Hort. var. of **Lathyrus odoratus**, SWEETPEA:

STATEMENT BY EDITORIAL COMMITTEE

The Editorial Committee wishes to gratefully acknowledge the fine cooperation of Elizabeth M. Bodger in supplying a really up-to-date listing of Sweetpea.

Especial attention is called to Miss Bodger's correct use of the distinctive term "strain," as applied to breeders' "fixed" varieties obtained by careful selection, particularly of annual flowers and vegetables. (Note that new hybrid varieties are not included in this category.) Bodger Seeds, Ltd., follow this procedure.

The questionable practice of many seedsmen, who for competitive or advertising motives apply their firm name to such a "strain," may be exposed to justifiable criticism; particularly so as its use would in no way detract from, but rather add to, publicity value, and would certainly be more in keeping with fact. Examples: Smith's Strain Hubbard (Squash), not Smith's Hubbard (Squash); Bodger's Strain Hollyhock, not Bodger's Hollyhock.

STATEMENT BY AUTHOR

Since publication of the first volume of STANDARDIZED PLANT NAMES, great strides have been made in the development of Sweetpea strains and varieties. While in the 1923 edition there is but a relatively short list of horticultural varieties, there is at the present time a very long list of horticultural varieties available in three distinct strains of the Spencer type, i. e. Winter or Early Flowering Spencer, Spring or Intermediate Flowering Spencer, and Summer or Late Flowering Spencer. The old Grandiflora type is now virtually out of commerce.

In the following listings, all varieties now included in the catalogs of leading Sweetpea growers of the United States and England have been included. Where possible, the name of the originator is given.

The author is indebted to Mr. Frank Cuthbertson of San Francisco for valuable information obtained from his Sweetpea files.

ELIZABETH M. BODGER,
El Monte, Calif.

With the kind permission of the author and of the publishers, the Editorial Committee has based this list in part on "Lilies for American Gardens," by George L. Slate, Charles Scribner's Sons, N. Y., 1939. Today many new hybrids are being produced and it is quite important that hybridizers record as accurately as possible, the parentage of the introduced polybrids, coining a suitable group name for such polybrids, made where feasible by combining syllables selected from each parent. ∞ CROCEGANS L. (*croceum* × *elegans*) is a good example of such a polybrid name. Horticultural varieties (clons) selected from polybrids should be given appropriate "fancy" or vernacular instead of Latin names in conformity to International Rules and STANDARDIZED PLANT NAMES practice. ¢ BROCADE, clon of ∞ MARHANSON L. is a typical and good example.

LUMBER TRADE NAMES

The Editorial Committee has been unsuccessful in obtaining either from wood specialists or interested organizations a single complete list of standardized lumber trade names suitable for this book. The list which follows has been obtained chiefly from the sources indicated below, and correlated with the accepted STANDARDIZED PLANT NAMES botanical and common names. In no field of plant nomenclature is the need for adequate name standardization more apparent than in the case of lumber names. Among the mass of synonymous names which appear in the trade for many a kind of lumber, a confusion which is apparent to the most casual observer, we have selected one name only for standardization purposes, endeavoring to do this on the basis of prevalent common trade usage, appropriateness, and avoidance of homonymity.

We recognize, of course, the justice of the claim that in many cases two or more closely related though botanically distinguishable species produce wood that is practically indistinguishable for the purposes of wood users. Red Oak and White Oak, for example, are each generally accepted names for the lumber of at least eight species of Quercus. In this list the Editorial Committee accepts such trade group-names where consistent with fair trade practices, honest business and the protection of the public from deceit and serious loss, and where they do not disguise important differences in wood qualities and uses. The practice of applying the same lumber trade name to woods from trees of two or more different genera is more seriously objectionable and is not accepted.

As examples of the present confusion in lumber trade names, attention might be called to the fact that "Satinwood" is applied to wood from species belonging to at least 10 genera of six different families. "Ironwood" is used for wood of trees of at least 35 different genera belonging to 20 botanical families and in many cases differing widely in other qualities of the wood than hardness. According to Meyer, the wood of 13 different genera of trees is marked "Corkwood." African, Philippine, and other exotic woods are sold as "Mahogany" which do not belong to the Mahogany genus (Swietenia) and which frequently are very different from that wood in qualities, use and appearance. Such Old World woods definitely are not entitled to be called Mahogany, and the misapplication of that name to them, for whatever reason, misleads the public, is bad nomenclatural practice, and should not be tolerated. Many of these woods have qualities no less admirable in their own way than those of Mahogany, though certainly not the same, and ought to be prized and used for their real qualities under their real names instead of being treated as substitutes.

The Editorial Committee believes that this is the first attempt to correlate closely a list of important lumber names with standardized plant names, both scientific and common. For obvious reasons this list is incomplete and imperfect. A full, adequate list would require years of effort by competent, fair-minded, and specially qualified experts, but its importance is so great that its accomplishment should immediately be undertaken, preferably on the initiative of the lumber organizations themselves. Such an authoritative work, expertly prepared as above indicated, should be published with a view to general adoption by trade and public alike.

The committee gratefully acknowledges its indebtedness to Warren D. Brush, Wood Technologist, U.S. Forest Service, for valuable criticism and suggestions, as well as to C. A. Rishell, J. C. Nellis and Henry Bahr, of the National Lumber Manufacturers Association staff; J. L. Stearns, of the Southern Hardwood Producers Association; Stuart Moir, forester of the Western Pine Association; Emanuel Fritz, of the University of California and California Redwood Manufacturers Association; B. R. Ellis, of the Southern Cypress Manufacturers Association; Warren G. Tilton, of the West Coast Lumbermen's Association, and George N. Lamb, of the Mahogany Association.

Lumber Trade Name	*Botanical Name*	*Plant Source S.P.N.Common Name*
Abachi. OBECHE		
Abiache. OPEPE		
Aboudikro(u). SAPELE		
ABURA (Ch;How;Leg;Mey; RL. *Bahia; Subaha*)	**Mitragyna stipulosa** (*macrophylla*)	ABURA MITRAGYNA
ACACIA (Mey;RL. *Gidgee*)	**Acacia** spp.	ACACIA
Acana. ALMIQUE; BULLETWOOD		
Acapu. ANGELIN		
Accra. SAPELE Dr. Brush reports that this is merely a trade name for wood shipped from Accra, Gold Coast, believed to be Entandrophragma.		
ACLE (FW;Mey;RL. *Akle*)	**Albizzia acle**	ACLE ALBIZZIA
Acoita-cavallo. ESTRIBEIRA(o)		
ACUREL (F&W)	**Trichilia cruegeriana**	TRINIDAD BITTERWOOD
AFARA (Ain;Ch;ET;How; Leg;Mey. *Frake; Limbo*)	**Terminalia superba**	AFARA TERMINALIA
Black A. FRAMERIE		
African-mahogany. SAPELE		
Agallocha; Agallochum. EAGLEWOOD		

Lumber Trade Name	*Botanical Name*	*Plant Source S.P.N.Common Name*
AGBA (Ain;ET;Leg;RL. *Moboron; Pink Mahogany*)	**Gossweilerodendron balsamiferum**	AGBA GOSSWEILERTREE
Agboin. EKHIMI		
Aguano. MAHOGANY, HONDURAS		
Aiele. PAPO		
Ailon. MAGNOLIA		
Akle. ACLE		
AKOMU (Ain;RL. *Boxboard; Cardboard; Ilomba; Walile*)	**Pycnanthus kombo**	AKOMU PYCNANTHUS
Akume. COPAIBA		
ALBARCO (RL;R&M. *Colombian Mahogany*)	**Cariniana pyriformis**	ALBARCO CARINIANA
Albarco. JEQUITIBA		
Albawood. OAK, WHITE		
ALDER	**Alnus**	ALDER
BLACK A. (Bat;Bo;ET; How;Leg;Mey. *Common A.; European A.*)	**glutinosa**	EUROPEAN A.
RED A. (Bo;Mey;RL) *Red A.* ELS, ROOD	**rubra** (*oregana*)	RED A.
WHITE A. (Bo;Mey) *White A.* ELS, WIT	**rhombifolia**	SIERRA A.
Alerce. ARAR		
ALIGNA (Ch;RL. *Apa; Lingue*)	**Afzelia africana**	AFRICAN AFZELIA
ALMENDRO	**Dipteryx panamensis**	PANAMA TONKABEAN
ALMIQUE (Mey;RL;R&M. *Acana*)	**Labourdonnaisia albescens**	WHITE MATTREE
ALMON (Mey;Rey;RL. *Philippine Mahogany*)	**Shorea eximia**	ALMON SHOREA
Almon. SERAYA		
Alona. TIGERWOOD		
AMARANTH (RL;Y,TW. *Amarante; Bois Violet; Guarabu; Morado; Palo Morado; Pao Roxo; Zapateri*) *See also* PURPLEHEART. It would seem better to call the lumber of this species "Purpleheart."	**Peltogyne paniculata**	GUIANA PURPLEHEART
Amarello. ARARIBA; BRAZILIAN-SATINWOOD; BRAZILIAN-YELLOWWOOD		
Amargoso. ANGELIM AMARGOSO		
Amboyna. PADAUK, INDIA		
Amoteak; Amotique. SUCUPIRA		
Ampira. FRAMERIE		
AMUGIS (Mey;Rey;RL)	**Koordersiodendron pinnatum**	AMUGIS
AMYRIS (FW;Mey;Y,TW. *West Indian Sandalwood*)	**Amyris balsamifera**	BALSAM AMYRIS
ANAN (Bo;ET;How;Mey; Tr)	**Fagraea fragrans**	SWEET FAGRAEA
Andiroba. CRABWOOD		
ANGELIM AMARGOSO(Mey; RL; R&M. *Amargoso*)	**Andira vermifuga**	BRAZILIAN ANGELINTREE
ANGELIM PEDRA (Mey;RL)	**A. spectabilis**	SHOWY A.
The name Angelim Pedra (Mey;RL) is also used in the lumber trade for Rock Hymenolobium (**Hymenolobium petraeum**). This is another instance of the urgent need of lumber name standardization.		
ANGELIN (Leg;Mey. *Acapu*) See note under **Andira**, p. 15.	**Andira** (*Vouacapoua*)	ANGELINTREE
ANGELIN (Leg;Mey. *Bitterwood; Cabbage Bark; Macayo; Partridgewood*)	**A. inermis** (*jamaicensis; V. americana*)	CABBAGE A.
ANGELIQUE (Bo;How)	**Dicorynia paraensis**	PARA ANGELWOOD
Angsana; Angsena. PADAUK, INDIA		
Anyaran. MOVINGUI		
Apa. ALIGNA		
Apaya. AVODIRE		
APITONG (How; Mey; Rey; RL)	**Dipterocarpus grandiflorus**	APITONG GURJUNOILTREE
Apopo. TIGERWOOD		
APPLE (Bat;Bo;ET;How; Leg;Mey;RL;Tr)	**Malus pumila** (*Pyrus malus*)	COMMON APPLE
Aprono. MANSONIA		

Lumber Trade Name	Plant Source: Botanical Name	Plant Source: S.P.N. Common Name
Apru. DANTA		
ARACA (Mey;RL)	**Terminalia januarensis** The exact identity of this species is disputed.	RIOJANEIRO TERMINALIA
ARAR (Mey. *Alerce*)	**Tetraclinis articulata** (*Callitris quadrivalvis*)	ARARTREE
ARARIBA (Mey;RL) Shipments of Arariba from Rio de Janeiro are called *Amarello; Branca; Rosa;* and *Vermelha.* Called *Balaustre* or *Canarywood* in United States.	**Centrolobium** spp.	PORCUPINEPODTREE
ARAUCARIA (Mey;RL. *Monkey Puzzle*)	**Araucaria araucana** (*imbricata*)	MONKEYPUZZLE ARAUCARIA

Redcedar (And;Aud;ET)		

"Redcedar" has become standardized for certain Juniperus species. This is unfortunate, for Juniper is a preferable name for Juniperus.

The species and wood of the genus Cedrela, also sometimes called "Red Cedar," should uniformly be called Cedrela. This is a particularly striking example of a needless misnomer. See REDCEDAR.

EUCALYPTUS (Bat;FW; Mey;RL)	**Eucalyptus**	EUCALYPTUS

In the interests of name standardization and good business practice, it seems highly desirable to have the woods of all species of this genus marketed as various sorts of Eucalyptus. Terms such as Blackbutt and Peppermint that are current in the lumber trade are accepted in the following list as adjectives followed by E. (for Eucalyptus) not standing alone as names complete in themselves, though they are often used in that way in Australia where they were first applied to these woods. Some of them are at least as properly applied to trees of other genera, as Karri to an African tree and Bloodwood to trees of many genera.

IRONWOOD		
It is a physical impossibility to standardize such a plant name as "ironwood" or its foreign equivalents such as palo de hierro, bois de fer, eisenholtz, etc. Van Wijk, in his "Dictionary of Plant-Names," gives trees of 34 genera bearing the name "Ironwood." Meyer, in his "Buch der Holznamen," lists 44 species of trees belonging to 35 genera and 20 families called "Ironwood." It is a most trite and unimaginative name for any strong wood; a pity somebody has not used "Steelwood, ' just for variety.

LANCEWOOD (Mey;RL. *Yaya*)	**Oxandra lanceolata**	LANCEWOOD
The name "lancewood" is considerably overworked. In Van Wijk's encyclopaedic "Dictionary of Plant-Names," 8 *genera* are called by this name. In Meyer's "Buch der Holznamen," 9 *genera* and 12 *species* are called "lancewood." Professor Record and others claim that the true lancewood is **Oxandra lanceolata.** The "lancewood" of Australian commerce is **Backhousia australis** and **B. myrtifolia.** Among other commonly called "lancewoods" are spp. of the genera Duguetia, Guatteria, and Rollinia of Guiana.

MAHOGANY	**Swietenia** spp.	MAHOGANY

African, Philippine, and other exotic woods are sold as "Mahogany" which do not belong to the Mahogany genus (**Swietenia**) and which frequently are very different from that wood in qualities, use, and appearance. Such Old World woods definitely are not entitled to be called Mahogany, and the misapplication of that name to them, for whatever reason, misleads the public, is bad nomenclatural practice, and should not be tolerated. Many of these woods have qualities no less admirable in their own way than those of Mahogany, though certainly not the same; and ought to be prized and used for their real qualities under their real names instead of being treated as substitutes.

Myrobalan . . . LEAFFLOWER, EMBLIC: **Phyllanthus emblica;** TERMINALIA, TROPICAL-ALMOND; **Terminalia catappa;** PLUM, MYROBALAN: **Prunus cerasifera**
Myrobalan, a controversial plant name, derives from myrobalanos, a scentless oil (thought to be our modern "oil of ben," obtained from the Horseradishtree, Moringa oleifera) anciently used in mixing unguents. In modern Greek, however, myrobalanos is the Emblic, fruit of Phyllanthus emblica. Myrobalan is also the trade name for commercial tanning material derived from two Oriental species of Terminalia.

NARCIS'SUS . . . . . NARCISSUS
The Editorial Committee is chiefly indebted to the Division of Plant Exploration and Introduction, Bureau of Plant Industry, U. S. Department of Agriculture, for the following treatment of the genus Narcissus. Special attention is called to the "fancy" or hort var. names of Narcissus, which are as a rule (with some notable exceptions such as "Mrs. Walter H. Brewster"), models for brevity.
It is extremely desirable that this admirable practice of giving suitable single or binomial names to plants and plant products be adopted universally in the plant world.

watier'i
webb'i . . . . . **N. jonquilla w.** Hort.

Common names and hort. var. of **Narcissus:**

EXPLANATION OF NARCISSUS TYPE CLASSIFICATION

As adopted by the Royal Horticultural Society

1a Yellow Trumpets.
1b White Trumpets.
1c Bicolor Trumpets.
2a Yellow Perianth Incomparabilis.
2b White Perianth Incomparabilis.
3a Yellow Perianth Barri.
3b White Perianth Barri.
4a Largecrown Leedsi (Giant Leedsi).
4b Smallcrown Leedsi (Leedsi).
5 Triandrus Hybrids.
6 Cyclamineus Hybrids.
7 Jonquil Hybrids.
8 Tazetta and Tazetta Hybrids, including Poetaz and other small bunch-flowered varieties.
9 Poeticus.
10 Doubles.
11 Various.

ABBREVIATIONS OF NAMES OF ORIGINATORS OR INTRODUCERS

Adams C. Lemesle Adams, Pendeford Hall, Wolverhampton, England.
Back. Mrs. O. R. Backhouse, England.
Back. H. Henry Backhouse, Bournemouth, England.
Back. W. William Backhouse.
Baker Baker.
Barr Barr & Sons, London, W. C., England.
Bath R. H. Bath, Ltd., The Floral Farms, Wisbeck, England.
Bier. Miss Mary McD. Bierne, "Rhodeen," Ashland, Va.
Bro. The Brodie of Brodie, Brodie Castle, Forres, England.
Buck. Leonard Buckland, formerly Keyham, Camperdown, Australia.
Cal. Roderick Frank Calvert, Carnsulan, Coverack, Helston, Cornwall, England.
Cart. Cartwright & Goodwin, Ltd., Kidderminster, England.
Cave Sir Charles H. Cave, Sidbury Manor, Sidmouth, England.
Chap. F. Herbert Chapman, West Mead, Peasmarsh, Sussex, England.
Cob. Cobley.
Cope. W. M. F. Copeland, West View, St. James' Road, Southampton, England.
Cros. E. M. Crosfield.
Cul. Culpin.
Daw. Charles Dawson, The Chantreys, Lymington, Hants, England.
deB. de Bruin.
deG. de Graff Brothers, Ltd., Noordwijk, Holland.
dGro. Probably J. de Groot & Son, Noordwijk, Holland.
Don. Donald Nursery, Newcastle, Ireland.
Eld. W. J. Eldering & Son, Ltd., Sassenheim, Holland.
Eng. Rev. George Herbert Engleheart, Salisbury, England.
Gib. A. Gibson, Australia or New Zealand.

NARCISSUS, continued

Hall J. Hall, Remura, Auckland, New Zealand.
Hart. William Baylor Hartland, Cork, Ireland.
Hay Rev. George Philip Hay, Westbere, Canterbury, England.
Heere Heere.

ORCHID GENERA

We regret that a revised list of Orchid Genera, other than the hardy native terrestrial ones, p. 422, and the genus Cordula, is not available for this edition of S.P.N. In response to the Committee's request, the Ames Botanical Laboratory which furnished the Orchid Genera for the first edition found it impossible, owing to time limitations, to supply a revision, while a similar request to the American Orchid Society did not bring the desired results.

For the benefit of those especially interested in this very important plant family, and for the important announcement contained therein, we are quoting the reply to our invitation received from David Lumsden, Secretary:

AMERICAN ORCHID SOCIETY

October 13, 1939

Mr. William A. Dayton,
Standardized Plant Names,
930 F Street, N. W.,
Washington, D. C.

Dear Mr. Dayton:

As per my promise to write you relative to the action taken by the Trustees of the American Orchid Society at their meeting held in Philadelphia, October 4, regarding any assistance they may desire to give, the secretary was instructed to write you stating that it was the opinion of the Society the Committee on Standardized Plant Names could get the information they are seeking from the publication "Sanders List of Orchid Hybrids." This publication contains about 100,000 names of hybrid orchids. It contains a complete list of the hybrids raised with parentage.

An addenda may be obtained bringing up the list to 1936. The list is published by authority of the Royal Horticultural Society, London, England. American hybrids are included in the list.

Sincerely yours,

DAVID LUMSDEN, *Secretary.*

The Committee thinks it desirable, however, to include the following compilation prepared for the first edition, together with the explanatory statement accompanying the list. Orchid Genera, excepting the hardy species noted above, is the only list in this new edition of S.P.N. which has not been revised.

ORCHID GENERA, continued

1923 EDITION FOREWORD

For convenience of reference the genera, species, and varieties of Greenhouse and Exotic Orchids are here brought together in one consolidated list.

The American Joint Committee wishes to acknowledge its great indebtedness to the Ames Botanical Laboratory, North Easton, Massachusetts, and to Mr. F. Tracy Hubbard, Compiler, for supplying the material for Orchid Genera. A careful reading of Mr. Hubbard's statement below will show the lamentable chaos and confusion now existing in Orchid names, especially other than American terrestrial forms, occasioned by a lack of generally accepted standard principles for plant naming, and the almost inextricable tangle of Latin polynomials occasioned by the efforts of the hybridizer to *carry the plant's pedigree in the name*, and his reluctance to translate such polynomials into good English common names.

It is an unfortunate fact perhaps that very few Orchids, excepting the comparatively few terrestrial forms, are known under common or vernacular English names. Also, it is quite possible that with many rare species, which will probably never be generally distributed, a common English name would serve no useful purpose.

It is only fair to state here that Mr. Hubbard supplied common names for a large percentage of the Orchids in this list; but owing to the fact that usually such common names were literal translations of the Latin names (a device that has proved rarely satisfactory in other plant groups), and for the other reasons given above, it seemed to the American Joint Committee wise to omit them in Standardized Plant Names.

Considering these severe handicaps, and many others not discussed here, Mr. Hubbard has done an exceedingly creditable piece of work, and has conformed so far as could be done at the present time to the principles practiced by the American Joint Committee.

It is a notable beginning and should lead to the formation of an expert committee on Orchid nomenclature to the end of simplifying and standardizing the names of species, natural varieties, and horticultural varieties of this remarkable and beautiful family of plants.

AMERICAN JOINT COMMITTEE
HARLAN P. KELSEY, *Secretary.*

STATEMENT OF F. TRACY HUBBARD

The genera, species, and varieties of Orchids in this list are in cultivation or have been offered for sale in America.

The Orchids present certain difficulties in conforming to the precedent, established in this work, of using common names in alphabetic sequence for horticultural varieties.

In this list the exact spelling as applied in horticulture or in the trade has been followed, except in such cases as incorrect termination or obvious transposition of letters, and if such spelling differs from the accepted spelling it has been attempted to point out, wherever possible, what was presumably intended. Many minor misspellings have been omitted as being superfluous.

In the case of hybrids the parentage has been designated, wherever known, and Rolfe and Hurst's Orchid Stud-book has been accepted as authoritative with certain qualifications:

1. In some instances in which the horticultural name of a parent differs from the botanically correct name, the horticultural name has been maintained; for instance, Cattleya gigas, the horticultural name, is

ORCHID GENERA, continued

adopted instead of Cattleya warscewiczi, the older and botanically correct name.

2. The Stud-book gives only the species name of the two parents. Where clearly designated in literature, the varietal form of the parent has been added.

3. If one of the parents as commonly cited is given a name which has been made a synonym in this list, the name here accepted is given, followed by the synonym in parentheses.

4. Where a varietal name has been carelessly raised to the rank of a species, the omission of the species name has been rectified by its insertion in brackets []. Furthermore, many hybrids accepted horticulturally are in reality minor variations of the same major cross and are not considered worthy of separation. Following the Stud-book, these have been treated as synonyms, and the name applied by the Stud-book, even though in some instances not in horticultural usage, has been adopted.

Throughout the Orchid list certain forms and abbreviations have been used. Parentheses () indicate that the enclosed portion is as in horticulture or the trade; brackets [] that the enclosure is our insertion. ABL signifies Ames Botanical Laboratory, and is used to designate the name which is botanically best according to our conception. Cy, as usual, designates the name used in Bailey's Standard Cyclopedia of Horticulture, when different from the name adopted in the list. Hyb. stands for hybrid and Nat. hyb. for natural hybrid.

Finally, certain genera, although more or less commonly known in horticulture under a given name, have been reduced to the more correct scientific name, where it has been judged best. The most noticeable of these changes are the replacement of Platyclinis by Dendrochilum and Pescatorea by Zygopetalum. A few species usually known in horticulture under genera to which they certainly do not belong have been referred to their correct genera, for example Saccolabium retusum, also known quite as commonly as S. blumei, has been changed to Rhynchostylis retusa.

woodhamen'se
Probably the same as C. woodhamsianum.
woodhamsia'num (*George Woodham; lowianum* × *veitchi*)
CYPRIPE'DIUM . . LADYSLIPPER
For horticultural purposes this name is probably best retained for all forms. In science, today, the genus Cypripedium is split into four genera: Selenipedium, containing about three reed-like plants none of which is known in cultivation; Cypripedium, the North American and a few Chinese and Japanese species, maintaining the Linnean use of the name; Cordula, the Old World tropical species which constitute the bulk of the greenhouse species and hybrids (these are all classed as Paphiopedilum by Bailey [Cy] and others); and Paphiopedilum (in its correct usage) for the Central and South American species which have been known in horticulture as Selenipedium (these are all classed as Phragmopedilum by Bailey [Cy] and others).
In the following list the section and our preference will be abbreviated to Cyp. for Cypripedium; Cord. for Cordula, and Paph. for Paphiopedilum; but no new binomial or trinomial Latin names will be made, notwithstanding the fact that such names are not now in existence, especially in the case of hybrids and variations of species. (For discussion of the generic names see Rolfe in Orchid Review, vol. 20 (1912), pp. 1–3.) In synonymy, C. will be used for Cypripedium, Pa. for Paphiopedilum, Ph. for Phragmopedilum, and S. for Selenipedium.

Zeno (*C. insigne* × *C. nitens*) ROMULUS

The following crosses have appeared in horticulture without names:
aureum hyeanum × *memoria jerninghami beeckmani* × *schlesingerianum* (*Mons. de Curte*) . . . . . **C. curtemanni**
boxalli × *thompsoni*
chamberlainianum × *mastersianum*
C. statherianum

ORCHID GENERA (CYPRIPEDIUM), con.

curtisi × *purpureum* . . . . . **C. oakesi**
Purpuratum is undoubtedly intended; there is no C. purpureum.
hilchense [*hilchensiae*] × [*insigne*] *Harefield Hall* . . . . REGINALD YOUNG
insigne Harefield Hall × *oenanthum superbum.* Allied to C. Milo.
—Harefield Hall × *spicerianum.* Allied to C. leeanum.
—Monarch × *nitens*
leeanum × *beeckmani* . . . . VERONA
lindleyanum × [*sedeni*] *leucorrhodum nitens* (*sallieri aureum*) × *insigne sanderae.* Allied to C. Romulus.
sanderae × *insigne luciniae*
schlesingerianum (*Mons. de Curte*) × *clinkaberryanum*
spicerianum × *Laura Kimball*

CYRTOPO'DIUM

anderso'ni
puncta'tum

DENDRO'BIUM

In this list Sarcopodium is included in Dendrobium; by a majority of botanists it is considered to be only a subgenus.

acumina'tum (*Sarcopodium acuminatum* Cy)
aggrega'tum
—ma'jus
ains'worthi (*Artemis; aureum* × *nobile; Artemus; edithae*)
—leechia'num (*leechianum*)
—splendidis'simum (*splendidissimum*)
albosanguin'eum
amesia'num grandiflo'rum
Not found in botanical literature, probably a garden hybrid.
am'plum (*Sarcopodium amplum* Cy)
an'ceps
Apollo grandiflorum
D. rubens grandiflorum
Artemis . . . . . **D. ainsworthi**
Artemus . . . . . **D. ainsworthi**
ASPASIA (*wardianum* × *aureum*)
atroviola'ceum
auranti'acum
au'reum . . . . . **D. heterocarpum**
barba'tulum
It is quite possible that the material grown under this name is in reality D. fytchianum.
barbig'erum (*barbrigium*)
barbrig'ium . . . . **D. barbigerum**
Misspelling.
bella'tulum
ben'soni . . . . . **D. bensoniae**
benso'niae (*bensoni*)
bigib'bum
bronckar'ti
brymeria'num
bufordien'se . . . . . **D. dulce**
calceola'ria **D. moschatum calceolaria**
calceo'lus . . . . . **D. moschatum**
cambridgea'num (*Dendrobium ochreatum* ABL-Cy)
carinif'erum
CASSIOPE (*moniliforme* × *nobile*)
childs'i
Not found in botanical literature, probably a garden hybrid.
chloroste'le (*Juno; xanthocentron* Cy; *linawianum* × *wardianum*)
chrysan'thum (*paxtoni*)
chrysodis'cus . . . . **D. melanodiscus**
chrysotox'um
—suavis'simum (*suavissimum*)
cilia'tum annamen'se

ORCHID GENERA (DENDROBIUM), con.

clava'tum
coelogy'ne (*Sarcopodium coelogyne* Cy)
crassino'de (*pendulum* ABL-Cy)
—barberia'num
crepida'tum
creta'ceum
crystalli'num
cupe'ta
Not found in botanical literature, probably a garden hybrid.
cu'preum . . **D. moschatum cupreum**
cur'tisi (*Cassiope* × *aureum*)
CYBELE (*findlayanum* × *nobile*)
cymbidioi'des
dalhousiea'num (*pulchellum* ABL)
dear'ei
densiflo'rum
Desdemona . . . . . **D. rubens**
devonia'num
dixan'thum
dominia'num (*linawianum* × *nobile*)
DORIS (*ainsworthi* × *moniliforme*)
dul'ce (*bufordiense; aureum* × *linawianum*)
edi'thae . . . . . **D. ainsworthi**
endocha'ris (*aureum* × *moniliforme*)
enos'mum (*endocharis* × *nobile*)
—leucop'terum
eriaeflo'rum
Euryalus . . . . . **D. rubens**
Euterpe . . . . . **D. murrhiniacum**
falconer'i
far'meri
fimbria'tum
—ocula'tum
findlaya'num
formo'sum
—gigan'teum
gol'diei . . . . . **D. superbiens**
HAROLD (*findlayanum* × *linawianum*)
—amoe'num
heterocar'pum (*aureum*)
hildebrand'i
infundib'ulum
—jamesia'num (*jamesianum*)
jamesia'num
D. infundibulum jamesianum
johan'nis
Juno . . . . . **D. chlorostele**
kingia'num
leechia'num. **D. ainsworthi leechianum**
lituiflo'rum
—free'mani
lu'na . . . . . **D. melanodiscus**
luteo'la
macrophyl'lum
There is also a D. macrophyllum of Lindley, which is the same as D. superbum and which is probably the plant more commonly in cultivation.
—daya'num . **D. superbum anosmum**
—gigan'teum . . . . **D. s. giganteum**
melanodis'cus (*chrysodiscus; luna; findlayanum* × *ainsworthi*)
—pal'lens (*pallens*)
meterocar'pum
Not found, probably a garden hybrid.
mi'cans (*wardianum* × *lituiflorum*)
moscha'tum (*calceolus*)
—calceola'ria (*calceolaria*)
—cupre'um (*cupreum*)
MRS. ALFRED ROGERS (*findlayanum* × *hildebrandi*)
murrhinia'cum (*murrhinianum; Euterpe; nobile* × *wardianum*)
murrhinia'num . . . **D. murrhiniacum**

ORCHID GENERA (DENDROBIUM), con.

NIOBE (*tortile* × *nobile*)
no'bile
—al'bum
—ames'iae
—amesia'num
Probably the same as D. nobile amesiae.
—ash'worthi
Probably the same as D. nobile ashworthianum.
—ashworth'iae
Probably the same as D. nobile ashworthianum.
—ashworthia'num
—ballia'num
—cook'soni
Probably the same as D. nobile cooksonianum.
—cooksonia'num
—LARZ ANDERSON
—ma'jus
—MRS. LARZ ANDERSON
This and D. nobile Larz Anderson may be the same.
—murrhini'acum
Possibly the same as D. murrhiniacum.
—nobil'ius
—owenia'num
—pulcher'rimum
—RAJAH
—rose'um
—rothwellia'num
—ru'brum
—SOUTH ORANGE
—summiten'se
—tollia'num
—victo'ria regi'na
—virgina'le
ochrea'tum ABL-Cy **D. cambridgeanum**
ocula'tum
Not found in botanical literature, probably the same as D. fimbriatum oculatum.
oncid'ium
Not found in botanical literature.
pal'lens . . **D. melanodiscus pallens**
par'ishi
pax'toni . . . . . **D. chrysanthum**
pen'dulum ABL-Cy . . **D. crassinode**
phalaenop'sis
—al'bum
—caerules'cens
—schroe'derae
Probably the same as D. phalaenopsis schroederianum.
—schroederia'num
—schroederia'num albes'cens
—schroederia'num al'bum ROEHRS
—schroederia'num roehrsia'na
Very likely this is the more correct name of D. phalaenopsis schroederianum album Roehrs.
pierard'i
pitcheria'num (*rolfeae; nobile* × *primulinum*)
platycau'lon
primuli'num
pulchel'lum ABL . **D. dalhousieanum**
re'gium
roeblingia'num (*nobile* × *ruckeri*)
rog'ersi
Not found in botanical literature, probably a garden hybrid.
rolf'eae . . . . . **D. pitcherianum**
ru'bens (*Desdemona; Euryalus; ainsworthi* × *nobile*)
—grandiflo'rum (*Apollo grandiflorum*)

ORCHID GENERA (DENDROBIUM), con.

san'derae
schneideria'num (*findlayanum* × *aureum*)
—grandiflo'rum
schuetz'ei
secun'dum
SIBYL (*bigibbum* × *linawianum*)
specio'sum
splendidis'simum
D. ainsworthi splendidissimum
—grandiflo'rum . . . . . **D. ainsworthi splendidissimum** var.
—grandiflo'rum Thompsons **D. ainsworthi splendidissimum** var.
statteria'num
Supposed nat. hyb. between D. bigibbum and D. phalaenopsis.
suavis'simum
D. chrysotoxum suavissimum
super'biens (*goldiei*)
super'bum (*macrophyllum* of Lindley)
—anos'mum (*macrophyllum dayanum*)
—dear'ei
—gigan'teum (*macrophyllum giganteum*)
THELMA (*wiganiae album* × *nobile virginale*)
thrysiflo'rum . . . . **D. thyrsiflorum**
thyrsiflo'rum (*thrysiflorum*)
Botanically considered a variety of D. densiflorum.
transpa'rens
veitch'i (*wardiano-japonicum; moniliforme* × *wardianum*)
D. moniliforme is the older and more correct name of D. japonicum.
veluti'num
VENUS (*falconeri* × *nobile*)
virgina'le
Not found in botanical literature, probably the same as D. nobile virginale.
wardiano-japon'icum . . . **D. veitchi**
wardia'num
—al'bum
—gigan'teum
—low'i
wiga'niae (*nobile* × *signatum*)
xanthocen'trum . . . . **D. chlorostele**

DENDROCHI'LUM

cobbia'num (*Platyclinis cobbiana* Cy; *P. gigantea*)
cucumeri'num (*Platyclinis cucumerina* Cy)
filifor'me (*P. filiformis* Cy)
gluma'ceum (*P. glumacea* Cy)
—super'bum
Of little standing as distinct.
latifo'lium (*Platyclinis latifolia* Cy)

DIA'CRIUM . . **EPIDENDRUM**
More correctly only a section of Epidendrum, though often maintained as a distinct genus.

bicornu'tum Cy
Epidendrum bicornutum

DI'SA

lu'na (*racemosa* × *veitchi*)

ELLEAN'THUS

longibractea'tus

EPICAT'TLEYA

Also written Epi-Cattleya. Crosses between Epidendrum and Cattleya.

gautemalen'sis
Hyb.—not found in botanical literature.

bound'i (*burtoni* × *radicans*)
brassavo'lae
bur'toni (*ybaguense* × *obrienianum*)
cilia're
cinnabari'num
cochlea'tum
conspic'uum . . . . . **E. roseum**
cooperia'num
coria'ceum . . . . . **E. variegatum**
decip'iens
dellen'se (*radicans* × *xanthinum*)
dichro'mum
diur'num ABL . . . . . **E. virens**
ela'tius . . . . . **Cattleya guttata**
erythronioi'des . . . . **E. boothianum**
falca'tum
Probably the form grown is E. parkinsonianum and not the true E. falcatum, which is smaller.
fra'grans
gattonen'se (*boundi* × *xanthinum*)
godseffia'num . . . . . **E. osmanthum**
grac'ile
inver'sum
kewen'se (*evectum* × *xanthinum*)
la'geri
Not known, probably a garden hybrid.
latila'brum
More commonly known as E. latilabre, but the original spelling is latilabrum.
lindleya'num ABL-CY **Barkeria lindleyana**
longifo'lium
macrochi'lum . . . **E. atropurpureum**
nemora'le
obri'eni . . . . . **E. obrienianum**
obrienia'num (*obrieni; evectum* × *radicans*)
odoratis'simum
oncidioi'des
osman'thum (*godseffianum*)
pallea'ceum (*auritum* ABL)
planila'bris
Not found in botanical literature.
polybul'bon (*Dinema polybulbon*)
porphy'reum
prismatocar'pum
pris'tes
rad'icans (*rhizophorum*)
rand'i (*atropurpureum randianum* Cy; *atropurpureum randi*)
r..izoph'orum . . . . . **E. radicans**
rig'idum
rose'um (*conspicuum*)
This may also apply to a variety of E. atropurpureum.
skin'neri
spectab'ile ABL-Cy **Barkeria spectabilis**
stamfordia'num
—walla'cei

ORCHID GENERA (EPIDENDRUM), con.
stenopet'alum
variega'tum (*coriaceum*)
vi'rens (*diurnum* ABL)
virga'tum
vitelli'num
—ma'jus
wal'lisi
wat'soni
An unpublished species (that is, without a description). Known only in horticulture. The printed form of the name is watsonianum.
xanthi'num
The following cross has appeared in horticulture without a name.
auranticum × *Cattleya gigas*. This is an Epicattleya.
EPIPHRONI'TIS
Crosses between Epidendrum and Sophronitis.
veitch'i (*E. radicans* × *S. grandiflora*)
E'RIA
anchorif'era
barba'ta
bractes'cens
convallarioi'des
corona'ria (*Trichosma suavis* Cy)
densiflo'ra
excava'ta
ferrugin'ea
gigan'tea
lava'ta
Not found in botanical literature, probably an error for E. lanata.
monostach'ys
obe'sa
ERIOP'SIS
rutidobul'bon
EUAN'THE ABL
sanderia'na ABL . **Vanda sanderiana**
GALEAN'DRA
devonia'na
lacus'tris
GOME'SA
planifo'lia
GOME'ZA . . . . . **GOMESA**
GONGO'RA
charles'worthi
galea'ta (*Acropera loddigesi; Maxillaria galeata*)
macula'ta (*quinquinervis* ABL-CY)
GRAMMATOPHYL'LUM (*GRAMMANGIS* ABL)
el'lisi (*Grammangis ellisi* ABL)
HAEMA'RIA ABL . **GOODYERA**
dis'color dawsonia'na ABL **G. dawsoniana**
HARTWE'GIA
purpu'rea
HOULLET'IA
brocklehurstia'na
odoratis'sima
—antioquien'sis
HUNT'LEYA Cy **ZYGOPETALUM**
burt'i Cy . . . . . **Z. burti**
LAE'LIA . . . . . LAELIA
The name of this genus under the American rules is Amalia.
acumina'ta . . . . . **L. rubescens**
al'bida
an'ceps
—al'ba

ORCHID GENERA (LAELIA), continued
an'ceps al'ba BULLS
—ames'iae
Probably the same as L. anceps **amesiana.**
—amesia'na
—blan'da
—BULLS
This is very likely the same as L. anceps alba Bulls.
—daw'soni
—grandiflo'ra
—hill'i
Probably the same as L. anceps hilliana.
—hillia'na
—hillia'na rosefielden'sis
—holidaya'na
Not found in botanical literature, probably a garden variety.
—lageria'na
—leea'na
—percivalia'na
—protheroia'na
—rose'a
—sanderia'na
—schroe'derae
—schroe'deri
Probably the same as either L. anceps schroederae or L. anceps schroederiana.
—schroederia'na
—stel'la
—stel'la vesta'lis
—veitchia'na
—wil'liamsi
—winnia'na
arnoldia'na [of Manda]
It is impossible to say whether this and the next are the same.
arnoldia'na **Laeliocattleya callistoglossa**
autumna'lis
—al'ba
—atroru'bens
bel'la . . . . . **Laeliocattleya bella**
boothia'na (*Cattleya lobata*)
cinnabaero'sa . . . . . **L. cinnabrosa**
cinnabari'na
cinnabro'sa (*cinnabaerosa; cinnabarina* × *tenebrosa*)
cris'pa (*Cattleya crispa*)
—super'ba
crispila'bia (*Laelia cinnabarina crispilabia* Cy)
daya'na . . . . . **L. pumila dayana**
digbya'na Cy . . **Brassavola digbyana**
el'egans . . . **Laeliocattleya elegans**
This species has been a source of much confusion, having been treated as a valid species of Laelia, but apparently it is a cross between Cattleya leopoldi and Laelia purpurata.
—schilleria'na **Laeliocattleya schilleriana**
fla'va
glau'ca Cy . . . . **Brassavola glauca**
gouldia'na
gran'dis tenebro'sa Cy . . **L. tenebrosa**
harpophyl'la
jonghea'na
lato'na (*cinnabarina* × *purpurata*)
lindleya'na (*Cattleya lindleyana*)
maja'lis (*speciosa* ABL)
—al'ba
monaphyl'la
NORA (*cinnabarina* × *xanthina*)
OLIVIA (*crispa* × *xanthina*)
pat'tini
Not found in botanical literature, probably a garden hybrid.

ORCHID GENERA (LAELIA), continued

per'rini
prae'stans . . . . . **L. pumila major**
pu'mila
—daya'na Cy (*dayana*)
—ma'jor (*praestans; pumila praestans* Cy)
purpura'ta
—russellia'na
—*schroe'derae*. L. purpurata schroederi
—schroe'deri (*purpurata schroederae*)
—wil'liamsi
ragotia'na (*cinnabarina* × *grandis*)
rubes'cens (*acuminata*)
specio'sa . . . . . **L. majalis**
super'biens
tenebro'sa (*grandis tenebrosa* Cy)
Whether this is a true species or a variety of L. grandis is open to question. We have followed R. A. Rolfe who considers it a distinct species.
—gran'dis
Not found, possibly L. grandis.
—WALTON GRANGE

The following crosses have appeared in horticulture without names:
cinnabarina × *xanthina* . . . . NORA *perrini* × *Cattleya aurea*
Laeliocattleya decia
pumila × *purpurata*
pumila dayana × *anceps stella*
purpurata × *Laeliocattleya balli* (*G. S. Ball*). This is a Laeliocattleya.
tenebrosa × *Laeliocattleya canhamiana*
Laeliocattleya KATHLEEN

LAELIOCAT'TLEYA
Also written Laelia-Cattleya and Laelio-Cattleya. Crosses between Laelia and Cattleya or between one of these genera and a Laeliocattleya or between two Laeliocattleyas. In references below the abbreviation L. is used for Laelia, Lc. for Laeliocattleya.

reichenbachia'na
schli'mi
tovaren'sis
veitch'i . . . . . **M. veitchiana**
veitchia'na (*veitchi*)
MAXILLA'RIA
angustifo'lia . . . . . **M. variabilis**

ORCHID GENERA (MAXILLARIA), con.

den'sa . . . . . **Ornithidium densum**
galea'ta . . . . . **Gongora galeata**
There is also a valid M galeata which is probably not in horticulture.
grandiflo'ra
henchmann'i . . . . . **M. variabilis**
houttea'na
hyacinthin'a. . **Xylobium hyacinthinum**
incarna'ta
Not found, perhaps a garden variety; according to Bailey's Cyclopedia a trade name only.
luteoal'ba
—*tur'neri* ABL . . . . . **M. turneri**
nigres'cens
pic'ta
porphyroste'le (*porphyrostella*)
porphyrostel'la . . . **M. porphyrostele**
pulsel'la
Not found, evidently a misspelling, possibly for pusilla.
rubes'cens
Not found, probably intended for rufescens.
sanderia'na
setig'era
tenuifo'lia
tur'neri (*luteoalba turneri* ABL)
variab'ilis (*angustifolia; henchmanni*)
venus'ta
MEGACLIN'IUM (*Bulbophyllum* ABL)
This genus is recognized by some authorities and by others is reduced to Bulbophyllum.
falca'tum (*Bulbophyllum falcatum* ABL)
MILTO'NIA . . . PANSYORCHID
Ajax . . . . . **Miltonioda** AJAX
bleua'na (*Miltoniopsis bleui; Miltonia vexillaria* × *roezli*)
—**charles'worthi**
Presumably the same as M. charlesworthi.
—**grandiflo'ra**
—**hyea'na**
Presumably the same as M. hyeana.
—**magnif'ica**
—**nobil'ior**
—QUEEN ALEXANDRA
—**rose'a**
—ST. ANDRE
Presumably the same as M. St. Andre.
blunt'i
Supposed nat. hyb. between M. clowes and M. spectabilis.
—**lubbersia'na**
can'dida
charles'worthi
clowes'i
cunea'ta
flaves'cens
hyea'na (*bleuana* × *vexillaria*)
lambeaua'na
Not found, probably a garden hybrid or a form of M. vexillaria.

hunnewellia'num
hyea'num (*Souvenir de Victor Hye de Crom; harryanum* × *luteopurpureum*)
illustris'simum (*lambeauianum* × *armainvillierense* (*ardentissimum*))
insleay'i
ISIDORUS (*cirrhosum* × *Rio Tinlo*)
Japonais ABL . . **O. lambeauianum**
JASPER (*crispum victoria regina* × *amabile*)
lae've
lambeauia'num (*Japonais* ABL; *rolfeae* × *crispum*)
lobb'i (*lobbiae; amabile* × *pescatorei*)
lobb'iae . . . . . **O. lobbi**
loochristien'se . . . **O. harvengtense**
luteopurpu'reum
—scep'trum (*sceptrum* ABL)
macula'tum
marita'na (*rolfeae* × *sceptrum*)
mirif'icum (*crispum* × *sceptrum*)
nebulo'sum
nit'idum (*spectabile* × *denisonae* (*wilckeanum*))
no'bile ABL-Cy . . . **O. pescatorei**
oberthu'ri (*adrianae* × *harbengtense*)
ossulston'ei . . . . . **O. ossultoni**
ossulto'ni (*ossulstonei; pescatorei* × *spectabile*)
OTHELLO (*adrianae* × *harryanum*)
pen'dulum ABL . . . **O. citrosmum**
pescato'rei (*nobile* ABL-Cy)
PHILOMENE (*rolfeae* × *percultum*)
PHOEBE (*cirrhosum* × *crispum*)
pulchel'lum
reichenheim'i
By some this is considered to be variety of O. laeve.
rolf'eae (*harryanum* × *pescatorei*)
ross'i
—ma'jus
ruckeria'num
By some considered to be a variety of O. crispum.
schlieperia'num (*schlipperianum*)
—al'bum
schlipperia'num . **O. schlieperianum**
SOLON (*adrianae* × *armainvillierense* (*ardentissimum*))
SORAMIS (*Phoebe* × *crispum*)
Souvenir de Victor Hye de Crom **O. hyeanum**
spectab'ile (*crispo-harryanum; crispum* × *harryanum*)
thomp'soni
Not found, probably the same as O. thompsonianum.
thompsonia'num (*crispum* × *edwardi*)
tigri'num (*Fascinator* × *harryanum*)
Not to be confused with O. tigrinum of Lindley (probably not in cultivation), which is Oncidium tigrinum.

ORCHID GENERA (ODONTOGLOSSUM), continued

trium'phans
triumpho'sum (*triumphans* × *cirrhosum*)
uro-skin'neri
VENILIA (*cirrhosum* × *pescatorei*)
vuylste'kei (*denisonae* × *triumphans*)
Not to be confused with Odontoglossum vuylstekeae which is the result of a different cross, O. spectabile × O. vuylstekei.
warnhamen'se (*halli* × *pescatorei*)
wilckea'num . . . . . **O. denisonae**
williamsia'num
Nat. hyb. between O. grande and O. schlieperianum.

The following cross has appeared in horticulture without a name:
cirrhosum × *crispum* . . . . . PHOEBE

ODONTO'NIA

Crosses between Miltonia and Odontoglossum.
laires'seae (*M. warscewiczi* × *O. crispum*)

ONCIDIO'DA

Crosses between Oncidium and Cochlioda.
charles'worthi (*O. incurvum* × *C. noezliana*)

ONCID'IUM

altis'simum
Some of the material in cultivation may be O. baueri of which O. altissimum of Lindley, not of Swartz, is a synonym.
amplia'tum
—ma'jus
anthocre'ne
auro'sum . . . . . **O. excavatum**
barba'tum
bicallo'sum
caloglos'sum (*Oncidium pectorale caloglossum* ABL)
Supposed by some to be a nat. hyb. between O. forbesi and O. marshallianum.
carthaginen'se
cavendishia'num
cebollet'a
con'color
cornig'erum
cris'pum
cur'tum
divarica'tum
excava'tum (*aurosum*)
flexuo'sum
forbes'i
fusca'tum . . . **Miltonia warscewiczi**
gard'neri
graminifo'lium
—wray'i
gutta'tum ABL . . . . . **O. luridum**
harrisonia'num
hasta'tum
incur'vum
jonesia'num
krameria'num
lancea'num
leucochi'lum
lon'gipes
lu'ridum (*guttatum* ABL)
macran'thum
marshallia'num
microchi'lum
oblonga'tum
ornithorhyn'chum
—albiflo'rum (*ornithorhynchum album*)
—al'bum
O. ornithorhynchum albiflorum

ORCHID GENERA (ONCIDIUM), continued

ornithorhyn'chum rose'um
papil'lio . . . . . BUTTERFLY ORCHID
—ma'jus
pectora'le caloglos'sum ABL
O. caloglossum
phymatochi'lum
pu'bes
pulchel'lum
pulvina'tum
reichenheim'i
Not found, presumably an error and Odontoglossum not Oncidium was intended.
rog'ersi . . . . **O. varicosum rogersi**
sarco'des
sphacela'tum
—ban'rei
splen'didum (*tigrinum splendidum* ABL)
thymatochi'lum
Not found, probably an error for phymatochilum.
tigri'num
—unguicula'tum (*unguiculatum*)
unguicula'tum **O. tigrinum unguiculatum**
unifio'rum
varico'sum
—rog'ersi (*rogersi*)
wentworthia'num

OR'CHIS . . . . . ORCHIS
incarna'ta
latifo'lia . . . . . MARSH O.
macula'ta . . SPOTLEAF O. (*Crowfoot*)
mas'cula . . . . . MALE O. (*Aaronsbeard; Crowfoot*)

ORNITHID'IUM
den'sum (*Maxillaria densa*)
fra'grans

ORNITHOCHI'LUS . . BIRDLIP
fus'cus . . . . . BURMESE B.

PAPHIOPED'ILUM Cy
CYPRIPEDIUM

PERISTE'RIA
ela'ta . . . . . HOLYGHOSTFLOWER

PESCATO'REA . **ZYGOPETALUM**
Also written Pescatoria, as in Bailey's Cyclopedia. Pescatorea is recognized by some botanists as a distinct genus.
au'rea
Not found, probably some garden form of Zygopetalum.
ceri'na Cy . . . . . **Z. cerinum**
clabocho'rum . . . . **Z. klabochorum**
daya'na Cy . . . . . **Z. dayanum**
—rhoda'cra Cy **Z. dayanum rhodacrum**
klabocho'rum Cy . . **Z. klabochorum**

PHAI'US . . . . . **PHAJUS**

PHA'JUS
The original spelling of the name and the form now commonly accepted in scientific works is Phajus; the change is so slight that it has been deemed best to adopt the more correct spelling. ABL.
cook'sonae (*grandifolius* × *humbolti*)
cook'soni (*Norman; simulans* × *wallichi*)
grandifo'lius
incarvil'lei ABL . . . . . **P. wallichi**
macula'tus

ORCHID GENERA (PHAJUS), continued

mar'thae (*blumei* × *simulans*)
Norman . . . . . **P. cooksoni**
sanderia'nus
Not certain, but probably the same as P. sanderi.
wal'lichi (*incarvillei* ABL)

PHALAENOP'SIS . . MOTHORCHID
amab'ilis (*grandiflora*)
—rimestadtia'na (*rimestadtiana*)
APHRODITE (*Phalaenopsis amabilis Aphrodite* ABL)
CYNTHIA
Supposed nat. hyb. between P. schilleriana and P. amabilis.
eques'tris ABL . . . . . **P. rosea**
ESMERALDA
grandiflo'ra . . . . . **P. amabilis**
grandifo'lia
Not found, probably an error for grandiflora.
leucorrho'da (*Phalaenopsis Aphrodite leucorrhoda* Cy)
Claimed by some to be a nat. hyb. between P. schilleriana and P. amabilis, by others, including Rolfe, a hyb. between P. Aphrodite and P. schilleriana, and by still others, to be a variety of P. Aphrodite, which in turn we feel is a variety of P. amabilis, a treatment reducing this to a sub-variety of that species. ABL.
lueddemannia'na
—ochra'cea
rimestadtia'na
P. amabilis rimestadtiana
A geographical form of P. amabilis.
rose'a (*equestris* ABL)
sanderia'na (*P. Aphrodite sanderiana* Cy)
Considered by some to be a nat. hyb., by others a variety of P. Aphrodite which we believe to be a variety of P. amabilis and this a sub-variety of that species. ABL.
schilleria'na
stuartia'na
viola'cea

PHOLIDO'TA
auricula'ta
Not found, possibly an error for P. articulata.
conchoid'ea . . . . . **P. imbricata**
imbrica'ta (*conchoidea*)
monostach'ys
Not found.
variega'ta
Not found, probably some garden variety.

PHRAGMOPED'ILUM Cy
CYPRIPEDIUM

PHYSOSI'PHON
loddige'si (*tubatus* ABL)

PILUM'NA . . . **TRICHOPILIA**
fra'grans . . . . . **T. fragrans**
—no'bilis . . . . . **T. fragrans** var.

PLATYCLI'NIS Cy
DENDROCHILUM

PLEIO'NE
Often considered only a section of Coelogyne.
birman'ica
lagena'ria
macula'ta
prae'cox wallichia'na ABL
P. wallichiana
wallichia'na (*Pleione praecox wallichiana* ABL)

ORCHID GENERA, continued

PLEUROTHAL'LIS
gel'ida
roez'li
tridenta'ta
velaticau'lis

POLYSTACH'YA
bractes'cens
Not found, probably an error for P. bracteosa.
ce'rea
lutes'cens
Not found, probably an error for P. luteola.
rufin'ula

PROMENAE'A
Often considered only a section of Zygopetalum.
citri'na (*P. xanthina* ABL-Cy; *Zygopetalum xanthinum*)

RENAN'THERA
coccin'ea
imschootia'na
—al'ba
low'ei Cy . . . . **Arachnanthe lowei**
sto'riei

RHYNCHOS'TYLIS
retu'sa (*Saccolabium retusum; S. blumei*)
—gutta'ta (*S. guttatum*)
viola'cea (*S. violaceum; Anota violacea* ABL)
RODRIGUE'ZIA ABL
BURLINGTONIA

SACCOLA'BIUM
belli'num
blu'mei . . . . **Rhynchostylis retusa**
gigan'teum . . . . . **Vanda densiflora**
gutta'tum **Rhynchostylis retusa guttata**
illus'tre
Probably Vanda densiflora illustris.
retu'sum . . . . **Rhynchostylis retusa**
viola'ceum . . . . . **R. violacea**

SARCAN'THUS
williamso'ni

SARCOCHI'LUS
calceo'lus . . **Thrixspermum calceolus**
pal'lidus (*unguiculatus*)
purpu'reus . . . **Camarotis purpurea**

SARCOGLOT'TIS
pic'ta (*Spiranthes picta*)
SCHOMBURGH'IA
SCHOMBURGKIA

SCHOMBURG'KIA
cris'pa
ly'onsi
tibici'nis (*tibicina*)
undula'ta

SCUTICA'RIA
had'weni
steel'i

SELENIPE'DIUM
The plants cultivated under this name belong to Paphiopedilum and are listed under Cypripedium. The true Selenipedium of botanists is, as far as known, not in cultivation.
brown'i . . . **Cypripedium ainsworthi**
Bry'sa . . . . . **C. BRYSA**
cardina'le . . . . . **C. cardinale**
cauda'tum . . . . . **C. caudatum**
gran'de . . . . . **C. grande**
hele'nae . . . . . **C. schroederae**
roez'li . . . . **C. longifolium hartwegi**
se'deni . . . . . **C. sedeni**

ORCHID GENERA, continued

SERRAS'TYLIS

modes'ta (*Macradenia* ABL)

SIGMATOSTA'LIX

rad'icans

SOBRA'LIA

amesia'na (*wilsoni* × *xantholeuca*)
leucoxan'tha
macran'tha
—al'ba (*macrantha kienastiana* Cy)
virgina'lis
wilsonia'na
Not found, probably the same as wilsoni.
xantholeu'ca

SOPHROCATLAE'LIA

Also written Sophro-Catlealia. Crosses between Sophronitis, Cattleya, and Laelia.

dana'e (*Sophrolaelia laeta* × *C. harrisoniana*)
MEDEIA (*Sophrolaelia orpeti* × *C. bicolor*)

SOPHROCAT'TLEYA

Also written Sophro-Cattleya. Crosses between Sophronitis and Cattleya.

DORIS (*Sophronitis grandiflora* × *C. dowiana*)
PSYCHE
Hyb. not found, probably Sophrolaelia Psyche.

SOPHROLAE'LIA

Also written Sophro-Laelia. Crosses between Sophronitis and Laelia.

Phrosa . . . . . PHROSO
PHROSO (*Sophrolaelia Phrosa; Sophrolaelia laeta* × *L. jongheana*)

SOPHRONI'TIS

cer'nua
coccin'ea . . . . . **S. grandiflora**
grandiflo'ra (*coccinea*)

SPATHOGLOT'TIS

aureo-vieillard'i Cy . . . **S. veitchi**
plica'ta
rubro-vieillard'i
Not found, probably some garden variety.
veitch'i (*aureo-vieillardi* Cy; *aurea* × *vieillardi*)

STANHO'PEA

amesia'na (*lowi* ABL-Cy)
buceph'alus
devonien'sis
eburne'a
grandiflo'ra
This name cannot be placed with certainty. S. grandiflora, of Lindley, is the same as S. eburnea while S. grandiflora of the younger Reichenbach equals S. bucephalus, both of which are in cultivation.
insig'nis
langleyen'sis
Not found, probably a garden form.
low'i ABL-Cy . . . . . **S. amesiana**
ocula'ta
reichenbachia'na
tigri'na
—au'rea
—venus'ta

STENOGLOT'TIS

fimbria'ta
longifo'lia

TAI'NIA (*ASCOTAINIA*)

viridifus'ca

TETRAMI'CRA . . **LEPTOTES**

ORCHID GENERA, continued

THRIXSPER'MUM

calceo'lus (*Sarcochilus calceolus*)

THU'NIA

Joined by some to Phajus.

al'ba
benson'iae (*alba bensoniae* ABL)
marshallia'na (*alba marshalliana* ABL)
wrigleya'na (*bensoniae* × *marshalliana*)
The more correct name (if this form is recognized) is T. veitchiana, but our feeling is that it is nothing but a cross between two plants which we consider to be only varieties of T. alba and is therefore scarcely worthy of notice.

TRICHOPI'LIA

coccin'ea (*marginata* ABL-Cy)
—margina'ta (*marginata* ABL-Cy)
fra'grans (*Pilumna fragrans*)
gigan'tea
Not found.
hen'nesi . . . . . **T. hennisiana**
hennisia'na (*hennesi*)
her'misi
Not found, perhaps an error for T. hennisi which is the same as T. hennisiana.
sua'vis
tor'tilis

TRICHOS'MA Cy . . . **ERIA**
sua'vis Cy . . . . . **E. coronaria**

TRIGONID'IUM

amesia'num
Not found, probably a garden variety.
egertonia'num

VAN'DA

amesia'na
bate'mani (*Vandopsis lissochiloides* ABL-Cy)
ben'soni
box'alli Cy . . . **V. lamellata boxalli**
caeru'lea (*coerulea* ABL)
—albes'cens
—roehrsia'na
caerules'cens (*coerulescens* ABL)
crista'ta
denisonia'na (*dennisoniae*)
denniso'niae . . . . **V. denisoniana**
densiflo'ra (*Saccolabium giganteum*)
—illus'tris
gigan'tea (*Vandopsis gigantea* ABL-Cy; *Stauropsis gigantea*)
hookeria'na
joaqui'miae (*Miss Joaquim; hookeriana* × *teres*)
kimballia'na
lamella'ta
—box'alli (*boxalli* Cy)
limba'ta
low'ei . . . . . **Arachnanthe lowei**
luson'ica . . . . . **V. luzonica**
luzon'ica (*lusonica*)
Miss Joaquim . . . . **V. joaquimiae**
par'ishi
—mariottia'na
rox'burghi (*tessellata* ABL)
sanderia'na (*Euanthe sanderiana* ABL)
sua'vis (*tricolor suavis* Cy)
te'res
—al'ba
—anderso'ni
—*auro'ra* . . . . **V. teres aurorea**
—aurore'a (*teres aurora*)
—can'dida
—tri'color
Probably the same as V. tricolor.

ORCHID GENERA (VANDA), continued

tessella'ta ABL . . . . **V. roxburghi**
tri'color
—dodg'soni
—planila'bris
—*sua'vis* . . . . . **V. suavis**

VANDOP'SIS

lissochiloi'des

VANIL'LA . . . . . VANILLA
aromat'ica . . . SOUTH AMERICAN V.
inodo'ra . . . . . TRINIDAD V.
planifo'lia (*fragrans*) . MEXICAN V.
tahiten'sis . . . . . TAHITI V.

WARSCEWICZEL'LA

By many joined to Zygopetalum.

aromat'ica
Little known.
dis'color
wend'landi

XYLO'BIUM

hyacinthi'num (*Maxillaria hyacinthina*)
leontoglos'sum

ZYGOPET'ALUM

Including Bollea and Pescatorea.

burk'ei
burt'i (*Huntleya burti* Cy; *Batemania burti*)
ceri'num (*Pescatorea cerina* Cy)
coeles'te (*Bollea coelestis* Cy)

OROX'YLUM (*OROXYLON*) INDIA TRUMPETFLOWER
The spelling of this name in literature is highly inconsistent. Professor Rehder, under date of September 5, 1940, furnishes the Editorial Committee with this note: "Oroxylum seems to be the correct spelling. . . . Pfeiffer in his Nomenclator credits Oroxylum to Ventenat (the author of the genus) and Oroxylon to Steudel as a change in spelling made by the latter."

Hort. var. of **Paeonia,** PEONY:

In the former edition of STANDARDIZED PLANT NAMES a list of horticultural varieties of Peonies was furnished by the American Peony Society. As the Editorial Committee has been unable to obtain a Peony list from that Society for this edition, we present below, as the best practicable alternative, a list collated by us from the three following sources: (1) "Peonies: The Manual of the American Peony Society," edited by James Boyd, 1928; (2) "Supplement to the Manual of the American Peony Society," compiled by A. F. Saunders, 1933; (3) "American Peony Society List of Peonies for Rating," by George W. Peyton, 1939.

ABBREVIATIONS OF PEONY CLASSIFICATION TYPES

Ane.	Anemone
C.	Chinese
D.	Double
HH.	Herbaceous Hybrids
J.	Japanese
S.	Single
T.	Tree

PALM GENERA

Taxonomically, palms are among the most difficult of all groups in the entire plant world to classify and systematize, and perhaps may always remain so. Under these severe limitations the Editors of STANDARDIZED PLANT NAMES believe that the following treatment by Dr. Bomhard is probably the most authentic and up-to-date of any at present available. On behalf of the American Joint Committee we wish to acknowledge our great indebtedness to the author.

HARLAN P. KELSEY, *Chairman,*
EDITORIAL COMMITTEE S.P.N.

This list is intended primarily to include palms reported to be in cultivation in this country or of economic interest. The common names necessarily conform to the plan adopted for this book. In recent years, the nomenclature of palms has undergone considerable revision at the hands of various authorities and many new species are being described. The latest publications should be consulted.

MIRIAM L. BOMHARD,
Forest Service,
U. S. Department of Agriculture

ACANTHOPHOE'NIX SPINEPALM
crini'ta (*Areca c.*) . . . . WOOLLY S.
no'bilis . . . . . **Deckenia n.**
ru'bra (*Areca r.* Bory,*not* Hort.) RED S.
Palms cultivated at present in this country under the name of Acanthophoenix probably do not belong to this genus.

ACANTHORRHI'ZA **CRYOSOPHILA**

ACANTHOSA'BAL . **PAUROTIS**

ACOELORRA'PHE . . **BRAHEA; PAUROTIS; SERENOA**

ACRIS'TA . . . . . **EUTERPE**

ACROCO'MIA . . . . ACROCOMIA
aculea'ta . . . . . GRUGRU A.
armenta'lis (*crispa*) CUBAN A. (*Corojo*)
fusifor'mis . . . . . JAMAICA A.
me'dia . . PUERTORICO A. (*Corozo*)
mexica'na . . . . . COYOL

Hort. var.; HV. = horticultural variety (or varieties); sp. = species (singular); spp. = species (plural).
¢ = clon; × (as a prefix) = hybrid; × (between scientific plant names) = crossed by; ∞ = polybrid; 🌿 = plant useful to wildlife.
See Glossary for definitions of clon, hybrid, and polybrid.

ferrugin'eum . . . . . SALENTO W.
quindiuen'se . . . . . QUINDIO W.

CHAMAEDORE'A CHAMAEDOREA; PACAYA

The male and female spadices are usually borne on separate plants in this genus, which is not well understood botanically. Some of the species are favorite household or patio palms. Among invalid genera synonymous with or related to Chamaedorea, the following should be mentioned: Collinia; Edanthe; Kinetostigma; Neanthe; Nunnezharia; Nunnezharoa; Nunnezia; Omanthe; Spathoscaphe; Stachyophorbe; and Stephanostachys. Several of these are, nevertheless, herein listed as though valid.

adscen'dens (*Kinetostigma a.*)
arenbergia'na (*Spathoscaphe a.*)
atrovi'rens
bambusoi'des Hort.

This name is obscure.

con'color (*lindeniana* Wendl., *not* Hort.; *Nunnezharoa c.*)
coralli'na (*not Morenia c.*) **C. oblongata**
costarica'na . . . . . **Omanthe c.**
desmoncoi'des (*Nunnezharoa d.*)
ela'tior (*Nunnezharoa e.*). CLIMBING C.

C. scandens, sometimes referred here, appears to be a separate species.

el'egans Auth. **Eleutheropetalum sartorii**
el'egans Mart. . . . . **Neanthe e.**
ernesti-augus'ti (*Morenia e.; Nunnezharoa e.*) . . . **Eleutheropetalum e.**
fibro'sa . . . . **Synecanthus fibrosus**
fra'grans (*Nunnezharia f.; Nunnezia f.*)
geonomaefor'mis (*geonomiformis; Nunnezharia g.*) . . . GUATEMALA P.
glaucifo'lia (*Nunnezharoa g.*)
graminifo'lia (*Nunnezharoa g.*) MONKEYTAIL P.
karwinskya'na (*lindeniana* Hort., *not* Wendl.)
lindenia'na Hort. . . **C. karwinskyana**
lindenia'na Wendl. (*not Morenia l.*) **C. concolor**
martia'na (*Stephanostachys m.*)
neurochlam'ys
oblonga'ta (*corallina; lunata; Nunnezharoa l.; N. oblongata*)
oblonga'ta Wendl., *not* Mart. **Eleutheropetalum sartorii**
paca'ya (*Nunnezharoa p.*) ORSTED P.
prin'glei
pulchel'la . . . . . **Neanthe elegans**
pu'mila (*Nunnezharoa p.*)
sarto'rii . . . . . **Eleutheropetalum s.**
scan'dens

Sometimes referred to C. elatior.

schip'pi
simplic'ifrons Hort. **Eleutheropetalum ernesti-augusti**
tepejilo'te Liebm. . . . . **Edanthe t.**
tepejilo'te Wendl. . . **C. wendlandiana**
tuerckhei'mi (*Kinetostigma t.; Malortiea t.*)
veraepa'cis . . . . . **Edanthe v.**

PALM GENERA (CHAMAEDOREA), con.

wendlandia'na (*tepejilote* Wendl., *not* Liebm.; *Nunnezharoa w.; Stephanostachys w.*)

Palms planted as this species may be Edanthe tepejilote.

CHAMAE'ROPS MEDITERRANEANPALM (*Hairpalm*)
bi'roo (*byrrho*) . **Livistona rotundifolia**
excel'sa Mart. . **Trachycarpus fortunei**
excel'sa Thunb. . . . . **Rhapis e.**
fortun'ei . . . . . **Trachycarpus f.**
grif'fithi . . . **Trachycarpus martianus**
hu'milis . . . . MEDITERRANEANPALM (*Hairpalm*)

There are numerous synonymous names for this variable species of a monotypic genus. Some are valid varietal names. The more important varieties in cultivation in this country are listed below.

—arbores'cens
—argen'tea
—canarien'sis . . . . . CANARY M.
—dactylocar'pa . . . DATEFRUIT M.
—el'egans
—macrocar'pa
hys'trix . . . . . **Rhapidophyllum h.**
khasia'na . **Trachycarpus martianus**
martia'na . . . . . **T. martianus**
moci'ni . . . . . **Cryosophila nana**
nepalen'sis. **Trachycarpus wagnerianus**
ritchiea'na . . . . . **Nannorrhops r.**
serrula'ta . . . . . **Serenoa repens**
stauracan'tha Hort.

This name is probably referable to Cryosophila nana.

ta'kil . . . . . **Trachycarpus t.**

CHAMBEYRO'NIA (*KENTIOPSIS* in part) CHAMBEYRONIAPALM
hook'eri (*Kentia lindeni* Hort.; *K. macrocarpa* Brongn., *not* Vieill.)
macrocar'pa (*Kentia lindeni* Hort.; *K. macrocarpa* Vieill., *not* Brongn.; *Kentiopsis m.*)

CHRYSALIDOCAR'PUS BUTTERFLYPALM
bar'oni . . . . . **Neodypsis b.**
decip'iens . . . . . **Macrophloga d.**
lucuben'sis . . . . . LUCUBA B.
lutes'cens (*Areca l.; A. madagascariensis* Mart., *not* Hort.; *Hyphaene indica* Hort., *not* Gaertn.) YELLOW B.
madagascarien'sis (*Areca m.* Hort., *not* Mart.; *Dypsis m.* Hort.) MADAGASCAR B.

CLINOSTIG'MA
moorea'num. **Lepidorrhachis mooreana**

COCCOTHRI'NAX (*THRINAX* in part; *THRINCOMA; THRINGIS*) . . . . . SILVERPALM
al'ta (*argentea* Brit. & Wils., *not* Sarg.; *latifrons; laxa; Thrincoma a.; Thringis latifrons; T. laxa*) PUERTO RICAN S.

Palms of this species are frequently planted under the name Thrinax altissima.

anom'ala . . . . **Zombia antillarum**
argenta'ta (*argentea* Auth., *not* Sarg.; *garberi; jucunda; Thrinax garberi*) FLORIDA S.
argen'tea (*Thrinax a.*) LATANIERBALAI
argen'tea Auth., *not* Sarg. **C. argentata**
argen'tea Brit. & Wils., *not* Sarg. **C. alta**
barbaden'sis (*Thrinax b.*)

Not identified among cultivated palms.

PALM GENERA (COCCOTHRINAX), con.

lat'ifrons . . . . . **C. alta**
lax'a . . . . . **C. alta**
mar'tii
See note under Thrinax martii.
miragua'ma (*miraguano; Copernicia m.; Thrinax m.; T. yuraguana*) MIRAGUAMA S.
pauciramo'sa
radia'ta (*Thrinax r.*)

CO'COS . . . . . COCONUT
This genus includes only one species, C. nucifera. Segregated genera of close relationship to Cocos are Arecastrum, Arikuryroba, Barbosa, Butia, Rhyticocos, and Syagrus.

alphon's(e)i Hort.
This name is botanically obscure.
ama'ra . . . . . **Rhyticocos a.**
arechavaleta'na . . . . . **Arecastrum romanzoffianum australe**
argen'tea Engel . . . . . **Syagrus a.**
argen'tea Hort.
This name is misapplied to some palm other than the true Syagrus argentea, which is not cultivated in this country.
arikuryro'ba. **Arikuryroba schizophylla**
austra'lis Hort. . . . . **Butia capitata**
This name has been misapplied to Butia eriospatha.
austra'lis Mart. . . . . **Arecastrum romanzoffianum australe**
blumena'via Hort.
This name may refer to Butia eriospatha or to B. capitata.
bonnet'i Hort. . . . . **Butia b.**
botryoph'ora . . . . . **Arecastrum romanzoffianum botryophorum**
brazilien'sis Hort.
A name of unknown application.
campes'tris Hort.
Perhaps referable to Butia capitata.
campes'tris Mart. . . . . **Syagrus c.**
capane'mae. **Arikuryroba schizophylla**
capita'ta . . . . . **Butia c.**
como'sa . . . . . **Syagrus c.**
Syagrus comosa is apparently not in cultivation. The name has been misapplied to a species of Butia.
corona'ta Hort. . . . . **Butia capitata**
corona'ta Mart. . . . . **Syagrus c.**
da'til . . . . . **Arecastrum romanzoffianum australe**
eriospa'tha Lindm. . . . **Butia yatay**
eriospa'tha Mart. . . . . **Butia e.**
flexuo'sa Hort. . . . . **Arecastrum romanzoffianum australe**
flexuo'sa Mart. . . . . **Syagrus f.**
gaert'neri Hort. . . . . **Butia bonneti**
ger'iba . . . . . **Arecastrum romanzoffianum botryophorum**
hu'milis Hort. in part **Butia capitata strictior**
insig'nis . . . . . **Syagrus i.**
lapid'ea
A name of uncertain application.
leiospa'tha . . . . . **Butia l.**
littora'lis Hort.
This name has been applied to some Butia.

PALM GENERA (COCOS), continued

macrocar'pa . . . . . **Syagrus m.**
mariae-regi'nae Hort.
This name is botanically obscure.
marit'ima Hort.
This name is botanically obscure.
martia'na . . . . . **Arecastrum romanzoffianum botryophorum**
maximilia'na
Perhaps referable to a Syagrus.
nehrlingia'na (*nehrlingi*) **Butia capitata n.**
norman'byi . . . . . **Normanbya n.**
nucif'era . . . . . COCONUT
KING. HV.
MAKAPUNO
NAWASI

paraguayen'sis . . . . . **Butia p.**
petrae'a . . . . . **Syagrus p.**
plumo'sa **Arecastrum romanzoffianum**
procopia'na . . **Syagrus macrocarpa**
pulpo'sa . . . . . **Butia capitata p.**
romanzoffia'na **Arecastrum romanzoffianum**
rupes'tris . . . . . **Syagrus petraea**
sap'ida Barb. Rodr. . . . . **Syagrus s.**
sap'ida Hort. . . . **Rhopalostylis s.**
schizophyl'la . . . . . **Arikuryroba s.**
sya'grus . . . . . **Syagrus cocoides**
vinif'era Hort.
This is an unidentified name.
vinif'era Mart. . . **Pseudophoenix v.**
weddellia'na . . . . . **Syagrus w.**
yatay' . . . . . **Butia y.**
yuruma'guas Hort.
Perhaps referable to a form of Butia yatay.

COELOCOC'CUS. **METROXYLON**
Although Coelococcus is at present considered to be inseparable botanically from Metroxylon, it may on further research again be recognized. The genus name is well established and will likely continue in usage inasmuch as one of the species has long furnished the Polynesian Ivorynuts or Tahitinuts of commerce.

COLEOSPA'DIX
angustifo'lius (*oninensis; Ptychosperma angustifolium*)
oninen'sis . . . . . **C. angustifolius**
Some of the palms in cultivation under the names Ptychosperma angustifolium and C. oninensis are Actinophloeus macarthuri or an undetermined species of Actinophloeus.

COLLIN'IA . **CHAMAEDOREA**

COLPOTHRI'NAX . . BARRELPALM
wright'i (*Pritchardia w.*) . BARRELPALM

COPERNIC'IA . . . . COPERNICIA
C. australis and C. cerifera have been grown in southern California and southern Florida. The remainder of the species here listed are mainly Cuban and of recent introduction.

austra'lis (*Corypha cerifera* Mart. in part, *not* Arr. Camara). CARANDA C.
balleya'na . . . . . BAILEY C.
brittono'rum . . . . . BRITTONS C.
burretia'na . . . . . BURRET C.

PAN'AX . . . . . GINSENG

Panax appears to be masculine in the original Greek but was treated as neuter by Linnaeus in Ed. 1 of Species Plantarum. Hence, under Art. 72 (1) of International Rules it is a neuter word. However, Prof. Rehder, who is a member of the Special (International) Committee on plant nomenclature, informs the Editorial Committee of this book that his committee recommended that a generic name retain its classical gender, the International Botanical Congress at Amsterdam (1935) making that a recommendation rather than a rule. This obviously raises a controversy over the gender of such a name as Panax; it can, therefore, be regarded (as Prof. Rehder does) as masculine or else as neuter. S. P. N. adopts the former policy.

foe'tida . . . . . TAGUA P.
—**hasta'ta** (*P. hastata*)
grac'ilis . . . . . CRINKLED P.
hermesia'na (*raddiana*)
ig'nea . . . . . P. manicata
incarna'ta lw . . . . . MAYPOP P.
jameso'ni (*Tacsonia j.*) . JAMESON P.
Sometimes misapplied to P. tomentosa.
lana'ta (*Tacsonia l.*)
laurifo'lia . . . . . WATERLEMON (*Yellow Granadilla*)

PASSIFLORA, continued
ligula'ris . . . . SWEET GRANADILLA
lute'a . . . YELLOW PASSIONFLOWER
macrocar'pa . . . P. quadrangularis
malifor'mis CURUBA P. (*Kuruba P.*)
manica'ta (*ignea; Tacsonia m.*) RED P.
milita'ris . . . . . SOLDIER P.
mix'ta (*Tacsonia m.*)
mollis'sima (*Tacsonia m.*) SOFTLEAF P.
multifor'mis
This name has been misapplied in the past to P. maliformis.
pfordt'i . . . . . ×P. alatocaerulea
quadrangula'ris (*macrocarpa*) GIANT GRANADILLA
racemo'sa (*princeps*)
raddia'na . . . . . P. hermesiana
ru'bra
tomento'sa (*Tacsonia t.*) . WOOLLY P.
trifascia'ta . . . . . THREEBAND P.
vanvolx'emi . . . . P. antioquiensis
viola'cea . . . . . VIOLET P.

PASSIONFLOWER . . . . . Passiflora
ANTIOQUIEN P. . . . P. antioquiensis
BANKS P. . . . . P. banksi
BLUECROWN P. . . . . P. caerulea
COLVILLE P. . . . . ×P. colvillei
CRINKLED P. . . . . P. gracilis
CURUBA P. . . . . P. maliformis
GIANT GRANADILLA P. quadrangularis
JAMESON P. . . . . P. jamesoni
Kuruba P. . . . . . CURUBA P.
MAYPOP P. . . . . P. incarnata
PURPLE GRANADILLA . . . P. edulis
RED P. . . . . P. manicata
SCARLET P. . . . . P. coccinea
SOFTLEAF P. . . . . P. mollissima
SOLDIER P. . . . . P. militaris
SWEET GRANADILLA . . . P. ligularis
TAGUA P. . . . . P. foetida
THREEBAND P. . . . . P. trifasciata
VIOLET P. . . . . P. violacea
WATERLEMON . . . . . P. laurifolia
WHITE P. . . . . P. alba
WINGSTEM P. . . . . P. alata
WOOLLY P. . . . . P. tomentosa
YELLOW P. . . . . P. lutea
Passionfruit . . . GRANADILLA, PURPLE: Passiflora edulis

PASTINA'CA lw . . . . . PARSNIP
sati'va lw . . . . . GARDEN P.
—**sylves'tris** . . . . . WILD G.P.

PATAGONIATREE . . . . . Patagonula
GUAYAIBI P. . . . . P. americana

PATAGON'ULA . . . PATAGONIATREE
america'na . . . . . GUAYAIBI P.

PATCHOULI
CABLIN P. . . . . Pogostemon cablin
HEYNE P. . . . . P. heyneanus

PATENTS, PLANT

This list is compiled from the official records of the United States Patent Office, with the exception of the Introduction Names. As these do not appear on the original Patent Records, the Editorial Committee requested authentic information direct from the present owners or introducers themselves and have included the results so far as they have been received.

Many of these Introduction Names might well be shortened and in other ways changed to comply more nearly to rules of horticultural nomenclature as adopted by the Horticultural Section of the International Botanical Congress, or S.P.N. standards. Some examples are: *Mrs. Francis King* would become FRANCIS KING or MRS. KING; *McGredy's Triumph*, MCGREDYS TRIUMPH; *Sun Glow*, SUNGLOW, etc. See discussion of International Rules in Preface.

In the following alphabetical list the figures following the kinds of plants refer to Plant Patent numbers.

AGROSTIS. 143.
APPLE. 57, 61, 85, 90, 125, 168, 238, 258, 278, 293, 327, 388, 474.
APRICOT. 74, 476.
AVOCADO. 100, 139, 234, 261, 433.
AZALEA. 145, 147.
BARBERRY. 40, 99, 110, 189, 460.
BEGONIA. 265, 406.
BENT (GRASS). 143.
BLACKBERRY. *See* LOGANBERRY.
BRAMBLEBERRY. 39.
BUDDLEIA. 206.
CAMELLIA. 224, 231, 431.
CARNATION. 3, 24, 34, 35, 37, 56, 69, 127, 133, 148, 193, 198, 219, 239, 260, 273–275, 319, 344, 372, 398, 399, 434, 463.
CHERRY. 29, 30, 41, 94, 164, 188, 316, 421.
CHRYSANTHEMUM. 58, 64, 75, 76, 204, 205, 251, 310, 313, 352, 368, 390–392, 401.
CITRUS HYBRID. 142.
CLEMATIS. 471, 472.

PATENTS, PLANT, continued
DAHLIA. 19, 36, 322.
DAPHNE. 315.
DELPHINIUM. 324, 371.
DEWBERRY. 4.
DOGWOOD. 442.
FIRETHORN. 346.
FREESIA. 17, 32, 43, 44, 98, 128, 196, 237.
FUCHSIA. 440.
GARDENIA. 93, 364.
GERANIUM. 355, 424.
GLADIOLUS. 77, 227, 255, 280, 356–360, 404.
GRAPE. 42, 88, 195, 311.
GRAPEFRUIT. 53.
GYPSOPHILA. 384.
HYDRANGEA. 276, 415.
IVY. 429, 430.
JUNIPER. 54, 89, 422.
KNIPHOFIA. *See* TORCHLILY.
LEMON. 342.
LILY. 165, 436.
LILYOFTHEVALLEY. 250.
LIME. 444.
LOBELIA. 221.
LOGANBERRY 82, 247, 248.

PATENTS, PLANT, continued
MANGO. 119, 451.
MUSHROOM. 27.
NASTURTIUM. 141.
NECTARINE. 92, 173, 328.
ORANGE. 124, 126, 347, 477.
PANSY. 123.
PEACH. 7, 15, 31, 51, 81, 84, 86, 120, 161, 166, 175, 186, 232, 233, 262, 271, 283, 290, 291, 306, 320, 325, 351, 367, 418, 473.
PEAR. 309, 380, 435.
PECAN. 47, 73.
PHLOX. 118, 252, 329.
PLUM. 12, 13, 14, 16, 18, 111, 413.
POINSETTIA. 176, 242, 307, 336, 343.
POMEGRANATE. 184.
POPLAR. 207, 211–218, 225, 226, 228–230.
POPPY. 365.
PYRACANTHA. *See* FIRETHORN.
RASPBERRY. 113.
RHODODENDRON. 432.
ROSE. 1, 2, 5, 6, 8–11, 20–23, 25, 28, 33, 38, 45, 48–50, 52, 59, 62, 63, 65–67, 70, 72, 78–80, 87, 91, 95–97, 102–109, 114–117, 121, 122, 129–132, 134–138, 140, 144, 149–160, 162,

PATENTS, PLANT, continued
163, 167, 169–172, 174, 177–183, 185, 187–190–192, 194, 197, 199–202, 208, 209, 222, 223, 235, 236, 240, 241, 243–246, 248, 249, 253, 254, 256, 257, 259, 263, 264, 266–270, 272, 277, 279, 282, 284–289, 292, 295–301, 303–5, 312, 314, 317, 321, 323, 326, 330–335, 337–341, 348–350, 353, 354, 361–363, 366, 367, 369, 370, 373–379, 381–383, 385–387, 389, 393–396, 400, 402, 403, 405, 407–411, 414, 416, 417, 419, 420, 423, 425–428, 437–439, 441, 443, 445–450, 452–459, 461, 462, 464, 466–469, 475.
SANSEVIERIA. 470.
SHASTA DAISY. 465.
SNAPDRAGON. 68, 281, 302, 308.
STRAWBERRY. 26, 46, 60, 71, 101, 112, 345.
SUGARCANE. 203, 210, 220.
TOBACCO. 412.
TORCHLILY. 318.
TRITOMA. *See* TORCHLILY.
VIOLA. *See* VIOLET.
VIOLET. 83, 397.
WATERLILY. 55, 294.

PLANT PATENTS

(Through July 1, 1941)

No.	For	Patent Granted	Inventor	Assigned to	Introduction Name
1	Climbing or Trailing Rose	Aug. 18, 1931	Henry F. Bosenberg, New Brunswick, N. J.	Louis C. Schubert, New Brunswick, N. J.	The New Dawn
2	Rose	Oct. 13, 1931	Frank Spanbauer, North Kansas City, Mo.		Senior
3	Carnation	Oct. 20, 1931	Otto A. Muller, Ambler, Pa.	The Florex Gardens, North Wales, Pa.	Joan Marie
4	Thornless Young Dewberry	Oct. 20, 1931	Elmer L. Pollard and Jubal E. Sherrill, Chino, Calif.		Acme
5	Rose	Nov. 10, 1931	Victor Groshens, Roslyn, Pa.		La Vie
6	Hybrid Tea Rose	Feb. 16, 1932	Robert Lee Catron, Richmond, Ind.	The Joseph H. Hill Co., Richmond, Ind.	Sweet Adeline
7	Peach	Feb. 16, 1932	James E. Markham, Xenia, Ill.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Hal-berta Giant
8	Rose	Feb. 23, 1932	George B. Hart, Brighton, N. Y.		Mary Hart
9	Hybrid Tea Rose	Feb. 23, 1932	Robert Lee Catron, Richmond, Ind.	Joseph H. Hill Co., Richmond, Ind.	Afterglow
10	Climbing Rose	Mar. 8, 1932	Joseph W. Kallay, Painesville, Ohio.	Jackson & Perkins Co., Newark, N. Y.	Blaze
11	Hybrid Tea Rose	Mar. 22, 1932	Christian W. Hjermind, Maywood, Ill., and Paul E. Weiss, River Forest, Ill.	Premier Rose Gardens, Maywood, Ill.	Ambassador
12	Plum	Apr. 5, 1932	Elizabeth Waters Burbank, Known also as Elizabeth Burbank, Executrix of Luther Burbank, Deceased, Santa Rosa, Calif.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Burbanks June Red Skin
13	Plum	Apr. 5, 1932	"	"	Burbanks Great Yellow
14	Plum	Apr. 5, 1932	"	"	Burbanks Flaming Delicious
15	Peach	Apr. 5, 1932	"	"	Burbanks July Elberta
16	Plum	May 10, 1932	"	"	Burbanks Mammoth Cardinal
17	Freesia	May 24, 1932	William Russell Elder, Indianapolis, Ind.	Elder & Elder Nurseries, Indianapolis, Ind.	
18	Plum	July 19, 1932	Elizabeth Waters Burbank, Known also as Elizabeth Burbank, Executrix of Luther Burbank, Deceased, Santa Rosa, Calif.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	
19	Dahlia	July 19, 1932	Harold L. Ickes, Hubbard Woods, Ill.		Anna W. Ickes
20	Yellow Rose	Aug. 23, 1932	Earl H. Mann, Richmond, Ind.	E. G. Hill Co., Richmond, Ind.	Golden Talisman
21	Cerise Rose	Aug. 23, 1932	"	"	Sterling
22	Rose	Aug. 23, 1932	Charles N. White, Medina, N. Y.		Yellow Joanna Hill
23	Rose	Aug. 23, 1932	Robert Lee Catron, Richmond, Ind.	Joseph H. Hill Co., Richmond, Ind.	Better Times
24	Variety of Plant (Carnation)	Aug. 30, 1932	William Sim, Saugus, Mass.		My Love
25	Hybrid Tea Rose	Aug. 30, 1932	Wallace R. Pierson, Cromwell, Conn.		Souvenir

No.	For	Patent Granted	Inventor	Assigned to	Introduction Name
26	Strawberry	Aug. 30, 1932	Bert W. Keith and Bud H. Keith, Sawyer, Mich.		Keiths Kanner King
27	Mushroom	Sept. 20, 1932	Louis F. Lambert, Coatesville, Pa.		Golden White
28	Rose	Oct. 4, 1932	Walter D. Brownell and Josephine D. Brownell, Little Compton, R. I.		Mrs. Arthur Curtiss James; Golden Climber
29	Cherry	Oct. 4, 1932	Levi R. Taft, East Jordan, Mich.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Montlate
30	Cherry	Oct. 4, 1932	"	"	Monearly
31	Peach	Oct. 11, 1932	Maurice A. Blake, New Brunswick, N. J.	New Jersey State Agricultural Exp. Sta., New Brunswick, N. J.	White Hale
32	Freesia	Oct. 11, 1932	Gerald Hew Dalrymple, Bartley, near Southampton, England.	C. J. Van Bourgondien, Babylon, N. Y.	Maryon
33	Hybrid Tea Rose	Oct. 11, 1932	Paul M. Pierson, Ossining, N. Y.		
34	Carnation	Oct. 11, 1932	Abner B. Shaw, North Dartmouth, Mass.	Stephen E. Shaw, North Dartmouth, Mass.	Greatheart
35	Carnation	Oct. 18, 1932	Russell Engle, Kokomo, Ind.	Thomas L. Knipe, Kokomo, Ind.	Chief Kokomo
36	Dahlia	Oct. 18, 1932	Jesse J. Bromall, Eagle Rock, Calif.	Charles G. Reed, Lawrence, Mass.	
37	Carnation	Oct. 25, 1932	William Sim, Saugus, Mass.		
38	Rose	Oct. 25, 1932	Matthias Leenders, Teyl, Netherlands.	Jackson & Perkins Co., Newark, N. Y.	Comtesse Vandal
39	Brambleberry	Oct. 25, 1932	Percy W. Meredith, Oregon City, Ore.		
40	Thornless Barberry	Nov. 8, 1932	William Gordon Sutherland, Boulder, Colo.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Thornless Barberry
41	Cherry	Nov. 8, 1932	Elizabeth Waters Burbank, Executrix of the Estate of Luther Burbank, Deceased, Santa Rosa, Calif.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Burbanks Late Heart-honey
42	Grape	Nov. 8, 1932	Herman J. B. Wiederkehr, Altus, Ark.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Early Giant
43	Freesia	Nov. 8, 1932	Edward A. Manda, East Orange, N. J.		Joan Manda
44	Freesia	Nov. 22, 1932	Gerald Hew Dalrymple, Bartley, near Southampton, England.	C. J. Van Bourgondien, Babylon, N. Y.	Tangerine
45	Variety of Rose	Nov. 29, 1932	Emile J. LeDuc, Danville, Pa.		Emile J. LeDuc
46	Strawberry	Nov. 29, 1932	Ernest W. Townsend, Hannah E. Cordrey, Charles M. Freeman, For Eastern Shore Trust Co., Administrators of the Estate of Oliver C. Cordrey, Deceased, Salisbury, Md.	Ernest W. Townsend, Salisbury, Md.	
47	Pecan	Nov. 29, 1932	William H. Brake, Rocky Mount, N. C.		
48	Plant or Rosebush	Dec. 6, 1932	George B. Hart, Brighton, N. Y.		
49	Hybrid Tea Rose	Dec. 20, 1932	Nicholas Grillo, Milldale, Conn.		American Pride
50	Hybrid Tea Rose	Dec. 20, 1932	James Didato, Middlesex, N. J.		Watchung
51	Peach	Dec. 20, 1932	William F. Ramsey, Okanogan, Wash.; Andrew T. Gossman, Wenatchee, Wash.	Columbia & Okanogan Nursery Co., Wenatchee, Wash.	Candoka
52	Rose	Jan. 10, 1933	John A. Mason, Burlingame, Calif.		Vivid Mason
53	Colored Seedless Grape Fruit	Jan. 24, 1933	Albert E. Henninger, McAllen, Texas.		Rubyred
54	Evergreen Plant (Juniper)	Jan. 31, 1933	Willis Russell Gray, Oakton, Va.		
55	Water Lily	Feb. 28, 1933	George Harry Pring, St. Louis, Mo.	The Missouri Botanical Garden, St. Louis, Mo.	St. Louis
56	Carnation	Mar. 14, 1933	Adolphe F. J. Baur, Indianapolis, Ind.	Baur-Steinkamp & Co., Inc., Indianapolis, Ind.	Light Pink Abundance
57	Apple Tree	Mar. 21, 1933	John H. Dickey, Wenatchee, Wash.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Scarlet Staymared
58	Chrysanthemum	Mar. 21, 1933	Alexander Cumming, Jr., Bristol, Conn.	Bristol Nurseries, Inc., Bristol, Conn.	Mercury
59	Hybrid Tea Rose	Apr. 4, 1933	Albert J. Amling and Ernest C. Amling, Orange, Calif.	Amling Brothers, Santa Ana, Calif.	Red Talisman
60	Strawberry	Apr. 18, 1933	Carl E. Schuster, Corvallis, Ore.		Corvallis

No.	For	Patent Granted	Inventor	Assigned to	Introduction Name
61	Apple	Apr. 18, 1933	Edwin P. Wray, White Salmon, Wash.		
62	Rose	May 2, 1933	Marguerite Denoyel, Venissieux near Lyon, France.	Jackson & Perkins Co., Newark, N. Y.	Governor A. E. Smith
63	Rose	May 2, 1933	Louis Reymond, Villeurbanne, France.	Jackson & Perkins Co., Newark, N. Y.	Amelia Earhart
64	Chrysanthemum	May 2, 1933	James Wheeler and Francis L. Wheeler, Natick, Mass.; Francis Lionel Wheeler, Executor of said James Wheeler, Deceased.		Aladdin
65	Rose	May 16, 1933	Elizabeth Waters Burbank, Executrix of the Estate of Luther Burbank, Deceased, Santa Rosa, Calif.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Burbanks Apple Blossom
66	Rose	May 16, 1933	"	"	Burbanks Golden Sunset
67	Hybrid Tea Rose	June 20, 1933	Fred H. Howard, Montebello, Calif.	Minnie Jones Howard, Montebello, Calif.	Mrs. J. D. Eisele
68	Snap Dragon	June 20, 1933	Cecil C. Chamberlin, Chagrin Falls, Ohio.		
69	Carnation	June 20, 1933	Russell Engle, Kokomo, Ind.	Thomas L. Knipe, Kokomo, Ind.	Opal
70	Rose	July 18, 1933	Richard Diener, Oxnard, Calif.		Diener's Rose Understock
71	Strawberry Plant	July 25, 1933	Everett C. Howard, Belchertown, Mass.		Howard's Supreme
72	Pink Rose	July 25, 1933	Frank Schramm, Crystal Lake, Ill.		Mrs. Frank Schramm
73	Pecan Tree	July 25, 1933	James A. Simpson, Uvalde, Texas.	Humble Oil & Refining Co., Houston, Texas.	Humble
74	Apricot	Sept. 26, 1933	Harry Yount, Douglas Co.; Andrew T. Gossman, Wenatchee, Wash.	Andrew T. Gossman, Wenatchee, Wash.	Riland
75	Single Chrysanthemum	Sept. 26, 1933	Ryohitsu Shibuya, Menlo Park, Calif.		
76	Single Chrysanthemum	Sept. 26, 1933	"		
77	Gladiolus	Oct. 3, 1933	Carl Salbach, Berkeley, Calif.		Golden Goddess
78	Rose	Oct. 3, 1933	Vinzenz Berger, Chomutov (Komotau), Czechoslovakia.	Paul J. Howard, Los Angeles, Calif.	Heidekind
79	Rose	Nov. 7, 1933	Christoph Weigand, Soden, Germany.	Paul J. Howard, Los Angeles, Calif.	Symphony
80	Yellow Rose	Nov. 7, 1933	Frank H. Traendly, Brooklyn, N. Y.	Traendly & Schenck's Rowayton Greenhouses, Inc., Rowayton, Conn.	Mrs. Franklin D. Roosevelt
81	Plant (Peach)	Nov. 14, 1933	Vincent G. Lucas, Ontario, Calif.	Lucas Ranching Co., Cucamonga, Calif.	Lucas Beauty
82	Thornless Logan Blackberry	Nov. 14, 1933	Beulah E. Bauer and Gordon R. Bauer, San Gabriel, Calif.		Bauer's Thornless Loganberry
83	Viola	Nov. 28, 1933	Stuart R. Weston, Marcy, N. Y.		Cornuta York Gem
84	Peach	Nov. 28, 1933	William F. Yerkes, near Rio Oso, Calif.		Rio Oso Gem
85	Apple Tree	Jan. 16, 1934	William Uecker, Cashmere, Wash.	Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.	Jonared
86	Peach	Feb. 6, 1934	Oliver P. Blackburn, East Bakersfield, Calif.		
87	Rose	Mar. 13, 1934	Max Krause, Hasloh in Holstein, Germany.	The Conard-Pyle Co., West Grove, Pa.	Nigrette
88	Seedless Grape	Mar. 13, 1934	Leon O. Bonnet, Berkeley, Calif.		
89	Pendulous Juniperus scopulorum	Mar. 13, 1934	Carl Burton Fox, Tulsa, Okla.	¼ to Geo. X Frey, Santa Fe, N. Mex.	Weeping Scopulorum Juniper; Juniperus scopulorum pendula.
90	Apple	Apr. 3, 1934	Harry I. Shotwell, Wenatchee, Wash.	Columbia & Okanogan Nursery Co., Wenatchee, Wash.	Shotwell Delicious Apple
91	Red Rose	Apr. 3, 1934	Frank Spanbauer, Medina, N. Y.		Carmelita
92	Nectarine	Apr. 3, 1934	Maurice A. Blake, New Brunswick, N. J.	New Jersey State Agricultural Exp. Sta., New Brunswick, N. J.	Garden State
93	Gardenia Plant	Apr. 17, 1934	Walter E. Lenk, Belmont, Mass.		Belmont
94	Cherry	Apr. 17, 1934	Menno Gerber, Orville, Ohio.		
95	Hybrid Tea Rose	Apr. 24, 1934	Robt. J. Montgomery, Executor of the Estate of Alexander Montgomery, Deceased, Amherst, Mass.	The Montgomery Co., Inc., Hadley, Mass.	Token
96	Rose Plant	May 15, 1934	Josephine D. Brownell, Little Compton, R. I.		Golden Orange Climber
97	Rose	May 15, 1934	Warwick G. Bate, Newton Falls, Ohio.		Radiant Beauty

No.	For	Patent Granted	Inventor	Assigned to	Introduction Name
98	Freesia	May 22, 1934	William Pitt Morgan, Marion County, Ind.	Elder & Elder Nurseries, Indianapolis, Ind.	Miss Blanche Blue
99	Hybrid Barberry	June 26, 1934	Elmer H. Schultz and Michael Henry Horvath, Mentor, Ohio.	Wayside Gardens Co., Mentor, Ohio.	Mentorensis
100	Avocado	Aug. 7, 1934	Jennie C. Gano, Whittier, Calif.		Gano
101	Strawberry	Aug. 7, 1934	Edwin P. Wray, White Salmon, Wash.		
102	Rose	Sept. 18, 1934	Pedro Dot, San Feliu de Llobregat, near Barcelona, Spain.	The Conard-Pyle Co., West Grove, Pa.	Luis Brinas

PELARGO'NIUM . . . PELARGONIUM
This large, essentially South-African genus is the "Geranium" of the gardens as well as of the familiar city windowbox and flowerpot. It is closely related to the true Geranium (Geranium), differing from that genus in technical characters.
In accordance with STANDARDIZED PLANT NAMES principles, the common or vernacular name Geranium is confined to the genus Geranium and the common name Pelargonium is applied to the genus Pelargonium.

POISONOUS PLANTS

The annual losses in the United States from poisonous plants reach astonishing figures. It is estimated that they average around 4 percent per annum for range livestock and, in Colorado alone, the poisonous-plant toll is reported to average about $1,000,000 a year. Crazyweed, Deathcamas, Larkspur, Loco, Lupine, Podgrass (*Arrowgrass*), Poisonvetch, Sneezeweed, and Waterhemlock are perhaps the chief offenders. In addition, there is a considerable annual loss of human life from poisonous plants, such as toxic fungi (bacteria are here eliminated from consideration); children sometimes eat Waterhemlock tubers, Elderberry roots, raw Horsechestnuts, and the like, with occasional fatal results.

The list below, covering about 175 genera and 525 species and varieties of plants, is intended to cover the more important poisonous plants of the United States. The list is intended to be practical, omitting plants which are occasionally reported to be poisonous (often without adequate evidence) and common vegetables (such as Potato, which at certain stages may contain toxic compounds). It is confined to plants which are actually known to have poisoned livestock or human beings and to species (like Nettles and Poisonivy) which are definitely irritating to the human skin. It disregards the very numerous plants (such as Ceanothus) for which chemical analyses have demonstrated the presence of toxic alkaloids such as saponin, but which practical experience shows to be valuable forage plants. It should be remembered that, if every plant in the United States alone were listed against whose record some suspicious report has been raised or for which some chemical analysis has demonstrated the presence of some toxic (actual or alleged) compound, the number would run high in four figures. The list has been compiled from published and unpublished records of the United States Forest Service, including the "Range Plant Handbook" (1937), "Important Western Browse Plants" (1931), and a 14-page mss. list, by W. A. Dayton, "Preliminary List of National Forest Range Plants Poisonous to Livestock" (1931); from the copious toxicological literature of the various State Agricultural Experiment Stations and of the U. S. Department of Agriculture, particularly "Stock-Poisoning Plants of the Range," by the late C. Dwight Marsh (U. S. Dept. Agr. Bull. 1245, rev. 1929); also from the late L. H. Pammel's encyclopedic "A Manual of Poisonous Plants" (1911), and Walter Conrad Muenscher's "Poisonous Plants of the United States" (1939).

suave'olens . . . . . MONGOLIAN P.
This name is sometimes misapplied in cult. to P. cathayana and P. maximowiczi.
—pyramida'lis . . . PYRAMIDAL M.P.
szechua'nica . . . . . SZECHWAN P.
tacamaha'ca (*balsamifera* Muenchh. and Auth., *not* L.) . TACAMAHAC P.
The spelling tacamahacca observed by some authors is disapproved by Prof. Rehder, who states that the author of the name (Miller) cites Bauhin's "Pinax" as the source of name, where, as in other pre-Linnean works, the spelling is uniformly tacamahaca.

PRU'NUS (*AMYGDALUS; ARMENIACA; CERASUS; EMPLECTOCLADUS; LAUROCERASUS; PADUS; PERSICA*) lw . APRICOT; CHERRY; CHOKECHERRY; LAUREL-CHERRY; PEACH; PLUM

This large, variable genus contains the cultivated Almonds, Apricots, Cherries, Peaches, Plums, etc. See CHERRIES, ORIENTAL FLOWERING; **FRUIT AND EDIBLE NUT NAMES.**

The species which follow belong to sections or subgenera of the genus: Almonds and Peaches to the section (or subgenus) Amygdalus; Apricots to Armeniaca; Cherries to Cerasus; Chokecherries to Padus; Laurelcherries to Laurocerasus; Plums to Euprunus, etc. These sections (or subgenera) are regarded by some botanists as distinct genera.

The term "Damson" (a corruption of Damascene—from Damascus) appears originally to have been applied to the so-called var. P. domestica damascena, which Prof. Rehder does not regard as distinct. The term is now used to cover certain varieties or forms having a small compact habit, small leaves, and small, firm, ovoid, usually dark purple clustered fruits.

japon'ica . . CHINESE BUSHCHERRY

Despite the name japonica, this species is Chinese rather than Japanese. It is not one of the true Japanese Flowering Cherries. The name P. japonica is often misapplied to the Flowering Almond varieties of P. glandulosa and to some of the true Japanese Flowering Cherries, especially the weeping variety of P. subhirtella, Shidare-higan.

RANGE PLANTS

AUTHORS' STATEMENT

Range plants, and particularly those of the Far West, cover 728,000,000 acres of range, or approximately one-third of the area of the United States, and comprise about 10,000 species of flowering plants in over 1,200 genera. The importance of these plants in the nation's economy is enormous. Not only is the range livestock industry, with all its social and economic implications, dependent on these plants, but they are most intimately associated with soil conservation, runoff and erosion, irrigation and hydroelectric power, agricultural crops, wildlife, timber reproduction and diseases, fire, recreation, and other vital phases of the national life. While this list is primarily of range interest, yet many hundreds of these plants have sufficient beauty or utility to attract, on an increasing scale, the interest of the ornamental and economic horticulturist and others concerned with introducing useful plants into cultivation. Some range plants are already important in the drug, gum, and latex trades; some of the fruits, nuts, and other edible plant products are prized by the white man as well as the Indian, and many merit, and are receiving, the attention of the professional pomologist; some of the native grasses are being introduced into cultivation and experimental effort is being made to improve them. Attention has very recently been directed to the native ranges of the Southeast, and detailed knowledge concerning these plants and their value is still largely lacking.

The list below includes the names of about 500 genera and 1,900 species and varieties of the more important range plants; to avoid unnecessary duplication grasses and poisonous plants are excluded, as these groups are treated in separate lists in this book. Conifers (except Junipers) are also omitted; they are frequently, in a broad sense, range plants as well, but in general, their outstanding value is for timber and their use as browse is ordinarily not desirable. Conifers, of course, appear in their proper alphabetical order in the body of this book. Most of the plants listed here are western, though a few of the more important Alaskan and Southeastern range plants are represented. The list has been compiled from various published and unpublished records of the U. S. Forest Service, including the "Range Plant Handbook" (Forest Service, 1937) and W. A. Dayton's "Important Western Browse Plants" (U. S. Department of Agriculture Misc. Pub. 101, 1931). See also GRASS GENERA, POISONOUS PLANTS, and WEEDS.

Our thanks are extended to Beryl O Schreiber of the California Forest and Range Experiment Station, for valuable criticism and suggestions.

RETINOS'PORA (*RETINISPORA*)
There is no such genus as Retinospora (or Retinispora as it was originally spelled). The plants referred to it are all juvenile states of the genera Chamaecyparis and Thuja.
The use of the name Retinospora only adds to plant-name confusion. Therefore this edition of STANDARDIZED PLANT NAMES does not recognize the name Retinospora as having any justifiable standing in horticulture.

RHODODEN'DRON (*AZALEA; AZALEASTRUM; BILTIA; RHODORA*) [w] . . RHODODENDRON

The original and major list of Rhododendron (including Azalea) for this volume was prepared by the Arnold Arboretum, Jamaica Plain, Mass. Later Clement G. Bowers' "Rhododendrons and Azaleas" and the yearbooks of The Rhododendron Assn. (England) were drawn upon for additions. John C. Wister, Sec., Penn. Hort. Soc., Philadelphia, Pa., also aided with suggestions and corrections.

To all of these authorities and sources the Committee extends sincere thanks.

Special attention is called to the fact that botanically all Azaleas are properly listed below under Rhododendron. In horticultural practice, however, it is deemed *permissible* to use the generic Latin term Azalea for the (mostly) deciduous forms of Rhododendron. Some horticulturists, however, prefer to use the technically correct botanical name Rhododendron for the entire group, confining the name Azalea to common and hort. names where appropriate. For convenience of reference, a botanical list is also included under Azalea, as well as a full list of common and HV. names. See **AZALEA.**

Common names and hort. var. (clons) of **Rhododendron:**

Abbreviations indicating the name of the group to which a horticultural variety is reported to belong, or the species from which it is reported to have been derived, in whole or in part, are as follows:

Arb.	Arboreum Series Hybrid.
Azd.	Azaleodendron.
Barb.	Barbatum.
Boo.	Booth.
Bra.	Brachycarpum.
Campa.	Campanulatum.
Campy.	Campylocarpum.
Car.	Carolinianum.
Cat.	Catawbiense.
Cau.	Caucasicum.
Cin.	Cinnabarinum.
Dau.	Dauricum.

RHODODENDRON, continued

Dec.	Decorum.
Dis.	Discolor.
Edg.	Edgeworthi.
Fal.	Falconeri.
For.	Fortunei.
Glau.	Glaucum.
Gran.	Grande.
Gri.	Griersonianum.
Grif.	Griffithianum.
Irr.	Irroratum.
Jav.	Javanicum.
Lac.	Lacteum.
Lap.	Lapponicum.
Lod.	Loderi.
Mad.	Maddeni.
Max.	Maximum.
Ner.	Neriiflorum.
Pont.	Ponticum.
Prae.	Praecox group of hybrids.
Salu.	Saluenense.
Scab.	Scabrifolium.
Smir.	Smirnowi.
Tali.	Taliense.
Thom.	Thomsoni.
Tri.	Triflorum.
Vir.	Virgatum.

Many other varieties not included in this list will be found in C. G. Bowers' "Rhododendrons and Azaleas," J. G. Millais' "Rhododendrons and the Various Hybrids" and especially the yearbooks of The Rhododendron Association (England).

ABBREVIATIONS OF NAMES OF ORIGINATORS

d. Oud.	P. den Ouden and Sons, Boskoop, Netherlands.
F.&D.	Felix and Dykuis, Boskoop, Netherlands.
Kos.	M. Koster and Sons, Boskoop, Netherlands.
Met.	T. Methven and Sons, Edinburgh, Scotland.
Moser	Moser, Versailles, France.
Noble	Charles Noble, England.
Par.	Samuel Parsons, Flushing, N. Y.
Sei.	T. J. Seidel, Schweiputz, Saxony, Germany.
Sta.	Standish, England.
V. Gee.	Van Geert.
V. Hou.	Louis Van Houtte, Ghent, Belgium.
V. Nes	C. B. Van Nes, Boskoop, Netherlands.
Wat., A.	Anthony Waterer, Woking, Surrey, England.
Wat., J.	J. Waterer, Sons and Crisp, Twyford, Berks, England.

In using names from this list, the clon sign should precede hort. var. names but not species or variety common names. Example, ₵ABALONE, but ABBE DAVID R. For Azalea hort. var. and common names, see **AZALEA.**

RI'BES (including *GROSSULARIA*) |w CURRANT; GOOSEBERRY

The Gooseberries are placed by some botanists in a distinct genus (Grossularia). The other (and more typical) species of Ribes are called Currants. For varieties of Currant and Gooseberry cultivated for their fruit, see list of **FRUIT AND EDIBLE NUT NAMES.**

Currants and Gooseberries form a large genus of at least 150 species widespread in the North Temperate Zone and in the high mountains of Mexico and South America. At least 80 species occur naturally in our Western States, more than in any other part of the world. Many of these plants are cultivated because of the beauty or fragrance of their flowers; a few (especially of the Old World species) are grown for their acid fruit, which is prized—and especially abroad—for jellies, jams, etc. The wild species are of great value for wildlife; birds, and small mammals, in particular, relish the berries, frequently produced in enormous quantities. As a rule, deer, elk, and domestic livestock browse the herbage rather lightly, unless other and better feed is scarce. However, these bushes often occur in great abundance and over wide areas so that, in the aggregate, their browse utility is considerable, especially in late summer and fall. These plants are of particular importance to the forester because they serve as alternate hosts for the White Pine blister-rust fungus, Cronartium ribicola, and, for that reason, large sums of money have been spent to eradicate Currants and Gooseberries in the neighborhood of commercial forests of 5-needle Pines.

The relatively full list below covers over 180 species, varieties, and hybrids of this genus. The hybrids marked below by the polybrid sign (∞) are probably, so far as the plants in cultivation are concerned, actually clons of the crosses indicated. The Editorial Committee is gratêful to S. B. Fracker and to the field workers of the blister-rust control project, Bureau of Entomology and Plant Quarantine, U. S. Department of Agriculture, for their constructive criticism of this list.

RO'SA |w . . . . . ROSE

For the rose species list the Editorial Committee is deeply indebted to Alfred Rehder, Arnold Arboretum, Jamaica Plain, Mass. The first edition of STANDARDIZED PLANT NAMES carried 94 species and natural varieties of Rosa, while Prof. Rehder's new list includes 236 species and natural varieties, and 43 polybrids and clons. The polybrid and clon signs, as well as the vernacular or common names, have been added by the Editorial Committee.

For horticultural varieties see American Rose Society's special list on page 542.

Hort. var. of **Rosa,** ROSE:

The following list has been provided by the American Rose Society. It is selected from "Modern Roses II," prepared for the American Rose Society by Dr. J. Horace McFarland and collaborators, to which the reader should refer for a complete list. It should be noted that these names in many instances do not conform to S.P.N. policy, but appear here in the form in which they have been registered with the American Rose Society.

Special attention is called to the unwarranted use of homonyms by introducers in naming new varieties; no less than 27 homonyms appear in this list, and are indicated by italicizing.

CLASS ABBREVIATIONS

Alp.	Alpina
Arv.	Arvensis
B.	Bourbon
C.	China
CB.	Climbing Bourbon
CC.	Climbing China
Cent.	Centifolia
CHP.	Climbing Hybrid Perpetual

RUSSE'LIA . . . . . CORALBLOW
elegantis'sima Hort. . . . HYBRID C.
Thought to be a cross between R. equisetiformis and R. sarmentosa. See note under R. lemoinei below. The cultivated plant may be a clon.

Hort. var.; HV. = horticultural variety (or varieties); sp. = species (singular); spp. = species (plural).
¢ = clon; × (as a prefix) = hybrid; × (between scientific plant names) = crossed by; ∞ = polybrid; |w = plant useful to wildlife.
See Glossary for definitions of clon, hybrid, and polybrid.

RUSSELIA, continued
equisetifor'mis (*juncea*) . CORALPLANT
lemoin'ei Hort. . . FOUNTAINPLANT
Reputed to be a cross between R. equisetiformis and R. sarmentosa. See note under R. elegantissima. Research is needed to ascertain whether elegantissima or lemoinei has priority. The cultivated plant may be a clon.
sarmento'sa (*multiflora; paniculata*) LEAFY CORALBLOW

The botanical status of the plants known as Cineraria is in dispute. All are cultivated derivatives of Senecio cruentus or have arisen by the hybridization of that species with related species of Senecio, as is supposed to have been the case with the so-called Cineraria hybrida of gardeners.
Many varieties of Cineraria are in cultivation but their names have not been standardized.

SEQUOI'A (*SEQUOIADENDRON*) SEQUOIA
See note on *SEQUOIADENDRON*.

gigan'tea (of (Lindl.) Dec., 1854, based on *Wellingtonia g.* Lindl. (1853), *not* Endl.; *washingtoniana; wellingtonia; Sequoiadendron giganteum; Wellingtonia g.*) . . . . GIANT S.

Although the International Rules of Botanical Nomenclature do not now provide for conserved specific names, the Editorial Committee of STANDARDIZED PLANT NAMES has decided to endorse the name Sequoia gigantea, even though a homonym, because of its appropriateness, because its use is practically unanimous among California botanists and in the Californian manuals, and because it is formally approved by the National Park Service, official guardians of these extraordinary trees. There will probably always be controversy as to whether or not Sequoia washingtoniana was adequately published, and the next oldest name, S. wellingtonia, besides being unpalatable to the American people, is neither accepted nor used except by a very small minority. There is every reason for believing that, Rules or no Rules, Sequoia gigantea will continue to be the name in general use.

SEQUOIADEN'DRON . . **SEQUOIA**
Prof. John T. Buchholz has recently separated the Giant Sequoia (*Bigtree*) into a distinct genus, Sequoiadendron. It seems desirable to retain this tree in Sequoia in the new edition of STANDARDIZED PLANT NAMES.

SIMMOND'SIA W . . JOJOBA (*Jajoba*)
chinen'sis (*californica*) W CALIFORNIA J.
Until comparatively recently this common and important Southwestern shrub was universally known as Simmondsia californica. The scientific name now approved under International Rules, S. chinensis, is patently preposterous, the plant having nothing to do with China. The Editorial Committee feels that common sense, as well as technical rules of precedence, should enter into botanical (as well as other) legislation and that, if necessary, a list of conserved species names should be made. See Dayton, W. A., "A Few Notes on Plant Names" (Proceedings Biological Society of Washington 40: 119–121. 1927).

SIMPSO'NIA . . . . . **THRINAX**

SINGHARANUT . . . . **Trapa bispinosa**

Single-awn . . . . THREE-AWN, SINGLE: **Aristida orcuttiana**

SINNIN'GIA . . . . . GLOXINIA
The Gloxinia of florists is Sinningia speciosa. Gloxinia crassifolia and G. gigantea are names loosely and incorrectly applied in the trade to some of the varieties of that species. The genus Gloxinia, of botanists, is not in cultivation.
specio'sa (*Gloxinia s.*) . . COMMON G.
Many varieties of Gloxinia are in cultivation but they are not sufficiently well distinguished to permit the preparation of an authentic list at the present time.

STATE FLOWERS AND TREES

STATE	STATE FLOWER Year of Adoption	STATE TREE Year of Adoption	SOURCE OF INFORMATION
Alabama	GOLDENROD **Solidago** spp.	None	B. P. Livingston, Chf., Div. Plant Ind., St. Dept. Agr., Montgomery, Ala.
Alaska	FORGETMENOT (1917) **Myosotis alpestris**	None	J. P. Anderson, Bot., Juneau, Alaska.
Arizona	SAGUARO (1933) **Cereus giganteus**	None	Harriet Jean Oliver, Sec., Comm. Agr. & Hort., Phoenix, Ariz.
Arkansas	"APPLE BLOSSOM" **Malus**	PINE (1939) **Pinus** spp.	H. E. Thompson, Asst. Dir., Coop. Extension Work in Agr. & Home Econ., Little Rock, Ark.
California	GOLDENPOPPY (1903) Californiapoppy-SPN **Eschscholtzia californica**	"CALIFORNIA REDWOOD" (1937) Redwood-SPN **Sequoia sempervirens**	W. B. Parker, Dir., St. Dept. Agr., Sacramento, Calif.
Colorado	COLORADO COLUMBINE **Aquilegia coerulea**	BLUE COLORADO SPRUCE **Picea pungens glauca**	F. Herbert Gates, St. Entom., Bur. Pl. & Insect Control, Denver, Colo.
Connecticut	"MOUNTAINLAUREL" (1907) Mountainlaurel Kalmia-SPN **Kalmia latifolia**	None	Olcott F. King, Comm., St. Dept. Agr., Hartford, Conn.
Delaware	PEACH BLOSSOM (1895?) **Prunus persica**	"HOLLY" (1939) American Holly-SPN **Ilex opaca**	V. J. Carmine, Sec., St. Bd. Agr., Dover, Del.
Florida	ORANGE BLOSSOM (1909) **Citrus** spp.	"CABBAGEPALM" (*Not official*) Cabbage Palmetto-SPN **Sabal palmetto**	R. A. Gray, Sec. of St., Tallahassee, Fla.
Georgia	CHEROKEE ROSE (1916) **Rosa laevigata**	LIVE OAK (1937) **Quercus virginiana**	Stiles A. Martin, Statis., St. Dept. Agr., Atlanta, Ga.
Hawaii	"PUA ALOALO" (1923) Hibiscus-SPN **Hibiscus** spp.	"COCOANUT PALM" Coconut-SPN **Cocos nucifera**	J. L. Dwight, Exec. Sec., Bd. of Comm. Agr. & For., Honolulu, T. H.
Idaho	LEWIS MOCKORANGE (1931) **Philadelphus lewisi**	None	George H. Curtis, Sec. of St., Boise, Idaho.
Illinois	"NATIVE VIOLET" (1908) **Viola** spp.	"NATIVE OAK" (1937) **Quercus** spp.	Milburn P. Akers, Supt., St. Dept. Finance, Springfield, Ill.
Indiana	COMMON ZINNIA (1931) **Zinnia elegans**	TULIPTREE (1931) **Liriodendron tulipifera**	H. C. Gray, Sec., Indiana Historical Bur., Indianapolis, Ind.
Iowa	"WILD ROSE" (1897) **Rosa** spp.	None	Mark G. Thornburg, Sec., St. Dept. Agr., Des Moines, Ia.
Kansas	COMMON SUNFLOWER (1903) **Helianthus annuus**	COTTONWOOD (1937) **Populus** spp.	J. C. Mohler, Sec., Kans. St. Bd. Agr., Topeka, Kans., & H. C. Gates, Kans. St. Coll. Agr. & Appl. Sc., Manhattan, Kans.
Kentucky	GOLDENROD (1926) **Solidago** spp.	TULIPTREE (*Unofficial*) **Liriodendron tulipifera**	Garth K. Ferguson, Comm. Agr., Frankfort, Ky.
Louisiana	"MAGNOLIA" (1900) Southern Magnolia-SPN **Magnolia grandiflora**	None	Harry D. Wilson, Comm., St. Dept. Agr. & Immig., Baton Rouge, La.
Maine	"PINE CONE & TASSEL"? (1895?) **Pinus strobus?**	"Pine" Eastern White Pine-SPN **Pinus strobus**	Frank P. Washburn, Comm., St. Dept. Agr., Augusta, Me.; & C. W. Johnson, Springfield, Mass.
Maryland	BLACKEYEDSUSAN (1918) **Rudbeckia hirta**	None	J. E. Metzger, Dir., Agr. Expt. Sta., College Park, Md.
Massachusetts	TRAILING-ARBUTUS **Epigaea repens**	None	R. B. Allen, Dir., Div. Pl. Pest Cont., St. Dept. Agr., Boston, Mass.
Michigan	"APPLE BLOSSOM" **Malus**	None	H. D. Hootman, Ext. Spec. Hort., St. Coll. Agr., E. Lansing, Mich.
Minnesota	SHOWY LADYSLIPPER (1902) **Cypripedium reginae**	None	C. P. Bull, Dir., Div. Weed & Seed Cont., St. Dept. Agr., St. Paul, Minn.

State	State Flower Year of Adoption	State Tree Year of Adoption	Source of Information
Mississippi	"Magnolia" (1900) Southern Magnolia-SPN **Magnolia grandiflora**	"Magnolia" (1938) Southern Magnolia-SPN **Magnolia grandiflora**	Mrs. G. H. Reeves, Educ. Dir., Forest & Park Svc., Jackson, Miss.
Missouri	"Hawthorn" **Crataegus** spp.	None	Jewell Mayes, Comm., St. Dept. Agr., Jefferson City, Mo.
Montana	Bitterroot (1895) Bitterroot Lewisia-SPN **Lewisia rediviva**	None	Lois Fladeger, Sec. to James T. Sparling, Comm., St. Dept. Agr., Labor & Industry, Helena, Mont.
Nebraska	Goldenrod (1895) November Goldenrod-SPN **Solidago serotina**	None	R. C. Kinch, St. Dept. Agr., Lincoln, Nebr.
Nevada	"Sagebrush" Big Sagebrush-SPN **Artemisia tridentata**	None	Geo. G. Schweis, Dir., Div. Pl. Ind., St. Dept. Agr., Reno, Nev.
New Hampshire	Purple Lilac Common Lilac-SPN **Syringa vulgaris**	None	Enoch D. Fuller, Sec. of St., Concord, N. H.
New Jersey	Violet (1913) **Viola** spp.	None	Kathryn B. Greywacz, Curator, N. J. St. Museum, Trenton, N. J.
New Mexico	Yucca **Yucca** spp.	None	F. F. Whitley, Ext. Hort., Ext. Svc., State College, N. M.
New York	Rose (*Unofficial*) **Rosa** spp.	None	H. D. House, St. Bot., N. Y. St. Museum, Albany, N. Y.
North Carolina	None	None	Harry T. Davis, St. Dept. Agr., Raleigh, N. C.
North Dakota	"Wild Prairie Rose" (1907) Arkansas Rose-SPN **Rosa arkansana**	Green Ash (*Unofficial*) **Fraxinus pennsylvanica lanceolata**	M. Quinnell, Dept. Agr. & Labor, Bismarck; O. A. Stevens, N. D. Agr. College, Fargo, N. D.
Ohio	"Scarlet Carnation" (1904) **Dianthus caryophyllus**	"Buckeye" (*Unofficial*) Ohio Buckeye-SPN **Aesculus glabra**	John T. Brown, St. Dir. Agr., Columbus, Ohio.
Oklahoma	American Mistletoe Christmas Am.-mistletoe-SPN **Phoradendron flavescens**	"Redbud Tree" Eastern Redbud-SPN **Cercis canadensis**	Joe C. Scott, Pres., St. Bd. of Agr., Oklahoma City, Okla.
Oregon	Oregongrape (1899) **Mahonia aquifolium**	Douglasfir (1939) Common Douglasfir-SPN **Pseudotsuga taxifolia**	Frank McKennon, Div. Chf., St. Dept. Agr., Salem, Ore.
Pennsylvania	"Mountainlaurel" (1933) Mountainlaurel Kalmia-SPN **Kalmia latifolia**	Hemlock (1931) Canada Hemlock-SPN **Tsuga canadensis**	John S. Light, Sec., St. Dept. Agr., Harrisburg, Penna.
Puerto Rico	None	None	F. A. Lopez Dominguez, Dept. Agr. & Comm., San Juan, P. R.
Rhode Island	Violet (1897) **Viola** spp.	Maple (1894) **Acer** spp.	A. E. Stone, St. Entom., St. Dept. Agr. & Cons., Providence, R. I.
South Carolina	"Yellow Jessamine" Carolinajessamine-SPN **Gelsemium sempervirens**	Palmetto (1939) Cabbage Palmetto-SPN **Sabal palmetto**	A. S. Salley, Sec., Hist. Comm. of S. C., Columbia, S. C.
South Dakota	American Pasqueflower **Anemone ludoviciana**	Cottonwood (*Unofficial*) **Populus** spp.	E. H. Everson, Sec., St. Dept. Agr., Pierre, S. D.
Tennessee	Iris **Iris** spp.	None	C. C. Flanery, Comm., St. Dept Agr., Nashville, Tenn.
Texas	"Texas Bluebonnet" Texas Lupine-SPN **Lupinus subcarnosus**	"Pecan Tree" Pecan-SPN **Carya illinoensis** (*pecan* Auth.)	B. C. Tharp, Univ. Tex., Austin, Tex.
Utah	Segolily (1911) Segolily Mariposa-SPN **Calochortus nuttalli**	"Blue Spruce" (1933) Blue Colorado Spruce-SPN **Picea pungens glauca**	E. E. Monson, Sec. of St., Salt Lake City, Utah.
Vermont	Red Clover (1894) **Trifolium pratense**	Sugar Maple (*Unofficial*) **Acer saccharum**	E. H. Jones, Comm., St. Dept. Agr., Montpelier, Vt.
Virginia	"American Dogwood" (1918) Flowering Dogwood-SPN **Cornus florida**	"American Dogwood" (1918) Flowering Dogwood-SPN **Cornus florida**	Margaret A. Young, Sec., Dept. Agr. & Immig., Richmond, Va.
Washington	Rhododendron Coast Rhododendron-SPN **Rhododendron macrophyllum**	None	Walter J. Robinson, Dir., St. Dept. Agr., Olympia, Wash.
West Virginia	"Big Laurel or Rhododendron" (1903) Rosebay Rhododendron-SPN **Rhododendron maximum**	None	J. B. McLaughlin, Comm., St. Dept. Agr., Charleston, W. Va.
Wisconsin	Violet (*Unofficial*) **Viola** spp.	None	Bronte H. Leicht, Editor, St. Dept. Agr., Madison, Wis.
Wyoming	Indian Paintbrush (1917) Wyoming Paintedcup-SPN **Castilleja linariaefolia**	None	George O. Houser, Exec. Mgr., St. Dept. Comm. & Indus., Cheyenne, Wyo.

SUCCULENTS

See also CACTUS GENERA.

The interest in Succulents and Cacti is increasing tremendously in America. Taxonomically they are among the difficult groups in the plant world to classify, while certain genera are quite subject to natural species (if not generic) hybridization, as Sempervivum and Sedum.

Hybridizers producing known either generic or species polybrids would confer a lasting benefit to science and to horticulture by indicating the definite parentage, particularly in the case of intergeneric hybrids. For such polybrids a suitable "fancy" or coined vernacular name is far preferable to a Latin name.

In editing this list the Committee consulted a great many works of reference. Among these the more important are the following: Alwin Berger's "Sukkulente Euphorbien" (Stuttgart, 1907), and "Stapelieen und Kleinen" (Stuttgart, 1910); F. Vaupel's "Zeitschrift fur Sukkulentenkunde," Vol. 1, Berlin-Dahlem Bot. Mus., 1923–4; A. Engler's "Saxifragaceae," in Engler & Prantl's "Die Naturlichen Pflanzenfamilien," Vol. 18a (Leipzig, 1930); N. E. Brown, A. Tischer & M. C. Karsten's "Mesembryanthema" (Ashford, England, 1931); J. A. Huber's "Zur Systematik der Gattung Sedum L." (Germany, 1931); R. Lloyd Praeger's "Sempervivums," The Royal Horticultural Soc. (London, 1932); F. Pax & K. Hoffmann's "Aizoaceae" and "Portulacaceae" in Engler & Prantl's "Die Naturlichen Pflanzenfamilien," Vol. 16c (Leipzig, 1934); H. Jacobsen's "Succulent Plants," translated by Vera Higgins (London, 1935); and Bailey's "Hortus Second."

Warm thanks are extended to Robert T. Clausen, Bailey Hortorium, Ithaca, N. Y., an outstanding authority on the family Crassulaceae, for aid with those genera especially Sedum and Sempervivum.

Louis C. Wheeler, now with the National Park Service, who has specialized in Euphorbiaceae, reviewed the galley proof of Euphorbia and made important corrections and suggestions.

HEUR'NIA (*HUERNIA*)

"The genus is named after Justus Heurnius; unfortunately, the name was originally misspelled Huernia and, by the Rules of Botanical Nomenclature, this is the spelling which should be adhered to; on the Continent the spelling given above is more commonly used." Jacobsen, H., Transl. by Vera Higgins, "Succulent Plants." (London, 1935.) It seems permissible, however, to regard Huernia as a typographical error, under Article 70 of the Rules, and follow the common-sense spelling of majority European usage.

MESEMBRYANTHEMUM (*Figmarigold*)
The maritime species are often called Seafigs.
At the suggestion of its consulting experts in the Bureau of Plant Industry, the Editorial Committee maintains this extraordinarily diversified, difficult and imperfectly known group of plants, for the present at least, in the single genus Mesembryanthemum.

Hort. var. of **Syringa,** LILAC:

Because of the large number of varieties of Lilac, the horticultural varieties and the hybrids have been combined in the special list below. For Lilac common names, see LILAC, p. 332.

Abbreviations indicate the species to which a horticultural variety is supposed to belong, in whole or in part. Those horticultural varieties with no species indicated after the name are S. vulgaris varieties. Abbreviations of the names of the originators are also given. In many cases the dates refer to the year the original plant was produced, though in the majority of cases the date refers to the year the plant was first reported to have been introduced into the trade. The Editorial Committee acknowledges its indebtedness to John C. Wister, Chairman

Presumably most of the hort. var. listed below are clons.

ABEL CARRIERE. D. (Lem. 1896.)
A. B. LAMBERTON. D. (Dunb. 1917.)
Abundant Bloomer. CITY OF KELSO.
ADELAIDE DUNBAR. D. (Dunb. 1916.)
ADMIRAL FARRAGUT. S. (Dunb.)
ADRIANA. Pre. L. (Prest. 1941?)
A. J. KLETTENBERG. D. (GR. 1933.)
Alba. (Cult. before 1600.) **S. vulgaris alba** (White Common L.)
ALBA GRANDIFLORA. S. Vul. (Before 1832.)
ALBA SANGUINEA. S.
Doubtful name.
ALBA VIRGINALIS. S. (Oud. 1841.) *Virginalis.*
ALBERT, THE GOOD. S. (Doug. 1886.)
ALBIDA. Swe.
Alexander de Humboldt. DE HUMBOLDT.
ALEXANDER HAMILTON. D. (Dunb. 1923.)
ALICE. S. (Klag. 1928.)
Alice. Pre. L. (Prest. & Brand 1941.)
ALINE MOCQUERIS. S. (Before 1872.)
ALLISON GREY. S. (Hav.)
ALMA. S. (Klag. 1932.)
ALPHONSE LAVALLEE. D. (Lem. 1885.)
AMBASSADEUR. S. (Lem. 1930.)
A. M. BRAND. S. (Brand.)
AMBROSE VERSCHAFFELT. S. (Eken. 1863.)
AMETHYST. S. (Spae. 1887.)
AMI SCHOTT. D. (Lem. 1933.)
AMOENA. S. (Before 1846.)
Andenken an Ludwig Spaeth. LUDWIG SPAETH.
ANNA. S. (Klag.)

SYRINGA, continued

ANNA ELIZABETH JACQUET. S. (Before 1924.)
ANNE SHIACH. S. (Hav.)
Antoine Buchner. MME. ANTOINE BUCHNER.
ARCHEVEQUE. D. (Lem. 1923.)
ARCHIDUCHESSE CHARLOTTE. S. (Eken. 1861.)
ARGENTEA.
Doubtful name.
ARIEL. Pre. L. (Prest. 1941?)
ARTHUR WILLIAM PAUL. D. (Lem. 1898.)
ASHES OF ROSES. S. (Klag. 1930.)
ASSESSIPPI. Hy.; S. (Skin. 1935.)
AUCUBAEFOLIA. D. (Gouch. before 1919.)
AUDREY. Pre. L. (Prest. 1941?)
AUREA. S. (About 1880.)
AVON. S. (Led. 1930.)
AZUREA PLENA. D. (1854.) *Double Azure.*
BANQUISE. D. (Lem. 1905.)
BEATRICE. Pre. L. (Prest. 1941?)
Beauty of Frankfort. HERMAN EILERS.
BELLE DE NANCY. D. (Lem. 1891.)
BELLICENT. Josif. (Prest.)
BERANGER. S. (Sim.-L. before 1867.)
BERRYER. Hy.; D. (Lem. 1913.)
BEST BLUE.
Doubtful name.
BETTY LOUISE. S. (Klag.)
BIANCA. Pre. L. (Prest. 1941?)
BICOLOR. C. (Lem. before 1853.) *Flore Bicolor.*
Billy Mills. W. K. MILLS.
BLANCH. Pre. L. (Prest. 1941?)
BLEUATRE. S. (Balt. before 1897.)
BLUE HYACINTH. (Clarke 1941.)
BOULE AZUREE. S. (Lem. 1919.)
BOUSSINGAULT. D. (Lem. 1897.)
BUFFON. Hy.; S. (Lem. 1921.)
CALIBAN. Pre. L. (Prest.)
CALPHURNIA. Pre. L. (Prest.)
CALVIN C. LANEY. S. (Dunb.)
Camille de Rohan. PRINCESSE CAMILLE DE ROHAN.
CANDEUR. S. (Lem. 1931.)
CAPITAINE BALTET. S. (Lem. 1919.)
CAPITAINE PERRAULT. D. (Lem. 1925.)
CARLEY. S. (Hav.)
CARMEN. D. (Lem. 1918.)
CARMINE. S. (Klag. 1928.) *Mrs. R. W. Mills.*
Caroli. CHARLES X.
CAROLYN MAE. S. (Sass.)
CASSANDRA. Pre. L. (Prest. 1941?)
CATINAT. Hy.; S. (Lem. 1922.)
CAVOUR. S. (Lem. 1910.)
C. B. VAN NES. S. (VN. 1904.)
CELESTIAL BLUE. S. (Klag. 1930.)
CELIA. Pre. L. (Prest. 1941?)
CHAMPLAIN. D. (Lem. 1930.)
CHARLEMAGNE. S. (Eken. before 1854.)
CHARLES BALTET. D. (Lem. 1893.)
CHARLES JOLY. D. (Lem. 1896.)
CHARLES SARGENT. D. (Lem. 1905.)
CHARLES X. S. (Before 1830.) *Caroli; Rubra Major.*
CHARLOTTE MORGAN. D. (Seab.)
May be the same as Mrs. Morgan.
CHARM. S. (Hav.)
CHARMIAN. Pre. L. (Prest. 1941?)
CHEERBENBURG.
CHENBOLT.
Doubtful name.

SYRINGA, continued

CHRISTOPHE COLOMB. S. (Lem. 1905.)

TEA . . . . . Camellia
Botanists have decreed that Teas are Camellias, although a few regard them as distinct but *closely allied* genera. Horticulturally and economically, however, a wide gulf separates these two groups. The Camellia, whose beauty and fragrance is a chief charm of Southern gardens and of Northern hothouses and floral establishments, is grown for ornament. Teas, on the other hand, and especially Common Tea (**Camellia sinensis,** synonym *Thea sinensis*), are for use, providing a beverage of worldwide popularity which has given its name to an evening meal and made these plants an outstanding agricultural crop of the Orient.
Botanically the differences between Camellias and Teas are minor.

This "horticultural name of uncertain application" is frequently misapplied to T. flavum and other yellow-flowered species, varieties and forms of this genus.

Hort. var.; HV. = horticultural variety (or varieties); sp. = species (singular); spp. = species (plural).
¢ = clon; × (as a prefix) = hybrid; × (between scientific plant names) = crossed by; ∞ = polybrid; |w = plant useful to wildlife.
See Glossary for definitions of clon, hybrid, and polybrid.

This enormous conifer of the Pacific Northwest, the main source of wooden shingles in that region and the tree from which Alaskan Indians carved their totem poles, is unfortunately known both popularly and in the lumber trade by the incorrect, and homonymous name Western Redcedar.

STANDARDIZED PLANT NAMES definitely objects to this unscientific and misleading practice which only tends to continue plant-name confusion.

TOXICODEN'DRON |w
This genus is regarded by some of the more conservative botanists as a synonym of Rhus. The group, however, is everywhere recognized by people as distinct from true Sumacs (Rhus); economically it is quite different, its peculiar poisonous and chemical properties setting it apart. Furthermore it has good morphological characters (including loose, delicate, axillary inflorescence; solitary terminal style, rounded, mostly whitish and smooth fruit; and striate stone). Prof. Rehder writes "There can be no strong objection to separating Toxicodendron from Rhus as a distinct genus" and, from the practical and nomenclatural standpoints, there are distinct advantages in making such a separation.

TRIFO'LIUM |w . . . . . CLOVER

Clovers, of which about 300 species occur widely distributed in the cooler portions of the earth, play an important role in soil conservation. Being legumes, the nitrogen-fixing bacteria on their roots build up soil fertility. They are unexcelled pasture and hay plants. The present acreage of cultivated Clovers in the United States is nearly five times that of Alfalfa. The native Clovers of our country furnish extensive and nutritious pasturage to domestic livestock and other animals. Dr. Edward H. Graham, Biologist of the Soil Conservation Service, U. S. Department of Agriculture, states that "Trifolium leads all other leguminous genera in its usefulness to wildlife" ("Legumes: Their Erosion-Control and Wildlife Values," 1939). The list below of nearly 100 species and varieties of Trifolium is built upon an initial one of 25 names prepared in 1929 by the late Dr. Frederick V. Coville, Botanist of the Bureau of Plant Industry and U. S. Department of Agriculture representative on the original Editorial Committee of STANDARDIZED PLANT NAMES. With that list of Clovers, prepared with Dr. Coville's inimitable flair for apt vernacular or common plant names, have been merged other names, more especially of western range plant Clovers (from U. S. Forest Service records) and of cultivated species described in Federal and State agricultural publications.

Seed Variation Clons of Tsuga canadensis, CANADA HEMLOCK:

This presentation of Canada Hemlock types and clons is adapted from "Canada Hemlock and Its Variations," a thesis from Cornell University by John C. Swartley. It was the explicit policy of the author to include a sufficient number of *botanical* varieties to cover all the different types of variations found in this species. This treatment, however, of giving Latin or botanical names to natural seed variation types or to clons is against the adopted principle of STANDARDIZED PLANT NAMES as stated in the Preface and many other places in this book, and which is based on the grounds of correct scientific procedure and the elimination of confusion and inaccuracy which otherwise is quite inevitable. In the present list, therefore, the individual variants or clons are listed under vernacular or common names with references to the particular *types* to which they belong.

Most of the clons here listed have been mentioned and described in Mr. Swartley's thesis. But the clons appear there by number rather than by name, therefore these numbers have been included in the following list to insure so far as possible the correct identity of the respective clons.

ABBREVIATIONS OF NATURAL SEED VARIATION TYPES OF CANADA HEMLOCK

B.G.	Bushy Globe
Bro.	Broadleaf
Cin.	Cinnamon
Dense	Dense
DL.	Denseleaf
Fas.	Fastigiate (*fastigiata*)
Globe	Globe (*globosa*)
Gold.	Golden (*aurea*)
Lar.	Largeleaf (*macrophylla*)
Lit.	Littleleaf (*microphylla; parvifolia*)
Pros.	Prostrate
Pyg.	Pygmy (*nana*)
Pyr.	Pyramidal
Pyr.D.	Dwarf Pyramidal
Slen.	Slender (*gracilis*)
Spar.	Sparseleaf
Spr.	Spreading
Twig.	Twiggy
Weep.	Weeping
WT.	Whitetip (*albospica*)
Yew	Yewlike

Hort. var. of **Tulipa**, TULIP:

The following abridged list of horticultural varieties of Tulips is adapted from "A Classified List of Tulip Names," published by the Royal Horticultural Society in London in 1939, to the fuller list of which attention is invited. The book referred to has numerous names of "surpassed and obsolete varieties," printed in small type, which are omitted in the following list for lack of space.

Some of the names in this list which appear as botanical species are probably of horticultural origin, and it is possible that some of them may not be validly published under International Rules.

Attention is invited to the list of Tulip varieties which appeared in the original edition of STANDARDIZED PLANT NAMES, prepared by O. M. Freeman, Bureau of Plant Industry, Department of Agriculture, Washington, D. C., and which was probably the first attempt in America to make available for general horticultural use a carefully compiled authentic grouping, with verified names, of this important bulb.

In order that all the Tulip names in this catalogue may be found in one alphabetical sequence, the common names and the Latin names of the wild species and subspecies have been repeated, in their proper alphabetical position, in this list of horticultural varieties.

The Committee feels that the Royal Horticultural Society list, despite its acceptance of duplicated names, which we

TULIPA, continued

cannot condone, is probably the best Tulip list available at the present time and, therefore, substitutes it for the one it formerly published.

Italicized hort. var. names prefixed by an asterisk (*) indicate homonyms. In each of these cases, recognized Tulip authority should endeavor to determine the oldest name, accepting that and rejecting the later names.

AMERICAN JOINT COMMITTEE ON HORTICULTURAL NOMENCLATURE
HARLAN P. KELSEY, *Chairman,*
Editorial Committee

ABBREVIATIONS AND EXPLANATIONS
TULIP TYPE DIVISIONS

A. Early-Flowering.
1. DUCVANTHOL TULIPS. Very early tulips, rarely exceeding six inches in height.
2. SINGLE EARLY TULIPS.
3. DOUBLE EARLY TULIPS.
4. MENDEL TULIPS. Midseason, single tall tulips of medium build.
5. TRIUMPH TULIPS. Midseason, single tall tulips of stouter build than Mendel tulips and not so tall as Darwin tulips.

B. May-Flowering.
6. COTTAGE TULIPS. All tulips, including lily-flowered, which do not fall within the other classes.
7. DUTCH BREEDERS. Flower oval or cupped, brown, purple or red, but sometimes bronze; base white or yellow, but generally stained blue or green to blue-black.
8. ENGLISH BREEDERS. Flowers forming one-third to a half of a hollow ball when fully expanded; base always white or yellow, without trace of other color.
9. DARWIN TULIPS. Lower portion of flower usually rectangular in outline; segments of good substance; stems tall and strong.
10. BROKEN DUTCH BREEDERS.
11. BROKEN ENGLISH BREEDERS.
12. REMBRANDT TULIPS. Broken Darwin tulips.
13. BROKEN COTTAGE TULIPS.
14. PARROT TULIPS. Varieties with laciniate segments.
15. LATE DOUBLE TULIPS.
16. SPECIES AND FIRST CROSSES BETWEEN SPECIES.

monta'na . . . . . **U. glabra**
ni'tens . . . . . **U. carpinifolia**
parvifo'lia . . . . . CHINESE E.
In the United States, especially in the Prairie States where it is being extensively planted in shelterbelts, etc., the Siberian U. pumila is generally called Chinese E. The Editorial Committee believes this misnomer is a source of confusion and adheres here to original S.P.N. usage (hitherto accepted in the U. S. Dept. of Agriculture), which is also the usage of Rehder's Manual and of Bailey's Hortus Second.

pedunucula'ta . . . . . **U. laevis**
plo'ti (*minor* Henry, *not* Mill.; *sativa* Moss, *not* Mill.) . . . . PLOTS E.
proce'ra (*campestris* in part) ENGLISH E.
This is U. campestris as interpreted by Miller.

VIC'IA (*OROBUS* in part) lw . . Vetch

Vetches form one of the most important genera of Legumes and are of interest to the horticulturist, farmer, stockman, wild-life specialist, and the general public. About 150 species of Vetch have been described, chiefly from the northern hemisphere and from southern and western South America. All of them are valuable soil-cover, particularly because of their ability to add nitrogen to the soil, and many of them are used as cover crops. Few, if any, plants are more palatable to domestic livestock. Deer, beaver, doves, quail and many other forms of wildlife seek out the nourishing foliage, pods, and seeds of these plants. A number of the Old World species are commonly cultivated for forage; a few are used as ornamentals; some are grown for human consumption because of their edible seeds. There are about 22 species of Vetch native to the United States and about 4 others are naturalized; many of these are, at least locally, important forage plants. The list below contains the names of over 50 species and varieties and of 5 horticultural varieties of Vetch. It is based on a list of 36 species prepared in 1930 by the late Frederick V. Coville, to whose genius much of the credit for the first edition of Standardized Plant Names is clearly due. To this list have been added the names of native western range Vetches and of Old World species which have recently come into prominence. The Editorial Committee wishes to express its gratitude to the large number of people who have been kind enough to review this list and offer constructive criticism. Especial thanks are due Roland McKee, senior agronomist of the Division of Forage Crops and Diseases, Bureau of Plant Industry, U. S. Department of Agriculture; and H. A. Schoth, agronomist, Division of Forage Crops and Diseases, Bureau of Plant Industry, U. S. Department of Agriculture, both widely known as authorities on the agronomy of Legumes and joint-authors of "Vetch Culture and Uses" (U. S. Dept. Agr. Farmers' Bull. 1740. 1934); also to Atlee L. Hafenrichter and Paul Tabor of the Soil Conservation Service, and to F. J. Hermann, of the Division of Plant Exploration and Introduction, Bureau of Plant Industry.

WATERLILY GENERA

In the preparation of this list the Editorial Committee had the benefit of constructive criticism and suggestions from two outstanding authorities on these genera, G. H. Pring, Supt. Missouri Botanical Garden, St. Louis, Mo., and Henry S. Conard, Professor of Botany, Grinnell College, Iowa. To both the Committee extends its appreciation and sincere thanks.

WEEDS

Weeds are "plants out of place" (see Glossary). Especially is this derogatory term applied to unwanted plants which invade such places as cultivated fields, orchards, gardens, lawns, and golf courses. Largely these plants are immigrants which man has, usually unwittingly, transported from their native lands. Some, however, are true aborigines, steadily increasing their area of occupation. Weeds "can take it"; they are tolerant of drought, of extremes of heat and cold, of fire and high wind, and characteristically possess vigorous reproductive powers. Many have highly developed underground persistent systems of rootstocks, tubers and the like; frequently they produce seeds with spines or other prominences which fasten themselves to passing objects, or else with parachutes of down or other appendages, which greatly facilitate their distribution.

Weeds, as such, have far-reaching economic significance. In Iowa alone the amount of loss by weeds is conservatively placed at about $50,000,000 annually. It is important to remember, however, that "weed" is a relative term. The same species which in one place is an obnoxious weed, may be in another place a plant economically very valuable for ground-cover, soil-builder, food for man and animals, medicine, fiber, and many other purposes. A number of these appear in STANDARDIZED PLANT NAMES under several different categories. In fact, almost any known plant *in the wrong place* might aptly be termed a "weed."

The below list includes about 500 species of the more common and important so-called weeds of the United States. There is a very large literature on weeds in this country, chiefly issuing from the U. S. Department of Agriculture and the State agricultural experiment stations. It is not feasible to list all the works which were consulted in the preparation of this list. Of especial value were Walter C. Muenscher's "Weeds" (New York, 1935); L. H. Pammel and others' "The Weed Flora of Iowa" (Iowa Geol. Survey Bull. 41926); W. J. Beal's "Michigan Weeds" (Mich. Agr. Expt. Sta. Bull. 260. 1912); George H. Clark and James Fletcher's "Farm Weeds of Canada" (Canada Dept. Agr. 1923); Bureau of Plant Industry, U. S. Department of Agriculture, "Service and Regulatory Announcements" (Circ. 9. 1926) and Public Document No. 354, 76th Congress, 1st Sess., the "Federal Seed Act" (1939)—both of which contain weed lists; also the late Frederick V. Coville's "Seed List" (Bureau of Plant Industry, Washington. 1935).

WISTA'RIA (*KRAUNHIA; WISTERIA*) . . . . . Wistaria
The original spelling of the scientific name, Wisteria, is accepted by most botanists as conforming to International Rules. The genus, however, commemorates Dr. Caspar Wistar (1760–1818), distinguished physician and scientist of Philadelphia. The Editorial Committee of Standardized Plant Names strongly endorses the spelling Wistaria, for both Latin and common names, now used by some botanists and horticulturists, as well as in Webster's New International Dictionary (1940 ed.), which is standard in the Government Printing Office.

XANTHORHI'ZA (*ZANTHORHIZA*) YELLOWROOT

The generic name appears in literature as Xanthorhiza, Xanthorrhiza, and Zanthorhiza. The name originated with Humphrey Marshall (1722–1801), whose book "Arbustrum Americanum" (1785) is said to be the first botanical work published in America. Professor Rehder, in a note to the Editorial Committee dated September 9, 1940, says: "Marshall spells Xanthorhiza with one 'r'; the spelling with two 'r's' is probably intended as a grammatical correction by a later author."

simplicis'sima (*Zanthorhiza apiifolia*) YELLOWROOT

Zanthorhiza apiifolia is in general use for this shrub in horticulture, but Marshall's name X. simplicissima (1785) antedates L'Heritier's Zanthorhiza apiifolia (1788) three years.

GLOSSARY

Horticultural, Botanical and Plant Terms of Special Interest to Users of STANDARDIZED PLANT NAMES

Adventi'tious buds: Buds produced without order or in an unusual place on any part of a plant, as from the stem instead of the leaf-axils.

Aquat'ic: A plant inhabiting water.

Arbores'cent: Treelike in size or form, or both.

Arbore'tum: A collection of living trees, grown especially for scientific or educational purposes. A tree botanical garden. The present tendency of Arboretums, both for good horticultural reasons and for scientific interest and use, is to include various definite wildlife associations in which trees are dominant.

Arboricul'ture: The science and art of growing trees, especially as ornamental or shade trees. Distinguished from silviculture or forestry (the science and art of growing trees as a forest or for lumber) and from tree horticulture or pomology (growing trees for fruit, nuts, etc.).

Ar'borist: One who practices arboriculture. Today as a professional title this also covers the treatment of tree diseases, insect pests, and tree surgery.

Asex'ual: Without sexual conjugation; a grass which propagates by rootstocks is said to exhibit asexual reproduction.

Asex'ual reproduc'tion: Reproduction produced vegetatively without the aid of sexual organs; as budding, grafting, layering, cuttings, etc.

Associa'tion: A biologically stabilized or balanced group of plants, with their accompanying animal life, forming a natural, persistent entity; a "climax" unit of vegetation or animal life, or preferably a combination of both, used especially of major groups. Examples, an Eastern Arborvitae, or Hemlock-Sphagnum bog; an Eastern White Pine forest; a Buffalograss-Blue Grama prairie or savanna.

Bien'nial: Enduring for two years. A herb which germinates (typically in the spring of) one year and flowers, fruits, and dies (typically in the fall or winter of) the succeeding year.

Bino'mial: Literally, consisting of two names; used especially of scientific names of species. The term also applies to common and to horticultural variety names. Examples: **Acer rubrum,** TIGER LILY, ROYAL SOVEREIGN.

Bisex'ual: Having both stamens and pistils.

Botanical Garden: A garden, especially a public or endowed institution of considerable size, devoted to the cultivation of plants from the scientific and educational standpoints.

Breed: Specifically a race of men or animals, allied by nativity and some distinctive qualities in common, which are transmitted by heredity; as, the Chihuahua breed of dog. Sometimes also used of plants; as, the Country Gentleman breed of Maize. Breeds require control by man to prevent loss of their distinctive characteristics, and are also subject to improvement through selection, hybridizing, and other ways. (See **Race, Strain.**)

Browse: Twigs and shoots, with their leaves, cropped by livestock from shrubs, trees, and woody vines. **Browse plants** comprise one of the four commonly recognized classes of plants producing range forage, the others being grasses, grasslike plants, and weeds. In STANDARDIZED PLANT NAMES these are included under Range Plants.

Bud muta'tion; Bud varia'tion: Same as **Budsport.**

Budsport: An abnormal or freakish shoot or branch developed from a bud; a sport developed from a bud; as an awlleaf shoot on an otherwise scaleleaf Juniper tree. A budsport (or bud variation) involving genetic changes is called a **bud mutation;** as a yellowleaf shoot on a normally greenleaf plant.

Bulb: A thickened, usually subterranean and scaly base of a plant stem, from which roots are emitted below. It consists of a modified stem and leaf bud and is not a true root. Example, Lily.

Bur: A prickly or spiny fruit envelope, as a Chestnut or Burdock bur.

Ca'lyx (pl. **-yces**): The outer series of the floral envelope, or perianth; the parts immediately below the corolla; the sepals (calyx parts or lobes) as a unit. Example, the persistent calyx of a strawberry.

Cereal: A grass (such as Barley, Maize, Rice, Rye, Wheat), whose edible seeds or grains are cultivated especially for human consumption.

Chime'ra: A novel growth due to the mixing of tissues of two or more different plants; a graft hybrid exhibiting characters of both stock and cion, caused by the blending of the tissues of both.

Chlo'rophyl: The complex nitrogenous substance responsible for the prevalent green hue of the vegetable kingdom. Chlorophyl is essential in plant nutrition, starch being formed through its agency in the leaves, with the presence of sunlight and air. In algae and certain other plants the green hue is frequently obscured by other pigments.

Chloro'sis: A plant disease characterized by yellowing or blanching of the leaves and other green (chlorophyl-bearing) parts. It is due to chemical and physical soil deficiencies, as well as to pathological conditions, and is distinguished from blanching due to absence of light (*etiolation*).

Ci'on: A slip or shoot used for grafting.

Climat'ic: Of or pertaining to climate, *i.e.*, the weather for a particular area over an extended period of time. Example, Climatic Zones, or belts of the earth's surface having approximately uniform rainfall, temperature, and other weather conditions. Climatic requirements of plants refer to their annual temperature, precipitation, humidity, and other weather requirements irrespective of their soil needs, and have a direct bearing on their hardiness.

Clon (pronounced klone): A clon is a group of plants propagated only by vegetative and asexual means, all members of which have been derived by repeated propagation from a single individual. The original individual so propag-

may be a member of a good species or variety, a variation or mutation within a species, such as a budsport, or plant of hybrid origin. It may have a simple or complex origin and constitution, and it may be a polyploid of a single species or of a hybrid. Clons may be propagated by buds, bulbs, cuttings, grafts, runners, tubers, etc. Most so-called hort. var. of cultivated ornamentals, fruits, and edible tubers, such as apples, dahlias, potatoes, roses, and strawberries, are clons. But the breeds, races, and strains of cereals (such as Indian Corn, Oats and Wheat) which reproduce practically true from seed are not clons. Unfortunately polybrid (group hybrid) names have very often been misapplied to clons as: **Malus atrosanguinea** (**M. halliana** × **sieboldi**) as applied to CARMINE CRAB: whereas the name **M. atrosanguinea** is properly the group name covering any cross between the two species named above, Carmine Crab being a single described clon, selected from the polybrid hybridization named atrosanguinea. Polybrids are always hybrids, but clons may or may not be of hybrid origin. The term clon, originally so spelled, was introduced by Webber and Cook. Clons are indicated in S.P.N. by the prefixed symbol ¢ as devised and here published by the American Joint Committee on Horticultural Nomenclature for the first time.

Con'ifer: A plant of the natural plant family Coniferae, to which Cedars, Firs, Hemlocks, Pines, Spruces, and numerous other well-known trees belong. Most of the species have evergreen, needlelike or scalelike leaves, and the fruit in the form of a cone. Ginkgo, Taxus, Cephalotaxus, Juniperus, and a few other non-cone-bearing genera are closely related.

Corm: A swollen or enlarged, rounded, solid, fleshy, mostly subterranean stem base. Like a bulb in shape and appearance, except that it is solid, instead of being composed of fleshy scales. Example: **Arisaema triphyllum,** INDIAN JACKINTHEPULPIT.

Corol'la: The inner series of the floral envelope parts: the petals as a unit. The five petals of a Geranium blossom compose its corolla. A corolla may be composed of separate petals, or have its parts united. A showy, flowerlike part is not necessarily a corolla. The white, petal-like parts of a Flowering Dogwood inflorescence are an *involucre* of modified leaves, the true corollas being small, numerous, greenish, and four-petaled. In a Callalily and other Arums, the conspicuous part of the flower is the showy outer bract, or *spathe*, the floral organs (stamens and pistils) being borne without any true corolla (except sometimes a few scales) on an elongated spike (spadix) as "Jack" in Jackinthepulpit. In the Four-o'clock there is no corolla, the showy part of the flower being the calyx.

Cross: Hybrid of any description, whether natural or artificial.

Cross-fertilization; Cross-pollination: Fertilization secured by pollen from the flower of another plant; transfer of the pollen of one flower to the pistil of another.

Cryp'togam: A non-seed-producing plant of lower rank than the flowering plants. Thus, Fungi, Algae, Lichens, Mosses, and the Ferns are cryptogams, reproducing by spores, instead of seed.

Cul'tigen: A domesticated "species" or other group, whose origin may be unknown or obscure, whose characters are such as to separate it from known natural species (indigens), and which is probably not represented by any type specimen filed in a herbarium or by an exact description. Therefore, it has no clear taxonomic beginning, as, BARLEY (**Hordeum vulgare**), and MAIZE (**Zea mays**). See **Indigen.**

Cul'tivar: So-called "horticultural variety" or "garden variety." Progeny of a clon, chimera, or the result of selective hybridization, which is known only in cultivation and may or may not be reproduced from seed. The name, usually selected by the propagator, appended to either a generic name or a binomial, should be set off by different type or included within quotations to distinguish it from the binomial of a natural species. Examples: **Syringa** ¢CONGO; **Malus** ¢BOBWHITE; **Deutzia scabra** ¢PRIDE OF ROCHESTER.

Cutting: A severed vegetative or asexual part of a plant used in propagation; as a cutting of root, of stem, or of leaf. **Cion** is a cutting used for grafting.

Dioe'cious: Literally, in two houses. One-sexed; male or female only, the staminate (male) and the pistillate (female) flowers borne on different individual plants. The flowers of BUFFALOGRASS (**Buchloe**), for example, and of many Ashes (**Fraxinus** spp.), Maples (**Acer** spp.), and Hollies (**Ilex** spp.) are dioecious.

Drug Plants: Medicinal plants; plants producing products or compounds used in medicine and sold by druggists.

Drupe: A simple, fleshy, or pulpy fruit, the inner portion of the pericarp being hard and stony. A stone fruit, as Peach, Plum, and Cherry.

Em'bryo: The rudimentary, undeveloped plant in a seed, resultant from the union of a staminate (male) and a pistillate (female) cell.

Endem'ic: Indigenous or native in a restricted locality; confined naturally to a certain limited area or region. Opposed to exotic.

En'docarp: The inner layer of a pericarp, or covering of a fruit, as the bony part of the stone of a Cherry or Plum.

Ep'iphyte: An airplant. A plant which grows on another plant but is not nourished by it and hence not a parasite, as many Lichens, Mosses, Ferns, and Orchids.

Espal'ier: A fruit tree trained lattice-fashion in one plane.

Evergreen: Remaining green throughout the year, as Pines and some Rhododendrons. Does not necessarily refer to cone-bearing plants.

Exot'ic: Foreign; not native; introduced from another region. Opposed to indigenous or endemic.

Eye: The marked center of a flower; a bud on a tuber, as on the potato; a single-bud cutting.

Fastig'iate: With close and erect branches, as in the Lombardy Poplar.

Fertiliza'tion: The effect of the deposition of pollen on a stigma of a flower, resulting in the conversion of flower into fruit and of ovule into seed.

Fiber Plants: Plants producing fibers of commercial or other economic use, as Cotton, Flax, etc. A **fiber** is an elongated, threadlike plant cell, capable of being spun, woven or otherwise worked into cloth, rope, or some other fabric.

Form: A subdivision of a botanical variety (see **Variety**), distinguished by some minor character, as: the dwarf "form" with white flowers of Sitka Columbine (**Aquilegia formosa nana alba**). In systematic botany, forms (**formae**) are represented by quadrinomial Latin names. As STANDARDIZED PLANT NAMES does not accept scientific names longer than trinomial, "form" names, when used, are listed with those of hort. var.

Frond: The leaf of a Fern, Palm, or the like.

Fruit: The ripened ovary of a seed plant with its contents and various envelopes. For example, a Pea pod, a grain of Wheat, an Apple, a Hickorynut, and a Rose hip are all, botanically speaking, fruits.

Genet'ics: The science of plant or animal breeding. The branch of biology dealing with heredity and all its phases.

Graft: A shoot (cion) or bud inserted in (or affixed to) another plant or root with the intention that it will grow there.

Graft-hybrid: Same as **Chimera.**

Grove: A group of trees in area smaller than a forest and without underwood. The term is preferably applied to *natural*, parklike growths, as distinguished from plantations or orchards.

Habit: Aspect or manner of growth; as, prostrate, pyramidal, shrubby, trailing, treelike, vase-shaped, etc.

Halfbreed: A cross between botanical varieties of the same species. Thus, a cross between **Rosa rugosa alba** and **R. r. kamtchatica** would be a halfbreed. Crosses between two races are also sometimes called halfbreeds.

Herbgarden: A garden of herbs, especially of old-fashioned herbs and simples, cultivated for culinary purposes and for fragrance, historic, legendary, and other interest, together with the trees, shrubs, and woody vines traditionally associated with such collections.

Het'erogen: A term, apparently newly coined, used by geneticists for a variable group of plants or animals, arising as hybrids, budsports, and other mutations, and the like, among which are several to many forms or types which may or may not breed true. Those interested in a fuller explanation of this term should refer to the admirable paper by Dr. A. B. Stout, "The Nomenclature of Cultivated Plants," referred to in the bibliography at the end of this glossary. See also **Polybrid, Clon, Cultivar, Chimera, Ortet, Ramet.**

Ho'monym: The same name for a different plant; a name untenable because preoccupied. For example, the generic name Pinus would be a homonym, and untenable, if applied to any group of plants other than the Pines.

Hull: The outer covering of a fruit, especially if smooth or relatively so (as differentiated from *husk*), as the hull of a Hickory or a Walnut nut, as distinguished from the shell.

Husk: An outside envelope of a fruit, especially if coarse, harsh or rough, as the husk of a Filbertnut or the husks (glumes) of an ear of Indian Corn.

Hy'brid: A plant resulting from a cross between two or more parents that are more or less unlike.

Hybridiza'tion: The obtaining of hybrids by either artificial or natural crossing.

Hydropon'ics: The science, art or practice of growing plants in aqueous chemical solutions rather than in soil.

Imperfect Flower: Having either stamens or pistils, but not both.

In'digen: An indigenous, or native plant. Opposed to cultigen and exotic.

Indig'enous: Native. Thus, **Achillea lanulosa** is the common indigenous Yarrow of the western United States, while **A. millefolium** is the common Yarrow introduced from the Old World. Opposed to exotic.

Insectiv'orous Plant: A plant which captures and digests insects, as Pitcherplant, Sundew, and Venusflytrap.

Kernel: The inner, often edible portion of a nut; the *endocarp*, as the kernel of a Butternut or of a Peach pit. The kernel is the portion of the seed which contains the plant embryo.

La'tex: A milky, usually white fluid found in certain plant cells. The latex contains various gum resins, waxes, etc. Rubber, guttapercha, and chicle are commercial examples of latex.

Leg'ume: (1) A simple, usually dry pod, splitting along the back into two valves or parts; the fruit of any leguminous plant, *i. e.*, a member of the Pea family (Fabaceae) or families closely related thereto (Caesalpiniaceae, etc.); (2) a plant belonging to these leguminous families or subfamilies.

Lia'na: A high-climbing or long-running vine. In temperate regions lianas are often herbaceous; in the tropics and subtropics, lianas are predominantly woody.

Metab'olism: The life processes of plants as summed up in the chemical and physical changes involved in their growth, reproduction, and decay. Thus, the formation of starch in the plant leaves; its transformation into sugar and transportation to the roots for winter storage; the production of flowers and seed; the bringing in, through the roothairs on the roots, of water and soil solutes from the soil; the withering and dropping off of the leaves in the fall, are all phases of metabolism.

Monoe'cious: Literally, in one house. Having the flowers differentiated as to sex, the staminate (male) and pistillate (female) flowers in separate inflorescences, but borne on the same individual plant.

Muta'tion: A sudden variation shown in the offspring of plants (or animals) which differ from their parents in some well-marked character or characters. Familiar examples of mutation are shown in such groups as the Eveningprimrose genus (**Oenothera**) and the Rose family (Rosaceae). A "sport" is a mutation.

Node: A stem joint. Nodes are a very conspicuous feature of grass stems as, for example, Bamboos and Indian Corn. Nodes usually represent the points on the stem from which the leaves are produced.

No'men conservan'dum: Literally, a conserved name. A name retained in Latin plant nomenclature regardless of priority. Nomina conservanda usually have a history behind them of long usage (possibly pre-Linnaean), or of acceptance by the great botanical figures of the past, better and fuller publication, questions of propriety, etc.

No'men nu'dum (pl. **-ina nuda**): A naked botanical name, printed in a book or other publication without any description or illustration. Nomina nuda are very properly rejected.

Nut: In botany, a nonsplitting 1-seeded fruit, with hard woody shell. In common usage, a hard-shelled fruit or seed containing an edible kernel. In popular parlance, Almonds, Peanuts, and Brazilnuts are nuts, but they are not so botanically; an Almond is a drupe (close akin to a Peach); a Peanut is a legume; while the fruit of the Brazilnut tree (**Bertholletia excelsa**) is a sort of large woody-shelled capsule (pyxis) containing nutlike seeds.

Orchard: A plantation of trees for the production of tree products—such as fruits, nuts, commercial oils, sugars, etc. The term is distinguished from grove, which is preferably applied to a natural growth of trees.

Or'tet: The one original plant from which a *clon* ultimately derives. A term introduced by A. B. Stout, derived from the Latin word *ortus*, origin.

Par'asite: An organism which derives its sustenance from another. Thus, mistletoes are parasites of oaks, pines, and other woody plants.

Peren'nial: Lasting for three or more years; said especially of herbaceous plants that are neither annual nor biennial. A perennial plant.

Photot'ropism: The common phenomenon exhibited by plants or their organs in growing inward or turning to a source of light. Heliotropism (turning toward the sun) is practically synonymous with phototropism, though similar tropisms can be induced by artificial light.

Pol'ybrid: A group name for hybrids from crosses between two particular species, varieties, or genera. The distinction between this term and the term **heterogen** is more fully discussed under that term. It is used for the purpose of clearly distinguishing between the definite individual selection called *clon*, which must be reproduced asexually, and the indefinite and variable forms which result from single or repeated crosses between two particular species, varieties, or genera, and from which a clon may be taken. Thus, all the diverse variations resultant from crossing FLAME AZALEA (**Rhododendron calendulaceum**) and PINXTERBLOOM AZALEA (**R. nudiflorum**) are called by botanists a hybrid species, ∞MORTIER AZALEA (∞**R. mortieri**). It would seem better policy, in future, not to give such crosses a specific scientific name, but to give them a common name (such as MORTIER AZALEA) prefixed by the polybrid symbol (∞). The symbol would warn horticulturists and others of the immense and uncertain variability of such a nexus. The term *polybrid* is here introduced by the editors, Harlan P. Kelsey and W. A. Dayton.

Polyg'amous: Having both perfect and unisexual, or imperfect (*i. e.*, either staminate or pistillate) flowers borne on the same individual, as, for example, in certain species of Maple.

Pome: The fleshy, applelike fruit of a member of the Apple family; also, though less exactly, a Rose hip or similar fruit of the Rose family (Rosaceae).

Race: A group, especially of cultivated plants, that possess certain well-marked differentiating characters, and which propagate true to seed except for simple fluctuating variations. The different groups of Beans, Indian Corn, Cotton, and Wheat, for example, often referred to as "varieties," are, in a more restricted sense, **races.** Golden Bantam, Leaming, and so on, may be recognized as **races** of Indian Corn; Fultz and Turkey, as **races** of Wheat; and Dwarf Erfurt and Snowball as **races** of Cauliflower. See **Breed** and **Strain.**

Ra'met: An individual member of a clon. A term introduced by A. B. Stout, derived from the Latin word *ramus*, branch.

Range Plants: Plants inhabiting natural grazing grounds as in the Far West. In general, range occupies country too high in elevation, too rough, too dry, or too rocky to be suitable for agricultural development, and differs from pasture usually in great extent, as well as in relative freedom from artificial improvement, the vegetation being almost entirely indigenous, and the areas usually unfenced.

Rootstock: (1) In botany, a rootlike stem or branch under or sometimes on the ground; a rhizome, as in Iris and Quackgrass. (2) In horticulture, a root, usually of a seedling, on which a cion, usually of a clon, is grafted.

Runner: A long, slender, tendril-like leafless form of creeping branch, prostrate on the ground. Each runner, after having grown to its full length, strikes root from the tip (it sometimes roots at the joints also), in which case it may merge into a stolon, fixing the tip to the ground, then forms a bud at that point, which later develops into a tuft of leaves and so gives rise to a new plant, as in Strawberry.

Se'pal: A division of the calyx corresponding to a petal in the corolla.

Ses'sile: Without a stem or stalk; a sessile leaf is without a petiole, or leafstalk, sitting directly on the axis or stem of the plant; as, the sessile leaves of St. Johnswort and the sessile cones of Hemlock. In a true spike all the flowers are sessile.

Shell: The hard layer of a nut, as distinguished from its hull (soft, outermost rind) and kernel, as the shell of a Hickorynut which, when cracked open, discloses the edible kernel.

Slip: A softwood or hardwood cutting "slipped," pulled or cut off, for propagating purposes. See **Cutting, Cion.**

Spe'cies (pl. **Species**): The unit of plant (or animal) classification. A group of individuals with so many characteristics in common as to indicate a very high degree of relationship and a common descent. Eastern White Pine (**Pinus strobus**) and Colorado Columbine (**Aquilegia coerulea**) are familiar illustrations of species.

Spore: The 1-celled, powderlike fruiting body (somewhat analogous to a seed in a seed plant) of a cryptogam, produced asexually, and without an embryo. See **Cryptogam.**

Sport: A variation starting from a bud or seed; a mutation. These when propagated are termed **Ramets.**

Sti'on: A plant composed of a stock and cion growing in combination regardless of the method of propagation. (A term proposed by Webber, based on an ellipsis of the combined two terms, stock and cion.)

Stock: (1) In horticulture: (a) The plant stem or root which receives the cion or other graft: as, a COMMON CHOKECHERRY (**Prunus virginiana**) **stock** for some Cherry or Plum hort. var. (also Understock); (b) The original progenitor of a group of closely related plants (as a **race**); (c) The supply of a species or variety or any number of species or varieties of plants or seeds in a nursery, seedhouse or other horticultural establishment; (2) In botany, (a) A plant of the genus Mathiola; (b) A main plant stem (stalk or trunk); (c) A root-producing caudex or rhizome (rootstock); (3) In forestry: (a) Forest nursery seedlings; (b) Logs delivered from stump to mill or railroad; (c) Coppice stumps, expected to produce new sprouts; (d) Specified growth constituting a given forest cover.

Sto'lon: A trailing or reclining branch above ground, which strikes root where it touches the soil, there sending up new shoots which, later, may become separate plants. Many plants multiply vegetatively in this way.

Stool: A clump of roots or rootstocks that may be used in propagation; also an established low plant from which layers are taken.

Strain: A group of cultivated plants derived from a **race,** which do not differ from the original of the race in visible taxonomic characters. When, for example, the breeder, by a careful selection of Pacific Bluestem Wheat, produces a new sort of Pacific Bluestem Wheat that differs from the original race only in the quality of yielding heavily, it would be called a strain of Pacific Bluestem Wheat. If, however, the breeder selects Jones Fife and changes the

chaff from hairy to smooth he has produced a new race. The demarcation, however, between **race** and **strain** is none too sharp. Strain is a term which should be far more often used than at present by seedsmen and other horticulturists.

Stratifica'tion: The operation or method of burying seeds to keep them fresh and to soften their integuments, or to expose them without injury to cold temperatures, that they may be more readily germinated.

Subspe'cies: A taxonomic rank immediately below that of species; by some authors regarded as a synonym of **variety**, but if subspecies and varieties are both recognized, then variety (which see) ranks below subspecies.

Sucker: A branch or shoot from a creeping underground stem or root which ascends above ground and tends eventually to become a separate individual plant. Suckers are common on many woody plants, such as Blackberry, Locust, Sassafras; on budded roses when a sucker from the understock is permitted to grow.

Suffrutes'cent; Suffrut'icose: Undershrubby. A term applied to perennial plants, usually smaller than true shrubs, whose stems are partly herbaceous and partly woody, dying down near to (but not entirely to) the ground each year.

Syn'onym: A different name for the same plant; an untenable specific or generic name. For example, *Abies picea* is a synonym of **Picea abies.**

Taxon'omy: The science of classification.

Terminol'ogy: A group name for special terms used in an art, science, craft, or other phases of human study or activity, as horticultural terminology, botanical terminology, fiber plant terminology, etc.

Type: In systematic biology (taxonomy), the specimen or specimens on which a species or other group is based and from which the author of that species or other group described it.

Understock: The presumably more sturdy or favorable plant or root upon which a clon is grafted or budded, in order to give greater vigor to a variety or to more rapidly propagate it. Same as **Stock.**

Vari'ety: In systematic biology, a division of a species. For example, the short-, squared-petal **Aquilegia formosa truncata** is a variety of the typical SITKA COLUMBINE (**A. formosa**). STANDARDIZED PLANT NAMES adopts the principle that *natural* variations only, that hold true to type, should be given Latin names. The term variety in horticulture is therefore lower in the systematic scale than the taxonomic term variety.

Weed: To the farmer, a plant out of place, especially an aggressive and pestiferous, often coarse, mostly herbaceous, usually introduced plant species (such as Crabgrass, Dandelion, Mustard, Plantain, and Wild Carrot) which takes possession of cultivated and fallow fields and pastures. A weed species may possess intrinsic values in horticulture for medicine, soil-improvement, etc. quite apart from its nuisance status as a weed. To the western stockman, a "weed" is a herbaceous, nongrasslike plant occurring on the range. An appreciable number of the weeds of the farmer are good range forage plants of the western stockman, especially on those ranges where under unfavorable growing conditions the same aggressiveness which renders a species a pest in agricultural land clothes it with utility if it possesses palatability to grazing animals.

Xer'ophyte: A plant adapted to arid conditions; a desert plant. Cacti are familiar examples of xerophytes.

Zone: A region or belt of the earth's surface characterized by similar climatic, growth or other conditions or by resemblances in the flora and fauna, as a Tropical or Temperate Zone; a Hudsonian (timberline) or Austral (southern United States) Zone.

BIBLIOGRAPHY

No existing glossary of definitions could be found that seemed adequate properly to fill the requirements of this book.

Many authorities were consulted, definitions revised or entirely rewritten, and a few new ones added. The bibliography below represents those authors on whom we have drawn most freely.

INDEX OF SPECIAL LISTS

While all these Special Lists are in alphabetical order, it is deemed best for convenience to index them here separately. It should be noted that all of these Special Lists are the result of investigation and study in the United States Department of Agriculture, or by outside specialists and experts, resulting in information of high economic value. Thus, for example, the Cereals, Drug Plant Names, Fruit and Edible Nut Names, Lumber Trade Names, and the Range Plants lists make accessible information of great importance.

	Page No.
Amaryllis Family Genera	13
Aquarium Plants	19–20
Aster	25–30
Azalea	32–38
Bamboo Genera	40–41
Begonia	44–53
Berberis (Barberry)	53–55
Cactus Genera	66–78
Camellia	82–85
Canna	86–90
Cereals	97–106
Cherries, Oriental Flowering	108–109
Chrysanthemum	111–125
Citrus Genera and Citrus Hybrids	127–128
Clematis	128–131
Cryptogams, Economic	145–147
Cycad Genera	149–150
Delphinium (Larkspur)	154–159
Dianthus (Carnation)	161–170
Drug Plant Names	175–202
Economic Plants	204–209
Eucalyptus	216–218
Fern Genera	223–225
Fiber Plants	226–228
Ficus (Fig)	228
Fruit and Edible Nut Names	233–266
Fruit Group Common Names	266–268
Fuchsia	268–269
Geranium (See Pelargonium)	
Grass Genera	278–288
Hemerocallis (Daylily)	295–298
Herbgarden Plants	299–303
Iris	313–315
Lathyrus (Peavine; Sweetpea)	324–329
Lilium	333–337
Lumber Trade Names	342–373
Narcissus	391–397
Nut Group Common Names	400
Orchid Genera	404–423
Paeonia (Peony)	426–444
Palm Genera	444–452
Papaver (Poppy)	453–454
Patents, Plant (Complete from 1 to 477)	455–467
Pelargonium ("Geranium")	469–471
Phlox	477–480
Poisonous Plants	489–494
Populus (Poplar)	496–497
Range Plants	509–523
Rhododendron	526–535
Ribes (Currant; Gooseberry)	536–537
Rosa (Rose)	539–569
State Flowers and Trees	596–597
Succulents	600–611
Syringa (Lilac)	613–617
Trifolium (Clover)	627
Tropaeolum (Nasturtium)	628–629
Tsuga (Hemlock)	629–630
Tulipa (Tulip)	630–642
Vicia (Vetch)	648
Viola (Violet)	649–651
Vitis (Grape)	651
Waterlily Genera	653–654
Weeds	655–659

STANDARDIZED PLANT NAMES

has been set up, electrotyped, printed and bound within the Mount Pleasant Press of the J. Horace McFarland Company, Harrisburg, Pa.

Preliminary composition (in 10-point No. 8 Monotype Roman) from the assembled cards began in May, 1938. From the resulting 429 galleys 30 proofs were made, and these were sent out at the Editorial Committee's order to various participating authorities. Upon their return the Committee transferred the work again to cards.

The cards of the "A–Z" list came to the Mount Pleasant Press in October, 1940, in 52 boxes. The necessary cross references were edited into these cards by Miss Meikle, of the Mount Pleasant Press, by December 15, 1940. The 62 special lists coming in from time to time from many sources were also edited into the copy, and proofs were mailed from the Press to the various authorities prior to final passing by Mr. Dayton in Washington.

Before final composition was undertaken many experiments were made. The plan of a two-column page, as in 1923, was given up as the special lists came in, and the three-column page agreed upon. Then came study as to the number of pages the work would make. It was expected to have it set in 8-point. This was found impracticable as running the book beyond 800 pages. Composition in 7-point began early in 1941, and was completed in July, 1941. The entire work, including 646 galleys, weighing about 7000 pounds, was in type before page makeup and electrotyping began in October, 1941. Printing was completed December 31, 1941.

The paper used in the book was selected for easy reading and durability. It is Zenith English Finish Book, made to our order by the Fitchburg Paper Company, Fitchburg, Mass. It was obtained and seasoned for many weeks before printing began.

The binding is in Roxite Library Buckram, made by Holliston Mills, Inc., Norwood, Mass., selected for strength and good appearance.
