FOREWORD

By the Rt. Hon. the EARL OF SWINTON, P.C., G.B.E., C.H., M.C.
*Secretary of State for the Colonies 1931-35; Secretary of State
for Commonwealth Relations 1952-55.*

THE compilers and editors of *The British Commonwealth* are to be congratulated on their courage and their achievement.

There is a mass of literature about individual countries of the Commonwealth and about particular subjects touching the Commonwealth as a whole. But there has never been, so far as I know, an attempt to combine in a single volume the story of Commonwealth development and an account of every country, great and small, within this vast and varied Commonwealth of Nations.

I imagine the attempt was not made because the task appeared too formidable. That it was well worth while to try I have no doubt. I have often felt how useful it would be to have what I may call a comprehensive "Guide to Knowledge" covering the whole Commonwealth. Now we have it.

It would be impossible in such a volume to tell the whole of truth. But there is a lot of interesting and useful information about every country; and the reader is put on the track how to get more special and detailed knowledge.

The editors have been fortunate in obtaining the collaboration of men and women in different parts of the Commonwealth. They write with a special knowledge and understanding of their own countries. This greatly enhances the value and interest of the book. It also typifies the diversity and the unity of this unique family of nations.

15th February, 1956.

SWINTON.

ACKNOWLEDGEMENT

A work of reference is an organic body, which cannot easily be built in a day. Each edition provokes new ideas, criticisms and suggestions, from both contributors and readers, on which the editors can draw for the preparation of the next; each entry in an old edition serves as a proof for the revised entry which will appear in the new; and it is only in collecting information on new organisations or changing circumstances that fresh ground is broken. As the years go by, the reputation of the book becomes its capital; as each new edition appears its sponsors, while hoping that it will be even better received than its predecessors, are at worst comforted by the knowledge that much of it is already well tried.

There is no such comfort in the first edition. Like all first editions, *THE BRITISH COMMONWEALTH* is a venture and the story of its production one of trial and enterprise. The story began several years ago when the directors of Europa Publications were considering whether they might make any addition to their list of international reference books, and when they decided that there was enough interest in the British Commonwealth, and enough demand for detailed information on the various countries and territories which belong to it, to justify a reference book devoted specially to it. And so the gigantic task of collecting, sorting and correlating information, began.

The information is of two kinds. There are for each country or area articles on geography, history and economic conditions, most of which are written by experts in their respective fields who are either nationals of the country concerned or who know it well. Many of these articles are signed and therefore give the views of their authors. If there are inconsistencies, if the articles contradict each other, in matters of opinion, or stress different aspects of their subjects, the editors offer no apology. The object is in every case to give an interesting and authoritative view rather than to aim at text-book uniformity. The British Commonwealth is a loose, illogical and complex association of peoples which defies any attempt at rigid treatment.

The sections on the constitution, government, administration, legal and religious affairs of each member of the Commonwealth, and those on many aspects of their national and international life which follow, consist almost entirely of facts—detailed information, as accurate as we can make it—about many thousands of institutions and organisations. In presenting this category of information, the problems vary with the country or territory: in the case, for instance, of the United Kingdom or Canada or Australia, selection was the great difficulty; in the case of some of the more remote or smaller territories, collection; and in yet other countries—particularly in parts of Africa—political and commercial development is so fast that information is often outdated while it is going through the press.

There were many other problems. The choice of title seemed at first to be easy enough. We decided quite spontaneously on *THE BRITISH COMMONWEALTH* as being the most straightforward description of the contents. But when the book was well under way we were asked to consider *THE COMMONWEALTH* or *THE COMMONWEALTH OF NATIONS* as possible alternatives. The suggestion came from a friendly and responsible quarter and we therefore considered the question of the title in all its aspects. We decided for what we believe to be good reasons (including the fact that the Commonwealth might be confused with the Commonwealth of Australia

ACKNOWLEDGEMENT

and The Commonwealth of Nations taken to mean all the nations of the world or the members of some future world organisation) that our original choice was best.

There were also of course, endless minor difficulties and decisions such as beset every work of reference, but that so many of the problems have been solved and in fact that this book appears at all is due to the help of people in all parts of the Commonwealth. Before all of them we must thank our two advisory editors, Professor GERALD S. GRAHAM, Rhodes Professor of Imperial History at King's College, University of London, who contributed the first chapter of the book and who organised the historical sections; and Dr. W. B. FISHER, Head of the Department of Geography, Durham Colleges, University of Durham, who contributed several of the geographical sections and commissioned and supervised the rest, and the maps. Both of them have been ready at all stages to answer queries and to give advice, and have been most patient with our difficulties.

We must also thank the following, both for their contributions and for their help:

- H. A. ALAVI, former Secretary, State Bank of Pakistan.
F. H. ANDREASEN-AALEN, Hatfield College, Durham.
J. H. APPLEBEY, Leader Writer on the *Daily Telegraph*.
H. BOWEN-JONES, Lecturer in Economic Geography, Durham Colleges, University of Durham.
Professor A. BRADY, Department of Political Science, University of Toronto.
A. C. BUCKLEY, former Demonstrator, Department of Geography, Durham Colleges, University of Durham.
Sir CHARLES COLLINS, C.M.G., late of the Ceylon Civil Service.
C. D. COWAN, Lecturer in History, School of Oriental and African Studies, University of London.
J. C. DEWDNEY, Lecturer, Department of Geography, Durham Colleges, University of Durham.
Dr. K. ONWUKA DIKE, Head of the Department of History, University College of Ibadan, Nigeria.
Dr. R. DOW, I.C.I. Ltd., former Research Fellow of the University of Aberdeen.
Miss ETHEL DRUS, Lecturer in History, Birkbeck College, University of London.
Dr. H. S. FERNS, Senior Lecturer in Modern History and Government, University of Birmingham.
J. F. FLAHERTY, of *Buchanan's Bulletin*, Ottawa, Canada.
H. A. DE S. GUNASEKERA, Lecturer in Economics, University of Ceylon.
Dr. A. J. HANNA, Lecturer in History, University of Southampton.
J. H. HUBBARD, Former Lecturer, Department of Geography, Durham Colleges, University of Durham.
Professor ARTHUR KEPPEL-JONES, Department of History, University of Natal.
A. D. KNOX, Lecturer in Economics, London School of Economics.
Miss HILDA LEE, Lecturer in History, London School of Economics.
D. H. MALING, Lecturer, University College of Wales (Swansea); former member of the Falkland Island Dependencies Survey (1947-50).
Professor NICHOLAS MANSENGH, Smuts Professor of the History of the British Commonwealth, University of Cambridge.
P. K. MITCHELL, Demonstrator, Department of Geography, Durham Colleges, University of Durham.
Professor C. G. PHILIPS, Department of History, School of Oriental and African Studies.
Professor V. K. R. V. RAO, Head of the Delhi School of Economics.
E. J. TAPP, Senior Lecturer, Department of History, University of New England, N.S.W., Australia.
C. H. THOMPSON, Department of the Prime Minister, and Cabinet Office, Central African Federal Government.
I. B. THOMPSON, University College, Durham.

ACKNOWLEDGEMENT

J. S. G. WILSON, Reader in Money, Banking and Public Finance, London School of Economics.

B. J. P. WOODS, Editorial Staff of *The Economist*.

After that, it is difficult to know where to start or where to stop; but we should like in particular to thank Mr. C. C. WIGLEY, of the Institute of Commonwealth Studies, for his help with the East African Economic Survey; Mr. B. C. HARFORD, of the Commonwealth Bank of Australia and Mr. H. R. WOODROW, economic adviser to the Australian Treasury, for their help at the proof stage with the Australian economic and statistical surveys; and Mr. D. SIMPSON, Assistant Librarian of the Royal Empire Society for his help with the book list. The rest of our thanks must be anonymous, because they go to the many hundreds of individuals in all the parts of the Commonwealth who have answered our letters or questionnaires, checked our drafts or suggested how this or that subject might be treated. These include officials in the offices of the High Commissioners and Commissioners in London and officials in overseas governments, many of whom have taken far more trouble than we had any reason to expect to give us up-to-date details, to check statistics, to encourage and advise; and the secretaries, librarians or Public Relations Officers of the many banks, insurance companies, trade organisations, transport offices, societies, institutes, libraries, museums, colleges and other organisations of which details are given in this book. They have gone out of their way to help us, often, we know, at the cost of much time and trouble, and we are glad to have this opportunity to show our very deep appreciation of their support.

We hope too that they will find this volume useful and, in the course of time, let us have their comments and criticisms before we embark on the second edition. In compiling the book we have had them particularly in mind and we should like in future editions to adapt it as far as possible to their needs; and indeed to the needs of the intelligent citizen in every country who wants concise, dependable information about a unique experiment in international co-operation involving over a quarter both of the land area of the globe and of the world's population.

TO REGIONS, COUNTRIES, TERRITORIES AND ISLANDS

In many cases, information on each country, territory or island of the Commonwealth is given both in the general chapters on the group or area to which it belongs and in its own individual section. In such cases the reader is referred to the Synopsis for the area concerned, in which details of page numbers may be found. In the case of smaller territories or islands which do not appear in the Synopses, or which are not covered by any of the general sections, a direct page reference is given.

THE EVOLUTION OF THE COMMONWEALTH

"EMPIRE", wrote a distinguished economic historian, "is not a disease; it is a phase of national expansion inside which new nations themselves containing the stock of one or more old nations, come to birth." This process of peaceful reproduction began in the latter part of the nineteenth century; and a British Empire which was started in the sixteenth century for purposes of settlement and trade gradually evolved into the present loose, yet curiously active political structure whose various parts "hive off" from time to time as independent nations, without altogether sacrificing the family tie. The result has been something new in history; an *Empire* became a *Commonwealth*.

In 1931, the last significant constitutional ties which made the old self-governing Dominions partially or theoretically dependent on London were discarded. Under the terms of the Statute of Westminster of that year, every self-governing member of the Empire became master of its own destiny within a Commonwealth and by admitting inferentially an undisputed right to secede from the Commonwealth, the Statute reduced to a legal quibble any vestige of imperial control over the one-time colonies. Similarly, in keeping with this principle, the ties with the present Colonies have been gradually loosened, as expanding opportunities for education in self-government, buttressed by the growth of nationalism, accelerated the pace of political progress. Between 1947 and 1948 arrangements were made for the complete sovereign independence of India, Pakistan, Burma and Ceylon either within or without the Commonwealth, and only Burma decided to withdraw. In 1954 the Gold Coast reached the threshold of independence; and the powers retained to-day by the United Kingdom in the government of Nigeria are but the minimum normally retained before the acquisition of full nationhood. It was properly in keeping with the evolutionary process that the name Dominions Office should have been changed in July 1947 to that of Commonwealth Relations, and the Colonial Service in October 1954 to that of Her Majesty's Overseas Civil Service.

For all the varying parts of the Commonwealth, complete self-government has been and remains the goal, and the British system of parliamentary government has been accepted as the standard model. This common political interest is an important factor in maintaining the interdependence of the Family; but equally important is the other kind of political heritage—a common conception of law in relation to the freedom of the individual, a common faith in the values of British democracy, and some understanding of the spirit in which it is practised.

In the fifteenth and sixteenth centuries, while Spain and Portugal were opening up new colonies for trade and settlement, England played only a minor part. Admittedly, a Genoese sailor, John Cabot, under the patronage of Henry VII, touched Newfoundland in 1497, and with his sons probably explored the coast of North America as far south as Virginia; but such discoveries were not followed up. Despite her insular position, England was a predominantly agricultural country, continental in outlook; her maritime resources were not yet sufficient for great overseas enterprises; and any English pretensions to control communications by sea were confined to the Channel which was regarded as part of the feudal domain connecting the Kingdom with possessions in France.

Nonetheless, individual English adventurers like William Hawkins of Plymouth undertook voyages to West Africa, the first in 1528; and in an effort to avoid the Spanish monopoly, Englishmen began looking for a back door to the fabulous East, either by the north-east around Asia, or by the north-west around North America. Between 1553 and 1558 Willoughby, Chancellor and Anthony Jenkinson tried unsuccessfully to get around, and subsequently through, Russia; Frobisher and Davis, between 1576 and 1587, each made three voyages into the Arctic Ocean; in 1577 Drake began his great voyage to the Moluccas by the south-west, and in the process became the first Englishman to encircle the globe. But little came of these gallant adventures other than the knowledge that a road to the East by the north-west or north-east was not practicable, and that a share in the riches of the New World could only be achieved by breaking the maritime power of Spain and Portugal.

Consequently, during the greater part of the sixteenth century, territories of the New World were unoccupied by English settlers. An attempt was made by Sir Humphrey Gilbert to establish a colony in Newfoundland in 1583, and a few colonists led by Sir Walter Raleigh landed at Roanoke in Virginia in 1585, but there was no continuous flow of population to North America until after 1630. This failure to colonise was not simply owing to bad organisation and lack of capital; it was fundamentally a result of the fact that until 1588 Spain, with her Caribbean bases, had more well-armed ships at sea than England.

Without constant national support, neither trading connections nor colonies could possibly survive. Following the defeat of the Spanish Armada in 1588, although hardly recognised at the time, the days of the Spanish monopoly were over, and likewise of those supreme individualists, the sea-dogs, who, while they had failed to set down enduring settlements, had broken paths by their exploits, and pointed the way to colonisation. In the dawning age of war-ships and navies, it was clear that colonial empires overseas could only be possessed by vigorous nations, able to control or at least dispute the sea routes of empire. For the next hundred years and more, this struggle for the command of the sea was the basic element in the competition of England, Holland and France for the trade and territories of the world beyond Europe.

The first half of the seventeenth century witnessed the first expansion of English trade and population overseas. It saw the beginning of great migrations by those who were subsequently to be known as British peoples to North America and Newfoundland, the West Indies, the East Indies and India. Unlike those of Spain and Portugal, these enterprises were not controlled entirely by the state; the first colonies or trading posts in North America and India were the product of chartered companies of private merchants, whose charters issued from the Crown and ordinarily conceded a monopoly of trade between England and the territories designated. The Virginia Company, which sent its first contingent to America in 1607, and the East India Company, established in 1600, although subject to government supervision, were the spontaneous creation of private organisations. "The expansion of England in the seventeenth century was an expansion of society, and not of the state."

Between 1620 and 1642 emigration to Bermuda and the

THE BRITISH COMMONWEALTH

West Indies amounted to some 40,000, of which almost half went to Barbados. The same period saw the establishment of "the greatest foundation of the old colonial Empire", the New England colonies. While trade was the impelling force in the Virginia settlement, the religious motive, in a nonconformist sense, was predominant in the foundation of Massachusetts and Puritan New England; similarly the Quakers, like the Puritan immigrants to the northward, found a refuge in Pennsylvania, and unhappy Roman Catholics a retreat in Maryland. In proselytising zeal the English never equalled the Spanish, Portuguese or French. Admittedly, most colonial charters of the time announced the propagation of the Gospel as among the first of colonial objectives, but the majority of these official professions of intention rarely went beyond lip-service to a doctrine that was only infrequently implemented in practice. Although the search for gold and silver and the riches of Cathay played a part in the early years of colonial activity, by the latter half of the seventeenth century the prospect of finding luxury goods and raw materials became the main justification for English colonisation. Cromwell seized Jamaica, the greatest sugar plantation in the Caribbean, in 1655; a syndicate of Charles II's courtiers made plans to exploit the Carolinas in 1663, while the Duke of York was responsible for the expedition that captured the commercial capital, New Amsterdam, from the Dutch in 1664, releasing to English possession the rest of the coastline between Virginia and New England. In the light of a new economic doctrine, expressed in what is called the "Mercantile System", trade expansion became the dynamic element of Empire.

The East India Company, driven from the Spice Islands by the Dutch in 1623, consolidated its efforts on the sub-continent of India at the expense of the Portuguese, acquiring three main settlements, Madras at the end of Charles I's reign, Bombay during the reign of Charles II and Calcutta, two years after the Glorious Revolution, in 1690. Thenceforward, with government encouragement, the East India Company prospered exceedingly; in order to safeguard its expanding trade, it found itself, especially in the eighteenth century, fighting wars and making alliances, and in consequence governing large native territories that were to form the nucleus of an Empire of India. Similarly, the Royal Africa Company was organised in 1672 to supply slaves to all the British colonies, and indirectly to begin a triangular trade between Europe, Africa and North America in salt, wines, sugar and tobacco. In addition, Charles II granted about a quarter of the North American continent in 1670 to the Hudson's Bay Company, headed by Prince Rupert, whose main object it was to bring beaver furs from the northern regions of Canada. There were, too, various private firms, some of which dealt with the relatively unproductive New England colonies, exchanging manufactures for naval stores, lumber, masts and potash.

The need for export markets was hardly a significant element in colonising activity until the Industrial Revolution produced the multiplying factories of England at the beginning of the nineteenth century. On the whole, it was expected that the colonies should draw such manufactured supplies as they required from England alone, either in their own or in English ships, and that the colonial inhabitants, renouncing manufacturing pursuits, should send the raw materials of their lands exclusively, apart from a few exempted articles, to England in their own or in English ships. This system, which worked fairly successfully, often because its various trade and navigation laws were not rigorously enforced, was designed to achieve a monopoly of the colonial carrying trade at the expense of the Dutch, the French or any other rivals for overseas commerce.

By the end of the seventeenth century, Empire, which had come to express itself in terms of trade, was very much a matter of governmental concern. In 1696, a Board of Trade and Plantations was created by William III, and until the American Revolution brought an end to the Board as well as the first Empire, it functioned as a kind of Colonial Office that put commercial profits far ahead of plantation welfare. "By trade and commerce", wrote Lord Bolingbroke in 1738, "we grew a rich and powerful nation. . . . As trade and commerce enrich, so they fortify our country. The sea is our barrier, ships are our fortresses, and the mariners that trade and commerce alone can furnish are the garrisons to defend them." In the new age of imperial rivalry that had begun with the wars of Louis XIV, the balance of trade became intimately integrated with the balance of power, and hence the quest for colonial trade in the days of the elder Pitt had become equally a competition for power.

The Treaty of Utrecht (1713) completed the first foundations of the trading Empire. At the end of the War of the Spanish Succession, the new Great Britain (which the Union with Scotland had created in 1707) retained possession of the eastern coast of North America, and acquired the former French province of Acadia (Nova Scotia), the vaguely defined Hudson Bay territories, Newfoundland, with the reservation of certain French fishing rights, St. Kitts in the West Indies, and two Mediterranean bases of importance, Gibraltar and Minorca. The frame of Empire now embraced India, the West Indies, Newfoundland and the Atlantic coast of North America. Half the maritime trade of the world was under the British flag, and the desire to consolidate this trade, and at the same time to crush for ever the rivalry of foreign competitors was bound to evoke the opposition of France and her ally Spain. The ensuing struggle for world empire was bitter and long-drawn, but fundamentally unequal. During the Seven Years' War the Royal Navy, although handicapped in the beginning by inefficiencies, was more than double, and the merchant marine which produced the seamen, almost six times that of France. Moreover, Great Britain possessed in William Pitt a leader whose eccentric genius was as much responsible for victory as the imposing fleets which he directed. Lacking ships and seamen, and immersed in the continent of Europe where her armies continued to take the offensive, France was bound to lose her overseas empire to that power which made constantly effective its command of the sea.

The Peace of Paris in 1763 ended a world war, and recognised a new and tremendously enlarged British Empire. Unhappily, Britain had not reached a stage when she could contemplate (as she did some 150 years later) reconstructing this Empire as a kind of federation of self-governing states under the Crown. Not even wise men like Pitt or Burke could conceive of a Commonwealth of Nations; the colonies were colonies in the dictionary meaning of the term, subordinate possessions that contributed raw materials and might be available as useful markets. Empire to be worthwhile involved political dependence; complete centralised control was inevitable if the Mother Country were to enforce effectively the triple monopoly of import, export and carriage. Imperial theory was limited generally speaking to the choice between absolute independence and absolute subordination. In the case of the maturing and nationally-sensitive American colonies, conciliation based on the removal of certain commercial or political grievances was the only positive remedy suggested during the years before 1776, when the Declaration of Independence disrupted the first British Empire. The American Revolution was not precipitated by oppressive trade laws and parliamentary

EVOLUTION OF THE COMMONWEALTH

coercion, although skilful leadership wove these grievances into a formidable propagandist pattern of antagonisms. The American minority who fought the war wanted no seats in Westminster; nor were they deeply concerned about restrictive navigation laws, or reduced bills for war expenses *per se*. After a long and inevitable advance towards full self-government, they had found the end of the road blocked by the accepted principle of British parliamentary ascendancy, and since the means of reconciling imperial unity and full colonial self-government was not discovered until Lord Durham issued his famous Report in 1839, there was then no alternative to revolution, and the revolution, thanks to the leadership of George Washington and the timely assistance of France, was a success.

In 1783 there were few optimists so sanguine as to agree with the pamphleteer who proclaimed that Britain's "political sun was eclipsed but for a moment to emerge from the clouds with greater glory". Yet this optimist turned out to be right. The years between 1783 and 1815 saw the beginning of an amazing process of expansion and acquisition culminating with the partition of Africa in the last quarter of the nineteenth century. France and Holland were left with the bulk of their overseas possessions intact, chiefly because the British government was much more concerned with bases than territory; and in Malta, the Cape, Mauritius, Tobago and St. Lucia (with the addition of Singapore in 1819) they had added sufficient strategic bases to command the seven seas. Moreover, Australia had begun to take root as transports brought the victims of English penal laws to New South Wales; Canada had survived the American War of 1812, and was growing more British as Scottish and English, and subsequently Irish, colonists followed the American Loyalists to the Maritime Provinces and Upper Canada. Finally, Ireland, the saddest failure in the history of British colonial rule, had been taken into the United Kingdom union in 1801.

As it happened, the American Revolution brought about no radical change in the philosophy of imperial rule. Although it did mean the final abandonment of all attempts to draw imperial revenue by internal taxation, on the whole it tended to influence British policy in the direction of tightening rather than relaxing control from London. Apart from the India Act of 1784 (which provided the basis of government in India until the Mutiny) and the Canada Constitutional Act of 1791 (which provided representative government for both French and English halves of the colony), the constitutional machinery of the Second Empire was laid down and operated without recourse to parliament. In the nineteenth century, the great bulk of the colonial Empire—after 1815 a unique combination of races embracing European minorities along with enormous non-European populations—came under what is known as the Crown Colony system of government. In the eighteenth century there had been no hesitation in handing over self-governing powers to minorities of white settlers, because there was no generally accepted sense of responsibility for the welfare of native peoples. With the nineteenth century, not only the demands of efficiency but the compulsions of a new humanitarianism supported by missionary enterprise determined the new colonial policy, which in the light of British constitutional history might appear at first glance retrogressive. Under the Crown Colony system, the governor and his council were responsible not to a popular assembly, but to the Secretary of State for War and Colonies—representing the first Colonial Office, established in 1801—and through him to the British Parliament. It was felt that in colonies inhabited by large and illiterate native populations, even limited self-government, as practised in the former American colonies, could

mean oppressive control by a white minority of settlers. As far as possible, then, colonial administration was to be carried out under royal prerogative through the medium of orders-in-council. Colonies with representative legislatures could, of course, vote taxes and even pass laws, but they could not (and in mature colonies of white population like Canada did not, until after 1840) control the executive. Indeed, after the middle of the century, some colonies, notably in the West Indies, which had developed representative institutions, were made to surrender this privilege in return for legislatures containing in some instances a majority of official and nominated members.

It is easy to find cause for self-reproach in the arrogance and ruthlessness of some empire-builders, and in the purple patches of their literary executors; slogans about the "white man's burden" not infrequently represented crude complacency and some insincerity. Nonetheless, the forces which influenced the direction of Colonial Office policy were part of the same powerful current that carried the anti-slavery movement to victory in 1833, that kept an anti-slavery squadron in being off the Guinea coast and sent the missionaries to Africa, New Zealand and the islands of the Pacific. Whatever the mistakes and inconsistencies of the Colonial Office, the ideal of "trusteeship" had taken root in the shape of an honest regard for the fate of the non-European peoples under British rule. Volumes of parliamentary papers testify to the probing activity of parliamentary committees which periodically investigated the welfare and future of aboriginal communities. By the middle of the nineteenth century, a sense of moral responsibility had been aroused, paving the way for a twentieth-century doctrine that the claims of material advantage must take second place to those of colonial economic and social betterment.

Meanwhile, the new middle class of the Industrial Revolution, which had forced through the Reform Bill of 1832, demanded a complete overhaul of the old colonial system involving a review of ancient trade laws with the object of opening up new markets with foreign countries throughout the world. The Freer Trade cause which they supported so urgently was to shatter beyond repair the old foundations of colonial policy, and expedite the act of imperial renunciation shortly to be recommended by Lord Durham's Report. Slowly but surely the movement towards political consciousness in the Canadas, mixed up, as it was, with racial unrest, and culminating in the Canadian rebellion of 1837, was forcing a reconsideration of the old problem of British supremacy and colonial autonomy. Could the realities of self-government be conceded to a colony without breaking up the Empire? Since there was no promising alternative in 1839, apart from a second American Revolution, British statesmen accepted reluctantly and fearfully the proffered Durham solution, thereby establishing a pattern of colonial evolution that has functioned down to the present time. Although bold in its intentions, the Durham scheme was not highly original in essentials. It simply meant allowing representative colonial assemblies to control their own executives in matters of domestic concern. By 1847 this privilege had been conceded in Nova Scotia and New Brunswick; by 1849 it was at last accepted for the newly amalgamated province of United Canada (Upper and Lower Canada, 1791-1840); by 1855 the same system that Durham had recommended for Canada had been accepted in Australia and New Zealand.

The final steps in the establishment of Free Trade followed quickly on the victory of responsible colonial government. With the repeal of the Corn Laws in 1846 and the Navigation Laws in 1849, a revolution in Britain's

THE BRITISH COMMONWEALTH

commercial and colonial system had been almost completed. In 1842 Richard Cobden had prophesied that the movement towards freer trade would gradually loosen the bonds which held the colonies together. If Britain could trade with the world on much the same basis as with white colonies who were in any event seeking even wider powers of self-government, what was the advantage of maintaining an Empire at considerable expense? Indeed, by the middle of the nineteenth century, ultimate separation of the colonies became an almost accepted principle among permanent officials in the Colonial Office. "Separatism" did exist as the corollary of Free Trade, and reached its high tide in the sixties; but it was not an active doctrine. Most people, if they thought at all about the colonial connection, were indifferent; like Gladstone, they argued that empire-building was an unprofitable task, that the emancipation of the colonies was inevitable, and that the Mother Country should not make expensive sacrifices, either military or administrative, to retain them.

Yet, paradoxical as it may appear, this period of indifference or, as it is sometimes called, "anti-Imperialism", witnessed a continued expansion of the Empire. For example, within ten years after 1841, Great Britain took possession of New Zealand, the Gold Coast, Natal, Labuan, Hong Kong, and the Indian territories of the Punjab and Sind. In 1852 strategic control over the whole eastern coast of Bengal was secured as a result of the annexation of Lower Burma; in the following year the "Central Provinces", greatest of the surviving Maratha states, was added and, not long after, the Mohammedan kingdom of Oudh. Moreover, the Mutiny brought an end to the long period of East India Company rule; the appointment of a Secretary of State for India signalled the assumption of full responsibility by the British government, with the actual administration in the hands of the Viceroy and his executive council which remained exclusively British. There was, indeed, a legislative council to which a few Indians were appointed but, as an obvious extension of the executive council, it possessed little real independence. The first significant advance towards self-government came in 1861, when the first Indian Councils Act instituted legislative assemblies for British India, both in the central government and in the provinces. The members were nominated, but half of the membership was non-official and included a few Indian members. A second Councils Act of 1892 introduced the principle of election, noteworthy as a precedent even though applied only to the non-official memberships.

More crucial for the future of India was the tightening of the bonds that tied India to the factories of the United Kingdom. Two years before Victoria's dramatic succession to the throne of the old Mogul Emperors in 1877, Disraeli secured forty-six per cent of the Suez Canal shares. The Canal meant closer communications, and enhanced the importance of the steamship, which, unlike the sailing ship, could navigate the Red Sea. The Canal stimulated the transition of India from the trader in luxuries such as silks, precious stones and spices to the ranks of exporter in bulk staples such as wheat, oil seeds, jute, raw cotton, rice and hemp. In return, the imports from Britain included greatly increased shipments of cotton goods, as well as heavy equipment for railways, bridges and harbour installations. Capital investment took on a new meaning, as the British plantation system extended itself from the indigo, coffee and tea of India and Ceylon to the tin and rubber of Burma and the Malay States; at the same time, the engineer, the technician and the scientist combated famine and tropical disease with irrigation schemes and anti-toxins. In India, Great Britain first applied the programme of "Welfare and Development" as a responsibility of the Imperial government, a marked diversion

from the "exploitation" principle that was subsequently to affect British policy in Africa.

Meanwhile, the swing of continental Europe away from free trade doctrines towards protective tariffs almost coincided with a revolution in European attitudes on problems of colonial expansion, which found expression in the 1880's in a highly competitive scramble for north and central Africa. British governments were still reluctant to support policies of colonial expansion, but public opinion had begun to veer after the election of the Disraeli government in 1874, and before long the appeals of missionaries and traders gained the support of the new popular press. In 1889, the British South Africa Company, organised by Cecil Rhodes, pushed north past the Zambesi River on the "Cape to Cairo" route; by 1898 Kitchener had conquered the Sudan. In 1886, the Royal Niger Company, under the direction of George Goldie, secured the future colony of Nigeria, while in the east the British East Africa Company (1888) laid the foundations for Kenya and Uganda. By 1901, all these territories had been taken over by the Crown; within the space of twenty years the largest block yet to be acquired—more than two million square miles—had been added to the British Empire.

This new British Empire comprised a vast congeries of states—an aggregation of races, religions, languages, degrees of civilisation, laws and customs that rested upon no natural foundations such as had given unity to European nations. It was divided by oceans, only partially bridged by steamships and the electric cable. There was no ecclesiastical organisation to bind it together in the way the Greek Orthodox Church once held together the members of the Russian race. Religion, indeed, was the cause of separation between Christians, Mohammedans, Hindus, Buddhists and pagans. Moreover, the political distinctions were already considerable and growing, between the self-governing white colonies with their own legislatures, prime ministers, political parties and local nationalisms, and the non-self-governing, non-white colonies confronted with problems of illiteracy, health and economic immaturity, and supported by the pillars of expert British officialdom. Nor was there a single and centralised military system to weld together this Empire. With the exception of India, there was no military unity. Indeed, after 1870 the tendency had been to withdraw British troops from the colonies, and by the end of the century a similar policy of home concentration was about to be applied to the Royal Navy.

During this time, the white colonies (called Dominions after 1901) were growing up, but their future remained uncertain. Political evolution based on the Durham settlement might lead to some form of Imperial Federation, as Joseph Chamberlain hoped, or it could end as a Canadian Prime Minister, Wilfrid Laurier, had once predicted, in complete independence. Certainly, within all the Dominions the feeling of separate nationality had grown greatly, and all of them were opposed to any diminution of their national aspirations which schemes of imperial federation or even imperial defence seemed to imply. Moreover, this national self-consciousness which ran counter to the traditional impulses of colonial loyalty had been stimulated by the integration of separate territorial units. In 1867, four of the British North American provinces had come together to form the Dominion of Canada, which after the accession of British Columbia in 1871 stretched from the Atlantic to the Pacific Ocean. This new Canada had herself become a colonial power, holding in trust huge territories in the prairie west (from which three provinces were to be created) as well as vast uninhabitable lands north of the 60th parallel, only gradually being opened up to-day by the tools of the prospector and the mining engineer. Similarly, in 1901, the six

EVOLUTION OF THE COMMONWEALTH

self-governing provinces of Australia came together to form a Commonwealth that was subsequently to administer in northern Australia and New Guinea an area of more than 600,000 square miles. In 1876, New Zealand superseded the semi-federal provincial system established in 1852 with a unitary government. Racial and economic bitterness seemed to threaten any policy of colonial integration in South Africa, but the prompt concession of responsible government to the Transvaal and the Orange Free State shortly after the end of the Boer War (1899-1902), allied to certain economic compulsions, smothered separatist antagonisms and made possible the Union that emerged in 1910.

While these developments were taking place the governing classes in Britain had been slowly but consciously reversing their thinking with regard to empire, and colourful patriotic oratory of the Disraeli, Rosebery and Chamberlain pattern began to replace the statistical, penny-pinching arguments of the Manchester School. New proposals were put forward to consolidate the makeshift apparatus of empire under some form of Imperial Federation. In 1884, the Imperial Federation League was organised in London, and included various leaders in the political, social and economic life of the country. The aim of the movement was not only to discredit the former tendency of carelessness and indifference towards the Imperial connection, but to promote some systematic plan of Imperial union that would not interfere unduly with autonomy in local affairs. But apart from divisions at home as to methods and policy, the whole scheme was from the beginning viewed with doubt, if not with apprehension, by political leaders in Australia and Canada. There was no more devoted adherent of empire than John A. Macdonald, the first Prime Minister of federal Canada; yet he doubted whether imperial federation was either politically expedient or constitutionally practicable. Such scepticism eventually killed the League, and after 1893 "federation" organisations confined themselves to advocating Imperial preferential tariffs and joint Imperial defence measures. Sharing the burdens of Empire defence was the primary issue under discussion at the first Colonial Conference of 1887—a Conference that inaugurated a series of periodic experiments in organised co-operation within the Empire. Meetings were held in 1894, 1897, 1902, 1907 and 1911; but while they revealed the advantages of discussing common problems such as communications, commercial relations and naval defence, they failed to secure the acceptance of any principle of closer Imperial unity.

The most important element influencing the advance towards separate nationhood was undoubtedly the rising spirit of colonial nationalism. At the same time, it is well to notice that already, partly because of racial divisions, but chiefly because of geography, two sets of nationalist reactions were discernible within the Imperial family. Far away from the Mother Country, yet homogeneously British in population, and dwelling precariously in the neighbourhood of multiplying Asiatic races, Australia and New Zealand clung more closely than did their sister Dominions to the British connection, and in the years to come viewed with reluctance the attempts of more strategically-favoured Dominions like Canada to loosen the ties. Obviously, the general trend of the twentieth century was towards decentralisation, but it is safe to say that none of the Dominions was anxious to "cut the painter" and achieve full sovereign independence. By 1914, they had, with minor exceptions, won complete autonomy in all their domestic affairs; they could regulate their own tariffs, their own immigration policies and administer their own military needs as they saw fit. Furthermore, they had established certain limited rights in the field of foreign

relations, especially in the field of commercial treaties. Individual control of foreign policy seemed out of the question; such a condition, implying the existence of several foreign policies, suggested a state of sovereign independence outside a unified Empire. In theory, this dilemma posed by the problem of foreign policy was insoluble; as time was to show, there was no substitute for a simple faith in the ability of nations with a common inheritance to think and act alike in the face of fundamental emergencies like war.

The war of 1914-18 strengthened the forces that were pushing the Dominions in the direction of full nationhood. Not that subsequent events were to mark any specific break with the past; the war merely strengthened the active spirit of pride and self-confidence that had taken root with the grant of responsible government in Durham's day. Although the device of an Imperial War Cabinet seemed to point the way to some method of Imperial centralisation, it did not in the long run offer a solution to the problem of future relations between the Dominions and the Mother Country. It was, however, a development which enabled the Dominions, against a certain amount of opposition from the United States' delegation, to insist on membership of the Peace Conference, and this achievement of a modest international status was finally confirmed by their admission to seats in the new League of Nations, along with the right of membership in the Council. Moreover, a Peace Conference decision allowing South Africa, Australia and New Zealand to share former German territories as mandatory powers added superficial laurels as well as active national responsibilities.

Like the Dominions, India also increased her stature and her claims during the war. The retirement of Lord Curzon in 1905 had already heralded the era of bellicose Indian nationalism, and to meet the new conditions a scheme of reforms devised by Lord Morley, as Secretary of State, and Lord Minto, as Viceroy, was produced in 1909. In a limited way, the resulting Act introduced the principle of representative institutions by making the powers and composition of the legislative assemblies, central and provincial, more parliamentary in form if not in authority. In 1917, the Imperial Conference statement which recognised the Dominions as autonomous nations of an Imperial Commonwealth included India "as an important portion of the same". In August of the same year, the Secretary of State, Mr. Montagu, informed the House of Commons that the policy of His Majesty's government was that of increasing the association of Indians in every branch of the administration and "the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire".

The Montagu-Chelmsford report, presented to Parliament and passed in 1919, represented a further and substantial step in the education of India towards self-government. The period of transition was to be one of progressive Indian rule, with the gradual disappearance of British administrators. Meanwhile, however, the central government would remain responsible to the British government, and was empowered, in case of emergency, to override the vote of the elective assembly. On the other hand, the system of dyarchy was introduced into the provincial assemblies, which were now vested with power over the executives, excepting such reserved subjects as maintenance of order and police. "Dyarchy" was a unique innovation in the history of constitutional government, but the effects were marred by the almost simultaneous passage of the Rowlatt Acts against sedition. The Rowlatt Acts established Gandhi in his crusade of non-cooperation and civil disobedience, and marked the beginning of

THE BRITISH COMMONWEALTH

bitter agitations, not unlike those preceding the grant of Irish Home Rule in 1922. Urged on by extremists, the Hindu Congress Party clamoured for immediate and complete self-government.

Another exhaustive investigation of the whole Indian problem was made by the Simon Commission. Their report appeared in 1930, but already it was clear that "once more the tide of Indian nationalism had outpaced the British response to it". Indian nationalists were now demanding not merely provincial, but national self-government, applied in an all-India federation which should include the Indian States as well as the British provinces. As a consequence, a series of Round Table Conferences lasting till 1933 resulted in the draft of a new constitution that was embodied in the Act of 1935.

The grant of full responsible government to the provinces was inevitable. In addition, under the terms of the Act, both British India and the States were to be represented in a Federal Government and Parliament, with Indian Ministers responsible for all federal subjects except defence and foreign policy. Although Congress repudiated the federal portion of the Act, the provincial sections came into force in 1937, and from then until 1939, eight of the eleven provinces were governed by Congress ministries.

Unhappily, the outbreak of war in 1939 stalled and finally stopped the new experiment. The Indian Princes refused to make the federal scheme operative until they were more certain that Congress would respect their traditional prerogatives; and the Congress leaders, failing in 1940 to win their claims for a review of the Act of 1935, withdrew from the provincial field, with the consequence that the administration of the eight self-governing provinces had to be taken over by the Governors. Meanwhile, the fear of a Hindu-dominated, Congress-governed India worried the Muslims, and aroused other minorities. Such agitations led, moreover, to the demand for Pakistan—a separate federation of Muslim States.

Yet complete self-government was the basis of the Cripps offer of 1942. This offer had to depend, inevitably, on the ability of the main Indian parties to work together, but the promise of such co-operation was not forthcoming. The Simla Conference of 1945 provided little more hope, for Hindus and Muslims failed utterly to reach any kind of agreement. Notwithstanding, the British delegates drew up a series of proposals, and in 1946, with the support of their government, offered to India, and subsequently to Pakistan, absolute independence within or without the Commonwealth.

In the Dominions too, the active embers of nationalism had not been extinguished by common sacrifices and the sharing of common Imperial designs. The war of 1914-18 had revealed a remarkable unity of purpose, but as time was to reveal, it served only to sublimate temporarily ardent national impulses. The Dominions had acquired during the war a kind of equality of status with the Mother Country which had been recognised in the establishment of an Imperial War Cabinet. On the other hand, in outward form and sometimes in practice, the Parliament of Westminster was supreme. During the Imperial War Conference in 1917, General Smuts declared: "I think that, although there is a great freedom, yet in actual theory the status of the Dominions is of a subject character. Whatever we may say, and whatever we may think, we are subject Provinces of Great Britain. That is the actual theory of the Constitution, and in many ways which I need not specify to-day that theory still permeates practice to some extent."

The constitutional developments that took place between 1922 and 1926 prepared the ground for the revolution in "theory" that took place between 1926 and 1931. In his book *The Development of Dominion Status 1900-1936*,

Professor R. M. Dawson has described the quick-moving series of incidents which finally precipitated the famous Imperial Conference of 1926. In September 1922, the crisis of Chanak, when Britain almost went to war with Turkey, revealed clear-cut to the world the dilemma presented by an Imperial foreign policy on the one hand, and the reactions of the several Dominions whose policies, especially in the case of Canada, were at variance with those of the Mother Country. It has been generally assumed that both Australia and New Zealand automatically offered to send troops in support of Great Britain, while Canada and South Africa temporised. Obviously the security of the Australasian Dominions was much more closely identified with Mediterranean issues and the safety of the Straits than that of Canada or South Africa. Nonetheless, as compared with the unreserved New Zealand response, that of Australia was obliging but 'epid'. Prime Minister Hughes was willing to associate his Government "in whatever action is deemed necessary to ensure the freedom of the Straits and the sanctity of the Gallipoli Peninsula, and would be prepared, if circumstances required, to send a contingent of troops". The effects of the crisis on the Canadian Government and especially on the Prime Minister, Mackenzie King, were much more significant and enduring. Instead of exciting the Canadian government to demand a share in the making of British foreign policy, the reaction took the form of a growing aversion to any involvement in British Imperial affairs. Legally, Canada was at war when Britain was at war, but henceforward the Government of Mackenzie King was determined to make it clear that Canada would in no way share moral responsibility for Imperial undertakings.

In 1923, Canada, which had not taken part in the Lausanne Conference, refused to accept responsibility for the resulting Treaty on the grounds that the pledged "freedom of the Straits" was a British obligation alone. The Imperial Conference of 1923 reflected this growing sense of Imperial decentralisation, and revealed the growing division between the two sets of Dominions. Australia and New Zealand were still anxious to preserve a central foreign policy; Canada and South Africa (although Smuts was worried about the distinction) leaned towards a more national interpretation of obligations. But if the distinction were to be accepted in practice, could an organisation that was assuming the shape of a Commonwealth of nations have any real validity? As it happened, the statesman once again preceded the lawyer; the Treaty of Locarno (1925) settled the issue by acknowledging a compromise. This Treaty, which guaranteed a demilitarised Rhineland along with Germany's western frontier, specifically omitted the Dominions; under Article 9, France, Germany, Belgium and Italy recognised the exclusion of the Dominions while admitting that they might, if they wished, become parties to its obligations. In this manner was a common foreign policy officially abandoned; in theory, at least when Britain was at war, a Dominion was *not* necessarily bound to participate actively. Thenceforward, whatever Imperial unity could be maintained depended upon the individual consent of each member nation. On the other hand, it is well to repeat that none of the Dominions wished to withdraw from the Empire, and all of them appreciated that on the security of Great Britain in relation to the Continent rested in large part their own safety.

By 1926 then, it was clear that any dreams of Imperial federation were long past revival. Australia and New Zealand were not averse to letting things drift, but the others were determined to have the new principles of Empire established in black and white to correspond with actual practice and achievement; in general, they wanted their new status proclaimed to the world in terms of legal

EVOLUTION OF THE COMMONWEALTH

equality. Hertzog, the new Prime Minister of South Africa, wanted to ensure his country's claim to the "right" of secession; Mackenzie King wanted to establish beyond doubt the formal position of the Governor-General, whose official status seemed to suggest inequality; the Irish Free State, after four years of existence as a separate Dominion, was anxious to abolish the right of appeal to the Privy Council. Obviously, such claims to equal status could not be denied without breaking the Empire. The Crown, which had for so long been the Crown common and indivisible, was fast becoming the Crown several—as each Dominion through its own government tacitly took responsibility for advising the monarch separately; and as actual practice had shown there was not always unanimity.

Yet could this evolving illogical constitutional system be put into black and white; could it be reduced to a written formula, as some of the Dominions demanded? It required the theologian's subtlety of Lord Balfour to bring order out of this juristic puzzle, and to do it in defiance of all logic. It was the triumph of Lord Balfour to hit upon a definition and a formula that satisfied, on the one hand, the New Zealanders who did not want definition, and, on the other, the South African nationalists who wanted implicit in the statement of status the right of secession.

It has been said that Lord Balfour, who presided over the Inter-Imperial Relations Committee at the 1926 Conference, worked out in a spare moment on the back of an old envelope the classic formula which defined status and retained unity: Great Britain and the Dominions, he wrote, are "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations."

The old Empire had been the outcome of British expansion and trade overseas; with the support and blessing of the Mother Country, the new Commonwealth and Empire that took shape after 1926 was the creation of the self-governing states who belonged to it. "As a result of the work of the Imperial Conference of 1926", declared General Hertzog in Cape Town, "the old Empire no longer exists."

The new relationship was confirmed and elaborated in the Statute of Westminster of 1931. The existence of a new kind of Empire had been legally recognised at last. When the President of Columbia University, New York, the late Nicholas Murray Butler, described the Statute as "the most important contribution to the public law of the world since the ratification of the Constitution of the United States", he was guilty of pardonable exuberance and exaggeration. In the history of colonial and Commonwealth development, the lawyer has never been able to catch up with the statesman. The Statute of Westminster provided "all that there was of the Commonwealth in law"; precedent and convention supplied the rest. Nonetheless, the Statute did record in black and white the achievement of *de facto* independence, and the retention of flexible bonds of association under the British Crown (which did mean, in the last resort, the right to secede).

The Statute of Westminster represented a goal—the achievement of what was termed *Dominion Status*. In retrospect, it is easy to recognise that the Statute was only another great milestone in evolution. Problems involved in the growth of living societies can have no final solutions; and living political organisms are subject, as Edmund Burke had once explained, to the law of "continuity in change, and change in continuity". Certainly, what appeared to many people in 1931 as a solution to the

problem of the British Empire turned out within a few years to be simply the beginnings of a new set of problems. Indeed, by 1949, it was proper to ask if change had not produced a complete disruption of the original organism.

Hitherto, amid all the changes of stature and status, the Crown had been the potent symbol of a strong partnership. The formula for describing the Commonwealth had evolved from the idea of allegiance to the common *Crown*, which had also become by 1931 the Crown *divisible*, shared in the person of one monarch who in 1931 had become seven juristic persons (if Newfoundland be temporarily included). In 1931 the Crown was *common* for the Dominions only through being worn by one and the same person, they were united in loyalty to a symbol, although themselves divided into separate nations. Yet the symbol remained vital; without the bond of a common sovereign, the one universally uniting element would have been lost.

As it happened, however, a new formula had to be invented which would enable the new Asiatic Dominion, India, to accept the idea of Commonwealth without accepting the old obligation of allegiance to the Crown upon which the original structure had been based. In 1949, the solution was to accept India as a republic, a republic acknowledging the King as *Head* of the Commonwealth. It was a dramatic, if not frightening admission, re-emphasised four years later by the decision of Pakistan to become a republic; but at least the new arrangement did recognise the unique position of the Crown as the only institution essential to the Commonwealth relationship.

Meanwhile, the formula for a Crown divisible took final legal shape in anticipation of the Coronation of Queen Elizabeth II. In the oath used at the Coronation of George VI, each of the Dominions was mentioned by name to show that the King was equally King of Great Britain, Ireland, Canada, Australia, New Zealand and the Union of South Africa, but since then many of the Dominion Prime Ministers had come to the conclusion that the existing Royal Title which included the phrase "and of the British Dominions beyond the seas" did not reflect the existing constitutional position under which other members of the Commonwealth are full and equal partners with the United Kingdom. Hence, the introduction into Parliament in February, 1953, of a bill to provide for an alteration of the Royal Style and Titles. The enactment of the Royal Titles Act meant that when the Queen was crowned in Westminster Abbey on June 2nd, 1953, she was crowned Queen, not only of the United Kingdom, but also, individually, of each of the other self-governing countries of the Commonwealth. For example, the Canadian title runs: "Elizabeth the Second by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith." So also run the titles in Australia, New Zealand and Pakistan—all referring to Her Majesty as Queen of the United Kingdom. The slight difference in the South African Act reflects the sensitive state of South African opinion, viz., "Elizabeth the Second, Queen of South Africa and of Her other Realms and Territories, Head of the Commonwealth." The principle of the divisibility of the Crown had become fully accepted in law, adopted, indeed, in a formal document, a development without precedent in history.

Yet, if the ties of Commonwealth continued to be thus loosened, so as to permit certain Dominions to surrender allegiance to the Crown, would there be any reality left to the Commonwealth? In other words, was it worthwhile for a community of nations of such widely differing traditions as Canada, India, Pakistan, South Africa and Australia to hang together? Would membership in such a loose congeries of states be as valuable or any more valuable than any other entente or alliance between regional

THE BRITISH COMMONWEALTH

and non-British groups? Indeed, would not the newly-planned regional groupings, like NATO, gradually take the place of the old Commonwealth?

In the past the Dominions and India found that membership brought them advantages. Even after the end of the nineteenth century when *Pax Britannica* had lost a lot of its validity, British power and prestige had still much to offer to citizens of the Empire. There was not only a great navy; there were the world-embracing tendrils of British diplomacy, and a Canadian or South African in the wildest wastes could still win respect and sometimes life, by saying like the Roman of old: "*Civis Britannicus sum*". Without Great Britain as the economic and political power-centre—accepting, as she has done in the past, the major share of responsibility—was there a workable substitute; in other words, was it possible to have a new alliance of real equals, equals not only in political stature, but in function and responsibility? Would the present loose and self-adjusting partnership be able to hold together without a recognised chieftain? Now that the United States had taken over Great Britain's post in world affairs, were there sufficient centripetal forces to impel the loose alliance of partners to keep together?

One major consideration that had to be faced was, of course, security. One question still had to be pondered: would the power implicit in the present Commonwealth relationship be worthwhile in helping to preserve the integrity and the way of life of individual member nations? Or, to put it another way, how much of the Commonwealth could any member afford to see liquidated before a water-tight system of collective security had been developed?

In all probability, if there had been no Commonwealth and Empire in 1940, after the surrender of France, Hitler would have won the war. Such a victory would have involved awesome consequences to human liberty on both sides of the Atlantic, and the eradication of that dismal prospect helps to explain why the United States gradually came to recognise in this historic community of nations a tested organisation of great total power. Hence, in the new world that emerged after the war, the revolutionary change in American foreign policy. The integrity of the Commonwealth became a first principle of American policy; for the sake of their own security, Americans were forced to recognise the Commonwealth and Empire as part of the cordon of their own national defences. During the course of the war of 1939-45, they saw the Commonwealth achieve an astounding degree of defensive and offensive unity. Men of every kind of religion, race and colour succeeded in combining for common ends in a manner that was not possible even for racially allied communities like the Latins and Slavs. Perhaps it was a miracle; it may not happen again; but it did happen impressively.

Sometimes there is a tendency to harp upon the merits of co-operation and consultation in maintaining the present Commonwealth. Its strength, say its advocates, lies in its very looseness and illogicality. In this dangerous world, this is a specious argument. Actually, only the power of the United States makes possible the enjoyment of so loose and unorganised an *entente*. If there were no United States, the member states could hardly afford to extol present methods of Commonwealth co-operation and conceivably they might feel the need to forego national vanities and knit themselves more closely to preserve their common way of life. For in a divided world, those nations which share a common inheritance will probably find they have to hold together, even if the association be often exasperating and sometimes even painful.

The period after 1919 witnessed a less spectacular, but nonetheless significant evolution of the dependent Empire,

the bulk of which, as has been noticed, fell under the Crown Colony system of government. With thirty or more dependencies in varying stages of development and affected by diversities of climate, race, creed and language, the colonial Empire was bound to be an incredibly complex and intractable field for constitutional experiment. Yet, as the achievements of the Gold Coast, Nigeria and Jamaica have made clear, the route of the Crown Colony towards self-government in the Durham manner has been marked by progressive, if not startling, advances. Apart from certain reserved powers in the hands of the governor, the Gold Coast has already attained full self-government, and there, as well as in Nigeria and Jamaica, the Civil Service has passed largely under the control of the native inhabitants. At the same time, political advances have been throughout supported by Imperial economic and social legislation, expressed for example in the Colonial Development and Welfare Acts of 1929, 1940, 1945 and 1949, solid evidence of the now fully matured principle of trusteeship.

The British system of parliamentary administration is still the model, and in colonies where political and social development has been backward, or in communities of varied racial texture, the machinery is bound fitfully to creak and strain. Friction is inevitable, and the more so where advances in education and standards of living have accelerated the rise of racial self-consciousness. In Africa, as well as in Asia, nationalism is a separative force, which knows little moderation. In Africa, as in India, the pace of development towards complete self-government has been forced in the face of this new challenge to old Imperial powers. The sudden awakening of the East to political self-consciousness is reminiscent of the French Revolution in the sense that forces have been unleashed that are changing history. Both India and Pakistan have been involved in conflicts of nationalism and racial emotion that subjected not only themselves but the Commonwealth relationship to enormous strains and tensions, conflicts which might have been avoided had a longer period of Imperial tutelage been possible. Similarly, if there were not graver dangers in delay, it might be doubted whether in countries approaching Dominion status the machinery of parliamentary government had not been established under the new constitutions more hastily than would seem properly warranted in the light of world conditions. The present movement towards complete independence irrespective of qualifications or capacities does indeed mark the end of an Imperial epoch; it represents a major turning point in colonial history; and only the future can say whether sharpened nationalist impulses and appetites will tempt any present or future members of the Commonwealth to disregard, or secede from, a voluntary association that has hitherto employed so considerable a total of strategic power for the benefit of its membership.

In the long run, however, elements other than the strategic—imponderables like ideas about the meaning of human freedom—may have decisive weight in deciding the future course of the Commonwealth. Within the Commonwealth, Britain still retains her prestige as the source of certain spiritual values—individual freedom, respect for law, toleration of varying religions—as well as the prestige that comes from the rich heritage of arts, letters and science which she has shared with all the time colonies irrespective of race, religion and colour. The Indian Constitution of January, 1950, is based in its fundamental tenets on the British liberal philosophy, which indirectly fashioned Indian nationalism.

Despite differences of race and creed and environment, there is a significant unity in the fabric of Commonwealth and colonial political thinking. In the course of evolution

EVOLUTION OF THE COMMONWEALTH

from Colony to Dominion, the members of the Commonwealth followed curiously similar paths in their pursuit of the traditional English conceptions of liberty. The pace and style varied, but in the course of the advance Canada and Australia, Ceylon and the Gold Coast, India and Pakistan absorbed a good deal of the general philosophy of individual liberty and government "by consent". Great Britain provided political ideas and doctrines that were not only decisive in creating an independent national spirit, but laid down the actual basis for a democratic existence.

In other words, an Empire which had been founded for purposes of settlement and trade had evolved by the middle

of the twentieth century into a huge, intricate and loose-jointed structure called a Commonwealth of Nations—an association which the ingenuity of the ablest lawyers could hardly reduce to legal definition, and yet a living and in many ways a dynamic union held together by a symbol—the Crown. The Commonwealth to-day represents in effect, to quote a phrase of Sir Ernest Barker, "an Empire without *imperium*", an historic coalition maintaining its choice of the opposite principle of *libertas*, and standing for certain common values and ideals which the rise of totalitarian creeds has brought sharply into relief.

G.S.G.

DOWNING STREET

THE WORK OF THE COMMONWEALTH RELATIONS OFFICE AND THE COLONIAL OFFICE

"THE anti-Downing Street complex" was a familiar phrase in the years between the two World Wars. Mr. Mackenzie King was supposed to suffer from it; so were most dominion nationalists. Perhaps they did. From Downing Street the Empire had been ruled. The cab driver of Walter Bagehot's day may not have been too certain of the importance of No. 10, but colonials knew only too well of the importance of the Colonial Office, first at No. 12 and then on the other side of the street. It was rare, however, for them to allude to the office in complimentary terms. The "din of indignation" against Downing Street policy which Lord Salisbury had heard in 1852 "from the Cape to New Zealand, from bishop to potboy", was rarely altogether stilled. The mother country might be regarded with the deepest affection, but the department of state concerned with the government of the colonial Empire was customarily and explicitly excluded from expressions of it by British settlers overseas.

The office of Secretary of State for the Colonies was established comparatively late in the history of the British Colonial Empire. Till the latter half of the eighteenth century colonial government and administration was the responsibility of a Committee of the Privy Council or alternatively of a "Council of Trade and Plantations", membership of which was drawn from the Houses of Parliament. In 1768 the first Secretary of State for the Colonies was appointed but the precedent then established was not uniformly followed in succeeding years. There was a short period when colonial affairs became the responsibility of the Home Secretary and then there came the protracted association of the Secretaryships for War and for the Colonies which lasted for fifty years from 1801 till 1854. This was the attachment that prompted Lord Derby's allusion to "the office at war with all the colonies". From 1854 onwards the Colonial Office had its own Secretary of State, who was responsible until 1925 for the affairs of the dependent colonies, and for the conduct of relations with those greater self-governing colonies that came to be known as the dominions, and thereafter, with the creation of the Dominions Office, for the former only. The Office itself moved from No. 12 Downing Street to the block on the north eastern corner designed by Sir Gilbert Scott under protest, and on the instruction of Lord Palmerston, in the Renaissance style. There it remained until after the second World War when the Colonial Office moved to Church House, Westminster, leaving the Commonwealth Relations Office in possession of a building at whose design its architect, to quote Lytton Strachey, was left "shuddering in horror".

The site in Downing Street was not altogether without its importance. To sensitive nationalists it suggested the watchful eye of the British cabinet closely supervising its activities; to those concerned with influencing Britain's overseas policy it suggested easy access to the ministers responsible for its direction. Both misgiving and supposition were largely illusory. The Colonial Office, save at infrequent intervals, was neither an influential department nor did its activities occupy much of the attention of governments, "Cabinets", it was said, "always hated colonies." The office of Secretary of State was only too

often the reward of the elderly or the faithful party man and for long periods in the nineteenth century it was the preserve of members of the Upper House. It was because this was so that Joseph Chamberlain's acceptance of the post, in preference to the Chancellorship, in 1905 was so momentous an event. Whatever else may be laid to his credit or to his discredit it can be said with confidence that Chamberlain gave to the Colonial Secretaryship a political status it had never hitherto and has rarely since enjoyed.

Chamberlain came to the Colonial Office at an important moment in its history. At the beginning of the nineteenth century the most advanced form of government in the Colonial Empire was that known as representative government; by its close the colonies of European settlement enjoyed responsible self-government. The Durham Report (1839) is the classic document from which the move towards responsible self-government derived its impetus and its continuing inspiration. Its adoption in Canada, in New Zealand, in the Australian and in the South African colonies had a marked and a beneficial effect upon relations with the Colonial Office. Once these colonies became largely self-governing in their domestic affairs a major source of friction disappeared, since the Colonial Office was no longer constantly embroiled in their internal politics. Furthermore the process of consolidation, which accompanied the movement towards self-government, reduced the number of oversea governments with which the Colonial Office had to deal. The Confederation of Canada in 1867, the federation of the Australian Colonies consummated in 1901, and ultimately the 1909 Union of South Africa reduced in number the principal colonies of European settlement by combining them into larger and more self-sufficient units.

Roughly contemporary with the process of consolidation in the colonies of European settlement was the vast extension of British rule over indigenous people in tropical and semi-tropical Africa. In these territories, acquired by agreement or conquest, trade was customarily the incentive and the abolition of slavery and other "barbarous customs", the establishment of order and of a rule of law, the principal justifications for British rule. Clearly such territories at one extreme and the great colonies of settlement at the other, imposed responsibilities different in kind upon the Colonial Office. It was because this was so that, largely as the result of pressure from overseas, the department was ultimately broken up in accordance with the natural line of division in its duties between the conduct of relations with self-governing territories and the administration of dependencies.

In 1887, the year of Queen Victoria's Golden Jubilee, a Colonial Conference was held in London. It was the first in a series at which the colonies of settlement were customarily represented by their Prime Ministers. Collectively, these colonies acquired the connotation of Dominions early in the twentieth century and their leaders were concerned to draw a clear line between the self-governing states they represented and colonies whose affairs were controlled from London. They were not disposed to look kindly towards the Colonial Office. Its past association

DOWNING STREET

with government from London told against it and its members were thought unreceptive of the new notions of equality that flourished overseas. It had, in the opinion of the Australian, Alfred Deakin, "a certain impenetrability, a certain remoteness, a certain weariness of people much pressed with affairs and greatly overburdened, whose natural desire is to say, 'Kindly postpone this, do not press that, do not trouble us; what does it matter? we have enough to do already. . . .'" Largely as a result of a demand from Australia and New Zealand for better information and more influence in the making of imperial policy a separate Dominions department was set up within the Colonial Office after the Colonial Conference of 1907. By comparison with the ideas of federation which the Conference had debated this seemed a singularly modest outcome of these imperial deliberations. "All that appears to have been accomplished," complained the Australian government, "is that a sub-department has been renamed." But a new department of state had in that its origins.

Responsibility for foreign policy, said the Prime Minister, Mr. Asquith, at the 1911 Conference, "can never be shared", but so rapidly were the powers of the Dominions expanding in practice that this reservation on a point of principle was to some extent waived by ensuring that Dominion governments were informed about all major developments in foreign policy. This was one of the responsibilities of the Dominions' department of the Colonial Office. The full entry of the Dominions into the reserved field of foreign policy came, however, as an almost incidental consequence of Dominion participation in the first World War. The Imperial War Cabinet, of which the outstanding Dominion leaders were members, was constituted in March 1917. It was not a cabinet in the strict sense of the term because it was not collectively responsible to any one parliament, but dominion membership of this improvised Imperial executive meant that Dominion leaders in practice conferred as equals with their United Kingdom colleagues about the waging of war and the making of peace. In the last phase of the war the Imperial War Cabinet, indeed, devoted most of its attention to the problems of peace and in respect of these the Dominions felt they were entitled, as active belligerents from first to last, to have their voices heard. The United Kingdom Government acceded to their claim and at the Peace Conference at Versailles the Empire was represented not by a United Kingdom but by a British Empire delegation. There followed logically Dominion membership of the League of Nations and the recognition of the dominions as full members of the international community.

The Imperial Cabinet did not survive the first World War. The tide of imperial sentiment ebbed with victory and between 1919 and 1939 Dominion nationalism was the determining force in Commonwealth affairs. The opposition of the more nationalist of the Dominions, their number reinforced by the addition of the Irish Free State in 1921, to any form of centralised control and to any centralised machinery for the conduct of imperial affairs, hardened. Canada, South Africa and the Irish Free State were also much concerned with questions of status. The Dominions in fact were free, they were in practice wholly self-governing. "There is not a man in the House", observed Mr. Bonar Law in 1920, "who would not admit that the connection of the Dominions with the Empire depends upon themselves. If the self-governing Dominions, Australia, Canada, chose tomorrow to say 'We will no longer make a part of the British Empire' we would not try to force them. Dominion Home Rule means the right to decide their own destiny." But if so much was recognised in practice it was a matter of convention, not of law. Constitutionally the elements of colonial subordination remained. "Too much of the old ideas clings to the new

organism", complained General Smuts in 1921. The whole process of redefinition of imperial relations that took place between 1923 and 1931 was intended to bring law and constitutional doctrine into line with contemporary realities. The outcome was the recognition of the full equality of the Dominions with the United Kingdom in every aspect of their domestic or external affairs as freely associated and autonomous members of the British Commonwealth.

The Imperial Conference of 1926 singled out "equality" as the root principle in Commonwealth relations. In this its members have been vindicated by history. They believed also that the application of the principle would not imperil unity and that no common cause would suffer because of the full autonomy of the Dominions. Here again their conviction has not proved unfounded. Fundamentally that was because there existed a sufficient underlying sense of unity among the members of the Commonwealth. But the existence of such a sense of unity by itself was not enough; it had to be cultivated and to have effective means of expression. Once imperial unity was no longer imposed from above it became conditional upon agreement between equals which could be reached only by constant discussion of common interests and common problems. It was the responsibility in the first place at least of the United Kingdom Government to work out by a process of trial and error the means by which such co-operation among equals might best be promoted.

The Dominions Office was brought into being as a separate department in 1925 with Mr. L. S. Amery as the first Secretary of State. While for some time to come its staff remained interchangeable with that of the Colonial Office the responsibilities of the new department were largely diplomatic. The Colonial Office, and indeed the India and Burma Offices, were charged with responsibility to Parliament for the government of the Colonial Empire, or India, or Burma as the case might be, whilst the new Dominions Office was responsible for the conduct of relations with the autonomous members of the British Commonwealth. This was implied in the designation of the respective Secretaries of State. On the one hand there was a Secretary of State for the Colonies, and for India, on the other, a Secretary of State for Dominion Affairs "A foreign office with a family feeling" was Lord Runciman's felicitous description of the new department.

The British Commonwealth after 1926 depended upon constant discussion and consultation for the promotion of unity. To some, the means seemed insufficient to the end. New Zealand ministers thought but little of "consultation and consultation only" as the basis of unity. But it was no less; and it proved more substantial than its critics suspected. The Dominions Office was the main-spring of the system of consultation. It was the duty of the department to give as much background information as possible about developments in foreign countries, about the course of international politics and about every question which might be of interest to Dominion governments. This was done by cable and correspondence, supplemented by personal conversations between the Secretary of State and the Dominion High Commissioners in London. Comparatively modest in the early years, the scale of information transmitted in this way expanded with the mounting dangers of the thirties and with the growing capacity of Dominion governments to absorb and digest what was sent out, for an essential counterpart to the role of the Dominions Office was the organisation and enlargement of Dominion departments of external affairs. But even when these counterparts had come into existence the Dominions Office remained in practice the principal source of information. So long as the United Kingdom alone had diplomatic representation in the principal world capitals it

THE BRITISH COMMONWEALTH

remained indeed almost the sole official source of information about foreign countries. During the thirties Dominion dependence on the United Kingdom in this respect was pronounced and it was not until the great elaboration of Dominion diplomatic services during the second World War that its virtual monopoly ended.

The great advantage of the system of Commonwealth consultation as it developed was that it preserved equality and ensured flexibility. Its smooth and effective operation depended upon regard for certain essential principles. The first was that no Commonwealth government should take action in a matter affecting other members without prior consultation, and until every effort had been made to reach a common view. The second was that policy remained the responsibility of the initiating government unless other Commonwealth governments wished also to adopt it. Silence was not tantamount to assent.

The practical working of the system of intra-Commonwealth consultation may conveniently be illustrated by reference to the negotiations that took place in 1946 on the renewal of the Anglo-Egyptian Treaty. On May 24th of that year the Foreign Secretary, Mr. Ernest Bevin, recalled that none of the Dominion governments had subscribed to the Anglo-Egyptian Treaty of 1936. They had been very fully consulted, they had raised no objections to its provisions, but they had not endorsed it. When ten years later the question of its renewal arose, the United Kingdom Government sent "almost every document" that was relevant to the Governments of the Dominions and asked for their views on the policy that was contemplated. They were thus both informed and consulted. But they did not take any decision. In no instance, noted Mr. Bevin, could he recall any specific case of a treaty or the termination of, or change in, a treaty in which a formal decision had been recorded by the Dominions. What was asked for were opinions in the light of which the United Kingdom might frame its own policy. The procedure adopted was clarified as a result of the Prime Minister, Mr. Attlee, being carried away "in the heat of debate", as he himself confessed, into saying that the Dominions had "agreed" that the United Kingdom Government's approach to the revision of the Anglo-Egyptian Treaty was best. In withdrawing this statement Mr. Attlee said: "It is our practice and duty as members of the British Commonwealth to keep other members of the Commonwealth fully and continuously informed of all matters which we are called upon to decide, that may affect Commonwealth interests. The object is to give them the opportunity of expressing their views if they so desire. These views are taken into account but the decision must be ours, and other governments are not asked, and would not wish, to share the responsibility for it. Dominion governments follow the same practice."

The summary of procedure leaves only one thing to be emphasised—the need for speed. It is of great importance that the Dominions should not only be consulted but should be consulted early when policy is in the formative stage. That has not always happened, sometimes through inadvertence, more often unavoidably. The classic instance was the failure of the United Kingdom government to consult the Dominion governments in advance about their decision to give a unilateral guarantee to Poland in March 1939. They were advised that at any moment Hitler might launch an attack on that unhappy country and felt that therefore time did not permit of consultation. Dominion governments concurred in the policy but deplored the lack of consultation. One of the motives prompting Mr. Curtin, the Prime Minister of Australia, to propose the creation of an imperial secretariat in 1943 was the recollection of the breakdown in March 1939. Others favoured the amalgamation of the Dominions Office

with the Foreign Office. When Mr. W. M. Hughes in characteristically biting phrases described the Dominions Office as being as obsolete as the muzzle-loading rifle or the hansom cab, and lingering unwanted on the stage, he was expressing his opinion that the existence of a department dealing with Dominion affairs slowed down communication and delayed decision. But such views were not widely shared and apart from particular criticisms the work of the Dominions Office earned the highest praise from those qualified to judge it overseas.

It will be realised that the urgency and the scale of intra-Commonwealth consultation imposed a heavy burden on the Dominions Office. During the second World War the volume of communication with Dominion governments was on a very large scale. Lord Cranborne, a wartime Secretary of State, alluded to the "sheaves of telegrams" that went out daily from the office to Dominion governments informing them of every aspect of a rapidly changing military and political situation. Nor was wartime consultation by any means confined to written communications. There was also personal contact at every level. There were during the war daily meetings between the Secretary of State and the Dominion High Commissioners in the Dominions Office; there were frequent visits by Dominion ministers and Prime Ministers, and there was at the apex of the whole system meetings of Prime Ministers, the first of which was held in London in 1944. These meetings, less elaborate and less formal, have come to supersede the older Imperial Conference.

There were suggestions at the outbreak of the second World War that an Imperial Council should be formed or the Imperial War Cabinet of 1917–19 reconstituted. They elicited no encouraging response from governments. Governments understood, as it was difficult for those outside the official world to understand, the extent to which the existing system of consultation satisfied even the needs of a total war. In a speech to the Canadian House of Commons in February 1941 the Canadian Prime Minister went so far as to suggest that an imperial council existed though it had no visible form. It is certainly the case that Mr. King would not have liked it if it had acquired one, but he was able to advance substantial arguments to support his seemingly paradoxical assertion. There were, he said, three channels for special communications between Commonwealth governments. They were (a) from Prime Minister to Prime Minister direct (b) from the Secretary of State for Dominion Affairs to the Secretary of State for External Affairs and (c) special and supplementary communications through High Commissioners. "The real but invisible imperial council", he concluded, "made possible by these means of constant and instantaneous conference has one all-important advantage which would be denied to an Imperial War Council sitting in London. It affords to the Prime Ministers of each of the dominions the opportunity of discussing immediately with his colleagues in his own cabinet all aspects of every question raised. His expression of view when given is not his alone—it is the expression of view of the cabinet of which he is the head. It is an expression of view given by the cabinet in the light of its responsibility to Parliament. It is moreover an expression of view given in the atmosphere, not of London, but of the Dominion itself." Mr. Mackenzie King indeed doubted if any more efficient means of co-operation between self-governing nations could be devised than what he was later to term this "continuing conference of cabinets". Others, notably the Australians, were more tepid in their appreciation and would have preferred some more formal and centralised machinery for co-operation but there is no doubt that the balance of opinion within the Commonwealth came down decisively in favour of the conference of cabinets in the sense in which the phrase

DOWNING STREET

was used by Mr. Mackenzie King. That this was so is no small tribute to the work of the Dominions Office. Upon its staff had fallen the principal share of responsibility for the working out of a system that was at once efficient, free and not at variance with the spirit of the Commonwealth.* The full measure of the achievement was not seen till 1947 when three Asian countries, India, Pakistan and Ceylon, became self-governing members of the Commonwealth.

The Asian members required from the outset reassurance that their continuing association with the Commonwealth would not impair their full freedom of action. The right to secede, to remain neutral in a war in which other members of the Commonwealth were engaged, were in fact for them conditions of membership. But experience of the working of the system of Commonwealth consultation brought not only reassurance on these negative aspects of membership but allowed of a more sanguine estimate of the possible benefits of Commonwealth co-operation. It was no chance that the Prime Ministers' meeting of October 1948, the first at which the Asian Prime Ministers were present, preceded the meeting in April 1949 at which republican India's continuing membership was agreed by other members of the Commonwealth at India's own request. Experience at the one had much to do with India's initiative at the other. Had a more rigid or formal system of Commonwealth co-operation emerged from the war, Asian membership of the Commonwealth might never have become a fact.

In the post-war years the frequency of consultation has increased. Meetings of Prime Ministers took place in 1944, 1946, 1948, 1949, 1951, 1953, and 1955. They have been supplemented by meetings of Defence Ministers, of Foreign Ministers, and in particular of Finance Ministers, the last named being called upon to take immediate and often drastic action to meet the recurrent crises in the sterling area and to plan long term remedies for them. At the official level meetings are too frequent to record, but increasingly and again especially in the financial and economic fields they have been used to prepare for later ministerial discussions. Nor should co-operation in the working out of the Colombo plan be overlooked. Characteristically there is no formal organisation for the implementation of this plan for development in south-east Asia because decision and action remain the responsibility of governments. But that is not to say that here, as elsewhere, the decisions of governments are not profoundly influenced by the discussions with representatives of other Commonwealth countries.

The Dominions Office was renamed the Commonwealth Relations Office in 1947, but its work, though extended with the enlarged membership of the Commonwealth, remains essentially the same. The C.R.O. continues to be the linch-pin in the Commonwealth system of co-operation through discussion and it is understood that more than four-fifths of the communications that pass between Commonwealth governments still originate in London. The responsibility of a comparatively small staff in Downing Street and in the United Kingdom High Commissioners' offices overseas remains therefore great. Britain is still the senior partner in the Commonwealth and the system depends in practice very largely upon Britain's initiative, good sense and understanding of the spirit which has made possible a unique experiment in co-operation between nations and races of varied history, culture and traditions.

"Decentralisation to the limit", to quote General Smuts, has been the guiding principle in the development of the self-governing Commonwealth, but he noted in 1943 that by contrast in the Colonial Empire the principle of centralisation continued to prevail. That was in one sense

true. Responsibility for the government of the Colonial Empire lies with Whitehall and for that reason the functions of the Colonial Office and its opportunities remain different in kind from those of the C.R.O., which is a diplomatic, not an administering, department. Yet the contrast must not be pressed too far. In another context General Smuts's words were misleading. In actual fact the government of the British Colonial Empire is remarkably decentralised by contrast with that of other Colonial Empires. The professed aim of the United Kingdom policy is self-government for colonial territories as soon as economic and political conditions permit. Centralisation of government in the imperial capital would be clearly inconsistent with this, the principal objective of policy, and is recognized to be so.

The position becomes clearer if one considers the duties of the Colonial Office and of the Colonial Services. Constitutional responsibility to Parliament for the government of colonial territories lies with the Secretary of State for the Colonies. The Colonial Office advises and assists the Secretary of State in the execution of this responsibility. Despite the increasingly rapid decentralisation of authority from Whitehall to the Colonial Governments themselves, the Colonial Office retains ultimate responsibility over the wide and diverse field of modern government. Its staff, far larger than that of the Commonwealth Relations Office, numbered about 1,200 of all grades in 1954. While the great majority are members of the Home Civil Service it has become regular practice to fill a proportion of these posts with men with experience in colonial territories who have either been seconded from the Colonial Service or retired. In view of its wide range of responsibility it is not surprising also to find that the Colonial Office relies heavily on the advice of unofficial experts given through advisory committees on such varied subjects as economic research, fisheries, local government, land tenure and education, from the highest to the lowest level. Since the end of the second World War the attention paid to education and to economic development has been most marked. The Colonial Development and Welfare Acts of 1945 and 1950 provided £140,000,000 for social betterment and economic development in the colonies.

The Oversea Civil Service consists of all members of the Government Services in the Colonies, Protectorates and Mandated Territories for whose government the Secretary of State for the Colonies is responsible.¹ The Service, which consisted of some 200,000 men and women before the second World War, has greatly expanded since 1945, particularly in technical personnel. The members of the Service work in some fifty different territories, varying greatly in size and in political and economic maturity, but it is only a small though important proportion of them that has been recruited from the United Kingdom. For long it was the accepted theory that the public service of each colonial territory should be entirely separate. Well suited to some of the older colonial territories with high cultural standards, this then broke down in practice with the vast extension of British rule in Africa in the period before the first World War, coupled with the extended field of action of governments in colonial territories. Social services of every kind, measures of economic control and assistance, the raising of living standards, all these were conceived in colonial territories as elsewhere to be as much a part of the responsibilities of twentieth-century governments as in Britain itself. In consequence in 1930 the Warren Fisher Committee recommended a single Imperial Colonial Service with unified branch services organised on a professional basis. The aim was to bring into being an

¹ The standard authority is *The Colonial Empire and its Service*, by Charles Jeffries, Cambridge 1938.

THE BRITISH COMMONWEALTH

Imperial Colonial Service with all the prestige that membership of such a service could confer without sacrificing the sense of local loyalty which often meant so much in particular territories. The Colonial Service thus united differs from other British public services in that it is not a single service. Though opportunities occur for members of the public service of each colony to be considered for transfer or promotion to other colonies and such transfer often takes place, the government of each colonial territory remains an administrative entity and members of the colonial service are the public servants of the colony in which they serve, and from whose revenue their salaries are paid.

Twenty years after the report of the Fisher Committee the advance of certain colonial territories to the threshold of self-government brought to light a further problem. West African and other territories enjoying self-government in their domestic affairs felt the need for trained administrative specialists at least to carry them through the early stages of responsible government. Recruitment from their own nationals in sufficient number was not possible. Under what terms could expatriate Colonial Service personnel be persuaded to stay? And what were the prospects for such officers who decided to stay in territories about to become self-governing? The element of uncertainty was harmful to efficient administration,

yet the problem was not susceptible of any easy solution.

If one were asked to distinguish between a member of the Commonwealth and a non-self-governing country within the Commonwealth to-day one simple but sufficient test would be to discover whether the affairs of the territory in question were dealt with by the Commonwealth Relations Office or by the Colonial Office. If the former, then the territory in question is probably a full member of the Commonwealth; if the latter it is not. The qualification has to be inserted in the first instance because the affairs of the Central African Federation and of the High Commission Territories are dealt with by the C.R.O., though they are not members of the Commonwealth; and so also are those of the Republic of Ireland which has seceded from the Commonwealth without becoming a foreign country. But these exceptions, it may be pleaded, are a by-product of history; for the future one can assume that any colonial territory which attains full membership of the Commonwealth will have responsibility for its affairs transferred from the Colonial to the Commonwealth Relations Office. It is a pragmatic test of membership but inasmuch as it displays due appreciation alike of the importance of and the differences between the two offices, it is realistic and well founded.

N.M.

THE COMMONWEALTH: ECONOMIC ASPECTS

THE years since 1945 have seen considerable attention being devoted to the economic affairs of the Commonwealth. Economic matters have indeed rivalled, and often displaced, more general political and constitutional issues in the deliberations of the Commonwealth Prime Ministers. The Finance Ministers of the Commonwealth have also met periodically. The problems of balance of payments and of Commonwealth development have loomed large at these meetings. But it is well before turning to these to consider the overall economic resources of the British Commonwealth and the broad pattern of trading relationships between its members. For on these must rest the Commonwealth's economic strength and any cohesion lent by economic relationships to the forces of politics and sentiment.

Taken together, the countries of the British Commonwealth form an association of considerable economic power, both actual and potential. The mere size of the Commonwealth and the substantial part of the world's population to be found within its borders are in themselves arresting. To these have to be added resources and trade bulking large in the world's totals. It is essential, however, before reviewing these aggregate figures to utter a warning of their pitfalls. There is always in any attempt to show the position of a group of countries *vis-à-vis* the world the problem of obtaining statistics on a reasonably comparable basis. To some extent our selection of illustrative material has to be governed by what is available, rather than by what may seem significant. To this has to be added that special problem of the contemporary world, that very often no data are available for recent years for Soviet Russia, the communist countries of central and south-east Europe, and for the mainland of China. Any data that we use to show world totals are thus in danger of being understated.

CONTRIBUTION TO WORLD TRADE AND PRODUCTION

Bearing in mind these limitations, we can try to set out some indicators of what the British Commonwealth contributes to world trade and production. The analyses of the Commonwealth Economic Committee (see Table I) show that in 1938 25 per cent of the world's exports came from the Commonwealth. In 1947 the percentage was slightly higher at 26 and from 1948 to 1952 it stood at 30 or more. In 1953 it fell once again below the level of 30 per cent, but at 29 per cent it was still a higher proportion of world exports than before the war. In 1953 21 per cent of total world exports came from the U.S.A., 29 per cent from the continent of Europe and 10 per cent and 6 per cent respectively from the non-Commonwealth countries in Central and South America and in Asia. The story for imports is again one of the importance of the Commonwealth; but, owing mainly to the growth of imports into the United States of America and the decline of those into the United Kingdom, the proportion commanded by the Commonwealth has generally been somewhat lower since the war than the 33 per cent of 1938. The post-war figure has varied from 31 per cent in 1950 to 34 per cent in 1949. The order of importance for the rest of the world was much the same for imports in 1953 as for exports, although the continent of Europe with 31 per cent is relatively more important and the United States with 16 per cent relatively

less so. The rest of the world's imports in 1953 were absorbed by the non-Commonwealth countries in Central and South America (9 per cent) and in Asia (8 per cent).

Within the Commonwealth there is considerable diversity in relative importance both as a source of exports and as a market for imports. The figures for 1938 and for 1948 to 1953 are set out in Table II. Suffice it here to review the principal characteristics of those for 1953. The United Kingdom was then, as in other years, the Commonwealth's major exporter, with close on 10 per cent of the world's exports, virtually the same proportion as in 1938. Canada and the colonial territories follow, both with about 6 per cent of the world's exports; and then come Australia (about 3 per cent), India and South Africa (each with something over 1 per cent), and New Zealand, Southern Rhodesia, Pakistan and Ceylon (each with less than 1 per cent). The growth in the Commonwealth's proportion of world exports from 25 per cent in 1938 to 30 per cent in the post-war years is attributable mainly to the expanding exports of Canada and the colonies. In 1938 Canada accounted for 3.7 per cent of aggregate exports; and by 1953 this percentage had grown to 5.8. For the colonies the corresponding figures are 3.8 per cent in 1938 and 6.0 per cent in 1953. Indeed in 1950 and 1951 they sold to the world 6.8 per cent and 6.9 per cent of all its exports. On the import side, the United Kingdom has declined in relative importance, but while 12 per cent of world imports in 1953 is less than her 18 per cent in 1938 she still provides the largest market for imported goods within the Commonwealth. Again it is Canada (6.5 per cent) and the colonies (5.1 per cent) which came closest behind in 1953. Australia, India, and South Africa took between 1 per cent and 2 per cent each, and each of the others absorbed rather less than 1 per cent. The declining relative importance of the United Kingdom has been compensated for principally by the growing import markets of Canada and the colonies. The Canadian share of world imports was 3 per cent in 1938 and 6.5 per cent in 1953; the colonial 3.4 per cent in 1938 and 5.1 per cent in 1953.

This important part played by Commonwealth countries in world trade rests on a considerable foundation of economic resources, providing both raw materials and manufactured goods. We may consider the Commonwealth's natural resources under the heads of foodstuffs, fuel and power, and the industrial raw materials coming from agricultural, forest and mineral wealth. The selection of items is naturally limited by the number of significant commodities for which it is possible to obtain reasonably comparable statistics from the principal producing countries.

Table III shows Commonwealth and known world production of the principal cereals (wheat, rice and coarse grains), fats and oils, meat, fruit, sugar, cocoa, tea and coffee. The table also includes tobacco which, although not a foodstuff, is most conveniently grouped here. By and large these figures refer to almost wholly unmanufactured products. They show that the Commonwealth countries are highly important producers of food grains (26 per cent of the world's wheat, 47 per cent of its rice and 15 per cent of the coarse grains like maize, barley, and oats). The Commonwealth dominates the world's production of vegetable oils and oilseeds, which have industrial as well as edible applications, with some 64 per cent of the grand total. Among the other items we may group under the

THE BRITISH COMMONWEALTH

general heading of fats and oils it produces about 20 per cent of world output of butter. Likewise the bulk of the world's cocoa (57 per cent) and of its tea (82 per cent) come from the Commonwealth. Its relative importance is nothing like as great in the other items in Table III; but with 17 per cent of the world's meat, 17 per cent of sugar, 20 per cent of tobacco, 15 per cent of canned fruit, 5 per cent of fresh fruit, and 5 per cent of coffee the Commonwealth can still claim to make a noteworthy contribution. This, of course, omits many foodstuffs, but vegetables are widely produced throughout the world and tastes vary largely with local supply. In other items, like spices, the Commonwealth countries can claim a significant part of the total.

POWER RESOURCES

If we turn from the sources of man's food to the power he uses in processing the raw materials, we find in Table IV that Commonwealth countries are in some respects fairly rich. But their riches here are by no means as outstanding as they are with so many others of the world's natural resources. They produce something like 27 per cent of the overall output of anthracite and bituminous coal, but only 3 per cent of lignite and brown coal. In crude petroleum the Commonwealth is distinctly lacking, with little more than 2 per cent of the world's output. Of the other sources of power it is more difficult to write. Data on natural gas are hard to come by and one can only say that important supplies are available in some Commonwealth countries, notably Canada. The Commonwealth's output of hydro-electric power is small in relation to the world total. The Paley Report¹ put developed hydro-electric power in the Commonwealth at 8 million kilowatts at the end of 1950 out of a grand total for the non-communist world of 75 million kilowatts. On the other hand, of a world potential of 480 million kilowatts, the Commonwealth is estimated to have between 80 and 90 million kilowatts. The major potential source is given as Canada, but a significant amount is to be found elsewhere. The problem, however, with some at least of this potential, is the distance separating potential power from its potential markets. Finally there are the fascinating possibilities of atomic power. The extent of its contribution to our sources of energy still lies with the future, but many Commonwealth countries are important producers of, or have significant reserves of, uranium and thorium.

The availability of sources of power can confer considerable economic advantages, but modern manufacturing industry depends also on a vast range of raw materials from fields, forests and mines. Commonwealth countries taken together produce 44 per cent of the world's natural rubber, 50 per cent of its wool, 98 per cent of its jute, 34 per cent of the various hems like sisal and manila and 30 per cent of kapok. But they grow only 13 per cent of the world's cotton and 1 per cent of its flax. For all that, they can claim to make a substantial contribution to clothing man, to supplying him with the raw materials for sacks and rope, and to helping to provide him with the rubber that he is able to put to so many uses. In addition they have a fair proportion of the world's forest resources, producing 9 per cent of the timber and 23 per cent of the wood pulp. The data on all these are grouped together in Table V.

MINERALS

The Commonwealth's basic resources by no means end with the products of its agriculture and forests. We have also to consider the production of minerals (see Table VI).

¹ United States of America, The President's Materials Policy Commission, *Resources for Freedom*, vol. III, table VIII. This is commonly known as the Paley Report.

In a few, the Commonwealth is of pre-eminent importance: 75 per cent of the nickel ore publicly recorded as mined in the world comes from the Commonwealth, as does 90 per cent of the asbestos, 59 per cent of the manganese, 76 per cent of beryl, 75 per cent of platinum and 53 per cent of titanium. Other minerals where Commonwealth ore production is important are copper (31 per cent), lead (31 per cent), zinc (26 per cent), tin (39 per cent), bauxite (31 per cent), mica (29 per cent) and diamonds (31 per cent). With several others, on which comparable data are to be had, Commonwealth production is small: only 10 per cent of the world's iron ore is mined within its borders, together with 13 per cent of its tungsten, 14 per cent of antimony, 8 per cent of phosphate rock, 14 per cent of cobalt and 14 per cent of graphite. For some minerals, Commonwealth output is negligible; molybdenum, mercury, potash and sulphur fall within this category. Lastly, there are the metals of monetary as well as of industrial significance: 78 per cent of the recorded output of gold is mined in the Commonwealth and 23 per cent of silver.

NATURAL RESOURCES

It is a tale of impressive strength in natural resources. But lest we be carried away by the enthusiasm of "Empire-firsters", it is well to remember that the significance of these resources is not to be judged solely by aggregates and percentage relationships between the Commonwealth as a whole and the world as a whole. Admittedly the statistics cited relate almost exclusively to actual production and largely eschew discussion of potential reserves—in which the Commonwealth abounds but which are valueless unless they can be developed at costs competitive with those of other sources of supply. But this is not a stationary world. The natural resources which seem to confer economic strength to-day may be outmoded by the technical advance of tomorrow. There can be no gainsaying the fact that the price of natural rubber has been markedly affected by the advent of a synthetic substitute. The producers of cotton and wool have for long been in competition with the man-made fibre rayon and are increasingly having to face the competition of the newer synthetics such as nylon, terylene and ardil. The resources of nature will not of themselves bring wealth to the Commonwealth unless they are tended by the skill and ingenuity of man. In an age when the chemist is of such importance, natural reserves which are significant to-day are not always a pointer to continuing wealth.

MANUFACTURE

Moreover manufacturing production turns not merely on the possession of suitable geographical resources but on the ability to bring them together at some convenient spot for the application of skill and capital. The Commonwealth comprises a widely scattered group of countries; and nature, which can be bounteous in the total of her gifts, can also be singularly wayward in their distribution. A total of natural riches does not therefore guarantee that to primary wealth there will be added manufacturing wealth. But as we shall see in a subsequent section the Commonwealth countries are in many respects complementary to one another, and have important trading relationships. Manufacturing industry is a dominant feature of the British economy. It is of great importance in Canada and it is of growing, in some already of marked, importance in a considerable number of the other Commonwealth countries. It is difficult with a few figures to sum up the Commonwealth position among the manufacturing nations of the world. Details of the growth of manufacturing in Commonwealth countries are set out in subsequent chapters and it may suffice here simply to

THE COMMONWEALTH: ECONOMIC ASPECTS

quote some statistics indicating the importance of the Commonwealth in world trade in manufactured goods: statistics are available showing the trade in manufactured goods from eleven principal manufacturing countries,¹ of which the United Kingdom, Canada and India, the only Commonwealth countries appearing in the group, accounted for 29.5 per cent of the group's total in 1937 and 35 per cent in 1950. The United Kingdom supplied 22.4 per cent in 1937 and 25.0 per cent in 1950; and Canada supplied 5 per cent in 1937 and 6.1 per cent in 1950. Similar but not wholly comparable figures for October, 1954 to March, 1955,² put the percentages for the United Kingdom and Canada at 19.8 and 5.7 respectively. These data have very definite drawbacks. In the first place the totals are only for a limited group of countries; but it is a group which consistently accounted for some 80 to 85 per cent of world trade in manufactured products from 1901 to 1938; and there is no reason to believe that any other Commonwealth country should appear as an important exporter of manufactured goods. The second and more important deficiency is that these are figures for trade, not production. They take account only of what crosses frontiers. For all that they are valuable for indicating that the Commonwealth adds manufacturing strength to its wealth of natural resources.

DISTRIBUTION OF RESOURCES: DIRECTION OF TRADE

But what, it may be asked, is the justification for lumping together in this way the products of so many scattered and diverse countries? Have we been taking for the purposes of an economic survey a group of countries suggested by their political and constitutional links or are there also economic reasons for thinking in terms of the Commonwealth? It is a problem worth thought, for the future cohesion of the changing Commonwealth is likely to depend more than it has in the past on the ties of economic self-interest and less on those of politics and sentiment.

The resources we have described are often concentrated in particular countries and the resulting diversity in productive activity yields ample scope for trade. External trade is highly important to all the members of the Commonwealth, with the possible exception of India, where it accounts for only a small percentage of the national income but where nevertheless it provides vital supplies and gives access to valuable markets. All but one of the Commonwealth countries carry on their major trade with other parts of the Commonwealth. The exception is Canada. As we shall see later, the exception is significant in governing the membership of the Sterling Area. Canada conducts an important trade with the Commonwealth, sending to Commonwealth countries in 1953 some 21 per cent of her exports and deriving from them 14 per cent of her imports.³ But her main trading connections are with the dollar countries. 2,578 million dollars of her aggregate exports of 4,117 million dollars go to the dollar area, 2,419 million dollars to the United States. Her total imports amount to 4,383 million dollars and 3,472 million dollars come from dollar countries, 3,221 million dollars from the United States. To turn from the exception to the rule, and setting out statistics for 1953, the importance of Commonwealth trade for the other countries of the Commonwealth may be seen from the percentages of their trade carried on within the Commonwealth. For imports the position may be summed up:

	percentages		percentages
United Kingdom	49	Southern Rhodesia	89
Australia	65	India	49
New Zealand	81	Pakistan	48
South Africa	53	Ceylon	56
		Colonies	52

The position is very similar for exports:

	percentages		percentages
United Kingdom	49	Southern Rhodesia	81
Australia	52	India	52
New Zealand	74	Pakistan	35
South Africa	50	Ceylon	42
		Colonies	52

The figures admittedly refer only to the one year 1953. Certainly variations occur from year to year, but they are not sufficient to alter significantly the general pattern indicated by the figures. Indeed, even if we compare the data for 1953 with the position as it was in 1938⁴ we find no very marked change, again except for Canada. No less than 52 per cent of Canada's exports in 1938 went to the Commonwealth as compared with 21 per cent in 1953. For her imports, the drop is from 27 per cent to 14 per cent. Canada has experienced the largest decline in the relative importance of her Commonwealth trade, but for most of the Sterling⁵ countries in the Commonwealth the importance of Commonwealth trade has fallen to some extent. For the United Kingdom, Southern Rhodesia and the colonies it has grown. For India and Pakistan, of course, no comparison with the position in 1938 is possible.

INTER-COMMONWEALTH TRADE

The importance to Commonwealth countries of their trade with one another is beyond question. It inevitably adds to the Commonwealth's community of interest. That so much of this trade is with the United Kingdom is also significant. The exports and imports of the United Kingdom herself are widely distributed among the Commonwealth countries. If we take her exports to the Commonwealth in 1953 we find them divided in these proportions:

	percentages		percentages
Colonies	33	South Africa	12
Australia	16	India	9
Canada	12	New Zealand	8

The remaining 10 per cent went to Southern Rhodesia, Pakistan and Ceylon. The pattern for imports in 1953 was similar. The colonies provided 36 per cent, Canada 19 per cent, Australia 18 per cent, New Zealand 10 per cent, India 7 per cent and South Africa, Pakistan, Ceylon and Southern Rhodesia the rest. The Commonwealth trade of her fellow members is quite different. It is not diffused over the Commonwealth. It is concentrated on the United Kingdom with a good part of the remainder going on the whole to some nearby Commonwealth country. Thus of the small part of Canada's total exports directed to the Commonwealth in 1953, 74 per cent went to the United Kingdom; and from the United Kingdom, Canada received 73 per cent of her Commonwealth imports. Australia's main Commonwealth link is also with the United Kingdom, who accounts for 69 per cent of her exports and 77 per cent of her imports. She also trades throughout the Commonwealth, but only New Zealand, taking 8 per cent

⁵ i.e. those belonging both to the Sterling Area and to the Commonwealth.

THE BRITISH COMMONWEALTH

of Australia's exports, and India and Canada, both supplying 4 per cent of her imports, are of any individual significance. This predominance of the British connection characterises all the others, as may be seen as we rehearse the figures for the Commonwealth exports and imports in 1953. New Zealand sent close on 93 per cent of her exports to, and received 70 per cent of her imports from, the United Kingdom, with Australia as the main subsidiary supplier (18 per cent). Fifty-four per cent of South African exports went to the United Kingdom, who was also the source of 75 per cent of her imports; and 25 per cent of her exports went to the neighbouring Rhodesias. Southern Rhodesia also traded principally with the United Kingdom, to the extent of 50 per cent of exports and 54 per cent of imports; the bulk of the remainder of her Commonwealth trade was with South Africa and Northern Rhodesia. The position is closely similar for the Asian members: 54 per cent of India's Commonwealth exports and 51 per cent of her imports are with the United Kingdom, with Australia, Pakistan, Ceylon and Canada playing a subsidiary rôle. For Pakistan, the subsidiary parts are taken by India and Hong Kong and the major part again by the United Kingdom (50 per cent of Commonwealth exports and 65 per cent of imports). Ceylon sends 50 per cent of her Commonwealth exports to, and takes 40 per cent of her Commonwealth imports from, the United Kingdom; India, Australia, New Zealand and Canada are also important to her. One should really write separately of the various dependent territories, which to-day include a number of the Commonwealth's economically most vigorous members, but their number makes this impossible. No injustice, however, is done simply by recording that 60 per cent of the Commonwealth exports of these territories go to the United Kingdom and from her they receive 58 per cent of their Commonwealth imports.

It must be stressed again that these percentages refer solely to trade with other Commonwealth countries and not to total trade. They must, therefore, be read *together with* the earlier statistics on the relative importance of Commonwealth trade. Their significance, however, is clear. In so far as trade provides a bond between countries, it is clearly an element in the cohesion of the Commonwealth and more particularly in the relationships between the United Kingdom and the other Commonwealth countries. None of this, of course, will come as any surprise to those acquainted with Commonwealth history. It was very often the flag which followed trade, and with trade went the development of commercial and financial institutions, often with their headquarters in the United Kingdom, to facilitate and develop it. Economically, therefore, there is a good reason for examining the Commonwealth as a whole.

Trade may bring some community of interest. It also brings mutual problems and from time to time it may lead to specific agreements or it may produce conflicts, particularly in a changing world where the economic structure and trade of nations have to be continually adjusted to meet development elsewhere. The Commonwealth has had its share of both agreements and conflicts. Its members all have their economic problems. This is not the place for the minutiae of Commonwealth economic relationships and still less for the domestic economic worries of its member nations. There are, however, some broad problems concerning the entire Commonwealth. First, there is the system of Imperial Preference and its relationship to the General Agreement on Tariffs and Trade (G.A.T.T.). Secondly there is the Sterling Area and the problems of balance of payments and of capital flows that have so much exercised the Commonwealth in recent years. What are these systems of Imperial Preference and the Sterling Area? What are the mutual Commonwealth problems

from which they spring? With what issues do they confront the Commonwealth and how do they bear on its unity?

IMPERIAL PREFERENCE

The system of Imperial Preference¹ is often associated with the Ottawa Conference of 1932. It is certainly correct that the Ottawa Agreement marks the beginning of a system of preferential tariffs embracing the Commonwealth as a whole, but many Commonwealth countries had levied preferential rates on imports from other parts of the Commonwealth for some decades before 1932. Canada introduced preference as early as 1898, New Zealand and South Africa followed in 1903 and Australia in 1908. Many years were to pass, however, before the United Kingdom, India and the colonies took the same path. British free-trade policy gave little place for tariffs, far less for any system of preferences and it was only with the McKenna duties of 1919 and the Key Industries duties of 1921 that the United Kingdom began to reciprocate the preferences extended to her by the Dominions. Similarly the "open door" policy for colonies that came to be accepted by the Great Powers in the nineteenth century precluded a preferential system in most colonial tariffs. But by the 1920's the "open door" policy was fast losing ground, and preferences became a part of a number of colonial tariffs, although they still had no place in most of the African colonies, in the Straits Settlements, the Federated Malay States, Hong Kong, Ceylon and one or two others. India introduced preferences in 1927.

By 1932, therefore, the system had some place in the tariffs of the Commonwealth's major trading nations. But even apart from the continuing absence of preferences in many countries, the impact was diminished by the fact that the margin of preference, or the difference between the tariffs on similar goods from Commonwealth and foreign sources, was often small and the range of goods enjoying preferences often restricted. Those extended by the United Kingdom, for example, could only become important when duties on staple foodstuffs and raw materials became an accepted part of her tariff policy. It has been calculated that in 1929 7 per cent of her imports from the Commonwealth enjoyed preference. Of these, 4 per cent enjoyed a margin of over 20 per cent. In return, something like 35 per cent of Britain's exports to the Commonwealth received preferences in other Commonwealth countries; but the size of the preference margins was often small and only 3 per cent had margins of over 20 per cent.

The great depression of the early 1930's, with its crushing effect on world trade and particularly on the markets for primary products, coupled with the ever-present desire to foster imperial economic development, conspired to end this situation. The Ottawa Conference produced what was essentially a programme for defending the economies of the Commonwealth, and particularly its primary producers upon whose prosperity in turn much of its market for manufactured goods depended, from the impact of world slump. Imperial Preference thus emerged as a mechanism of defence and in addition as an instrument for fostering the economic growth of Commonwealth countries. So much for the problems which helped to produce it, but what of its effects?

The year 1932 and the years immediately following saw a twofold development in the system of preferences. The

¹ See F. V. Meyer, *Britain's Colonies in World Trade* (London, 1948) and F. C. Benham, *Great Britain under Protection* (New York, 1941).

² Sir Donald MacDougall and R. Hutt, "Imperial Preference: a Quantitative Analysis", *Economic Journal*, June, 1954.

THE COMMONWEALTH: ECONOMIC ASPECTS

system became more general in a dual sense; more countries adhered and preferences were granted on more goods. Moreover, the margins of preference were raised. The "open door" policy virtually disappeared in the colonies; the United Kingdom had adopted protection with the Import Duties Act of February, 1932, greatly enlarging the range of commodities on which preferences could be offered; the Dominions and India expanded their preferences and widened their margins. In addition, in 1934, quota restrictions on the entry of cotton and rayon goods were imposed in the colonies, to the advantage of Commonwealth producers and to the detriment mainly of Japan. By 1937, some 60 per cent of United Kingdom imports from the Commonwealth enjoyed preferences, 9 per cent having a preferential margin of over 20 per cent. In return, about 55 per cent of her exports to the Commonwealth enjoyed preference, 20 per cent with a margin of over 20 per cent.¹

These pre-war years were the short heyday of Imperial Preference. The system was soon to become entangled in the myriad controls over trade and foreign payments spawned by war. It is thus difficult to assess clearly the effects on Commonwealth economic relations of an experiment that has generated a remarkable amount of political heat. It is certainly true that trade within the Commonwealth rose after 1932. Commonwealth exports to the Commonwealth rose from £398 million in 1932 to £603 million in 1938, and this change involved a growth in intra-Commonwealth exports as a percentage of total Commonwealth exports from 43 per cent to 49 per cent. The corresponding figures for imports show a growth from £433 million to £676 million; and the relative importance of intra-Commonwealth imports rose from 38 per cent to 41 per cent.² But much else was happening at the same time. The world depression of the early 1930's affected the United Kingdom relatively less than it did many other important countries. That in itself would give a fillip to Commonwealth trade. The international monetary crisis of those years and the resulting emergence of the Sterling Area gave a further stimulus to intra-Commonwealth trade, of which more will be said later. The years from 1932 were years of recovery, albeit slow, from a profound slump and this meant much to the primary producers, among whom as we have seen Commonwealth countries are important, who had been laid so low by the events of 1929 to 1931. Commonwealth trade would have grown had there been no Imperial Preference. How much additional growth came from Imperial Preference one cannot say. Certainly some Commonwealth producers benefited, but the gain was not always great. It is certain that other producers received nothing and may even have lost, particularly where the growth of preferences stimulated retaliation in other countries. It is plain that Commonwealth consumers reaped no benefit from the higher duties on foreign goods, for the elaboration of the system took the form more of higher tariffs on non-Commonwealth products than of lower tariffs on those from the Commonwealth. The overall preferential margins were not large in 1937. United Kingdom exports to the Commonwealth had an *average* percentage margin of preference of about 20 per cent on those goods enjoying preferences and of about 11 per cent on all goods. Her imports from the Commonwealth received an *average* preferential margin of some 17 to 20 per cent on goods subject to preference and of about 12 per cent on all goods.³ Whatever the impact on individual products, and that on occasions could be considerable, the overall effect on

Commonwealth trade and development taken as a whole cannot have been great.

The year 1937 probably marks the apogee of Imperial Preference. The advance to greater preferences ceased as early as 1938. The Anglo-American Trade Agreement of that year involved a bargaining of preferences against reductions in the American tariff. Many margins of preference were narrowed, and others disappeared altogether. A further check on the development of the system came with the Anglo-Indian agreement of 1939 and with the agreement between Canada and the United States in 1938. Thus even before the outbreak of war the significance of Imperial Preference had begun to dwindle.

The war brought controls over trade and payments. It saw the emergence of the Sterling Area as a formal instrument having the effect of minimising the spread of these controls to much of Commonwealth trade. The importance of preferential tariffs thus diminished before a system where imports were subject to quotas, granted readily or reluctantly depending upon the country of origin. Many goods, moreover, were traded under long-term bulk purchasing agreements; and where markets are guaranteed by such devices tariff preferences cease to have much current importance even for those who benefit from them. Most of these agreements for particular commodities have now disappeared. The retreat of bulk purchasing has thus restored some of the significance of Imperial Preference. In like manner, preferences have risen in importance in so far as quotas have disappeared or become more liberal and as exchange controls have lessened in severity. But in other respects Imperial Preference is even less important than before the war. It has become involved in a wider debate over the value of trade controls discriminating between imports from different countries. Imperial Preference was conceived as an instrument for Commonwealth economic development. Discriminatory controls are debated in part for their likely value in insulating particular areas from the spread of economic fluctuations generated elsewhere. The future impact of Imperial Preference will thus turn in part at least on the outcome of the balance of payments problems, which evoke controls, and of the debate on discrimination and economic stability. We turn to this problem in the later discussion of the Sterling Area.

G.A.T.T.

One aspect of the debate between regional and multi-lateral trade has been the development of the General Agreement on Tariffs and Trade, embodying an attempt to lower the barriers to trade throughout the world. The results of the various meetings at which the members of G.A.T.T. have negotiated tariff reductions have undoubtedly been to narrow preferential margins within the Commonwealth. This was particularly apparent after the Geneva negotiations in 1947, and the process has since been carried a little further. To this narrowing of preferential margins must be added the effects of world inflation on the incidence of specific duties. Many Commonwealth preference margins are specific, being levied not as a percentage of value but as a fixed amount per physical unit; and they decline as a percentage of the value of imports as prices rise. The cumulative impact of rising prices and of reductions in preference rates has been to push the overall impact of Commonwealth preferences some way back to the position in 1929. By 1948, the proportion of United Kingdom exports to the Commonwealth enjoying a preferential margin of over 20 per cent had fallen to 9 per cent, as compared with the 20 per cent of 1937 and 3 per cent of 1929. Similarly, only 4 per cent of goods sold by Commonwealth countries to the United Kingdom enjoyed a preference of over 20 per cent. This

¹ MacDougall and Hutt, loc. cit.

² Commonwealth Economic Committee, *A Review of Commonwealth Trade* (Thirty-third Report, 1949).

³ MacDougall and Hutt, loc. cit.

THE BRITISH COMMONWEALTH

is just the same as the 1929 position and only half of the 1937 percentage.¹ If the effect of Imperial Preference on Commonwealth trade as a whole was open to question in the 1930's, it is still more open to question to-day.

The waning of Imperial Preference and the attack of G.A.T.T. have led the protagonists of Preference to lend their voices to the criticisms of G.A.T.T. The General Agreement has indeed been amended in a number of ways important for many Commonwealth countries, but the principal issue over G.A.T.T. concerning us here is that arising from the clause forbidding new preferences. Commonwealth conferences have in general endorsed Imperial Preference, and the Prime Ministers' conference of November to December 1952 specifically discussed the "no new preference" rule. The communiqué runs:

"16. *Imperial Preference.* There was general recognition at the Conference of the value of existing preferences.

"On the initiative of the United Kingdom a discussion took place on a proposal that all Commonwealth countries should join in seeking release from the 'no new preference' rule in the General Agreement on Tariffs and Trade (G.A.T.T.) and this United Kingdom proposal was supported by the representatives of some countries. The representatives of other countries felt that such an approach would not advance the agreed objective of restoring multilateral world trade and the Conference was therefore unable to support it.

"All Commonwealth Governments agreed, however, to co-operate with the United Kingdom Government in an approach to the other contracting parties to the G.A.T.T. to meet particular difficulties arising on the United Kingdom tariff. The object would be to enable the United Kingdom, consistently with the basic provisions of the G.A.T.T., to continue the duty-free entry for Commonwealth goods notwithstanding any increases that might from time to time become necessary in duties designed to protect domestic industry and agriculture in the United Kingdom. The Commonwealth Governments also agree to consider sympathetically certain special tariff problems affecting the Colonies."

The United Kingdom has been able to obtain some concessions from G.A.T.T., but they are strictly hedged. An outcome of the recent ninth session of G.A.T.T. is that, subject to prior concurrence of the contracting parties in each case, Britain can grant increases in preferences for the exclusive benefit of colonial products wholly or largely dependent on her markets; and she can extend to colonial producers the same assistance as can, consistent with G.A.T.T., be given to her own producers. In addition the United Kingdom has some restricted power to raise most-favoured-nation tariffs without imposing duties on similar items from the Commonwealth, but provided the larger preferential margin is not likely to lead to any substantial diversion of trade from foreign to Commonwealth countries.

High hopes were entertained of Imperial Preference; but it may be doubted whether it has moulded Commonwealth trade to any great extent. It has, however, assisted some producers, and it still commands a wide measure of support. Its direct impact has declined and it has been overlaid by other forces affecting trade. But any move to greater freedom from import and exchange controls will restore something of its significance

THE STERLING AREA

Imperial Preference is an exclusively Commonwealth "club". The Sterling Area is not. Ireland, Burma, Iraq,

Libya and Iceland all belong to the Area. One extremely important member of the Commonwealth—Canada—does not. But like Imperial Preference the Sterling Area has a long history of gradual evolution.² In its contemporary form it shares with Imperial Preference the further characteristic of being an essentially defensive organisation.

The British Isles have for long been important in world trade, but a position of special importance was achieved with their lead over the world in developing great industries in the eighteenth and nineteenth centuries. The nineteenth century saw an immense development in world trade and the United Kingdom, thanks to her initiative in industrialisation, played a leading part in this. Important competitors, notably Germany and the United States, began to appear in the latter part of the century, but by and large the United Kingdom was able to maintain until 1914 her position as the world's principal supplier of manufactured goods. It followed that sterling was a currency worth having.

Sterling was also a currency which it was possible to obtain. The story of the United Kingdom in the nineteenth century is one of a rapid growth in population and of an industrial development far outstripping the growth of her agriculture. She thus became more dependent on overseas sources for her supplies of foodstuffs, particularly after the abolition of the Corn Laws in the 1840's, and of industrial raw materials, coal and iron ore being the principal exceptions and wool and cotton the chief examples. Sterling was thus to be had by other countries, and once obtained it was highly useful for the command it conferred over the supply of manufactures. A goodly proportion of world trade came to be conducted in Sterling and countries throughout the world, both those which were linked politically to the United Kingdom and those which were not, found it valuable to hold reserves of Sterling.

This tendency was further strengthened by other developments. The British Merchant Navy emerged to a dominant position and the great part of world trade was carried in British ships. World markets in many commodities grew up, following improvements in transport and communications. Extremely prominent among these centres of world trade were the corn and cotton markets of Liverpool and the various commodity markets of London. To all this must be added the strength of London as a financial centre. Savings and a favourable balance of trade made London the world's principal source of long-term capital. The British record of financial stability helped to stimulate the use of the bill on London as a means of world-wide commercial payments.

A great variety of factors thus conspired to make Sterling the principal currency for international trade and to make London the principal centre for trading in currencies. As a matter of convenience, countries throughout the world acquired the habit of holding balances of Sterling in London and of conducting their trade through London. Here are the foundations of the Sterling Area as we know it to-day. Those foundations are now overlaid by a superstructure giving the building a quite different aspect. But this early history is fundamental for understanding the Area of to-day. Partly this is so because inertia can be important in institutions and history shows us the origins of London's still continuing prestige. Partly also because it shows with a clarity denied by latter-day complications the vital rôle of a convenient centre and a convenient currency in international payments. The countries attached to London for reasons of convenience and holding their reserves in Sterling are no longer so numerous as in

¹ See R. S. Sayers, *Modern Banking* (Oxford, 1951), Institute of Bankers, *The Sterling Area* (London, 1948), and A. C. L. Day, *The Future of Sterling* (Oxford, 1954).

² MacDougall and Hutt, loc. cit.

THE COMMONWEALTH: ECONOMIC ASPECTS

the nineteenth century, but they are the countries which even in the more expansive days of the last century were noteworthy for the closeness of their financial and trading connections with London.

The days when the Sterling Area may be said to have been coterminous with the trading world ended in 1914 with the first World War. Some attempt to return to pre-war conditions was made in the 1920's, but Sterling's defensive action had in effect begun. The Sterling Area was changing in content and purpose. The final break came with the devaluation of the pound in 1931. Throughout the 1930's the Sterling Area remained a completely informal organisation. It is clear that the British Commonwealth, with the possible exception of Canada, was in the monetary union. Other countries held Sterling and used it; but the closeness of their association with Sterling varied from time to time and it is singularly difficult to draw up a list of Sterling Area countries. It is clear, however, that the Area had undergone a change not merely in its scope but also in its *raison d'être*. Countries still linked themselves for the convenience in international payments flowing from association with an important monetary centre, but rival centres—notably New York—were developing. The convenience provided by London was no longer sufficient. The United Kingdom, however, could offer a further advantage in her comparative stability in the 1930's, which we have already noted. In fact as a great importing country she received some fillip from the falling prices of primary products and was consequently well placed to keep up the volume of her imports. For primary producing countries she was a source of stability in an unstable world. Monetary union was thus added to Imperial Preference in the search for better markets.

The outbreak of war in 1939 brought a further contraction of the Area and a further modification of its purpose. The convenience and stability of a monetary union remained; discrimination, as a defence against shortage of foreign currencies, was added. Geographically, the Area became restricted to the countries already mentioned, except Iceland which came in later, but including Palestine, Egypt and the Sudan which have since left. From time to time other countries—the Belgian Congo, parts of the French Empire, and the Faroes—came and went. In 1940 there appeared that system of exchange control which has developed into the system we know to-day. It is a discriminatory system aiming to make trade and capital movements as free as possible within the Area and to impose controls of varying strictness on trade between the Area and other parts of the world, in an effort to economise on those external reserves—notably the American and Canadian dollars—of which the Area is short. It provides moreover for strict controls over the uses to which non-members may put any Sterling they earn, and particularly over the use of Sterling for payments by people outside the United States to Americans.

The Area's membership was precisely defined under defence regulations during the war. The structure and definition of membership were consolidated by the Exchange Control Act of 1947. But while one can now specify, in a way not possible before the war, just what are the scheduled territories composing the Sterling Area, it still remains a somewhat loose and informal organisation. Any statement of its basic characteristics must be accompanied by a number of qualifications. The Sterling Area is a monetary union where the members pool their reserves of gold and foreign currencies, maintain stable exchange rates with one another even though their currencies may fluctuate in value *vis-à-vis* the currencies of non-member countries, and discriminate in their exchange and import restrictions between member and non-member goods. The central gold and dollar pool is managed by Britain. The

other countries turn over to the pool their earnings of foreign currencies, and as a *quid pro quo* have access to it for their foreign currency requirements. The general understanding thus is that while some of them may maintain independent gold and dollar reserves, they do not build up these reserves in any significant way at the expense of the central pool. From time to time, of course, pressures do arise to enlarge these independent reserves or to establish new ones; and in 1947 South Africa withdrew from the pool.

This withdrawal from what is the core of the Sterling Area did not, paradoxically, entail South Africa's departure from the Area. She continues to sell a sizeable volume of gold to the United Kingdom, thus meeting part of the deficit in her current balance of payments; and the United Kingdom in her turn has allowed South Africa the same access to the London capital market as is granted to full members of the Area. To protect these reserves the Sterling Area countries maintain import and exchange restrictions, and these restrictions discriminate between various currencies. The United Kingdom herself imposes no restrictions on trade or capital movements with Sterling Area countries, except Hong Kong. But the same cannot be said of all the other independent members of the Area. Their restrictions, however, bear less severely on Sterling Area trade and capital movements, although they can be strict enough at times, as British exporters to Australia know to their cost. Finally, the general rule is for stability of exchange rates between members. When Britain devalued her pound in September, 1949, Sterling Area countries followed, maintaining the constancy of rates within the Area. Even here there is an exception. Pakistan did not devalue in 1949. Her rupee thus appreciated *vis-à-vis* the Area's other currencies. This position was maintained until September, 1955, when the position prevailing before September, 1949 was restored.

This then is the system that has developed over the years as the pound's role in world commerce has changed. It shares the characteristic with many Commonwealth institutions of having few rules and many exceptions. It is to the problems of this Area that Commonwealth conferences have addressed themselves.

THE POUND AND THE DOLLAR

The continuing problem has been the dollar shortage. This is by no means a problem peculiar to the Sterling Area. The American dollar has been a scarce currency for almost all countries. But while some countries have been fortunate enough not to have a dollar problem, it has to be recognised that those which suffer do so as a matter of policy. The dollar problem exists because at the prevailing price of dollars the demand for them far exceeds the supply. There is a price for dollars high enough to choke off demand and to stimulate supply sufficiently to close this gap. The real problem lies in the consequences that might flow from attempts to reach this price. Devaluation of non-dollar currencies would probably be necessary and so possibly would deflation in the non-dollar world. The living standards in the Sterling Area countries and the rest of the non-dollar world would decline in relation to the standards of the dollar countries. It is a question, however, whether these dire consequences are inevitable. It is certain that they would be vastly less severe to-day than they were just after the war. It has even been thought on occasions in recent years that they might have ceased to exist.

The Commonwealth countries within the Sterling Area thus have a choice before them. They can perpetuate the present discriminatory system. That, however, carries with it the danger of falling further behind in living standards, in relation to the dollar countries, because the

THE BRITISH COMMONWEALTH

Sterling Area countries are sheltered from the stimulus of their competition. On the other side, there is the possibility of strengthening the economy of the Sterling Area sufficiently to enable it to maintain its living standards *vis-à-vis* the dollar world without the aid of its discriminatory crutches. Whether this second consummation will ever come to pass it is hard to say, but it is by and large the policy which the Commonwealth countries have set themselves, notably in the Commonwealth Conference of 1952.

The measure of success of the Commonwealth's policy lies in the growing proportion of imports from the dollar countries paid for by the Commonwealth from earned resources, and the diminishing proportion paid for from dollar grants and loans of one form or another. This improving position of the current balance of payments with the dollar area has been achieved together with some relaxation in the severity of import restrictions. It has also been accompanied, taking the Sterling Area as a whole, by high employment and rising living standards. It is no mean achievement. But doubts about the sufficiency of all the Commonwealth's policies must still arise from any contemplation of the central gold dollar balances. At the end of 1945 these stood at 2,476 million U.S. dollars, and by the end of June 1955 they had risen to no more than 2,680 million U.S. dollars. They are still small in relation to the Area's total trade and to the potential pressures on its balance of payments.

STERLING CRISES

Moreover, it is common knowledge that such rise as has occurred has been anything but steady. The Sterling Area has suffered a number of severe crises: in 1947 with the ill-fated attempt at convertibility, in 1949 culminating in the devaluation of the pound, in 1951, and the recent stresses and strains of 1955. The reserves have, indeed, varied over the past decade from the nadir of 1,340 million U.S. dollars in September, 1949, to a peak of 3,867 million U.S. dollars at the end of June, 1951, just before their plunge to 1,685 million U.S. dollars in mid-1952. It is, of course, a further measure of the success of the policies of more recent years that the biennial crisis which seemed to be our lot for the six years after the war did not occur in 1953, which indeed was a year of steady growth in the reserves. For all that, the tale is not a happy one, and crises are by no means a thing of the past.

It would be invidious to try to allocate the blame for these crises among the members of the Sterling Area. But in a monetary union between an industrial country and a number of basically primary producing countries it is important to notice how often these crises have afflicted the balance of payments of all. One of the benefits of such a union, as is illustrated by the history of the 1930's, should be some offsetting of crises. When the terms of world trade move against the primary producers they should help the industrialised country and enable it, as in the 1930's, to lend some stability to the primary producers. The converse should, of course, happen if the terms move the other way and the primary producers find the prices of their products going up while the industrial country experiences a rise in its costs. That, at any rate, is the theory. It has not been the practice. The year 1947 (see Table VII) was a year of heavy deficits for all but one of the Sterling Commonwealth countries,¹ Canada having no part in this particular issue. This is the crisis associated with the attempt to make the pound convertible. It is plain, however, that the problem was far from being peculiar to the United Kingdom. The American recession of 1949 probably touched off the crisis of that year. The

United Kingdom in 1949 had a surplus on her current balance of payments, albeit one that was mostly in trade with the rest of the Sterling Area. But a great number of other countries in the Area had substantial deficits, and these they covered mostly by funds drawn from London. There is a trace of that offsetting behaviour of balances of payments that one hopes for in a monetary union; but it was clearly insufficient, and the heavy drain on the dollar reserves, to which the United Kingdom contributed, and the increasing speculation on the future value of the pound, forced the devaluation of September, 1949. Two years later came a further crisis, on the heels of the boom in commodity prices induced by the beginning of the Korean war in 1950. The reaction of commodity prices in 1951 principally affected the primary producing countries in the Sterling Area, but it did not make itself felt until late in the year and continued to have very serious effects on the current balance of payments of a number of countries in 1952. The burden of the 1951 crisis seems therefore to rest with the United Kingdom and resulted in some measure from the attempt to replenish the stocks eaten into in the previous year. If the United Kingdom began the crisis, a good part of the rest of the Sterling Area certainly continued and aggravated it. Of the problems of 1955 it is still somewhat difficult to write. The United Kingdom is certainly a contributor to the fall in the reserves, and is very likely an instigator as well. But it may be noticed that "the surplus of the Rest of the Sterling Area with the non-sterling world was £55 million lower in January to June, 1955 than in the first half of 1954, mainly because a substantial rise in imports was only partly offset by increased exports. This, together with a deficit on the U.K. current account, changed the Sterling Area's balance with the non-sterling world from a surplus of £191 million to a deficit of £31 million."²

The various Commonwealth countries contributing to these recurrent drains on the gold and dollar reserves can often plead many extenuating factors. In the earlier years of the past decade the United Kingdom and some of the Far Eastern colonies, for example, could plead the special strains imposed on them by war damage. In a number of years India has suffered a severe drain on her foreign earnings in order to meet the consequences of poor harvests. Quite a number of the primary producing countries can point to the violence of price fluctuation affecting some of their major exports. Some index numbers of export prices illustrating this are given in Table VIII and the consequences for the Sterling Area's balance of payments of the sharpest of these movements between 1950 and 1952 have already been noted. Point may be given to this problem by citing two price movements of exceptional vigour. The price of wool, so important to Australia, rose from 127 pence per pound in March 1951 to 314 pence per pound a year later. The price for rubber over the same period rose from 16 to 66 pence per pound.³ For both of these products the price subsequently fell heavily. Further illustrations of these and other forces disturbing balance of payments situations could be cited. For all that, it is too much to believe that the ups and downs of the post-war years have been solely the outcome of some unfortunate but fortuitous concatenation of events. The problem has so often been that almost any change was unfortunate. It is a state of affairs suggesting all too plainly economies ill prepared for the more or less normal buffetings of world trade.

The Commonwealth countries have been set on the laudable objectives of economic expansion and of high

¹ United Kingdom Balance of Payments, 1946 to 1955. (Cmd. 9585, October 1955).

² Commonwealth Economic Committee, *Commonwealth Trade in 1951*, p. 7.

³ The colonies have again been lumped under one general heading and this may do some injustice.

THE COMMONWEALTH: ECONOMIC ASPECTS

and growing employment. But very often these have been pursued with a zeal that has led to great monetary expansion. In consequence many of them have had over-extended economies perpetually verging on balance of payments difficulties. It is the ideal situation for infectious crises. For many countries the monetary expansion has been quite understandable. The sterling balances they hold in London and which are part of their external reserves stand at a much higher level than before the war. When they look to these balances they see a picture of apparently unprecedented financial strength. Unfortunately these sterling balances, which are short-term liabilities of the United Kingdom, have risen vastly more since before the war than have the Sterling Area's gold and dollar reserves. Before the war, the United Kingdom's short-term liabilities were generally about balanced by her short-term assets. During the war, new short-term sterling debts of some £3,000 million were incurred while the gold and dollar reserves rose from the equivalent of £542 million in June, 1939 to £610 million in December, 1945. The restraining influence which should have been exercised throughout the Sterling Area by the smallness of the reserves was minimised for many by the size of their sterling balances.

In addition to this problem of monetary growth and inflation, it appears that the actual controls imposed on payments between Sterling Area countries and the rest of the world can help to synchronise crises. The problem is quite simply that the willingness or reluctance of governments to issue import and exchange permits is a potent factor in determining the volume of imports. When all of the control systems of a number of countries are geared ultimately to a single reserve of gold and dollars, it follows almost inevitably that controls will be imposed and relaxed at much the same times. Thus can a monetary union negate itself.

We have therefore a Sterling Area that has developed step by step to meet the exigencies of varying situations, where considerable strides forward have been taken in implementing a policy of strengthening the Area's balance of payments, but where nonetheless the fulfilment of that policy has been hampered by lack of sufficient financial stringency and where the machinery of the Area can help to obstruct one of its useful functions. This monetary union has certainly had an important part to play in Commonwealth history. It is clear that London's power as a convenient financial centre strengthened the links between the United Kingdom and her Empire in the years before the first World War. It is also clear that the stability to be offered in the 1930's was a further factor making for a community of interest. Doubts, however, are sometimes expressed whether the Sterling Area plays the same rôle to-day. Many Commonwealth countries, which are dollar earners, are restless at the restraints placed on their purchases of dollar goods. Voices have been raised from time to time in Australia, for example, suggesting that a link with New York and the American dollar would be more advantageous than one with London and the pound. It has been argued that the Sterling Area places considerable strains on the United Kingdom and that some relief from them would be desirable. It does not follow, of course, that centrifugal elements in the Sterling Area necessarily imply fission in the Commonwealth. But any mutual benefits to be derived from the Area are certainly a unifying force for the Commonwealth, and any disappearance of the one naturally implies the loss of the other.

It is hard to assess the strength of these elements of conflict and it undoubtedly varies somewhat from time to time as the circumstances of particular countries change. It would certainly be quite extraordinary if no friction ever arose. But the centrifugal forces are stronger to-day than

in the 1930's and far stronger than before 1914. The United Kingdom is weaker and thus less able to offer to the other countries of the Area the facilities of a convenient and stable centre which attracted them to her. The decline in the importance of those of the Area's characteristics has been matched by the emergence of discrimination, but it is likely that this is more useful to the United Kingdom than to the Commonwealth's primary producing countries. Moreover, one element, which as has been shown was so vital before 1914, and indeed continued to be until 1939, is now in some danger. This is the United Kingdom's importance as a source for capital.

CAPITAL AND DEVELOPMENT

The Commonwealth needs capital for its economic development. It still looks largely to London. "The United Kingdom," states the communiqué at the close of the Commonwealth Economic Conference in 1952, "is the traditional source of external capital for Commonwealth investment and has special responsibilities in the Colonial territories. The United Kingdom Government are determined that the flow of capital from London for sound development throughout the Commonwealth shall be maintained and increased." The Finance Ministers' meeting in January 1954 could with justice note that "finance from the United Kingdom for Commonwealth development flows through many channels." There are many institutions for facilitating the supply of capital from the United Kingdom to the Commonwealth, particularly the Sterling Commonwealth.

There are, to begin with, the efforts to assist colonial development. The Overseas Resources Development Act of 1948 led to the establishment of the Colonial Development Corporation in February of that year. The task of the Corporation is to assist colonial economic expansion. Its function is mainly to encourage and supplement private investment. It is conceived as an instigator of projects, either alone or in association with private capital, in an effort to show the commercial viability of projects unable to attract private investment unaided. The finance of the Corporation comes from Exchequer borrowing up to a permitted maximum of £100 million; and in addition it has short-term borrowing powers of up to £10 million at any one time. The Corporation has perhaps attracted more public attention for its failures than for its successes. Its contribution to colonial economic expansion has certainly not been commensurate with its capital outlay. But up to the end of March, 1955, £57 million had been sanctioned, although not wholly expended. While the Corporation concentrates on commercial ventures, the funds made available under the Colonial Development and Welfare Acts have been principally devoted to providing the basic equipment in the form of communications systems, health, education and other social services, which have a vital rôle to play in economic growth. The funds are made available to colonial governments by the British Government. They are thus used to supplement government resources in the colonies, not private investment. The amount to be made available in the current ten years' period, which ends on 31st March, 1956, is £140 million, although it is possible that all of this may not be actually spent in that period. Up to the end of the financial year 1954-55 approximately £100 million had been spent and the remaining £40 million was "entirely committed on approved schemes or earmarked for various specific purposes"¹ For the five years 1955-60, £120 million are to be available. To these various government funds we must add the sums provided

¹ United Kingdom Colonial Office, *The Colonial Territories, 1954-55* (Cmd. 9489, June, 1955).

THE BRITISH COMMONWEALTH

every year under the Vote for Colonial Services. In 1953-54, for example, £20 million were spent under this head, and in 1954-55 £41 million. The expenditures are varied in nature as may be seen from a few examples from 1954-55: £250,000 to Cyprus to meet earthquake damage suffered in 1953; £85,000 to the Falkland Islands as a contribution to the Falkland Islands Dependencies Survey; £1.8 million to Aden to meet expenditure on municipal services in connection with the building of a new oil refinery.

Governments and private borrowers have access to the London capital markets. Since 1951 Commonwealth governments have raised £157 million; and the amount authorised for borrowing by private enterprise in Sterling Commonwealth countries from 1953 to June, 1955 is £113 million.¹ These are not necessarily the amounts actually raised. They are merely authorisations setting the maximum to any issues. On the other hand, these figures do not show a variety of possible capital movements. Applications to raise less than £50,000 do not require Treasury sanction. More important, the figures do not indicate transfers from existing resources of firms or the re-investment abroad of unremitted profits. These unrecorded amounts are believed to be considerable. The movement of private funds is assisted by the Commonwealth Development Finance Co., Ltd., which was established in March 1953 "to assist in the provision of financial assistance for development projects in the Commonwealth. . . ." The Company has this much in common with the Colonial Development Corporation that it aims to supplement existing sources where they are insufficient. So far it has invested some £9 million, which are mostly included in the above totals.

Lastly, we must mention United Kingdom investment through the Colombo Plan and the International Bank for Reconstruction and Development. The Plan is a co-operative endeavour for assisting economic development in South-East Asia. Its members are the United Kingdom, Malaya, Borneo, Australia, Ceylon, India, New Zealand, Burma, Cambodia, Laos, Vietnam, Indonesia, Nepal, Pakistan, the Philippines, Thailand and Japan. The United States belong to the Consultative Committee. The investment projects covered by the Colombo Plan are generally public projects of much the same type that Development and Welfare funds help to finance in the colonies. Most of the finance is raised internally within the South-East Asian countries. Through the Plan they obtain some external capital and considerable technical assistance. The United Kingdom has contributed significantly to assisting with training and technical advice. The capital funds provided have mainly taken the form of the releases of blocked sterling balances to Indian, Pakistan and Ceylon. "Over the six years of the Plan (1950-57) these releases, together with aid given under Colonial Development and Welfare and from the Colonial Development Corporation to Malaya and North Borneo will have totalled over £300 million."² Since early in 1953, the United Kingdom has made sterling available to the International Bank for lending to Commonwealth countries. The source of this

sterling has been the United Kingdom subscription to the Bank's capital. In addition the Bank was able in 1951 and 1954 to raise £10 million on the London market.

COMMONWEALTH INVESTMENT

There has been a measure of double-counting in this review of the United Kingdom's Commonwealth investments. If we take the period from 1946 to 1954 we find that her total net overseas investment is estimated at £884 million.³ If we restrict ourselves to the years since 1952, when at the Finance Ministers' conference early in the year the United Kingdom's resolve to provide for Commonwealth investment was reiterated, net investment came to £423 million. This latter total for 1952 to 1954 gives a yearly average of £141 million as compared with the average for the post-war period as a whole of £97 million. £141 million per year is a fairly substantial figure and seems on the face of things to indicate London's continuing power as a source of capital for Commonwealth development. But the position in fact is not so favourable. There is the possibility that the capital the Commonwealth needs and can absorb is greater, although this is difficult to assess, so wide can be the gap between aspiration and execution. There is the certainty that the United Kingdom's domestic savings and her balance of payments position did not provide these funds. From 1946 to 1954, she had an aggregate deficit on her balance of payments on current account of £472 million. That she was still able to invest abroad is the result of the financial assistance she received from other countries. Thus she received £277 million in defence aid, £505 million in grants, and £801 million in additions to her short-term sterling liabilities; but she was able to add £227 million to the gold and dollar reserves. The grants and defence aid came mostly from the United States, and a substantial proportion of the short-term funds came from the colonies. This is not the stuff capital exports are made of. For the later years 1952-54, the position is somewhat better. The United Kingdom invested abroad £423 million, added £152 million to the gold and dollar reserves, and reduced her sterling liabilities by £42 million. All this was financed by a favourable current balance of £344 million and defence aid of £273 million. The position has improved; but 1955 again has the makings of a deficit. We thus face the problem that the United Kingdom's capacity to lend to the Commonwealth has been influenced very substantially by her ability to borrow. Moreover, even the more favourable £141 million a year of 1952 to 1954 is not the measure of her investment in the Commonwealth. We have to add what she gets from the dollar world and subtract the flow, mainly in the form of a reduction in sterling liabilities, to those countries which are neither dollar nor sterling. Total investment in the Commonwealth for 1952 to 1954 is probably about £330 million. London is still not a strong centre for Commonwealth finance and that must inevitably bear on the decisions of Commonwealth countries as they seek funds for development. It may also bear on the Commonwealth's political structure.

GEOGRAPHY

POSITION, SIZE AND POLITICAL DIVISIONS

THE total land area of the British Isles is 120,885 sq. miles, and of the United Kingdom 94,284 sq. miles, the Republic of Ireland accounting for the balance.

The distribution is as follows:

England :	50,874
Wales :	7,466
Scotland :	30,405
Northern Ireland :	5,237
Channel Islands :	75
Isle of Man :	227
Republic of Ireland :	26,601

These units may be regarded as included within a quadrilateral some 800 miles from south to north and about 500 from east to west, stretching from Jersey (49° 10' N.), in the Channel Islands, to Unst (60° 50' N.), in Shetland, and from Lowestoft (1° 50' E.) to Valentia (10° 30' W.) Within this comparatively small area there are several distinct political units, which vary in their degree of attachment to the British Crown and to the central government. The largest of these is the United Kingdom of Great Britain and Northern Ireland, comprising the ancient kingdoms of England and Scotland, the Principality of Wales and the larger part of the Irish province of Ulster. England, Scotland and Wales come under the direct control of the British Parliament at Westminster, whereas Northern Ireland, while represented at Westminster, also has its own Parliament, meeting at Stormont, Belfast. The Channel Islands and the Isle of Man, while owing direct allegiance to the British Crown, are not subject to the British Parliament and have their own legislative bodies: the "States" of Jersey and Guernsey and the Manx "House of Keys". The area which now constitutes the Republic of Ireland, or Eire, has, during the present century, become completely independent, first as the Irish Free State, established with Dominion status in 1921, and, since 1948, as a republic quite outside the Commonwealth. Thus its political severance from the rest of the British Isles is complete, though its economic links with the United Kingdom remain strong.

PHYSICAL GEOGRAPHY

Structure The geography of the British Isles is characterised, not merely in its physical but also in its social and economic aspects, by a degree of variety seldom encountered within so small an area. A complex geological structure produces surface outcrops by rocks of many different types and degrees of resistance to erosion, thus giving rise to a large number of dissimilar geographical regions. Generally speaking, the rocks diminish in age and resistance from north to south and from west to east ranging from the ancient, extremely hard metamorphic and igneous types of the Scottish Highlands to the younger, more easily eroded sediments of south-east England. A fundamental division is that into a "Highland Zone" in the north and west and a "Lowland Zone" in the south and east, the line separating the two zones running in an irregular manner from the mouth of the Tees to the estuary of the Exe. The importance of this division is readily apparent not only in the nature of the physical environment—structure, relief, climate and soil—but also in the human response to that environment as

expressed in such matters as population density, settlement type, and economic activities.

The Highland Zone consists of a series of plateaux ranging in height from 1,000 to 4,000 ft. above sea level. These represent the stumps of ancient mountain systems which have been worn down by long periods of erosion and uplifted by earth movements in more recent times. The uplift involved a considerable amount of fracturing and differential movement, so that important areas of lowland are found within the Highland Zone. These lowlands often contain the coal-bearing strata of Carboniferous age on which the economic development of Britain has been largely based. The plateaux themselves have been deeply cut into by rivers and glaciers, and large areas are covered with boulder clay and other superficial deposits dating from the glacial period.

The Lowland Zone, on the other hand, lies almost entirely below 1,000 ft., and the limestones, sandstones and clays of which it is composed dip gently towards the south and east, interrupted here and there by minor folds developed during the "Alpine" earth movements which affected much of Europe. The banded outcrop of rocks varying in their resistance to erosion gives the characteristic "scarp and vale" topography found over most of this zone. Within each zone, the landscape varies greatly from one district to another, as will become apparent later when the different regions of the British Isles are described in more detail.

Climate and Weather. The weather of the British Isles is renowned for its unreliability, but the climate is remarkable for its equable character and its lack of extremes of heat, cold, rainfall or drought. These islands are centrally placed with respect to three of the world's major pressure systems; the Icelandic Low and the Azores High, (both of which persist throughout the year but occupy a more northerly position in summer than in winter), and alternating winter high and summer low pressures which occur over the land mass of Europe-Asia. The weather prevailing at any one time depends to a large degree on the relative strength of these three systems. The presence of low pressure to the north and high pressure to the south of the British Isles results in the prevailing winds in that area being from the west or south-west. Only when the Eurasian winter high extends its influence westwards to reach the shores of Britain do easterly winds occur for any length of time. The prevalence of westerly winds ensures that the ameliorating influence of the Atlantic Ocean, (strengthened by the warm waters of the North Atlantic Drift and making for mild winters and cool summers), tends to be dominant, rather than the intense winter cold and summer heat typical of continental Europe.

This is the general picture. Day-to-day weather conditions, however, are determined by the passage from west to east across the British Isles of a series of small low pressure systems or "depressions", separated by intervening ridges of higher pressure. As each depression passes, the barometer falls, winds veer round to the west and increase in strength, and rain occurs. During the passage of the ridge of high pressure between two depressions, winds become northerly or north-easterly and die away until calm conditions are established, which give warm, sunny weather in summer and low temperatures, often below freezing point, in winter.

Temperature. In winter, temperatures are higher over the Atlantic than over the Eurasian land mass; and western areas of the British Isles are noticeably milder than eastern ones. The 40° January isotherm runs from north to south, dividing the islands into two roughly equal parts, the highest average for that month—over 45°—being recorded well to the west, in south-west Ireland and the Scilly Isles. In summer, however, the main factor affecting temperature is latitude, and southern areas are considerably warmer than those in the north. In this case, the isotherms run approximately east-west and the July mean isotherm of 60° divides the British Isles into southern and northern halves. The south of England experiences July mean temperatures of 62° or more, while in the Shetlands the average is below 54°.

The two isotherms mentioned above divide the British Isles into four quadrants. The north-east has cool summers and cold winters and the south-east warm summers and cold winters, while the north-west has cool summers and mild winters and the south-west warm summers and mild winters. This is best illustrated by the following figures, taken for one station in each quadrant:

Q.	STATION	LAT.	LONG.	JAN.	JULY	RANGE
NE.	Aberdeen	57°10'N.	2°6'W.	39°	57°	18°
SE.	London	51°30'N.	0°10'W.	38°	64°	26°
NW.	Stornoway	58°12'N.	6°20'W.	43°	56°	13°
SW.	Valentia	51°56'N.	10°15'W.	45°	59°	14°

Temperatures are also affected by the local factors of altitude and distance from the sea. Inland areas are warmer in summer and colder in winter than coastal districts, and uplands are cooler than lowlands throughout the year.

Rainfall in the British Isles is partly orographic and partly cyclonic in origin; that is to say it is related not only to the disposition of relief features, but also to the passage of the depressions mentioned above. Since the prevailing winds are from the west and the highest areas are mainly in western districts, the west is much wetter than the east, but the passage of depressions ensures that no district suffers from drought. The heaviest rainfall—over 80 in.—occurs on the mountains of the Highland Zone, and large areas in the north and west have between 30 in. and 60 in. Areas with less than 30 in. are confined to the midlands, east and south-east of England, together with a narrow strip along the east coast of Scotland. The lowest amounts—less than 20 in.—occur around the estuary of the Thames. In all areas, rainfall is well distributed throughout the year, with a marked autumn or winter maximum in the west and a tendency towards a summer maximum in the east.

Soils and vegetation. In an area such as the British Isles, where there is a great deal of variety in rock type, relief, climate and drainage conditions, a large number of different types of soils may be distinguished. Soils may be divided, on the basis of texture, into three groups; sandy soils, clays and loams, each of which offers different opportunities for agricultural development. *Sandy soils* are found where the parent material is sandstone or some kind of sandy superficial deposit which may be of alluvial, glacial or marine origin. Such soils occur in a variety of locations in the British Isles: on the sedimentary sandstones of the Lowland Zone and on glacial sands in many areas. They very easily drain and rarely, if ever, suffer from excessive dampness, but are liable to dry up in periods of low rainfall. They are well-aerated and “warm”, that is to say they heat up rapidly in spring, yielding early crops, and are thus often devoted to fruit and vegetables. In their natural state, however, they tend to be deficient

in plant food and require the frequent addition of large amounts of fertiliser. *Clay soils* are very retentive of moisture and are liable to become water-logged in rainy periods. Being heavy soils, they are difficult to plough and since they are better suited to pastoral than to arable farming, large areas are under grass. If carefully treated, however, they can provide arable land of fairly high value. Clay soils cover large parts of the British Isles, being developed on much of the boulder clay of the Highland Zone as well as on the numerous sedimentary clays of the Lowland. *Loams* are intermediate in texture between sands and clays and avoid the excessive dryness of the former and dampness of the latter, thus providing some of the country's most valuable agricultural land. They are particularly well-developed where boulder clay is derived from sandstones, as in the Mid-lowland of Scotland and the English Midlands. They are also important in East Anglia, on the chalky boulder clay of that region, and in parts of the London and Hampshire basins. Under certain conditions, special soil types are formed. On dry limestone uplands, for example, thin calcareous soils of little value may be found, but where these have an admixture of clay, fertile “marls” may develop. Where conditions are very wet, lack of oxygen in the soil prevents the decay of organic matter, which normally accumulates to form peat. If the water in which peat accumulates is derived from acid rocks, as in the Highland Zone, the peats themselves are acid and thus infertile, but if it contains a high proportion of lime, as in the Fens, the peats, are “mild” and, when drained, give exceptionally productive soils. Throughout the British Isles, the detailed pattern of soil type is very complex and in many areas the nature of the soil has been profoundly modified by artificial drainage, ploughing and manuring, so that in such areas “natural” soils no longer exist.

The natural vegetation has been affected to an even greater extent by the activities of man and is preserved in only a few small and scattered areas. Broadly speaking, all the more low-lying districts were at one time covered with dense deciduous forests of oak, ash, beech, birch and other trees, while on poorer soils coniferous types were dominant. Only on the higher slopes in mountainous areas, where strong winds were unfavourable to tree growth, were forests absent, being replaced by grassy or peaty moorland. The forests, however, have been extensively cleared to provide fuel and building material and to open up the land for agriculture, so that at the present time the British Isles have a smaller proportion of their surface under woodland (less than 5 per cent) than any other country in Europe.

ECONOMIC AND SOCIAL GEOGRAPHY

The modern economic and social geography of the British Isles is, to a large extent, a product of the Agricultural and Industrial Revolutions of the eighteenth and nineteenth centuries which, by encouraging a fuller use of the area's natural resources, enabled it to support a much larger population at a considerably higher standard than in any preceding period.

Agriculture For many centuries, the staple products of British agriculture were grain and wool, but during the nineteenth century competition from overseas areas, where land and shipping were cheap, forced the British farmer to turn his attention to other types of production. This has resulted in a steady decline in the area devoted to food crops, particularly grain, and a corresponding increase in the area under pasture and fodder crops. These trends were visible throughout the period 1870 to 1939, but were reversed, albeit temporarily, during the second World War, when large areas which had been laid down to grass

THE BRITISH COMMONWEALTH

ENGLAND

were once again brought under the plough. By virtue of their mild and moist climate the British Isles are well suited to stock farming, and cattle and sheep now play the leading role in the agricultural economy. Despite the influx of foreign wool, the number of sheep has remained high, since the mountains of the Highland Zone, which might otherwise be entirely unproductive, can carry large flocks. These animals are now valued more for their meat than for their wool. The number of cattle, and particularly of dairy cattle, has risen considerably during the last eighty years. Meat and milk have, in fact, replaced grain and wool as the major products of British agriculture. There has also been an increase in the importance of other types of produce which are not easily imported, such as poultry, eggs, fruit, vegetables and sugar-beet.

Changes in the type of production have been achieved with the aid of great improvements in farming methods. These have included the introduction of scientific crop rotations, the breeding of better types of seed and stock, and a high degree of mechanisation. Thus, despite the small proportion of the population engaged in farming, British agriculture is one of the most productive, per acre, in the world. Nevertheless, the increase in output has not kept up with the growth of population and it has been necessary to import increasing quantities of food. In 1946, foodstuffs made up 50 per cent of the United Kingdom's imports.

Population. The economic changes of the last two hundred years have brought about a rapid increase of population, as the following figures show:

POPULATION IN THOUSANDS

	1801	1851	1901	1951
England and Wales:	8,890	17,930	32,530	43,740
Scotland:	1,610	2,890	4,470	5,100
Ireland:	—	6,650	4,700	4,320

Before 1851, both urban and rural populations were increasing, but since that date growth has taken place entirely within the towns, while the population of rural districts has steadily declined. Rural depopulation has been most marked in the more remote areas of the Highland Zone, particularly in Scotland and Ireland, whence large numbers moved not only into the towns but also overseas, chiefly to North America and the Dominions. In Ireland, emigration has been on such a scale as to bring about a marked reduction in numbers. The remarkable increase which has taken place in the United Kingdom was achieved by a striking fall in the death rate, reflecting the improved conditions of life produced by greater material prosperity, and not by any increase in the birth rate. Indeed, the latter has declined steadily during the last eighty years. This has slowed down the rate of population growth and will, if continued, bring it to a halt.

Changes in population distribution have been as striking as those in numbers. The change from an agricultural to an overwhelmingly industrial economy made the mining and industrial districts the areas of greatest population density, though there has been a tendency in recent years for this trend to be reversed with the establishment of new industries away from the coalfields. Some 80 per cent of the population of the United Kingdom now live in towns, of which the largest are the seven great conurbations: Greater London, Greater Manchester, the West Midlands, the West Riding, Merseyside, Clydeside and Tyneside.

REGIONAL GEOGRAPHY

In an area as varied in character as the British Isles there is a large number of distinct geographical regions.

(i) *The Pennines* stretch southwards for over 160 miles from the Scottish border to central Derbyshire, and are made up of a series of plateaux at heights between 1,500 and 2,000 ft., composed of sandstones, limestones and Millstone Grit. These uplands form a barrier between the areas on either side, and are of little agricultural value, being almost entirely devoted to sheep-rearing. Settlement is very sparse and the only towns are those situated on the trans-Pennine routes—e.g. Hexham (on the Tyne Gap), Appleby (Stainmore route) and Skipton (the Aire Gap).

(ii) *Cumbria* consists of a central block of mountain country, the Lake District, rising in places to over 3,000 ft., surrounded by lowlands developed on younger rocks—the Vale of Eden, the Solway Plain, West Cumberland and the Morecambe Bay coastlands. The central area has a high rainfall, is heavily glaciated, and is devoted mainly to sheep farming. In the valleys, there are small towns which, in addition to being markets, are dependent to a large degree on the tourist industry. The Vale of Eden and the Solway Plain are composed of glacial drift-covered sandstones and clays and form rich dairying country, while in the west coal measures outcrop and mining towns such as Maryport, Workington and Whitehaven have developed.

(iii) *Northumbria* is a term applied to the lowland areas of Northumberland and Durham lying between the Pennines and the sea. Soils are rather poor and cattle-rearing and sheep-breeding are the main types of farming. The region's great importance lies in its position as a mining and industrial area. Industrial districts have developed on the estuaries of the Tyne, Wear and Tees. The largest of these is Tyneside. Over a million people live in the towns strung out along the river below from Newcastle to the sea. The Wearside industrial area is confined to the port of Sunderland. Teesside lies some ten miles south of the coalfield and industry here is of more recent origin.

(iv) *Lancastria*. To the west of the Pennines, in Lancashire and Cheshire, is a broad lowland of sedimentary rocks. Most of the area is below 250 ft., but two blocks of Upland—the "Forests" of Bowland and Rossendale—extend westward from the Pennines, separating the lowlands of the Ribble from those of the Lune and the Mersey. The most valuable agricultural land is in west Lancashire and in Cheshire, where large areas are under crops—chiefly oats, turnips and potatoes—and sown grasses. The mild, damp climate and the rather heavy soils favour cattle, and Cheshire is England's most important dairying county.

In south-east Lancashire, where coal occurs on the flanks of the Rossendale upland, and where soft water is available from the Pennine millstone grit, is the great cotton manufacturing district centred on Manchester. Most of the population of Lancastria—some 6-7 million—lives in the towns of the industrial districts of the south-east and on Merseyside (Liverpool, Birkenhead, Bootle and Wallasey), but mention should also be made of the large holiday resorts on the Irish Sea coast.

(v) *Yorkshire, Nottinghamshire, East Derbyshire*. To the east of the Pennines is an area similar in its general layout to that just described. In the west of this region, the York-Notts-Derby coalfield, the largest and most productive in the country, supports the woollen textile industry of the West Riding and the steel works of the Don valley. The Vale of York, to the east, is a rich agricultural district where, although cattle are still important, the low rainfall and lighter soils permit intensive arable farming, and large crops of wheat, barley and vegetables are grown. The region as a whole is drained by rivers converging on

the Humber estuary where a number of ports handling coal and textiles have developed. The largest of these is Hull, the fourth port of the United Kingdom.

(vi) *The Midlands* are a triangular area of lowland bounded by the Pennines, the Welsh hills, and the scarp-lands of the south-east (see vii below), and connected by lowland corridors to Lancastria, the Vale of York and the Bristol Channel. The soils of this region are developed from drift-covered sandstones and clays and are rather heavy. Large areas are under grass, and the leading agricultural activities are dairying and stock-fattening. Within the region there are a number of uplands composed of older sedimentary rocks which include productive coal measures, and these have become the site of important industrial areas such as the Potteries of North Staffordshire and the Birmingham-Black Country metal manufacturing district.

(vii) *The English Scarplands* stretch in an arc from the Cleveland Hills to the Dorset coast and consist of young sedimentaries which dip gently towards the North Sea and the Thames. South of the Thames, east-west folding has occurred to form the Wealden dome. Two lines of upland run right across the region. The more westerly is composed of Jurassic limestones and sandstones and includes the Cotswolds, the Northamptonshire Uplands, the Lincoln Edge and the North Yorkshire Moors. This is separated by a broad lowland (developed on less resistant clays), from a chalk upland comprising Salisbury Plain, the Chilterns, the East Anglian Heights and the Lincolnshire and Yorkshire Wolds. In the Weald there is a concentric arrangement, the succession being as follows: the central High Weald, developed on sandstones, the lowlands of the Wealden clay, the Greensand scarp, the Gault Clay vale and the chalk of the North and South Downs.

The scarplands, with their good soils and low rainfall, contain the most productive agricultural districts of the British Isles. The uplands are dry and well drained and are devoted either to arable farming or, on the poorer soil, to sheep, while the clay vales are often under grass, with stock-fattening and dairying. There are exceptions to this arrangement. The Fens, although they form the lowest areas in this region, are the most intensively cultivated arable lands in Britain. 80 per cent or more of this area is under the plough, and wheat, barley, oats, sugar-beet and potatoes and other vegetables are widely grown. In East Anglia, the chalky boulder clay which covers large areas also provides excellent arable land.

Industrial activity, however, is not entirely absent from the scarplands, since the Jurassic sandstones contain important iron ore deposits and iron and steel industries have developed in Northampton and Lincolnshire. Apart from the metal manufacturing centres, the towns are either agricultural markets, commercial centres with small-scale light industries, dormitories for people whose work is in London, or packet-stations, fishing ports and holiday centres along the coast.

(viii) *The London and Hampshire Basins* contain the youngest rocks of all—the Tertiary sands, gravels and clays. Arable farming occurs on the better-drained patches of gravel, and around London often takes the form of intensive market gardening. The clays give very heavy soils and are usually under grass, while the frequently sterile sands are often covered with heathland or pine-woods. The London basin is dominated by London itself, which is not only Britain's leading port and commercial centre but also a major manufacturing district with a wide range of industries. About one-fifth of the population of the United Kingdom is concentrated in this area.

(ix) *The South-west Peninsula*, the southernmost part of Highland Britain, is composed of sandstones and slates, with large granitic intrusions, and forms rolling upland

country. The climate is very mild, the soils are better than elsewhere in the Highland Zone and dairy farming is predominant. The exceptionally mild winters are responsible for an important agricultural specialisation—the production of early vegetables and flowers. Most of the population is concentrated along the coast, where there are a large number of small fishing ports and holiday centres as well as a few larger towns such as Plymouth, Exeter and Torquay. The south-west was important in the past for its tin and other metallic minerals but at the present day china clay is the only mineral exploited on any scale.

WALES

The greater part of Wales lies between 600 and 2,000 ft., though several peaks rise to more than 3,000 ft. North and central Wales are composed of old sedimentary rocks similar to those of the Southern Uplands of Scotland, but in the south there is a large basin of Carboniferous strata containing valuable coal seams. Thus northern and central districts are devoted mainly to agriculture, particularly to sheep-rearing, and settlement is confined to the valleys and the coastal fringe. Population in the interior is sparse and scattered, but along the coast there are several large holiday resorts. In the south, however, the numerous narrow valleys which cross the coalfield are the site of closely packed mining settlements and support a large part of the Welsh population. These valleys converge southwards towards the Bristol Channel lowlands where Newport, Cardiff, Port Talbot and Swansea have developed as coal ports. These towns are also the site of an iron and steel industry, now based largely on imported ores, which is engaged primarily in the production of steel sheets for the tinplate works of the Swansea-Llanelli district.

SCOTLAND

(i) *The Highlands* lie north-west of a line running from the mouth of the Clyde to Stonehaven on the east coast and take the form of a high plateau of very old and extremely hard rock. Large areas are between 2,000 and 3,000 ft above sea level, but many peaks rise above this height, a few exceeding 4,000 ft. The area has been heavily glaciated, and is cut into by deep glacial troughs which often contain large lakes or fiords. Soils are thin and the climate harsh and, in this unfavourable environment, settlement is sparse and scattered, being confined to small areas of lowland along the coast and in the major valleys.

(ii) *North-east Scotland*. Towards the east, however, the height of the land decreases, the climate becomes drier, and the soils are more fertile. Thus, in the valleys of the Dee and Don, on the Buchan plateau, and around the Moray Firth, there are considerable areas devoted to oats, turnips and sown grasses. This is Scotland's chief cattle-rearing district. Along the coast are numerous fishing ports, where herring is the main catch. The largest of these—Aberdeen (180,000)—is also a university city and the third largest town in Scotland.

(iii) *The Mid-lowland* is a region of varied relief, lying between the Highlands and the Southern Uplands. Much of the area is below 500 ft., but there are several hill masses rising above 1,000 ft. The Mid-lowland has always been the most important part of Scotland and to-day it supports three-quarters of the country's population. Within this region are found the most productive agricultural areas, the coalfields of Lanarkshire, Clackmannan, Fife, Midlothian and Ayrshire and the great industrial district of Clydeside. The east is mainly agricultural, being devoted to high-grade arable farming and stock-rearing.

(iv) *The Southern Uplands* make up the remainder of the country. The rocks here are old sedimentaries; hard,

THE BRITISH COMMONWEALTH

but less so than those of the Highlands. Most of the region lies below 2,000 ft., glaciation was less intense, and slopes are generally smooth and grass-covered. This is the main sheep-rearing area of Scotland, and the higher parts are almost entirely engaged in this type of farming. The major valleys, however, (Tweed, Annan, Nith and Dee) together with the coastal lowlands of Galloway, are prosperous arable, stock-feeding and dairying areas. The main towns are Berwick-on-Tweed (which is actually in England), Dumfries, the agricultural market of Galloway, and Stranraer, the Northern Irish packet station.

IRELAND

Ireland consists essentially of a low-lying, drift-covered Central Plain, most of which is less than 400 ft. above sea level, surrounded by a series of mountains and uplands; the mountains of Connemara, Mayo and Donegal in the west and north-west; the Mourne Mountains and the basaltic plateaux of Antrim in the north-east; the Wicklow and Wexford hills in the south-east; and the parallel ridges and valleys of the south. Ireland is an agricultural country, well suited, by reason of its mild, damp climate and its large areas of lowland pasture, to cattle rearing and dairy-farming. The greater part of the agricultural land is under grass, and where crops are grown these are usually fodder crops—oats and roots—or potatoes for both animal and human consumption. Only in the most easterly parts of the country are wheat and barley found, and then only in small quantities. The mountain areas of the west are in many ways similar to the Scottish Highlands, cultivable land being limited in extent. The eastern uplands carry considerable numbers of sheep.

In Northern Ireland an important manufacturing district has developed around the head of Belfast Lough, where linen textiles and shipbuilding are the main activities. Towns are generally small. Only in the case of Belfast do we find anything similar to the large manufacturing towns of Great Britain.

THE ISLE OF MAN

The Isle of Man is situated in the northern part of the Irish Sea midway between Ulster and Cumberland.

Structure and Relief. The island was at one time joined to Cumbria, and the rocks of the two areas are in many ways similar. The larger part of the island—about three-quarters of its total area—is composed of old, resistant rocks, the Manx slates, which are contemporary with the Skiddaw slates of the Lake District. These form an upland plateau, 1,300 to 1,800 ft. above the sea, but several peaks rise above this level, the highest being Snaefell (2,034 ft.). The plateau is cut by a number of narrow, steep-sided valleys bearing evidence of glacial erosion, and is flanked on its eastern and western sides by subsidiary plateaux at heights between 300 and 500 ft. These terminate along their seaward edges in high, rocky cliffs. There are two areas of lowland let into the Manx massif, the Peel Basin in the west, around the town of that name, and the Plain of Malew in the south-east, the first developed on sandstone and the latter on limestone, both of Carboniferous age. The largest lowland area is the Northern Plain. This is composed of sedimentary rocks covered to a considerable depth by sands, gravels, boulder clay, and alluvium of glacial and post-glacial age. In this region, the nature of the surface depends on the drift cover and not on the solid rock, the highest parts being the Bride Hills which are mainly composed of boulder clay.

Climate. The climate is mild and damp. The higher parts

receive between 50 and 60 in. of rain and most other areas have at least 35 in. The driest district is the Northern Plain, which lies in the rain shadow of the hills and receives between 30 and 35 in. Precipitation is well distributed throughout the year with a late autumn maximum and a spring minimum. Temperatures are equable: the July mean at Douglas is 57° and the January mean is 41°. The most unpleasant feature of the climate is the frequent occurrence of high winds, which often damage the crops.

Agriculture. The uplands, with their gentle, grass-covered slopes, are entirely given over to sheep, but there are considerable areas of arable land in the more low-lying districts, particularly in the Northern Plain, which is the most important agricultural region. The bulk of the farmland is under fodder crops—oats and roots—and sown grasses. Wheat and barley, once extensively grown in the Northern Plain and elsewhere, now occupy a negligible area. The island's suitability for fodder crops and the demands of the tourist industry make livestock the mainstay of Manx agriculture, the most important products being milk and mutton.

Population. Of a total population of 55,000, some 20,000 live in Douglas, the main tourist centre, and another 17,000 live in the small towns of Onchan, a suburb of Douglas, Ramsey (4,200), Peel (2,500), Castletown (1,700), Laxey, Port St. Mary, Port Erin and Kirkmichael.

THE CHANNEL ISLES

The Channel Isles lie some 25 miles to the east of the Cherbourg peninsula of France and consist of Jersey, Guernsey, Alderney and Sark, together with a number of smaller islands. They are composed of hard, ancient rocks, (similar to those of the neighbouring part of France), which form plateaux rising to 400 ft. above sea level, bounded by rocky cliffs. The climate is extremely mild and frost is practically unknown. January mean temperatures are in the region of 45° and July means are above 62°. The average annual rainfall of 30 to 35 in. is well distributed throughout the year. The worst feature of the climate is the severity of the winds which hinder the cultivation of the plateau summits and confine both agriculture and settlement to the valleys and coastlands. The soil, being derived from crystalline and granitic rocks, is thin and infertile in its natural state, but has been greatly enriched over the years by the addition of manure in the form of seaweed, and now yields extremely heavy crops. Before the development of modern forms of transport, the agricultural economy was based on the production of grain and wool, but to-day the Channel Isles are noted for their dairy produce, early vegetables, fruit and flowers, a combination reflecting the unusually favourable climatic conditions. Farms are small and the land is intensively cultivated. The tourist trade is a very important source of income and, together with agriculture, is the mainstay of the islands' economy. The only other activities are fishing and quarrying.

The population density is very high, the inhabitants numbering 102,800, of whom 57,300 live in Jersey and 45,500 in Guernsey. Many of the rural districts have been depopulated by emigration to England and North America or by migration into the towns. The latter have grown rapidly as the tourist trade has expanded. St. Helier, in Jersey, has 27,900 inhabitants and St. Peter Port, in Guernsey, has 18,000.

Politically and economically, the Channel Isles are closely linked to the United Kingdom, but geographically they are part of France.

J.C.D.

ECONOMIC SURVEY

THE United Kingdom is a rich industrial country enjoying a national income in 1954 of £15,700 million, equivalent to just over £300 a head. She owes her wealth partly to her natural advantages of position and mineral resources and partly to the skills of her population. In the nineteenth century coal formed the basis of her lead in manufactures, especially of ships, railways and machinery. She has now a large investment both at home and abroad in industrial equipment and a population traditionally adapted to trade and manufacture. Though she has lost the commanding advantage in world trade which she enjoyed in the nineteenth century, over 20 per cent of the national income is still earned abroad; and though London is no longer the financial centre of the world *par excellence*, it still retains a leading place, both because it is highly organised, and because it has great experience in the techniques of trading and of the mobilisation of finance.

On the other hand Britain to-day has disadvantages which are to a certain extent the counterpart of these initial advantages. In the nineteenth century a great investment abroad was built up and the income from it helped to pay for imports of raw materials. In two world wars these investments were greatly reduced and had to be replaced by exports of goods and services. Large debts were incurred during the 1939-45 war so that instead of being a creditor country Great Britain has become a debtor. Because of her heavy investment in capital equipment at home it has proved difficult to keep pace with modernisation elsewhere: this is particularly true of the transport system. Finally, after so long an industrial development (compared with other countries) Great Britain has evolved mature social objectives which necessarily limit her freedom in economic action.

Since 1945 Great Britain has made great efforts to retain her economic position while at the same time securing her social objectives. In this she has been largely successful. Full employment has been maintained at a level higher than had generally been thought possible before; unemployment has never, since the war, risen to the 3 per cent which economists thought necessary to allow for men changing from one job to another. A new system of social services has been established, including a system of universal old-age pensions. At the same time exports have been increased by 66 per cent in volume compared with the level in 1938, while imports have fallen by 10 per cent. And, at any rate since 1950, a heavy burden of defence expenditure has been carried as well. Britain has been able to achieve this mainly by maintaining a large volume of capital investment at home. But she has been materially assisted by the high level of demand for manufactured goods throughout the world, and, especially in the immediate post-war period, by the absence of German and Japanese competition. Inevitably, however, the strains set up have been great and ever since the war successive Governments have been grappling with the problem of inflation—the tendency of demand to outrun productive capacity. A premature attempt to re-establish the convertibility of sterling had to be abandoned in 1947. In 1949, the pound had to be devalued from \$4.03 to \$2.80. Another balance of payments crisis in 1951, just at the time the Labour Government was replaced by a Conservative Government, had to be met by cuts in capital investment and renewed restrictions on imports. Even though, after this, a recovery of world supplies en-

abled the new Government to remove all the physical restrictions on consumers' expenditure and many of the restrictions on industrial activity and international trade as well, by the end of 1954 imports again began to run ahead of exports, and the Bank rate had to be raised steeply to check an excess of demand, especially for investment goods. Early in 1955 a wave of strikes, in the coal mines, the railways and the docks, interrupted the increase in exports and checked the rising trend of industrial production so that further restrictions had to be considered. This further check brought, perhaps for the first time since the war, a general realisation both of how much had been accomplished since 1945 and of the perilous balance of the economy. At the end of 1955 it was still uncertain whether, by adding cuts in Government expenditure to the high bank rate, a sufficient margin of safety would be created.

PRODUCTION

Since 1946 Great Britain's gross domestic product has risen by 27 per cent. The two following tables show the main contributors to this result and the way in which the pattern of British industrial production has been changing.

GROSS NATIONAL PRODUCT BY INDUSTRY

(Percentages)

	VOLUME	MANPOWER

THE BRITISH COMMONWEALTH

The increase in agricultural production has been secured by a system of protection. In the immediate post-war period this was operated through Government purchase and consumer subsidies. It has since been converted by the Conservative Government into a more complicated combination of production grants (£54 m. in 1954-55), deficiency payments (£163 m.) and remaining subsidies on milk and bread of £106 m. The total of these subsidies of £323 m. compares with the total agricultural income of £1,336 m. The following figures show where the main changes have taken place. In 1939 the area of arable land was 12,906,000 acres; by 1954 this had risen to 17,864,000 acres. The estimated quantity of wheat harvested rose from 1,645,000 tons in 1939 to 2,783,000 tons in 1954; barley from 892,000 tons to 2,244,000 tons; oats from 2,003,000 tons to 2,440,000 tons; potatoes from 5,218,000 tons to 7,325,000 tons; sugar beet from 3,529,000 tons to 4,521,000 tons. Numbers of cattle rose from 8,872,000 in 1939 to 10,672,000 in 1955; pigs from 4,394,000 to 5,827,000; fowls from 60,234,000 to 72,905,000. The number of sheep, however, declined from 26,887,000 to 23,074,000. Milk disposals rose from an average monthly total of 108.3 m. gallons in 1939 to 164.8 m. gallons in 1954. During this time most farms have been transformed by mechanisation and manpower engaged on the land has not increased in proportion to production. Tractors employed have risen from 203,326 in 1946 to 438,888 in 1954. Manpower has risen from 803,526 in 1939 to only 815,100 in 1955.

In the mining sector coal is, of course, of most importance, it presents also one of the most intractable problems in the whole British economy. Nationalised in 1947 by the Labour Government, the 900-odd pits in England, Scotland and Wales are now under a single control. Since 1947 production has risen by 30 m. tons to 214 m. tons, and as the annual loss of productive capacity in this extractive industry is as much as 4-5 m. tons, this is a considerable achievement. It has only been made possible by reorganisation of many pits and a large-scale mechanisation (which has raised overall productivity from 1.14 tons per manshift in 1939 to 1.23 tons per manshift in 1954 and productivity at the face from 3.00 tons per manshift to 3.26 tons per manshift), and by an increase in manpower which brought the total from 711,400 in 1947 to its peak of 717,000 in 1953. But a shortage of technicians delayed the planning of the industry's main investment programme so that the main schemes for the sinking of new pits are not yet bearing fruit. The management in the early stages of so vast an experiment as the nationalisation of the mines involved has been severely strained, and came under strong criticism from a Committee of examination which reported in 1954. In 1954 and 1955 the industry, in spite of its improved wages and working conditions, has again been losing men. Production in 1954 had to be supplemented by 3 m. tons of imports. In 1955 production has fallen below the level of 1954 and exports have had to be curtailed while imports have again been materially increased. It has become clear that exports of coal will have to be given up altogether, while British industry relies increasingly on oil to satisfy its increasing demand for power. A large programme for the development of power from nuclear energy has been put in hand (and already expanded). But substantial amounts of electricity are not expected to be produced by these means for more than a decade. Even then, unless the programme is again expanded, nuclear power will only help to meet the normal increase in demand.

In the manufacturing group the most important group of industries are the metal-using industries. And of these, engineering, shipbuilding, electrical goods and vehicles have expanded considerably more than the national average. The expansion of the engineering, shipbuilding

and electrical group had brought production to a level 73 per cent above that of 1946 by 1954; vehicles had increased by 78 per cent. These groups are still expanding fast. To support them there has also been a large increase in steel supplies. In 1946 steel production was 12.7 m. tons. A five-year investment plan put in hand immediately after the war raised production to 17.6 m. tons by 1953. Since then production has risen to 18.5 m. tons in 1954 and is expected to reach 19.5 m. tons in 1955. A second five-year investment plan which is now in course of completion is expected to increase production again to 23.5 m. tons in 1958. Even so, however, considerable imports of steel have been needed. (The steel industry was nationalised by the Labour Government in 1951, but was denationalised by the Conservative Government soon after. The re-sale of the companies to private ownership is still proceeding, but there is now a Public Board whose main task is to fix maximum prices and to ensure that investment in the industry is adequate. The Government has reserved powers to compel investment if the Board thinks the industry's plans are inadequate.) Among other industries which have increased their production since 1946 by more than the national average the most notable is the chemical industry, now increasingly engaged in the production of plastics and man-made fibres. Production of chemicals has risen by 85 per cent since 1946 and is also still rising fast. But many other smaller industries, for example those making clocks and watches, office machinery, electronic devices of all kinds, earth-moving machinery and equipment for the oil industry, have contributed to an expansion of nearly 100 per cent in the miscellaneous group of engineering industries which are not separately shown. Under the stimulus of the building programme production of bricks and cement has increased by 64 per cent.

The best index of progress in building and construction is to be found in the figures for the two main categories, housing and industrial building. Immediately after the war and until the Conservative Government came into power in 1951 most of the house-building programme was in the hands of the local authorities. Finance for this was found from the budget and the rents were subsidised. Houses completed rose rapidly from 55,400 in 1946 to 227,616 in 1948. It then became apparent that the resources of the industry were being overstrained and in 1949, 1950 and 1951 the numbers completed were 197,547, 211,871 and 227,273 respectively. In 1950 the proportion of houses built by private builders was only 10 per cent. After 1951 some reduction was made in the standards required and with better supplies of materials there was a rapid increase in the number of completions—302,174 in 1952, and 354,660 in 1953. In 1954 there was a slight drop to 336,561 and the rate in 1955 suggests a total of just over 300,000. But during this time the number of houses being built privately has rapidly increased: the proportion was 18 per cent in 1952, 24 per cent in 1953, 32 per cent in 1954 and over 40 per cent in 1955. Meanwhile, however, the subsidies had risen to over £100 m. a year in 1954 and were still rising.

After 1951 the housing programme was pressed forward in an attempt to overcome the post-war housing shortage partly created by damage during the war. Economic difficulties were not allowed to interfere with its development. Industrial building, on the other hand, closely controlled in the immediate post-war period by a system of licensing, was interrupted by each of the balance of payments crises. Completions rose rapidly till 1948 when over 23 m. sq. ft. of factory space were built. Cuts in 1949 reduced the total to 21 m. sq. ft. and the rising trend did not re-establish itself until 1951 with over 33.5 m. sq. ft. of completions. The crisis of 1951 brought another

round of cuts and the 1951 figure was not exceeded until 1954. The budget of 1954, however, with its investment allowance, gave a fresh impetus to the programme and approvals for fresh work rose by 80 per cent over the figure for 1953.

In the remaining sectors of the economy four notable features may be distinguished.

(i) The rise in production of the gas, electricity and water group is mainly due to the heavy investment which has taken place in electrical generation. The electricity supply industry was nationalised by the Labour Government in 1948 and since then has had access to the capital market on favoured terms. As in the case of other nationalised industries its loans carry a Government guarantee. The programme of building generating stations has not been accomplished so fast as was originally planned but between 1946 and 1954 installed capacity has risen from 12,297,000 kW. to 20,567,000 kW., or by 67 per cent. Over the same period electricity generated has risen from 42,742 m. units to 72,900 m. units, or by 71 per cent. Plans now in hand will bring installed capacity to 26,650,000 kW. by 1960.

(ii) Britain's transport system was also nationalised by the Labour Government, the whole, both road and rail, being brought under the single ownership of the British Transport Commission. (The only exceptions were private cars and lorries either working short distances or carrying firms' own goods.) This system was partially dismantled by the Conservative Government when long-distance haulage by road was sold back to private enterprise. The British Transport Commission now owns effectively only the railways with such road vehicles as are a necessary supplement to their working. While these changes of organisation have been taking place, however, there has been a considerable switch of traffic from the railways to the roads and for one reason or another the modernisation both of the roads and of the railways has been neglected. It was only in 1955 that the Government announced a programme for road construction which would begin to provide the kind of roads which modern traffic demands. And it was only at the same time that the British Transport Commission completed planning an investment programme for the railways which will largely replace steam traction by electricity and diesel engines.

(iii) The rise in the product of the commercial sector of the economy reflects in part simply a rise in production as a whole: banking and insurance services move in step with the rise in activity elsewhere. It is also, however, in part the result of the increasing commercial freedom which since 1951 has been one of the main planks of the policy of the Conservative Government. The City of London has been able to offer more services both for the finance of trade from Great Britain and for the movement of goods between third countries, as the restrictions on the movement of money have been removed. At the same time the withdrawal of the Government from the business of buying overseas has enabled the traditional commodity markets to be reopened.

(iv) Finally, the fall in the product attributed to the Government service and defence since 1946 reflects mainly the demobilisation which took place immediately after the war. The slight rise since 1950 is the result of re-armament which took place around the time of the Korean war, and Government expenditure as a whole, though it has been gradually falling as a proportion of the national income, is still equivalent to roughly one-third of the total.

DEMAND

The rise in production is the counterpart of the stimulus of demand. As Britain has recovered from the war there have been changes in the distribution of total demand and

in the rates of expansion. The demand from consumers is, of course, the greatest single part of the whole. Taking consumption, public current expenditure, capital formation and exports together, to represent total output, consumer demand represents 57 per cent of the whole. Since 1946 consumers' demand has increased by about 15 per cent in a market which, though it was restricted in the immediate post-war years by the continuation of wartime rationing, is now virtually free. This expansion, it should be added, is a measure of quantity only and does not make allowance for the rise in the quality of most goods or for the increasing variety, especially of foodstuffs. (Roughly one-third of all consumers' expenditure in Great Britain is on food.) Next in importance in contributing to demand are exports. Since 1946 exports have increased by 86 per cent and now contribute 17 per cent to the total. Government expenditure on current goods and services now accounts for 14 per cent of total output, having fallen by 11 per cent since 1946. The balance is made up by capital formation which has increased by just over 20 per cent since 1946 to account for 12 per cent of total output. Most of this capital formation is in fixed assets (£2,452 m. in 1954) and a relatively small part in stocks and work in progress (£225 m. in the same year). But this last item is one of the most volatile elements in forming national demand and there is no doubt that changes in the level of stocks, especially when prices are moving at the same time, have been one of the most important influences disturbing the balance of the economy. For example in 1951, when one of the most severe balance of payments crises occurred, there was a rise in stocks over 1950 of nearly £800 m.

The picture of demand is not complete without the savings which have been necessary to finance the investment programme. The following table gives the total of gross savings in each year since 1948 and shows the sources from which it has come

	INVESTMENT (Gross £m.)	SOURCE (PERCENTAGES)					
		PERSONS	COMPANIES	PUBLIC CORPS.	GOV'T	LOCAL AUTHS	TAX RES.
1948	1,720	—	41	1	42	6	10
1949	1,802	—	46	7	43	6	—
1950	1,908	—	43	5	39	5	10
1951	2,066	2	34	3	31	4	25
1952	2,348	28	39	7	20	3	—
1953	2,647	29	44	7	11	5	3
1954	2,837	25	43	7	13	4	8

This table provides the clue to the financial policy which has been pursued by successive British Governments. In the immediate post-war period under the Socialist Governments a policy of cheap money was adopted. The rate of interest was not used as a means either of encouraging savings or of checking demand. The banking system was left free to expand both deposits and advances without restriction either of price or volume. As a consequence, the gap left between the savings of companies and of individuals and the demand for investment had to be made up by the central government. A deliberate policy of maintaining a budget surplus was followed in spite of the high rates of taxation which this involved. In 1951 income tax, although it had previously been lowered to 9s in the £, was again increased to 9s. 6d. When the Conservative Government took office in October 1951 this

THE BRITISH COMMONWEALTH

policy was reversed. The Bank rate was almost immediately raised with corresponding increases in all other rates of interest, while at the same time taxation was reduced. The outcome of this change, aided no doubt by the comparative stability of prices which was characteristic of the next two years, can plainly be seen from the table. Savings by persons began to rise and, in fact, became of such significant proportions that it became possible to lower the rate of taxation again. Income tax was reduced first to 9s. in the £ and then to 8s. 6d. (its lowest since the war) while at the same time direct taxes were also reduced and special incentives were given to industry to increase its rate of investment. These took the form first of all of initial allowances, which represented a deferment of income tax in proportion to the rate of capital investment, and then an investment allowance, which is not merely a deferment but a remission of taxation, also geared to the rate of capital investment. This change in financial policy has demonstrated without doubt that a combination of monetary and fiscal controls is superior to reliance on the comparatively inflexible method of fiscal control alone: changes in the British economy call for adjustment more often than once a year at budget time. The inflation which reappeared in 1955 also showed, however, that the exact proportion in which the two should be mixed is a matter of recondite judgment and the Conservative Chancellor has been criticised for relying too much on monetary controls and too little on the budget.

LABOUR, WAGES AND PRICES

The total working population of Great Britain is 23,869,000—16,058,000 males and 7,811,000 females. Since the end of the war there has been very little change in this total—it has increased by no more than about 3 per cent—and the demand for labour has been consistently high. More men and women have been drawn into employment and the unemployment rate is now well below 2 per cent. Since 1948 the total of unemployed has never risen significantly above 300,000.

The following table relates the rise in employment to the rise in industrial production and provides a rough measure of the rise in productivity in British industry.

	(1948=100)	
	INDUSTRIAL PRODUCTION	OUTPUT PER MAN-YEAR IN INDUSTRY
1949	106	102
1950	114	103
1951	117	106
1952	114	105
1953	121	106
1954	129	108

In conditions of full employment, however, the workers have been able to secure greater increases in wages than the rise in productivity; and since prices have risen recently by less than wage rates, the real position of the wage earning section of the population has improved. The following table compares the rise in wage rates with the rise in retail prices.

WAGE RATES AND RETAIL PRICES (June 1947=100)

	WAGE RATES	RETAIL PRICES
1948	106	108
1949	109	111
1950	110	114
1951	119	125
1952	129	136
1953	135	140
1954	142	143
1955	152	150*

* June.

Average weekly hours worked have risen from 45.3 in 1948 to 46.9 in 1955. But the trend in wage negotiations has been to shorten the official working week so that a greater proportion has been paid at overtime rates. Consequently earnings have risen since 1948 by 60 per cent. Food prices have risen by more than the average of all prices—86 per cent since 1947—but especially since the beginning of 1952 the prices of manufactures have been steady, tending to fall if anything. Since 1952 British export prices, which are a good index of the prices of manufactures, have fallen by 3 per cent.

EXPORTS

Britain's trade pattern is at the same time determined by, and the cause of, her position as the centre of the Sterling Area system. Britain's exports, visible and invisible combined, result usually in a surplus with the sterling area countries; some of this surplus is paid to her in gold or dollars earned by these countries' exports of raw materials. With the aid of these dollars Britain is then able to finance her own deficit with the dollar area. Her trade with European countries, the third main area, is usually more or less balanced; but the setting up of the E.P.U. mechanism has given Britain a new incentive to develop this trade since surpluses here are now partly paid in gold. Normally this system is a source of strength to Britain but it has its dangers as well. Before 1949, when the Sterling Area system was to a large extent isolated from the dollar area system by controls both on the movement of capital and trade, it was the divergence of prices in the two systems which led to the devaluation of sterling. Even now, when the barriers to trade are very much less, it is still possible (as happened in 1955) that demand in the sterling area, if it contains an element of inflation, will distort Britain's trade at the margin by providing too easy sterling markets. The danger then is that Britain's competitive power in the other markets, especially the dollar markets, will be weakened.

The following table shows the distribution of exports and imports by areas in 1954.

DISTRIBUTION OF TRADE BY AREAS 1954 (Per cent)

	IMPORTS	EXPORTS
Dollar area	20	15
O.E.E.C.	28	26
Sterling area	43	49
Rest	9	10
	100	100

The total of British exports in 1954 was £3,964 m. Of this £1,149 m. or 29 per cent was earned by invisible transactions. The most important of these were shipping, £388 m. interest, profits and dividends, £293 m. and tourism, £95 m. The remainder includes a large but undisclosed sum earned as profits by British oil companies operating abroad; the earnings abroad of British insurance companies; and the earnings of London's banking and finance houses. Of these shipping, interest, profits and dividends, and the earnings of the oil and insurance companies bring substantial surpluses even when the corresponding invisible imports are offset against them.

Most important of Britain's visible exports are her exports of manufactured goods. These account for over 80 per cent of the total compared with 6 per cent for food and beverages, 6 per cent for coal and oil products, and 4 per cent for basic materials. Of her manufactured products machinery, in turn, is by far the most important. Machinery other than electrical machinery makes up nearly one-fifth of exports of manufactures; electrical machinery

provides another 6 per cent. Besides this, cars and commercial vehicles are very important (6 per cent), ships and boats (2 per cent), aircraft and aircraft engines (2 per cent) and railway vehicles (1 per cent). Cotton textiles, though much less important than they used to be, are equivalent to 5 per cent of all manufactured exports, woollen textiles to 4 per cent; synthetic textile yarns provide another 1 per cent. Chemical exports are now 9 per cent of the total, manufactures of metals 7 per cent and exports of iron and steel 6 per cent. More significant than this analysis of exports, however, is the division between traditional exports and those which are either new since the war or which have been greatly expanded. Before the war British motor manufacturers, for example, produced mainly for the home market. Only a very small proportion of their cars were exported. In the immediate post-war period, however, the proportion rose as high as 75 per cent and it is still just over 50 per cent. The motor industry has, in fact, become a major exporting industry. The following table gives some other important exports which are either greatly expanded or virtually new British exports.

NEW OR VIRTUALLY NEW EXPORTS

(£m.)	1938	1954
Radio communication equipment	—	11.7
Floor polishers	—	1.2
Hair clippers, dryshavers	—	1.2
Combine harvesters	—	2.8
Fork lift trucks	—	1.1
Nylon products	—	2.8
Penicillin and other antibiotics	—	7.5
Detergents	—	3.9
Prefabricated buildings	—	2.8
Tracklaying tractors	—	4.8
Petroleum well-drilling equipment	—	2.4
Oil-refining machinery	—	2.7
Refrigerators	0.4	6.8
Agricultural tractors	5	42.8
Washing machines	2	5.3
Accounting machines	1	3.3
Excavating and earth-moving machines	7	14.9
Plastics	4	23.7
Platinum/Palladium	3	9.1
Petrol	2.9	84.2
Aircraft	5.4	52.2

This is not an exhaustive table but it illustrates the variety of development which has recently taken place. New exports of this kind now account for rather more than 10 per cent of all manufactured exports.

FINANCE

Great Britain has a highly organised financial system centred on the City of London. Within the "square mile" are the commodity markets, the Baltic Exchange for dealing in shipping and air passages, the head offices of the insurance companies and the Banks and, of course, the Stock Exchange. These institutions provide services for traders both at home and abroad, but they also operate the mechanism for the whole of the country's economic activity. Deposits with the Banks total around £6,500 m. compared with just over £2,000 m. of notes in circulation. In the Discount market spare funds are borrowed each day either from British or foreign banks and are lent out to the British Government against Treasury Bills. More important still, it is through this mechanism that the Government exercises one of its controls over the whole rate of economic activity. By raising or lowering the Bank Rate and by buying or selling its own securities the Government is able to regulate the total supply both of bank

deposits and of cash. This in turn limits the amount of money which the banks can lend to traders to finance their short-term borrowing, especially for the holding of stocks.

Through the mechanism of the City the Government also either borrows the money that is necessary to cover the shortfall in the budget, or repays debt out of any surplus. During 1954-55 it is estimated that the Government will have a deficit of £436 m. in all its transactions: indeed the Government has been in deficit to a greater or less extent almost every year since the war. The total of Government income for 1954-55 was estimated by the Chancellor at £4,902 m. Total expenditure will be £5,338 m. The following table shows the distribution of the main heads of income and expenditure.

DISTRIBUTION OF GOVERNMENT INCOME
AND EXPENDITURE 1954-55

(Percentages)			
REVENUE		EXPENDITURE	
Direct Taxes	50	Debt Interest	11
Customs and Excise	39	Defence	28
Other Indirect Taxes	7	Civil Expenditure	43
Capital Receipts	4	Capital Expenditure	15
		Other	3
	100		100

On the revenue side income tax and surtax provide over 80 per cent of direct taxes, the remainder being shared mainly between death duties and profits tax. On the expenditure side, capital expenditure is mainly accounted for by advances to local authorities for house building, to the Post Office and to the National Coal Board for investment in the mines. Civil expenditure is divided as follows: grants to local authorities, 26 per cent; Health Insurance Pensions, 37 per cent; food and agricultural subsidies 13 per cent; other (including expenditure on atomic energy and on foreign, colonial and Commonwealth services) 24 per cent.

THE PRESENT POSITION

Towards the end of 1954 signs of fresh strain began to appear in Britain's balance of payments. Production at home was rising, and so were prices of raw materials bought abroad. As the result of these two forces the cost of imports began to rise; besides this, there were signs that industrialists were beginning to hold rather larger stocks of raw materials than previously. Between the first and second half of 1954 imports rose by £65 m. At the same time, mainly as the result of the dock strike which took place in October of that year, exports fell by £31 m. With a deterioration taking place in the invisible balance at the same time, the balance of payments worsened from the first to the second half-year by £184 m. The position was aggravated by the fact that at the same time a small swing took place in the pattern of trade. The current balance with the non-sterling world deteriorated by more than the total, while the current balance with the sterling area improved. Exports to Australia and New Zealand particularly rose steeply. The further consequence of this was that the rise in the gold and dollar reserves which has been taking place was replaced by a fall. Between the end of June and the end of December the reserves fell from \$3,017 m. to \$2,762 m.

Action was taken to meet this situation in January and February. In January the bank rate was raised from 3 per cent (to which it had been reduced the previous May) to 3½ per cent, and a month later it was raised again to 4½ per cent. On this occasion, however, two further measures were taken as well. Restrictions were reimposed on hire purchase transactions and special action was taken in overseas financial centres where sterling is dealt in. The

THE BRITISH COMMONWEALTH

Government decided to support sterling when necessary in these centres so that the official and unofficial rates for sterling could be kept close together. This step was taken to stop trade in sterling commodities at cheap rates, through which the sterling area had been losing dollars. These measures at first had some success. The psychological effect was good in foreign centres and in the early months of 1955 not only was there a check both to the increase in the price and volume of imports, but exports appeared to be recovering as well. Three misfortunes then checked this recovery. First of all a railway strike and a prolonged dock strike upset the country's export trade. Coming after the previous dock strike in October 1954, this not only delayed goods but also reduced confidence in the capacity of British industry to deliver on time. Secondly it became clear during the course of the summer that production in the coal mines was lagging behind the level of the year before. As a consequence it became necessary to increase imports of coal, mainly from America, at great cost in dollars. Finally, rumours circulated freely in Europe that, as a result of changes in the E.P.U. mechanism, it was likely that the British Government would allow sterling to fluctuate between wider limits than hitherto. It was generally believed that when this happened, sterling would, in fact, be devalued. As a result of these rumours, holdings of sterling abroad were reduced to the minimum, and this put a further strain on the balance of payments. Between the end of 1954 and June 1955 the gold and dollar reserves fell again from

\$2,762 m. to \$2,680 m. As a result of this further fall, which grew worse in July, the Government was forced to act again. At the end of July the Chancellor announced that the higher bank rate would be enforced by a tighter control of the volume of credit. Hire purchase was still further restricted, and some cuts were proposed both in the capital expenditure of those parts of the economy which are under Government control and in the Government's own current expenditure. These measures were reinforced by a specific denial that any change in the sterling exchange rate was contemplated. By the end of September the credit restriction was beginning to be effective. Though in the first half of September the gold drain was still running at an alarming rate, it was stopped after the Chancellor had repeated his assurance about sterling at the meeting of the International Monetary Fund. It was still felt, however, that the credit restriction ought to be reinforced; and in October the Chancellor introduced an autumn budget increasing by one fifth all rates of purchase tax, raising the distributed profits tax, increasing telephone charges, bringing local-authority expenditure under closer control, and curbing the housing subsidies.

After this, the first signs of a reduction in the rise in capital investment were seen. The cuts in Government expenditure, however, were less than had been expected and the problem of paring the very great demands being made on Britain's productive capacity so that there would always be a margin in hand for emergencies remained.

THE CROWN AND THE CONSTITUTION

THE United Kingdom is a Constitutional Monarchy. In the ninth century, when England was first united under a Saxon King, the Monarchy was the only central power and the Constitution did not exist. To-day, the Sovereign acts on the advice of her Ministers which she cannot, constitutionally, ignore; power, which has been at various times and in varying degrees in the hands of kings, feudal barons, ministers, councils and parliaments, or of particular groups or sections of society, is vested in the people as a whole and the Sovereign is an essential part of the machinery of government which has gradually been devised to give expression to the popular will.

Both the powers of the Government and the functions of the Sovereign are determined by the Constitution, by the body of fundamental principles on which the State is governed and the methods, institutions and procedures which give them effect. But the United Kingdom has no written constitution. There is no document, no one law or statute, to which reference can be made. The Constitution is organic, it is an accumulation of convention, precedent and tradition which, although continually changing as the times change, is at any one moment binding and exact.

Some of the principles and many of the practices are secured by Statute, some are avowed by Declaration or Manifesto and many are incorporated in the Common Law. The Reform Bill of 1832 dramatically broadened the basis of representative government and prepared the way for further changes, the Bill of Rights of 1689 ended the long era of rivalry between Crown and Parliament and began the story of their co-operation; and Magna Carta, in 1215, began the process by which the law of the land acquired a status of its own, independent of King and Parliament and, as Professor G. M. Trevelyan has put it, "gave expression to the spirit of individual liberty as it has ever since been understood in England". But the Constitution is above all based on usage. It has been, and will continue to be, moulded and modified to match changing customs and to meet successive situations. Any one Parliament could, if it chose, revise or repeal every law and disown every convention that has constitutional significance. It could destroy the whole fabric of political and social existence, including its own, because, according to the Constitution, Parliament, which represents the people, is supreme. The work of one Parliament is not binding on its successors, except in so far as changes must be made by constitutional means. Parliament cannot disobey the law, but it can change it.

This evolutionary Constitution has come into being only because the United Kingdom emerged and consolidated over long years when change was slow, and because she escaped any violent revolution. New countries, which grow up in the conditions of the twentieth century, when education, science and outside influences can change the face of political life inside a generation, and older countries which have suffered violence, have no time to allow constitutions to evolve. Nigeria in 1954, like France in 1789 or Germany in 1919 and 1945, had need of a new constitution overnight, if life was not to stand still and then disintegrate. It is perhaps paradoxical that the United Kingdom, which has no written constitution herself, should provide a model for so many new constitutions in such various lands. In some respects the modern con-

stitution makers have the best of several worlds: they can apply their own skill and judgment, unhindered by preceding legislation; and they can draw on the experience of a long past and see its results.

It would be impossible to enumerate the principles which are extant in the British Constitution. It would also be misleading, because declarations of general principles are quite out of character. In constitutional as in legal practice, the way has been to admit the general principle in quite practical terms related to specific practical problems: the *Habeas Corpus* Act, which establishes the principle of no imprisonment without trial, makes no mention of the principle itself but lays down in most concrete terms the punishments that shall be inflicted on a judge, or other law officer, if he fails to issue the Writ (commanding the prisoner to be brought before the court) when applied for. The principles of the Constitution and constitutional practice are in fact inherent in the Common Law on the one hand and in the structure, functions and procedures of the various instruments of government, on the other of the Crown, of Parliament, of the Privy Council, of the Government and the Cabinet and of the Government Departments.

THE SOVEREIGN

The Queen's title in the United Kingdom is "Elizabeth II, by the Grace of God of the United Kingdom of Great Britain and Northern Ireland and of Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith". The title varies slightly for different parts of the Commonwealth. In each country, with the exception of India, the Queen is represented by a Governor-General whom she appoints on the advice of the Ministers of the country concerned. He may be a national of that country, or of any other Commonwealth country, and he fulfils the same constitutional position, according to the constitution, laws and customs of the country in which he serves, as the Queen fills in the United Kingdom. If the Queen visits a Commonwealth country she can of course take over the functions of the Governor-General.

The monarchy is hereditary, descending to the sons of the Sovereign in order of seniority or, if there are no sons, to the daughters.

Her constitutional position as head of the state, quite apart from her position as Head of the Commonwealth, demands of the Queen that she keep herself informed on all aspects of the life of her subjects, that she maintain absolute impartiality and that she should personally visit the different parts of her realm as often as it is possible for her to do so, but she has also quite specific functions: she summons, prorogues and dissolves Parliament; she must give Royal Assent to a Bill which has passed through both Houses of Parliament, before it becomes law, she is head of the judiciary (although the judiciary is now quite independent of the executive); she appoints, on ministerial advice, all important state officials, including judges, officers of the forces and representatives abroad, and she confers honours and awards. Her formal consent is necessary before a Minister can take up office or a Cabinet be formed, and before a Treaty may be concluded, war declared or peace made. These are some of the more essential functions. But the Queen has also endless residuary responsibilities, such as the guardianship of infants

UNITED KINGDOM

and persons of unsound mind, the creation of corporations, granting of printing rights for the Bible and Prayer Book and for state documents; and her signature and consent are necessary to many important state papers. Constitutional government cannot in fact be carried on without her, so much so that provision has been made by Act of Parliament for the appointment of a Regent should the Sovereign be incapacitated or under age and for Counsellors of State to act in the temporary absence of the Queen.

PARLIAMENT

The Queen in Parliament—the House of Commons and the House of Lords—is the supreme legislative authority in the United Kingdom. Under the Parliament Act of 1911 the maximum life of one Parliament was fixed at five years: if, that is, Parliament has not meanwhile been dissolved for any other reason, such as the fall of the government in power, then a general election is at the end of five years necessary by law. During its lifetime, the power of Parliament is theoretically absolute, it can make or unmake any law. In practice of course it must take account of the electorate. Parliament is prorogued at intervals during its life, which therefore consists of a number of sessions by present custom, a session has normally 160 sitting days and is divided into five periods, from November (when the session is opened) until Christmas (about 30 days), from January till Easter (50), from Easter till Whitsun (30), from Whitsun until the end of July (40) and 10 days in October.

The House of Commons. The House of Commons has 630 members, each elected for one geographical constituency. The Speaker, who is elected by the members immediately a new parliament meets, presides. Members of Parliament may be elected either at a general election or at a by-election (held in the event of the death, resignation, or expulsion of the sitting member) and in either case hold their seats during the life of the existing parliament. All British subjects over 21 (and subjects of any Commonwealth country and of the Irish Republic who are resident in the United Kingdom) have the vote unless legally barred (e.g. for insanity). Anyone who has the vote may stand as a candidate for election except clergymen of the Church of England, the established Churches of Scotland and Northern Ireland and the Roman Catholic Church, and certain officers of the Crown; Civil Servants wishing to stand must resign from the Service for the period of the election.

The House of Lords. There are about 800 peers who have the right to a seat in the House of Lords, including Princes of the Royal Blood (who, by tradition, take no part in the proceedings), hereditary peers of England and of the United Kingdom (peerages created since the Act of Union of England and Scotland of 1707 are all peerages of the United Kingdom), several Lords of Appeal in Ordinary (appointed for life to carry out the judicial duties of the House); 16 representative Scottish and 5 representative Irish peers (since 1920 no new Irish peers have been created), and the two archbishops and the 24 senior bishops of the Church of England. All except the spiritual and judicial peerages are hereditary. The Lord Chancellor is the Speaker of the House.

The Party System. Members of Parliament whose views coincide form groups which agree in each case to support the policies put forward by their chosen leaders, and to present a common front on all important issues both in Parliament and to the electorate. This system evolved during the seventeenth and eighteenth centuries and is now essential to the working of the British Constitution.

Under the party system, the Queen sends for the leader of the party which wins the majority of seats (al-

THE CROWN AND THE CONSTITUTION

though not necessarily of votes) at a general election and asks him to form a Government. The party which wins the second largest number of seats forms the Opposition, which has quite specific functions. Members of other minority parties and independents may support the Government or Opposition as they choose. Each party has its own Whips, officials whose duty it is to arrange, in consultation with the Whips of other parties, matters of procedure and organisation, to see to it that Members attend debates and to muster for their party its maximum voting strength, and each has its own national and local organisations outside Parliament.

Parliamentary Procedure. Parliamentary procedure, like the Constitution itself, is determined by rules, customs, forms and practices which have accumulated over many centuries. The Speaker is responsible for their application, and generally for controlling the course of business and debates in the house.

It is the duty of Parliament to make the laws which govern the life of the community, to appropriate the necessary funds for the various services of state and to criticise and control the Government. Parliament is also consulted before the ratification of certain international treaties and agreements.

Legislation may with some exceptions be initiated in either House and on either side of the House. In practice, most Bills are introduced into the House of Commons by the Government in power (the chief exceptions are Private Members' Bills) as the result of Cabinet decisions. Each Bill which is passed by the Commons at its third reading is sent to the House of Lords, who either accept it or return it to the Commons with suggested amendments. The Lords cannot in any instance prevent Bills passed by the Commons from becoming law: over Money Bills or Bills affecting the duration of Parliament, they have no power at all, and by the Parliament Act of 1949 any other Bill passed by the Commons in two successive sessions may be presented for Royal Assent without the consent of the Lords provided one year has elapsed between the date of the second reading in the Commons and the date of its final passing. In practice, the House of Lords is extremely unlikely to push things thus far, and its main function is to scrutinise the work of the Commons, to caution and suggest. Bills of a non-controversial kind are sometimes introduced initially in the House of Lords.

THE PRIVY COUNCIL

The power of the Privy Council has declined with the development of the Cabinet and its main function to-day is to give effect to decisions made elsewhere. There are at present over 300 Privy Counsellors, including Cabinet Ministers (who are automatically created Privy Counsellors), and people who have reached eminence in some branch of public affairs. Meetings are presided over by the Lord President of the Council, an office which since 1600 has always been held by a member of the party in power, who is usually also a leading member of the Cabinet. The Privy Council is responsible for making Orders in Council, of which there are two kinds, those made in virtue of the Royal prerogative, e.g. the ratification of treaties and those which are authorised by Act of Parliament and are in fact a form of delegated legislation. It has also various advisory functions which cover such subjects as scientific, industrial, medical and agricultural research. An important organ of the Privy Council is the Judicial Committee (see page 80).

HER MAJESTY'S GOVERNMENT

The Government is headed by the Prime Minister, who is also the leader of the Party which holds the majority

THE BRITISH COMMONWEALTH

in the House of Commons. It includes Ministers who are in charge of Government departments and those who hold traditional offices which involve no special departmental duties; the Chancellor of the Exchequer and the Lord Chancellor, who are specially responsible for financial and economic, and legal affairs respectively, the law officers of the Crown (the Attorney-General and Solicitor-General, the Lord Advocate for Scotland and the Solicitor-General for Scotland), the Ministers of State, who are usually appointed to assist Ministers in charge of departments, and Parliamentary Secretaries and Under-Secretaries.

The Cabinet. The Cabinet system developed during the eighteenth century from the informal meetings of Privy Counsellors who were also ministers and who formed a committee of manageable size which, it was gradually

realised, could take decisions far more quickly and simply than larger bodies. The cabinet to-day has between 15-25 members at the discretion of the Prime Minister,—its main duty is to formulate policy for submission to Parliament.

Ministerial responsibility. The doctrine of ministerial responsibility has also evolved gradually but was generally accepted by the middle of the last century. Each Minister must take full responsibility for the work of his own department, particularly in Parliament; if his department fails over any important matter, he will be expected to resign. Ministers also assume collective responsibility for the work of the Government and for any advice which it may offer to the Crown.

THE GOVERNMENT

HEAD OF THE STATE

Her Majesty Queen ELIZABETH II (ELIZABETH ALEXANDRA MARY), succeeded to the Throne February 6th, 1952; heir Prince CHARLES PHILIP ARTHUR GEORGE, Duke of CORNWALL, born November 14th, 1948.

THE MINISTRY

(Conservative Government, formed April 7th, 1955; modified December 20th, 1955)

THE CABINET

Prime Minister and First Lord of the Treasury: The Rt. Hon. Sir ANTHONY EDEN, K.G., M.C., M.P.

Lord President of the Council: The Most Hon. The Marquess of SALISBURY, K.G.

Lord Privy Seal and Leader of the House of Commons: The Rt. Hon. R. A. BUTLER, C.H., M.P.

Chancellor of the Exchequer: The Rt. Hon. HAROLD MACMILLAN, M.P.

Lord Chancellor: The Rt. Hon. Viscount KILMUIR, G.C.V.O.

POLITICAL PARTIES

THE CONSERVATIVE AND UNIONIST PARTY

The Conservative and Unionist Party is the lineal descendant of the old Tory Party, transformed and modernised by the genius of Disraeli, who was the real founder of modern Conservatism, and modified by the inclusion of Liberals, led by the late Duke of Devonshire and Joseph Chamberlain, who refused to follow Mr. Gladstone in his conversion to Home Rule for Ireland. To Disraeli, who consistently supported Lord Shaftesbury (then Lord Ashley) in his factory legislation, is owing the strong programme of social progress, for the modern interpretation of which the Party is indebted to Sir Winston Churchill and Mr. R. A. Butler; and Joseph Chamberlain was the founder of the party's imperial policy.

The aims of the Conservative Party are to uphold the Christian religion and resist all attacks upon it, to defend our monarchical constitution, to defend and develop Empire trade, to support as a general rule free enterprise and initiative against state trading and nationalisation, to maintain and improve standards of life and full employment and to develop a property-owning democracy.

PARTY POLICY

Foreign Affairs:

(a) to make the United Nations an effective instrument of the rule of law;

(b) to enable the Council of Europe to perform its proper functions in bringing the Western peoples closer together;

(c) to bring about the close association of the British Empire and Commonwealth with the United States of America and Western Europe as the surest hope for world peace;

(d) to preserve peace by a firm foreign policy based on sufficient strength and capable of inducing respect for our position as a major world power and at the same time to strive for real world disarmament.

Imperial Affairs:

(a) to retain and develop the great and unique brotherhood of the British Empire and Commonwealth, to promote its unity, strength and progress, as a first task of British statesmanship;

(b) to improve, perfect and to uphold the principle of racial partnership; make the fullest use of Commonwealth machinery for joint consultation and action, and to promote a unity of peoples and not only of leaders;

(c) to develop the rich and varied resources of the Empire and Commonwealth and so bring about increasing prosperity and plenty;

(d) to encourage the greatest possible volume of trade within the Empire and Commonwealth, retaining Imperial Preference, and granting the Empire producer a place in the home market second only to the home producer;

(e) to work to raise living standards and to guide the Colonial peoples along the road to self-government within the framework of the British Commonwealth and Empire.

(f) to seek the promotion of capital investment in the improvement of Colonial communications, the extraction of minerals and the modernisation of agriculture, with emphasis on peasant production, and to help the Colonies in their assault on ignorance, want and disease.

Economic and Industrial Policy:

(a) to encourage free competitive enterprise and work for price stability with freedom and efficiency as the keys to abundance and lower costs;

(b) to reduce the burden of taxation on the individual, the family and on industry;

(c) To encourage proper rewards for extra initiative, skill, effort and responsibility, and co-partnership and profit sharing schemes where desirable;

(d) to maintain free and independent trade unions as an essential part of the industrial system and to consult with their leaders on all economic matters;

(e) to pursue a policy of economic expansion and full employment, and to curb inflation;

(f) to move towards a freer system of world trade and payments, and to strengthen Britain's defences against unfair international trade practices;

(g) to launch a vigorous drive to promote the health, welfare, and safety of the working population, and to safeguard the employment of children;

(h) to press ahead speedily with a programme of nuclear power stations on a commercial scale;

(i) to expand scientific and technological training, and to promote and encourage research both in private and state industries;

(j) to promote good farming by support prices, deficiency payments, orderly marketing, etc., to uphold the principles of the 1947 Agriculture Act and to resist nationalisation of the land.

Social Policy:

(a) to promote the ideal of a property-owning democracy by encouraging home ownership, fostering personal thrift and stimulating partnership in industry;

(b) to ensure that every family has a decent house and to pull down slums at an increasing rate;

(c) to better the standard of education by reducing the size of classes, improving existing buildings and equipment, and extending facilities for scientific and technical training,

(d) to provide the best Health Service the nation can afford, to build new hospitals, extend and modernise existing ones, promote progress in all forms of preventive work, and remove restrictions on voluntary hospital work;

(e) to give constant attention to the needs and interests of all pensioners and encourage the provision of "half-way houses" for the old;

(f) to give effect to a national "clear-air" policy;

(g) to strike a just balance between the interests of the individual and those of the community, and improve the machinery of tribunals, public inquiries and departmental decisions affecting individual interests and property.

ELECTORAL POSITION

At the General Election of May, 1955, 13,286,566 votes were cast for the Party and its Liberal and National Liberal associates, 624 seats were contested and 344 Members of Parliament (including 21 associates of the party) returned.

PRINCIPAL ORGANISATIONS

The Conservative and Unionist Central Office: Abbey House, 2-8 Victoria Street, London, S.W.1; t. 1870;

The Ladies' Carlton Club: 5, Grosvenor Place, London, S.W.1., f. 1906; Sec. NOEL BACKWELL.

THE LABOUR PARTY

HISTORY

The Labour Party was formed in 1900 as a federation of trade unions, socialist societies, local trades councils and Co-operative societies. It owes its origin to a resolution of the Trades Union Congress which, in 1899, instructed its Parliamentary Committee to invite the co-operation of the working-class organisations named, in devising ways and means of securing the return of an increased number of Labour members to Parliament. Previous attempts to form an independent Labour Party had not succeeded, though there were a number of Labour members in Parliament; but this resolution of Congress led to the establishment of a Labour Representation Committee, whose aims at first went no further than the organisation of a distinct Labour group in Parliament which would "co-operate with any party which for the time being may be engaged in promoting legislation in the direct interest of Labour, and be equally ready to dissociate themselves from any Party having an opposite tendency".

In the first year of its existence the Labour Representation Committee reported the affiliation of some forty trade unions with an aggregate membership of about 350,000; some half dozen local trades councils with a combined membership of about 100,000; and three Socialist societies, with a total membership of less than 23,000. It fought its first General Election in the year of its birth and was able to place only fifteen candidates in the field, of whom no more than two were elected to Parliament. Subsequent General Elections showed a steady rate of growth, and a phenomenal expansion began in 1918, when the Party was re-organised and the basis of membership broadened to include not only affiliated organisations but also individual members. It thus ceased to be a federation of affiliated organisations, and became a political party, in which membership was open to any person who desired to join it.

MEMBERSHIP AND ELECTORAL POSITION

Total membership, including organisations and individual members, was 6,498,027 in 1954.

At the General Election of 1955, 12,369,532 votes were cast for the Party, 617 seats contested and 277 Members of Parliament returned.

POLICY

National: The following is a summary of the objects of the Party as defined in its constitution:

(a) To secure for the producers by hand or by brain the full fruits of their industry and the most equitable distribution thereof that may be possible, upon the basis of the common ownership of the means of production and the best obtainable system of popular administration and control of each industry or service

(b) Generally to promote the political, social and economic emancipation of the people, and more particularly of those who depend directly upon their own exertions by hand or by brain for the means of life.

Inter-Dominion: To co-operate with the Labour and Socialist organisations in the Dominions and the Dependencies with a view to promoting the purposes of the Party and to take common action for the promotion of a higher standard of social and economic life for the working population of the respective countries.

International: To co-operate with the Labour and Socialist organisations in other countries and to assist in organising a federation of nations for the maintenance of freedom and peace, for the establishment of suitable machinery for the adjustment and settlement of international disputes by conciliation or judicial arbitration, and for such international legislation as may be practicable.

ORGANISATION

Relations with the Trades Union Congress and the Co-operative movements are maintained through the National Council of Labour, representing the T.U.C. General Council, the National Executive of the Labour Party, the Parliamentary Labour Party and the Co-operative Union.

The supreme authority in the Labour Party is vested in the annual conference of delegates. It meets during October each year. Reports are submitted to it on the work of the year by the National Executive and the Parliamentary Party, and resolutions from the affiliated organisations are considered with a view to the formulation of the Party's policy.

HEADQUARTERS

The Labour Party: Transport House, Smith Square, London, S.W.1; Sec. MORGAN PHILLIPS; National Agent A. L. WILLIAMS; Chief Woman Officer MARY SUTHERLAND.

NATIONAL EXECUTIVE COMMITTEE

Treasurer: Rt. Hon. HUGH GAITSKELL, C.B.E., M.P.

Chairman: E. G. GOOCH, C.B.E., M.P.

Leader of the Parliamentary Party: Rt. Hon. HUGH GAITSKELL, C.B.E., M.P.

AFFILIATED ORGANISATIONS

(Details concerning trade unions will be found in the *Industry and Commerce Section*.)

Fabian Society: 11, Dartmouth Street, London, S.W.1, f. 1884. A centre for free and independent research and discussion within the Socialist movement. Among its early leaders were Sidney and Beatrice Webb, Bernard Shaw and H. G. Wells.

Executive Committee: JOHN PARKER, M.P. (Chair). AUSTEN ALBU, M.P., T. BALOGH, RITCHIE CALDER, Mrs. MARGARET COLE, C. A. R. CROSLAND, R. H. S. CROSSMAN, M.P., JOHN DIAMOND (Hon. Treas.), Lord FARINGDON, Rt. Hon. HUGH GAITSKELL, M.P., H. D. HUGHES, ROY JENKINS, M.P., T. E. M. MCKITTERICK, IAN MIKARDO, M.P., ARTHUR SKEFFINGTON, M.P., Mrs. MARY STEWART, Mrs. EIRENE WHITE, M.P., Rt. Hon. HAROLD WILSON, M.P., Rt. Hon. KENNETH YOUNGER, M.P.

Royal Arsenal Co-operative Society (Political Purposes Cttee.): 147, Powis Street, Woolwich, S.E.18; f. 1921; 366,000 members. It is affiliated nationally and locally to the Labour Party as well as to the Co-operative Party, and it has a representative on the National Labour Party Executive. It seeks the adoption of its nominees as parliamentary and local government candidates through the local Labour Party machinery; they run as Labour and Co-operative candidates. Sec. EDWIN FURNESS, B.A., F.R.ECON.SOC., K.C.C.

THE LIBERAL PARTY

Many influences have played their part in the formulation of the Liberal political philosophy. The seventeenth-century struggles of the common law against the Crown, and of Puritanism against the Church; the Whig assertion of the sanctity of contract, the fervour of eighteenth-century Nonconformity; the Radicalism that was inspired by the French Revolution; the economic philosophy of the Manchester School—all have contributed something.

Modern Liberalism, however, dates—if it can be dated at all—from the beginning of the present century. The Liberal Government which took office in 1905 and which remained in office until a coalition was formed during the Great War gave a new orientation to domestic policy. Social reform was the keynote of their activities. Among other policies initiated were the provision of pensions for the aged, minimum wage legislation, the insurance of the worker against sickness and unemployment, and the recasting of our system of direct taxation along progressive lines. Trade unions were encouraged and education and health services developed.

The circumstances of the war, and the difficulties which the post-war Coalition Government had to meet, broke the continuity of Liberal traditions and the Party suffered from internal dissensions, which culminated in a split over the tariff policy of the National Government in 1931. In 1935 one section of the Party broke away and formed the National Liberal Party.

Until the outbreak of war Liberal M.P.s made a striking stand against the Government's appeasement policy, both in the House and the country.

After the 1945 General Election, the Rt. Hon. Clement Davies, Q.C., M.P., became Leader of the Liberal Parliamentary Party.

The Liberal Party supported the Labour Government's social security measures and the nationalisation of coal, gas, electricity and rail transport. It opposed all measures affecting the liberty of the individual, such as direction of labour, conscription, the "closed shop" and diminishing powers of Parliament.

The preamble to the party Constitution states: "The Liberal Party exists to build a Liberal Commonwealth in which every citizen shall possess liberty, property and security, and none shall be enslaved by poverty, ignorance or unemployment. Its chief care is for the rights and opportunities of the individual, and in all spheres it sets freedom first."

After the 1951 election Mr. Churchill offered Mr. Clement Davies a post in the new Conservative Government. This offer was refused. The Liberal Parliamentary Party, however, agreed to support the Government in all measures conceived in the national interest, while at the same time preserving their complete independence as a party.

At the General Election of 1955, 722,395 votes were cast for the Party, 110 seats were contested and 6 Members of Parliament returned.

PRINCIPAL ORGANISATIONS

Liberal Party Organisation: 58, Victoria Street, London, S.W.1. Founded June 1936 in accordance with the Report of the Re-Organisation Commission set up after the General Election of 1935, which recommended that an "all-important step towards rebuilding the Party is to endow it with a strong and united Headquarters", and that the National Liberal Federation, which had existed since 1877, should be wound up and merged in a new system.

Acting Pres. LEONARD F. BEHRENS; Vice-Pres. The Rt. Hon. Lord BEVERIDGE, K.C.B., Lady VIOLET BONHAM CARTER, D.B.E., ELLIOTT DODDS, FRANK BYERS, O.B.E., Sir ANDREW MCFADYEAN, Dr. NATHANIEL MICKLEM, M.A., D.D., Sir RONALD WALKER; Dir-Gen. H. F. P. HARRIS, B.COM., B.SC., ECON; Hon. Treasurers: The Rt. Hon. Lord GRANTCHESTER, Major-Gen. W. H. GREY, C.B., C.M.G., PHILIP FOTHERGILL.

EXECUTIVE

Chairman: GEOFFREY ACLAND

Vice-Chairman: G. GRANVILLE SLACK, B.A., LL.M.

Publications: EDWIN MALINDINE

National League of Young Liberals: 58 Victoria Street, London, S.W.1; f. 1903; Chair. Dr. ROY DOUGLAS; Hon. Sec. TIMOTHY JOYCE; Hon. Treas. EDRYD JONES.

Liberal Candidates' Association: 58 Victoria Street, London, S.W.1; f. 1950, c. 200 mems. Pres. Lord STRABOLGI; Chair. EDWIN MALINDINE; Hon. Secs. LUCIEN FIOR, Miss IVY THURSTON, A.C.A., A.A.C.C.A.

CLUBS

National Liberal Club: Whitehall Place, London, S.W.1. f. 1882, with W. E. Gladstone as its first President; membership 3,700; Chair. Gen. Cttee. HAROLD J. GLANVILLE, J.P.; Vice-Chair. Capt. FRANCIS GRIERSON, G. GRANVILLE SLACK; Sec. C. BILLSON; Chair. Political Cttee. EDWIN MALINDINE; Hon. Sec. T. D. NUDDS; Hon. Librarian L. J. HUMPHREY.

Eighty Club: 11, King's Bench Walk, Temple, E.C.4; f. 1880 with the object of promoting Liberal education among the electorate; Pres. Rt. Hon. Viscount THURSO, K.T., C.M.G.; Chair. Lord GRANTCHESTER, O.B.E., Hon. Treas. Lt.-Col. H. K. SADLER; Sec. Hon. JOHN W. BENSON.

THE BRITISH COMMONWEALTH

THE NATIONAL LIBERAL PARTY

National Liberal Organisation: 2, Lambeth Palace Road, London, S.E.1. The administrative centre of the Liberals who co-operate with the Conservatives and Unionists.

CENTRAL OFFICE

Chair Lt.-Col. Lord TEVIOT, D.S.O., M.C.; Vice-Chair. Lord ENNISDALE, O.B.E., Sir HERBERT BUTCHER, M.P.; Hon. Treas. Sir LEIGHTON SEAGER, Bt., C.B.E., D.L., J.P.; Gen. Sec. PETER ENSOR WALTERS; Political Sec. JACK CHERRY.

NATIONAL LIBERAL COUNCIL

Pres. The Rt. Hon. The Earl of ROSEBERY, K.T., D.S.O., M.C., LL.D.; Vice-Pres. The Dowager Viscountess RUNCIMAN, J.P.; The Dowager The Hon. Lady BARLOW; Rt. Hon. ERNEST BROWN, C.H., M.C.; Lord DOVERCOURT; Sir FREDERIC HAMILTON, Rt. Hon. Sir WILLIAM MABANE, K.B.E.; Sir HENRY MORRIS-JONES, M.C., D.L., J.P.; Col. Sir ALFRED MOWAT, Bt., D.S.O., O.B.E., M.C., J.P.; Sir HENRY PRICE, Bt.; Sir LEIGHTON SEAGER, Bt., C.B.E., D.L., J.P.; Rt. Hon. Sir GEOFFREY SHAKESPEARE, Bt.; Chair. of Exec. Cttee. Lord MILVERTON, G.C.M.G.; Vice-Chair. of Exec. Cttee. Hon. DAVID RHYS; Hon. Sec. and Treas. PETER ENSOR WALTERS.

COMMUNIST PARTY

The Party was formed in 1920 as a result of the coming together of sections of various Socialist organisations on the basis of their agreement with the aims and constitution of the Third (Communist) International (disbanded in 1943). The Party is organised in Districts, some of the larger of which are subdivided. Each district covers a suitable geographical and industrial area, and embraces a number of local branches which are based on towns or groups of adjacent villages or constituencies. Party members are organised in branches based on their place of work or residence, and work either in factory groups or area or ward groups. Membership of the Party involves payment of dues, acceptance of Party policy, and willingness to carry out, according to individual circumstances, activity in furtherance of the Party's objects.

The Party Congress elects the Executive Committee, which elects the Political Committee that is responsible for conducting the day-to-day leadership of Party activity.

The object of the Party is to achieve a Socialist Britain, in which the public ownership of the means of production and exchange shall replace the existing capitalist system, and it believes that this aim can be attained only by the will of the great majority of the people, led by the organised working class.

Its policy for the British Commonwealth, as projected in its programme *The British Road to Socialism*, is national independence of the British people and of all peoples of the British Empire, united in a voluntary and fraternal association to promote mutually beneficial economic exchange and co-operation. Seventeen candidates, none of whom was successful, contested the General Elections of 1955.

Headquarters: 16, King Street, Covent Garden, London, W.C.2; Secretary HARRY POLLITT; press organ; the *Daily Worker*; weekly: *World News and Views*.

INDEPENDENT LABOUR PARTY

Founded in 1839 under the leadership of Keir Hardie, for the propagation of Socialism, the Party took a prominent part in the creation of the Labour Party in 1900. It worked as an affiliated organisation within the Labour Party, giving special support to its own members who ran as Labour candidates, until 1932, when it disaffiliated in order to have freedom to pursue a more revolutionary Socialist policy. Since then it has put forward its own candidates for parliamentary election.

National Administrative Council: ANNIE MAXTON (Chair). ANNE GILL (Treas.), JIM GRAHAM, STAN BIRKETT, DON BATEMAN, JACK SCOTT, BERT VALLANCE, MARK SADLER, CISSIE SMITH, JOHN GILL, DICK BARNES, FRED MOREL, HARRY HARDCASTLE, STAN IVESON.

General and Political Secretary: WILFRED WIGHAM.

Headquarters: 318, Regent's Park Road, London, N.3.

Press Organ: *The Socialist Leader* (Weekly).

Head Office: 48 Dundas Street, Glasgow, C 1.

THE CO-OPERATIVE PARTY

The Party, which is the political organisation of the Co-operative Union of Great Britain, was founded in 1917. It administers the Co-operative Political Fund and seeks to stimulate co-operative and political thought and to secure the election of Co-operative members to the House of Commons and to local government bodies. It is not affiliated to the Labour Party nationally, but there is a joint sub-committee representative of the two executives, and from time to time joint campaigns are conducted. Local Co-operative Parties are eligible for affiliation to divisional Labour Parties, and are usually so affiliated. Co-operative candidates for Parliament are nominated through the machinery of the divisional Labour Parties. The policy and programme of the Co-operative Party is finally determined by the Annual Congress of the Co-operative Union of Great Britain. In December 1954 there were 647 affiliated societies with a total membership of 9,644,701.

Headquarters: 56, Victoria Street, London, S W 1; Sec. J. BAILEY.

THE LEGAL SYSTEM

One of the most cherished liberties of the ordinary British citizen is his freedom from arbitrary arrest and his knowledge that the law regards him as innocent unless he can be proved guilty. Arbitrary arrest and imprisonment were abolished when the famous Habeas Corpus Act was passed in 1679; in its present-day form this Act obliges the officers of the law, on pain of severe penalties, to produce the accused in court within forty-eight hours, to inform him of the exact nature of the charge to be preferred against him and to provide him with the names of the witnesses called against him.

Two factors help to ensure a fair trial: the independence of judges, who are outside the control of the executive and can be removed from office only by a vote of both Houses of Parliament; and the participation of private citizens in all important cases, in the form of a jury of twelve persons (or eight, in some civil cases) with certain property qualifications, who make the actual decision as to the defendant's guilt. Their verdict must be unanimous, otherwise the case must be retried with another jury.

Two kinds of law are administered in the law courts, Statute Law, which is written law and consists mainly of Acts of Parliament, and Common Law, which originated in ancient usage and has not been formally enacted.

Scottish common and statute law differ in some respects from that current in the rest of the United Kingdom, owing to Scotland's retention of her own legal system under the Act of Union with England of 1707.

CRIMINAL COURTS

Petty Sessions, or Magistrates' Courts, the courts of lowest jurisdiction, are presided over by Justices of the Peace, who are unpaid laymen appointed by the Crown. They have power to try all non-indictable offences, and some of the less serious indictable offences, if the accused so desires. The trial of all criminal offences must begin by a hearing in the Petty Sessions. The Justices must decide whether the evidence is sufficient for the accused to be remitted for trial at the Quarter Sessions or Assizes, according to the seriousness of the offence.

Magistrates also have power to grant, renew, transfer or withdraw licences for the sale of intoxicating drinks and to see that the regulations governing the construction of licensed premises are carried out.

Suitably qualified Justices of the Peace are chosen in each large borough or county to conduct trials of young offenders in special juvenile courts, from which the public is excluded.

In large towns, where there is too much work for unpaid Justices to manage, a stipendiary magistrate or, in London, a Metropolitan Magistrate, is appointed by the Crown to carry out the functions of a magistrates' court.

Quarter Sessions. The Court of Quarter Sessions of a county is composed of the Justices of the Peace for the county under the presidency of a legally qualified Chairman (a barrister or solicitor of experience). In large towns a Recorder, who is a salaried barrister, sits alone.

Quarter Sessions have jurisdiction over the less serious indictable offences excluding, among others, those carrying the penalties of death or life imprisonment.

Assizes. Sessions of the Courts of Assize, which try the most serious indictable offences, are held in county towns and the larger cities three times a year and are presided

over by a judge of the Queen's Bench Division (*see* "High Court of Justice" below) or a Commissioner of Assize, i.e. a barrister commissioned to act as a judge. The Central Criminal Court in London (the Old Bailey) acts in the main as the Assize Court for London and its environs.

From the Quarter Sessions or Assizes appeal lies to the **Court of Criminal Appeal**, consisting of three Queen's Bench judges, one of whom is normally the Lord Chief Justice.

The final court of appeal in the United Kingdom for both criminal and civil cases is the **House of Lords**, sitting as a Law Court. The only peers who have a right to take part in these sessions are the Lord Chancellor, ex-Lord Chancellors, ex-judges who are peers and seven Lords of Appeal in Ordinary, who are paid judges with life peerages.

CIVIL COURTS

County Courts. A high proportion of civil actions are tried in these courts, which are presided over by a paid judge, sitting alone, except when he allows an application, by one of the parties to the trial, for a jury which, in these cases, consists of eight persons instead of the twelve usual in criminal courts. Subjects coming under the jurisdiction of County Courts include rent restriction, agricultural holdings and all common law cases except those involving the personal reputation of the defendant. Some divorce cases are at present heard in County Courts.

High Court of Justice. Certain civil cases are heard in the three divisions of this court—Chancery, Queen's Bench and Probate, Divorce and Admiralty. Chancery deals with enforcement of trusts, mortgages and contracts to sell land, construction of wills, and company, bankruptcy, revenue and patent proceedings. Queen's Bench tries civil actions for damages for breach of contract or for tort and deals with some divorce cases. The judges of this division hear also criminal cases at Assizes (*see above*). The third division deals with probate of wills, matrimonial causes and shipping cases, such as disputes over collisions and claims for salvage.

The judges of these three divisions have the title of Justice of the High Court.

HIGH COURT OF JUSTICE

CHANCERY DIVISION

Lord High Chancellor: Rt. Hon. Viscount KILMUIR, G.C.V.O.

Judges

Hon. Sir HARRY BEVIR VAISEY.
Hon. Sir RONALD FRANCIS ROXBURGH.
Hon. Sir HENRY WYNN-PARRY.
Hon. Sir CHARLES EUSTACE HARMAN.
Hon. Sir HAROLD OTTO DANCKWERTS.
Hon. Sir GEORGE HAROLD LLOYD-JACOB.
Hon. Sir GERALD RITCHIE UPJOHN, C.B.E.

QUEEN'S BENCH DIVISION

Lord Chief Justice of England: Rt. Hon. Lord GODDARD.

Judges

Hon. Sir GEORGE MALCOLM HILBERY.
Hon. Sir ROLAND GIFFARD OLIVER, M.C.
Hon. Sir WINTRINGHAM NORTON STABLE, M.C.

THE BRITISH COMMONWEALTH

Hon. Sir JAMES DALE CASSELS.
Hon. Sir HUGH IMBERT PERIAM HALLETT, M.C.
Hon. Sir GONNE ST. CLAIR PILCHER, M.C.
Hon. Sir GEORGE JUSTIN LYNSEY.
Hon. Sir AUSTIN ELLIS LLOYD JONES, M.C.
Hon. Sir LAWRENCE AUSTIN BYRNE.
Hon. Sir FREDERIC AKED SELLERS, M.C.
Hon. Sir DONALD LESLIE FINNEMORE.
Hon. Sir GEOFFREY HUGH BENBOW STREATFEILD, M.C.
Hon. Sir BENJAMIN ORMEROD.
Hon. Sir GERALD OSBORNE SLADE.
Hon. Sir EDWARD HOLROYD PEARCE.
Hon. Sir PATRICK ARTHUR DEVLIN.
Hon. Sir WILLIAM GORMAN.
Hon. Sir PATRICK REDMOND JOSEPH BARRY, M.C.
Hon. Sir TERENCE NORBERT DONOVAN.
Hon. Sir WILLIAM LENNOX MCNAIR.
Hon. Sir COLIN HARGREAVES PEARSON, C.B.E.
Hon. Sir CECIL ROBERT HAVERS
Hon. Sir HILDRETH GLYN-JONES.
Hon. Sir KENNETH DIPLOCK.
Hon. Sir JOHN PERCY ASHWORTH, M.B.E.

PROBATE, DIVORCE AND ADMIRALTY DIVISION

President : Rt. Hon. Lord MERRIMAN, G.C.V.O., O.B.E., LL.D.

Judges

Hon. Sir HUBERT JOSEPH WALLINGTON.
Hon. Sir HENRY WILLIAM BARNARD.
Hon. Sir HENRY FORDON WILLMER, O.B.E.
Hon. Sir CHARLES ARTHUR COLLINGWOOD.
Hon. Sir SEYMOUR EDWARD KARMINSKI.
Hon. Sir WILLIAM ARTHIAN DAVIES.
Hon. Sir ERIC SACHS, M.B.E., T.D.

Court of Appeal. Appeal lies in civil cases to this court from County Courts and from the High Court of Justice. The Court of Appeal and the High Court of Justice together constitute the Supreme Court of Judicature.

The Master of the Rolls is the effective head of the Court of Appeal, and is assisted by eight Lords Justices of Appeal. The Lord Chancellor and the Lord Chief Justice are among the *ex-officio* members.

COURT OF APPEAL

Ex-Officio Judges

Lord High Chancellor: Rt. Hon. Viscount KILMUIR, G.C.V.O.
Lord Chief Justice of England: Rt. Hon. Lord GODDARD.
Master of the Rolls: Rt. Hon. Sir FRANCIS RAYMOND EVERSLED.
President of Probate, Divorce and Admiralty Division: Rt. Hon. Lord MERRIMAN, G.C.V.O., O.B.E., LL.D.

Lords Justices of Appeal

Rt. Hon. Sir JOHN EDWARD SINGLETON, P.C.
Rt. Hon. Sir ALFRED THOMPSON DENNING, P.C.
Rt. Hon. Sir DAVID LLEWELYN JENKINS, P.C.
Rt. Hon. Sir (WILLIAM) NORMAN BIRKETT.
Rt. Hon. Sir FRANCIS LORD CHARLTON HODSON, M.C.
Rt. Hon. Sir JOHN WILLIAM MORRIS, C.B.E., M.C.
Rt. Hon. Sir CHARLES ROBERT RITCHIE ROMER, C.B.E.
Rt. Hon. Sir HUBERT LISTER PARKER.

In civil, as in criminal, cases the **House of Lords** is the final court of appeal.

HOUSE OF LORDS

President: The LORD HIGH CHANCELLOR.

Lords of Appeal in Ordinary

Rt. Hon. Viscount SIMONDS.

Rt. Hon. Lord OAKSEY, D.S.O., T.D.
Rt. Hon. Lord MORTON, M.C.
Rt. Hon. Lord REID.
Rt. Hon. Lord TUCKER.
Rt. Hon. Lord RADCLIFFE, G.B.E.
Rt. Hon. Lord COHEN
Rt. Hon. Lord KEITH.
Rt. Hon. Lord SOMERVELL.

Judicial Committee of the Privy Council. This standing committee of the Privy Council, consisting of the Law Lords of the United Kingdom (the Lord Chancellor, ex-Lord Chancellors and Lords of Appeal in Ordinary) and other Privy Counsellors who have held high judicial office, is the highest court of appeal on certain issues concerning Australia, New Zealand, Ceylon and United Kingdom dependent territories. The Lord Chancellor selects a board of three or five from the Committee by invitation for each particular case.

The following represent the Commonwealth:

Rt. Hon. Sir JOHN GREIG LATHAM, G.C.M.G.
Rt. Hon. Sir GEORGE EDWARD RICH, K.C.M.G.
Rt. Hon. N. J. DE WET.
Rt. Hon. H. V. EVATT.
Rt. Hon. E. F. WATERMEYER.
Rt. Hon. THIBADEAU RINFRET.
Rt. Hon. Sir HAROLD ERIC BARROWCLOUGH.
Rt. Hon. Sir OWEN DIXON, K.C.M.G.

SCOTTISH LEGAL SYSTEM

CRIMINAL COURTS

Minor offences, as in the rest of the United Kingdom, are dealt with in magistrates' courts.

Sheriff Court. Most criminal actions, including all but the most serious offences, are heard in this court. Each of the twelve sheriffdoms of Scotland has a Sheriff and a number of Sheriffs-Substitute, who conduct the proceedings.

The **High Court of Justiciary** is the supreme criminal court in Scotland. All the most serious criminal cases are taken there in the first instance and appeal may be made to it from the Sheriff Court; there is, however, no further appeal to the House of Lords.

The judges of this court are known as Lord Commissioners of Justiciary and are headed by the Lord Justice General. Apart from their criminal jurisdiction in this court, these same fourteen judges are also judges of the Court of Session (see below) in civil cases. The Lord Justice General is also the President of the Court of Session.

CIVIL COURTS

The **Sheriff Court** tries civil as well as criminal cases, its civil side being roughly equivalent to the English County Courts. Appeal may be made to the Court of Session.

Court of Session. This is the supreme civil court in Scotland. It has an Inner House and an Outer House. The Inner House, which has two divisions of equal standing, each consisting of three judges under the presidency of the Lord President and the Lord Justice Clerk respectively, is mainly an appeal court, whence further appeal may be made to the House of Lords. The Outer House deals with the major civil cases and all divorce actions.

The judges are those of the High Court of Justiciary, sitting in a civil capacity as judges of the Court of Session.

UNITED KINGDOM

COURT OF SESSION

Lord CAMERON.

RELIGION

THE CHURCH OF ENGLAND

The Church of England is the Established Church, and as such acknowledges the authority of Parliament in matters in which secular authority is competent to exercise control. Queen Elizabeth I was declared "supreme Governor in earth" of the Church of England, and the Sovereign is consecrated to this office at his coronation.

In England there are two Provinces, Canterbury and York. The former contains 29, the latter 14, dioceses. Each Province has its ancient Houses of Convocation, the Upper House consisting of the Diocesan Bishops, and the Lower House of Deans of cathedrals, the two senior Archdeacons of each diocese in each Province, and the elected representatives of the clergy in each diocese.

By the Church of England Assembly (Powers) Act, 1919 (usually called the Enabling Act) the Constitution of the National Assembly of the Church of England ("Church Assembly") received statutory recognition in 1920, with power, subject to the control and authority of Parliament, of initiating legislation on all matters concerning the Church of England. In the discharge of this duty the Assembly has passed since its establishment 117 Measures (August 1954) which have received the Royal Assent, and these have the force of Acts of Parliament.

The Church Assembly consists of three Houses; the House of Bishops, composed of 43 diocesan Bishops; the House of Clergy, consisting of the Lower Houses of Convocation of Canterbury and York, numbering 344 members; and the House of Laity, consisting of 344 elected diocesan representatives.

The Archbishops and the 24 senior Bishops sit in the House of Lords.

The Province of Canterbury

Archbishop of Canterbury, Primate of All England and Metropolitan: Most Rev. and Rt. Hon. GEOFFREY FRANCIS FISHER, P.C., D.D.

The Province of Canterbury includes 29 dioceses:

London	Rt. Rev. H. C. MONTGOMERY-CAMPBELL, M.C., D.D.
Winchester	Rt. Rev. A. T. P. WILLIAMS, D.D.
Bath and Wells	Rt. Rev. H. W. BRADFIELD, D.D.
Birmingham	Rt. Rev. J. L. WILSON, C.M.G., D.D.
Bristol	Rt. Rev. F. A. COCKIN, D.D.
Chelmsford	Rt. Rev. S. F. ALLISON, D.D.
Chichester	Rt. Rev. G. K. A. BELL, D.D.
Coventry	(Vacant)
Derby	Rt. Rev. A. E. J. RAWLINSON, D.D.
Ely	Rt. Rev. H. E. WYNN, D.D., S.T.D.
Exeter	Rt. Rev. R. C. MORTIMER, D.D.
Gloucester	Rt. Rev. W. M. ASKWITH, D.D.
Guildford	(Vacant)
Hereford	Rt. Rev. TOM LONGWORTH, D.D.
Leicester	Rt. Rev. R. R. WILLIAMS, D.D.
Lichfield	Rt. Rev. A. S. REEVE, D.D.
Lincoln	Rt. Rev. M. H. HARLAND, D.D.
Norwich	Rt. Rev. P. M. HERBERT, D.D.
Oxford	Rt. Rev. H. J. CARPENTER, M.A.
Peterborough	Rt. Rev. SPENCER LEESON, D.D.
Portsmouth	Rt. Rev. W. S. L. FLEMING, D.D.
Rochester	Rt. Rev. C. M. CHAVASSE, O.B.E., M.C., D.D.

St. Albans	Rt. Rev. E. M. GRESFORD JONES, D.D.
St. Edmundsbury and Ipswich	Rt. Rev. A. H. MORRIS, D.D.
Salisbury	Rt. Rev. W. L. ANDERSON, D.S.C., D.D.
Southwark	Rt. Rev. B. F. SIMPSON, M.C., D.D.
Truro	Rt. Rev. E. R. MORGAN, M.A.
Worcester	Rt. Rev. L. M. CHARLES-EDWARDS.

The Province of York

Archbishop of York, Primate of England and Metropolitan:

The Most Rev. A. M. RAMSEY, D.D.

The Province of York includes 14 dioceses:

Durham	(Vacant)
Blackburn	Rt. Rev. W. H. BADDELEY, D.S.O., M.C., M.A., S.T.D.
Bradford	Rt. Rev. F. D. COGGAN, M.A., B.D.
Carlisle	Rt. Rev. THOMAS BLOOMER, D.D.
Chester	Rt. Rev. G. A. ELLISON, M.A.
Liverpool	Rt. Rev. C. A. MARTIN, D.D.
Manchester	Rt. Rev. W. D. L. GREER, D.D.
Newcastle	Rt. Rev. N. B. HUDSON, D.S.O., M.C., D.D.

Warrington (Liverpool)	Rt. Rev. C. ROBERT CLAXTON, M.A.
Hulme (Manchester)	Rt. Rev. K. V. RAMSEY, M.A., B.D.
Middleton (Manchester)	Rt. Rev. FRANK WOODS, M.A.
Knaresborough (Ripon)	Rt. Rev. H. V. V. DE CANDOLE, M.A.
Pontefract (Wakefield)	Rt. Rev. G. W. CLARKSON, M.A.

THE CHURCH IN WALES

THE PROVINCE OF WALES

The Province of Wales was created as a result of the Welsh Church Act of 1914, which took effect on March 31st, 1920, and forcibly separated the four Welsh Dioceses from the Province of Canterbury. On January 6th, 1920, the Governing Body passed a resolution approving the creation of a new Province, and requesting the Lord Archbishop of Canterbury to make such provisions as were in his power.

On April 1st, 1920, His Grace issued the necessary decree and on April 7th the Welsh bishops met in the Old Parish Church at Llandrindod and elected the Rt. Rev. Alfred George Edwards, D.D., Bishop of St. Asaph, as the first Archbishop of Wales. This election was approved by the Governing Body of the Church in Wales on April 8th, 1920, by acclamation, and confirmed by the Welsh bishops in Synod at Holy Trinity Church, Llandrindod, on the same day. On June 1st, 1920, the Archbishop was enthroned at St. Asaph by the Archbishop of Canterbury.

The Province is practically coterminous with Wales and Monmouthshire, with the exception of a few border parishes which, under the Welsh Church Act, voted themselves out of the Church in Wales.

The Province comprises six dioceses, viz.,

St. Asaph, St. David's, Bangor, Llandaff, Monmouth, and Swansea and Brecon.

There are 14 Archdeaconries, 82 Rural Deaneries, 908 Incumbencies, and approx. 450 Assistant Curacies in the Province. It comprises an area of 5,164,111 acres, and the population, according to the census of 1951, numbered 2,596,986. There are approx. 1,700 churches.

General Office: The Representative Body of the Church in Wales, 39 Cathedral Road, Cardiff. Sec. and Treas. L. S. WHITEHEAD.

Archbishop of Wales and Bishop of Llandaff: The Most Rev. JOHN MORGAN, D.D.

Assistant Bishop in Wales: (Vacant).

RELIGION

The Church in Wales now comprises 6 dioceses; those, other than Llandaff, being:

St. David's	Rt. Rev. W. T. HAVARD, M.C., D.D.
Monmouth	Rt. Rev. A. E. MORRIS, M.A., D.D.
Bangor	Rt. Rev. J. C. JONES, M.A., D.D.
St. Asaph	Rt. Rev. D. D. BARTLETT, D.D.
Swansea and Brecon	Rt. Rev. W. G. H. SIMON, M.A.

THE ROMAN CATHOLIC CHURCH IN GREAT BRITAIN

The Roman Catholic population of Great Britain is estimated at over 3,800,000.

There are six Archbishoprics:

Westminster: His Eminence Cardinal BERNARD GRIFFIN.

Birmingham: Most Rev. FRANCIS GRIMSHAW.

Liverpool: Most Rev. WILLIAM GODFREY.

Cardiff: Most Rev. MICHAEL McGRATH.

St. Andrews and Edinburgh: Most Rev. GORDON GRAY.

Glasgow: Most Rev. DONALD CAMPBELL.

The following is a list of the Roman Catholic Bishops in Great Britain (14 England and Wales, 6 Scotland):

Aberdeen	Rt. Rev. FRANCIS WALSH, W.F.
Argyll and the Isles	Rt. Rev. KENNETH GRANT.
Brentwood	Rt. Rev. BERNARD WELL.
Clifton	Rt. Rev. JOSEPH RUDDERHAM.
Dunkeld	Rt. Rev. W. A. HART.
Galloway	Rt. Rev. JOSEPH MCGEE.
Hexham and Newcastle	Rt. Rev. JOSEPH MCCORMACK.
Lancaster	Rt. Rev. THOMAS EDWARD FLYNN.
Leeds	Rt. Rev. JOHN CARMEL HEEMAN.
Menevia	Rt. Rev. JOHN PETIT.
Middlesbrough	(Vacant)
Motherwell	Rt. Rev. JAMES SCANLAN.
Northampton	Rt. Rev. J. LEO PARKER.
Nottingham	Rt. Rev. EDWARD ELLIS.
Paisley	Rt. Rev. JAMES BLACK.
Plymouth	Rt. Rev. CYRIL RESTIAUX.
Portsmouth	Most Rev. JOHN HENRY KING.
Salford	Rt. Rev. GEORGE ANDREW BECK, A.A.
Shrewsbury	Rt. Rev. JOHN A. MURPHY.
Southwark	Rt. Rev. CYRIL COWDEROY.

Auxiliary Bishops

Birmingham	Rt. Rev. HUMPHREY BRIGHT, Bishop of Soli.
Lancaster	Rt. Rev. THOMAS B. PEARSON, Bishop of Sinda.
Liverpool	Rt. Rev. JOSEPH HALSALL, Bishop of Zabi.
Middlesbrough	Rt. Rev. GEORGE BRUNNER, Bishop of Elide.
Westminster	Most Rev. EDWARD MYERS, Archbishop of Beraca. Rt. Rev. GEORGE CRAVEN, Bishop of Sebastopolis.

THE SCOTTISH CHURCHES

The Church of Scotland: 121 George Street, Edinburgh.

The National Church of Scotland was reformed in 1560, and became Presbyterian in doctrine and constitution. From 1572 to 1592 the Church was rent by the struggle between the forces of Presbyterianism and Episcopacy; but in the latter year it was again established on a Presbyterian basis. This settlement endured until the Restoration of King Charles II; and then from 1660 to 1688 Episcopacy was forced upon the Church by Royal and Parliamentary authority. The Revolutionary settlement of 1690, however, restored to the

THE BRITISH COMMONWEALTH

Church the constitution of 1592. In 1921 "The Church of Scotland Act" was passed, by which the articles declaring the full spiritual freedom of the Church are recognised as lawful. In May, 1925, "The Church of Scotland (Property and Endowments) Act" became law, and made over to the Church churches, manse and endowments in absolute property, vesting the future control of them in Trustees. Immediately the General Assemblies of the Church of Scotland and the United Free Church appointed a Committee to prepare a basis and plan of union, and the union of the two Churches was effected in 1929. The Moderator of the General Assembly of the Church of Scotland for 1956 is the Rt. Rev. Dr. R. F. V. SCOTT, D. LITT., D. D., and the Lord High Commissioner to the General Assembly The Duke of HAMILTON; 1,292,127 members; publ. *Life and Work* (monthly).

The United Free Church of Scotland: 11 Newton Place, Glasgow, C.3; f. 1929; Moderator General Assembly (1955) Rev. J. HOWIE HALDANE; Sec. Mrs. WM. BELL; organs *Steadfast*, *Cheerio* (monthlies) Congregations 118, ministers and missionaries 100, members 24,688.

The Free Church of Scotland: 15 North Bank Street, Edinburgh; Moderator General Assembly Rev. J. M. MORRISON, Gen. Treas. J. W. BAXTER, B. COM.; Deputy Treas. G. J. BREWSTER; Assembly Clerk Rev. WM. MACLEOD, M.A., J.P.; Deputy Clerk Rev. Prof. W. J. CAMERON, B.D.; 160 congregations; publs. *Monthly Record*, *The Instructor* (monthly).

The Episcopal Church in Scotland: was once the Established Church of Scotland, was disestablished and disendowed in 1689, and thereafter suffered great persecution for 100 years; is in full communion with all branches of the Anglican Communion and is organised in 7 dioceses—those of Aberdeen and Orkney, Argyll and The Isles, Brechin, Edinburgh, Glasgow and Galloway, Moray, Ross and Caithness, St. Andrews, Dunkeld and Dunblane. There is a Bishop in each diocese; one of them is elected by the other Bishops as The Primus; Churches, mission stations, etc. 379, parsonages 128, clergy 331, communicants 55,601. The following is a list of the Bishops: Argyll, T. HANNAY, D.D. (Primus); Aberdeen, (Vacant); Brechin, ERIC GRAHAM, D.D.; Edinburgh, KENNETH C. H. WARNER, D.S.O., D.D.; Glasgow, Most Rev. F. H. MONCRIEFF, M.A.; Moray, D. MACINNES, M.B.E., M.C.; St. Andrews, J. W. A. HOWE, M.A., B.D.; Registrar, DONALD B. SINCLAIR, W.S., 43 Castle Street, Edinburgh.

THE FREE CHURCHES

Baptist Union of Great Britain and Ireland: Baptist Church House, 4 Southampton Row, London, W.C.1; Pres. (1955-56) Rev. HENRY COOK, M.A.; Sec. Rev. E. A. PAYNE, M.A., D.D.

The Baptists have a similar form of government to the Congregationalists, but differ from them in the practice of baptism by immersion of believers. They are grouped in associations of Churches, the majority of which belong to the Union; f. 1813; members in British Isles (1954) 325,896. Press organ *The Baptist Times*, weekly.

Calvinistic Methodist (Presbyterian) Church of Wales: f. as separate Church 1811; churches 1,437, ministers 742, members 152,305; Moderator General Assembly Rev. J. R. EVANS, B.A., B.D., Cardiff. Sec. Rev. H. R. WILLIAMS, B.A., Dol Gaer, Gaerwen, Anglesey.

The Church of Christ, Scientist: Established by Mary Baker Eddy in Boston, U.S.A., in 1892, where it still has its headquarters, the Church has 347 branch churches and

societies in Great Britain and Ireland. The Governing Body of The Mother Church in Boston is The Christian Science Board of Directors. The Christian Science Publishing Society includes among its publications *The Christian Science Journal*, the *Christian Science Sentinel* (weekly), *The Christian Science Quarterly*, the international daily newspaper *The Christian Science Monitor*; British Isles Bureau: Connaught House, 163-164 Strand, London, W.C.2.

Church of Jesus Christ of Latter-day Saints: 149 Nightingale Lane, London, S.W.12; Pres. of British Mission CLIFTON G. M. KERR. Publ. *Millennial Star* (monthly).

Congregational Union of England and Wales: Memorial Hall, Farringdon Street, London, E.C.4; Chair. Rev. W. GORDON ROBINSON, M.A., PH.D. (1955-56); Chair-Elect Rev. ELSIE CHAMBERLAIN; Sec. Rev. S. M. BERRY, M.A., D.D.

The leading feature of Congregational policy is the autonomous character of the local church, the right of each individual member to take part in the church's government, and its independence of all external ecclesiastical authority. Two orders only are recognised; that of the pastor or minister elected by the free vote of the members of each individual church; and deacons (laymen or women, elected by the membership of the church), who supervise its temporal affairs and assist the minister in the administration of the Lord's Supper and in such pastoral work as may be necessary.

In the British Isles there are 2,537 Congregational ministers, 4,037 churches and 339,257 communicants.

Free Church Federal Council: 27 Tavistock Square, London W.C.1; central Council for the co-ordination of the work of the Free Churches throughout the country; Moderator (1955-56) Rev. F. P. COPLAND SIMMONS, M.A.; Gen. Sec. Rev. A. D. HARCUS, O.B.E., M.A., D.D.; Asst. Sec. Rev. D. HUBERT THOMAS, M.A.; Financial Sec. R. J. SPENCER, F.C.C.S.; Youth Sec. Rev. KENNETH HYDE, B.D.

General Assembly of Unitarian and Free Christian Churches: 15 Gordon Square, London, W.C.1; Pres. (1955-56) Rev. F. A. BULLOCK; Hon. Treas. RONALD P. JONES, M.A.; Sec. Rev. JOHN KIELTY; est. 1928.

There are between three and four hundred congregations included in the Assembly, some twenty of which are in the Dominions. Adult membership is estimated at 30,000. The congregations are self-governing, but for common purposes and mutual benefit they are united in District Associations and the General Assembly. Publs. *The Inquirer* (weekly), *The Unitarian* (monthly).

The Methodist Church: 1 Central Buildings, London, S.W.1. The Church was founded in 1932 by the union of the Wesleyan Methodist, Primitive Methodist and United Methodist Churches. The Wesleyan Methodist Church was founded in 1739 as a result of the evangelical mission work conducted by Rev. John Wesley, M.A., a priest of the Church of England, and others, including his brother, Rev. Charles Wesley, M.A. The doctrinal standards are contained in certain of John Wesley's sermons and his Notes on the New Testament. The Primitive Methodist Church was founded in 1807 by Hugh Bourne and William Clowes, two officials of the Wesleyan Methodist Church, who were excommunicated for conducting open-air services in defiance of the expressed will of the Conference. The Methodist Churches throughout the world represent a total membership of over thirteen million.

The chief court of the Church is the Annual Conference, which consists of ministers and laymen. The

UNITED KINGDOM

Church throughout Great Britain is divided into 46 Districts, and these hold their Synod Meetings in September and May. The Districts are divided into Circuits, which hold a Quarterly Meeting, made up of representatives from the churches within the Circuit. There are also local church courts.

Pres. of the Methodist Church and of the Conference 1955-56 Rev. LESLIE D. WEATHERHEAD, M.A., D.D., PH.D., D.LITT.; Pres. Designate Rev. HAROLD C. WALTERS; Sec. Rev. ERIC W. BAKER, M.A., PH.D.

The chief Methodist press organs are the *Methodist Recorder* and *Joyful News* (weeklies), *The Methodist Magazine* (monthly).

Moravian Church in Great Britain and Ireland: temporary address, 42 Onslow Gardens, Muswell Hill, London, N. 10. The Unitas Fratrum was founded in 1457 in Bohemia by Brother Gregory amongst those who followed the teaching of John Hus. The first English congregation was organised in London in 1742 amongst members of the Fetter Lane Society, founded by James Hutton and developed by Wesley and Bohler. Communicant members in England and Ireland number 3,247. Chair. Admin. Church Board Rev. F. E. BIRTILL; Treas. Rev. J. H. FOY; Sec. Rev. L. J. BRITTON. Publ. *Moravian Missions* (monthly), *Moravian Messenger* (monthly), *Moravian Almanack* (annual).

Presbyterian Church of England: Presbyterian Church House, 134 George Street, London, W.1; Trinitarian and Evangelical; mems 69,513 (Dec 31st, 1954); congregations 334; Moderator (1955-56) Rt. Rev. R. E. FENN, B.A.; Moderator Designate Rev. K. D. KEAY, M.A.; Gen. Sec. Rev. F. G. HEALEY, M.A.; publ. *Presbyterian Messenger* (monthly).

The Religious Society of Friends: Friends House, Euston Road, London, N.W.1; founded by George Fox, about the middle of the 17th century, the Friends ("Quakers") number in Great Britain 21,194; Clerk (Chair) HAROLD REED; Recording Clerk (Sec) STEPHEN J. THORNE. The Society, as a religious organisation, works actively for social reform and international peace and justice.

Its chief unofficial press organ is *The Friend* (weekly).

Salvation Army: Memorial Training College, Denmark Hill, London, S.E.5. General of the Army WILFRED KITCHING; Chief of Staff Commissioner EDGAR DIBDEN; Int. Secs. Commr. JOSEPH B. SMITH (British Dominions and the Americas), Commr. GORDON SIMPSON (EUROPE), Commr. ERNEST BIGWOOD (Asia and Africa); Commr. W. EBBS (International Public Relations Chief). The aim of the Army is personal salvation through belief in Jesus Christ. Founded in 1865, by the Rev. William Booth, as a Christian Mission in the East End of London, the first headquarters ("Eastern Star") was opened in 1876 in Whitechapel Road, London, E. In 1878 it became the Salvation Army, and William Booth assumed the title of General, the uniform being introduced throughout the Army in 1879. In 1880 the Army extended to U.S.A., in 1881 to France, and since then its operations have extended to 85 countries and colonies. In addition to its purely evangelical work, the Army has branches for Social Work, Migration, Insurance, etc. During the war years, welfare work among Service men and women greatly increased, and specially trained Salvation Army officers are now at work in the distressed areas of Europe and the East. Publs. in Great Britain include *The War Cry*, *The Young Soldier*, *The Musician*, *All the World*, *The Warrior*, *The Deliverer*, *The Musical Salvationist*, etc. The number of periodicals published in various languages totalled 129 in 1955.

RELIGION

The Spiritualists' National Union Ltd.: 12 Tib Lane, Manchester, 2; Pres. HARRY DAWSON; Gen. Sec. RICHARD ELLIDGE. An organisation of 509 Spiritualist churches, societies and 22,000 individual members, founded in 1891 (and incorporated 1901) for the advancement of Spiritualism as a religion and religious philosophy; is a Trust Corporation officially recognised as the central and national body representing the Spiritualists of Great Britain.

BUDDHISM

Buddhist Society, The: 16 Gordon Square, W.C.1; f. 1924; the Society studies every phase of Buddhism and the whole field of philosophy and religion from the Buddhist point of view, holds members' classes and public lectures at headquarters and publishes books on Buddhism; groups have been established in Brighton and Cambridge, Founder-Pres. CHRISTMAS HUMPHREYS; Vice-Pres. Miss. I. B. HORNER, Dr. E. CONZE, RONALD FUSSELL; Gen. Sec. Miss JOAN P. POPE; publ. *The Middle Way* (quarterly).

ISLAM

The Muslim community in the United Kingdom, which is estimated to number about 75,000, consists mainly of persons of foreign origin but includes a few hundred British converts. The chief concentrations of Muslims are in London, South Wales, Liverpool and Manchester. There are at present five mosques and a sixth is under construction. The chief centre of Islam in the United Kingdom is the Shah Jehan Mosque at Woking, Surrey, which was founded in 1889, Imam Dr. P. M. ABDULLAH.

JEWISH COMMUNITY

The Jewish Community of Great Britain and Northern Ireland is estimated to number 450,000 (including refugees).

The Chief Rabbi of the United Hebrew Congregations of the British Commonwealth of Nations is Rabbi ISRAEL BRODIE, B.A., B.LITT. Office, 4 Creechurch Place, Aldgate, London, E.C.3. Sec. M. WALLACH, B.Sc. (ECON.)

The Court of the Chief Rabbi (Beth Din) is at Adler House, Adler Street, London, E.1; Clerk to the Court M. CARR.

The religious organisation falls into the following main divisions.

Federation of Synagogues: f. 1887; Pres. H. LEDERMAN, Exec. Dir. JULIUS JUNG, 64 Leman Street, London, E.1; Sec. SIMON WILSACK, F.C.C.S.; has some 69 constituent and affiliated synagogues with a total membership of about 15,000 families.

The United Synagogue: Woburn House, Upper Woburn Place, London, W.C.1; f. 1870 by Act of Parliament, Pres. of the Council Hon. EWEN E. S. MONTAGU, C.B.E., D.L., Q.C.; Vice-Pres. HENRY GLEDHILL, Alderman

THE BRITISH COMMONWEALTH

BERNARD N. WALEY-COHEN; Sec. **ALFRED H. SILVERMAN**, A.S.A.A.; 32,000 members.

West London Synagogue of British Jews: 33 Seymour Place, London, W.1; f. 1840; Pres. **OWEN E. MOCATTA**; **ALAN SILVERMAN**; Senior Minister Rabbi **Harold F. REINHART**, D.D.; about 2,000 members. Publ. *Synagogue Review* (monthly).

CHRISTIAN SOCIETIES (excluding Roman Catholic)

Baptist Missionary Society: 93 Gloucester Place, London, W.1; f. 1792; Foreign Sec. Rev. V. E. W. **HAYWARD**, M.A.; Home Sec. Rev. J. B. **MIDDLEBROOK**, M.A. Works in India, Pakistan, Ceylon, Congo, the West Indies, Brazil, Hong Kong and Malaya, in 95 stations and sub-stations, through 351 European missionaries and 3,066 native workers. Its church membership is 93,007 and its Christian community 554,247. Its annual expenditure is £270,000.

British Council of Churches: 10 Eaton Gate, London, S.W.1; f. 1942 to carry on the work formerly done separately by the Council on the Christian Faith and Common Life, the Commission of the Churches for International Friendship and Social Responsibility, and the British Section of the World Conference on Faith and Order. Composed of representatives of the Christian Churches of Great Britain and Ireland (except the Roman Catholic Church) and of Inter-denominational Organisations. Functions: (i) to facilitate common action by the Churches in evangelistic enterprise, in promotion of international friendship, in stimulating a sense of social responsibility and in guiding the activities of the Churches for the welfare of youth; (ii) to promote co-operation in study and to ensure adequate British participation in the studies promoted by the World Council of Churches, (iii) to assist the growth of ecumenical consciousness in the members of all Churches and generally to promote Christian unity. The Council works through Education, Inter-Church Aid, International, Social Responsibility, Faith and Order, and Youth Departments. Pres. The Archbishop of **CANTERBURY**, Vice-Pres. Very Rev. Prof. **JAMES PITT WATSON**, D.D., Mrs. **M. B. RIDLEY**; Chair of Exec. Committee (Vacant), Chair of Committee on Finance and Administration Rev. Dr. **HUGH MARTIN**, C.H.; Gen. Sec. Rev. **KENNETH SLACK**, M.B.E.

Brotherhood Movement (Inc.): f. 1875; Nat. Pres. **G. R. THOMAS**, M.P.; Nat. Sisterhood Pres. Mrs. **G. GIBBS**; Gen. Sec. **A. E. H. GREGORY**, 17 Broadlands Road, Hockley, Essex, 70,000 members; publ. *Outlook* (monthly).

Objects: To extend the principles and practice of Christian brotherhood into every department of human life at home and abroad. To promote the establishment of Brotherhoods and Sisterhoods and kindred societies. To promote international peace and the fellowship of nations.

China Inland Mission: Newington Green, London, N.16; f. 1865; Home Dir. Rev. **G. A. SCOTT** (acting); 475 members; publ. *China's Millions*.

Object: Missionary work in Inland China and other parts of the Far East.

Christian Evidence Society (Inc.): f. at Lambeth Palace 1870; Central Office, Rectory Chambers, St. Mary-at-Hill, London, E.C.3; Pres. The Archbishop of **CANTERBURY**; Chair. of the Society Lord **SELBORNE**, C.H., P.C.; Sec. Rev. **F. H. E. HARFITT**, O.C.F., F.R.G.S., F.R.S.A., M.R.S.L., Rector, St. Mary-at-Hill, E.C.3.

Object: Defence of the Christian faith.

Church Army: 55 Bryanston Street, London, W.1; f. 1882, inc. 1892; the main object of the Society was to give scope to laymen and women for full-time Christian work within the Church of England, and this characteristic has been maintained ever since. The Church Army works on the principle of combined spiritual and temporal influence. All work is done under Episcopal authority and in co-operation with the clergy. The Society conducts homes, hostels, and clubs of many kinds for men, women, girls, and children. It has a Training College for Evangelists and Sisters. In the spiritual sphere it has itinerant mission vans, news teams, Evangelists and Sisters in parishes, workers in the foreign field, daughter societies in Australia, Canada, New Zealand, and U.S.A. Church Army Housing Ltd. has built over 800 houses and flats which are let at low rents to small wage-earners with large families. "Churchill" houses are being purchased and adapted for letting as one- and two-roomed flatlets to elderly people with small means. Chief Sec. Rev. **E. WILSON CARLILE**, B.D., A.C.A.; publs. *Gazette* (weekly), *Review* (bi-monthly).

Church Lads' Brigade: 58 Gloucester Place, London, W.1; f. 1891; Governor and Commandant Air Marshal Sir **AUBREY B. ELLWOOD**, K.C.B., D.S.C.; Gen. Sec. Rev. **J. H. S. BURTON**, M.A.; 20,000 mems. (excluding overseas mems.); publ. *The Brigade* (quarterly).

Object: To extend the Kingdom of Christ among lads and to make them faithful members of the Church of England or any Episcopal Church in communion with the Church of England.

Church Missionary Society: 6 Salisbury Square, London, E.C.4; f. in 1799 to spread the Christian Gospel in Africa and the East. Its annual expenditure is over £500,000. Pres. Sir **KENNETH G. GRUBB**, C.M.G., LL.D.; Gen. Sec. Rev. Canon **M. A. C. WARREN**, D.D.; Treas. **S. KINGSLEY TUBBS**, F.C.A.; pub. *C.M.S. Outlook* (monthly).

Church of England Zenana Missionary Society: Cromwell House, Highgate Hill, London, N.6; f. 1880; evangelistic, educational and medical work among the women of India, Pakistan, and Malaya; Pres. Hon. Lady **SMITH**; Gen. Sec. Rev. **JOHN BATES**, B.Sc.; publ. *Looking East*.

Church Pastoral-Aid Society: 7 Victoria Street, London, S.W.1; f. in 1836 for the purpose of making grants to incumbents in English and Welsh parishes for the payment of the stipends of curates, lay agents and women workers. It has also an Augmentation Fund, for increasing the endowment of poor livings which are in the gift of the Society; an Ordination Fund, for helping candidates to be trained for the Ministry, and a Camps and Holidays Fund for providing evangelistic camps for children. In addition there is a Bursary Fund for helping women candidates in training for full-time parish work. Secs. Rev. **T. G. MOHAN**, Rev. **T. C. RALPH**, Rev. **E. G. H. SAUNDERS**, **M. H. McQUEEN**; publ. *Church and People* (bi-monthly).

BROADCASTING

British Broadcasting Corporation: Broadcasting House, London, W.1; Governors: Chair. The Rt. Hon. Sir ALEXANDER CADOGAN, O.M., G.C.M.G., K.C.B.; Vice-Chair. Sir PHILIP MORRIS, C.B.E., M.A., LL.D.; Rt. Hon. THOMAS JOHNSTON, C.H., LL.D. (National Governor for Scotland); The Rt. Hon. the Lord MACDONALD OF GWAENYSGOR, K.C.M.G., LL.D. (National Governor for Wales); The Rt. Hon. Sir HARRY MULHOLLAND, Bt. D.L. (National Governor for Northern Ireland); The Rt. Hon. the Lord ROCHDALE, O.B.E., T.D. D.L.; Mrs. BARBARA WOOTTON, M.A., L.H.D., J.P.; Lady RHYS-WILLIAMS, D.B.E.; Sir EDWARD BENTHALL, K.C.S.I., Board of Management: Dir.-Gen. Sir IAN JACOB, K.B.E., C.B.; Dir. of Administration Air Chief Marshal Sir NORMAN BOTTOMLEY, K.C.B., C.I.E., D.S.O., A.F.C.; Dir. of Television Broadcasting Sir GEORGE BARNES; Dir. of External Broadcasting J. B. CLARK, C.B.E.; Chief Assistant to the Dir.-Gen. H. G. J. GRISEWOOD; Dir. of Technical Services Sir HAROLD BISHOP, C.B.E.; Dir. of Home Sound Broadcasting R. E. L. WELLINGTON, C.B.E.

The British Broadcasting Company which was formed in 1922 was superseded in 1927 by the British Broadcasting Corporation. Originally, sound programmes were provided for the British Isles; later, sound broadcasts to Commonwealth and foreign countries, and television, were introduced.

The objects of the Corporation under its Royal Charter (Cmd. 8605) include the provision of a public service of broadcasting as a means of information, education and entertainment and the development and exploitation of the service to the best advantage and in the national interest. The Governors of the B.B.C. are appointed by Her Majesty in Council; they are "the Corporation" and are responsible for all its activities. Three of the Governors are designated as the National Governors for Scotland, Wales and Northern Ireland respectively. The Governors for Scotland and Wales preside over the National Broadcasting Councils for those countries; the Governor for Northern Ireland will preside over the Council for that country if and when a Council is established.

The Corporation's stations in the United Kingdom are operated under a licence from the Postmaster-General (Cmd. 8579), which prohibits the B.B.C. from broadcasting commercial advertisements or sponsored programmes except with his consent.

The Postmaster-General's licence is required to instal and operate broadcast receiving apparatus. The annual fee for a licence covering television and sound is £3; for sound only the fee is £1. For the conduct of its Home Services (Sound and Television) the B.B.C. receives a Parliamentary grant equal to the amount of licence revenue remaining after deduction of Post Office expenses and of a stated sum retained by the Treasury. The B.B.C. External Services are financed by a Parliamentary Grant-in-Aid.

The number of broadcast receiving licences current at the end of June 1955 was 14,035,867, including 275,910 for cars and 4,676,422 for television and sound combined.

PROGRAMMES

The Home Service programmes are transmitted on 10 different medium waves to listeners throughout the United

Kingdom. The service provides some special programmes from the seven regional departments: London, Midland, North, West, Scotland, Wales and Northern Ireland.

The Light Programme is transmitted over one long wave, receivable over most of the United Kingdom, and also uses a medium wave for certain urban areas.

The Third Programme is transmitted over two medium wavelengths.

VHF SOUND BROADCASTING

The coverage of the three programmes on long and medium waves is to be reinforced by additional transmitting stations operating in the very high frequency range, 87.5–100 mc/s. An initial group of ten such stations, which will cover 83 per cent of the population, is under construction, and all are to be in service by the end of 1956. The first is at Wrotham, Kent (May 1955), to be followed by Pontop Pike (Co. Durham), Divis (near Belfast), Meldrum (near Aberdeen), Sutton Coldfield, Holme Moss, Wenvoe, Norwich, South Devon and West Wales.

The following services are maintained on short wavelengths for listeners overseas:

The General Overseas Service (in English), directed for twenty-one hours daily, to all areas of the world in turn. Specialised services to:

The Pacific Area	In English.
The Far Eastern Area	In English, Burmese, Cantonese, Indonesian, Japanese, Kuoyu, Malay, Thai, Vietnamese.
India, Pakistan, Ceylon	In English, Bengali, Hindi, Urdu, Marathi, Sinhalese, Tamil.
The Middle East and North Africa	In Arabic.
Africa and the Mediterranean Area	In English, Afrikaans, Maltese.
The Western Hemisphere	In English, French for Canada, Portuguese for Brazil, Spanish for Latin America, Mexico.
Israel	In Hebrew.
Persia	In Persian.

Services in the following tongues are maintained on medium and short waves, for listeners in Europe:

English, Albanian, Bulgarian, Czech and Slovak, Danish, Dutch, Finnish, French, German, Greek, Hungarian, Italian, Norwegian, Polish, Portuguese, Rumanian, Russian, Spanish, Swedish, Turkish, Yugoslav (Serbo-Croat and Slovene).

TELEVISION

By September 1955 the following television stations were in operation: Alexandra Palace, Divis, Holme Moss, Truleigh Hill (temporary), North Hessary Tor (temporary), Kirk o'Shotts, Norwich (temporary), Rowridge, Sutton Coldfield, Channel Islands, Meldrum, Wenvoe, Douglas, Pontop Pike (temporary).

The following television stations are scheduled for service in 1956 or 1957: Crystal Palace (to replace Alexandra Palace), Dover Area, Londonderry area, North

THE BRITISH COMMONWEALTH

Hessary Tor (permanent), Rosemarkie (NE. Scotland), Blaen Plwy (W. Wales), Norwich (permanent), Carlisle area, Isle of Man (to replace Douglas in 1957), Pontop Pike (late 1955).

Independent Television Authority (I.T.A.): 13-14 Princes Gate, London, S.W.7; Chair. Sir KENNETH CLARK; Deputy Chair. Sir RONALD MATTHEWS; Lord ABERDARE OF DUFFRYN (Wales), Dr. T. J. HONEYMAN (Scotland), Lieut.-Col. ARTHUR CHICHESTER (Northern Ireland), Sir HENRY HINCHCLIFFE, Lord LAYTON, Miss MARGARET E. POPHAM, Miss DILYS POWELL, G. B. THORNEYCROFT; Dir.-Gen. Sir ROBERT FRASER.

On July 30th, 1954, the Television Act came into force, providing that an Independent Television Authority should be established for a term of ten years. Its members are appointed by the Postmaster-General; three of them make the interests of Wales, Scotland and Northern Ireland respectively their special care.

The programmes will, in general, be provided by programme contractors; contracts will not be given for foreign individuals or companies, or to persons in control of or employed by an advertising agency. The whole, but not

part, of any one series of B.B.C. party political broadcasts (in sound only) may be relayed; the Postmaster-General may make regulations, subject to Parliamentary approval, granting facilities to the B.B.C. and the I.T.A. and its programme contractors for "sporting or other events of national interest". Programmes may include advertisements, provided they are "clearly distinguishable as such and recognisably separate from the rest of the programme", subject to restrictions on content and timing. The Authority will be required to set up advisory committees on religious transmissions, advertisements and children's programmes.

The Postmaster-General is authorised to make a grant of not more than £750,000 per annum to the I.T.A. He has power also to make a loan of not more than £2,000,000 within five years. An annual report must be presented to the Postmaster-General, who will lay it before Parliament.

The I.T.A. opened its first station, at Croydon, to serve the London area, in September 1955. It hopes to open a station early in 1956 to serve the Midlands, followed by two others, to cover the Lancashire and Yorkshire areas respectively.

FINANCE

Abbreviations: brs. = branches; cap. = capital; p.u. = paid up; res. = reserves; subs. = subscribed.

BANKING

CENTRAL BANK

Bank of England: Threadneedle Street, London, E.C.2; incorporated by Royal Charter in 1694, and nationalised by Act of Parliament on March 1st, 1946; is the Government's banker and on its behalf manages the note issue and the National Debt and administers the Exchange Control Regulations; also the central bank of the country and the bankers' bank; mem. of the Clearing House; brs. at Birmingham, Bristol, Liverpool, Leeds, Manchester, Newcastle-upon-Tyne, Southampton and Law Courts Branch, Temple Bar, W.C.2; cap. authorised, issued and p.u. £14,553,000, which is held by the Treasury; Governor C. STOCK EXCHANGE

The Stock Exchange: Throgmorton Street, London, E.C.2; f. 1801; 3580 mems. (The Governing Body is a Council of 36 Members.) Members act either as Brokers or Jobbers: this division of Membership is the basis of a system of trading in stocks and shares which is unique. Brokers act as agents on behalf of the public; Jobbers buy and sell as principals, confining their dealings to markets, such as the gilt-edged market, the industrial market or the mining market; they have no dealings with the public. Brokers' charges are regulated by an official minimum scale; they may share their commission with agents registered with the Council and with certain overseas brokers. Bargains in the gilt-edged market are done for cash; all other bargains are done for settlement on the Account Day: there are twenty-four Account Days during the year. Transfers, except those in respect of British Government stocks, are subject, in general, to a stamp duty of £2 per cent. The Stock Exchange Daily Official List contains about 10,000 different securities with a market value of about £30,000,000,000. Dealings are permitted in these securities and in securities which have been granted a quotation on a Stock Exchange overseas. Chair. SIR JOHN BRAITHWAITE; Sec. C. D. MORLEY.

Associated and Provincial Stock Exchanges of the United Kingdom, Northern Ireland and Eire: The Council of Associated Stock Exchanges is composed of the following Stock Exchanges: Aberdeen, Belfast, Birmingham, Bradford, Bristol, Cardiff, Cork, Dublin, Dundee, Edinburgh, Glasgow, Greenock, Halifax, Huddersfield, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Newport (Mon.), Nottingham, Sheffield, Swansea; Pres. RICHARD M. SYNGE (Liverpool); Sec. A. L. OWEN (Stock Exchange, Liverpool).

G. NATIONALISED INDUSTRIES

(Information about the British Transport Commission and the British Airways Corporations will be found in the section on Transport).

NATIONAL COAL BOARD

Hobart House, Grosvenor Place, London, S.W.1.

Established under the Coal Industry Nationalisation Act of 1946. Charged with the duties of (a) working and getting the coal in Great Britain to the exclusion of any other person; (b) securing the efficient development of the coal-mining industry; (c) making supplies of coal available of such qualities and sizes, in such quantities and at such prices as may seem to them best calculated to further the public interest in all respects, including the avoidance of any undue or unreasonable preference or advantage.

Chairman: SIR HUBERT HOULDSWORTH (till July, 1956).

Deputy-Chairman: J. BOWMAN, C.B.E. (Chair-Elect)

Board Members: SIR ANDREW BRYAN, FRSE, W. H. SALES (Industrial Relations), J. LATHAM, C.B.E. (Finance), W. REID, PH.D. (Production), R. H. THOMAS, O.B.E. (Marketing and Supplies), A. H. A. WYNN (Science), part-time mems. S. P. CHAMBERS, J. CRAWFORD, W. L. HLEYWOOD, SIR H. WILSON SMITH.

Secretary: C. A. ROBERTS, C.B.E.

Dir.-Gen. of Production: H. A. LONGDEN

Legal Adviser: D. H. HASLAM

Dir.-Gen. of Finance: A. W. JOHN.

Dir.-Gen. of Marketing: R. J. MOFFAT, C.B.E.

Dir.-Gen. of Research: DR. W. IDRIS JONES, C.B.E., B.Sc., PH.D., F.R.I.C., M.I.CHEM.E.

Dir.-Gen. of Industrial Relations: A. WALSH, M.B.E.

Dir.-Gen. of Carbonisation: R. J. MORLEY, PH.D.

Dir.-Gen. of Staff: J. O. BLAIR-CUNYNGHAME

Chief Medical Officer: J. H. ROGAN

Dir. of Opencast Production: J. R. CASELEY, C.B.E.

CENTRAL ELECTRICITY AUTHORITY

Central Electricity House, Trafalgar Buildings, London, S.W.1.

Established under the Electricity Act, 1947, to develop and maintain the system of electricity for all parts of Great Britain, except the North of Scotland district, and modified by the Electricity Reorganisation (Scotland) Act, 1954.

THE BRITISH COMMONWEALTH

which created the independent South of Scotland Electricity Board to take over the functions of the Authority and Area Boards in that district.

Chairman: Lord CITRINE, P.C., K.B.E., COMP.I.E.E., LL.D.

Board: Sir HENRY SELF, K.C.B., K.C.M.G., K.B.E., COMP.I.E.E. and J. ECCLES, C.B.E., M.M., B.SC., M.I.E.E., M.INST.C.E., M.I.MECH.E. (Deputy Chair.), Dame CAROLINE HASLETT, D.B.E., J.P., COMP.I.E.E., Lt.-Col. E. H. E. WOODWARD, C.B.E., M.C., T.D., B.SC. (ENG.), M.I.E.E., N. ELLIOTT, O.B.E., M.A., M.I.C.E., M.I.E.E., C. R. KING, C.B.E., COMP.I.E.E., M.INST.F., L. HOWLES, C.B.E., M.I.E.E., M.I.STRUCT.E., F.R.S.A., D. H. KENDON, B.SC., M.I.E.E., M.I.MECH.E.

Secretary: E. LONG, F.C.I.S., F.S.A.A., F.I.M.T.A.

Chief Engineer: J. D. PEATTIE, B.SC., F.C.G.I., M.I.E.E. (Acting)

Commercial Manager: W. B. NODDING, M.ENG., M.I.E.E.

Chief Contracts Officer: F. W. SMITH, C.M.G., M.C.

Chief Legal Adviser: R. A. FINN, B.A.

Chief Accountant: A. M. SCOTT, M.C., C.A.

There are twelve Area Boards, the function of which is to acquire from the C.E.A. (or from any other approved source) bulk supplies of electricity and to plan and carry out an efficient and economical distribution in their area.

GAS COUNCIL

1 Grosvenor Place, London, S.W.1.

Established under the Gas Act, 1948, to advise the Minister of Fuel and Power on questions affecting the Gas Industry and to promote and assist the efficient exercise and performance by the Area Boards of their functions.

There are twelve Area Gas Boards, whose Chairmen are members of the Gas Council. The main functions of the Boards are to develop and maintain an efficient, co-ordinated, and economical gas supply for their area, an efficient production of coke, and efficient methods of recovering by-products obtained in the manufacture of gas.

Chairman: Col. Sir HAROLD C. SMITH, K.B.E., D.L., M.I.C.E., M.INST.GAS.E.

Deputy Chairman: Sir HENRY F. H. JONES, M.B.E., M.A., M.I.C.E., M.INST.GAS.E.

Council: Sir ANDREW CLOW, K.C.S.I., C.I.E., M.A.; E. CROWTHER, C.B.E., M.ENG., M.I.C.E., M.INST.GAS.E., D. P. WELMAN, M.I.MECH.E., M.I.E.E., R. S. EDWARDS, PH.D., B.SC., A.R.C.S., SYDNEY SMITH, M.INST.GAS.E., M.INST.F., G. LE B. DIAMOND, C.B.E., M.I.MECH.E., M.INST.GAS.E., MERVYN JONES, M.A., LL.M. (Cantab.), LL.B. (Wales), Sir JOHN STEPHENSON, C.B.E., J.P., M. MILNE-WATSON, C.B.E., B.A., W. K. HUTCHISON, C.B.E., B.A., B.SC., M.INST.GAS.E., M.I.CHEM.E., A. R. MCBAIN, C.B., O.B.E., C. H. CHESTER, C.B.E., M.I.MECH.E., M.INST.GAS.E.

D. TRADE UNIONS

CENTRAL ORGANISATIONS

Trades Union Congress: Transport House, Smith Square, London, S.W.1; founded 1868 by the voluntary association of a number of trade unions for the purpose of defending trade union rights against attacks then pending. Its original membership of less than 120,000 has grown until to-day it has a membership of over 8 million, while the scope of its activity has been greatly enlarged. It not only formulates through its governing body (the General Council) the main policies of trade unionism, but takes part in consultations with other leading economic and industrial bodies, and with Government departments, on topics affecting the lives of wage-earners and salaried employees. It maintains contact with the Labour Party by means of the National

Council of Labour, on which the General Council, the Executives of the Labour Party, and of the Parliamentary Labour Party and the Co-operative Union, have representation.

The T.U.C. is affiliated to the International Confederation of Free Trade Unions and nominates the British Workers' Representative to the International Labour Organisation.

Its General Council is elected annually by ballot of the delegates attending Congress, exercising voting power on the basis of the membership of their unions.

Chairman (1955-56): W. B. BEARD, O.B.E.

Gen. Secretary: Sir VINCENT TEWSON, C.B.E., M.C.

Asst. Gen. Secretary: GEORGE WOODCOCK, C.B.E.

Asst. Secretary: V. FEATHER.

Heads of Depts.: R. BOYFIELD (Organisation), C. R. DALE (Social Insurance), D. BOWERS (International), E. PARKIN (Finance), J. V. C. WRAY (Education and Wages Councils), E. FLETCHER (Production), J. A. WALTON (Press), L. MURRAY (Research and Economic), C. H. HARTWELL (Editorial).

Scottish Trades Union Congress: 12 Woodlands Terrace, Glasgow, C 3; f. 1897; comprises Scottish Unions and Trades Councils, as well as the Scottish membership of British Trade Unions. It affiliates 89 Unions, with a total membership of 800,000; Chair. D. CURRIE (1955-56); Gen. Sec. GEORGE MIDDLETON, C.B.E.

General Federation of Trade Unions: Central House, Upper Woburn Place, London, W.C.1; f. 1899 by the T.U.C., Affiliates 59 organisations, with a total membership of 364,729; Chair. C. HEAP, O.B.E., J.P.

PRINCIPAL TRADE UNIONS AFFILIATED TO THE T.U.C.

183 Unions, with a total membership of 8,106,958, were affiliated to the T.U.C. at the beginning of 1954. The following Table shows the number of unions, with membership, in each of the 18 Trade Groups in which affiliated Unions are organised

TRADE GROUP	NUMBER OF UNIONS	MEMBERSHIP
1. Mining and Quarrying	4	719,170
2. Railways	3	530,948
3. Transport (other than Railways)	10	1,355,889
4. Shipbuilding	5	122,761
5. Engineering, Founding and Vehicle Building	27	1,388,445
6. Iron and Steel and Minor Metal Trades	17	198,588
7. Building, Woodworking and Furnishing	19	592,562
8. Printing and Paper	13	305,546
9. Cotton	6	170,166
10. Textiles (other than Cotton)	21	99,000
11. Clothing	6	175,165
12. Leather and Boot and Shoe	6	110,020
13. Glass, Pottery, Food, Chemicals, etc.	15	470,502
14. Agriculture	1	135,000
15. Public Employees	4	248,447
16. Civil Service	8	457,061
17. Non-Manual	14	233,839
18. General Workers	4	739,849

The following list includes all affiliated Unions whose membership is in excess of 5,000:

UNITED KINGDOM

TRADE AND INDUSTRY

- Amalgamated Association of Operative Cotton Spinners and Twiners:** 115 Newton Street, Manchester; Sec. C. SCHOFIELD, O.B.E.; 19,294 mems.

United Road Transport Workers' Association of England: 28 High Street, Chorlton-on-Medlock, Manchester, 13; f. 1891; Gen. Sec. H. ASHCROFT

United Society of Boilermakers and Iron and Steel Ship-builders: Lifton House, Eslington Road, Newcastle-on-Tyne, 2; f. 1834; Sec. E. J. HILL; 85,085 mems.

PRINCIPAL TRADE UNIONS NOT AFFILIATED TO THE T.U.C.

National and Local Government Officers' Association: 1 York Gate, Regent's Park, London, N.W.1; f. 1905; Sec. J. H. WARREN, O.B.E., M.A., D.P.A., solicitor, 223,000 mems.

National Union of Teachers: Hamilton House, Mabledon Place, London, W.C.1; Sec. Sir RONALD GOULD, Hon. F.E.I.S., M.A.; 219,000 mems.

E. JOINT NEGOTIATING MACHINERY

There is in British industry a highly developed system of voluntary joint negotiation between employers and workpeople on all matters affecting terms and conditions of employment. In many industries Joint Industrial Councils or Boards have been set up for dealing with such questions on a national or regional basis. There are at present well over 200 such Councils, details of which can be found in the *Directory of Employers' Associations, Trade Unions, Joint Organisations, etc.*, published by H.M.S.O. In some industries, e.g. cotton, joint negotiation is done by local organisations, and disputes which cannot be settled in this way are referred to a Conciliation Committee or Board. The following list contains a selection of Joint Organisations in some of the major industries of the United Kingdom, with a separate section covering the nationalised fuel and power industries.

I. NON-NATIONALISED INDUSTRIES

Where two names are given, the first is Employers' Secretary and the second Workpeople's Secretary.

Asbestos Manufacturing Industry (N.J.I.C.):

CHAS. W. ROOKE, LANE & Co., 2-3 Norfolk Street, Strand, London, W.C.2.

C. H. BECKETT, N.U.G. & M.W., 47 Ashley Road, Epsom, Surrey

Ballast and Sand Industry (N.J.C.):

C. B. MILLS, 48 Park Street, London, W.1.

T. H. HODGSON, O.B.E., Transport House, Smith Square, London, S.W.1.

TRADE AND INDUSTRY

Boot and Shoe Manufacturing Trade (J.I.C.):

A. BARKER, 22 Gilbert Street, London, W.1.

LIONEL POOLE, J.P., The Grange, Earls Barton, Northants.

Building Industry (N.J.C.):

E. JONES, M.A., B.Sc., 82 New Cavendish Street, London, W.1.

Sir RICHARD COPPOCK, C.B.E., Federal House, Cedars Road, London, S.W.4.

Carpet Industry (N. J. Committee):

J. B. RANSOME, F.C.A., 55-61 Moorgate, London, E.C.2.

CYRIL YARSLEY, Callows Lane, Kidderminster, Worcs.

Cast Stone and Cast Concrete Products Industry (N.J.I.C.):

J. D. MORTIMER, F.C.A., 14 Queen Victoria Street, London, E.C.4

T. H. HODGSON, O.B.E., T. & G.W.U., Transport House, Smith Square, London, S.W.1.

Cement Manufacturing Industry (N.J.I.C.)

Sec. Miss N. PEGG, Terminal House, 52 Grosvenor Gardens, London, S.W.1.

Chemical and Allied Industries (J.I.C.):

S. CHAPMAN, 166 Piccadilly, London, W.1

(Vacant) T. & G.W.U., Transport House, Smith Square, London, S.W.1

Cocoa, Chocolate and Sugar Confectionery (J.I.C.):

J. E. CHAPMAN, 11 Green Street, London, W.1

T. H. HODGSON, O.B.E., Transport House, London, S.W.1

Cotton Industry:

Joint Conciliation Committee of the Federation of Master Cotton Spinners' Associations Ltd., and the National Union of General and Municipal Workers:

A. H. RIGBY, 5th Floor, Royal Exchange, Manchester, 2.

T. ECCLES, O.B.E., J.P., Thorne House, 279 Wilmslow Road, Rusholme, Manchester, 14

Joint Conciliation Committee of the Federation of Master Cotton Spinners' Associations Ltd., and the Northern Counties Textile Trades Federation:

A. H. RIGBY, 5th Floor, Royal Exchange, Manchester, 2.

LEWIS T. WRIGHT, Chronicle Buildings, 3rd Floor, 74 Corporation Street, Manchester, 4.

Joint Conciliation Committee of the Cotton Spinners and Manufacturers' Association and the Northern Counties Textile Trades Federation

A. K. ROBERTS, Midland Bank House, 26 Cross Street, Manchester, 2

LEWIS T. WRIGHT, Chronicle Buildings, 3rd Floor, 74 Corporation Street, Manchester, 4.

Electrical Cable Making Industry (J.I.C.):

Sec. for Employers Assens., T. H. PIKE, 52-54 High Holborn, London, W.C.1

Sec. for Trades Unions, H. R. NICHOLAS, Transport House, London, S.W.1.

Electrical Contracting Industry (N.J.I.C.):

L. C. PENWILL, 14 Bedford Row, London, W.C.1.

F. HAXELL, Hayes Court, West Common Road, Hayes, Kent

Flour Milling Industry (N.J.I.C.):

B. BURRAWAY, 21 Arlington Street, London, S.W.1.

T. J. HEALY, Transport House, London, S.W.1

Furniture Trade (J.I.C.):

D. D. MITCHELL, 17 Berners Street, London, W.1.

A. G. TOMKINS, C.B.E., Fairfields, Roe Green, Kingsbury, London, N.W.9.

THE BRITISH COMMONWEALTH

Glass Container Industry (J.I.C.):

W. GOODWIN, 29 East Parade, Leeds.
R. H. HAIGH, T. & G.W.U., 22 Blenheim Terrace, Leeds.

Glass Processing Industry (N.J.I.C.):

L. F. BRETT, F.C.I.S., 54 Old Broad Street, London, E.C.2.
B. H. ROCKMAN, O.B.E., J.P., N.U.F.T.O. (London) Hall, 14 Jockey's Fields, London, W.C.1.

Home-Grown Timber Trade (N.J.I.C.):

F. L. FORGE, 69 Cannon Street, London, E.C.4.
T. J. HEALY, Transport House, London, S.W.1.

Hosiery Trade (N.J.I.C.):

H. W. CHANDLER, 104 Regent Road, Leicester.
C. G. CROOCH, 55 New Walk, Leicester.

Iron Ore Industry (N.J. Board):

P. T. M. WILSON, 48 Meadow Road, Kettering, Northants.
F. HAYDAY, 47 Ashley Road, Epsom, Surrey.

Leather Goods and Allied Trades (N.J. Wages Board):

P. A. PLATTEN, C.B.E., 69 Cannon Street, London, E.C.4.
W. COLLINGSO, J.P., 19 Brazennose Street, Manchester 2

National Maritime Board:

Bevis Marks House, E.C.3.
Employers' Chair. Sir DONALD F. ANDERSON.
Workpeople's Chair. D. S. TENNANT, C.B.E. (for 1955).

Paint, Varnish and Lacquer Industry (N.J.I.C.):

E. G. SANGSTER, B.L., 79-80 High Holborn, London, W.C.1.
Councillor R. G. COOK, N.U.G.M.W., 47 Ashley Road, Epsom, Surrey.

Port Transport Industry (N.J.C.):

J. MORRIS CLIFFORD, 3 St. James's Square, London, S.W.1.
A. BIRD, Transport House, London, S.W.1.

Pottery Industry (N.J.C.):

SAM H. JESSETT, Federation House, Station Road, Stoke-on-Trent, Staffs.
S. HOBSON, 5A Hillcrest Street, Hanley, Stoke-on-Trent, Staffs.

Printing and Allied Trades (J.I.C.):

L. E. KENYON, 11 Bedford Row, London, W.C.1.
J. FLETCHER, C.B.E., 60 Doughty Street, London, W.C.1.

Quarrying Industry (N.J.I.C.):

Sec. A. V. DALZELL, O.B.E., Craigs Court House, 25 Whitehall, London, S.W.1.

Rayon Producing Industry (Joint Labour Committee):

J. C. BURGESS, 7 Norfolk Street, Manchester, 2
T. H. HODGSON, O.B.E., Transport House, London, S.W.1.

Road Passenger Transport Industry (N.J.I.C.):

R. E. HYSLOP, Aldwych House, Aldwych, London, W.C.2.
F. COYLE, Transport House, London, S.W.1.

Rubber Manufacturing Industry (N.J.I.C.):

A. BABBAGE, 236-37 Royal Exchange, Manchester.
C. H. BECKETT, 47 Ashley Road, Epsom, Surrey.

Shirt, Collar and Tie Trade (N.J. Committee):

M. K. REID, 70 Pall Mall, London, S.W.1.
JOHN E. NEWTON, 41 Portman Square, London, W.1.

Silica and Moulding Sands Industry (N.J.C.):

G. K. TIMPERLEY, Drayton House, 30 Gordon Street, London, W.C.1.
H. E. MATTHEWS, O.B.E., 47, Ashley Road, Epsom, Surrey.

Soap, Candle and Edible Fat Trades (J.I.C.):

R. E. W. JOHNSON, Alliance House, 12 Caxton Street, London, S.W.1.
F. KNOWLES, Oakley, 122 Wilmslow Road, Fallowfield, Manchester.

Surgical Dressings Industry (N.J.I.C.):

C. P. ROBINSON, Wheat Bridge Mills, Chesterfield.
Miss A. B. HORAN, 47 Ashley Road, Epsom, Surrey.

Wall Paper Makers' Industrial Council:

C. F. CARROLL, King's House, King Street West, Manchester.
C. HEAP, J.P., 223 Bury New Road, Whitefield, Manchester.

Wholesale Clothing Trade (N.J. Committee):

Sir HERBERT KAY, C.B.E., F.C.I.S., 7 Cavendish Square, London, W.1.
JOHN E. NEWTON, 41 Portman Square, London, W.1.

Wood Box, Packing Case, and Wooden Container Industry (J.I.C.):

M. W. PAYNTER, 20-21 Took's Court, London, E.C.4.
T. McANDREW, 32 Milton Street, Manchester, 13.

2. NATIONALISED INDUSTRIES COAL

National Conciliation Board for the Coal-Mining Industry:

- (a) Joint National Negotiating Committee:
Joint Secretaries:
W. H. SALES, National Coal Board, Hobart House, Grosvenor Place, London, S.W.1.
A. L. HORNER, National Union of Mineworkers, 5 Westminster Bridge Road, London, S.E.1.
- (b) National Reference Tribunal.
Secretary:
OWEN STABLE, Paper Buildings, 1 Temple Gardens, Temple, London, E.C.4

ELECTRICITY

Electricity Supply Industry (Administrative and Clerical Grades) (N.J.C.):

W. H. HAND, A.C.I.S., C.E.A., Winsley Street, London, W.1.
L. G. MOSER, N.A.L.G.O., 1 York Gate, Regent's Park, London, N.W.1.

Electricity Supply Industry (Manual Workers) (N.J.I.C.):

E. A. EDWARDS, M.B.E., Central Electricity Authority, Winsley Street, London, W.1.
Councillor R. G. COOK, N.U.G.M.W., 47 Ashley Road, Epsom, Surrey.

Electricity Supply Industry (Technical Staff) (N.J. Board):

G. W. ESSEX, C.E.A., Winsley Street, London, W.1.
H. NORTON, Electrical Power Engineers' Association, 102 St. George's Square, London, S.W.1.

GAS

Gas Industry (N.J.I.C.):

D. L. HILL, M.A., 1 Grosvenor Place, London, S.W.1.
F. HAYDAY, N.U.G.M.W., 47 Ashley Road, Epsom, Surrey.

Gas Staffs (N.J.C.):

D. L. HILL, M.A., 1 Grosvenor Place, London, S.W.1.
G. H. NEWMAN, N.A.L.G.O., 1 York Gate, Regent's Park, London, N.W.1.

Intermediate Grades:

- D. L. HILL, M.A., 1 Grosvenor Place, London, S.W.1.
 { G. H. NEWMAN, N.A.L.G.O., 1 York Gate, Regent's
 Park, London, N.W.1
 { F. HAYDAY, N.U.G.M.W., 47 Ashley Road, Epsom,
 Surrey.

Senior Gas Officers' Joint Council:

- A. B. BADGER, M.A., PH.D., 1 Grosvenor Place, London,
 S.W.1.
 G. H. NEWMAN, 1 York Gate, Regent's Park, London,
 N.W.1.

F. STATUTORY WAGE-REGULATING ORGANISATIONS

Agricultural Wages Board: 5-8 St. Andrew's Place, London, N.W.1; established under the Agricultural Wages Act, 1948; Sec. B. VERNON.

Catering Wages Board: Ebury Bridge House, Ebury Bridge Road, London, S.W.1; established under the Catering Wages Act, 1943.

Wages Councils: Ebury Bridge House, Ebury Bridge Road, London, S.W.1, established under the Wages Councils Acts, 1945 to 1948.

G. ARBITRATION TRIBUNALS

The Chairman of the Council is the Chancellor of the Exchequer and the Secretariat is provided by the Board of Trade.

Regional Boards for Industry: Horse Guards Avenue, Whitehall, London, S.W.1, established during the second World War, and reconstituted thereafter, to provide a medium for regular collaboration between representatives of the Government, employers and workpeople. There are eleven such boards.

I. INDUSTRIAL RESEARCH ASSOCIATIONS

Department of Scientific and Industrial Research: Charles House, 5-11 Regent Street, London, S.W.1, f. 1915 (for fuller details, see p. 168).

British Baking Industries Research Association: Baking Industries Research Station, Chorleywood, Herts.; f. 1946; Chair R. T. COLGATE, D.S.C., F.R.I.C., Dir. J. B. M. COPPOCK, B.S.C., PH.D., F.R.I.C.

British Boot, Shoe and Allied Trades Research Association: Satra House, Rockingham Road, Kettering, Northants.; f. 1919; Dir. H. BRADLEY, C.B.E., B.S.C., D.I.C., F.B.S.I.

British Cast Iron Research Association: Bordesley Hall, Alvechurch, Birmingham; f. 1921, 1,340 mems., Dir. J. G. PEARCE, O.B.E., DRING. (h.c.) M.S.C., M.I.MECH.E., M.I.E.E., F.I.M., F.I.N.S.T.P., M.I.B.R.I.F., publs. *Journal of Research and Development, Bulletin and Foundry Abstracts* (both every two months).

British Ceramic Research Association: Beechfield, Queen's Road, Leatherhead, Surrey, f. 1938; Dir.-Gen. D. T. A. GREEN, O.B.E., D.S.C., F.R.I.C., F.I.N.S.T.P., M.I.CHEM.E.

British Coal Utilisation Research Association: Randalls Road, Leatherhead, Surrey; f. 1938; Dir.-Gen. D. T. A. TOWNEND, D.S.C., PH.D., D.I.C., C.B.E.

THE BRITISH COMMONWEALTH

British Coke Research Association: 74 Grosvenor Street, London, W.1; f. 1944; Dir. G. W. LEE, M.Sc., F.R.I.C., F.INST.P.

British Cotton Industry Research Association: Shirley Institute, Didsbury, Manchester; f. 1919; Dir. D. W. HILL, D.Sc.; research in cotton, rayon, silk and synthetic fibre.

British Electrical and Allied Industries Research Association: Thorncroft Manor, Dorking Road, Leatherhead, Surrey; f. 1920; Dir. S. WHITEHEAD, M.A., Ph.D., M.I.E.E., F.INST.P.

British Food Manufacturing Industries Research Association: Randalls Road, Leatherhead, Surrey; formed 1920, re-organised 1946, Dir. F. H. BANFIELD, Ph.D., M.Sc., F.R.I.C.

British Gelatine and Glue Research Association: c/o Kidsons Taylor & Co (Secretaries), Sardinia House, 52 Lincoln's Inn Fields, London, W.C.2; f. 1948, Dir. A. G. WARD, M.A., F.INST.P., 2A Dalmeny Avenue, N.7.

British Hat and Allied Feltmakers' Research Association: Stanley House, Manchester Road, Fairfield, Droylsden, Manchester, f. 1947, Dir. T. BARR, Ph.D., B.Sc., F.R.I.C.

British Hydromechanics Research Association: Harlow, Essex, f. 1947; Dir. L. E. PROSSER, B.Sc. (Eng.), M.I.Mech.E.

British Internal Combustion Engine Research Association: 111-112 Buckingham Avenue, Trading Estate, Slough, Bucks, f. 1943, Dir. Eng. Rear-Admiral D. J. HOARE, C.B., M.I.Mech.E.

British Iron and Steel Research Association: 11 Park Lane, London, W.1; f. 1945, co-operative research in all aspects of iron and steel making, Dir. Sir CHARLES GOODEVE, O.B.E., D.Sc., F.R.S.

British Jute Trade Research Association: Kinnoull Road, Kingsway West, Dundee, Scotland; f. 1946; Dir. H. CORTEEN, M.Sc., F.INST.P., F.T.I.

British Launderers' Research Association: The Laboratories, Hill View Gardens, Hendon, London, N.W.4; f. 1920, Dir. F. C. HARWOOD, B.Sc., F.R.I.C., M.I.Chem.E., F.T.I., F.S.D.C.

British Leather Manufacturers Research Association: Milton Park, Egham, Surrey; f. 1920, Dir. H. PHILLIPS, D.Sc., F.R.I.C.

British Non-Ferrous Metals Research Association, The: Euston Street, London, N.W.1; f. 1919; Dir. G. L. BAILEY, C.B.E., M.Sc., F.I.M.

British Paper and Board Industry Research Association: St Winifred's Laboratories, Welcomes Road, Kenley, Surrey, f. 1945, Dir. N. R. HOOD, Ph.D., B.Sc., F.R.I.C., M.I.Mech.E., M.I.Chem.E.

British Rayon Research Association: Heald Green Laboratories, Wythenshawe, Regd. Office, Bridgewater House, 58 Whitworth Street, Manchester, 22; f. 1946, Chair. Sir WILLIAM PALMER, K.B.E., C.B., Dir. J. WILSON, M.C., M.Sc., F.R.I.C.

British Scientific Instrument Research Association: Sira, Southill, Elmstead Woods, Chislehurst, Kent, f. 1918; Dir. A. J. PHILPOT, C.B.E., M.A., B.Sc., F.INST.P.

British Shipbuilding Research Association: 5 Chesterfield Gardens, Curzon Street, London, W.1; f. 1944, Dir. S. L. SMITH, C.B.E., D.Sc., M.INST.C.E., M.I.Mech.E., M.INST.N.A.

British Welding Research Association: 29 Park Crescent, London, W.1; f. 1946; Dir. H. G. TAYLOR, D.Sc. (Eng.), D.I.C., F.INST.P., M.I.E.E.

Coal Tar Research Association: Oxford Road, Gomersal, nr. Leeds; f. 1949; Dir. D. McNEIL, B.Sc., Ph.D., F.R.I.C., publs. *Review of Coal Tar Technology* (six-monthly), *Coal Tar Data Book*.

Coil Spring Federation Research Organisation: 40 Grosvenor Gardens, London, S.W.1; f. 1946; Dir. R. GENDERS, M.B.E., D.MET., F.R.I.C.

Design and Research Centre for the Gold, Silver and Jewellery Industries: 26 Dover Street, London, W.1; f. 1946; Chair JULIAN I. PIGGOTT, C.B.E., M.C.; Sec. Miss M. de V. HUNT.

Hosiery and Allied Trades Research Association: Thorneywood House, 4 First Avenue, Sherwood Rise, Nottingham; f. 1949; Dir. D. STARKIE, M.Sc., Ph.D.

Lace Research Association: Glaisdale Drive West, Bilborough, Nottingham; f. 1949; Dir. of Research JOHN C. MACCALLUM, B.Sc., Sec. S. HENSON.

Linen Industry Research Association: The Research Institute, Lambeg, Lisburn, Co. Antrim, N. Ireland; f. 1919; Chair. H. B. McCANCE, Dir. of Research A. J. TURNER, C.B.E., M.A., D.Sc., Sec. H. SEATON.

Motor Industry Research Association: Great West Road, Brentford, Middx; f. 1945; Dir. A. FOGG, M.Sc., M.I.Mech.E.

Parsons and Marine Engineering Turbine Research and Development Association (Pametrada): Pametrada Research Station, Wallsend, Northumberland; f. 1945; Research Dir. T. W. F. BROWN, D.Sc., S.M., A.R.T.C., M.I.Mech.E., M.I.N.A.

Printing, Packaging and Allied Trades Research Association: Patra House, Randalls Road, Leatherhead, Surrey; f. 1930; Dir. G. L. RIDDELL, Ph.D., F.R.I.C.

Production Engineering Research Association of Great Britain: Melton Mowbray, Leicestershire, f. 1946; Dir. D. F. GALLOWAY, Ph.D., Wh.Sch., M.I.Mech.E., M.I.Prod.E., M.I.I.A., B.Sc., M.INST.PET., A.M.I.E.E.

Research Association of British Flourmillers: 21 Arlington Street, London, S.W.1; f. 1923; Dir. T. MORAN, C.B.E., D.Sc., Ph.D.

Research Association of British Paint, Colour and Varnish Manufacturers: The Paint Research Station, Waldegrave Road, Teddington, Middlesex, f. 1926; Dir. L. A. JORDAN, C.B.E., D.Sc., A.R.S.C., F.R.I.C.; publ. *Review of Current Literature relating to the Paint, Colour, Varnish and Allied Industries* (bi-monthly).

Research Association of British Rubber Manufacturers: Shawbury, Shrewsbury, Shropshire; f. 1919; Chair; P. W. HOWARD; Dir. of Research J. R. SCOTT, Ph.D., M.Sc., F.R.I.C., F.INST.P.; publ. *Rubber Abstracts* (monthly).

Research Council of the British Whiting Federation: 12 Buckingham Street, Strand, London, W.C.2; f. 1948, Dir. G. E. BESSEY, M.Sc., F.R.I.C.; publ. *Bulletin* (quarterly).

TRANSPORT

BRITISH TRANSPORT COMMISSION

British Transport Commission: 222, Marylebone Road, London, N.W.1; Chair. Gen. Sir BRIAN ROBERTSON, G.C.B., G.B.E.; Deputy Chair. Sir JOHN BENSTEAD, C.B.E.; full-time mems.: Lord RUSHOLME, J. C. L. TRAIN, C.B.E., M.C., M.I.C.E., A. B. B. VALENTINE, Sir REGINALD WILSON; part-time mems.: H. P. BARKER, Sir IAN BOLTON, Bt., O.B.E., H.M.L., Hon. LL.D., D. H. CAMERON of LOCHIEL, T.D., Sir HARRY MEIHVEN, K.B.E., A. POPE, C.I.E., JOHN RYAN, C.B.E., M.C., T. H. SUMMERSON, J.P., Sir CECIL WEIR, K.C.M.G., K.B.E., M.C., D.L.; Sec.-Gen. Major-Gen. LLEWELLYN WANSBROUGH-JONES, C.B., C.B.E.

Far-reaching changes in the British system of inland transport resulted from the passing of the Transport Act, 1947, which established a British Transport Commission with the duty of providing an efficient, adequate, economical and properly integrated system of public inland transport (excluding transport by air) and port facilities in Great Britain. On January 1st, 1948, the principal railway and canal undertakings, with their ancillary services, passed into the ownership of the Commission.

The Act also empowered the Commission to acquire certain long-distance road-haulage undertakings. Furthermore, the Commission was to prepare schemes for the co-ordination of road passenger services in connection with which it had power to acquire the whole or part of any road passenger undertaking.

The Commission, which consists of a full-time Chairman and a maximum of fourteen members, is mainly concerned with questions of policy, including general financial control and the preparation of schemes relating to fares, rates and charges.

Amendments regarding the general duties of the Commission were, however, introduced under the provisions of the Transport Act of May 1953, which provided, *inter alia*, for the disposal to private ownership of a large proportion of the Commission's fleet of road haulage vehicles by the agency of a Road Haulage Disposal Board, appointed by the Minister of Transport. The Road Haulage Executive was disbanded and its activities carried on, under the name of British Road Services (see below), by a board of management which, in addition to carrying out the provisions of the Transport Act, manage the road haulage interests retained by the Commission.

RAILWAYS

The Transport Act also provided for modifications in the administration of British Railways. The Railway Executive was abolished, and, as from February 1st, 1955, under the provisions of the British Transport Commission (Organisation) Scheme Order, 1954, the function of railway operation was delegated to six Area Boards. The Chairmen of the Area Boards (which correspond to the Regions listed below) are Lord RUSHOLME (London Midland), R. F. HANKS (Western), Sir PHILIP WARTER (Southern), Sir REGINALD WILSON (Eastern), T. H. SUMMERSON (North-Eastern) and Sir IAN BOLTON (Scottish). The Boards act in the name of the commission, which remains the employer and retains general control of finance and charges.

British Railways, London/Midland Region: Euston Station, London, N.W.1; route mileage 4,194, Gen. Manager J. W. WATKINS, C.V.O., D.S.O., M.C.

British Railways, Western Region: Paddington Station, London, W.2, route mileage 4,336; London terminus Paddington Station, Gen. Manager, K. W. C. GRAND.

British Railways, Southern Region: Waterloo Station, London, S.E.1; route mileage 2,048, principal London terminus Waterloo, Victoria, Charing Cross, Cannon Street, London Bridge; Gen. Manager C. P. HOPKINS.

British Railways, Eastern Region: Liverpool Street Station, London, E.C.2, route mileage, 2,841, Gen. Manager C. K. BIRD.

British Railways, North-Eastern Region: York, route mileage 2,250; Gen. Manager H. A. SHORT, C.B.E., M.C.

British Railways, Scottish Region: 302 Buchanan Street, Glasgow, C.2; route mileage 3,479, Gen. Manager JAMES NESS

The Commission has also final responsibility for the following bodies

British Road Services: 222 Marylebone Road, London, N.W.1, Gen. Manager and Chair. of Management Board: Major Gen. G. N. RUSSELL, C.B., C.B.E.

British Transport Docks: 22 Dorset Square, Marylebone, London, N.W.1 Gen. Manager and Chair of Management Board: Sir ROBERT LETCH

There are seven offices in the Dominions and the Middle East; Dir F LEWELLYN SMITH, Chief Exec S E CLARK, O B E , Sec W T WILLIAMS.

SHIPPING

PORTS

There are about 300 ports in the United Kingdom of which London, Liverpool, Southampton, the Tyne ports, Glasgow, Hull, Belfast, Swansea, Bristol and Middlesbrough are the largest (in terms of the tonnage of shipping cleared). The ports formerly owned by the railway companies, such as Southampton, Hull, Swansea and Cardiff, are now administered by the British Transport Commission. Others are administered by public trusts, on which the principal users (shippers, importers etc.) and bodies such as Government Departments and local authorities, are represented. London is administered by the Port of London Authority, Liverpool by the Mersey Docks and Harbours Board, Belfast by the Belfast Harbour Commission and Glasgow by the Clyde Navigation Trust. Bristol and a few smaller ports are under the control of local authorities, and there are over a hundred ports, of which Manchester is the largest, which are owned and administered by private companies.

ADRIAN, EDGAR DOUGLAS, BAIRD, O.M., M.A., D.Sc., M.D., LL.D.,
F.R.C.P., physiologist.
AITKEN, ALEXANDER CRAIG, M.A., D.Sc., F.R.S.E., statistician.
ALLEN, JOHN FRANK, M.A., Ph.D., physicist.
ALLIBONE, THOMAS EDWARD, D.Sc., Ph.D., electrical engineer.
ANDERSON, JOHN STUART, Ph.D., M.Sc., chemist.
ANDRADE, EDWARD NEVILLE DA COSTA, D.Sc., Ph.D., F.Inst.P.,
physicist.
ANDREWES, CHRISTOPHER HOWARD, B.Sc., M.D., F.R.C.P.,
pathologist.
APPLETON, SIR EDWARD (VICTOR), G.B.E., K.C.B., M.A., D.Sc.,
physicist.
ARBER, AGNES, M.A., D.Sc., F.L.S., botanist.
ARKELL, WILLIAM JOSCELYN, M.A., D.Sc., geologist.
ASTBURY, WILLIAM THOMAS, M.A., Sc.D., F.Inst.P., chemist.
ATHLONE, ALEXANDER, EARL OF, K.G., G.C.B., G.C.M.G.,
G.C.V.O., D.S.O., D.C.I.
ATKINS, WILLIAM RINGROSE GELSTON, C.B.E., O.B.E. (MIL.),
M.A., Sc.D., F.I.C., F.Inst.P., physiologist.
ATTLEE, CLEMENT RICHARD, EARL, P.C., O.M., C.H.
BAGNOLD, RALPH ALGER, O.B.E., M.A., A.M.I.E.E., F.R.G.S.,
geophysicist.
BAILEY, SIR EDWARD (BATTERSBY), M.C., M.A., F.R.S.F., F.G.S.,
geologist.
BAILEY, KENNETH, Ph.D., M.Sc., Sc.D., biochemist.
BAILEY, RICHARD WILLIAM, D.Sc., M.I.Mech.E., metallurgist.
BAIRSTOW, SIR LEONARD, C.B.E., A.R.C.S., D.Sc., D.Eng., aero-
nautical engineer.
BAKER, HENRY FREDERICK, Sc.D., LL.D., F.R.A.S., mathe-
matician.
BAKER, WILSON, chemist.
BALLS, WILLIAM LAWRENCE, C.M.G., C.B.E., M.A., Sc.D., agricul-
turalist.
BARCROFT, HENRY, M.D., M.R.C.P., physiologist.
BARKER, JOHN, M.A., Ph.D., plant physiologist.
BARTLETT, SIR FREDERIC (CHARLES), C.B.E., M.A., psychologist.
BARTON, DAVID HAROLD RICHARD, chemist.
BATES, DEK ROBERT, D.Sc., M.R.I.A., mathematician.

BATES, LESLIE FLEETWOOD, D.Sc., physicist.
BAWDEN, FREDERICK CHARLES, M.A., plant pathologist.
BAWN, CECIL EDWIN HENRY, B.Sc., Ph.D., chemist.
BEALS, CARLYLE SMITH, astrophysicist.
BEDSON, SAMUEL PHILLIPS, M.D., M.Sc., B.S., bacteriologist.
BELL, RONALD PERCY, M.A., chemist.
BENNET-CLARK, THOMAS ARCHIBALD, M.A., Ph.D., botanist.
BENNETT, GEORGE MACDONALD, C.B., M.A., Sc.D., Ph.D., F.R.I.C.,
chemist.
BENSON, WILLIAM NOEL, D.Sc., metallographer.
BERNAL, JOHN DESMOND, M.A., crystallographer.
BERRILL, NORMAN JOHN, B.Sc., Ph.D., D.Sc., zoologist.
BESICOVITCH, ABRAM SAMOILOVITCH, M.A., mathematician.
BEST, CHARLES HERBERT, C.B.E., M.A., M.D., D.Sc., F.R.S.C.,
F.R.C.P.(C.), physiologist.
BHABHA, HOMI JEHANGIR, Ph.D., D.Sc., physicist.
BISAT, WILLIAM SAWNEY, M.Sc., engineer.
BLACKETT, PATRICK MAYNARD STUART, M.A., physicist.
BLACKMAN, VERNON HERBERT, M.A., Sc.D., biologist.
BLEANEY, BREBIS, M.A., D.Phil., physicist.
BORN, MAX, M.A., Ph.D., Sc.D., physicist.
BOSWELL, PERCY GEORGE HAMNALL, A.R.C.S., D.Sc., F.G.S.,
geologist.
BOWDEN, FRANK PHILIP, Sc.D., chemist.
BOWEN, EDMUND JOHN, M.A., D.Sc., chemist.
BOYD, Brig. JOHN SMITH KNOX, O.B.E., M.D., bacteriologist.
BOYD-ORR OF BRECHIN MEARNES, JOHN, Baron, D.S.O., M.C.,
M.A., M.D., D.Sc., F.R.S.E., veterinary physiologist.
BRADLEY, ALBERT JAMES, D.Sc., M.A., crystallographer.
BRAGG, SIR (WILLIAM) LAWRENCE, O.B.E., M.A., physicist.
BRAMBELL, FRANCIS WILLIAM ROGERS, Ph.D., D.Sc., zoologist.
BRIDGES, Rt. Hon. Sir EDWARD (ETTINGDENE), G.C.B., G.C.V.O.,
M.C., D.C.L., LL.D., D.Litt.
BRIGGS, GEORGE EDWARD, M.A., botanist.
BROWN, GEORGE LINDOR, C.B.F., M.Sc., M.B., Ch.B., physio-
logist.
BROWN, THOMAS GRAHAM, D.Sc., M.D., physiologist.
BROWN, WILLIAM, M.A., D.Sc., botanist.
BROWNING, CARL HAMILTON, M.D., D.Phil., bacteriologist.
BRUCE OF MELBOURNE, Rt. Hon. STANLEY MELBOURNE,
Viscount, P.C., C.H., M.C.
BRUNT, SIR DAVID, M.A., B.Sc., meteorologist.
BULLARD, SIR EDWARD (CRISP), B.A., Ph.D., geophysicist.
BULLEN, KEITH EDWARD, M.A., Ph.D., Sc.D., mathematician.
BULMAN, OLIVER MERFIDITH BOONE, Sc.D., palaeozoologist.
BURCH, CECIL REGINALD, Ph.D., physicist.
BURKILL, JOHN CHARLES, Sc.D., mathematician.
BURN, JOSHUA HAROLD, M.D., pharmacologist.
BURNET, SIR (FRANK) MACFARLANE, M.D., Ph.D., biologist.

CAMERON, GORDON ROY, anatomist.
CANNON, HERBERT GRAHAM, M.A., Sc.D., D.Sc., F.L.S., zoologist.
CARTWRIGHT, MARY LUCY, M.A., D.Phil., mathematician.
CATCHESIDE, DAVID GUTHRIE, D.Sc., plant cytogeneticist.
CHADWICK, SIR JAMES, M.Sc., Ph.D., physicist.
CHAIN, ERNST BORIS, M.A., D.Phil., chemical pathologist.
CHANDRASEKHAR, SUBRAHMANYAN, M.A., Ph.D., astronomer.
CHAPMAN, DAVID LEONARD, M.A., chemist.
CHAPMAN, SYDNEY, M.A., D.Sc., mathematician.
CHERRY, THOMAS MACFARLAND, mathematician.
CHERWELL OF OXFORD, Rt. Hon. FREDERICK ALEXANDER
LINDEMANN, Baron, P.C., philosopher.
CHIBNALL, ALBERT CHARLES, Ph.D., Sc.D., biochemist.
CHRISTOPHERS, SIR (SAMUEL) RICKARD, C.I.E., O.B.E., M.B.,
bacteriologist.
CHURCHILL, Rt. Hon. Sir WINSTON (LEONARD SPENCER), P.C.,
K.G., O.M., C.H., M.P.
CLARK, SIR WILFRID EDWARD LE GROS, M.A., D.Sc., F.R.C.S.,
anatomist.
CLEMO, GEORGE ROGER, D.Sc., F.R.I.C., chemist.
COCKCROFT, SIR JOHN (DOUGLAS), K.C.B., C.B.E., M.A., Ph.D.,
M.Sc., A.M.I.E.E., physicist.

THE BRITISH COMMONWEALTH

- COLE, FRANCIS JOSEPH, D.S.C., zoologist.
 COLEBROOK, LEONARD, M.B., B.S., F.R.C.O.G., gynaecologist.
 COLLIP, JAMES BERTRAM, C.B.E., M.A., PH.D., D.S.C., M.D., bio-
 chemist.
 CONSTANT, HAYNE, C.B.F., M.A., aeronautical engineer.
 CONWAY, EDWARD JOSEPH, M.B., D.S.C., biochemist
 COOK, ARTHUR HERBERT, organic chemist.
 COOK, JAMES WILFRED, D.S.C., PH.D., F.R.I.C., F.R.S.E., chemist.
 CORNER, EDRED JOHN HENRY, M.A., botanist.
 CORNFORTH, JOHN WARCUP, M.S.C., D.PHIL., organic chemist.
 COTTRELL, ALAN HOWARD, PH.D., B.S.C., metallurgist
 COULSON, CHARLES ALFRED, M.A., PH.D., physicist.
 COWLING, THOMAS GEORGE, M.A., D.PH., mathematician.
 COX, ERNEST GORDON, chemist.
 COX, LESLIE REGINALD, M.A., SC.D., palaeontologist.
 COXETER, HAROLD SCOTT MACDONALD, PH.D., mathematician
 CRAIGIE, JAMES, O.B.E., M.B., CH.B., PH.D., bacteriologist.
 CRAIGIE, JOHN HUBERT, A.B., M.S.C., PH.D., D.S.C., LL.D.,
 geneticist.
 CRANE, MORLEY BENJAMIN, agriculturist.
 CREW, FRANCIS ALBERT ELEY, M.D., D.S.C., PH.D., M.R.C.P.E.,
 F.R.C.S.E., geneticist.
 CUNNINGHAM, GORDON HERRIOT, C.B.E., D.S.C., PH.D., mycolo-
 gist.
 CURRAN, SAMUEL CROWE, PH.D., D.S.C., physicist
 CURTIS, WILLIAM EDWARD, D.S.C., A.R.C.S., F.R.A.S., F.INST.P.,
 physicist.
 DALE, SIR HENRY (HALLEIT), O.M., G.B.E., M.A., M.D., F.R.C.P.,
 biochemist
 DALY, IVAN DE BURGH, M.B., B.CH., M.A., M.D., physiologist
 DARLINGTON, CYRIL DEAN, D.S.C., horticulturalist.
 DARWIN, SIR CHARLES (GALTON), K.B.F., M.C., M.A., physicist.
 DAVENPORT, HAROLD, M.A., SC.D., mathematician
 DAVIDSON, CHARLES RUNDLE, astronomer.
 DEACON, GEORGE EDWARD RAVEN, C.B.E., D.S.C., physicist.
 DE BEER, SIR GAVIN (RYLANDS), F.L.S., F.R.G.S., F.Z.S., M.A.,
 D.S.C., anatomist.
 DEE, PHILIP IVOR, C.B.E., M.A., physicist.
 DE GRAAF-HUNTER, JAMES, C.I.F., M.A., SC.D., F.INST.P.,
 F.R.A.S., F.R.G.S., HON. M.I.R.F., geodesist.
 DESCH, CECIL HENRY, D.S.C., PH.D., F.R.I.C., metallurgist.
 DEVONS, SAMUEL, M.A., PH.D., physicist
 DICKENS, FRANK, biochemist
 DIRAC, PAUL ADRIEN MAURICE, B.S.C., PH.D., mathematician.
 DIXON, MALCOLM, SC.D., biochemist
 DOBSON, GORDON MILLER BOURNE, C.B.E., M.A., D.S.C., meteor-
 ologist
 DODDS, SIR (EDWARD) CHARLES, M.V.O., biochemist
 DONNAN, FREDERICK GEORGE, C.B.E., M.A., PH.D., F.R.I.C.,
 chemist
 DOODSON, ARTHUR THOMAS, C.B.E., D.S.C., mathematician
 DOREY, STANLEY FABES, C.B.E., D.S.C., marine engineer
 DOUGLAS, CLAUDE GORDON, C.M.G., M.C., B.S.C., D.M., physio-
 logist
 DOWNE, ALLAN WATT, M.D., CH.B., D.S.C., bacteriologist.
 DRURY, SIR ALAN (NIGEL), C.B.F., M.A., M.D., M.R.C.S., L.R.C.P.,
 pathologist
 DUDLEY, SIR SHELDON (FRANCIS), K.C.B., K.H.P., M.D., F.R.C.P.,
 pathologist
 DUNCAN, WILLIAM JOLLY, C.B.E., D.S.C., aerodynamicist
 DUNHAM, KINGSLEY CHARLES, D.S.C., PH.D., SC.D., F.G.S.,
 geologist
 DU TOIT, PETRUS JOHANN, D.S.C., animal physiologist.
 DYSON, FREEMAN JOHN, B.A., physicist
 ECCLES, JOHN CAREW, D.PHIL., M.B., B.S., physiologist.
 ECCLES, WILLIAM HENRY, D.S.C., A.R.C.S., physicist
 ECKERSLEY, THOMAS LYDWELL, B.A., B.S.C., M.I.E.E., physicist.
 EDGELL, Vice-Admiral SIR JOHN (AUGUSTINE), R.N., K.B.E.,
 C.B., hydrographer.
 EDWARDS, CHARLES ALFRED, D.S.C., metallurgist.
 EGERTON, SIR ALFRED (CHARLES GLYN), B.S.C., M.A., F.R.I.C.,
 F.INST.P., F.C.S., physicist
 ELLIOT, Rt. Hon. WALTER ELLIOT, P.C., C.H., M.C., agriculturist.
 ELLIOTT, THOMAS RENION, C.B.E., D.S.O., M.A., F.R.C.P., M.D.,
 physician
 ELIS, SIR CHARLES (DRUMMOND), PH.D., physicist.
 ELTON, CHARLES SUTHERLAND, M.A., animal ecologist.
 EMELFUS, HARRY JULIUS, chemist.
 ENGLEDDOW, SIR FRANK (LEONARD), C.M.G., M.A., agriculturist.
 EVANS, SIR CHARLES (ARTHUR LOVATT), LL.D., D.S.C., M.R.C.S.,
 F.R.C.P., physiologist.
 EVANS, ULICK RICHARDSON, M.A., SC.D., metallurgist.
 EVERSHERD, JOHN, C.I.E., F.R.A.S., astronomer
 EWINS, ARTHUR JAMES, D.S.C., chemist.
 FAGE, ARTHUR, C.B.E., F.R.A.C.S., F.I.A.E.S., physicist
 FAIRLEY, SIR NEIL HAMILTON, K.B.E., M.D., D.S.C., pathologist.
 FARREN, SIR WILLIAM (SCOTT), C.B., M.B.E., engineer
 FEARNSIDES, WILLIAM GEORGE, M.A., geologist
 FEATHER, NORMAN, physicist
 FELDBERG, WILHELM SIEGMUND, M.A., M.D., physiologist
 FELL, HONOR BRIDGET, B.S.C., PH.D., D.S.C., physiologist
 FILDES, SIR PAUL (GORDON), O.B.E., M.A., M.B., B.CH., bacterio-
 logist
 FINCH, GEORGE INGLE, M.B.E., D.TECH. CHEM., F.INST.P.,
 chemist.
 FINNEY, DAVID JOHN, SC.D., statistician.
 FISHER, SIR RONALD (AYLMER), M.A., SC.D., F.Z.S., eugenicist.
 FLECK, SIR ALEXANDER, D.S.C., chemist.
 FLEURE, HERBERT JOHN, D.S.C., M.A., geographer
 FLOREY, SIR HOWARD (WALTER), M.B., B.S., B.S.C., M.A., PH.D.,
 pathologist.
 FOLLEY, SYDNEY JOHN, physiologist.
 FORD, EDMUND BRISCO, zoologist
 FOSTER, JOHN STUART, PH.D., F.R.S.C., D.S.C., physicist.
 FOX, HAROLD MUNRO, M.A., zoologist
 FRANK, FREDERICK CHARLES, O.B.E., D.PHIL., physicist.
 FRANKEL, OTTO HERZBERG, D.S.C., D.AGR., agriculturist
 FRANKLIN, KENNETH JAMES, D.M., B.CH., M.A., D.S.C., F.R.C.P.,
 physiologist.
 FRAZER, ROBERT ALEXANDER, mathematician
 FREETH, FRANCIS ARTHUR, O.B.E., D.S.C., PH.D., F.R.I.C.,
 F.INST.P., chemist
 FRISCH, OTTO ROBERT, O.B.E., physicist.
 FRÖHLICH, HERBERT, physicist.
 GADDUM, JOHN HENRY, pharmacologist
 GALL, ERNEST FREDERICK, SC.D., chemical microbiologist.
 GARNER, WILLIAM EDWARD, C.B.E., D.S.C., physical chemist.
 GATES, REGINALD RUGGLES, M.A., B.S.C., PH.D., D.S.C., F.L.S.,
 F.R.A.I., F.R.M.S., botanist
 GATES, SIDNEY BARRINGTON, O.B.E., M.A., engineer.
 GAYDON, ALFRED GORDON, D.S.C., chemical engineer
 GEE, GEOFFREY, chemist
 GIBB, SIR ALEXANDER, G.B.E., C.B., engineer
 GIBB, SIR CLAUDE (DIXON), C.B.F., M.F., M.I.MECH.E., engineer
 GLENNY, ALEXANDER THOMAS, B.S.C., bacteriologist
 GODWIN, HARRY, SC.D., botanist
 GOLD, ERNEST, C.B., D.S.O., O.B.I. (MIL.), M.A., meteorologist
 GOLDSBROUGH, GEORGE RIDSDALE, C.B.E., D.S.C., F.R.A.S.,
 mathematician
 GOLDSTEIN, SYDNEY, M.A., PH.D., mathematician.
 GOODEVE, SIR CHARLES (FREDERICK), O.B.F., D.S.C., chemist.
 GOUGH, HERBERT JOHN, C.B., M.B.E., D.S.C., M.INST., M.E.,
 engineer.
 GRANT, RONALD THOMSON, O.B.E., M.D., M.R.C.P., F.F.P.S.,
 pathologist.
 GRAY, SIR JAMES, C.B.F., M.C., M.A., SC.D., zoologist.
 GRAY, JOSEPH ALEXANDER, O.B.E., B.S.C., D.S.C., physicist.
 GREGORY, FREDERICK GUGENHEIM, D.S.C., plant physiologist
 GRIFFITH, ALAN ARNOLD, C.B.E., D.ENG., engineer
 GRIFFITHS, EZER, O.B.E., D.S.C., physicist.
 GUGGENHEIM, EDWARD ARMAND, physical chemist
 GUY, SIR HENRY (LEWIS), C.B.F., M.I.MECH.E., M.I.C.E., D.S.C.,
 engineer.
 HALDANE, JOHN BURDON SANDERSON, M.A., biologist.
 HALL, SIR ARNOLD (ALEXANDER), M.A., aeronautical engineer.
 HALL, PHILIP, mathematician.
 HAMMICK, DALZIEL LLEWELLYN, M.A., D.S.C., chemist
 HAMMOND, JOHN, C.B.E., D.S.C., M.A., physiologist.
 HANES, CHARLES SAMUEL, PH.D., agriculturist.
 HANKEY OF THE CHART, Rt. Hon. MAURICE PASCAL ALERS
 HANKEY, Baron, P.C., G.C.B., G.C.M.G., G.C.V.O.
 HARDY, ALISTER CLAVERING, F.L.S., F.R.G.S., F.Z.S., M.A., D.S.C.,
 zoologist.
 HARRINGTON, SIR CHARLES (ROBERT), M.A., PH.D., pathologist.
 HARRARD, SYDNEY CROSS, D.S.C., plant breeder.
 HARRIS, GEOFFREY WINGFIELD, M.D., SC.D., physiologist.

UNITED KINGDOM

HARRIS, THOMAS MAXWELL, M.A., PH.D., botanist.
HARRISON, JOHN WILLIAM HESLOP, D.S.C., F.R.S.E., biologist
HARTLEY, Sir HAROLD (BREWER), K.C.V.O., C.B.E., M.C., M.A., chemist.
HARTLEY, Sir PERCIVAL, C.B.E., M.C., biologist.
HARTREE, DOUGLAS RAYNER, M.A., PH.D., mathematician.
HARTRIDGE, HAMILTON, M.A., M.D., SC.D., M.R.C.P., physiologist.
HARVEY, HILDEBRAND WOLFE, SC.D., hydrologist.
HATTON, Sir RONALD (GEORGE), C.B.E., M.A., D.S.C., botanist.
HAVELOCK, Sir THOMAS (HENRY), M.A., D.S.C., mathematician.
HAWKES, LEONARD, D.S.C., geologist.
HAWKINS, HERBERT LEADER, D.S.C., F.G.S., geologist.
HAWORTH, ROBERT DOWNS, D.S.C., PH.D., B.S.C., F.R.I.C., chemist.
HAWTHORNE, WILLIAM REDE, M.A., engineer.
HEILBRON, Sir IAN, D.S.O., D.S.C., PH.D., F.R.I.C., chemist.
HEILBRONN, HANS ARNOLD, mathematician.
HEITLER, WALTER HEINRICH, physicist.
HERZBERG, GERHARD, physicist.
HEY, DONALD HOLROYDE, D.S.C., PH.D., F.R.I.C., chemist.
HILDITCH, THOMAS PERCY, C.B.E., D.S.C., F.R.I.C., chemist.
HILL, ARCHIBALD VIVIAN, C.H., O.B.E., M.A., SC.D., M.D., D.S.C., physiologist.
HILL, AUSTIN BRADFORD, C.B.E., medical statistician.
HILL, ROBERT, biochemist.
HILLS, EDWIN SHERBON, geologist.
HIMSWORTH, Sir HAROLD (PERCIVAL), K.C.B., M.D., F.R.C.P., Q.H.P., clinical medicine.
HINDLE, EDWARD, M.A., SC.D., PH.D., F.R.S.E., zoologist.
HINSHELWOOD, Sir CYRIL (NORMAN), M.A., physical chemist.
HINTON, Sir CHRISTOPHER, engineer.
HINTON, MARTIN ALISTER CAMPBELL, F.L.S., F.G.S., F.Z.S., zoologist.
HIRST, EDMUND LANGLEY, M.A., D.S.C., chemist.
HOARE, CECIL ARTHUR, D.S.C., protozoologist.
HODGE, WILLIAM VALLANCE DOUGLAS, M.A., F.R.S.E., mathematician.
HODGKIN, ALAN LLOYD, M.A., physiologist.
HODGKIN, DOROTHY MARY CROWFOOT, M.A., B.S.C., PH.D., crystallographer.
HOGDEN, LANCELOT, M.A., D.S.C., medical statistician.
HOLMES, ARTHUR, D.S.C., A.R.C.S., M.R.I.A., F.R.G.S., F.G.S., geologist.
HOLMES, Sir GORDON (MORGAN), C.M.G., C.B.E., F.R.C.P., D.S.C., physician.
HORTON, FRANK, SC.D., D.S.C., M.S.C., physicist.
HOWARTH, LESLIE, O.B.E., B.S.C., M.A., PH.D., applied mathematician.
HUGHES, EDWARD DAVID, PH.D., D.S.C., F.R.I.C., chemist.
HUME-ROTHERY, WILLIAM, O.B.E., M.A., PH.D., D.S.C., metallurgist.
HUTCHINSON, JOHN, LL.D., botanist.
HUTCHINSON, JOSEPH BURTT, C.M.G., SC.D., plant geneticist.
HUXLEY, ANDREW FIELDING, M.A., physiologist.
HUXLEY, JULIAN SORELL, M.A., D.S.C., zoologist.
ILLING, VINCENT CHARLES, geologist.
ING, HARRY RAYMOND, chemist.
INGHAM, ALBERT EDWARD, mathematician.
INGIIS, Sir CLAUDE (CAVENDISH), C.I.E., hydraulic engineer.
INGOLD, CHRISTOPHER KELK, D.S.C., A.R.C.S., F.C.S., chemist.
JACKSON, DEREK AINSLIE, O.B.E., D.F.C., A.F.C., M.A., D.S.C., physicist.
JACKSON, JOHN, C.B.E., M.A., D.S.C., astronomer.
JACKSON, WILLIS, D.S.C., D.PHIL., electrical engineer.
JAMES, REGINALD WILLIAM, M.A., B.S.C., F.INST.P., physicist.
JAMES, WILLIAM OWEN, B.S.C., PH.D., M.A., D.PHIL., plant physiologist.
JEFFERSON, Sir GEOFFREY, C.B.E., M.S., F.R.C.S., neurologist.
JEFFERY, GEORGE BARKER, M.A., D.S.C., mathematician.
JEFFREYS, Sir HAROLD, M.A., D.S.C., F.R.A.S., F.R.MET.SOC., geophysicist.
JONES, Sir (BENNETT) MFLVILL, C.B.E., A.F.C., aeronautical engineer.
JONES, EWART RAY HERBERT, PH.D., D.S.C., chemist.
JONES, Sir HAROLD SPENCER, K.B.E., M.A., SC.D., B.S.C., F.R.A.S., astronomer.
JONES, HARRY, B.S.C., PH.D., mathematician.
JONES, OWEN THOMAS, M.A., D.S.C., M.S.C., geologist.
JORDAN, HEINRICH ERNST KARL, PH.D., F.Z.S., F.R.E.S., zoologist.

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

KAPITZA, PÉTER, PH.D., physicist.
KATZ, BERNARD, M.D., PH.D., D.S.C., neurophysiologist.
KAY, HERBERT DAVENPORT, C.B.E., D.S.C., biochemist.
KEEN, Sir BERNARD (AUGUSTUS), D.S.C., agriculturist.
KEILIN, DAVID, M.A., SC.D., biologist.
KENDALL, JAMES, M.A., D.S.C., chemist.
KENNAWAY, Sir ERNEST (LAURENCE), M.A., M.D., D.S.C., pathologist.
KENNEDY, WILLIAM QUARRIF, D.S.C., geologist.
KENNER, JAMES, D.S.C., PH.D., chemist.
KENYON, JOSEPH, D.S.C., F.R.I.C., chemist.
KERMACK, WILLIAM OGILVY, M.A., D.S.C., F.R.S.E., chemist.
KERR, Sir JOHN GRAHAM, M.A., F.L.S., F.Z.S., zoologist.
KIDD, FRANKLIN, C.B.E., M.A., D.S.C., botanist.
KING, FREDERICK ERNEST, chemist.
KING, HAROLD, C.B.E., D.S.C., medical chemist.
KING, LOUIS VESSOT, M.A., D.S.C., physicist.
KING, WILLIAM BERNARD ROBINSON, O.B.E., M.C., M.A., SC.D., geologist.
KREBS, HANS ADOLF, M.A., M.D., biochemist.
KRISHNAN, Sir KARIAMANIKKAM (SRINIVASA), physicist.
KUHN, HEINRICH GERHARD, D.PHIL., physicist.
LACK, DAVID, ornithologist.
LANG, WILLIAM DICKSON, M.A., SC.D., F.G.S., F.Z.S., geologist.
LANG, WILLIAM HENRY, M.B., C.M., D.S.C., F.L.S., botanist.
LEATHES, JOHN BRESFORD, M.A., M.B., D.S.C., F.R.C.S., F.R.C.P., physiologist.
LEIPER, ROBERT THOMSON, C.M.G., D.S.C., M.D., parasitologist.
LEMBERG, (MAX) RUDOLPH, D.PHIL., biochemist.
LENOX-CONYNGHAM, Sir GERALD (PONSONBY), M.A., F.R.A.S., F.R.G.S., geodesist.
LEWIS, DAN, PH.D., D.S.C., geneticist.
LEWIS, WILFRID BENNETT, C.B.E., PH.D., physicist.
LEWIS, WILLIAM CUDMORE McCULLAGH, M.A., D.S.C., F.INST.P., chemist.
LIDDELL, EDWARD GEORGE TANDY, D.M., B.CH., M.A., physiologist.
LIGHTHILL, MICHAEL JAMES, mathematician.
LINNET, JOHN WILFRID, M.A., D.PHIL., chemist.
LINSTEAD, REGINALD PATRICK, C.B.E., D.S.C., chemist.
LISSMANN, HANS WERNER, zoologist.
LITTLEWOOD, JOHN EDENSOR, M.A., mathematician.
LOCKSPFISER, Sir BEN, K.C.B., M.A., M.I.MECH.E., F.R.A.F.S., engineer.
LONSDALE, KATHLEEN, D.B.F., D.S.C., physicist.
LOVELL, ALFRED CHARLES BERNARD, O.B.E., B.S.C., PH.D., F.INST.P., physicist.
LOWENSTEIN, OTTO EGON, PH.D., D.PHIL., D.S.C., M.I.BIOL., F.R.S.E., zoologist.
LYTTELTON, RAYMOND ARTHUR, M.A., PH.D., mathematician.
MAASS, OTTO, C.B.A., M.S.C., PH.D., F.R.C.S., chemist.
MACINTOSH, FRANK CAMPBELL, physiologist.
McCANCE, Sir ANDREW, D.S.C., metallurgist.
McCANCE, ROBERT ALEXANDER, C.B.F., M.C., M.D., experimental medicine.
McCREA, WILLIAM HUNTER, M.A., PH.D., B.S.C., mathematician.
MACKENZIE, CHALMERS JACK, C.M.G., M.C., D.S.C., engineer.
McFOD, JAMES WALTER, O.B.E. (MIL.), M.B., CH.B., bacteriologist.
McNEILL, JAMES McFADYEN, C.B.F., M.C., LL.D., naval architect.
MAHALANOBIS, PRASANTA CHANDRA, physicist.
MAHLER, KURT, PH.D., D.S.C., mathematician.
MANN, FREDERICK GEORGE, SC.D., D.S.C., F.R.I.C., chemist.
MANN, THADDEUS ROBERT RUDOLPH, M.D., SC.D., biochemist.
MANTON, SIDNIE MILANA, PH.D., SC.D., zoologist.
MARRIAN, GUY FREDERIC, D.S.C., F.R.I.C., medical chemist.
MARSDEN, ERNEST, C.M.G., C.B.E., M.C., F.R.S.N.Z., physicist.
MARSHALL, Sir GUY (ANSTRUTHER KNOX), K.C.M.G., entomologist.
MARSTON, HEDLEY RALPH, biochemist.
MARTIN, ARCHER JOHN PORTER, M.A., PH.D., biochemist.
MARTYN, DAVID FORBES, B.S.C., PH.D., D.S.C., physicist.
MASKELL, ERNEST JOHN, PH.D., plant physiologist.
MASON, THOMAS GODFREY, SC.D., industrial chemist.
MASSEY, HARRIE STEWART WILSON, B.A., M.S.C., PH.D., mathematician.
MASSON, Sir (JAMES) IRVINE (ORME), M.B.E., D.S.C., F.R.I.C., chemist.
MATHER, KENNETH, PH.D., D.S.C., geologist.

THE BRITISH COMMONWEALTH

- MATTHEWS, SIR BRYAN (HAROLD CABOT), C.B.E., M.A., SC.D., physiologist.
- MATTHEWS, LEONARD HARRISON, SC.D., zoologist.
- MAWSON, SIR DOUGLAS, O.B.E., D.S.C., B.SC., B.E., geologist.
- MEDAWAR, PETER BRIAN, M.A., D.S.C., zoologist.
- MEES, CHARLES EDWARD KENNETH, F.C.S., F.R.A.S., F.R.P.S., photographic research worker.
- MELVILLE, HARRY WORK, chemist.
- MENDELSSOHN, KURT ALFRED GEORG, D.PHIL., physicist.
- MERTON, SIR THOMAS (RALPH), M.A., D.S.C., physicist.
- MICHELL, ANTONY GEORGE MALDON, M.C.E., engineer.
- MILLER, FREDERICK ROBERT, M.A., M.B., M.D., F.R.C.P., F.R.S., physiologist.
- MILLS, WILLIAM HOBSON, M.A., SC.D., chemist.
- MILNER, SAMUEL ROSLINGTON, D.S.C., F.INST.P., physicist.
- MITCHELL, GEORGE HOOLE, D.S.C., geologist.
- MITCHELL, JOSEPH STANLEY, C.B.F., M.A., M.B., B.CHIR., PH.D., D.M.R., biophysicist.
- MOON, PHILIP BURTON, M.A., PH.D., physicist.
- MORDELL, LOUIS JOEL, B.A., M.S.C., mathematician.
- MORGAN, WALTER THOMAS JAMES, PH.D., D.S.C., biochemist.
- MORTON, RICHARD ALAN, PH.D., D.S.C., biochemist.
- MOTT, NEVILL FRANCIS, M.A., physicist.
- MUIR, SIR ROBERT, M.A., M.D., LL.D., D.C.L., pathologist.
- NEEDHAM, DOROTHY MARY MOYLE, SC.D., biochemist.
- NEEDHAM, JOSEPH, SC.D., M.A., PH.D., biochemist.
- NEUBERGER, ALBERT, biochemist.
- NEWITT, DUDLEY MAURICE, M.C., D.S.C., chemist.
- NEWMAN, MAXWELL HERMAN ALEXANDER, M.A., mathematician.
- NORRISH, RONALD GEORGE WREYFORD, PH.D., physical chemist.
- NUFFIELD, WILLIAM RICHARD MORRIS, Viscount, G.B.E.
- OFFORD, ALBERT CYRIL, D.S.C., PH.D., mathematician.
- OGSTON, ALEXANDER GEORGE, B.A., D.PHIL., biochemist.
- OLIPHANT, MARCUS LAURENCE ELWIN, physicist.
- OROWAN, EGON, physicist.
- PANETH, FRIEDRICH ADOLF, PH.D., chemist.
- PANTIN, CARL FREDERICK ABEL, M.A., SC.D., zoologist.
- PARKES, ALAN STERLING, M.A., PH.D., D.S.C., SC.D., physiologist.
- PARSONS, SIR JOHN (HERBERT), C.B.E., D.S.C., F.R.C.S., ophthalmic surgeon.
- PAWSEY, JOSEPH JADE, PH.D., radio physicist.
- PEARSALE, WILLIAM HAROLD, F.L.S., D.S.C., botanist.
- PEAT, STANLEY, D.S.C., chemist.
- PEIERLS, RUDOLF ERNST, C.B.E., mathematician.
- PENFIELD, WILDER, O.M., C.M.G., neurologist.
- PENNEY, SIR WILLIAM (GEORGE), K.B.E., D.S.C., physicist.
- PENROSE, LIONEL SHARPLES, M.A., M.D., eugenicist.
- PERUTZ, MAX FERDINAND, PH.D., biophysicist.
- PETERS, SIR RUDOLPH (ALBERT), M.C., M.D., biochemist.
- PFEIL, LEONARD BESSEMER, O.B.E., metallurgist.
- PIPPARD, ALFRED JOHN SUTTON, M.B.E., engineer.
- PIRIE, NORMAN WINGATE, M.A., biochemist.
- PITT-RIVERS, ROSALIND VENETIA, PH.D., biochemist.
- PLASKETT, HARRY HEMLEY, M.A., astronomer.
- POLANYI, MICHAEL, physical chemist.
- PONTECORVO, GUIDO, DR.AGR., PH.D., geneticist.
- POWELL, ALAN RICHARD, metallurgist.
- POWELL, CECIL FRANK, M.A., physicist.
- POWELL, HERBERT MARCUS, M.A., chemical crystallographer.
- PRESCOTT, JAMES ARTHUR, C.B.E., soil scientist.
- PRESTON, REGINALD DAWSON, plant biophysicist.
- PRINGLE, JOHN WILLIAM SUTTON, M.B.E., SC.D., zoologist.
- PROUDMAN, JOSEPH, C.B.E., M.A., D.S.C., oceanographer.
- PRYCE, MAURICE HENRY LECORNEY, physicist.
- PUGH, WILLIAM JOHN, O.B.E., geologist.
- PUGSLEY, ALFRED GRENVILLE, O.B.E., B.SC., M.S.C., D.S.C., civil engineer.
- PUMPHREY, RICHARD JULIUS, M.A., PH.D., SC.D., zoologist.
- PUNNETT, REGINALD CRUNDALL, M.A., geneticist.
- PYE, SIR DAVID (RANDALL), C.B., M.A., SC.D., M.I.MECH.E., F.R.A.S., physicist.
- QUASTEL, JUDA HIRSCH, D.S.C., biochemist.
- RACE, ROBERT RUSSELL, PH.D., M.R.C.S., serologist.
- RAISTRICK, HAROLD, SC.D., D.S.C., F.R.I.C., F.C.S., biochemist.
- RAMAN, SIR (CHANDRASEKHARA) VENKATA, M.A., physicist.
- RAMSAY, JAMES ARTHUR, M.A., PH.D., zoologist.
- RANDALL, JOHN TURTON, D.S.C., physicist.
- RANKINE, ALEXANDER OLIVER, O.B.E., D.S.C., physicist.
- RATCLIFFE, JOHN ASHWORTH, O.B.E., physicist.
- READ, HERBERT HAROLD, D.S.C., A.R.C.S., F.G.S., F.R.S.E., geologist.
- READ, JOHN, M.A., SC.D., B.SC., PH.D., chemist.
- REDMAN, RODERICK OLIVER, M.A., PH.D., astrophysicist.
- RELF, ERNEST FREDERICK, C.B.E., A.R.C.S.C., F.R.A.E.S., aerophysicist.
- RICARDO, SIR HARRY (RALPH), B.A., engineer.
- RICHARDS, FRANCIS JOHN, D.S.C., plant physiologist.
- RICHARDSON, SIR OWEN (WILLANS), M.A., D.S.C., physicist.
- RICHEY, JAMES ERNEST, M.C., B.A., B.A.I., SC.D., geologist.
- RIDEAL, SIR ERIC (KEIGHTLEY), M.B.E., M.A., PH.D., D.S.C., F.R.I.C., chemist.
- RIDLEY, HENRY NICHOLAS, C.M.G., M.A., F.L.S., botanist, zoologist and geologist.
- RIMINGTON, CLAUDE, chemical pathologist.
- RIVETT, SIR (ALBERT CHERBURY) DAVID, K.C.M.G., M.A., B.SC., D.S.C., chemist.
- ROBERTSON, ALEXANDER, chemist.
- ROBERTSON, ANDREW, D.S.C., engineer.
- ROBERTSON, JOHN MONTEATH, chemist.
- ROBERTSON, MURIEL, M.A., D.S.C., protozoologist.
- ROBINSON, SIR ROBERT, O.M., M.A., D.S.C., F.C.S., F.R.I.C., chemist.
- ROCKEFELLER, JOHN DAVISON, JUNR., A.B., M.A., LL.D.
- ROGERS, SIR LEONARD, K.C.S.I., C.I.E., M.D., F.R.C.P., F.R.C.S., pathologist.
- ROGOSINSKI, WERNER WOLFGANG, mathematician.
- ROOM, THOMAS GERALD, mathematician.
- ROSENHEAD, LOUIS, C.B.E., mathematician.
- ROTHSCHILD, NATHANIEL MAYER VICTOR, Baron, G.M., PH.D., SC.D., zoologist.
- ROUGHTON, FRANCIS JOHN WORSLEY, M.A., PH.D., physiologist.
- ROWLEDGE, ARTHUR JOHN, M.B.E., engineer.
- RUSHTON, WILLIAM ALBERT HUGH, SC.D., physiologist.
- RUSSELL, BERTRAND ARTHUR WILLIAM RUSSELL, Earl, O.M., M.A., mathematician and philosopher.
- RUSSELL, SIR (EDWARD) JOHN, D.S.C., F.C.S., agriculturist.
- RUSSELL, FREDERICK STRATTEN, C.B.E., D.S.C., D.F.C., B.A., marine biologist.
- RYDE, JOHN WALTER, physicist.
- RYLE, MARTIN, M.A., physicist.
- SAHA, MEGHNAD, D.S.C., F.INST.P., physicist.
- SALISBURY, SIR EDWARD (JAMES), C.B.E., D.S.C., F.L.S., botanist.
- SANGER, FREDERICK, PH.D., biochemist.
- SCHONLAND, BASIL FERDINAND JAMIESON, C.B.E., M.A., PH.D., M.I.E.E. (S. Af.), geophysicist.
- SCOTT, DAVID AYIMFER, M.A., PH.D., chemist.
- SCOTT, HUGH, SC.D., entomologist.
- SFWELL, ROBERT BERESFORD SEYMOUR, C.I.E., SC.D., zoologist.
- SHENSTONE, ALLEN GOODRICH, O.B.E., M.C., B.A., M.A., PH.D., physicist.
- SHOENBERG, DAVID, M.B.E., PH.D., physicist.
- SHORTT, HENRY EDWARD, C.I.E., M.D., CH.D., D.S.C., Col. I.M.S. (retd.), parasitologist.
- SIMON, SIR FRANCIS (EUGEN), C.B.E., PH.D., physicist.
- SIMONSEN, SIR JOHN (LIONEL), D.S.C., F.R.I.C., F.C.S., chemist.
- SIMPSON, SIR GEORGE (CLARKE), K.C.B., C.B.E., D.S.C., LL.D., meteorologist.
- SINTON, JOHN ALEXANDER, V.C., O.B.E., M.D., D.S.C., malariologist.
- SKINNER, HERBERT WAKEFIELD BANKS, PH.D., physicist.
- SMITH, DAVID MACLEISH, D.S.C., engineer.
- SMITH, SIR FRANK (EDWARD), G.C.B., G.B.E., A.R.C.S., D.S.C., LL.D., physicist.
- SMITH, KENNETH MANLEY, D.S.C., PH.D., agricultural entomologist.
- SMITH, THOMAS, M.A., physicist.
- SMITH, SIR WILLIAM WRIGHT, botanist.
- SMITH, WILSON, M.D., bacteriologist.
- SNOW, ROBERT, M.A., plant physiologist.
- SODDY, FREDERICK, M.A., LL.D., chemist.
- SOUTHWELL, SIR RICHARD (VYNNE), LL.D., M.A., engineer.
- SPATH, LEONARD FRANK, D.S.C., geologist.
- SPENCER, LEONARD JAMES, C.B.E., A.R.C.S., M.A., SC.D., F.G.S., F.C.S., F.R.G.S., mineralogist.
- SPRING, FRANK STUART, B.S.C., PH.D., D.S.C., organic chemist.
- STACEY, MAURICE, B.S.C., PH.D., D.S.C., chemist.

UNITED KINGDOM

STANIER, Sir WILLIAM (ARTHUR), M.I.MECH.E., M.I.LOCO.E., mechanical engineer.
 STAPLEDON, Sir (REGINALD) GEORGE, C.B.E., M.A., agricultural botanist.
 STEACIE, EDGAR WILLIAM RICHARD, O.B.E., D SC., chemist.
 STEDMAN, EDGAR, PH.D., D.SC., chemist.
 STEPHENSON, THOMAS ALAN, D.S.C., zoologist.
 STILES, WALTER, M.A., SC.D., F.L.S., botanist.
 STONELEY, ROBERT, M.A., SC.D., mathematician.
 STONER, EDMUND CLIFTON, SC.D., F.INST.P., physicist.
 STOPFORD, Sir JOHN (SEBASTIAN BACH), K.B.E., M.D., anatomist.
 STOREY, HAROLD HAYDON, C.M.G., PH.D., botanist.
 STRATTON, FREDERICK JOHN MARRIAN, D SO., O.B.E., M.A., LL.D., astrophysicist.
 STUBBLEFIELD, CYRIL JAMES, D.S.C., PH.D., A.R.C.SC., F.G.S., geologist.
 SUCKSMITH, WILLIE, D.S.C., physicist.
 SUTHERLAND, GORDON BRIMS BLACK McIVOR, M.A., PH D., SC.D., spectroscopist.
 SUTTON, LESLIE ERNEST, M.A., D.PHIL., chemist.
 SUTTON, Sir (OLIVER) GRAHAM, C.B.E., D SC., mathematician and physicist.
 SWINBURNE, Sir JAMES, Bt., M.INST.C.E., M.I.E.E., engineer.
 SYKES, CHARLES, D.S.C., metallurgist.
 SYNGE, JOHN LIGHTON, M.A., SC.D., F.R.S.C., mathematician.
 SYNGE, RICHARD LAURENCE MILLINGTON, B.A., PH.D., biochemist.
 TAYLOR, EDWARD WILFRED, C.B.E., F.INST.P., physicist (optics).
 TAYLOR, Sir GEOFFREY (INGRAM), M.A., meteorologist and engineer.
 TAYLOR, Sir HUGH STOTT, K.B.E., D.S.C., physical chemist.
 TEMPLE, GEORGE, C.B.E., PH.D., D.S.C., mathematician.
 THODAY, DAVID, M.A., SC.D., F.R.S.S.A.F., botanist.
 THODE, HENRY GEORGE, M.B.E., PH D., chemist and physicist.
 THOMAS, HUGH HAMSHAW, M.B.E., M.A., SC.D., F.L.S., F.G.S., botanist.
 THOMAS, MEIRION, M.A., F.R.S.E., botanist.
 THOMPSON, HAROLD WARRIS, M.A., B SC., D.PHIL., chemist.
 THOMPSON, WILLIAM ROBIN, B SC., M.S.C., D SC., PH.D., F.R.E.S., entomologist.
 THOMSON, Sir GEORGE (PAGET), M.A., physicist.
 THORNTON, HENRY GERARD, D.S.C., bacteriologist.
 THORPE, WILLIAM HOMAN, SC D., entomologist.
 TIEGS, OSCAR WERNER, M.A., zoologist.
 TILLEY, CECIL EDGAR, B SC., PH.D., mineralogist and petrologist.
 TITCHMARSH, EDWARD CHARLES, M.A., mathematician.
 TIZARD, Sir HENRY (THOMAS), G C.B., A.F.C., M.A., aeronautical engineer.
 TODD, Sir ALEXANDER (ROBERTUS), chemist.
 TODD, CHARLES, O.B.E., M.A., M.D., bacteriologist.
 TODD, JOHN ARTHUR, PH.D., mathematician.
 TOLANSKY, SAMUEL, PH.D., D SC., physicist.
 TOMPKINS, FREDERICK CLIFFORD, D SC., PH.D., physical chemist.
 TOWNSEND, Sir JOHN (SEALY EDWARD), M.A., physicist.
 TRAVERS, MORRIS WILLIAM, D.S.C., chemist.
 TREVAN, JOHN WILLIAM, pharmacologist.
 TREVELYAN, GEORGE MACAULAY, O.M., D C L., LL.D., LITT.D., historian.
 TURNBULL, HERBERT WESTREN, M.A., F.R.S.E., mathematician.
 TURNER, EUSTACE EBENEZER, M.A., D.S.C., F.I.C., chemist.
 TURNER, WILLIAM ERNEST STEPHEN, O.B.E., D.S.C., M.S.C., F.INST.P., F.S.G.T., technologist.
 TWYMAN, FRANK, F.INST.P., spectroscopist.
 TYNDALL, ARTHUR MANNERING, C.B.E., D.S.C., physicist.
 UBBELOHDE, ALFRED RENE JEAN PAUL, M.A., D.S.C., chemist.
 UVAROV, BORIS PETROVICH, C.M.G., B.S.C., D.S.C., entomologist.
 VERNEY, ERNEST BASIL, M.A., M.B., B.CH., F.R.C.P., pharmacologist.
 VOGT, MARTHE LOUISE, DR.MED., DR.PHIL., PH.D., pharmacologist.
 WADDINGTON, CONRAD HAL, SC.D., geneticist.
 WAGER, LAWRENCE RICKARD, SC D., geologist.
 WALKER, ARTHUR GEOFFREY, C.B.E., M.A., PH.D., D.S.C., F.R.A.S., F.R.S.E., mathematician.

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

WALKER, Sir GILBERT (THOMAS), C S I., SC.D., M.A., F.R.A.S., meteorologist.
 WALLACE, THOMAS, C.B.E., M.C., D.S.C., horticultural chemist.
 WALLIS, BARNES NEVILLE, C.B.E., engineer.
 WALSHE, Sir FRANCIS (MARTIN ROUSE), O.B.E., F.R.C.P., physician.
 WATERS, WILLIAM ALEXANDER, SC.D., physical and organic chemist.
 WATSON, DAVID MEREDITH SEARES, M.S.C., F.G.S., F.Z.S., zoologist.
 WATSON, GEORGE NEVILLE, SC.D., D.S.C., M.S.C., F.R.A.S., mathematician.
 WATSON-WATT, Sir ROBERT (ALEXANDER), C.B., engineer.
 WAVERLEY of WESTDEAN, Rt Hon (JOHN ANDERSON), Viscount, G.C.B., G.C.S.I., G.C.I.F.
 WELLS, GEORGE PHILIP, M.A., SC D., zoologist.
 WESTOLL, THOMAS STANLEY, B.S.C., PH D., D.S.C., geologist.
 WHIDDINGTON, RICHARD, C.B.E., M.A., D SC., physicist.
 WHITEHEAD, JOHN HENRY CONSTANTINE, M.A., PH.D., mathematician.
 WHITTAKER, Sir EDMUND (TAYLOR), M.A., mathematician.
 WHITTAKER, JOHN MACNAGHTEN, M.A., D SC., mathematician.
 WHITFRIDGE, DAVID, D M., physiologist.
 WHITTLF, Air Commodore Sir FRANK, K B F., C B., D.S.C., M.A., B.A., engineer.
 WHYTLAW-GRAY, ROBERT, O.B.E., PH D., F.R.I.C., chemist.
 WIGLESWORTH, VINCENT BRIAN, C.B.E., M.A., bacteriologist.
 WILLIAMS, CARRINGTON BONSOR, SC D., entomologist.
 WILLIAMS, FREDERIC CALLAND, O.B.E., D SC., D.PHIL., electron technician.
 WILLIS, JOHN CHRISTOPHER, M.A., SC D., F.L.S., botanist.
 WILSON, ALAN HERRIES, mathematician.
 WILSON, CHARLES THOMSON REES, C.H., M.A., D.S.C., physicist.
 WILSON, HAROLD ALBERT, M.A., D SC., M SC., physicist.
 WILSON, WILLIAM, D SC., PH.D., physicist.
 WOODS, DONALD DEVEREUX, B.A., M.A., PH.D., microbiologist.
 WOOLLEY, RICHARD VAN DER RIET, O.B.E., M.S.C., M.A., SC D., astronomer.
 YATES, FRANK, SC.D., agricultural statistician.
 YONGE, CHARLES MAURICE, C.B.E., D SC., zoologist.
 YOUNG, FRANK GEORGE, M.A., PH.D., D.S.C., biochemist.
 YOUNG, JOHN ZACHARY, M.A., anatomist.
 ZUCKERMAN, Sir SOLLY, C B., M.A., D SC., M.R.C.S., L.R.C.P., anatomist.

FOREIGN MEMBERS.

ADAMS, Dr WALTER SYDNEY (U.S.A.), astronomer.
 BOHR, Prof NIELS HENRIK DAVID (Denmark), physicist.
 BORDET, Prof JULES (Belgium), bacteriologist.
 BOWEN, Dr. NORMAN LEVI (U.S.A.), geologist.
 BRIDGMAN, Prof. PERCY WILLIAMS (U.S.A.), physicist.
 BROGLIE, Prince Louis Victor Pierre Raymond de (France), physicist.
 BROGLIE, MAURICE, LE DUC DE (France), physicist.
 BRONK, Dr. DETLEV WULF (U.S.A.), physiologist.
 BROUWER, Prof. LUITZEN EGBERTUS JAN (Netherlands).
 CAULLERY, Prof. MAURICE JULES GASTON CORNEILLE (France), biologist.
 CONANT, Dr. JAMES BRYANT (U.S.A.), chemist.
 CORT, Prof. CARL FERDINAND (U.S.A.), physiologist.
 CORNER, GEORGE WASHINGTON (U.S.A.), anatomist.
 COURRIER, Prof. M. J. C. R. (France), physiologist.
 DEBYE, Prof. PETER (U.S.A.), chemist.
 EVANS, Prof. HERBERT McLEAN (U.S.A.), anatomist.
 FRISCH, KARL VON (Germany), physiologist.
 GASSER, Dr. HERBERT SPENCER (U.S.A.), physiologist.
 HADAMARD, Prof. JACQUES (France), mathematician.
 HARRISON, Prof. ROSS GRANVILLE (U.S.A.), zoologist.
 HEISENBERG, WERNER (Germany), physicist.
 HEVESY, Prof. GEORGE CHARLES DE (Sweden), chemist.
 HÖRSTADIUS, SVEN OTTO (Sweden), zoologist.
 HOUSSAY, Prof. BERNARDO ALBERTO (Argentina), physiologist.
 JOLIOT, Prof. JEAN FRÉDÉRIC (France), chemist.
 KARRER, Prof. PAUL (Switzerland), chemist.
 KLUYVER, ALBERT JAN (Netherlands), biochemist.
 LANGMUIR, Dr. IRVING (U.S.A.), chemist.

THE BRITISH COMMONWEALTH

LASHLEY, Prof. KARL SPENCER (U.S.A.), physiologist
 VON LAUE, Prof. MAX THEODOR FELIX (Germany), physicist.
 LOEWI, OTTO (U.S.A.), pharmacologist

MEINESZ, Prof. FELIX ANDRIES VENING (Netherlands), geo-physicist.

MEITNER, LISE (Sweden), physicist
 MULLER, Prof. HERMANN JOSEPH (U.S.A.), zoologist.

NORLUND, Prof. NIELS ERIK (Denmark), mathematician.

PAULI, Prof. WOLFGANG (Switzerland), physicist.
 PAULING, Prof. LINUS CARL (U.S.A.), chemist
 PORTEVIN, Prof. ALBERT MARCEL GERMAIN RENÉ (France), metallurgist

REICHSTEIN, Prof. TADEUS (Switzerland), organic chemist.
 RENNER, OTTO (Germany), biologist
 RICHARDS, Dr. ALFRED NEWTON (U.S.A.), pharmacologist.
 ROUS, Dr. FRANCIS PEYTON (U.S.A.), pathologist.
 RUSSELL, Prof. HENRY NORRIS (U.S.A.), astronomer
 RUZICKA, Prof. LEOPOLD (Switzerland), chemist.

SCHRÖDINGER, Prof. ERWIN (Austria), physicist.
 SIEGBAHN, KARL MANNE GEORG (Sweden), physicist.
 SKOTTSBERG, Prof. CARL JOHAN FREDRIK (Sweden), botanist
 STENSIO, Prof. ERIK ANDERSSON (Sweden)
 STÖRMER, Prof. FREDRIK CARL MULERTZ (Norway), mathematician and geophysicist.

STRUVE, OTTO (U.S.A.), astronomer.
 SVEDBERG, Prof. THEODOR (Sweden), chemist
 SVEDELIUS, Prof. NILS EBERHARD (Sweden), botanist.

TIMOSHENKO, Prof. STEPHEN (U.S.A.), engineer.

UREY, Prof. HAROLD CLAYTON (U.S.A.), chemist

VINOGRADOV, Academician Prof. IVAN MATVEEVICH (U.S.S.R.) mathematician.

VON KARMÁN, Prof. THEODORE (U.S.A.), aeronautical engineer

WARBURG, Prof. OTTO HEINRICH (Germany), physiologist
 WEYL, Prof. HERMANN (Switzerland), mathematician.
 WIELAND, Prof. HEINRICH OTTO (Germany), chemist.
 WINGE, Prof. OJVIND (Denmark), physiologist.
 WYCKOFF, Dr. RALPH W. G. (U.S.A.), bacteriologist.

ROYAL SOCIETY OF EDINBURGH

22, 24 GEORGE STREET, EDINBURGH, 2

Founded 1783 for the promotion of science and literature

President Prof. JAMES RITCHIE, C.B.E., M.A., D.Sc., LL.D.

General Secretary Dr. J. E. RICHEY, M.C., F.R.S.

Curator Dr. DOUGLAS GUTHRIE

Assistant Secretary and Librarian W. H. RUTHERFORD, A.C.C.S.

The important scientific library of approx. 100,000 vols. consists mainly of publications of scientific institutions throughout the world, and scientific journals.

Approx. 790 Fellows, 22 British Hon. Fellows, 44 foreign Hon. Fellows

Publications: *Proceedings, Section A (Mathematics, Physics), Section B (Biology, Geology), Transactions, Year Book*

ROYAL ACADEMY OF ARTS IN LONDON

BURLINGTON HOUSE, PICCADILLY, LONDON, W.1

Founded by King George III in 1768

President (for the year 1956) Sir A. E. RICHARDSON, P.R.A.

Keeper HENRY RUSHBURY, R.A.

Treasurer Sir EDWARD MAUFE, R.A.

Secretary HUMPHREY BROOKE, B.A., B.Litt.

Registrar CHARLES W. TANNER, M.V.O.

ROYAL ACADEMICIANS

ANDERSON, STANLEY, C.B.E. (1941).

AUSTIN, ROBERT (1949).

BATEMAN, JAMES (1942).

BRANGWYN, Sir FRANK (1919).

BROCKHURST, GERALD L. (1937).

BRUNDRIE, REGINALD GRANGE (1938).

CONNARD, PHILIP, C.V.O. (1925).

COWPER, F. CADOGAN (1934).

CUNDALL, CHARLES (1944).

DE SOISSONS, LOUIS, C.V.O., O.B.E. (1953).

DICK, Sir WILLIAM REID, K.C.V.O. (1928).

DOBSON, FRANK, C.B.E. (1953).

DRING, WILLIAM (1955).

DUNLOP, R. O. (1950).

ELWELL, FREDERICK WILLIAM (1938).

EURICH, RICHARD (1953).

FITTON, JAMES (1954).

FLINT, Sir WILLIAM RUSSELL (1933).

GARBE, RICHARD (1936).

GERE, CHARLES MARCH (1939).

GOODEN, STEPHEN, C.B.E. (1946).

GREEN, WILLIAM CURTIS (1933).

HALL, OLIVER (1927).

HARRIS, EMANUEL VINCENT, O.B.E. (1942).

JOHN, AUGUSTUS E., O.M. (1938).

KELLY, Sir GERALD FESTUS, K.C.V.O. (1930).

KNIGHT, HAROLD (1937).

KNIGHT, Dame LAURA, D.B.E. (1936).

LAMB, HENRY (1949).

LAMBERT, MAURICE (1952).

LAWRENCE, ALFRED KINGSLEY (1938).

LE BAS, EDWARD (1954).

LEDWARD, GILBERT (1937).

MCMILLAN, WILLIAM (1933).

MASON, ARNOLD (1951).

MAUFE, Sir EDWARD (1947).

MONNINGTON, WALTER THOMAS (1938).

MOYNIHAN, RODRIGO, C.B.E. (1954).

MUNNINGS, Sir ALFRED J., K.C.V.O. (1925).

NASH, JOHN (1951).

NEWTON, ALGERNON (1943).

OSBORNE, MALCOLM, C.B.E. (1943).

PITCHFORTH, R. VIVIAN (1953).

PROCTER, Mrs. DOD (1942).

RICHARDSON, ALBERT EDWARD (1944).

RUSHBURY, HENRY, C.V.O. (1936).

SCOTT, Sir GILES GILBERT, O.M. (1922).

SPEAR, RUSKIN (1954).

SPENCER, STANLEY, C.B.E. (1950).

SPURRIER, STEVEN (1952).

TAYLOR, LEONARD CAMPBELL (1931).

THOMSON, ALFRED REGINALD (1945).

TODD, A. R. MIDDLETON (1949).

TUNNICLIFFE, CHARLES F. (1954).

WHEELER, CHARLES, C.B.E. (1940).

WOODFORD, JAMES (1945).

WORTHINGTON, Sir HUBERT, O.B.E. (1955).

ROYAL SCOTTISH ACADEMY

PRINCES STREET, EDINBURGH

Founded 1826.

President Sir W. O. HUTCHISON.

Treasurer A. BRUCE THOMSON, R.S.A.

Secretary STANLEY CURSITER, R.S.A.

Librarian WILLIAM WILSON, R.S.A.

HONORARY RETIRED ACADEMICIANS.

CARRICK, A. (1929).

WATT, G. FIDDES (1924).

ROYAL SCOTTISH ACADEMICIANS:

AIKEN, J. M. (1936).

BONE, Miss P. M. (1944).

ALLAN, A. R. W. (1937).

BORTHWICK, A. E. (1938).

BRITISH ACADEMY

BURLINGTON GARDENS, LONDON, W 1

Founded 1901.

President Sir GEORGE CLARK, D LITT, M A.
Secretary Sir R. E. MORTIMER WHEELER, C I E, M C,
D LITT.

Treasurer Prof R G D. ALLEN, C.B.E.

Foreign Secretary Sir CHARLES WEBSTER, K C M G.

Honorary Fellows 4, Fellows 200, Corresponding
Fellows 54

The Academy is divided into 11 sections

Publication: *Proceedings* (annual).

MEMBERS.

Ancient History:

ADCOCK, Sir FRANK EZRA, O.B.E., D.LITT.
BAYNES, Prof. NORMAN HEPBURN, D.D., D.LITT., M.A.
BEAZLEY, Sir JOHN DAVIDSON, M.A.
BELL, Sir HAROLD IDRIS, C.B., O.B.E., D.LITT.
GARDINER, Sir ALAN HENDERSON, D LITT.
GOMME, Prof. ARNOLD WYCOMBE.
GRIFFITH, GUY THOMPSON.
JONES, Prof. ARNOLD HUGH MARTIN.
MOMIGLIANO, Prof. ARNALDO DANTE, D.LITT.
RICHMOND, Prof. IAN ARCHIBALD, M.A., LL.D.
ROSE, Prof. HERBERT JENNINGS, M.A.
SCULLARD, Dr. HOWARD HAYES, M.A., PH.D.
SMITH, SIDNEY, LITT.D.
SYME, Prof. RONALD
TARN, Sir WILLIAM WOODTHORPE, LITT.D.
TOD, MARCUS NIEBUHR, O.B.E., LITT.D.
WADE-GERY, Prof. HENRY THEODORE, M.C.
WALBANK, Prof. FRANK WILLIAM, M.A.

Medieval and Modern History:

ASHTON, Prof. THOMAS SOUTHCLIFFE.
BAYNES, Prof. NORMAN HEPBURN, D.D., D.LITT., M.A.
BROWNING, Prof. ANDREW, M.A., D.LITT.
CAM, Prof. HELEN MAUD.
CHENEY, Prof. CHRISTOPHER ROBERT.
CLARK, Sir GEORGE NORMAN, LL.D.
CLAY, CHARLES TRAVIS, C.B., LITT.D.
DARLINGTON, Prof. REGINALD RALPH, PH D.
DOUGLAS, Prof. DAVID CHARLES, M.A.
EDWARDS, Prof. JOHN GORONWY, M.A.
GALBRAITH, Prof. VIVIAN HUNTER, M A
GOOCH, GEORGE PEABODY, C H, D.LITT.
HANCOCK, Prof. Sir WILLIAM KEITH, M A.
HARMER, Dr. FLORENCE E.
JACOB, Prof. ERNST FRASER, D.PHIL
JOHNSON, CHARLES, C.B.E
KNOWLES, Rev. Prof. MICHAEL DAVID, LITT.D.
NAMIER, Sir LEWIS BERNSTEIN, M.A.
NEALE, Prof. JOHN ERNEST, D.LITT
PANTIN, WILLIAM ABEL, M.A.
PARES, Prof. RICHARD, C.B.E.
PLUCKNETT, Prof. THEODORE FRANK THOMAS, LL.D.
POOLE, AUSTIN LANE, D.LITT.
POWICKE, Sir FREDERICK MAURICE, M.A.
RABY, FREDERIC JAMES EDWARD, C.B., LITT.D.
RICHARDSON, HENRY GERALD.
STENTON, Sir FRANK MERRY, D.LITT.
STENTON, Lady, D.LITT.
SUTHERLAND, LUCY S., C.B.E., M.A.

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

SYKES, Rev. Prof. NORMAN.
TAWNEY, Prof. RICHARD HENRY.
THOMPSON, Rev. JAMES MATTHEW.
TOYNBEE, Prof. ARNOLD JOSEPH, D.LITT.
TREVELYAN, Dr. GEORGE MACAULAY, O.M., C.B.E.
WEBSTER, Prof. Sir CHARLES KINGSLEY, K.C.M.G., M.A.,
LITT.D.
WOODWARD, Sir ERNEST LEWELLYN, D.LITT.
WORMALD, Prof. FRANCIS, M.A.

Biblical and Ecclesiastical Studies and Theology:

BLACK, Very Rev. Prof. MATTHEW, D.LITT.
DAWSON, CHRISTOPHER, M.A.
DODD, Rev. Prof. CHARLES HAROLD, D.D.
DRIVER, Prof. GODFREY ROLLES, M.C., M.A.
JOHNSON, Prof. AUBREY RODWAY.
MANSON, Rev. Prof. THOMAS WALTER, D.D., D LITT.
RAVEN, Rev. Canon CHARLES EARLE, D.D.
ROBERTS, COLIN HENDERSON.
ROWLEY, Rev. Prof. HAROLD HENRY, D.D.
SYKES, Rev. Prof. NORMAN.
TAYLOR, Rev. Dr. VINCENT, PH.D., D.D.
TENNANT, Rev. FREDERICK ROBERT, D.D.

Oriental Studies:

ARBERRY, Prof. ARTHUR JOHN, LITT.D.
BAILEY, Prof. HAROLD WALTER, M.A., D PHIL.
BARNETT, LIONEL DAVID, C.B., LITT.D.
BLACK, Very Rev. Prof. MATTHEW, D LITT.
BLACKMAN, Prof. AYLWARD MANLEY, M.A., D LIT
CERNY, Prof. JAROSLAV.
DRIVER, Prof. GODFREY ROLLES, M.C., M.A.
GADD, CYRIL JOHN, M.A.
GARDINER, Sir ALAN HENDERSON, D.LITT.
GIBB, Sir HAMILTON ALEXANDER ROSKEEN, M.A.
GLANVILLE, Prof. STEPHEN RANULPH KINGDON, M.B.E., M.A.
HENNING, Prof. WALTER BRUNO, PH.D.
JOHNSON, Prof. AUBREY RODWAY.
KAHLE, Prof. PAUL ERNST.
RANDLE, HERBERT NIEL, C.I.E., D.PHIL.
ROWLEY, Rev. Prof. HAROLD HENRY, D.D.
SMITH, SIDNEY, LITT.D.
THOMAS, Prof. FREDERICK WILLIAM, C.I.F., M.A.
TURNER, Sir RALPH LILLEY, M.C., LITT.D.
WALEY, ARTHUR DAVID, C.H., C.B.E., LL.D.
WHEELER, Sir ROBERT ERIC MORTIMER, C.I.E., M.C., D.LITT
WINSTEDT, Sir RICHARD OLAF, K.B.E., C.M.G., D.LITT.
ZETLAND, Most Hon. The Marquess of, P.C., K.G., G.C.S.I.,
G.C.I.E.

Literature and Philology, Classical:

ADCOCK, Sir FRANK EZRA, O.B.E., D.LITT.
ALLAN, DONALD JAMES, M.A.
BAILEY, CYRIL, C.B.E., D.LITT., LL.D.
BARBER, ERIC ARTHUR.
BEAZLEY, Sir JOHN DAVIDSON, M.A.
BELL, Sir HAROLD IDRIS, C.B., O.B.E., D.LITT.
BOWRA, Sir CECIL MAURICE, D LITT.
CALDER, Sir WILLIAM MOIR, LL.D.
DODDS, Prof. ERIC ROBERTSON, D.LITT.
FRAENKEL, Prof. EDUARD, M A, D.PHIL.
GARROD, HEATHCOTE WILLIAM, C.B.E., D.LITT.
GOMME, Prof. ARNOLD WYCOMBE.
GOW, ANDREW SYDENHAM FARRAR, M.A.
GUTHRIE, Prof. WILLIAM KEITH CHAMBERS.
HACKFORTH, Prof. REGINALD, M.A.
JONES, WILLIAM HENRY SAMUEL, LITT.D.
KITTO, Prof. H. D. F., B.A.
LORIMER, Prof. WILLIAM LAUGHTON, M A.
MURRAY, Prof. GILBERT, O.M., LL.D., D.LITT.
MYNORS, Prof. ROGER AUBREY BASKERVILLE.
PAGE, Prof. DENYS LIONEL.
PFEIFFER, Prof. RUDOLF.
ROBERTS, COLIN HENDERSON, M.A.
ROBERTSON, Prof. DONALD STRUAN, D.PHIL.
ROSE, Prof. HERBERT JENNINGS, M.A.
ROSS, Sir WILLIAM DAVID, K.B.E., LL.D., LITT.D.

Literature and Philology, Medieval and Modern:

ALEXANDER, Prof. PETER.
CHAPMAN, ROBERT WILLIAM, D.LITT., LL.D.
CRAIGIE, Sir WILLIAM A., LL.D., D.LITT.
DARBISHIRE, Miss HELEN, C.B.E., M.A.

THE BRITISH COMMONWEALTH

DAVIS, Dr. HERBERT JOHN, M.A., LL.D., LITT.D.
 GARROD, HEATHCOTE WILLIAM, C.B.E., D.LITT.
 GREG, Sir WALTER WILSON, LITT.D.
 GRIERSON, Sir HERBERT JOHN CLIFFORD, M.A.
 LEWIS, Prof. CLIVE STAPLES, M.A.
 MORISON, STANLEY.
 ONIONS, CHARLES TALBUT, C.B.E., D.LITT.
 ORR, Prof. JOHN, M.A.
 RABY, FREDERIC JAMES EDWARD, C.B., LITT.D.
 RENWICK, Prof. WILLIAM LINDSAY, D.LITT.
 SCHOLDERER, VICTOR, D.LITT.
 SISAM, KENNETH, M.A.
 SMITH, Prof. DAVID NICHOL, D.LITT., LL.D.
 SUTHERLAND, Prof. JAMES RUNCIMAN, M.A.
 TILLYARD, EUSTACE MANDEVILLE WETENHALL, O.B.E., LITT.D.
 WILLEY, Prof. BASIL, M.A.
 WILLIAMS, Sir HAROLD HERBERT, M.A.
 WILLIAMS, Prof. Sir IFOR, D.LITT.
 WILSON, Prof. FRANK PERCY, D.LITT.
 WILSON, Prof. JOHN DOVER, C.H., LITT.D.

Philosophy:

AARON, Prof. RICHARD ITHAMAR, M.A., D.PHIL.
 AYER, Prof. ALFRED JULES
 BROAD, Prof. CHARLIE DUNBAR, LITT.D.
 CARRITT, EDGAR FREDERICK, M.A.
 EWING, ALFRED CYRIL, LITT.D.
 GINSBERG, Prof. MORRIS, M.A., D.LIT.
 KNEALE, WILLIAM CALVERT.
 MOORE, Prof. GEORGE EDWARD, O.M., LITT.D.
 PATON, Prof. HERBERT JAMES, D.LITT., LL.D.
 PRICE, Prof. HENRY HABBERLEY, D.LITT.
 RADHAKRISHNAN, Sir SARVEPALLI, D.LITT.
 ROSS, Sir WILLIAM DAVID, K.B.E., LL.D., LITT.D.
 ROTH, Prof. LEON, D.PHIL.
 RUSSELL, Prof. LEONARD JAMES, M.A., B.Sc., D.PHIL.
 SMITH, Prof. NORMAN KEMP, D.PHIL.
 WAIMANN, FRIEDRICH, M.A.

Jurisprudence:

ALLEN, Sir CARLETON KEMP, M.C., Q.C., D.C.L.
 CARR, Sir CECIL THOMAS, K.C.B., Q.C., LL.D.
 CHESHIRE, Prof. GEOFFREY CHEVALIER, D.C.L.
 FIFOOT, CECIL HERBERT STUART, M.A.
 FLOWER, Sir CYRIL THOMAS, C.B., M.A.
 GOODHART, Dr. ARTHUR LEHMAN, Hon. K.B.E., Q.C., M.A., LL.M., LL.D., D.C.L.
 HAZELTINE, Prof. HAROLD DEXTER, LITT.D.
 JENNINGS, Sir (WILLIAM) IVOR, Q.C., M.A., LL.D., LITT.D.
 LAUTERPACHT, Prof. Sir HERSCH, Q.C., LL.D.
 LEE, Prof. ROBERT WARDEN, D.C.L.
 MCNAIR, Lord, C.B.E., Q.C., LL.D.

Royal Entomological Society of London: 41 Queen's Gate, London, S.W.7; f. 1833; 1,150 mems.; library of 12,000 vols.; Pres. P. A. BUXTON, C.M.G., F.R.S.; Sec. E. B. BRITTON, M.Sc.; publs. *Transactions* (annual), *Proceedings*; *Series A* (General Entomology), *Series B* (Taxonomic Entomology), *Series C* (Journal of Meetings), *Handbooks for the Identification of British Insects*; library see page 173.

Royal Society for the Protection of Birds: 25 Eccleston Square, London, S.W.1, f. 1889, inc. 1904; approx. 7,000 mems.; Pres. Col. Rt. Hon. Lord FORESTER; Chair The Rt. Hon. Lord HARCUMB, G.C.B., K.B.E.; Sec. P. E. BROWN, M.B.O.U.; publs. *Bird Notes* (quarterly), *Annual Report*.

THE BRITISH COMMONWEALTH

Royal Zoological Society of Scotland: Zoological Park, Edinburgh, 12; f. 1909, inc. by Royal Charter 1913, for the promotion of the study of zoology and animal physiology, investigation and preservation of Scottish wild animal life, the establishment and maintenance of zoological parks or gardens in Scotland, etc; 3,000 mems.; library of 1,000 vols; Pres. Rt. Hon. The Earl of ROSEBERY, K.T., P.C., D.S.O., M.C., LL.D.; Dir.-Sec. D. BOWLES, B.Sc., F.Z.S.; publ. *Annual Report*.

Selborne Society: The Hermitage, Hanwell, London, W.7; f. 1885 to perpetuate the memory of Gilbert White of Selborne and to promote the study of natural history; 600 mems.; Pres. The Rt. Hon. Lord EBBISHAM, G.B.E.; Chair. of Council C. PERCIVAL STAPLES, M.B.O.U.; Sec. WILFRED MARK WEBB, O.B.E., F.L.S., F.R.M.S.; publ. *Lecture List* (annual).

Society for the Bibliography of Natural History: c/o British Museum (Natural History), London, S.W.7; f. 1936; Pres. Dr. J. RAMSBOTTOM, O.B.E.; Sec. and Editor, A. C. TOWNSEND, publ. *Journal*.

Society for the Promotion of Nature Reserves: c/o British Museum (Natural History), Cromwell Road, London, S.W.7, f. 1912, inc. by Royal Charter 1916, for the collection of information about areas of scientific importance in the United Kingdom or elsewhere in the British Empire, threatened by development, for the preparation of schemes for nature reserves and for their acquisition and maintenance, and for the education of public opinion on the value of nature; 400 mems.; Pres. Lord HURCOMB, G.C.B., K.B.E.; Sec. N. D. RILEY, C.B.E.; publ. *Handbook* (annual).

Yorkshire Philosophical Society: c/o The Yorkshire Museum, York; f. 1822 for the promotion of natural history and archaeology; 450 mems.; library of ca. 7,000 vols; Pres. Sir HERBERT READ; Librarian Miss EDITH HOLMES; publs. *Annual Report* and *Transactions*.

Zoological Society of London: Regent's Park, London, N.W.1; f. 1826, approx. 7,000 mems.; Pres. Sir LANDSBOROUGH THOMSON, C.B., O.B.E., M.A., D.Sc.; Hon. Sec. Sir S. ZUCKERMAN, C.B., D.Sc., F.R.S.; Dir. and Permanent Sec. L. HARRISON MATTHEWS, Sc.D., F.L.S., F.R.S., publs. *Proceedings* (quarterly), *Transactions* (irregular); library: see page 174.

CHEMISTRY

Biochemical Society: f. 1911 for the advancement of the science of biochemistry; 2,300 mems.; Hon. Secs. Prof. F. L. WARREN, D.Sc. (London Hospital Medical College, London, E.1), Dr. C. E. DALGLISH (Postgraduate Medical School of London, London, W.12); publ. *The Biochemical Journal*.

British Association of Chemists: Hinchley House, 14 Harley Street, London, W.1; f. 1917 to protect the interests of chemists, promote education in chemistry and improve the status of the profession of chemistry; 2,000 mems.; Pres. G. T. GURR, F.R.I.C.; Hon. Sec. F. W. KAY, M.Sc., Ph.D.; publ. *The British Chemist* (bi-monthly).

Chemical Society: Burlington House, London, W.1; f. 1841; over 8,000 fellows; Pres. Prof. W. WARDLAW, C.B.E., D.Sc., F.R.I.C.; Hon. Secs. Prof. F. BERGEL, F.R.I.C., Prof. E. D. HUGHES, D.Sc., F.R.S., Dr. L. E. SUTTON, F.R.S.; Gen. Sec. J. R. RUCK-KEENE, M.B.E., B.A.; publs. *Journal of the Chemical Society*, *Annual Reports*, *Quarterly Reviews* (Editor Dr. R. S. CAHN, M.A., F.R.I.C.), *Current Chemical Papers*, library see page 170.

Faraday Society: 6 Gray's Inn Square, London, W.C.1; f. 1903; approx. 2,400 mems.; Pres. R. P. BELL, M.A.,

F.R.S.; Sec. and Editor F. C. TOMKINS, D.Sc., F.R.S.; publs. *Transactions of the Faraday Society* (monthly), *Discussions of the Faraday Society* (usually twice a year).

Pharmaceutical Society: 17 Bloomsbury Square, London, W.C.1; f. 1841; 26,564 mems.; Pres. H. STEINMAN; Sec. Sir HUGH N. LINSTAD, O.B.E., F.P.S., M.P.; Sec. and Registrar F. W. ADAMS, B.Sc., F.P.S., A.R.I.C.; publs. *The Pharmaceutical Journal* (weekly), *The Journal of Pharmacy and Pharmacology* (monthly), *The Pharmaceutical Society's Calendar* (annual), *The British Pharmaceutical Codex*, *The Extra Pharmacopœia*, *The Pharmaceutical Pocket Book* (occasional), *Hormones: A Survey of their properties and uses*, *Antibiotics: A survey of their properties and uses*, and *The National Formulary* (published jointly with the British Medical Association); library: see page 172.

Royal Institute of Chemistry: 30 Russell Square, London, W.C.1; f. 1877; Charter of Incorporation 1885, new Charter 1949, 13,200 mems. (Fellows and Associates), also 3,100 registered students (not members); Pres. D. W. KENT-JONES, Ph.D., F.R.I.C.; Sec. H. J. T. ELLINGHAM, Ph.D., A.R.C.S., M.I.CHEM.E., F.I.M., F.R.I.C.; publs. *Journal* (monthly), *Lectures*, *Monographs* and *Reports* (about 6 issues annually).

Society for Analytical Chemistry: 7-8 Idol Lane, London, E.C.3; f. 1874, inc. 1907; 1,790 mems.; Pres. K. A. WILLIAMS, B.Sc., Ph.D., F.R.I.C., A.Inst.P., M.Inst.Pet.; Hon. Sec. N. L. ALLPORT, F.R.I.C.; publs. *The Analyst* (monthly) and *Analytical Abstracts* (monthly).

Society of Chemical Industry: 14 Belgrave Square, London, S.W.1, f. 1881, Royal Charter 1907; 8,000 mems.; Pres. JULIAN M. LEONARD, M.I.CHEM.E.; Gen. Sec. FRANCIS J. GRIFFIN; publs. *Chemistry and Industry* (weekly), *Journal of Applied Chemistry* (with abstracts; monthly), *Journal of the Science of Food and Agriculture* (with abstracts; monthly), *Annual Report on Applied Chemistry*.

ECONOMICS, POLITICS, ETC.

British Sociological Association, The: Skepper House, 13 Endsleigh Street, London, W.C.1; f. 1951 to promote interest in sociology, to advance its study and application in Britain, and to encourage contacts between workers in all relevant fields of enquiry, Chair. Prof. T. H. MARSHALL, C.M.G., M.A.; Vice-Chair. Prof. T. H. PEAR, M.A., B.Sc.; Hon. Gen. Sec. JOHN MADGE, M.A.; Hon. Treas. Prof. W. J. H. SPOTT; Sec. Miss G. M. AYERS, B.Sc. (ECON.).

Fabian Society: 11 Dartmouth Street, London, S.W.1, f. 1884 for the furtherance of socialism and the education of the public on socialist lines; 5,000 mems.; Chair. HAROLD WILSON, M.P.; Gen. Sec. W. T. RODGERS; publs. *Fabian Journal*, *Fabian International Review*, *Venture*, *Fabian News* (monthly), books and pamphlets.

Hansard Society: 39 Millbank, London, S.W.1; f. 1944 for promoting knowledge of and interest in parliamentary government; 1,400 mems.; 2,000 vols. in library; Chair. and Hon. Dir. Comdr. Sir STEPHEN KING-HALL; publ. *Parliamentary Affairs* (quarterly).

London and Cambridge Economic Service: London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2; f. 1923 by economists of London and Cambridge Universities with the aim of providing a service of statistical information and considered interpretations of the facts of current economic developments in the United Kingdom and elsewhere;

UNITED KINGDOM

Sec. to the Editorial Committee H. C. EDEY, B.COM.; publs. quarterly bulletins and special memoranda.

Proportional Representation Society: 86 Eccleston Square, London, S W 1, f. 1884 to secure an effective vote for every parliamentary and local government elector by the adoption of the single transferable vote form of P.R. for all elections of representative bodies, and similarly for elections in all voluntary organisations; 1,000 mems.; comprehensive reference library; Chair. JEREMY J. THORPE; Sec. JOHN FITZGERALD, J.P.; publs. *Representation* (quarterly), *Annual Report*.

Royal Economic Society: 4 Portugal Street, London, W.C.2; f. 1890, 6,000 mems.; Pres. Lord BRAND, C.M.G.; Sec. AUSTIN ROBINSON, C.M.G., O.B.E.; publ. *Economic Journal* (quarterly).

Royal Statistical Society: 21 Bentinck Street, London, W 1; f. 1834, approx. 2,500 mems. Pres. Prof. E. S. PEARSON, C.B.E.; Hon. Secs. R. F. GEORGE, IRIS DOUGLAS; publs. *Journal* (Series A, quarterly), *Journal* (Series B, 2 parts annually), *Applied Statistics* (3 parts annually).

EDUCATION

Association for Education in Citizenship: 14 Kendall Place, London, W.1; f. 1935 to advance training in the moral qualities necessary for the citizens of a democracy, the encouragement of clear thinking in everyday affairs, and the acquisition of a knowledge of the modern world, 400-500 mems.; Chair. GORDON BARRY, B.Sc.; Sec. Miss V. T. BLANCHFIELD.

Association of Teachers of Domestic Subjects: 29 Gordon Square, London, W.C.1; f. 1896 as a professional organisation, 3,500 mems.; Chair. (1954-56) Miss E. L. MCINTOSH, Sec. Miss ANGELA CRAWLEY; publ. *Housecraft* (monthly).

Central Bureau for Educational Visits and Exchanges: Hamilton House, Bidborough Street, London, W.C.1; f. 1948; Chair. Sir RONALD GOULD, M.A.; Sec. Miss V. M. ATKINS; publ. *Survey of Educational Travel*.

Central Council of Physical Recreation: 6 Bedford Square, London, W.C.1; f. 1935 to improve the physical and mental health of the community through physical recreation; aided by the Ministry of Education; the Council is composed of 184 national organisations and 55 individual mems.; Pres. H.R.H. The Duke of EDINBURGH, K.G., K.T.; Chair. of Exec. Cttee. Sir STANLEY ROUS, C.B.E.; Gen. Sec. Miss P. C. COLSON, O.B.E.; publs. *Physical Recreation* (quarterly).

Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom: 36 Gordon Square, London, W.C.1, Chair. Sir PHILIP MORRIS, C.B.E., M.A., LL.D.; Sec. J. F. FOSTER, M.A., LL.D.

Educational Centres Association: Walthamstow Educational Settlement, Greenleaf Road, Walthamstow, London, E.17; f. 1920; Pres. Prof. ROSS D. WALLER, M.B.E., M.A.; Hon. Sec. RAY LAMB.

Educational Foundation for Visual Aids: 33 Queen Anne Street, London, W.1; f. 1948; set up by the Ministry of Education in conjunction with the local education authorities for the promotion, production and distribution of visual aids in education; Dir. J. A. HARRISON.

Educational Institute of Scotland: 46 Moray Place, Edinburgh, 3; f. 1847; Royal Charter 1851; professional organisation of teachers in Scotland; 29,500 mems.; library of 5,000 vols.; Pres. (1955-56) JAMES W. SCHOLES, M.B.E., J.P., F.E.I.S.; Gen. Sec. WILLIAM CAMPBELL, M.A., B.L., F.E.I.S.; publ. *Scottish Educational Journal* (weekly).

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

National Adult School Union: 35 Queen Anne Street, London, W 1; f. 1899 as co-ordinating body for County Unions of Adult Schools; 10,000 mems.; Gen. Sec. W. ARNOLD HALL, B.A., B.D.; publs. *One and All* (monthly) and *Annual Study Handbook*.

National Educational Association: 72 Vallance Road, Wood Green, London, N 22; f. 1889 to promote and defend a national system of education which shall be efficient, progressive, unsectarian, and under popular control; Pres. Rt. Hon. ISAAC FOOT, P.C.; Chair. of Exec. Rev. JOHN PHILLIPS, B.A., B.LITT.; Sec. WILFRID J. ROWLAND.

National Froebel Foundation: 2 Manchester Square, London, W 1; formed 1938 by amalgamation of National Froebel Union (f. 1887) and the Froebel Society; 1,100 mems.; library of over 6,000 vols.; Chair. Miss H. DENT, M.A.; Dir. Miss EVELYN LAWRENCE, B.Sc. (ECON.), PH.D.; Sec. Miss V. E. NIGHTINGALL; publ. *Bulletin* (alternate months).

National Institute of Adult Education (England and Wales): 35 Queen Anne Street, London, W.1, f. 1949 by incorporation of the British Institute of Adult Education and the National Foundation for Adult Education to promote understanding and co-operation between bodies and individuals engaged in adult education, to encourage inquiry and experiment and serve as a centre of information; both corporate and individual membership; Sec. E. M. HUTCHINSON, M.A.; publs. *Adult Education* (quarterly), *Bibliography and Annual Handlists of Adult Education*, six-monthly *Calendars of Residential Short Courses*, *Directory of Organisations*.

New Education Fellowship: 1 Park Crescent, London, W.1; f. 1921 to help lay the foundations for world co-operation and peace, holds an international conference on education every second year; 17,000 mems. Pres. Dr. K. G. SAIYIDAIN; Chair. Prof. J. A. LAUWERYS; Sec. J. B. ANNAND; publ. *The New Era in Home and School* (monthly).

Newman Association: Newman International Centre, 31 Portman Square, London, W 1, f. 1942 as Graduate Division of University Catholic Federation of Great Britain; 1,600 mems., Pres. LAWRENCE ROCHE, M.A., Hon. Sec. DOROTHY WARD; publ. *The Newman* (monthly).

Parents' National Educational Union (Incorporated): 171 Victoria Street, London, S W 1; f. 1888 to maintain a high standard of education by means of a liberal curriculum and the use of Charlotte Mason's principles as set forth in her books; Chair. Sir CLEMENT JONES, C.B.; Gen. Sec. Miss HELENA G. HAUGHTON; publ. *Parents' Review* (monthly).

Royal Society of Teachers: 36 Berkeley Square, London, S W 1; f. 1929, 90,500 mems. (no new mems. admitted after 1948), Chair. I. J. PITMAN, M.P., Sec. J. R. CARTER.

Workers' Education Association: Temple House, 27 Portman Square, London, W 1, f. 1903 to stimulate public interest in education and to provide opportunities for adults to increase their intellectual equipment, and to render effective service to the community; co-operates with the universities and university colleges through its twenty-one districts in joint cttees., for the provision of tutorial classes based on a three-year period of study; it is recognised by the Ministry of Education as a Responsible Body, and the classes which it provides independently rank for grants from public funds, 34,000 mems., 84,000 students; Pres. HAROLD CLAY,

THE BRITISH COMMONWEALTH

LL.D.; Gen. Sec. HARRY NUTT; Education Officer H. EDMUND POOLE, M.A.; Organising Sec. W. C. E. GREGORY, M.A.; publs. *Highway*, works on adult education and *Annual Report*.

ENGINEERING

Association of Public Lighting Engineers: 22 Surrey Street, London, W.C.2; f. 1923, inc. 1928, to promote, encourage, and improve the science of efficient public lighting, and to facilitate the exchange of information and ideas on this subject; Pres. L. A. DOXEY (Leeds); Sec. ERIC EVANS; publ. *Public Lighting* (quarterly)

British Institution of Radio Engineers: 9 Bedford Square, London, W.C.1; f. 1925, inc. 1932, to promote the advancement of the science of radio and electronic engineering and their applications, to facilitate the exchange of information and ideas on these subjects, to conduct examinations in all branches of radio engineering; 5,500 mems.; Pres. Rear-Admiral Sir PHILIP CLARKE, K.B.E., C.B., D.S.O.; Sec. GRAHAM D. CLIFFORD, F.C.C.S.; publs. *Journal* (monthly), *Year Book*

Illuminating Engineering Society, The: 32 Victoria Street, London, S.W.1, f. 1909 to promote the art, science and technology of lighting and to disseminate knowledge relating to lighting and seeing, confers the title of Fellow of the Society (F.I.E.S.) and maintains the Register of qualified lighting engineers, Pres. A. G. HIGGINS, M.Sc., F.R.I.C., F.I.E.S.; Sec. G. F. COLE; publs. *Transactions* (ten times a year), *Light and Lighting* (monthly).

Institute of Marine Engineers: 85 Minories, London, E.C.3; f. 1889 to promote the scientific and practical development of marine engineering in all its branches, 8,700 mems., Pres. H. A. J. SILLEY; Chair. of Council W. J. FERGUSON, M.Eng; Sec. J. STUART ROBINSON, M.A.; publ. *Transactions* (monthly), *Year Book*.

Institution of Chemical Engineers: 56 Victoria Street, London, S.W.1, f. 1922 to promote the science and practice of chemical engineering, to improve the standards and methods of education therein, and to act as a qualifying body for chemical engineers, etc.; approx. 3,250 mems., Pres. JOHN A. ORIEL, C.B.E., M.C., M.A., F.R.I.C.; Gen. Sec. J. B. BRENNAN, M.Sc., Ph.D.; publs. *Transactions* and *Bulletin* (quarterly).

Institution of Civil Engineers: Great George Street, Westminster, London, S.W.1, inc. by Royal Charter in 1828 for the general advancement of mechanical science and more particularly for promoting the acquisition of that species of knowledge which constitutes the profession of a Civil Engineer, being the art of directing the great sources of power in Nature for the use and convenience of man, 21,100 corporate and non-corporate mems.; Pres. WILLIAM KELLY WALLACE, C.B.E., M.I.C.E., Sec. A. McDONALD, B.Sc., M.I.C.E.; publs. *Proceedings*, *Chartered Civil Engineer*, *Géotechnique* (quarterly); library see page 171

Institution of Electrical Engineers: Savoy Place, London, W.C.2; f. in 1871 and inc. by Royal Charter in 1921 to promote the general advancement of electrical science and engineering and their applications, and to facilitate the exchange of information and ideas on those subjects; 30,430 mems. (Dec 1st, 1955); Pres. Sir GEORGE NELSON, Bt.; Sec. W. K. BRASHER, C.B.E., M.A., M.I.E.E.; publs. *Journal*, *Proceedings*; library see page 171

Institution of Engineering Designers: 38 Portland Place, London, W.1, f. 1945 to promote the general advancement of the science appertaining to engineering design

and to forward the practice and standardisation of engineering draughtsmanship; Gen. Sec. W. E. WALTERS, F.I.E.D., F.R.S.A., F.F.C.S.; publ. *The Engineering Designer* (monthly).

Institution of Engineers and Shipbuilders in Scotland: 39 Elmbank Crescent, Glasgow, C.2; f. 1857 to facilitate the exchange of information and ideas amongst its mems., and to promote the advancement of the science and practice of engineering and shipbuilding; 1,600 mems.; library of 10,000 vols; Pres. Prof. A. M. ROBB, D.Sc.; Sec. P. W. THOMAS, B.Sc. (Eng); publ. *Transactions*.

Institution of Fire Engineers: 94 Southwark Bridge Road, London, S.E.1; f. 1918, inc. 1924, to promote, encourage, and improve the science of fire engineering and fire technology, 2,700 mems.; Pres. E. T. HAYWARD, O.B.E., M.I.F.I.E.; Hon. Gen. Sec. A. P. L. SULLIVAN, C.B.E., M.M., M.I.F.I.E.; publ. *Quarterly*.

Institution of Gas Engineers: 17 Grosvenor Crescent, London, S.W.1; f. 1863, Royal Charter 1929, for the promotion of engineering science and technology as applied to the gas industry in all or any of its branches, and to facilitate the exchange of information and ideas among mems. of the Institution, and otherwise, on the subjects of improved methods of administration, etc., in gas undertakings; 3,370 mems.; library of over 10,000 vols; Pres. W. K. HUTCHISON, C.B.E., M.Inst.Gas.E., M.I.CHEM.E.; Sec. Dr. W. T. K. BRAUNHOLTZ, O.B.E., M.A., F.R.I.C.; publs. *Transactions* (annual), *Communications* (twice a year), *Bulletin* (six times a year)

Institution of Heating and Ventilation Engineers: 49 Cadogan Square, London, S.W.1, f. 1897 for the promotion of the science and practice of heating, ventilating, air-conditioning, drying, domestic hot-water supplies, and all branches of engineering kindred thereto; 2,250 mems., Pres. WALTER HARDING, A.M.I.MECH.E., M.I.H.V.E.; Sec. H. SWAIN, M.B.E., A.M.I.MECH.E.; publ. *I.H.V.E. Journal* (monthly)

Institution of Highway Engineers: 47 Victoria Street, London, S.W.1, f. 1930 to promote the furtherance, consideration and discussion of all questions affecting the profession of Highway Engineering, 1,800 mems. (July 1955), Pres. S. M. LOVELL, O.B.E., T.D., A.M.I.C.E., A.M.I.MUN.E., F.HIST.H.E.; Sec. N. W. JENSON, F.C.I.S.; publ. *Quarterly Journal*

Institution of Locomotive Engineers: 28 Victoria Street, London, S.W.1; f. 1911; Pres. (1955-56) K. J. COOK, M.I.C.E., M.I.MECH.E., M.I.LOCO.E., Sec. and Editor G. T. HART, B.Sc., M.I.MECH.E., M.I.LOCO.E., publ. *Journal of the Institution of Locomotive Engineers* (six annually)

Institution of Mechanical Engineers: 1 Birdcage Walk, London, S.W.1; f. 1847, inc. by Royal Charter 1930; 42,000 mems.; Pres. P. L. JONES, M.C., B.Sc.; Sec. BRIAN G. ROBBINS, M.Sc. (Eng), M.I.MECH.E.; publs. *Proceedings* (from 1847), *Chartered Mechanical Engineer*, library see page 171.

Institution of Mining Engineers: 3 Grosvenor Crescent, London, S.W.1; f. 1889, inc. by Royal Charter 1915, for the advancement of coal and iron ore mining and allied industries, and the promotion of the acquisition of the knowledge necessary for the control and direction of mining operations in relation to stratified deposits; over 4,000 mems.; Pres. (1956-57) WILLIAM REID, Ph.D.; Sec. J. McDERMID, T.D.; publ. *Transactions* (monthly)

UNITED KINGDOM

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

- Institution of Municipal Engineers:** 84 Eccleston Square, London, S.W.1; f. 1873, inc. by Royal Charter 1948, to promote the science and practice of engineering and kindred subjects in the interests of local government authorities and the communities they serve; 7,636 mems.; Pres. (1954-55) P. PARR, O.B.E., B.Sc.; Sec. C. W. SCOTT-GILES, O.B.E., M.A.; publ. *Journal* (monthly).
- Institution of Naval Architects:** 10 Upper Belgrave Street, London, S.W.1; f. 1860, inc. 1910, to promote the improvement of ships; 3,830 mems.; Pres. Viscount RUNCIMAN of DOXFORD, O.B.E., A.F.C., D.C.L.; Sec. Capt. A. D. DUCKWORTH, R.N.; publ. *Transactions* (quarterly, and in annual volumes).
- Institution of Production Engineers:** 10 Chesterfield Street, London, W.1, f. 1921 to promote the science and practice of production engineering; 10,071 mems.; Sec. W. F. S. WOODFORD; publ. *Journal* (monthly).
- Institution of Public Health Engineers:** 118 Victoria Street, London, S.W.1; f. 1895; 1,275 mems.; Pres. E. H. VICK, M.I.C.E., M.I.S.P.; Chair. F. N. SHIMMIN, B.Sc., A.M.I.C.E., F.R.S.N.I., F.I.S.A.N.E.; Sec. E. V. BALSOM, M.B.E., A.M.I.MECH.E., F.R.S.N.I.; publ. *Journal and Proceedings* (quarterly).
- Institution of Structural Engineers:** 11, Upper Belgrave Street, London, S.W.1; f. 1908, inc. by Royal Charter 1934, to promote the general advancement of the science and art of structural engineering; over 7,000 mems.; Pres. STANLEY VAUGHAN, B.Sc., M.I.C.E., M.I.STRUCT.E., A.C.G.I.; Sec. Major R. F. MAITLAND, O.B.E.; publs. *The Structural Engineer* (monthly), *Year Book and List of Members and Technical Records* (as issued).
- Institution of Water Engineers:** Parliament Mansions, Abbey Orchard Street, London, S.W.1; f. 1896, inc. 1911, to promote the advancement of water engineering and all matters connected with or relating to water undertakings; approx. 1,600 mems.; Pres. HUGH RALPH LUPTON, O.B.E., M.C., M.A.; Sec. W. O. SKEAT, B.Sc.; publs. *Manual of British Water Supply Practice, Journal, Year Book and List of Members*.
- Newcomen Society for the Study of the History of Engineering and Technology:** Science Museum, South Kensington, London, S.W.7; f. 1920 to encourage and foster study of the history of engineering and technology in all parts of the world, Hon. Sec. A. S. CROSLY, Science Museum, London, S.W.7; publ. *Transactions* (annual).
- Society of Consulting Marine Engineers and Ship Surveyors:** 4 Lloyd's Avenue, London, E.C.3; f. 1920 to provide a central organisation for consulting engineers, naval architects and ship surveyors, and generally to elevate the status and procure the advancement of the interests of the profession, Pres. J. E. CHURCH; Sec. R. K. MUNRO; publ. *Quarterly Report*.
- Society of Engineers (Inc.):** 17 Victoria Street, London, S.W.1; f. 1854 to promote the science and practice of engineering, etc.; 1,200 mems.; library of 3,350 vols.; Pres. Dr. H. G. TAYLOR; Sec. A. R. COOK, publ. *Journal and Transactions*.
- South Wales Institute of Engineers:** Institute Buildings, Park Place, Cardiff; f. 1857 for the encouragement and advancement of engineering science and practice; 950 mems.; Pres. T. A. ROGERS, M.I.MINE.E.; Sec. E. S. DOUTHWAITE; publ. *Proceedings* (thrice yearly).
- of British teachers of geography and of the study of geography generally; 3,738 mems.; library of 8,500 vols.; Pres. (1956) Rt. Hon. Lord NATHAN, P.C., T.D., D.L., Chair. of Council Prof. H. J. FLEURE, D.Sc., F.R.S.; Hon. Sec. Dr. ALICE GARNETT; publ. *Geography* (quarterly).
- Geological Society:** Burlington House, London, W.1; f. 1807; 2,000 fellows; Pres. Dr. W. CAMPBELL SMITH, C.B.E., M.C., T.D., M.A., SC.D.; Secs. Prof. S. E. HOLLINGWORTH, M.A., D.Sc., A. J. BUTLER, O.B.E., M.Sc., Asst. Sec. A. GREIG; publ. *Quarterly Journal*; library see page 171.
- Geologists' Association:** f. 1858 to foster the progress and diffusion of the science of geology and to encourage research and the development of new methods; 2,000 mems.; Pres. L. R. British Council: 65 Davies Street, London, W 1, estab. in November 1934, and incorp. by Royal Charter in 1940; its principal purposes are the promotion of a wider knowledge of the United Kingdom and the English language abroad and the development of closer cultural

UNITED KINGDOM

relations between the United Kingdom and other countries. The Council derives its funds from votes of the Foreign Office, Commonwealth Relations Office, Colonial Office and Colonial Development and Welfare Fund. For the year ending March 31st, 1956, the total of the sums so voted is £2,779,700.

The principal officers of the Council are. Pres. Sir RONALD ADAM, Vice-Pres. Sir REGINALD LEEPER, G B E, K C M G; Chair Sir DAVID KELLY, G C M G, M C; Vice-Chair Sir PHILIP MORRIS, C B E, M EDELMAN, M P, C E MOTT-RADCLIFFE, M P; Dir-Gen. Sir PAUL SINKER, K C M G, C B; Sec. Miss B M H TRIPP.

Under the Charter the powers of the Council are vested in the Executive Committee of 30 mems., of whom 9 are nominated by the following. The Lord President of the Council, the Secretaries of State for Foreign Affairs, the Home Department, Commonwealth Relations, Scotland and the Colonies, the Chancellor of the Exchequer, the President of the Board of Trade, and the Minister of Education. There are the following expert advisory committees and panels (the names of Chairmen holding office as at Sept. 1st, 1955, are given in brackets). Books and Publishing Panel (Sir STANLEY UNWIN), Drama Committee (Sir BRONSON ALBERY), English Studies Panel (Sir IFOR EVANS), Fine Arts Committee (Sir PHILIP HENDY), Law Committee (Lord PORTER), Music Committee (Sir ADRIAN BOULT), Editorial Advisory Panel (JOHN LEHMANN), Science Committee (Sir ALFRED EGERTON, F R S) (with Agriculture, Science and Engineering, Medicine, and Veterinary Panels), Soviet Relations Committee (CHRISTOPHER MAYHEW, M P), Universities Committee (Sir JAMES MOUNTFORD). There are advisory panels for Scotland (Sir JOHN McEWEN, Bt) and Wales (Lady MEGAN LLOYD GEORGE).

There are officers of the Council in the following Commonwealth countries: Australia, Ceylon, India, Pakistan, British East Africa, British Guiana, British West Africa, British West Indies, Cyprus, Hong Kong, Fiji, Gibraltar, Malaya, Mauritius, Malta, Northern Rhodesia, Nyasaland, Sarawak, Singapore, Uganda; and in the following foreign countries: Argentina, Austria, Belgium, Brazil, Burma, Chile, Colombia, Denmark, Egypt, Finland, France, Greece, Indonesia, Iraq, Israel, Italy, Japan, Jordan, Lebanon, Mexico, Netherlands, Norway, Peru, Poland, Portugal, Siam, Spain, Sweden, Switzerland, Syria, Turkey, Uruguay, Venezuela and Yugoslavia.

In most of these countries, except in Latin-America, the Council maintains British Institutes, or similar centres, in the capital cities, and in other cities also in some countries. In Latin America, the Council co-operates with and assists a large number of organisations which exist to promote English studies and cultural exchanges with Britain.

The Council provides many services for overseas students studying in the United Kingdom. On behalf of the Colonial Office it is responsible for the non-academic welfare of colonial students in the U.K. It sponsors and arranges visits from overseas of individuals and groups, and its organisation for receiving visitors is often used by United Kingdom Government Departments, overseas governments, universities and professional societies. The Council also organises short courses and summer schools in the United Kingdom on a variety of technical and social subjects.

The Council carries on a great variety of educational and cultural activities, including instruction, particularly in English language and literature, in centres abroad, study groups; the maintenance of libraries of English books in other countries; art exhibitions;

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

concert and theatre tours abroad, documentary film shows, and the exchange of knowledge, material and equipment between scientists in the United Kingdom and other countries.

and encourage the teaching of human biology as a cultural and practical subject, and to preserve and strengthen the family as the basic social unit; Pres. The Earl of CRANBROOK; Sec. Miss E. RÉE; publ. *Biology and Human Affairs* (three times a year).

Canterbury and York Society: f. 1904; 207 mems.; Pres. The Archbishops of CANTERBURY and YORK; Sec. A. C. WOOD, Public Record Office, Chancery Lane, London, W.C.2; Gen. Editor Miss R. GRAHAM; publ. *Bishops' Registers*.

Commons, Open Spaces and Footpaths Preservation Society: 71 Eccleston Square, London, S.W.1; f. 1865; 3,500 mems.; Chair. Lt.-Col. E. N. BUXTON, M.C.; Sec. W. H. WILLIAMS, M.A., LL.B.; publ. *Quarterly Journal*.

Dugdale Society for the Publication of Warwickshire Records: Shakespeare's Birthplace, Stratford-upon-Avon; f. 1920; 185 mems.; Pres. Sir WILLIAM STRATFORD DUGDALE, Bt., D.L., J.P., F.S.A.; Chair. B. A. FETHERSTONE-DILKE, M.B.E., J.P., M.A., M.B.; Hon. Sec. and Gen. Editor LEVI FOX, M.A., F.S.A., F.R.HIST.S., F.R.S.L.; Hon. Treas. R. T. JONES.

Eugenics Society: 69 Eccleston Square, London, S.W.1; f. 1908 to promote the study of eugenics; approx. 500 mems; 3,500 vols. in library; Pres. Sir CHARLES DARWIN, K.B.E., SC.D., F.R.S.; Sec. C. O. CARTER, B.A., B.M., M.R.C.P., publ. *The Eugenics Review* (quarterly).

Food Education Society: Gordon House, 29 Gordon Square, London, W.C.1; f. 1909 for the raising of the standard of national health and the reduction of preventable disease by promoting knowledge in the choice and preparation of food and in the vital relationship between soil fertility, food quality and human health; Pres. (Vacant); Chair. FRANKLIN BICKNELL, D.M., M.R.C.P.; Hon. Treas. HAROLD HUNT, J.P.

London Society: 3 Dean's Yard, London, S.W.1; f. 1912 to stimulate a wider concern for the beauty of the capital city, the preservation of its charms and the careful consideration of its development; approx. 800 mems.; Pres. and Chair. of Council Rt. Hon. Viscount ESHER, G.B.E.; Chair. Exec. Cttee. Rt. Hon. Lord MOTTISTONE, F.S.A., F.R.I.B.A.; Organising Sec. Miss E. BRIGHT ASHFORD, B.A.; publ. *The London Society Journal* (every two or three months).

National Housing and Town Planning Council Inc.: 42 Devonshire Street, London, W.1; est. 1900 as the National Housing Reform Council to secure the abolition of unhealthy and socially undesirable houses; to promote the principle of sound town and country planning; and to disseminate information as to the improvement of the housing conditions of the people and the best standards of planning, 1,250 mems.; Gen. Sec. A. R. KERRELL-VAUGHAN, D.P.A., Hon. A.T.P.I., F.I.H.S.G.; publs. *The British Housing and Planning Review* (bi-monthly), *British Housing and Planning Year Book*.

National Trust for Places of Historic Interest or Natural Beauty: 42 Queen Anne's Gate, London, S.W.1; f. 1895 for the purpose of promoting the permanent preservation of, and public access to, land of natural beauty and buildings of historic interest; list of properties available at above address; 52,000 mems.; Sec. J. F. W. RATHBONE, publs. *List of Properties*, *Annual Report*, *News Bulletin*.

Oxford Preservation Trust: The Painted Room, 3 Cornmarket Street, Oxford; f. 1927 to combine together Oxford City and University, Oxfordshire, and Berkshire to work for the beauty of Oxford and its surroundings; ca. 1,500 mems.; Pres. The Earl of HALIFAX, K.G.,

UNITED KINGDOM

D.C.L.; Chair. of Board of Trustees A. H. SMITH, M.A. (Vice-Chancellor of Oxford University); Sec. SAM SMITH, J.P.; publ. *Oxford Preservation Annual Report*.

Saltire Society: Gladstone's Land, 483 Lawnmarket, Edinburgh, 1; f. 1936 to foster the Scottish way of life; 1,700 mems.; Pres. Prof. A. D. GIBB; Hon. Sec. ROBERT HURD; publs. *The Saltire Review* (three times yearly), *The Saltire News Letter* (every two months).

Society for Nautical Research: National Maritime Museum, Greenwich, London, S.E.10; f. 1910; over 1,000 mems.; Pres. R. C. ANDERSON, LITT.D., F.S.A.; Chair. Prof.

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

MICHAEL A. LEWIS; Hon. Sec. Lt-Comdr. G. P. B. NAISH, R.N.V.R.; publ. *The Mariner's Mirror* (quarterly).

Town and Country Planning Association: 28 King Street, London, W.C.2; f. 1899 to further the cause of Town and Country Planning, decentralisation of overcrowded areas, and the creation of new self-contained towns; 2,000 mems.; library of 750 vols; Chair. of Council Sir ERIC MACFADYEN; Chair of Exec F. J. OSBORN; Business Sec. Miss E. BALDWIN; publ. *Town and Country Planning* (monthly)

THE BRITISH COMMONWEALTH

RESEARCH INSTITUTES

AGRICULTURE, BIOLOGY, HORTICULTURE

Agricultural and Horticultural Research Station (University of Bristol): Long Ashton, Bristol; f. 1903 as National Fruit and Cider Institute, which was in 1912 incorporated in the Research Station; research into fruit culture and related subjects, control of diseases of agricultural and horticultural crops, and into domestic preservation of fruit and vegetables; Dir. Prof. T. WALLACE, C.B.E., M.C., D.Sc., F.R.S., F.R.I.C.; Sec. A. L. LEGGETT; publ. *Annual Report*.

Agricultural Research Council: Cunard Building, 15 Regent Street, London, S.W.1; f. by Royal Charter in 1931; one of three Government organisations established under the Lord President of the Council to promote and co-ordinate scientific research on all problems that affect the life and activities of the nation as a whole; Chair Lord ROTHSCHILD, G.M., M.A., Sc.D., Ph.D., F.R.S.; Sec. Sir W. K. SLATER, K.B.E., D.Sc., F.R.I.C.

Poultry Research Centre of the Agricultural Research Council: King's Buildings, West Mains Road, Edinburgh, 9; f. 1947 to investigate poultry problems by the application of scientific principles; Dir. Dr. A. W. GREENWOOD, C.B.E., D.Sc., F.R.S.E.; Sec. A. B. TOTTY, B.A.

Animal Breeding Research Organisation: Glenbourne, South Oswald Road, Edinburgh, 9; est. 1945 by the Agricultural Research Council, to obtain, by research, information designed to help the stockbreeder to produce superior stock and to reduce the risks and uncertainty attached to breeding; Dir. H. P. DONALD, D.Sc. Ph.D., F.R.S.E., Sec. -Treas. F. H. JAMES.

Colonial Products Council: Colonial Products Laboratory, Imperial Institute Building, London, S.W.7, its functions are to consider how, by the application of research, greater use can be made of colonial plant and animal products, and to advise the Secretary of State as to (a) the colonial raw materials (plant and animal) which are likely to be of value to the manufacture of products required by industry, and (b) the research and development which should be initiated on such products, Chair. Prof. Sir E. CHARLES DODDS, M.V.O., D.Sc., M.D., F.R.C.P., F.R.I.C., F.R.S.; Dir. of Research R. A. E. GALLEY, Ph.D., D.I.C., F.R.I.C.; Scientific Sec. P. C. SPENSLEY, M.A., B.Sc., D.Phil., F.R.I.C.; Sec. W. F. DAWSON, M.B.E.; publ. *Colonial Plant and Animal Products* (quarterly).

Commonwealth Agricultural Bureaux: Farnham House, Farnham Royal, Bucks; f. in 1929 as the Imperial Agricultural Bureaux by agreement among the Governments of the British Commonwealth to act as effective clearing-houses for the interchange of information of value to research workers in agricultural sciences and forestry; each Bureau is an information service for scientists throughout the Commonwealth; there are in all 13 separate centres (*see* below) under the control of the Exec. Council; Chair. J. E. C. COVENTRY, B.A., M.Sc.; Sec. Sir HERBERT HOWARD.

Commonwealth Institute of Entomology: 56 Queen's Gate, London, S.W.7, f. 1913 for the collection, co-ordination, and dissemination of all information bearing upon injurious and useful insects and other

arthropods; undertakes identifications; library of 13,700 vols.; Dr. W. J. HALL, C.M.G., M.C., D.Sc.; publs. *Bulletin of Entomological Research* (quarterly), *Review of Applied Entomology* (monthly), *Distribution Maps of Insect Pests* (bi-annual).

Commonwealth Mycological Institute (formerly Imperial Bureau of Mycology); Ferry Lane, Kew, Surrey; f. 1920 for the collection and dissemination of information on the fungal, bacterial, virus, physiological and soil disorders of plants and on all deleterious fungi of economic importance; undertakes identifications; Dir. S. P. WILTSHIRE, M.A., D.Sc.; publs. *Review of Applied Mycology* (monthly), *Distribution Maps, Plant Diseases* (two each month), *Index of Fungi* (twice a year), *Review of Medical and Veterinary Mycology* (twice a year), *Mycological Papers* (irregular), *Commonwealth Phytopathological News* (quarterly).

Commonwealth Institute of Biological Control: Science Building, Carling Avenue, Ottawa, Ontario, Canada; f. 1927 as the Farnham House (Slough) Laboratory of the Imperial Institute of Entomology, transferred to Canada 1940; its purpose is the biological control of injurious insects and noxious weeds, and the collection and distribution throughout the British Commonwealth of beneficial parasites with which to attack the harmful ones, Dir. W. R. THOMPSON, Ph.D., D.Sc., F.R.S., F.R.S. (Can.); publ. *A Catalogue of the Parasites and Predators of Insect Pests*.

Commonwealth Bureau of Agricultural Parasitology (Helminthology): Winches Farm, 395 Hatfield Road, St Albans, Herts; f. 1929, collates world research literature on helminth parasites of animals and plants, with reference particularly to those of economic importance; Dir. Prof. R. T. LEIPER, C.M.G., M.D., D.Sc., LL.D., F.R.C.P., F.R.S., publ. *Helminthological Abstracts* (quarterly).

Commonwealth Bureau of Animal Breeding and Genetics: King's Buildings, West Mains Road, Edinburgh, 9, f. 1929 for the collection and abstracting of the world's literature on the breeding and the genetics of animals, and for the dissemination of this information throughout the world, Dir. J. P. MAULE, M.A., A.I.C.T.A., publ. *Animal Breeding Abstracts* (quarterly).

Commonwealth Bureau of Animal Health: Veterinary Laboratory, New Haw, Weybridge, Surrey; f. 1929 for the collection and abstracting of the world's literature in connection with the various aspects of veterinary science, and for the dissemination of this information throughout the British Commonwealth; Dir. M. CRAWFORD, M.R.C.V.S.; publs. *Index Veterinarius* (quarterly), *The Veterinary Bulletin* (monthly), *Veterinary Reviews and Annotations* (half-yearly).

Commonwealth Bureau of Animal Nutrition: Rowett Research Institute, Bucksburn, Aberdeenshire; f. 1929 to collect and abstract the world's literature in the field of human and animal nutrition, and to disseminate this information throughout the British Commonwealth; Dir. I. LEITCH, O.B.E., M.A., D.Sc.; publ. *Nutrition Abstracts and Reviews* (quarterly).

UNITED KINGDOM

RESEARCH INSTITUTES

Commonwealth Bureau of Dairy Science: Shinfield, near Reading, Berks.; f. 1938 for the collection, collation, and distribution of scientific and technological information on dairy husbandry, milk and milk products, and the economics, physiology, microbiology, chemistry and physics of dairying for the benefit of research workers, teachers, advisory officers, etc.; Dir. A. W. MARSDEN, M.Sc., D.I.C., A.R.C.S., F.R.I.C.; publs. *Dairy Science Abstracts* (monthly), review articles and others occasionally.

Commonwealth Forestry Bureau: at Imperial Forestry Institute, South Parks Road, Oxford; f. 1938 for the collection and abstracting of the world's literature on forestry, forest products and their utilisation, and for the dissemination of this information throughout the British Commonwealth; Dir. F. C. FORD ROBERTSON, M.A., B.Sc.; publ. *Forestry Abstracts* (quarterly).

Commonwealth Bureau of Horticulture and Plantation Crops: East Malling Research Station, near Maidstone, Kent; f. 1929 as a clearing-house of information on investigations into problems affecting horticulture and plantation crops throughout the world; Dir. D. AKENHEAD, O.B.E., M.A., B.Sc.; publs. *Horticultural Abstracts* (quarterly).

Commonwealth Bureau of Pastures and Field Crops: Hurley, nr. Maidenhead, Berks.; f. 1929 to collect, abstract and distribute information on research and developments throughout the world relating to grass and grasslands, crops and plants grown or used for fodder, and (since 1947) annual field crops; current periodicals and reports published in many languages are constantly scrutinised and abstracts of important articles or papers are prepared from them by a whole-time qualified staff, Dir. A. G. G. HILL, B.A., AGR.B., B.Sc.; publs. *Herbage Abstracts*, *Field Crop Abstracts* (both quarterly).

Commonwealth Bureau of Plant Breeding and Genetics: School of Agriculture, Cambridge, f. 1929 to abstract and review current literature on the breeding and genetics of plants of economic importance and relevant publications in allied fields, plant pathology, applied statistics, and other sciences, and to maintain an information service on these subjects, library of 20,000 vols., journals, 70,000 pamphlets, etc.; Dir. P. S. HUDSON, Ph.D.; publ. *Plant Breeding Abstracts* (quarterly).

Commonwealth Bureau of Soil Science: Rothamsted Experimental Station, Harpenden, Herts.; f. 1929 for the collection and dissemination of information from all sources on soil, whether as the nurse of growing crops, the raw material for a road, or from purely physical and chemical aspects; Dir. G. V. JACKS, M.A., B.Sc.; publs. *Soils and Fertilisers* (bi-monthly), *Bibliography of Soil Science*, *Fertilisers and General Agronomy* (triennial).

Department of Animal Genetics, University of Edinburgh: Institute of Animal Genetics, West Mains Road, Edinburgh, 9; f. 1928 for teaching and research in Genetics; Head Prof. C. H. WADDINGTON, Sc.D., F.R.S.

East Malling Research Station: East Malling, nr. Maidstone, Kent; f. 1913 for the promotion of experiments in horticulture; Dir. F. R. TUBBS, M.Sc., Ph.D., A.R.C.S., D.I.C., F.R.S.; publs. *Annual Report*, *Journal of Horticultural Science*.

Forest Product Research Laboratory: Princes Risborough, Aylesbury, Bucks.; est. 1925; Dir. Dr. F. Y. HENDERSON, C.B.E.; publs. *Annual Report*, special reports, bulletins, records, leaflets.

Imperial Forestry Institute: University of Oxford, South Parks Road, Oxford; f. 1924 for research and higher studies in forestry; Dir. Prof. H. G. CHAMPION.

Institute of Animal Genetics: West Mains Road, Edinburgh, 9; houses the Dept. of Animal Genetics (Edinburgh University), the Commonwealth Bureau of Animal Genetics (*q.v. above*) and groups of research workers financed by the Agricultural and Medical Research Councils; Dir. Prof. C. H. WADDINGTON, Sc.D., F.R.S.

John Innes Horticultural Institution: Bayfordbury, Hertford, Herts.; f. 1910, by private bequest, for research and teaching in genetics, cytology, plant breeding, pomology, and horticultural science, Dir. Dr. K. S. DODDS, D.Sc., Ph.D.; Acting Head of Cytology Dept. L. F. LA COUR, M.B.E.; Head of Plant-Breeding Dept. WATKINS WILLIAMS, M.Sc.; Head of Genetics Dept. Dr. D. LEWIS, D.Sc., Ph.D., F.R.S.; Head of Garden Research Dept. W. J. C. LAWRENCE, V.M.H.; Curator J. NEWELL; Sec. G. R. DAVIES, Registrar Miss I. M. G. SHIPTON; publ. *Annual Report*.

Marine Biological Station (University of Liverpool). Port Erin, Isle of Man; f. 1885; marine zoology, botany and hydrography, public aquarium and fish hatchery, Dir. J. S. COLMAN, M.A., publ. *Annual Report*.

National Institute for Research in Dairying: Shinfield, Reading, Berks.; f. 1912 for the investigation of problems in dairying and allied subjects, more than 11,000 vols. and 23,000 pamphlets in library; Dir. Prof. H. D. KAY, C.B.E., Ph.D., D.Sc., F.R.S.; Sec. H. F. BURGESS, M.B.E., A.C.I.S.; publ. *Annual Report*.

National Institute of Agricultural Botany: Huntingdon Road, Cambridge; f. 1919; 2,500 mems.; Dir. F. R. HORNE, M.A., N.D.A., N.D.D.; Sec. MAURICE G. TOZER, M.B.E., A.A.C.C.A.; publs. *Annual Report*, *Journal*, and leaflets.

Plant Pathology Laboratory: Milton Road, Harpenden, Herts.; f. 1914; is an integral part of the Ministry of Agriculture, Fisheries and Food and its primary function is to advise the Minister on all matters relating to pests and diseases of plants, Dir. W. C. MOORE, C.B.E., M.A.

Rothamsted Experimental Station: Harpenden, Herts.; f. 1843 for research in soil and plant growth; Rothamsted is also the headquarters of the Soil Survey of England and Wales and the Commonwealth Bureau of Soil Science (*q.v. above*); about 50,000 vols. in library; Scientific Staff 185; Dir. Sir WILLIAM G. OGG, Ph.D.; Sec. J. B. BENNETT, A.C.A., Heads of Depts.: Physics, H. I. PENMAN, M.Sc., Ph.D.; Chemistry, R. K. SCHOFIELD, Ph.D., Soil Microbiology, H. G. THORNTON, D.Sc., F.R.S.; Pedology, A. MUIR, Ph.D.; Botany, D. J. WATSON, Ph.D.; Statistics, F. YATES, F.R.S.; Plant Pathology, F. C. BAWDEN, F.R.S.; Biochemistry, N. W. PIRIE, F.R.S.; Entomology, KENNETH MELLANBY, C.B.E., D.Sc.; Bees, C. G. BUTLER, Ph.D.; Insecticides, C. POTTER, D.Sc.; Nematology, F. G. W. JONES, M.A.; Field Experiments, H. V. GARNER, M.A., Farm Manager, J. R. MOFFATT, B.Sc.; Librarian D. H. BOALCH, M.A.; publs. *Memoirs*, *Annual Report*.

THE BRITISH COMMONWEALTH

Rowett Research Institute: Bucksburn, Aberdeen; f. 1914 for research in animal nutrition and allied sciences; Dir. DAVID P. CUTHBERTSON, M.D., D.Sc., F.R.S.E.; Heads of Depts.: Applied Biochemistry, J. DUCKWORTH, B.S.A., D.Sc., F.R.S.E.; Protein and Carbohydrate Chemistry, R. L. M. SYNGE, B.A., Ph.D., F.R.I.C., F.R.S.; Microbiological Chemistry, A. E. OXFORD, M.Sc., Ph.D., Dip. Bact.; Enzymology, G. A. LEVY, D.Sc., F.R.I.C.; Pathology, J. J. BULLEN, Ph.D., M.R.C.V.S.; Physiology, A. T. PHILLIPSON, M.A., Ph.D., M.R.C.V.S., F.R.S.E.; Applied Nutrition, J. A. CRICHTON, M.B.E., M.A., B.S.C. (AGR.); Statistics, A. W. BOYNE, Sec. W. MIDDLETON, N.D.A.; Duthie Experimental Stock Farm, W. THOMSON; Librarian W. L. I. SIMPSON, M.A.

Royal Botanic Gardens: Kew, Surrey, f. 1759-60 by Princess Augusta of Saxe-Gotha, became a National Botanic Garden 1841; Dir. Sir EDWARD J. SALISBURY, C.B.E., F.R.S.; publs. *Kew Bulletin*, *Index Kewensis*, *Icones Plantarum*, library: see page 173.

Veterinary Laboratory (Ministry of Agriculture, Fisheries and Food): New Haw, Weybridge, Surrey; f. 1917 for the investigation and control of diseases in animals; joint library with Commonwealth Bureau of Animal Health (4,500 vols., 450 periodicals); Dir. A. W. STABLEFORTH, D.Sc., M.R.C.V.S., D.V.S.M.; Laboratory Sec. J. A. ALDRIDGE, M.B.E.; Librarian D. E. GRAY, F.L.A.

Welsh Plant Breeding Station (University College of Wales): Plas Gogerddan, nr Aberystwyth; f. 1919 to explore the possibilities of plant breeding in relation to agricultural requirements; to study the genetics of agricultural plants; to produce improved varieties and strains of plants; to study the use of such varieties and strains in relation to needs; to study methods of grassland improvement generally; Dir. Prof. E. T. JONES, M.Sc.; Sec. J. O. PARRY-WILLIAMS, M.B.E.

Woburn Experimental Station (Lawes Agricultural Trust): Husborne Crawley, Bletchley, Bucks; f. 1876 for the investigation of manurial and other problems of British crops; Dir. Sir W. G. OGG, M.A.; Asst. Dir.-in-Charge Dr. HAROLD H. MANN, F.R.I.C.; publ. *Annual Report*.

ARCHAEOLOGY

British School of Egyptian Archaeology: University College, London, W.C.1, f. 1905, Dir. Lady FLINDERS PETRIE; Sec. Lady THORNTON

University of London Institute of Archaeology: (see under University of London)

ART, THE ARTS

British Film Institute: 164 Shaftesbury Avenue, London, W.C.2; f. 1933, its aim is to encourage the development of the art of the film, to promote its use as a record of contemporary life and manners, and to foster public appreciation and study of it from these points of view; among its activities are the upkeep of the National Film Archive, the direction of the National Film Theatre, and the running of an Information Dept.; 25,000 mems in 50 countries; Patron The Duke of SUTHERLAND, K.T.; Chair S. C. ROBERTS, M.A., LL.D.; Dir. JAMES QUINN; publs. *Sight and Sound* (illustrated), *Monthly Film Bulletin*, *Critics' Choice*.

CHEMISTRY

Chemical Research Laboratory: Teddington, Middlesex; est. 1925, Dir. D. D. PRATT, C.B.E., Ph.D.; publ. *Chemistry Research* (annual)

ECONOMICS, POLITICS

British Institute of Public Opinion: 59 Brook Street, London, W.1; f. 1936 to carry out opinion surveys and social surveys; Dir. HENRY DURANT, Ph.D., B.Sc. ECON.

Economic Research Council: 55 Park Lane, London, W.1; f. 1943 as a non-profit-making research and educational organisation in the field of economics and monetary practice; Pres. JOHN M. PENTON; Joint Hon. Secs. HAROLD S. GOODWIN, EDWARD HOLLOWAY.

National Institute of Economic and Social Research: 2 Dean Trench Street, Smith Square, London, S.W.1; f. 1938; Pres. Sir JOHN WOODS, G.C.B., M.V.O.; Dir. W. A. B. HOPKIN; Sec. Mrs. F. S. STONE; publs. *Economic and Social Studies*, *Occasional Papers*, *Register of Research in the Social Sciences*, *Annual Report*.

P.E.P. (Political and Economic Planning): 16 Queen Anne's Gate, London, S.W.1; f. 1931; Chair. of Council E. M. NICHOLSON, C.B.; Dir. RICHARD BAILEY; publs. broad-sheets and large-scale reports.

Royal Institute of International Affairs: Chatham House, 10 St. James's Square, London, S.W.1; f. 1920 to facilitate the scientific study of international questions; mems., all categories, approx. 3,500; Pres. Rt. Hon. Viscount CECIL of CHELWOOD, C.H.; Rt. Hon. Sir WINSTON S. CHURCHILL, K.G., O.M., C.H., Rt. Hon. Sir ANTHONY EDEN, K.G., M.C., M.P., Rt. Hon. Viscount SAMUEL, G.C.B., G.B.E.; Chair. Air Chief Marshal Sir WILLIAM ELLIOT, G.C.V.O., K.C.B., K.B.E., D.F.C.; Dir.-Gen. C. M. WOODHOUSE, D.S.O., O.B.E., M.A.; Dir. of Studies Dr. A. J. TOYNBEE, Admin. Sec. Lt.-Col. I. H. MACKAY, O.B.E.; affiliated Institutes in Canada, Australia, New Zealand, South Africa, and Pakistan; publs. *Survey of International Affairs* (annually), *Documents of International Affairs* (annually), *British Year Book of International Law* (annually), *International Affairs* (quarterly), *The World Today* (monthly), Information Handbooks, individual studies, study group reports (irregularly).

EDUCATION

National Foundation for Educational Research in England and Wales: 79 Wimpole Street, London, W.1; f. 1945; Pres. The MINISTER OF EDUCATION; Chair of Exec. Cttee. Dr. G. B. JEFFERY, M.A., F.R.S.; Dir. BEN S. MORRIS, B.Sc., ED B.

GEOLOGY

Geological Survey of Great Britain: Exhibition Road, London, S.W.7; f. 1835; forms, with the Geological Museum (see page 177), a single institution administered by the D.S.I.R.; Dir. W. J. PUGH, O.B.E., D.Sc., F.R.S.; publs. *Geological Maps*, *Memoirs*, British Regional Geology Handbooks, Museum Catalogues, *Bulletin*, *Summary of Progress* (annual); library: see page 171.

MEDICINE, NUTRITION, PUBLIC HEALTH

Asthma Research Council: 6 Angel Court, Throgmorton Street, London, E.C.2, f. 1927 to promote research into asthma and its allied disorders, Patron H.R.H. The Duke of GLOUCESTER; Pres. His Grace The Duke of SUTHERLAND; Chair. Sir ALBERT G. STERN, K.B.E., C.M.G.; Sec. Miss E. M. STOPFORD.

British Institute of Radiology: 32 Welbeck Street, London, W.1; f. 1927, when the Röntgen Society was amalgamated with the B.I.R.; forms a centre for consultation on the medical, physical and biological applications of radiology, houses the Mackenzie Davidson Library,

UNITED KINGDOM

which was bequeathed to the B.I.R. in 1923; 1,200 mems.; Pres. CUTHBERT ANDREWS; Hon. Secs. JOHN BLEWETT, M.D., D.M.R., L. F. LAMERTON, M.Sc., PH.D., F.INST.P.; publ. *The British Journal of Radiology* (monthly).

Bureau of Hygiene and Tropical Diseases: Keppel Street, Gower Street, London, W.C.1; f. 1908 as Sleeping Sickness Bureau; Dir. Dr. CHARLES WILCOCKS, C.M.G.; Asst. Dir. Dr. H. J. O'D. BURKE-GAFFNEY, O.B.E.; Sec. JOHN RATHBORN, B.A.; publs. *Bulletin of Hygiene*, *Bulletins of Hygiene Reprints*, and *Tropical Diseases Bulletin* (monthly).

Chester Beatty Research Institute of the Institute of Cancer Research: Royal Cancer Hospital, Fulham Road, London, S.W.3; f. 1910; Dir. and Prof. of Experimental Pathology Prof. ALEXANDER HADDOW, M.D., D.Sc., PH.D.; Prof. of Chemistry Prof. F. BERGEL, D.PHIL.NAT., D.Sc.; Prof. of Biochemistry Prof. E. BOYLAND, D.Sc.; Prof. of Physical Chemistry Prof. J. A. V. BUTLER, D.Sc.; Prof. of Cytogenetics Prof. P. C. KOLLER, D.Sc.

Empire Rheumatism Council: Tavistock House (North), Tavistock Square, London, W.C.1; f. 1936 to organise research into the causes and means of treatment of rheumatism, arthritis, fibrositis, and allied diseases, to encourage teaching, and to stimulate public authorities to provide treatment; Chair. Dr. W. S. C. COPEMAN, O.B.E., F.R.C.P.; Chair. of Scientific Co-ordinating Cttee. Prof. R. E. TUNBRIDGE, O.B.E., F.R.C.P.; Hon. Medical Sec. Dr. OSWALD SAVAGE, O.B.E., M.R.C.P.; Gen. Sec. R. VICTOR HOWELL

Food Investigation Organisation, D.S.I.R.: Headquarters: 20A Regent Street, Cambridge; f. 1917; Dir. FRANKLIN KIDD, C.B.E., M.A., D.Sc., F.R.S.; publs. *Food Science Abstracts*, *Annual Reports*, *Special Reports*, *Technical Papers*, *Leaflets*, and articles in scientific journals.

Ditton Laboratory: East Malling, Kent; Supt. R. G. TOMKINS, M.A., PH.D.

Low Temperature Research Station: Downing Street, Cambridge; Supt. E. C. BATE SMITH, M.Sc., PH.D.

Torry Research Station: Aberdeen; Supt. G. A. REAY, O.B.E., B.Sc., M.A., PH.D., F.R.I.C., F.R.S.E.

Humber Laboratory: Wassand Street, Hull; Officer-in-Charge C. L. CUTTING, B.Sc., PH.D., A.R.I.C.

Lister Institute of Preventive Medicine: Chelsea Bridge Road, London, S.W.1; Department of Serums and Vaccines, Elstree, Herts; inc. 1891; Chair. Sir HENRY H. DALE, O.M., G.B.E., M.D., F.R.S.; Dir. Prof. A. A. MILES, C.B.E., M.A., M.D., F.R.C.P.

Medical Research Council: 38 Old Queen Street, Westminster, London, S.W.1; inc. 1920; Chair. Rt. Hon. The Earl of LIMERICK, G.B.E., K.C.B., D.S.O.; Sec. Sir HAROLD HIMSWORTH, K.C.B., M.D., F.R.C.P., F.R.S., Q.H.P.; Second Sec. Sir LANDSBOROUGH THOMSON, C.B., O.B.E., D.Sc.; Dir. National Institute for Medical Research Sir CHARLES HARRINGTON, SC.D., F.R.S.

Mount Vernon Hospital and the Radium Institute: Rickmansworth Road, Northwood, Middx.; General Hospital, including regional centres for radiotherapy, and plastic centre and jaw injuries; Sec. F. A. WATSON, F.H.A.

Ross Institute of Tropical Hygiene: Keppel Street, London, W.C.1; f. 1926 as a memorial to the late Sir Ronald Ross; it has since 1934 been a Dept. of the London School of Hygiene and Tropical Medicine; its objects are the teaching of tropical hygiene, assistance to industry in the tropics on all matters concerning the

RESEARCH INSTITUTES

prevention of disease, and research both at home and in the field overseas; Chair. Sir ERIC MACFADYEN, M.A., J.P.; Dir. Prof. G. MACDONALD, C.M.G., M.D., F.R.C.P., D.P.H., D.T.M.; Organising Sec. L. G. PONSFORD, LL.B.

Royal Institute of Public Health and Hygiene, The: 28 Portland Place, London, W.1; Laboratories, 23 Queen Square, London, W.C.1; f. as R.I.P.H. 1886, I.H. 1903, amalgamated 1937, approx. 2,350 mems.; Pres. Rt. Hon. WALTER ELLIOT, C.H., M.C., F.R.C.P., F.R.S., M.P.; Sec. H. H. GERRANS, F.C.I.S.; publ. *Journal* (monthly).

Royal Society for the Promotion of Health (formerly Royal Sanitary Institute). 90 Buckingham Palace Road, London, S.W.1; f. 1876 to promote the health of the people; 12,400 mems., Patron H.M. THE QUEEN; Pres. The Rt. Hon. Lord PERCY OF NEWCASTLE; Sec. P. ARTHUR WELLS, M.A., M.Sc., F.C.C.S., F.INST.P.; publs. *Journal* (monthly; circ. 11,275), *Calendar*; library: see page 173.

Water Pollution Research Laboratory: Elder Way, Stevenage, Herts; f. 1927; Dir. B. A. SOUTHGATE, C.B.E., D.Sc., F.R.I.C.; publs. *Annual Reports*, technical papers, *Water Pollution Abstracts* (monthly).

Wellcome Laboratories of Tropical Medicine: The Wellcome Building, Euston Road, London, N.W.1; Dir. R. S. F. HENNESSEY, C.M.G., M.D., M.R.C.P.(I).

Wellcome Research Laboratories: Langley Court, Beckenham, Kent; Dir. D. W. ADAMSON, M.Sc., D.Phil., A.R.I.C.

Wellcome Veterinary Research Station: Ely Grange, Frinton, Sussex; Dir. R. F. MONTGOMERIE, PH.D., B.Sc., F.R.C.V.S. (See also Wellcome Historical Medical Museum, page 178, library, page 174, Museum of Medical Science, page 179)

METEOROLOGY, ASTRONOMY

Cambridge University Laboratories: Madingley Road, Cambridge; Observatory f. 1824; Solar Physics Observatory f. 1913; work on solar physics, astrophysics and optics, Dir. Prof. R. O. REDMAN, F.R.S.

Liverpool Observatory and Tidal Institute: The Observatory, Birkenhead, Cheshire; Observatory f. 1845, Tidal Institute, 1919, amalgamated 1929; study of tides in all aspects, geophysical studies, especially storm surges; Dir. A. T. DOODSON, D.Sc., F.R.S., publ. *Annual Report*.

Meteorological Office: Victory House, Kingsway, London, W.C.2; f. 1855, a State institution; Central Forecast Office at Dunstable, Climatology, Library, Instruments and Marine Depts at Headstone Drive, Harrow; General Research at London H.Q.; Dir. Sir GRAHAM SUTTON, C.B.E., D.Sc., F.R.S.; publs. weather reports, *Geophysical Memoirs*, *Meteorological Reports*, *Professional Notes*, *Meteorological Magazine*, *Marine Observer*, *Observatories' Year Book*, etc.; library: see page 172

Royal Greenwich Observatory: Herstmonceux Castle, Sussex; f. 1675 at Greenwich, Astronomer Royal Dr. RICHARD VAN DER RIET WOOLLEY, M.Sc., PH.D., F.R.S.; publs. various reports of observations

University Observatory: Oxford; teaching and research in solar physics, Dir. H. H. PLASKETT

University of London Observatory: Mill Hill Park, London, N.W.7; f. 1929; teaching and research in astronomy, Dir. Prof. C. W. ALLEN, D.Sc.

THE BRITISH COMMONWEALTH

PHILOLOGY

Orthological Institute: 10 King's Parade, Cambridge; f. 1927; conducts research on signs, symbols, and the normative science of language; Dir. C. K. OGDEN

PHILOSOPHY, PSYCHOLOGY

Burden Neurological Institute: Stoke Lane, Stapleton, nr. Bristol; f. 1939 to conduct research in neurology and psychiatry; library of 4,000 vols.; Dir. FREDERICK GÖLLA, F.R.C.P.

Institute for the Study and Treatment of Delinquency: 8 Bourdon Street, Davies Street, London, W.1.; f. 1931 to initiate and promote scientific research into the causes and prevention of crime; founder of the Portman Clinic, an out-patient clinic for diagnosis and treatment of delinquents, with an advisory service to courts. 475 mems.; Pres. (Vacant); Chair. The Rt Hon. Lord CHORLEY, M.A., J.P.; Chair. of Scientific Cttee. Dr. E. GLOVER, M.D.; Gen. Sec. Miss J. E. FRAME; publs. *British Journal of Delinquency* (quarterly), *Annual Report*, monographs and pamphlets.

Royal Institute of Philosophy: University Hall, 14 Gordon Square, London, W.C.1; f. 1925; 1,300 mems.; Pres. Rt. Hon. Viscount SAMUEL, G.C.B., G.B.E., D.LITT., D.C.L., LL.D.; Chair. Sir W. DAVID ROSS, K.B.E., LITT.D., LL.D., F.B.A.; Dir. and Sec. L. C. ROBERTSON, M.A.; publ. *Philosophy* (quarterly).

PHYSICS

Institute of Physics: 47 Belgrave Square, London, S.W.1; f. 1918, inc. 1920; 5,000 mems.; Pres. Sir JOHN COCKCROFT, K.C.B., C.B.E., F.INST.P., F.R.S.; Hon. Sec. B. P. DUDDING, M.B.E., PH.D., F.INST.P.; Sec. and Editor of Journals H. R. LANG, PH.D., F.INST.P.; publs. *Journal of Scientific Instruments*, *British Journal of Applied Physics*, *Physics in Industry*, and *Student Monograph series*

National Physical Laboratory: Teddington, Middlesex; f. 1900; Dir. R. L. SMITH-ROSE, C.B.E. (Acting); annual reports and technical papers published by H.M.S.O.; other technical papers, published in journals of learned societies, etc

POLAR RESEARCH

Scott Polar Research Institute: Lensfield Road, Cambridge; f. 1926; aims to promote research, interest in and understanding of the polar regions; library open to research workers and museum open to the public, Dir. G. C. L. B. BERTRAM, M.A., PH.D.; publ. *Polar Record*.

SCIENCE (GENERAL)

Department of Scientific and Industrial Research: Charles House, 5-11 Regent Street, London, S.W.1; Cttee. of the Privy Council appointed by Order in Council 1915. President of the Committee of Council: The LORD

PRESIDENT OF THE COUNCIL.

Secretary. Sir BEN LOCKSPEISER, K.C.B., F.R.S.

Chairman of the Advisory Council: Sir HUGH BEAVER, M.I.C.E., M.I.CHEM.E.

Directors:

Building Research: F. M. LEA, C.B.E., D.S.C., F.R.I.C. (see below).

Chemical Research: D. D. PRATT, O.B.E., PH.D. (see p. 166).

Fire Research: S. H. CLARKE, M.S.C.

Food Investigation: F. KIDD, C.B.E., D.S.C., F.R.S. (see p. 167).

Forest Product Research. F. Y. HENDERSON, C.B.E., D.S.C., D.I.C. (see p. 165).

Fuel Research: A. PARKER, C.B.E., D.S.C., F.R.I.C., M.I.CHEM.E. (see next column).

Geological Survey and Museum: W. J. PUGH, O.B.E., D.S.C., M.I.M.E., F.G.S., F.R.S. (see pp. 166 and 177).

Hydraulics Research: Sir CLAUDE C. INGLIS, C.I.E., M.I.C.E., F.R.S.

Mechanical Engineering Research: D. G. SOPWITH, D.S.C., M.I.MECH.E. (ENG.).

National Physical Laboratory: R. L. SMITH-ROSE, C.B.E., D.S.C. PH.D., M.I.E.E. (Acting) (see previous column).

Pest Infestation Research: G. V. B. HERFORD, O.B.E.

Radio Research: R. L. SMITH-ROSE, C.B.E., D.S.C., PH.D., M.I.E.E.

Road Research: W. H. GLANVILLE, C.B., C.B.E., D.S.C., PH.D., M.INST.C.E. (see p. 169)

Water Pollution Research: B. A. SOUTHGATE, C.B.E., D.S.C., PH.D., F.R.I.C. (see p. 167).

United Kingdom Atomic Energy Authority: St. Giles Court, St. Giles High Street, London, W.C.2; f. 1954 to take over responsibility for research and development in atomic energy, formerly controlled by the Ministry of Supply; Chair. Sir EDWIN PLOWDEN; Mem. Sir JOHN COCKCROFT, Sir CHRISTOPHER HINTON, Sir WILLIAM PENNEY, Sir DONALD PERROTT, Rt Hon. Lord CHERWELL, Sir LUKE FAWCETT, Sir IVAN STEDEFORD, W. STRATH; part-time mems. Sir ROWLAND SMITH, C. F. KEARTON.

Research Group under Sir JOHN COCKCROFT, headquarters at Atomic Energy Research Establishment, Harwell, nr. Didcot, Berks.

Industrial Group under Sir CHRISTOPHER HINTON; headquarters at Risley, nr. Warrington, Lancs

Weapons Group under Sir WILLIAM PENNEY; headquarters at Aldermaston, nr. Reading, Berks.

SOCIOLOGY

Institute of Sociology: Le Play House, Ledbury, Herefordshire; f. 1903; 300 mems., Sec. A. M. L. CURRIE, Chair. of Council Prof. CAMPBELL STEWART

Royal Anthropological Institute of Great Britain and Ireland: 21 Bedford Square, London, W.C.1; f. 1843; 1,158 mems.; Hon. Sec. W. B. FAGG, M.A.; publs. *Man* (monthly), *Journal* (semi-annual), *Occasional Papers*; library: see page 172

TECHNOLOGY

Building Research Station (*Department of Scientific and Industrial Research*): Garston, near Watford, Herts; estd 1921, Dir. F. M. LEA, C.B.E., D.S.C., F.R.I.C., HON. A.R.I.B.A.; publs. National Building Studies (comprising bulletins, special reports, research papers), annual reports, and *B.R.S. Digests and Building Science Abstracts* (monthly).

Coal Utilisation Council: 3 Upper Belgrave Street, London, S.W.1; f. 1932 to promote the efficient use of coal and other solid fuels for domestic purposes and the development of relevant appliances; Pres. J. STANLEIGH TURNER, J.P.; Vice-Pres. Sir JOHN CHARRINGTON; Dir.-Gen. ERIC BELLINGHAM, O.B.E., LL.B.; Dir. J. S. WILLIAMS, B.COM.

Colonial Products Laboratory: Imperial Institute Building, London, S.W.7; formerly Colonial Products Advisory Bureau (Plant and Animal), came under Colonial Office in 1949; it examines and reports on all colonial plant and animal products, and deals with inquiries about them, Dir. Dr. R. A. E. GALLEY, PH.D., D.I.C., F.R.I.C.; publ. *Colonial Plant and Animal Products* (quarterly); library (see page 170).

Fuel Research Station: Blackwall Lane, East Greenwich, London, S.E.10; estab. 1917; 10,000 vols. in library;

UNITED KINGDOM

Dir. Dr. A. PARKER, C.B.E., D.S.C., M.I.CHEM.E., F.R.I.C.; publs. annual reports, technical papers, reports on the investigation of atmospheric pollution, *Fuel Abstracts* (monthly).

Mineral Resources Division, Colonial Geological Surveys: Imperial Institute Building, London, S.W.7; formerly the Mineral Resources Department, Imperial Institute; came under Colonial Office in 1949; it examines and reports on all colonial minerals and deals with inquiries about them; also a statistical section; Principal G. E. HOWLING, B.Sc.; publs. *Colonial Geology and Mineral*

RESEARCH INSTITUTES

Resources (quarterly), *Statistical Summary of the Mineral Industry* (annual), and publications on individual minerals of economic importance.

Road Research Laboratory: Harmondsworth, West Drayton, Middlesex; estab. 1933; research on road materials and construction, road traffic and safety; 30,000 books and pamphlets and 300 journals in library; Dir. W. H. GLANVILLE, C.B., C.B.E., D.S.C., PH.D., M.I.C.E.; publs. *Annual Reports of the Road Research Board*, *Road Abstracts* (monthly), *Technical Papers* and *Road Notes*.

LIBRARIES

LONDON

Admiralty Library: Whitehall, S.W.1; f. 1810; 220,000 volumes, contains works mainly on naval subjects; Librarian Lt.-Comdr. P. K. KEMP, R.N.

Associates of the late Rev. Dr. Bray: S P C K., Northumberland Avenue, London, W.C.2, f. 1730; an association founded by Dr Bray, who was the founder of the Society for Promoting Christian Knowledge (1698) and of the Society for the Propagation of the Gospel in Foreign Parts (1701), with the object of providing theological libraries for the Clergy in Great Britain as well as in the Colonial and Missionary Dioceses of the Anglican Communion; over 150 libraries in Great Britain and more than 250 overseas have been founded or aided by the Association; Pres. The Archbishop of CANTERBURY; Chair. Rev. H. P. THOMPSON; Sec. Miss M. H. I. ROCHE.

Aslib Library: *see* **Aslib** under Learned Societies.

Athenæum, Library of The: 107 Pall Mall, S.W.1; f. 1824; contains about 78,000 vols., reference books and general literature, Librarian E. STIFF, M.A.

British and Foreign Bible Society's Library: 146 Queen Victoria Street, E.C.4, f. 1804; largest collection of printed Bibles (over 20,000); Librarian JOHN STIRLING.

British Drama League Library: 9-10 Fitzroy Square, W.1; f. 1925; 100,000 volumes, Librarian MARY GARNHAM, F.L.A.

British Library of Political and Economic Science: London School of Economics, Houghton Street, Aldwych, W.C.2; f. 1896; contains over 350,000 bound volumes and numerous other items covering economics, political science, law (especially international and foreign), sociology, history, geography, etc., legislative and administrative reports, important deposits of official documents, and a number of special collections; Librarian G. WOLEDGE, B.A., publs. *Guide to the Collections*, *Notes for Readers*, *A London Bibliography of the Social Sciences*

British Medical Association Library: Tavistock Square, W.C.1, f. 1887, 65,000 books, Librarian T. J. SHIELDS.

British Museum Library and Reading Rooms: Great Russell Street, Bloomsbury, W.C.1, f. 1753; National Library, contains over 6,000,000 printed books, about 60,000 MSS., 100,000 charters and rolls, 18,000 detached seals and casts of seals, 3,000 Greek and Latin papyri, and a fine collection of Egyptian papyri. Newspapers are kept in a special department at Colindale, London, N.W.9. Public Reading Rooms for research, admission by ticket. Dir. and Principal Librarian Sir THOMAS KENDRICK, K.C.B.; Keepers. Printed Books, C. B. OLDMAN, C.B.; MSS., A. J. COLLINS; Oriental Printed Books and MSS., J. LEVEEN.

British Museum (Natural History) Library: Cromwell Road, S.W.7; 200,000 volumes on botany, zoology, geology, and mineralogy, Librarian A. C. TOWNSEND, M.A.

Carlton Club Library: 69 St. James's Street, S.W.1; f. 1832; contains about 36,500 volumes, most of which are at present stored, Sec. PETER STEWART.

Chemical Society Library: Burlington House, Piccadilly, W.1; f. 1841; over 52,000 volumes and 12,000 pam-

phlets; is a fine collection of works on chemistry and cognate subjects; special collections: Roscoe collection of books on alchemy and early chemistry; collection of books from the library of Michael Faraday; Nathan collection of books on explosives and firearms; Librarian R. G. GRIFFIN.

Church House Library: Dean's Yard, Westminster, S.W.1; f. 1888; specialist reference library dealing with Church affairs, largely in connection with the Church Assembly and the Convocations.

Church Missionary Society Library: 6 Salisbury Square, E.C.4; f. 1799; approx. 25,000 volumes; religion, social sciences, history, language, description and travel; special collections include James Long Bequest (books on Islam and Buddhism) and General Lake's collection of Puritan literature; Librarian Miss J. FERRIER; C.M.S. Gen. Sec. Canon M. A. C. WARREN, M.A., D.D.

College of Arms: Queen Victoria Street, E.C.4, ca. 30,000 vols.; genealogical and heraldic collections; Registrar and Hon. Librarian A. R. WAGNER, C.V.O., Richmond Herald.

Colonial Office and Commonwealth Relations Office Library: Colonial Office, Sanctuary Buildings, Great Smith Street, S.W.1; Commonwealth Relations Office, Downing Street, London, S.W.1; f. 1854; principal collection consists of Colonial and Commonwealth Government publications; Librarian B. CHEESEMAN, A.L.A.; Deputy Librarian C. D. OVERTON, F.L.A.

Congregational Library: Memorial Hall, Farringdon Street, E.C.4; f. 1830, contains about 30,000 volumes, mainly relating to the history and activities of the Non-conformists, and collection of hymnology.

Custom House Library: King's Beam House, E.C.3; f. 1671; contains about 25,000 volumes, together with many MS. records of H.M. Customs and Excise headquarters and outport, including much valuable historical material; representative transcripts, lists, etc., of outport records; also private museum; Librarian and Keeper RUPERT C. JARVIS, F.S.A., F.R.Hist.S.

Dr. Williams's Library: 14 Gordon Square, W.C.1; opened 1729; contains about 90,000 volumes, a lending library of theological, philosophical and historical works; Librarian Rev. R. THOMAS, M.A.; publs. *Catalogue of Accession*, *Bulletin of Accession* (annual), *Lectures of Friends of Dr. Williams's Library* (annual).

Egypt Exploration Society Library: 2 Hinde Street, W.1; f. 1882; contains about 2,000 volumes relating to Egypt and neighbouring countries; Librarian and Sec. WINIFRED A. KEEVES.

Foreign Office Library: Cornwall House, Stamford Street, S.E.1; f. 1784; contains over 100,000 volumes, largely historical, political and on international law; Librarian and Keeper of the Papers E. J. PASSANT; Deputy Librarian G. H. FONE.

Friends' Library: Friends House, Euston Road, N.W.1; f. 1673; the official library of the Society of Friends (Quakers) in Great Britain and the repository of its archives; contains about 13,000 volumes, 20,000 pamphlets, and 20,000 MSS., as well as prints; Librarian JOHN L. NICKALLS.

Geological Museum Library: Exhibition Road, S.W.7; 56,000 volumes; Librarian C. J. STUBBLEFIELD, D.Sc., F.R.S.

Geological Society Library: Burlington House, Piccadilly, W.1; f. 1809; contains about 90,000 volumes; Librarian MISS A. BARBER.

Gladstone Library: National Liberal Club, Whitehall Place; S.W.1; f. 1888; contains about 40,000 books and about 40,000 pamphlets; Librarian G. E. V. AWDRY, F.L.A.

Gray's Inn Library: Field Court, Gray's Inn, W.C.1; f. ca. 1522; volumes of books on law; special collections: Baconiana, ecclesiastical MSS. 12th-14th centuries; for the use of mems. of Gray's Inn only; the library was completely destroyed by enemy action in May 1941; there is now a temporary library of about 18,000 volumes; Librarian W. HOLDEN, M.B.E.; Asst. Librarian B. M. COCKS.

Guildhall Library (Library of the Corporation of London): King Street, E.C.2; f. about 1425; contains 130,000 printed books, etc., 23,000 MSS., and 25,000 prints; general reference library, particularly rich in books on all aspects of London history; the MSS. collection consists mainly of City parochial records and records of the City Livery Companies, commercial reference room of British and foreign directories, trade papers, etc.; Librarian R. SMITH, F.L.A., F.S.A.

Guy's Hospital Medical School: The Wills Library: St. Thomas's Street, S.E.1; f. 1903; 20,000 volumes; Librarian G. A. R. WINSTON.

Hirsch Music Library: British Museum, Great Russell Street, W.C.1; purchased for the nation in 1946; a unique collection of musical treatises and theoretical works prior to 1800, full operatic scores and complete and first editions of the classics; Asst. Keeper in charge of Music Room A. HYATT KING.

Horniman Museum and Library: (*see under* Museums).

House of Commons Library: Westminster, S.W.1; f. 1818; contains about 100,000 volumes, including Parliamentary Records, the reference library files contain more than 1,180 periodicals and newspapers; the research division issues bibliographies on subjects of current interest to members, Librarian STRATHEARN GORDON.

House of Lords Library: Old Palace Yard, Westminster, S.W.1, f. 1826; contains about 65,000 volumes, legal and Parliamentary, history and general literature; Librarian C. T. CLAY, C.B., F.S.A., F.B.A.

Imperial Institute, The Library (The Library of the Colonial Products Laboratory and the Mineral Resources Division, Colonial Geological Surveys). South Kensington, S.W.7; f. 1887, contains about 100,000 vols. of Dominion, Colonial, Indian and other works of reference; Librarian C. D. OVERTON, F.L.A.

Imperial War Museum: Lambeth Road, S.E.1; f. 1917; contains publications and MSS. relating to all military operations in which the Armed Forces of the British Commonwealth have been engaged since 1914; 70,000 volumes, 3,500,000 photographs, Dir. L. R. BRADLEY, C.B.E.; Deputy Dir. and Keeper of Photographs A. J. CHARGE, M.B.E.; Keeper of Pictures W. PHILIP MAYES, F.S.A. (Scot.); A.M.A., Librarian J. R. HILLIER, A.L.A.

India Office Library (Commonwealth Relations Office): King Charles Street, S.W.1; f. 1801; contains about 260,000 printed books, 25,000 MSS. relating principally to India and the East and 1,500 Indian and Persian miniature paintings; Librarian S. C. SUTRON, publs. *Annual Report, Guide*, and catalogues of the collections.

Inner Temple Library: Temple, E.C.4; f. about 1500; contained about 90,000 volumes (about half destroyed by enemy action in 1941), restored to 85,000 volumes (1954); mostly legal and historical; collection of Petyt MSS. available to the public for historical research; Librarian E. A. P. HART.

Inns of Court Bar Library and the Libraries of the Supreme Court of Judicature: Royal Courts of Justice, Strand, W.C.2; f. 1883, contains 100,000 volumes, Chief Librarian R. A. RICHES, O.B.E.; Asst. Librarians W. F. BIRD, C. L. FISHER.

Institution of Civil Engineers' Library: Great George Street, Westminster, S.W.1, f. 1818; a private library of about 70,000 volumes and 19,000 pamphlets; includes works on all branches of engineering; Sec. A McDONALD.

Institution of Electrical Engineers' Library: Savoy Place, W.C.2, f. 1871; the main collection contains nearly 10,000 books, over 11,000 bound volumes of periodicals, reports, etc., and several thousand pamphlets, over 500 periodicals are received. The library includes two famous collections of historical electrical works—the collection of Sir Francis Ronalds (held in trust), consisting of 6,000 volumes and pamphlets and the library of Silvanus P. Thompson, comprising 4,500 volumes and 8,000 pamphlets, there is also a valuable collection of Faraday MSS. and a small collection comprising the library and notebooks of Oliver Heaviside; Sec. W. K. BRASHER, C.B.E., M.A.

Institution of Mechanical Engineers' Library: 1 Birdcage Walk, Westminster, S.W.1; f. 1847; 50,000 volumes; Librarian REGINALD T. EVERETT, B.E.M.

Iron and Steel Institute and Institute of Metals Joint Library: 4 Grosvenor Gardens, S.W.1, f. 1938, 30,000 volumes, Joint Librarian ALAN E. CHATTIN.

King's College Library: Strand, W.C.2; f. 1829; contains about 180,000 volumes; Librarian ROBERT HUTTON, M.A.

Lambeth Palace Library: Lambeth, S.E.1, f. 1610; contains about 41,000 printed books and 1,300 volumes of MSS. dating back to the 9th century and including documents of the See of Canterbury, early printed books, etc., Librarian C. R. DODWELL, M.A., PH.D.; Asst. Librarian ROSEMARY BURDETT, M.A.; Archivist DOREEN SLATTER, M.A., B.LITT.

Law Society Library: Chancery Lane, W.C.2; f. 1828; 74,980 volumes, mostly English law books, reports and statutes; Librarian S. E. CHAMPION; pub. *Law Society's Gazette* (mems. only).

Library Association Library: Chaucer House, Malet Place, W.C.1; f. 1877, approx. 18,000 volumes plus large collections of library reports, bulletins, etc., and 6,000 photographs and illustrations, Librarian D. C. HENRIK JONES, F.L.A.

Library of the Royal Society of Arts: 8 John Adam Street, W.C.2; approx. 4,500 vols., Curator-Librarian D. C. G. ALLAN, M.Sc.

Lincoln's Inn Library: Holborn, W.C.2; in existence 1475; with 75,000 volumes and 1,000 volumes of MSS., including the Hale Collection, is the largest and oldest law library in London; Librarian C. W. RINGROSE.

Linnean Society Library: Burlington House, Piccadilly, W.1; f. 1788; contains about 70,000 volumes, mostly works on natural history; Librarian W. S. WARTON.

London County Council Education Library: County Hall, Westminster Bridge, S.E.1; f. 1909, contains about 130,000 volumes; Librarian H. R. MAINWOOD, A.L.A.

THE BRITISH COMMONWEALTH

London Library: 14 St. James's Square, S.W.1; f. 1841; over 600,000 volumes covering a wide range of subjects and languages; subscription circulating and reference library; under Royal Charter; membership (limited) 5,000, including 900 life mems.; Sec. and Librarian S. NOWELL-SMITH, M.A., F.S.A.; Asst. Sec. and Sub-Librarian S. G. GILLAM, B.LITT., M.A.

London Oratory Library: Brompton Road, South Kensington, S.W.7; f. 1854, contains 40,000 volumes and 3,000 pamphlets; the finest library of Catholic literature in London.

London School of Hygiene and Tropical Medicine Library: Keppel Street, Gower Street, W.C.1, f. 1924; 37,600 volumes, Librarian C. C. BARNARD, B.A., F.L.A., F.I.L.

Marx Memorial Library: Marx House, 37A Clerkenwell Green, E.C.1, f. 1933, approx. 10,000 volumes; 25,000 pamphlets, files of Labour, Socialist and Communist periodicals, Pres. Prof. J. D. BERNAL, F.R.S.; Chair. ANDREW ROTHSTEIN, M.A.; Librarian H. EVANS.

Medical Society of London Library: 11 Chandos Street, W.1; f. 1773; approx. 25,000 volumes; Registrar and Librarian PERCY MINTER, publ. *Yearly Transactions*.

Meteorological Office Library: Headstone Drive, Harrow, Middlesex; f. 1870; approx. 65,000 books and 20,000 pamphlets, the national library for meteorology and climatology, includes comprehensive records of data published by British and foreign institutions, Librarian G. J. EVANS, B.Sc.

Middle Temple Library: Brick Court, Temple, E.C.4; f. 1641; contains about 85,000 volumes of works on law and history including Commonwealth and U.S. Laws and Reports; Librarian H. A. C. STURGESS, M.V.O.

Ministry of Agriculture, Fisheries and Food Library: 3 Whitehall Place, S.W.1; f. 1889; 70,000 vols, some 1,500 current periodicals and serials; includes Cowan and Cotton Libraries (books and periodicals on apiculture); Librarian F. C. HIRST, F.L.A.; publs. *Agriculture* (monthly), *National Agricultural Advisory Service Quarterly Review*, *Plant Pathology* (quarterly), *Bulletins and Leaflets*.

New Hall: f. 1954. *Tutor:* ALICE MURRAY, M.A.

UNIVERSITY OF DURHAM

46 NORTH BAILEY, DURHAM

Founded 1832.

The University comprises the Durham Division (eight colleges situated in Durham) and the Newcastle Division (King's College, Newcastle-upon-Tyne, including the Medical School). The University is controlled under statutes which came into force in 1937.

Chancellor: GEORGE MACAULAY TREVELYAN, O.M., M.A., LITT.D., F.B.A.
Vice-Chancellor: CHARLES ION CARR BOSANQUET, M.A., D.C.L.
Pro-Vice-Chancellor: Sir JAMES FITZJAMES DUFF, M.A., M.ED., LL.D., D.C.L.
Treasurer (Honorary): Sir THOMAS BRADFORD, D.S.O., D.L., D.C.L.
Registrar: ERNEST MARSDEN BETTENSOM, M.A.
Librarians: DAVID GOUDIE RAMAGE, M.A. (Durham); WILLIAM SMITH MITCHELL, M.A., PH.D. (Newcastle).
 The library at Durham contains 150,000 volumes and at Newcastle 195,000 volumes.
 Number of teaching staff. 520, including 70 professors.
 Number of students: 3,304 men, 890 women, total 4,194.
 Publications: *Durham University Journal*, *Proceedings of the Durham University Philosophical Society*, *Riddell Memorial Lectures*, *Durham University Gazette*.

DEANS:

Theology: Rev. C. K. BARRETT, M.A.
Arts: Prof. W. H. F. BARNES, M.A.
Medicine: Prof. R. B. GREEN, M.A., M.B., B.S., F.R.C.S., D.C.L.
Science: Prof. W. F. K. WYNNE-JONES, D.S.C., F.R.I.C.
Applied Science: Prof. A. F. BURSTALL, D.S.C., PH.D.
Music: C. BURNS, M.A., MUS.DOC.
Commerce: D. M. MENNIE, M.A.
Law: Prof. E. C. RYDER, M.A., LL.B.
Education: JOHN PHILIP TUCK, M.A.
Agriculture: Prof. M. M. COOPER, B.AGR.(SC.).

DURHAM COLLEGES:

University College: f. 1833.
Master: L. SLATER, M.A.
Hatfield College: f. 1846.
Master: E. BIRLEY, M.A., F.S.A.
St. Chad's College: f. 1904.
Principal: Rev. T. S. WETHERALL, M.A.
St. John's College: f. 1909.
Principal: Rev. Prof. J. P. HICKINBOTHAM, M.A.
College of the Venerable Bede: f. 1841.
Principal: Rev. G. E. BRIGSTOCKE, M.A.
St. Cuthbert's Society: f. 1871; known as non-Collegiate until 1947.
Principal: Rev. W. A. WHITEHOUSE, M.A., B.LITT.
St. Mary's College: f. 1899.
Principal: E. MARJORIE WILLIAMSON, M.SC., PH.D.
St. Hild's College: f. 1858.
Principal: NINA M. E. JOACHIM, B.A.

UNITED KINGDOM

Neville's Cross College: f. 1921.

Principal: NETTY MARGARET LUNAN, M.A.

St. Aidan's Society: f. 1895; known as Home Students until 1947.

Principal: ETHLEEN M. SCOTT, M.A., L.R.A.M., A.R.C.M.

NEWCASTLE DIVISION:

King's College: Newcastle-upon-Tyne; f. 1937.

Rector: CHARLES ION CARR BOSANQUET, M.A., D.C.L.

AFFILIATED COLLEGES:

Codrington College: Barbados, B.W.I. (see under BRITISH WEST INDIES: BARBADOS: College).

Fourah Bay College: Sierra Leone (see under BRITISH WEST AFRICA: SIERRA LEONE: Education).

Sunderland Technical College: Green Terrace, Sunderland, Co. Durham; f. 1901.

Principal: D. A. WRANGHAM, M.Sc., Wh.Sc., D.I.C., M.I.Mech.E., A.C.G.I.

Number of teachers: 95 full-time, 259 part-time.

Number of students: 667 full-time day, 1,068 part-time day, 2,377 evening

EDINBURGH UNIVERSITY

Founded 1583.

Chancellor: H.R.H. The Duke of EDINBURGH, K.G., K.T., LL.D., F.R.S.

Vice-Chancellor and Principal: SIR EDWARD V. APPLETON, G.B.E., K.C.B., M.A., D.Sc., Sc.D., LL.D., F.R.S.

Rector: Prof (Emeritus) SIR SYDNEY SMITH, C.B.E., M.D., LL.D., F.R.C.P., D.P.H.

Registrar: CHARLES H. STEWART, M.A., J.P., LL.B., C.A.

Librarian: L. W. SHARP, M.A., PH.D.

The library contains over 500,000 bound volumes and 1,000 current periodicals

Number of teaching staff: 758, including 75 professors.

Number of students: 4,272 men, 1,605 women, total 5,877.

Publication: *Edinburgh University Calendar*.

DEANS:

Faculty of Divinity: Very Rev. Prof. JOHN BAILLIE, M.A., D.Litt., D.D., S.T.D., LL.D., L.H.D.

Faculty of Law: Prof. M. G. FISHER, C.B.E., Q.C., M.A., LL.B.

Faculty of Medicine: (Vacant)

Faculty of Arts: Prof. J. MACMURRAY, M.C., M.A.

Faculty of Science: Prof. R. N. ARNOLD, D.Sc., D.Eng., Ph.D., M.I.Mech.E., A.M.I.C.E.

Faculty of Music: Prof. S. T. M. NEWMAN, M.A., Mus.D., F.R.C.O.

CONSTITUENT COLLEGES:

New College: f. 1846.

Principal: Very Rev. Prof. JOHN BAILLIE, M.A., D.D., D.Litt., S.T.D., LL.D., L.H.D.

NOTE—The Royal (Dick) Veterinary College was embodied within the University of Edinburgh on April 1st, 1951, and is now called the Royal (Dick) School of Veterinary Studies.

Heriot-Watt College: Chambers Street, Edinburgh; f. 1821.

Principal: HUGH B. NISBET, Ph.D., D.Sc., F.R.I.C., F.R.S.E.

Number of teachers: 57 full-time, 131 part-time.

Number of students: 455 full-time, 651 part-time, 3,076 evening.

ASSOCIATED COLLEGE:

Edinburgh and East of Scotland College of Agriculture, The: 13 George Square, Edinburgh; f. 1901.

Principal: Prof. STEPHEN J. WATSON, M.Sc., D.Sc., F.R.I.C., F.R.S.E.

UNIVERSITIES AND UNIVERSITY COLLEGES

Secretary and Treasurer: J. A. JOHNSTON, A.C.R.A.

Number of teachers: 36

Number of students: 223

Publications: *Calendar*, *Annual Report*, *Farms Guide*, *Bulletins*, *Rural Advisory Leaflets*, etc

UNIVERSITY OF EXETER

Founded 1855 as University College of the South-West of England, incorporated 1922; acquired university status by Royal Charter 1955.

Chancellor: The Duchess of DEVONSHIRE

Principal: J. W. COOK, D.Sc., Sc.D., Ph.D., F.R.S.

Secretary: RODERICK ROSS, M.A.

Academic Registrar: ALAN G. BARILETT, M.A.

Librarian: J. L. LLOYD, M.A.

The library contains 98,000 volumes

Number of teachers: 126, including 17 Professors

Number of students: approx. 1,000 men and women.

Publications: *Calendar*, *Prospectus*, *Scholarship Pamphlet* (annual).

GLASGOW UNIVERSITY

GLASGOW, W 2

Founded 1451, reconstituted 1577.

Chancellor: Rt. Hon. Lord BOYD ORR OF BRECHIN MEARNES, D.S.O., M.C., M.A., M.D., D.Sc., LL.D., F.R.S.

Vice-Chancellor and Principal: SIR HECTOR HETHERINGTON, K.B.E., D.L., M.A., LL.D., D.Litt., D.Ès.L.

Rector: T. J. HONEYMAN, M.B., F.R.F.P.S.

Registrar: R. T. HUTCHESON, O.B.E., J.P., M.A., Ph.D.

The library contains 416,000 volumes

Number of teaching staff: 675, including 64 professors.

Number of students (1953-54): 4,770 men, 1,277 women, total 6,047.

Publications: *Glasgow University Publications* (95 vols. issued), *Geology Department Papers* (23 vols. issued).

DEANS:

Faculty of Arts: A. M. BOASE, M.A., Ph.D.

Faculty of Science: P. I. DEE, C.B.E., M.A., F.R.S.

Faculty of Medicine: G. M. WISHART, M.D., B.Sc.

Faculty of Law: R. BROWNING, LL.B., C.A.

Faculty of Divinity: I. HENDERSON, M.A., D.D.

Faculty of Engineering: B. HAGUE, Ph.D., D.Sc.

ASSOCIATED COLLEGES

Royal Technical College, Glasgow: George Street, Glasgow, C 1; established 1886 as the Glasgow and West of Scotland Technical College by an order of Her Majesty Queen Victoria in Council, amalgamating several old institutions, notably Anderson's College, the first Technical College, founded in 1796; in February 1912 His Majesty King George V directed that in future it should be known as The Royal Technical College, Glasgow.

Director: DAVID S. ANDERSON, B.Sc., Ph.D., A.R.T.C., M.I.Mech.E.

Secretary and Treasurer: GEORGE H. THOMSON, B.Com., A.L.A.A.

Librarian: CHARLES G. WOOD, F.L.A.

Number of volumes in the library is 35,000

Number of teachers: 212, including 10 Professors

Number of day students: 1,105 men, 122 women, total 1,287.

Publication: *Report on Research*

THE BRITISH COMMONWEALTH

West of Scotland Agricultural College: 6 Blythswood Square, Glasgow, C.2; f. 1899.

Principal: DONALD S. HENDRIE, N.D.A., N.D.D., B.Sc.
Courses and advisory services in Agriculture, Dairying, Horticulture, Poultry Husbandry and Bee-keeping.

UNIVERSITY COLLEGE OF HULL

COTTINGHAM ROAD, HULL

Founded 1927.

Chancellor: Rt. Hon. Lord MIDDLETON, M.C., T.D., J.P.

Vice-Chancellor: J. H. NICHOLSON, C.B.E., B.A., M.A. (ED.).

Registrar: W. D. CRAIG, B.L.

Chairman of Council: H. I. LOTEN, M.B.E., J.P.

Treasurer: L. H. DOWNS, C.B.E., M.A., M.I.MECH.E.

Librarian: PHILIP A. LARKIN, M.A.

There are over 110,000 volumes in the library.

Number of teachers: 141, including 13 Professors.

Number of students (full-time): 508 men, 204 women, total 712 (Session 1954-55).

Publication: *Calendar*.

DEANS:

Faculty of Arts: F. W. TAYLOR, M.A., LL.M.

Faculty of Science: E. R. TRUEMAN, B.Sc.

UNIVERSITY OF LEEDS

LEEDS, 2

Founded 1904.

Chancellor: H.R.H. The PRINCESS ROYAL, C.I., G.C.V.O., G.B.E., LL.D.

Pro-Chancellor: Sir HUBERT HOULDSWORTH, Bt., Q.C., D.Sc., LL.D.

Vice-Chancellor: Sir CHARLES RICHARD MORRIS, M.A., LL.D., D.Litt.

Pro-Vice-Chancellor: J. T. WHETTON, D.S.O., O.B.E., M.C., M.Sc.

Treasurer: Sir MAXWELL RAMSDEN

Bursar: EDWIN JOSEPH BROWN, O.B.E., B.Com.

Registrar: JOHN VAUGHAN LOACH, B.Sc., Ph.D., F.R.I.C.

Librarian: B. S. PAGE, M.A.

The library contains 384,285 volumes and pamphlets, and the Brotherton Collection contains 41,815 volumes and pamphlets and a large number of MSS., deeds, and letters.

Number of teachers: 578, including 68 Professors.

Number of students: 2,558 men, 827 women, total 3,385.

Publications: *University Calendar*, *University Gazette*.

Number of teachers: 21, including 4 Professors.

Number of students (1953-54): 68 full-time, 76 part-time.

Publications. *The Slavonic and East European Review* (f. 1922; twice yearly).

Warburg Institute: Imperial Institute Buildings, South Kensington, S.W.7; f. 1905 for the study of the history of the classical tradition.

Director: Prof. GERTRUD BING, PH.D.

Publications: *Studies* (monographs), *Journal of the Warburg and Courtauld Institutes*, *Corpus Platonicum Medii Aevi*, *Mediaeval and Renaissance Studies*.

SCHOOLS OF THE UNIVERSITY

I. Schools in receipt of U.G.C. Grants

(a) Non-Medical

Bedford College: Inner Circle, Regent's Park, N.W.1, f. in Bedford Square by Mrs. E. J. Reid, in 1849, incorporated 1869, chartered January 11th, 1909; supplemental charter August 29th, 1911.

Principal: Miss N. L. PENSTON, B.A., D.PHIL., F.L.S.

Secretary: Miss I. G. SHEPPARD, B.A.

Number of teachers: 112 including 19 Professors.

Number of students (1954-55): 791.

DEANS:

Faculty of Arts: Prof. R. B. ONIANS, M.A., PH.D.

Faculty of Science: Prof. E. E. TURNER, M.A., D.SC., F.R.I.C., F.R.S.

THE BRITISH COMMONWEALTH

Birkbeck College: Malet Street, W.C.1; f. 1823; Charter of Incorporation March 17th, 1926.

Master: JOHN F. LOCKWOOD, M.A., PH.D.

Secretary: A. J. CARAFFI, B.Sc.

Registrar: DOUGLAS DAKIN, M.A., PH.D.

Number of Teachers: 114 including 11 Professors.

Number of students. 1,425.

DEANS:

Faculty of Arts: Prof. W. G. EAST, M.A.

Faculty of Science: Prof. C. A. MACE, M.A., D.LIT.

Imperial College of Science and Technology: Prince Consort Road, South Kensington, S.W.7; formed 1907 by federation of Royal School of Mines, Royal College of Science, and City and Guilds College.

Rector: R. P. LINSTAD, C.B.E., D.Sc., D.I.C., F.R.S.

Secretary: G. C. LOWRY, O.B.E., T.D., M.A.

Registrar: E. F. CUTCLIFFE, M.B.E., B.A.

Number of teachers: 310 including 31 Professors.

Number of full-time students: 1,870.

DEANS:

City and Guilds College: Prof. O. A. SAUNDERS, M.A., D.Sc. (ENG.), M.I.Mech.E., F.Inst.P.

Royal College of Science: Prof. P. M. S. BLACKETT, M.A., F.R.S.

Royal School of Mines: Prof. D. WILLIAMS, D.Sc., PH.D., B.Eng., D.I.C., M.I.M.M., F.G.S.

King's College: Strand, W.C.2; f. 1829.

Principal: PETER SCOTT NOBLE, M.A., LL.D.

Dean: The Rev. SYDNEY HALL EVANS, M.A., B.D.

Secretary: IVAN PETER SHAW, M.A.

Registrar: JOHN THEODORE COMBRIDGE, M.A.

Library (f. 1829) of 180,000 vols

Number of teachers: 184, including 33 Professors.

Number of students. 2,120

DEANS:

Faculty of Arts: GEOFFREY BULLOUGH, M.A.

Faculty of Laws: RONALD HARRY GRAVESON, LL.D., S.J.D., PH.D.

Faculty of Natural Sciences: JAMES HOWARD TAYLOR, B.Sc., A.M., PH.D.

Faculty of Medical Sciences: THOMAS NICOL, M.D., D.Sc., F.R.C.S., F.R.C.S.E., F.R.S.E.

Faculty of Engineering: JAMES GREIG, M.Sc. (ENG.), PH.D., M.I.E.E.

Faculty of Theology: Rev. SYDNEY HALL EVANS, M.A., B.D.

London School of Economics and Political Science: Houghton Street, Aldwych, W.C.2, f. 1895.

Director: Sir ALEXANDER CARR SAUNDERS, M.A., LL.D., Litt.D., D.én Droit, D.Litt., F.B.A.

Secretary: H. KIDD, M.A.

Number of teachers 192.

Number of students 3,470 (1954-55).

Publications *Economica* (quarterly journal of economics, economic history, and statistics), *The British Journal of Sociology* (quarterly), *New Series*, *Reprints of Scarce Works on Political Economy*, *Monographs on Social Anthropology*.

Queen Elizabeth College: 61 Campden Hill Road, W.8; f. 1908.

Principal: Miss M. J. SARGEANT, M.A., B.Litt.

Number of teachers: 40. Number of students 118.

Queen Mary College: Mile End Road, London, E.1; f. 1887.

Principal: Sir THOMAS CREED, K.B.E., M.C., Q.C., M.A.

Registrar: R. P. TONG, O.B.E., M.A.

Librarian: A. WHITWORTH.

Number of teaching staff: 107, including 16 professors. Number of students: 1,113.

Publications: *Calendar*, *Prospectus*, *Annual Report*.

DEANS:

Faculty of Arts: Prof. S. T. BINDOFF, M.A.

Faculty of Science: Prof. F. M. HAINES, PH.D., D.Sc.

Faculty of Engineering: Prof. W. J. JOHN, B.Sc., D.I.C., M.I.E.E.

Faculty of Medicine: Dr. J. R. FORREST, B.Sc., PH.D.

Royal Holloway College (University of London): Englefield Green, Surrey; f. 1883; opened by Queen Victoria in 1886; women's college.

Principal: Miss E. C. BATHO, M.A., D.Lit.

Secretary: Miss D. HUSTLER, M.B.E.

Registrar: Miss E. D. P. PARGITER, B.A.

Number of teachers: 52, including 8 Professors.

Number of students: 331 resident, 37 non-resident.

Royal Veterinary College and Hospital: Royal College Street, Camden Town, London, N.W.1; f. 1791.

Principal: R. E. GLOVER, M.A., B.Sc., F.R.C.V.S.

Secretary and Bursar: H. W. J. ADAMS, M.A., F.C.I.S.

Number of teachers: 67. Number of students: 336.

School of Oriental and African Studies: University of London, W.C.1. f. 1916.

Director: Prof. Sir RALPH TURNER, M.C., M.A., Litt.D., F.B.A.

Secretary: Lt.-Col. H. MOYSE-BARTLETT, M.B.E. (Mil.), M.A., PH.D.

Library see page 173.

Number of teachers: 150 including 18 Professors

Number of full-time students (1954-55) 193 men, 55 women

Publications *The Bulletin*, *Calendar*, *Annual Report*

School of Pharmacy: 17 Bloomsbury Square, W.C.1; f. 1842

Dean: Prof. H. BERRY, B.Sc., Dip.Bact., F.R.I.C., PH.C.

Clerk to the Council and Secretary: S. R. CURTIS, B.A.

Number of teachers: 32, including 3 Professors

Number of students: 106.

University College: Gower Street, W.C.1; f. 1826

Provost: Sir IFOR EVANS, M.A., D.Lit.

Secretary: E. A. L. GUETERBOCK, M.A.

Library see page 174.

Number of teachers 455, including 57 Professors.

Number of students 3,455.

Publication *Calendar*

DEANS:

Faculty of Arts: THOMAS B. L. WEBSTER, M.A., F.S.A.

Faculty of Science: EGON S. PEARSON, C.B.E., M.A., D.Sc.

Faculty of Laws: RICHARD C. FITZGERALD, LL.B., F.R.S.A.

Faculty of Engineering: MAXWELL B. DONALD, M.Sc., F.R.I.C., M.I.CHEM.E., A.R.C.S.

Faculty of Medical Science: FRANK R. WINTON, M.A., M.D., D.Sc.

Westfield College: Kidderpore Avenue, Hampstead, N.W.3; f. 1882; a residential college for women.

Principal: Miss K. CHESNEY, M.A., D.Phil., D.Litt.

Secretary: Miss R. M. FORSTER, B.A.

Registrar: Miss M. B. MURIEL, M.A.

Number of teachers: 31, including 3 Professors.

Number of students: 270.

UNITED KINGDOM

Wye College: Wye, Nr. Ashford, Kent; the School of Agriculture and Horticulture in the University of London; residential.

Principal: DUNSTAN SKILBECK, M.A.

Secretary-Registrar: C. W. A. GARLAND, B.Sc.

Number of students: approx. 200.

(b) Undergraduate Medical and Dental.

Charing Cross Hospital Medical School: 62-65 Chandos Place, Charing Cross, W.C.2; f. 1834.

Dean: E. C. WARNER, B.Sc., M.D., F.R.C.P.

Secretary: BRIAN S. DREWE, T.D., M.A., LL.B.

Number of teachers: 73. Number of students: 224.

Publication: *Charing Cross Hospital Gazette* (every term).

Guy's Hospital Dental School: St. Thomas's Street, London Bridge, S.E.1.

Dean: E. R. BOLAND, C.B.E., F.R.C.P.

Sub-Dean: F. S. WARNER, F.D.S., M.R.C.S.

Secretary: W. F. COOK, F.C.C.S.

Number of students: 338 men, 39 women, total 377.

Guy's Hospital Medical School: St. Thomas's Street, London Bridge, S.E.1, f. 1725.

Dean: E. R. BOLAND, C.B.E., F.R.C.P.

Sub-Dean: J. C. HOUSTON, M.D.

Secretary: W. F. COOK, F.C.C.S.

Library: see page 171

Number of students: 479 men, 70 women, total 549.

King's College Hospital Medical School: Denmark Hill, S.E.5; f. 1831

Dean: VERNON F. HILL, L.R.C.P., M.R.C.S., F.F.A.R.C.S.

Secretary: W. F. GUNN, LL.B., F.C.I.S.

Number of teachers: 67 medical, 23 dental.

Number of students: 210 medical, 81 dental.

London Hospital Medical College, The: Turner Street, E.1, f. 1785.

Dean: H. B. MAY, M.D., F.R.C.P.

Secretary: H. P. LAIRD, B.A.

Number of teachers: 150

Number of students: 479 medical, 112 dental.

Publication: *The London Hospital Gazette* (six per year)

Middlesex Hospital Medical School: Mortimer Street, W.1; f. 1835

Dean: Prof. B. W. WINDEYER, D.Sc., M.B., F.R.C.S., F.F.R.

Secretary: Miss EILEEN M. WALTON.

Number of students: 450.

Royal Dental Hospital of London, School of Dental Surgery: 32 Leicester Square, W.C.2, f. 1858

Dean: H. L. HARDWICK, F.D.S., L.R.C.P., M.R.C.S.

School Secretary: K. R. MCK. BIGGS, B.A.

Number of teachers: 60

Number of students: 172

Royal Free Hospital School of Medicine: 8 Hunter Street, Brunswick Square, W.C.1; f. 1874

Dean: Miss K. G. LLOYD-WILLIAMS, M.D., F.F.A.R.C.S.

Warden and Secretary: Miss J. I. BEALE, B.A.

Number of full-time teachers: 44, including 3 Professors.

Number of students: 456.

St. Bartholomew's Hospital Medical College: West Smithfield, E.C.1; f. 1662.

Dean: E. G. TUCKWELL, M.Ch., F.R.C.S.

Library: see page 173.

Number of teachers: 89.

Number of students: 456 men, 126 women, total 582.

UNIVERSITIES AND UNIVERSITY COLLEGES

St. George's Hospital Medical School: Hyde Park Corner, S.W.1; f. 1752.

Dean: M. F. NICHOLLS, C.B.E., M.Chir., F.R.C.S.

Number of students: 150.

St. Mary's Hospital Medical School: Norfolk Place, Paddington, W.2; f. 1854.

Dean: A. G. CROSS, M.A., M.D., F.R.C.S.

Secretary: J. E. STEVENSON, LL.B.

Number of students: 450.

St. Thomas's Hospital Medical School: St. Thomas's Hospital, S.E.1; hospital f. 1106.

Dean: Prof. W. G. BARNARD, C.B.E., F.R.C.P.

Secretary: A. L. CROCKFORD, C.B.E., M.C., T.D., M.A., M.B., B.Chir., Q.H.S.

Number of students: 425

University College Hospital Medical School: University Street, W.C.1; f. 1827.

Dean: J. D. S. FLEW, M.D., F.R.C.O.G.

Secretary: Major-Gen. H. L. BIRKS, C.B., D.S.O.

Number of teachers: 75.

Number of students: 300.

Westminster Medical School: Horseferry Road, Westminster, S.W.1; f. 1849

Dean: H. E. HARDING, F.R.C.S.

Number of teachers: 80

Number of students: approx. 200.

(c) Postgraduate Medical

British Postgraduate Medical Federation: Central Office: 18 Guilford Street, London, W.C.1, established by the University of London in 1945 for the further development of postgraduate medical education in London; admitted as a School of the University in 1917

Director: Prof. Sir FRANCIS FRASER, M.A., M.D., LL.D., F.R.C.P.

Federated Institutes of the Federation

Postgraduate Medical School of London: Hammersmith Hospital, Ducane Road, Shepherd's Bush, W.12.

Dean: C. E. NEWMAN, M.D., F.R.C.P.

Institute of Cancer Research: Royal Cancer Hospital, Fulham Road, S.W.3.

Acting Dean: Prof. ALEXANDER HADDOW, M.D., D.Sc., Ph.D.

(See also page 167).

Institute of Cardiology: 35 Wimpole Street, W.1 (associated with the National Heart Hospital, Westmorland Street, W.1)

Dean: G. W. HAYWARD, M.D., F.R.C.P.

Institute of Child Health: The Hospital for Sick Children, Great Ormond Street, W.C.1

Dean: G. H. NEWNS, M.D., F.R.C.P.

Institute of Dental Surgery: Eastman Dental Hospital, Gray's Inn Road, W.C.1

Dean and Director of Studies: Prof. F. C. WILKINSON, M.D., B.D.S., D.D.Sc., M.Sc., F.D.S.R.C.S.

Institute of Diseases of the Chest: Brompton Hospital, Fulham Road, S.W.3

Dean: Dr. J. G. SCADDING, M.D., F.R.C.P.

Institute of Laryngology and Otology: The Royal National Throat, Nose and Ear Hospital, 330 Gray's Inn Road, W.C.1.

Dean: C. GILL-CAREY, F.R.C.S.

Institute of Neurology: The National Hospital for Nervous Diseases, Queen Square, W.C.1.

Dean: MICHAEL KREMER, M.D., F.R.C.P.

THE BRITISH COMMONWEALTH

Institute of Obstetrics and Gynaecology: Chelsea Hospital for Women, Dovehouse Street, S.W.3 (associated with the Hammersmith Hospital and Queen Charlotte's Maternity Hospital).

Dean and Director: C. D. READ, M.B., CH.B., F.R.C.S.E., F.R.A.C.S., F.R.C.O.G.

Institute of Ophthalmology: Judd Street, W.C.1 (associated with the Moorfields, Westminster and Central Eye Hospital).

Dean: R. C. DAVENPORT, M.B., B.S., F.R.C.S.

Institute of Orthopaedics: Royal National Orthopaedic Hospital, 234 Great Portland Street, W.1.

Dean: H. JACKSON BURROWS, M.A., M.D., F.R.C.S., F.R.A.C.S.

Institute of Psychiatry: Maudsley Hospital, Denmark Hill, S.E.5.

Dean: D. L. DAVIES, M.A., D.M., F.P.M.

Associated Institutes of the Federation:

Institute of Basic Medical Sciences: Royal College of Surgeons of England, Lincoln's Inn Fields, W.C.2.

Dean: Prof. Sir JAMES PATERSON ROSS, K.C.V.O., M.S., F.R.C.S.

Institute of Dermatology: St. John's Hospital for Diseases of the Skin, Lisle Street, Leicester Square, W.C.2

Dean: J. E. M. WIGLEY, M.B., B.S., F.R.C.P.

Institute of Urology: 10 Henrietta Street, W.C.2 (associated with St. Peter's, St. Paul's and St. Philip's Hospitals)

Dean: A. R. C. HIGHAM, T.D., M.B., B.S., F.R.C.S.

London School of Hygiene and Tropical Medicine (incorporating the Ross Institute): Keppel Street, Gower Street, W.C.1; f. 1924, opened 1929.

Dean: (Vacant).

Library. *see* page 172.

Number of teachers: 58.

Number of students approx. 280.

Publications. *Memoir Series, The Journal of Helminthology* The Bureau of Hygiene and Tropical Diseases, which is governed by a Committee appointed by the Secretary of State for the Colonies, and is housed on the School premises, publishes the *Bulletin of Hygiene*, the *Tropical Diseases Bulletin*, and a series of *Review Monographs*.

II. Schools not in receipt of U.G.C. Grants

King's College, Theological Department: Strand, W.C.2; f. 1829.

Dean: Rev. SYDNEY HALL EVANS, M.A., B.D.

Number of teachers: 16 Number of students: 210.

Lister Institute of Preventive Medicine: Chelsea Bridge Road, S.W.1; and Elstree, Herts; inc. 1891.

Director: Prof. A. A. MILES, C.B.E., M.A., M.D., F.R.C.P.

London College of Divinity: Ford Manor, Lingfield, Surrey; School of Theology, University of London (formerly at Highbury); f. 1863; new college in process of erection at Northwood.

Principal: (Vacant).

Secretary: Rev. T. G. MOHAN, M.A.

Number of teachers: 7 (4 full-time).

Number of students: 49 men (all residential).

New College, London: 527 Finchley Road, Hampstead, N.W.3; formerly Hackney and New College; New College f. 1850, Hackney College f. 1871; united by

Act of Parliament July 14th, 1924, as Hackney and New College, re-named 1936 (parent foundations date back to 1673).

Principal: Rev. JOHN HUXTABLE, M.A.

Secretary: Rev. JAMES B. BINNS, M.A.

Library: *see* page 172.

Number of teachers: 3. Number of students: 42.

Richmond College: Richmond, Surrey; f. 1843.

Principal: Dr. HAROLD ROBERTS.

Number of tutors: 5.

Number of students: 55.

INSTITUTIONS WITH RECOGNISED TEACHERS

Although not all the institutions in the following list are constituent bodies of the University, all of them have recognised teachers of the University of London on their staffs.

(N.B.—Student numbers for the following institutions are totals, including both students who are taking degree courses and others.)

Battersea Polytechnic: Battersea Park Road, S.W.11; f. 1893

Principal: R. W. WEST, D.Sc., A.R.C.S., F.R.I.C., F.I.R.I.

Number of teachers: 113 full-time, 135 visiting.

Number of students: 1,053 full-time, 1,857 part-time.

Chelsea Polytechnic: Manresa Road, Chelsea, S.W.3; f. 1895.

Principal: N. M. H. LIGHTFOOT, M.A., F.R.S.E.

Number of teachers: 71 full-time, 123 part-time.

Number of students: 775 full-time day, 330 part-time day, 1,729 evening, total 2,834.

College of Estate Management: St. Alban's Grove, Kensington, W.8; f. 1919; Rural Department (residential) at William Wells Hall, Wye, Kent.

Principal: R. JARDINE BROWN, M.A., LL.B., D.LITT.;

Secretary: JOHN WATERMAN.

Number of students (day and evening): 480.

Goldsmiths' College: Lewisham Way, New Cross, S.E.14 f. 1905.

Warden: D. R. CHESTERMAN, M.Sc., PH.D.

Training Department for Teachers.

Principal: THE WARDEN

Number of teachers: 50. Number of students: 550.

School of Art:

Principal: CLIVE GARDINER

Number of teachers: 30

Number of students: 400.

Evening Department of Adult Education.

Head of Department: J. A. GULLAND, M.A.

Number of students: approx. 3,000.

Jews' College: Woburn House, Tavistock Square, W.C.1; f. 1855 for the education and training of Rabbis, ministers, preachers, readers, and teachers of religion for Jewish congregations

Principal: Rabbi Dr. I. EPSTEIN, PH.D., D.LITT.

Number of teachers: 10.

Number of students: 33, plus 16 in Department of Precentors.

John Innes Horticultural Institution: *See* page 165.

Maria Grey Training College: 300 St. Margaret's Road, Twickenham, and 11 The Avenue, Brondesbury, N.W.6; f. 1878.

Principal: Miss M. CANT, B.A.

Number of tutors: 22. Number of students: 230

UNITED KINGDOM

National Institute for Medical Research: The Ridgeway, Mill Hill, N.W.7; f. 1915.

Director: Sir CHARLES R. HARINGTON, SC.D., F.R.S.

Northampton Polytechnic: St. John Street, E.C.1; f. 1896.

Principal: J. E. RICHARDSON, PH.D., B.ENG., M.I.E.E., A.M.I.MECH.E.

Secretary: T. H. HOLMES, A.C.I.S.

Number of teachers: 100 full-time, 200 part-time.

Number of students: 5,000.

Northern Polytechnic: Holloway Road, N.7; f. 1892, opened 1896.

Principal: T. J. DRAKELEY, C.B.E., SSC, PH.D., F.R.I.C., F.I.R.I.

Secretary: R. H. CURRELL, A.S.A.A.

Number of teachers: 275.

Number of students: 1,400 day, 3,111 evening.

National College of Rubber Technology, [Northern Polytechnic: Holloway, N.7; f. 1948.

Director: T. J. DRAKELEY, C.B.E., D.S.C., PH.D., F.R.I.C., F.I.R.I.

Head of College: F. H. COTTON, PH.D., M.S.C., F.R.I.C., F.I.R.I.

Secretary: R. H. CURRELL, A.S.A.A.

Number of teachers: 15.

Number of students: 134 day, 130 evening.

Rothamsted Experimental Station: Harpenden, Herts. (See page 165).

Royal Academy of Music (See page 198).

Royal College of Music (See page 198).

Sir John Cass College: Jewry Street, Aldgate, London, E.C.3; f. 1902.

Principal: A. M. WARD, D.S.C., PH.D., F.R.I.C.

Number of teachers: 130.

Number of students: 2,800.

Trinity College of Music (See page 198).

West Ham College of Technology: Romford Road, Stratford, E.15, f. 1898.

Principal: E. A. RUDGE, PH.D., M.S.C., F.R.I.C., A.M.I.CHEM.E.

Secretary: H. T. HART.

Number of teachers: 125.

Number of students: 2,100.

Woolwich Polytechnic: Thomas Street, Woolwich, S.E.18; f. 1890.

Principal: J. S. TAIT, PH.D., B.S.C., A.R.T.C., M.I.E.E., A.M.I.MECH.E.

Secretary: J. F. S. HALLIWELL, A.C.I.S.

Number of teachers: 105 full-time, 241 part-time.

Number of students: 401 full-time, 2,044 day, 4,017 evening.

VICTORIA UNIVERSITY OF MANCHESTER MANCHESTER, 13

Founded 1903.

Chancellor: Rt. Hon. The Earl of WOOLTON, P.C., C.H., D.L., M.A., B.S.C., LL.D.

Vice-Chancellor: Sir JOHN STOPFORD, K.B.E., M.D., SC.D., D.S.C., LL.D., F.R.C.P., F.R.S. (to Sept. 30th, 1956).

Prof. W. M. COOPER, LL.M. (from Oct. 1st, 1956).

Registrar: VINCENT KNOWLES, M.A.

Librarian: MOSES TYSON, M.A., PH.D.

The library contains over 561,000 volumes relating to all the faculties, including:

Medical Library: f. 1930; 99,536 volumes and more than 600 journals, etc.; *Librarian:* G. WILSON.

UNIVERSITIES AND UNIVERSITY COLLEGES

College of Technology Library: 33,000 volumes; *Librarian:* L. L. ARDERN.

Library for Deaf Education: f. 1919; 8,509 volumes.

Number of teachers: 763, including 74 Professors.

Number of students (1954-55): 4,116 men, 1,134 women, total 5,250.

Publications. *Calendar*, *The Serpent* (once a term), *News Bulletin* (fortnightly during term), *Medical School Gazette* (four or five times a year).

Manchester Museum (See page 180).

University Meteorological Observatory: Whitworth Park; estab. 1892.

DEANS:

Faculty of Arts: Prof. RONALD PEACOCK, M.A., LITT.D., DR PHIL.

Faculty of Science: Prof. F. C. WILLIAMS, O.B.E., D.S.C., D PHIL., M.I.E.E., F.R.S.

Faculty of Law: Prof. R. A. EASTWOOD, LL.D.

Faculty of Medicine: Prof. WALTER SCHLAPP, M.B., CH.B., M.S.C., PH.D.

Faculty of Music: Prof. R. A. C. OLIVER, M.A., B.ED., PH.D.

Faculty of Economic and Social Studies: Prof. W. A. LEWIS, B.COM., M.A., PH.D., L.H.D.

Faculty of Theology: Prof. H. H. ROWLEY, M.A., B.LITT., D.D., THEOL.D., LL.D., D.TH., F.B.A.

Faculty of Technology: B. V. BOWDEN, M.A., PH.D., M.I.E.E.; see also Manchester College of Technology, page 199).

Faculty of Education: R. St. G. T. HARPER, M.A.

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

KEELE, STAFFORDSHIRE

Founded 1949.

President: Rt. Hon. The Earl of HARROWBY.

Principal: Prof. J. W. BLAKE (until August 31st, 1956).

Sir GEORGE BARNES (from September 1st, 1956).

Registrar: J. F. N. HODGKINSON, M.A.

Librarian: S. O. STEWART, M.A.

Number of teaching staff: 80, including 13 professors.

Number of students (1953-54) resident, 292 men, 181 women; non-resident, 13 men, 5 women, total 491.

UNIVERSITY OF NOTTINGHAM UNIVERSITY PARK

Founded 1948.

Chancellor: His Grace The Duke of PORTLAND, K.G., LL.D.

Pro-Chancellors: Ald. Major THOMAS PHILIP BARBER, D.S.O., T.D., D.L., B.A., and Ald. W. CRANE, C.B.E., M.A., J.P.

Vice-Chancellor: BERTRAND LESLIE HALLWARD, M.A., D.L.

Registrar: HEDLEY PICKBOURNE, M.A.

Librarian: G. E. FLACK, M.A., A.L.A.

The library contains 145,000 volumes, 55,000 pamphlets.

Leverhulme Research Awards: St. Bridget's House, Bridewell Place, London, E.C.4; f. 1933; Awards, Fellowships and Grants are awarded to senior workers who are prevented by routine duties or pressure of work from carrying out research. They are limited to British-born subjects normally resident in the United Kingdom. In exceptional circumstances the Trustees may waive the condition as to residence. The duration of the awards does not extend over more than two years or less than three months, and the amount depends on the nature of the research and the circumstances of the applicant. Forms of application may be obtained from

the Secretary, Leverhulme Research Awards, St. Bridget's House, Bridewell Place, London, E.C.4; Chair. Advisory Committee Sir HECTOR HETHERINGTON, LL.D.; Sec. Miss M. BRANNEY.

Lord Kitchener National Memorial Fund: 50 Pall Mall, London, S.W.1; f. 1916; scholarships tenable at British and Irish universities or approved institutions of university rank, including medical schools; age limit 17-20 at January 1st, or up to 30 for ex-Servicemen; for sons of officers or ex-officers or men or women awarded by competitive selection based on application forms obtainable from the office and returnable in January and February annually, and interview. Pres. The Marquess of SALISBURY, K.G.; Chair. of Council The Lord Mayor of LONDON; Chair. Exec Cttee Sir HERBERT J. CREEDY, G.C.B.; Chair. Scholarship Cttee. WALTER HAMILTON, M.A.; Sec. E. N. CORBYN.

Nuffield Foundation: Nuffield Lodge, Regent's Park, London, N.W.1. The Nuffield Foundation is the result of Lord Nuffield's greatest benefaction. It was established in 1943 as a trust, with a capital valued at £10,000,000. The trustees consist of Lord NUFFIELD, two other ordinary trustees, and six managing trustees, of whom the Chair is The Hon. Sir GEOFFREY C. GIBBS, K.C.M.G., Dir. L. FARRER-BROWN. The four main objects of the Foundation, as stated in the Trust Deed, are The advancement of health, including the prevention and relief of sickness, particularly by the support of medical teaching and research; the improvement of social well-being, particularly by the furtherance of scientific research; the advancement of education, and the care and comfort of the aged. The Trust Deed, however, gives effect to Lord Nuffield's desire that the trustees should have wide additional powers of selection and initiative. The major part of the Foundation's activities is related to the needs of Great Britain; but, in addition to its programme of training fellowships and scholarships for students from the Dominions, the Foundation has now begun to support research overseas within the British Commonwealth. To further the last object of its Trust Deed, namely, the care and comfort of the aged, the Foundation has established, in co-operation with the Lord Mayor's Air Raid Distress Fund, the National Corporation for the Care of Old People

Pilgrim Trust, The: Millbank House, 2 Great Peter Street, Westminster, London, S.W.1, f. in 1930 by the late Edward Stephen Harkness of New York to help preserve the national inheritance of the United Kingdom of Great Britain and Northern Ireland, and to promote the future well-being of the country and its people. Grants are confined to such purposes as fall within the legal definition of "charitable". In the period of the industrial depression the Trustees assisted a large number of social service centres and educational settlements for the unemployed. During the war they supported schemes for the welfare of the Services and of civilians directly affected by the war. At all times they have given consideration to proposals for the encouragement of learning and the arts and for the preservation of ancient buildings, both ecclesiastical and secular, of historical records, and of the countryside. Applications cannot be considered from the following: colleges and schools, for normal educational purposes; churches; hospitals and other established charities having a recognised held of support; youth organisations; individuals seeking pecuniary assistance. Annual income about £130,000. Sec. The Rt. Hon. Lord KILMAINE, C.B.E.

UNITED KINGDOM

Horace Plunkett Foundation: 10 Doughty Street, London, W.C.1; f. 1919; Trustees: Dr. W. G. S. ADAMS, JAMES MCFADYEN, K. WELLER, Sir MALCOLM DARLING, A. C. RICHMOND, C. C. RIDDALL, N. WOOD, Sir BLYTH WACE, Capt. J. CRAIG, S. A. GARNHAM, A. T. S. MCGHIE, J. GIBB, Dr. J. RAEBURN, B. J. SURRIDGE, W. P. WATKINS; Sec. Miss M. DIGBY; promotes the systematic study of the principles and methods of agricultural and industrial co-operation, maintains the Co-operative Reference Library of some 12,000 books, also pamphlets, reports and periodicals, in twenty or more languages; open daily to students; publs. *The Year Book of Agricultural Co-operation* (f. 1927; double numbers issued for years 1943-44, 1945-46; annual issue resumed 1947), *Law and Practice of Co-operation, Agricultural Co-operation in the Commonwealth*.

Rhodes Trust: 36 Beaumont Street, Oxford; f. 1902; Trustees: Rt. Hon. Lord HAILEY, Sir EDWARD PEACOCK, Very Rev. JOHN LOWE, Rt. Hon. MALCOLM MACDONALD, C. H. G. MILLIS, Prof. K. C. WHEARE, Sir GEORGE ABELL; Gen. Sec. Rt. Hon. Lord ELTON; the endowment of the Rhodes Scholarships at Oxford

EDUCATIONAL TRUSTS

University and of Rhodes House, Oxford, and educational and charitable purposes, especially in South Africa.

Rotary International in Great Britain and Ireland: Tavistock House, Tavistock Square, London, W.C.1; f. 1911; Rotary Foundation Fellowships for Advanced Study are awarded to carefully selected college graduate students from all parts of the Rotary world for one year of advanced study in universities located in countries other than their own, 36,000 mems; publ. *Rotary Service* (monthly).

Salter's Institute of Industrial Chemistry: 36 Portland Place, London, W.1; f. 1918, The Master, Wardens and Court of the Salters' Company; (a) Research Fellowships for special training in Industrial Chemistry; (b) training Scholarships in the principles of Chemical Engineering or for further experience by research in Chemistry; (c) Grants to heads of Departments in centres of Chemical Engineering; (d) Grants-in-Aid to enable young men and women employed in chemical works in or near London to improve their chemical knowledge.

THE BRITISH COMMONWEALTH

NORTHERN IRELAND

THE CONSTITUTION

NORTHERN IRELAND is part of the United Kingdom of Great Britain and Northern Ireland. By the Government of Ireland Act, 1920, the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone and the parliamentary boroughs of Belfast and Londonderry were established as a separate area of government under the Parliament of Northern Ireland which, with certain exceptions, was given legislative and executive powers over the territory. In consequence of the reservation of certain legislative and fiscal powers to the United Kingdom Government, Northern Ireland returns twelve members to Parliament at Westminster.

LEGISLATURE

The Parliament of Northern Ireland consists of the Senate, composed of two *ex-officio* members and 24 senators elected by the lower house, and the Commons, the 52 members of which are elected by the same method as are the 12 members returned to the British Parliament; the Northern Irish constituencies are of course considerably smaller. Money Bills must originate in the Commons, and may not be amended in the Senate. Any deadlock may be resolved by a decision of the houses in joint session after the Senate has rejected a Bill twice passed by the Commons.

The Governor, as the representative of the Crown, gives or withholds the Royal Assent to Bills passed by the Legislature of Northern Ireland. The Crown may also reserve Bills, and a Bill so reserved does not become law unless the Royal Assent is given within one year. The Governor also summons, prorogues and dissolves the Parliament.

EXECUTIVE

Executive powers are exercised by the Governor and the Ministers, who are responsible to the Legislature. Matters relating to the Crown, the defence of the realm, relations with foreign powers, coinage, wireless telegraphy and the Post Office, together with certain financial matters, are reserved to the Imperial Parliament.

Services transferred to the control of the Northern Ireland Parliament include law and order, local government, health services, National Insurance and allied services, education, agriculture, transport, electricity, fisheries, harbours and industrial development.

Fiscal powers are limited, the main powers of taxation, including the customs and excise duties, income tax, surtax, and any other taxes on income, capital, or profits, being reserved to and imposed by the Imperial Parliament, at the same rates as apply elsewhere in the United Kingdom. These taxes account for approximately 90 per cent of revenues raised from Northern Ireland and are collected in the United Kingdom Exchequer. A Joint Exchequer Board allocates this amount in three portions, the first two of which are retained in the United Kingdom Exchequer, namely the actual cost of certain reserved services in Northern Ireland, and a contribution to the cost of Imperial Services generally. The amount thus retained averaged about 40 per cent of the total in pre-war years, rose to 80 per cent during the war and is at present about 50 per cent. The remainder, known as the Residuary Share of Reserved Taxes, is paid to the Northern Ireland Exchequer to meet, with the proceeds of local revenues, the cost of services

administered by the Northern Ireland Government. The locally administered taxes comprise Estate Duty, Stamp Duties, Motor Vehicle Duties and miscellaneous items.

Relationships with the Irish Republic (formerly known as the Irish Free State and later as Eire) are regulated by the Irish Free State Agreement Act (1922), the Irish Free State (Consequential Provisions) Act of the same year, and an agreement regulating the boundary separating the jurisdiction of each authority. The first gave Dominion Status to the whole island, but gave opportunity for Northern Ireland to contract out within one month. This was done, since Northern Ireland elected to remain part of the United Kingdom, and the second Act became effective.

Local administration is broadly similar to that obtaining in Great Britain.

THE GOVERNMENT

Governor: H. E. The Lord WAKEHURST, K.C.M.G., Government House, Hillsborough, N. Ireland.

THE CABINET

Prime Minister: Rt. Hon. Viscount BROOKEBOROUGH, C.B.E., M.C., D.L., M.P.

Minister of Finance: Rt. Hon. W. B. MAGINESS, Q.C., LL.D., M.P.

Minister of Home Affairs: Rt. Hon. G. B. HANNA, Q.C., M.P.

Minister of Labour: Major The Rt. Hon. IVAN NEILL, F.R.C.S., M.P.

Minister of Education: Rt. Hon. H. C. MIDGLEY, M.P.

Minister of Agriculture: Rev. Rt. Hon. ROBERT MOORE, M.P.

Minister of Commerce: Col. The Rt. Hon. The Lord GLENTORAN OF BALLYALLOLY, H.M.L., M.P.

Minister of Health and Local Government: Rt. Hon. Dame DEBRA PARKER, D.B.E., M.P.

Minister in the Senate: Lt.-Col. The Rt. Hon. A. R. G. GORDON, C.B.E., D.S.O., D.L.

Secretary of Cabinet: Sir ROBERT GRANSDEN, C.B.E.

MINISTERS NOT IN THE CABINET

Attorney-General: Rt. Hon. J. E. WARNOCK, Q.C., D.L., M.P.

Parliamentary Secretary to Prime Minister: Senator W. M. W. CLARK

JUDICATURE

The judicial system of Northern Ireland, so far as the Supreme Court is concerned, is a miniature of the English system, deriving as it does from the Courts established in Ireland in 1877 on the model of the Supreme Court in England. It consists, as in England, of a High Court and a Court of Appeal, the High Court having an unlimited jurisdiction both in civil matters and, on Assize, in criminal matters also. A Court of Criminal Appeal was established in 1931, also on the English pattern. The county court system to some extent corresponds to its English prototype, with the important difference that in Northern Ireland a county judge and a recorder of a borough are also chairmen of quarter sessions, and themselves exercise all the jurisdiction which in England is divided. The courts of summary jurisdiction, again, originally followed the English system, but in 1935 an alteration was made whereby most of the judicial powers of justices of the peace were transferred to permanent paid officers, known as resident magistrates.

The Lord Chief Justice of Northern Ireland: The Rt Lord MACDERMOTT

Lords Justices of Appeal: The Rt Hon Lord Justice (ARTHUR) BLACK, The Rt Hon Lord Justice (SAMUEL CLARKE) PORTER

Judges of the High Court: The Hon Mr Justice SHEIL; The Hon. Mr Justice CURRAN

Recorders: Mr Justice Honour Judge FOX, Q.C.; London-derry, His Honour Judge COPELAND, Q.C.

Chairmen of Quarter Sessions: Judge M. D. BEGLEY, Q.C., Judge ISAAC COPELAND, Q.C.; Judge B. J. FOX, Q.C. (Belfast). Judge J. G. ANGEW, Q.C.; Judge W. JOHNSTON, Q.C.

RELIGION

<i>Religious Professions</i>	<i>1951 Census</i>
Roman Catholic	471,329
Presbyterian	410,259
Church of Ireland	353,025
Methodist	60,544
Other (or not stated) denominations	69,552
TOTAL	1,370,709

The organisation of the churches takes no account of the fact that Ireland is divided into two political entities, Northern Ireland and the Irish Republic; Armagh is the

seat of both Catholic and Protestant Primates of All Ireland, and Belfast is the headquarters of the Presbyterians and Methodists.

Roman Catholic Church: The Catholic dioceses of Down and Connor and Dromore are completely in Northern Ireland; Armagh, Derry and Clogher are partly in Northern Ireland and partly in the Irish Republic.

BISHOPS

Down and Connor Most Rev. D. MAGEEAN, Lisbreen, Belfast.

Dromore Most Rev. E. O'DOHERTY, Bishop's House, Newry, Co. Down.

Fines, Fees, etc.	131,177

Expenditure, 1953-54, £2,779,359

Credit balances in hand at March 31st, 1954, amounted to £1,251,273.

THE CONSTITUTION

The Isle of Man is governed by Tynwald in accordance with its own laws, except for matters which are the concern of the United Kingdom Government. Tynwald consists of both branches of the Legislature, that is, the Legislative Council and the House of Keys, sitting together as one body, but voting separately on all questions except the appointment of Boards of Tynwald. The House of Keys has 24 members chosen by adult suffrage for five years. The Legislative Council is composed of the Governor, the Lord Bishop of Sodor and Man, the two Deemsters, the Attorney-General, two members appointed by the Governor and four members elected by the House of Keys. Customs duties and income-tax come within the province of Tynwald, but since 1921 the Governor, who is Chancellor of the Exchequer, must submit all proposed increases of expenditure in the budget estimates to the Keys and the Council separately before bringing the vote to Tynwald.

THE GOVERNMENT

THE LEGISLATIVE COUNCIL (Upper House)

The Lieutenant-Governor: Sir AMBROSE DUNDAS FLUX DUNDAS, K.C.I.E., C.S.I.

The Lord Bishop of Sodor and Man: Rt. Rev. BENJAMIN POLLARD, T.D., D.D., M.Sc.

The First Deemster and Clerk of the Rolls: Sir WILLIAM P. COWLEY, C.B.E.

The Second Deemster: J. A. CAIN, M.A.

The Attorney-General: S. J. KNEALE, O.B.E.

Members appointed by the Lieut.-Governor: J. R. CORRIN, J.P.; J. F. CRELLIN, O.B.E., M.C., C.P., J.P.

Members appointed by the House of Keys: A. J. TEARE, M.B.E., J.P.; E. B. C. FARRANT, J.P.; G. HIGGINS, J.P.; J. CALLISTER, J.P.

Clerk: E. R. ST. A. DAVIES, M.B.E. (Govt. Sec.).

HOUSE OF KEYS (Lower House)

The House of Keys consists of 24 members, elected by adult suffrage—3 for N. Douglas, 2 for S. Douglas, 1 each for Ramsey, Peel and Castletown, 16 for rural districts.

Speaker: Sir JOSEPH D. QUALTROUGH, C.B.E., J.P.

Secretary: FRANK B. JOHNSON, M.A.

GOVERNMENT BY BOARD

There are a number of Boards which exercise administrative powers, deriving their incomes, wholly or partially, from the Insular Government or from local rates. They consist, for the most part, of members of the Legislature elected by and from themselves.

Harbour Board: Murray House, Finch Road, Douglas, Chair A. S. KELLY, M.H.K., Sec. H. T. MATTHEWS

Highway and Transport Board: Athol Street, Douglas, Chair F. H. CROWE; Sec. T. C. KILLIP, Surveyor-General R. C. W. BROWN.

Local Government Board: 6 Mount Havelock, Douglas; Chair J. F. CRELLIN, O.B.E., M.C., M.L.C.; Sec. W. H. KARRAN.

Board of Social Services: Hill Street, Douglas; Chair J. C. NIVISON, M.H.K., Administrator and Sec. R. J. KEWLEY, F.C.I.S.

Tourist Board: Victoria Street, Douglas; Chair Sir JOSEPH D. QUALTROUGH, C.B.E., M.H.K., J.P., Sec. L. BOND

Assessment Board: Govt. Buildings, Douglas, Chair A. MOORE, M.H.K., Clerk T. H. CORLETT

Health Services Board: 3 Harris Terrace, Douglas, Chair H. C. KERRUISH, M.H.K., Sec. G. S. FORSTER

Board of Education: 1 Hope Street, Douglas, Chair H. K. CORLETT, M.H.K., J.P., Sec. W. R. WEBSTER.

Board of Agriculture and Fisheries: Hill Street, Douglas, Chair R. C. CANNELL, M.H.K., Sec. W. C. HALSALL

Forestry, Mines and Lands Boards: 46 Athol Street, Douglas, Chair T. F. CORKHILL, M.H.K., Sec. J. T. HARRISON.

Electricity Board: Harcroft, Douglas, Chair J. R. CORRIN, J.P., M.L.C.; Engineer and Sec. L. DOUGLAS, M.I.E.E.

Water Board: 16 Circular Road, Douglas, Chair A. J. TEARE, M.B.E., J.P., M.L.C., Sec. W. R. PRESCOTT, F.C.C.S.

Airports Board: Ronaldsway Airport, Nr. Castletown; Chair J. H. NICHOLLS, M.H.K., Sec. J. C. CHRISTIAN

FINANCE

BANKS

Barclays Bank Ltd.: 30 Victoria Street, Douglas; Manager J. A. BUTTERWORTH.

Isle of Man Bank: Douglas; f. 1865; cap., auth. and issued £400,000 (Feb. 9th, 1955), res. £440,000 (Dec. 31st, 1954); dep. £8,451,779 (Dec. 31st, 1954); 10 brs.; Chair. J. ROBERT QUAYLE.

Lloyds Bank Ltd.: Douglas; brs. at Peel and Ramsey, Manager J. GREENWOOD.

Martins Bank Ltd.: Douglas; brs. at Castletown, Peel, Port Erin and Ramsey; Manager A. E. COSTAIN.

Westminster Bank Ltd.: Castletown; brs. at Douglas, Castletown, Peel, Port St. Mary and Ramsey; Manager S. C. KISSOCK.

SAVINGS BANKS

Isle of Man Bank for Savings, The: 32 Athol Street, Douglas.

Liverpool Savings Bank, The: 32 Finch Road, Douglas.

TRANSPORT

ROADS

There are over 400 miles of country roads, excluding streets and roads in the four towns; about half are main roads.

RAILWAYS

There are two Railways operating in the Isle of Man, the Isle of Man Steam Railway, which covers the whole island, and the Manx Electric Railway, which runs between Douglas and Ramsey.

SHIPPING

Isle of Man Steam Packet Co. Ltd.: Imperial and Royal Buildings, North Quay, Douglas; the Company's fleet consists of nine passenger vessels ranging from 1,641 to 3,104 tonnage, and three cargo vessels from 411 to 1,019 tons gross. Regular services operate all the year round between Liverpool and Douglas, and during the summer double daily services (Sundays excepted) are run between Liverpool and Douglas and Fleetwood and Douglas. There are also bi-weekly sailings between Ardrossan and Douglas, and frequent services between Douglas and Dublin and Douglas and Belfast.

AIRLINES

Manx Airlines Ltd.: Ronaldsway Airport, Ballasalla; all-the-year-round service to Glasgow; services to Newcastle and Carlisle in the summer months only.

The following airlines have branch offices at Ronaldsway Airport.

Aer Lingus.
British European Airways.
Lancashire Aircraft Corporation.
Scottish Airlines.

LIBRARY AND MUSEUM

Manx Museum, Library and Art Gallery: Douglas; f. 1922; Dir. BASIL R. S. MEGAW, B.A., F.S.A., Headquarters of Manx National Trust, and of Ancient Monuments Administration; brs. at Greencash (Folk Museum), and Castletown (Nautical Museum); Sec. A. M. CUBBON, B.A.; publ. *Journal of the Manx Museum* (occasional), *Annual Report*.

THE CHANNEL ISLANDS

THE CHANNEL ISLANDS are situated off the north-west coast of France and are the only portions of the Duchy of Normandy now belonging to the Crown of England, to which they have been attached since the Norman Conquest. They consist of JERSEY (28,717 acres), GUERNSEY (15,654 acres) and the following dependencies of Guernsey—ALDERNEY (1,962), BRECHOU (74), GREAT SARK (1,035), LITTLE SARK (239), HERM (320), JETHOU (44) and LIHOU (38), a total of 48,083 acres, or 75 sq. miles.

JERSEY

STATISTICAL SURVEY

Area:

Jersey, the largest of the Channel Islands, is situated to the south-east of Guernsey, from which it is separated by 17 miles of sea. The distance from Guernsey (St Peter Port) to Jersey (St Helier) is 26 miles, and the distance between the Jersey and Guernsey Airports is 27 miles. Jersey (St Helier) is distant 35 and 28 miles respectively from the neighbouring French ports of St Malo and Granville. Greatest length, 12 miles, greatest breadth, 6 miles. Area, 28,717 acres.

Population:

Population	. 55,288	(As at April 10th, 1954)
Births	. 816	(Year ended June 30th, 1955).
Deaths	. 719	(Year ended June 30th, 1955).

Industry:

The principal industry in Jersey is agriculture (potatoes, tomatoes, dairy and cattle farming). Tourism is second in importance.

Finance:

(Financial year ended January 31st, 1955)

Revenue	. . .	£2,799,599	1s. 6d
Expenditure	. . .	£2,542,889	19s. 4d
Public Debt	. . .	£3,640,883	5s. 0d

Trade:

IMPORTS

Building material	. . .	26,869 tons
Builders' timber	. . .	288,255 cu. ft.
Foodstuffs	. . .	27,267 tons
Fuel	. . .	86,994 tons

EXPORTS

Potatoes	. . .	35,509 tons
Tomatoes	. . .	13,307 tons
Cattle—Bulls	. . .	102
Cows	. . .	222
Calves	. . .	83
Heifers	. . .	755

CONSTITUTION AND LAW

The Lieutenant-Governor and the Commander-in-Chief of Jersey is the Personal Representative of the Sovereign, and the channel of communication between Her Majesty's Government in the United Kingdom and the Insular Government. He is appointed by the Crown, and is entitled to sit and speak in the Assembly of the States, but not to vote. He has a veto on certain forms of legislation.

The Bailiff is appointed by the Crown, and is President both of the Assembly of the States (the Insular Legislature) and the Royal Court of Jersey. He has, in the States, a right of dissent and a casting vote.

The Government of the Island is conducted by Committees appointed by the States. The States consists of 12 Senators (elected for nine years, four retiring every third year), 12 Constables (triennial), and 28 Deputies (triennial), all elected under universal suffrage, by the people. The Dean of Jersey, the Attorney-General and Solicitor-General are appointed by the Crown and are entitled to sit and speak in the States, but not to vote. Permanent laws passed by the States require the sanction of Her Majesty in Council but Triennial Regulations do not.

Justice is administered in Jersey by the Royal Court, which consists of the Bailiff and 12 Jurats. There is a final appeal to Her Majesty in Council. The Jurats are elected by an Electoral College. A Stipendiary Magistrate deals with minor civil and criminal causes.

The official language is French, but English is the language in daily use.

THE GOVERNMENT

Lieutenant-Governor: Admiral Sir RANDOLPH STEWART GRESHAM NICHOLSON, K.B.E., C.B., D.S.O., D.S.C., Government Office, Jersey.

Bailiff: Sir ALEXANDER M. COUTANCHE, Kt., Royal Court House, Jersey.

Government Secretary: Brig R. M. H. LEWIS, C.B.E., M.C.

Attorney-General: C. S. HARRISON, C.M.G., O.B.E., States Offices, Jersey.

Solicitor-General: R. H. LE MASURIER, D.S.O., States Offices, Jersey.

Receiver-General: Major R. E. B. VOISIN.

Greffier of the Royal Court: P. E. LE COUTEUR, Royal Court, Jersey.

Greffier of the States: FRANCIS DE LISLE BOIS, O.B.E., Greffe Office, Jersey.

STATES DEPARTMENTS

States Treasury: Royal Square, St. Helier; Treas. F. N. PADSHAM.

Income Tax: Royal Square, St. Helier; Comptroller G. H. HAMON.

States Analyst's Department: Laboratory, 100 Halkett Place, St. Helier, Official Analyst D. A. R. DAVIES, B.Sc., F.R.I.C.

States Telephone Department: Minden Place, St. Helier; Telephone Manager C. J. SYVRET.

Technical Instruction, Agriculture: Experimental Farm, Glenham Farm, Trinity, Dir. R. E. JOHNSTON, B.Sc., N.D.H.

Social Assurance Committee: Sec. J. C. PATERSON.

Public Health Department: Royal Square, St. Helier; Medical Officer Dr. R. N. MCKINSTRY, O.B.E.

Aliens' Office: Victoria Chambers, Conway Street, St. Helier, Chief Aliens Officer ALAN LE BRUN.

Harbour Master: W. G. FURZER.

THE BRITISH COMMONWEALTH

RELIGION

Jersey constitutes a Deanery within the diocese of Winchester. The twelve Rectories are in the gift of the Crown. In addition to the Rectories, there are various other livings in the Church of England. The Church of Rome and the various Nonconformist Churches are represented in the Island.

Church of England in Jersey: Dean Very Rev. M. LE MARINEL, M.A., The Deanery, David Place, 12 ancient parishes (eight 12th century, one 13th century, three 14th century); 7 new parishes, 6 district churches; served by 23 clergy, the Church of England is the Established Church.

Roman Catholic: St. Mary and St. Peter's (English), Vauxhall Street, St. Thomas (French), Val Plaisant. Also Methodist, Wesley Street, and others throughout the Island; Baptist, Congregational New Church, Presbyterian, Salvation Army.

THE PRESS

Chroniques de Jersey, Les: Rutland House, Charing Cross, St. Helier, Jersey; f. 1814, Editor E. DE LAQUAINE.

Evening Post, The: 2 Charles Street, St. Helier, Jersey; f. 1890; Independent Progressive, Managing Editor A. G. HARRISON; News Editor A. J. SCRIVEN; circ. 16,265.

Jersey Sun: A.A. Buildings, Esplanade, St. Helier; f. 1954; weekly, Editor JAMES KENALLY-SMITH, circ. 5,000.

Jersey Weekly Post: 2 Charles Street, St. Helier; Managing Editor A. G. HARRISON; News Editor M. LUCAS.

BROADCASTING

B.B.C. programmes from England are received through Re-Diffusion.

A B.B.C. television station was opened at Le Platons in October 1955, on an experimental basis.

BANKING

The first six banks listed below are branches of British banks, and details concerning directors, capital, etc. will be found under the appropriate section in the pages dealing with Great Britain.

Barclays Bank Ltd.: 13 Library Place, St. Helier; Manager, A. T. GREEN.

Lloyds Bank Ltd.: Broad Street, St. Helier; Manager H. C. JONES.

Martins Bank Ltd.: Halkett Place, St. Helier, Manager I. L. CHAMBERS.

Midland Bank Ltd.: Library Place, also Hill Street, St. Helier, Managers R. HYLAND (Library Place), K. BARBER (Hill Street).

National Provincial Bank Ltd.: 11 Royal Square, St. Helier, Manager C. M. RICHARDSON.

Westminster Bank Ltd.: 16 Library Place, St. Helier; Manager H. J. DENNEY.

Le Masurier (P.) and Co.: 18 Hill Street, St. Helier, f. 1912.

Jersey Savings Bank: New Street, St. Helier; est. 1834; total funds £6,000,000, Actuary H. ARTHUR.

CHAMBER OF COMMERCE

Chamber of Commerce: Royal Square, St. Helier, f. 1768; 370 mems., Pres. F. P. LE QUESNE, Sec. Mrs. S. LE BROCCQ.

TRANSPORT

SHIPPING

British Channel Islands Shipping Co. (Jersey) Ltd.: Conway House, 28 Conway Street, St. Helier, and North Pier Steps, Guernsey; regular bi-weekly service, London to Jersey and Guernsey, Tuesday and Friday; Marine Supt. Capt. J. B. CHILD.

British Railways: A daily passenger and cargo service is run from Southampton and Weymouth to Jersey during the summer months, and thrice weekly in the winter.

Cunard Steamship Co.: run a fortnightly cargo service between Jersey and Liverpool.

AIR LINES

Channel Island Airways Ltd. (Inc. in Jersey): Head Office, The Airport, Jersey; Manager J. M. KEENE-MILLER.

Scheduled Air services are maintained throughout the year by British European Airways Corporation (B.E.A.C.) and Jersey Airlines Ltd. between Jersey and Guernsey, Alderney, London, Southampton and France. Aer Lingus, Transair, Derby Aviation, Cambrian Air Service, Morton Air Service and Olley Air Service operate during the summer months.

LEARNED SOCIETY

Société Jersiaise: The Museum, 9 Pier Road, St. Helier; f. 1893, for the study of Jersey archaeology, history, and natural science and for local research; over 1,000 mems.; Pres. H. J. BAAL, F.Z.S., Sec. RALPH MOLLET, F.R.HIST.S.

LIBRARY

Public Library: Royal Square, St. Helier, Librarian A. S. H. DICKINSON, F.L.A.

MUSEUM

Museum of the Société Jersiaise: 9 Pier Road, St. Helier, f. 1894, includes zoological and historical collections, art gallery and prehistoric relics.

GUERNSEY

STATISTICAL SURVEY

Area:

Guernsey, the most central of the Channel Islands, lies near the coasts of Brittany and Normandy, in 49° 33' N lat and 2° 40' W long; 28 miles WSW. of Cape de la Hague, 95 miles SW. of the Needles; 30 miles in circumference, greatest length 9½ miles, greatest breadth 7 miles. Area 15,654 acres.

Dependencies of Guernsey are Alderney (1,962 acres), Brechou (74 acres), Great Sark (1,035 acres), Little Sark (239 acres), Herm (320 acres), Jethou (44 acres), and Lihou (38 acres).

Population:

Guernsey (as at mid-year 1954)	43,414
Births (1953-54)	689
Deaths (1953-54)	501
Alderney	1,350
Sark	437

Agriculture:

The Jersey and Guernsey breeds of cows are famous. The principal produce of Guernsey is tomatoes, flowers, grapes, much of which is grown under glass.

UNITED KINGDOM

Finance:

Revenue (Financial year ending Dec. 31st, 1954)	£2,210,560
Revenue in respect of Alderney	56,793
Total	£2,267,353
Expenditure	£2,241,299
Expenditure in respect of Alderney	45,789
Total	£2,287,086
States Funded Debt	£5,377,955
Note Issue	£436,948

External Trade:

IMPORTS (1954)	
Fuel	220,294 tons
Building Materials	22,644 tons
Groceries and Provisions	17,876 tons
EXPORTS (1954)	
Tomatoes	46,663 tons
Flowers and Fern	2,042 tons
Grapes	277 tons
Bovine Animals	305 head

CONSTITUTION AND LAW

The Lieutenant-Governor and Commander-in-Chief of Guernsey is the Personal Representative of the Sovereign and the channel of communication between Her Majesty's Government in the United Kingdom and the Insular Government. He is appointed by the Crown. He is entitled to sit and speak in the Assembly of the States, but not to vote.

The Bailiff is appointed by the Crown and is President both of the Assembly of the States (the Insular Legislature) and of the Royal Court of Guernsey. He has a casting vote in the States.

The government of the island is conducted by committees appointed by the States.

Under the Reform (Guernsey) Law, 1948, the States of Deliberation was re-constituted and, from January 1st, 1949, is composed of the following members:

- The Bailiff, who is President *ex-officio*
- Twelve Conseillers elected by the States of Election (see "States of Election" below)
- H.M. Attorney-General and H.M. Solicitor-General (Law Officers of the Crown), who have a voice but not a vote
- Thirty-three People's Deputies elected by popular franchise
- Ten Douzaine Representatives elected by their respective Parochial Douzaines.

The function of the States of Election is to elect persons to the offices of Jurat, Conseiller and H.M. Sheriff. It also was reconstituted as from January 1st, 1949 and is composed of the following members:

- The Bailiff (President *ex-officio*).
- The 12 Jurats of "Jures-Justiciers".
- The 12 Conseillers
- The 10 Rectors.
- H.M. Attorney-General and H.M. Solicitor-General.
- The 33 People's Deputies
- Thirty-four Douzaine Representatives.

Until January 1949 the Royal Court possessed, *inter alia*, the power to make Ordinances with various local matters. Thenceforth all powers and functions of a legislative nature (with minor exceptions) formerly exercised by that Court have been vested in the States of Deliberation.

THE CHANNEL ISLANDS

Projets de Loi (Permanent Laws) require the sanction of Her Majesty in Council.

Justice is administered in Guernsey by the Royal Court, which consists of the Bailiff and the 12 Jurats and certain Court officials. The Royal Court also deals with a wide variety of non-contentious matters. A Stipendiary Magistrate deals with minor civil and criminal cases.

The question of judicial reform is now under consideration.

A Channel Islands Court of Appeal, possessing appellate jurisdiction in civil and criminal matters, is in process of constitution.

Meetings of the States and of the Royal Court, formerly conducted in French, are now conducted in English, which is the language in common use. The Norman *patois* is, however, often heard in the country parishes.

THE GOVERNMENT

Lieutenant-Governor and Commander-in-Chief of Guernsey: H.E. Air Marshal Sir THOMAS W. ELMHIRST, K.B.E., C.B., A.F.C.

Private Secretary and A.D.C.: Capt. M.H.T. MELLISH

Bailiff of Guernsey: Sir AMBROSE J. SHERWILL, Kt., C.B.E., M.C.

Government Secretary: Major-Gen. R.F. COLWILL, C.B.E.

Attorney-General: W.H. ARNOLD, C.B.E.

Solicitor-General: A.J. LOVERIDGE, M.B.E.

Receiver-General: L.A. GUILLEMETTE, M.B.E.

States Supervisor: L.A. GUILLEMETTE, M.B.E.

President, Education Council: The Very Rev. E.L. FROSSARD, M.A.

Immigration Officer: L.W. SARRE, M.B.E.

Postmaster: H.C. CHAPPELL, M.B.E.

RELIGION

The Guernsey Deanery (The Very Rev. E.L. FROSSARD, M.A.) includes the islands of Alderney, Sark, Herm and Jethou and forms part of the Bishopric of Winchester. The Church of England is represented by 10 Rectors and 5 Vicars, with others amounting to 20 Clergy in all. The Roman Catholic Church is represented by 6 Churches of which the senior is St. Joseph, Cordier Hill, St. Peter Port (Father Francis Philips). The Presbyterian Church is represented by St. Andrews Church, The Grange, St. Peter Port. The Methodist, Congregational, Baptist, Elim and Salvation Army Churches are also represented throughout the Island.

THE PRESS

Guernsey Evening Press: Smith Street, St. Peter Port; f. 1897; Independent, Editor F.S. ROUSSEL.

Guernsey Star, The: 2-4 Smith Street, St. Peter Port, Guernsey; f. 1813; Independent, Editor H.N. MACHON.

Guernsey Weekly Press: 8 Smith Street, St. Peter Port, Guernsey, f. 1902; Independent, Editor HERBERT N. MACHON.

BANKING

Most banking business is carried out by branches of British banks.

Barclays Bank Ltd.: 6 and 8 High Street, St. Peter Port; Manager R.A. HILL.

Lloyds Bank Ltd.: St. Peter Port, Manager S.A. SCHOFIELD; agency in Alderney and sub-br. at St. Sampson's.

Midland Bank Ltd.: St. Peter Port; Manager A.V. HOOLEY, also sub-brs. at Sark and St. Sampsons.

THE BRITISH COMMONWEALTH

National Provincial Bank Ltd.: 29 High Street, St. Peter Port; Manager H M. de la RUE; sub-br. at St. Sampsons; agencies in Alderney and Sark.

Westminster Bank Ltd.: 33 High Street, St. Peter Port; Manager E. J. KIDDY; also sub-br. at St. Sampsons and agency in Alderney.

Guernsey Savings Bank: High Street, St. Peter Port; Mr A. C. BICHARD, Actuary.

Martins Bank Ltd.: 1 Fountain Street, St. Peter Port; Manager E. H. C. YATES.

TRANSPORT

SHIPPING

British Channel Island Shipping Co. (Guernsey) Ltd.: St. Peter Port, Manager E. F. DRAKE, also agents for Commodore Shipping Co. Ltd.

British Railways: A daily passenger and cargo service is run from Southampton and Weymouth to Guernsey during the summer, and thrice weekly in the winter.

O. Dorey and Sons Ltd.: 4 North Quay, St. Peter Port; Chair. and Managing Dir CECIL DOREY; general coasting and near trades, 6 vessels of 5,319 tons gross.

AIRLINES

Scheduled air services are maintained by British European Airways Corporation (B.E.A.C.) and Jersey Airlines Ltd. between Jersey and Guernsey, Alderney, London, Southampton and France, throughout the year. Transair, Cambrian Air Service, Derby Aviation, Olley Air Services, Morton Air Service, and locally based charter companies operate during the summer months.

LIBRARIES AND MUSEUMS

Guille-Allès Library and Museum: St. Peter Port; f. 1856

The Lukis and Island Museum: Corney Street, St. Peter Port, f. 1938.

The Priaux Library: Candie Gardens, St. Peter Port; f. 1889.

Hauteville House: Hauteville, St. Peter Port, contains many of the relics and furniture of Victor Hugo, and is the house where he spent 15 years in exile. It is maintained by the Municipality of Paris; Administrator L. V. LAMBERT.

ALDERNEY

President: Comdr. S. P. HERIVEL, O.B.E., D.S.C.

Clerk of the States and Court: P. W. RADICE, M.A.

The President is the civic head of Alderney and has precedence on the island over all persons except the Lieutenant-Governor of Guernsey, the Bailiff of Guernsey or his representative. The President is responsible for the conduct of the official business of the island. He presides at the meetings of the States, the island parliament, which is elected on a popular basis. His term of office is three years and he is eligible for re-election.

SARK

Dame of Sark: Mrs. R. W. HATHAWAY, O.B.E.

Seneschal: W. BAKER

The Seigneur, or the Dame, of Sark is the hereditary civic head of the island and thereby entitled to certain privileges.

He is a member of the Chief Pleas of Sark, the island parliament, and has a suspensory veto on its ordinances. He has the right, subject to the approval of the Lieutenant-Governor of Guernsey, to appoint the Seneschal of Sark, who is President of the Chief Pleas and Chairman of the Seneschal's Court, which is the local Court of Justice.

HERM

Tenant: Major A. G. WOOD.

Herm is leased by the States of Guernsey to a tenant whose contract obliges him to carry out some of the day-to-day administration of Herm on behalf of the States.

JETHOU

Jethou is leased by the States of Guernsey to a tenant who has no official functions.

GEOGRAPHY

CANADA covers an area of 3,846,000 sq. miles (of which 269,000 sq. miles are inland water) and extends some 3,000 miles from east to west and 1,500 miles from the U.S.A. border to the Arctic Ocean. Although a part of northern Canada lies within the Arctic Circle, much of the Canadian mainland lies rather further south than is sometimes realised and its most southerly regions (the district round Toronto and Windsor, in Ontario) are at the same latitude as Madrid, Rome and Tokyo, while the greater part of Labrador is no further north than Scotland. However, the great northward extension of the Canadian islands into the Arctic Ocean brings Dominion territory to within seven degrees of the North Pole as far north as northern Greenland, and nearer the Pole than the Siberian islands.

In structure and topography, Canada can be divided into three great regions: (a) Eastern Canada, a region of diverse, but on the whole not very imposing relief, (b) the central prairies, extensive plains at differing levels, diversified here and there by eastward-facing scarps and (c) the western Cordillera, or Rocky Mountains.

Eastern Canada. This region may be defined as extending from the Atlantic coasts of Labrador, Newfoundland and Nova Scotia as far west as Lake Winnipeg (Manitoba), and the component rock measures consist largely of most ancient and resistant rocks—granites and schists which form the basal layer, and of restricted deposits of limestones and sandstones which are comparable in age with those of Wales and the English Lake District. This whole region, fundamentally granitic, has structural counterparts in Scandinavia and Central Siberia, and is regarded as the primitive nucleus round which the rest of the North American continent took shape. In conformation, the area takes the pattern of a gigantic basin or depression, with Hudson Bay at the lowest part and as much of it is drained by the river St. Lawrence and its tributaries, the name Laurentian Shield is often applied to the whole structure.

Topographically, the Shield consists of a low undulating plateau-surface, about 1,000–1,500 ft. in average altitude, becoming distinctly more rugged in the south and east (Quebec, southern Labrador and the Maritime Provinces) where the general level of the Shield reaches heights of 2,000 ft., with the highest peaks at 6,000 ft. northwards, the Shield drops gradually to sea level (Hudson Bay). South and east of the St. Lawrence valley lie the Maritime Provinces of New Brunswick, Prince Edward Island and Nova Scotia. These form in effect a much attenuated continuation of the Appalachian mountains of the U.S.A.—the highest parts reach an altitude of 3,000 ft., but there are extensive lowland zones of only 300–600 ft. above sea level.

The present surface features of the Laurentian Shield have mostly been developed by ice and water action. In the recent geological past the area was covered by immense ice-sheets, which followed a complex pattern of advance and retreat. The Great Lakes and St. Lawrence valley represent a remnant of glacial drainage round the southern edges of the former ice sheets; and besides this predominantly west-eastward trend of drainage there are a number of gaps and subsidiary channels (formed by melt-water and ice) that lead southwards into the United States. It is still possible under flood conditions to sail in a small boat from the St. Lawrence direct into the head-

waters of the Mississippi; and these natural facilities of communication between the St. Lawrence valley and the United States are an important contributory factor in the close economic ties between the two countries.

The major effect of ice was to gouge out hollows in the rock surface, and to deposit the eroded material in hillocks and ridges. Much of the Canadian Shield hence consists of an interminable succession of low-lying basins, covered with coniferous forest on the higher parts, and occupied by swamps and lakes at lower levels. This is the "Muskeg" region—thousands of square miles of almost featureless country, difficult to penetrate, largely waterlogged and only now in process of being mapped. Occasionally (more especially in the south-west) ridges on a larger scale diversify the landscape e.g., the Niagara escarpment, 250 to 300 ft. high, which runs for some 300 miles, and is crossed by the St. Lawrence River, producing the famous Falls. Towards the north and west however, the monotonous succession of forest, muskeg swamp and irregular waterway continues for many hundreds of miles.

The Great Lakes—Superior, Huron, Erie, Ontario and Michigan—are (except for the last) partly Canadian and partly American territory. They owe their origin to ice-action, and once again may be regarded as residual features of former drainage round the Ice sheets. Great hollows were scooped out, and the eroded material re-deposited in places, forming a containing barrier. The irregular nature of the terrain, (with abrupt drops in level) and generally abundant water-supplies make the whole region one of the most important water-power areas in the world, the full potentialities of which still have not been developed.

The Central Plains or Prairie Provinces, comprising Alberta, Saskatchewan and much of Manitoba, are far less complex in structure, and consist of a series of almost horizontal strata comparable in age and character with those of the Weald of England. The region is diversified by two irregular north-south running scarps which break the whole prairie region into three distinct steps—the lowest on the east adjoining the Laurentian Shield, and the highest on the west, where the prairies merge into the Rocky Mountains. The first step lies at an average altitude of 800 ft. above sea level, and was in many places covered by a shallow lake, in which accumulated thick sediments that now form a deep black soil of great richness. Further west, the second step averages 1,500–2,000 ft. in altitude and has a distinctly more varied topography of small depressions, occasional ridges and isolated hills. Soil character, too, varies considerably—from excellent in many small depressions, to indifferent or even sterile where leached sands occur. Finally, towards Alberta, comes the third step; markedly less regular in formation, with an average level of 2,000–3,000 ft., and hill summits that at times reach 7,000 ft. Soils and vegetation again vary extensively: here there are occasional salt marshes or saline deposits, interspersed with fertile patches of river alluvium.

The prevailing pattern of vegetation over the entire Plains region is natural open grassland (true prairie) towards the south, and coniferous forest in the north. In Alberta, however, grassland tends to be replaced by scrub where drier conditions prevail, and the higher hillslopes are forest covered. The coniferous forest belt

extends northwards for a distance of several hundred miles—as far north as the Yukon—but becomes progressively less dense and finally, towards the shores of Hudson Bay and the Arctic Ocean, passes into tundra—a complex of moss, lichen and stunted bushes, with a permanently frozen sub-soil.

The Western Cordillera covers Western Alberta and the entire province of British Columbia, and consists of a mass of northwest-southeast running folds which in structure, rock character, and age of formation much resemble the Alps. In detail, there are three main ridges—the Rocky Mountains proper, lying just west of Alberta, in which occur more than a dozen peaks that exceed 10,000 ft.; then the Selkirk Range a little to the west; and finally, some 250 miles further west, fronting the Pacific Ocean, the Coast Ranges. Between these main ridges lie extensive depressions occupied by large rivers, such as the Fraser River; and the whole Cordillera system gradually declines in height towards the north (Yukon)—though here maximum heights still reach 8,000 ft. Well-developed troughs or depressions, occurring amongst the mountains, provide a diversity of conditions (topographically and also climatically), from broad valley lowlands to massive pyramidal mountain crests; and these depressions, besides affording extreme scenic beauty, also provide relatively easy crossings by a number of cols including the Kicking Horse and Crows Nest passes.

Climate. Topography exercises considerable influence upon the climate of Canada. The whole country is open to the Arctic Ocean, near which the lowest land occurs; while the north-south running barrier of the Cordillera, together with the less imposing, but still significant Appalachian system of the eastern provinces, shut off modifying influences from both the Pacific and Atlantic Oceans. In particular, the effects of a warm off-shore current in British Columbia are restricted to a narrow coastal zone; whereas in Europe, where mountain chains run mainly from east to west, the continent is entirely open to mild westerly winds. Two other ocean currents are important:

(1) the very cold Davis Strait current which flows from the Arctic Ocean, carrying masses of ice at all seasons. This current produces very cool summers in Labrador, (2) the warm Gulf Stream off the north-eastern shores of Nova Scotia and Newfoundland. Because prevailing winds here are westerly (i.e. from land to sea) the warming effect of the Gulf Stream is only very slight, but where the waters of the cold Davis-Labrador current and the warm Gulf Stream meet in the Gulf of St. Lawrence and off Newfoundland, frequent fogs prevail and there are (in spring and early summer) numerous icebergs.

Most of Canada experiences considerable winter cold, with the mean temperature consistently below freezing-point from November to March. Exceptions to this occur only in southern British Columbia, where the winter temperature is similar to that of northern England; but in the interior and east, cold becomes intense. Quebec has a January mean of 10° F., Montreal 13° F., and at the centre of the prairies, open to Arctic winds, the mean

falls to -4° F. (Winnipeg). Summers on the other hand, are distinctly warmer than in Britain—with averages of 65-70° F. One distinctly favoured region is the Lake Peninsula of Ontario (Toronto-Windsor). Surrounded on all sides but the north-east by water, winter cold and summer heat are reduced, giving it the nearest approach to a "Mediterranean" climate experienced in Canada.

As might be expected, the incidence of rainfall varies widely. British Columbia (especially the western slopes of the Cordillera) receives ample amounts ranging from 30 in. to 90 in. a year, autumn being the wettest and summer the driest season, though no month is rainless. Further east, over the crest of the Rockies, a "rain-shadow" effect is marked, and the prairie Provinces have an average of only 10-20 in., the drier parts lying in Alberta just east of the Rockies. Here is a major difference—the high plains of Western Alberta, which suffer from recurrent drought years when rainfall can amount to only 5-6 in. are too dry for agriculture, and can be used only for ranching, while the damper eastern prairies (Saskatchewan and Manitoba) are the great cereal-producing districts.

Towards the St. Lawrence valley rainfall again increases (31 in. annually at Toronto), and the Atlantic coasts have 40-60 in. Summer is the wettest period in the interior; winter on the eastern coastal districts; while in the St. Lawrence valley and Maritime Provinces rainfall is well distributed throughout the year. Fairly abundant precipitation in winter produces an exceptionally heavy snow-fall which, with the remarkably low temperatures, is characteristic of the East Canadian winter.

The St. Lawrence estuary is almost entirely frozen over in winter, and Hudson Bay is closed for an even longer period only British Columbia in the west, and small portions of Nova Scotia and New Brunswick in the east, remain ice-free. Even the Cabot Strait between Newfoundland and the mainland of Canada is accessible to normal ships only between May and December, though strengthened ice-breakers can penetrate at other times. Fog is frequent during the summer—about one-quarter of the time—hence passage of the St. Lawrence presents difficulties at almost all seasons. Further south, Halifax (Nova Scotia) which is washed by the Gulf Stream, and St. John on the Bay of Fundy (where exceptionally high tides—up to 40 ft.—prevent ice formation) are important in that they remain open all the year round. These two ports have the further advantage of being 400-600 miles nearer to Britain than New York, and can also offer a quicker route to the interior of the U.S.A. as compared to New York.

These then are the geographical features which condition the development of Canada's vast economic resources. As in any land when distances are formidable and climate harsh and variable, purely environmental factors have closely affected and at times restricted progress and development; but geographical conditions have also given rise to the coniferous forest, the fertile plains and the latent mineral wealth on which the future of Canada must depend.

W B F

THE BRITISH COMMONWEALTH

HISTORY

DURING the course of the seventeenth century France and Britain established their claims to the territories in North America now comprising Canada. In 1608, Samuel de Champlain established Quebec on the St. Lawrence River as a base for the settlement, exploration, conversion and commercial penetration of the continent. By the close of the century this base had become the centre of a small agrarian community and an extensive commercial empire based on a trade in furs. British penetration was undertaken by the Hudson's Bay Company chartered in 1670. This Company rapidly developed a fur-trading empire in the northern and central part of the continent, but the climate and character of Hudson Bay made colonisation impossible.

Anglo-French rivalry, which culminated in the Seven Years War, resulted in the transfer of French Canada to the British Crown by the Treaty of Paris in 1763. The transfer of a French speaking, Roman Catholic, agrarian community organised on feudal principles presented certain difficulties to an officially Protestant nation of strong commercial propensities, long used to the representative character of Parliament and accustomed to the autonomy and complexity of the English law courts. British and colonial business men easily took over the French fur-trading empire, but they and the military and administrative officials found the problem of adapting British institutions to the requirements of the French-speaking community less tractable. For a variety of reasons, not all related to the condition of Canada itself, the British Government abandoned the effort to establish English law and government at Quebec and, under the terms of the Quebec Act of 1774, granted privileges to the Roman Catholic Church, acknowledged the French civil law, protected feudal institutions of property and established an authoritarian system of government from which the representative element was excluded.

During the American Revolution Canada resisted the arms and propaganda of the American revolutionaries, but in spite of this the American revolt transformed Canada. During and after the revolution there was a great influx of English-speaking British subjects into Canada, New Brunswick and Nova Scotia. This influx changed the social composition of Canada by introducing a Protestant, Anglo-Saxon and commercially minded element acquainted with the practice of representative government and having no knowledge of or sympathy for feudal social institutions. In order to meet the requirements of the newcomers the British Government was obliged to introduce "the very image and transcript of the English constitution", in the shape of the Constitutional Act of 1791 which separated Canada into two colonies, Upper and Lower Canada, endowed them with representative institutions and fortified the aristocratic and clerical element in the community.

Economically the new Canada was much more broadly based than hitherto. Stimulated by the economic opportunities afforded by the Napoleonic Wars and the industrial developments in Britain and along the Atlantic seaboard of the United States, Canadian merchants began to exploit the forest resources of the country and to bring within the orbit of commerce the agricultural production of the much extended area of cultivation. In providing themselves with tools the farmers and lumbermen of the new Canada laid the basis for the eventual industrialisation

of the community. The largest automobile manufacturing enterprise in Canada had its humble beginnings in the home manufacturing of axe handles by a farmer in the forests of Ontario.

In 1812 the United States attacked Canada with the object of smashing the power of the Indian tribes allied to Great Britain and of removing a base of British power in North America. Assisted by some regular British soldiers, and under the direction of British officers, the Canadians were able to resist the Americans and to maintain the integrity and territory of their community.

The influx of settlers from Britain and the United States after the Napoleonic Wars, the desire for public improvements such as roads and canals and the belief that the best lands were being monopolized by privileged companies and ecclesiastical corporations combined during the 1820's and 1830's to generate a strong sentiment critical of the institutions and purposes of the colonial government. In Lower Canada the French-speaking population had learned to use representative institutions as a weapon to defend their French, feudal and Roman Catholic culture from the undermining effects of commercial enterprise and, to this end, to oppose the Government. As depression deepened in 1837 political violence developed in both Upper and Lower Canada, and was suppressed by the Government. Inquiry followed under the direction of Lord Durham and culminated in the famous *Durham Report* of 1839.

Durham, an enthusiast for *laissez-faire* policies of commercial and industrial expansion, recommended that the Canadians be left to govern themselves in all matters of domestic concern and that Upper and Lower Canada be united the better to adapt French-speaking Canadians to the habits and requirements of a liberal, commercial and industrial civilisation. The second item of Durham's advice was acted on almost immediately in the form of the Union Act of 1840, but it was not until the repeal of the Corn Laws and the final dissolution of the mercantilist system of commercial regulation in Britain that the decision was taken in 1846 to instruct British colonial governors to govern on the advice of ministers responsible to the colonial legislatures.

The inauguration, thus, of a system of self-government in Canada tended to intensify rather than diminish the problems of policy making. The conservative, agrarian community of Roman Catholic, French Canada did not become ardent supporters of a rapidly expanding, popular, commercial and industrial civilisation on the North American Anglo-Saxon pattern. In return for the maintenance of the privileges of the Church and various clerical corporations and the protection of the rights of the French language, the French Canadian bloc in the legislature of Canada traded its support to economic interest groups centred in Montreal. The racial, religious and economic rivalry which thus developed between the communities centred about Montreal and Toronto resulted in an increasing degree of deadlock in the affairs of government.

This deadlock was rendered the more serious because the economy of Canada was not expanding as rapidly as that of the United States, and the heavy investments made in canals, railways and harbours were not as rewarding as similar undertakings in the United States. With the end of privileges in the British market for certain Canadian exports such as flour and timber, some Canadian capitalists

considered in 1849 the possibility of annexation to the United States, but finally came around to industrial development through the device of tariff protection for home industries. The economic expansion of Canada during the 1850's was not sufficient or impressive enough to divert attention from the chronic dissensions about race and religion or to remove the material frustrations which excited them.

The victory of the Unionists in the American Civil War and the emergence of the United States as a united, expansive and powerful industrial state provoked much thought in Canada about the future of Canada on the continent of North America. Having already experienced one attack by expansionist elements in the American community during the War of 1812-14, the Canadians were fully alive to the possibility that the large areas of north-western America possessed by the Hudson's Bay Company might not necessarily fall into Canadian possession just because a British flag flew at Fort Garry (Winnipeg). The American purchase of Alaska in 1867 was but a straw in the wind which many Canadians thought might blow away their future as an independent British nation.

Internal difficulties and external uncertainties combined to compel a solution which consisted of a federal union of the British colonies in North America. It cannot be said that any widespread mass sentiment existed for confederation, but politicians, business men and a small number of British officials in London were in varying degrees sufficiently enthusiastic to devise a federal system designed to leave under provincial authority questions such as education, property and civil rights and to create a strong central government capable of enforcing common economic and monetary policies across the continent. The British North America Act of 1867 brought together Upper and Lower Canada under the name of the provinces of Ontario and Quebec and the old colonies of New Brunswick and Nova Scotia.

Almost at once the new federal government undertook to purchase the north-west territories from the Hudson's Bay Company. In 1870 the province of Manitoba was constituted, and entered the federation. British Columbia on the Pacific coast entered in 1871 and in 1873 Prince Edward Island joined the Dominion. After this date there were no further additions of territory until 1949 when Newfoundland became a province of Canada.

In the 1870's Canadian political development was running well ahead of economic development, for there did not exist the means of travelling conveniently across the Dominion let alone the means of transporting goods and people over its immense expanse. The creation of the material foundations of the new nation remained the principal problem of the new federal government for many years. Although private capitalists undertook to own and operate the transcontinental railway system required, the federal government was obliged to come to the assistance of the enterprise with money, enormous land grants and the promise of monopoly privileges. In 1885 the Canadian Pacific Railway was complete. A national policy of tariff protection was inaugurated to stimulate industrial development, and by the time Canada's first Prime Minister, the Rt. Hon. Sir John A. Macdonald, died in 1891 it may be said that the foundations of modern Canada were well laid.

The physical expansion of Canada created a number of political problems of a traditional kind relating to racial, religious and economic tensions. The status of the French and half-breed population in western Canada, the system of education in the frontier communities and the economic policies of the metropolitan centres in eastern Canada all combined to create problems which in the end the Conservative leaders proved themselves incapable of solving.

The defeat of the Conservative régime in 1896 by the Liberals under the leadership of Sir Wilfrid Laurier coincided with a revival in world business and the commencement of a long price rise which stimulated investments on a hitherto unheard of scale. The prosperous epoch of Sir Wilfrid Laurier witnessed a rapid increase in population particularly in Western Canada, and a great increase in industrial production.

During the period 1896-1911 Canada began to encounter the problems characteristic of the older industrial societies. Its economic connections with the rest of the world and particularly with the United States and western Europe became more extensive and various. The movement of people seeking economic opportunities in Canada, the tension among the great powers, the necessities of an international economic connection had, within the first decade of the twentieth century, made Canada's traditional isolation within the protective shell of the British Empire no longer practical or possible. For many years Sir Wilfrid Laurier endeavoured to avoid involving Canada in international politics, but after 1908 he was unable to resist any longer the participation of Canada in international political affairs. His policy of building a Canadian Navy was designed to assist in the armament of the British Empire while maintaining still an apparent detachment from the dissensions of the Great Powers. This decision to embark on a Canadian armaments programme provoked a sharp, if confused, popular reaction among imperialists who thought he was not going far enough in his commitments and likewise among nationalists, pacifists, socialists and isolationists who thought he was proposing too much or something which should not be proposed at all.

Joined with this problem were a number of other difficulties connected with the functioning of the economy which had grown up rapidly during the Laurier period. During the last phase of the Laurier period static or falling real incomes among the mass of the population began to reflect the appreciation of capital claims more rapidly than productivity. During 1910 and 1911 there was widespread industrial unrest and evidence of agrarian discontent. Sir Wilfrid Laurier sought to overcome all his difficulties by a movement in the direction of closer integration in the expanding American empire, and in 1911 he proposed a programme of commercial reciprocity with the United States. This proffered solution failed to win popular support, and in the election of 1911 the Liberal régime was defeated by a combination of conservative and nationalist forces.

What might have been the final character of the Conservative-Nationalist Government, which came into office in 1911, can never be known. During the remaining period of peace until 1914 the Government headed by Sir Robert Borden exhibited a marked tendency to arrest the onward course of development towards complete Canadian involvement in the economic and political concerns of the Great Powers. Owing to the defeat by the Senate of his policy of buying ships for the British Navy Sir Robert Borden was able to avoid spending any significant part of Canadian resources on armaments, and this was a factor in relaxing some of the internal tensions of the Canadian economy. When the 1914-18 war began the Canadian economy was depressed, but had begun to shed some of the neuroses connected with its unbalanced commercial and financial development.

Canadian participation in the 1914-18 war took the form of despatching men organised in Canadian units to the front where they fought under British commanders and eventually under their own commanders as part of the Allied armies. On the supply side Canada produced immense quantities of food, certain simple forms of the munitions of war and industrial raw materials. At first

THE BRITISH COMMONWEALTH

the Canadian war economy functioned on the *laissez-faire* principles of a commercial community. Military service was voluntary, and supplies were produced by the contract arrangements of a market economy.

The heavy losses of men in the Canadian Army and the heavy cost of the war in terms of money and resources compelled the Government by 1917 to consider either cutting its obligations or resorting to a more strict control of men and materials. A decision in favour of further control, and particularly the inauguration of compulsory military service, precipitated acute internal dissension. A coalition of political forces favourable to an intensified war effort was effected by Sir Robert Borden in 1917, and in the election which followed the Union Government managed to secure a show of popular support. This did not prevent violent resistance to the Government's policy in the province of Quebec, and the expression of acute criticism elsewhere in Canada.

The experiences of the first World War may be said to have dominated the political life of Canada during the next decade, and were not without their influence even during the course of the second. The Allied victory, the rapid disengagement of Canada from participation in the confused politics of post-war Europe and the speedy and total demobilisation of the Canadian armed forces helped to ease post-war tension and to lay the foundation for renewed economic expansion; but in spite of this, the year 1919 was characterised by widespread industrial unrest and agrarian discontent. The most conspicuous and dramatic incident of this popular commotion was the Winnipeg General Strike, which was in the end violently suppressed. New political parties emerged during 1919 and 1920. In both Ontario and the western provinces parties of farmers and wage-workers were formed. In this year the Liberal Party elected a new leader, Mr. W. L. Mackenzie King, who believed that a reconciliation between classes was the most important task of the moment and the indispensable condition for the preservation of the traditional social and economic structure of Canada.

In the federal election of 1921 the Liberal Party emerged as the strongest but not the majority party in Parliament. Its supporters in Quebec were strongly nationalist, while at the same time it was obliged to rely for the formation of a government upon the votes of the independent progressive farmer's representatives from the western provinces. Between 1921 and 1924 the policy of Mr. Mackenzie King was essentially a do-nothing one designed to avoid difficulties in both foreign and domestic affairs and to permit the expansion of business enterprise. By 1925 it appeared that the Mackenzie King experiment was failing and in the election of that year the Liberals lost so much ground that Mackenzie King advised the Governor-General, Lord Byng, to order another general election. This the Governor-General refused to do, and he called upon the Conservative leader, the Rt. Hon. Arthur Meighen, to form a Government. Lord Byng's refusal to accept the advice of the Liberal leader was at once depicted as a departure from the practice of parliamentary government and an illegitimate expression of preference by a servant of the British Government for the Conservative opposition. In the election of 1926, which followed the defeat of the Con-

servative Government in the House of Commons, the Liberal leader was able to rally nationalist, isolationist and progressive elements to the banner of his party, and the Liberals emerged with a clear majority.

The consequences of the election of 1926 were far reaching. Mackenzie King greatly strengthened his hold on the Liberal Party and brought within its control all but a small minority of "leftist" and nationalist elements. In order to avoid future accusations of interference in Canadian affairs the British Government decided to appoint in Canada an agent of its own in the person of a High Commissioner, and to re-define the office of Governor-General and to make him a personal representative of the Crown unconnected officially with the Cabinet in London. This policy culminated in the Statute of Westminster of 1931.

Not only were many of the legal anomalies of Anglo-Canadian relations resolved, but Canada's position in the international community was clarified in favour of a separate international personality. A Canadian minister to the United States was appointed late in 1926, and in 1928 direct diplomatic relations were established with France and Japan.

In domestic politics Mackenzie King's principal objective was to de-centralize government and to shift to the shoulders of the provincial governments the responsibility for social and economic reforms which were in some cases beyond their resources but for which they had a constitutional and legal responsibility. When the depression of 1929 began, the Federal Government was ill-equipped legally or intellectually to devise policies capable of coping with economic disaster, and in the election of 1930, the Conservative Party under the leadership of the Rt. Hon. R. B. Bennett was returned to power.

The new Conservative Government had a large majority but a small stock of ideas for dealing with the worst depression in Canadian experience. High tariffs and economy in Government expenditure proved incapable of re-starting the Canadian economy in a manner capable of relieving significantly widespread unemployment, distress and frustration. When finally Mr. Bennett sought to imitate the New Deal of President Roosevelt, it was too late for him to capture public enthusiasm and support. In the general election of 1935 the Conservatives were overwhelmingly defeated.

By the time the Liberals returned to power the Canadian economy was beginning to recover under the stimulus given to world business by policies of public spending in Europe and the United States on armaments and public amenities. Mackenzie King's principal policy consisted of embarking on a prolonged public inquiry into the character of the Canadian constitution.

In foreign policy Canada remained resolutely isolationist and at the time of Munich Mackenzie King enthusiastically supported Mr. Neville Chamberlain. When war came in 1939, any doctrine of neutrality or passive belligerency lost political validity. The Canadian Parliament assembled and declared war on Germany one week after the British declaration of hostilities.

H.S.F.

CANADA AND THE COMMONWEALTH

THE relations of Canada with Britain and the other member states of the Commonwealth have been determined by the facts of history and environment, especially by the character of her dual nationality, her situation in North America as a neighbour to the United States, to whom she is bound by powerful ties of economics and culture, and her strong links with Britain and to a less extent with western Europe.

The Canadian federal state is not yet a century old (it was established in 1867), and it continues to rest, as it rested from the outset, on evident compromises. These are not merely the compromises implicit in any democratic federation, wherein an effort must be made to achieve a reasonable balance between local liberties and central power, but the compromises also between two peoples with diverse traditions and different cultures. One-third of the population is French, who, inevitably, are anxious to survive in North America as a distinct cultural unit, and hence are disposed to assess Canada's external relations with the special bias of their interests as a separate group. They usually shrink from a heavy involvement in the affairs of the outside world, including the Commonwealth, for any such involvement may affect adversely their position as a minority in a Canada and North America predominantly Anglo-Saxon in culture. Allied to this cultural dualism is the diffusion of Canada's fifteen million people over half a continent, which implies regions often divorced from one another by great distances, different economies and separate interests. In such a state the issue of achieving a unified national will is rarely simple, and least of all in the formulating of a foreign policy that may involve peace or war. If at intervals in the past Canada appeared to avoid any positive attitudes and commitments in Commonwealth relations, one reason at least is to be found in her own character as a nation with dual cultures and regional diversities.

Canada's proximity to the United States has profound but complicated consequences in her life. First of all, there is a constant stream of people back and forth across the border in a manner without parallel between any other two states in the modern world. Most Canadian families have relatives or friends in the United States, and are constantly exchanging visits. Tourists and business men in large numbers ceaselessly come and go. Restless individuals cross and recross at the border ports, and have done so for generations. There is also a daily flow of cultural influences over the long frontier through newspapers, magazines, radio and television. These perennial influences cannot but affect Canadian attitudes, and yet this common circulation of cultural blood does not destroy in Canada the sense of national identity. There remains through it all the will for a distinct Canadian nationhood, which is now not weaker but stronger. Hence the government in Ottawa is not disposed to be merely an echo of Washington, without a mind of its own. But there are facts which make imperative the closest collaboration between the two states, and such especially are the allied facts of economics and defence.

Crucial is the fact that, since Canada has been later and slower in development, she has to-day more unexploited natural resources, relative to population than her neighbour. The vast growth of industrialism in the United States, quickened by urgent demand and technical change in the second World War and its after years, gives the

republic a keener interest in Canada's timbers, metals, and more recently, fuels. She views Canada as a rich frontier of virgin resources conveniently close to her factories, a frontier all the more attractive and significant with the diminution of her own natural wealth. In 1939 she took only 2 per cent of Canada's combined production of aluminium, copper, lead and zinc. By 1950 she took 62 per cent. The two neighbours have become interlaced in a trade greater than that between any two countries in the world. In the twenty inter-war years (1919-39) Canada sent to the United States 38 per cent of her exports, and from that country received 65 per cent of her imports. But in the first post-war years (1946-50), she sent 48 per cent of her exports and received 71 per cent of her imports. In the two years 1952-3, her exports to the United States rose to 58 per cent of the total. Related to trade is foreign investment, and since 1945 more than two-thirds of the capital from abroad has come from the United States. This foreign capital admittedly is only a small portion of the total investment in Canadian industry (Canadians themselves contribute the bulk) but that derived from the republic is significantly concentrated in the developments of oil, iron ore, aluminium, and such manufacturing as paper and allied products.

For Canadians this dependence upon the American economy poses a difficult national problem. The closer their economic ties with the United States, the more they are shaken by fluctuations in her economy and changes in her tariff, and the less free are they to manoeuvre in economic policy. This fact, coupled with the pronounced reliance of their country on external trade, explains why most informed Canadians would prefer to see a larger commerce with Britain, other Commonwealth countries and other parts of the world. They believe that a many-sided trade would provide the surest protection of the Canadian national interest. They do not wish their country to be merely an economic dependency of their neighbour, jolted and injured at times by tariffs and other trade restrictions suddenly imposed by Washington. Multi-lateral trade offers a safeguard against excessive dependence. But under present circumstances the many-sided type of trade is hard to achieve. Canadians have had no real alternative but to trade abundantly with the United States, which since the second World War has been able and eager to purchase in large quantities the goods which Britain could not buy. Canadians cannot escape from economic necessity. They must export, or their country suffers paralysis. But apart from other influences, economics to-day is more than ever closely tied to defence and security, and the combined efforts of the two North American countries in defence imply some attempted integration of their economies.

Since the second World War the remarkable progress in long-range aircraft and the possibility in the future of atomic warfare have presented a case that no nationalist logic can deny for joint provisions in defending the whole continent. Such provisions are now a valuable corollary to the North Atlantic Alliance, and hence of concern to Britain and the entire Commonwealth. Much of Canada's vulnerability dwells in the simple fact that she possesses fifteen million people in a land area of 3,600,000 sq. miles. Two fifths of the area is within the Yukon and North West Territories, Arctic in climate, unsuitable for agriculture, and repellent to settlement. This northern land contains

THE BRITISH COMMONWEALTH

only some 25,000 inhabitants throughout its whole vast extent, and across the polar ice lies Soviet Russia. The relatively empty northland is one of the direct approaches to the populated centres of North America, and inevitably its defence must become a joint interest of Canada and the United States. Likewise Newfoundland and Labrador constitute another American strategic area where joint action is imperative, not merely in the interest of the two countries but of the whole system of N.A.T.O.

The formal joint action for continental security began in 1940 with the Ogdensburg Declaration and the appointment of the Permanent Joint Board on Defence, which during the war drafted basic plans for defending Canada and Alaska, and after the war remained for both governments a source of expert guidance. The present arrangements fit within the framework established in the forties. Certain broad objectives in the collaboration were formally announced in Ottawa and Washington on February 12th, 1947:

- (1) The interchange of selected individuals in order to increase the familiarity of each country's defence personnel with that of the other
- (2) The general co-operation and exchange of observers in exercises and in testing military material.
- (3) The encouragement of common designs and standards in arms, equipment, organisation, methods of training and new developments
- (4) Such mutual and reciprocal availability of military, naval and air facilities in each country as may be agreed upon in specific instances.
- (5) All co-operation to be arranged without impairing the political sovereignty of either country over the normal activities in its territory.

A joint defence of the continent must involve measures in both countries to promote the most extensive economic development, although in this matter admittedly what is possible or desirable in time of war may not be possible or desirable in time of peace. In one significant sector of the economy, defence production, there has been a zealous effort since 1950 to achieve a major degree of co-operation and integration, and here continuous and fruitful consultations occur between representatives of governments and industry on both sides of the frontier. The more general aim of the two countries must be to ensure the maximum expansion within both and the maximum trade between them. Only by this means can the economic strength of North America for shouldering the burdens of defence be enlarged. This common aim is recognised in the agreement between the two countries in November, 1953, to establish a Joint United States-Canadian Committee on Trade and Economic Affairs.

A final remark on Canadian-American relations is pertinent. Canada shares in the continental interests of the United States and in the physical and social environment which has shaped America. Her people see the United States at close range and under all circumstances. Every day of the year they follow almost as a matter of course its public controversies. Hence they presumably understand the republic, its institutions and attitudes, better than any other people in the Commonwealth.

In Commonwealth affairs it is with Britain, the senior partner, that Canada's relations are most intimate, and for reasons evident enough. In a portion of the Canadian people there is an intangible but enduring sentiment for a land from which their ancestors came. Many admire the stable temper and empiric conceptions which usually govern British policies, domestic or foreign. There is not merely the vague sense of sharing with Britain in the distinguished traditions of parliamentary government, but also the sense, rarely put into words, that the bonds with Britain help to demonstrate Canada's national stature in North America. She is not to be regarded as a

satellite of the United States, moving merely in the shadow of her powerful if affable neighbour, for she has distinct institutions and a genuine constitutional link with Britain and the other nations within the Commonwealth.

The chief constitutional link is the monarchy. Canada is a parliamentary state on the monarchical pattern of Westminster. The British Queen is the Queen of Canada. The Canadian people accept as sovereign the person who is sovereign of the United Kingdom, and thereby emphasise the traditional bond between their country and Britain. The monarchy of course has not precisely the same functional meaning within the Canadian as in the British state, where the monarch in person is present and active, but that fact alters little its significance as a link between the two countries. It nourishes the sense of sharing something in common, something with a long tradition, and with a marked capacity for inspiring popular devotion. The importance of the monarchy in this respect is difficult to assess precisely and difficult indeed to explain in words. It exerts an intangible influence, but it is not to be minimised as a mere picturesque relic; it is a real symbol of association and unity. No responsible political leaders in Canada would question it or change it.

But there are also concrete and what Burke might call gross facts which make a close association with Britain of the first importance. Next to the United States, the British Isles remain the best single market for Canadian products. In the five years 1946-50 some 22 per cent of Canadian exports went there. Unfortunately in 1951 the percentage dropped to 16, but rose slightly in the subsequent two years. The proportion of Canadian exports destined for Britain since the end of the second World War is smaller than in the two decades before 1939, when it seldom fell below 30 per cent of the total, whereas the proportion sent to the United States has rapidly risen. Yet the fact remains that the British market is still important and, for reasons suggested earlier, those who shape Canadian policy would like to enlarge it and also to win back the other Commonwealth market that has been lost. British investment in Canada which in 1939 exceeded 35 per cent of the country's total foreign investment, had by 1952 shrunk to some 17 per cent. While for Canada Britain as a source of foreign capital still ranks statistically next to the United States, it is far behind in the investment of fresh capital.

If, as suggested, it is in Canada's national interest that her trade and other economic relations with Britain should be more important than they are, why is this end not pursued more successfully by Canadian governments? The answer is not simple, and yet it must be attempted in the briefest terms. No unilateral action on Canada's part can be really effective. In order for her to sell proportionately more products in the British market, it is essential that the balance of payments between the United Kingdom, and, not merely Canada, but North America in general should be reached at a high level. But to attain such a result, concerted action is essential by all three of the states involved in the intricate triangular relationship, and perhaps most of all action by the United States and Britain. In the present situation Canada by itself can accomplish little, unless it adopts discriminatory trade controls, which would do serious harm to her interests. Actually in all three countries to a varying extent appropriate policies are rendered difficult by complicated external and internal circumstances and also by vested economic interests like those which in the United States firmly resist tariff reductions.

There is an additional fact significant in affecting Canadian attitudes. The British have the burden as well as the advantage of an old industrial system, and, in a critical era when drastic change is necessary, the burden perhaps

may be the more conspicuous. The Canadians are to a large extent building their system of industrial production afresh and from the ground floor. This system is North American and exhibits, although at times with characteristic Canadian restraint, American traits. Its managers, for example, are usually quick to adopt American labour-saving methods, quick to acquire machinery to produce more goods at less cost, and quick to scrap inefficient plant. Canadian industry is, of course, aided by rich natural assets not present in Britain, such as an abundance of water-power, and the acute post-war difficulties of the British with their coal industry have not always been appreciated on the western side of the Atlantic.

Canada is the only dollar country in the Commonwealth, and hence its currency policy is out of harmony with the policies of Britain and other members. Yet it is fair to emphasise that Canada is a different dollar country from the United States. She is faithful to the system of imperial preferences, although for obvious reasons she now benefits very little from it, but other members of the Commonwealth exporting to her do or can materially benefit. In brief the Canadian market for most products is more accessible, owing to lower tariffs, than the market of the United States. No quantitative controls limit that market for the British exporter. Indeed some observers think that the British exporters often insufficiently recognise the genuine accessibility of Canadian markets.

Apart from economics, Canada's association with Britain to-day is made intimate by the harsh necessities of defence. With Britain she shares a common interest in the security of the whole Atlantic region and hence in what transpires in western Europe. Like Britain she recognises that in modern strategy the protection of the Atlantic must begin not on the Atlantic but in Europe. The cardinal element in her foreign policy is support for N.A.T.O., which is planned to hold western Europe with its great industrial potential. Irrespective of its necessities, this policy is singularly well suited to resolve any clash of opinion in the Canadian electorate as to what the country's external relations should be, for it postulates a working agreement between all three of the major Powers with whom Canadians have close bonds, Britain, the United States and France. It harmonises remarkably well with Canadian sentiments as well as Canadian interests. Military collaboration with Britain in the past often aroused distrust among many French in Quebec, who feared that their fellow citizens of British descent were dragging them into support of Britain and British imperial concerns in which they had scant interest. N.A.T.O. removes the basis for such fears. Collaboration with Britain is no longer merely bilateral action between Ottawa and London, but part of a comprehensive plan for the security of the whole Atlantic area and Canada within it. It is little wonder that from the outset leaders of the Canadian Government have been enthusiastic in its advocacy and that the Secretary of State for External Affairs, could without political embarrassment extol it as "one of the greatest achievements of history in our time".

Canada has followed up her formal attachment to N.A.T.O. by action and expenditures. To strengthen the actual forces in Europe as a deterrent to aggression, she had by November, 1951, contributed the Twenty-Seventh Brigade (some 6,000 men) for duty in Germany, undertook for the same end to provide twelve squadrons of Sabre Fighters, which have been duly distributed in England, France, and the French Zone of Germany, and committed herself at the Lisbon Conference of N.A.T.O. (February, 1952) to make available twenty-four warships of the Royal Canadian Navy for anti-submarine and coastal services as part of N.A.T.O.'s Atlantic force. Under the mutual aid programme she supplies certain arms and

equipment to North Atlantic partners without payment. She also provides within her own territory for the training of certain army and air force personnel from member countries. All this represents a concrete and direct contribution to the common defence. But, as a consequence of her geographic magnitude and resources, she is obligated to play in the alliance a further and crucial role, namely, that of a producer of abundant raw products, especially metals of strategic value. Such production involves onerous demands on capital, and between it and the purely military effort a balance has to be struck.

Since 1949, therefore, Canadian foreign policy has been primarily concerned with the building of N.A.T.O. This policy throughout has involved close collaboration with Britain, and a close collaboration also with the other chief signatories of the Atlantic Pact. It might seem superficially to imply a narrowing preoccupation with the affairs of a single region, but underlying Canadian policy is the conviction that on the strength of the Atlantic Alliance largely depends the security against a third world war. In other words, N.A.T.O. must be of deep concern for all the countries of the Commonwealth and all the free countries in the world, for it is designed to guard against aggression in the zone of greatest danger.

At the same time, Canada's attitude towards the Commonwealth has entered on a new and important phase. Canadian political leaders are now less wary of the ties with the Commonwealth than in the inter-war years (1919-39); they are less anxious about status, and less fearful that positive co-operation with its members might restrict their freedom of action or embarrass them in relations with the United States. Their international vision has extended with the rapid march of events, and they are now prompt to emphasise the beneficent value of close consultation and exchange of views with other states of the Commonwealth. This emergence of a more positive attitude is due, not merely to the interplay of fresh domestic influences in Canadian thought, but to revolutionary changes in the configuration of world politics during the last decade, not least of all in the international position of the United States. The collapse of isolationism in Washington has strengthened the growth of internationalist conceptions in Ottawa.

Of special interest is the deeper concern and closer contact with the Asian members of the Commonwealth. To-day the most intimate relation of Canada with Asia is through the medium of the Commonwealth, with its special and periodic conferences of Prime Ministers and other Ministers, its flexible arrangements for dealing with concrete matters, and its constant exchange of views between members, not merely through the High Commissioners but through representatives at the meetings of the United Nations and such bodies as the Commonwealth Parliamentary Association.

The modern Commonwealth has two significant aspects first, the perennial exchange of ideas on policy and related matters; second, the doing of things together and the performance of actions helpful to one another. The first of these is illustrated in the growing volume of consultation between Canada and the Asiatic dominions, and the second in Canada's participation in the Colombo Plan, formulated at the First Commonwealth Conference held in Asia and concerned mainly with Asian affairs (January, 1950). In each of the years since the establishment of the Colombo Plan the Canadian government has allocated \$25 million for capital assistance and a further expenditure for the training of technical personnel from South-East Asia. In the first year \$15 million of the total amount was assigned for investment in India and \$10 million in Pakistan. In India the investment was directed to a large irrigation and hydro-electric project in West Bengal and

THE BRITISH COMMONWEALTH

the provision of buses and trucks for the road transport service of Bombay State. In Pakistan it was directed to the provision of equipment, materials, and technical personnel for the erection of a cement plant in the Punjab. Some subsidiary enterprises in Pakistan, such as a live-stock farm, were also assisted by the Canadian allocation. Under the technical aid offered through the Colombo Plan, a training in a wide range of subjects and occupations has been provided in Canada to students and civil servants from the three Asiatic dominions. Some of the fields of study are those of agriculture, transportation, engineering in its various aspects, forestry, medicine, fisheries and education. Some technical experts have also been sent to the Asiatic countries, as notably in the case of Ceylon, to promote the fishing industry and soil conservation.

The broad significance of this policy is clear: in providing for a carefully planned movement of capital it gives concrete expression to the idea that the Commonwealth is not something that dwells only in political rhetoric and noble sentiments, but is a living community whose members can help one another in coping with immediate and material problems. The Indian sub-continent is physically remote from Canada, and its social conditions and geographic environment are singularly different. Yet, as the Colombo Plan modestly illustrates, Canadians can provide it with some material aid in helping to raise the standards of life among its people, and thereby increase the vitality of the Commonwealth itself. Important is another and allied fact. Hitherto for ordinary Canadians the Commonwealth has meant mainly a British-Canadian nexus. Its other units have seemed remote, and relations with them slight. The Colombo Plan has done something to publicise the fact that it can also mean varied, practical and fruitful relations with states in Asia. Asians from the three Dominions co-operate with Canadians in making the

plan a success, and thus the Commonwealth's multilateral features receive a new and valued emphasis.

Canadians recognise that this post-war Commonwealth is different from that before the war, and different most of all in its multi-racial and multi-cultural composition. In the four Dominions before 1939, the overwhelming portion of the people had come, or were descended from those who came, from the British Isles and Western Europe. They all shared in a stream of culture that flowed from Europe. South Africa was admittedly somewhat different, for here African and European cultures met in collision, or reached an unsteady accommodation with each other. But in the contemporary Commonwealth there are three Dominions whose main cultural roots are Asian. Their religious beliefs, their social usages as shaped by religion, and their material ways of life have been determined by an Asian environment. Yet such differences from the older Dominions are not the only relevant facts. There are also resemblances. The new, like the old, have entered into the experience of gradual evolution in a specific form of self-rule, and in the process they have acquired and brought into play the dynamic ideas of liberal democracy, derived mainly from Britain, and in themselves a significant part of culture. In that sense what is often referred to as "the new Commonwealth" is not so new. It is only a continued growth of the old in new soil. The ethos of the old was national self-rule, combined with an active sense of political kinship with other and freely associated communities. General Smuts once extolled for his fellow South Africans the ideal of the Commonwealth as "full sovereign status, freedom to the utmost without limit, but always in the group of comrades and friends with which we have marched hitherto in our history". Many Canadians would still say with Burke that what matters most is the spirit of the communion, the spirit of association with others who cherish similar things and are moving in the same direction.

A.B.

ECONOMIC SURVEY

THE Canadian economy has been growing steadily since the end of the second World War. The population has risen because of a large inflow of immigrants and a high birth-rate. Normal growth in wealth and productivity has been accelerated by an inflow of capital and by the discovery of important new natural resources. This growth is causing structural changes in the economy which appear likely to make for a greater degree of stability than was experienced during the first half of the present century.

Canada, however, is still a sparsely populated country. Some 15 million people inhabit an area of 3,845,774 sq. miles, the second largest piece of the Earth's surface under one political jurisdiction. Climatic and soil factors have hitherto restricted population to a narrow strip of territory, seldom more than 100 miles in depth along the southern border. Even now most of the expansion is still taking place in that narrow strip but the country is growing in depth since new mineral resources have been found in the hitherto unpeopled northlands.

Their development leads to the building of new railways and highways, the creation of new towns, the erection of power plants on formerly untamed waterfalls. It creates new demands for industrial equipment and consumer goods and so stimulates the expansion of manufacturing industries in the older established industrial cities. Apart from the broadening out of the developed area of Canada the more significant structural changes now occurring are shifts in the relative importance of different industries. Agriculture, once the sole prop of the Canadian economy, now takes second place to manufacturing in the value of its products and in the number of people employed.

Canada is highly dependent on external trade, ranks third among the nations in the volume of its world commerce and has the highest foreign trade *per capita* of any country in the world. But population growth together with rising incomes and urbanisation have built a home market which makes the country somewhat less dependent on foreign commerce than it was in the first half of the present century and so less susceptible to booms and slumps originating abroad.

AGRICULTURE

Agriculture remains the most important of the primary industries, supports about 20 per cent of the working population and has an annual output valued at more than \$2 billion. Farming is a major activity in all provinces except Newfoundland but the type of farming varies greatly with soil, climatic and marketing conditions. In Eastern Canada livestock and dairy products are the chief source of farm income, although there are a few areas which specialise in the production of fruits and vegetables. The prairie region in the provinces of Manitoba, Saskatchewan and Alberta produce high-quality wheat and constitute one of the great wheat-growing areas of the world. The prairie wheat lands are subject to drought cycles and wide variations in yields, but since 1950 better-than-average crops have coincided with a shrinkage in world demand resulting in a large surplus. The carryover at the end of the 1954-55 crop year (July 31st, 1955) was 481 million bushels of which 100 million remained on the farms for lack of elevator storage space. This stock of wheat at the beginning of a new harvest represented more than the normal export and domestic consumption for a whole year.

Marketing of wheat grown in the prairies is handled by the Canadian Wheat Board, a government appointed body which acts as agent for the producers but gets no subsidy. The Board pays farmers an initial price on delivery of their wheat (recently \$1.40 per bushel basic No. 1 Northern at Fort William) which is announced in advance of seeding. The Board sells all prairie grown wheat and when a year's crop has been cleared distributes its surplus, after operating costs, to the producers, making interim payments as warranted. Owing to the congestion of elevator space the board also limits the amount of grain any farmer may deliver. During the past year the delivery quota was eight bushels per seeded acre. The system equalises the cash returns of all wheat growers and spreads them out over a long period. Thus the cash income of wheat growers in 1955, following a subnormal crop in 1954, was supplemented by payments accruing from the bumper 1953 crop as well as from the delivery under the quota of farm stored grain.

Butter is the only other farm product subject to active governmental marketing intervention. Butter production, over the years, is in reasonable balance with domestic consumption. A government board sets a support price, considerably above world prices, stores the excess over domestic use and, when supply is excessive, sells the surplus abroad and absorbs the loss.

The large market for bacon which was once provided by the United Kingdom has disappeared, but increased domestic consumption and exports to the United States have taken its place. Generally beef and hog prices in Canada are governed by the prices prevailing in the larger consuming centres of the United States as Canadian meats and livestock enter the United States at moderate rates of duty.

The individual or family farm is the basic unit of Canadian agriculture. The trend is towards larger forms as mechanisation and improved methods of cultivation make it possible to produce larger quantities with less labour. Thus although the farm population is declining, production of farm products is increasing and the incomes and living standards of farmers are rising.

FOREST INDUSTRIES

Approximately one-fifth of the national income and one-third of all exports originate in the forests. The income is distributed in a wide variety of ways. Multi-million dollar corporations control large timber tracts, build their own roads, maintain fire-protection service, operate their own power plants and steamship services in addition to their pulp, paper and lumber mills. The pay-rolls of these giant operators, most of whose activity depends on the export sale of newsprint and pulp, constitute one of the most important sustaining factors in Canadian economic life.

But the industry includes hundreds of smaller saw-mill and wood-processing concerns and literally thousands of individual operators who share in the proceeds of the sale of finished wood products. These include small saw-mill operators, loggers who cut trees on contract for saw-mills, and farmers who supplement their farm income, especially in newly settled areas, by selling wood from their own lands. The forest industries have been an attractive field for foreign capital, especially in the newsprint division. Several of the larger operations are owned by American and British interests, in some cases directly related to

THE BRITISH COMMONWEALTH

publishing concerns. At least two large American publishers and one large British publishing group control newsprint mills and timber limits.

More than half the world supply of newsprint is produced in Canadian mills from Canadian forests. Newsprint is the largest export trade item and 95 per cent of the output is exported, nearly all of it to the United States.

The forests cover 1,485,870 square miles, approximately 42 per cent of the total land area, and the productive forests, those known to be capable of exploitation in terms of quality and accessibility, extend over 827,162 square miles.

The full potentiality of forest resources is still far from being exploited and until recently was assumed to be unlimited. Lately increasing attention has been paid to conservation and scientific forest management. As a preliminary step to the formation of a national forestry programme the provincial governments, assisted by federal grants, are now engaged in compiling a forest inventory which will contain estimates of the quantities of different types of wood in the different areas.

Current expansion in the forest industries is due to diversification of output and the installation of improved and bigger production units on the part of established firms. High capital costs and near-complete dedication of accessible stands of timber discourage new concerns from entering the field. A few mergers have taken place and others are probable. No new newsprint mills have been established recently but the total output of newsprint has increased as larger and faster paper-making machines have been installed in existing mills.

Technological advances which make possible a greater use of wood waste lead to diversification and tend to favour the larger operators. So while newsprint and sawn lumber will remain the basic products of the forest industries the manufacture of a wide range of other fabricated wood products promises to make increasing demands on wood supply in the future and is already leading to more complete utilisation of the wood taken from the forests.

FISHING

Some of the richest fishing grounds in the world, including the Grand Banks, are adjacent to Canadian coasts, and many inland lakes are productive. Fishermen take a yearly catch of some 1,000,000,000 pounds which has a marketed value of close to \$200,000,000. Like the larger food-producing industry, agriculture, fishing is in a process of change, and fishermen are profiting from new and improved techniques and increased mechanisation. Larger vessels are being introduced, equipped with radar and echo-sounding devices for the location of fish. Ashore, processing and handling methods are being improved and an increasing proportion of the catch is being sold fresh-frozen at premium prices compared to those available for salted fish, long the staple product of fisheries on the east coast.

A growing market for fresh fish in the United States and in Canada's inland cities has more than compensated the fishing industry generally for the loss of some of its overseas markets for salt-fish due to dollar-shortages in the consuming countries. Yet so many fishing communities, especially in Newfoundland, are dependent on the sale of salt-fish and are unable to adapt to the fresh-fish market that governmental action is needed to support the price for that product.

MINING

Important new mineral discoveries, iron ore, copper, nickel, uranium, petroleum and natural gas have been made within the last fifteen years and high prices offered for metals have sparked a wave of exploration and prospecting which appears certain to result in more discoveries.

Development of these resources is largely responsible for

the recent changes in the economy and the changes which will take place in the next few years. They bring a continuing inflow of foreign capital. They necessitate vast capital expenditures, the construction of railroads, pipelines, power plants and transmission lines. They cause a shift of population northward into hitherto unpopulated areas. They have changed Canada from a net importer of iron ore to a net exporter, and promise to do the same with respect to petroleum.

Canada has had an important mining industry since the beginning of the century but the emphasis was formerly on precious metals. There is still a large production of gold and a sizeable production of silver but the emphasis has shifted to base metals, uranium and petroleum. Total value of mineral production passed the billion dollar mark in 1950 and has been advancing sharply ever since.

Extensive mining of the iron ore resources is gradually leading to the exhaustion of the rich Messibi range of iron mines in the United States. Ore from these mines has supported the huge United States steel industries and the smaller Canadian operations located along the shores of the great lakes. Canadian deposits within easy shipping distance by water, at Steep Rock in North-western Ontario, at Maromora in Southern Ontario and, most spectacular of all, in the Quebec-Labrador area, are taking their place.

Opening up of the Knob Lake iron ore property in Quebec-Labrador illustrates the wide range of secondary economic developments set in motion by the exploitation of these resources. A 400-miles railway had to be built through difficult terrain, from the mine to tidewater at Sept-Iles on the north shore of the St. Lawrence River where a seaport was constructed. Two power plants were installed and two towns built. Further north other large deposits on the west shore of Ungava Bay are being developed and another port and railway line will be required. The need for cheap transportation of Quebec-Labrador iron to the steel mills along the great lakes was probably the clinching argument which won United States agreement to construction of the St. Lawrence Seaway.

Uranium is another metal which is pushing back the frontier of civilisation. There are producing mines at Port Radium, in the North-West Territories, Beaverlodge, in North Saskatchewan and large proven deposits in the Algoma and Haliburton regions of Ontario. Although production figures are secret Canadian output of the metal which is to provide fuel for the atomic age is understood to be second only to that of South Africa.

The nickel deposits at Sudbury, Ontario, yield about 70 per cent of the world's supply of that metal and mining facilities are in process of enlargement. Another important nickel property is being mined at Lynn Lake in Northern Manitoba and further north on the western side of Hudson Bay another promising nickel ore body is controlled by the International Nickel Company of Canada and awaits development.

Copper is widely distributed across Canada and production is on the increase as a result of new discoveries and favourable prices. In the Bathurst area of New Brunswick a large copper-zinc-lead-silver complex, discovered in 1953 promises to change the economic outlook of a region hitherto dependent on its forests for employment and income. A large smelter recently went into operation in the Gaspé Peninsula of Eastern Quebec to process ores from a nearby 70,000,000-ton copper deposit.

Further north in Quebec rail communication is being built into the Chibougamau region to tap copper-gold deposits and a smelter will be installed at Chicoutimi. The Manitouwadge deposits in Northern Ontario called for another new railway line.

Production of industrial minerals is a rapidly-growing branch of mining. Most of the world's asbestos is produced

in the eastern townships of Quebec and facilities are being increased to meet the demand created by a high level of construction activity. Canada has no known deposits of elemental sulphur but production for smelter gases, "sour" gas and petroleum wells and the roasting of iron pyrites is on the increase.

FUELS

Canada has abundant supplies of mineral fuels, coal, oil and gas, but in the main they are located far from the chief consuming areas. This creates problems of transportation and tends to accentuate the advantages of oil and gas over coal in the Canadian fuel market. The coal deposits are chiefly in Nova Scotia and on the western fringes of the prairies. Despite transportation subsidies to facilitate the marketing of coal in the heavily industrialised area of Ontario and Quebec coal production is going down. Gas and oil reserves in Western Canada have been greatly expanded by recent discoveries, starting with the Leduc oil field in Alberta and extending eastward into Saskatchewan and Manitoba. The transportation and utilisation of these resources will call for heavy capital expenditure in the years ahead. Oil from the fields adjacent to Edmonton now moves eastward by pipeline to Sarnia, Ontario, and supports sizeable petrochemical industries, including a government-owned synthetic rubber plant in Sarnia and a \$50,000,000 plant at Edmonton producing synthetic fibre and other chemical products. Another pipeline carries crude oil to the west coast.

The marketing of natural gas will call for other large pipeline projects two of which are planned for the near future. One is a trans-Canada line from Southern Alberta to Montreal. This, when completed, will be the world's longest pipeline, 2,200 miles. It will serve communities in the mid-western states as well as Northern Ontario and the large eastern cities of Toronto, Montreal and Ottawa.

The gas reserves of the Peace River area in Northern Alberta and British Columbia are likely to reach markets on the Pacific Coast at Vancouver and the cities of the North-western United States through another projected pipeline. Difficulties in meeting government insistence that home markets be served before export as well as in securing permission from United States authorities for the importation of surplus Canadian gas have delayed both these projects but there are signs that they will soon be under way. They will mean capital expenditures in excess of a billion dollars on gathering lines, truck lines, local distribution systems and gas-burning installations.

POWER

Canada is a country of lakes and rivers which provide an abundance of water-power. Full development of all power sites would yield in excess of 66,000,000 horse power of which something over 20 per cent is currently in use. Many power sites, however, are too remote from developed regions to make utilisation economic. Some of these are attracting specialised industries requiring low-cost on-site power but others will not be developed for many years. The most highly industrialised region, Southern Ontario, is in sight of the end of its accessible water-power resources and faces the necessity of using more costly power from steam plants.

Up to now the availability of cheap power has encouraged the industrial development of the St. Lawrence River basin and the Great Lakes area at the expense of other areas. Large power sites adjacent to seaboard have in several instances been responsible for the location of industry. The two big aluminium plants, at Shipshaw in Quebec and Kitimat in British Columbia exist because of low-cost power at tide-water. Canada has no bauxite. The ore has to be shipped from the West Indies. Currently

projected is a large metallurgical processing industry at Taku River in Northern British Columbia which would be based on the diversion of the Yukon River from its present northern course down the side of a steep plateau into the Pacific ocean. The Hamilton River Falls in Labrador, higher than Niagara, is another untapped source of mass power which may attract ocean transport-using industry to the Canadian hinterland.

The water-power situation places limits on the potential use of nuclear power in Canada. A demonstration power reactor is under construction with a view to testing the possibility of nuclear power competing with thermal power from coal-fired plants in Southern Ontario which has no coal deposits and where coal-transportation costs make the cost of thermal power about seven mills per kilowatt hour. The use of power in Canada increases at the rate of about six per cent a year. The generating capacity of existing plants is now estimated at 17 million horse power and projects under way or planned will increase that by 10 million horse power in the next 10 years. Thus the role envisaged for nuclear power in the near future is limited to providing supplementary power in areas where water-power resources become fully employed and powering mining and other industrial installations in remote northern areas where the cost of transporting fuel would be prohibitive.

MANUFACTURING

Manufacturing industries account for roughly 30 per cent of the value of all the goods and services produced in Canada. Generally these industries are expanding both in volume of production and in the range of articles produced, in keeping with the growth of population and rising levels of income and demand.

The advance, however, is not uniform. Manufacturing industries can be divided into two broad groups: those closely related to the primary industries, engaged in the processing and fabrication of Canadian raw materials; and those using imported materials, in the main dependent for their existence on the protective tariff or proximity to their Canadian customers.

The former group of industries has enjoyed uninterrupted expansion and prosperity since the end of the second World War. Although the bulk of their output is marketed outside Canada demand has been good. They are fully competitive with corresponding industries elsewhere, and they enjoy the maximum advantages which can be derived from large-scale operations.

In this group can be included the pulp and paper industries, based on forest products; flour milling and meat packing based on farm output; fish packing and processing based on the resources of the sea and inland lakes, chemical industries based on petroleum and other mineral products. Metal refining and smelting, based on mineral production also belongs in this group although, in the case of aluminum it rests on power resources and not on the ore supply. In the other group are to be found a wide range of industries producing finished goods or parts and components of finished goods. Most of them face active competition in the home as well as external markets from older-established, larger-scale industries in other countries, frequently in closer relationship to their sources of materials. The textile industry, for example, using imported cotton and wool, has experienced difficulty in holding even its local market in the face of British competition in woollens and United States competition in cottons and from both countries in synthetics. The electrical products industry in which the chief operators are subsidiaries of major United States companies has difficulty in meeting competition from Britain and Germany where wage costs are lower and from the United States where bigger volume enables

THE BRITISH COMMONWEALTH

manufacturers to derive maximum benefits from mass production techniques.

Thus while Canada appears to be firmly established as a major manufacturing nation the present position and future prospects for all branches of manufacturing are not uniformly good. One of the difficulties is that Canadian wage levels generally conform to a North American standard and follow the trend in the United States, while the efficiency of labour in terms of output per man-hour does not keep pace with that of the United States. This is generally due not to inefficient management or lack of capital but to the smaller scale of Canadian operations.

For a variety of reasons the manufacturing industries are concentrated in the southern part of Ontario and the south-western part of Quebec. This is the region of abundant and cheap water-power, of dense population and hence large local consuming markets, of easy transportation by both rail and water. It is also close to the large American industrial centres of Detroit, Chicago, Cleveland, Buffalo, from whose larger companies Canadian manufacturing operations draw capital, parts and components as well as instruction. American investment in manufacturing in Canada is very large. The automobile business is controlled in the United States. The large electrical manufacturing companies, the railway equipment companies, the rubber manufacturers, the chemical industry and a considerable part of the food processing and newsprint industries are either wholly or largely owned by parent American companies.

The farm machinery business presents a slightly different picture. The largest American company has extensive manufacturing facilities in Canada and the largest Canadian company operates plants in the United States as well as in Britain, Europe and Australia. Since there are no tariffs on farm machinery entering either Canada or the United States these companies tend to concentrate production of some lines in one country and some in another. One produces all its combine harvesters in Canada and all its tractors in the United States, for the combined Canadian-American market and for export.

TRANSPORTATION

In a country of vast distances and sparse population transportation is vital. Historically railway building in Canada has moved ahead of settlement. The opening up of the prairies in the early part of the present century was made possible by the building of trans-continental railways. Having the railways built the federal government set out to bring people to the lands in order to enable the railways to pay for themselves.

That process is now reversed. Railway building continues but new lines are built only when it is clearly demonstrated that there will be traffic to move over them. The vital part railways play in the day-to-day lives of the people and the historical use of railways to stimulate economic development have given the Canadian transportation system two of its unique features. The first of these is a large measure of governmental control and intervention for an economy otherwise based on the principles of private enterprise. Of the two big railway systems, the largest, the Canadian National Railways, is owned by the federal government. Some of the provincial governments also own, and operate railways. The Ontario Northland Railway, the Northern Alberta Railways and British Columbia's Pacific Great Eastern are examples. These railways are government-owned either because they were built pursuant to a public policy of opening up new territory when private enterprise was unwilling to take the risk or because private enterprise, having built a railway, became bankrupt and government took control to prevent a stoppage in transportation. The two main systems, the Canadian National, the world's

largest railway, and the Canadian Pacific, which by reason of its steamship and airline operations can claim to be the "world's largest transportation system", compete with one another for traffic in most parts of the country but avoid new building which creates duplicating facilities. Railway rates and services are firmly regulated by a Board of Transport Commissioners. A railway may not abandon an uneconomic line, build a new branch line or raise a rate without the Board's approval.

The other unique feature is that since they were pioneers in opening up new territory the railways have tended to be business octopuses; where services other than railways appeared to be needed, especially to further their own interests, they created them. The Canadian Pacific owns the controlling interest in one of the country's largest mining and smelting companies, has extensive land holdings, operates a Trans-Atlantic steamship line, three long-distance international airlines and many domestic air services. The Canadian National operates steamship services on both coasts, some on its own account and some as agent for the government. Both companies own extensive railway mileage in the United States. Both operate truck and bus lines.

Over the years the Canadian Pacific Railway has been a profitable undertaking. The government has had to underwrite some deficits on the Canadian National Railways but, under a recent revision of its capital structure that system is now expected to show a profit on the average year. Both railways have suffered in recent years from the competition of highway and air services which draw off their high-revenue traffic. They are currently attempting to meet airline competition with fast, luxury, trans-continental trains and competition on the highways by reductions in freight rates and "agreed charge" arrangements with large shippers.

One of the hard economic facts of transportation in Canada is that railway transportation is necessary to move large quantities of low-value commodities great distances—wheat from the inland prairies to seaboard, ore from mine to mill, lumber, newsprint, coal building materials. Yet the historic pattern of railway freight rate making has been to assess minimum charges on these commodities and higher charges on high-valued manufactured goods. There is even a statute which fixes rates on grain moving from the prairies to seaboard at a level deemed favourable to the development of grain growing in 1899.

With parliament and the public highly resistant to increases in transportation costs the railways have a difficult time adjusting their rate structure to the competition offered by the trucking industry, unregulated and bidding actively for a share in the long-distance movement of freight after establishing itself firmly in the short-haul field. Increasing population and traffic helps to reduce the burden of overhead resulting from high railway mileage but the transportation situation is not likely to become stable until either the railways are freed from some of their present restrictions or the trucking industry is regulated to curb its inroads on railway traffic.

Air transportation is the key which is opening up the Canadian northland, an important service in the developed areas. Under official policy Trans-Canada Airlines, a government-owned service, has a monopoly on long-haul east-west air routes. North-south and local feeder lines are generally operated by privately-owned companies, the most important of which is Canadian Pacific Airlines which shares with T.C.A. the international routes on which Canadian lines are licensed.

For ocean shipping services and for a sizeable part of its coastal water transport Canada relies on British and foreign-owned shipping. Canadian wage-rates and operating

costs make it difficult for Canadian-registered ships to compete although the argument is frequently advanced that, in order to protect its large volume of external trade, Canadian-owned steamship services should be supported by subsidy. Canada's coastal trade is open to Commonwealth but not to foreign-registered ships, a fact of some importance to inland water transport in view of the approaching completion of the St. Lawrence Seaway. This event which will take place probably in 1957 will be one of the more significant changes in transportation on the North American continent in the present century. It will permit deep-draught ocean vessels to travel a 2,000-mile inland water route from the Atlantic to the westerly end of Lake Superior. Unless the present policy of allowing Commonwealth ships to share in the coastal trade is altered it will enable British vessels to carry cargo from overseas to Montreal, pick up other freight and carry it to any of a score of inland ports. It will also lower the cost of hauling wheat from Fort William and Port Arthur to the sea by eliminating the need for transshipment. The old 14-foot canals on the international rapids section of the St. Lawrence River, hitherto a bottleneck to traffic will be replaced by a new 27-foot channel.

EXTERNAL TRADE

Foreign trade is of much greater importance to Canada than to most other countries. In terms of value, approximately one-third of the commodities produced are sold outside the country, and thus any serious disruption in exports is bound to have grave internal repercussions. Imports are no less essential to Canadian economic life although with the widening range of manufacturing the country is becoming somewhat less dependent on them. Large imports of coal, petroleum and machinery are necessary to industry, and a wide range of food, fibres and textiles must be imported to support the high standard of living built up by Canadians. Coffee, tea, citrus fruits are among the foods which must be imported.

The country's total foreign trade amounts roughly to \$9 billion a year, approximately equally divided between exports and imports. In recent years it has been normal to expect a small surplus of imports over exports, something which causes little worry on the score of balance of payments because of the sizable inflow of capital entering the country. The United States is by far the biggest customer for Canadian goods and the greatest supplier of goods to the Canadian market. More than half the exports go to the United States and considerably more than half the imports come from there. Bilaterally Canadian-American trade tends to be one-sided in favour of the United States. Balances in favour of Canada on trade with the United Kingdom and other overseas countries keep the overall Canadian trade position in reasonable equilibrium.

Concern is sometimes expressed at the dependence of Canada on exports to the United States in view of protectionist sentiment in that country. The hard fact remains, however, that until convertibility of currencies is restored there is no other outlet for the volume of materials which must be moved out each year to keep Canadian industry active.

PUBLIC FINANCE

Canadian governmental finance has been on a sound basis since the second World War. The federal government reported an unbroken series of surpluses from the

end of hostilities down to 1955 when a moderate deficit of \$150 million occurred. The federal government's budget is about \$4.5 billion, more than half of which is raised in direct taxes on personal incomes and corporation profits. Some 40 per cent of the federal budget or \$1.7 billion is spent on defence, while about \$1.6 billion goes in transfer payments including veterans', old age and other pensions, family allowances and health grants. The net public debt on March 31st, 1955 stood at \$17.9 billion on which the average interest charge is 2.86 per cent.

No discussion of Canadian public finance can be complete without looking at the condition of the ten provincial governments and the municipalities. The provincial governments draw part of their revenues from the federal treasury in subsidies. The rest comes from direct taxes, profits on state liquor monopolies, royalties and other fees on the use of national resources. Municipal corporations are chartered by the provinces, raise most of their revenue from real-estate taxation. Capital expenditures of all provinces and municipalities are increasing due to increasing population, increased concentration in urban centres and rising demands for services such as roads, hospitals and schools. Provincial and municipal budgets together amount to \$2.5 billion and their combined debt is more than \$4.5 billion.

THE OUTLOOK

Economic conditions in Canada in the years ahead appear certain to be influenced in large measure by conditions abroad, more particularly in the United States, her chief market for exports, and chief source of supply for imports and capital. A serious depression in the United States could hold Canada back. Assuming, however, that there will be no serious depression it seems certain that the economy will continue to advance, though at somewhat varying rates.

Projecting recent rates of growth forward 20 years, it is reasonable to assume a population of 22 to 23 million by 1975, an increase of 50 per cent, a gross national product of \$55 billion, an increase of 100 per cent.

The trend towards urbanisation of the population is expected to continue. Agricultural production may rise in absolute terms but arable land will soon be all taken up. Hence food production is not expected to keep pace with the increase in the output of other industries or with population. This, along with other factors will make for a more stable farm economy, less dependent on the export of food products, and it should reduce the sharp shifts in farm income which tends to set the pace for all business activity.

The nearby United States market for Canadian raw materials and foods may also become more stable because with the growth of population—another 50 million in the next 20 years—the United States will be more dependent on imports and may even move out of the export market in food products.

Throughout this period Canada will require large quantities of capital but it is likely to be provided increasingly from Canadian, rather than foreign sources. Relatively less capital may be required for commercial and industrial undertakings, relatively more for social undertakings such as utilities and municipal services, hospitals, schools and highway building.

THE BRITISH COMMONWEALTH

THE CONSTITUTION

CONSTITUTIONAL development has been mainly based upon four important acts of the British Parliament: the Quebec Act of 1774, the Constitutional Act of 1791, the Act of Union of 1840, and the British North America Act of 1867. The first is chiefly important as it established the French civil law throughout the then province of Quebec. The second is noteworthy for the division of the province into the French-speaking province of Lower Canada and the English-speaking province of Upper Canada, and for the concession of representative government through an elective Legislative Assembly which, however, had no control over the executive government except in so far as it could refuse to vote taxes (the non-tax revenue of the province was outside of its control). The Act of Union (Section 45) mentions the appointment by Her Majesty of the Executive Council, but does not refer to the responsibility of the Council. It can be stated that responsible government has existed in Canada by constitutional practice and precedent. It was recognised in the instructions which the Colonial Secretary of State transmitted to the Governors.

Responsible government appeared in Canada in 1847, the year when Lord Elgin was appointed Governor-General. On March 11th, 1848, the reorganisation of the Baldwin-La Fontaine ministry inaugurated the era of free government in Canada.

The fourth act separated the two Canadas from their existing legislative union to make them provinces, each administering its own local affairs, in a wider confederation, which within a comparatively short period so extended its boundaries as to take in the whole of British North America, except Newfoundland and Labrador.

The British North America Act 1867 provides that the Constitution of the Dominion shall be "similar in principle to that of the United Kingdom"; that the executive authority shall be vested in the Sovereign of Great Britain and Ireland, and carried on in his name by a Governor-General and Privy Council; and that the legislative power shall be exercised by a Parliament of two Houses, called the "Senate", and the "House of Commons".

The present position of Canada in the British Commonwealth of Nations was defined at the Imperial Conference of 1926: "The self-governing Dominions are autonomous Communities within the British Empire, equal in status, though united by a common allegiance to the Crown."

The Imperial Conference of 1930 was noteworthy, as regards constitutional development, in four respects

1. Agreement was reached as to the principles that should be followed in the constitution to judicial tribunals for the solution of disputes that might arise between Members of the British Commonwealth.

2. The recommendations of the Conference on the operation of Dominion legislation (1929) were approved. This approval involved conventional recognition that the powers of reservation and disallowance in respect to Dominion legislation were (apart from one specific and temporary exception) obsolete, and also the recommendation of clauses to be incorporated in the Act of Parliament known as The Statute of Westminster. These clauses were designed to ensure that the Parliaments of the Dominions should have full power to enact laws having extra-territorial operation; that within each Dominion the laws therein enacted should be supreme and should not be subordinated to legislation enacted by the Parliament at

Westminster; and that the Dominions in respect to merchant shipping and admiralty jurisdiction should have complete and unrestricted legislative power.

3. The Conference recommended to the Governments a draft British Commonwealth Merchant Shipping Agreement.

4. Certain detailed problems relating to inter-Imperial relations were considered and recommendations were made for their solution

The Statute of Westminster received the Royal Assent in December 1931. In its application to Canada the Statute emancipates the Legislatures of the provinces as well as the Dominion Parliament from the operation of the Colonial Laws Validity Act. A special section was, however, included providing that the Statute should not apply to the repeal amendment or alteration of the British North America Acts of 1867 to 1930, and also preventing the Dominions and provinces, in the exercise of their enlarged legislative powers, from trenching upon provincial and Dominion fields of legislative power respectively.

The Government

The national government works itself out through three main agencies. There is **Parliament** (consisting of the Queen as represented by the Governor-General, the Senate and the House of Commons) which makes the laws; the **Executive** (the Cabinet or Ministry) which applies the laws; and the **Judiciary** which interprets the laws.

Particular features of the British system of government are the close relation which exists between the Executive and Legislative branches, and the doctrine of Cabinet responsibility which has become crystallised in the course of time. The members of the Cabinet, or executive committee, are chosen from the political party commanding a majority in the House of Commons. Each Minister or member of the Cabinet is usually responsible for the administration of a department, although there may be Ministers without portfolio whose experience and counsel are drawn upon to strengthen the Cabinet, but who are not at the head of departments.

The second characteristic of the British system, the collective responsibility of the Cabinet, is very important. While each Minister is primarily responsible for the administration of his own particular department, that responsibility is shared, before Parliament and the country, by all his colleagues. Thus the Government of the day, not any particular Minister, is answerable for and must continue to exist, or must fall, on the stand taken by a Minister when acting in his official capacity.

Although the meetings of the Cabinet are presided over by the Prime Minister, in his capacity of President of the Privy Council, the Ministers all meet as equals and there is no precedence in Council. From the Cabinet signed orders and recommendations go to the Governor-General for his approval, and it is in this way that the Crown acts only on the advice of its responsible Ministers. The Cabinet takes the responsibility for its advice being in accordance with the will of Parliament and is held strictly accountable.

The Federal Parliament

Parliament must meet at least once a year, so that twelve months do not elapse between the last meeting in one session and the first meeting in the next. The duration of

Parliament may not be longer than five years. Senators (a maximum of 102 in number), are appointed for life by the Governor-General in Council. They must be at least 30 years of age, British subjects, residents of the province they represent, and in possession of \$4,000 over and above their liabilities. Members of the House of Commons are elected by universal adult suffrage for the duration of Parliament.

Under the British North America Act, which is the basis of the constitution, the Dominion Parliament has exclusive legislative authority in all matters relating to public debt and property; regulation of trade and commerce; raising of money by any mode of taxation; borrowing of money on the public credit; postal service; census and statistics; militia, military and naval service and defence; fixing and providing for salaries and allowances of the officers of the Government; beacons, buoys and lighthouses; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea-coast and inland fisheries; ferries on an international or interprovincial frontier; currency and coinage; banking, incorporation of banks, and issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for Indians; naturalisation and aliens; marriage and divorce; the criminal laws, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries, such classes of subjects as are expressly excepted in the enumeration of the classes of subjects exclusively assigned to the Legislatures of the provinces by the Act. Judicial interpretation and later amendment have, in certain cases, modified or clearly defined the respective powers of the Dominion and Provincial Governments

Provincial Government

In each of the ten Provinces (Newfoundland joined with Canada as the tenth province on April 1st, 1949) the Queen is represented by a Lieutenant-Governor, appointed by the Governor-General in Council, and governing with the advice and assistance of the Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislatures are unicameral, consisting of an elected Legislative Assembly, except in Quebec, where there is a Legislative Council as well as a Legislative Assembly.

The Legislature in each province may exclusively make laws in relation to: amendment of the constitution of the province, except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and charitable institutions in and for the province, other than marine hospitals;

municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnisation of marriage in the province; property and civil rights in the province; the administration of justice in the province, including the constitution, maintenance and organisation of provincial courts both of civil and criminal jurisdiction, and including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province. Further, provincial Legislatures may exclusively make laws in relation to education, subject to the protection of religious minorities, who are to retain the privileges and rights enjoyed before Confederation.

Municipal Government

Under the British North America Act, the municipalities are the creations of the Provincial Governments. Their bases of organisation and the extent of their authority differ in different provinces, but almost everywhere they have very considerable powers of local self-government.

GOVERNORS-GENERAL OF CANADA

1867-1955

<i>Name</i>	<i>Assumed Office</i>
Viscount MONCK, G.C.M.G.	1867
Lord LISGAR, G.C.M.G.	1869
The Earl of DUFFERIN, K.P., K.C.B., G.C.M.G.	1872
The Marquis of LORNE, K.T., G.C.M.G.	1878
The Marquis of LANSDOWNE, G.C.M.G.	1883
Lord STANLEY of PRESTON, G.C.B.	1888
The Earl of ABERDEEN, K.T., G.C.M.G.	1893
The Earl of MINTO, G.C.M.G.	1898
Earl GREY, G.C.M.G.	1904
Field-Marshal H.R.H. The Duke of CON- NAUGHT, K.G.	1911
The Duke of DEVONSHIRE, K.G., G.C.M.G., G.C.V.O.	1916
Gen. Lord BYNG of VIMY, G.C.B., G.C.M.G., M.V.O.	1921
Viscount WILLINGDON of RATON, G.C.S.I., G.C.I.E., G.B.E.	1926
The Earl of BESSBOROUGH, G.C.M.G.	1931
Lord TWEEDSMUIR of ELSFIELD, G.C.M.G., C.H.	1935
The Earl of ATHLONE, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O.	1940
Field-Marshal Viscount ALEXANDER of TUNIS, K.G., G.C.B., G.C.M.G., C.S.I., D.S.O., M.C., LL.D., A.D.C.	1946
Rt. Hon. VINCENT MASSEY, C.H.	1952

THE BRITISH COMMONWEALTH

THE GOVERNMENT

Governor-General: Rt. Hon. VINCENT MASSEY, C.H.,
M.A., LL.D., D.C.L.

FEDERAL MINISTRY

Seat of Government. Ottawa, Ontario.
(Liberal Administration formed November 12th, 1954.)

Prime Minister and President of the Privy Council: Rt.
Hon. LOUIS ST. LAURENT, P.C., Q.C.

**Minister of Trade and Commerce and Minister of Defence
Production:** Rt. Hon. C. D. HOWE, P.C., B.SC

Minister of Agriculture: Rt. Hon. JAMES GARFIELD
GARDINER, P.C.

Minister of National Health and Welfare: Hon. PAUL
J. J. MARTIN, Q.C.

Minister of National Revenue: Hon. JAMES J. McCANN,

POLITICAL PARTIES

National Liberal Federation of Canada: 130 Queen Street, Ottawa, Ont. The Liberal Party advocates the importance of the individual and the family, the preservation of political freedom as a means to ensure economic freedom and the extension of a maximum of security to all citizens. It has brought into being a comprehensive federal social security programme, and has approved a fiscal policy of balanced budgets and a more equitable distribution of the rapidly rising national income. It favours public ownership and control of the Central Bank and advocates reduced tariffs and freer world trade. The party stands for co-operation between nations, a friendly association with Commonwealth countries, and close relations between the British and American peoples. It gives full support to the United Nations and the North Atlantic Treaty Organisation. Hon. Pres. Rt. Hon. LOUIS S. ST. LAURENT, P.C., Q.C., M.P. (Prime Minister); Pres. DUNCAN K. MAC-TAVISH, O.B.E., Q.C.; Vice-Pres. ROLAND BOCK, W. P. GREGORY, Q.C., H. B. WHITESIDE, S. S. RAJUSE, W. APPLEBY, Mrs. C. J. EMBREL, Hon. Treasurer W. W. WOODRUFF; Hon. French Sec MAURICE BOURGET, M.P.; Hon. English Sec. A. B. WESELAKE; Con. Sec. H. E. KIDD

Progressive Conservative Party: 141 Laurier Avenue West, Ottawa; successor to the Conservative Party. The Conservative Party was reorganised at a national convention in December 1942, when its name was changed and its policies were brought into line with new economic conditions. The creed adopted in 1942 pledges the Party to "Freedom, Security, Opportunity and the British Partnership". Its agrarian and labour policies pledge guaranteed parity income for farmers and the establishment of a national labour code, including guaranteed collective bargaining, extension of labour management committees, minimum wages, maximum hours of work, minimum age of employment, holidays with pay, and equal pay for equal work as between men and women. The Party stands for a uniform and comprehensive contributory social security plan, including extended unemployment insurance coverage, accident and sickness benefits, children's allowances, maternity benefits, widow's benefits, and retirement pensions. The Party believes in an aggressive expansion of Canadian export and import

trade, and for this purpose advocates the continuance of long-term trade credits to foreign countries, the establishment of an export board with power and authority to determine and pay whatever difference may exist between a fair Canadian price and the actual world market price on approved items of export. The Party stands for a fostering and encouragement of private enterprise and opposes socialism and state control. It advocates co-operative planning by representatives of labour, management, agriculture and government but disapproves of state planning. Leader Hon. GEORGE A. DREW, P.C., Q.C., M.P., Ottawa; National Secretary, W. H. KIDD, General Executive KATHLEEN KEARNS

Social Credit Association of Canada: National Office: 7-9 Pleasant Building, Toronto, Ont.; was set up in April 1944 at Toronto, representatives from all parts of Canada being present; Publ. *Canadian Social Creditor* (bi-weekly). At the Regina Conference in 1950 the administrative work was separated from the political, National Leader of the Party, SOLON E. LOW, M.P., National President, ERNEST G. HANSELL, M.P.

Co-operative Commonwealth Federation: National Office: 301 Metcalfe Street, Ottawa; organised in 1932 as a federation of Labour, Farmer and Socialist Parties. It advocates the establishment of a planned economy, control over finance and credit through a National Investment Board, the public ownership of certain key industries and a comprehensive programme of social services, including national health insurance and pensions for the incapacitated. In international affairs, while supporting military preparedness, the C.C.F. advocates greater emphasis on economic aid and technical assistance to under-developed countries. It has 24 members in the House of Commons and polled 12 per cent of the popular vote in the 1953 elections. National President and Parliamentary Leader M. J. COLDWELL, M.P., Ottawa, National Chair. DAVID LEWIS; Sec. LORNE INGLE

Labour-Progressive Party: 555 Bloor Street West, Toronto, Ont.; National Leader TIM BUCK, Organising Sec. LESLIE MORRIS, Labour Sec. WILLIAM KASHTAN; Education Dir. NORMAN FREED; Treas. PAUL PHILLIPS.

THE LEGAL SYSTEM

There are two courts constituted by the Dominion with jurisdiction throughout Canada—the Supreme Court of Canada and the Exchequer Court of Canada. The administration of justice in the provinces, including the constitution, maintenance and organisation of the provincial courts, both civil and criminal, including procedure in civil matters in those courts, rests with the provincial authorities.

Judges of the Superior Courts hold office for life, while all others must retire at the age of 75. They are appointed by the Governor-General in Council, and must have been admitted to the bar at least ten years before appointment. All are paid their regular salaries by the Federal Government, but in some of the provinces they receive extra remuneration for presiding over certain provincial courts. No judge may engage in any occupation or business other than his judicial duties.

DOMINION COURTS

1. **The Supreme Court of Canada** has jurisdiction as a Court of Appeal in both civil and criminal cases throughout the Dominion. It is also a Court of Appeal for controverted election cases, from the Exchequer Court, and from the Board of Railway Commissioners. It also has jurisdiction in controversies between the provinces and the Dominion. The Governor in Council may refer to the Supreme Court for an opinion upon any matter deemed advisable in the public interest. Leave to appeal from the decisions of the Supreme Court may be granted by the Judicial Committee of the Privy Council of Great Britain in all actions commenced before the 23rd December, 1949. There are three sessions of the Court each year.

Chief Justice of Canada: Hon. PATRICK KERWIN, P.C.

Puisne Judges: Hon. ROBERT TASCHEREAU, Hon. I. C. RAND, R. L. KELLOCK, Hon. C. H. LOCKE, Hon. J. R. CARTWRIGHT, Hon. GERALD FAUTEAUX, Hon. D. C. ABBOTT, P.C.

Registrar: PAUL LEDUC, Q.C.

Law Reporters: A. E. RICHARD, F. DES RIVIERES.

2. **The Exchequer Court of Canada** possesses exclusive original jurisdiction in all cases in which demand is made or relief sought against the Crown or any of its officers. It enforces the law relating to revenue, and has concurrent jurisdiction in copyright, patent and trade-mark actions. The Court has jurisdiction in Admiralty matters, and it acts as Prize Court in time of war.

President: Hon. J. T. THORSON

Puisne Judges: Hon. J. C. A. CAMERON, Hon. J. D. KEARNEY, Hon. ALPHONSE FOURNIER, Q.C., Hon. L. McRITCHIE

Registrar: GABRIEL BELLEAU, Q.C.

BROADCASTING

A Royal Commission on Radio Broadcasting recommended in 1929 that broadcasting should be organised and operated as a public service. This recommendation was affirmed by a special Committee of the House of Commons in 1932, and at the same session of Parliament the Canadian Radio Broadcasting Act was enacted providing for the appointment of a Commission with the twofold power, (1) operating a national broadcasting service; and (2) controlling all broadcasting in Canada. This statute was repealed by the Canadian Broadcasting Act, 1936, which came into effect on November 2nd of that year. On that date the Commission was succeeded by the Canadian Broadcasting Corporation.

The Corporation consists of a board of eleven governors, appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Board is headed by a full-time Chairman (1945) and determines and supervises the policy of the Corporation. Executive functions are exercised by a General Manager and Assistant General Manager. By the statute under which it operates, the Corporation is empowered to carry on a national broadcasting service and to control all programmes broadcast in Canada. The C.B.C. operates 22 AM stations in Canada, eight of them with a power of 50,000 watts. These and other developments in the national system are in accordance with a plan of national coverage laid down in 1936. All network services in Canada are operated by the corporation, and the main networks are the Trans-Canada, Dominion, and French networks. In addition to nineteen stations operated by the Canadian Broadcasting Corporation, 96 privately owned stations are affiliated with the networks in giving national distribution to programmes. In addition there are 61 privately owned stations not affiliated with the network.

The Canadian Broadcasting Corporation is maintained by revenue from a 15 per cent excise tax on radio and television sets and on certain parts for radio and television sets. This is supplemented by a limited amount of revenue from advertising. A Royal Commission which reported in 1951, endorsed the present radio system in Canada, and recommended that the income of the C.B.C. be supplemented by statutory grant. The revenue received by the

privately owned stations is from the sale of time to commercial sponsors for advertising. The regulations made by the Corporation, and applicable to all stations in Canada, permit advertising, but not to exceed 10 per cent of any programme period. The quality of all programmes must conform to standards required by the regulations.

In addition to its domestic operations, it operates the C.B.C. International Service—the Voice of Canada abroad—on behalf of the Canadian Government. The International Service is not a charge on the licence fee paid by Canadian listeners, but is financed by special Government grant. Short-wave broadcasting began early in 1945, and the C.B.C. International Service is now making regular transmissions in fifteen languages. One of the features of the International Service which is now being developed is a spoken-word transcription service, which is carried out in English, French and Spanish.

Television: C.B.C.-T.V. stations are now in operation in many of the large towns. Increase in the number of publicly owned and privately owned TV stations in Canada will eventually evolve into a national television service parallel to the partnership between publicly and privately owned stations that makes up Canada's national radio system.

CANADIAN BROADCASTING CORPORATION

Head Office: 140 Wellington Street, Ottawa.

BOARD OF GOVERNORS

A. D. DUNTON (Chairman); D. A. POULIOT (Vice-Chairman), Montreal, R. K. GERVIN, Vancouver, F. J. CRAWFORD, Toronto; Dr. G. D. STEEL, Charlottetown; J. A. CORY, Kingston; G. GINGRAS, Montreal, K. G. MONTGOMERY; GORDON A. W. WINTER, St. John's; ROGER J. FRY, Winnipeg.

ADMINISTRATION

General Manager: J. ALPHONSE OUMET.
Assistant General Manager: E. L. BUSHNELL.
Controller of Administration: R. P. LANDRY
Co-ordinator of Radio: A. K. MORROW.
Co-ordinator of Television: J. P. GILMORE.

FINANCE

BANKING

Bank of Canada: 234 Wellington Street, Ottawa; f. 1934; cap. p.u. \$5,000,000; notes in circulation \$1,623,456,907; total deposits \$657,806,916; res. \$20,403,347 (as at Dec. 31st, 1954); Gov. JAMES E. COYNE; Deputy Gov. J. R. BEATTIE.

The Bank operates under the provisions of the Bank of Canada Act which was last amended in 1954. Its chief function is to control the total volume of money and credit through changes in the chartered (commercial) banks' cash reserves. Each chartered bank is required to maintain, on the average during each calendar month, an amount of cash reserves, in the form of Bank of Canada notes and deposits with the Bank of Canada, equal to not less than 8 per cent of its Canadian dollar deposit liabilities. The Bank may alter the percentage required, upon giving at least one month's notice, between 8 per cent and 12 per cent but cannot in any one month increase the percentage by more than one. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. It is empowered to buy and sell securities on the open market, to make loans or advances for periods not exceeding six months to chartered banks, the Government of Canada, and the government of any province, and to buy and sell bullion and foreign exchange.

Industrial Development Bank: Head Office: Ottawa, Ont.; General Manager's Office: 901 Victoria Square, Montreal, Quebec; brs. in Toronto, Ont., Vancouver, Winnipeg, cap. auth., issued and p.u. \$25,000,000; res. \$6,222,527 (as at Sept. 30th, 1954); total assets \$43,084,570; Pres. J. E. COYNE; Gen. Manager D. G. MARBLE, C. H.; Sec. L. F. MUNDY.

The Industrial Development Bank, established on November 1st, 1944, is a subsidiary of the Bank of Canada, but operates as a separate entity. Its function is to supplement the activities of the chartered banks and other lending agencies by providing capital assistance to industry in cases where credit would not otherwise be available on reasonable terms and conditions.

Bank of Montreal: 119 St. James Street West, Montreal, Que.; London Office: 47 Threadneedle Street, E.C.2; f. 1817; (Dec. 1954) cap. p.u. \$44,000,000; res. fund \$88,000,000; Hon. Pres. H. R. GEOGRAPHY

THE total area of Australia, including Tasmania, amounts to 2,947,581 sq. miles. This is an area almost as great as that of the United States of America and nearly three-quarters that of Europe. The several States vary considerably in size. Western Australia is the largest (975,920 sq. miles) followed by Queensland (670,500), South Australia (380,070), New South Wales (309,433), Victoria (87,884), and Tasmania (26,215). The Northern Territory has a total area of 523,620 square miles and the Australian Capital Territory 939. The country is situated entirely in the Southern Hemisphere, nearly 40 per cent of the total area lying within the tropics, the remainder being in the temperate zone. As a result, Australia experiences a wide range of climates. On the whole, it is a country of limited rainfall—there are several noteworthy exceptions—and large parts of it are desert or semi-desert.

GEOLOGICAL CHARACTER

The physiography of the Australian continent is relatively simple. The Australian land-mass, with New Guinea and Tasmania, forms part of an old structural platform which is approximately defined in area by the 100-fathom isobath. This platform rises, in places very steeply, from great abyssal depths but is itself so shallowly submerged north and south of Australia that a drop in sea level of approximately 100 ft. (in the case of New Guinea) and 200 ft. (in the case of Tasmania) would reunite these islands to the mainland of Australia.

Only on the eastern and north-eastern edges of this platform, where there have been two distinct periods of crustal folding, does pronounced relief appear. Elsewhere relief is subdued owing to the absence of any intense tectonic activity, and to the exposure of the western two-thirds of Australia to normal processes of weathering since Permian times (*c.* 150 million years ago).

This latter (western) area, usually termed the "Shield" region, may be said to comprise the whole area west of Cloncurry that lies at altitudes of over 500 ft., (i.e. part of Queensland, and most of South Australia, Western Australia, and Northern Territory), and also including the coastlands of Western Australia. With its structural nucleus formed by the exposed granite plateau on which stands Kalgoorlie, this old Shield mass, during and after the Permian period, was slowly uplifted along its western edge, and in the east downwarped to form the western limb of a great trough. The extreme western edge became topographically accentuated by faulting movements (as along the line south from Moora in Swanland). Thus from Cape Talbot around the North-West Cape to the Great Australian Bight the "grain" of the land is towards the interior and, as a result, Western Australia turns its back to the sea. The lowlands of the littoral broaden out into the Basin of the Christmas River system (important for its artesian water), but apart from this one region tend to exist merely as a narrow strip between 20 and 100 miles wide. Across this flow the few permanent and ephemeral streams that feebly cut back into the arid hills; and in this area is concentrated most non-mining settlement.

In the interior the ancient plateau, besieged by headward eroding streams in the west and north, presents a fossil landscape which remains much as it must have been before its uplift many million years ago. The shallow lakes of the south-west and residual tabular blocks alone give an

indication that at some earlier time there must have been moister conditions, with river systems which eroded this region into its present featureless monotony. Extensive weathering of hill slopes and deposition of loose material as a thick mantle (under present arid conditions) combine to accentuate the topographic "senility" of the landscape, and to obscure the few surviving vertical relief features.

Along the eastern margins of this Shield region lie the Macdonnell and Musgrave ranges. Rising to over 4,000 ft., these form a topographical break in the general plateau level (which is 1,000 ft.) but they are structurally no different from the rest of the old Shield formation. Physiographically, and in terms of human geography, their significance is much smaller than a contour map would suggest.

The second main structural and relief region of Australia consists of a great trough of lowland stretching from the Gulf of Carpentaria in the north to the mouth of the Murray River in the south. Topographically, the lowland can be divided into three main areas, the Carpentaria coastal region, the Lake Eyre Basin and the basin of the Murray-Darling systems. In the south its unity is broken by the Flinders Mountains, which have been produced by faulting.

This whole region was down-warped at a geological period contemporaneous with the formation of the Wealden rock systems of Britain, and soon afterwards (in Tertiary times) eroded down to a flat plain. Thereafter the lowland remained unaffected either by the tilting of the Western Shield or by the mountain building movements in the east. Its drainage systems consist largely of a series of shallow basins sometimes without connection to the sea and the whole region presents a semi-desert landscape of ephemeral salt-lakes and streams.

Owing to its geological conformation as a trough, the particular human importance of this region lies in its artesian water. The Great Artesian Basin, lying north of the Darling and of the Flinders Range, measures some 600,000 sq. miles in extent and its water-bearing strata (Cretaceous and Jurassic rocks) are generally more than 6,000 ft. thick. The artesian water varies from place to place in both salinity and temperature; but its occurrence alone makes possible the permanent agricultural use of the only major Australian region where soil is actually accumulating on any large scale.

The third and last major region is that of the Eastern Highland belt, extending from the Cape York Peninsula south to Tasmania. Rarely of any considerable height (only in three small areas, the New England Plateau, the Blue Mountains, and the Australian Alps, rising over 3,000 ft.), these highlands, topographically and structurally, are complex masses rather than true north-south ranges.

There has been considerable oscillation of surface level, with periods of submergence by the sea. Rock series of highly varied age and character were in consequence formed: the most important perhaps being several coal and lignite beds—the coal measures of Newcastle and Atherton (Permian), Gippsland and the Darling Downs (Jurassic); and the lignites of Latrobe.

At a later period the whole eastern zone was folded, fractured and uplifted by the same earth movements that elsewhere in the world produced the Alps and Himalaya.

A downward warping brought into existence the Tasman Deep between Australia and New Zealand, and submerged lowland zones both in the north and south—separating New Guinea and Tasmania from the mainland mass. An opposite, upward movement produced a series of high plateau regions deeply scored by gorges and canyons—e.g. as at Canberra. This countryside of uplands and rugged defiles appeared forbidding to early settlers on the coastlands, but was in fact easier to penetrate than the Appalachian ranges of North America.

During the same geological period great basalt flows (true volcanic development) as well as structural changes in rock series effected a westward movement of the main drainage divide. The eastward-flowing river systems diverted the headwaters of the western slope streams, and in so doing deprived the western area of much of its water supply; a situation that man is now reversing to a minor extent by the Snowy Mountain and River Murray power and irrigation schemes. The present tortuous courses and complex structures of the rivers include the unusual sequence of broad upper valleys, narrow gorge-like middle sections, and open but flood-vulnerable lower courses.

Later geological changes have been few. The effects of an Ice Age have not been great on topography except through changes in sea-level. These later changes, together with simultaneous earth movement, produced the shallows off the Queensland coast on which the Great Barrier Reef developed; the drowned valleys and indented coast of New South Wales and Victoria, and the uplifted, cliffed shores of the Great Australian Bight.

CLIMATE

Climatic conditions for the most part emphasise the tripartite physiographic division of Australia, while also introducing a new element—a distinction between the northern and southern halves of the continent. The main climatic characteristics are determined largely by the global position of the continent in relation to the normal pressure systems of the Southern Hemisphere, and to the movements of air masses over the continent of Asia.

The main atmospheric pressure belts are primarily determined by the unequal distribution of solar heating (insolation), and by the differential effects as between land and sea heating. Where heating is greatest (i.e. close to the Equator) there tends to occur a low-pressure zone of inflowing and uprising warm air. To north and south of this belt lie high-pressure zones of cooler descending air—from which air streams move away towards the Equator (producing the Trade Winds), and towards the Temperate-Polar regions (giving rise to the Westerlies).

Australia is affected by climatic conditions associated with each of these main belts as they seasonally swing north and south, and are modified by the thermal effects of land and sea distribution and by the Asiatic monsoons. During the summer the equatorial low-pressure zone extends as far south as the hot north-western region around Pilbara, while a high-pressure belt develops over the Australian Bight in the far south.

Over the northern area, from the North-West Cape to Cape York Peninsula, travel a series of shallow and slow moving depressions. As a result of comparative thermal stability as the humid air moves from warm seas over a hot land-mass, and because of the absence in this old Shield region of highlands that might bring orographic rain, total rainfall is low. Most rain in fact occurs during the passage inland of small but intense tropical cyclones, and it therefore tends to be markedly concentrated in time, variable in quantity, and local in effect. Tropical air, intense insolation, and the absence of any cooling factors result in average summer temperatures rising to over 90° F.

Over the remainder of the Shield region light and variable components of the Trade Wind system blow outwards from the southern continental interior. Precipitation results only from the entry of occasional tropical cyclones from the north, or from the intrusion of small unstable and damp air masses from the Bight. Air humidity and cloudiness are low, rainfall small and highly variable in time. High temperatures are lowered in average by the occasional indraught of cooler southern air, and on the West Australian coast cool offshore currents slightly reduce temperatures along the coastal margins.

In the north-east, the Queensland coast receives weak but humid south-east Trade Winds off the warm southern Coral Sea. Rainfall is intensified by the orographic effects of the highland divide to the west, and also by the incidence of tropical hurricanes incurving from the Coral Sea. Off-sea winds and considerable periods of cloudiness reduce average temperatures to about 80° F., although the very high humidity makes conditions unduly oppressive for human activity—and it often seems hotter than is actually the case.

In the south-east of Australia precipitation is largely of weak Trade Wind origin, but the total effect of periodic intrusions of colder air from the south is important in supplying rainfall from "depressions", and in reducing average temperatures to between 60° and 70° F. In this region topography has considerable effects on climate. The high plateau of New England, the Blue Mountains, and Australian Alps concentrate most of the rainfall on their eastern slopes and produce a marked "rainshadow" (i.e. drying) effect to the west. Details of altitude and aspect become of particular significance in determining local rainfall and temperatures. Of considerable importance too are the storm winds, the "Southerly Bursters" of cold Polar air, and the "Brickfielders", hot arid winds from the interior.

These basic climatic influences of the southern summer are slightly modified by monsoonal factors. The south-east trades in particular are weakened by air-masses from the Asiatic high-pressure centres to the north—air-masses which strengthen the normal southward flow into the general summer intertropical front, and which give something of a monsoonal character to the climate of north Australia.

During winter (June–September) the main pressure belts move north. The High Pressure belt now becomes centred in the interior, and the Low Pressure formed from Polar air covers the summer-dry regions of southern Australia.

In this period most of northern Australia is affected by south-east Trades from the interior, varied only by the passage of low pressure cols and inblowing Polar air from the south. Over the central and northern Shield and central lowland regions rainfall is very low, and average temperatures range between 55° and 75° F., the isotherms running parallel to latitude. On the Queensland coast the Trade Winds blowing onshore bring a second rainfall maximum of much the same character as that of the summer.

Along the southern coastlands a succession of "depressions", like those of the British Isles, brings winter rainfall of Mediterranean type and average temperatures of about 50° F. to Swanland, the Flinders region and Victoria. The Nullarbor Plain to the north of the Bight receives precipitation only from the infrequent development of large and intense Antarctic storms, and in most years is as arid as the continental interior.

In the south-eastern regions of New South Wales winter climate is governed by the balance between a development of depressions, and the outflowing air masses from the interior. Average temperatures range generally between

THE BRITISH COMMONWEALTH

50° and 55° F. but vary considerably according to locality. Rainfall from depressions brings a second rainy season. During this winter period the south-east Trades are considerably strengthened by the pull exerted by the monsoon low pressure centred over Asia, and as a result the northern lands of Australia are completely dominated by dry air masses moving north from the interior.

The climates of Australia may therefore be grouped as follows:

The eastern highland belt and the associated coastlands have a main summer rainfall maximum with another, secondary, maximum in winter. Rainfall totals, depending on altitude, aspect, and incidence of tropical and temperate cyclones vary from about 40 in. in the southern lowlands to over 80 in. in the Tasmanian hills and parts of Queensland.

The northern lowlands have a pseudo-monsoonal character, with temperature, rainfall and humidity maxima occurring during summer—winter being a cooler, dry season with some hurricane rainfall. Total precipitation ranges between 30 and 60 in.

The southern coastlands have a "Mediterranean" climate of hot summers and warm winters with a marked summer dry season. This climatic region has no marked limit to the north but zones imperceptibly into the semi-arid interior. The interior plateau and central lowland regions, stretching from the west coast to the Darling Basin, are desert and semi-desert lands. Rainfall is low in total amount (ranging from 6 to 15 in.), and extremely variable in incidence. This, together with intense solar heating and evaporation over long periods, makes the region the "Dead Heart" of Australia.

VEGETATION

The geomorphological and climatic characteristics so far outlined control the drainage patterns and the distribution of soil and vegetation types.

Over one-half of Australia is so arid that rainfall either percolates immediately into the ground or quickly evaporates without forming surface channels. The only exception to this is the formation of stormwater gullies of the "wadi" type. In the Nullarbor plains a large expanse of bare limestone accentuates this aridity-induced phenomenon.

Over an additional one-quarter of the area (the central lowland region and near the west coast), rivers of intermittent flow are typical. The irregular drainage system of Lake Eyre is completely ephemeral in character, and few of the western coastal streams have recorded periods of flow of longer than one year.

Only on the better-watered fringes of the northern coastlands, the eastern highland slopes, Victoria and Swanland are permanent rivers to be found. Great fluctuations in volume—induced by season and storm—are characteristic of these rivers of Queensland and New South Wales. Only those streams (notably the Murray and its upper tributaries) that tap the spring thaws of winter snow in the Australian Alps can be said to have fairly constant régimes, and even here high evaporation-rates reduce the flow of the lower courses.

The soil-vegetation complex displays a similar concentric pattern around the desert heart. Those areas with a total annual rainfall of less than 10 in. in the north and 8 in. in the south have no true soil development. Gibber (gravel and bare rock) and dune areas stretch along latitude 26° S., as areas merely of rock weathering completely devoid of vegetation. In sheltered hollows, and on perched desert water-tables, spinifex grasses and mulga bush exist spasmodically, but their possible contribution to soil formation is quickly destroyed by oxidation.

On the northern margin of the desert area, where annual rainfall is between 10 and 15 in., are developed tropical steppe soils, thin and unstable and carrying a discontinuous cover of saltbush and mulga scrub-forest. Here may be observed a marked vegetative response to climatic variations, rainstorms bringing flushes of new grass that quickly die away.

On the north and east margins of the dry steppe zone stretches the Grey Earth-Savannah belt. Markedly seasonal rainfall totalling about 15 in., and a normal excess of evaporation over precipitation, produce an open landscape of mitchellgrass and brigalow scrub on unleached fairly well-developed soils. Local groundwater supplies in clayey areas and in the beds of ephemeral streams sometimes induce forest growth. This is the cattle range country of the Northern Territory, and of the Queensland part of the central lowland region.

On the southern steppe margin, a predominantly calcareous parent rock together with marked dry onshore winds from the Bight give rise to a special type of soil which carries a unique vegetation of mallee and saltbush. Where these chestnut soils—saline and with high lime content—experience an annual rainfall of about 10 in., mallee and saltbush give a nutritionally good permanent pasture for sheep, while the comparatively high humus and mineral content of the soils (apart from some minor deficiencies in trace elements), makes marginal wheat farming a possibility.

Leached soils with forest and scrub vegetation characterise the wetter regions of the northern coastlands, the eastern highland belt and littoral, South Victoria and Swanland.

In North Arnhem Land and on the Cape York Peninsula heavy annual rainfall results in considerable soil leaching, and long periods of insolation produce rapid oxidation of organic matter. The occurrence of long dry spells, particularly during the warm winter, thus inhibits extensive tree growth, and vegetation is a generally poor open eucalypt scrub.

From north-east Queensland south to Tasmania lies a discontinuous belt of true rain-forest, with a range from equatorial to cool temperate flora. In the whole of this region eucalypt varieties predominate.

In the extreme north, coastal mangrove swamps, softwoods of the palm and cypress type, together with epiphytes and lianas of Indonesian origin, are found along with giant eucalypt stands.

South of Sydney the giant eucalypts, epiphytes and ferns are associated with conifers and beeches, while in Swanland two particular species of eucalypt, the Jarrah and Karri, are the dominant types. In this rainy zone generally the details of plant association vary considerably with local differences in climate and soil.

In New South Wales and Victoria, rather sterile heavily leached soils usually carry scrub and grasses, which also predominate on the bleaker high plateau areas. Here the luxuriance of tree growth is a fairly accurate guide to soil thickness, fertility and human usefulness. Here too, the early settlers naturally first used the grassland areas (which did not need clearing) for cultivation, and thereby first farmed the poorest land.

In Tasmania, Jarrah and Karri eucalypt hardwoods cover the wetter districts (those which receive over 30 in. of rain per annum), and the climatic gradation into the drier interior is marked by a succession of zones of gums and acacias.

Lying between the damper wooded periphery and the interior Savannah country, is a zone of black and chestnut soils. Receiving between 18 and 20 in. of rainfall annually, this zone carries a vegetation transitional between forest and grassland. In the northern part of the region around Townsville the concentration of rainfall in the summer,

and the high air temperatures of the dry winter, hinder tree growth and encourage the growth of tall grasses. Seasonal leaching and rapid humus formation and accumulation have produced rich black soils with an unusually high concentration of organic material. Where rainfall is more uniformly distributed throughout the seasons (as in New South Wales), open parkland and chestnut forest soils predominate.

This last transitional region is the only part of Australia in which mature soil development is neither inhibited by aridity nor adversely affected by heavy leaching or by general soil erosion on steep mountain slopes. It has the richest agricultural resources of the continent.

ECONOMIC RESOURCES

There have been three phases in the development of the Australian potential. The first began with establishment in 1788 of a penal colony on the only part of the coast that appeared from the sea to afford a possible landing, and the subsequent sanguine extension of pioneer pastoral farming to the desert margins. The second phase, from 1850 to 1900, involved a more realistic assessment of agricultural resources, the discovery of vast mineral wealth and the appearance of peripheral zones of comparatively close settlement. The third, still continuing, is one of the growing social and economic maturity, of a turning away from a primitive dependence on wool and wheat.

From the first doubts were expressed about the practicability of carrying out London's instructions that "... the Settlements of New Holland must clearly be considered as Receptacles for Offenders ... their growth as Colonies must be a secondary consideration". The geographical factors made a "Gaol-break" inevitable. The lowlands first settled around Fort Jackson were restricted in area by surrounding hills, and the sterility of their soils intensified the poverty of results achieved by ill-directed convict farm labour. Less attractive than neighbouring regions such as the Hunter Valley, the County of Cumberland became a place from which to escape. Once the key routes westwards via the plateau summits were discovered there were no real topographical barriers such as had existed while the only routes lay along deeply dissected valleys. It was an empty land: no governmental decree could confine free settlers or time-expired convicts within legal boundaries while such vast possibilities lay beyond the horizon. Lastly there were the energy of individuals like Macarthur, the ideas of Wakefield and his like and the virility of the "squatters". Clearly the opportunities for extensive wool—and to a lesser extent wheat—production would not be missed in areas which were in any way accessible from the first coastal points of settlement.

The latent sources of wealth of the Australian continent are considerable. As indicated earlier, coal reserves of varying ages and characteristics exist in abundance along the whole extent of the eastern young rock belt, from Littler in Queensland, through Ipswich (behind Brisbane), and the fields of Newcastle and Latrobe, to the Collie basin near Perth. The Newcastle coalfield has particular importance by reason of its position on the coast near the main

population centres. Total production* is now nearly 20,000,000 tons per annum. Iron ore is less plentiful. But, first using the Newcastle coal-measure iron, nowadays relying on the ores of the Middleback Ranges of South Australia, and with future supplies assured in the Yampi Sound deposits, there has been developed an iron and steel industry with the lowest raw material cost and final product prices in the world.

Resources of non-ferrous metals (including lead, zinc, copper and tin as well as gold and silver), are large and have not as yet been completely prospected. They are found mainly in the most ancient rock series of the Shield region and its outlier north of Adelaide. Mineral working has meant the growth of true mining towns in tropical and sub-tropical arid regions, with consequent supply difficulties. Both Kalgoorlie and Broken Hill have to rely on water pipelines from neighbouring coastlands where rainfall is heavier. This special investment in communications and water supply has in turn encouraged further agricultural pioneering, and the movement inland of the cultivated belts.

Coal is not the only power resource. Hydro-electricity potential is naturally confined to the wetter Eastern Highlands, and is greatest in Tasmania. Its chief use is for the multi-purpose development of irrigation on the Divide's western slopes, and for the generation of electricity for the concentration of population and industry on the East Coast. More recently, large deposits of uranium bearing ores have been discovered, and plans to use them for power supply are under way. It has been suggested that they are the largest so far discovered in the world. More problematical are the possibilities of petroleum production, as indications of oil wealth have so far turned out to be disappointing in terms of economic production.

These power and mineral resources have formed the basis for twentieth-century industrialisation. In summing up one may say that the total resources available to the present Australian population of ten millions are vast in every respect. But in most regions, particularly those of the tropical and desert lands, activity is severely restricted by environment. The importance of the primary industries of mining and pastoralism is assured by the severe difficulties of utilising the resources of the tropical and arid half of the continent in any other way: the fleece is still golden.

The manner in which the resources of the better-watered fringe lands are utilised would seem on the other hand to depend mainly on the demographic situation. Economic activities of very diverse types compete for capital and labour and until the planned expansion of immigration reduces this tension, efforts to use all resources simultaneously produce considerable strains. But it may be said that this structurally old and long isolated continent, but recently discovered and explored, has in face of many difficulties of environment produced more quickly than any other pioneer land a mature and advanced society.

H.B.-J.

* Excluding brown coal.

THE BRITISH COMMONWEALTH

HISTORY

THE continent of Australia was first discovered by the Dutch in the early half of the seventeenth century, but was left in the undisturbed possession of the few widely scattered Stone Age aborigines until 1769, when the English navigator Captain James Cook, in his search for the mythical Terra Australis, charted some of its shores and took possession of the eastern half of the continent. The annexation was timely, for a few years later the English Government was confronted by a penal problem consequent upon the forced cessation of transportation to the North American colonies, which had broken away in 1776. To relieve the subsequent congestion of convicts in gaols and hulks the English Government adopted the suggestion that felons be sent to the newly acquired colony of New South Wales. Accordingly, in 1787 Captain Arthur Phillip sailed in command of the "First Fleet" to establish a penal settlement at Port Jackson (Sydney).

For several years this lonely "gaol" struggled desperately against a harsh, niggardly environment, the constant threat of starvation and internal factions. To ease the pressure on the scanty resources of Port Jackson a branch settlement was established in Norfolk Island and in 1803 fears of French designs on the island inspired a further extension of the gaol to Van Diemen's Land (Tasmania). Fortunately, Australia was spared from being no more than a penal settlement by the introduction of fine-wool merino sheep in 1796, and by the penetration in 1813 of the forbidding Blue Mountains to the inviting and endless plains beyond. Such developments led to a broadening of English policy to admit of land settlement by emancipists, discharged prison guards and a trickle of free migrants. Even under the sterner penal conditions of Van Diemen's Land, land settlement developed and extended to spill over in the 1830's into the Port Phillip district of the mainland.

Meanwhile, in far Western Australia an entirely free English settlement was attempted in 1829 on the Swan River by private entrepreneurs. Lack of skilful leadership and planning led to failure and to intervention by the English Government to rescue the misguided settlers from their wretched predicament. For years the colony languished in the doldrums for want of sufficient labour.

With the Swan River settlement as a grim warning, South Australia was founded in 1837 on the principles of systematic colonisation put forward by Edward Gibbon Wakefield. Here too, insufficient preparation caused several years of financial stringency, and ultimately necessitated official intervention; but under the vigorous governorship of Captain George Grey and after the opening up of fertile country for wheat production, South Australia, aided by a locally invented harvester, entered upon an era of steady prosperity.

In New South Wales scattered settlements of pastoralists grew up. Shortly after the establishment of a penal colony in Moreton Bay (Brisbane), squatters opened up the rich and extensive Darling Downs. By 1840 the growing independent spirit of this rapidly expanding colony forced the British Government to stop the convict transportation system to New South Wales. Ten years later, when the Australian colonies were given power to make their own constitutions, they lost little time in doing so. During the 1850's the five colonies of New South Wales, Tasmania (after 1853), South Australia, Victoria and Queensland, the two latter having been separated from

New South Wales in 1850 and 1859 respectively, all gained a wide measure of representative and responsible government, including vote by ballot and manhood suffrage. The nature of such government in New South Wales and Victoria was in large measure determined by the discovery of gold in those colonies in the fifties, and by the immense flood of immigrants which came to swell the population. Many of them, influenced by reform and revolutionary movements in Europe, not only quickened and diversified the purely pastoral economy but introduced totally new social and economic forces which were to have lasting effect. The miners' resistance at Eureka in 1854 against overbearing authority is a tragic but memorable example. In education, such forces worked to break down a dual system of national and denominational schools, and by the 1870's the principle of free, compulsory and secular education through government schools had been adopted. Church schools were left to continue, but without government subsidies. From the sharpening and clash of conflicting interests there emerged a colonial democracy, militant in tone, placing a premium on egalitarianism, fiercely independent and brusquely indifferent to the pretensions, but not to the possession, of wealth.

After the first flush of the gold-rush period the increased demand for land led in the 1860's to a series of Selection Acts in New South Wales and Victoria which unlocked vast areas for settlement. Unfortunately, the intractable nature of much of the country, drought and the malpractices of squatters partly defeated the purpose of these Acts, and intensified class bitterness. The eastern colonies were rescued from years of frustration and social conflict by railway construction, by improved yields from the use of superphosphates, by the invention of refrigeration in the 1880's and at the end of the century by the discovery of drought-resisting varieties of wheat. The prosperity of the Australian colonies in the 1870's and 1880's was general, for by this time Western Australia had, partly through a belated recourse to transportation to solve her labour shortage, achieved some measure of economic stability and independence. Prosperity only added to the centrifugal forces making for colonial separatism. Different railway gauges and conflicting fiscal policies, especially between free trade New South Wales and protectionist Victoria, were symptomatic of an intense and narrow parochialism that gave little thought for the morrow. Yet cutting across colonial borders and differences were class divisions which in the hands of trade unions began to assume a lasting pattern of employer-employee antagonism, and led to much industrial strife in eastern Australia. A series of bitterly fought strikes, the failure of banks and a prolonged drought, which halved the number of sheep, marked the end of an era of carefree expansion and prodigal expenditure of men and money. Only Western Australia, through a timely discovery of rich gold deposits at Kalgoorlie and Coolgardie, escaped the depression of the 1890's.

Towards the end of the century the eastern colonies, notwithstanding their primary absorption in internal and domestic matters, began to show concern for their external relationships. Since their inception all the Australian colonies had subscribed to two basic assumptions, viz. that the continent must be reserved for British settlement only, and that the purity of the white race must be safeguarded. For long apprehensive as to the activities

of the French in the south-west Pacific, the eastern colonies were roused to a sense of danger and exasperation when Germany occupied the northern half of eastern New Guinea after Queensland's annexation of the southern half had been disavowed by the Colonial Office. Of a more general and domestic nature was the Chinese problem which had begun in the 1840's with the importation of cheap coolie labour to replace the convict assignees, but which, with the gold rushes (when tens of thousands poured into the Australian colonies), had assumed ominous proportions. Racial antipathy was intensified by the fierce competition of the Chinese, and the Colonial governments attempted to restrict their entry into Australia. Perturbed at such exclusionist policies against a nascent Power she wished to placate, Great Britain forced the repeal of restrictions. But popular feeling in Australia against Asiatic immigration continued to grow and to give rise to alarmist talk of a "Yellow Peril". To labour unions in particular the Chinese were a threat to employment and wages standards, so that by the end of the century a white Australia policy had emerged with sufficient support to insist upon restriction of Chinese immigration.

The common dangers from without served to strengthen arguments for closer organic union among the colonies. Federation had often been discussed, and an abortive attempt at colonial union had been made in 1884 with the Federal Council of Australasia. But subsequent events were to give federation a sense of urgency. Alarmed at the defenceless position of Australia, and acutely aware during times of depression of the folly of tariff barriers against each other's goods, colonial statesmen rose above their parochial loyalties and gave expression to mounting public opinion in a series of federation conventions. Common characteristics and common interests triumphed over their differences; and in 1901 the six Australian colonies federated to form the Commonwealth of Australia. Adopting the system of parliamentary executive, the federation provided for specific powers for the Federal Government and left the residuary powers with the States. It gave what the colonies wanted, union but not unity.

The first Commonwealth Parliament lost no time in dealing with matters of common concern. One of its first actions was to give legislative sanction to the White Australia policy in the Immigration Restrictions Bill of 1901. This necessitated the repatriation of Pacific islanders (Kanakas), employed in the Queensland sugar-cane fields. Federation brought for the first time a uniform fiscal policy of protection for the whole of Australia. In 1906 a Commonwealth Court of Conciliation and Arbitration was established to deal with labour disputes extending beyond the borders of any State. An early decision of that court laid down the basic wage as "the normal needs of the average employee regarded as a human being living in a civilised community". With the Labour Party in power after 1909 the Commonwealth Bank was established and a Federal land tax was imposed. At the same time Australia's growing sense of nationhood was reflected in its insistence upon a separate Australian Navy and in the introduction of compulsory military training.

In spite of such defence measures and the Prime Minister's pledge that Australia would support Great Britain "to the last man and the last shilling", Australia was ill-prepared in 1914 for the full consequences of its almost automatic committal to the war effort. Twice did its mercurial war-time leader, Mr. W. M. (Billy) Hughes try to carry referenda to conscript man-power for war service; but in two bitterly fought campaigns in which a powerful Irish element with strong Sinn Fein sympathies took a leading part, conscription was rejected; and the Labour Party, seriously divided on the issue, fell from Office. But the part Australia played in the war was vigorous and

substantial, both in men and materials; and in the ill-fated Gallipoli campaign her troops, in conjunction with the New Zealanders (together known as the Anzacs) won laurels for their country by their valour. Not only did the war toughen the national fibre but it strengthened the forces making for national unity and gave Australia a status among the nations of the world. Recognition of this status was made when along with the other Dominions she secured the right of separate representation at the peace conference and of independent membership of the League of Nations. As a member, she was entrusted with the mandate over the ex-German territory in New Guinea and with a share in the mandate over the phosphate island of Nauru.

In Australia the war had so disturbed and changed the nature of the economy as to create lasting problems. In the struggle fought on the home front for concerted action, liberalism had been the chief casualty. Never strongly entrenched among vigorously intolerant communities, it fell victim to the clash between capital and labour, which even before the end of the war had divided in open conflict. The exigencies of war had strengthened and developed heavy and secondary industries in the eastern States. From the resultant growth of industrial monopolies and trade unions came class bitterness and hostility, leading to an era of lock-outs and strikes which continued well after the war. But the fillip given to the Australian economy was such as to cause the Federal Government to set up a tariff board to protect secondary industries and to secure a well-balanced commercial and industrial development of the country. Yet too often tariff protection gave shelter to obsolete or obsolescent plants.

In general, the 1920's were years of prosperity and economic expansion. High prices for her primary products of wool and meat enabled Australia to spend freely on public works. During this period over 300,000 immigrants were absorbed into the labour force required for her development. At the same time, the opening up of some of the back-country and the attempted development by the Federal Government of the Northern Territory led to a more realistic appraisal of Australia's resources. The extravagant but popular conception of Australia Unlimited was replaced by more sober estimates of her economic and population potentialities. This was also a period in which the States, freed from the unifying forces of war tended to assume a more parochial outlook, which in Western Australia even went to the length of a movement for secession. In Queensland, and New South Wales in particular, a newly formed Country Party gave support to fissiparous political trends manifest in New State movements.

By 1928, a hardening of trade and financial conditions had strengthened the position of the Federal Government. After eight years of endless wrangling, and twenty years of uncertainty before that, the States entered into a financial agreement with the Commonwealth by which the Federal Government took over all State debts. But so dependent was her economy upon that of Great Britain, in particular, that she could not escape the world depression which developed in the early 1930's. A slump in export prices and a sudden cessation of overseas borrowing gave rise to widespread unemployment and distress. Unfortunately for Australia the crisis had developed at a time when she was facing serious problems arising out of a shortage of funds abroad. To meet the emergency the Commonwealth and State Governments imposed drastic deflationary policies involving 20 per cent reductions in wages and salaries and a 25 per cent depreciation of the Australian pound. Feverish attempts were made to balance budgets in all States, except New South Wales where the problems were tackled by the Labour

THE BRITISH COMMONWEALTH

Government by such unorthodox methods as repudiation of interest on overseas loans, that they created a constitutional crisis and the dismissal of the State Premier in 1932. To honour the State's obligations the Commonwealth paid the interest in default and furnished the amount from the State Treasury. With nearly 30 per cent of union labour unemployed, Australia sought desperately to find markets and economic security. The Ottawa Trade Agreement of 1932 gave her preferential treatment for dried fruits, dairy produce and sugar in return for reduced duties on English goods. But at best the agreement afforded only a breathing space in which to find new markets outside the British Commonwealth and Empire. Such efforts led to a trade diversion policy in which reciprocal trade treaties were made with Japan, China, the United States and Egypt, in addition to some European countries.

Meanwhile, with her customary predilection for practice rather than theory, Australia struggled out of the depression, so far as the home front was concerned, by trial and error. No longer was she able to shelter inefficient secondary industries: they either had to improve their methods or close down. On the other hand, the restrictions on imports stimulated the growth of some industries. To offset the prevailing low prices the Federal Government gave bounties to wheat farmers. Although efforts to secure increased Federal powers for marketing and aviation failed, trade gradually expanded and when in 1937 an end was put to a tariff war with Japan, temporary advantages were secured for Australian wool and textiles. Greater internal investment, which replaced heavy public borrowing abroad, contributed to expansion and stability in secondary production.

Consequent upon the depression and her efforts at recovery came a greater awareness of Australia's position in world affairs. Not unnaturally, in the absence of international tension, isolationist tendencies had re-emerged, but never to the point where she was complacently indifferent to her international commitments and defence. Not only did she honour the Washington disarmament agreement of 1922 by reducing her naval armaments, but she administered New Guinea in the spirit of the mandate, and continued to support the League of Nations. This did not prevent her, especially under a non-Labour Federal Government, from placing her faith still in Great Britain and from contributing towards the British naval base under construction at Singapore. With her traditional loyalties to the Mother Country unimpaired her statesmen saw little need at the 1926 Imperial Conference to try to define the Dominion status enjoyed by members of the British Commonwealth, and Australia was in no hurry to adopt the Statute of Westminster of 1931.

For all that, she could not but be concerned at the rapid industrial rise of Japan and of her military conquests in Manchuria. Although reluctant to support the imposition of sanctions upon Italy for her unprovoked aggression in Abyssinia, the deterioration of the international situation and the impotence of the League of Nations to restrain the aggressor made Australia increasingly concerned with defence problems. Even the Labour Party, which when in power in 1929 had suspended compulsory military training, urged stronger air defence. The Government, under Mr. J. A. Lyons, placed its trust in full co-operation with Great Britain and in a balanced development of all armed services. Remote from the scene of European events, Australians watched the gathering storm with increasing apprehension, and generally supported every move made by the British Government to prevent its breaking. When it did break in 1939, Australia never hesitated to throw in her lot with that of the Mother Country and to place the Royal Australian Navy at the disposal of the British Admiralty.

Australia entered the second World War with a sober sense of duty and inevitability. Her reaction to it was more mature and realistic than in 1914. Although still harbouring old illusions as to the essence of her defence, and not fully appreciative of the nature of the new forces to her north, she was aware that she could no longer escape the consequences of her geographical position in the Pacific. She began to mobilise all her resources without delay. The United Australia Party, which was in power, invited the Labour Party to form a coalition for the duration of the war, but with its traditional opposition to conscription the Labour Party rejected the offer on the grounds that the interests of democracy could best be safeguarded even in war by the existence of a vigilant opposition. With the assistance of State Governments the Commonwealth enforced rigorous measures for the prosecution of the war effort. Controls were imposed on exchange, imports, prices and investments, while her wheat and wool crops were bought up by Great Britain. In 1941 the State Governments agreed to surrender their taxing powers for the duration of the war and to accept in return single uniform taxation by the Commonwealth Government.

But the United Australia Party sat uneasily in Federal Office. Apart from making diplomatic history by appointing Australian ministers to Washington and Tokyo, its record was undistinguished and, after losing strength at the 1940 Federal elections, it surrendered its precarious hold to the Labour Party under Mr. John Curtin in the following year. The responsibility for the conduct of the war effort increased in 1942 with the sudden entry of the Japanese on the side of the Axis powers. For the first time in her history Australia was faced with the threat of imminent invasion. The fall of Singapore shattered the somewhat pathetic faith she had placed in that bastion of defence and in the British Navy. The immediate public reaction, born of dire peril, was a stiffening of support for the Federal Government's request for a more direct voice in the determination of Allied war policy. This not being forthcoming, the Prime Minister insisted upon the return from the Middle East of a large part of the Australian forces to defend Australia. At the same time he turned to the United States for aid. Response was immediate. General Douglas MacArthur was ordered to escape from the beleaguered Philippines and to make of Australia a base from which to conduct combined service operations to drive back the Japanese. To implement this plan hundreds of thousands of American troops poured into eastern Australia, together with much lend-lease assistance. The Commonwealth accelerated her war effort by enforcing man-power direction and tightening control over wages and profits. This policy of austerity was wholeheartedly endorsed at the Federal elections in 1943.

With brighter Allied prospects in Europe and the Japanese tide successfully turned back in the south-west Pacific, the Federal Government began in 1943 to plan for post-war reconstruction. Although its successful war policy carried the Federal Government some distance towards planning for peace, it met with opposition from the States which, while weakened by the centralising wartime trends, still clung to their not inconsiderable powers. When appealed to by referendum the general public, fearful as to how they might be used, refused to grant the special powers the Federal Government needed to give effect to its post-war planning. On the other hand, the State Governments supported the Federal Government's attempt to avoid another post-war depression by a policy of full employment, and co-operated in settling ex-servicemen on the land, in housing, in the continuation of price control and in reconstruction training.

Yet, although the Labour Party was in power in most of the States and in the Commonwealth Government, trade unions were often at odds with them in regarding the post-war era as critical years in which they should consolidate their gains. Communist-inspired strikes seriously embarrassed an unsympathetic Federal Labour Government, which was at the same time being pressed on all sides for the relaxation of war-time controls. The first concessions were made in 1946 when building controls were handed back to the State Governments. To prevent inflation resulting from the removal of restrictions and to preserve a favourable trade balance drastic cuts were made in dollar imports; and the new Labour Prime Minister, Mr. J. B. Chifley, sought in 1947 to control the machinery of credit by nationalising the trading banks of Australia through the forced purchase of bank shares. In this he was thwarted by the opposition of the private banks, which successfully appealed to the Privy Council against the Banking Act. Further setbacks to increased Federal control were met when the people of Australia rejected a referendum seeking special powers to control rents and prices. As in the past, the Australian public showed their almost traditional reluctance to see more power going to Canberra, the federal capital. Bowing to the will of the people, the Federal Government in 1948 abandoned all economic controls and instead sought to introduce the social welfare state. Social security measures such as increased child endowments (first introduced during the war), old age, widow and invalid pensions and hospital benefits commended themselves to an ageing population appreciative of the advantages of a welfare state but reluctant to forego the attractions of free enterprise.

In spite of such concessions, return to peace and an era of rapidly rising costs and prices hastened the fall of the Federal Labour Government. Not even his own personal popularity and successful handling of a paralysing coal strike were sufficient to save Mr. Chifley and his party at the Federal elections of 1950. Playing on the public's fears of socialisation and regimentation, the newly formed Liberal Party in conjunction with the Country Party were returned to office to form a coalition government. But the upper house or Senate, which has never operated as a safeguard for the member States but has tended to follow the party lines of the lower house, remained predominantly Labour and therefore opposed to the legislation of the new government. To remove the obstruction Mr. R. G. Menzies, the new Prime Minister, secured a double dissolution and, at the elections which followed, an endorsement of his government's policy by clear majorities in both houses. Notwithstanding such a mandate the public rejected his proposals to amend the constitution in order to deal more effectively with Communism. But in spite of a widespread dislike of politics of proscription, the Korean war prompted generally firmer anti-communist policies, including compulsory secret ballot in union elections, with the result that the very limited influence that Communism has had on the Australian way of life has tended to decline. Yet industrial unrest remained general during the spiralling inflation consequent upon the spectacular rise in wool income. Not until 1952, with a slight lowering of wool prices and renewed restrictions on imports, was the inflation checked and the buoyant economy stabilised. Among the chief sufferers from inflation have been the State Governments which

have had to bargain fiercely at annual Commonwealth-State conferences for the Commonwealth "hand-outs". Nevertheless, when in 1953 they were offered the return of their taxing powers they preferred to leave the unpopular task of raising money to the Commonwealth Government.

Among the many activities of an increasingly powerful Federal Government none has been more nationally significant than its post-war immigration scheme. Closely related to this immigration policy is Australia's extensive post-war economic development which has in fact been directed towards increasing the country's capacity to absorb a larger population (see Economic Survey).

Nowhere has the maturity of Australia been better seen than in the part she has taken in external affairs since 1942. Then, the threat of imminent Japanese invasion provoked Australia into departing markedly from her traditional practice of accepting Britain's lead in matters of foreign policy. After the war, under the vigorous and impetuous direction of Dr. H. V. Evatt, the Federal Labour Government, while continuing to maintain her co-operation with Britain and the Commonwealth, laid great store by support of the United Nations. If somewhat stridently assertive at times, Australia has from a belated and sudden awakening to her vulnerability insisted upon greater independence in shaping and executing policy in the Pacific. At the same time, the Labour Government's emphasis upon social and economic policies designed to raise living standards in the under-privileged countries has been manifest in open sympathy with the nationalist independence movements of south-east Asia. Australia's own new diplomatic independence was signalled in 1944 by the Canberra Pact, a regional security agreement with New Zealand.

The fall of the Labour Party from Federal power in 1949 resulted in a shifting of emphasis from the United Nations back to the British Commonwealth of Nations. With a pragmatic rather than a theoretical or doctrinaire approach to world affairs, and with less confidence in untried Asian nationalism, the Liberal-Country Party Government sought mainly in its foreign policy to prevent the spread of Communism in Asia. Hence Australia became a prime mover in the Colombo Plan, designed to give economic and technical aid to south-east Asia. For the same reason, basically, she supported the United Nations in Korea. More pertinently for her own security she sought in 1951, along with New Zealand, assurances from the United States against a rearmament Japan. These she obtained in return for the acceptance of an American-imposed Japanese peace treaty. Although the resulting Australian, New Zealand and United States agreement (A.N.Z.U.S.) has placed some strain on Australia's loyalties to Great Britain, it is a significant recognition of her growing dependence on the United States for her security. In 1954 Australia signed the Manila pact by which a wider association of interested countries was formed into a South-East Asia Collective Defence Treaty (S.E.A.T.O.). Having to this extent contracted outside the Commonwealth of Nations, Australia now enjoys a dual partnership in British and American-centred organisations.

From half a dozen widely scattered English settlements there has emerged in the course of a little over a century and a half a major Pacific power.

E. J. T.

ECONOMIC SURVEY

THE Commonwealth of Australia consists of six States, together with the Northern Territory and the Australian Capital Territory. Both States and Commonwealth have their own Parliaments, the legislative powers of which are delimited by the State and Commonwealth Constitutions. The climate and natural resources of the country considerably limit the range of economic activity. It is no accident that the larger part of the population and the economic centre of gravity of the country are located in the south-east and that the two most important States, agriculturally and industrially, are New South Wales and Victoria.

POPULATION

As at December 31st, 1954, the population was 9,090,738 and males slightly outnumbered females. By far the larger part of this population is European in origin (at the 1947 census, only 46,638 full-blooded aborigines were recorded). In recent years there has been a considerable migration of persons from Europe, but the population is still predominantly British, though the statistics are slightly inflated by including as "British" the natural increase of aliens after arrival. Nevertheless, the "foreign" element has been increasing. In 1950, it was estimated that 97.6 per cent of the total was "British". By 1952, this had been reduced to 96.5 per cent and, on the basis of trends then evident, a further fall to 93.8 per cent by 1957 was forecast. The second important feature of Australian demographic structure is that the larger part of the population lives in urban communities (between the 1933 and 1947 censuses the proportion rose from 63.8 per cent to 68.7). The rate of population growth has varied not so much in response to changes in rates of natural increase as to changes in the rate of immigration, which has been very sensitive to the state of economic and social conditions both in Australia and abroad. In absolute terms natural increase has accounted for most of the population growth, though between 1947 and 1954 net immigration provided some 684,800 persons as against 826,580 from natural increase. The flow of immigrants was actively encouraged by government assistance of various kinds, but the physical resources required to meet the market demands which accompanied this steep rise in numbers were quite inadequate and the Government's immigration targets had to be scaled down. Even so, the rate of immigration remains high (See Tables 2 and 3).

Australia has experienced the general long-term decline in birth rates, though as elsewhere the effect of declining fertility has been offset to some extent by a decline in death rates. Infant mortality rates had been reduced to 23.8 per 1,000 births by 1951-52. In 1947, the proportion of the population under 15 years of age was only 25.1 per cent, compared with 27.5 per cent at the previous census in 1933 and 31.7 per cent in 1921. During the war and post-war years, there was an interruption of the long-term decline in recorded birth rates. There was also a slight rise in death rates, this being due to the relative ageing of the population in consequence of low birth rates in the 1930's, but the rate of natural increase is still relatively high and the age composition remains relatively young. In recent years immigration has considerably modified the position.

The distribution of the population is very uneven, due partly to historical reasons but primarily to climate and the location of natural resources. As at December 31st, 1954, nearly 3.5 million people lived in New South Wales and 2.5 million in Victoria. Queensland had a population of over 1.3 million, South Australia 808,000, Western Australia 649,000 and Tasmania 320,000. About half the population is concentrated in the six State capitals and outside these, the only town with a population of 100,000 or over is Newcastle and only two others have 50,000 or more inhabitants. The density of population works out at about 3 per sq. mile compared with 753 in England and Wales. Three-quarters of Australia is sparsely settled simply because the climate does not permit crop farming. Rainfall is not only inadequate but also variable and concentrated in a short season. Labour has always been scarce in the rural areas and Australian primary industries have therefore tended to be highly capitalised, with a noticeable emphasis on mechanisation.

According to the 1947 census, which provides the last available classification of workers by industry, Australia then had a working population of about 3.2 million out of a total of 7.5 million. If the working population is broken down into industrial groups, it is possible to determine the broad lines of the economy and to establish some notion of the directions in which it is developing (see Table 4). In general terms, the changes which have occurred since 1901 are (a) a progressive decline in the proportion of the population employed in the primary industries, and (b) the progressive expansion of the secondary and service industries, this expansion being most marked in manufacturing. It is in the larger cities that the expansion of manufacturing industry has been most noticeable. This development was greatly stimulated by the second World War. Much of Australia's factory expansion was then prompted by defence needs, but a proportion of this capacity was converted to meet postwar civilian requirements and used as the basis for further expansion.

THE PRIMARY INDUSTRIES

Australia has long been generally regarded as mainly an agricultural, pastoral and mining country and, despite the recent emphasis on industrialisation, still depends on her primary products for her ultimate prosperity. Apart from the provision of raw materials for local manufacture, rural production is the basis of Australia's exports and the major source of her overseas income. For the relative importance of the several rural sectors see Table 9.

WOOL

Wool, which has for many years been the country's major export, remains the basis of Australia's prosperity. Indeed, the extent to which the rest of the economy depends on high prices for wool is sometimes frightening. Moreover, very high wool prices carry dangers of their own. Too high a price will serve to intensify the search for and use of substitutes. Abnormal increases in grazer incomes (as in 1950-51) encourage extravagant spending and the development of unhealthy internal inflationary pressures, only partly offset by reductions in bank indebtedness or—in the longer run—by ploughing profits back into pastoral properties. Subsequently, when the

bubble is pricked by a downward shift in overseas demand, there will be contraction and recession, necessitating the imposition of import restrictions of the 1952 type, with repercussions on other countries, particularly the United Kingdom. But, whatever the effects on the rest of the economy, the grazier is wedded to free auctions and resents any attempt to impose price stability or to even out the flow of income. Fortunately for Australia, wool prices have in recent years been fairly well maintained, and the long-term outlook for wool is considered promising. The extent of Australia's dependence on wool is demonstrated by Table 28.

The emphasis on wool production has been due primarily to suitable climate and pastures. Indeed, over large areas, the land could scarcely be utilised for any other economic purpose. In addition, the industry has paid careful attention to breeding and research. There is also a highly organised grading and marketing system. Australia pastures about one-sixth of the world's sheep. The sheep population reached its all-time peak in March 1955 at over 130 million. The number of sheep declined from 125 million in 1943 to 95.7 million in 1947. Then came a recovery to 123 million in 1953, this being greatly assisted by the virtual elimination of the rabbit over large areas and steps taken to improve pastures. These sheep produce about one-quarter of the world's wool and over half the world's merino wool. Although in recent years there has been a higher proportion of crossbred wools due to the greater emphasis on meat-producing breeds, nearly three-quarters of Australian wool is of merino type. The chief wool-growing States are New South Wales, Victoria and Queensland (see Table 10), but the stud flocks of Tasmania are of strategic importance and this State produces some of the country's finest wool.

WHEAT

Wheat is the most important agricultural crop and, although the contribution made by wheat and flour to export proceeds is considerably smaller than that of wool, it nevertheless ranks second in exports. Australia's wheat production ranges only between 2 and 4 per cent of the world's total, but as an exporter she ranks third after the United States and Canada. The average value of exports of wheat and flour for the five crop years 1949-50 to 1953-54 was £A86.76 million but in the year to June 1955 amounted to only £A65.6 million. Wheat is grown in all the Australian States, but New South Wales, Victoria, Western Australia and South Australia are the leading producers, as will be seen from Table 11. Better yields have helped to maintain the total wheat crop at figures approaching—and sometimes exceeding—200 million bushels per annum (the average for the five crop years 1948-49 to 1952-53 was 189.6 million bushels).

In the past, wheat prices have been subject to wide fluctuations and in an endeavour to stabilise the position an Australian Wheat Board was established in 1939 to acquire crops for marketing. The price of wheat is determined by the Board both for domestic consumption and for export in accordance with international agreements, the proceeds of exports and local sales being credited to a pool out of which growers are paid in instalments. Under the International Wheat Agreement, Australia was given a quota of 88 million bushels to be exported annually at a maximum price of 16s. 1d. a bushel. Further quantities beyond the quota may be sold in the free market. Wheat for domestic consumption was made available at below the export price in order to restrain the rise in the cost of living. In 1951-52 the domestic price was about 10s. per bushel, but later it was raised to about 12s. For purposes of stabilisation, part of the proceeds of wheat sales are retained by the Board to provide compensation to growers when a fall in wheat prices occurs.

Sugar is the second largest crop, about 90 per cent of it being produced from cane in Queensland, in the coastal belt from beyond Cairns to the New South Wales border and most of the remainder in northern New South Wales. The labour employed is exclusively white and at times development has been delayed by the inadequate supply of labour for both cane fields and mills. From time to time, agreements between the Commonwealth and Queensland Governments have fixed the wholesale price of sugar and sugar products, all of the Queensland and New South Wales crops being acquired by the Queensland Government. The net proceeds of all sugar, whether sold in Australia or abroad, are then pooled and a uniform price per ton is paid to the mills. The application of land to cane growing is controlled and the Queensland Government has also attempted to limit production by setting a ceiling and applying penalty prices to excess output. The ceiling has been lifted gradually in recent years and now exceeds 1 million tons. In 1952-53, nearly 434,000 acres were devoted to sugar cane, which represented a gradual increase over a period of years (the average for 10 seasons 1943-52 was almost 358,000 acres). Because of a poor season in 1951-52, production of raw sugar at 745,000 tons was considerably below the level of over 900,000 tons produced in the three previous years, but output recovered to 949,000 tons in 1952-53. Average exports for the five years to 1953-54 were 431,000 tons compared with 377,000 tons for 1934-35 to 1938-39. For the year ended June 1955 exports amounted to over 737,000 tons. The value of sugar exports in 1952-53 was £A21.8 million and for 1954-55 £A31.1 million. An international agreement now gives Australia an export quota of over 300,000 tons at guaranteed prices, with the right to sell a further 300,000 tons at market prices. It is expected that rising domestic consumption will take care of the balance.

MEAT

The bulk of Australia's meat production consists of beef and veal, most of which goes into home consumption. The number of beef cattle amounted to 10.5 million in 1953 and had increased only slightly to nearly 11 millions by March 1955. Generally speaking these cattle are raised in areas frequently affected by droughts and on the coarse grasses of Northern Australia, only being brought to better-class country for fattening purposes. Over half these cattle are found in Queensland and about a quarter in New South Wales. Dairy cattle, on the other hand, numbering 5 million in March 1955, require consistently better pastures, and their distribution is spread more evenly between the States. Victoria leads with about 1.5 million, followed by Queensland (which has temperate tablelands) with about 1.4 million and New South Wales with 1.25 million. South Australia, Western Australia and Tasmania have less than a million between them. However, a more accurate test is the number of dairy cows in milk. On this basis, Victoria still leads slightly, but New South Wales climbs into second place above Queensland. Prior to the war, Australia was the third largest butter exporter in the world, about half her production of butter and cheese being exported, but with rising domestic consumption—despite higher yields—there has been a decline in the export surplus. For Australian dairy products generally, the United Kingdom has over a long period of years been almost the only important export market available, but the home market is becoming increasingly important. Exports of butter in the year to June 1955 were valued at £A24.6 million of which £A20.7 went to the United Kingdom.

Victoria produces more mutton and lamb than other States, but New South Wales production is also considerable. The output of these meats comes mainly from crossbred sheep which are concentrated in areas of high rainfall

THE BRITISH COMMONWEALTH

and high fertility. Merino sheep produce the finest wool but the carcase is poor as meat.

Pigs, of which there were 1.3 million in March 1955, tend to be raised mainly as a sideline on dairy farms and in dairying districts. Despite the increase in prices, the value of exports of bacon, hams and pork has remained virtually unchanged since 1938.

Before 1939, about a quarter of Australian meat production was exported. Latterly, mainly as a result of population growth and despite a decline in *per capita* consumption from the pre-war level of 250 lb. per year to just over 200 lb. in 1952-53, the proportion of carcase meat exported has declined to about 15 per cent. Exports of beef and veal in the year to June 1955 were valued at £A21.8 million and those of mutton and lamb at £A11.8 million.

For some years, export prices have been subject to long-term agreements between the British and Australian Governments. These began during the war years and a 15-year agreement signed in October 1951 is now in operation. This runs until September 30th, 1967. The principal objectives were to promote the production of meat in Australia and potential exports to the United Kingdom. Producers have been assured a satisfactory market at minimum prices, with provision for adjustment to accord with changes in costs of production. The agreement was linked with measures to develop the northern cattle areas by providing watering facilities on stock routes and improving transport facilities, in order to reduce long-distance droving with resultant losses in weight and numbers. Alternatively, as in the Kimberley region of Western Australia, inland abattoirs might be set up and the carcasses flown to coastal meat works for treatment. All meat shipped from Australia has to be frozen as the maximum transit period for chilled meat is about 30 days.

The value of exports of primary products other than wool for the years 1938-39 and 1949-50 to 1953-54 are set out in Table 29.

MINERAL PRODUCTION

The opening up of several of the less accessible parts of Australia has owed much to the exploitation of mineral wealth and the extraction of minerals still contributes in an important way to the Australian economy. Gold, which was once a leading source of wealth and, indeed, in the 1850's was the mainspring of the economy, is now no more than a supplementary source of income. (Western Australia produces three-quarters of Australia's gold). The value of total output in recent years has varied between £A13 million and £A16 million. Exports in 1955 were valued at £A13.7 million.

Much more important has been the mining of lead, zinc and silver, the exports of which were worth more than £A34 million in 1954-55. Australia is one of the world's largest producers of lead and ranks high among producers of zinc and silver, much of which come from the high-grade deposits at Broken Hill in western New South Wales. Other important sources are Mount Isa (Queensland), Captain's Flat (N.S.W.) and Mount Lyell (Tasmania). Most of the lead production of over 200,000 tons a year is exported, as is a high proportion of zinc production. The production of copper, despite recent substantial increases, still falls short of domestic demand. Copper is mined at Mount Lyell, and Mount Morgan and Mount Isa in Queensland.

Other minerals of some importance include tin, tungsten, titanium, zirconium and aluminium. Sulphuric acid has been produced over a period of years in conjunction with

the smelting of metal ores, the large mining companies being linked financially with the fertiliser companies. The latter use sulphuric acid for the purpose of converting phosphatic rock imported from Nauru and Ocean Island into superphosphate, which is an essential application to Australian soils. Nevertheless, Australia still has to import sulphur and the gap is now being filled by exploiting large-scale deposits of pyrites in South Australia. Aluminium has also had to be imported, but low-grade bauxite deposits exist and these are to be smelted at Bell Bay, Tasmania. A capacity of 13,000 tons of aluminium ingot a year is expected to meet most of Australia's requirements. Meanwhile, the local production of aluminium is based on imported bauxite from Malaya. Australian tin production (about 2,000 tons a year) at present meets most local demands. The value of tungsten exports is small but increasing. For statistics relating to production of metals see Table 12.

With the development of atomic energy, great interest has been shown in Australia's deposits of uranium. There are two major ventures in uranium mining in Australia—the first is in the hands of the South Australian Government and the Commonwealth Government is responsible for the second. One is at Radium Hill in South Australia, some 60 miles south west of Broken Hill, with a chemical treatment plant nearer the coast which went into operation in mid-1954. The other newer and potentially larger deposit is at Rum Jungle in the Northern Territory, about 50 miles by rail south of Darwin, but also connected by road and air. Mining development and ore processing have been undertaken on behalf of the Commonwealth by one of Australia's leading mining groups, but private mines in this area also supply ore to Rum Jungle for treatment. A continuous search for other deposits is being made elsewhere in Australia. An Atomic Energy Commission has been set up to control Commonwealth activities in this field. It is responsible for the surveying, prospecting, mining and treatment of uranium ores and also for scientific research and development of atomic energy for defence and industrial purposes. The Commonwealth has agreed to purchase all Australian-produced ore at fixed prices and has negotiated guaranteed export markets for a period of 10 years. During the first quarter of 1955 the first shipment of uranium oxide from the Rum Jungle plant was despatched to the U.S.A.

MANUFACTURING INDUSTRIES

By June 1947, 37.1 per cent of a working population of 3.2 million was employed in secondary industry. The 1954 census revealed a working population of 3.7 million, but at the time of going to print the comparable percentage occupied in secondary industry had not been published. However, available evidence suggests that although there has been a continued growth in *factory employment*, the *proportion* of the working population engaged in secondary industry has fallen.

The importance of manufacturing industry may be gauged from the fact that the estimated net value of production (excluding depreciation and maintenance costs) of factories was £A1,083 million in 1952-53 compared with a total for all primary industry (including mining) of £A1,106 million. The position changes somewhat from year to year depending on price movements and whether the primary industries have had a good or bad season. The comparative position for the several sectors of the economy is set out in Table 18.

The development of manufacturing should not be judged in money terms alone, since price changes frequently

distort the position. A better test of the extent of the expansion in Australia is probably the rise in factory employment over a period of years and possibly also the number of factories (see Table 14).

Special mention should be made of the Australian iron and steel industry, not only because it is reputed to produce the cheapest steel in the world, but also because this industry is basic to many others. Its first stage of rapid development came during the first World War when large steel works were established at Newcastle in the heart of the coalfields north of Sydney. Newcastle is now the largest industrial city in Australia outside the State capitals. During the second World War there was further expansion and the basis of production was broadened to include ferro-alloys and bright steel sheet. The pace of development has been maintained during the post-war years.

There are two important deposits of iron ore being worked at present—one near Whyalla in South Australia (estimated reserves of 150 million tons) and the other at Yampi Sound in the north of Western Australia (54 million tons at Koolan Island and 19 million tons at Cockatoo Island). In addition to ore mined in Australia, a three-year contract was concluded to run from May 1955 for the delivery of 160,000 tons per annum from New Caledonia, with an option thereafter to increase the amount to 500,000 tons per annum. A blast furnace was installed at Whyalla in 1941 for the production of pig iron which is sent to be converted into steel either to Newcastle or to Port Kembla (near the coalfields centred on Wollongong, about 50 miles south of Sydney). A steel rolling mill (using steel from New South Wales) has also been built at Kwinana, near Perth in Western Australia, one of the less highly industrialised States, which has latterly considerably increased the pace of its development. Lack of good metallurgical coking coal has hindered the local production of steel in this State.

In 1951, Australian production of ingot steel was about 1.5 million tons. This was approximately a million tons short of demand and considerable imports were necessary. Subsequently, demand declined somewhat and by 1953 production had been increased to over 2 million tons, which was sufficient to satisfy most local requirements. On the basis of this steel industry a widening range of engineering products has been produced in recent years. An Australian car is now being turned out in quantity and a number of overseas manufacturers—British and American—have set up local plants. Shipbuilding and repair was another industry greatly stimulated by the war and vessels up to 12,500 tons deadweight have been built. The agricultural implement industry is particularly important and one of the oldest, because of the heavy demand for mechanised equipment from the primary industries. Several types of tractors are now being made locally. All these industries tend to be confined to the home market because of their level of costs. Most Australian industries are protected by tariffs.

Some idea of the growth of manufacturing activity in Australia is given by the index of factory production compiled by the Australia and New Zealand Bank. (See Table 15.)

It is difficult to establish which are the most important manufacturing industries in Australia, because the Commonwealth Statisticians' classification of industry is necessarily somewhat arbitrary. Thus, in terms of value of output, Industrial Metals, Machines and Conveyances is by far the most important, followed by Food, Drink and Tobacco, but both are very broad groupings. Next come the Chemicals group, Textiles, Clothing, Paper and Printing, and the Woodworking Trades, but some of the smaller groups, such as Rubber, are also important. (See Table 16.)

Distribution of industry as between States may be gauged by the number of factories, the number of factory employees, and value of output (See Table 17).

POWER AND TRANSPORT

Coal has for long been the primary source of power and reserves are very considerable. New South Wales has the bulk of the conveniently located black coal and this is converted either into gas or thermally produced electricity. Victoria generates her electricity largely from brown coal mined by open cut at Yallourn in Gippsland. Pulverised brown coal has also been used successfully by the Victorian State Railways; and brown coal will soon supply an appreciable proportion of Victoria's gas. Queensland also mines most of the coal she requires by open-cut mining at Callide and Blair Athol where large reserves are known to exist. About 244 million tons of black coal deposits exist in the eastern and northern coastal areas of Tasmania but their exploitation has not been extensive as her hydro-electric resources have made Tasmania largely independent of coal. Production figures are given in Table 13. The increasing demands of a rising population, together with the somewhat uncertain supply position in New South Wales as a result of recurrent labour troubles, have tended in recent years to direct attention towards other sources of power.

One alternative is hydro-electric power, but Australia is not very well provided with suitable resources of water. Tasmania is much better off than other States and several of her major industries, including metal refining and newsprint manufacture, to which the State forests make a valuable contribution, are dependent on hydro-electric power.

An important scheme to extend generating capacity is the Snowy River project, for which the Commonwealth and the States of New South Wales and Victoria are jointly responsible. The ambitious project will divert the waters of the fast-running Snowy River through a mountain for the production of hydro-electric power and subsequent use for supplementary irrigation purposes. The Murray-Murrumbidgee basin is already the most important irrigation area in Australia. A small amount of this power has already become available. The Victoria State Electricity Commission is also constructing a series of large power stations in the north-east of Victoria on a tributary of the Murray and, again, some of this power has begun to flow. Other schemes are planned to harness the Queensland rivers for generating electricity. These projects will provide important supplementary supplies to the growing industrial and urban populations, and assist the further mechanisation of farmwork by economies in the use of labour which has always been in short supply. The spread of power machinery in rural areas is illustrated by the rapid increase in the number of milking stands in Australia—from fewer than 90,000 in 1943 to 180,000 by 1953.

Petroleum in its various forms is another important source of power. The greater part of Australia's requirements were for many years imported in refined form and, in 1953, refining capacity in Australia was less than a million tons a year, or about 17 per cent of total consumption. Very large projects have been launched with the object of raising refining capacity to over 7 million tons a year. The largest refinery, recently completed, is at Kwinana, near Perth in Western Australia. Other new refineries are located at Geelong, Melbourne and Sydney.

For more than fifty years the search for oil has gone on in Australia, especially around Roma in Queensland, where a natural flow of gas through an artesian bore occurred in 1900. There have been traces of oil elsewhere, but exploitation when begun has proved uneconomic. The most encouraging discovery came in November, 1953, when oil flowed at the rate of 700 gallons an hour through a $\frac{1}{4}$ -in. pipe from a well at Rough Range, near Exmouth Gulf, Western Australia, 700 miles north of Perth. The capital to finance this search for oil and the large-scale surveys

THE BRITISH COMMONWEALTH

over extensive areas of Australia and also of New Guinea has come mainly from the international oil companies, which handle the import and distribution of petroleum in Australia. At the same time, Australian capital has shown an increasing interest and after the find at Rough Range several public issues were made to finance further exploration. State and Commonwealth Governments have also made valuable surveys.

Over the longer term, there is likely to be a considerable switch to nuclear power produced from the uranium with which Australia seems to be tolerably well supplied.

Because of the great distances in Australia, coastal shipping is an important means of transporting heavy or bulky goods. The movement of goods by rail—there are nearly 27,000 miles of track in Australia—is also significant, particularly from the back country to the ports, but the usefulness of the railways to inter-State traffic is limited by the changes of gauge at State boundaries. On a number of occasions, proposals have been put forward to substitute a uniform gauge at least between the main centres, but it is doubtful whether this will ever be achieved. The railways, which are for the most part Government-owned, compete with road transport, especially for goods, and for the passenger traffic with air travel. Air transport is used very extensively both for passengers and freight.

In 1951–52, the domestic transport systems carried 255 million tons of freight. Of this, 76.5 per cent went by road, 18.7 per cent by rail, 4.6 per cent by sea and 0.2 per cent by air. The ratio of privately-owned cars to population is high. No separate figures are available, but on the basis of total cars owned, Australia has one motor vehicle to every 5.5 persons, compared with 5.4 in Canada and 2.9 in the United States.

NATIONAL INCOME

It will be apparent from Table 19 that the Australian National Income has increased very considerably during the post-war years, but if allowance is made for the growth in population and for price changes the advance in real terms per head has been very limited. In part, this may be due to the heavy inflow of migrants and to the inflationary consequences of an investment programme, which at times has tended to outrun the resources available. Moreover, full employment has encouraged the trades unions to press, not without some success, both for higher wages and shorter hours, thereby adding to the forces making for price inflation. Over the five-year period 1948–49 to 1953–54, national income in money terms rose by 93 per cent. Meanwhile, population increased 14.4 per cent and the cost of living (as measured by the “C” series price index number for the six capital cities) rose by more than 70 per cent. (See Table 19.)

WAGES AND HOURS

The Australian Constitution provides that the Commonwealth Parliament shall have power to make laws with respect to “conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State”. A Court was set up under the *Conciliation and Arbitration Act* 1904 (as amended). This Court is concerned primarily with industrial disputes, insofar as these relate to standard hours of work, and the determination of the “basic wage” to be paid to unskilled workers. Most other matters are now dealt with (under the amending legislation of 1947 and 1952) by a Conciliation Commissioner, but in certain circumstances there is provision for reference or appeal to the Court. For the coal industry, in which labour relations had been notoriously difficult over a long period of years, a special tribunal

was set up in 1946 by the Commonwealth in co-operation with the New South Wales Parliament. The States also have their own industrial tribunals and—in some cases—wages boards for particular industries or occupations. These have jurisdiction only within their own borders but in many matters they tend to follow the lead given by the Commonwealth Court. These bodies regulate conditions of work generally and register trades unions and employers’ associations which may appear before them, but their main function concerns wages and hours.

Basic wages, i.e. the minimum rates paid to unskilled labour, are fixed by all the various industrial tribunals operating under Commonwealth or State legislation. These wages have been varied from time to time, according to changes in the cost of living and the capacity of industry to pay. Broadly speaking, the basic wage declared by the Commonwealth Court for the several capital cities may be taken as the basis of all wages decisions. Industrial tribunals also determine the “margin” for skill and any other special characteristics of the job in question. The first basic wage was declared by the Commonwealth Court in 1907. The original purpose of the basic wage was to provide a minimum living wage, and it was the practice until September 1953 to adjust this part of the total wage every quarter by reference to the “C” series retail price index, which attempts to measure changes in the prices of food, groceries, rents of 4- and 5-roomed houses, clothing and miscellaneous household requirements. During the earlier post-war years, it was felt in certain quarters that automatic cost-of-living adjustments to the basic wage had imparted considerable instability to the wage-price structure resulting in a spiralling effect. Others argued that fears of this sort were exaggerated, because of the extent to which prices, both for imports and exports, entered directly into the determination of domestic prices. However, there was little doubt that there had been some upward pressure as a result of automatic wage adjustments and the Commonwealth Arbitration Court was persuaded to take action to suspend such automatic adjustments in September, 1953. Henceforth, any variation in the basic wage was to be subject to a Court hearing, its competence to act in this way being subsequently upheld by the Australian High Court. Since then there have been attempts by the trade unions to secure the reintroduction of quarterly cost-of-living adjustments to basic wages. Meanwhile, certain of the State tribunals had retained the principle of quarterly adjustments; others followed the lead of the Commonwealth Court. An alternative solution attempted by some of the State Governments has been the reintroduction of price controls, which during the war and early post-war years were operated by the Commonwealth under “defence powers”. (Tables 5 and 6 relate to earnings, cost of living and wage disputes.)

The downward trend in hours of work per standard week began in the December quarter of 1924 when the weighted averages were for males 46.7 hours and for females 46 hours. Except for slight increases in 1929 and 1930, the reduction continued. During the second half of 1947, the hours for males and females in New South Wales were reduced to 40 in occupations subject to State arbitration. For Australia generally, the 40-hour week operated from January 1st, 1948 (at that time most of the existing awards provided for a 44-hour working week).

PUBLIC FINANCE

Under the federal system of government, which has operated in Australia since the beginning of the century, there are three levels of government, each with limited functions. The Commonwealth Government has a wide range of fiscal powers which cover all kinds of taxation

and it has a prior right of collection over other governments. In addition, it was granted the exclusive right to levy customs and excise taxes, as one of the major reasons for federation was to achieve a uniform trade policy for the whole Commonwealth. During the war, high rates of income tax were levied by the Commonwealth for defence purposes. The States also levied substantial income taxes which were at varying rates. This led to some anomalies. In order that the maximum revenue might be raised from income tax and that these anomalies might be eliminated, a "uniform tax scheme" was introduced in 1942-43 by the Commonwealth (despite protests from certain States), whereby the Commonwealth levied one income tax on all incomes throughout Australia but paid out a proportion of the amounts raised, by way of reimbursement to the States. In addition to income tax and the revenue from customs and excise, the Commonwealth collects sales tax, death duties, and a number of minor taxes. Income tax reimbursement provides the bulk of State revenue but the States also levy land tax, probate duties, and various stamp duties. Local government bodies derive the greater part of their income from rates levied on real property.

An important aspect of the federal system of government in Australia is the Commonwealth Grants Commission. This was established in 1933 by the Commonwealth to advise on the amounts of special annual grants to be made by the Commonwealth to such States as suffered financial disabilities as a result of federation. The need for such grants was recognised by the Constitution and accepted by successive Commonwealth Governments. The Grants Commission therefore makes an annual assessment of the special needs of the States in question—South Australia, Western Australia and Tasmania—and recommends the payment of related grants by the Commonwealth Government.

Commonwealth budgetary policy during the war and early post-war years was—within the limits imposed by heavy defence expenditure—most conservative and taxation was kept at high levels. When the Labour Government which had been in power since 1941 was defeated in 1949 and was succeeded by a Liberal-Country Party Coalition Government, the new Treasurer favoured incentives and tax relief, but was forced by inflation and the running down of London funds in 1951-52 to retreat towards austerity and a temporary imposition of drastic import restrictions. Thereafter, there was some improvement, though the extent to which lower taxes were possible was limited by the high level of social service and defence expenditure (Commonwealth and State finance over recent years is summarised in Table 20)

THE BANKING SYSTEM

The bulk of the commercial banking business is done by seven private banks, the Bank of New South Wales, the Australia and New Zealand Bank, the National Bank of Australasia, the Commercial Banking Company of Sydney, the Commercial Bank of Australia, the English, Scottish and Australian Bank, and the Bank of Adelaide—and one government-owned institution—the Commonwealth Trading Bank of Australia, which is now formally separate from the central bank—though its General Manager is still subject to the overriding authority of the central bank's board of directors. The greater part of the banks' resources are derived from deposits, of which about 20 per cent are "fixed" for terms varying from 3 months to 2 years. In December, 1954, trading bank deposits amounted to £A1,495 million. The most usual way of granting accommodation is by means of the overdraft which is often for a longer term than would be usual in the United Kingdom. Certain banks do a limited bill business—

primarily in export bills. Hire-purchase finance also now provides an increasing amount of similar domestic paper. Trading bank advances and discounts totalled £A873 million in December, 1954 and Treasury bills, Government and municipal securities amounted to £A216 million (for greater detail, see Table 21).

Savings bank business is a separate activity, largely in the hands of government-owned institutions. Savings deposits—£A1,040 million in December, 1954—are invested for the most part in various types of government securities and in fixed loans. Each of the Australian States has established some form of rural or agricultural bank and, in certain cases, these have extended their activities into other fields, including the finance of industry.

The Commonwealth Bank of Australia is the central bank. It was established in 1911 under federal government ownership, initially as an ordinary bank in competition with those already operating. It began a savings bank business in 1912 and in 1913 opened its general banking department. The depression of the early 1930's obliged it, almost against its will, to take charge of both the credit situation and the exchange rate.

The advent of the second World War considerably hastened its development of central banking functions. During the first two years of war, the emphasis continued to be on central bank leadership and trading bank co-operation, but as inflationary pressures increased, government opinion came to favour "a thorough scheme to curb unnecessary monetary expansion". Finally, in November 1941, the National Security (Wartime Banking Control) Regulations were introduced. These regulations required the trading banks *inter alia* to comply with the advance policy laid down by the Commonwealth Bank from time to time, to secure the prior consent of the Commonwealth Bank before acquiring securities for investment purposes, and to lodge such part of their "surplus investible funds" as the Commonwealth Bank might direct in "special accounts" held with the central institution. A nominal rate of interest was paid on these deposits and withdrawals could only be made at the discretion of the central bank. In 1942, interest rates were likewise controlled, under the National Security (Economic Organisation) Regulations. The Commonwealth Bank was already responsible for exchange control, much of the detailed work being delegated to the other banks as its agents. All these provisions were incorporated, substantially unchanged, in the banking legislation of 1945. Wartime arrangements to ensure that the financial policy of the Bank should be in harmony with the main decisions of government policy were also continued. In addition, the 1945 legislation embodied formal statutory recognition of the Commonwealth Bank as the central bank and gave it a complete monopoly of the note issue, for the management of which it had in fact been fully responsible since 1924.

For some years, this legislation remained the basis of control without amendment, though both the qualitative and quantitative aspects of the controls became much less rigorous. Further relaxation followed the recession of 1951-52. From 1951 onwards, long-term interest rates were allowed to rise to accord with market opinion. The qualitative controls were considerably loosened in May and all but removed in October, 1952. The control of bank interest rates was abandoned in favour of observance of agreed higher maxima on overdrafts and deposits. The trading banks made much of the threat to their position of the uncalled liability in respect of special accounts. Their views were doubtless coloured by the unsuccessful attempt of a Labour Government to nationalise them in 1947. New legislation was passed in April, 1953 which had the effect both of limiting the extent of the liability for calls to special account and of providing for automatic releases

THE BRITISH COMMONWEALTH

in the event of a fall in deposits. Much of the former legislative framework was retained, but the procedures were now applied rather more loosely. In addition, the trading bank section of the Commonwealth Bank was formally separated from the central bank, though the latter retained its interests in rural credits, mortgage banking and industrial finance.

Central bank credit policy has been generally concerned to support the rising level of economic activity and the trading banks have been encouraged to meet the expanding demands of production, subject to their exercising caution in assuming the longer-term type of commitment. Whenever necessary, the Commonwealth Bank has sought the co-operation of the trading banks in imposing greater restraint in the making of advances and compulsion has to a large extent been replaced by "moral suasion". In addition, when trading bank liquidity is high, a portion of new funds may be immobilised in special accounts with the central bank, but as the law now stands statutory releases must be made when there is a fall in deposits. Because of the operation of this semi-automatic formula and the limited extent to which open market operations are possible, the Commonwealth Bank is now possessed of rather less discretion in controlling credit conditions than was the case under the unamended 1945 legislation. In order to strengthen its position, it has therefore sought to persuade the trading banks to maintain, in addition to these special accounts, a ratio of liquid assets and government securities to total deposits of 25 per cent, subject to variations for seasonal and other short-term influences.

THE CAPITAL MARKET

Despite the absence of a Money Market in the London sense—there is no official minimum rate of discount (bank rate) and no discount houses—there is some degree of institutional specialisation. The pastoral finance companies provide a limited range of banking facilities, mainly to woolgrowers. Other financial institutions of importance include the life assurance companies, which compete to some extent with the banks in making loans; the trust companies (trustee and executor business); the building societies; the hire purchase companies; and the investment trusts. There are also several experienced issuing houses operating in the main centres. In addition, a small number of "merchant banks" has been set up in recent years—the Anglo-Australian Corporation in Melbourne, Main-guard Ltd in Sydney, and subsidiary companies in Melbourne and Sydney of the Charterhouse Investment Trust, London. It is probable that these "banks" will make their major contribution in the capital market and develop primarily as issuing houses. None of these is actually registered as a bank under the relevant banking legislation. Long-term capital for the use of private enterprise is secured by forming joint-stock companies and arranging for issues of shares. Although company law is a matter for the States and not within the competence of the Commonwealth Parliament, the basic principles underlying each of the several State Acts are derived from English law and practices. In addition to public companies, Australian laws provide for the setting up of partnerships and proprietary companies, which are similar to the private companies in England.

The banks are concerned mainly with meeting requirements for working capital and in certain cases with the limited provision of medium-term industrial finance. The finance for public utilities has generally been provided from government sources.

The insurance companies and the trustee companies are among the largest investors and they have shown an increasing interest in the shares of the larger industrial

concerns. There has also been a substantial growth in investment from abroad.

The largest borrowers are still the Commonwealth and State Governments. Most of the States' debt has been incurred for the purpose of public works, while a high proportion of Commonwealth loans has served to finance war and defence expenditure. Following the Financial Agreement between the Commonwealth and States in 1927, the Commonwealth and six State Governments set up the Australian Loan Council with sole authority to determine the total amount that shall be borrowed in each financial year and its distribution as between the respective governments. The authority of the Council also extends to a proportion of the borrowings for public works of semi-government and local government bodies (which refer large issues for approval). By centralising control in this way, the Loan Council has assisted in promoting orderly government finance. A summary of the public debt position is set out in Table 22.

Between 1945 and 1952-53, Australian companies supplied 54 per cent of the £A520.6 million invested in major industrial development in Australia, though in 1952-53 itself overseas enterprises increased their share to 60 per cent, (£A69.95 million of the year's total of £A117.8 million).

New security listings on Australian stock exchanges indicate the amount of capital raised in recent years by public subscription and are set out in Table 23. Some idea of the character of the post-war expansion may be gleaned from a classification of new issues by industry. For example, engineering and related activities accounted for over £A20 million of the new listings in 1951. Manufacturers of basic materials such as chemicals, cement and plastics, paper manufacturers and textile firms have also raised large sums. By early 1954, new listings also reflected the increased activity in oil and uranium ventures.

The wartime drives to encourage investment in government securities widened considerably the field of investors. Latterly, the decline in yields on gilt-edged securities caused some transfer of interest to preference and equity shares and those of investment trusts. Since the war, the public has also had the opportunity of subscribing to unsecured notes and short-term debentures which have been listed on the Stock Exchanges.

Much Australian development has been financed by the investment of overseas capital and, despite the growth in domestic savings, this is likely to remain so. British capital has always been prominent and, more recently, the United States has shown an increasing interest. Of new industrial enterprises set up with outside help since the war over 65 per cent have been linked with British interests and about 25 per cent with United States companies. Of the total, 28.5 per cent were medium-sized enterprises falling within the range £A100,000-£A500,000 nominal capital, the two remaining groups of importance being the small firms of less than £A50,000 nominal capital (22.5 per cent) and the large ventures of more than £A1 million (20 per cent).

Post-war development plans have been somewhat complicated by the extent of the ambitious migration programme. Investment plans have greatly exceeded domestic capacity and, if this rate of development were to be maintained, overseas assistance was the only possible answer.

Until 1949, the policy of the Commonwealth Government was to raise domestic loans for public works and to retire funded debt abroad as it fell due. During this period there was also a considerable inflow of capital which took three main forms. First and by far the most important was the investment by overseas companies in the expansion or

establishment of Australian branches, subsidiaries or affiliates. These comprised vehicle assembly plants, textile mills, oil refineries and branches of many other industries, either wholly owned by interests overseas or with the participation of Australian shareholders. Secondly, there were purchases by individuals abroad of equity shares in Australian companies or of government bonds. Thirdly, and to some extent overlapping the first two, were the funds either transferred to or left in Australia in the expectation of an appreciation of the Australian pound. This was so-called "hot money", though after the end of the wool boom of 1950-51 most of it was either withdrawn or employed in commercial transactions within Australia.

After 1950, a certain amount of capital was also obtained from overseas on government account, mainly from international agencies, with two relatively small loans of S.Fr.60 million each from Switzerland to buy equipment required for various development projects. Credits from the International Monetary Fund (since repaid) provided temporary assistance. Between August, 1950 and March, 1954, the International Bank for Reconstruction and Development made three loans for long-term investment purposes to Australia, totalling \$204 million (£A91 million). Table 24 indicates the approximate position of overseas capital investment in Australia, as estimated by the Commonwealth Statistician.

Australian Government policy since the war has been to encourage the setting up of new enterprises by overseas interests with the object of broadening the range of the economy and strengthening it against the impact of fluctuations in world conditions. Labour Governments which were in power until 1949 endeavoured to ensure both Australian financial participation in and control of, enterprises with overseas affiliations, but there have been no discriminatory laws against companies operating with capital from abroad, except for certain restrictions imposed by exchange control where each case is judged upon its merits. In practice, there has been no difficulty in remitting dividends earned in Australia, provided these are paid from current earnings, but repatriation of capital has been more difficult. The participation of non-Australian capital has been positively encouraged in a number of ways. Thus, there have been agreements on double taxation with the United Kingdom in 1946 and the United States in 1953. During the early post-war years of acute shortages of labour and materials, Government sponsorship was provided to assist affected companies to meet their essential needs, and in certain cases, Government authorities also supplied ancillary services, such as housing and transport facilities near the sites of new factories.

EXTERNAL TRADE

International trade is of particular importance to the Australian economy. Export surpluses are derived mainly from the primary industries, while imports consist of manufactured goods and certain critical raw materials, the local production of which is insufficient to meet the domestic demand (e.g. cotton, rubber and petroleum). Australian prosperity therefore depends to a considerable extent on prices in overseas markets. Seasonal conditions are often responsible for significant fluctuations in the volume of primary production and these largely determine the size of the exportable surplus. Given this, the amount of foreign exchange available to be spent on imports is decided by world prices. The export earnings of primary producers also exert a major influence on spending within Australia. The proportion of Australian national income derived from exports of primary produce is not as high as it was, due to the growth of the internal market and of other industries.

Merchandise export figures (excluding gold) for 1952-53 and 1953-54 at £A851 million and £A817 million respectively, amounted to more than a fifth of the national income. Four items of export have been dominant in recent years. The overwhelming importance of wool which accounted for about half of total export proceeds in 1952-53 and 1953-54 is apparent from Table 28. The other principal exports are wheat and flour which yielded £A90 million and £A61 million respectively, meats* (£A66 million and £A58 million) and butter (£A20 million and £A16 million). The exports of other foodstuffs amounted to £A123 million (approx) in both these years. The remainder of Australia's export income is earned by base metals (about £A70 million), gold and silver, with a small but growing export of manufactured goods (machinery, chemicals and fertilisers, arms and ammunition, paper, textiles and clothing, optical instruments, etc.) to nearby countries in Asia and the Pacific.

Imports of merchandise amounted to £A511 million in 1952-53 and to £A679 million in 1953-54. The most important items include yarns, manufactured fibres, textiles and apparel (£A48 million and £A108 million), machinery (£A90 million and £A100 million), metals and metal manufactures (£A107 million and £A91 million), and oils, fats and waxes (£A74 million and £A83 million), followed by motor vehicles and parts, and foodstuffs and tobacco.

The bulk of this trade is with the United Kingdom, which took £A348 million and £A296 million of Australia's exports in 1952-53 and 1953-54 respectively and provided £A215 million and £A332 million of Australia's imports in those two years. The remaining exports were spread over a number of countries, with France, Japan, the United States and Italy prominent. Imports also came from a number of countries other than the United Kingdom, but only the United States with £A85 million and £A73 million for those years deserves separate mention. An important feature of Australia's trade in recent years has been deficits with both the sterling area and the dollar area, the bulk of which have been covered by surpluses on trade with the O.E.E.C. countries (see Table 25).

The importance of British countries in Australia's overseas trade is due mainly to the complementary nature of the respective economies but no doubt historical connections have also exerted an important influence. Australia has established connections with British firms and individuals and many British firms have Australian subsidiaries. Commercial methods and legal traditions are similar. Close financial links have existed over a long period and Australia has remained a member of the sterling area, keeping the bulk of her overseas assets in London, where she has also raised a high proportion of her external loans. Other reciprocal government arrangements include a double taxation agreement and long-standing tariff preferences in favour of British goods. The traditional tariff in Australia is a "three-decker" schedule, which provides a preferential low rate of duty on British goods, intermediate rates for other nations with which trade agreements have been entered into, and higher general rates on "other imports". As a result of tariff negotiations within the terms of the General Agreement on Trade and Tariffs (G.A.T.T.), the margins of preference have sometimes been narrowed, but that has not altered the structure of the system.

Drastic import restrictions have had to be imposed periodically over the last few years because of the notorious instability in Australia's export earnings, especially those of wool. When export earnings are high, Australian incomes and bank deposits become inflated, expenditure

* Includes poultry and game

THE BRITISH COMMONWEALTH

increases sharply, leading to a high level of internal activity and heavy spending on imports. Later, when wool prices fall, the flow of imports (on which there is a time-lag because of the length of the pipe-line) tends to remain high and overseas funds slump heavily. It is at this stage that drastic government measures have been taken to check imports. These have mainly affected sterling goods, since dollar imports were already severely restricted. Hence, apart from the constant necessity to economise in the use of dollars, controls have been em-

ployed to conserve overseas funds generally and to ensure the provision of goods and services essential to the development programme. (See Table 26 for net holdings of gold and foreign exchange.) This has proved to be a most difficult problem and is inherent in the "open" nature of the Australian economy. It could be resolved only by a combination of import controls, appropriate fiscal policies, and sterner and more flexible measures to influence internal credit conditions. Technically, this would not be easy and politically almost impossible.

STATISTICAL SURVEY

AREA AND POPULATION

TABLE I

The total area of the Commonwealth of Australia is 2,974,581 sq. miles, of which 38·6 per cent or about five-thirteenths, is in the Tropical Zone.

The following table gives the area and population of the States and Territories (excluding full-blood aboriginals):

STATE OR TERRITORY	AREA (sq miles)	CENSUS, JUNE 30TH, 1947			CENSUS, JUNE 30TH, 1954		
		Males	Females	Total Persons	Males	Females	Total Persons
New South Wales . . .	309,433	1,492,211	1,492,627	2,984,838	1,720,860	1,702,669	3,423,529
Victoria	87,884	1,013,867	1,040,834	2,054,701	1,231,099	1,221,242	2,452,341

THE CONSTITUTION

ON January 1st, 1901, the six colonies (now known as States) were federated under the name of the "Commonwealth of Australia". On December 7th, 1907, the Commonwealth and the State of South Australia entered into an agreement for the surrender to and acceptance by the Commonwealth of the Northern Territory, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given and the Territory was transferred to the Commonwealth by proclamation of January 1st, 1911.

On October 18th, 1909, the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 911 square miles as the seat of Government of the Commonwealth. By the Jervis Bay Territory Acceptance Act, 1915, an area of 28 square miles at Jervis Bay, surrendered by New South Wales, was accepted by the Commonwealth.

Under the administration of the Commonwealth, but not included in it, is Papua, finally annexed by the British Government in 1884 and transferred to Commonwealth administration in 1906. Norfolk Island was a separate Crown Colony until July 1st, 1914, when it was transferred to the Commonwealth. A Mandate issued by the League of Nations in December 1920 conferred on Australia the government of the former German Territory of New Guinea, comprising about 93,000 square miles. Australia was also entrusted with the administration of the Mandate for the island of Nauru. In 1949 the Papua and New Guinea Act provided for the joint administration of these territories in a union known as the Administration of the Territory of Papua and New Guinea. However, the identity and status of Papua as a Possession of the Crown and that of New Guinea as a Trust Territory continue to be maintained. Both New Guinea and Nauru are now administered by Australia under Trusteeship Agreements with the United Nations. The Ashmore and Cartier Islands, and the Antarctic Territories, other than Adélie Land, were placed under the authority of the Commonwealth in 1931 and 1933 respectively. The administration of the Cocos-Keeling Islands was transferred from Singapore to Australia in November, 1955.

Parliament

The legislative power of the Commonwealth is vested in a Federal Parliament, consisting of the Queen, represented by the Governor-General, a Senate, and a House of Representatives. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise, prorogue the Parliament, and may in like manner dissolve the House of Representatives. This power is limited by strict although unwritten constitutional understanding, and it is seldom that decisions on these matters would be made at the discretion of the Governor-General. After any general election Parliament must be summoned to meet not later than thirty days after the day appointed for the return of the writs. Parliament must meet at least once every year.

The Senate

The Senate is composed of ten Senators from each Original State, directly chosen for a period of six years by the people of the State, voting as one electorate. The

Senate may proceed to the dispatch of business notwithstanding the failure of any State to provide for its representation in the Senate.

If a Senator vacates his seat before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, in joint session, choose a person to hold the place until the expiration of the term or until the election of a successor. If the State Parliament is not in session the Governor of the State appoints a Senator to hold office until Parliament reassembles, or until a new Senator is elected.

At least one-third of the members of the Senate must be present for the exercise of its powers.

The House of Representatives

The House of Representatives is composed of 124 members directly chosen, the qualification of electors being in each State that which is prescribed in the law of the State as the qualification of electors of the more numerous House of Parliament of the State, but in the choosing of members each elector shall vote only once.

As nearly as practicable, the number of members is twice the number of Senators. Members chosen in the States are in proportion to the population of the State, a quota being ascertained by dividing the number of persons in the Commonwealth by twice the number of the Senators. The number of persons in each State is then divided by the quota, the result being the number of members to be elected by the State. If on this division there is a remainder greater than one-half of the quota, one more member is to be chosen in the State. In any case, not less than five members are to be elected in each Original State.

With regard to the foregoing, if any State law precludes all persons of any race from voting at elections for the State Parliament, persons of that race resident in the State shall not be counted in reckoning the number of people of the State or of the Commonwealth.

The life of every House of Representatives is three years, unless dissolved by the Governor-General.

Members of the House of Representatives must be twenty-one years of age, qualified as electors and resident for at least three years within the Commonwealth. They must be natural-born British subjects or naturalised subjects of at least five years standing. Voting is compulsory.

The Powers of Parliament

According to the Constitution, the Commonwealth Parliament has power to make laws for the peace, order, and good government of the Commonwealth with respect to:

1. Trade and commerce with other countries, and among the States.
2. Taxation; but so as not to discriminate between States or parts of States.
3. Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth.
4. Borrowing money on the public credit of the Commonwealth.
5. Postal, telegraphic, telephonic and other like services.

THE BRITISH COMMONWEALTH

6. The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth.
7. Lighthouses, lightships, beacons and buoys.
8. Astronomical and meteorological observations.
9. Quarantine.
10. Fisheries in Australian waters beyond territorial limits.
11. Census and statistics.
12. Currency, coinage and legal tender.
13. Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money.
14. Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned.
15. Weights and measures.
16. Bills of exchange and promissory notes.
18. Copyright, patents of inventions and designs, and trade marks.
19. Naturalisation and aliens.
20. Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth.
21. Marriage.
22. Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants.
23. Invalid and old-age pensions.
- 23A. The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorise any form of civil conscription), benefits to students, and family allowances.
24. The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States
25. The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States.
26. The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws
27. Immigration and emigration.
28. The influx of criminals.
29. External affairs
30. The relations of the Commonwealth with the islands of the Pacific.
31. The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws
32. The control of railways with respect to transport for the naval and military purposes of the Commonwealth.
33. The acquisition, with the consent of a State, of any railways in the State on terms arranged between the Commonwealth and the State.
34. Railway construction and extension in any State with the consent of that State.
35. Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State.
36. Matters in respect of which this Constitution makes provision until the Parliament otherwise provides.
37. Matters referred to the Parliament of the Commonwealth by the Parliament of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law.

38. The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia.

39. Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or office of the Commonwealth.

Proposed laws appropriating revenue or moneys, or imposing taxation, must not originate in the Senate. The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue for the ordinary annual services of the Government; neither may it amend any proposed laws so as to increase any proposed charge on the people.

If the House of Representatives passes any proposed law, and the Senate rejects it, or returns it with amendments to which the House of Representatives will not agree, and if, after an interval of three months the House of Representatives again passes the proposed law and it is again rejected by the Senate, the Governor-General may dissolve both Houses simultaneously. But such dissolution must not take place within six months before the end of any Parliament.

If after such dissolution and a new election the Senate still fails to accept the proposed law, the Governor-General may convene a joint sitting of the two Houses. Upon the passage of the Bill, and any amendments, by an absolute majority of the total number of members of the two Houses it shall be deemed to have been duly passed by both Houses of Parliament and shall be presented to the Governor-General for the Royal Assent.

The Executive Government

The executive power of the Commonwealth is vested in the Queen, and is exercised by the Governor-General, assisted by an Executive Council of Ministers of State. These Ministers are, or must become within three months, members of the Commonwealth Parliament.

The Judicial Power

The judicial power of the Commonwealth is vested in the High Court of Australia, in such other Federal Courts as the Commonwealth Parliament creates, and in such other courts as it invests with Federal jurisdiction.

The High Court consists of a Chief Justice and not less than two other Justices, appointed by the Governor in Council. (There are at present a Chief Justice and six other Justices.) It has both an original and an appellate jurisdiction.

The High Court's original jurisdiction extends to all matters arising under any treaty, affecting representatives of other countries, in which the Commonwealth or its representative is a party, between States or between residents of different States or between a State and a resident of another State, and in which a writ of *Mandamus*, or prohibition, or an injunction is sought against a Commonwealth officer. It also extends to matters arising under the Constitution or involving its interpretation, and to any other matter as empowered by the Commonwealth Parliament.

The appellate jurisdiction extends to appeals from all judgments, decrees, orders and sentences of its own Justices exercising original jurisdiction, of any other Federal Court or court exercising Federal jurisdiction and of the Supreme Court of any State or any other State court from which an appeal lies to the Queen in Council. There is no appeal from the High Court to the Queen in Council,

without the High Court's special leave, on any question as to the limits *inter se* of the constitutional powers of the Commonwealth and those of any State or States.

In addition and pursuant to the Constitutional provisions, Federal judicial power is also exercised by the Federal Court of Conciliation and Arbitration, which consists of a Chief Judge and six other Judges dealing with industrial disputes which extend beyond the limits of any one State. Also, since 1928, jurisdiction in bankruptcy and insolvency is administered exclusively by Commonwealth Bankruptcy Courts. There is a Federal Supreme Court in the Australian Capital Territory and in the Northern Territory. State courts, usually courts of summary jurisdiction, are invested with Federal judicial power, principally to deal with offences created by Federal statutes.

Finance and Trade

The Constitution provides that all revenues or moneys raised or received by the Executive Government shall form a Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth as provided by the Constitution.

The collection and control of customs and excise duties and the payment of bounties is under the exclusive control of the Executive Government, and customs duties imposed must be uniform. The States may not impose customs or excise duties, although they may grant bounties on the mining of gold and other metals, and, with the consent of the Commonwealth Parliament, on the production or export of goods. Trade, commerce and intercourse among the States must be absolutely free.

The Commonwealth may grant financial assistance to any State on such terms and conditions as the Commonwealth Parliament thinks fit, but preference may not be given to any State or part thereof over any other State or part thereof.

The Commonwealth may make agreements with the States with respect to their public debts, including the taking over of such debts by the Commonwealth, their management, the payment of interest, and the provision and management of sinking funds in respect thereof. (Pursuant to the Financial Agreement of 1928 the Commonwealth took over State debts, and an Australian Loan Council was established to regulate borrowings and otherwise co-ordinate Commonwealth and State financial arrangements. Grants are based on the findings of a State Grants Commission, to which evidence is submitted by the States in support of their claims.)

Since 1942, first as a wartime measure and later as a result of agreement between the Commonwealth and the States, all direct taxation is imposed and collected by the Commonwealth Government. A proportion, arrived at by a formula fixed according to population and revenue of the States, is passed back to each State.

The States

The Commonwealth Constitution safeguards the Constitution of each State by providing that it shall continue as at the establishment of the Commonwealth, except as altered in accordance with its own provisions. When a State law is inconsistent with a law of the Commonwealth, the latter prevails, and the former is invalid to the extent of the inconsistency. However, the legislation of the Commonwealth Parliament is limited to those matters which are listed in Section 51 of the Constitution, while

the States possess, as well as concurrent powers in those matters, residual legislative powers enabling them to legislate in any way for "the peace, order and good Government" of their respective territories.

The States may not raise or maintain naval or military forces, or impose taxes on any property belonging to the Commonwealth, nor may the Commonwealth tax State property. The State may not coin money.

The Commonwealth may not make any law for establishing any religion or for prohibiting the exercise of any religion, and no religious test may be imposed as a qualification for any office under the Commonwealth.

The Commonwealth is charged with protecting every State against invasion, and, on the application of a State Executive Government, against domestic violence.

Provision is made under the Constitution for the admission of new States and for the establishment of new States within the Commonwealth.

Alteration of the Constitution

Proposed laws for the alteration of the Constitution must be passed by an absolute majority of each House of Parliament, and not less than two or more than six months after its passage the proposed law must be submitted in each State to the qualified electors.

In the event of one House twice rejecting a proposed law which has already received an absolute majority in the other House, the Governor-General may submit the proposed law to the electors. If, in a majority of the States a majority of the electors voting approve the proposed law and if a majority of all the electors voting also approve, it shall be presented to the Governor-General for Royal Assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing or altering the limits of the State, or in any way affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

GOVERNORS-GENERAL

THE BRITISH COMMONWEALTH

CONSTITUTION OF THE STATES

NEW SOUTH WALES

New South Wales became a British Possession in 1788, and a responsible government was elected in 1856. It federated with the other States to form the Commonwealth in 1901.

The executive power is in the hands of a Governor, appointed by the Crown, who is assisted by a Cabinet.

The Legislative Power is vested in a Parliament of two Houses, the Legislative Council and the Legislative Assembly. The former consists of sixty members, elected at a joint sitting of both Houses of Parliament, for a term of twelve years, fifteen members retiring every three years. The Legislative Assembly consists of ninety-four members, and sits for three years.

VICTORIA

Formerly a portion of New South Wales, Victoria was proclaimed a separate colony in 1851 and accorded responsible self-government four years later.

The legislative authority is vested in a bi-cameral Parliament, the Upper House, or Legislative Council, of thirty-four members, elected for six years, and the Lower House, or Legislative Assembly, of sixty-five members, elected for three years. One-half of the members of the Council retire every three years.

In the exercise of the executive the Governor is assisted by a Cabinet of responsible Ministers. Not more than four members of the Council and not more than eight members of the Assembly may occupy salaried office at any one time.

QUEENSLAND

Queensland was formerly a part of New South Wales. It was formed into a separate colony with responsible government in 1859.

Legislative power rests with a uni-cameral Parliament composed of seventy-five members elected from seventy-five districts for a term of three years.

SOUTH AUSTRALIA

South Australia was formed into a British Province by Letters Patent of February 1836. The Constitution of October 24th, 1856, vests the legislative power in a Parliament elected by the people and consisting of a Legislative Council and a House of Assembly. The Council is composed of twenty members, one-half of whom retire

every three years. Their places are filled by new members elected from each of the five districts into which the State is divided for this purpose. The executive has no authority to dissolve this body.

The thirty-nine members of the House of Assembly are elected for three years from thirty-nine electoral districts.

The executive power is vested in a Governor, appointed by the Crown, and an Executive Council consisting of six responsible Ministers and the Chief Justice of the Supreme Court.

WESTERN AUSTRALIA

Formal possession of the country around King George Sound was taken in 1791. In June 1829 Captain James Stirling founded the Swan River Settlement, now the Commonwealth State of Western Australia.

Large grants of land were made to early settlers, and agricultural and pastoral occupations were pursued by a small population. In 1850, when the State was in a poor condition, the inhabitants' petition that it might be made a penal settlement was acceded to. In the following eighteen years, 9,718 convicts were sent out. Transportation ceased in 1868.

In 1890 the administration was vested in the Governor, a Legislative Council and a Legislative Assembly. The Council was, at first, nominated by the Governor, but it was provided that in the event of the population of the colony reaching 60,000 it should be elective. This figure was reached in 1893.

According to the present Constitution, the Legislative Council consists of thirty members representing ten electoral provinces and holding their seats for six years.

The Legislative Assembly consists of fifty members, elected for three years, each representing one electorate.

The entire management and control of the unalienated lands of the Crown in Western Australia is vested in the State Legislature.

TASMANIA

Tasmania was discovered in 1642 and became a British settlement in 1803 as a dependency of New South Wales. Responsible government was established in 1856.

The administration is vested in a Governor acting upon the advice of a Legislative Council and House of Assembly. The Council consists of nineteen members who sit for six years, retiring in rotation. There is no power to dissolve the Council. The Head of Assembly has thirty members, elected for five years.

THE GOVERNMENT

Governor-General: Field-Marshal Sir WILLIAM JOSEPH SLIM, G.C.B., G.C.M.G., G.B.E., D.S.O., M.C., K.S.T.J.

COMMONWEALTH CABINET

(Liberal and Country Party Coalition,
re-formed Jan. 10th, 1956).

Prime Minister: Rt. Hon. ROBERT G. MENZIES, C.H., Q.C., (L.).

Treasurer: Rt. Hon. Sir ARTHUR W. FADDEN, K.C.M.G. (C.P.).

Vice-President of the Executive Council and Minister for Defence Production: Rt. Hon. Sir ERIC J. HARRISON, K.C.V.O. (L.).

Minister for Labour and National Service and Minister for Immigration: Rt. Hon. HAROLD E. HOLT (L.).

Minister for Trade: Rt. Hon. JOHN McEWEN (C.P.).

Minister for External Affairs: Rt. Hon. RICHARD G. CASEY, C.H., D.S.O., M.C. (L.).

Minister for Defence: Rt. Hon. Sir PHILIP McBRIDE, K.C.M.G., M.P. (L.).

Minister for the Navy and Leader of the Government in the Senate: Senator the Hon. NEIL O'SULLIVAN (L.).

Attorney-General: Senator the Hon. JOHN A. SPICER, Q.C. (L.).

Minister for National Development: Senator the Hon. WILLIAM H. SPOONER, M.M. (L.).

Minister for Air and Minister for Civil Aviation: Hon. A. G. TOWNLEY (L.).

Minister for Territories: Hon. P. M. C. HASLUCK (L.).

MINISTERS NOT IN THE CABINET

Minister for Repatriation: Senator the Hon. WALTER J. COOPER, M.B.E. (C.P.).

Minister of Supply: Hon. HOWARD BEALE, Q.C. (L.).

Minister for Primary Industry: Hon. W. McMAHON (L.).

Minister for Shipping and Transport: Senator the Hon. S. D. PALTRIDGE (L.).

Minister for Health: Hon. D. A. CAMERON (L.).

Minister for the Army: Hon. J. O. CRAMER (L.).

Postmaster-General: Hon. C. DAVIDSON, O.B.E. (C.P.).

Minister for Customs and Excise: Hon. F. M. OSBORNE, D.S.C. (L.).

Minister for the Interior and Minister for Works: Hon. A. FAIRHALL (L.).

Minister for Social Services: Hon. H. S. ROBERTON (C.P.).

ADMINISTRATORS OF TERRITORIES

Northern Territory: Hon. F. J. S. WISE.

Papua and New Guinea: Brig. D. M. CLELAND, C.B.E.

Nauru: R. S. LEYDIN, O.B.E.

Norfolk Island: Brig. C. H. B. NORMAN, D.S.O., M.C.

DIPLOMATIC REPRESENTATIVES

(A=Ambassador; M=Minister; HC=High Commissioner)

Brazil: C. V. KELLWAY, Rio de Janeiro (M.).

Burma: C. T. MOODIE, Rangoon (M).

Canada: Sir DOUGLAS COPLAND, K.B.E., C.M.G., Ottawa (HC).

Ceylon: Col. R. A. PEACHEY, Colombo (H.C. Acting).

Egypt: A. R. CUTLER, V.C., Cairo (M).

France: A. T. STIRLING, C.B.E., Paris (A).

Germany: J. D. L. HOOD, C.B.E., Bonn (A).

India: P. R. HEYDON, New Delhi (HC).

Indo-China: D. W. McNICOL, Saigon (M).

Indonesia: W. R. CROCKER, Djakarta (A).

Irish Republic: W. T. DORG, Dublin (Chargé d'Affaires).

Israel: B. C. BALLARD, Tel-Aviv (M).

Italy: D. P. McGUIRE, C.B.E., Rome (M).

Japan: A. B. JAMIESON (Chargé d'Affaires).

Netherlands: H. A. McCLURE-SMITH, The Hague (A).

New Zealand: D. L. DAVIS, Wellington (H.C. Acting).

Pakistan: Maj.-Gen. W. J. CAWTHORN, C.B., C.I.E., C.B.E., Karachi (HC).

Philippines: Rear-Admiral G. D. MOORE, C.B.E., Manila (A).

South Africa: Lt.-Col. W. R. HODGSON, C.M.G., O.B.E., Pretoria (HC).

Thailand: D. O. HAY, D.S.O., M.B.E., Bangkok (A).

United Kingdom: Sir THOMAS W. WHITE, K.B.E., D.F.C., V.D., London (HC).

United States of America: Sir PERCY C. SPENDER, K.B.E., Q.C., Washington (A).

United Nations: Dr. E. R. WALKER, New York (A); R. L. HARRY, Geneva (Permanent Delegate).

Agents-General for the States in London

New South Wales: F. P. BUCKLEY, 56-57 Strand, W.C.2.

Victoria: (Agent-Gen. for Victoria) Col. the Hon. W. W. LEGGATT, D.S.O., M.C., E.D., F.L.A.

Queensland: D. J. MUIR, 409-410 Strand, W.C.2.

South Australia: A. H. GREENHAM, South Australia House, Marble Arch, W.1.

Western Australia: Hon. J. A. DIMMITT, Savoy House, Strand, W.C.2.

Tasmania: Sir ERIC VON BIBRA, O.B.E., 457 Strand, W.C.2.

COMMONWEALTH GOVERNMENT DEPARTMENTS

AIR DEPARTMENT

Secretary: E. W. HICKS, B.COM.

Chief of Air Staff: Air Marshal Sir JOHN McCAULEY, K.B.E., C.B., B.Com.

First Assistant Secretary: J. C. PERRY

ARMY DEPARTMENT

Secretary: A. D. McKNIGHT.

Chief of General Staff: Lt.-Gen. Sir HENRY WELLS, C.B., K.B.E., D.S.O.

Assistant Secretaries: E. HARDING, O.B.E., M.M., L. G. BINNS, O.B.E., E. G. WILLIAMS.

ATTORNEY-GENERAL'S DEPARTMENT

Solicitor-General and Secretary: Prof. KENNETH H. BAILEY, C.B.E., M.A., B.C.L., LL.M.

Parliamentary Draughtsman: J. Q. EWENS, O.B.E., LL.B.

Crown Solicitor: H. E. RENFREE, LL.B.

AUDITOR-GENERAL'S OFFICE

Auditor-General: H. C. NEWMAN, O.B.E.

Secretary and Chief Inspector: V. J. W. SKERMER.

AUSTRALIAN ATOMIC ENERGY COMMISSION

Chair: Sir JACK EDWIN STEVENS, K.B.E., C.B., D.S.O., E.D.

Members: Prof. J. P. BAXTER, O.B.E., H. M. MURRAY.

Secretary: P. C. GREENLAND.

THE BRITISH COMMONWEALTH

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

Acting Commonwealth Statistician: S. R. CARVER.
First Assistant Statistician: K. M. ARCHER.

DEPARTMENT OF CIVIL AVIATION

Director-General: D. G. ANDERSON.
Assistant Directors-General: C. S. WIGGINS, C.B.E., F.I.R.E.
(Operations); R. M. BADENACH (Ground Facilities);
(Acting) A. B. McFARLANE (Regulatory).

DEPARTMENT OF COMMERCE AND AGRICULTURE*

Secretary: J. G. CRAWFORD, C.B.E., M.E.C.
First Assistant Secretaries: J. V. MORONEY (Marketing),
Dr. W. A. WESTERMAN (Trade Policy).

DEPARTMENT OF DEFENCE

Secretary: Sir FREDERICK G. SHEDDEN, K.C.M.G., O.B.E.
Deputy Secretary: F. O. CHILTON, D.S.O.

DEPARTMENT OF DEFENCE PRODUCTION

Secretary: H. P. BREEN, C.B.E., A.A.S.A.
Deputy Secretary: J. L. KNOTT.
Controller-General of Munitions Supply: R. H. DOYLE.

DEPARTMENT OF EXTERNAL AFFAIRS

Secretary: A. H. TANGE, C.B.E.
Assistant Secretaries: J. PLIMSOLL (Geographical Regions),
P. SHAW (United Nations), J. K. WALLER (Adminis-
trative and General).

DEPARTMENT OF HEALTH

Director-General of Health: Dr. A. J. METCALFE, C.B.E.,
M.B., CH M., D.P.H.
Senior Medical Officers: Drs. H. E. DOWNES, C. E. COOK,
R. E. RICHARDS, G. M. REDSHAW, S. D. WATSFORD,
L. J. WIENHOLT.
Chief Administrative Officer: R. H. D. WHITE.

DEPARTMENT OF IMMIGRATION

Secretary: T. H. E. HEYES.
First Assistant Secretary: A. L. NUTT.

DEPARTMENT OF THE INTERIOR

Secretary: W. A. McLAREN, C.B.E.
First Assistant Secretary: H. A. BARRENGER.

DEPARTMENT OF LABOUR AND NATIONAL SERVICE

Secretary: H. A. BLAND.
Assistant Secretaries: E. R. TOMS (Administration), Dr.
P. H. COOK (Employment), Dr. I. G. SHARP (Industrial
Relations), A. L. BRENTWOOD (Industrial Services),
T. C. GRAHAM (Planning and Research).

DEPARTMENT OF NATIONAL DEVELOPMENT

Secretary: Dr. H. G. RAGGATT, C.B.E.
First Assistant Secretary: B. W. HARTNELL.

NAVY DEPARTMENT

Secretary: T. J. HAWKINS, C.B.E., B.A., LL.B.
Chief of Naval Staff: Vice-Admiral R. R. DOWLING, C.B.,
C.B.E., D.S.O.
Flag Officer Commanding Australian Fleet: Rear-Admiral
H. M. BURRELL, C.B.E.

POSTMASTER-GENERAL'S DEPARTMENT

Director-General of Posts and Telegraphs: Sir GILES
CHIPPINDALL, C.B.E.
Deputy Director-General: P. E. R. VANTHOFF, O.B.E.,
M.V.O.

PRIME MINISTER'S DEPARTMENT

Secretary: Sir ALLEN BROWN, C.B.E.
Deputy Secretary: E. J. BUNTING, O.B.E.

REPATRIATION COMMISSION

Chairman: Maj -Gen. G. F. WOOTTEN, C.B., C.B.E., D.S.O.,
E.D.
Deputy Chairman: H. F. GASCOIGNE-ROY, D.C.M.
Secretary: S. P. GEORGE.

DEPARTMENT OF SHIPPING AND TRANSPORT

Secretary: C. H. McFADYEN.
First Assistant Secretary: D. C. L. WILLIAMS.

DEPARTMENT OF SOCIAL SERVICES

Director-General: F. H. ROWE, C.B.E.
Deputy Director-General: A. W. PAUL

DEPARTMENT OF SUPPLY

Secretary: F. A. O'CONNOR, O.B.E.
Deputy Secretary: C. A. SIMON, C.B.E.
Chief Scientist: W. A. S. BUTEMENT, O.B.E., B.Sc., A.M.I.E.E.

DEPARTMENT OF TERRITORIES

Secretary: C. R. LAMBERT, C.B.E.
First Assistant Secretary: J. C. ARCHER.

DEPARTMENT OF TRADE AND CUSTOMS*

Comptroller-General: F. A. MEERE, O.B.E.
First Assistant Comptrollers-General: F. J. MARCUSSEN
(Administration), H. F. B. HEYES (Trade and Tariff)

DEPARTMENT OF THE TREASURY

Secretary: Sir ROLAND WILSON, C.B.E.
First Assistant Secretaries: C. S. HEWITT (Budget and
Accounting), D. J. HIBBERD (Banking, Trade and
Industry), R. J. RANDALL (General Financial and
Economic Policy).
Commonwealth Actuary: W. C. BALMFORD, O.B.E.
Commissioner of Taxation: P. S. MCGOVERN, C.B.E.

DEPARTMENT OF WORKS

Director-General: Dr. L. F. LODER, C.B.E.
Deputy Director-General: L. F. PRICE, M.C.
Assistant Directors-General: H. YOXON, A. C. FLEET-
WOOD

* The reorganisation of January 10th, 1956 involved changes of function and personnel of these Departments, and the formation of two new Departments (of Trade and of Primary Industry).

COMMONWEALTH PARLIAMENT

THE SENATE

President: Senator the Hon. ALISTER MAXWELL McMULLIN.

Chairman of Committees: Senator the Hon. ALBERT D. REID, M.C.

Leader of the Government: Senator the Hon. N. O'SULLIVAN.

Leader of the Opposition: Senator the Hon. N. E. McKenna.

Clerk: R. H. C. LOOF

Clerk-Assistant: J. R. ODGERS.

MEMBERS OF THE SENATE

(The following list is correct only up to July 1st, 1956, when changes due to the December, 1955 elections for half the Senate take effect.)

S. K. AMOUR	N.S.W.
K. M. ANDERSON	N.S.W.
The Hon. J. I. ARMSTRONG	N.S.W.
J. J. ARNOLD	N.S.W.
The Hon. W. P. ASHLEY	N.S.W.
W. E. AYLETT	Tasmania

POLITICAL PARTIES

Liberal Party of Australia, The: Federal Secretariat, 30 Ash Street, Sydney (G.P.O. Box 1061); the Party was formed in December 1944 from a number of non-socialist organisations. First returned in the Commonwealth Parliament in December 1949, the Party has retained office in conjunction with the Country Party at all subsequent elections. It holds 57 of the seats in the House of Representatives, compared with 18 seats held by the Country Party, and 47 by the Australian Labour Party. Branches elect members to State Councils, and State Councils send representatives to the Federal Council and the Federal Executive. Features of Party policy are loyalty to the throne and the maintenance of the political and economic unity of the Commonwealth; the Party is absolutely opposed to socialism and supports freedom of enterprise and initiative. Universal national service and the maintenance of adequate defence forces are also prominent in the policy, together with uncompromising opposition to Communism, the prevention of industrial disturbance, the maintenance of full employment and the extension of social services. Since the Party has been in office, a long-range plan of national development and productive expansion has been pursued. The Leader of the Party is the Prime Minister, the Rt. Hon. R. G. MENZIES, C.H., Q.C., M.P.; the Leader in the Senate is the Minister for the Navy, Senator the Hon. NEIL O'SULLIVAN; the Federal President is W. H. ANDERSON, C.B.E.

Country Party, The: 4 St. James' Buildings, 123-125 William Street, Melbourne, C.1; f. 1916; the principal objectives of the Party are the betterment of conditions in rural and agricultural communities through improved marketing facilities, more effective Parliamentary representation of country people, the encouragement of desirable immigrants, and the promotion of the study of all matters relating to agricultural and primary production. The Party upholds the integrity of the Commonwealth; Federal Parliamentary Leader Rt. Hon. ARTHUR FADDEN K.C.M.G.; State Leader

Sir HERBERT HYLAND; Chief Pres. G. A. C. PERKINS; Gen. Sec. W. H. LOUCH; publ. *The Countryman* (weekly).

Australian Labour Party: 236 Elizabeth Street, Brisbane; Objectives: the socialisation of industry, production, distribution and exchange; principles of action. socialisation of industry by—(a) the constitutional utilisation of the Federal, State and Municipal Government Parliamentary and administrative machinery; (b) the extension of the scope and powers of the Commonwealth Bank until complete control of banking and credit is in the hands of the nation; (c) the organisation and establishment of co-operative activities, in which the workers and other producers shall be trained in the management, responsibility and control of industry; (d) the cultivation of Labour ideals and principles, and the development of the spirit of social service; (e) the setting-up of Labour research and Labour information bureaux, and of Labour educational institutions; (f) progressive enactment of reform, as defined in the Labour platform; Leader of the Parl. Labour Party in the Senate, Senator the Hon. W. P. ASHLEY; Leader in the House of Representatives, Rt. Hon. H. V. EVATT, Q.C.; Pres. of the Federal Executive F. E. CHAMBERLAIN, Vice-Pres. Senator J. P. TOOHEY and W. P. COLBOURNE; Federal Sec Hon. JOHN M. SCHMELLA.

Australian Labour Party (Anti-Communist): formed April 17th, 1955 by seven members dismissed from the Australian Labour Party following criticisms of Dr. Evatt and counter-charges against certain right-wing members of the Party. The split developed in 1954 and became centred in the Victoria State Executive Committee of the Party, which was ordered on December 3rd to dissolve itself. In the federal Parliament the seven supporters of the old Victorian Executive formed the new Anti-Communist Labour Party; leader ROBERT JOSHUA; as a result of the Dec 1955 elections the Party lost all seven seats in the House of Representatives, and obtained two in the Senate.

THE BRITISH COMMONWEALTH

THE BRITISH COMMONWEALTH

THE LEGAL SYSTEM

The judicial power of the Commonwealth is vested in a Federal Supreme Court, the High Court of Australia, consisting of a Chief Justice and six Justices and such other courts as the Commonwealth Parliament may create. Parliament can also vest certain federal jurisdiction in State courts. The High Court has original jurisdiction in all matters arising under treaties or affecting representatives of other countries, and in certain matters in which the Commonwealth or the States are concerned. It also hears and determines appeals from judgments of its own Justices exercising original jurisdiction, and from judgments of any other Federal Court or of the Supreme Court of any State, subject, in certain cases, to final appeal to the Queen in Council.

HIGH COURT OF AUSTRALIA

Chief Justice: Rt. Hon. Sir OWEN DIXON, G.C.M.G.

Justices: Hon. Sir EDWARD A. McTIERNAN, K.B.E., Hon. Sir DUDLEY WILLIAMS, K.B.E., M.C., Hon. Sir WILLIAM F. WEBB, K.B.E., Hon. Sir WILFRED FULLAGAR, K.B.E., Hon. Sir FRANK KITTO, K.B.E., Hon. Sir ALAN TAYLOR, K.B.E.

Principal Registrar: J. G. HARDMAN, O.B.E., LL.B., 450 Law Courts Place, Melbourne.

COMMONWEALTH COURT OF CONCILIATION AND ARBITRATION

Chief Judge: Hon. Sir WILLIAM R. KELLY, K.B.E.

Judges: Hons. A. W. FOSTER, R. C. KIRBY, E. A. DUNPHY, S. C. G. WRIGHT, Sir EDWARD J. R. MORGAN, R. ASHBURNER.

Industrial Registrar: J. E. TAYLOR, 372 Little Bourke Street, Melbourne

FEDERAL COURT OF BANKRUPTCY

Judge: Hon. Sir STUART CLYNE.

Inspector-General: C. E. TROYAHN, 450 Law Courts Place, Melbourne.

SUPREME COURT OF THE AUSTRALIAN CAPITAL TERRITORY

Judge: Hon. W. B. SIMPSON.

Registrar: B. M. MARTIN, Civic Centre, Canberra, A.C.T.

NEW SOUTH WALES

Minor civil matters are heard in Courts of Petty Sessions (Small Debts Courts) which have a jurisdiction limited in point of locality and amount. The civil jurisdiction of District Courts also is limited in these respects but the Supreme Court is not so limited. In criminal matters certain offences are tried in Courts of Petty Sessions, others by Courts of Quarter Sessions, and the most serious before the Supreme Court.

THE SUPREME COURT King and Elizabeth Streets, Sydney.

Chief Justice: Hon. K. W. STREET.

Prothonotary: R. E. WALKER.

Judges: Hons. W. F. L. OWEN, E. D. ROPER, L. J. HERRON, J. S. J. CLANCY, B. SUGERMAN, E. P. KINSELLA, J. H. McCLEMENS, C. McCLELLAND, A. R. RICHARDSON, R. LE GAY BRERETON, W. R. DOVEY, H. MAGUIRE,

QUEENSLAND

The Magistrates' Courts, consisting of Justices of the Peace, or Magistrates, have jurisdiction which varies in accordance with the personnel of the Bench, but which in general is limited to business in which not more than £200 is claimed. Justices of the Peace and Stipendiary Magistrates have power to deal summarily with certain minor offences and have power to grant bail. General criminal jurisdiction is vested in the Supreme Court and is exercised by a Judge sitting with a jury. Appeal lies from the Criminal Court to the Court of Criminal Appeal, consisting of not less than three Judges, and can with leave be taken to the High Court of Australia.

In the Supreme Court are vested common law, equity, matrimonial, probate and Admiralty jurisdictions, and Judges are not assigned specifically to any one branch. The Supreme Court holds periodical sittings in country centres, and for this purpose a Judge is sent on circuit. Appeal lies to the full Bench of the Supreme Court, and in certain cases to the High Court of Australia, and possibly to the Privy Council.

THE SUPREME COURT

Chief Justice: Hon. NEAL WILLIAM MACROSSAN, M.A.

Senior Puisne Judge: Hon. ALAN J. MANSFIELD.

Puisne Judges: Hons. ROSLYN F. B. PHILP, BENJAMIN H. MATTHEWS, EDWIN J. D. STANLEY, KENNETH R. TOWNLEY, WILLIAM G. MACK, M. HANGER, L. BROWN.

Parliamentary Draftsman: E. L. BEAN, C.M.G., M.A., LL.B., S.M.

BANKRUPTCY COURT

Judge: Judge Sir HERBERT KINGSLEY PAINE, C.M.G., M.A., LL.B.

WESTERN AUSTRALIA

The Supreme Court has complete jurisdiction in all criminal and civil matters. Local Courts have limited civil jurisdiction. There are Magistrates' Courts and Children's Courts. The Courts of Session deal with criminal matters outside Perth.

THE SUPREME COURT

Chief Justice: Hon. Sir JOHN P. DWYER, K.C.M.G.

Puisne Judges: Hons. A. A. WOLFF, L. W. JACKSON, J. E. VIRTUE, R. V. NEVILE

Solicitor-General: SYDNEY H. GOOD, Q.C.

Master and Registrar: GREGORY J. BOYLSON.

ARBITRATION COURT

President: Hon. R. V. NEVILE.

Industrial Registrar: JOSEPH H. BOGUE.

TASMANIA

The Supreme Court is both a court of first instance and a Court of Appeal in all jurisdictions, civil and criminal. The State is also divided into four districts with local civil Courts presided over by Commissioners who are Police Magistrates, sit in Petty Sessions, and have all the powers of two Justices of the Peace. Petty offences and some civil claims are dealt with in Petty Sessions and in General Sessions by Justices of the Peace.

THE SUPREME COURT

Chief Justice: Hon. Sir JOHN D. MORRIS, K.C.M.G.

Puisne Judges: Hon. R. K. GREEN, LL.B., Hon. M. G. GIBSON, LL.M., Hon. M. P. CRISP, LL.B.

Solicitor-General: S. C. BURBURY, Q.C., LL.B.

Principal Registrar: H. R. DOBBIE, LL.B.

THE BRITISH COMMONWEALTH

RELIGION

At the 1954 census, 8,033,754 persons (or 89.4 per cent of the total population) declared adherence to some Christian denomination; 855,819 (or 9.5 per cent of the population) gave no reply to the question regarding religious belief. Of the remainder, 54,817 belonged to non-Christian communities (mainly Hebrew), 18,456 were indefinite and 23,684 declared they had no religion.

The Christians were divided as follows: Church of England 3,408,850, Catholic (so described in individual census schedules) 1,299,884, Roman Catholic 762,102, Methodist 977,933, Presbyterian 869,242, Baptist 127,444, Lutheran 116,178, Protestant (undefined) 95,408, Church of Christ 80,364, Greek Orthodox 74,760, Congregational 69,452, others (including members of the Salvation Army, Seventh Day Adventists and Brethren) 152,137.

CHURCH OF ENGLAND IN AUSTRALIA

The General Synod was formed in 1872. It meets every five years, and consists of two Houses: the House of Bishops and the House of Representatives. Both Houses sit together, but vote separately.

BROADCASTING

Broadcasting in Australia falls under two headings—national and commercial. The national domestic service, which excludes all advertising, is controlled by a Commission of seven members, appointed by the Cabinet and known as the Australian Broadcasting Commission. The technical services for the national broadcasting service are provided by the Postmaster-General's Department.

In June 1954, there were in operation 53 national and 106 commercial broadcasting stations. The latter are owned and operated by private interests, being dependent on advertising for their revenue. On June 30th, 1954, the number of listener's licences in existence was 2,041,613.

With the object of improving broadcasting in Australia the Australian Broadcasting Act, 1948 was passed, after a complete review of the existing broadcasting structure. The Act provided for the establishment of a Board of three members appointed on a full-time basis to be known as the Australian Broadcasting Control Board. The Board commenced operations on March 15th, 1949, its chief functions being to ensure: (a) the provision of services by broadcasting, television and facsimile stations and services of a like kind in accordance with plans approved by the Government, (b) appropriate standards of technical equipment and operation, and (c) that programmes transmitted by both national and commercial stations serve the best interests of the nation.

Australian Broadcasting Control Board: 497 Collins Street, Melbourne, f. 1949; Chair. R. G. OSBORNE; R. B. MAIR, R. C. ALLSOP (Members); J. O'KELLY (Sec.)

Australian Broadcasting Commission: 264 Pitt Street, Sydney, N.S.W.; Commrs. Sir RICHARD BOYER, K.B.E., (Chair.), E. R. DAWES (Vice-Chair.), Hon. Dame ENID LYONS, G.B.E., Sir JOHN MEDLEY, J. C. STEWART, P. E. R. VANTHOFF, M.V.O., O.B.E., M. W. O'DONNELL; Gen. Manager C. J. A. MOSES; London Office: 55 Portland Place, W.1.

Federation of Commercial Broadcasting Stations: Wingello House, Angel Place, Sydney.

TELEVISION

In 1953 a Royal Commission was established to examine and report upon the whole field of television and its establishment in Australia. The Report of the Commission, published in May, 1954, recommended that television—national and commercial—should be introduced on a gradual basis. In September 1954, the Federal Cabinet reaffirmed its decision to proceed with the introduction of television and to establish national and commercial services as quickly as possible. The first two stations are to be at Sydney and Melbourne.

FINANCE

TRANSPORT

Powers over transport are reserved to the six State Parliaments, and the Commonwealth Government may legislate only in respect of inter-State and overseas transport and transport within its own territories. In Australian law there is a clear distinction between "inter-State" transport and "intra-State" (i.e. within the State) transport. For intra-State transport each State has a publicly-owned railways department, and a system of licensing and taxation of private operators in road transport, airways, and shipping insofar as they operate solely within State boundaries. The State of West Australia also operates a State shipping service. The Commonwealth (i.e. the Federal) Parliament has powers over inter-State and overseas transport, and this power is important in connection with airways and sea navigation. Because of the distances involved, air transport often crosses State boundaries and also extends into foreign countries, and so Commonwealth laws and regulations have been more extensive here than in the case of other forms of transport; in fact, some of the States leave aviation regulation exclusively to the Commonwealth. In addition, there has been established under the authority of the Commonwealth Parliament the publicly-owned "Trans-Australia Airlines", which conducts inter-State air services. Sea navigation, inter-State and overseas, is also regulated by the Commonwealth Government, under the Navigation Acts. Through the Australian Shipping Board, the Commonwealth conducts inter-State shipping services and its vessels comprise the largest fleet operating in Australian coastal waters.

The Federal Government operates the Commonwealth Railways in Commonwealth territories and in Western Australia and South Australia. With regard to road transport, the Commonwealth makes moneys available to the States for road works under the Commonwealth Aid Road Act, 1954. In 1954-55 these grants totalled approximately £24,000,000.

The Australian Transport Advisory Council which has as its chairman the Commonwealth Minister for Shipping and Transport and, as members, the six State Transport Ministers and other Commonwealth Ministers whose portfolios embrace transport functions, meets from time to time to discuss transport problems of national interest. The Council works towards uniformity in certain aspects of State and Commonwealth transport legislation and administration and the formulation of a co-ordinated national transport policy.

At the end of June 1954, Australia had approximately 27,000 miles of railways, 95,967 miles of scheduled air routes, and about half a million miles of roads, while shipping services connected major and minor ports round the 12,000-mile coastline.

RAIL TRANSPORT

The development of railways in Australia has been the main factor in the opening up of the inland country. With low or no traffic before railways were built, private enterprise did not invest in them to any large extent, and from the '60s of the nineteenth century onwards the various State Governments built railways, not only as transport media but also as developmental agencies.

They have been a medium of economic development and implicit subsidies through low rates, in consequence of a

deliberate policy of assisting primary and secondary industry, but present railway freight policy is tending to require traffics to bear the costs of the railway services they are receiving.

Owing to the division of political authority among the six States in pre-Federation times the various State railway systems are not built to the same gauge. Queensland, West Australia, and Tasmania have the 3 ft. 6 in. gauge, New South Wales the standard gauge of 4 ft. 8½ in., Victoria 5 ft. 3 in., while South Australia has long mileages of all three.

COMPANY-OWNED RAILWAYS

Emu Bay Railway Co. Ltd., The: 19 Queen Street, Melbourne, C.I.; London Office: 95 Gresham Street, E.C.2; inc. 1897 in Tasmania; Chair. Sir ALEXANDER STEWART, K.B.; DIRS. W. SYDNEY JONES, C. R. B. JAMES, F.C.I.S.; Manager FREDERICK McCORMICK, Burnie, Tasmania; mileage, approx. 90; freight and passenger services between Burnie and Zeehan, Tasmania; engineering and railway workshops at Burnie.

Midland Railway Co. of Western Australia Ltd., The: (inc. in England): Midland Junction, Western Australia; London Office: 117 Old Broad Street, E.C.2; inc. 1890; Chair. Col. ROBERT P. W. ADEANE, O.B.E.; Sec. R. T. ROBINSON; Australian Chair. DAVID W. BRISBANE, M.I.C.E.; Gen. Manager J. S. DOWSON, M.B.E., A.M.I.C.E. The only company-owned and operated railway of any size in the Commonwealth. Runs northward from Midland Junction, near Perth, to Walkaway on the west coast; 277 miles; 3 ft. 6 in. gauge; stock comprises 18 locos, 18 carriages, 14 brake vans, 617 wagons, gross traffic receipts year ending June 30th, 1954, £581,980, working expenses (excluding renewals, etc.) £502,425.

ROAD TRANSPORT

For many years the railways had virtually a transport monopoly, except for sea competition in coastal areas, but in recent decades they have had to face competition in the inland areas from air and road transport. The motor track has brought many places beyond the railway within the ambit of fast communications, but motor carriers have also, to a large extent, operated along highways parallel to the railway. To prevent wasteful duplication of rail services, strict regulation and licensing of motor transport is carried out by State authorities. Before 1954, these controls applied to inter-State as well as intra-State road transport, but since that year, inter-State traffic has been free of restrictive taxation following a decision of the Privy Council which held that these State controls were unconstitutional when applied to road haulage operations over State boundaries. The result of this decision has been a significant increase in the volume of goods hauled inter-State by road and it has raised such problems as the effect of this increased competition on railway finances and the raising of sufficient revenue to improve inter-State highways to cater for the heavier traffic now using them.

Over 2,000,000 motor vehicles registered throughout Australia pay, through registration fees and petrol tax, money which is in part disbursed to State and local authorities for the construction and maintenance of roads.

AIR SERVICES

National and inter-State air services are run by the following airlines; and, in conjunction with the B.O.A.C., Qantas Empire Airways run a service to Great Britain from Sydney.

Of the domestic airlines, the Government-owned Trans-Australia Airlines (T.A.A.) and the privately-owned Australian National Airways (A.N.A.) are the principal operators, carrying over three-quarters of the total domestic traffic.

Ansett Airways Pty. Ltd.: Commonwealth Aerodrome, Essendon, Melbourne, W.6, Victoria; local services in Australia.

Australian National Airways Pty. Ltd.: 390 Flinders Street, Melbourne, C.1, Victoria; f. 1936; inter-State services throughout Australia; Sec. J. O. DE CLERCK.

Butler Air Transport Ltd.: Kingsford-Smith Airport, Mascot, Sydney, N.S.W.; f. 1935; Founder-Managing Dir. C. A. BUTLER; operates internal services in Australia, mainly in N.S.W.; Fleet: 1 Vickers Viscount, 6 Douglas DC-3s, 2 de Havilland Herons.

Connellan Airways Ltd.: Townsite Aerodrome (P.O. Box 47), Alice Springs, N.T.; f. 1938, Governing Dir. E. J. CONNELLAN; Manager I. M. LESLIE.

East-West Airlines Ltd.: P.O. Box 249, Tamworth, N.S.W.; Chair. D. M. SHAND; Gen. Manager Capt. A. J. SMITH; Operations Manager J. G. RILEY; Sec. R. O. COOKSEY.

Guinea Airways Ltd.: Airways House, 132 North Terrace, Adelaide, South Australia; Chair. S. POWELL; Sec. C. A. WINDOW; services linking Adelaide with 12 airports, mainly in Southern Australia.

MacRobertson-Miller Airlines Ltd.: 194 St. George's Terrace, Perth, West Australia; amalgamation of *MacRobertson-Miller Aviation Co. Pty. Ltd.* and *Airlines (W.A.) Ltd.* on Oct. 1st, 1955; Chair. R. F. RUSHTON; Managing Dir. C. N. KLEINIG; Secretary E. C. GARE; services: Perth-Darwin, Kalgoorlie-Perth, Wittenoom Gorge-Perth and station services covering inland areas of Western Australia and part of Northern Territory.

Qantas Empire Airways Ltd.: Shell House, Carrington Street, (P.O. Box 489), Sydney, N.S.W.; registered November 1920 as Queensland and Northern Territory Aerial Services Ltd.; Qantas Empire Airways formed in 1934, combining Qantas Ltd. and Imperial Airways interests; acquisition by the Commonwealth Government in 1947; Chair. Sir HUDSON FYSH, K.B.E., D.F.C. (one of the original founders); Chief Exec. and Gen. Manager C. O. TURNER; services: Sydney-London, Sydney-New Guinea, Sydney-Japan, Sydney-Hong Kong, Sydney-Noumea-Nadi, Sydney-Norfolk Island and internal New Guinea, Papua and adjacent islands, Sydney-Mauritius-Johannesburg; Sydney-San Francisco-Vancouver; aircraft: super Constellations, Catalinas, DC-3s, DC-4s, DH Beavers; publ. *Airways* (monthly).

Queensland Airlines Pty. Ltd. (formerly Aircrafts Pty. Ltd.); Brisbane Airport, Brisbane, Queensland; changed to present name 1947 (with close association of Butler Air Transport Ltd.); Chair. D. S. AARONS; Managing Dir. Capt. A. S. ADAIR, O.B.E.; air services within the State and to centres in N.S.W.; unduplicated route miles 4,316; equipment, DC-3s, Handley Page "Heralds" ordered for future.

South Coast Airways Pty. Ltd. (S.C.A.): 307 Castlereagh Street, Sydney, N.S.W.; route: Sydney-Cowra-West Wyalong.

Townsville and Country Airways Pty. Ltd.: 41 Flinders Street (P.O. Box 469), Townsville, Queensland; route: Townsville-Cloncurry-Mount Isa.

Trans-Australia Airlines (T.A.A.): Swanston Street (P.O. Box 2806AA), Melbourne, C.1; f. 1946; operated by Australian National Airlines Commission (Chair. G. P. N. WATT, C.B.E.); routes totalling over 30,000 miles to 93 ports in every Australian State, including Canberra, Sydney, Melbourne, Brisbane, Hobart, Perth, Darwin, Alice Springs, Cairns, Cloncurry and Queensland Channel Country; Gen. Manager J. P. RYLAND, D.F.C.

Trans-Oceanic Airways Pty. Ltd.: Flying Boat Base, Rose Bay, Sydney; routes. Sydney-Lord Howe Island, Sydney-Hobart.

Woods Airways Pty. Ltd.: National House, 49 William Street, Perth, W. Australia; route: Perth-Rottnest Island.

SHIPPING

Commonwealth of Australia: Australian Shipping Board: 400 Collins Street, Melbourne; Chair. The Secretary, Dept. of Shipping and Transport; Gen. Manager (Acting) N. St. J. LARKINS; services. Australian coastal trade and islands of Pacific; 34 vessels.

Adelaide Steamship Co. Ltd.: 101 Leadenhall Street, London, E.C.3; Dirs. Hon. Sir WALTER G. DUNCAN, M.L.C., H. H. LLOYD, T. E. BARR SMITH, M. H. E. MACKAY; Gen. Manager P. W. HADDY; Sec. T. M. WADDY; 24 vessels.

Australasian United Steam Navigation Co. Ltd.: 122 Leadenhall Street, London, E.C.3; Dirs. L. P. S. BOURNE, C.B.E., Sir WILLIAM C. CURRIE, G.B.E., Rt. Hon. Viscount SIMON, C.M.G., Rt. Hon. Lord HUNTINGFIELD, K.C.M.G., Rt. Hon. the Earl of INCHCAPE; S. A. TAYLOR; Australian coastal services; 4 vessels; 13,310 tons gross.

Australian-Oriental Line Ltd.: 6 Bridge Street, Sydney, N.S.W.; London Office: 3 Old Broad Street, E.C.2; f. 1925; Dirs. H. N. LETHBRIDGE, H. W. MACKISACK, S. G. ROWE, V. G. HASWELL, J. F. YUILL, T. M. McLACHLAN; Supt. Engineer W. A. R. DOUGLAS; services: Melbourne to Japan via Sydney; Queensland ports and Hong Kong; 2 vessels.

Australian Steamship Pty. Ltd.: c/o Howard Smith Ltd., 269 George Street, Sydney; Chair. Wm. HOWARD SMITH; Joint General Managers A. D. MARSHALL, D. G. McLEOD; 10 vessels.

Australind Steam Shipping Co. Ltd.: 88 Leadenhall Street, London, E.C.3; f. 1904; Dirs. W. H. GWYN, H. J. F. MILLS, A. C. TRINDER, O. G. TRINDER, F. E. HARMER, C.M.G.; Sec. A. C. TRINDER; service: Europe-U.S.A.-Canada-Australasia; 4 motor vessels.

Broken Hill Pty. Ltd., The: P.O. Box 86A, 422 Little Collins Street, Melbourne; Managing Dir. N. E. JONES; Sec. R. G. NEWTON; 14 vessels.

Burns, Philp and Co. Ltd.: 7 Bridge Street (P.O. Box 543), Sydney; London Office: 35 Crutched Friars, E.C.3; Dirs. J. MITCHELL, F. E. LOXTON, A. K. MACKINTOSH, P. T. W. BLACK, D. W. CROSS, G. R. RICKARDS; 8 vessels.

Huddart Parker, Ltd.: 464 Collins Street, Melbourne; Dirs. T. J. PARKER, P. F. PHILLIPS, T. L. WEBB; 9 vessels; passenger and cargo.

McIlwraith McEacharn, Ltd.: Scottish House, 94-96 William Street, Melbourne; Dirs. S. T. EDWARDS (Chair. and Managing Dir.), C. L. N. BARRATT, W. IAN POTTER, I. N. HOLYMAN, F. G. L. HARDING; 8 vessels.

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

GENERAL

Australasian Association of Psychology and Philosophy: c/o Dept. of Moral and Political Philosophy, Univ. of Sydney; f. 1923; brs. throughout Australia and New Zealand; Pres. Q. B. GIBSON; Chair. Prof. A. K. STOUT; Hon. Gen. Sec. D. H. MONRO; publ. *Australasian Journal of Philosophy*.

Incorporated Law Institute of New South Wales: Royal Chambers, 3 Castlereagh Street, Sydney; f. 1884; 1,900 mems.; Pres. R. Z. DE FERRANTI; Sec. H. G. BROOKE; Librarian G. S. OLD, B.A., LL.B., DIP.LIT.; 7,000 vols.

Royal Society of Australia: Canberra; f. 1930; 100 mems.; Hon. Sec. Miss I. CRESPIN.

Royal Society of New South Wales: Science House, Sydney; f. 1821; 382 mems.; Pres. M. R. LEMBERG, F.R.S.; Hon. Secs. J. L. GRIFFITH, F. N. HANLON; library of 40,000 vols.; publs. *Journal and Proceedings*.

Royal Society of Queensland: Brisbane; f. 1884; 268 mems.; Pres. Prof. A. L. REIMANN; Sec. Prof. T. K. EWER; library of 46,000 vols.; publ. *Proceedings*.

Royal Society of South Australia Inc.: 2 Kintore Avenue, Adelaide; f. 1853; 175 mems.; Pres. C. G. STEPHENS; Sec. L. W. PARKIN; publ. *Transactions*.

Royal Society of Tasmania: Argyle Street, Hobart; f. 1843; 445 mems.; Pres. H.E. THE GOVERNOR; Hon. Sec. W. BRYDEN, PH.D.; publ. *Papers and Proceedings*.

Royal Society of Victoria: 9 Victoria Street, Melbourne, C.1; f. 1854; 240 mems.; Pres. Prof. J. S. TURNER; Hon. Sec. C. M. TATTAM; publ. *Proceedings*.

Royal Society of Western Australia (Inc.): Gledden Building, Hay Street, Perth; f. 1913; 220 mems.; Pres. Dr. D. E. WHITE, B.SC., D.PHIL.; Secs. Dr. N. H. BRITAIN, B.SC., PH.D., R. D. ROYCE, B.SC.; publ. *Journal* (annual).

ARCHITECTURE

Royal Australian Institute of Architects: Daking House, Rawson Place, Sydney, N.S.W.; inc. 1930; 2,000 mems.; Pres. E. J. A. WELLER; Sec. R. S. GREIG; publs. *Architecture* (quarterly), *Year Book*.

Affiliated Institutes:

South Australian Institute of Architects: 12 Pirie Street, Adelaide; f. 1886; 144 mems.; Sec. J. S. HALL, B.E., A.R.I.B.A.; publ. *Quarterly Bulletin*.

Royal Victorian Institute of Architects: 53-55 Collins Place, Melbourne, C.1; Sec. JOHN B. ISLIP, F.C.I.S.

ART, THE ARTS

Arts Council of Australia, The: (formerly C.E.M.A.), Rural Bank Building, Martin Place, Sydney; f. 1943; brs. in all States; approx. 4,000 mems.; takes drama, music, opera, ballet and art exhibitions to country centres and encourages amateur activity; Patron H.E. the Governor-General of Australia; Fed. Pres. Sir ROBERT GARRAN, G.C.M.G., Q.C., D.L.L.D.; Hon. Fed. Dir. C. R. MCKERIHAN.

Contemporary Art Society of Australia: Sydney, Melbourne, Hobart and Adelaide; f. 1939 in Melbourne; Sec. V. BRECKENRIDGE.

Royal Art Society of New South Wales: 175 Pitt Street, Sydney; f. 1880; 350 mems.; Pres. ERIK LANGKER; Hon. Sec. ESTELLE ANDREWS.

Royal Queensland Art Society: Box 1602v, G.P.O., Brisbane; f. 1886; 300 mems.; Pres. E. J. A. WELLER; Sec. E. KRUBERG.

Royal South Australian Society of Arts: North Terrace, Adelaide; f. 1856; Pres. D. GOLDFINCH; Hon. Sec. LISETTE KOHLHAGEN.

Society of Artists: 166 Phillip Street, Sydney; f. 1895; 50 mems.; Pres. DOUGLAS R. DUNDAS; Gen. Sec. MERVYN E. R. HORTON.

Victorian Artists' Society: 430 Albert Street, East Melbourne, C.2; f. 1870; 500 mems.; four exhibitions annually; Pres. R. MALCOLM WARNER; Sec. REX BRAMLEIGH; publ. *V.A.S. Bulletin* (yearly).

ASTRONOMY

Astronomical Society of South Australia: Institute Buildings, North Terrace, Adelaide; f. 1892; 100 mems. Pres. Prof. L. G. H. HUXLEY; Sec. M. G. COSTELLOE.

Astronomical Society of Tasmania: 18 Elizabeth Street, Hobart; f. 1930; 50 mems.; Sec. C. E. BISDEE.

CHEMISTRY

Royal Australian Chemical Institute: 55 Collins Place, Melbourne, C.1; f. 1917; 3,144 mems.; Sec. Dr. R. R. GARRAN; publ. *Proceedings of The Royal Australian Chemical Institute* (monthly), *Reviews of Pure and Applied Chemistry* (quarterly).

New South Wales Branch: 39 Martin Place, Sydney, f. 1917; Sec. W. S. CHAMBERS.

Queensland Branch: f. 1917; Sec. E. J. SCOTT, Box 1782w, G.P.O., Brisbane.

South Australian Branch: f. 1917; Sec. M. C. BOURNE, 16 Loch Ness Avenue, Torrens Park.

Tasmanian Branch: f. 1941; Sec. J. A. FRIEND, Univ. of Tasmania, Hobart.

Victorian Branch: 55 Collins Place, Melbourne, C.1; f. 1917; Sec. E. J. O'BRIEN.

Western Australian Branch: f. 1917; Sec. R. W. MINNS, G.P.O. Box J725, Perth.

ECONOMICS, POLITICS

Australian Institute of International Affairs: 177 Collins Street, Melbourne; f. 1932; 1,335 mems.; brs. in all States; Pres. D. A. S. CAMPBELL; Hon. Sec. K. A. AICKIN; publ. *The Australian Outlook* (quarterly).

Australian Institute of Political Science: Sydney; publ. *Australian Quarterly*.

Economic Society of Australia and New Zealand: University, Melbourne; 1,800 mems.; branches in each of the Australian State capitals and also in Wellington, Auckland, Christchurch and Dunedin, N.Z.; Pres. Prof. W. PREST; Hon. Sec. R. F. HOLDER; publ. *The Economic Record*.

Institute of Public Affairs: 19 Bligh Street, Sydney, N.S.W.

AUSTRALIA

ENGINEERING, METALLURGY

Australian Institute of Marine and Power Engineers: 135 George Street, Sydney.

Australian Institute of Metals, The: 18 Queen Street, Melbourne, C.1; inc. 1946; branches at Adelaide, Brisbane, Melbourne, Newcastle, Port Kembla and Sydney; Hon. Fed. Sec. J. G. RITCHIE.

Australian Institute of Mining and Metallurgy: f. 1893; 1,500 mems.; Pres. JULIUS KRUTTSCHNITT; Sec. Miss B. E. JACKA, 399 Little Collins Street, Melbourne, C.1; publ. *Proceedings*.

Institution of Engineers, Australia: Science House, Gloucester and Essex Streets, Sydney; f. 1919, inc. by Royal Charter 1938; branches in each State; 10,000 mems.; Pres. C. W. CANDY; Sec. C. H. D. HARPER, M.C.; publ. *Journal* (eight issues annually).

Royal Aeronautical Society (Australian Division): 157 Gloucester Street, Sydney, N.S.W.; f. 1928; Chair. Prof. A. V. STEPHENS, M.A., F.R.A.E.S.; Sec. W. ISBISTER, B.E., B.SC., A.M.I.E. (Aust.), A.F.R.A.E.S.

Victorian Institute of Engineers: 124 La Trobe Street, Melbourne; f. 1883; Sec. R. F. KNEALE; publ. *Proceedings*.

GEOGRAPHY

Geographical Society of New South Wales: Science House, Gloucester Street, Sydney; f. 1927; 300 mems.; Hon. Secs. Miss G. KIRKLAND, B.A., K. W. ROBINSON, M.A.; publ. *The Australian Geographer*.

Royal Geographical Society of Australasia: Queensland Branch: 177 Ann Street, Brisbane; f. 1885; 1,000 mems.; Pres. Hon. Mr. Justice A. J. MANSFIELD, F.R.G.S.A.; Hon. Gen. Dir.-Sec. D. A. O'BRIEN; publ. *Queensland Geographical Journal*.

South Australia Branch: Institute Buildings, North Terrace, Adelaide; f. 1885; 300 mems.; publ. *Proceedings* (annual).

HISTORY

Historical Society of Queensland: Newstead House, Brisbane; f. 1913; 244 mems.; library; research; museum of historical Queensland documents; Pres. Sir RAPHAEL CILENTO; Hon. Sec. ALEX MORRISON; publs. *Bulletin* (monthly), *Journal* (annual).

Royal Australian Historical Society: History House, 8 Young Street, Sydney; f. 1901; 1,600 mems.; Gen. Sec. C. PRICE CONIGRAVE, F.R.A.H.S.; Editor P. R. ELDERSHAW; publ. *Journal and Proceedings*.

Royal Historical Society of Victoria: 31 Queen Street, Melbourne, C.1; f. 1909; 318 mems.; Sec. A. T. LATHAM; publ. *Victorian Historical Magazine*.

Tasmanian Historical Research Association: c/o State Archives, Public Buildings, Macquarie St., Hobart, f. 1951; 165 mems.; Sec. ROBERT SHARMAN; publ. *Papers and Proceedings* (quarterly).

LITERATURE, BIBLIOGRAPHY

Australian Ex-Libris Society: Box 2076L, G.P.O., Sydney; Sec. P. NEVILLE BARNETT.

English Association—Sydney Branch: 25 Hanna Street, Beecroft, N.S.W.; f. 1923; 150 mems.; Pres. Miss THELMA HERRING, M.A.; Hon. Sec. H. M. BUTTERLEY; publ. *Southerly* (quarterly).

Fellowship of Australian Writers: Box 3448R, G.P.O., Sydney; f. 1928; 400 mems.; Pres. MUIR HOLBURN; Sec. GLEN MILLS.

LEARNED SOCIETIES AND PROFESSIONAL ASSOCIATIONS

Melbourne Dickens Fellowship: Box 1879R, G.P.O., Melbourne; f. 1904; 130 mems.; Hon. Sec. Miss VIOLET McMEEKIN, M.R.S.T., F.T.C.L.

Melbourne Shakespeare Society: 2 Furnell Court, Toorah, Melbourne; f. 1884; 180 mems.; Pres. D. H. RANKIN, M.A., M.ED.; Hon. Sec. Mrs. MENDES.

MEDICINE

Australian Physiotherapy Association: 185 Elizabeth Street, Sydney, N.S.W.; f. 1905; Pres. Dr. JOHN McGEORGE; Gen. Sec. Miss E. P. EVANS.

College of Radiologists (Australia and New Zealand): 135 Macquarie Street, Sydney, N.S.W.; 242 mems.; Hon. Sec. Dr. A. R. COLWELL.

Ophthalmological Society of Australia (B.M.A.): 27 Commonwealth Street, Sydney, N.S.W.; f. 1938; 215 mems.; Pres. Dr. PETER B. ENGLISH; Sec. Dr. PETER A. ROGERS.

Royal Australasian College of Physicians: 145 Macquarie Street, Sydney, N.S.W.; f. 1938; 312 fellows, 472 mems.; Pres (1954-56) Dr. C. G. McDONALD; Hon. Sec. Dr. H. MAYNARD RENNIE (N.S.W.); Hon. Treas. Dr. W. P. MACCALLUM (N.S.W.); Censor-in-Chief Dr. T. M. GREENAWAY (N.S.W.); periodic publ. *Australasian Annals of Medicine* (quarterly).

Royal Australasian College of Surgeons: Spring Street, Melbourne; Sec. H. G. WHEELER; publ. *Journal*.

SCIENCE

Australian and New Zealand Association for the Advancement of Science: Science House, 157 Gloucester Street, Sydney; f. 1888; 2,750 mems. branches in State capitals; Hon. Gen. Sec. Prof. J. R. A. McMILLAN, D.SC.AGR.; publs. Reports, *Australian Journal of Science*.

ZOOLOGY, NATURAL HISTORY

Field Naturalists' Club of Victoria: Royal Society's Hall, Victoria Street, Melbourne, C.1; f. 1880; 650 mems.; Pres. E. E. LORD; Sec. F. LEWIS; publ. *The Victorian Naturalist* (monthly).

Linnean Society of New South Wales: Science House, 157 Gloucester Street, Sydney; f. 1874; 233 mems., 18,000 vols. in library; Hon. Secs. W. R. BROWNE, A. B. WALKOM; publ. *Proceedings*.

Royal Australasian Ornithologists' Union: 386 Flinders Lane, Melbourne; f. 1901; 887 mems.; Sec. GORDON BINNS; publ. *Emu*.

Royal Zoological Society of New South Wales: 28 Martin Place, Sydney; f. 1899; 580 mems.; Hon. Sec. L. HARTFORD; publs. *Australian Zoologist*, *Proceedings*.

Royal Zoological Society of South Australia: Frome Road, Adelaide; f. 1878; 200 mems.; maintains public Zoological Gardens; Pres. Hon. A. J. MELROSE, M.L.C.; Dir. VINCENT D. HAGGARD; publ. *Report*.

Wild Life Preservation Society of Australia: 6 Cooperbrook Avenue, Gymea Bay, N.S.W.; f. 1909; 250 mems.; Pres. THISTLE Y. HARRIS, B.SC., M.ED.; Hon. Sec. ALLEN A. STROM, A.S.T.C.; publ. *Australian Wild Life* (irregular).

Zoological Board of Victoria: Melbourne; est. 1936 as successor to Royal Zoological and Acclimatisation Society of Victoria (f. 1861) in the management of the Melbourne Zoological Gardens, Royal Park, Melbourne, N.2; 11 mems.; Chair. Prof. H. A. WOODRUFF; Dir. A. G. WHITLAM.

THE BRITISH COMMONWEALTH

RESEARCH INSTITUTES

AGRICULTURE, FORESTRY

Australian Institute of Agricultural Science: 731 Hay Street, Perth, W.A.; (W.A. Branch); approx. 200 mems.

Commonwealth Forestry and Timber Bureau: Canberra; f. 1925; Dir.-Gen. G. J. RODGER, B.SC.FOR.

Australian Forestry School: Canberra; f. 1926; Principal M. R. JACOBS, M.SC., DRING., PH.D., DIP.FOR.

Divisions of Forest Resources and Timber Production and of Research: Officer-in-Charge D. A. N. CROMER, M.SC., DIP.FOR.

Division of Imports, Exports, Statistics and Programming: Officer-in-Charge H. R. GRAY, M.A., DIP.FOR., M.SC.

Division of A.C.T. Forests: Officer-in-Charge C. R. COLE, B.SC.FOR.

Waite Agricultural Research Institute: Private Bag, Adelaide; f. 1924; under management of Adelaide Univ., Dir. J. MELVILLE; Prof. of Agricultural Chemistry (Vacant); Prof. of Agriculture C. M. DONALD; Entomologist D. C. SWAN; Plant Pathologist C. G. HANSFORD; Plant Physiologist L. H. MAY; Statistician (Vacant); Sec. G. L. GOODEN; Headquarters of Oenological Research and Div. of Soils (C.S.I.R.O.); publ. *Biennial Report*.

EDUCATION

Australian Council for Educational Research: 147 Collins Street, Melbourne, C.I.; f. 1930; 9 mems. of whom 6 are elected by State Institutes for Educational Research; Pres. Sir JOHN MEDLEY, M.A., D.C.L.; Dir. W. C. RADFORD; publs. *Reviews of Education in Australia*; A.C.E.R. Research Series, Reports and Tests.

Tasmanian Institute for Educational Research: Sec.-Treas. MARIA KAWENOKA, M.A., A.B.P.S.S., 307 Macquarie Street, Hobart

GEOLOGY

Geological Survey of New South Wales: Dept. of Mines, Sydney; f. 1875; Govt. Geologist F. W. BOOKER; publs. *Annual Reports, Geological Memoirs, Palaeontological Memoirs, Ethnological Memoirs, Records, Mineral Resources, Bulletins*.

Geological Survey of Western Australia: Beaufort Street, Perth; f. 1896; Govt. Geologist H. A. ELLIS; publs. *Bulletin of the Geological Survey of Western Australia*, and annual *Progress Reports*.

Queensland Geological Survey: Brisbane; f. 1877; Chief Govt. Geologist C. C. MORTON; publs. *Reports, Maps, Annual Mining Review*.

South Australian Geological Survey: Dept. of Mines, 31 Flinders Street, Adelaide; f. 1892; Dir. S. B. DICKINSON; staff: approx. 380, incl. geophysicists, geologists, mining engineers, metallurgists, research officers and chemical engineers; publs. *Annual Report, Abstract Bulletins, Geological Survey Bulletin, Mining Review, Prospectors' Handbooks, Reports of Investigations*.

Tasmania Geological Survey: Hobart; f. 1860; Chief Geologist H. G. W. KEID, M.SC.; publs. *Bulletin, Records, Reports, Mineral Resources, Underground Water Supply*, geological survey maps; c/o Department of Mines, Hobart.

MEDICINE

Australian Institute of Anatomy: H.Q. of Nutrition Section of the Commonwealth Department of Health, Canberra; f. 1929; Officer-in-Charge E. H. HIPSLEY, M.B.B.S.

Commonwealth Serum Laboratories: Parkville, Melbourne; Dir. F. G. MORGAN, C.B.E., M.B., B.S., F.R.A.C.P.

Commonwealth X-Ray and Radium Laboratory (Commonwealth Department of Health): The University, Melbourne; f. 1929; Dir. C. E. EDDY, D.SC., F.INST.P.; Asst. Dir. D. J. STEVENS, B.SC., A.INST.P.

Institute of Medical and Veterinary Science: Frome Road, Adelaide; est. 1938 for purpose of research into diseases of human beings and animals; Chair. Sir J. KEITH ANGAS; Dir. J. ORDE POYNTON, M.A., M.D., B.CH., M.R.C.S., L.R.C.P.; Sec. D. G. DAVIES, A.A.S.A., A.C.I.S.

Microbiological Laboratory: 93 Macquarie Street, Sydney; f. 1892; Dir. Dr. ERNEST L. MORGAN; publ. *Annual Reports*.

National Health and Medical Research Council: Commonwealth Health Department, Canberra; Chair. A. J. METCALFE, C.B.E., M.B., CH.M., D.P.H. (Dir.-Gen. of Health).

School of Public Health and Tropical Medicine: Univ. of Sydney, Sydney, N.S.W.; incorporating (1930) The Australian Institute of Tropical Medicine, Townsville, Queensland; 56 mems.; library of 20,000 vols.; Dir. Prof. EDWARD FORD; Dep. Dir. Prof. A. H. BALDWIN.

Walter and Eliza Hall Institute of Medical Research: Sydney Road, Parkville, Melbourne, N.2; f. 1916; Dir. Sir F. MACFARLANE BURNET, F.R.S.; Asst. Dir. I. J. WOOD, M.D.; publs. *Elucidation, Annual Report*.

METEOROLOGY

Commonwealth of Australia Bureau of Meteorology: Box 1289K, G.P.O., Melbourne; f. 1907; branch offices in Perth, Adelaide, Brisbane, Sydney and Hobart; Dir. L. J. DWYER; publs. daily weather bulletins and charts, monthly and annual rainfall maps and statistics, bulletins on special subjects, climatological publications. *Australian Meteorological Magazine, Meteorological Studies, Meteorological Memoirs*.

OBSERVATORIES

Astronomical State Observatory: Perth; f. 1896; Dir. H. S. SPIGL.

Commonwealth Observatory: Mount Stromlo, Canberra; f. 1924; Commonwealth Astronomer R. v.D. R. WOOLLEY, O.B.E., SC.D., F.R.S.; publ. *Memoirs*.

Government Observatory: Sydney; f. 1856; Govt. Astronomer HARLEY W. WOOD; publ. *Astrographic Catalogue* (Sydney section), *Sydney Observatory Papers*.

Observatory of the State of South Australia: Adelaide; f. 1856; Dir. G. F. DODWELL.

AUSTRALIA

Riverview College Observatory: Riverview, Sydney, N.S.W. f. 1908; Dir. T. N. BURKE-GAFFNEY, S.J.; publs. *Seismological Bulletin*, *Geophysical Papers* and *Riverview College Observatory Publications* (astronomical).

SCIENCE

Australian Academy of Science: Box 6, G.P.O. Canberra; f. 1952 to promote, declare and disseminate scientific knowledge, establish and maintain standards of scientific enterprise and to recognise outstanding contributions to the advancement of science in Australia; took over functions of Australian National Research Council 1955; 68 Fellows; Pres. Prof. M. L. E. OLIPHANT; Sec. Div. of Physical Sciences Prof. T. M. CHERRY; Sec. Div. of Biological Sciences Prof. S. SUNDERLAND.

Commonwealth Scientific and Industrial Research Organisation: 314 Albert Street, East Melbourne, C.2; operates under the Science and Industry Research Act, 1949.

Chairman of Organisation: Sir IAN CLUNIES ROSS, C.M.G.

Chief Executive Officer: Dr. F. W. G. WHITE, C.B.E.

Executive Members: Dr. S. H. BASTOW, D.S.O., H. J. GOODES, O.B.E., A. B. RITCHIE.

Secretary (General Administration): F. G. NICHOLLS.

Secretary (Industrial and Physical Sciences): G. B. GRESFORD.

Secretary (Agricultural and Biological Sciences): G. B. GRESFORD (acting).

Secretary (Finance and Supplies): M. G. GRACE.

Chairmen of State Committees: Prof. J. P. BAXTER, O.B.E. (New South Wales), Dr. R. S. ANDREWS (Victoria), A. F. BELL (Queensland), Prof. J. G. WOOD (South Australia), Prof. E. J. UNDERWOOD (Western Australia), S. L. KESSELL, M.B.E. (Tasmania).

Co-opted Members of Advisory Council: D. T. BOYD, Dr. L. B. BULL, C.B.E., Prof. Sir MACFARLANE BURNET, F.R.S., Hon. O. McL. FALKNER, W. A. GUNN, D. R. HAWKES, Sir EDWARD LEFROY, I. M. McLENNAN, D. MacKINNON, Prof. Sir JOHN MADSEN, Prof. L. H. MARTIN, C.B.E., Prof. D. M. MYERS, Prof. M. L. OLIPHANT, F.R.S., G. B. O'MALLEY, Sir DAVID RIVETT, K.C.M.G., F.R.S., Prof. S. M. WADHAM.

Animal Health and Production, Division of, Melbourne: Chief, D. A. GILL.

Biochemistry and General Nutrition, Division of, Adelaide: Chief, H. R. MARSTON, F.R.S.

Building Research, Division of, Melbourne: Chief, I. LANDLANDS.

Coal Research Section, Sydney: Officer-in-Charge H. R. BROWN.

Dairy Research Section, Melbourne: Officer-in-Charge G. LOFTUS HILLS.

Electrotechnology, Division of, Sydney: Chief, F. J. LEHANY.

RESEARCH INSTITUTES

Entomology, Division of, Canberra: Chief, Dr. A. J. NICHOLSON.

Fisheries, Division of, Cronulla, N.S.W.: Chief, (Vacant).

Food Preservation, Division of, Sydney: Chief, Dr. J. R. VICKERY.

Forest Products, Division of, Melbourne: Chief, S. A. CLARKE.

Industrial Chemistry, Division of, Melbourne: Chief, Dr. I. W. WARK.

Irrigation Research Stations, Merbein (Victoria) and Griffiths (N.S.W.): Senior Officer-in-Charge, F. PENMAN.

Land Research and Regional Survey Section, Canberra: Officer-in-Charge, C. S. CHRISTIAN.

Mathematical Instrument Section, Sydney: Officer-in-Charge, Prof. D. M. MYERS.

Mathematical Statistics, Division of, Adelaide: Chief, Dr. E. A. COFNISH.

Meteorological Physics Section, Division of, Melbourne: Chief, Dr. C. H. B. PRIESTLEY.

Metrology, Division of, Sydney: Chief, N. A. ESSERMAN.

Mineragraphic Investigations. Officer-in-Charge, Dr. A. B. EDWARDS.

Physical Metallurgy Section, Melbourne. Officer-in-Charge, Prof. J. N. GREENWOOD.

Physics, Division of, Sydney: Chief, Dr. G. H. BRIGGS.

Plant Fibre Section, Melbourne: Officer-in-Charge, W. L. GREENHILL.

Plant Industry, Division of, Canberra: Chief, Dr. O. H. FRANKEL, F.R.S.

Radio Research Board, Sydney: Officer-in-Charge, Dr. G. H. MUNRO.

Radiophysics, Division of, Sydney: Chief, Dr. E. G. BOWEN, O.B.E.

Soils, Division of, Adelaide: Chief, J. K. TAYLOR.

Tribophysics, Division of, Melbourne: Chief, Dr. W. BOAS.

Wildlife Survey Section, Canberra: Officer-in-Charge, F. N. RA1CLIFFE.

Wool Textile Research Laboratories, Melbourne, Sydney and Geelong: Senior Officer-in-Charge, Dr. F. G. LENNOX.

STATISTICS

Commonwealth Bureau of Census and Statistics: Commonwealth Offices, West Block, Canberra, A.C.T.; f. 1906; Acting Commonwealth Statistician S. R. CARVER; library of 3,000 vols.; publs. *Official Year Book of the Commonwealth*, *Pocket Compendium of Australian Statistics*, *Bulletins Oversea Trade*, *Australian Balance of Payments*, *Demography*, *Primary Industries*, *Secondary Industries*, *Labour Report*, *Transport and Communication*, *Finance* (annually), *Quarterly Summary of Australian Statistics*, *Monthly Review of Business Statistics*, *Census 1954*, *Bulletins* and *Parts*.

THE BRITISH COMMONWEALTH

LIBRARIES

FEDERAL TERRITORY

Australian National University Library, The: Canberra, A.C.T.; 100,000 vols. in Western languages and 22,000 vols. in Chinese and Japanese; Librarian A. L. G. McDONALD, B.A.

Canberra University College Library: Box 197, Canberra City, A.C.T.; 22,000 vols.; Librarian Miss C. CAMPBELL-SMITH, B.A., DIP.ED.

Commonwealth National Library: Canberra, A.C.T.; f. 1902; reference and lending library for Commonwealth Parliament, Government Depts., and the Australian Capital Territory; copyright library for Australia; Archives Dept.; central documentary and educational film library; important holdings of Australiana, including Petherick, Ferguson and Mathews Ornithological collections; 400,000 vols., 50,000 maps, tens of thousands of pictures, manuscripts and documents, 110,000 feet of microfilm, and 5,500 film titles: Librarian H. L. WHITE, M.A.; publs. *Annual Catalogue of Australian Publications* (1936 to date), *Australian Books: a Select List of Works published in or about Australia* (1949 to date; annual), *Australian Public Affairs Information Service* (1945 to date; monthly), *Books published in Australia: list of books supplied to the National Library under copyright* (1946 to date; monthly), *List of Australian Government Publications* (1952 to date; monthly), *Historical Records of Australia* (33 vols. published to date), *Parliamentary Handbook and Record of Elections for the Commonwealth of Australia* (11 issues), *Catalogue of 16-mm. Films, 1950*, and *Supplements, 1951 and 1954*.

NEW SOUTH WALES

City of Sydney Public Library (formerly Sydney Municipal Library). George Street, Sydney; f. 1909; 143,000 vols.; City Librarian F. L. S. BELL, M.A., F.R.A.I.; publs. *Annual Report*, *Monthly Book List*.

Library of the New South Wales University of Technology: Broadway, Sydney; f. 1948; 57,000 vols.; Librarian Miss E. A. SIMS; br. libraries at Kensington and Newcastle, N.S.W.

Library of the University of New England: Armidale, N.S.W.; f. 1954; 30,000 vols.; Librarian Miss E. M. TATTERSALL, B.A.

Public Library of New South Wales: Macquarie Street, Sydney; f. 1826; State copyright privileges; 665,000 vols.; includes Mitchell Library and Galleries, and Dixon Library and Galleries of Australiana; historical pictures of Australasia and the Pacific; Principal Librarian and Sec. JOHN METCALFE, B.A., F.L.A.; Deputy Principal and Dixon Librarian G. D. RICHARDSON, M.A.; Mitchell Librarian PHYLLIS MANDER JONES, B.A.

University of Sydney Library (Fisher Library): University, Sydney; f. 1852; 358,333 vols.; Librarian E. V. STEEL, B.A.

VICTORIA

Public Library of Victoria: Swanston Street, Melbourne, C.1; f. 1853; 750,000 vols., special collections of art, music, heraldry and genealogy, typography, Shakespeareana and Australiana; Archives of State Govt. Depts.; Librarian C. A. McCALLUM, B.A.

University of Melbourne Library: Melbourne; f. 1855; 205,000 vols.; Librarian H. HOLDSWORTH, M.A., LIB. DIP., DIP.ED., F.L.A.

QUEENSLAND

Supreme Court Library: George Street, Brisbane; f. 1862; Librarian G. H. G. SMITH; 35,000 vols.

Parliamentary Library of Queensland: Parliament House, Brisbane; f. 1860; 82,000 vols.; State copyright privileges; Librarian S. G. GUNTHERPE.

Public Library of Queensland: William Street, Brisbane; f. 1896; 183,470 vols.; the State reference library, non-lending; including Oxley Memorial Library of Australiana; State Librarian J. L. STAPLETON.

University of Queensland Library: Brisbane; f. 1911; 130,000 vols, special collection on Pacific and Far East; Librarian HARRISON BRYAN, B.A.

WESTERN AUSTRALIA

Library of the University of Western Australia: Perth; f. 1913; 115,000 vols.; Librarian M. EVALYN WOOD.

Public Library of Western Australia: James Street, Perth; f. 1887; State reference library open free to all; 196,357 vols.; Principal Librarian and Sec. Dr. C. L. DRAKE, M.A. (Acting).

SOUTH AUSTRALIA

David Murray Library of the South Australian School of Mines and Industries: North Terrace, Adelaide; f. 1889; 12,000 vols.; Librarian J. L. CLEATOR.

Public Library of South Australia: North Terrace, Adelaide; f. 1884; State copyright privileges; 273,000 vols.; Principal Librarian H. C. BRIDESON.

Library of the University of Adelaide: Adelaide; f. 1876; 185,000 vols.; Librarian W. A. COWAN.

TASMANIA

State Library of Tasmania: (taking in Tasmanian Public Library, f. 1849) f. 1944; Argyle Street, Hobart; 160,000 vols. for adults, 107,000 for children; individual service to whole population; box service to municipal libraries serves 80 per cent of population; 1,633 documentary films and 1,407 gramophone record collection; State Librarian A. F. JOHNSON, F.L.A.

University of Tasmania Library: Hobart; f. 1920; 85,000 vols.; Librarian DIETRICH HANS BORCHARDT, M.A., DIP.N.Z.LIB.SCH.

MUSEUMS AND ART GALLERIES

NEW SOUTH WALES

National Gallery: Domain, Sydney; f. 1875; Dir. HAL MISSINGHAM.

Australian Museum: College Street, Sydney; f. 1827; natural history, ethnology, palaeontology and mineralogy; Dir. J. W. EVANS, SC.D.; Scientific Staff: R. O. CHALMERS, A.S.T.C., J. F. LOVERING, M.SC. (Mineralogy and Petrology); H. O. FLETCHER (Palaeontology); F. A. MCNEILL, ELIZABETH C. POPE, M.SC., C.M.Z.S. (Lower Invertebrates); JOYCE K. ALLAN, F.R.Z.S., D. F. McMICHAEL, M.A., PH.D. (Conchology); A. MUSGRAVE, F.R.Z.S., F.R.E.S., D. McALPINE, B.SC. (Entomology and Arachnology); G. P. WHITLEY, F.R.Z.S. (Ichthyology); J. R. KINGHORN, C.M.Z.S., J. A. KEAST, M.SC., PH.D. (Amphibia, Herpetology and Ornithology); E. LE TROUGHTON, F.R.Z.S., C.M.Z.S. (Mammalogy and Osteology), F. D. MCCARTHY, DIP. ANTHR. (Anthropology and Ethnology); Library and Pubs. MARGARET W. FRASER, B.A.; 34,000 vols.; publs. *Records of the Australian Museum* (annual), *Memoirs and Monographs* (occasional), *Australian Museum Magazine* (quarterly).

MacLay Museum of Natural History: Univ. of Sydney, Sydney; f. 1890; Zoology and Ethnology; reference and research material in Entomology, Ornithology, Reptiles and Fishes; Curator J. R. HENRY.

Mining and Geological Museum: George Street, N., Sydney; Curator H. F. WHITWORTH.

Museum of Applied Arts and Sciences: Harris Street, Sydney; f. 1880; administered by Board of 7 Trustees; Applied Science, Art, Australian Plant Products; Dir. A. R. PENFOLD; publs. bulletins, technical education series, guides, etc., *Annual Report*

Nicholson Museum of Antiquities: Univ. of Sydney, Sydney; f. 1868; collection of prehistoric Egyptian, Near Eastern, Cypriot, Greek and Roman antiquities; Curator Prof. A. D. TRENDALL, M.A., LITT.D., F.S.A.; publ. *Handbook to the Nicholson Museum* (2nd ed. 1948).

Wilson Museum of Anatomy and Anthropology: Univ. of Sydney, Sydney; f. 1832; includes normal anatomy section (800 specimens), probably best since destruction of Museum of Royal College of Surgeons during second World War.

VICTORIA

National Gallery of Victoria: Melbourne; f. 1859; Dir. DARYL E. LINDSAY, A.R.W.S.; Asst. Dir. GORDON THOMSON, B.A.; Keeper of Prints Dr. URSULA HOFF; Education Officer G. C. DOCKING, B.A.; Head of Art School W. A. DARGIE; contains most important collection in Southern Hemisphere; Old Masters: Rembrandt, Van Eyck, Memlinc, Tiepolo, Van Dyck, Turner, Veronese, Uccello, Titian, Goya, Constable, Gainsborough, Poussin, Claude, Rubens, etc.; Modern School: Manet, Monet, Pissaro, Cézanne, Sargent, McEvoy, Orpen, Degas, Van Gogh, Augustus John, Sisley, Signac, Despiu, Rodin, Sickert, Henry Moore, etc.; Australian works: many thousands of fine prints and drawings, including 36 William Blake water colours. The Art Museum contains European and Oriental sculpture, period furniture, pottery, ceramics, bronzes, glass and silver; publs. *Quarterly Bulletin* and various catalogues, coloured reproductions.

Leighton Gallery of Art (W. and G. Dean Pty. Ltd.), Leighton House, 346-348 Little Collins Street, Melbourne, C.1; Dir. A. C. RYAN.

National Museum of Victoria: Russell Street, Melbourne; f. 1854; Dir. R. T. M. PEScott, M.AGR.SC., F.R.E.S.; publs. *Memoirs*, No. 1, 1906, *Annual Report*, *Year Book*, booklet on *Australian Aboriginal Art*, 1950, *Handbook No. 1* (Mammals of Victoria), *Collections of a Century* (Centenary History)

Museum of Applied Science of Victoria: Swanston Street, Melbourne; f. 1870; Dir. C. M. FOCKEN, D.PHIL.; Senior Asst. R. H. FOWLER, M.AGR.SC.; Departments: Engineering, Physics and Chemistry; Applied Biology; Public Health; Horology; Arms; Economic Geology; Manufactures

QUEENSLAND

Botanic Museum and Herbarium: Brisbane; f. 1889; Govt. Botanist S. L. EVERIST.

Queensland Museum: Gregory Terrace, Brisbane; f. 1855; zoology, geology, ethnology; Dir. GEORGE MACK, B.SC.; publ. *Memoirs of the Queensland Museum*.

Queensland National Art Gallery: Gregory Terrace, Brisbane; f. 1892; Dir. ROBERT HAINES.

WESTERN AUSTRALIA

Art Gallery of W. Australia: Beaufort Street, Perth; f. 1895; Dir. LAURENCE THOMAS; Asst. Dir. DAVID LAWRENCE.

Museum of Western Australia: Beaufort Street, Perth; f. 1887; Director L. GLAUERT; specialises in local W.A. exhibits and collections

SOUTH AUSTRALIA

National Gallery of South Australia: North Terrace, Adelaide; f. 1881; collections acquired under the terms of bequests of Thomas Elder, Morgan Thomas, David Murray, A. R. Ragless, J. T. Mortlock and Government grant; Sec. J. HUNT DEACON, F.R.N.S.; publ. *Bulletin of the National Gallery of South Australia* (quarterly).

Applied Science Museum: North Terrace, Adelaide; f. 1889; Sections of Industry, Aeronautics, Metallurgy, Mining, Mineralogy, Engineering and General Applied Science; Dir. H. E. HOOPER, A.S.A.S.M.

South Australian Museum: North Terrace, Adelaide; f. 1856 as part of the South Australian Institute; zoological material mainly from Southern and Central Australia; the Australian ethnological collection is outstanding, and, for south and central districts, one of the best in existence; approx. 13,000 vols. in library; Dir. HERBERT M. HALE; publ. *Records of the South Australian Museum* 1918-.

TASMANIA

Tasmanian Museum and Art Gallery: Macquarie Street, Hobart; f. 1844; Dir. W. BRYDEN, M.SC., PH.D., F.R.S.

Queen Victoria Museum and Art Gallery: Wellington Street, Launceston; collections comprise pure and applied art, Tasmanian history, Tasmanian and general anthropology, Tasmanian botany, geology, palaeontology, and zoology; Dir. W. F. ELLIS; publ. *Records of the Queen Victoria Museum* (periodically).

THE BRITISH COMMONWEALTH

UNIVERSITIES

AUSTRALIAN NATIONAL UNIVERSITY

Founded 1946

BOX 4, G.P.O., CANBERRA, A.C.T.

Chancellor: Rt. Hon. Viscount BRUCE OF MELBOURNE,
P.C., C.H., M.C., B.A., LL.D., D.C.L., F.R.S.

Vice-Chancellor: L. G. MELVILLE, C.B.E., B.E.C., F.I.A.

Master of University House: Prof. (Emerit.) A. D. TREND-
DALL, M.A., LITT.D., F.S.A.

Registrar: R. A. HOHNEN, B.E.C.

Library: see page. 360.

GENERAL INFORMATION:

The Australian National University Act was passed by the Parliament of the Commonwealth in 1946. It provides for the establishment at Canberra in the Australian Capital Territory of a University consisting of a Council and Convocation. The governing authority of the University is the Council consisting of up to 30 members, 4 of whom are elected by the Commonwealth Parliament; up to 8 appointed by the Governor-General; up to 9 elected by Convocation; 3 elected by the professorial and teaching staff; and 2 elected by the students. The Vice-Chancellor is *ex officio* a member of the Council and 3 members may be co-opted.

The functions of the University are primarily to encourage and provide facilities for post-graduate research and study, both generally and in relation to subjects of national importance to Australia.

The University may establish such Research Schools as are desirable, including (a) a School of Medical Research, to be known as "The John Curtin School of Medical Research"; (b) a Research School of Physical Sciences; (c) a Research School of Social Sciences; and (d) a Research School of Pacific Studies.

The income of the University, in addition to fees and gifts, consists of a statutory grant of £325,000 per annum, and a varying annual supplementary grant for running expenses. The cost of buildings and other capital works is met from a special annual grant. These funds are voted by the Commonwealth Parliament.

"University House", the residential college for single students and staff, was opened at the beginning of 1954. The workshops, the accelerator wing and the office block of the Research School of Physical Sciences have also been completed. The permanent building for the John Curtin School of Medical Research was begun in 1953, and it is expected to be completed in 1956. The School is at present working in temporary laboratories constructed for that purpose.

The University consists of the four Research Schools mentioned above.

John Curtin School of Medical Research:

Dean: A. H. ENNOR, D.S.C.

Research School of Physical Sciences:

Director: M. L. E. OLIPHANT, B.S.C., M.A., PH.D., LL.D.,
D.S.C., F.INST.P., F.R.S.

Research School of Social Sciences:

Dean: G. SAWER, B.A., LL.M.

Research School of Pacific Studies:

Dean: (Vacant).

UNIVERSITY OF ADELAIDE

ADELAIDE

Founded 1874

Opened 1876. Royal Letters Patent 1881

Chancellor: The Hon. Sir MELLIS NAPIER, K.C.M.G., LL.B.

Vice-Chancellor: A. P. ROWE, C.B.E., B.S.C.

Registrar: V. A. EDGELOE, B.A.

Library: see page 360.

Number of teachers: 329, including 31 professors.

Number of students (1954): 4,115.

Publication. *Australian Journal of Experimental Biology and Medical Science*; Editor-in-Chief: M. L. MITCHELL, M.S.C.; *The Joseph Fisher Lecture in Commerce*.

AFFILIATED COLLEGES:

St. Mark's College: North Adelaide; f. 1922; number of teachers, 20; number of students, 103.

Principal: Dr. A. GRENFELL PRICE, C.M.G., D.LITT., DIP.ED.

St. Ann's College: North Adelaide; f. 1939; number of teachers, 8; number of students, 52.

Principal: Miss L. BUSH, M.A., DIP.ED.

Aquinas College Inc.: North Adelaide; f. 1947; number of teachers, 15; number of students, 67.

Principal: Very Rev. Father M. A. M. SCOTT, M.S.C.

Lincoln College: North Adelaide; f. 1951; number of teachers, 14; number of students, 71.

Principal: Rev. F. HAMBLBY, M.A., B.D.

School of Mines and Industries: North Terrace, Adelaide; f. 1889; number of teachers, 452; number of students, 9,754.

Principal: R. W. PARSONS, O.B.E., M.E.

Roseworthy Agricultural College: Roseworthy; f. 1883; number of teachers, 21; number of students, 104.

Principal: Dr. R. N. MCCULLOCH, M.B.E., D.SC.AGRIC., B.S.C.

DEANS:

Faculty of Agricultural Science: C. M. DONALD, M.A.G.S.C.

Faculty of Arts: J. J. C. SMART, M.A., B.PHIL.

Faculty of Dentistry: T. DRAPER CAMPBELL, D.S.C., D.D.S.C.

Faculty of Economics: P. H. KARMEI, B.A., PH.D.

Faculty of Engineering: F. B. BULL, M.A., B.S.C.

Faculty of Law: R. A. BLACKBURN, B.A., B.C.L.

Faculty of Medicine: K. S. HETZEL, M.D., F.R.C.P., F.R.A.C.P.

Faculty of Music: JOHN BISHOP, O.B.E.

Faculty of Science: A. R. ALDERMAN, PH.D., D.S.C.

CHAIRMEN OF BOARDS OF STUDIES:

Pharmacy: D. O. JORDAN, D.S.C.

Physical Education: M. L. MITCHELL, M.S.C.

Physiotherapy: A. A. ABBIE, M.D., D.S.C.

Social Studies: P. H. KARMEI, B.A., PH.D.

Research: J. G. WOOD, PH.D., D.S.C.

UNIVERSITY OF MELBOURNE

CARLTON, N.3, MELBOURNE

Founded 1853

Chancellor: The Hon. Mr. Justice ARTHUR DEAN, LL.M.,
Q.C.

AUSTRALIA

Deputy Chancellor: COLIN MACDONALD GILRAY, O.B.E., M.C., M.A.
Vice-Chancellor: Prof. G. W. PATON, B.A., B.C.L., M.A., LL.D.
Registrar: F. H. JOHNSTON, B.A., B.COM., L.C.A., J.P.
Dean of Graduate Studies: J. ROGERS, M.C., B.A., D.SC., DIP.ED., F.INST.P.

Library: see page 360.
 Number of teachers: 820, including 47 professors.
 Number of students: 7,020.
 Publications: *Melbourne University Calendar* (annual), *Faculty Handbooks* (annual), *Melbourne University Gazette* (monthly), *Research Reports* (annual), *The Melbourne Graduate* (termly), *Handbook of Public and Matriculation Examinations* (annual); Editor THE REGISTRAR.

AFFILIATED RESIDENTIAL COLLEGES:

Trinity College. **Newman College.**
Ormond College. **University Women's College.**
Queen's College.

DEANS:

Faculty of Agriculture: Sir SAMUEL WADHAM, M.A., AGR.DIP.
Faculty of Architecture: B. B. LEWIS, B.Arch., M.A., PH.D., F.R.I.B.A., F.R.A.I.A.
Faculty of Arts: H. A. K. HUNT, M.A., Litt.D., DIP.ED.

THE BRITISH COMMONWEALTH

THE NEW SOUTH WALES UNIVERSITY OF TECHNOLOGY

BROADWAY, SYDNEY AND KENSINGTON N.S.W.

Founded 1948

Chancellor: WALLACE C. WURTH, C.M.G., LL.B.
Deputy Chancellor: The Hon. JOHN S. J. CLANCY, LL.B.
Vice-Chancellor: JOHN P. BAXTER, O.B.E., B.Sc., PH.D.,
A.M.I.CHEM.E., F.R.A.C.I., M.I.E.AUST.
Registrar: GODFREY L. MACAULEY, B.E.C.
Bursar: JOSEPH O. A. BOURKE, B.A.

The library (page 360) is available to members of the University and of Sydney Technical College.

Number of teachers: 17 professors, 7 associate professors, 270 senior lecturers and lecturers.

Number of students: 3,880.

Publications: *Calendar*, *Gazette*, *Research Reports*.

DEANS:

Faculty of Applied Science: Prof. A. E. ALEXANDER.

Faculty of Architecture: Prof. F. E. TOWNDROW.

Faculty of Engineering: Prof. D. W. PHILLIPS.

GENERAL INFORMATION

Incorporated by Act of the New South Wales Parliament in April 1949, the New South Wales University of Technology was established to meet the urgent demand in Australia for increasing numbers of technologists and applied scientists, and to provide them with the means of advanced training and research. The governing authority of the University is a Council representative of Parliament, industry and commerce, the trade unions, technical education, professional bodies, the University of Sydney, and of the University's own teaching staff and its undergraduates and graduates.

The University is empowered under the Act to decentralise its activities, both in its co-operation with industry and in its teaching services, by establishing and maintaining branches, departments, or colleges at Newcastle, Wollongong, Broken Hill, or at such other places in New South Wales as it may approve. Under this Authority, the Newcastle University College was established in 1951.

The University instituted its first degree courses in Civil, Electrical, Mechanical and Mining Engineering in March 1948, this initial step being made possible by the work of the Development Council, appointed in August 1947, and the decision to utilise the resources of the Department of Technical Education pending the University's acquiring its own staff, buildings and equipment. The structure of these courses is designed to give students lectures and laboratory training at the University of Technology for approximately half the year, and practical experience of a planned nature in industry for the remainder of the year.

In March 1949, degree courses in Applied Chemistry and Chemical Engineering were begun, followed by the introduction of a degree course in Architecture in 1950. Applied Physics and Wool Technology degree courses were introduced in 1951, and degree courses in Applied Geology, Food Technology, and Metallurgy in 1954. An Applied Psychology degree course began in 1955. In 1954 part-time degree courses, similar in content to the corresponding full-time courses, were introduced. In general, the part-time courses extend over six or seven years, and while attending the course the student is required to gain practical experience in an approved position in industry.

Facilities are provided by which graduate students may proceed to the degree of M.Sc., M.E., M.Arch. or Ph.D. in Science, Engineering or Architecture.

In April 1955 the first permanent building on the University's new site at Kensington was opened. Six schools and the University administration are now located at Kensington.

ASSOCIATE COLLEGE:

Newcastle University College: Newcastle, N.S.W.; f. 1951.

UNIVERSITY OF TASMANIA

HOBART

Founded 1890

Chancellor: Sir JOHN MORRIS, K.C.M.G., M.A., LL.B.

Vice-Chancellor: TORLEIV HYTTEN, C.M.G., M.A.

Registrar: ALLAN PRESHAW, B.A., F.C.I.S.

Library: *see* page 360.

Number of teachers: 85, including 20 professors.

Number of students: 700.

Publications: *Calendar* (annual), *Matriculation Manual* (annual).

PERTH

Founded 1911

Visitor: His Excellency the Governor, Sir CHARLES
GAIRDNER, K.C.M.G., K.C.V.O., C.B., C.B.E.

Chancellor: ERIC W. GILLET, B.A., LL.B.

Pro-Chancellor: ALEX. J. REID, C.M.G., I.S.O., J.P., B.A.,
F.A.S.A.

Vice-Chancellor: STANLEY L. PRESCOTT, M.Sc.

Registrar: ARTHUR J. WILLIAMS, B.A., DIP.ED.

Library: *see* page 360.

Number of professors: 16.

Number of students: 1,857.

Publications: *Calendar*, *Handbook*, *Gazette*.

DEANS:

Faculty of Arts: Prof. M. N. AUSTIN.

Faculty of Law: Prof. F. R. BEASLEY.

Faculty of Education: Prof. C. SANDERS.

Faculty of Economics: Prof. F. R. E. MAULDON.

Faculty of Science: Dr. B. J. GRIEVE.

Faculty of Engineering: Prof. K. L. COOPER.

Faculty of Agriculture: Prof. E. J. UNDERWOOD.

Faculty of Dental Science: Prof. K. J. G. SUTHERLAND.

CANBERRA UNIVERSITY COLLEGE

BOX 197, CANBERRA CITY, A.C.T.

Founded 1930

Chairman of Council: BERTRAM THOMAS DICKSON, B.A.,
PH.D.

Principal: Prof. HERBERT BURTON, M.A.

Registrar and Secretary to Council: THOMAS M. OWEN,
B.COM., F.A.S.A.

Library: *see* page 360.

Number of teachers: 57 including 10 professors.

Number of students: 267 men, 66 women, total 333.

Publications: *Calendar* (annual), *Gazette* (quarterly).

EXTERNAL TERRITORIES ADMINISTERED BY THE COMMONWEALTH

PAPUA AND NEW GUINEA

Under the Papua and New Guinea Act 1949, the Territory of New Guinea was placed under the International Trusteeship system and provision was made for the joint administration of the Territories of New Guinea and Papua. The status of the two Territories, however, remains different.

PAPUA (formerly called British New Guinea) forms part of the Commonwealth of Australia. It comprises the south-eastern portion of the island of New Guinea and the Trobriand, Woodlark, D'Entrecasteaux and Louisiade groups of islands. The total area is approximately 90,500 sq. miles, of which 87,786 are on the mainland.

A protectorate was proclaimed in 1884 over the territory and it was annexed to the Crown in 1888. In 1901 the Australian Government agreed to take it over as a territory of the Commonwealth, and following the Papua Act 1905, the Governor-General formally declared British New Guinea a territory of the Commonwealth, under the name of Papua.

The estimated indigenous population on June 30th, 1953, was 392,709; the non-indigenous population at the same date was 4,691. Copra and rubber are among the chief exports.

NEW GUINEA is a Trust Territory and comprises that part of the island of New Guinea north of the Papua and west of the Dutch New Guinea borders, the islands of the Bismark Archipelago and the two northernmost islands of the Solomon Group. The total area is approximately 93,000 sq. miles. The territory was formerly a German possession, occupied by Australian forces in September, 1914 and at the end of the first World War was given up by Germany as one of the terms of peace. By a League of Nations Mandate the territory was entrusted to the Australian Commonwealth which set up the administration in May 1921. The Commonwealth Government later placed the Territory of New Guinea under the Trusteeship system established under the United Nations Charter; the agreement whereby Australia became the sole administering authority was approved by the General Assembly of the United Nations on December 13th, 1946.

The estimated indigenous population on June 30th, 1953 was 1,143,564; the non-indigenous population being 10,758. The climate is suitable for the growth of tropical products. Exports include gold and copra.

NAURU

NAURU is a small island in the Central Pacific with an area of 5,263 acres. It was annexed by Germany in 1888, occupied by an Australian force in 1914 and, under the Treaty of Versailles, its administration passed under Mandate to Great Britain. It is administered by Australia on behalf of the Governments of Australia, New Zealand and the United Kingdom. In 1947 the General Assembly of the United Nations approved the terms of a trusteeship agreement submitted by the three Governments.

The estimated population on June 30th, 1953 was 3,404.

NORFOLK ISLAND

NORFOLK ISLAND is about 5 miles long and 3 wide and was discovered by Captain Cook in 1774. It was first a dependency of the State of New South Wales and became a territory of the Commonwealth of Australia after 1913. The population at June 30th, 1953 was estimated at 1,166.

COCOS-KEELING ISLANDS

THE COCOS-KEELING ISLANDS are 27 in number and lie about 700 nautical miles south-west of Java Head. The islands, which have an area of 5 sq. miles, form a low-lying coral atoll, densely covered with coconut palms.

The islands were declared a British possession in 1857 and came successively under the authority of the Governor of Ceylon (1878) and the Governor of the Straits Settlements (1886); they were annexed to the Straits Settlements and incorporated with the Settlement (later Colony) of Singapore in 1903. Administration of the islands was transferred to the Commonwealth of Australia in November, 1955. An air-strip on West Island played an important part in communications during the second World War. In July, 1952 the population numbered about 1,000 but the figure is now estimated at only 600, as a result of emigration. Copra is the only export of note.

UNINHABITED TERRITORIES

AUSTRALIAN ANTARCTIC TERRITORY

THE AUSTRALIAN ANTARCTIC TERRITORY was established by Order in Council, dated February 7th, 1933 and covers lands (other than Adélie Land) situated south of the 60th parallel of south latitude and lying between the 160th and 45th meridians of east longitude. The area is estimated at 2,472,000 sq. miles and adjoins that belonging to New Zealand. There are no permanent inhabitants. In 1954 a base, to be known as the Mawson Base, was set up in MacRobertson Land for meteorological and other research.

HEARD ISLAND AND MACDONALD ISLANDS

These islands are situated south-east of the Kerguelen Islands and have been administered by the Commonwealth of Australia since December 1947, when an Australian Meteorological Station was set up on Heard Island. The area is 159 sq. miles; there are no permanent inhabitants.

MACQUARIE ISLAND

MACQUARIE ISLAND lies about 1,000 miles south-east of Tasmania, of which it is a dependency. There are no permanent inhabitants. A meteorological and research base was established there in 1948.

GEOGRAPHY

ALTHOUGH New Zealand is a small country, smaller than the British Isles its geographical characteristics are varied and complex. Within its area are to be found active volcanoes and mountain glaciers descending to sea-level, climates as diverse as those of Oporto, London and Bergen, and vegetation ranging from equatorial Malayan types to Alpine heaths.

In structure and topography New Zealand is a "youthful" region. Comparatively ancient sedimentary rocks and even older gneisses form the mountainous backbone of South Island. On their flanks, and covering them in North Island, lie younger sedimentary beds ranging from Triassic (*c.* 100 million years ago) to extensive and geologically recent alluvial and glacial deposits. Topographically more important than rock succession has been the effect of crustal movement. At a period datable to *c.* 50 million years ago (late Tertiary times) the land mass lying along the summit of north-south crustal fold (and probably extending far towards New Guinea) was severely folded and fractured. The separation into two main islands has been later accentuated by changes in sea-level after the last Ice Age.

As in Eastern Australia, so in south and central South Island uplifted portions of the rock series have given rise to block mountain topography. Here, during the last Ice Age, was developed a major ice cap; and in the high mountains (rising generally to over 3,000 ft. and often to over 6,000 ft.) shrunken but still large ice caps and valley glaciers still survive. Where the ice has retreated the relief features exposed are those of Alpine glaciation, with bare rock peaks, cwms and deep U-shaped valleys. On the western flanks of the main massifs these great valleys have later been submerged to form a fjord coastline, while on the east they have been occupied by great elongated lakes. In the lowlands of South Island the main effects of glaciation were those of deposition. Glacial and river-borne detritus formed the narrow coastal terraces of Westland, and also the great Canterbury plains, which attach the old volcanic island of the Banks Peninsula to the mainland. In North Island volcanic activity in its various forms has been of greatest importance topographically. Between the structurally older prongs of the Eastern Ranges stretching between Wellington and East Cape on the one hand, and the north-westward trending Auckland peninsula on the other, lies a major zone of crustal weakness. Along this occurs a line of active and passive volcanoes, hot lakes and geysers, and great deposits of volcanic ash and pumice. Apart from the effects of glaciation, topographical contrasts are mainly between the long eroded western hills, the volcanic and ash central hill lands and the deeply dissected eastern tabular mountains.

The climates of New Zealand are determined by the combined effects of seasonal pressure changes, by latitudinal differences in temperature and by the varying effect of relief upon exposure to sea winds. South Island throughout the year lies in the path of temperate "depressions". Westerly winds are overwhelmingly predominant, bringing high humidity and precipitation. The west-facing central mountain belt receives annual averages of over 200 in., and over the entire western and north-western half of the island an evenly distributed rainfall of over 60 in. occurs. On the eastern hills and plains, rainfall rapidly decreases eastward to below 30 in. and in central Otago to less than 15 in. This is due to "rain

shadow" effect in the lee of the main mountain divide.

Actual temperatures are markedly controlled by relief. Only one station, (in the south-west highlands) records a monthly winter minimum temperature below 32° F., but the strong and steady westerly winds together with the normal altitudinal drop in temperature produce a long period of winter and spring bleakness. The eastern coastlands have warm winters, July temperatures averaging between 42° in the south to 48° in the north. Periodic dry and hot winds, the "Nor'westers" of föhn type (warmed by descent from the highlands) drive across the eastern plains from the mountains, elevating the average temperatures, and reducing air humidity. In summer, average temperatures rarely rise above 65° F. in the hottest inland areas of central Otago, are generally over 60° in the eastern and northern coastal lowlands, and fall to about 55° along the windswept south-west seaboard. In general, eastern South Island is closest in climatic conditions to south-east England, and the western region to western Britain. North Island has more distinct seasons. In summer, activity from depressions is restricted, and anticyclonic calms dominate the Auckland peninsula; but in winter the westerly wind-streams are dominant.

Rainfall is fairly uniformly distributed by month, and nowhere is there a really dry season. North of Auckland there is a definite summer minimum of precipitation, and the decrease in the number of rainy days is even more marked. The absence of any extensive mountain ranges that might cause concentration results in a comparative uniformity of rainfall distribution by place, although the general average of 50 in. is considerably exceeded on peaks such as Mount Egmont. Temperatures even more equable than those of South Island vary between winter minimum averages of 50° and summer averages of 66° F.

In all, New Zealand may be said to have a mild and equable cool-temperate climate, unmarred by variability of rainfall; with sunshine records that are generally comparable to, and sometimes exceed those of the Mediterranean area.

Soils and vegetation types reflect the physiographic and climatic environments in a rather complex manner, mainly because, as in Australia, early and long biotic isolation has produced flora and fauna largely different in species from those of other landmasses.

Since the last period of mountain building, two-thirds of New Zealand's land surface has been affected more by soil removal than by accumulation. The effects of general erosion on rugged terrain were accentuated by the glaciation previously alluded to, which left scoured rock surfaces and coarse detritus in most of South Island's mountain region.

Glacial effects and deposition by water, while producing accumulation, mainly resulted in the local formation of great gravel beds, and in the plains of Southland and Canterbury even larger deposits of such coarse and irregular material. In both islands, high rainfall and steep gradients have produced short river courses occupied by turbulent streams rapidly eroding in their catchment areas, and, in flood, depositing gravels rather than alluvial silt in the lowlands. The other zones of soil accumulation are those associated with the deposition of volcanic ash, and here a certain sterility results from the absence of essential trace elements such as cobalt. All the soils of New Zealand

are "immature" in one way or another, and are very vulnerable to erosion.

The natural vegetation of New Zealand (before pastoralism and cultivation introduced ecological changes) seems to have been as follows:

In the North Island, dense evergreen rain-forest predominated, with Malayan species such as the Kauri, mixed hard and softwoods, and many types of tree, ferns and lianas. Normal leached brown forest soils occurred everywhere, except above the tree-line and in the pumice region, where vegetation was more typically xerophytic scrub, and where soils were less well structurally developed.

In South Island there were, and still survive, marked regional differences, although everywhere, except along Marlborough Sound, soils tend to be thin, acid and low in humus content.

Alpine heaths and bare rock stretches exist above the treeline, which lies about 6,000 ft. above sea-level in the north and drops to about 3,000 ft. in the bleaker south. Between the Alpine belt and the coasts to the south, west and north, lies the rainforest belt, which also extends along the eastern foothills. Evergreen trees and ferns predominate, but latitudinal differences in temperature make temperate species such as the "antarctic beech" important in the south, while along Marlborough Sound forest types are the same in both islands.

In much of the east, where annual rainfall is less than 40 in., there stretches the great tussock region. Composed of drought-resistant medium-height bunch grasses with a substratum of more succulent sward grasses and herbs, this vast grassland once covered over 25,000 sq. miles extending from the east coast into the hills of Southland, Otago and Marlborough. In the main associated with low rainfall, thin coarse soils, and the desiccating nor-westerly winds, this vegetation is still inexplicably arid in type.

Human reaction to these different environmental factors has varied considerably. The first extensive human settlement was the main Maori immigration, which took place in the fourteenth century A.D. These Polynesian peoples of Neolithic (i.e. New Stone Age) culture found a strange land, with few edible plants and an extremely restricted fauna. Bats were the only mammals, reptiles were few, and the large bird population included such oddities as the flightless moa and kiwi.

By the middle of the eighteenth century the Maori had developed some specialised techniques of land use. In the North Island forests a population of some 40,000 was distributed fairly evenly. Here, the sweet potato (*kumara*), the taro root, and the paper mulberry had been introduced from Polynesia, and the cultivation of these crops and the use of the fibre of the flax tree (*phorium tenax*) were more important than hunting, fishing or gathering food.

In South Island, climatic conditions restricted introductions to *kumara*; and the smaller population of approximately 10,000 was concentrated along the north coast, and on the littoral between Christchurch and Invercargill. Here there was greater dependence on hunting—the moa had become extinct before 1750—and on gathering edible bracken roots and edible seaweeds. The only additional resource was that of green-stone, a type of nephrite found in Westland, and sufficiently highly prized to be the object of special expeditions into the mountains.

In both islands the advent of the Maori had little disturbing ecological effect. The dogs, pigs and rats which the Maoris introduced remained few in number, and very little land was cleared for cultivation.

Before 1840 European contact (other than that made by explorers) was confined to the hunting of seals off Stewart Island in the extreme south, and to the establishment of short-lived whaling stations on the Banks Peninsula.

Some unprofitable attempts at extracting phormium flax and timber were also made.

In 1840 the first small agricultural settlements were established, and fear of French interest in this region and of the consequences of actual landings along the east coast impelled Britain to sign the Treaty of Waitangi with Maori chiefs and thus to establish British sovereignty. The timing of this declaration was of considerable importance. Sporadic and normal pioneer mixed farming developed slowly but, on a much larger scale, both organised settlement from Britain (through Wakefield's schemes), and an even more important pastoral squatter immigration from New South Wales were now possible.

At first interest was mainly in North Island. By 1850 most of the accessible land near Wellington was occupied, and sheepmen had moved north to Hawkes Bay. Certain environmental lessons had been learnt in Australia, and the forested lands, in spite of Maori occupation, were regarded as the most attractive.

In South Island, the forest land around Nelson, was of greatest early importance. Although topographical restrictions slowed down expansion, between 1844 and 1856 sheep numbers in this area increased from 5,000 to 250,000, while cultivated land increased more slowly from 1,000 to 5,000 acres.

In both these regions however the adverse effect on the quality of Merino wool of high humidity, and medium to high temperatures, and conflict with the Maori in these zones of highest tribal density, considerably restricted territorial expansion and turned attention even before the 1860's to the rearing of English sheep breeds. At this period however there could be little thought of production of anything but wool, as there was no accessible market for any other product.

From 1846 onwards the vast possibilities of the tussock grasslands of eastern South Island were realised. By 1851, on the Canterbury plains alone merino sheep flocks numbered over 17,000; and in succeeding years hundreds of squatters and their flocks poured in from drought and depression-stricken New South Wales. The frontier of pastoral occupation swept over the plains into the hills of Canterbury and Otago, completely overwhelming Wakefield's 1848 ambition of transplanting from Britain "a complete segment of society to become the germ of a new nation".

With development based on the pastoral use of these grassland areas, and speeded up by the Otago gold rushes of the 1860's, South Island caught up with the North. By 1881, out of a total sheep population of 13 million, 9 million were in South Island, and the human population was equally divided between the two. Merinos, with their ability to forage and their fine wool, were eminently suited to the mainly empty tussock land and its climate. In the forestland of the North, European impact on the larger and more highly developed native groups led to the Maori Wars, and the production of fine quality wool needed slow and careful livestock breeding and acclimatisation.

In the 1880's two factors appeared that revolutionised resource valuation. The first of these was the new value given to the agricultural land of North Island by the development of refrigeration and fast steamer services and the consequent opening up of the only great mutton market in the world—industrial Britain.

Before 1880, the production of merino and English stock crossbreds to suit the generally humid conditions in North Island was mainly an attempt to produce wool in adverse conditions. After 1882, these efforts were made unnecessary by the economic and environmental possibility of introducing Romney Marsh sheep for meat (and only secondarily wool) for the English market. This new opportunity resulted in a great expansion of sheep farming

THE BRITISH COMMONWEALTH

in North Island. By 1900 sheep numbers were equal once more to those of the South, and by 1941 were 30 per cent larger, Romneys and Southdowns vastly predominating.

This expansion was possible because the forest soils of North Island, once cleared, were and are easily laid down to improved pasture. Of the utilised area, by far the greatest acreage is now under ryegrass and clover—exotics introduced from Britain, and thriving in climatic conditions that near the optimum. To-day, with the exception of the central volcanic area, land too heavily leached to allow continuous cultivation makes excellent improved pasture, and no deterioration of the natural environment has followed human action.

The second factor that has changed land values in New Zealand is ecological: the tussock grasses of South Island with one exception (Blue Grass) are unpalatable to sheep, and their apparent attractiveness is in fact due to the lushness of the substratum plants existing in their own special local climate. On the great stretches of range, the flocks (which quickly rose in number to nine millions in 1881), by a process of selective grazing, diminished the relative strength of Blue Grass and of the succulent substratum plants, and thus reduced the carrying capacity of the land. Consequent changes in plant associations, and human efforts to find new pasture and improve the old have had very serious ecological effects through soil-wash and flood.

The removal by selective grazing of the ground level succulents made the light soils more vulnerable to erosion. Indiscriminate burning in an attempt to encourage new growth accelerated this process, and attempts to increase the area of grassland by forest clearing in the hills have further magnified the problem. Increasing runoff on bare hillsides, augmenting river flood volume, has produced in the lowlands dangers not only from floodwater, but also from silt and gravel deposition on alluvial land.

The regional differentiation outlined above between land use in the regions of North and South Islands has been accentuated by differing possibilities for improved pasture and for cultivation. The establishment of good sown pasture in all but the best soil regions of the plains of South Island is more difficult and expensive than in the North, while on the few good soil areas sheepfarming has been displaced more and more by more profitable grain cultivation and dairy farming.

The proportion of the New Zealand population resident in South Island has dropped almost to Maori levels, from 63 per cent in 1870 to 32 per cent to-day, measuring the relative decline in importance of the pastoralism, still so widespread. The sheep population shows a similar decline while the pushing of sheep ranching into the mountain ranges has been reflected in the virtual disappearance of the pure Merino and the dominance of the Corriedale crossbred, whose very name suggests its hardness for mountain grazing and which also supplies superior mutton.

This decline of pastoralism has been accompanied by a rapid expansion of dairy farming, particularly in the improved pastures of North Island, in Auckland and Wellington. By 1939 New Zealand supplied 20 per cent of all butter in world trade. Since 1939 this process has been slowed by the phenomenal rise in value of wool in world markets.

Resources other than of agricultural land are very restricted. Coal production of over 2,000,000 tons per annum, mainly from the Westport region, is sufficient to supply some 90 per cent of domestic requirements but is unlikely to increase. The hydro-electric power potential is very great and the only difficulty in tapping both this resource and the geothermal power of the North Island hot springs results from the great capital cost involved, and the smallness of the scattered population of two million. Mineral resources, although they include some iron-bearing sands as at Onokaka and some petroleum at Taranaki, are commercially negligible.

In New Zealand then we have a picture of a small country with a small population concentrated on the non-volcanic areas of North Island, and on the lowland periphery of South Island. The present human geography contains surviving features of each of the different assessments of environment made during the last century and a half, and now presents everywhere (except in the high mountains) a man-modified landscape. Commercially closely connected with Britain—which still takes three-quarters of her exports—and dependent on world trade to a greater extent than any other country, New Zealand's fortune is, and must be, mainly based on the agricultural wealth of her various regions.

H.B.-J.

HISTORY

The islands of New Zealand were first discovered and named in 1642 by the Dutch navigator, Abel Tasman. He found and left them in possession of the Maoris, a New Stone Age Polynesian people, who came, it now appears certain, from tropical Oceania several centuries before. For over a century and a quarter they remained undisturbed and secure in their tribal lives until 1769 when their islands were rediscovered by Captain Cook. He reported so favourably upon them that shortly after 1788, when a penal colony was established in New South Wales, increasing contact was made by trading vessels in search of timber and flax. Such traffic was soon followed by sealers and whalers who found the surrounding waters profitable hunting grounds. Before long, as a result of these trading activities, white settlement grew up in the Bay of Islands in the far north. There the licentious and unscrupulous conduct of many traders and whalers gave New Zealand a sinister reputation, while traffic in fire-arms wrought terrible havoc among the Maoris in their hitherto comparatively harmless tribal warfare.

Concern for the welfare of the Maori led to the establishment of an Anglican mission in 1814 by the senior chaplain at Port Jackson, the Rev. Samuel Marsden. For years its position was so precarious that it exercised little influence over the natives. But an appeal from missionaries and traders roused the British Government to appoint in 1833 a Resident for New Zealand. So inadequate was his authority and power that "the man of war without guns", as the Maoris contemptuously called him, proved utterly ineffective in maintaining law and order. For all that, trade and settlement increased, and interest quickened to the point of causing E. G. Wakefield, the systematic coloniser, to form in England a New Zealand Company for planned settlement in the islands. The despatch of settlers, the fear of the French, and repeated representation from missionaries and merchants, finally forced the English Government to abandon its policy of minimum intervention and to commission Captain Hobson to take possession of New Zealand as Lieutenant-Governor under the Government of New South Wales. Hobson landed in 1840 at the Bay of Islands and concluded the Treaty of Waitangi with Maori chiefs. The treaty confirmed the natives in their right to the lands and in return for protection gave the Queen the exclusive right of purchase. By such prompt action he checked unbridled land speculation and limited a French colonising enterprise to settlement at Akaroa under the English flag. After a brief connection with New South Wales New Zealand became in 1842 a separate colony with Hobson its first Governor.

Meanwhile, undue haste to lay claim to a rich valley in the north of the South Island led to a disastrous clash with the Maoris. At the same time the Maoris in the far north were beginning to fear for their lands and way of life and openly rebelled against the European. Until Captain George Grey arrived as Governor attempts at suppression proved abortive. By vigorous attack and promise to uphold the Treaty of Waitangi he soon ended the war and won the esteem of the Maoris.

Elsewhere, colonisation went on apace. Several hundred West of England farmers landed in Taranaki to found the settlement of New Plymouth. In the South Island, where there were but few Maoris, a Scottish Free Church settlement was made in Otago in 1848, and in 1850 a Church of England settlement was established on the Canterbury

plains. Assuming that such colonists would reasonably expect self-government, the British Government passed an Act in 1846 conferring representative institutions on New Zealand. The autocratic Grey with good reason thought the step premature and delayed the introduction of a self-governing constitution until 1852. This provided for a General Assembly for the whole colony and for six Provincial Councils. Four years later the principle of responsible government was also established. But for twenty years the colony was in most matters controlled by the Provincial Councils.

During most of that time the North Island was troubled by Maori Wars. European ignorance of the nature of the tribal ownership of land in 1860 provoked warfare in Taranaki, which spread like fire in the fern over much of the island. Under astute leadership the Maoris drew together to present a united front to European encroachment. In spite of their pacific overtures the Government was for fighting it out, and even the return of Grey for a second term of office failed to restore peace. At every turn the natives continued to harass soldier and settler alike, until by about 1870, their resources at an end, organised resistance gradually ceased. Although quelled and his spirit temporarily broken, the Maori had earned the lasting respect of the European for his skill and bravery.

Untroubled by war, the English and Scottish settlements in the South Island made rapid progress. The discovery of gold in Otago in 1861 and on the West Coast in 1865 not only increased the wealth of the Island but quickened the pace of development tremendously. More important in the long run was the impact made by the tens of thousands of gold diggers from Australia and North America. Free of regional attachments, they encouraged thinking along national rather than provincial lines. This broadening of outlook was assisted by better communications, inter-island steamer services and the telegraph. By 1870 the prosperity of the South and the pacification of the North made a bold policy of economic expansion uniquely opportune. With supreme confidence and foresight Julius Vogel, the Colonial Treasurer, (who was to be premier, 1872-75) borrowed from London nearly £20 million within the next ten years for an extensive scheme of public works. An unwitting pioneer of the social welfare state, Vogel established the Government Life Insurance and the Public Trust organisation. Independently of the Government, the Bank of New Zealand and several large mercantile companies had already been established in the sixties and seventies.

In the wake of the capital came about 100,000 migrants to help build roads and railways and to open up the country especially the wheat lands of Canterbury. On the plains or in the valleys, under severe privations and hardships, determined settlers were soon pasturing sheep and laying the foundations of much of New Zealand's future prosperity. In all these enterprises Vogel and the entrepreneurs were favoured by high prices for their exports. Such stimulating and widespread economic changes had their political repercussions, for the centripetal forces at work so impoverished and weakened the Provincial Councils that Vogel was able to abolish them in 1876. In the following year, came free, compulsory and secular education for the whole country.

By 1878 the Vogel boom was over, the spending spree ended. Instead, the high cost of public works and falling

THE BRITISH COMMONWEALTH

prices combined to bring New Zealand to the brink of disaster. It took sober and restraining leadership to tide the colony through the long depression of the eighties by a policy of stringent economy. Of a population that had grown to half a million, thousands left to enjoy the prosperous conditions in Australia. Recovery came slowly, but with the opening up of the North Island, primary production increased markedly. Nothing however gave the economy such a fillip as did the commercial application in 1882 of refrigeration, an invention which not only helped to rescue the colony from its financial predicament but which shaped the whole pattern of New Zealand's future development.

Politically, hard times had fostered radicalism and ousted the Conservatives from office in favour of the Liberals with their concern for the artisan and small farmer. This tendency was strengthened by the failure of the great Australasian maritime strike of 1890 and the subsequent recourse of Labour to the ballot box for reform. With the support of Labour the Liberal Government not only stepped in to save the Bank of New Zealand from collapse but embarked upon an era of unprecedented social activity. Strongly influenced by Reeves's Fabian socialism, the Prime Minister, R. J. ("Dick") Seddon, a rugged pragmatist, introduced such far-reaching reforms as to make the New Zealand worker the best protected in the world. Within a few years Seddon carried through legislation which provided for better factory conditions, accident compensation, shorter working hours and payment for overtime, compulsory conciliation and arbitration in industrial disputes, and finally in 1898 old age pensions. In addition land hunger was appeased by legislation which made possible subdivision of large holdings and which imposed a graduated tax on unimproved land values. This policy of empirical humanitarianism earned for New Zealand a reputation as an advanced social laboratory. By the end of the century she had in fact so outdistanced the Australian colonies in social legislation as to make her little disposed to accept the invitation to join their Federation. All things in fact conspired towards political independence. A land predominantly of small farmers engaged in wool, meat and dairy production for export had steadily regained prosperity. The Maoris with their self-confidence restored were settling down side by side with the European to become one people. Urban development had brought with it secondary industries to diversify and give greater maturity to the general economy.

So absorbed had she become with her own domestic problems that New Zealand had taken little interest in external affairs. For a few brief years she had under the audacious imperialism of Vogel espoused a policy of "Oceania for the Anglo Saxons"; but, with little support from Britain, enthusiasm for it died down. From her beginnings she had with unquestioning loyalty placed implicit faith in the Mother Country for her protection. More positively she had sent a voluntary contingent to the South African war and had, since 1887, contributed regularly towards the British Navy. At the outbreak of World War I she gave immediate and generous support to Britain. Her armed forces played an active part in the various theatres of war, especially at Gallipoli. At home the war itself made little difference to the life of the average New Zealander; business was as usual. Conscription for the armed services was introduced in 1916, but the coal miners successfully resisted it. High prices for primary exports and the war stimulus given to their production strengthened New Zealand's economy. Moreover, she emerged from the war with enhanced international prestige through her separate representation at the Peace Conference and independent membership of the League of Nations. From this she gained the mandate over

ex-German Samoa and participated in the mandate for the phosphate island of Nauru. For all that, she took little interest in imperial or foreign affairs. Recognition of the Dominion as a separate, independent nation raised little enthusiasm but only apprehension. The Balfour Declaration of 1926 (see page 7) found her fearful of its separatist implications. Instead, she remained almost proud of her dependence upon the Mother Country and continued to worship at an Imperial shrine that had ceased to be.

After the war, under conditions of general prosperity and full employment, New Zealand resumed a selective assisted immigration policy which had increased the population by nearly 70,000 by 1928 when the intake temporarily ceased. As trade conditions hardened the Government intervened more and more to control the nation's economy. It offered expert advice and financial assistance to step up production. The growing army of dairy farmers who had banded together to form co-operative butter and cheese factories was content to let the Government organise the marketing of its produce overseas. Increasingly too did the public turn to the Government for aid when the first signs of depression appeared in 1928. To meet the threat of unemployment and unfavourable balance of trade the leader of the United Party, Sir Joseph Ward, proposed to borrow £70 million to stave off depression by stimulating economic expansion. But, although elected to office, the party was unable to cope with a situation which threatened to get out of hand. Far from raising tens of millions the Government was put to the less spectacular tasks of setting up relief works to absorb the unemployed and of rationalising the rail and road transport system to effect economies. A coalition Government of United and Reform Parties proceeded on orthodox lines to reduce expenditure on defence and to halt railway construction. Faced with a mounting army of unemployed, the Government directed them into such relief works as developing crown land. In addition it subsidised local bodies in their efforts to employ the jobless usefully, and encouraged the establishment of certain secondary industries. To meet the cost of these measures the Government imposed emergency taxes of a direct and indirect nature, and also reduced salaries and wages of public servants. To enable private employers to do likewise the Government made automatic recourse to the Arbitration Court in the event of disputes no longer necessary. It also declared a moratorium on war debts and converted many of its bonds at lower rates of interest. Along with the other Dominions, New Zealand committed herself to the Ottawa agreement of 1932 in her search for a solution, and depreciated the New Zealand £ by 25 per cent, to the benefit of the primary producer only.

But in spite of all these palliatives the depression grew worse instead of better. Trade had so contracted that in one year (1931) income from exports fell by 40 per cent. Faith in the Government was badly shaken, for by 1935 the number of unemployed had risen to 70,000. Some disorder and rioting broke out in the major cities, and labour unrest was rife throughout the country. Strikes even occurred among the unemployed! The working classes and small farmers complained that the Government failed to consider welfare as against wealth. To most electors a new broom was needed, and in 1935 small farmers combined with the working classes to return the Labour Party to power with a substantial majority.

It was a major political upset which only desperate conditions could have provoked. Nevertheless, with the increase in urban development the Labour Party had steadily gained in strength until it had become the official parliamentary opposition. Extremist elements which had made an unsuccessful bid for party leadership had

mellowed with the years to play a prominent part in the Labour Government. Imbued with much of the idealism of the old Liberal Party, the Government was now eager to take over where Seddon had left off. Under its leader, Michael Savage, it began auspiciously enough by giving Christmas bonuses and holiday grants to the unemployed. Prices of essential commodities were fixed. The dairy farmer was given a guaranteed price for his butter and cheese which were marketed by the Government both at home and abroad. The scourge of unemployment was tackled by the introduction of large-scale public works such as road and railway construction. From a poor-house boss the State became an ideal employer, offering the right to work at a fixed basic wage. Elsewhere salary and wage cuts were restored and a forty-hour week was introduced to increase the demand for labour. To cope with the acute housing shortage the Government set up a special department to undertake a most ambitious and exemplary building programme. These various and extensive undertakings were financed by means of increased taxation and public loans. In 1936 the Government bought out the shareholders of the Reserve Bank, which had been set up two years previously, and thus secured control over currency and exchange rates. Although it armed itself with the power to do so, the Government interfered little with secondary industry. Partly because of the vigorous Government attack on the evils and consequences of the depression, and partly because of the general improvement in trading conditions in all countries, at the end of three years Colin Clark, an eminent economist, could point to New Zealand farmers as the "best off" in the world, and he further declared that "no other country has made such a bold departure from the old-fashioned fatalistic outlook towards depression or taken such positive steps to promote and maintain employment and income"

It was no undeserved tribute; and, when in 1937 the Labour Government went to the country seeking a mandate for advanced social legislation, a grateful public granted it with little hesitation. The Government then began to build upon the social legislation of the 1890's to complete a social welfare State. In 1938 a Social Security Act was passed which provided general practitioner services, medicine, hospital treatment and maternity benefits, all free of any direct cost to the patient. These medical services, together with the increased old age pensions already granted by Labour in its previous Government, and family allowances gave security to all from the cradle to the grave. In spite of much opposition from the medical profession to certain features of the scheme, it was generally well received. To finance such comprehensive insurance a special income tax was levied and supplemented by grants from ordinary revenue. Fortunately, these were years of prosperity with high prices for exports. But although her economic recovery was real enough, New Zealand was so prodigal of her funds that by 1939 they had become so depleted by heavy withdrawals to meet overseas commitments that to stave off a crisis it was necessary to restrict further imports and to control the export of capital.

Such attempts to insulate New Zealand against forces inimical to the welfare state were aided by the advent of World War II which intensified the demand and raised the prices for exportable products. The war itself was accepted with fatalistic fortitude by a people who, probably rather more than other Commonwealth members, had become progressively disillusioned by the failure of the League of Nations to take active steps to keep the peace. With a more sober appraisal of New Zealand's position in the Pacific, her Government had invited Australia and Britain to a defence conference before

hostilities commenced. The Mother Country's declaration of war in 1939 was felt to be as binding on New Zealand as it had been in 1914. A special "war cabinet" was formed on the basis of a coalition of all political parties. Conscription was introduced for overseas service in the various theatres of war, essential commodities were rationed and the country's resources were mobilised for the war effort. But the rationalising of manpower in 1942 provoked a crisis in the coal mining industry and caused the Government to take over the mines. Incensed at what it regarded as the Government's capitulation to the coal miners, the National Party withdrew from the "war cabinet". With the entry into the war of the Japanese the country quickly responded to meet the dire threat of imminent invasion. The forty-hour week was suspended in favour of forty-eight hours. In 1943 thousands of men from the armed forces were released to increase food and factory production and thereby assist the United States in its overall Pacific policy.

When the war ended in 1945, New Zealand showed many signs of strain resulting from acute shortages, irksome controls, the accumulation of purchasing power and farming problems. The Government immediately set about post-war rehabilitation and reconstruction, and provided liberally for discharged servicemen. Although rationing of butter and meat continued for many years, most war time controls were soon removed. In 1945, against much opposition, the Labour Government nationalised the Bank of New Zealand, the largest trading bank in the Dominion. But with the support of the small farmer now lost, only the abolition of "weighting" in favour of country electorates saved the Government from defeat at the 1946 elections; so that it lived to legislate another day, and to make minor additions to its social security programme. Meanwhile, a certain amount of inflation brought widespread industrial troubles which the Labour Government, embarrassed by a communist-dominated splinter group was powerless to subdue. By 1949 it had not only lost its momentum, but there seemed in fact little remaining for it to do. Lacking imagination, vitality or initiative, it was content at the general elections to rest on its laurels. By concentrating on the depression and the psychology of fear it hoped to retain office. But the electors, assured that no party would tamper with the social security legislation, showed a marked preference otherwise for a freer economy, and in this mood ended the long reign of the Labour Party.

Far from making a radical departure in Government policy the new National Party in office under S. G. Holland, although it removed more controls, showed itself to be largely in support of the social welfare state. Moreover, with the full approval of the Labour Party, it abolished the Legislative Council which as a chamber of review had gradually declined into impotence. It returned the coal mines to private ownership and withdrew subsidies on certain commodities. But the attempt to peg prices failed to prevent inflation. Extremists refused to stand by the principle of compulsory arbitration, and the Government brought in troops to break a prolonged waterfront strike. So critical was the situation and hostile public criticism of the Government that the Prime Minister submitted his handling of the crisis to the electors and secured an endorsement of his policy. Since then interest in politics has declined largely because in much of their policies so little now separates the two major parties. At the 1954 general elections the Labour Party, bankrupt of ideas, was unable to wrest the reins of office from the National Party with its more generous policy towards private enterprise. The most significant feature of the election was the emergence of a Social Credit Party which, although it failed to win seats, polled significantly well to suggest a

THE BRITISH COMMONWEALTH

growing dissatisfaction with both the National and Labour Parties.

Economically the Dominion has prospered greatly since the war. Between 1939 and 1952 the national income almost trebled. Efficient utilisation of land resources has brought the standard of living to a very high level, and New Zealand's export trade per head of population is among the largest in the world. High export prices from Britain, to whose economy that of New Zealand is still mainly geared, have enabled the country to carry the heavy burden of taxation, including the tremendous cost of social security (£59 million in 1952). Large sums have also been spent in the development of hydro-electric power. Increased bank credit has stimulated diversification of secondary industry, including the erection of newsprint mills. Investigations into the possibilities of harnessing steampower from the thermal activity have recently (1954) been made. Much attention has been paid to such fundamental long-term problems as erosion and the bringing into production of marginal lands. The resumption of limited immigration helped to increase the population to over two million, including 121,000 Maoris, by 1950. Owing to a long and steady drift from the South Island two-thirds of the population now reside in the North Island.

Yet with it all, the social climate in this land of plenty has given rise to some disquietude. So much enterprise

and intervention by the Government have led to too great a reliance upon it at every turn. Although New Zealand may yet have escaped the "banana mentality" which Sir William Beveridge feared, a benign social welfare state tends not unnaturally to induce complacency among its inhabitants.

More than ever is New Zealand conscious of her position in the Pacific and of her status as a Dominion. The first major step in independent policy was the Canberra Pact, a mutual security agreement with Australia, allowing for the fullest possible co-operation and consultation on matters of common concern. Finally, in 1947, with a more realistic appraisal of the greater and more responsible part she was bound to play in world and Commonwealth affairs, New Zealand adopted the Statute of Westminster. In her strong advocacy of policies to prevent the spread of Communism she has supported the United Nations in Korea and has contributed regularly to the Colombo Plan for giving technical and material aid to South-East Asia. Although not without some misgivings at the exclusion of Britain, she joined the Australian, New Zealand and United States Pact (A.N.Z.U.S.) in 1951, and in 1954 she became a member of the South-East Asia Treaty Organisation (S.E.A.T.O.) Such commitments have placed strains upon her imperial connections, but in the words of a Labour Prime Minister it is still mainly true that "Where Britain goes, we go". E.J.T.

ECONOMIC SURVEY

BACKGROUND

New Zealand is one of the three or four most prosperous countries in the world. In the Commonwealth only Canada has a higher national income per head.¹ How has this small country, settled so recently, achieved such a measure of prosperity? The answer to this question lies in a consideration of the way the people of New Zealand have used their resources, for as in every other country, the natural and human resources in combination have produced the national wealth.

Compared with many other countries, New Zealand has not been blessed with rich, easily exploited, natural resources. Its present prosperity does not depend on an endowment of minerals such as iron or oil, and its highly efficient pastoral industry, the economy's foundation, did not inherit lush natural grasslands. The lush grasslands which now produce most of New Zealand's exports are the result of much hard work and of scientific method applied to what was originally bushland and tussock; but the work of man has been aided powerfully by a valuable natural resource—the climate. A temperate, windy climate without great extremes, sunny yet with sufficient rain—this not only allows all-year-round grazing for the pastoralist, but provides the setting in which other men and women make their contribution to the national wealth in manufacturing, transport, commerce, law, teaching, public works or wherever it may be that they earn their living.

The New Zealand economy has had its ups and downs over the past hundred years, and although at present it is more prosperous than ever before, it is likely to go through ups and downs again in the future. Ultimately, whatever the natural resources of the country, it is the people of the country that determine how the economy fares. For economic activities New Zealand has the benefit of a healthy people, comparatively well educated, willing to try new methods of production if they promise greater efficiency, and not over-awed by (although perhaps at times over-governed by) their elected government.

Government is stable, a phenomenon taken for granted in countries that have it, but one whose absence in many backward parts of the world often handicaps economic progress. It is easy to criticise governments; but speaking broadly and comparatively, it is fair to say that in economic matters New Zealand Governments have been reasonably hard-headed and sensible, and at times even adventurous in doing what seemed right for the economy. To give two examples: first, in 1948 the government of the day raised the value of the New Zealand pound in terms of other currencies by 25 per cent. The main object seems to have been to halt the rise in internal prices by reducing, or slowing the rise in, prices of imports. The political disadvantages of the exchange appreciation were minimised by price increases which had just been negotiated

for some exports (meat and dairy produce). This reduced the effect of the exchange alteration on incomes from those exports, and the Government enjoyed a stroke of luck in an upturn of wool prices soon after the exchange rate was altered, which softened the blow for wool producers, the other great class of New Zealand exporters. Given some luck in the timing of the change it must still be recognised that New Zealand's currency appreciation in 1948 was almost unique in the post-war world. The second example, by a different government, was the "wool freeze" in 1951 when the Korean war trebled world wool prices. As one measure to dampen the effect on the rest of the economy of a steep rise in wool export receipts the Government persuaded wool producers to neutralise temporarily one-third of their export earnings in special separate banking accounts which could not be operated upon but which remained the property of each individual producer. Later, when wool prices fell, the sums in those accounts were released in instalments over a five-year period. It would be quite wrong to claim that this was the complete answer to inflation, but considered only as a single anti-inflationary measure it was imaginative and well-timed.

The history of New Zealand's economic development to its present prosperity might be summed up as "making the most of the opportunities offering". When the development of refrigeration in the 1880's made it possible to send meat, butter and cheese to the other side of the world the response to this great opportunity was immediate, and widespread throughout the community. It involved eventually farms, butter and cheese factories, meat-freezing works, transport, agricultural research by government and universities and a host of other activities less directly a part of export industry. It was not merely a Government-inspired or centrally-directed development. It is true that New Zealand has been fortunate in the large and stable market open in the United Kingdom for its farm produce. This has been, and still is, a vital element in the country's economic fortunes; but it should be remembered that this market is open to others also, so that New Zealand meets competition in selling its produce. Further, while New Zealand is fortunate in having such a good market available, there is on the other side the fact that she is shut out by import restrictions and quotas from many countries where her produce could sell in open competition at a profitable price.

One of the keys to economic development is power. New Zealand is trying to make the most of its hydro-electric possibilities. Roughly 90 per cent of electric capacity is hydro and the rest thermo. In terms of kilowatt-hours generated per head of population New Zealand is among the world's four or five biggest users of electric power.²

In another activity which to-day marks the more prosperous countries of the world New Zealand is prominent—the use of private motor-cars. With a passenger car to every seven people New Zealand is among the three or four

¹ National Income per head in 1953 expressed in U.S. dollars:

U.S.A.	1,910	Australia	940
Canada	1,290	United Kingdom	810
New Zealand (1953-54)	990		

Such figures do not give a fine comparison of standards of living, but they do indicate broadly the relative average amounts of material wealth enjoyed in each country.

² Average monthly total of kilowatt-hours produced per head of population in 1954:

Canada	380
U.S.A.	240
New Zealand	150
Australia	130
United Kingdom	120

THE BRITISH COMMONWEALTH

leading motor-car users.¹ All its cars are imported. New Zealand has no steel production and with such a small population could hardly produce motor-cars economically without an export outlet; but here again it makes something of its opportunities by importing many cars un-assembled and thus operating locally a thriving car-assembly industry.

There is a moral for New Zealand people today in expressing their past economic history as "making the most of their opportunities"; and the moral is that their prosperity will be maintained or will increase or diminish according to the use they make of their opportunities in a changing world as population expands, world trade evolves, productive methods progress, new resources emerge and consumption demands vary.

PRODUCTION

According to recent estimates,² of New Zealand's total production (net national output) in 1952-53, farming accounted for just over one-quarter and manufacturing just under one-quarter. Building accounted for 5 per cent of total production; transport and communications 8 per cent; public utilities and public administration about 2 per cent each; forestry, hunting, fishing and mining all taken together about 2 per cent; and the remaining 30 per cent was services of many kinds including commerce. These figures display the broad pattern of production. They show that in this relatively highly developed economy, as in similar and even less-developed economies, services, transport and public administration make up a large part—here 40 per cent—of total activity. The significance of farm production to New Zealand is perhaps under-stressed by comparing it in this way with other sectors, since farming provides the country's exports.

The pattern of employment in the main industrial sectors, as given by an analysis of the 1951 census, shows that 17 per cent of all actively engaged were in farming, 24 per cent were in manufacturing, and 8½ per cent in construction. Thus the rest, about 50 per cent, were in various services, commerce and transport. As with the production pattern, the employment pattern illustrates the large part played in the whole of economic activity by services of many kinds.

In recent years about half of farm production has been wool and livestock, about 40 per cent has been dairy products (mainly butter, cheese and dried milk) and around 10 per cent has been crops, such as wheat, oats and other grains, grass seeds, vegetables, fruit, tobacco and other agricultural, as distinct from pastoral, products. Of the first group, wool and livestock, about 80 per cent is normally exported, and of the dairying group about 70 per cent is exported. Only about 15 per cent of the third group of crops, etc. is exported. So the great export products are wool, butter and cheese and meat, all pastoral, produced almost entirely by feeding sheep and cattle on grass all the year round.

Total farm production is estimated to have increased by 33 per cent between 1938-39 and 1953-54. Of this increase, 23 per cent took place over the seven post-war years from 1946-53. The volume of wool production from

1946-47 to 1954-55 is estimated to have risen 24 per cent, from 367 million lb to 455 million lb (greasy basis). Over the same period dairying production, as measured by the volume of butterfat produced, expanded by 25 per cent. Meat production had some ups and downs over this period but was some 12 per cent higher in 1954-55 than in 1946-47. The growth of livestock numbers over this period is important for future prospects. The figures reveal that dairy cows, cattle, and breeding-ewes all increased by about 20 per cent between 1946-47 and 1953-54. This is a good indicator that the farm economy has the basis for a continued increase in the volume of production. By 1955 New Zealand had 6 million cattle, including 2 million dairy cows in milk, and 40 million sheep of which 25 million were breeding-ewes.

The volume of factory production was 110 per cent higher in 1953-54 than immediately before the war. The scarcity of imported goods during the war gave an impetus to some manufacturing; yet over half of the 110 per cent increase took place after 1946-47. The rate of expansion of factory production appears to have slackened in recent years. Thus from 1951-52 to 1953-54 the estimates show a total increase of 6 per cent for the two years taken together, whereas for some years after 1946-47 the annual average increase in the volume of production was 6 per cent. Expansion has been notable in a wide range of manufactures from rubber products, paper products, durable consumer goods such as refrigerators and other sheet metal manufactures to super-phosphate fertilisers. Protection by quantitative import restrictions had since 1938 encouraged industries that otherwise would not have been established. Among these were some non-economic manufactures that even when fully established could not compete with imports. The tendency since 1951, however, has been to reduce the scope of quantitative import controls and more recently the Government has instituted a policy of replacing protective direct controls by tariffs. This is a healthy trend in public policy. It is important that it should be pursued further to avoid distorting the economy as it expands.

Since the end of the second World War the demand for labour in the economy has consistently outrun the supply. Vacancies, as recorded by the Department of Labour's half yearly surveys, were over 30,000 for several years until in 1953 and 1954 they fell somewhat to between 20,000 and 30,000. On the other hand, the average number of people unemployed was never as great as 100 in any year after 1946. This remarkable pattern of many more jobs than people seeking them is probably exaggerated by the statistics, but even so it provides a strong indication that inflationary pressures have been bearing on the economy over these years. The figures do not include vacancies in farming, unfortunately, so that they throw no light on the demand for labour in that vital industry. It is true that mechanisation of farming has spread and made possible an expansion of production without a corresponding expansion of labour. Yet without doubt farming would readily have absorbed more labour had it been offering.

While vacancies have remained at a high level the labour force has been expanding, partly due to immigration. From 1950 to 1954 the labour force expanded by over 50,000 and of these 40,000 were immigrants.

EXTERNAL TRADE

New Zealand and Canada both claim, from time to time, that the value of their external trade per head of population is the highest in the world. Since the value of trade varies from year to year there is little point in adjudicating on this claim; it is often a valid claim for New Zealand, however,

¹ Number of people per passenger car in 1953:

U.S.A.	4	Australia	8
Canada	6	United Kingdom	18
New Zealand	7		

It is interesting to notice here another indicator of prosperity—the number of telephones per 100 people (figures as at end of 1953):

U.S.A.	31	Australia	16
Canada	24	United Kingdom	10
New Zealand	22		

² See Report of the Official Estimates of National Income and Sector Accounts for the years 1938-39 to 1953-54. Census and Statistics Department, Wellington, N.Z. 1954.

and it expresses in a phrase how important trade is to the economy. Exports are usually over 30 per cent of national income—a high figure, though by no means the highest in the world.

The great traditional exports—wool, dairy-produce and meat—still account for around 90 per cent of the total. Two-thirds or more of all exports normally go to the United Kingdom. This has always been the market for almost all the meat and dairy produce exported and for a large part of the wool also. Important sales of wool are made to other markets, however; mainly the U.S.A., France, Germany, the Netherlands, Italy, Belgium and Canada. Hides and skins, sausage casings and apples are useful exports also, and development of the paper and wood-pulp industry will soon mean a new item in the category of minor exports.

Imports come in great variety. Machinery and other metal manufactures, textiles, wheat and sugar, petrol and oils, cars and tyres, fertilisers and chemicals—these are the main groups; but there is a host of other smaller items which a highly developed economy needs from the outside world. It is New Zealand's dependence upon imports that makes the export industries so essential to the maintenance and improvement of living standards, for if exports cannot earn the foreign exchange to pay for all these varied imports the standards of the economy must fall.

The United Kingdom is by far the greatest supplier of New Zealand's imports. In recent years it has supplied 50 to 60 per cent of the total. The next supplier of importance is Australia with 10 to 12 per cent, and then the U.S.A. with around 10 per cent. Both the U.S.A. and Canada might supply more if they were able to compete on all fours with other countries; but the post-war dollar imbalance has made special restrictions necessary against dollar imports.

New Zealand's trade pattern has ensured its adherence to the sterling group or area. Its traditional dependence on the United Kingdom to supply capital has strengthened trade ties, although since the 1920's, until the last two years, it has had little capital from its traditional financier. The prospect is that trade will dictate, for many years to come, a continued strong interlocking of the New Zealand economy with that of the United Kingdom.

FINANCE AND BANKING

Government revenues and expenditures in New Zealand are high. Revenues have been between 30 and 35 per cent of national income during the past three or four years. Two-thirds of revenue has come from direct taxation, mainly income tax and a social security tax levied on all incomes. Most of the remaining one-third is from indirect taxes such as customs duties and sales tax. Current (as distinct from capital) expenditures have been around 27 per cent of national income over the past three years. Surpluses on current account have been equivalent to between 3 and 8 per cent of national income in these years. Of all current expenditures, social security benefits and pensions have accounted for about 30 per cent, and other social services about 17 per cent, so that almost half the current public expenditure is on social services of some kind. This figure surely makes New Zealand a Welfare State in the modern sense.

Capital expenditure of the Government (on housing, schools, electric power, railways, highways, land and forest development and other public operations) has been rising in recent years until it has now reached a total rivalling expenditure on social security benefits and pensions. Public capital expenditure (gross) has risen not only in terms of money but also as a percentage of the gross

national product (G.N.P.). It represented 10 per cent and 9 per cent of G.N.P. in 1952-53 and 1953-54 after being 7 per cent in 1950-51 and 1951-52. The central government's capital expenditure represented about three-quarters of all public capital expenditure, and the remaining one-quarter was spent by local authorities. It is pertinent to notice in this context that gross capital expenditure of the private sector of the economy was estimated to be 13 per cent, so that all gross capital expenditure, both public and private, in the years 1952-53 and 1953-54 was 23 per cent and 22 per cent respectively of G.N.P., which is a high figure indicating that the economy was investing in itself quite heavily.

With this high level of investment, large public commitments for social services to be financed by taxation, and with a reluctance since 1949 to continue drawing on central bank credit for financing public expenditure it is not surprising that the government has found some difficulty in financing all the public investment that it wished to undertake. Only since 1954 has it been somewhat easier to borrow abroad in London, and even so the possibilities there are limited. Taking the three years 1952-53 to 1954-55 together it appears that over 40 per cent of the government's capital expenditure has been financed by borrowing from the public, either directly by selling bonds or through National or Post Office Savings; around 12 per cent was financed by borrowing from commercial banks and the central bank (the Reserve Bank of New Zealand); external borrowing provided 13 per cent; current surpluses provided almost 10 per cent, and the remainder, just over 20 per cent, came from miscellaneous receipts, most of which it seems could properly be added to the current surpluses. Financing of public capital expenditure in those three years could not therefore be called very inflationary, since such a large part was from savings of the public or from the current surplus. It can be argued, however, that public finance should have been more deflationary than it was, in order to reduce the inflationary pressures in the rest of the economy.

Signs of inflationary pressures in the economy at this time were: price movements (a rise of 12½ per cent in the retail price index from 1952 to mid-1955); the large numbers of recorded vacancies already referred to; and the pressure for imports only restrained by quantitative import controls or rationing of foreign exchange. These indications are evidence of some inflationary pressure; but not of a very serious inflation. The balance of payments for 1952-53 and 1953-54 showed overall surpluses totalling £40 million for the two years, which is a fairly large figure when compared with total imports of £400 million over the two years. These surpluses would themselves contribute to internal inflationary pressures; but they show that the import controls in force were effective in safeguarding the balance of payments and could perhaps have been somewhat relaxed without danger to the economy. When they were relaxed slightly in 1954-55, however, imports rose by over £50 million, and there was an overall deficit of £35 million for the year.

In the early months of 1955 imports were at a higher level than in the previous two years and the external accounts seemed to be running into a serious imbalance, for there was no corresponding rise in export receipts to be expected. A new element in the scene, however, is an apparently strong determination to use monetary measures by restraining bank advances to bring the economy back to a more balanced relation between foreign exchange expenditure and earnings. The results of this policy over the coming years may have great significance for the economy.

In New Zealand, as in many other countries, after the depression of the early 1930's an era of "cheap" or "easy"

THE BRITISH COMMONWEALTH

money set in. This was perhaps inevitable during the war, and it facilitated post-war economic activity and the maintenance of full employment. Continued inflation and pressure on the balance of payments for many years after the war have brought about a reconsideration of monetary policy in New Zealand (again, as in other countries). At first, the sterner monetary policy involved little more than requests by the Reserve Bank to the commercial banks to restrain the level of advances. This seemed to carry little weight when the economy was importing heavily in 1951 and 1952; but during the calmer years that followed the central bank has been overhauling its apparatus of monetary control. In October 1955 the bank rate, that is the rate at which the Reserve Bank will discount bills, was set at 7 per cent. From 1941 to 1954 it had been unchanged at $1\frac{1}{2}$ per cent. This rate of itself has meant little in New Zealand so long as commercial banks have had no need to borrow from the central bank. To ensure that a great monetary expansion would force the commercial banks to borrow from the central bank, and therefore to pay the higher bank rate for such borrowing, the commercial banks have been required since August 1955 to maintain with the Reserve Bank $21\frac{1}{2}$ per cent of their demand liabilities in New Zealand and $7\frac{1}{2}$ per cent of their time liabilities. These requirements have been varied several times since July 1952; before that date they were 7 per cent and 3 per cent.

The testing time for the new monetary regulations is still to come, and more refinements to the control methods will still be needed. They may give way under the political strain if they appear to be taking effect, especially if it seems that the demand for unavailable labour is being reduced by the tightness of money. The new attitude to monetary measures is nevertheless a healthy sign, for the economy is one subject to the effects of fluctuations in the outside world, and an enlightened monetary policy is an indispensable weapon in the armoury of measures for encouraging progress with stability.

PROSPECTS

Prospects for New Zealand exports are always the most vital, and the most uncertain, aspect of the economy's future. At present, on the whole, export prospects are good. The collapse of export markets that from time to

time has hit the country so hard in the past (the last time in the early 1930's) has taken place during world-wide depression. It is reasonable to expect for the future that depressions will never be allowed to reach the severity of past depressions. Yet in economic matters the unexpected can happen, and while governments may be well prepared to meet difficulties that are familiar from past experience, they may be caught unprepared by some new turn of events that can do much damage before it is checked. Only a soothsayer would confidently predict the economic future; but so far as it is permissible to have a view, based on present indications, that view for New Zealand's export prospects is undoubtedly good. That is to say, there seems a good chance that New Zealand will be able to sell all its main export production at profitable prices.

But it must be recognised that ups and downs are likely. Wool prices may fluctuate widely as they have so often in the past. Meat and dairy produce prices, depending mainly on demand in the United Kingdom, are now free to move without the price-fixing by governments that held for fourteen years after 1940. Dairy produce, in particular, is threatened by surpluses built up in the U.S.A. If these are unloaded on world markets they will tend to depress prices, perhaps severely. While basically, therefore, export prospects are good, fluctuations must be expected. It may be that if economic adversity comes the New Zealander will prove to be flabby from the years of prosperity, yet it is possible to take a more optimistic view and conclude from the country's economic history that it will face future reverses realistically. Trends in the past few years—especially towards freer imports and a more effective monetary policy—certainly justify some optimism for they help to make the economy more flexible and so more easily adjustable to changing conditions.

Yet at present the economy is over-stretched, judging by the demand for labour and the imbalance in the external accounts. A relatively small easing of the pressure is all that is needed for stability. The fundamentals are sound—prospects for export markets, some important new industries (notably paper and pulp), a high rate of investment and a general interest in better productive methods. With these, despite the prospects of ups and downs, the long-term economic outlook must be called favourable.

STATISTICAL SURVEY

AREA

The administrative responsibilities of New Zealand devolve over a wide area, the land territories of which consist mainly of a number of islands of varying size in the South Pacific Ocean, together with an uninhabited tract in the Antarctic known as the Ross Dependency. While the two largest and most important islands—the North and South Islands of New Zealand—are separated only by a relatively narrow strait, the remaining islands or island groups are not only very much smaller but are scattered over a large expanse of ocean.

The boundaries of New Zealand, including its most outlying islands and dependencies, range from the northern limit of latitude 8° S. to the south of latitude 60° S., and from longitude 160° E. to 150° W.

For statistical purposes the following classifications of the administrative area is the most convenient:

(a) Main islands:

North Island and adjacent islets	44,281 sq. miles
South Island and adjacent islets	58,093 sq. miles
Stewart Island and adjacent islets	670 sq. miles
Chatham Islands	372 sq. miles

(b) Minor islands (total area 307 sq. miles) included in the geographical area of New Zealand by Imperial Act of 1863:

Antipodes (24 sq. miles), Auckland Islands (234), Bounty Islands ($\frac{1}{2}$), Campbell Island (44), Snares Islands (1), Solander Island ($\frac{1}{2}$), Three Kings Islands (3).

(c) Kermadec Islands, annexed 1887, 13 sq. miles.

NEW ZEALAND

STATISTICAL SURVEY

(d) Cook and other Pacific Islands, annexed 1901.
 Lower Group (78 sq. miles): Atiu, Aitutaki Man-
 gaia, Manaue (or Hervey Islands), Mauke (or
 Parry), Mitiaro, Rarotonga, Takutea.
 Northern Group (12 sq. miles): Manihiki (or
 Humphrey), Nassau, Palmerston (or Avaru),
 Penrhyn (or Tongareva), Pukapuka (or Danger),
 Rakahanga (or Reirson), Suvarrow (or Anchor-
 age).

Nuie Island (100 sq. miles).
 Tokelau Islands (4 sq. miles).

(e) The Trust Territory of Western Samoa (1,133 sq.
 miles).

(f) The Ross Dependency (estimate), 175,000 sq. miles

The total area of New Zealand and all islands and
 dependencies (excluding Western Samoa and the Ross
 Dependency) is 103,930 sq. miles.

POPULATION

Figures for New Zealand are as at March 31st, 1955; for Western Samoa as at March 31st, 1954.

	MALES	FEMALES	TOTALS
New Zealand:

TOTAL LABOUR FORCE	602.6	185.1	787.7

AGRICULTURE

The importance of livestock in the New Zealand economy is well illustrated by the fact that over 90 per cent of the cultivated area is devoted to sown pasture and fodder crops. In addition, large areas of unimproved land provide rough grazing. The statistics quoted below relate to holdings of 1 acre or more outside borough boundaries.

ALLOCATION OF LAND
(^{'000} acres)

USAGE	1938-39	1951-52	1952-53	1953-54
Field crops	1,807	2,062	2,131	2,061
Plantations (of timber trees)	844	916	950	950
Orchards	22	20	21	21
Lying fallow	141	143	174	144
Pasture (sown grasses)	16,784	16,797	16,574	16,573
Other cultivated land	96	110	112	112

FORESTRY

About 24 per cent of New Zealand is forest, half as much as a century ago.

The principal timbers milled at present are rimu and *pinus radiata*. The table below shows the output of timber by species for recent years. Quantities in the table are quoted in thousands of feet board measure (ft. b.m.) i.e. thousand units of 12 in. x 12 in. x 1 in.

	1947-48	1950-51	1951-52	1952-53	1953-54	1954-55
Rimu and Miro	198,727	228,515	225,407	231,564	219,234	211,000
Matai	25,973	36,957	36,864	35,638	36,534	37,700
