THE BRITISH COMMONWEALTH

THE CONSTITUTION

Executive Council

The powers, duties and responsibilities of the Governor-General and the Executive Council under the present system of responsible government are set out in Royal Letters Patent and Instructions thereunder of May 11th, 1917. In the execution of the powers and authorities vested in him the Governor-General must be guided by the advice of the Executive Council, but if in any case he sees sufficient cause to dissent from the opinion of the Council, he may act in the exercise of his powers and authorities in opposition to the opinion of the Council, reporting the matter to Her Majesty without delay, with the reasons for his so acting.

In addition to the Governor-General, the Executive Council consists of all the ministers of the Crown. Two members, exclusive of His Excellency or the presiding member, constitute a quorum. Authority is given in the Civil Lists for the appointment of one or two Maoris or half-castes as members of the Executive Council representing the Maori race.

Parliament

Until 1951, New Zealand had a bi-cameral legislature. The Legislative Council consisted of members appointed by the Governor-General, on the advice of his ministers, for a seven-year term, and exercised powers similar to those of the House of Lords in the United Kingdom. The Council had exercised these powers to an increasingly limited extent as the years went by; and various proposals were advanced for its reform. It was finally decided that it should be abolished. The Legislative Council Abolition Act was passed in 1950 and took effect as from January 1st, 1951.

House of Representatives

The number of members constituting the House of Representatives is eighty—seventy-six Europeans and four Maoris. They are designated "Members of Parliament". The number was originally fixed by the Constitution Act as not more than forty-two and not less than twenty-four, and the first Parliament called together in 1854 consisted of forty members. Legislation passed in 1858 fixed the number of European members at forty-one; in 1860, at fifty-three; in 1862, at fifty-seven; in 1865, at seventy; in 1867, at seventy-two; in 1870, at seventy-four; in 1875, at eighty-four; in 1881, at ninety-one; in 1887, at seventy; and in 1900, at seventy-six. By the Maori Representation Act, 1867, which is still in force, as embodied in the Electoral Act, 1927, four Maori members were added.

The basis upon which the Dominion is divided anew into seventy-six European electorates, after each population census, was substantially altered by the Electoral Amendment Act, 1945. Prior to the passing of this Act the allocation of electorates was on the basis of the total population. An addition was also made to the rural populations, so that the number of rural electorates, in proportion to population, was higher than urban electorates. The "country" quota, as this allowance was called, was computed on the basis that 28 per cent was added to the rural population, which for electoral purposes meant population other than that contained in a city or borough of over 2,000 inhabitants or in any area within five miles of the chief post offices at Auckland, Wellington, Christchurch or Dunedin. The 1945 Amendment abolished this "country" quota and, in

addition, changed the basis on which the electorates were allocated from the distribution of the total population to that of the adult population.

Quinquennial Parliaments, instituted under the Constitution Act, were abolished by the Triennial Parliaments Act, 1879, which fixed the term at three years. General elections have been held at three-yearly intervals since 1881, with a few exceptions.

Under the Electoral Act, 1927, every registered elector of either sex, but no other person, is qualified to be a parliamentary candidate. It is provided, however, that a person shall not be so tested who is disqualified as an elector under any of the provisions of the Act; or is an undischarged bankrupt; or is a contractor to the public service of New Zealand to whom any public money above the sum of £50 is payable, directly or indirectly (but not as a member of a registered company or incorporated body), in any one financial year. Though women's suffrage has been operative since 1893, women were not eligible as parliamentary candidates until the passing of the Women's Parliamentary Rights Act, 1919, the provisions of which are now embodied in the Electoral Act, 1927. Under the Electoral Act public servants were prohibited from being elected, but this prohibition was removed by the Political Disabilities Removal Act, 1936, which provided that if elected they immediately ceased to be public servants.

Twenty members, inclusive of the Speaker, constitute a quorum.

Legislative procedure is similar to that in the British parliament. New Bills are given three readings and discussion in committee. The first reading is voted on without comment; at the second reading the proposals are discussed as a whole; then in Committee (of the whole house) the clauses are discussed in detail; the third reading may involve another debate, but is generally formal. When a Bill has gone through this procedure it passes to the Governor-General for his formal assent. Financial Bills and import policy measures of the Government involving public expenditure are always introduced by "Governor-General's message", and all other business is suspended until the "message" covering the Bill is considered by the whole house. There are standing and regular committees to examine new legislation.

Franchise

Since the abolition of plural voting in 1889 and the introduction of women's suffrage in 1893 every person twenty-one years of age or over has had the right to exercise a vote in the election of members for the House of Representatives. To be registered as an elector a person must have resided for one year in the Dominion, and for three months in the electoral district for which he claims to vote. A system of compulsory registration of electors was introduced at the end of 1924, but for Maori electors a Proclamation is necessary before registration becomes operative. The Electoral Amendment Act, 1948, however, provided for the preparation of rolls for Maori electoral districts.

Maoris are qualified to vote only at elections of the four members representing the Maori race. A Maori half-caste is entitled to be registered as an elector of a Maori or a European electoral district.

By the Electoral Amendment Act, 1937, which made

provision for a secret ballot in Maori elections, Maori electors were granted the same privileges, in the exercise of their vote, as European electors.

For the system of local-government administration a modified form of franchise exists, a ratepaying qualification being necessary for the exercising of votes on financial issues.

GOVERNORS AND GOVERNORS-GENERAL

Captain WILLIAM HOBSON, R.N., Lieut.-Governor of the Settlement from January 30th, 1840 to January 3rd, 1841; and of the Crown Colony from January 3rd, 1841 to September 10th, 1842.

Captain WILLOUGHBY SHORTLAND, R.N., Administrator from September 10th, 1842 to December 26th, 1843.

Captain ROBERT FITZROY, R.N., Administrator from December 26th, 1843 to November 17th, 1845.

Captain GEORGE GREY, R.N., Administrator from November 18th, 1845 to December 31st, 1847; and as Sir GEORGE GREY, K.C.B., Governor-in-Chief (under the Charter of 1846) and Governor of the Provinces of New Ulster and New Munster, from January 1st, 1848 to March 7th, 1853; finally Governor of the Self-Governing Colony of New Zealand (under the Constitution of 1852) from March 7th, 1853, to December 31st, 1853.

Lieut.-Col. ROBERT H. WYNYARD, C.B., Administrator from January 1st, 1854 to 1855.

Col. THOMAS GORE BROWNE, C.B., Governor from 1855 to 1861.

Sir GEORGE GREY, K.C.B., Administrator from October to December 1861; Governor from December 1861 to 1868.

Sir GEORGE FERGUSON BOWEN, G.C.M.G., Governor from 1868 to 1873.

Sir GEORGE A. ARNEY, Chief Justice, Administrator from March to June 1873.

Sir JAMES FERGUSSON, Baronet, P.C., Governor from June 1873 to December 1874.

Marquis of NORMANBY, P.C., G.C.M.G., Administrator from December 1874; Governor from January 1875 to February 1879.

JAMES PRENDERGAST, Chief Justice, Administrator from February 21st to March 27th, 1879.

Sir HERCULES G. R. ROBINSON, G.C.M.G., Administrator from March to April 1879; Governor from 1879 to 1880.

JAMES PRENDERGAST, Chief Justice, Administrator from September 9th to November 29th, 1880.

The Hon. Sir ARTHUR H. GORDON, G.C.M.G., Governor from 1880 to 1882.

Sir JAMES PRENDERGAST, Chief Justice, Administrator from June 24th, 1882 to January 20th, 1883.

Lieut.-Gen. Sir WILLIAM F. D. JERVOIS, G.C.M.G., C.B., Governor from 1883 to 1889.

Sir JAMES PRENDERGAST, Chief Justice, Administrator from March 23rd to May 2nd, 1889.

Earl of ONSLOW, G.C.M.G., Governor from 1889 to 1892.

Sir JAMES PRENDERGAST, Chief Justice, Administrator from February 25th to June 6th, 1892.

Earl of GLASGOW, G.C.M.G., Governor from 1892 to 1897.

Sir JAMES PRENDERGAST, Chief Justice, Administrator from February 8th, to August 9th, 1897.

Earl of RANFURLY, G.C.M.G., Governor from 1897 to 1904.

The Rt. Hon. BARON PLUNKET, K.C.M.G., K.C.V.O., Governor from 1904 to 1910.

Hon. Sir ROBERT STOUT, K.C.M.G., Chief Justice, Administrator from June 8th to 22nd, 1910.

Rt. Hon. Lord ISLINGTON, K.C.M.G., D.S.O., Governor from 1910 to 1912.

Hon. Sir ROBERT STOUT, K.C.M.G., Chief Justice, Administrator from December 3rd to 10th, 1912.

Earl of LIVERPOOL, P.C., G.C.M.G., G.B.E., M.V.O., Governor from 1912; Governor-General from 1917 to 1920.

Rt. Hon. Sir ROBERT STOUT, P.C., K.C.M.G., Chief Justice, Administrator from July 8th to September 26th, 1920.

Viscount JELLCOE of SCAPA, G.C.B., O.M., G.C.V.O., Governor-General from 1920 to 1924.

Rt. Hon. Sir ROBERT STOUT, P.C., K.C.M.G., Chief Justice, Administrator from November 26th to December 12th, 1924.

General Sir CHARLES FERGUSSON, Baronet, LL.D., G.C.M.G., K.C.B., D.S.O., M.V.O., Governor-General from 1924 to 1930.

Rt. Hon. Viscount BLEDISLOE, P.C., G.C.M.G., K.B.E., Governor-General from 1930 to 1935.

Rt. Hon. Viscount GALWAY, P.C., G.C.M.G., D.S.O., O.B.E., Governor-General from 1935 to 1941.

Marshal of the Royal Air Force Sir CYRIL NEWALL, G.C.B., O.M., G.C.M.G., K.C.B., C.M.G., C.B.E., Governor-General from 1941 to 1946.

Lieut.-Gen. Lord FREYBERG, V.C., G.C.M.G., K.C.B., K.B.E., D.S.O., LL.D., Governor-General from 1946 to 1952.

Lieut.-Gen. Sir WILLOUGHBY NORRIE, G.C.M.G., G.C.V.O., C.B., D.S.O., M.C., Governor-General appointed 1952.

POLITICAL PARTIES

Labour Party, The: Wellington; The General Election of Nov. 27th, 1935, brought the Labour Party into power for the first time. It continued in office until November 1949, having been re-elected in 1938, 1943 and again in 1946. The policy of the Party is still substantially the same as it was in 1935—the maximum utilisation of the Dominion's resources for organising an internal economy to distribute goods and services so as to guarantee to every person able and willing to work an adequate standard of living.

To this end the Labour Government took over control of currency and credit, inaugurated guaranteed prices for the farmers, established a social security scheme, fostered the secondary industries, restored cuts in wages and pensions and increased expenditure on social services; to-day the Party stands for the safeguarding of these achievements

Leader: Rt. Hon. W. NASH.

New Zealand National Party: Sussex Chambers, 12 Panama Street, Wellington, C.1; a new party, est. in 1936, following the defeat in the 1935 elections of the coalition Government, which had been a fusion of the Reform and United political parties; returned to office in November 1949, 1951 and again in 1954. The National Party represents the Conservative and Liberal elements in New Zealand politics. While retaining existing social service benefits, it stands for free enterprise, the gradual abolition of price controls, and vigorous enforcement of the laws concerning sedition and subversive activities. In international affairs, it stands for close relations with Britain and the Commonwealth, and full support of the United Nations Organisation. Number of mems.: 20,000; publ. *Freedom* (weekly).

Gen. Sec.: E. N. PRYOR.

Leaders: Rt. Hon. S. G. HOLLAND, P.C., C.H. (Prime Minister), A. MCKENZIE (President).

THE LEGAL SYSTEM

The Judicial System of New Zealand comprises a Court of Appeal, a Supreme Court, a Court of Arbitration and a Workers' Compensation Court. There are also Magistrates' Courts, having both civil and criminal jurisdiction and Wardens' Courts dealing with Mining proceedings.

THE COURT OF APPEAL

Consists of two Divisions sitting alternately and comprising six Judges of the Supreme Court.

Registrar: W. PARKER, Wellington.

THE SUPREME COURT

Chief Justice: Rt. Hon. Sir HAROLD E. BARROWCLOUGH, K.C.M.G., C.B., D.S.O., M.C., E.D. (Wellington, 1953).

Judges: K. MCGRESSON (1947), J. STANTON (1948), A. K. NORTH (1951), Sir GEORGE FINLAY (1944), Hon. J. D. HUTCHISON (1949), Hon. P. B. COOKE, M.C. (1950), Hon.

F. B. ADAMS (1950), A. K. TURNER (1953), G. I. MCGREGOR (1953), Hon. W. P. SHORLAND (1954), Hon. T. E. HENRY (1955).

(Dates are date of appointment.)

COURT OF ARBITRATION

The Court of Arbitration consists of three Judges, an Employers' representative and a Workers' representative.

Judges: Hon. Sir ARTHUR TYNDALL, C.M.G. (1940), Hon. W. F. STILWELL (1949).

Deputy Judge: D. J. DALGLISH (1947).

WORKERS' COMPENSATION COURT

Judge: Hon. D. J. DALGLISH (1947).

LAND VALUATION COURT

Judge: Hon. K. G. ARCHER.

New Zealand National Airways Corporation: P.O. Box 96, Wellington, C.1; f. 1946; Engineering Division, Milson Aerodrome, Palmerston North, N.Z.; operates regular daily services to all parts of New Zealand and services to Suva (Fiji) (1,318); Auckland-Norfolk Is. and Samoa-Cook Is. (Aitutaki) (889); Chair. Sir LEONARD ISITT, K.B.E.; Gen. Manager J. J. BUSCH; Operations Manager (Vacant); Sec. Treas. D. E. FOLEY; Publicity Manager I. H. DRISCOLL; Commercial Manager W. J. JENNINGS; Passenger Supt. A. B. SHAND.

Tasman Empire Airways Ltd. (Inc. N.Z.): Head Office: Mechanics' Bay, Auckland (P.O. Box 2201, Auckland,

C.1); Regd. Office: Commercial Bank Chambers, Lambton Quay, Wellington (P.O. Box 986, Wellington, C.1); f. 1940; direct link between Auckland and Sydney, N.S.W.; Auckland and Suva, Fiji; Auckland and Papeete, Tahiti (via Suva, Fiji and Aitutaki, Cook Is.); Auckland and Chatham Is. (via Wellington); Wellington and Sydney; Christchurch and Melbourne; Chair. Sir LEONARD ISITT, K.B.E., Legion of Merit (U.S.); Vice-Chair. T. A. BARROW, J.P., A.R.A.N.Z., A.I.A.N.Z.; Gen. Manager G. N. ROBERTS, C.B.E., A.F.C., Legion of Merit (U.S.); Sec. F. H. BASS, F.P.A.N.Z., F.C.I.A., F.A.I.S., F.I.A.N.Z.

South Island Airways operates a service from Christchurch to Oamaru.

Straits Air Freight Express Ltd. is the chief air freight carrier and is under Charter to New Zealand Railways.

OTHER AIRLINES WITH BRANCH OFFICES IN NEW ZEALAND

C.P.A.L. (Canadian Pacific Air Lines): Union House, 32-34 Quay Street, Auckland.

B.C.P.A. (British Commonwealth Pacific Airlines Ltd.): Air Centre, cnr. Commerce and Customs Streets, Auckland.

P.A.A. (Pan-American World Airways Inc.): Windsor House, 58-60 Queen Street, Auckland.

B.O.A.C. and Q.E.A. (Qantas Empire Airways Ltd.): both at Airways House, 101 Customs Street East (P.O. Box 2201), Auckland.

LEARNED SOCIETIES

THE ROYAL SOCIETY OF NEW ZEALAND

WELLINGTON

Founded 1867

The Royal Society is the senior scientific institution of New Zealand. At the time of its foundation it had four branches, the Auckland Institute, the Wellington Philosophical Society, the Philosophical Society of Canterbury and the Otago Institute. It now has eight.

President: Dr. DAVID MILLER, F.R.S.N.Z.

Secretary: Miss M. WOOD, c/o Victoria University College, Wellington.

The eight branches are as follows:

Auckland Institute and Museum: P.O. Box 9027, Auckland, S.E.1.

Canterbury Branch of the Royal Society of New Zealand: c/o Canterbury Museum, Christchurch, C.1; f. 1862 as Canterbury Philosophical Institute; 290 mems.; Sec. C. R. RUSSELL, M.Sc., F.R.M.S.

Hawke's Bay Branch, Royal Society of New Zealand: c/o Hawke's Bay Museum, Napier.

Nelson Institute: c/o Nelson Museum, Nelson.

Rotorua Philosophical Society: c/o Matipo Avenue, R.D.2, Rotorua.

Southland Branch, Royal Society of New Zealand: c/o Southland Museum, Invercargill.

Waikato Scientific Association: Biochemical Laboratory, Ruakura Animal Research Station, Hamilton.

Wellington Branch of the Royal Society of New Zealand:

Dominion Museum, Wellington, C.3; f. 1867 as Wellington Philosophical Society, name changed 1938; 400 mems.; Pres. Dr. ERNEST MARSDEN; Librarian R. J. P. CAREY; Sec. and Treas. R. W. WILLETT.

New Zealand Geographical Society: Department of Geography, Canterbury University College, Christchurch; f. 1944 to promote and stimulate the study of geography; brs. in Auckland, Wellington, Christchurch and Dunedin; 1,444 mems. in New Zealand, 213 overseas mems.; Chair. J. L. HEWLAND, M.A.; Sec.-Treas. L. L. POWNALL, M.A.; publs. *New Zealand Geographer* (twice yearly) and the *Record of Proceedings of the Society and its Branches* (twice yearly).

New Zealand Institute of Architects (Inc.): 39 Johnston Street, Wellington, C.1; f. 1905; Pres. N. Y. A. WALES; Sec. F. H. HARRIS; publs. *Year Book, Journal* (monthly, except Jan. and Dec.).

Polynesian Society: Wellington; f. 1892; to promote studies and publications dealing with native peoples of Polynesia, Melanesia and Micronesia; library; 700 mems.; Pres. M. R. JONES; Sec. C. R. H. TAYLOR, c/o Alexander Turnbull Library, Box 8016, Wellington; publs. *Memoirs, Journal* (quarterly).

Royal Agricultural Society of N.Z.: P.O. Box 85, Palmerston North; Sec. R. MCCAY.

Royal Astronomical Society of New Zealand: Carter Observatory, Wellington, W.1; f. 1920; 220 mems.; Sec. Miss N. I. JONES; Editor K. D. ADAMS; publs. *Southern Stars* (quarterly), and *News Sheet* (monthly).

THE BRITISH COMMONWEALTH

RESEARCH INSTITUTES

Cawthron Institute: Nelson, N.Z.; f. 1919; agricultural research; Scientific Departments; Soils and Agriculture, Biochemistry, Mycology and Entomology; Dir. Sir THEODORE RIGG; Asst. Dir. Dr. D. MILLER; Soils and Agriculture Sir THEODORE RIGG, Dr. E. B. KIDSON; Biochemistry Dr. H. O. ASKEW; Entomology Dr. D. MILLER; Senior Mycologist T. C. CHRISTIE, M.Sc.; Hon. Curator Atkinson Observatory E. L. MORLEY; publs. *Annual Report, Cawthron Lectures, Bulletins*.

New Zealand Magnetic Survey: Botanic Gardens, Christchurch, C.I.; Magnetic Survey operations throughout New Zealand territories; Magnetic Variometers at Amberley; Magnetic Survey of New Zealand ran 1899 to 1909; re-survey started 1941; whole original area covered at December 1948; charts plotted, report printed 1952, but field work now continuous; Magnetographs installed 1901; Observatory f. 1902; Eschenhagen, Adie and La Cour variometers at Amberley from 1929 on, three-component Galitzin seismographs and short-period Wood-Anderson seismometer at Christchurch; it uses a total force airborne magnetometer, technically directs magnetic operations at Apia, issues K- indices and hourly values, makes climatological observations at Christchurch, prepares magnetic charts for S.W. Pacific, co-operates with Geo-physical Survey in special regional observations and aims generally at acquiring research data for deductions of the global structure in S.W. Pacific area; Dir. A. L. CULLINGTON, B.Sc. (Acting).

Christchurch Geophysical Observatory: P.O. Box 1171, Christchurch, C.I.; established 1948 to co-ordinate certain inter-related geophysical activities of the Geophysics Division, a section of the Department of Scientific and Industrial Research, New Zealand; responsible for the administration, staffing, technical and research programmes of the Ionospheric Stations at Campbell Island and Rarotonga; staff of central organisation maintain Ionosphere Recorders at Godley Head, C.I.W. Compton-Bennett Cosmic Ray Meter, and a Blackett M.U.2. Cosmic Radiation Intensity Recorder at Christchurch. Ionospheric data from all stations collected, reduced and distributed; investigations into relationships between terrestrial magnetic, ionospheric, and auroral disturbances and changes in intensity of cosmic radiation are undertaken; studies of physical processes in upper atmosphere are in progress; Dir. J. W. BEAGLEY, M.Sc.; publs. *Ionospheric Data* (Lincoln, Campbell Island, Rarotonga) (monthly), *Solar, Magnetic and Ionospheric Data Bulletin* (monthly).

Carter Observatory: Wellington, W.I.; founded 1939 by Act of New Zealand Parliament; Observatory building completed December 1941; work of Observatory includes adult education in astronomy, co-operation with schools and colleges, solar and terrestrial relationships, and general astronomical research; Dir. I. L. THOMSEN.

Dairy Research Institute (N.Z.), The: Massey College O.P. Palmerston North; established 1927 as a unit of the D.S.I.R., inc. 1947; Depts. of Bacteriology, Chemistry, Dairy Husbandry and Dairy Manufactures, Engineering; Chief Bact. H. R. WHITEHEAD, D.Sc.,

A.N.Z.I.C., F.R.S.N.Z.; Chief Chemist F. H. McDOWALL, D.Sc., F.N.Z.I.C.; Dir. Prof. W. RIDDET, C.B.E., B.Sc. (AGR.), N.D.A., N.D.D.

Department of Scientific and Industrial Research (N.Z.): P.O. Box 8018, Government Building, Wellington, N.I.; f. 1926.

Secretary: Dr. W. M. HAMILTON.

Deputy Secretary: W. A. JOINER.

Assist. Secretaries: L. W. TILLER, I. D. DICK, W. A. JOINER.

DIRECTORS:

Dominion Laboratory: F. J. T. GRIGG.

Dominion Physical Laboratory: K. I. WILLIAMSON.

Auckland Industrial Development Laboratories: J. B. BROOKE.

Geological Survey: Dr. L. I. GRANGE.

Geophysics Division: Dr. E. I. ROBERTSON.

Superintendent, Geophysical Observatory: J. W. BEAGLEY; *Geophysical Survey:* N. MODRINIAK; *Magnetic Survey:* (Vacant); *Oceanographic Institute:* J. W. BRODIE; *Seismological Observatory:* R. C. HAYES.

Wheat Research Institute: E. R. HULLETT.

Crop Research Division: Dr. E. J. GODLEY.

Botany Division: C. M. SMITH.

Grasslands Division: Dr. J. MELVILLE.

Plant Diseases Division: Dr. G. H. CUNNINGHAM.

Entomological Research Station: Dr. D. MILLER.

Soil Bureau: N. H. TAYLOR.

Fruit Research Station: J. D. ATKINSON.

Tobacco Research Station: R. THOMSON.

Fats Research Laboratory: Dr. F. B. SHORLAND.

Applied Mathematics Laboratory: Dr. R. M. WILLIAMS. *Officer-in-Charge, Animal Ecology Section:* Dr. K. A. WODZICKI.

Station Research Officer, Hop Research Station: Dr. R. H. J. ROBORGH.

Officer-in-Charge, Information Bureau: N. A. MARRIS.

Scientific Liaison Officers, London: Dr. V. ARMSTRONG, M. O'CONNOR.

Liaison Secretary, Washington: Miss K. SANBURN.

Secretary-Executive Officer, Manufacturers' Research Committee: C. P. McEVEDY.

Publs. N.Z. *Journal of Science and Technology* (Agricultural and General Sections published alternate months), *Annual Report, Bulletins, Information Bulletins, Geological Bulletins, Geological Memoirs, Palaeontological Bulletins, Seismological Bulletins* (occasional), *Cape Expeditions Bulletins, Soil Bulletins, Departmental Handbook*, etc.

INCORPORATED RESEARCH ASSOCIATIONS:

Dairy Research Institute (Inc.): Prof. W. RIDDET.

Woollen Mills Research Association (Inc.): Dr. L. M. STORY.

Pottery and Ceramic Research Association (Inc.): (Vacant).

Fertiliser Manufacturers' Research Association (Inc.): Dr. B. W. DOAK.

Research Institute of Launderers, Dry Cleaners and Dyers of N.Z. (Inc.): P. CARLYON COATES.

Leather and Shoe Research Association (Inc.): F. W. WOODROFFE.

NEW ZEALAND

New Plymouth Astronomical Society Observatory: New Plymouth; f. 1920; Hon. Dir. F. J. MORSHEAD.

Wheat Research Institute: 197 Hereford Street, Christchurch; f. by Act of Parliament 1928; the Institute is part of the Department of Scientific and Industrial

LIBRARIES, MUSEUMS

Research; functions are research, advice and teaching with the object of improving wheat, flour and bread; Dir. E. W. HULLETT, M.SC., F.N.Z.I.C.; Sec. L. A. MANSELL, B.A., DIP.J.; publ. *New Zealand Wheat Review* (annual).

LIBRARIES

Alexander Turnbull Library: Bowen Street, Wellington; f. 1919; 100,000 vols., 15,000 MSS., 2,500 pictures and prints, 150,000 photographic negatives, 3,500 maps; collections of Pacific ethnology, history, linguistics, literature (with emphasis on N.Z. material); English literature (including Milton studies) and drama; Scottish and Irish history; early printing, printing history and graphic art; Antarctic exploration; fine arts; Librarian C. R. H. TAYLOR; publs. *Turnbull Library Record* (quarterly), *Bulletin Series*, *Annual Report*.

Auckland Public Library: Auckland, f. 1880, 9 branch libraries, mobile library, reference library; 307,795 vols., special collections Grey and Shaw Collections of MSS., Grey Maori Collection, Lewis Eady Music Collection, Reed Dumas Collection; Librarian R. DUTHIE, B.A., DIP.N.Z.L.S.

Auckland University College Library: P.O. Box 2553, Auckland; f. 1882; 90,000 vols.; Librarian F. A. SANDALL, B.A., DIP.ED., DIP.LIB., F.L.A.

Canterbury Agricultural College Library: Lincoln, Christchurch; 7,000 vols.; Librarian D. MUFF.

Canterbury Public Library: P.O. Box 1466, Christchurch; f. 1859; 95,000 vols.; library contains Lending, Reference and Children's Departments, Newspaper Room, also serving suburban libraries; City Librarian R. N. O'REILLY, M.A., A.N.Z.L.A.; publ. *Journal*.

Canterbury University College Library: Christchurch; f. 1873; approx. 100,000 vols.; Librarian C. W. COLLINS, M.A., A.B.L.S.

Dunedin Public Library: P.O. Box 906, Dunedin, C.I.; f. 1908; 152,965 vols.; Librarian A. G. W. DUNNINGHAM, B.A.

General Assembly Library: Wellington, C.I.; f. 1856, 220,000 vols.; national reference collection; Library of Parliament, copyright and international exchange repository; special collections. New Zealand literature and largest N.Z. newspaper and periodical collection in country; Chief Librarian J. O. WILSON, D.S.C., M.COM., A.L.A., A.N.Z.L.A.; publs. *Copyright List* (monthly, with annual cumulation), *Copyright Periodicals Currently Received* (every second year).

Library of the Otago District Law Society: Stuart Street, Dunedin; f. 1879; 8,000 vols.; Librarian Mrs. M. CRIMP.

Otago University Library: Dunedin; f. 1869; 120,000 vols.; Librarian FRANK H. ROGERS, M.A., F.L.A.; special collections; Hocken Library of N.Z. and South Seas material, 11,000 vols. (also MSS., maps, pictures). Dental Library, 2,100 vols.; Mining and Metallurgy, 7,000 vols.

Otago University Medical School Library: Great King Street, Dunedin; f. 1916; general medical information; includes an Historical Library, containing Monro's collection of books and manuscripts; 30,000 vols.; Librarian HARRY D. ERLAM, B.A., A.L.A.

Wellington Public Libraries: P.O. Box 1992, Wellington; f. 1893; 228,080 vols.; City Librarian STUART PERRY, LL.B., A.L.A.; 9 br. libraries and mobile suburban service.

MUSEUMS

Auckland Institute and Museum: P.O. Box 9027, Auckland, S.E.I.; f. 1852 (Museum), 1867 (Institute), united 1869; ethnological and natural science museum; 1,000 mems. (300 life mems.); approx. 17,000 vols.; handbooks and educational leaflets; Dir. GILBERT ARCHEY, O.B.E., M.A., D.S.C., F.R.S.N.Z.; Librarian ENID A. EVANS, B.A., A.L.A.; publs. *Records* (annual), *Bulletin* (as required).

Canterbury Museum: Christchurch; f. 1867; ethnology and natural history (notably ornithology) of N.Z. and

Pacific Basin, early Colonial exhibits, European fine arts; Dir. ROGER DUFF, M.A., D.S.C., F.R.S.N.Z.; publs. *Records* (annuals), *Popular Guide*, *Bulletin* (occasional), pamphlets.

Dominion Museum: Wellington; f. 1865; ethnology, natural history, geology; Dir. R. A. FALLA, M.A., D.S.C., F.R.S.N.Z.

Otago Museum: King Street, Dunedin; f. 1868; natural sciences and anthropology; Dir. Dr. H. D. SKINNER, D.C.M., M.A., D.S.C.; publs. *Annual Report*, *Handbooks to the Collections*.

THE BRITISH COMMONWEALTH

UNIVERSITIES

UNIVERSITY OF NEW ZEALAND

UNIVERSITY HOUSE, BOWEN STREET,
WELLINGTON

· Founded 1870

Chancellor: The Hon. Sir DAVID SMITH, LL.M.
Pro-Chancellor: LEONARD JOHN WILD, O.B.E., B.SC., M.A.
Vice-Chancellor: GEORGE ALEXANDER CURRIE, D.SC.
Registrar: IAN FRASER MCKENZIE, M.A., B.COM., A.R.A.

CONSTITUENT COLLEGES:

University of Otago: Dunedin; f. 1869.

Chancellor: Rev. HUBERT JAMES RYBURN, M.A., B.D.
Vice-Chancellor: FREDERICK GEORGE SOPER, C.B.E.,
PH.D., D.SC., F.R.S.N.Z., F.R.I.C., F.N.Z.I.C.
Registrar: J. W. HAYWARD, B.COM.
Library: see page 401.
Number of teachers (full-time): 156, including 29 professors.
Students: men 1,516, women 541, total 2,057.
Publications: *Calendar, Proceedings of the Otago Medical School.*

DEANS:

Faculty of Science: G. T. S. BAYLIS, M.SC., PH.D., D.I.C.
Faculty of Medicine: Sir CHARLES E. HERCUS, D.S.O.,

GEOGRAPHY

THE territories here discussed comprise the following political units: (1) the Union of South Africa, extending from 22°–35° S. lat. and from 17°–33° E. long., and made up of four provinces—Cape Province (277,000 sq. miles), Natal (35,000 sq. miles), the Transvaal (110,000 sq. miles) and the Orange Free State (50,000 sq. miles); (2) South-West Africa (formerly German South-West Africa) extending between 17°–28° S. lat., and 12°–21° E. long., and covering 318,000 sq. miles; (3) Bechuanaland, lying to the east of South-West Africa, with an area of 275,000 sq. miles; (4) Swaziland, bounded by the Transvaal on the west and north, by Natal on the south and by Portuguese East Africa on the east—area 6,700 sq. miles, and (5) Basutoland, an enclave entirely within the Union of South Africa, covering 12,000 sq. miles. Bechuanaland, Swaziland and Basutoland are British Protectorates. The status of S.-W. Africa is doubtful: originally allotted under mandate to the Union of South Africa, the territory is now administered as an integral part of the Union and has elected representatives in the South African Parliament; but in 1950 the International Court of Justice at The Hague gave an opinion that South-West Africa was still under international mandate, which could not be modified without the consent of the United Nations.

Physically, southern Africa consists of a massive plateau of extremely ancient and resistant rocks, chiefly granites. In places there occurs a covering of later, but still moderately ancient, sediments roughly comparable in age and character with the rocks of the north of England—red sandstones, limestones, shales, and coal measures. Occasionally in Cape Province and Natal small expanses of rocks similar to those of south-east England (chalk, clays, sandstones) are to be found.

A special feature is that most of the coastline has been formed by faulting followed by downthrow on the seaward side. This means that highland or plateau surfaces approach close to the sea, with a sudden sharp fall to sea-level, and a relatively straight, unindented coast. Good harbours are in consequence rare—there is none, for instance for some 800 miles south of Durban—and the rivers drop abruptly near the coast by cascades or waterfalls, and hence do not offer easy access inland. Their estuaries also are often blocked by sand-bars.

Much of southern Africa is thus a high, irregular plateau, between 3–6,000 ft. in average elevation; and flanking the main plateau on the south are three steps, or terraces. The lowest of these steps forms a narrow coastal plain that is less than 20 miles wide; and this is succeeded by a range of hills (the Cape Ranges) running approximately east-west, and reaching a maximum height of 4,500 ft. Beyond the Cape Ranges lies the second step: the Little Karroo, which is a narrow trough backed to the north by a further series of hills (the Zwarteborgen) that once more attain 4,500 ft. in height. North of the Zwarteborgen lies the Great Karroo—the third step, lying 2–3,000 ft. above sea level, and bounded to the north by the edge of the main plateau, which reaches 6,000 ft. in height in Cape Province, and over 10,000 ft. in Natal, (the Drakensberg Range). From these heights the main plateau drops gradually down northwards and westwards to an average elevation of 3–5,000 ft., and is broken by a number of depressions containing rivers—the Orange,

Vaal and their tributaries. This last region is termed the High Veld—an open, rolling territory continuing northwards without much break of variation into Portuguese Angola and the Rhodesias. In Bechuanaland, average altitude falls slightly below 3,000 ft., with extensive swamp areas in the extreme north but at least three-quarters of the Union of South Africa, S.-W. Africa and Bechuanaland lies at more than 3,000 ft.

Climate. Generally speaking, most of southern Africa comes under the influence of south-easterly rain-bearing winds from the Indian Ocean, which blow mainly in summer (November–March), and this is hence the season of most rainfall. An important exception occurs in the extreme south-west, where a small region round Cape Town receives most rainfall in winter (June–September), and has a hot, dry summer. This small area in consequence has a climatic régime closely similar to that of the Mediterranean lands and California: but the rest of southern Africa experiences what may be very broadly described as a monsoonal climate—a hot rainy summer, and cool dry winter.

The effect of topography in relation to prevailing winds is important. Receiving the first onset of the damp south-easterly winds, the coasts of Natal and the high Drakensberg behind them are the wettest parts of the whole region; Durban has 35 in. of rain annually. The High Veld receives only partly dried-out winds, and is thus distinctly less rainy, with annual falls of only 15–30 in., whilst further west still, in S.-W. Africa, winds are exhausted of their moisture, and extreme aridity consequently prevails. Port Nolloth, lying some 500 miles north of Cape Town in the extreme north-west of Cape Province, receives only 2 in. of rain. Over much of southern Africa aridity or semi-aridity is hence characteristic—a feature intensified by the unreliability of rains in the interior, and the high rate of evaporation. The “Mediterranean” region round Cape Town experiences 20–25 in. of rain annually.

Summer temperatures are generally high, and altitude makes surprisingly little difference: at Pretoria (4,500 ft. above sea-level) the January mean is 72° F., at Durban (sea-level) 77°, and at Cape Town 69° F. In fact, Pretoria and Kimberley, both over 4,000 ft. in height, experience some of the highest temperatures in southern Africa—their northerly position more than compensates (in summer) for the effect of elevation. But in winter, the great height of the Veld produces striking variation as compared with the coast, where hard frost is rare. Inland, on the other hand, frost may occur in any month of the year, and can be specially severe during the winter months—there is a difference of 25–30° F. as between day and night temperatures at all seasons. Winter minima temperatures (July) are: Pretoria 53°, Durban 65°, Cape Town 55° F. Another difference arises from the presence of ocean currents. The cold Benguela current off the west coast of southern Africa gives Cape Town an unusually low temperature for its latitude; whilst the warm Mozambique current affects the east coast from Port Elizabeth to Durban.

Generally speaking, it would thus seem that Cape Province and Natal enjoy extremely favourable climatic conditions, with moderately high, but not overwhelming,

temperatures, and sufficient rainfall. The Veld, while experiencing "good" climatic conditions in its southern and eastern districts, suffers increasingly towards the north and west from summer heat and winter cold, and a general deficiency of rainfall. In most of South-West Africa and Bechuanaland, desert conditions prevail.

Soil and Cultivation. Agriculture was introduced by the first Dutch settlers at Cape Town during the seventeenth century; and in view of the "Mediterranean" climate prevailing in this part of South Africa, emphasis was placed on wheat-, vine-, and fruit-growing. The later arrival of Huguenot refugees from France further extended vine-growing and wine-making, so that agriculture in the extreme south is still characterised by extensive vineyards.

Extension of cultivation northwards was for long largely inhibited by increasing aridity—hence the interior remained grazing country occupied by the cattle, sheep and goats of both the natives and white settlers. Towards the end of the nineteenth century, however, maize and sugar were introduced. The former (known in South Africa as "mealies") has become by far the most important crop of the country—now accounting for about two-thirds of the total cereal production. Maize flourishes best on the damper (i.e. eastern) parts of the High Veld, and in adjacent coastal regions (Eastern Cape Province, Natal and eastern Orange Free State and the Transvaal).

Sugar growing is mostly confined to Natal. Wheat, barley and oats grow well in eastern districts and "kaffir corn", a species of sorghum, is still used as food by some natives. Being more tolerant of low rainfall, this crop can be grown in the drier areas towards the west. Fruit growing has greatly expanded in recent years, and because of South Africa's location in the southern hemisphere can successfully overcome the handicaps of great distance from European markets, as the fruit is available at different seasons as compared to Californian and Mediterranean products. Dried and canned fruit are both exported on an increasing scale.

The scarce and unreliable rainfall is the major limiting factor, for the South African farmer; but there are other difficulties with which he must contend. Owing to abrupt relief—descents of several thousand feet from the interior to the coast—soil erosion can easily develop—first by gully erosion due to water, later by lifting of dry surface soil by the wind. Moreover, South African soil is not in general outstandingly fertile, though considerable exceptions to this exist; and in some areas backward methods still prevail. In drier parts, pastoralism replaces cultivation, and much of the Veld in the Transvaal and Natal is given over to animals, in particular Merino sheep. Finally, with the importance of gold and diamond mining, there have at times been difficulties over labour, and a drift away from the countryside to the towns.

Mineral Resources. Since the first exploitation of gold and diamonds in the last two decades of the nineteenth century, mining has held a consistently larger place in the national economy. Gold is by far the most important single commodity produced and is mined almost exclusively in the Witwatersrand which extends for some 40 miles both east and west of Johannesburg, in the Northern Transvaal. The gold is found in a conglomerate rock which occurs as irregular reefs: one of the most productive of these being

the "Main Reef" which varies from 2 to 11 ft. in thickness, and lies at an average depth of 3,000 ft. Some mines however reach 7–8,000 ft. in depth. From time to time fears have been expressed that the reefs would ultimately be worked out—but the frequent rises in the world price of gold during the last twenty-five years have acted as a constant stimulus by allowing further use of lower-grade ore. The most recent development is the discovery of uranium, often in association with gold, or in the waste from which gold has been extracted.

Coal now ranks as the second most valuable mineral of the Union. One major field is located less than 100 miles east of Johannesburg, and the occurrence of good steam coal close to the Rand has been an essential factor in the successful development of gold mining. Coal of distinctly lower quality occurs further south, near Vereeniging (Southern Transvaal) and also in adjacent areas of the Orange Free State; whilst thinner seams of high-quality coal (and also anthracite) occur in parts of Natal at Newcastle and Ladysmith. Other extensive coal deposits are known to exist in the centre and east of the Union, but are not so far developed.

Diamonds are third in order of importance, and production is either from mines, or from alluvial (river) gravels. Formed as the result of igneous activity, diamonds occur naturally in funnels or "pipes" of basaltic material ("blue ground") which have erupted through overlying strata. Erosion by water acting on the pipes may however wash out the diamonds, which may thus be found mixed with river gravel and pebbles at or near the surface. The main centres of actual mining are Kimberley and near Pretoria: alluvial diamonds are found in Namaqualand (Cape Province) and along the Vaal and Harts rivers. Production of diamonds is strictly controlled by the de Beers Syndicate, which regulates supplies according to demand. Much the greater proportion of diamonds produced now finds a use in industry—as abrasives—and only a small proportion are sold as gem-stones; though recent devaluations of currency in the world have enhanced the demand for diamonds as a stable investment.

Other minerals of importance are (in order of value): copper, platinum, asbestos, tin, silver (often associated with gold) and osmiridium. Iron also occurs on a considerable scale in the Transvaal, but is not so far greatly exploited.

Urban Populations. By far the largest town in southern Africa is Johannesburg, with approximately 900,000 inhabitants (of which 365,000 are Europeans). The town owes its prosperity to mining (chiefly gold) and presents a surprising spectacle of great wealth and substantial modern buildings on the one hand, and shanties and squalor on the other. Its great altitude produces a rather rigorous climate of summer heat and winter cold; and its chief outlets are Durban, some 18 hours away by metre-gauge railway, and to a less degree Lourenço Marques, in Portuguese Mozambique. Cape Town (pop. 580,000) is the chief port of South Africa, and a provincial capital, but increasingly rivalled by Durban (460,000). The other provincial capitals have much smaller populations: Pretoria, the Union capital and also the provincial capital of the Transvaal, has 290,000; Bloemfontein (Orange Free State) 115,000; and Pietermaritzburg (Natal) 7,600.

W.B.F.

HISTORY

THE COLONIAL PERIOD

SOUTH AFRICA first came into the light of history when Dias passed, and named, the Cape of Good Hope in 1488. For the next century and a half the great promontory was nothing but an obstacle to be got round on the voyages between Europe and Asia: voyages which were at first a Portuguese monopoly, later broken into by the Dutch, French and English. It was the Dutch East India Company that first established a victualling station on the South African coast—Cape Town, founded by a band of the Company's employees, under the command of Jan van Riebeck, in 1652.

The purpose of the station was to supply food and water to the Company's ships. Meat could be got by barter from the local Hottentots, a nomadic, race of pastoralists. Grain, vegetables and fruit had to be grown by the European residents. It was soon found that the motive of private profit would be the best incentive to farming. In 1657 some men were discharged from the Company's service and given land. In this incidental fashion colonisation of South Africa by Europeans was begun.

During the next sixty years new colonists were settled on the land in small numbers. More than half were of Dutch origin, but there were also Germans and, of great importance for their influence on the country, a few hundred French Huguenots who had fled to the Netherlands from Louis XIV's persecution. All the settlers were Protestants, mostly of the Reformed Church; a few were Lutherans.

Slaves from West and East Africa and the East Indies were introduced early to work on the private farms and the Company's own estates. The nomadic Hottentots tended to withdraw from the neighbourhood of the expanding colony. Their numbers were drastically reduced by smallpox and their tribal organisation disintegrated, except in regions remote from the settlement. A still more primitive race, the Stone Age Bushmen, who were still in the hunting stage, fought for survival, but in vain; only insignificant numbers remain in desert areas to-day.

The colonists suffered economic hardships imposed by their government, which combined political power with the monopoly of the market for the farmers' produce. Petitions and complaints to Holland brought little relief; the Company, convinced that white settlement meant political agitation, ceased in 1717 to encourage emigration to the Cape. The farmers found pastoral farming, with cattle and sheep bartered from the Hottentots, more profitable than the cultivation of wheat and vines. In the eighteenth century a class of pastoralists developed, and pushed the frontiers of settlement rapidly outwards.

In 1795, after the Netherlands had come under French control, a British force seized the Cape Colony in order to deny to France the command of the route to India. In terms of the Treaty of Amiens the colony was restored to the Batavian Republic (not to the East India Company, now defunct) in 1803. When war broke out again the Cape resumed its military importance. It was taken by the British a second time in 1806, a conquest which the peace of 1814 confirmed.

It was during this Napoleonic period that the characteristic human problems of the colony began to take the political shape that was not fundamentally changed for

a century. The European inhabitants of various origins had long been fused into a group conscious of its distinct nationality; the names *Afrikaner* (African) and *Boer* (farmer) were applied to it. It had developed, out of seventeenth-century Dutch, a new language, *Afrikaans*; this was as yet only a spoken idiom, the language of Holland being still used in writing. Among these people there was a marked difference, in way of life and mentality, between the townsmen and farmers of the oldest settled districts and the rough pastoralists of the interior. The latter group became the source of the historical and political traditions that were to be dominant in the twentieth century.

To these white colonists were added, under the British régime, others of British origin and English speech. The first large batch of them arrived in 1820 and was settled along the eastern frontier; Grahamstown and Port Elizabeth were the chief towns of this British community. Immigration from Britain continued through the nineteenth and into the twentieth century. Except in a few districts, such as the original area of their settlement on the frontier, the British colonists concentrated themselves mainly in the towns, including Cape Town itself. Relations between the two ethnic groups were not unfriendly, but the presence of the British element encouraged the government in a policy of anglicisation. English became by degrees the official language. English currency, some elements of English law, English schoolmasters, and Scottish ministers in the Dutch Reformed Church were some of the features of the policy, which naturally discontented the older population.

The fundamental political issue, however, was the relationship between the white inhabitants and those of other races, which are included under the general term *non-European*. For some of these the relationship was that of master and slave. The British Government, under missionary and other humanitarian influences, gradually restricted the power of master over slave, until in 1834 slavery was abolished altogether. The Hottentots—those of them that lived within the colony—had no land, and could choose either vagrancy or service with the farmers. Laws punishing vagrancy further limited their field of choice; but it was widened by the establishment of missionary institutions, especially those of the London Missionary Society.

The distinction between foreign slave and native Hottentot had long been blurred by interbreeding, which brought European blood also into the mixture. The abolition of slavery removed the legal distinction; very few pure Hottentots were left; the mixed race known as the Cape Coloured people then constituted almost the whole of the non-European population of the colony. An Ordinance of 1828 had made them in most respects the equals of the Europeans in legal rights.

Beyond the eastern frontier lived a native African race, the Bantu, far more advanced than the Hottentots economically, politically and in military prowess. The Bantu-speaking tribes occupied most of Africa south of the equator. They had been slowly moving down the south-east coast and about 1778 they met the advancing Europeans in the region of the Great Fish River. Boundaries were proclaimed, but the border was troubled on both sides by raids, cattle-lifting, murder and retaliation. Eight

regular wars were fought on the eastern frontier between 1779 and 1853. It is important to remember that during this period the relations of the colonists with the Bantu were military and diplomatic: very few "Kaffirs" lived in the colony itself.

The frontier Boers had by 1834 become profoundly dissatisfied with their government. Anglicisation, the abolition of slavery, the legal equality of people of all races and the "soft" handling of the Bantu enemy were the essential causes of discontent; the need of new and better pastures was a secondary factor inducing many to leave the colony. Over the years 1835-8 (the largest migration was in 1836) thousands of Boers, mostly from the eastern districts, moved away into the little-known interior. Much of the land had recently been denuded of inhabitants by the devastations of the Zulu despot Shaka. The Great Trek led at first to Natal, but clashes between the Boers and the Natives there resulted in British intervention, and the British annexation of the country in 1843. Most of the Natal Voortrekkers then crossed the Drakensberg again to settle in the interior, where some of their kinsmen had preceded them. North of the Vaal River they formed the Transvaal or South African Republic, whose independence was recognised by Britain in 1852. The country between the Orange and the Vaal was under British rule for a few years; abandoned in 1854, it became the Orange Free State.

In the same year the Cape Colony was given an elected Parliament; the franchise, based on a low property qualification, made no distinction of race. Natal became in 1856 a colony separate from the Cape; in its legislature officials sat together with popular representatives. In principle the Natal franchise was open to all races, but it was so administered as virtually to exclude non-Europeans. In the two republics, on the other hand, "no equality between black and white in Church or State" was frankly the guiding principle of constitution, law and policy.

The non-Europeans in Natal and the republics were Bantu-speaking Africans, heathen tribesmen. The non-Europeans of the Cape Colony were the Coloured people, Afrikaans-speaking, mostly Christian and influenced for generations by European civilisation. The slow expansion of the Cape, during the second half of the nineteenth century, up to the Natal border, incorporated in that colony large numbers of Bantu. The pattern in Natal was complicated during the same period by the introduction of Indian labourers to work in the canefields.

Relations between the colonies (together with the imperial government) and the republics were made difficult by conflicting territorial claims and by the discovery of diamonds and gold. A series of wars between the Free State and its neighbours the Basuto, under the astute chief Moshesh, ended in the latter's request for British annexation. This took place in 1868, Basutoland becoming a dependency of the Cape; in 1884, following difficulties in administration of the colony, it was made a separate British possession. The diamonds of Kimberley attracted British and other diggers; the territory (Griqualand West) was annexed by Britain in 1871, and to the Cape in 1880.

These expansions were into territory claimed by the Free State. The Transvaal suffered more than this: it was itself annexed in 1877, on the excuse that its bankrupt government had broken down, and with the intention of bringing it into a South African confederation. But the Transvaal Boers fought for their independence, which was restored in 1881.

When Germany appeared on the scene in 1884, proclaiming a protectorate over South-West Africa, territorial expansion in Africa became a competition among the Great Powers. Britain was concerned to prevent direct contact

between the Boer republics and Germany. Cecil Rhodes, the diamond magnate and Cape politician, wanted also to provide for the expansion of his colony to the north. So the next move, in 1885, was into Bechuanaland. British Bechuanaland, south of the Molopo, became a Crown colony, which was annexed to the Cape ten years later. Bechuanaland, north of the Molopo, was proclaimed a protectorate, which it still remains.

In the following year the rich Witwatersrand goldfield was discovered in the Transvaal, and Johannesburg was founded. Large numbers of immigrants, mostly British, threatened the character of the old-fashioned patriarchal republic. They were denied the vote, and in other ways believed themselves to be ill-treated by the government of President Kruger. The friction troubled the other South African states, especially the Cape Colony, many of whose citizens were involved in it. The Cape had been given responsible government in 1872 (Natal attained this goal in 1893), and in 1890 Cecil Rhodes became Prime Minister. In the same year his Pioneer Column began the settlement of Rhodesia. Rhodes was determined to unite South Africa. Knowing that he had not long to live, he was inclined to short cuts and drastic solutions. To bring the Transvaal into line, politically, with the colonies, a revolution was planned in Johannesburg. It was to be aided by an invasion, conducted by Rhodes' lieutenant Dr. Jameson. At the last minute the leaders in Johannesburg called off the revolution, but Dr. Jameson carried out his raid from the Bechuanaland border (December, 1895). The raiders were captured. Rhodes had to resign all his offices, and the cause of co-operation between the English and the Afrikaners was almost irretrievably ruined.

The imperial government became involved in the disputes that followed between the Transvaal government and its *Uitlander* (foreign) subjects. The disputes culminated, in 1899, in the Anglo-Boer War. The Orange Free State was involved as an ally of the Transvaal. The stubborn resistance of the republics appeared to have been overcome early in 1900, but guerilla warfare continued until 1902, when the Boer armies surrendered on terms. The conquered states became British colonies. The Transvaal also lost some territory to Natal, and Swaziland, which had been administered by the Transvaal, became a British protectorate.

Within five years of the peace both the new colonies were given responsible government. All four colonies thus enjoyed similar constitutions, all owned the same allegiance and all included both British and Afrikaner populations. The movement for union, the main obstacles to which had been removed, quickly gathered momentum. Representatives of the four Parliaments met in a National Convention in 1908 and drew up a unitary constitution. Natal, which alone had a white population that was mainly British, would have preferred a federal system, but accepted the draft constitution by referendum. The others accepted it by parliamentary vote. The Imperial Parliament in 1909 passed the South Africa Act as drafted by the colonial statesmen; it took effect in 1910, fusing the four colonies into the Union of South Africa.

BOTHA AND SMUTS

Though the constitution was not federal but unitary, it was nevertheless a combination of compromises. The Cape Province made no legal or political distinctions between different races; Natal made such distinctions, their racial character being thinly veiled; in the other two provinces white supremacy was the main theme of social, economic and political organisation. It was impossible to devise a parliamentary franchise acceptable to all the provinces. Each therefore retained its own. But the Cape was given the further guarantee, without which it would

THE BRITISH COMMONWEALTH

have rejected union, that no one might be deprived of his vote on the ground of race or colour except by a two-thirds majority of the two Houses of Parliament in joint session. The same entrenchment was given to the clause which made English and Dutch the official languages of the Union. Otherwise the constitution could be amended by ordinary legislation. There were other compromises on the distribution of seats, the quasi-federal composition of the Senate and the national capital. Pretoria is the administrative capital, Cape Town the seat of Parliament.

Louis Botha, who had been the Transvaal Premier, formed the first government, with J. C. Smuts, another Transvaal statesman, as his chief lieutenant. Their party, the South African Party, had the support of almost all the Afrikaners in the country as well as of a minority of the English. The opposition parties, both essentially British in composition, were the Unionist (representing capitalist interests and imperial sentiment) and Labour (representing skilled European labour).

Botha's tenderness towards the sentiments and interests of the British section was unacceptable to many Afrikaners. Led by J. B. M. Hertzog they seceded from the South African Party and in 1914 formed the National Party. Its main strength lay at first in Hertzog's own province, the Orange Free State, and in the western Transvaal. When the World War broke out, and Botha gave South Africa's support to Britain, it seemed to many irreconcilable Boers that the chance to reverse the decision of 1902 had come. Their rebellion was easily suppressed by Botha, who used only Afrikaner troops for the purpose; but it gave a tremendous political fillip to the Nationalists.

South African forces took part in the war, first in the conquest of South-West Africa from the Germans, then in the East African campaign and also in France. Botha commanded in South-West Africa; Smuts in East Africa, after which he went to London and sat in the British War Cabinet. South Africa, like the other Dominions, won a new international status when she was admitted to the Peace Conference and became a signatory of the treaty in 1919. This did not, however, satisfy the Nationalists, who demanded complete independence of Britain.

Botha died shortly after signing the peace. Smuts, who succeeded to the premiership, fought a bitter election campaign in 1920. The South African Party lost its absolute majority, and retained a precarious hold on power only through Unionist support. The rise of Nationalism imposed a closer co-operation upon its opponents; the Unionists amalgamated with the South African Party, and the enlarged South African Party won a clear majority in 1921.

The absorption of the Unionists and the steady drain of Afrikaners to the opposition made the South African Party an increasingly British party, while the Nationalists were exclusively Afrikaner. Party feeling was dangerously reinforced by strong racial and national emotions. The Labour Party, however, though mainly English-speaking in leadership and still largely so in its members, was drawn in the post-war years into closer association with the Nationalists. For the latter were not only the party of national independence; representing the tradition of the Boer republics, they stood firmly for the subordination of the non-Europeans to the white race. Because the skilled and relatively well-paid white workers felt their wages and jobs to be threatened by non-Europeans, accustomed to a low standard of living, the Labour Party had on this issue a common interest with the Nationalists.

The Transvaal Chamber of Mines, in an attempt to meet rising costs, proposed to abandon the customary colour bar which excluded Natives from skilled and semi-skilled work. The dispute led to a strike, which became general on the Witwatersrand early in 1922. The strike in turn

developed into a "revolution" along the whole length of the Rand. Troops restored order and broke the strike. But Smuts was not forgiven by the white workers. The Labour Party formed an electoral pact with the Nationalists, on condition that both socialism and republican independence were shelved for the duration of the agreement. The two parties supported each other in the election of 1924. The South African Party was defeated and a Nationalist-Labour Coalition under Hertzog came into power.

HERTZOG

The year 1924 marks not only the end of the period of British ascendancy, but the approximate beginning of a new chapter in the history of the Africans (i.e. the Bantu-speaking Natives; *Africans* must not be confused with *Afrikaners*). Hitherto the very great majority of them had lived either in the Reserves, where much of the old tribal system survived, or on the European farms, where they were the labour force (except in the western half of the Cape Province, the home of the Coloured people). The unskilled miners were migrant labourers who on expiry of their contracts returned to their tribal homes within or outside the Union. Much of the urban labour was of the same migratory kind. The number of detribalised Africans, whose only homes were the segregated "Native locations" on the outskirts of the towns, was very small. This distribution appeared to justify the traditional European, and especially Afrikaner, view that the so-called "Natives" were foreigners in the white man's land, in which they could claim no rights. The traditional view was not modified by the presence of large numbers of Africans on the farms, because in these quasi-manorial communities the rights appropriate to a modern society were hardly relevant. White and black had managed to live for half a century in their separate worlds without much friction.

What upset this precarious *modus vivendi* was the growth of secondary industry and urban populations in an economy formerly based on farming and mining. Industry had grown rapidly under the natural protection afforded by war conditions, and when this was removed the artificial protection of tariffs was demanded and ultimately given. South Africa entered its Industrial Revolution, and the towns, formerly the preserves of the English, began to receive from the countryside an influx of Afrikaners and also of Africans who came to stay.

When Hertzog took office the change was beginning; the post-war disturbances, of which the Rand Strike was one, were symptoms of it. Yet Hertzog's "Native policy", his attempt at a comprehensive and permanent solution of the peculiar problems of a multi-racial society, belonged altogether to the pre-industrial era. One part of this policy was to remove the Africans in the Cape Province from the common voters' roll and to give them separate and permanently limited representation. This involved the amendment of an entrenched clause of the constitution by a two-thirds majority, which Hertzog did not command. The policy was therefore held in reserve for ten years while other matters were attended to.

Both the form and the substance of independence, together with the elevation of the Afrikaners to a position of at least equal power and prestige with the English, were primary objects of the government. "Dutch" as an official language was made to include—in practice to give place to—Afrikaans, which since the 1870's had become a literary language. Bilingualism was insisted upon throughout the civil service, with the result that the more bilingual Afrikaners came within a generation to fill the service, almost to the exclusion of the English (even the bilingual English ceased to be attracted to it.) Symbols of the

British connection were gradually abolished and a national flag provided. The Imperial Conference of 1926 agreed to the Balfour Declaration, recognising the sovereign independence of the Dominions, and this was given legal substance by the Statute of Westminster in 1931.

By that time the whole world had plunged into economic crisis, and Britain, South Africa's chief export market, had abandoned the gold standard. South Africa remained on gold; it was a point of national honour with the government, a proof of actual independence, to follow a course different from Britain's. Given the economic ties between the two countries, this policy was disastrous. It produced, at the end of 1932, a political crisis which might have brought the South African Party back to power.

Forces were at work, however, to put an end to the old unhappy quarrel of Boer and Briton, reflected and perpetuated by the party system. In 1933 a coalition government was formed, with Smuts serving under Hertzog. The next year the two main parties fused into one, still under Hertzog's leadership, called the United Party. There were elements that refused to accept the compromise: D. F. Malan, the Nationalist leader in the Cape Province, broke away with his followers, the "Purified" Nationalists, and a much smaller group on the other (English) side formed the Dominion Party. Labour, weakened by dissensions and desertions, had almost ceased to count in the political scale.

The United Party commanded a very large majority in Parliament. Hertzog took advantage of this to bring his "Native policy" out of cold storage and to embody it in bills which were passed by the proper procedure in 1936. The Africans in the Cape (but not the Coloured people, whom Hertzog treated in most respects as the equals of Europeans) were removed from the common roll and given three white representatives in the House of Assembly. In addition the Africans of all the provinces were to elect, by an indirect method, four European Senators. Since racial segregation was the essence of Hertzog's solution, provision was made for the enlargement of the existing Reserves, in which alone (since an Act of 1913) Africans could hold land. By 1936 the central fact in race relations was the growth of a large urbanised African population, increasingly accustomed to European standards, ideas and aspirations. Hertzog's Acts were not based on an acceptance of this fact.

Before the consequences of this legislation could be measured, the second World War broke out. Hertzog determined to underline his country's independence by a policy of neutrality, which was coloured by some overt sympathy for Nazi Germany. The United Party and the Cabinet split on the proposal, which had to be decided by a free vote in Parliament. Hertzog was narrowly defeated. He resigned and Smuts formed a government supported by the various elements who were in favour of participation in the war.

THE SECOND WORLD WAR

South Africa sent two divisions to fight in the Abyssinian and North African campaigns, and a third took part in the invasion of Italy. Her Air Force, however, was probably her most important contribution to the allied cause in the Mediterranean theatres.

These were all volunteer forces, drawn from a nation deeply divided in its sympathies. The followers of Smuts supported the war effort; his opponents, officially neutral, were to some extent sympathetic to the German cause. A few supported it actively, by sabotage or by conveying military information to the enemy; but there was no rebellion.

Significant political developments occurred during the war. When the United Party split in 1939, Hertzog's followers crossed the floor to sit beside the "Purified" Nationalists. But the two groups for a time kept their separate identities. In 1940 their reunion was negotiated. Hertzog, who stood now as always for the real equality and co-operation of the two white nationalities, put forward a programme in this spirit. It was rejected. The Re-united National Party, led by Malan, frankly adopted as its aims republican independence, the supremacy of the Afrikaners over the English and of the white race over the non-European. These principles were carried to a degree of completeness that had not been approached by the old (1914-34) National Party.

Hertzog, his lieutenant N. C. Havenga and the few supporters who stood loyally by him withdrew from the re-united party; they formed the Afrikaner Party, under Havenga's leadership (Hertzog died at this time). In the elections of 1943 this small group was eliminated from Parliament, leaving Malan's Nationalists as the sole opposition. The supporters of Smuts had retained the name and organisation of the United Party, which governed in war-time coalition with the small Dominion and Labour Parties. The Government was supported in 1943 by about two-thirds of the electorate.

The transition from war to peace brought discontent and strengthened the Opposition. The Nationalists made an electoral agreement with the Afrikaner Party, leaving the latter a clear field in a few constituencies. The United Party had a similar agreement with Labour. In the election of 1948 the former Dominion Party, as well as some other splinter groups, was destroyed. Of the two main antagonists, the Nationalist-Afrikaner Party coalition won a small parliamentary majority, though a minority of the votes. Smuts made way for Malan.

MALAN

Most Europeans in South Africa fear, more or less acutely, that their survival as a separate and self-governing racial group is threatened by the numerical preponderance of the other races. Of a population of nearly 13,000,000 the racial groups form roughly the following percentages: Africans, 67; Europeans, 21; Coloured, 9; Asiatics (i.e. Indians), 3. The Europeans are divided into Afrikaans and English-speaking sections in the ratio 3 : 2, but as many Afrikaners are supporters of the United Party, the Nationalists have felt their own position within the white group to be precarious also. Both fears contributed to their victory at the polls. Once in power, they determined to do everything possible to strengthen and entrench their own domination and that of the white race. The latter object was to be achieved in terms of *apartheid* (separateness), a word never clearly defined but suggesting the reversal of all the tendencies towards the integration of the different races in a common society, coupled with the more rigid exclusion of the non-Europeans from political and economic power. The chief legislative measures may be briefly mentioned to illustrate the object and the method.

In 1949 both marriage and extra-marital relations between Europeans and people of other races were prohibited. An Act of 1950 provided for the registration of the population; as everyone's race would be stated on his identity card the boundary between white and Coloured, racially indistinct, would henceforth be impossible to cross. The registration would be useful also in the administration of the Group Areas Act (1950), which provided for the segregation of all racial groups in separate residential zones in the towns. The Bantu Authorities Act

THE BRITISH COMMONWEALTH

(1951) established tribal councils, whose composition would be controlled by the government, for the local administration of Native areas. In 1954 the government took over the direct control of all Native education, hitherto exercised largely by missionary societies; the education of Africans was to be related to their role in society.

The Separate Representation of Voters Act (1951) removed from the common roll in the Cape Province the Coloured voters, who had been left there by the Act of 1936. In 1951, however, the measure was passed by simple majorities in the two Houses sitting separately. The government, which did not command a two-thirds majority, claimed that the original entrenchment had been abolished by the Statute of Westminster. The Supreme Court thought otherwise, and in 1952 ruled the Act null and void. An attempt to reverse this decision by turning Parliament into a High Court was likewise frustrated by the Supreme Court.

The segregation plans would be assisted if South Africa could bring Bechuanaland, Basutoland and Swaziland under her jurisdiction. These (the "High Commission Territories") have been under the control of the United Kingdom High Commissioner for South Africa, an office separated from the Governor-Generalship after the Statute of Westminster. Several South African governments have approached the United Kingdom with requests for the transfer of the territories, but in vain; the native inhabitants, in whose interests they are administered, are opposed to the change and successive British governments have refused to make it without their consent.

The Nationalists, who believe their own continuance in office to be necessary for national survival, have taken steps to facilitate this. Immigration from Britain was discouraged, and citizenship made more difficult for British immigrants to obtain. Various changes in the electoral laws favoured the interests of the party in power. Its parliamentary strength was increased by the addition of representatives from South-West Africa.

This territory, which since the first World War had been administered by South Africa under mandate from the League of Nations, had been treated in some respects as an integral part of the Union. An Act of 1950 gave the territory representation, greater than its population warranted, in both Houses of the Union Parliament. The majority of the small white population is Afrikaans-speaking, and the Nationalists won all the seats at the first elections.

Many of these measures—and notably the Separate Representation of Voters Act which threatened the Constitution—were received with extreme hostility by the European opponents of the government. In 1951 the War

Veterans' Torch Commando was formed to organise public opinion in opposition to the government's policies. Mass meetings and torchlight parades were followed by more prosaic electioneering. The non-Europeans, led by their chief representative organisations, the African National Congress and the South African Indian Congress, planned their own resistance, the Campaign for the Defiance of Unjust Laws which was carried out in 1952. Some 8,000 non-Europeans courted arrest and imprisonment by committing statutory offences, chiefly the breach of segregation laws. Their most immediate grievance was the Pass Laws (not an invention of the new government) which subjected the Africans to much humiliation as well as restricting their movements.

The government, which had inherited several drastic powers for suppressing disorder, introduced legislation to add to these. The Suppression of Communism Act (1950) and its subsequent amendments, enabled the Minister of Justice to ban the public activities and restrict the movements of any person whom he deemed a Communist; from this there was no appeal to the Courts. Early in 1953 the Public Safety Act gave the government power to declare a state of emergency, throughout the Union or in any part of it, and to suspend any or every law except those relating to the constitution and meeting of Parliament. At the same time the Criminal Law Amendment Act imposed very severe penalties for offences committed by way of protest against any law or in support of a campaign for the repeal of a law.

The record of the government (no longer a coalition, since the Afrikaner Party had been absorbed by the Nationalists) received the endorsement of the public in the general election of 1953; the government gained both seats and votes. The Opposition lost not only votes but also its cohesion. Many of its supporters in Natal (and a few elsewhere), led chiefly by a section of the Torch Commando, broke away to form the Federal Party, seeking salvation in a decentralisation of the Union. Others, thinking the United Party reactionary in racial questions, formed the Liberal Party; while a few United Party members of Parliament seceded for the opposite reason, to become the National Conservative Party. All these, as well as the Labour Party, were weak in numbers.

On November 30th, 1954, Dr Malan retired from public life. The party chose as his successor Mr. J. G. Strydom, the leader of its uncompromising Transvaal wing. The history of South Africa since 1908 may be regarded as the peaceful conquest of the sub-continent by the Transvaal, before which the Cape Province with its liberal tradition had gone down in defeat.

A K.-J.

ECONOMIC SURVEY

POPULATION

According to the most recent estimate the population of the Union of South Africa totals 13,669,000 (as compared to the 1951 Census figure of 12,667,759) which, spread over the total land area of 472,733 sq. miles, gives a population density of 29 persons per sq. mile. It is, therefore, a relatively sparsely populated country; but, because of the nature of the terrain—there are large expanses of desert and semi-desert country as well as inaccessible mountainous regions—the population is very unevenly spread and some areas are fairly densely populated. The main centres of population tend to coincide with the regions of industrial concentration. Thus there are thickly populated areas in the Southern Transvaal (particularly in the vicinity of the Witwatersrand), in the Western Cape Province and Cape Peninsula, in Natal around the port of Durban and in the Eastern Province near the ports of East London and Port Elizabeth. There is a rapidly expanding area in the Northern Orange Free State in the new goldfields.

The Union's population is made up of four main racial groups: whites, who constitute less than a quarter; Asiatics, who number approximately 400,000 and are mostly concentrated in Natal; Africans (or "Natives") who, numbering over 9 million, are easily the largest section; and persons of mixed blood known as Coloureds, who total over 1.2 million. Distinctions between the groups often tend to be arbitrary; but, in terms of the Population Registration Act of 1950, the government is at present taking steps to re-classify the whole population.

LABOUR

No recent figures of the total labour force are available; but in 1952 the numbers employed in the five main branches of industry (mining, manufacturing, transport, building and electricity undertakings) was 1.5 million, of which less than half a million were white. Agriculture, in which must be counted also the numbers of self-employed, accounted for 929,000 in the same year, 867,000 of whom were non-whites. Thus taking into account employment in the public service, domestic servants and other minor industries, the total labour force in South Africa to-day is probably about 4-4.5 million, more than three-quarters of whom are non-white.

The bulk of non-white labour is unskilled. Legal barriers to their acquiring skills are few; they exist only in the mining and building industries. But in practice there are a number of hindrances. Training facilities are scanty; the apprenticeship system discourages non-European youths from receiving proper training; and, finally, the trade unions and professional societies, which are mostly under the control of the Europeans, inhibit the entry of the non-white into the skilled grades of work. Recently, however, the government has taken steps to provide training for non-whites, especially in the building industry, but they are restricted to doing work for their own race.

Skilled workers are short in the Union to-day. The government has therefore sponsored measures to encourage immigration of foreign artisans. But for a number of reasons it has not recently been very successful. There has in fact, been only a small net gain from immigration since the Nationalist Government, which first won office in 1948, reversed its predecessor's policy of unrestricted

immigration. Shortages of skilled labour have, as a result acted as a brake on economic development. Some private firms have therefore tended to utilise non-European labour in the semi-skilled and machine-operative grades. This tendency seems likely to be extended.

Recorded unemployment is low. The numbers registered as unemployed at the Government employment exchanges averages about 13,000, an insignificant percentage of the total labour force. But the recorded figures give only a partial coverage and, furthermore, the real problem in South Africa is under-employment of, in other words, the under-utilisation of individual capacity.

One final fact about the South African labour force deserves to be mentioned, and that is the practice of migratory labour. Since a large number of non-Europeans (principally Africans) are also small cultivators in the Native Reserves (territories specially set aside for exclusive African occupation), the labour force is constantly on the move. Quite frequently the practice is to spend six months in the towns and six months in the Reserves. This phenomenon is especially catered for by the gold-mining companies, some of whom welcome it as providing a means of affording their labourers a recuperative rest period from the rigours of deep-level mining. But there is no doubt that it is in general wasteful and uneconomic.

AGRICULTURE

South Africa is not a rich agricultural country. Probably not more than one-third of the land area is suitable for intensive cultivation. Large expanses, indeed, are little more than arid desert. Rainfall is erratic, and perhaps not more than 6 per cent of the land is at present being cultivated. The chief crops are wheat (1953-54 crop: 634,700 short tons), maize (1953-54 crop: 3,917,700 short tons) and fruit. Smaller quantities of tobacco, sugar and other crops are also grown.

Livestock production is an important industry. There were over 11½ million head of cattle and over 31 million wool-bearing sheep in the Union as at August 31st, 1953, since then the livestock population has increased. But substantial numbers of the cattle and large numbers of sheep are of poor quality, particularly those belonging to the Africans. There is a well-established dairy industry which is capable of meeting the country's requirements.

Farming in South Africa is subject to the extremes of drought and flood. In some years agriculture has been a fairly substantial contributor to foreign earnings, but in others it has been necessary to import large quantities of farm products, especially of wheat. Even maize has had on occasions to be imported. The gross value of farming production in 1953-54 was £343 million, divided equally between agricultural products and pastoral products, which by volume, represents an increase of 51 per cent by comparison with pre-war figures. Since the population of South Africa has increased by only 34 per cent in the same period, it is evident that the farming industry is now better able than before to meet the country's food and raw material requirements.

The problem of soil erosion assumes serious proportions in South Africa, particularly in the Native Reserves. Due to climatic conditions, the relatively thin top-soil is always in danger of being washed away unless sound farming methods are practised. The problem was allowed to

THE BRITISH COMMONWEALTH

worsen for too long before the Government became fully aware of the menace. However, since the passing of the Soil Conservation Act of 1946, energetic steps have been taken, but it is, of course, impossible to replace the fertile soil which has already been washed down to the sea. It has been estimated that the annual loss of top-soil is equivalent to over half a million acres of good productive land each year.

MINING

South Africa is most fortunately endowed with mineral wealth. Besides gold, diamonds and other precious minerals, there are very substantial deposits of coal, iron ore and manganese, and important amounts of copper, chrome ore, asbestos and many other minerals. The total value of mineral production in the Union in 1954 was £248·8 million, of which gold-mining accounted for more than three-quarters. Although the volume of mineral production is now several times larger than it was before the war, the mining industry as a whole is relatively less important to the national economy than hitherto. This is shown by the declining share in the net national income attributable to mining; the percentage in 1939 was 21 per cent, while in 1954 it was 13 per cent.

This transition, which has come about largely because of the very rapid expansion of the Union's manufacturing industry in recent years, poses for the country in general and the gold-mining industry in particular some awkward problems. Competition with manufacturing firms for labour, for instance, tends to push up costs; and in the case of the gold-mining industry this is especially undesirable because the price of its product is, for all practical purposes, fixed. The United States Treasury, which in effect controls the world buying price for monetary gold at 35 dollars per fine ounce, has remained unmoved by the frequent endeavours of the world gold-producers, led by South Africa, to secure a higher price.

Gold and Uranium. In response to the contraction of profit margins, which is due not only to the factors mentioned above but is a result also of the gradual working out of the richer seams, the gold-mining industry has sought by various means, such as mechanisation, to develop more efficient methods of production. The fact that, in spite of adverse circumstances, gold production has been rising, is proof of the success of these measures; but it is also a reflection of two other developments, namely the opening up of the Orange Free State goldfields, and the windfall which uranium has brought to a number of mines which were on the margin of profitability.

An enormous amount of capital has been sunk in the new Free State mines. It is only recently that it has begun to show any return; in 1954 output from Free State mines was 1,122,605 fine ounces, 12 per cent of the total, whereas in the first six months of 1955, 979,827 fine ounces were produced, which is 15 per cent of the total. In addition to this shift towards the Free State fields there has also been a marked tendency for development to take place on the western extremity of the Witwatersrand, while the Central and East Rand have shown signs of declining.

The advent of uranium has transformed the outlook for many mines. It is obtained as a bi-product of gold, though the processes of refining and concentrating the ore are complicated and require expensive machinery and plant. The capital outlay for those mines, which receive the approval of the Government to undertake uranium production, is met by long-term loans provided jointly by the American and British governments. The whole output, the quantity and terms of sale of which remain secret, go to the United States and British Atomic Energy Authorities, in

agreed proportions. Some idea of the importance of this export and its potential value to the Union's economy may be judged from the figure of £15 million, which was the value of uranium exports in 1954. In due course, as more uranium plants go into production, this figure should at least be doubled.

Coal. South Africa has extensive coalfields, some of which are, however, low-grade. Production has been rising steadily in recent years and was 30,844,118 tons in 1954. Most of it is required for internal purposes but extensive bunkering services have to be provided for at the ports. The Government has taken the lead in exploiting low-grade supplies of coal in its oil-from-coal plant (SASOL) which, at great cost, it has installed at Sasolburg on the Orange Free State-Transvaal border. Pilot production of petroleum has already started and full-scale production should begin later this year. It is hoped to found a chemical industry based on bi-products of the process.

Diamonds. Diamonds are still an important mineral, and a useful provider of foreign exchange. Output, a large proportion of which comes from the state-owned fields at the mouth of the Orange river, totalled 2,891,264 metric carats, worth £13·2 million, in 1954.

Iron. Output is rising and totalled just over 2 million ounces in 1954.

Manganese, Copper, Chrome and Tin, among base-metals, are of growing importance, though in the case of the latter, temporarily adverse circumstances of demand caused the output to shrink to 773,000 tons in 1954.

INDUSTRY

The Union's manufacturing industry has experienced a remarkable increase in the post-war era. This is clearly shown in the national income accounts by the rapid growth of private manufacturing industry in relation to the rest. The total value of manufacturing industry's contribution in 1954 is put at £358·9 million, representing 26 per cent of the total; the figures in 1939 were by comparison £70 million and 18 per cent.

Behind this increase lies the rapid expansion of the home market, which unlike countries such as Australia, is not primarily the result of a heavy influx of new immigrants; in South Africa the main impetus to post-war expansion has been the growth of internal spending power. Gross national produce per head of the population which was £36 in 1938-39, was as high as £96 per head in 1952-53, a figure which compares more than favourably with that in neighbouring African territories. This wave of post-war prosperity has spread, though unevenly, to all sections of the community, and manufacturers are turning their attention increasingly to the specialised needs of the non-European market.

Not all the new industries which have grown up in the Union since the war are soundly based, in the economic sense. In addition to the protection provided by the Union's tariff system, which is on the whole of moderate proportions, the whole of South African industry has, since 1948, been sheltered from overseas competition by the operation of import controls. Import restrictions became imperative because of balance of payments difficulties and, while the controls have from time to time been reduced, they still remain necessary; at present imports are restricted to 52 per cent of the level of 1948. It is the Union Government's declared policy to proceed steadily towards complete liberalisation of imports, thus uncompetitive industries which have sprung up under the shelter of the controls, must either reform their methods or succumb eventually to foreign competition.

Manufacturing industry is almost wholly privately owned. The state has, however, taken an active part in certain sectors. It has a majority share in the S.A. Iron and Steel Corporation, which has large plants at Pretoria and Vereeniging. Electricity supplies are the monopoly of the Electricity Supply Commission (ESCOM) which is a publicly-owned corporation. The railways are owned and operated by the state, as are airways and some trunk motor-transport routes; and in addition to its initiative in establishing the SASOL oil-from-coal plant, the Government has taken part in exploiting phosphate deposits in the Transvaal. The Government has also set up a publicly-owned development corporation, known as the Industrial Development Corporation, which has played an important role in the setting up of a number of new industries, including the new textile factory at Zwelitsha which will provide employment for 2,000 Africans.

Most of the capital for manufacturing industry is however provided by private capitalists; and a substantial proportion comes from abroad. According to some recent official estimates 63 per cent of gross capital formation in the Union is in the private sector, 25 per cent of which is in manufacturing industry. Domestic savings are increasing but there is still a need for foreign capital; the government's policy is to encourage the inflow of such capital, though the non-resident shareholders' tax to some extent discriminates against it.

Heavy Industry. The iron and steel works are situated in Pretoria and at the new Vanderbijl Park works near Vereeniging. The rated capacity of the two plants is 1.2 million ingot tons annually, which is not enough to meet the internal demand and fairly substantial quantities of steel and steel products still have to be imported. The steelworks are modern and efficient and draw largely on local sources for supplies of iron and coal.

Textile Industry. The textile industry has grown rapidly since the war. There are establishments in each of the four main industrial areas, and this decentralisation is possibly a hindrance to efficient production. High production costs render this section of industry susceptible to unrestricted foreign imports. The industry has, therefore, sought and obtained a certain degree of tariff protection, but it is doubtful whether, in the event of complete relaxation of import and exchange controls, it could survive.

Canning Industry. This centres on the Western Cape Province where most of the deciduous fruit is grown and where a profitable industry has been built up which caters largely for the United Kingdom market. The abundant sea fisheries at various points on the coast of the sub-continent have also favoured the canning industry in the areas concerned.

Boot and Shoe Industry. The area around Port Elizabeth is the home of the boot and shoe industry, which employs some 70,000 workers.

Motor Assembly. It is the policy of the government to promote the expansion of the motor assembly industry in the country. Overseas manufacturers have set up large plants; General Motors of U.S.A. have their plant at Port Elizabeth, the British Motor Corporation have theirs near Cape Town and there are other plants at these ports and at Durban.

A wide range of other industries exist, some of which serve primarily the home market, in many cases providing ancillary services to the gold-mines and other larger industries; others have built up valuable export markets, particularly in neighbouring African territories.

EXTERNAL TRADE

South Africa is still heavily dependent on overseas trade: imports are 32 per cent and exports 35 per cent of the national income. The economy is, therefore, sensitive to conditions in world markets. But South Africa is fortunate in one respect, in that gold, which makes up 30 per cent of her export earnings, tends to act as a counterweight, moderating the effects of any recession originating from abroad. Although great progress has been made in building up the home industry, the country has still to look to foreign suppliers, particularly the United Kingdom and the United States, for heavy or specialised machinery and other capital equipment. There is also a strong demand from foreign suppliers for durable consumer goods, such as refrigerators and motor-cars, as well as for a wide range of other consumer requirements; and 60 per cent of all industrial raw materials used in the Union's factories have still to be imported.

Imports in 1954 amounted to £443,299,604, £18 million more than in 1953; they would have been higher had it not been for the restraint imposed by import controls. Metals, machinery and vehicles were easily the most important items, accounting for more than one third. Fibres, oils, foodstuffs and government stores (which include armaments), in that order, were next in importance. By far the biggest supplier was the United Kingdom, with 34 per cent of the total, the United States being next with nearly 20 per cent. It may be expected that the United States will tend to increase its share, since discriminatory restrictions against imports from the dollar area have disappeared as from January 1st, 1954.

Exports in 1954, excluding gold bullion, were £273,740,000, re-exports of non-Union goods £38.4 million. Gold bullion exports were £156 million. Gold remains, therefore, the Union's principal earner of foreign exchange. In earlier years substantial quantities (as much as £39 million a year) was sold in fabricated form to non-government sources abroad. This market has, since the virtual disappearance of the premium on the free market, lapsed and nearly the whole of the Union's gold output is now sold on the London gold market, mostly to official buyers. Since the beginning of 1955 the undertaking to sell a minimum of £50 million of newly mined gold annually to the United Kingdom has been terminated. The United Kingdom, however, still succeeds in earning substantial quantities of gold from South Africa, and in fact more than the former guaranteed minimum.

Exports usually vary with the fortunes of the agricultural industry, particularly of wool. Excluding gold, the most important exports are wool, fruit, diamonds and hides and skins; but the export of other miscellaneous products including manufactured articles, is tending to expand. South Africa is well placed geographically to supply her neighbours, and in recent years it has been particularly successful in this direction. The Federation of Central Africa is already an important trade partner, and a new tariff agreement has recently been signed. But the United Kingdom, taking more than a quarter of South Africa's exports (excluding gold) is still far and away the best customer.

Balance of Payments. It is normal for South Africa to have an adverse trade balance (of £114 million in 1954) and freight, insurance and other services increase the deficit. But this is usually offset by sales of newly-mined gold and by an inflow of capital, either private or official, from overseas. In some years, however, due largely to the failure of private capital to maintain its rate of inflow, there have been substantial deficits which have to be met by running down the country's reserves of gold and other

THE BRITISH COMMONWEALTH

foreign balances. In 1954, for instance, reserves were reduced by £44 million. The drain on the reserves continued in 1955 and the government has been forced to adopt new measures to bring it under control.

South Africa has a unique relationship with the sterling area. It does not participate in the currency pooling arrangement, and it is responsible for settling its own foreign currency debts. In fact, however, most of its deficit is with the sterling area and, contrary to the general experience, it has no dollar problem. Exchange policy is nevertheless closely co-ordinated with the sterling area and the British Chancellor of the Exchequer has frequently paid tribute to the co-operation of the South African authorities in financial and economic matters.

FINANCIAL AND MONETARY POLICIES

A tradition of conservative financial policies has been built up in South Africa over a number of years. Since the war the main problem that has faced the framers of the budget has been that of containing inflationary forces. On the whole, this has been achieved, though the index of retail prices (which is an unsatisfactory indicator of the cost-of-living for the population as a whole, but is the only one at present available) has risen by over 30 per cent since 1948. By comparison with most other countries in the world this is, however, fairly modest. As part of the general financial strategy, the government has usually budgeted for a surplus. On most occasions, however, due primarily to unexpected windfalls of tax income, the surplus has turned out to be larger than forecast. This has been doubly fortunate since the government's expenditure on capital items has been steadily increasing. In the latest budget, presented to Parliament in April 1955, expenditure on Revenue Account was estimated at £240 million and that on Loan Account at nearly £90 million. The surplus is estimated at £10 million.

Despite steadily increasing public expenditures, it has been found possible to reduce on separate occasions, the burden of taxation. Substantial tax reductions, totalling £22 million, were made in 1954. In the year (1955-56), only minor concessions were made, and the Government decided on a new departure in introducing an undistributed profits tax, which, however, does not apply to the profits earned in the Union by foreign companies.

Money and Banking. Monetary policy has generally kept in step with the wider economic and financial policies. Co-ordination is facilitated by the fact that the central bank, the South African Reserve Bank, has a majority of government shareholders and is to all intents and purposes an auxiliary of the Treasury. There are four main commercial banks, two of which are British-owned, the Standard Bank of S.A. Ltd., and Barclays Bank (D.C. & O.) Ltd., one which has a strong Dutch connection, the Netherlands Bank of S.A. Ltd., and Volkskas Ltd., which is a local bank. The latter has recently been making considerable headway, especially among the Afrikaans-speaking section of the community.

The internal credit situation is naturally strongly influenced by the external balance. When funds are flowing in, the Reserve Bank has sometimes to intervene and neutralise any undue expansion of credit. The reverse also applies. But, largely because there is not a fully-developed money market in South Africa and the Commercial Banks hold reserves well in excess of the minimum statutory requirement, credit control tends to be somewhat ineffective. The Government has tried more than once to establish a proper money market in South Africa. For a time, strenuous efforts were made to develop the inland commercial bill, but with only partial success. More

recently a new institution, known as the National Finance Corporation, has been set up with government backing, designed to mobilise short-term funds lying idle in the country and put them to more active use. In fact, most of its investments, totalling over £100 million, are in Treasury bills and other Union Government stocks. But the establishment of the N.F.C. has certainly created a short-term money market of a sort, and it has facilitated the control of the Reserve Bank over the money market in general.

Interest rates in South Africa are not high for a young country in an early phase of its economic development. The Reserve Bank has, until recently, kept its discount rate ("bank rate") fairly low; but with the development of an adverse trend in the autumn of 1955 interest rates have been advanced. The bank rate was raised to 4½ per cent in September 1955. The yield on Government bonds is currently about 4½ per cent, and the minimum overdraft rate is 5½ per cent.

GENERAL ECONOMIC POLICIES

The present South African (Nationalist Party) Government under Mr. J. G. Strydom has given assurances that its aim is a free-enterprise economy with the minimum of state interference. But, as is natural in a newly-developing country, the state does in fact play a large role in the economic life of the country. As mentioned previously, it owns and operates the railways, motor transport and airways and there are public corporations in other large sectors of the economy. In addition, however, the government has set up large numbers of control boards in the agricultural industry, the purpose of which is to ensure orderly marketing conditions. It has, furthermore, wide powers of regulation and control by virtue of various acts of parliament, such as the Motor Carrier Transportation Act of 1930 and the Wage Act of 1937.

Finally, a word needs to be said about the *apartheid*, the policy of racial segregation. It is the government's intention to make provision for separate residential, educational and other facilities for the races. In the economic field, the intention is to have only temporary non-European labour in the areas of white industrial development; the labour will in the main be migratory. Plans are being made, furthermore, to shift the focus of future industrial development towards the "Native Reserves", where there should be ample supplies of labour. In pursuance of this policy, the state has taken steps to limit the influx of non-Europeans into the industrial towns and has in some instances refused permission for the expansion of existing industrial areas.

SOUTH-WEST AFRICA

This territory was formerly administered by the Union as mandatory power for the League of Nations, but recently steps have been taken to integrate the territory, economically as well as politically, with the Union itself. It is rich in mineral wealth (total value of minerals produced £21.9 million in 1953); the most important minerals being diamonds, lead and zinc. Large deposits of iron and copper have been proved by an American mining corporation and a bright future appears to be opening for the country's mining industry.

Of hardly less importance is the *karakul* (Persian lamb) industry which has grown to substantial proportions. Exports of pelts in 1953 were valued at over £5 million. Competition from South Africa is however an anxiety to the industry. Livestock production and dairy farming have also been rapidly developed, with the Union as its chief market. South-West Africa provides something like

one quarter of the Union's butter requirements. There is also a flourishing fishing industry on the coast. Communications in South-West Africa are a brake to economic progress. The port of Walvis Bay provides an adequate outlet, but rail and road communications with the hinterland are poor. Should the project of building a rail link to the Central African Federation come to fruition, South-West Africa's ports would assume considerable importance.

HIGH COMMISSION TERRITORIES

Basutoland. The economy of Basutoland is based mainly on peasant agriculture and animal husbandry. Poor farming methods have, however, resulted in bad land usage, soil erosion and low yields. Basutoland is not self-sufficient in basic foodstuffs, but earns a small income from exports of wool and mohair. Successful efforts have been made, with the aid of Colonial Development and Welfare Funds, to introduce better farming methods and to check the spread of soil erosion.

The most important export of the territory is labour. It has been estimated that upwards of 30,000 Basutos go to the gold-mines of South Africa each year in search of work. Their earnings and remittances home are an important source of revenue for the territory.

Bechuanaland Protectorate. The economy depends almost entirely on the export of cattle and the Colonial Development Corporation has established two large ranches in the Protectorate. With greatly improved water supplies cattle ranching in the present unoccupied areas offers hopeful prospects. There is evidence of important mineral deposits.

Swaziland. The country derives its wealth from important mineral deposits and from diversified farming. It has a good climate and good soil. Ranching on a large scale is carried on and the Colonial Development Corporation has been active in sponsoring irrigation schemes, plantations of timber and other projects. The chief minerals are asbestos, tin and barytes. Adequate communications are, however, lacking and Swaziland has no direct exit to the coast. Both the Portuguese in Mozambique and the South African authorities have proposed rail links with Swaziland. The Union Government is at present considering the construction of a new port on the Zululand coast north of Durban, which would be the logical outlet for Swaziland.

The British Government, which is responsible for the High Commission territories, has done a lot to help them economically. Some £14.4 million pounds has been earmarked for development in the three territories since 1945 by the Colonial Development and Welfare Fund and the Colonial Development Corporation.

B.W.

THE BRITISH COMMONWEALTH

UNION OF SOUTH AFRICA (UNIE VAN SUID AFRICA)

STATISTICAL SURVEY

AREA

The total area of the Union is 472,733 sq. miles.

Area of Provinces (sq. miles): Cape of Good Hope, 278,839; Natal, 33,578; Transvaal, 110,450; Orange Free State, 49,866.

POPULATION

A census of all races of the population was taken in May 1951. The population is divided for census purposes into five racial groups as follows:

- (1) Whites (i.e. European or of European origin);
- (2) Asiatics;
- (3) Coloureds (this group consists chiefly of Cape Coloureds; also includes Cape Malays);
- (4) Natives.

The last three groups, when combined, form the "Non-White" group in the Union.

RACIAL COMPOSITION (1951)

RACE	
Whites	2,641,689
Asiatics	366,664
Coloureds	1,103,016
Natives	8,556,390
TOTAL	12,667,759

THE CONSTITUTION

THE UNION is constituted under the South Africa Act, 1909, passed by the Parliament of the United Kingdom. Under the Act the four self-governing colonies were united under one Government in May 1910, the colonies becoming original provinces of the Union.

The most outstanding change in the constitution of the Union as established by the South Africa Act of 1909 resulted from the Statute of Westminster, enacted by the Parliament of the United Kingdom in 1931, which gave effect to resolutions passed by the Imperial Conferences of 1926 and 1930.

The preamble of the Statute sets forth two important principles: (1) That the Crown is the symbol of the free association of the members of the British Commonwealth of Nations; (2) That in accordance with the established constitutional position no law made by the Parliament of the United Kingdom after December 11th, 1931, shall extend to any Dominion named, as part of the law of that Dominion, except at the request and with the consent of the Dominion concerned.

Executive Power

A Governor-General, appointed by the Queen, represents the Sovereign in the Union, and exercises such powers and functions as the Queen assigns to him. Ministers of State, not exceeding fourteen in number, are appointed to administer such departments of State as are established by the Governor-General-in-Council. They are to be members of the Executive Council, and after the first general election of members of the House of Assembly no Minister is to hold office for more than three months unless he becomes a member of either that House or of the Senate. The appointment and removal of all officers of the public service is vested in the Governor-General-in-Council unless delegated to some other authority. The Public Service Commission appointed in conformity with the requirements of the South Africa Act, has certain powers conferred and duties imposed on it relating to the appointment, promotion, discipline, retirement and superannuation of persons employed in the Public Service.

Legislative Power

The legislative power of the Union is vested in Parliament, consisting of the Queen, the Senate and the House of Assembly. The Governor-General has power to summon, prorogue and dissolve Parliament, either both Houses simultaneously or the House of Assembly alone. There must be a session of Parliament every year.

The Senate: Senators must be Union nationals of European descent, at least 30 years of age, qualified as voters, and resident for at least five years within the Union. A Senator must also be a registered owner of property to the value of £500 over any mortgage.

Under the 1955 Senate Act, all Senators except those elected under the Native Representation Act, were required to vacate their seats by December 31st, 1955. The new Senate has a membership of 89 and consists of:

(a) 65 elected Senators: 27 for the Transvaal, 22 for the Cape, 8 for the Orange Free State and 8 for Natal, each province electing a number (not less than 8) equal to one-fifth of the number of electoral divisions into which it is divided for elections to the House of Assembly and Provincial Councils.

(b) 16 nominated Senators, of whom half should be selected on the ground mainly of their acquaintance "with the reasonable wants and wishes of the coloured races in South Africa".

(c) Two elected and 2 nominated Senators representing South-West Africa, one of them being selected mainly on the ground of his acquaintance "with the reasonable wants and wishes of the coloured races of the territory".

(d) 4 Senators elected in terms of the Native Representation Act, 1936.

Senators elected under (a) and (c) are now elected by majority vote instead of the principle of proportional representation. Nominated and elected Senators under (a), (b) and (c) hold their seats for 5 years.

The House of Assembly: Members of the House of Assembly must be Union nationals of European descent, qualified as registered voters and resident for at least five years in the Union. The House of Assembly continues for five years unless previously dissolved.

All Europeans over the age of 21 are entitled to the vote, except those who have been convicted of treason, murder, or any other offence punishable by a term of imprisonment without the option of a fine.

The House of Assembly consists of:

(a) 150 members directly elected under the South Africa Act, 1909 and the Electoral Consolidation Act, 1946 to represent the electoral divisions in the four Provinces of the Union;

(b) 3 members elected under the Representation of Natives Act, 1936, to represent the electoral circles in the Cape Province and

(c) 6 members directly elected under the South-West Africa Affairs Amendment Act, 1949, to represent the electoral divisions in the Territory of South-West Africa.

Native Representation

One of the chief obstacles to the formation of the Union of South Africa was the insistence of Cape Colony on preserving its liberal policy of equal rights. This met with great opposition from the other colonies, but eventually so that a compromise might be reached, the Cape gave up their insistence on the right of natives to sit in Parliament, and the other colonies conceded the right of coloureds and natives to vote, but for European candidates. It was also agreed that this right should be safeguarded. Section 35 of the South Africa Act embodied these franchise rights, and both this and the other "entrenched clause" (stating that Dutch and English should be the official languages) were safeguarded by Section 152, which stated: "Parliament may repeal or alter any of the provisions of the South Africa Act provided that . . . no repeal or alteration in Sections 35 and 137 shall be valid unless the Bill embodying such repeal or alteration shall be passed by both Houses of Parliament sitting together, and a third reading be agreed to by not less than two-thirds of the total number of members of both Houses".

The Representation of Natives Act, 1936, removed the Cape natives from the ordinary electoral roll, but provided for the direct representation of natives in the Senate and in the House of Assembly, and the establishment of a Natives' Representation Council. Four Senators are elected by electoral colleges and three members are

SOUTH AFRICA

returned to the House of Assembly by natives registered on the Cape Native Voters' Roll.

In 1949 the Bantu Authorities Act was passed, abolishing the Natives' Representative Council and setting up in its place Bantu local authorities with administrative, executive and judicial functions. In the same year the Government passed the Separate Representation of Voters Act, which removed the coloured voters of Cape Province from the ordinary electoral roll and substituted a system of representation by European members of parliament elected directly by them. The Act was passed by a simple majority, and was subsequently ruled invalid by the Appellate Division of the Supreme Court on the grounds that a two-thirds majority of both Houses of Parliament sitting together was necessary in terms of the South Africa Act. The Government contended that, since the coming into operation of the Statute of Westminster, the Union Parliament had become the completely sovereign legislature in and over the Union. The Government then announced its intention of forming a High Court of Parliament to act as the final court of appeal on constitutional issues. A Bill was enacted, but subsequently declared invalid by the Appeal Court. The coloured voters' issue remains unsolved. (*See also* LEGISLATIVE POWER, above.)

Procedure

Money Bills must originate in the House of Assembly, which may not pass a Bill for taxation or appropriation unless it has been recommended by message from the Governor-General during the session. The amendment of money Bills by the Senate is restricted. Provision is made for the joint sitting of the members of the Senate and the Assembly in the event of both Houses not agreeing to amendments to a Bill after other prescribed expedients have failed.

The Governor-General may assent to, or withhold assent from, a Bill. Two copies of every law, one in English and one in Afrikaans, are to be enrolled of record in the office of the Registrar of the Appellate Division of the Supreme Court of South Africa. In case of conflict between the

CONSTITUTION

two copies, that signed by the Governor-General shall prevail.

Each member of each House must make Oath or Affirmation of Allegiance. A member of one House cannot be elected to the other, but a Minister may sit and speak, but not vote, in the House of which he is not a member.

Provincial Government

Provision is made for the appointment of an administrator in each province, who holds office for a term of five years. In each province there is also a provincial council consisting of the same number of members as are elected in the province for the House of Assembly, but in no case is the membership to be less than 25. A member of the provincial council ceases to be a member on being elected to either House of the Union Parliament.

An executive committee of four persons, not necessarily members of the council, together with the administrator as chairman, is elected by the provincial council at its first meeting after each general election. This committee carries on the administration of affairs on behalf of the provincial council. The administrator may, and when required to do so must, act on behalf of the Governor-General-in-Council in regard to all matters in respect of which no powers are reserved or delegated to the provincial council.

GOVERNORS-GENERAL OF THE UNION OF SOUTH AFRICA

	<i>Assumed Office</i>
Viscount GLADSTONE	May 31st, 1910
Earl BUXTON	Sept 8th, 1914
H.R.H. Prince ARTHUR of CONNAUGHT	Nov. 20th, 1920

THE BRITISH COMMONWEALTH

POLITICAL PARTIES

Conservative Party: this was formed in 1954 by a number of members who broke away from the United Party; Leader P. B. BEKKER.

Labour Party: P.O. Box 2864, Johannesburg; f. 1908, advocates economic equality between the races and the gradual extension of political rights to all non-Europeans in accordance with their stage of development; stands for self-government in industry and opposes Government interference in domestic affairs of trade unions; its programme includes a Social Security Scheme for all, irrespective of race. Chair. Mrs. JESSIE MACPHERSON; Parl. Leader A. HEPPLER; Sec.-Gen. C. CLINGMAN.

Liberal Party of South Africa: P.O. Box 3618, Cape Town; advocates equal rights of all citizens irrespective of race, colour or creed; its aims include equal political rights, freedom of worship and association, access to an independent judiciary, the application equally to all parts of the population of the principle of compulsory education, the right to organise trade unions, economic groups and associations; the party has (September 1955) 4 representatives in Parliament; Leaders Mrs. V. M. L. BALLINGER, LEO MARQUAND, ALAN PATON.

National Party: P.O. Box 246, Pretoria; the National Party was formed in 1912 by General Hertzog on the principle of "South Africa first". The party came to power in 1924 and remained in office until 1933. Then a section of the party, led by General Hertzog went into coalition with General Smuts' South African Party, to form the United Party. The coalition was in office for six years, but in 1939, on the outbreak of the second World War, General Hertzog and his followers broke away to form with Dr. Malan and his followers the Reunited National Party, on the following principles:

- (1) South Africa First.
- (2) The maintenance of the Western European way of life in South Africa on the principle of Christian guardianship over the non-European races.
- (3) Co-operation between the two European sections of the population on the basis of equal language and cultural rights.
- (4) The fullest political and economic independence of the Union of South Africa.

At the election of 1948 Dr. Malan and his party joined forces with Havenga's Afrikaner Party, and in 1948 the two parties in coalition came into office. The coalition was terminated in 1951 when the parties again brought into being the National Party of South Africa.

The principles of the National Party are broadly the same as those of the Reunited National Party. In addition to the points listed above, the party stands for the eventual formation of a republic, and for the policy of *Apartheid*—the segregation of the non-European races. Leader: J. G. STRYDOM.

United Party: 238 Vermeulen St., Pretoria; the Nationalist Party and the South African Party merged in the United Party in 1934, with Gen. Hertzog as Prime Minister and Gen. Smuts as Deputy Prime Minister. On September 5th, 1939, Gen. Hertzog submitted a motion to Parliament proposing a modified form of neutrality for South Africa. This was defeated, and his request that the Governor-General should dissolve Parliament and hold an election, refused. Consequently, Gen. Hertzog and his followers resigned from the United Party. The United Party remained in power until their defeat at the General Election of May 1948. The United Party affirms the existing relationship between the Union and the British Commonwealth of Nations, but stipulates that its maintenance shall be subject to there being no derogation from the Sovereign Independent Status of the Union; the party programme includes a proviso that no one will be denied the right to advocate a change in the form of Government; the party recognises the two great industries—agriculture and mining—as the basis of the country's permanent welfare and encourages the concurrent development of commerce and secondary industry; a fundamental principle of its Native policy is the recognition of the natives as a permanent portion of the population under the trusteeship of the European race, but there will be no intermixture of the races, and the party seeks a solution of the Native question along lines which, without depriving the native of the right of development, recognises the requirements of the European civilisation as paramount. Leader: J. G. N. STRAUSS.

Union Federal Party: Leader: The Hon. G. HEATON NICHOLLS.

THE LEGAL SYSTEM

The common law of the Union of South Africa is the Roman-Dutch law, the uncodified law of Holland as it was at the time of the cession of the Cape in 1806. The law of England is not recognised as authoritative, though the principles of English law have been introduced in relation to mercantile matters. In shipping and insurance, English law is followed in the Cape Province, where it has also largely influenced criminal and civil procedure. In all other matters, however, Roman-Dutch law prevails.

The Supreme Court consists of an Appellate Division with a Chief Justice and ten Judges of Appeal. In each province of the Union there is a Provincial Division of the Supreme Court, while in the Cape there are in addition to the Provincial Division two Local Divisions; and in the Transvaal one, exercising the same jurisdiction within limited areas as the Provincial Divisions. Judges appointed prior to 1912 hold office for life; those appointed since that year until they attain the age of 70 years.

The provinces are further divided into districts with Magistrates Courts, whose criminal and civil jurisdiction is clearly defined. From these courts appeals may be taken to the Provincial and Local Divisions of the Supreme Court, and thence to the Appellate Division.

THE SUPREME COURT

APPELLATE DIVISION

Chief Justice: Hon. A. V. D. S. CENTLIVRES.

Judges of Appeal: Hon. O. D. SCHREINER, Hon. O. H. HOEXTER, Hon. H. A. FAGAN, Hon. L. C. STEYN, Hon. E. M. DE BEER, Hon. F. G. REYNOLDS, Hon. H. DE VILLIERS, Hon. C. P. B. BRINK, Hon. C. G. HALL.

ANDERSON, Johannesburg; Natal, Miss S. HUNDLEY, Durban; Midlands, B. K. ANDERSON, Port Elizabeth; South-West, Rev. J. B. ANDERSON, Pacaltsdorp; Western, E. J. HOLDEN, Cape Town; 93,358 mems.; publs. *The Congregationalist*, *C.U.S.A. Kerkberg*.

Church of England in South Africa: Christ Church, Hillbrow, Johannesburg; formed by the group who continued to worship according to the doctrine of the Church

RELIGION

of England after the secession of the Church of the Province of South Africa in 1870; not now part of the Anglican Communion; Bishop Rt. Rev. G. F. B. MORRIS.

Methodist Church of South Africa, The: 11 Chapel Street, Kimberley, Cape.; f. 1883; Pres. (1955-56) Rev. STANLEY B. SUDBURY; Sec. Rev. F. H. EDMONDS.

Nederduits-Hervormde Kerk, Die: governed according to Presbyterian Church regulation by a General Church Assembly; Administrator J. H. H. JANSON; total membership 68,144.

Presbyterian Church of South Africa: Head Office: J.B.S. Building, 49 St. George's Street, Cape Town; f. 1897; Gen. Sec. and Clerk of the Assembly Rev. J. PATERSON WHYTE, M.A.; 36,000 mems.; publ. *Presbyterian Leader*.

Reformed Church of South Africa (Die Gereformeerde Kerk): total membership 80,016.

JEWISH COMMUNITY

The Jews have been associated with South Africa since its earliest days. There was a party of Jews among the 1820 settlers. An organised Jewish community was founded at Cape Town in 1841 and there are now about 200 congregations in the Union, most of them having their own synagogues. The official representative of the World Zionist Organisation (and of its various funds and institutions in the Union) is the South African Zionist Federation.

South African Jewish Board of Deputies: P.O.B. 1180, Johannesburg, f. 1912; is the representative institution of South African Jewry; is composed of all the important congregational and Jewish institutions in South Africa; there are about 103,000 Jews in the Union; Pres. I. A. MAISELS, q.c.; Chair. N. PHILLIPS.

BROADCASTING

All broadcasting within the Union of South Africa is carried on by the South African Broadcasting Corporation, a public utility corporation established on August 1st, 1936, under the amended Broadcasting Act.

The Corporation's policy is controlled by a Board of Governors, whose members are appointed from time to time by the Governor-General. Section 12 of the Broadcasting Act, 1936, states that the object of the Corporation shall be to carry on "a broadcasting service within the Union and the Territory of South-West Africa". It is also empowered to operate a television service, and the Governor-General may request it to broadcast programmes to listeners outside the Union of South Africa. A recent Act of Parliament authorises the distribution of programmes by wire to subscribers. A rediffusion service for Non-Europeans operates in the Johannesburg area.

The Corporation controls three national networks for its English, Afrikaans and Commercial Services. The

Commercial Service started on a regional basis in the Transvaal in May 1950 and it expanded to full national coverage in October 1951.

The Corporation operates an international short-wave service which is beamed to Central Africa.

South African Broadcasting Corporation: Broadcast House, Commissioner Street, Johannesburg; Board of Govs.: Dr. S. H. PELLISSIER (Chair.), W. J. LAMB (Vice-Chair.), T. A. F. RHODES, Prof. C. G. S. TRADE UNIONS

The trade union movement in South Africa is of comparatively recent growth. Fifty years ago there was not a single branch of a trade union in the country. The gradual process of changing from a pastoral into an industrial country received a tremendous impetus from the discovery of diamonds and gold, and the opening-up of the coalfields. Side by side with the growth of industry came the rise of the trade union movement. At the beginning of the century the unions were in their infancy, their members were few, their branches scattered, their influence almost negligible. The movement has since made rapid progress.

South African Trade Union Council: 515-522 Sakers Corner, 34 Eloff Street, Johannesburg; f. 1954; Gen. Sec. Miss DULCIE M. HARTWELL; this Council consists of the majority of mems. of the former South Africa Trades and Labour Council and of the Western Province Federation of Labour Unions; 149,503 mems. of affiliated trade unions. It has the following Area Divisions:

Natal: Rand Provident Buildings, 324 Smith Street, Durban; Secretary Mr. N. J. MOIR.

Transvaal: 512-522 Saker's Corner, 34 Eloff Street, Johannesburg; Secretary Mr. A. J. DOWNES.

Western Province: 105 Burleigh House, 24 Barrack Street, Cape Town; Secretary Mr. W. G. KEEBLE

Eastern Province: 96 Mutual Arcade, Main Street, Port Elizabeth; Secretary Mr. F. H. LEDGER.

PRINCIPAL REGISTERED TRADE UNIONS

Amalgamated Bricklayers' Trade Union of South Africa: P.O. Box 1356, Johannesburg; Sec. A. E. BARTON.

Amalgamated Engineering Union: 20 Kerk Street, P.O. Box 1168, Johannesburg; f. 1890; Sec. (Vacant); 21,495 mems; publ. *A.E.U. Journal* (monthly).

Amalgamated Society of Woodworkers: P.O. Box 1095, Johannesburg; f. 1881; Sec. H. F. TYLER, 7,540 mems.

THE CO-OPERATIVE MOVEMENT

In 1922, the Co-operative Societies Act was passed in the Union, bringing the whole Movement under the control of the Minister of Agriculture and Forestry, through the medium of the Registrar of Co-operative Societies in Pretoria. This important Act regulated the formation, registration, and management of the different types of co-operative organisations.

Encouraged by ruling economic conditions, and aided by loan facilities and the official guidance given, the Movement developed rapidly. The progress was accelerated by the new Co-operative Act of 1939, simplifying borrowing by co-operative agricultural companies with limited liability. This Act also made it possible for several companies which were co-operative in character to transfer registration from the Companies Act to the Co-operative Societies' Act.

The Co-operative Movement in South Africa has by now attained a position of considerable importance in the economic structure of the Union, and on June 30th, 1955, there were 458 registered co-operative societies of all types.

TRANSPORT

RAILWAYS

With a few minor exceptions the South African Railways and Harbours Administration owns and operates all the railways in the Union and in the Mandated Territory of South-West Africa. The Administration also operates an extensive network of road transport services, which serves primarily to develop rural areas, but also acts as feeder to the railways.

South African Railways and Harbours Administration:

Union Buildings, Pretoria; Minister Hon. B. J. SCHÖEMAN; Railway Commissioners J. J. HAYWOOD, Dr. J. H. BOTHA, Dr. C. V. VON ABO; Administrative Sec. to the Minister J. M. OELOFSEN; Railways and Harbours Board Secretary P. J. CONRADIE.

TRACK MILEAGE:

Owned and operated by South African Railways:

1. In Union, 15,086 miles.
2. In Mandated Territory of South-West Africa, 2,022 miles.

Privately-owned lines operated by South African Railways, 35 miles.

The electrified mileage totals 1,747.

ROAD SERVICES

The route mileage of regular services, including the mileage in the Mandated Territory, aggregates 21,712.

SHIPPING

The principal harbours of the Union are at Cape Town, Mossel Bay, Port Elizabeth, East London and Durban. The main harbour of the Mandated Territory of South-West Africa is at Walvis Bay.

The principal shipping services are as follows (the addresses given are those of local offices in the Union):

Blue Funnel Line: P.O. Box 31, Cape Town; services to U.K. and Australia.

Blue Star Line Ltd.: P.O. Box 4446, Cape Town; services to U.K., Australia and New Zealand.

British India Steam Navigation Co. Ltd.: P.O. Box 1038, Durban; regular services to East Africa and India.

Christensen Canadian Africa Line: P.O. Box 4765, Cape Town; services to Eastern Canada and to East Africa.

Clan Line Steamers Ltd.: P.O. Box 1551, Durban; services to the U.K., East Africa and the U.S.A.

Companhia Colonial de Navegação: P.O. Box 702, Cape Town; services to Portugal and East Africa.

Companhia Nacional de Navegação: P.O. Box 702, Cape Town; services to Portugal and Portuguese African territories.

Deutsche Ost-Afrika-Linie: P.O. Box 917, Cape Town; coastal freight services, and to Germany, Holland and East Africa.

Louis Dreyfus Lines: P.O. Box 998, Durban.

Elder Dempster (Liverpool) Ltd.: P.O. Box 7, Cape Town; services to Eastern Canada and West Africa.

Ellerman and Bucknall Steamship Co. Ltd.: P.O. Box 812, Cape Town; services to U.K., Holland, France, Germany, East Africa and U.S.A.

Farrell Lines: P.O. Box 1006, Durban; services to East Africa and to U.S. Atlantic ports.

French Lines: a joint service by the **Messageries Maritimes:** P.O. Box 1144, Port Elizabeth and **Chargeurs Reunis:** P.O. Box 10819, Johannesburg; services to Holland, France and West Africa.

Hall Line Ltd.: P.O. Box 812, Cape Town; services to U.K., East Africa and the Middle East.

Harrison Line: P.O. Box 1006, Durban; services to U.K., Europe, East Africa and the Middle East.

Holland Afrika Lijn: P.O. Box 4765, Cape Town, services to Holland, Germany, East Africa, Egypt and Italy.

Houston Line (London) Ltd.: P.O. Box 1551, Durban; services to U.K., Europe, and U.S. Atlantic ports.

Indian African Line: P.O. Box 1006, Durban; services to East Africa, India and Ceylon.

India-Natal Line (Bank Line Ltd.): P.O. Box 931, Durban, services to East Africa, India and Ceylon.

James Nourse Ltd.: P.O. Box 702, Cape Town; services to India, West Indies, Dominican Republic, Cuba and U.K.

Kawasaki-Kerr South African Line: P.O. Box 998, Durban; services to U.S. Pacific ports.

Lloyd Triestino Line: P.O. Box 718, Cape Town; services to East Africa, Egypt and Trieste.

Lykes Bros., S.S.Co. Inc.: P.O. Box 1337, Durban; services to U.S. Gulf ports

Natal Line (Bullard King and Co. Ltd.): P.O. Box 931, Durban; services to U.K., Europe and Mauritius

Nedlloyd Line: P.O. Box 4765, Cape Town.

Osaka Shosen Kaisha: P.O. Box 812, Cape Town; services to Singapore, Ceylon and Japan.

Prince Line Ltd.: P.O. Box 1038, Durban; infrequent services to U.S. Atlantic ports

Robin Line (Seas Shipping Co., Inc.): P.O. Box 31, Cape Town; services to U.S. Atlantic ports.

Royal Inter-Ocean Lines: P.O. Box 1548, Durban, services to East Africa, Singapore, Hong Kong and Japan

Seaboard Shipping Co. Ltd.: P.O. Box 931, Durban; services to Western Canada and U.S. Pacific ports.

Shaw Savill and Albion Co. Ltd.: P.O. Box 169, Cape Town; services to U.K., Australia and New Zealand.

South African Lines Ltd.: P.O. Box 2334, Cape Town; services to U.K., Holland and Germany.

South African Marine Corporation Ltd.: P.O. Box 2171, Cape Town; services to U.S.A. and U.K.

South African Railways and Harbours: S.A. Railways Headquarters, Johannesburg; cargo services to Australia.

Thesen's Steamship Company Ltd.: P.O. Box 1345, Cape Town; coastal services and services to East Africa.

SOUTH AFRICA

Transatlantic S.S. Co. Ltd. of Gothenburg: P.O. Box 640, Cape Town; services to Sweden and other Baltic countries, to Australia and New Zealand, and to West Africa.

Union-Castle Mail Steamship Co. Ltd.: P.O. Box 7, Cape Town; services to U.K., Europe, main African ports, and U.S. Atlantic ports.

Wilh. Wilhelmsen of Oslo: P.O. Box 640, Cape Town; services to Scandinavia and Baltic countries.

CIVIL AVIATION

All civil aviation in South Africa is controlled by the Minister of Transport under an Act of 1923. The Minister is advised by the Civil Aviation Advisory Committee, consisting of a Chairman and eight other officers.

The Division of Civil Aviation, functioning through the National Transport Commission to the Minister, is responsible for the administration of the Aviation Act and regulations.

The licensing and control of air carriers and air services is a function of the National Transport Commission in terms of the Air Services Act and regulations. The administrative work in this connection is undertaken by the Division of Civil Aviation

Civil Aviation Commissioner: Transport Building, Pretoria; Brig. C. GORDON ROSS, C.B.E., D.F.C.

Civil Air Liaison Officer (Canada): W. D. VAN ZYL.

South African Airways' Representative in London: H. H. BUCHNER, South Africa House, Trafalgar Square, London, W.C.2.

TRANSPORT

South African Airways: Jan Smuts Airport, Transvaal, Chief Airways Manager Major-Gen. C. J. VENTER, C.B. D.F.C.; there are daily passenger services linking all the principal towns of South Africa—Johannesburg, Durban, East London, Port Elizabeth, Cape Town, Bloemfontein, Kimberley, Upington, Keetmanshoop, and Windhoek; and daily services to Bulawayo in Southern Rhodesia, and twice-weekly between Johannesburg and Lourenço Marques. In addition, South African Airways, jointly with B.O.A.C., operate the Springbok Service which runs a daily service from Johannesburg to London.

OTHER AIR LINES WITH HEAD OR BRANCH OFFICES IN THE UNION

B.O.A.C., U.A.T., Q.E.A. and S.A.A.: all at Maritime House, Loveday Street, Johannesburg.

C.A.A.: Airways Corner, Loveday Street, Johannesburg.

C.A.S.: Libertas Building, 61 Marshall Street, P.O. Box 2245, Johannesburg.

D.E.T.A.: 19 Clonmel Chambers, Eloff Street, Johannesburg.

El Al (Israel Airlines Ltd.): Geneva House, Loveday Street, Johannesburg.

K.L.M.: Locarno House, Loveday Street, P.O. Box 8624, Johannesburg.

P.A.A.: Queensland Insurance Building, Loveday Street, Johannesburg.

Sabena: Unity House, 100 Fox Street, Johannesburg.

S.A.S.: 8 Maritime House, Main Street, Johannesburg

LEARNED SOCIETIES AND RESEARCH INSTITUTES

GENERAL

Royal Society of South Africa: University of Cape Town, Rondebosch; f. 1877, Royal Charter 1909; 1 honorary and 93 ordinary Fellows, 196 mems.; publ. *Transactions*.

President: S. H. HAUGHTON, D.S.C.

Secretary: W. J. TALBOT, B.S.C.

Treasurer: N. SAPEIKA, B.A., PH.D., M.D.

South African Council for Scientific and Industrial Research:

Visagie Street, P.O. Box 395, Pretoria; f. 1945; Pres. Dr. S. M. NAUDÉ; Vice-Pres. E. W. DOHSE; Sec.-Treas. A. J. MILLER-SMIT; mems.: Dr. T. B. DAVIE, Dr. F. J. DE VILLIERS, Dr. P. J. DU TOIT, F.R.S., F. G. HILL, Prof. H. Q. MONNIG, P. E. ROUSSEAU, Prof. E. STEGMANN, Dr. E. TABERNER, Dr. H. J. VAN ECK, Prof. R. W. WILCOCKS, J. E. WORSDALE. The Council has the following laboratories and divisions:

National Physical Laboratory, Pretoria.
 National Chemical Research Laboratory, Pretoria.
 National Building Research Institute, Pretoria.
 National Nutrition Research Institute, Pretoria.
 National Road Research Institute, Pretoria.
 National Mechanical Engineering Research Laboratory, Pretoria.
 National Institute for Personnel Research, Johannesburg.
 Telecommunications Research Laboratory, Johannesburg.
 Library and Information Division, Pretoria (see page 451).
 Liaison Division, Pretoria.
 South African Scientific Liaison Office, South Africa House, London, England.
 South African Scientific Liaison Office, Box 680, Benjamin Franklin Station, Washington, D.C., U.S.A.

SOUTH AFRICA

Co-operative industrial research is subsidised through autonomous research institutes, registered as non-profit companies and controlled by industrial subscribers:

Leather Industries Research Institute, Grahamstown.

Fishing Industry Research Institute, Cape Town.

Sugar Milling Research Institute, Durban.

Paint Industries Research Institute, Durban.

Wool Textile Research Institute, Grahamstown.

Medical research is supported through units at medical research institutions:

Amoebiasis, tuberculosis and family health in Durban.

Virus diseases and clinical nutrition in Cape Town.

Dental research, cardio-pulmonary diseases, bilharzia, human bio-chemistry and nutrition in Johannesburg.

Heart research in Pretoria.

Publs.: *Annual Report of the Council*; Library and Information Division: *C.S.I.R. Information* (monthly), *Register of Current Scientific Research at South African Universities* (annual); National Building Research Institute: *Bulletin* (half-yearly); Telecommunications Research Laboratory: *Basic Radio Propagation Predictions for Southern Africa* (monthly), *Bulletin of Ionospheric Conditions observed at Johannesburg and Cape Town* (monthly); National Institute for Personnel Research: *Journal of the N.I.P.R.* (thrice yearly); Liaison Division: *Research Review* (quarterly), *Directory of Scientific Research Organizations in the Union of South Africa*.

South African National Council for Social Research: The Department of Education, Arts and Science, Pretoria; f. 1946; the Council is an advisory body, having no statutory existence but serving the Minister of Education, Arts and Science with advice in matters falling within its scope. The Secretary for Education, Arts and Science is *ex-officio* Chairman of the Council; objects: (a) to promote, organise, co-ordinate and assist educational, sociological and humanistic research on a national basis, but not to dominate or monopolise the field; (b) to encourage and to undertake the planning of research projects; (c) to ensure efficient and economic use of moneys; (d) to create where necessary bodies for carrying out long-range or long-term researches; (e) to encourage the training of highly qualified research workers by means of grants, scholarships and fellowships to selected individuals for attachment to university departments, Government departments, or institutions; (f) to provide information, liaison and statistical services as well as to assist in the publication of results and other material likely to be valuable for research; (g) to promote library services; (h) to formulate in general terms research policy, and to put forward to the Government and the country the needs of research; (i) to obtain and administer endowments; publ. *Journal for Social Research* (twice yearly).

South African Institute of Race Relations: P.O. Box 97, Johannesburg; f. 1929; 3,800 mems.; 75 affiliated bodies; Pres. Dr. ELLEN HELLMAN; Vice-Pres. Dr. EDGAR H. BROOKES, Prof. D. D. T. JABAVU, Dr. A. W. HOERNLÉ, L. MARQUARD; Dir. QUINTIN WHYTE, M.A.; publs. *Race Relation News* (monthly), *Race Relations* (quarterly), *Hoernlé Memorial Lecture* (annually), *Handbook on Race Relations in South Africa*, *Press Bulletin*, *Annual Report*, pamphlets.

Van Riebeeck Society: c/o South African Public Library, Cape Town; f. 1918; 1,356 mems.; publishes *South African Historical Documents*; Chair. The Hon. H. S. VAN ZYL; Sec. Mrs. V. VARLEY; Treas. D. H. VARLEY; publ. one volume annually.

ARCHITECTURE, ENGINEERING AND TECHNOLOGY

Cape Chemical and Technological Society: P.O. Box 2645, Cape Town; f. 1905; 101 mems.; Sec. Dr. E. G. PROUT, M.Sc., Ph.D.

Institute of Certified Engineers, South Africa: P.O. Box 3361, Johannesburg; f. 1911; 1,005 mems.; Secs. The Associated Scientific and Technical Societies of South Africa; publ. *Journal*.

Institute of S.A. Architects: Transvaal Provincial Institute, 302 Kelvin House, Marshall Street, Johannesburg; f. 1911; 650 mems.; Secs. The Associated Scientific and Technical Societies of South Africa; publ. *South African Architectural Record* (monthly).

Institute of Transport (Southern Africa Division): Road Motor Transport Section, General Manager's Office, South African Railways, Johannesburg; f. 1926; 883 mems.; Chair. D. M. De V. ROBBERTZE, M.Inst.T.; Sec. A. CRERAR, A.M. Inst.T.; Hon. Treas. C. FLOOR, M.Inst.T.; publ. *Journal*.

South African Institute of Electrical Engineers: P.O. Box 5907, Johannesburg; f. 1909; 1,920 mems.; Pres. Prof. G. R. BOZZOLI; Secs. The Associated Scientific and Technical Societies of South Africa; publ. *Transactions*.

South African Institution of Civil Engineers: P.O. Box 1183, Johannesburg; f. 1903; 1,441 mems.; Pres. H. SCRADER; publ. *Transactions* (monthly).

South African Institution of Mechanical Engineers: P.O. Box 5907, Johannesburg; f. 1892; 1,034 mems.; Secs. The Associated Scientific and Technical Societies of South Africa; publ. *Journal* (monthly).

THE BRITISH COMMONWEALTH

ASTRONOMY

Astronomical Society of South Africa: c/o The Royal Observatory, Cape Town; f. 1922; Pres. Dr. D. S. EVANS; Hon. Sec. A. MENZIES; Hon. Treas. G. ORPEN; mems. of Council: Dr. W. S. FINSEN, D. D. ROBERTSON, Dr. A. D. THACKERAY, W. P. HIRST, Dr. P. KIRCHHOFF, Prof. G. H. MENZIES, Dr. R. H. STÖY; approx. 250 mems.; publs. *Notes* (monthly), *Handbook* (annually); autonomous local centres at Johannesburg, Durban and Port Elizabeth.

Boyden Station (formerly *Harvard Observatory*): Mazelspoort, Bloemfontein; is maintained by the following observatories: Hamburg-Bergedorf, Stockholm, Armagh, Dunsink, Uccle and Harvard.

Lamont-Hussey Observatory of the University of Michigan: Naval Hill, Bloemfontein; opened 1928; Astronomer in Charge Prof. R. A. ROSSITER, M.A., PH.D., F.R.A.S.

Leyden Southern Station, Johannesburg: Dir. T. WALRAVEN.

Radcliffe Observatory, Pretoria: first established 1772 at Oxford (England), transferred to Pretoria in 1937; the telescope of this observatory is employed on direct photography, spectroscopic and photo-electric work, and is the largest telescope in the Southern Hemisphere; Observer A. D. THACKERAY, M.A., PH.D.

Royal Observatory, Cape Town: instituted by Order in Council 1820; the observatory is under the control of the British Admiralty, and its expenses are defrayed out of naval funds; the observatory also controls the emission of wireless time signals; H.M. Astronomer R. H. STÖY, M.A., PH.D.

Union Observatory: 20 Gill Street, Johannesburg; f. 1912; Govt. astronomical observatory; library of about 12,000 vols.; Union Astronomer W. H. VAN DEN BOS.

BANKING, ECONOMICS AND POLITICS

Economic Society of South Africa, The: P.O. Box 929, Pretoria; f. 1925; Objects: to promote the thorough discussion of, and research into economic questions, in particular those affecting South Africa, and to this end to enlist the active co-operation of all persons, of whatever school of economic thought, capable of throwing light on them; 1,350 mems.; Sec. TERRITORY OF SOUTH-WEST AFRICA

Capital: Windhoek.

AREA

The total area is approximately 317,725 square miles.

POPULATION

The census of 1951 gives a total population of 430,354; of these 49,641 are European and 380,686 are natives (this figure includes 156,453 enumerated natives and 224,233 natives estimated outside police areas); there are also 27 Malays and Asiatics.

HISTORY

Until 1921 the Government of the Territory of South-West Africa (formerly German South-West Africa) was based on martial law but troops had been withdrawn and civil courts established previous to that date.

In May 1925 a new Constitution was granted for South-West Africa, and has remained without great amendment since.

ADMINISTRATION

The administration of South-West Africa is vested by Mandate of the League of Nations, dated December 17th, 1920, in the Government of the Union of South Africa. The government of the territory consists of the Administrator, assisted by a Legislative Assembly of eighteen elected members. Women were enfranchised in 1939. The

Executive consists of the Administrator and four members elected by the Legislative Assembly.

In addition to the local government system, South-West Africa is represented by ten members in the Union Parliament, six in the House of Assembly, and four in the Senate.

Administrator: D. T. DU P. VILJOEN.

Executive Committee: The Administrator (Chair.), J. G. H. VAN DER WATH, A. H. DU PLESSIS, J. H. CLOETE, Dr. H. P. A. LOMBARD.

Legislative Assembly (elected November 1955).

Aroab: J. D. VISSER.

Gobabis: S. FRANK.

Grootfontein: Dr. H. LOMBARD.

Keetmanshoop: L. W. B. BINGE.

Luderitz: J. H. CLOETE.

Maltahohe: P. C. ROUX.

Mariental: J. G. H. VAN DER WATH.

Okahandja: A. NEL.

Otjikondo: B. B. H. W. A. A. S. VON BACH.

Otjiwarongo: P. J. PRETORIUS.

Outjo: G. F. MEYER.

Rehoboth: W. J. G. LATEGAN.

Swakopmund: J. J. M. VAN ZYL.

Usakos: A. H. DU PLESSIS.

Warmbad: A. D. NIEDERHEITMANN.

Windhoek East: J. P. M. NIEHAUS.

Windhoek North: E. A. NEL.

Windhoek West: Dr. W. H. WEDER.

THE BRITISH COMMONWEALTH

THE HIGH COMMISSION TERRITORIES

HIGH COMMISSION

(Office: Hill Street, Pretoria and 91 Parliament Street, Cape Town, Union of South Africa.)

The Colony of Basutoland and the Bechuanaland and Swaziland Protectorates are the responsibility of the Commonwealth Relations Office and are under the jurisdiction of a High Commissioner, each individual territory being administered by a Resident Commissioner.

High Commissioner: Sir PERCIVALE LIESCHING, G.C.M.G., K.C.B., K.C.V.O.

Deputy High Commissioner: T. V. SCRIVENOR.

Administrative Secretary: B. A. MARWICK.

Secretary for Finance: C. R. LATIMER, O.B.E.

Assistant Secretaries: H. P. RITCHIE and C. D. STENTON.

Attorney General and Legal Advisor: A. C. THOMPSON, M.C., Q.C.

Chief Justice of Basutoland, Bechuanaland Protectorate and Swaziland: Sir HAROLD WILLAN, C.M.G., M.C.

BASUTOLAND

Capital: Maseru

CONSTITUTION AND GOVERNMENT

Basutoland is a Crown Colony and is governed by a Resident Commissioner, with the assistance of the Basutoland Council. The territory is divided for administrative purposes into nine districts, Maseru, Leribe, Mophale's Hoek, Mafeteng, Quthing, Qacha's Nek, Butha-Butha, Mokhotlong and Berea, presided over by hereditary chiefs who are responsible to the Paramount Chief in all local matters.

The Basutoland Council: since the 1950 changes in the constitution the Council consists of the Resident Commissioner, as President, the Paramount Chief and his 94 nominees (including 4 chosen for nomination by each of the 9 District Councils and 6 by various bodies in the territory) and 5 members appointed by the Resident Commissioner. All members, except for the Resident Commissioner, are Basuto.

THE ADMINISTRATION

Resident Commissioner: E. P. ARROWSMITH, C.M.G.

Deputy Resident Commissioner and Government Secretary: (Vacant).

Senior District Officers: R. E. K. MURRAY, O.B.E., H. J. D. ELLIOT, O.B.E.

Principal Auditor: J. H. BELDERSON, O.B.E.

Director of Agricultural and Livestock Services: P. A. BOWMAKER, O.B.E.

Director of Education: D. H. CREED-NEWTON, M.B.E.

Legal Secretary: B. L. O'LEARY.

Director of Medical Services: R. JACOBSON.

Commissioner of Police: Lt.-Col. D. R. OWENS.

Superintendent of Prisons: V. C. D. FARQUHARSON.

Controller of Posts and Telegraphs: C. H. WILLIAMS, M.B.E.

Government Engineer: P. ST. C. BALLENDEN.

Financial Secretary: E. C. ALLEN, O.B.E.

THE LEGAL SYSTEM

The judicial department of the territory is the responsibility of the Chief Justice of Basutoland, who is also the Chief Justice of Bechuanaland and Swaziland. His headquarters are in Maseru.

THE HIGH COURT: this is the supreme court of the territory and has final jurisdiction in both civil and criminal cases, subject only to a right of appeal, in particular cases, to the Privy Council.

DISTRICT COURTS: each of the nine districts possesses First, Second and Third Class Subordinate Courts, presided over respectively by District Commissioners, Assistant District Officers and Cadets. These courts have jurisdiction in all cases involving disputes between Europeans and Natives and in certain cases concerning Natives only.

THE JUDICIAL COMMISSIONER'S COURTS: these deal with appeals originating from the higher Basuto Court of Appeal.

BASUTO COURTS: there are 63 Basuto Courts (including 15 Courts of Appeal), which have limited jurisdiction in both criminal and civil cases.

THE PRESS

The following two weekly newspapers are published in the territory:

Leselinyana la Lesotho: Paris Evangelical Missionary Society, Morija.

Moeletsi oa Basotho: Mazenod Institute, Mazenod, near Maseru

PUBLISHERS

The Bantu Press, Maseru.

FINANCE

The Standard Bank of South Africa is the only bank which has a branch within the area; its branch office is at Maseru; Manager R. C. W. FINCH.

TRANSPORT

Basutoland has no railway system of its own but Maseru, the capital, is connected with the Union of South Africa Railway system by a short length of track; otherwise the railway runs near the border, so that goods can be taken to the nearest station by road. There are, however, regular services operated by the Motor Transport Department of the South Africa Railway to the lowland districts of the territory. The few roads that do exist are of poor quality and are often unsuited to modern transport, though the Colonial Development and Welfare Programme has already started on its work of improving communications. Pack animals are the only means of transport in most of the mountain regions.

There are landing grounds at Maseru, Mashai, Semonkong and Mokhotlong

EDUCATION

There is only one Government School in Basutoland and therefore most of the work in education is performed by the three main voluntary missionary societies (the Paris Evangelical, Roman Catholic and English Church). They

SOUTH AFRICA

organise with Government assistance 814 of the 931 schools and institutions in the territory. The remaining 117 schools, although maintained entirely from Government funds, are managed by Committees. In 1954 the total number of students was 103,332. The Pius Catholic College provides the only secondary education available, and those who wish to study further may enter universities in neighbouring territories.

BECHUANALAND

Administrative Headquarters: Mafeking

CONSTITUTION AND GOVERNMENT

Bechuanaland is a Protectorate and is governed by a Resident Commissioner with the assistance of an African, European and a Joint Advisory Council. The territory is divided for administrative purposes into eleven districts, presided over by hereditary chiefs, among whom the Chief of Kwena is senior in status although he possesses no superior jurisdiction.

The African Advisory Council: this is composed of native members, representing the various Reserves and non-tribal areas. They usually meet once a year under the leadership of the Resident Commissioner.

The European Advisory Council: the Council consists of 8 members, who are elected by the European community to represent their interests. They assemble twice a year under the leadership of the Resident Commissioner.

Joint Advisory Council: this was established in 1950; it meets twice a year and consists of 16 members, drawn equally from the two other councils.

THE ADMINISTRATION

Resident Commissioner: M. O. WRAY, O.B.E.

Deputy Resident Commissioner and Government Secretary: R. P. FAWCUS.

Senior District Officers: S. V. LAWRENSON, O.B.E.; J. D. A. GERMOND, C.B.E.; J. F. MILLARD, M.B.E.

Legal Adviser: R. KELLY.

Principal Auditor: J. H. BELDERSON.

Director of Agriculture: I. S. HUTCHESON.

Director of Education: J. GARDINER.

Director of Geological Survey: Dr. R. B. McCONNELL.

Director of Medical Services: M. L. FREEDMAN, O.B.E.

Commissioner of Police and Chief Immigration Officer: J. T. A. BAILEY.

Postmasters: A. JACOBSON, L. G. DUHY, J. W. W. BURGESS, J. J. HIGGO.

Director of Public Works: H. V. DAVIES.

Treasurer: G. A. RUTLEDGE.

Director of Veterinary Services: J. E. R. ROE.

THE LEGAL SYSTEM

The judicial department of the territory is the responsibility of the Chief Justice, who is also the Chief Justice of Basutoland and Swaziland. His headquarters are in Basutoland although he attends Sessions in Bechuanaland whenever necessary.

THE HIGH COURT: this is the supreme court of the territory and has final jurisdiction in both criminal and civil cases, subject only to a right of appeal, in particular cases, to the Privy Council.

DISTRICT COURTS: each of the ten districts possesses First, Second and Third Class Subordinate Courts, presided over respectively by the District Commissioners, Assistant District Officers and Cadets. These courts have

HIGH COMMISSION TERRITORIES

jurisdiction in all cases involving disputes between European and Natives and in certain cases concerning between natives only.

NATIVE COURTS: these have limited jurisdiction in both criminal and civil cases. Their present status and rights were established by the Native Administration and Native Courts Proclamation of 1943.

THE PRESS

Although no local newspapers are published, several South African newspapers have a limited circulation in the territory.

FINANCE

Two banks have branch offices in Bechuanaland: Barclays Bank (D.C.O.) and the Standard Bank of South Africa Ltd.

TRADE AND COMMERCE

There are no employers' associations in Bechuanaland. There is one workers' association. **The Francistown African Employees' Union**, P.O. Box 32, Francistown; f. 1949; Chair. L. D. RADITLADI; Sec. P. M. TLHALERMA; mems. 160.

TRANSPORT

Bechuanaland itself possesses no railway system. However, the Rhodesia Railways Ltd. operates a single track line, which passes through the Protectorate linking the Union of South Africa and the Rhodesias. The roads are made from earth or sand, occasionally reinforced by gravel.

There are airfields at Gaberones, Mahalapye, Francistown and Maun. A new aerodrome is being constructed at Serowe.

EDUCATION

Attempts to improve the standard of education in Bechuanaland are hampered by several factors: the size of the territory makes communications difficult; financial resources are limited and there are few voluntary educational bodies, such as missionary societies.

In 1953 there were for the Native population 142 primary schools (with a total number of 11,487 pupils), of which 115 were tribally sponsored; 2 tribal secondary schools, and 2 junior secondary schools. Although at present the one teachers' training college in the territory can only accept 50 pupils there are plans to replace this with one which can accommodate over double that number. There is no university so that those wishing to study further must attend colleges in the neighbouring territories. Most of them go to the Union of South Africa, but there is some doubt as to whether the Union will accept those applying after 1958. By that time there will be available, in addition to existing facilities in East and Central Africa, the new University of Rhodesia and Nyasaland. There are also nine primary schools for the European community and one boarding-school in Ghanza, opened in 1953.

There is a small Eurafican community, most of whose children attend the African tribal schools. There are also five Government Coloured schools.

SWAZILAND

Capital: Mbabane

CONSTITUTION AND GOVERNMENT

Swaziland Protectorate is governed by a Resident Commissioner with the assistance of the European Advisory Council and the Inner Council of the Native Paramount Chief. The territory is divided for administrative purposes into six districts (Hlatikulu, Mankaiana, Manzini, Mbabane, Pigg's Peak, Stegi).

THE BRITISH COMMONWEALTH

European Advisory Council: the Council received statutory recognition in 1949, although it functioned before that date. It consists of the Resident Commissioner, the Deputy Resident Commissioner, ten members elected by the European Community and a further six members chosen by the Government who attend in an advisory capacity, without having the right to vote.

Council of the Paramount Chief, The: in 1940 a Proclamation was issued by the High Commissioner recognising the Paramount Chief and his Council as the Native Authority of the territory; in 1950 this was replaced by a further Proclamation in a form more acceptable to the Paramount Chief and his Council. The Resident Commissioner keeps in touch with the Inner Council and a meeting of the entire Council is held to discuss matters regarded as too important to be dealt with by the Inner Council alone.

THE ADMINISTRATION

Resident Commissioner: D. L. MORGAN, C.M.G., M.B.E.

Deputy Resident Commissioner and Government Secretary: R. ARMSTRONG, O.B.E.

First Assistant Secretary: (Acting): J. H. STEWARD.

Senior District Officer: H. D. G. FITZPATRICK, M.B.E.

Auditor: D. W. DUNLOP.

Principal Education Officer: W. E. C. PITCHER.

Director of Land Utilisation: C. J. VAN HEERDEN.

Director of Medical Services: J. C. J. CALLANAN, O.B.E.

Commissioner of Police: L. W. CLARKE.

Senior Postmaster: G. P. CRAFTFORD.

Government Engineer: R. W. WOOD.

Treasurer: H. M. J. UNDERHAY.

Director of Geological Survey: H. J. R. WAY, O.B.E.

THE LEGAL SYSTEM

The judicial department of the territory is the responsibility of the Chief Justice, who is also Chief Justice for Basutoland and Bechuanaland Protectorate.

THE HIGH COURT: this is the supreme court and has final jurisdiction in both civil and criminal cases, subject only to the right of appeal, in certain cases, to the Privy Council.

DISTRICT COURTS: each of the six districts possesses First, Second and Third Class Subordinate Courts, presided over respectively by the District Commissioners, the Assistant District Officer and Cadets. Magistrates may also preside over the courts. The courts have jurisdiction in all cases involving disputes between Europeans and Natives and in certain cases concerning natives only.

THE JUDICIAL COMMISSIONERS COURT: this was established in 1950 and is the court of appeal for the Higher Native Court of Appeal in criminal cases.

THE NATIVE COURTS AND THE HIGHER NATIVE COURT OF APPEAL: these were set up in 1950 under the Native Courts Proclamation. Fourteen Native Courts were established and given limited jurisdiction in both civil and criminal cases. The Higher Native Court of Appeal deals with appeals originating from the Native Courts and has final jurisdiction subject only to a right of appeal to the Judicial Commissioner's Courts in criminal cases and to the High Court of Swaziland in civil cases.

PRESS

The Times of Swaziland and Izwi Lama Swaza (*The Voice of the Swazi*) are the only two newspapers. Both are published weekly.

FINANCE

Two banks have branch offices in the territory: Barclays Bank (D.C.O.) and the Standard Bank of South Africa Ltd. Both have branches at Mbabane and Bremersdorp.

TRANSPORT

There is no railway system in Swaziland. There are, however, regular motor transport services operated by the South African Railways Administration and the Portuguese East Africa Administration, by which both goods and passengers can be taken to the nearest station in the neighbouring territories. All the roads are made from earth or sand, although plans are being made to improve the road surfaces by gravelling. In 1954 there were 697 main roads and 443 branch roads.

There are no regular internal air services nor do any international air lines touch the territory.

EDUCATION

Lack of financial resources has hindered progress. In 1954 there were 234 schools and institutions in Swaziland. A number of missionary societies organise, with Government assistance, most of the African primary schools. The Government itself owns 17 schools and the Swazi National Trust operates a further 3. In 1954 the total number of students was 18,428.

The European Community is served by six Government-sponsored and two private schools. In 1954 the total number of students was 815.

For the Eurafican community there are four Government-aided missionary schools.

GEOGRAPHY

THE territory of India, constituted in 1947 as a Dominion, and in 1950 as a Republic within the British Commonwealth, has a land area of 1,176,864 sq. miles, 72 per cent of the former British India, and extends from 33° to 3° N. lat., and from 67° to 98° E. long. There are frontiers with Pakistan, Tibet, Nepal, Bhutan, China and Burma. It is increasingly the custom to speak of "India" as meaning the present Republic of India only, using the term "Indian sub-continent" either for the former India before partition, or for India and Pakistan together.

In structure, India can broadly be regarded as comprising three regions: (a) the southern fringe of the Himalayan mountain chain, (b) the riverine plains of the north, occupied largely by the Ganges and its tributaries, and (c) the plateau or table-land of the Deccan. The Himalaya are an immense complex of generally young rocks, some 150 to 200 miles wide, folded and uplifted at a period roughly contemporary with that of the formation of the Alps of Europe. Towards the centre of the range, where disturbance has been greatest, masses of granite and other igneous rocks occur, and earth movements are still taking place, producing earthquakes from time to time, some of which are extremely destructive. Extensive areas of the Himalaya lie above 15,000 ft. and the range contains the three highest peaks in the world: Everest (29,141 ft.)—actually just on the frontiers of Nepal and Tibet outside India, Mount Gasharbrum (Godwin Austen) (28,250 ft.); and Kanchinjunga (28,146 ft.).

The abrupt drop from the Himalaya to the river plains gives rise to a well-marked zonation of flora and fauna. At lowest levels—especially in the south-east where rainfall is heavier—occurs the Terai, a dense fever-infested jungle occupied by tiger, elephant and many reptiles. Above the Terai lies a temperate zone (best developed towards the south-west) which is characterised by tree-ferns, evergreens, rhododendrons, oaks and cedars. Higher still lies an "Alpine" region of meadowland; with an "Arctic" zone (firs, pines, etc.) above, the flora of which passes into dwarf species towards the permanent snow-line, which lies at about 16,000 ft.

The river plains are almost entirely below 1,000 ft. in height (in most places below 600 ft.) and are occupied by the Ganges (1,500 miles in length) and its great tributary the Brahmaputra which, after flowing eastwards within Tibet for nearly 1,500 miles, swings suddenly south and westwards to join the Ganges 75 miles from its mouth. Both rivers in their lowland courses consist of a system of intricate variable channels rather than a single stream; and there are numerous smaller tributaries of which most (but by no means all) also rise in the Himalaya. The riverine lowlands, abundantly watered, and with a deep fertile alluvial soil, support by far the greater part of India's population, and include most of the more advanced and historically prominent areas. Now, however, much of the eastern delta region of the Ganges-Brahmaputra system forms the territory of East Pakistan, *q.v.*

The third major region of India is the Deccan (or peninsular India), in the main a plateau area diversified by hills and mountain ranges. The Deccan is a table of ancient granites, covered in places by more recent rock series (e.g. coal measures and sandstones) and tilted, so that the west side (inland of Bombay) stands much higher than the east. This high western side rises abruptly from sea level to form a hill-range known as the Western Ghats, which are in places 3,000–7,000 feet in height; further east

the surface drops more gently towards the Bay of Bengal—hence most rivers of the Deccan rise in the west and flow eastwards. Soils in the Deccan are distinctly less fertile than those of the Ganges lowlands; but the underlying rocks contain a variety of exploitable minerals.

Climate. India is well known for its "monsoon" climate. The word itself means "reversal", and refers to the changes in wind direction (and hence in weather) which occur regularly each year. In winter, winds blow outward from the interior of Asia towards the Indian Ocean, and are consequently dry and moderately cold, especially towards the north. In summer, a centre of intensely low pressure develops in north-west India, over the Thar desert and Indus valley (Pakistan), and this draws in a strong current of hot moist air from the Indian Ocean. The moist current begins to blow suddenly, almost dramatically, in June, and first brings heavy rain to the western Deccan (Bombay-Travancore area). Eastwards of the Western Ghats (i.e. in the central Deccan) rainfall is less copious, and great anxiety can often be felt as to whether the season's rainfall will be adequate—this can be a famine area if the monsoon is late, or less humid than usual.

Passing eastwards, the monsoonal current then crosses the Bay of Bengal, and is deflected northwards and westwards by the hills of Burma and the Himalaya, to pass over the Ganges lowlands. By reason of its sea crossing, the current has now regained much moisture, and contact with the eastern Himalaya produces the heaviest rainfall in the world: Cherrapunji (Assam) records over 400 in. annually, but probably 500 to 1,000 in. fall on the higher hills around. Moving finally north-westwards up the Ganges valley, the monsoon current becomes progressively dried-out, until in the Punjab almost no rain falls, and desert conditions prevail. Thus, generally speaking, the sequence of seasons in India is: a mild or cool, and dry winter, giving place to great, almost intolerable heat in late spring. This is followed in June (at almost the same date each year) by heavy monsoonal rains and distinctly lower (though still high) temperatures. Early autumn is rather drier and still warm—humid and oppressive at first in some districts; but later there is a marked improvement to give what is generally regarded as the best season of the year—a crisp sunny autumn and early winter. Mean temperatures range at Delhi (in the north-west of India) from 58° (January) to 92° (June), with an annual rainfall of 26 in. Corresponding figures for Calcutta (in the north-east) are 65° (January) to 86° (May) and 59 in. of rainfall; and for Madras (extreme south) 75° (January) to 89° (May), and 50 in. rain. The vagaries of the monsoon can lead to widespread distress: for example, in 1950 north India experienced flooding, with much loss of life, whilst in the Deccan severe drought prevailed.

Racial Groups. The relative wealth of India as compared with that of neighbouring Asiatic lands has attracted many invaders—ranging from small, highly organised, and active conquering groups to larger but indeterminate folk—movements that have been historically unimportant but ethnically significant. Consequently, the native population of India now shows a surprising variety of racial type, from the dusky aboriginal of the remoter hills to the occasional fair-haired, blue-eyed aristocrat of the north-western provinces, and the problem of assigning racial origins is far from simple.

The classic exposition is that of J. H. Hutton ("Census of India, 1931"), whose views are summarily recapitulated here. The most important single racial element would seem to be the Dravidian—a name used by Hutton to denote a dark long-headed and wavy-haired group of small to medium stature. This Dravidian type, which Hutton regards as related racially to the "Mediterranean" stocks of southern Europe, forms the basic and by far the most numerous element of the Indian population, especially in the Deccan.

Here and there, in remote corners, are still to be found small and scattered groups of an earlier and more primitive racial strain—the negrito—which also has representation elsewhere in southern Asia, in Africa and in Indonesia.

In the lower Ganges valley, Mongoloid influences are of considerable importance, particularly in the hinterland of Calcutta, where the Bengali population is regarded as largely an intermixture of Mongoloids and Dravidians. Towards the north-west, proto-Nordic strains are found—i.e., tall, slimly-built individuals with medium-dark to fair colouring; the Pathans of Pakistan and upper classes of certain Hindu states are of this category. There are also some 150,000 Anglo-Indians (or Eurasians) living mainly in the larger towns. Numerically these Anglo-Indians are unimportant, but they have exercised a disproportionately large influence on commerce and the professions, which they mainly enter.

Such a cursory outline does very little to indicate the enormous variety of ethnic types occurring within the Indian sub-continent, with a parallel variation in culture patterns and ways of life. In remoter or more difficult parts—principally the hills of the Deccan and the north-east Himalaya—live small groups of "hill tribes" who exist as wanderers, hunting animals and occasionally pillaging weaker neighbours. These people have no more than a primitive (Stone Age) culture, showing certain resemblances to that of the Australian aboriginal. At the other extreme, one need hardly refer to the highly evolved habit of life and sophistication of the upper classes in India—sages, philosophers and politicians whose views command respect throughout the world. Altogether, some 225 distinctive languages are currently in use (with many more dialects); and there is a wide variation in religious beliefs—some of which are merely crude propitiation of impersonal forces, others highly developed ethical and philosophical systems that attract converts from regions beyond India.

Population. The last Census of India (1951) gave a total population (exclusive of Kashmir) of 357 million, which indicates a density of 313 persons per sq. mile. There is however a wide variation, from over 1,000 per sq. mile in Travancore to under 50 in Sikkim and, as might be expected, the middle and lower Ganges valley (Delhi to Calcutta) together with the lowlands of peninsular India are the most densely peopled areas; in fact about half the total population of India lives in 15 per cent of the total area, at an average density of 750–760 people per sq. mile.

Birth-rates (crude) average 26–30 per thousand of population, and death-rates about 13–18 per thousand per annum. This phenomenon of a rapidly declining death-rate with a substantially higher and more stable birth-rate is common to many countries of the world, especially in Asia; but the size of the Indian population renders the effects of a marked excess of births a special matter of concern. Between 1941 and 1951 the total population of India grew by 42 million (over 4 million a year) and even allowing for a possible slight decline in births, the Indian population may well have reached 425 million by 1970.

Despite the expansion of irrigation during the last half-century, and the development of communications to

permit the growth of agricultural markets and the import of foodstuffs from Burma and Siam, the growth in population more than kept pace with measures to accommodate it. In the opinion of many, the standard of living of the Indian peasant slowly but inexorably declined after the turn of the century, though this decline has to some extent been counterbalanced by the rise in wealth due to industrial expansion in the towns. One figure suggests that the Indian peasant now receives an average daily food supply represented by less than 1,600 calories, as against an average of 2,200–2,300 calories a century ago—amongst the lowest (in 1953) of any country in the world. Symptoms of this pressure of human numbers upon resources are the extreme fragmentation of peasant land holdings; a considerable amount of concealed or partial rural unemployment, thought to affect at least 80 million people, and generally low real incomes for most grades of society.

The surge of population during the last half century is now recognised as a principal problem of Indian life. It is hardly possible, with existing geographical and social limitations, to bring about a progressive annual expansion of over 1 per cent in agricultural productivity; and though further industrialisation is certainly feasible, it is unlikely that industry will provide a livelihood for more than 20 per cent of the population—India will remain predominantly rural, with cultivation the chief activity. The considered answer of the Indian Government to the problems of excessive numbers has been the official adoption of a policy of restriction of births. India is one of the few countries in the world to take an unequivocal attitude in this matter. But even granted that this solution may be the right one, there are practical difficulties in the way of its adoption. Meanwhile numbers increase and the pressure on resources continues.

Agriculture. At least 250 million Indians (70 per cent of the population) are dependent for a living on agriculture, which provides nearly half the National Income. Food crops naturally predominate, with rice by far the most important cereal, accounting for nearly half of the total cultivated area and (owing to a high yield per unit area) nearly two-thirds by weight of the total agricultural production. Millet is next in importance, with bajra third. Groundnuts and sesame are widely grown as a source of fats—an essential in diet, since little meat is available. Because of its heavy demands on water, rice is pre-eminently a crop of the middle and lower Ganges valley, with other cereals (chiefly millet, but also some wheat and barley) replacing rice in the drier areas.

The black fertile soil derived from the trap (igneous) rocks of the north-west Deccan is particularly suited to cotton growing, which has greatly increased in recent years and is expected to increase further, giving by 1956 an annual production of over 4 million tons. Tobacco, spices, fruit and vegetables are also grown both for export and for home consumption. Two especially valuable export crops are jute (currently India's most valuable export commodity) which is grown in Bengal and adjoining areas of the lower Ganges valley; and tea, second in value only to jute, which comes mainly from the hills of Assam towards the Burma frontier, and from the foothills of the south-eastern Himalaya, round Darjeeling.

Despite the predominance of agriculture in the economy, India is not wholly self-sufficient in foodstuffs and, except in unusually good years, 20 to 25 per cent of her imports consist of foodgrains. At present crop yields are generally low, due to wasteful methods of husbandry: the yield of rice is only one-fifth of that in Egypt and one-third of that in the U.S.S.R. Holdings are often too small for efficient exploitation, and there is an acute shortage of capital, with many villagers chronically in debt to the local

THE BRITISH COMMONWEALTH

moneylender. An extensive government-sponsored plan to increase agricultural productivity has, however, been initiated since 1947 (See ECONOMIC SURVEY).

India is estimated to have about one-quarter of the world's cattle and water-buffalo. Both animals are kept

mainly for their milk, from which *ghee* (clarified butter) is made—a most important article of diet. The meat, owing partly to religious prohibition and partly to the inferior quality of the beasts themselves, is not much eaten.

W.B.F.

HISTORY

(INDIA AND PAKISTAN)

From their modest trading stations on the coasts of India the English East India Company in the eighteenth century was drawn into the mainland by the collapse of the Mughal Empire. By 1784 the Company had created by force of arms a strong Bengal state in the north-east and, with their policy sharpened by the world-wide struggle against France, the British went on to dominate all India.

By 1825 British paramountcy was securely established against challenge either from Europe or from within India. The Company may have been the agent of conquest, but the whole strength of Britain was committed, a fact to which formal recognition was given in 1858 by the transfer of India's government from the Company to the Crown.

The British succeeded to a Muslim empire that had rotted away through half a century of growing turbulence. Sustained economic and cultural development had ceased, both among the Muslim rulers and their Hindu subjects, and political morality degenerated with the times. On this chaotic scene the Company gradually imposed order and political unity, establishing standards both in law and conduct which, although not always of the highest, yet were immeasurably higher than those they replaced. With the spread of order came a sense of security and the possibility of a recovery in agriculture which to a country of peasants like India constituted the greatest immediate boon that could be offered. These achievements were deliberately sought by the British, but the most penetrating and widespread changes came rather from the interaction of world forces which the British conquest let loose in India.

For twenty centuries the economic life of India had changed scarcely. The great bulk of the income of the country was provided by the peasant working on the land and raising crops of rice, wheat, barley, millets and pulses, oilseeds and sugar cane, and it was the needs of this weak, small-scale agriculture on a consumption rather than an exchange basis that determined the life of most Hindus and Muslims who made up the population of about one hundred millions. On this basis the Indian economy remained parochial, primitive and slow-changing. Through the ages both Hindu and Muslim rulers had been concerned rather with problems of land than of trade, mainly because they drew the bulk of their revenues in the most convenient form of land revenue, traditionally taken as one-sixth of the crop, though on occasion it may even have been one-third or one-half.

Through the East India Company, the British constituted a ruling power with a vested interest in developing trade, and in the nineteenth century British manufactures penetrated along the main arteries of communication. India became part of the British free-trade area and British trade was carried into the heart of Indian life, disrupting the basic Indian cotton goods industry, along with many of her old trades and crafts. Through the combination of immense British political and economic power, India became a vast dependent market; and her slow-changing economy was quickened and ultimately transformed.

Just as in trade so also in government India underwent rapid change. After a period of hesitation, misrule and experiment a system of district administration was evolved throughout British India under the Company's Covenanted European servants (later to become the Indian Civil Ser-

vice). Within each district the Company's officers undertook three essential functions, to keep the peace, to collect the revenues and to administer justice. Throughout British India a rule of law obtained, and the European administration functioned efficiently and honestly. During the anxieties of the conquest many areas had been allowed to remain under native princely rule, but in these, too, British residents were appointed and it was made clear that European standards of administration were to be applied. The Central Government itself reported direct to London, where Parliament in a succession of Acts in 1773, 1784, 1793 and 1855 and 1858 had laid it down that all government was subject to review in a spirit of trusteeship.

It was inevitable that, through a British system of administration, British ideas would exert a determining influence on Indian policy. The ideas of Adam Smith are to be seen in the policy applied by Cornwallis in settling Bengal, the aims of the evangelicals and utilitarians are to be traced in the attempts to christianise Indians, and to abolish the Hindu practices of *sati*, and female infanticide and to set up an efficient government. Mission schools, too, were opened, and the Company encouraged education through English and on British lines. But Indian life was built on ancient, strongly-founded cultures whether Hindu or Muslim, and although the new influences made the more responsive Indians question their own superstitions they did not at once go on to accept, as the missionaries had hoped, a Christian framework of life. But European influences, which had already begun to revolutionise the political and economic life of India, began also to change the very texture of Indian thought and belief; and symptoms of unrest became evident, taking violent expression in the great mutinies of the Indian sepoy troops, in 1807 in South India and in 1857 in the north.

These unsuccessful outbreaks brought down the full weight of British policy and administration on Indian society—a process that was facilitated by the growth of quick communications. The completion of the telegraph route in 1870 brought Government in Calcutta more closely under the control of the London Government. The development of the steamship and the opening of the Suez Canal in 1869 brought India's economy into the world economy as a dependency of Britain. The rule of law in India was reinforced by a rule of economic law in which the advantages of policy, of capital, mobility and skill lay with Britain. By 1870 within India itself, railways, telegraph and postal services linked Calcutta, Lahore in the north-west, Bombay and Madras, and where the railways went there the roads ran to meet them.

The economic consequences of this revolution were profound. Provincial economies were transformed into an Indian economy with local prices giving way to all-India prices. Equally important, heavy crops could be quickly transported abroad and Indian agricultural products began to follow India's raw cotton into international trade. Largely through British capital and initiative new crops were developed and Indian tea, coffee, jute, oil and minerals assumed world importance. The value of her exports rose from £23 million in 1855, to £53 million in 1900, to £137 million in 1910. In India's import trade Britain was dominant, providing, for example, the heavy engineering

THE BRITISH COMMONWEALTH

equipment for the railways, and controlling the Indian market in Lancashire cottons and even towards the close of the century further fortifying her position by preferential tariff treatment.

British initiative and capital also contributed to the growth of large-scale industry in India. The Bengal coalfield was opened to facilitate the growth of railways, jute mills were built around Calcutta, and cotton mills on the west coast around Bombay. By 1900 British investments in India totalled some £400 million, and British-controlled managing agencies guided most of the industrial and commercial activity.

The great mass of Indians earned their livelihood as peasant cultivators. Encouraged by British protective methods of rule the Indian population began to grow rapidly from 206 million in 1872 to 315 million in 1911 and 338 million in 1931. Great irrigation schemes sponsored by the Government were insufficient to meet this increase and a steady pressure on the soil began, which encouraged a competitive bidding for land. Most Indian indigenous capital had long been absorbed in land, a process which was perpetuated by the British command of the industrial field; and the ignorant peasantry began to fall into the hands of Indian moneylenders, who soon discovered how to seek protection in the new systems of law. Government's protective measures were not enough and only a countrywide scientific improvement in agriculture to raise the peasants' income could have broken what had become a vicious circle. This was energetically attempted at the close of the century under Curzon's rule, but the parallel process of teaching improved farming methods to an illiterate and reluctant peasantry was difficult and slow of application; and Indian agriculture therefore tended to remain backward and the peasant amidst rising prices poverty-stricken.

Government, too, which traditionally found most of its income from land revenue, remained impoverished and with famine periodically striking the land every budget became in effect a gamble in rain. The Government in social and economic policy therefore tended to be cautious, but even so the political, economic and social pressures of the west on India were great.

The growth of Government services and the employment of Indians in the civil and legal services, the application of English education in schools and universities, the rise of an Indian press and of industry and commerce, all these led to the emergence in the latter half of the nineteenth century of Indian middle classes predominantly though not exclusively Hindu. With the spread of quick communications they acquired a hitherto unknown class consciousness and with it the power to make a united, countrywide response to the Government's policies. From the start the great majority deliberately copied and wholeheartedly admired the British, but there were groups with divergent interests, both among the Hindus and the Muslims. It was inevitable in a dominantly Hindu society, that the age-old sentiment of Hindu nationalism should persist and that there should be many orthodox Hindus who felt that western education despoiled Hindu culture; and they were reinforced by all those who had had a western training and yet were frustrated in their search for suitable higher employment.

The Muslim upper classes had on the whole reacted differently. On the one hand, looking back to their past glories as rulers and on the other following a dogmatic, clearly defined creed which constituted their whole way of life, they tended to regard western education as inferior and meaningless. Revivalist movements among the Muslims of both north-east and north-west India took place but they were directed as much against Hindu interests as against British rule.

The Muslim disinclination to interest themselves in western learning cost them dear, and nowhere did this become more obvious than in the public services, which only a century earlier they had monopolised. In Bengal, for example, where the Hindu and Muslim communities were broadly equal in numbers, the Muslims in 1871 held only 92 out of 773 appointments. From this swift decline the Muslims were rescued by the remarkable endeavours of the famous Sayyid Ahmad Khan, who through the second half of the century did not cease to urge and work for the cultural regeneration of his community through education on western lines. Devoting his life to this cause, he founded for this purpose a college at Aligarh (1877) and by numerous tours and speeches began to make his community turn round and face the future.

The future of British rule in India formed a problem which perplexed the British Government. Earlier in the century at the period of the conquest and of the pacification of India, British spokesmen like Munro, Elphinstone and Macaulay had envisaged a time when Britain would leave India. As Elphinstone said, "Education for Indians is our highroad back to Europe." But with the re-conquest of northern India during the Mutiny and the growing realisation not only of the economic value of India to Britain but also of the weakness and disunity of Indian society, British policy became more hesitant. On the one hand higher education plans and the policy of creating a free press, which fortified the strength and the claims of the Indian middle classes, were proceeded with; on the other, admission to the senior posts in the Indian Civil Service was made increasingly difficult for Indians; and an alternative line of policy of opening the service to "young men of good family and social position" was soon abandoned as a failure. When a group of middle class, western-educated Indians, calling themselves the Indian National Congress, met in 1885 at Bombay to organise a native parliament, which was to work for constitutional development, the Government at first encouraged it, and then as the movement began to spread through urban India, grew hostile.

During the governor-generalships of Ripon (1880-84) and Curzon (1898-1905) the extremes of British political policy were defined. Ripon wished to use the Indian middle classes in moving quickly to some form of constitutional government. Curzon at the other extreme denied that the urban Indian middle classes could speak for the great majority of illiterate peasant cultivators. It seemed to him that the Government and the Indian Civil Service were better able to represent the Indian masses, and that the main task of Indian government was to raise their standard of life rather than to promote the political interests of the educated minority, in short that the main immediate problem was economic, not political.

Although Curzon had in reality posed a false dilemma, the growing divisions among educated Indians strengthened the position of the Government. As the years passed and the constitutional agitation in the National Congress achieved meagre results, extreme Indian groups emerged, drawing their strength on the one side from revivalist Hindu movements like the Arya Samaj (1879) and the Ramakrishna mission, and on the other side from a growing awareness of the achievements of contemporary revolutionary movements in continental Europe. In western India a Hindu Brahman, Bal Gangadhar Tilak, invoking the power of violence, raised an extremist agitation against both the British and the Muslims, and on the other side of India when Curzon in 1905 sought for administrative reasons to partition the province of Bengal, the middle classes became alive with resentment and soon showed that they had realised the power of organised propaganda and demonstration; and the *swadeshi* and boycott movements aimed at encouraging Indian against foreign trade

INDIA

were born. During the agitation some Hindu-Muslim antagonism also developed and Muslim political opinion showed signs of taking a line different from the Hindu. The Congress claim to speak for the whole of India was denied not only by the British Government but also by Sayyid Ahmad Khan and his Muslim followers who argued that in any constitutional form of government for India Muslim interests would be permanently subordinated to Hindu, an argument which crystallised in the formation in 1906 of the All-India Muslim League to defend Muslim interests.

By this time the British Government had become convinced that political action was needed to take account of these new forces and to strengthen the moderate elements in Indian politics. Hitherto, putting aside the expressed claims of the constitutionalists in the National Congress under G. K. Gokhale, they had taken the line of avoiding any decision that would pre-suppose the development of *responsible* government in India after the British fashion. By acts of Parliament in 1861 and 1892, for example, Indians had been given the right of advising the Government, and out of the Act of 1892 emerged the principles of election and representation, but it was representation through special interests and not as in Britain through the whole body of voters. In 1909 this line of policy was continued in the Morley-Minto reforms which admitted Indians to the Secretary of State's India Council in London, and to the executive councils in India and which extended the representation of Indians in the central and provincial legislatures, but representation was based on the grant of separate electorates for the Muslims and other communities. The Government took care to retain its official majority in the central legislature, in order ultimately to ensure control from London.

Before the reforms had been long in operation the World War of 1914-18 broke out, and during the exertions and stresses of this period India came of age both economically and politically. She grew to be one of the leading industrial powers of the world, not so much as in the past through the influx of British capital as through the employment of Indian, mainly Hindu, resources, which in the following thirty years began to dominate the Indian economy. India, too, in these years raised the largest volunteer army in the world, and her representatives at international conferences began to realise the importance of India's position in the British Commonwealth. These developments threw into relief the small part Indians were playing in their own home government. The moderates, too, who were still influential in the National Congress, had come to the conclusion that the Morley-Minto reforms had taken them into a political blind alley; and that some other road to responsible government must be sought; while the more extreme groups decided to strike out for themselves. The British, impressed by the scale of India's war achievement and by the fact that the war had in part been fought for national self-determination, also re-examined their own policy and at the close of the war proclaimed the objective of "an increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire".

This formed a major reversal of policy in that it assumed that British India was a nation for which responsible parliamentary government was feasible. Accordingly under an Act of 1919 a scheme was devised to provide the constitutional means to this end. The first aim, a responsible system of government, was to be achieved by reorganising the central and the nine provincial governments. At the centre there was to be a legislature consisting of an assembly and a Council of State with a

HISTORY

the promise of Dominion Status, consulting Committee, remained responsible to the provinces the departments of Government, support only into two groups, those "reserved" under the control of officials and those "transferred" to Indian ministers responsible to the legislatures. The franchise for central and provincial legislatures was much extended, though election still rested on the basis of separate electorates. Indian constitutionalists welcomed the proposals and expressed willingness to work them in the spirit they were offered, but they were in a minority, for both in the National Congress and among Muslim groups more extreme views by this time prevailed.

Indeed, the whole Muslim world within and outside India was rousing itself. The defeat of Turkey, the rise of Arab nationalism and Arab states in the Near East combined to create on the one hand a Khalifat (Caliphate) movement for the restoration of the defeated Sultan and on the other an awareness that some attempt must be made to come to terms with the forces of the modern world, especially those emerging from the West. In India Muslims began more seriously than ever before to examine their political position *vis-à-vis* the Hindus. Meanwhile the constitutionalists lost control of the Indian National Congress, which soon placed itself under the leadership of a new and little-known member, Mohandas Karamchand Gandhi. In his person the main impulses of a generation of Indian religious revivalism and of political agitation came to a focus, and within a decade, employing non-violent, non-co-operative techniques which he had previously perfected in South Africa, Gandhi changed what had been essentially a middle-class constitutional agitation into a mass revolutionary movement to drive the British from India.

The aftermath of war had produced sporadic terrorism throughout northern India, and the British attempt to bring it under control gave Gandhi and the Congress the opportunity to oppose Government and to threaten to destroy the new political experiment. A more unfavourable beginning for the new system could hardly have been devised. The constitutionalists had quitted Congress, and many of them as ministers or members of the new legislatures strove earnestly to work the proposals, but they lacked the backing of strong parties. Indeed, apart from the Indian National Congress, the members showed little tendency to organise themselves into strong parties and therefore one of the essential conventions of the British method, the two-party system, did not materialise. However, in this restricted sense, the system was made to work, and many of the new ministers carried through useful constructive legislation, and in all provinces and states advantage was taken of the fiscal independence which India had gained in 1919. Largely at Britain's expense, the new Indian, mainly Hindu, banking and commercial interests, the Parsis and Gujaratis of western India, the Marwaris of Rajputana, and the Chettiars of Madras, consolidated their hold on India's industrial economy; and great new managing agencies such as the Parsi Tata organisation and the Hindu Dalmia and Birla concerns began to displace the British, incidentally at the same time giving increasing financial and political support to the National Congress.

Gandhi pressed on with his policy, persuading Congress to define its aim as the attainment of self-rule, and discovering in himself a genius for presenting his ideas in popular, symbolic form. Feeling that the western world had little of value to give India, particularly that industrialisation was an evil, he sought to develop India as a land of villages. His own simple life and his set daily task of spinning cotton thread on the *charkha* or home-made

ich his countrymen, ...
British. Through the *charkha* he ...
homespun *khaddar* cloth, and the use of India-
ed, *swadeshi* articles. In politics he developed his
non-violent, non-co-operative methods to bring the
Indian masses into the struggle, and at his command
thousands defied the police and went quietly to prison.

At first Gandhi carried some of the Muslim groups with him, but he was too much of a Hindu figure and the Congress itself too obviously dominated by Hindu economic and political interests, for this to continue long. Moreover, the Muslim community was beginning to realise that in the political race it was already outdistanced. Although by this time Indians formed a majority in the public services, including the I.C.S., the Muslims were under-represented. In the economic field Hindu interests were outpacing the Muslims, as was revealed by the collapse of the Muslim Currimbhoy Textile Group in western India. Symptoms of this growing sense of economic and political competition were to be seen in the spread of communal rioting, particularly in Calcutta, in the revival of the long quiescent All-India Muslim League, and in the formation by Hindu orthodox groups of a Mahasabha to press Hindu, caste interests, and to oppose the Muslims. Coincidentally a proposal by a group of more moderate politicians, both Hindu and Muslim, to abolish special electorates was at once repudiated by the Muslim League.

This evidence of increasing discord, along with the failure of the Act of 1919 to win general support, led the British in 1928 to embark on a fresh examination of the whole political system and future, and a British commission under Sir John Simon was sent to conduct an inquiry. In its report it faced the situation realistically. Starting with the assumption that the British could not retrace their policy in India, it yet admitted that political developments had not justified the faith inspiring the proposals of 1919. But, in the hope that a greater challenge would evoke a greater response, they proposed more and not less responsible government. A federation was envisaged as the form of an All-India Government and, as a means to this end, responsible government was to be introduced into the provinces.

The Commission was promptly followed by conferences of Indian representatives in London, at which the Indian princes indicated their readiness to enter a federation and the Indian National Congress, through Mahatma Gandhi, continued to insist that it alone represented all groups and parties in India. The inquiry was then continued in parliamentary committees in London, finally culminating in a new Act, passed in 1935, which engaged all Britain's political energies and talents for months on end.

The Act, broadly speaking, followed the lines indicated by the Simon Commission Report, and dealt with two main subjects, the establishment of a federation and the creation of self-government in the provinces of British India. The federation, however, was not to come into being until a specified number of Indian States had agreed to join.

The more important Indian princes had all along been aware of the important strategic and constitutional position of their states, and in any new system they were bent on maintaining their own privileges. They felt, moreover, that the ruler-subject relationship in their states formed a more satisfactory basis of government than a quick rush into methods of responsible government to which they were not accustomed. The National Congress had no confidence in the Princes even though some of them, as, for instance, in Mysore, Travancore and Baroda, had shown by their modest grant of representative institutions to their peoples and by their policies for industrialisation and education that they were far from indifferent to

western ideas of progress. The National Congress, however, kept up political pressure by constantly threatening that when the British had gone it would "have no patience with the Princes". The latter therefore began to reconsider their promise to join the Federation, and only prompt and strong advice on the part of the British would have brought them quickly into line. This was not given, for the British, preoccupied in India by the struggle with Congress and in the west by the rise of Hitler's Germany, did not think it right to hurry the Princes, and the outbreak of the World War of 1939 in fact interrupted the negotiations so that this part of the Act of 1935 was never put into practice.

This failure to bring about the federation proved to be important because it formed one of the factors opening the way subsequently to the partition of India. Meanwhile the Central Government remained as constituted in the Act of 1919, with the Viceroy responsible to London.

The second part of the Act of 1935 which provided for Indian self-government in each of the eleven provinces of British India, was carried into effect. All the provincial ministerial departments were to be transferred to elected ministers who were to be responsible to the legislatures. The Governor of each province was to retain powers to safeguard peace and protect the minorities. Lastly, the franchise was extended from the seven million voters of 1919 to about thirty-five million, including six million women and ten per cent of the scheduled castes or untouchables. Separate communal electorates were retained.

The Indian constitutionalists, who had already done their best to apply the 1919 Act, again showed their willingness to co-operate with Government, and the Muslim groups, though cooler, also agreed to take part. But the Congress opposed the Act. They were in no mood to co-operate with the British; and the nature of their reaction may be perhaps best understood from the fact that Mahatma Gandhi, as he later admitted, had not even troubled to read its clauses. In particular, Congress objected to the proposal that the Governors should retain certain "safeguards". However, when in 1937 the time for the general election approached Congress decided to take part "in order to combat the Act and seek the end of it".

At this period two Indian political leaders came to the front, Jawaharlal Nehru and Muhammad Ali Jinnah. Nehru was the son of a famous Congressman, Motilal, whose family, although Hindu and Brahman, was western-educated. Nehru was sent to school and the university in England. On his return he had early entered politics as a supporter of Mahatma Gandhi and soon came to be acknowledged as his right-hand man and likely successor, and with Gandhi's support he became President of the National Congress in 1936 and 1937. It was Nehru's privilege to bring into full action the political machine which Gandhi had created. Jinnah, who came from a well-to-do Muslim trading family in Bombay, had been sent to England, like Nehru, to be trained as a lawyer, and on his return he, too, joined the Congress. He later crossed over to the Muslim League but remained adamant that co-operation with Congress was essential and that the 1935 Act could be worked in the provinces only through coalition governments. On this political platform he fought the general election of 1937.

Under Nehru and Gandhi the well-organised political machine of Congress scored a great, countrywide victory, with clear majorities in six provinces and a remarkable majority in the overwhelmingly Muslim North-West Frontier Province. On this the Congress decided to take office in these provinces, firmly rejecting Jinnah's plea that they should form coalition governments.

This fateful choice, which formed a turning-point in the modern history of India, arose directly from the nature

and strength of the Congress. It had always claimed to be a truly national organisation representing all classes and peoples of India, and indeed its vast membership at this period, numbering three to four million, and its working or governing committee was widely representative of Hindu and some Muslim groups. Its success in 1937 was so sweeping and so remarkable especially among Muslims in the North-West Frontier Province that it could see no reason why it should not go on to absorb the Muslim League, which anyway was only one and not necessarily the most important of a number of small Muslim parties.

In fact even in the eyes of moderate Muslims, like Jinnah, the Congress was increasingly assuming the colour of a Hindu body, and its rejection of coalition government served to reinforce the evidence of a Hindu superiority already evident in the civil services, in education and in the economy as a whole. Personally humiliated by Congress's decision Jinnah turned to rally the whole Muslim community behind the Muslim League, and the developing policy of Congress played into his hands.

Although the 1935 Act envisaged the new provincial governments as separate entities, Congress quite logically exploited its own countrywide organisation in such a way that the provincial ministries looked to the central Congress working committee for inspiration and guidance; and it was significant that leading Congressmen like Nehru and Rajendra Prasad chose to remain outside the provincial ministries and to direct policy from the Congress headquarters at Wardha.

The actual performance of the Congress ministries, especially in the way they worked with the existing Civil Service, in their firm maintenance of law and order and in their financial management, was impressive. But under their rule relations between the Hindu and Muslim communities rapidly deteriorated. Communal riots increased in both frequency and severity. Muslims everywhere objected in particular to the Congress's educational policy which was based on Gandhian principles, and which they regarded as a challenge to their own culture. General accusations were made that Hindu Congressmen in office were discriminating against Muslims, and between 1937 and 1939 three Muslim reports, purporting to prove this, were published. On a growing wave of Muslim fear, Jinnah and the Muslim League were borne into the position of representing the great majority of the Muslim community. The Muslim prime ministers of the Punjab, Bengal and Assam, who previously had led their own separate Muslim groups, joined the Muslim League, and for the first time, largely through Congress's mistakes of policy, the Muslim League became an effective political force.

Simultaneously Jinnah's own policy changed and from supporting the 1935 Act he swung over to the view that any form of parliamentary government in India based on English practice would permanently subordinate the Muslims to a Hindu-dominated Congress. In 1940 he declared "There are in India two nations" and both he and the Muslim League, taking advantage of policies long canvassed among extreme Muslim groups, finally put forward in March 1940 the demand for a separate, independent state to be called Pakistan (meaning "Land of the Pure"), which was to include the Muslim majority regions of the north-west and north-east of India. With this declaration partition had become the fundamental issue of Indian politics.

Meanwhile, in September 1939, the second World War had broken out and Britain as on the previous occasion in 1914, took India to war with her. Congress had anticipated this possibility and, arguing that a country which was not itself free should not be called on to defend freedom, they demanded independence as the price of their co-operation, and when the British Government merely reiterated

the promise of Dominion status, the Working Committee called all the Congress ministries out of office. The Muslim League on its side offered the Government support only on condition that Congress policies for India should be rejected.

This state of political deadlock persisted throughout the war, and whilst the fighting remained remote from India's frontiers no attempt to resolve it got very far. But when in 1941-42 the Japanese armies advanced through Burma, the British hastily despatched Sir Stafford Cripps to India to make a new offer of independence to take effect at the end of the war, if so desired with Dominion status, and at the same time, with the Muslim position in mind, it was suggested that any provinces which so wished might contract out of the new state. But the Congress stood firm both against the idea of Muslim separatism and for the policy of at once establishing fully responsible government. With the Japanese on India's door-step the British Government felt unable to take this bold step. The Congress obviously felt that a point of crisis had been reached. "A post-dated cheque on a bank that is obviously failing" was Mahatma Gandhi's description of the Cripps offer, and to force the issue he called on Britain to quit India under threat of a new non-violent campaign. The Congress backed him, and the Government promptly interned the Congress leaders but not before an outbreak of sabotage had cut the railway communications of the armies fighting on the frontier. By the close of 1942 order was restored, but the sense of frustration of Indians against Government and of community against community was marked by a crescendo of communal rioting.

The close of the war in Europe gave Britain a much-needed breathing space and the accession to power in the late summer of 1945 of a new Labour Government and the collapse of Japan's war effort produced a calmer situation in which the British cabinet sought a final settlement of the India question. Aware that prolonged negotiations might precipitate a catastrophic civil war they took the bold step of sending to Delhi a mission of three cabinet members. Acting on the long-held British assumption that the division of India into sovereign states could be avoided while giving adequate protection to Muslim interests, the mission were prepared to proceed at a fair and feasible pace to this end, but both the Congress and the Muslim League remained uncompromising.

Meanwhile, to show that Britain was serious in her intention to transfer power, the Viceroy had been instructed to bring the major Indian parties into an interim cabinet in which all the cabinet posts were to be held by Indians. Protracted manoeuvrings then followed in which first the Muslim League alone and then Congress alone undertook to form the interim Government. Not until October 1946 were they both brought into a coalition government by which time the struggle for power among the leading and middle-class Hindu and Muslim elements had spread throughout their whole communities. Rioting became widespread and within six months in Bengal and Bihar alone over ten thousand people suffered violent death.

It soon became clear that the coalition government would not work. The Muslim League revealed by its policy that it had participated only in order to prevent the Congress from controlling the central government, and when a Constituent Assembly was called together to frame a constitution, the League refused pointblank to take part and condemned the Assembly's proceedings as "invalid and illegal". The British cabinet tried a new approach by inviting India's leaders to London, but the Congress and the League were unyielding in their mutual distrust.

Meanwhile in northern India civil strife mounted to a climax. The worst-affected area was the Punjab where the Unionist ministry's decision to ban private armies was

THE BRITISH COMMONWEALTH

seized on by the Muslim League as their opportunity to take power. Attempts by the Hindus and Sikhs to prevent this soon deteriorated into persistent rioting. The towns of Amritsar and Multan went up in flames, the work of the capital, Lahore, was brought to a standstill and roving armed bands in the countryside fought pitched battles with the troops.

In an attempt to shock India's leaders into a sense of responsibility the British Government declared that the transfer of power must be completed by June 1948, and to point the moral a new viceroy, Viscount Mountbatten, formerly the Allied Supreme Commander in South-East Asia, was sent out to wind up the British administration. But the Congress and Muslim League did not yield an inch; and the communal war in the Punjab continued and began to spread to other parts of India.

Mahatma Gandhi and Pandit Nehru were profoundly shocked especially when they saw for themselves these consequences of "India's mad career of violence"; at the same time it was borne in on the members of the Congress Working Committee that the political unity of India could not be maintained except through widespread civil war and the exercise of force. Moreover, the British had made it clear that they would no longer accept the responsibility and in the last analysis the Congress did not feel equal to it. Prompted by their local parties in Bengal and the Punjab, they therefore proposed in May 1947 the partition of the Punjab as a solution of the struggle there. With this decision the partition of India was brought into the realm of practical politics, and quick to seize the advantage, the new Viceroy got the London Government to accept this as a basis of negotiation, and persuaded the Congress, the Sikhs and the Muslim League to come into line. Swiftly a plan was drawn for the division of the Punjab and Bengal—in each of which there were small Muslim majorities—the final decision being taken by each Legislative Assembly. Boundary commissions were provided to determine the exact frontiers, and the North-West Frontier Province, in which Congress had a hold, and the Muslim majority district of Sylhet in Assam were each to hold a referendum to decide their political allegiance.

Thankful that with this news the communal rioting promptly fell to manageable proportions, the Viceroy pressed on with great speed to complete the partition. By August 15th, 1947, it was possible for the Houses of Parliament in London to decree the birth of two new sovereign states of India and Pakistan, the latter to consist of a Muslim majority state in the north-west, including Sind and the Frontier Province, and of a Muslim majority state in East Bengal including Sylhet. Both the new India and the new Pakistan elected to become Dominions within the British Commonwealth of Nations. These decisions together, although not representing a complete fulfilment of British rule in India, constituted a remarkable triumph for Britain's post-war policy in India.

As its first Viceroy, India nominated Viscount Mountbatten, Pakistan named its leader Muhammad Ali Jinnah and under them the complicated task of dividing the powers, rights, assets, and not least the Indian army and Civil Service was carried through. But the task was made more difficult by a mass movement of millions of Hindus and Muslims across the international boundaries, creating a vast refugee problem.

In the political settlement the position of the Indian princes was at first left undetermined. British paramountcy had of course lapsed, and the Viceroy had advised them to seek association with one or other of the two new states. Some, like Mysore and the Rajputana states, for communal and geographical reasons promptly joined India, others similarly placed like Bhopal, which yet had a

Muslim ruler, hesitated before following suit; and two big states, Hyderabad and Kashmir, both holding key strategic situations, the former athwart central India, the latter in the north-west, held aloof altogether. But the Indian States' Minister, Vallabhai Patel was determined, by a mixed policy of coercion and persuasion, to bring these big states into closer relationship, and the declaration by the Muslim Nawab of Hyderabad that he could accept nothing less than an independent status, forced the Indian cabinet to assert its authority by ordering the invasion of Hyderabad. There was little resistance and Hyderabad soon came under direct rule from Delhi. In Kashmir, the Maharajah, who was a Hindu ruling over a majority of Muslims, leaned to India but hesitated to take the final decision. Communal strife had spread from India into the state and was intensified by strong governmental action against the Muslims. Taking advantage of this, Muslim tribesmen from the north-west invaded Kashmir and moved on the capital Srinagar, whereupon the Maharajah acceded to India. The Indian Government promptly flew in troops to save Srinagar and drive the tribesmen out of Kashmir, and in reply Pakistan pushed in state forces to prevent an Indian victory by force of arms. Military stalemate was soon reached and a cease-fire, which came under United Nations' authority, was arranged for January 1st, 1949. This left the centre and south, including Srinagar and the upper Jhelum valley and the province of Jammu under India's control. The military struggle was not resumed but politically the future of Kashmir became the great bone of contention between India and Pakistan.

Bound up with this problem was the control of the headwaters of the great Punjab canal and river system of irrigation. Planned as one great integrated system it was inevitable that the partition of the Punjab should give rise to difficulties, the more serious because the livelihood and life of millions of people were involved. Prolonged drought in West Pakistan in 1952 and 1953 brought matters to a head, and the Pakistan press and people became convinced that India intended to put Pakistan at her mercy by controlling the Kashmir headwaters, and in the spring of 1953 Indo-Pakistani tension grew until war seemed imminent. The timely intervention of the International Bank which proposed to find a way of fairly dividing the waters and, equally important, of generally enlarging the irrigation system took this issue for the time being out of politics. Pakistan, finding that neither the Kashmir problem nor the headwaters question could be settled within the Commonwealth began to look outside for support, and understandably sought to reassure herself by a military alliance with Turkey and by seeking military help from the United States. Simultaneously her domestic political situation showed signs of deteriorating. Under the frustrations of these early years the Muslim League itself began to fall apart. It lost political control of East Bengal, and in West Pakistan, the heart of its power, it was torn by the struggles between the orthodox extremists and the more progressive Muslims. The army and the civil service provided some stability, but whether Pakistan was to develop into a progressive modern state or sink slowly to the lower level of her fellow Islamic countries of the Middle East seemed uncertain. Pakistan stands at the cross-roads.

India since 1947 has consolidated her position as the most orderly, democratic nation in Asia. In the spring of 1952 she carried through the great experiment of a general election involving 175 million voters, a large proportion of whom were illiterate. Two political trends became evident, the first that the National Congress still possessed the confidence of the country, the second that orthodox Hindu groups on the one side and the Communist Party

INDIA

on the other had gained an all-India and growing status. India's boldness in political and economic experiment—the latter best seen in a vast five-year development plan—was not matched in the social sphere. In international affairs, through the personal contribution of her Prime Minister, Pandit Nehru, she took a line independent of both the West and the U.S.S.R. At the United Nations she became the focus of anti-colonial agitation. In the

HISTORY

Commonwealth she became the bridge for western and Asian opinion; and between Asian countries she sought to develop the Commonwealth method of association. India has become a power in international politics; but her domestic social policy and her external relations with Pakistan have still to be developed and strengthened if she is to prove equal to the international responsibilities she has undertaken.

C.H.P.

ECONOMIC SURVEY

PRELIMINARY ECONOMIC PROBLEMS

When independence came to India in August, 1947, it was not altogether an unmixed blessing; for with independence came the partition of the country and partition had not only political but also economic consequences. The new government was also left with the heritage of the aftermath of a war economy, and its inflationary potential. Thus, as a result of the partition, independent India found herself with a net reduction in domestic supplies of rice, wheat, cotton, and jute, with a corresponding increase in the pressure on her foreign exchange resources and also with difficulties in obtaining even the physical supplies of vital raw materials such as cotton and, in particular, jute. Partition also brought in its wake a large influx of refugees from Pakistan and with it the gigantic problem of relief and rehabilitation of many millions of persons. The aftermath of a war economy largely financed by inflation and unaccompanied by any significant increase in productive capacity confronted the country with rising prices, shortages of essential commodities, inadequate and inefficient transport, depleted and highly depreciated industrial equipment, and an acute demand for imports. Simultaneously, public demand for economic betterment showed a remarkable upsurge and added to the pressure on Government. The new Government therefore started its career under almost insuperable economic difficulties; and, except for those who had faith, it was neither clear nor certain what would be the outcome.

The country, however, had certain factors in its favour in waging this economic battle. Political leadership was in strong and popular hands and at the helm was a Prime Minister who commanded a measure of spontaneous public support such as has seldom been seen in the history of other political democracies during times of peace. The administration inherited from the British was intact, loyal and competent; and many of its members felt a new spirit of enthusiasm and purpose in facing up to their new responsibilities. The economy, though shaken by war and partition, was nevertheless basically sound, with a considerable measure of development in trade, transport, minerals, banking and industry; and it was obvious that there were great economic potentialities awaiting development. India possessed an alert business community and a standard of university education that gave her in absolute terms a larger professional and intellectual class than was possessed by most other countries in the world with the exception of France, Germany, the United Kingdom, the U.S.A., and the U.S.S.R. In the world of international economic relations, it was supported by its sterling balances, its membership of the sterling bloc and its possession of certain vitally needed exportable goods such as jute, manganese and tea. Above all, the massive though imponderable inheritance bequeathed by Mahatma Gandhi enveloped the country and gave her confidence not only in her destiny but also in her ability to overcome the difficulties standing in the way of its fulfilment.

Several major economic problems claimed the country's attention immediately after independence: problems of food, raw materials, transport, industrial unrest and refugee rehabilitation. Equally, if not even more important, was the task of political consolidation, the integration of the princely states into the Indian Union and the drafting of a Constitution. The Constitution was adopted after a long and lengthy debate and provided for a political and economic democracy with a Welfare State as the pattern for the new Indian society.

The Food Problem. During this first period of three years, the major preoccupation of Government was necessarily political rather than economic. All the same, the economic aspect was not, and in fact could not be, ignored. The food problem claimed immediate attention. Proceeding on the thesis that food controls and rationing were to some extent responsible for hoarding and artificial scarcity and taking into account the strongly expressed desire of the people to be rid of controls, the Government of India lifted a major portion of food controls early in 1948. The immediate result was disastrous; food prices rose sharply all over the country and there was no corresponding increase in domestic supplies coming into the market. The Government was both bold and wise enough to reverse its previous decision and re-imposed food controls within eight months of its original decision to remove them. It was now clear that while food controls as such were not desirable and imposed a heavy strain on the administrative and moral resources of the people (the number of persons subject to rationing in one form or another was several times the entire population of the United Kingdom, and this in a country where literacy was low and the population multi-lingual), there was no alternative as long as the supply situation was not good enough to create the confidence that alone could arrest hoarding. Such an improvement in the supply situation implied three conditions, viz. (1) ready availability of international supplies at reasonable prices, (2) sufficient stocks in the hands of the Government to meet any local shortages that might develop, and (3) a sufficiently significant increase in domestic production to meet not only rural demand but also to make available increased supplies for the urban market. Meanwhile, imports had to be obtained in increased measure, distribution controlled, and a psychology of confidence created among the non-producer consumers of foodgrains in the country; simultaneously, the tempo of domestic production had to be raised far beyond what was achieved under the British during the war and early post-war years.

The Government became fully seized of the situation and accordingly directed its energies during the first few years to increasing the volume of imports of foodgrains, while at the same time calling upon the country to work for self-sufficiency in food supplies. Results may be judged from the fact that whereas imports of foodgrains totalled only 6.2 million tons during the five pre-independence years of 1943-47, the corresponding figure during the five post-independence years of 1948-52 was nearly three times as large, namely 17.2 million tons. At the same time, expenditure on the Grow More Food Campaign which totalled Rs.20 crores¹ during the five years 1943-47 was stepped up to Rs.47 crores during the four years 1948-51. Nature also assisted Government efforts with the result that by 1952, food production started showing a significant increase over the figures of the previous years. It therefore became possible for the Government to resume a policy of de-control; this was done by stages, beginning in 1952, and by 1954, all food controls had been completely abolished. The food problem that appeared so menacing at the advent of independence has now been brought under control and one of the most important economic problems confronting the country has been successfully solved.

¹ One crore = 10 million.

Raw materials. The problem of raw materials was also one of acute significance on the emergence of independence. Partition left the country with the bulk of the raw material required for its jute industry in Pakistan; and it also left with Pakistan a substantial portion of the long-staple cotton required by the Indian textile industry. Cotton at least could be obtained from other foreign sources, but not jute; and relations between the two countries were so strained during the first few years of independence that India found it difficult to obtain her normal requirements from Pakistan. This in turn meant that India had to strain her agricultural resources in order to step up the domestic output of both raw jute and raw cotton; and this at a time when she was also trying to raise the domestic output of foodgrains. Vigorous attempts, however, were made to increase the production of cotton and jute and these met with a fair measure of success. Within five years of independence, the area under cotton and jute had increased from 11.7 and 0.65 million acres respectively in 1947, to 14.5 and 1.95 million acres respectively in 1951; while output in terms of bales of 400 lb. each had increased from 2.2 million and 1.7 million under cotton and jute respectively in 1947 to 2.9 and 4.7 million respectively in 1951. Since then, supplies of raw material have not presented any special difficulty and the industry and trade of the country have been able to proceed on their normal course.

Transport. Transport was another acute problem. The railway system had been subjected to an almost intolerable pressure during the war and there had been neither repairs nor replacements. The end of the war saw the country with a large number of locomotives and wagons out of use or awaiting repairs and the resulting shortages told heavily on the availability of transport facilities. Transport bottlenecks added to the gravity of the food situation and the problem of raw materials and contributed to overall shortages in the economy. The new Government bent its energies to the immediate task of securing large imports of locomotives and wagons and in this it was helped by a loan from the International Bank. It also embarked on vigorous plans for increasing the domestic production of wagons and coaches. By 1951, though the problem had by no means been solved, enough had been achieved to restore a considerable measure of normalcy; and transport ceased to be such a cause of anxiety to the Government. While the short-term problem was being tackled steps were also being taken to solve the long-term difficulty of transport bottlenecks by measures aimed at making the country self-sufficient in coaches, wagons and locomotives within a reasonable period.

Wages and Employment. Industrial and labour unrest was another problem that harassed the Government in the early years. Prices had risen steeply during the war and with them the cost of living; but no corresponding increases had been effected in the wages and salaries of employees in either the private or the public sector. The Government took early steps to remedy the situation. Wages, salaries and dearness allowances were all revised in an upward direction in the case of government servants in the lower income groups, while special legislation providing for adjudication by industrial tribunals of claims for revision of wages and dearness allowances brought about a substantial increase in the earnings of industrial workers. Thus, the average annual earnings of factory employees in industry rose from Rs.737 in 1947 to Rs.890 in 1948 and Rs.986 in 1949. At the same time, at a tripartite Conference of representatives of the Government, labour and employers held in 1948, an industrial truce was reached which led to a substantial reduction in industrial disputes, thereby paving the way for a subsequent

expansion of industrial output. Thus the number of man-days lost through industrial disputes fell from 12.7 million in 1947 to 7.8 million in 1948 and 6.6 million in 1949. The Government, at the same time, gave further evidence of its concern for industrial labour by embarking on schemes for industrial housing, employees health insurance, coal mines provident fund and bonus schemes and other forms of industrial welfare.

The Refugee Problem. The refugee problem that confronted the Government of India after independence was truly one of stupendous dimensions. When the census of 1951 was taken, it was found that 7.3 million displaced persons had arrived in India from Pakistan, of whom no less than 4.5 million came in 1947 and more than 1 million persons in 1948. The refugees not only presented a gigantic economic problem but also all the elements of an explosive political situation. The Government set up a special Ministry of Relief and Rehabilitation to deal with this question. The Muslim population that had emigrated to Pakistan had left a certain area of cultivated land that could be used for rehabilitation of the refugees of rural origin who had arrived in India; but nearly 54 per cent of the refugees were persons of urban origin for whom the evacuee property left by emigrants was woefully inadequate and for whom therefore special arrangements had to be made by the Government for residential accommodation, commercial premises, and finance for industrial and commercial rehabilitation. During the seven years ending 1954-55 the Government had succeeded either through its own operations or by subsidising private schemes, in getting over half a million new residential units and 340,000 new shop units constructed in urban areas. Some 223,000 persons were found new employment through the employment exchanges, while over 100,000 persons were given technical training to fit them for productive work. Loans to the extent of Rs.369 million were also disbursed to the refugees for economic rehabilitation in urban areas. The total expenditure incurred by the Government of India on the refugee problem during this period reached 2,237 million rupees. Thus, by April, 1955, the refugee problem itself had been successfully tackled and such aspects as remained, notably in terms of employment and earnings, were no more than a part of the general problem of under-development affecting the country as a whole. Even by 1948 it was clear that the Government had set on foot an active and comprehensive programme for refugee relief and rehabilitation, and the dangerous political possibilities inherent in the refugee problem gradually died down with the progressive and visible implementation of the programme.

Thus the first Government of independent India was able not only to tackle with a reasonable degree of success the many political problems that confronted it in the early years of independence but was also able to make a start on the economic problems. India was declared a Republic on January 26th, 1950 and embarked on her new career with a Constitution drawn up by her own people. The stage was now set for a concentration of national effort on the broad economic problem that confronted the country. The problem was partly one of rehabilitation of the economy from the effects of war and partition; partly that of creating the conditions necessary for rapid economic development; and partly one of directing the nature and speeding up the tempo of current economic activity. All this required planning. Accordingly, the Government announced, in the Finance Minister's budget speech of 1950, the setting up of a Planning Commission, and India's first Planning Commission came into existence on April 1, 1950 with the Prime Minister, Pandit Jawaharlal Nehru, as its first Chairman. The subsequent economic history

THE BRITISH COMMONWEALTH

of India is bound up with the formulation and implementation of the planned programmes for the economic development of the country.

THE FIRST FIVE YEAR PLAN

India's first Five Year Plan was formulated and published in draft form in July, 1951. The Plan was not, however, a comprehensive plan in that it did not involve the direction or control of the entire economy; not was it a plan in the sense of starting *de novo* and mapping out in detail even the activities which fell within its range. It was more a programme of public expenditure intended partly to repair the damage wrought to the economy by war and partition and partly to increase the volume and range of the economic and social overheads so vitally necessary for the promotion of economic development. The Planning Commission also had to take account of a number of development schemes, especially in the fields of irrigation, power and transport, which were already in progress, although all that it could really do was to give coherence and a sense of national purpose to the programme, thereby effecting some rationalisation and re-distribution of the expenditure on development. Nevertheless, there is no doubt that the plan marked a new stage in the nation's economic history; and subsequent events have shown what a profound effect it has had on the conditions and tempo of economic development in the country.

Expenditure. The Plan envisaged a total expenditure of Rs.20.69 billion in the public sector (this was subsequently increased by Rs. 1.5 billion to cover schemes specifically aimed at increasing employment) during the five years beginning April 1st, 1951. This expenditure was distributed under different heads as under:

(Figures in millions of rupees.)

Agriculture and Community Development	3,610
Irrigation	1,680
Multi-purpose Irrigation and Power	
Projects	2,660
Power	1,270
Transport and Communications	4,970
Industry	1,730
Social Services	3,400
Rehabilitation	850
Others	520

It was expected that an expenditure of about Rs.18 billion would be incurred during the same period by the private sector in the fields of agriculture, industry, trade, housing etc. The planners expected that, as a result of this planned public expenditure and anticipated private expenditure, the national income would increase over the five-year period by about 10 to 12 per cent compared with the estimated level for 1950-51; the rate of saving as a proportion of national income simultaneously going up from an estimated 5 per cent in 1950-51 to 6½ per cent in 1955-56.

Resources. The revenue budget for the first Five Year Plan was as follows:

(Figures in millions of rupees.)

1. Public Savings from current revenues	5,680
2. Public Savings from Railways	1,700
3. Private Savings through loans	1,150
4. Private Savings through small savings and other unfunded debt	2,700
5. Private Savings through deposits, funds and other miscellaneous sources	1,350
6. Foreign loans and grants	1,560
7. Uncovered	6,550
TOTAL:	20,690

It was proposed to meet as much as possible of the uncovered balance by further taxation and foreign loans and grants, the remainder to be left as deficit. In other words, a part of the planned outlay on public expenditure was to be financed by deficit. The size of the uncovered balance was increased subsequently by another Rs.1,500 million for development projects specifically aimed at increasing employment, especially among the educated middle classes. The receipts from budgetary surpluses, have in some respects fallen short of expectations but the response on the part of the public in respect of loans and small savings has been quite satisfactory. Thus, on the basis of actual borrowings, total net receipts for the Centre and States taken together are likely to amount to Rs.1,800 million during the Plan period as against the original estimate of Rs.1,150 million. Response from the public to the small savings drive has also been satisfactory, the total amount likely to be realised from this source being Rs.2,350 million during the Plan period. Receipts from foreign loans and grants have also shown a rise, the amount received during the period 1951-54 totalling Rs.2,342 million of which Rs.1,319 million had already been utilised during the period. Of this amount, loans totalled Rs.1,175 million, Rs.905 million being accounted for by the United States Wheat Loan and Rs.270 million being loans sanctioned by the International Bank. Grants totalled Rs.1,167 million, of which the United States Government accounted for Rs.816 million and the Colombo Plan for Rs 324 million. In addition, sterling resources made available by the United Kingdom Government from India's sterling balances amounted to Rs.2,900 million during the Plan period. The figures exclude the amounts received by way of foreign loans and grants during the last year of the Plan period viz. 1955-56. Thus, except for a shortfall in the receipts expected from budgetary and railway surpluses, the financial picture, so far as resources are concerned, has not been unsatisfactory. At the same time, the dangers of financing by deficit have been mitigated to some extent by the shortfall in planned expenditure, especially during the earlier years of the Plan period, mainly because of the time necessary to tune up the administrative machinery to undertake with efficiency the proposed large increases in public expenditure. This shortfall in public expenditure has not had, however, any significantly adverse effect on the targets of production, especially of the basic consumption goods like foodgrains and cloth, the supplies of which are so important in mitigating the effects of deficit financing. In the event, prices have not shown any tendency to rise; on the contrary, after recording a rise at the time of the Korean boom in common with the rest of the world, Indian prices have shown a marked tendency to fall during the last three years. There has been therefore no inflation or even a tendency to inflation during the period of the first Five Year Plan.

Achievements.—The country is now in the fifth and last year of the first Five Year Plan. It is clear from the facts available that the economy has responded to the stimulus provided by the Plan and that, by and large, the objectives have been achieved. Thus, the production of foodgrains and cloth exceeded the targets, whereas progress in the production of cotton, cement, ammonium sulphate, locomotives and coastal shipping has kept more or less to schedule. In certain other fields, however, especially in the production of capital goods and the provision of social services, progress has been behind schedule during the first three years of the Plan. Agricultural production as a whole had gone up by 18 per cent and industrial production by 33 per cent by the first half of 1954 as compared to the pre-plan year. Details are as follows:

	1950-51 (Base Year)	Increase by 1955- 56 (Plan target)	Increase achieved in 1953-54	Percentage of achieve- ment to the Plan target
I. Agricultural production:				
Foodgrain* (million tons)	54.0†	7.6	11.4	150.0
Cotton lac bales)	29.7	12.6	9.6	76.2
Jute (lac bales)	32.8	20.9	-1.5	—
Gur (lac tons)	56.2	7.0	-10.0	—
II. Electric energy (million kW)	2.3	1.2	0.5	41.7
III. Irrigation (million acres)	50.0	19.7	7.5‡	38.1
IV. Industrial production:				
Finished steel (lac tons)	9.8	6.7§	1.0	14.9
Cement (lac tons)	26.9	21.1	13.4	63.5
Ammonium Sulphate (thousand tons)	46	404	261	64.6
Locomotives (numbers)	7	143	79	55.2
Jute manufactures (thousand tons) . .	892	308	-28	—
Mill cloth (million yards)	3718	982	1188	120.9
Bicycles (thousands)	101	492	188	43.8
Coastal shipping (thousand G.R.T.) . .	217	165	102	61.8
V. National highways (thousand miles) .	11.9	0.6	0.6	50.0
VI. Education and Health:

Hospitals (thousand beds)	106.5	10.7	4.8¶	44.8

* Including gram and pulses.

† Base year is 1949-50.

‡ Of which 2.9 is by way of major works.

§ Target to be achieved by 1957-58.

|| Revised target

¶ In addition 4.8 thousand beds had been added to T.B. hospitals by 1953-54.

National Income. The result of this increase in production was a rise in the national income of about 12.5 per cent by the end of the third year of the Plan period. Thus, the index number of the net national output at constant prices was 115 in 1953-54 as compared to 102.3 in 1950-51, while that of the *per capita* net output rose to 107.9 as compared to 99.8 in 1950-51. Production in 1954-55 has also shown an increase, especially in the industrial and governmental sector, and there has been no decline in agriculture; the same trends have continued in the current year in spite of some unfavourable monsoon conditions. It is practically certain therefore that the increase in national income by the end of the first Five Year Plan will be greater than was originally postulated, and may well amount to about 15 per cent over the five-year period.

Prices. The strength of the economy is also shown by the behaviour of the price level during the last five years. The index number of wholesale prices stood at 409.7 (the base is August 1939 = 100) in 1950-51, which was the pre-plan year. The index rose to 434.6 in 1951-52 mainly because of boom conditions associated with the Korean war and the stock-piling that accompanied it. It fell sharply to 380.6 in the next year and stood at 377.4 in 1954-55 in spite of the vast increase in public expenditure resulting from the Plan.

Balance of Payments. The country's balance of payments also did not show any adverse effects on account of the working of the Plan. While 1951 showed an adverse balance of Rs.313 million, 1952 showed a favourable

balance of Rs.17 million, 1953 of Rs.592 million, and the first half of 1954 of Rs.106 million. India's economic situation thus showed an appreciable improvement, reflected in a lesser dependence on foreign sources of supply and in the gradual replacement of her external deficit by a surplus.

Investment. Another significant indication of India's economic strength has been the increased inflow of private foreign investments during the post-independence period. A recent survey of India's foreign liabilities and assets made by the Reserve Bank of India has shown that between the end of June 1948 and the end of 1953, there has been a "net increase in foreign business investments of the order of Rs.1,320 million, of which about 85 per cent (Rs.1,120 million) belonged to the "direct" investment category. The increase in investment classified according to trades showed that the manufacturing sector accounted for Rs.640 million, trading Rs.300 million, plantations Rs.200 million, utilities Rs.190 million and miscellaneous Rs.90 million. While the flow of new capital from the United States was largely confined to the trading sector, investment from the United Kingdom went to several sectors such as manufacturing (Rs.560 million), plantations (Rs.210 million), trading (Rs.200 million), utilities (Rs.190 million) and financial business (Rs.140 million).

The strength of the economy was reflected not only in the increase in its public outlay on investment and in the foreign private outlay on investment, but also in its domestic private outlay on investment. Thus an inquiry conducted by the Taxation Enquiry Commission showed that gross capital formation during the five year period 1946-51

THE BRITISH COMMONWEALTH

in the manufacturing sector for all public limited companies was of the order of Rs.6,170 million, of which gross fixed assets amounted to Rs.3,170 million, plant and machinery alone accounting for Rs.1,950 million. The paid-up capital of joint stock companies at work in India rose from Rs.5.7 billion in 1948 to Rs.9.0 billion in 1953 or by Rs.3.3 billion, while electric power used for industrial purposes rose from 203 million kWh in 1948 to 330 million kWh in 1954, that is by 63 per cent. Ton-miles of freight carried on Indian railways rose from 1,859 million in 1948 to 2,447 million in 1953 or by about 32 per cent. The effect of all this has been seen in the spectacular rise that has taken place in the volume of industrial production, the index moving up from 108.4 in 1948 to 146.6 in 1954 and to a monthly average of 158.3 during the first seven months of 1955. Figures for some of the individual industries, for which data are available, are given on page 478.

Rural Development. The most spectacular change reflecting the increased strength of the economy has been in the rural sector under the programme for what is known as community projects and National Extension Service Blocks. The idea was to undertake an integrated approach to the whole problem of rural development, including in it not only purely economic activity such as agriculture, irrigation, communications and supplementary employment, but also such other vital aspects of rural life as education, health, housing, training and social welfare. Project areas have been selected all over the country, comprising blocks of about 100 villages each, the development blocks being sub-divided into groups of 5 villages, with a village level worker in charge of each group. In implementing the various projects aimed at the all-round economic, social and cultural development of the village, an essential aim has been to secure the participation of the villagers themselves, and scales of voluntary contributions, either in cash or in labour, have been laid down as pre-conditions to development schemes being undertaken under the Community Development programme. In addition, a national extension organisation for intensive rural work has been set up with a view to reaching every farmer and assisting in the co-ordinated development of rural life as a whole, and a beginning has been made in the first Five Year Plan by bringing about 120,000 villages, or nearly a quarter of the rural population, within the ambit of this organisation. The programme of Community Projects and National Extension Service has been successful beyond expectation and a new life and tempo have been created in the countryside which is bound to have far-reaching results on the pace of rural economic development. By the end of 1953-54, 220 Community Project Blocks and 498 National Extension Service Blocks were in operation, covering a total of 73,450 villages and a population of 54.4 million. An indication of the effect these have on rural life is found in the data available on the 167 Community Project Blocks which were started in October 1952 and have now had two years of active life. These Blocks covered 18,350 villages with a population of about 18 million and their development has included the digging of 346,513 compost pits, and the distribution of 1.9 million maunds¹ of chemical fertilisers, 550,086 maunds of improved seeds and 52,906 agricultural implements; 324,223 agricultural demonstrations have been held, 181,750 acres of waste land have been reclaimed and minor irrigation facilities were extended to 474,045 acres. In the sphere of communications, 558 miles of *pucca* roads and 7,790 miles of *kacha* roads were constructed; rural health and sanitation were improved by the construction

of soakage pits and rural drains and by the renovation of old wells. Finally, 2,592 new schools and about 9,100 model houses were constructed and 95,287 houses were reconditioned; and 8,323 adult education centres and 1,966 co-operative societies were started. The total expenditure incurred by the Government on these projects was of the order of Rs.87 million, while the total voluntary contribution made by the people in cash, labour, materials etc. was approximately Rs.38 million.

It will be seen from the above facts that the Indian economy is now gearing itself up for an era of rapid economic development. The economic problems inherited from the second World War and from Partition have largely been solved and political stability has been achieved. The country has embarked on a Five Year Plan of economic development and has largely succeeded in achieving its objectives. Some of the bottlenecks that were preventing the expansion of the country's economy have now been removed and it is possible to think of economic development on a larger scale and at a more rapid pace than was possible before. For instance, the area under irrigation has been substantially increased, and the production of electric power has been raised; a number of the necessary basic industries have either been started or are under way; technical and scientific skills have increased, and a new psychology of confidence and self-reliance has been created in the country.

THE SECOND FIVE YEAR PLAN

It is therefore but appropriate that India should now be thinking of a larger and a bolder second Five Year Plan and that industry should figure more prominently in it than in the first. Draft proposals for the second Five Year Plan (see table on page 479) are already under discussion and these envisage something like a doubling of the volume and intensity of the national effort that went into the first Five Year Plan. Thus it is suggested that national income should be increased by about 25-27 per cent over the next five-year period, the rate of savings and investment by about 10-11 per cent, and a sound industrial-mineral-transport base built up at the end of the period which will make possible a still more ambitious Plan for the third five year period.

The task will not be easy. There are a number of problems facing the country in its task of proceeding along the road of planned economic development, and some of them almost defy solution: there is the problem of increasing population and, along with it, not only the increasing number of mouths to feed but, what is even more important the growing additions to the labour force for whom productive employment has to be found; there is the problem of the increasing unemployment over a short period that would result from the application of improved technology to productive activity, especially in the field of industry. Added to this is the vast and unsolved problem of the large proportion of the existing labour force that is now attached to agriculture, where both disguised and real unemployment or under-employment exist. The problem of employment thus looms large before the country, especially in the immediate future. There is also the vast problem of bringing about a voluntary increase in the rate of saving in a community, the bulk of which is poor and can legitimately plead for immediate increases in consumption, and which at the same time functions within the framework of an active political democracy with its inevitable limitations on the power of the government to undertake unpopular action or to follow long- rather than short-term policies. Then there is the problem of foreign capital—whether by way of loans or of grants is a matter of comparative indifference—which is so badly needed both in

¹ 1 maund = 82½ lb.

INDIA

the form of physical supplies and of foreign exchange resources in order to implement a programme of the order and content of the second Five Year Plan; and the difficulties of getting supplies of foreign capital and equipment in a world torn asunder by political blocs for a country like India which wants to keep free from the entanglements of military alliances. There is also the problem of introducing the economic regulations required to arrest the emergence of inflationary tendencies which are liable to follow any substantial resort to deficit financing. And finally, there is the vexed problem of reconciling the creation of economic incentives for the many with that of economic incentives for the few, and the whole host of policies and institutions connected with the aim of creating a socialistic pattern of society in India. It is obvious, therefore, that it will not be easy for India to make the progress

ECONOMIC SURVEY

that she wants and actually could make in the economic field. But the economic background is sound, the people are determined and self-reliant, the outside world is, on the whole, friendly and helpful, and the atmosphere is one that is suited for great effort. Above all, in the person of her Prime Minister, Jawaharlal Nehru, the country has not only an inspiring but also an inspired leader. India has come well out of the immediate pangs of independence, she has made a good start with her first Five Year Plan, and she has every reason to do better with the second. Growing prosperity will benefit not only India and her people but also the outside world and its citizens. Above all, it will contribute to the future of political and parliamentary democracy in Asia, and thereby, in the long run, in the rest of the world also.

V. K. R. V. R.

THE BRITISH COMMONWEALTH

STATISTICAL SURVEY

AREA AND POPULATION

The area of the Union of India is 1,176,864 sq. miles and the population at the time of the 1951 Census was 356,879,394. The largest towns and their populations are: Bombay 2,839,270, Calcutta 2,548,677, Madras 1,416,056, Delhi (incl. New Delhi) 1,191,104, Hyderabad 1,085,722. About 15 per cent of the population lives in towns but the proportion varies: in Bombay State, for instance, the figure is 24 per cent, in Assam 3 per cent. The population of

India's 75 cities increased by 43·8 per cent in the decade 1941-51.

In October, 1955 the States Re-organisation Commission recommended far-reaching changes which, if adopted, will reduce the number of states from 27 to 16, with three territories (Delhi, Manipur and the Andaman and Nicobar Islands) to be administered from the centre; the distinction between Part A and Part B states would be abolished and Part C states would disappear.

Four great trunk roads stretching diagonally across the country form the framework of India's road system. The Grand Trunk Road stretches from Amritsar in the north-west to Calcutta in the east. The other three run from Calcutta to Madras, Madras to Bombay, and Bombay to Delhi. In all, they **amount to** over 5,000 miles. Subsidiary roads connecting various district centres are linked to them.

THE BRITISH COMMONWEALTH

THE CONSTITUTION

The Constitution of India, adopted by the Constituent Assembly in November 1949, was inaugurated on January 26th, 1950, on which date India became a sovereign democratic republic. India's relations with the British Commonwealth of Nations were defined at the London Conference of Dominion Prime Ministers in April 1949, when it was unanimously agreed that the Republic of India should remain a full member of the Commonwealth.

A Constituent Assembly was set up in 1946 in accordance with the Cabinet Mission Plan, and was subject to the final authority of the British Parliament. In consequence of the Indian Independence Act, 1947, it re-assembled as a sovereign body to assume power on behalf of the Government of India, thereby superseding the former Indian legislature, consisting of the Council of States and the Legislative Assembly. The new Constitution provided, under Article 379, that the Constituent Assembly should act as the Provisional Parliament for the Union of India until both Houses of the new Parliament were constituted.

The Constitution declares in the preamble that the People of India solemnly resolve to constitute a Sovereign Democratic Republic and to secure to all its citizens justice, liberty, equality and fraternity. There are 397 articles and 9 schedules, which form a comprehensive document. The Constitution is flexible in character, and a simple process of amendment has been adopted.

Union of States. The Union of India comprises 27 states. Nine states correspond to former Governors' provinces, seven to former Indian states, or unions of states, and nine to Chief Commissioners' provinces. Andhra is a new linguistic state. The Andaman and Nicobar Islands are scheduled territories also included in the Union. There are provisions for the formation and admission of new states.

The States Re-organisation Commission (October, 1955) recommended changes which, if adopted, will reduce the number of states from 27 to 16,* with three territories to be administered from the centre.

The Constitution confers citizenship on a threefold basis of birth, descent, and residence. Provisions are made for refugees who have migrated from Pakistan and for persons of Indian origin residing abroad.

Fundamental Rights and Directive Principles. The rights of the citizen contained in Part III of the Constitution are declared fundamental and enforceable in law. "Untouchability" is abolished and its practice in any form is a punishable offence. The Directive Principles of State Policy provide a code intended to ensure promotion of the economic, social and educational welfare of the State in future legislation.

The President is the head of the Union, exercising all executive power on the advice of ministers responsible to Parliament. He is elected by an electoral college consisting of elected members of both Houses of Parliament and the Legislatures of the States. The votes are weighted so that the voting strength of the Central Legislature is equal to that of all the State Legislatures combined. The President holds office for a term of five years and is eligible for re-election. He may be impeached for violation of the

Constitution. The Vice-President is the *ex-officio* Chairman of the Upper House and is elected by a joint sitting of both Houses of Parliament.

The Parliament for the Union consists of the President and two Houses, known as the Council of States and the House of the People. The Council of States, or the Upper House, consists of not more than 250 members. Election is indirect through the State legislatures. The Council of States is a permanent body, not liable to dissolution, but one-third of the members retire every second year. The House of the People consists of not more than 500 members, directly elected on the basis of adult suffrage. The life of this House is normally five years.

Government of the States. The governmental machinery of Part A states (corresponding to Governors' provinces) closely resembles that of the Union. Each of these states has a governor at its head appointed by the President for a term of five years to exercise executive power on the advice of a Council of Ministers. The heads of Part B states (corresponding to Indian states and unions of states) are known as Rajpramukhs, and were appointed in accordance with agreements made between the States Unions and the Government of India. The Rajpramukh will also exercise executive power on the advice of ministers but for a transition period of ten years the government of these states will be subject to directions of the Central Government. The states' legislatures consist of the Governor, or Rajpramukh, and either one house (legislative assembly) or, in some states two houses (legislative assembly and legislative council). The term of the assembly is five years, but the council is not subject to dissolution. Part C states (Commissioners' provinces) are administered by the President through a Chief Commissioner or a Lieutenant-Governor.

Legislation—Federal System. The Constitution provides that bills, other than money bills, can be introduced in either House. To become law, they must be passed by both Houses and receive the assent of the President. In financial affairs the authority of the Lower House is final. The various subjects of legislation are enumerated on three lists in the seventh schedule of the Constitution: the Union List, containing over 90 entries, including external affairs, defence, communications, and atomic energy; the State List, containing over 60 entries, including local government, police, public health, education; and the Concurrent List, with under 40 entries, including criminal law, marriage and divorce, labour welfare. The Constitution vests residuary authority in the Centre. All matters not enumerated in the Concurrent or State Lists will be deemed to be included in the Union List, and in the event of conflict between Union and State Law on any subject enumerated in the Concurrent List, the Union Law will prevail. In time of emergency Parliament may even exercise powers otherwise exclusively vested in the states. An independent judiciary exists to define and interpret the Constitution and to resolve constitutional disputes arising between states, or between a state and the Government of India.

Other Provisions of the Constitution deal with special administration of tribal areas, administration relations between the Union and the states, inter-state trade and commerce, finance, and official language.

* This plan includes Jammu and Kashmir, which is still in dispute between India and Pakistan.

THE GOVERNMENT

President: Dr. RAJENDRA PRASAD.
Vice-President: Dr. S. RADHAKRISHNAN.

THE CABINET

Prime Minister and Minister for External Affairs: JAWAHARLAL NEHRU.
Minister for Education and Natural Resources and Scientific Research: MAULANA ABUL KALAM AZAD.
Minister for Home Affairs: GOVIND BALLABH PANT.
Minister for Communications: JAGJIVAN RAM.
Minister for Finance: C. D. DESHMUKH.

Chief Commissioner: KEWAL SINGH.

JAMMU AND KASHMIR

The future of the State of Jammu and Kashmir is the subject of a dispute between India and Pakistan, which has been referred to the United Nations.

POLITICAL PARTIES

The first General Elections under the new Constitution were held in 1952 and resulted in a sweeping victory for the Congress Party who, with 362 successful candidates,

secured 75 per cent of the seats in the House of the People, although they gained only 45 per cent of the total votes. The figures for the 1952 Elections were:

1952 ELECTIONS

PARTIES	VALID VOTES POLLED	PERCENTAGE TO TOTAL VALID VOTES POLLED	SEATS WON
Congress . . .	47,528,011	44.85	362
Socialist* . . .	11,126,344	10.50	12
K.M.P.P.* . . .	6,158,782	5.81	9
C.P.I. and Peoples' Democratic Front . . .	4,712,009	4.45	23
Jan Sangh . . .	3,236,361	3.05	3
S.C.F. . . .	2,501,964	2.30	2
Ram Rajya Parishad . . .	2,094,811	1.98	3
Krishikar Lok Party . . .	1,489,488	1.40	1
Hindu Mahasabha . . .	1,046,263	0.91	4
Forward Bloc (M) . . .	988,272	0.90	1
R.S.P.I. . . .	393,984	0.37	2
Forward Bloc (R) . . .	133,936	0.13	—
R.C.P.I. . . .	26,245	0.02	—
Bolshevik Party . . .	25,792	0.02	—
Other Parties . . .	7,678,662	7.27	26
Independents . . .	16,845,494	15.90	41
TOTAL . . .	105,987,318	99.86	489

* since merged as Praja Socialist Party.

Since 1952 steps have been taken to check the growth of mushroom parties, and on the recommendation of the Electoral Commission only parties which poll more than 3 per cent of the total votes (regardless of the number of seats) are recognised as All-India Parties. The following four parties have been so recognised.

The Indian National Congress, the party now in power at the Centre and in all states, was founded in 1885 by A. O. Hume, with the main object of creating national consciousness in India, and establishing friendly relations with the United Kingdom. In 1907 Congress was split in two—the Extremists and the Moderates. In 1920, Mahatma Gandhi began to take a leading part in its activities and policies, and Congress soon became a mass organisation fighting for complete independence. By 1939 Congress held power in six of the eleven provinces and in two others there were Congress-Coalition Governments. At the outbreak of war in 1939 these ministries gave up office. In 1942 the Congress adopted the policy of "quit India" towards the British. The 1945 elections led to Congress ministries in eight provinces, Congress-Coalition ministries in two, and a Muslim League ministry in one.

Since Independence, Congress has worked for the well-being and advancement of the people of India by peaceful and legitimate means, for a co-operative Commonwealth based on equality and opportunity, for political, economic and social rights, for peace and fellowship. The 60th session of the party, held in January 1955, called for

the establishment of a "socialistic pattern of society" in India and welcomed a neutral foreign policy aimed at peaceful co-existence.

Leader: U. N. DHEBER.

Membership: over 6 million.

The Praja Socialist Party was founded in 1952 as the result of a merger between the Socialist party and the Kisan Mazdoor Praja (Peasant, Workers' and Peoples') party. In the last Indian general election, the two parties polled 17 million votes as compared to Congress's 47 million.

Leaders: ACHARYA NARENDRA DEVA (Chair.), FARID ANSARI, BIPINPAL DAS, M. R. DANDAVATE (Joint Secs.).

Membership: About 270,000.

The Communist Party has its following mostly among trade unionists and student bodies. Its earlier policy of violence was abandoned in favour of support for a "coalition of all democratic anti-feudal, anti-imperialist forces in the country". The party polled nearly 5 million votes in the 1952 elections.

Leaders: H. N. MOOKERJEE; Gen. Sec. A. K. GHOSH.

Membership: About 60,000.

Jan Sangh (*India People's Party*) was founded in 1952 in opposition to the Congress Party. It stands for land reform, economic decentralisation and the reunion of India and Pakistan.

President: PREMNATH DOGRA.

Membership: 400,000.

THE BRITISH COMMONWEALTH

THE LEGAL SYSTEM

The appointment of a Law Commission, to be headed by M. C. SETALVAD, the Attorney-General, was announced on August 5th, 1955. The Commission will review the system of judicial administration in India and make recommendations for improvements. The enquiry will cover both civil and criminal courts, the recruitment of the judiciary and the standards of legal education.

THE SUPREME COURT

Article 124 of the Constitution provides for the establishment of a Supreme Court of India consisting of a Chief Justice of India and, until Parliament prescribes by law a larger number, not more than seven judges.

The Supreme Court exercises exclusive jurisdiction in any dispute between the Union and the States (although there are certain restrictions where an acceding state is involved). It has appellate jurisdiction over any judgment, decree or order of the High Court where this Court certifies that both a substantial question of law and the interpretation of the Constitution are involved.

Provision is made for the appointment by the Chief Justice of India of judges of High Courts as *ad hoc* judges at sittings of the Supreme Court for specified periods, and for the attendance of retired judges at sittings of the Supreme Court. The Supreme Court will have advisory jurisdiction in respect of questions which may be referred to it by the President for opinion. The Constituent Assembly has also empowered the Supreme Court to hear appeals against a sentence of death passed by a provincial High Court, in reversal of an order of acquittal by a lower court, and in a case which a High Court has transferred to itself from a subordinate court.

The Supreme Court will also hear appeals which are certified by High Courts to be fit for appeal, subject to rules made by the Supreme Court. Parliament may, by law, confer on the Supreme Court any further powers of appeal.

HIGH COURTS

The High Courts are the Courts of Appeal from the lower courts, and their decisions are final except in cases where the appeal lies to the Federal Court.

Trial by jury is the rule in original criminal cases before the High Court, but juries are not employed in civil suits.

LOWER COURTS

Provision is made in the Code for Criminal Procedure for the constitution of lower criminal courts called Courts of Session and Courts of Magistrates. The Courts of Session are competent to try all persons duly committed for trial, and inflict any punishment authorised by the law.

Appeals can be made from a single judge's decision in

the High Court, sitting as a court of original criminal jurisdiction, to a bench of not less than two judges of the same Court sitting as a Court of Appeal. The President and the local government concerned exercise the prerogative of mercy.

The constitution of inferior civil courts is determined by regulations within each state.

SUPREME COURT

Chief Justice of India: The Hon. SUDHI RANJAN DAS.

Judges: HONS. VIVIAN BOSE, N. H. BHAGWATI, B. JAGANNADHADAS, T. L. VENKATARAMA AYYAR, B. P. SINHA, SYED JAFER IMAM

ASSAM HIGH COURT

Chief Justice: S. S. PRASAD.

BOMBAY HIGH COURT

Chief Justice: The Hon. M. C. CHAGLA.

WEST BENGAL HIGH COURT

Chief Justice: The Hon. PHANI BHUSAN CHAKRAVARTHI.

BIHAR HIGH COURT

Chief Justice: The Hon. SUDHANSHU KUMAR DAS.

HYDERABAD HIGH COURT

Chief Justice: The Hon. LAXMI SHANKER MISRA.

MADHYA BHARAT HIGH COURT

Chief Justice: The Hon. G. K. SHINDE.

MADHYA PRADESH HIGH COURT

Chief Justice: The Hon. B. P. SINHA

Chief Justice: The Hon. KAILASH NATH WANCHOO

SAURASHTRA HIGH COURT

Chief Justice: The Hon. MOHANLAL CHUNILAL SHAH.

TRAVANCORE HIGH COURT

Chief Justice: The Hon. K. T. KOSHY.

UTTAR PRADESH HIGH COURT

Chief Justice: The Hon. BIDHUBHUSAN MALIK.

RELIGION

DISTRIBUTION OF COMMUNITIES

According to the 1951 Census:

Hindus largely predominate in the centre and south of India, and form 85 per cent of the population. Muslims in India now number about 10 per cent of the population. The Sikhs are mainly in the Punjab and the Jains in Rajasthan and Bombay. The Tribes are chiefly found in Bihar, Orissa, the Central Provinces and Assam, and also in Bengal, Madras, Rajputana and Central India. More than half of the total number of Christians (2·3 per cent of the population) live in South India, the remainder being scattered over the continent in Punjab, Uttar Pradesh, Bengal, Assam, Orissa, Madhya Pradesh, Bihar and Bombay. The Parsees and Jews are chiefly residents of Bombay State.

CHRISTIAN CHURCHES

According to the latest estimates there are about 8,200,000 Christians in India, of whom roughly half are Roman Catholic and the rest members of the Anglican Church or of other Protestant Churches.

THE ROMAN CATHOLIC CHURCH

Head of the Roman Catholic Church in India and Archbishop of Bombay: His Eminence Cardinal VALERIAN GRACIAS, Archbishop's House, Bombay, 1.

The Church has 14 Archbishops and is divided into 49 dioceses.

Archbishops

Agra .	The Most Rev. EVANGELISTO LATINO ENRICO VANNI, The Cathedral, Agra.
Bangalore .	The Most Rev. Dr. T. POIHACAMURY, Archbishop's House, Miller's Road, Bangalore.
Bombay .	H. E. Cardinal VALERIAN GRACIAS, Archbishop's House, Wodehouse Road, Bombay.
Calcutta .	The Most Rev. FERDINAND PERIER, S.J., Archbishop's House, 32 Park Street, Calcutta, 16.
Delhi and Simla	The Most Rev. JOSEPH FERNANDES, Cathedral House, New Delhi.
Ernakulam.	The Most Rev. AGOSTINO KANDATHIL, Archbishop's House, Ernakulam, S. I.
Hyderabad	The Most Rev. Dr. MARK G. GOPU, Archbishop's House, Alexandra Road, Secunderabad-Deccan.
Madras Mylapore	The Most Rev. Dr. LOUIS MATHIAS, Archbishop's House, Kingsford, Chetpet, Madras, 10.
Madurai .	The Most Rev. Dr. J. P. LEONARD, S.J., Archbishop's House, Kosakulam, Pudur, Madurai City.
Nagpur .	The Most Rev. Dr. EUGENE D'SOUZA, Catholic Cathedral, Nagpur, 1.
Pondicherry	The Most Rev. Dr. AUGUSTE S. COLAS, Archbishop's House, Pondicherry.

Ranchi .	The Most Rev. Dr. N. KUJUR, S.J., St. Albert's Seminary, P.O. Box 5, Ranchi.
Trivandrum	The Most Rev. MAR IVANIOS, Archbishop's House, Trivandrum, Travancore.
Verapoly .	The Most Rev. JOSEPH ATTIPETTY, Latin Archbishop's House, Ernakulam.

THE CHURCH OF INDIA

Until March 1930 the Church of England in India (and Ceylon) was in the eyes of the law an integral part of the Church of England and subject to the general supervision of the Archbishop of Canterbury. This legal connection was severed by the Indian Church Act and the Indian Church Measure passed by Parliament in 1927, and on March 1st, 1930, the Church of England in India and Ceylon, now known as the Church of India, Pakistan, Burma, and Ceylon, became wholly responsible for the management of its own affairs.

There are approximately 750,000 adherents, of whom 150,000 are European and Anglo-Indian.

Lord Bishop of Calcutta and Metropolitan of India, Pakistan, Burma and Ceylon: Most Rev. A. N. MUKERJEE, Bishop's House, Chowringhee Road, Calcutta, 16.

Bishops

Assam: Rt. Rev. JOSEPH ARMITANAND.
Bhagalpur: Rt. Rev. PHILIP PARMAR.
Bombay: Rt. Rev. WILLIAM Q. LASH.
Chota Nagpur: Rt. Rev. GEORGE N. L. HALL.
Delhi: Rt. Rev. F. R. WILLIS.
Lucknow: Rt. Rev. CHRISTOPHER J. G. ROBINSON.
Nagpur: Rt. Rev. SADANAND A. PATHAK.
Nasik: Rt. Rev. HENRY C. READ.

There are also Bishops at Amritsar, Colombo, Kurunagala, Lahore and Rangoon.

CHURCH OF SOUTH INDIA

The Church of South India was founded in 1947 by the union of the Anglicans, Methodists, Congregationalists and Presbyterians in South India.

Moderator and Bishop of Rayalaseema: Most Rev. H. SUMITRA, Gooty, Anantapur District, S. India.

Deputy Moderator: The Right Rev. J. E. L. NEWBIGIN, TALLAKULAM P.O., Madurai, S. India.

There are 13 bishops and a total congregation of about 225,000.

Other significant Christian groups in India include the Baptist Churches, the Lutheran Churches, the Methodist Churches, the United Church of North India and the Syrian Churches. In addition there are Baptist, Lutheran, Presbyterian, Congregational and interdenominational missions throughout India.

The National Christian Council of India represents all the major non-Roman Catholic churches in India; Christian Council Lodge, Nagpur; Pres. Bishop S. K. MONDOL; Vice-Pres. Most Rev. A. N. MUKERJEE, Rt. Rev. F. WHITTAKER; Sec. Dr. E. C. BHATTY.

THE BRITISH COMMONWEALTH

THE PRESS

The Press has played a prominent part in constitutional and political affairs since 1919. Increased literacy has led to a rapid growth in the number and circulation of both English-language and vernacular newspapers during the past few years. To-day there are more than 600 daily newspapers with a total circulation of over 2½ million.

Geographical considerations discourage the growth of "national" circulations, although there are to-day several newspapers which circulate throughout the country as a whole.

The reading of papers in English is largely confined to the educated classes, but vernacular papers are read to illiterates in towns and villages by their more educated fellows. These newspapers have, therefore, more influence than circulation figures would suggest.

Following the recommendations of a Press Commission, the establishment of a Press Council was approved by the Indian Council of States on September 14th, 1955. The Council, to consist mainly of journalists, would be responsible for maintaining ethical standards and for investigating and advising on matters affecting the Press as a whole.

A further recommendation of the Press Commission is embodied in the Press and Registration of Books (Amendment) Bill 1955, which provides for a Press Registrar to whom all newspapers will have to submit information such as names of proprietor, publisher, editor and printer, circulation figures and make-up. The main purpose of the Registrar, according to the bill, is to watch for any development towards monopoly ownership.

NEWS AGENCIES

Press Trust of India: 357 D. Naoroji Road, Bombay; Dir. Dr. N. B. PARULEKAR.

United Press of India: 34 Ganesh Chunder Avenue, Calcutta; f. 1933; Nationalist news agency with branches throughout India; Chair. Dr. B. C. ROY; Managing Dir. and Editor B. SEN GUPTA.

BROADCASTING

Broadcasting in India is controlled by the Ministry of Information and Broadcasting through All-India Radio, Broadcasting House, Parliament Street, New Delhi.

A comprehensive development plan has been evolved and a number of new stations have recently sprung up. There are at present regional stations operating from the following centres: Delhi, Bombay, Madras, Calcutta, Lucknow, Tiruchirappalli, Patna, Cuttack, Shillong-Cauhati, Nagpur, Vijayawada, Baroda, Allahabad, Jullundur, Ahmedabad, Dhawar, Hyderabad, Aurangabad, Mysore, Trivandrum, Santiniketan, and Calicut.

Broadcasting is particularly important in India owing to the difficulty of reaching the vast masses of the people by any medium other than the spoken word. Since radio sets are costly and expensive to maintain, listening is arranged by means of community sets installed for public use in a large number of villages. The Government have so far set up over 3,500 community receivers for public use in rural, industrial and urban areas.

ALL-INDIA RADIO

A.-I. R. network is equipped with a total of 26 medium-wave and 17 short-wave transmitters, and covers all the important linguistic areas in the country. Programmes are broadcast in a number of dialects.

The News Services Division, centralised in New Delhi, is one of the largest news organisations in the world, transmitting 71 news bulletins in 23 languages (15 Indian and 8 foreign). The External Services Division of A.-I. R. broadcasts to listeners overseas in 12 languages for about 21 hours daily.

The listening habit has grown steadily with the expansion of the broadcasting network. The number of radio licences in the country stood at 890,640 in November 1954.

Director-General: V. KUMAR.

FINANCE

Dr. M. R. JAYAKAR, P.C., D.C.L., LL.D., M.A.; Dir. Dr. S. M. KATRE, M.A., PH.D.; Registrar Dr. R. G. HARSHE, B.A., D.LITT.; Curator of Museum P. L. SASWADKAR, M.A.; Librarian V. B. BELSARE, B.A., DIP.LIB; publs. *Quarterly Bulletin, Monograph Series, Dissertation Series, Sources of Indian Lexicography, Handbook Series*.

Ganganatha Jha Research Institute: Allahabad, U.P.; f. 1943; research into Sanskrit and other Oriental languages; 219 mems; library of 5,000 vols, 4,000 manuscripts, Pres. Dr. BHAGAWANA; Sec. M. U. MISHRA, M.A., D.LITT.; publ. *Quarterly Research Journal*.

Indian Institute for Educational and Cultural Co-operation: (see Learned Societies.)

Islamic Research Association: Post Box No. 585, Bombay; f. 1933; Pres. ALI MAHOMED MECKLAI; Sec. S. S. DESNAVI; publs. 12 vols. of research work on *Islamic Studies*.

K. R. Cama Oriental Institute and Library: 136 Apollo Street, Fort, Bombay; f. 1916; 136 mems.; 7,358 vols. and about 600 journals; Pres. Sir RUSTOM MASANI, Kt.; Joint Secs. RUSTAM J. J. MODI, Dr. J. M. UNWALA; Librarian K. P. DASTOOR, M.A.; publ. *Journal*.

INDIA

EDUCATIONAL AND RESEARCH INSTITUTES

Kuppuswami Sastri Research Institute, The: Sanskrit College, Madras 4; f. 1944; promotion of Oriental learning; 170 mems.; library of 5,000 vols. (including palm-leaf manuscripts); Pres. T. R. VENKATARAMA SASTRI; Sec. K. BALASUBRAHMANYA AIYER, A. SHAN-MUKHA MUDALIAR; publ. *Journal of Oriental Research* (quarterly).

Oriental Institute: Baroda; f. 1915; library of 17,500 vols. on Indology and Sanskrit, MSS. Library of 14,138 bundles; 9 mems.; publication office of the famous *Gaekwad's Oriental Series*, of which 125 have been edited or translated; Dir. Prof. G. H. BHATT; publs. *S.R.G. Lecture Series*, *M.S. University Oriental Series*, and *Archaeology Series*, *Prachina Gurjara Granthamala Journal*.

Venkatesvara Oriental Institute: Tirupati, Andhra State; f. 1939; research, particularly in Sanskrit; Dir. Prof. J. CHENNA REDDY, M.A., B.ED.; publs. *Institute Journal* and other treatises, including the *Glossary of Indian Philosophical Terms*, and a dictionary of technical terms in Sanskrit.

Vishveshvaranand Vedic Research Institute: Sadhu Ashram P.O., Hoshiarpur; f. 1924; research and study in Indology, including language, literature, philosophy, religion, history, arts, sciences, etc.; 2,000 mems.; library of 40,000 vols.; Pres. BAKSHI Dr. Sir TEK CHAND, M.A., LL.D.; Sec. Prof. DIWAN ANAND KUMAR, M.A.; Joint Sec. and Dir. Prof. VISHVA BANDHU SHASTRI, M.A., M.O.L.; publ. *Vishva Jyoti* (monthly).

BIOLOGY

Institute of Plant Industry: Indore, Madhya Bharat; f. 1924; research in cotton genetics, and in crop improvement of cotton and rotation crops; Dir. RAI BAHADUR R. L. SETHI, I.A.S. (Retd.), M.Sc., B.Sc.

Birbal Sahni Institute of Palaeobotany: 53 University Road, Lucknow; f. 1946; research in fossil plants in its purely scientific aspects and its application to related sciences; library of 1,300 vols., 10,000 reprints, etc.; Officer-in-Charge Dr. K. R. SURANGE; publs. *Palaeobotany in India*, *Sir Albert C. Seward Memorial Lectures*, *The Palaeobotanist*.

Botanical Survey of India: 14 Madan Street, Calcutta; f. 1890; botanical and ecological surveys.

Zoological Survey of India: 34 Chittaranjan Avenue, Calcutta 12, f. 1916; Dir. Dr. S. L. HORA, D.Sc.

GEOLOGY

Geological Survey of India: Chowringhee, Calcutta, f. 1851; devoted to study of geology, ground water, mineral resources, exploration and research; Dir. V. P. SONDHI, M.Sc., F.G.S., F.N.I., publs. *Records*, *Memoirs*, *Bulletins*, *Indian Minerals*, *Palaeontologia Indica*.

Mining, Geological and Metallurgical Institute of India: 27 Chowringhee Road, Calcutta; f. 1906; 800 mems.; Pres. Dr. P. K. GHOSH; Hon. Sec. Dr. R. K. DUTTA ROY.

MEDICINE, HEALTH, PSYCHOLOGY

Bose Research Institute: 93/1 Upper Circular Road, Calcutta; f. 1917; research in biology, cyto-genetics, mutation, physiological genetics, anti-biotics, biochemistry, chemistry of plant products, physical- and radio-chemistry, radiation and nuclear physics; an experimental station at Falta and a high-altitude laboratory at Darjeeling; Dir. D. M. Bose, M.A., Ph.D.; Registrar A. K. GHOSH; publs. *Transactions*, *Annual Reports*.

***Central Drug Research Institute:** Chattar Manzil Palace, Lucknow; f. 1951; biochemical, pharmacological and medical research; Dir. Dr. B. MUKERJI, D.Sc., M.B., F.A.A.A.S., F.A.P.H.S., M.P.S., M.S., Ph.S., F.N.I.

Central Drugs Laboratory: 3 Kyd Street, Calcutta 16; f. 1937; standardisation and testing of drugs; pharmaceutical chemicals, insecticides, disinfectants and colouring agents; Dir. Dr. M. D. CHAKARVARTI, B.Sc., M.B., D.Phil.

Central Research Institute: Kasauli, Pepsu; f. 1905; Bacteriological Laboratory and Medical Research Inst. of Govt. of India; Dir. Lieut.-Col. M. L. AHUJA, M.B., Ch.B., M.D., D.P.H.; publs. *Indian Journal of Medical Research* and *Indian Research Memoirs*.

Haffkine Institute: Parel, Bombay, 12; f. 1896; principal centre of plague research in India; library of 25,000 vols.; Dir. Dr. D. W. S. SOMAN, M.D., D.P.H., D.T.M. and H.; Depts.: Antitoxins and Sera, Biochemistry, Chemotherapy, Clinical Pathology, Entomology, Pharmacology, Vaccines, Virus Diseases (including Rabies), and a Blood Bank, each with its staff of scientists; publs. *Annual Report* and papers in scientific journals.

Indian Cancer Research Centre: Parel, Bombay, 12; Dir. Dr. V. R. KHANOLKAR, B.Sc., M.D.

Indian Council of Medical Research: "P" Block, Raisina Road, New Delhi; f. 1911; assists in financing medical research; Pres. Hon. RAJKUMARI AMRIT KAUR; Sec. Dr. C. G. PANDIT, Ph.D., M.B.B.S., D.P.H., D.T.M., F.N.I.; Chair. Scientific Advisory Board Lt.-Col. C. K. LAKSHMANAN, M.R.C.P., L.M.S., D.P.H., D.T.M. & H.; Gov. Body of 17 mems., Scientific Advisory Board of 16 mems.; publs. two quarterly journals, *Indian Journal of Medical Research*, *Indian Journal of Malarology*, *Proceedings of Annual Session* (in 2 parts), *Special Reports*.

Indian Institute for Medical Research: P-27 Prinsep Street, Calcutta 13, f. 1935; nutritional, biochemical and microbiological problems; Dir. Dr. J. C. RAY.

Indian Veterinary Research Institute: Izatnagar, Bareilly; Dir. L. SAHAI, M.Sc., M.R.C.V.S.

King Institute of Preventive Medicine: Guindy, Madras; f. 1903; 13,100 vols.; Dir. Dr. Y. S. NARAYANA RAO, M.B.B.S., D.T.M., D.B.; publ. *Annual Reports*.

Pasteur Institute and Medical Research Institute: Shillong, Assam, f. 1917; maintained by Govt. of Assam; Dir. Dr. S. R. PANDIT.

Malaria Institute of India: 22 Alipore Road, Delhi, malaria research and control, training of medical officers; f. 1927; Dir. Lt. Col. JASWANT SINGH, M.B., Ch.B., D.P.H., D.T.M. & H.; Deputy Dirs. Dr. B. S. KHURANA, M.B.B.S., D.P.H., M.R.C.P., Dr. B. ANASTHASWAMY RAO, B.Sc., M.B.B.S., M.P.H.; publ. *Indian Journal of Malarology* (quarterly), *Health Bulletins*.

Pasteur Institute of Southern India: Coonoor (Nilgiris); f. 1907, 7,130 vols.; work on virus diseases incl. rabies, influenza, general bacteriology; Dir. Dr. N. VEERARAGHAVAN, M.B., B.S., D.Sc.; publ. *Annual Report*.

School of Tropical Medicine: Chittaranjan Avenue, Calcutta; f. 1920; research and teaching, Dirs. Dr. J. C. GUPTA (Pharmacology), Dr. R. N. CHAUDHURI (Tropical Medicine), Dr. S. C. GHOSAL (Bacteriology, Pathology); Dr. R. N. CHAKRABORTY (Chemistry); Dr. S. SEN (Protozoology); Dr. D. N. ROY (Entomology).

* Under the Council of Scientific and Industrial Research.

THE BRITISH COMMONWEALTH

METEOROLOGY, ASTRONOMY

Alipore Observatory and Meteorological Office: Calcutta; f. 1877; publ. *The India Meteorological Department*.

Astronomical Observatory: Presidency College, Calcutta; f. 1898; Dir. Dr. S. K. BASU.

Astronomical Observatory of St. Xavier's College of the University of Calcutta: 30 Park Street, Calcutta; f. 1875; Dir. Rev. F. GOREUX, S.J.

Astrophysical Observatory: Kodaikanal, S. India; f. 1898; 33 mems.; 10,000 vols.; Dir. Dr. A. K. DAS, D.SC., F.R.A.S., F.N.I.; publs. *Bulletin*, *Annual Report*.

Bombay Observatories: Colaba (f. 1841) and Alibag (f. 1904); Dir. S. L. MALURKAR.

High-Altitude Research Observatory: Gulmarg, Kashmir; f. 1951; studies principally cosmic rays; operated jointly by the universities of Aligarh and Jammu and Kashmir; Dir. Dr. P. S. GILL, PH.D., F.N.I.

Indian Meteorological Department: f. 1876; issues daily, weekly and monthly weather reports, daily and monthly returns of rainfall, Dir.-Gen. S. BASU, M.SC., F.N.I.; Dir.-Gen. of Observatories, Lodi Road, New Delhi, 3; Central Weather Office, Ganeshkhind Road, Poona, 5; publs. *Indian Journal of Meteorology and Geophysics* (quarterly), *Memoirs*

National Institute of Practical Psychology: Sunama House, Malabar Hill, Bombay; Dir. Dr. JAL DASTAR C PAVRY.

Nizamiah Observatory: Begumpet, Deccan; f. 1908, transferred to control of Osmania Univ. 1919, 10,000 vols.; Dir. Dr. AKBAR ALI, M.A., B.SC., PH.D.; publs. *Astronomical*, *Seismological*, *Rainfall* and *Annual Reports*.

Observatory of the Geodetic Branch, Survey of India: Geodetic and Research Branch, Survey of India, Dehradun, U.P.; f. 1800; Dir. B. L. GULATEE, M.A., F.R.I.C.S., M.I.S.; publ. *Reports*.

Office of Deputy Director-General of Observatories (Instruments): Lodi Road, New Delhi; library of 6,000 vols.; Deputy Dir.-Gen. of Observatories (Instruments) P. R. KRISHNA RAO, B.SC., F.A.S.C., F.R.MET. SOC

Regional Meteorological Offices: these all issue daily weather reports:

Calcutta (Alipore). f. 1877, Dir. A. K. ROY, B.SC., B.A.

Bombay (Colaba Observatory). f. 1847; library of 6,400 vols.; Dir. J. M. SIL, B.A.

Nagpur (New Colony): f. 1894, Dir. Dr. S. MULL, M.SC., PH.D., D.I.C

Madras (Naksahwa Bungalow, College Road): f. 1792; Dir. Dr. S. R. SAVUR, M.A., PH.D.

PHILOSOPHY

Indian Institute of Philosophy: Amalner (E. Khandesh); f. 1916; comparative study of Indian and European philosophy; 12 mems.; library of 3,500 vols.; publs. *English Language Quarterly*, *Philosophical Quarterly*. 6 fellowships awarded yearly for research.

PUBLIC ADMINISTRATION AND SOCIAL SCIENCE

Indian Institute of Public Administration, The: Sapru House, Barakhamba Road, New Delhi 1; f. 1954 to promote the study of public administration; research on the working of government machinery; training courses; library and information service; publications on Indian administration; quarterly organ: *The Indian Journal of Public Administration*; Pres. JAWAHARLAL NEHRU; Chair. and Editor S. B. BAPAT.

Tata Institute of Social Sciences: Chembur, Bombay; f. 1936; teaching and research in social sciences, social work and allied problems; Dir. A. R. WADIA; publ. *Indian Journal of Social Work* (quarterly).

SCIENCE

Indian Association for the Cultivation of Science: Jadavpur Calcutta, 32; f. 1876; 260 mems.; library of 10,600 vols.; Pres. Hon. C. C. BISWAS, M.A., B.L.; Hon. Dir. M. N. SAHA, D.SC., F.R.S., F.N.I.; Registrar S. N. SEN, M.SC.; Prof. P. RAY, M.A., F.N.I., S. C. SIRKAR, D.SC., F.N.I., S. R. PALIT, D.SC., F.R.I.C., and B. N. SRIVASTAVA, D.SC., F.N.I.; publs. *Indian Journal of Physics*, bulletins, and special publications.

Indian Institute of Science: Bangalore 3, S. India; f. 1911; 9 Fellowships, 6 Hon. Fellowships, 286 Associateships; Dir. (acting) Prof. K. SREENIVASAN, B.SC., A.I.I.S.C., M.I.E.E., MEM.A.I.E.E., S.M.I.R.E., F.A.S.C., M.I.T.E., Registrar A. G. PAI, M.A.; Librarian B. V. RAGHAVENDRA RAO, D.SC.; 53,000 vols. publ. *Journal of the Indian Institute of Science*.

Institute of Nuclear Physics: 92 Upper Circular Road, Calcutta 9; f. 1950; mems.: 62 research, 42 admin.; library of 2,618 vols.; research and teaching in nuclear science; Dir. M. N. SAHA, F.R.S.

Institute of Science: Mayo Road, Fort, Bombay; f. 1920; awards 12 Scholarships, 12 Fellowships, 6 Sir Currimbhoy Ebrahim Scholarships for Bombay Province Mohammedan students; Principal Dr. F. R. BARUCHA, D.SC., F.N.I.; Librarian M. B. ARTE, M.A.; staff of 7 professors, 7 lecturers, 1 asst. lecturer; publ. *Magazine* (half-yearly)

National Institute of Sciences of India: Mathura Road, New Delhi 1; f. 1935, 291 Ordinary Fellows, 39 Hon. Fellows, Pres. Dr. A. C. UKIL, Secs. Prof. R. C. MAJUMDAR, Dr. B. P. PAL; Treas. Dr. D. S. KOTHARI; Foreign Sec. Prof. P. C. MAHALANOBIS; Editor of Publications J. M. SEN, publs. *Proceedings*, *Transactions*, *Bulletins*, *Progress of Science in India*.

***National Physical Laboratory of India:** Hillside Road, New Delhi; f. 1950; fundamental and applied research in physics; Dir. Dr. K. S. KRISHNAN, D.SC., F.R.S.; Deputy Dir. Dr. K. N. MATHUR, D.SC.

Physical Research Laboratory: Ahmedabad; f. 1947; centre for post-graduate studies leading to M.Sc. and PH.D. degrees by research in experimental and theoretical physics; four depts. atmospheric physics, cosmic rays, radio physics and electronics, theoretical physics; Dir. Dr. K. R. RAMANATHAN, M.A., D.SC., F.A.S.C., F.N.A.

Raman Research Institute: Hebbal P.O., Bangalore 6; Dir. Sir CHANDRASEKHARA RAMAN, M.A.

Tata Institute of Fundamental Research: Apollo Pier Road, Bombay 1; f. 1945; fundamental research in theoretical and experimental physics and in mathematics; recognised by Dept. of Atomic Energy, Govt. of India, as its main laboratory for fundamental research in atomic science; Dir. Dr. H. J. BHABHA, F.R.S.

STATISTICS

Indian Statistical Institute: 203 Barrackpore Trunk Road, Calcutta, 35; f. 1931; research and training for Statisticians Diploma and Computers Certificate; maintains international statistical education centre, and specialised library; Pres. C. D. DESMUKH (Minister of Finance); Dir. Prof. P. C. MAHALANOBIS, F.R.S.; publ. *The Indian Journal of Statistics*.

* Under the Council of Scientific and Industrial Research.

Council of Scientific and Industrial Research: Old Mill-Road, New Delhi; f. 1942; a number of national research laboratories (marked with an asterisk in this section) have been established under the Council, which is itself responsible to the Ministry of Natural Resources and Scientific Research, Chair. JAWAHARLAL NEHRU; Dir. Prof. M. S. THACKER, B.Sc.; Sec. R. P. BAHADUR, M.Sc.; publs. *Journal of Scientific and Industrial Research* (monthly), *Monographs*

Association of Principals of Technical Institutions: c/o Govt. of India, Delhi Polytechnic, Lothian Road, Delhi, 6, f. 1941; 190 mems.; Pres Dr. J. C. GHOSH, D.Sc., F.N.I.; Hon. Sec. V. LAKSHMINARAYANAN, B.E., M.E., A.M.I.E.; publ. *Journal* (quarterly).

***Central Building Research Institute:** Roorkee; f. 1953; Dir. Lt. Gen. H. WILLIAMS, C.B., C.B.E., M.I.C.E., M.I.E. M.I.S.E.; publ. *Bulletin*.

***Central Electrochemical Research Institute:** Karaikudi, Madras; f. 1953; electrochemical and electrometallurgical research; Dir. Dr. B. K. RAM PRASAD, D.Sc., M.I.E., M.I.E.E.; publ. *Bulletin*

Central Electronic Research Institute: Pilani; Planning Officer Dr. N. B. BHAT, Sc.D., F.A.Sc.

***Central Food Technological Research Institute:** Cheluvamba Mansion, Mysore; f. 1950, food conservation and preservation, nutritional studies, development of tonic, infant and multi-purpose foods; Dir. Dr. V. SUBRAHMANYAM, D.Sc., F.R.I.C., F.N.I.; publ. monthly *Bulletin*.

***Central Glass and Ceramic Research Institute:** Jadavpur, Calcutta 32; f. 1950; Dir. Dr. ATMA RAM, D.Sc., F.N.I.; research on glass, white wares, refractories, enamel; technical assistance to the industry, testing and standardisation; publ. *C.G.C.R.I. Bulletin*.

Central Laboratories for Scientific and Industrial Research: Hyderabad; f. 1944, new building opened 1954; research on utilisation of local raw materials; also sections for x-ray and physical chemistry, entomology and chemical engineering; Dir. Dr. HUSAIN ZAHEER.

***Central Leather Research Institute:** Adyar, Madras 20; f. 1953; all aspects of leather research; Dir. Prof. B. M. DAS; publ. *Bulletin*.

***Central Road Research Institute:** P.O. Okhla, Delhi; f. 1952; research in all aspects of road building, Dir. S. R. MEHRA, M.I.E.; publ. *Road Research Notes*.

***Central Salt Research Institute:** Bhavnagar; f. 1954; preparation of high-purity sea salt, and allied studies; Dir. Dr. MATA PRASAD, D.Sc., F.R.I.C., F.N.I.

Central Water and Power Research Station: P.O. Box. 18, Poona; f. 1916; field station opened below Khadakvasla in 1934 and taken over by the Govt. of India in 1937; reorganisation with 8 sections sanctioned in 1947; staff of 302; 8,500 vols.; Dir. D. V. JOGLEKAR; publs. *Annual Report*, miscellaneous papers

Forest Research Institute: New Forest, Dehra-Dun, U.P.; f. 1906; 769 mems.; 50,000 vols.; Pres K. L. AGGARWAL, I.F.S.; 15 research brs., 3 colleges; publ. *Annual Reports*, etc.

***Fuel Research Institute:** P.O. Jealgora, Manbhum; f. 1950; Dir. Dr. A. LAHIRI; Assistant Dirs. Dr. N. G. BASAK, Dr. M. S. IYENGAR; publ. *Bulletin*.

Harcourt Butler Technological Institute: Kanpur, f. 1921. administered by the Industries Dept. of the Govt. of Uttar Pradesh; chemical and oil technology, chemical engineering and applied microbiology; 2-year post-graduate and shorter courses; Principal Dr. D. R. DHINGRA, M.Sc., Ph.D., A.R.I.C., M.C.I.C., F.I.C.; publ. *Journal of Science Technology*.

Imperial Veterinary Research Institute: Mukteswar-Kumaun, U.P.; f. 1890; Dir. L. SAHAI, M.Sc., M.R.C.V.S.; publ. *Annual Reports*.

Indian Lac Research Institute: Namkum, Ranchi, Bihar; f. 1924; chemical and entomological sections; 54 mems., including Dir. and 25 research workers, about 6,730 vols.; Dir. Dr. P. K. BOSE; publs. *Research Bulletins*, *Technical Notes*, *Research Notes*, *Annual Reports*, books, etc.

Institute of Radiophysics and Electronics: 92 Upper Circular Road, Calcutta; f. 1949; houses post-graduate teaching and research dept. of Univ. of Calcutta Faculty of Technology; 3-year course leading to M.Sc. (Tech.) in radio physics and electronics; research facilities in ionosphere and radio wave propagation etc.; Dir. S. K. MITRA, D.Sc., F.N.I., F.A.S.; publ. annual research reports.

***National Chemical Laboratory of India:** Poona 8; f. 1950; physical, inorganic, organic, plastics and polymer chemistries; biochemistry; chemical engineering research and development, Dir. Prof. G. I. FINCH, M.B.E., D.Sc., F.R.S.

***National Metallurgical Laboratory:** Jamshedpur; f. 1950; ore dressing, production, physical and chemical metallurgy; Dir. E. H. BUCKNALL; Deputy Dir. Dr. B. NIJHAWAN, Ph.D.

Technological Laboratory, Indian Central Cotton Committee: Matunga, Bombay; f. 1924; Dir. C. NANJUNDAYYA, M.Sc., Ph.D., F.T.I.; 8 assts.; publs. *Technological Bulletins*, Series A (87 issued), Series B (52 issued), *Technological Leaflets* (36 issued).

The following four Research Institutes are maintained by the Directorate of Industries, Govt. of West Bengal.

Bengal Ceramic Institute: Calcutta, 10; f. 1941

Bengal Textile Institute: Serampore; f. 1904.

Berhampore Textile Institute: Berhampore; f. 1925.

Industrial Research Laboratory and Bengal Tanning Institute: Calcutta; f. 1919.

* Under the Council of Scientific and Industrial Research.

THE BRITISH COMMONWEALTH

LIBRARIES

NOTE.—There are more than 1,100 libraries in India, of which over half are attached to universities and colleges; details of some of the latter will be found under the entries in that section. The National Library (details below) is in Calcutta and the National Archives of India are in New Delhi. Public libraries number about 250 and 110 libraries are attached to Central Ministries, to government offices or to State Departments. A selection of the more established libraries is listed below:

Allahabad Public Library: Allahabad; f. 1864; 46,500 vols.; Librarian B. N. BANERJI, M.A., LIB.DIP.

Amir-ud-Daula Government Public Library: Jkaiserbagh, Lucknow; f. 1910; 43,887 vols.; Librarian K. KUMAR, B.A., LL.B., D.L.SC.

Asafiyah State Library: Hyderabad; f. 1891; 88,847 vols., 14,883 manuscripts; Librarian Dr. M. R. KHAN, M.A., DIP.L.SC., D.PHIL., F.L.A.

Baghbazar Reading Library: Calcutta, 4; f. 1883; 30,000 vols.; Librarian Prof. S. BANERJI.

Bangalore Public Library: Bangalore, Mysore; f. 1914; 21,850 vols.; Librarian K. K. RANGACHAR, M.A.

Bharat Itihas Samshodhah Mandal Library: 313A Sadashiv Peth, Poona; f. 1910; 10,858 vols.

Central Library: Baroda; f. 1910; 138,944 vols.; Librarian T. D. WAKNIS, B.A., LIB.DIP.

Connemara Public Library: Egmore, Madras; f. 1896; 76,000 vols.; Librarian K. B. MENON, B.A.

Government Oriental Library: Mysore; f. 1891; 27,497 vols.; collection includes ancient MSS.; Librarian M. S. BASAVALINGAYYA, B.L., M.A.

Gujarat Vidyapath Granthalaya Library: Ahmedabad 9; f. 1920, 88,705 vols.; Librarian C. P. BAROT.

Gutham Library: Madras; f. 1898; 33,200 vols.

Jamia Library: Jamia Millia, Islamia, P.O. Jamia Nagar, Delhi; f. 1920; 19,200 vols.; Librarian NABI AHMAD.

Jamia Nizamial Library: Hyderabad; f. 1875; 25,000 vols.

Jamsetjee Nesserwanjee Petit Institute Library: Bombay; f. 1898; 75,000 vols.; Librarian M. K. MOWDAVALA, B.A., LL.B., A.L.A.

Karvir Nagar Wachan Mandir Library: Kohlapur; f. 1850; 30,000 vols.

Madras Government Oriental Manuscript Library: P.O. Triplicane, Madras; f. 18th century; contains rare and important collection of MSS. in Sanskrit and South Indian languages; 60,000 vols.; Curator and Ed. T. CHANDRASEKHARAN, M.A., L.T.

Madras Literary Society Library: Madras; f. 1812; 100,974 vols.; Librarian C. N. KRISHNA IYER, B.A.

Mumbai Marathi Granth Sangrahalaya Library: Bombay; f. 1898; 25,206 vols.; Librarian B. D. SATOSKAR, B.A., DIP.LIB.

National Archives of India: New Delhi; about 10,000,000 records; Dir. of Archives Dr. B. A. SALETORRE, L.T., M.A., PH.D.; Asst. Dirs. G. K. DOGRA, M.A., R. C. GUPTA, M.SC., S. ROY, M.A., S. C. GUPTA, M.A., B.L.

National Library: Belvedere, Calcutta 27; f. 1902; over 804,450 vols.; Librarian B. S. KESAVAN, M.A., DIP.LIB.

Nilgiri Library: Ootacamund; f. 1867; 27,000 vols.

Rammohun Library: Calcutta, 9; f. 1905; 20,800 vols.; Librarian R. BHATTACHARYA, M.A.

Sheth Maheklal Jethabhai Pustakalaya Library: Ellis Bridge, Ahmedabad 6; f. 1937; 46,380 vols.; Librarian M. M. PATEL, M.A., DIP.LIB.SC.

Shrimati Radhika Sinha Institute and Library: P.O. Box 62, Patna; f. 1922; 32,531 vols.; Librarian P. N. GOUR.

Trivandrum Public Library: Trivandrum, Travancore; f. 1847; 48,000 vols.; Librarian M. M. JOHN, M.S.

MUSEUMS

Museums Association of India: Elphinstone College Building, Bombay 1; f. 1943; practically all museums in India are members of the association; 500 vols. in library; Pres. KHWAJA MUHAMMAD AHMAD, M.A., LL.B.; Sec. Dr. P. M. JOSHI; publ. *Journal of Indian Museums*.

Andhra Sahitya Parishat (Telugu, Academy): Cocanada, Andhra State, Madras; f. 1911; library of nearly 6,000 MSS, and 7,000 vols. in Telugu, Sanskrit and English; Pres. MAHARAJAH OF PITHAPURAM; Secs. C. SATYANARAYANA, P. PARTHASARADHI.

Archaeological Museum Mathura: Mathura, U.P.; f. 1874; 7,000 exhibits, mostly of Kushana period; Curator J. P. CHATURVEDI; publs. *Museum Catalogue*, *Museum Handbook*.

Baroda Museum and Picture Gallery: Baroda; f. museum 1894 and picture gallery 1920; Indian archaeology: prehistoric and historic; Indian art: ancient, medieval and modern; numismatic collections; modern Indian paintings; industrial art; Asiatic and Egyptian collections; Greek, Roman, European civilisations and art; European paintings; ethnology, zoology, geology, economic botany, Dir. V. L. DEVKAR; Keepers: B. L. MANKAD (Art and Historical Sections) P. G. GUPTA (Science Sections) Librarian G. S. GHOTIKAR; publs. *Bulletin*, 1944 ff., *Handbook of the Collections*, 1952, *Catalogue Picture Gallery*, 1935.

Government Museum: Pantheon Road, Egmore, Madras; f. 1851; archaeology, art, South Indian bronzes, Buddhist sculptures, anthropology, botany, zoology; Supt. A. AIYAPPAN, M.A., PH.D.; publs. *Annual Report*, various illustrated vols. in anthropology, archaeology and natural history, and *Madras Museum Bulletin*.

C. UPADHYAYA, M.A., LL.B., D.L.

THE BRITISH COMMONWEALTH

UNIVERSITIES

There are in India three types of university. The affiliating universities, such as Agra, Jammu and Kashmir and Bihar have no university teaching departments and in most cases no constituent colleges (colleges run directly by the university). The affiliating and teaching universities, such as Bombay, Calcutta and Madras, have their own teaching departments or constituent colleges, or both, but also affiliate other, independent colleges. The residential teaching universities have no affiliating functions.

AGRA UNIVERSITY

AGRA
Founded 1927

Chancellor: RAJYAPAL OF UTTAR PRADESH.
Vice-Chancellor: Lieut.-Col. C. V. MAHAJAN, M.A., M.L.A.
Registrar: Capt. L. P. MATHUR, D.SC.
Number of students: 35,257.

DEANS:

Faculty of Arts: KALKA PRASAD HHATNAGAR, M.A., LL.B.
Faculty of Science: C. R. CHATURVEDI, M.A.
Faculty of Law: BRIJENDRA SWARUP, LL.D.
Faculty of Commerce: K. PRASAD, M.A., PH.D.
Faculty of Agriculture: B. L. SETHI, M.SC., PH.D.
Faculty of Medicine: (Vacant).
Faculty of Veterinary Science and Animal Husbandry: P. G. PANDE, M.SC., M.R.C.V.S.
Faculty of Engineering: A. C. SAHGAL, B.A., B.SC., A.M.I.E.E.

AFFILIATED COLLEGES:

Agra College: Agra
Principal: M. RAY, D.SC.
Number of professors: 13.

Ahir Kshatriya College: Shikohabad.
Principal: P. N. KULSHRESHTHA, M.A., D.PHIL.
Number of professors: 4.

A. S. Jat College: Lakhaoti
Principal: G. N. PATHAK, M.SC., PH.D.
Number of professors: 5.

Balwant Rajput College: Agra
Principal: R. K. SINGH, M.A., D.ED.
Vice-Principal: Dr. SABAL SINGH, M.A., PH.D.
Number of professors: 19.

Barahseni College: Aligarh.
Principal: M. C. MATHUR, M.A., M.SC., PH.D.
Number of professors: 19.

Bareilly College: Bareilly, U.P.
Principal: R. K. SHARMA, M.A.
The library contains 21,263 volumes.
Number of professors: 15.

Bundelkhand College: Jhansi.
Principal: SUKH SWARUP, M.SC.
Number of professors: 6.
Number of students: 322.

Christ Church College: Kanpur.
Principal: Rev. R. G. SLATER, M.A.
Number of professors: 9.
Number of students: 1,012.

Coronation Hindu College: Moradabad.
Principal: J. P. SINGHAL, M.A., PH.D.
Number of professors: 6.

Durbar College: Rewa.

Principal: J. K. DAS GUPTA, M.A., PH.D.
The library contains 12,152 volumes.
Number of professors: 14.
Number of students (1953-54): 732.

D.A.V. College: Ajmer.

Principal: D. VABLE, M.A., LL.B.
Number of professors: 7.

D.A.V. College: Dehradun.

Principal: Dr. R. N. SAXENA, M.A., D.LITT.
Vice-Principal: A. S. SINHA, M.A.
Number of professors: 18.

D.A.V. College: Muzaffarnagar.

Principal: S. PRASAD, M.SC.
Number of professors: 6.

Dayanand Anglo-Vedic College: Kanpur; f. 1919.

Principal: KALKA PRASAD BHATNEGAR, M.A.
Number of professors: 18.

Dayanand Vedic College: Orai.

Principal: KISHORI LAL KHARE, M.A.
Number of professors: 5.

D. J. College: Baraut.

Principal: A. B. MALKHANI, M.SC.
Number of professors: 8.

D. L. G. Degree College: Almora.

Principal: A. D. PANT, M.A., L.T.
Number of professors: 5.

D. S. College: Aligarh

Principal: V. G. JHINGRAN, M.SC., B.ED.
Number of professors: 11.

D. S. B. Government Degree College: Nainital.

Principal: J. L. SHARMA, M.A., D.SC.
Number of professors: 10.

Engineering College: Dayalbagh.

Principal: A. C. SAHGAL, B.A., B.SC., A.M.I.E.E.
Number of professors: 3.

Gandhi-Faiz-Am College: Shahjahanpur.

Principal: M. R. KIDWAI, M.SC.
Librarian: MASHOOQ, ALI KHAN, M.A.
Number of volumes in library: 4,835.
Number of professors: 13.

G. D. Hindu Girls' College: Moradabad.

Principal: KM. B. SEN GUPTA, M.A., B.LITT.
Number of professors: 6.

Government Agricultural College: Kanpur.

Principal: B. L. SETHI, M.SC., PH.D.
Number of professors: 5.

INDIA

UNIVERSITIES

Government College: Ajmer.

Principal: V. V. JOHN, M.A.

Number of professors: 8.

Faculty of Education: Vacant.
Faculty of Law: K. NARAYAN, M.A., B.L.
Faculty of Medicine: B. N. BANERJEE, F.R.C.S.
Faculty of Science: S. P. SINHA, PH.D.
Faculty of Veterinary Science: H. R. KAPUR, M.R.C.V.S.

COLLEGES MAINTAINED BY THE UNIVERSITY:

Langat Singh College: Muzaffarpur.
Principal: F. RAHMAN, B.A. (LOND.).
Ranchi College: Ranchi.
Principal: G. P. DUBEY, M.SC. (CANTAB.).

T.N.J. College: Bhagalpur.
Principal: J. MISHRA, M.A., D.PHIL.

COLLEGES ADMITTED TO THE PRIVILEGES OF THE UNIVERSITY:

Affiliated Colleges— First Grade:

(i) *Technical and Professional Colleges:*

Bihar Agricultural College: Sabour (Bhagalpur).
Principal: R. H. RICHHARIA, PH.D.
Bihar Institute of Technology: P.O. Sindri Institute (Manbhum).
Principal: D. L. DESHPANDE, M.SC.
Bihar Veterinary College: P.O. Veterinary College, Patna.
Principal: H. R. KAPUR, M.R.C.V.S.
Birla Institute of Technology: Post Box. No. 61, Mesra Ranchi.
Principal: M. C. PANDEY.

Chotanagpur Law College: Ranchi.
Principal: S. K. SAHAY.

Darbhanga Medical College: Darbhanga.
Principal: B. N. BANERJI, M.B., F.R.C.S.

Indian School of Mines and Applied Geology: Dhanbad.
Principal: R. P. SINHA, PH.D.

Ranchi Agricultural College: Kanke (Ranchi).
Principal: H. K. MUKHERJI

S.K.J. Law College: Muzaffarpur
Principal: KISHORE NARAYAN, M.A., B.L.

Tirhut College of Engineering: Muzaffarpur.
Principal: B. OJHA.

(ii) *Other First-Grade Colleges.*

Chandradhari Mithila College: Darbhanga
Principal: (Vacant.)

College of Commerce: Patna.
Principal: I. S. JHA.

D.A.V. College: Siwan (Saran).
Principal: B. B. MISHRA, PH.D.

Deoghar College: Deoghar (S.P.)
Principal: K. N. SAHAY, M.A.

Gaya College: Gaya.
Principal: K. S. VARMA, PH.D.

Ganesh Dutt College: Begusarai (Monghyr).
Principal: S. N. SINGH, M.A.

H. D. Jain College: Arrah
Principal: B. B. MUKHERJI, M.A.

J. K. College: Purulia.
Principal: ANAND KRISHNA PRASAD, M.A.

Jamshedpur Co-operative College: Jamshedpur.
Principal: Mrs. ABRAHAM.

Koshi College: Khagaria (Monghyr).
Principal: I. DATTA, PH.D.

M.D.D. Mahila College: Muzaffarpur.
Principal: A. SEN, M.A.

Marwari College: Bhagalpur.
Principal: B. N. MUKHERJI, M.A.

Munshi Singh College: Motihari.
Principal: K. P. SINHA, M.SC.

Nalanda College: Biharshariff (Patna).
Principal: D. P. SRIVASTAVA, M.A.

INDIA

Purnea College: Purnea.

Principal: J. P. JHA DWIJ, M.A.

R. D. and D. J. College: Monghyr.

Principal: K. N. SINGH KAPIL, M.A.

Rajendra College: Chapra.

Principal: M. P. SINHA, M.A.

Ram Dayalu Singh College: Muzaffarpur.

Principal: G. P. SINGH, M.A.

Ram Krishna College: Madhubani (Darbhanga).

Principal: A. K. DUTTA, M.A.

Ranchi Women's College: Ranchi.

Principal: Mrs. B. PRASAD, M.A.

S.R.K. Goenka College: Sitamarhi (Muzaffarpur).

Principal: B. M. MISHRA, M.A.

S. Sinha College: Aurangabad (Gaya).

Principal: B. N. MISHRA MADHAVA, M.A.

Samastipur College: Samastipur (Darbhanga).

Principal: C. S. KESARI, M.A.

St. Columba's College: Hazaribagh.

Principal: A. F. MARKHAM, M.A. OXON.

St. Xavier's College: Ranchi.

Principal: A. SCHOCKAERT, PH.D.

S. Mahila Mahavidyalaya: Bhagalpur.

Principal: Mrs. S. VEDALANKAR, PH.D.

T.N.J. College: Bhagalpur (also teaching Law).

Principal: J. MISHRA, D. PHIL.

UNIVERSITY OF BOMBAY

BOMBAY

Founded 1857

Chancellor: H.E. The GOVERNOR OF BOMBAY.

Vice-Chancellor: The Hon Mr JUSTICE N. H. BHAGWATI, M.A., LL.B.

Registrar: S. R. DONGERKERY, B.A., LL.B.

Number of students: 24,365

Publications: *The Journal of the University of Bombay*, *The Bombay University Bulletin*

DEANS:

Faculty of Arts: K. R. GUNJIKAR, M.A., B.SC.

THE BRITISH COMMONWEALTH

PATNA UNIVERSITY

Founded 1917

The creation of Bihar University in 1952 relieved Patna University of its affiliating functions. Teaching at Patna is carried on in a number of autonomous colleges.

Chancellor: H.E. R. R. DIWAKAR.

Vice-Chancellor: B. NARAYANA, M.Sc., M.B., Ph.D., F.R.S., F.N.I.

Registrar: JAGATNANDAN SAHAY, M.A., T.D.

Librarian: INDRADEO NARAIN SINHA, Dip.Lib.Sc.

The library contains 71,000 volumes.

Number of teachers: 418.

Number of students: 8,089.

Publication: *Patna University Journal*.

DEANS:

Faculty of Arts: K. DUTTA, M.A., Ph.D.

Faculty of Education: Mrs. S. SINHA, M.A.

Faculty of Engineering: N. N. G. DASTIDAR, B.Sc., A.M.C.I., A.M.I.E.

Faculty of Law: B. K. SINHA, B.A., B.L.

Faculty of Medicine: D. RAM, B.Sc., M.B., D.O.L., D.O.M.S.

Faculty of Science: B. N. SINGH, D.Sc.

Faculty of Commerce: B. K. SINHA, B.A., B.L.

CONSTITUENT COLLEGES:

Bihar College of Engineering: Mahendrn Patna; f. 1924; 4-year course; 66 new students admissions every year.

Principal: N. N. G. DASTIDAR, B.Sc.

Number of teachers: 24, students: 350.

Bihar National College: Bankipur, Patna, 4; f. 1889.

Principal: D. P. VIDYARTHI, M.A., Ph.D.

Number of teachers: 77, students: 2,060.

Magadh Mahila College: Patna.

Principal: Mrs. RAMOLA NANDI, M.A., M.Sc.

Number of teachers: 26, students: 455.

Patna College: P.O., Bankipore, Patna, Bihar; f. 1863; the oldest college in the province, and the parent institution of three other colleges.

Principal: K. AHMAD, M.A.

Number of teachers: 39, students: 723.

Patna Law College: P.O. Mahendru, Patna, Bihar; f. 1909.

Principal: B. K. SINHA, B.A., B.L.

Number of teachers: 27, students: 656 men.

Publication: *Patna Law College Magazine*.

Patna Training College: Patna.

Principal: D. P. GUPTA, M.A., M.Ed., Ph.D.

Number of teachers: 7, students: 112.

Patna Women's College: Patna.

Principal: Mother M. THEODOSIA, A.C., M.A.

Number of teachers: 24, students: 313.

Prince of Wales' Medical College: Bankipur, Patna; f. 1927.

Principal: D. RAM, B.Sc., M.B., D.O.L., D.O.M.S.

Number of teachers: 61, students: 624.

Science College: Bankipur, Patna.

Principal: M.Q. DOJA, B.A.

Number of teachers: 39, students: 850.

Women's Training College: Patna.

Principal: Mrs. S. SINHA, M.A., M.Ed.

Number of teachers: 6, students: 60.

UNIVERSITY OF POONA

GANESHKHIND, POONA 7

Founded 1949

Chancellor: H.E. Dr. HAREKRUSHNA MAHTAB.

Vice-Chancellor: Rt. Hon. M. R. JAYAKAR, P.C., M.A., D.C.L., LL.D.

Registrar: T. D. KHAN.

Librarian: K. S. HINGWE, M.A., D.L.Sc.

The library contains 30,000 volumes.

Number of teachers: 8.

Number of students: 1,400.

DEANS:

Faculty of Arts: Lt.-Col. R. D. KARMARKAR, M.A.

Faculty of Law: Prof. R. B. PHADAKE, M.A., LL.B.

Faculty of Medicine: Dr. R. AIMAN, M.A., B.S., M.R.C.S., D.R.C.O.G.

Faculty of Science: B. V. BHIDE, M.Sc., A.I.I.Sc.

Faculty of Engineering: T. N. TOLANI, B.E., M.I.E., M.R.SAN.I.

Faculty of Agriculture: L. S. S. KUMAR, M.Sc., A.R.C.S., D.I.C.

Faculty of Mental, Moral and Social Sciences: T. M. JOSHI, M.A.

Director: D. ROY.

COLLEGES

Apart from the Colleges which are attached to Universities and which have been listed in the preceding section, a number of Institutes in India combine research with teaching. Details of some of these will be found in the section on EDUCATIONAL AND RESEARCH INSTITUTES on page 510.

GEOGRAPHY

THE territory of Pakistan consists of two entirely separate units: West Pakistan, bounded by Iran, Afghanistan and India, and covering 310,000 sq. miles; and East Pakistan (formerly East Bengal) which, except for a coastline on the Bay of Bengal and a 200-mile frontier with Burma on the east, is virtually an enclave within India. The two units are over 1,000 miles apart, so that communication between them involves either crossing Indian territory or travelling 2,500 miles by sea round the tip of India.

West Pakistan consists mainly of the middle and lower valley of the Indus river, together with an adjacent mountainous zone on the west (Baluchistan). The northern frontier runs more or less along the first foothills of the Himalaya, except in the extreme north where it includes the main peaks of the Hindu Kush; and the eastern boundary of Pakistan may be said to be the Thar desert. Further north among the Himalaya lies the territory of Kashmir, which is a subject of dispute with India.

East Pakistan comprises the eastern section of the Ganges delta and is thus almost entirely an alluvial lowland, with its eastern frontier at the beginning of the Assam hills. The actual boundaries of both East and West Pakistan were drawn mainly on a sectarian and religious basis, to separate Muslims and Hindus, and so largely ignore topographical features and economic units; thus the new boundaries have led to considerable difficulties, particularly as regards communications and the use of river water for irrigation.

Climatically, the two regions of Pakistan are strikingly dissimilar. East Pakistan experiences the full effects of the summer monsoon (*see* India: Geography) with dramatic alternation of dry and wet seasons. Lying close to the Bay of Bengal, summer rainfall is intense, giving steamy

oppressive conditions from June to October; while later in the year dry, moderately warm conditions prevail. Mean temperatures at Dacca range from 63° F. (January) to 87° F. (May), and annual rainfall is between 50 in. and 125 in., all but 10 in. falling between May and October (inclusive).

West Pakistan receives only an attenuated and partly dried out monsoonal air current which has already deposited most of its moisture in the lower Ganges valley, hence rainfall is everywhere restricted. In addition to this summer monsoonal rainfall there are also very slight winter rains in some areas, produced by small depressions that work their way across Pakistan from as far west as Europe and the Mediterranean. Even however with this extra rainfall, most of West Pakistan is arid or sub-arid and depends, like Egypt and Mesopotamia, on irrigation from its rivers and canals. Maximum day temperatures can reach 125° to 135° during May and June, the hottest months; but frost is also common during the winter in the north and the hillier parts of the centre. Karachi, in the extreme south, has mean temperatures ranging between 68° and 88° with 8 inches of rain annually. Lahore has a temperature range of 61°–96°, and 18 in. of rainfall.

Pakistan with 76 million inhabitants (1951 census) is the sixth largest state in the world (in numbers) and the largest Muslim country—though only 85 per cent of its inhabitants are Muslims. Some 14 per cent of this total is regarded as literate. Lahore (pop. 1½ million) is the largest city of Pakistan, and functions as a market and administrative centre for the Punjab. Karachi (1,126,000) is the capital and chief port, whilst Dacca (411,000) is the chief town of East Pakistan.

W.B.F.

ECONOMIC SURVEY

THE ECONOMIC BACKGROUND

At the time of the partition of India, in 1947, the outstanding feature of the territories which came to comprise Pakistan was an almost complete absence of modern industry. The Muslim communities, which constituted the predominant element in Pakistan's population, were backward and played little part in trade and industry. Many opponents of the idea of Pakistan were reconciled to it only because it was widely believed that the new state would not be economically viable. Pakistan has always been conscious of the need to proceed with economic development at the highest possible rate and also to demonstrate economic strength. Its record is at once impressive and punctuated by crises, caused by the strains to which the economy is being subjected, in the course of the drive to build up military strength as well as to bring about a balanced development of industries and agriculture in the quickest possible time.

The first census, taken in 1951, showed that of its total population of 76 million the civilian labour force numbered only 22 million: 17 million were engaged in agriculture and of the remaining 5 million not more than 950,000 workers were employed in factories, plantations, transport and mining. The bulk of these were, in fact, employed on railways and port establishments. These figures indicate the low level of industrial development and the very high proportion of the dependent population, the latter being partly explained by the non-employment of women in many communities. The number engaged in agriculture is excessive in relation to the amount of land available for cultivation, so that, for example, in East Pakistan 9.5 million cultivators have on an average only 2.18 acres of crop land whereas it is estimated that, for the type of cultivation that is carried on, a minimum of 4 acres is required per cultivator to provide him with reasonably full employment. The result of such disguised unemployment on land, the low level of industrial growth and the high proportion of dependent population is reflected in the extremely low average life expectancy of 27 years and the estimated *per capita* national income of Rs.230.

The first two years of Pakistan's existence were characterised by a complete disruption of her economic life and a desperate struggle to pull herself together. Following on widespread communal rioting in India and Pakistan, several million people left their homes and sought refuge across the border. Statistics of the number of refugees vary considerably but the magnitude of the numbers involved may be judged by Pakistan official figures of 6 million evacuees from West Pakistan to India, and 8 million refugees from India to West Pakistan. All normal economic activity was disrupted in West Pakistan, and the disruption was greatest in the fields of communications and commerce and what little there was of industry. The social and occupational pattern of the population involved was far from being complementary. The Hindu and Sikh evacuees from Pakistan were largely urbanised communities engaged in trade, finance and banking. The Muslim refugees from India were, on the other hand, predominantly agriculturists and artisans. For the new government there was not only the task of an unprecedented magnitude of reorganising normal economic activity, but an immediate one also of providing and

financing relief. But expenditure on refugees had priority only after defence. Government expenditure on defence has overshadowed everything else and has constituted an excessive burden on the finances of the government and on the economy as a whole. As a result the country has been experiencing inflation at home and a series of foreign exchange crises. The financial difficulties which the country is facing have, given the defence expenditure, proved insoluble.

It is against this background that we can see Pakistan proceeding with its programme of industrialisation to emerge from its status of a backward agricultural country, barely self-sufficient in food and largely dependent for paying for its requirements of manufactured goods on the export of two commodities, cotton and jute, both of them subject to the vicissitudes of wide variations in prices in the markets of the world.

AGRICULTURE

The characteristic feature of agriculture in Pakistan is cultivation by peasant farmers of smallholdings, which are very often subdivided into several small fragments. In "Zamindari" areas, Zamindars, who are absentee landlords, receive from the tenant 50 per cent of the *gross* produce (often more). The tenant has to meet out of his share his expenses of cultivation. There is a rich variety of systems of land tenure in existence, and from time to time they have undergone changes designed to confer on the tenant some permanence of interest in his holding. But he is never quite free from the risk of eviction. He has thus neither the resources nor the permanency of interest to carry out any substantial improvements. On the other hand, the Zamindars (who have recently been subjected to nominal rates of income tax) have been content to live in luxury and ease, and have found little reason to trouble themselves to improve their land. The other system of land settlement is known as "Ryotwari", which is supposed, in principle, to be one of owner-cultivators. But even here letting and sub-letting is widely practised. Where this is not so, the owner-cultivator is probably struggling to eke out a bare existence from his patch of land and his resources are too meagre to permit much in the way of development. Plantations run on capitalist lines are a rarity, except in the case of the cultivation of tea, which is produced entirely on plantations, many of which are owned and managed by Europeans. The main bulk of the agriculture is conducted on rather primitive lines on small holdings, which generations of inheritance have subdivided and split up into little collections of non-contiguous plots.

Crop yields in Pakistan are among the lowest in the world. Thus wheat yields average about 768 lb. per acre as against 2,166 lb. in the U.K. and 1,620 lb. per acre in Egypt. Again, rice yields in Pakistan average 1,249 lb. of paddy per acre as against 4,552 lb. in Italy, 3,361 lb. in Japan and 3,519 lb. in Egypt. This very low level of agricultural efficiency has been the subject of periodical inquiries and reports for the last 100 years (led by the Bengal and Orissa Famine Commission of 1866), but progress has not been spectacular. The major work on the subject has been the report of the Royal Commission on Agriculture (1926-27), whose findings have not lost all their freshness, thanks to lack of progress. The latest

THE BRITISH COMMONWEALTH

examination of the situation in Pakistan was made by the Pakistan Agricultural Enquiry Committee, under the chairmanship of the Rt. Hon. Lord Boyd-Orr. The committee could but scratch at the surface of the problem; it was not among its terms of reference to examine the question of land tenures. Its recommendations covered measures for improving government research in developing better varieties of crops and in cattle breeding; the setting up of an institute to introduce mechanised farming, but "Mechanisation of agriculture should, in order to avoid unemployment problems, be introduced gradually"; better marketing and grading facilities; refrigerated road and rail transport and cold storage for vegetables and fruit; more warehouse accommodation at assembly markets and ports; and measures to encourage the use of fertilisers, etc.

The Six-Year Development Plan of the Pakistan Government envisaged an expenditure of Rs.92 million on the provision of subsidised chemical fertilisers. Despite the subsidised supply at one-half to one-third of the real cost, for some years the response to the scheme has been very meagre and only a negligible quantity of fertilisers is used. The committee considered the reasons to have been, (i) insufficient propaganda, (ii) inefficient marketing, (iii) the high cost of the fertiliser (i.e. in relation to the cultivator's share of the gross produce) and (iv) the low purchasing power of the farmer. Emphasis is put also on the need for "extension" work to bring the fruits of research to the knowledge of the farmer. Considerable hopes are based on the village AID (Agricultural Industrial Development) programme, the first phase of which is the training now of village workers, each of whom will be attached to five villages, to which he will bring the knowledge of modern scientific practices. It is too early to judge the scheme. In the past agricultural extension work has made little headway.

The Report of the Economic Appraisal Committee, issued in 1953, finds it "strange that in spite of the efforts of research workers and the Department of Agriculture, extending almost over half a century, the yields of the crops are what they are". It goes on to say, "We recognise that without creating in the peasant real interest in his cultivated land and providing him with an adequate return, no appeals for increased production and no measures for improvement will be fully effective." But the report does not make any specific recommendations about the measures of reform that are required.

In the absence of any radical measures to increase crop yields, the agricultural policy of the government leans heavily on efforts to extend the area under cultivation, in order to feed a population increasing at the rate of 1 per cent per annum, to provide raw materials for its growing industries and to maintain exports. The target suggested by the Agricultural Enquiry Committee is an increase of 5 to 10 per cent per annum. The Grow More Food Conference, held in 1952, aimed at increasing production by 25 per cent by 1956-57. Apart from the supply of cheap fertilisers, government efforts are directed mainly at better irrigation facilities, improved drainage and soil conservation. As a result of these efforts the area under 15 major crops increased from 45 million acres in 1948-49 to 50 million acres in 1953-54.

Agricultural conditions differ materially in East and West Pakistan both in regard to climate and to land available for extending cultivation. Through East Pakistan lies the outlet of the two main river systems of northern India, the Ganges and the Brahmaputra. The province constitutes what is probably the largest delta in the world. Rainfall is heavy; 75 per cent of the total area is already under cultivation so that very little is available for extending the cultivated area. An ambitious multipurpose scheme known as the Brahmaputra Project,

which would reclaim large cultivable areas rendered useless by flooding is expected to take 20 to 30 years to complete and will, it is hoped, increase production by 100 per cent in the area concerned. The first part of this project, known as the Ganges-Kobadak Scheme, is due for completion by 1956, and will bring under cultivation over 175,000 acres. It is also planned to extend the area under double cropping by increasing lift irrigation. A Lift Irrigation Project aims at the installation of 500 power pumps in 5 years. The Karnaphuli Hydro-electric Project includes a scheme to install 2,500 pumps to drain areas liable to flooding in the wet season; and during the dry season to lift water for irrigation of a million acres of land. The Teesta Barrage, which is due for completion in 1960, will serve an area of 1.125 million acres, for which it will provide controlled irrigation.

West Pakistan, by contrast, is dry, some of it arid desert. The rainfall varies from an average of 4 to 40 inches, and the climate is one of extremes of temperature. The Indus and its tributaries, Jhelum, Chenab, Ravi and Sutlej, have brought life to this arid land and an extensive network of canals has been developed. At the time of partition Pakistan had about 22 million acres of irrigated land, about two-thirds of the cultivated area. Crop yields in the area dependent on rainfall are about one-half of the yields in the canal-irrigated area. The frontier with India cuts across the river and canal system in the Punjab, and Pakistan sometimes has apprehensions that the canals serving Pakistan which have their head works in India may be deprived of their share of water. The dispute with India arising from this situation has been the subject of negotiations through the World Bank. Meanwhile it has given an added sense of urgency to schemes for supplementary irrigation. Many of the new projects, notably the Lower Sind Barrage (serving 2.75 million acres) are already in operation. The Punjab Tube-Well Project will provide 2,000 tube-wells to irrigate 1.8 million acres. The government is particularly proud of the Thal Project: under an Act of 1949, the Thal Development Authority was set up, charged with the reclamation and colonisation of the Thal, a treeless desert covering 5 million acres. The scheme involves irrigation from the waters of the Indus, construction of roads and buildings, afforestation and the setting up of industries; 250,000 refugees are to be settled in the Thal, and in all 1.5 million acres will be brought under cultivation.

Soil erosion, waterlogging and salinity, which is associated with it, take a severe toll in the irrigated areas. In the Punjab alone, waterlogging is estimated to have taken 40,000 acres out of cultivation and 2 million acres have been rendered barren by salinity. It is believed that 20,000 to 30,000 acres a year are lost from these causes, and that 8 million acres have been lost through soil erosion in a few years. Thus the schemes for bringing new land under cultivation barely make up for the land lost. Power from the newly developed Hydel project is being used to reclaim waterlogged land. But prevention of both waterlogging and soil erosion is bound up with the general problem of improving methods of cultivation.

Foodgrains. Food crops account for more than 85 per cent of the total cultivated area. East Pakistan produces annually about 7.5 million tons of rice, which is the main food crop. There is usually a small deficit in requirements of rice which is met by imports from West Pakistan, which produces about 0.7 million tons annually. The production of foodgrains in West Pakistan has fluctuated considerably, partly due to natural causes and partly also to differentials between controlled foodgrain prices and uncontrolled prices of cash crops. The staple food in West Pakistan is wheat of which between 3.3 and 4

million tons are produced annually. About 1½ million tons of coarse grains are also produced in the country, most of it in West Pakistan.

The consumption of foodgrains in Pakistan has been a little less than the average of 16 oz. per day, the figure aimed at in the Six-Year Plan for Development. This high rate of consumption of cereals is necessary in view of the very low rate of meat consumption (0.06 oz. *per capita* daily in West Pakistan as against 5.2 oz. in the U.K. and 7.6 oz. in the U.S.A.) and of fruit and vegetables. Before partition, the area now comprising Pakistan was known as the granary of India, and it was believed that Pakistan would have a food surplus. In the event, during the years 1949-53, Pakistan was able to export in all 270,000 tons of foodgrains. This was possible partly because consumption was slightly below the figure of 16 oz. per day considered to be the necessary minimum. However, by 1952 the food situation began to deteriorate seriously, and substantial quantities of wheat had to be imported to avert famine. The reasons for this were partly the failure of rains and the low level of water in the canals, and partly also the diversion of land from food crops to cash crops like cotton, sugar cane, oilseeds and tobacco, whose prices were more favourable. Smuggling of foodgrains across the border to India also contributed to the difficulties. In the first seven years of Pakistan's existence, she had imported nearly 1.3 million tons of foodgrains in five of those years, as against the export of 0.5 million tons in the other years. As a result of the increase in population foodgrain requirements are estimated to rise at the rate of about 150,000 tons annually.

Oilseeds. Vegetable oils constitute an important item of food in Pakistan, but there is a large deficiency. The oilseeds produced in the country are rape, mustard, sesamum, linseed and cottonseed. Production is between 230,000 and 300,000 tons of rape and mustard seed, about 12,000 tons of linseed, about 35,000 tons of sesamum. The output of cottonseed varies widely, but it is estimated that about 375,000 tons are available annually for crushing and export.

Jute. Jute is the principal source of income for the cultivator in East Pakistan, and accounts for about 43 per cent of the foreign exchange earnings (with raw cotton contributing another 43 per cent). At the time of partition, East Pakistan produced about 73 per cent of the total production of world's jute, but now, Indian production having increased, the figure is 60 per cent. India, however, ceased to export raw jute in 1950, and Pakistan is the sole supplier to the rest of the world. India herself still imports considerable quantities from Pakistan, being dependent on her for the better qualities. The production of jute is subject to restrictions imposed by the provincial government of East Pakistan with a view to maintaining prices at fair levels. The control is, however, not fully effective, which is not surprising in view of the slender resources of the government and the fact that cultivation is carried on in a large number of very small units by peasants. In normal years the production has ranged between 6.0 and 6.8 million bales (of 400 lb). Jute prices and exports have been subject to wide fluctuations, and as a result the 1952-53 season ended with a carry-over of 2.8 million bales. For the following season it was decided drastically to restrict production which, largely because rice prices were attractive at the time, proved successful and the output for the year was officially estimated to be only 2.5 million bales. Crop forecasts, traditionally under-estimates, are issued periodically by the government. Fairly reliable estimates are issued by the Pakistan Jute Association at Narayanganj. The 1954-55

year ended with no carry-over. The jute year is reckoned from July 1st to June 30th.

Cotton. Pakistan produces about 5 per cent of the world's supply of raw cotton, about 40 per cent of the production of undivided India. Its pre-partition average was 1.5 million bales (of 400 lb), but the disturbances following partition brought production down to 1 million bales. In the first five years production rose steadily to 1.8 million bales in 1952-53, but there was a marked decline in 1953-54 due partly to reversion of land to food production, but mainly to adverse weather. Cotton is the principal cash crop of West Pakistan, and contributes 43 per cent of the foreign exchange earnings of the country. Ninety per cent of the crop consists of what are known as the American varieties, grown under irrigation. The bulk of the crop is of 1½ in. staple, but a fair quantity of the 289F variety of 1 to 1½ in. is also produced. Under the quality development programme longer staple varieties are being developed.

Tea. Tea is grown entirely on plantations, of which about 70 per cent of the acreage is owned and managed by European companies. Production is about 50 million lb. Pakistan teas emphasise bulk and colour and are used for blending with more highly flavoured varieties. About half of the production is consumed locally. Small amounts are exported directly to the Middle East and South America but the main bulk is exported to the U.K. Tea is sold through auctions at Chittagong or London. The fact that Pakistan did not follow suit when many currencies of the world devalued in line with the pound sterling, led to drastic cuts in the rupee prices of exportable commodities. This affected the production of tea more than anything else. During 1950 to 1952, the industry passed through a critical period and a number of small estates had to close down. The situation improved only after world tea prices began to rise in 1953 and 1954.

Sugar. The area planted in sugar cane has steadily increased with the growth in the number of sugar mills. The acreage in 1947-48 was less than 700,000. In 1952-53, it was 870,000 acres. The yield of raw sugar has not, however, kept pace because of variations in the extraction rate as a result of the pyrrilla pest. The extraction rate of sucrose was about 8.4 per cent in 1952-53. It fell to 6.9 per cent in 1952-53 as a result of the pest but the extraction rate improved to 7.8 per cent in 1953-54. This compares with about 10 per cent in the West Indies. The yield of sugar cane is also very low, about 12 tons per acre as against 56 tons in Java. Efforts are being made to develop higher-yielding varieties.

Tobacco. Total production is about 165 million lb., of which about 100 million lb. are grown in East Pakistan. The cultivation of tobacco in West Pakistan is mainly a post-partition development. Here Virginia-type tobacco is grown for the cigarette industry which has now come into being.

Livestock. Agriculture in Pakistan depends upon livestock, not only as a source of milk, meat, hides, skins and wool, but also as the main source of power. Pakistan possesses some of the finest breeds of milch cattle, such as the Red Sindhi and Sahiwal cows and Nili Buffalo. Some of these are exported for cross-breeding. Among the leading breeds of draught animals are the Bhargani and Dhani bulls. The Tharparker is a dual-purpose breed. There are no breeds developed for beef. The government plays a leading part in developing breeds and, when the

THE BRITISH COMMONWEALTH

Agricultural Enquiry Committee emphasised the urgency of improving the dairy industry, had to decide the breeds on which the future of the industry was to be based. Buffalo milk is of the highest quality, yielding 5 to 8 per cent butter fat, as compared with 4 to 6 per cent in cows milk: but in its natural state it is believed to be too rich for human consumption so that it would not be practicable to depend entirely on buffaloes for the increased demand for milk. In view of the urgency of increasing the milk supply, present policy concentrates on milch stock, regardless of the effect on the working capacity of the bullocks. The cattle population is large but underfed and, particularly in East Pakistan, of poor quality. About 860,000 buffalo hides, 4.5 million cow hides, 5.6 million goatskins and 2.1 million sheepskins are produced annually, and Pakistan is the third largest exporter of hides and skins in the world, following Argentina and South Africa, but exports are likely to fall with the present expansion of the tanning industry. Of raw wool, between 24 and 30 million lb. are produced annually. The average yield of wool per sheep is 4 lb.

INDUSTRY

Industrial Policy. At the time of partition there was very little industry in Pakistan, although the territory was rich in many industrial raw materials. From the outset the government announced its determination to promote industrial development and invited business men to enter industry. It was believed that to bring about rapid industrial development the government would need to play an active role, but under the existing constitution (of 1935) industries were a provincial subject. An Industries Conference, consisting of representatives of the central and provincial governments, was convened at the end of 1947, and it was decided that 27 industries would be subject to central planning. In the budget of March 1948, tax concessions were given to new industrial undertakings. In April 1948, a comprehensive statement of industrial policy was issued, (followed by a supplementary statement in September) designed to encourage private enterprise and the foreign investor. The main feature of the statement was that, "Free play will be given to private enterprise and individual initiative", but this was to be in conformity with the broad principles of central planning which were set down in the statement. These related to fixation of industrial targets and allocation of materials in short supply, the location of industry and the maintenance of fair labour standards. The arms and munition, industry, manufacture of railway wagons, telephones, telegraph and wireless apparatus, and the generation of hydel power were to be operated by the State. The government also reserved the right to take over, or participate in, any other industry "vital to the security or the economic well-being of the state". The rest of the field was open for private enterprise. In the event of private capital not coming forward in adequate measure for the development of any industry of national importance, the government might set up "a limited number of standard units more as a means of attracting private enterprise than for any other object".

In February 1949, the government appointed a committee to investigate the reasons for the apparent reluctance of the Pakistani business man to invest in industry. (The Committee found that the foreign investment since partition had been directed into financial and commercial concerns rather than into industry.) In July 1949, an Advisory Council of Industries, comprising officials and business men was set up to advise the government on industrial policy. The Pakistan Industrial Finance

Corporation was established, with 51 per cent government participation, to provide credit to industrial concerns. The fiscal policy of the government was reorientated to provide incentives to promotion of industry. Beginning with the budget presented in March 1948, a series of tax concessions were granted to industrial concerns and on incomes from investments in industry. The rates of depreciation allowances were also made very generous. Investment in certain specified industries was also exempted from estate duty.

With the exception of the cotton textile industry, industrial growth was very slow in the early years. Unfamiliarity of Pakistani business men with industrial enterprise and shortage of trained personnel contributed a little to this, but mainly the early years were taken up with planning and obtaining machinery at long delivery dates, and in addition avenues for investment in trade, with prospects of large and immediate profits, were so great that there was little incentive to make longer-term industrial investments. In the spring of 1950, the Pakistan Industrial Development Corporation Act was passed, but the Corporation itself was brought into existence only in 1952. Its purpose was to provide leadership in the industrial sphere by building up industries with government finance, with or without private participation in the first instance, but with the ultimate intention of handing over the concerns to private ownership. It would also carry out investigations and assist private capital in its enterprises. In the first instance it was to promote jute, paper, heavy chemicals, fertilisers, heavy engineering and shipbuilding industries. In 1952, iron and steel, sugar, cement and textiles were added to its list, and in 1954 natural gas, production of power from natural gas, chemicals, pharmaceuticals, and dyestuff industries were included. The Government also set up factories for the manufacture of armaments, telephone and telegraph equipment, while some of the provincial and state governments have established textile mills.

Under the stimulus of government encouragement, tax concessions, tariff protection reinforced by import licensing, and provision of credit facilities, private industry continued to grow steadily. After 1952, however, when the country passed through severe foreign exchange difficulties, import restrictions had to be intensified. The business man could no longer employ all his capital in the import trade. It appeared that the import restrictions were likely to be prolonged. This opened up favourable opportunities for local industries; modern industry which hardly existed on the eve of partition now plays an important part in the economic life of the country.

Foreign Capital. In the statement of industrial policy the Government declared that it would welcome foreign capital seeking investment from purely industrial and economic motives and not claiming special privileges. There were however, requirements as to the participation of Pakistani nationals, both in the administrative and the technical services of the industry, and for their training. In certain industries, it was also laid down that Pakistani nationals should ordinarily be given the option of providing up to at least 51 per cent of the capital; in other industries at least 30 per cent. There were to be exemptions from this condition if sufficient indigenous capital was not forthcoming. In 1954, it was declared that foreign participation would be permitted up to 60 per cent of the total investment in approved industries. It was also stated that no restrictions would be imposed on the remittance of profits except those of general application arising from foreign exchange limitations and policy, to which such remittances are subject everywhere. A further announcement, in 1954, was that capital invested in or profits

ploughed back into certain approved industrial projects would be allowed repatriation at any time, and under certain conditions also the amount of appreciation of such capital. Since 1953, foreign investors have shown an increasing interest in industrial investment in Pakistan, particularly following the severe import restrictions.

Colombo Plan and Foreign Aid. Pakistan received during the three years 1951-52, 1952-53 and 1953-54 the equivalent of Rs.828 million in the form of loans and aid from abroad. Loans and credit made available by the U.K. Government, the International Bank for Reconstruction and Development, and the U.S. Export-Import Bank together amounted to Rs.289 million. Under the Colombo Plan grants of equipment and supplies were made, equivalent to Rs.144 million, by Australia, Canada and New Zealand. Under the U.S. Mutual Security Programme Pakistan received the equivalent of Rs.149 million. From the U.S.A., Australia and Canada gifts of wheat were received during 1953-54 to the value of Rs.242 million. Although not all of these funds were fully utilised during the period, the importance of foreign capital as a source of financing the country's development programme may be judged by comparison with the total of Rs.2,065 million spent during the same three-year period by the central and provincial governments on development.

Under the Colombo Plan and also under the U.N. Expanded Programme of Technical Assistance, the U.S. Programme of Technical Aid and the Ford Foundation, Pakistan has received technical assistance on a substantial scale. This includes the training abroad of Pakistan nationals, the provision of foreign technical experts and technical equipment.

Development Planning. Pakistan's first Six-Year Plan, to run from 1951 to 1957, was born out of the meeting of Commonwealth Foreign Ministers at Colombo in January 1950, where the Colombo Plan for Co-operative Economic Development in South and South-East Asia was mooted. The Six-Year Plan envisaging an expenditure of Rs 2,600 million, was then hurriedly drawn up. It was soon reviewed and in 1951 a Two-Year Priority Programme of selected projects was set up. In the course of implementation this programme too underwent modifications. In some cases targets were exceeded and new industries added and some other schemes omitted or postponed. The Two-Year Priority Programme was to cost Rs.500 million. The main Six-Year Plan envisaged 32 per cent of the development expenditure on agricultural development, 20 per cent on transport and communications, 18 per cent on fuel and power, 19 per cent on industry and mining, and 11 per cent on "social capital". The emphasis was shifted considerably in the Two-Year Priority Programme which provided for 48 per cent to be spent on industry and mining, 25 per cent on transport and communications, 25 per cent on fuel and power, leaving a very small amount for agriculture. But following food shortages renewed emphasis was put on short-term schemes to raise food production, with the adoption of the Five-Year Food plan in 1952. The original Six-Year Plan and the revised higher targets were fulfilled much earlier than planned. By the middle of 1955 the cost of schemes executed or approved totalled Rs.5,231 million as compared with the estimated cost of Rs.2,600 million for the entire six-year period. Of this, schemes costing about Rs.2,000 million were for agriculture and irrigation, Rs 1,500 million for power, Rs.940 million for communications and Rs.525 million for industry.

The planning organisation consists of the Economic Council (presided over by the Prime Minister and having

as its members the Central Ministers in charge of Agriculture, Industries, Communications, Education, Finance and Economic Affairs), the Planning Commission (having as its members secretaries of central ministries concerned and Development Commissioners of provincial governments, presided over by the Central Minister for Economic Affairs) and a number of sub-commissions. In 1953 a Planning Board was set up to make a detailed survey of resources of the country and to draw up a fresh five-year plan. The Board was due to place the first draft of the plan before the country by the end of 1955.

Cotton Textiles. At the time of partition the cotton textile industry in Pakistan consisted of 17 mills, with 177,000 spindles and 4,800 looms. By the beginning of 1955 the installed capacity of the industry stood at 1,383,444 spindles and 19,040 looms. In addition there is a handloom industry. The number of handlooms in the country is estimated to be about 500,000, about half of which are in East Pakistan. Handloom cloth is exempted from sales tax and excise duty and 25 per cent of the output of the spinning mills is reserved for the handloom industry. The target of the Six-Year Plan for the textile industry was one million spindles, later increased to two million. With two million spindles working Pakistan would expect to be self-sufficient in cloth, at a level of 18 yards per head. Nearly half of the textile machinery was obtained in 1951-52 from Japan, the share of the U.K. being about a quarter; the rest came from Germany and the U.S.A. In later years the relative share of the U.K. has increased substantially and has amounted to nearly two thirds of the total.

Jute Goods. There were no jute mills in Pakistan at the time of partition. The target set by the Six-Year Development Plan was 6,000 looms, (rising to 10,000 looms in 10 years). The Plan target had already been achieved by the middle of 1955, two and a half years ahead of schedule. It is estimated that the industry will consume about 1.2 million bales of raw jute annually and will produce over 200,000 tons of jute goods. Pakistan's own requirements of jute goods are estimated at about 40,000 tons a year. In 1954 about 11,000 tons were exported. The total capital invested in the industry is estimated at Rs 165 million, of which about Rs 100 million have been subscribed by private enterprise and the balance by the government.

Paper. Pakistan's requirements of writing and printing paper, excluding newsprint, are estimated to reach 25,000 tons annually. Early in 1950 the government decided to set up a paper mill in the Chittagong Hill Tracts and in 1952 the construction of the mill was taken over by the Pakistan Industrial Development Corporation. It is planned for an annual productive capacity of 30,000 tons, and is now in full production. The P.I.D.C. is also constructing two strawboard and paper mills in West Pakistan, each with a capacity of 7,500 tons. In addition it is engaged on investigations for a proposed newsprint factory with a capacity of 30,000 tons annually.

Cement. At the time of partition cement production in the country amounted to 324,000 tons. Output increased steadily and up to 1950 was sufficient to cover home consumption and permit limited exports. As a result, however, of a large increase in construction work considerable quantities of cement had to be imported in subsequent years. In 1954 production was 674,000 tons, against estimated requirements of one million tons. The P.I.D.C. is setting up two factories in West Pakistan and one in East Pakistan, with a combined capacity of 400,000 tons.

THE BRITISH COMMONWEALTH

Sugar. In 1948 sugar production in Pakistan was only 7,400 tons. The estimated requirements of the country are 265,000 tons per annum. By 1954 the installed capacity of the industry had risen to 95,000 tons. The sugar industry is one of those which the P.I.D.C. has taken up for development. In 1955 four new factories with a combined capacity of 68,000 tons were to go into production and the P.I.D.C. planned to build ten additional mills. In recent years almost the whole of the sugar manufacturing machinery has been imported from the U.K.

Cigarettes and Matches. Cigarette production, started after partition, now reaches over 4,000 million a year. Additional factories are expected to bring production up to 10,000 million a year in two years time. With the development of the industry imports of cigarettes have been very limited. Until 1952-53, however, large quantities of "bidi" (tobacco wrapped in leaf instead of paper) and bidi tobacco were imported from India. In 1953-54 these were reduced to nominal quantities. No accurate statistics of bidi production and consumption exist, but they have been estimated at 11,000 million and 35,000 million a year. Manufacture is a cottage industry. The indigenous bidi industry has been given protection from imports from India and as a result of the restricted imports, some of the demand has been transferred to cigarettes.

Fourteen match factories are producing annually more than 4.5 million gross boxes. Demand is estimated to be in the region of 7 million gross boxes (50 sticks each) per annum. Development plans in hand should bring production up to 8 million gross boxes.

Tanning and Footwear. The organised tanning industry at the time of partition was small, consisting of only four mechanised tanneries, and a certain amount of tanning by indigenous methods. Now there are some 46 tanneries, most of which are mechanised and employ up-to-date scientific methods. Annual output capacity is now 17 million lb. of sole leathers and 17 million sq. ft. of upper leathers. Footwear production is claimed to have reached 21 million pairs annually, and the country is now self-sufficient in this respect.

Heavy Engineering. In 1953 the P.I.D.C. signed an agreement with Krupps to make a detailed survey of exploitable iron ore; an earlier survey having reported some 10 million tons in the Kalabagh area of the Punjab. The P.I.D.C. in association with Krupps is setting up plant, which in the first phase will be capable of producing 50,000 tons of iron ingots a year. The second phase aims at an annual production of 300,000 tons of steel ingots and 50,000 tons of pig-iron. At present Pakistan's requirements of iron and steel, including tin plate, are estimated to be 350,000 tons. These are expected, however, to rise to 600,000 tons. At present the output of the iron and steel industry, which depends on imported and local scrap, is 10,000 tons of steel ingots and about 25,000 tons in re-rolling.

The first phase of the P.I.D.C. shipbuilding scheme is due for completion by the end of 1955. This envisages construction and repair of small vessels up to 2,500 dead-weight tons, principally launches, tugs, barges, etc., required by the East Pakistan Railway and the Pakistan Navy. It includes also the construction of a commercial dry dock, sufficient to take all vessels normally touching Karachi.

A small machine-tools industry, producing lathes, band saws and drills, is progressing slowly. There are also factories producing centrifugal pumps, horizontal slow-speed diesel engines, sewing machines, hurricane lanterns, razor blades and surgical instruments.

Heavy Chemicals. Two small factories produced about 330 tons per annum of sulphuric acid at the time of partition. With the addition of a modern plant, with a capacity of 10 tons per day, production has been raised to 3,000 tons per annum, which is more than Pakistan's present requirements. For that reason a sulphuric acid plant being put up by the P.I.D.C. in partnership with private capital was converted to a superphosphate-cum-sulphuric-acid plant. About half of its sulphuric acid production from its capacity of 20 tons a day will be utilised to produce 6,000 tons of superphosphates per annum. A 10 ton per day capacity sulphuric plant has also been set up in East Pakistan in conjunction with the Karnaphuli paper mills.

The present demand for caustic soda in Pakistan is estimated at 7,000 tons per annum. Two plants of 10 tons per day capacity, one in East Pakistan and one in West, have made the country self-sufficient in this chemical. The chlorine from the West Pakistan plant is utilised to manufacture 700 tons of 100 per cent DDT each year. The East Pakistan plant has been installed as a part of the paper mill.

The only soda-ash factory in Pakistan produces 25,000 tons per annum and is operated by a subsidiary of the Imperial Chemical Industries. There are 16 factories producing sodium silicate with an installed capacity of 52,000 tons per annum, but producing only 14,000 tons per annum. The local demand is about 16,700 per annum. In 1953 protective duties were levied against imports.

In order to increase the supply of fertiliser in the country the P.I.D.C. is setting up an ammonium sulphate plant having a capacity of 50,000 tons per annum, with provision to double this capacity. In addition to fertiliser the plant will provide ammonia and other by-products and it is planned to make it the nucleus of a heavy chemical industry in Pakistan.

Power. Lack of cheap sources of power is the main obstacle in the way of Pakistan's development plans. Coal mined in the country is inferior in quality and has a high sulphur and ash content. Methods of mining are primitive and very few mines are mechanised. As a result of reorganisation of the industry, following recommendations by a U.K. firm of consultants, production has increased from 332,000 tons in 1949 to nearly 600,000 tons, but Pakistan still needs to import substantial quantities of coal.

Production of electricity in 1947 was meagre. There was only one hydel station producing about 9,500 kW. and the installed capacity of thermal power in the large towns was about 60,000 kW. The capacity of thermal stations now stands at 197,000 kW. Hydel schemes completed so far have increased output to 62,000 kW., and the completion of all the schemes in hand will increase power output by 718,000 kW. In order to speed up development the government proposes to set up an Electricity Commission, which is to be the precursor of a Power Development Corporation.

Production of crude oil in Pakistan has increased five-fold since partition to 1,700,000 barrels. Vigorous efforts have been made to find more oil in the country, but the results have so far not been as spectacular as the hopes. The only refiner has a capacity of 4,500 barrels per day.

Perhaps the most outstanding discovery for Pakistan in recent years has been that of natural gas, a large quantity of which was discovered in the course of oil prospecting. Reserves of natural gas at Sui in Baluchistan are estimated to exceed 2,250,000 million cubic feet, a reservoir sufficient to supply 100 million cubic feet per day for more than 60 years, a quantity equivalent in heating value to about

1,600,000 tons of imported coal a year. The work of laying the pipeline to Karachi has been completed and gas made available there. Lines are being laid to industrial centres in the Punjab. It has also been announced recently that natural gas has been discovered at Haripur in East Pakistan.

FINANCE AND FOREIGN EXCHANGE

Finance. The Pakistan Government has succeeded in producing a series of surplus budgets through periods of strain as well as of unexpected prosperity. A simple device is adopted of dividing the budget into a "revenue" and a "capital" account; expenditure on revenue account is kept within the bounds of revenue receipts and other expenditure is charged to the capital account. Thus the capital account includes expenditure not only on revenue-yielding development projects but also on defence and other items which would ordinarily be a charge on current revenues. Published statistics of receipts and expenditure on revenue account do not, therefore, accurately reflect the deficit, which is the sum of net borrowing by the government and the decrease in its cash holdings. The statistics on page 546 which have been compiled by the U.N. Economic Commission for Asia and the Far East, include in "expenditure" current capital outlays (excluding from the latter debt redemption and certain monetary operations), and reflect more accurately the government's financial position.

On the expenditure side, defence is a significant item and accounted for 60 per cent of the total in 1950-51. Absolute defence expenditure continued to rise, although its share of the total fell to 52 per cent in 1951-52 and 1952-53 and to 38 per cent in 1953-54 and 1954-55, when there was also a fall in the absolute amount. The two other major items are "Investments", which comprise expenditure on development, and "contributions to provincial governments" which are also mainly used for development projects. The low level of expenditure on economic and social services is another marked feature of the budget.

Immediately after partition, Pakistan was completely dependent on foreign trade and customs revenue is a main item of revenue. In 1950-51 it provided as much as 71 per cent of the total tax revenue. It then fell progressively to 38 per cent in 1953-54, and rose again in 1954-55 to 46 per cent, due to fluctuations in the volume of trade and in prices; this rise is possibly also a reflection of the growth of industry and the decline in the importance of foreign trade. Income tax revenue has been fairly steady and accounted for 19 per cent of the total in 1954-55. Taxes on transactions and consumption rose both absolutely and relatively (from 15 per cent of the total in 1950-51 to 33 per cent in 1954-55).

Foreign Exchange. In the early years an illusion of the strength of Pakistan's foreign exchange position was supported by the publicity given to statistics of the balance of trade on *private* account, which was in Pakistan's favour, but which omitted foreign exchange expenditure on government account (between 25 and 30 per cent of total payments) and other payments (including those on shipping, insurance and banking services which amounted to about 15 per cent of the total). This incorrect appraisal of Pakistan's real position, as well as reasons of prestige, may have influenced her decision in September 1949 not to follow suit with other countries in the Sterling Area in devaluing her currency. It was said in support of the decision that the nature of her export trade was such that she could not have hoped to expand it by devaluation and would lose by lower prices in non-devalued markets; while non-devaluation, by cheapening her imports (of capital goods), would help her industrialisation programme. As it turned out, India decided not to accept the new exchange parity of the Pakistan rupee and trade between the two countries came to a standstill. It was then widely expected that Pakistan could not hold out on the non-devaluation decision, and this in turn led to a complete stoppage of foreign buying and speculative orders for imports in anticipation of a devaluation of the rupee. Pakistan then entered a period of acute foreign exchange difficulties but the situation changed completely after 1950 when the effects of the Korean boom were felt and in 1951 Pakistan earned a substantial surplus on its foreign exchange account. Thereafter, the balance of payments was again reversed and the situation was kept in hand only by foreign aid and severe curtailment of imports. Although export earnings have fallen from the Korean boom peak levels they are higher than in 1948 and 1949. Pakistan's problem has rather been that of maintaining a minimum level of imports of consumer goods in the face of the heavy demands made on the foreign exchange budget by the Government, for defence and development, and the growth of industrial investment.

On July 31st, 1955, Pakistan devalued the rupee, returning to the original parity with sterling before the devaluation of the £ in September 1949. The decision was not taken under financial pressure. The 1954-55 jute and cotton crops (the two main exports) had been sold and there was no "carry over". In announcing the decision it was however stated that the country had reached a stage when it could look to exports of manufactured jute and cotton goods to augment its foreign exchange earnings. It was also hoped that devaluation would improve the lot of the agriculturist through higher prices; and it was maintained that Pakistan had reached a level of production when it was safe to alter the exchange-rate without fear of serious inflation. The immediate reaction was, nevertheless, a substantial rise in prices.

THE CONSTITUTION

THE State of Pakistan was established on August 14th, 1947, under the provisions of the Indian Independence Act, 1947, as the result of an agreement between the British Government and the two main Indian political parties, the Indian National Congress and the All-India Muslim League. By this agreement India was divided and the predominantly Muslim areas were incorporated into the State of Pakistan.

Pakistan consists of two parts, East and West Pakistan, which are separated by over 1,000 miles. West Pakistan is composed of Sind, West Punjab, North-West Frontier Province and Baluchistan and other smaller States which acceded to Pakistan at the time of the partition. East Pakistan includes Sylhet, a district of the province of Assam in pre-partition India. Karachi is the capital of Pakistan.

In November 1954 the Government of Pakistan decided to integrate the existing Provinces and Princely States in West Pakistan into a single administrative unit, and to make the country a Federation of two units: West Pakistan and East Pakistan. This decision was approved by the Provincial Governors, Chief Ministers, Rulers and States in December 1954, and the legislation was passed on September 30th, 1955. Since 1947 Pakistan has enjoyed the status of an independent Dominion, but in January 1955 the Pakistan Government declared that Pakistan should be a sovereign independent Republic. The Government also affirmed Pakistan's decision to continue her full membership of the Commonwealth of Nations and her acceptance of the Queen as a symbol of the free

association of its members. In March 1956 Pakistan became an Islamic Republic within the British Commonwealth.

Apart from its work in preparing a Constitution for Pakistan, the Constituent Assembly is also functioning as a Parliament or Federal Legislative Assembly until such time as the final Constitution is formulated and adopted.

The head of the State is (since March 1956) the President.¹ The Government is carried on by a Cabinet, which is collectively responsible to the Constituent Assembly through the Prime Minister. The latter is appointed by the President, while other ministers are appointed on the advice of the Prime Minister. The President is presumed to act on the advice of his ministers. Any Ordinance promulgated by the President is subject to repeal by the Constituent Assembly.

Both Urdu and Bengali have been declared State languages, but English will continue as a State language for twenty years.

Until such time as the new Constitution is promulgated, the Indian Independence Act of 1947, and the Government of India Act of 1935 as adapted for Pakistan, together form the working Constitution of Pakistan.

The task of drawing up the Pakistan Constitution was begun by the old Constituent Assembly in 1947, Committee Reports being submitted in 1952 and 1953. A draft constitution was adopted by the Constituent Assembly on February 29, 1956.

¹ Formerly the Governor-General.

THE BRITISH COMMONWEALTH

THE GOVERNMENT

HEAD OF THE STATE

President: Major-General ISKANDER MIRZA (Acting).

THE CABINET

(formed August 1955)

Prime Minister and Minister of Defence, Kashmir Affairs, Economic Affairs, States and Frontier Regions: MOHAMAD ALI

Minister of Foreign Affairs and Commonwealth Relations: HAMIDUL HUQ CHOUDHURY.

Minister of Communications: M. R. KAYANI.

Minister of the Interior and Education: A. K. FAZLUL HUQ.

Minister of Commerce and Industries: HABIB IBRAHIM RAHIMTOOLA.

Minister of Finance: SAYED AMJAD ALI.

Minister of Health: KAMINI K. DUTTA.

Minister of Law: ISMAIL I. CHUNDRIGAR.

Minister of Information and Broadcasting: PIR ALI MOHAMMAD RASHDI.

Minister of Labour, Works and Minority Affairs: NURUL HUQ CHOUDHRY.

Minister of Food and Agriculture: ABDUL LATIF BISWAS.

Minister of State for Refugees and Rehabilitation, and Parliamentary Affairs: SARDAR AMIR AZAM KHAN.

Minister of State for Finance: LUTFUR REHMAN KHAN.

Minister of State for Economic Affairs: AKSHYA KUMAR DAS

Spain: SHADID SUHRAWARDY, Madrid (A); also accredited to the Vatican.

Sudan: MIAN ZIAUD DIN, Khartoum (Chair., Governor-General's Commission).

Sweden: S. M. BURKE, Stockholm (M); also accredited to Norway, Denmark and Finland.

Switzerland: A. H. MALIK, Berne (A); also accredited to Austria and Yugoslavia.

Syria: S. LALSHAH BOKHARI, Damascus (M); also accredited to Lebanon and Jordan.

Thailand: KAMALUDDIN AHMED, Bangkok (C).

Turkey: MIAN AMIN-UD-DIN, Ankara (A).

United Kingdom: M. IKRAMULLAH, London (HC).

United Nations: M. MIR KHAN, New York (Permanent Representative).

U.S.A.: MOHAMMED ALI, Washington (A); also accredited to Cuba and Mexico.

U.S.S.R.: MAHMUD AHMAD, Moscow (C); also accredited to Czechoslovakia.

Vatican: (see Spain).

Yemen: (see Egypt).

Yugoslavia: (see Switzerland).

TRADE COMMISSIONERS

Southern Rhodesia: MOHAMMAD AKRAM, P.O. Box 926, 22 Malica Road, Salisbury.

Singapore: M. H. ENVER ALI BAIG, 4 Prince Street, P.O. Box 949, Singapore 1.

PROVINCES

WEST PAKISTAN

On September 30th, 1955, the Constituent Assembly passed the West Pakistan Bill providing for the unification of the former Provinces, States and Tribal Areas of West Pakistan. As from October 14th, 1955, the following territories were incorporated into the Province of West Pakistan:

(i) The Governors' Provinces of the Punjab, the North-West Frontier and Sind; (ii) the Chief Commissioner's Province of Baluchistan and the Capital of the Federation; (iii) the States of Bahawalpur and Khairpur and the Baluchistan States Union, and (iv) the Tribal Areas of Baluchistan, the Punjab and the North-West Frontier and the States of Amb, Chitral, Dir and Swat.

Governor: MUSHTAQ AHMED GURMANI.

MINISTERS

Chief Minister and Minister for Law and Order and General Administration: Dr. KHAN SAHIB.

Minister for Revenue, Industries, Commerce and Labour, Refugees and Rehabilitation: M. A. KHUHHRO.

Minister for Education, Health and Law: ABDUL HAMID KHAN DASTI.

Minister for Finance, Communications and Works: MIAN MUMTAZ MOHAMMAD KHAN DAULTANA

Minister for Development, Irrigation, Colonisation and Information: BAHADUR KHAN.

PAKISTAN

Minister for Food, Agriculture, Social Welfare and Local Government: ABID HUSSAIN SHAH.
Minister for Tribal Affairs: KHAN QURBAN ALI KHAN.

EAST PAKISTAN

Governor: AMIR-UD-DIN AHMAD (Acting, July 1955).

MINISTERS

Chief Minister and Minister for Home Affairs including General Administration, Jails, Transport and Jute: ABU HUSSAIN SARKAR.
Minister for Education: ASHRAFUDDIN AHMED CHAUDHRY.
Minister for Communications, Buildings and Irrigation: ABDUS SALAM KHAN.

POLITICAL PARTIES

Minister for Agriculture and Relief: HASHIM-UDDIN AHMED.
Minister for Commerce, Labour and Industry: AZIZUL HUQ (NANNA MIAN).
Minister for Revenue: MUSTAGHAUSUL HUQ.
Minister for Local Self-Government and Registration: GHYASUDDIN AHMED CHAUDHRI.
Minister for Food and Fisheries: LATIF HOSAIN.
Minister for Public Relations: MAHMUDUNNABI CHAUDHRI.
Minister for Justice and Legislature: NASIR-UDDIN AHMED CHAUDHRI.
Minister for Medicine and Public Health: A. M. ZAHORUL HUQ (LAL MIAN OF COMILLA).
Minister for Finance: BASANTA KUMAR DAS.
Minister for Co-operatives: SARAT CHANDRA NAZUMDAR.
Minister for Excise and Forests: MADHUSUDHAN SARKAR.

POLITICAL PARTIES

In the June, 1955 elections to the Constituent Assembly no single political party secured an absolute majority and in August, 1955 the Muslim League formed a coalition government with the support of the United Front. The result of the elections was as follows:

	Seats
Muslim League	25
United Front	16
Awami Muslim League	13
Independents (including 2 non-Muslims)	4
Pakistan National Congress	4
Scheduled Castes Federation	3
Noon Group	3
United Progressive Parliamentary Party	2
Azad Pakistan Party	1
Communist Party	1

Muslim League: originally founded in 1906 as the All-India Muslim League, it became the Muslim League in 1947 on the formation of Pakistan; as the All-India Muslim League it tried at first to work out a compromise with the Congress Party, whereby the rights of Muslim minorities would be safeguarded in an independent India, but these attempts were unsuccessful; in 1930 the idea of a separate Muslim state was first put forward by Dr. Mohammed Iqbal, and was adopted as a political goal by the League in 1940. The goal was achieved on August 14th, 1947 under the leadership of Quaid-i-Azam Mahomed Ali Jinnah, founder and first president of the Muslim League. The objects of the Muslim League include the safeguarding of the integrity and sovereignty of Pakistan and of the religious, cultural, social, economic and political interests of Muslims in Pakistan, and the promotion of friendly relations between Muslims and other communities. Pres. and Leader Miss FATIMA JINNAH (succeeded Chaudhri Mohamad Ali, the Prime Minister, November, 1955).

United Front: f. 1954 in East Pakistan, where a group of parties united to form a common front in opposition to the Muslim League in the provincial elections of March, 1954, which the United Front won. The chief parties constituting the front were:

Awami Muslim League (see below), which seceded in August, 1955;

Kraishak Sramik (Peasants' and Workers' Party) led by A. K. FAZLUL HUQ the moving spirit behind the United Front;

Nizam-i-Islam Party, led by MAULANA ATHAR ALI,

Khalafat-i-Rabbani Party, which aims at the establishment of an Islamic constitution and an alliance between all Islamic countries; Leader ABUL HASHIM;

Ganatantri Dal, which has been charged with Communist sympathies, led by MAHMUD ALI.¹

The policy of the United Front includes the establishment of Bengali as a state language, the abolition of the zamindari system of landholding, the decentralisation of government and the release of political prisoners; the Front holds 121 seats in the East Pakistan and 16 seats in the Constituent Assembly; Leader A. K. FAZLUL HUQ

Awami Muslim League: f. 1949 in East Pakistan by MAULANA A. H. BHASHINI; urges that Bengali should be one of the state languages and that East Pakistan should have full internal autonomy; the party joined the United Front in 1954 but seceded in 1955 (though some dissident Awami Leaguers continued to support the Front under A. Salam Khan) and went into opposition in both the provincial and central Assemblies. Leaders MAULANA ABDUL HAMID BHASHANI and H. S. SUHRAWARDY; Gen. Sec. MAJIBUR RAHMAN.

Pakistan National Congress: (Hindu), was originally part of the main India party; most of its influential leaders in Pakistan migrated to India following partition; holds 4 of the 9 non-Muslim seats (among East Pakistan members) in the Constituent Assembly. Hindu Congress members have given some support to the United Front in the Province and in the Centre. Leader BASANT KUMAR DAS.

¹ The arrest of Mahmud Ali under the Public Safety Act was reported in November 1955.

THE LEGAL SYSTEM

The legal system in Pakistan is based on Subordinate Judges, Class I and II, who have territorial jurisdiction over districts or sub-divisions of districts and pecuniary jurisdiction up to £700. Above them in rank are the District Judges, who preside over District Courts. Their pecuniary jurisdiction is unlimited and they sit in appeal over the Subordinate Judges of a whole district or division formed of several districts. Above the District Courts stand the Provincial High Courts, with final appeal to the Federal Court.

There are Small Cause Courts in most of the large towns. Their pecuniary jurisdiction is very small, and any litigation which concerns title is barred to them; they exist chiefly as a means of speedy and cheap recovery of small debts or enforcement of petty contracts.

On the criminal side there are Magistrates of the first, second and third class, stationed at various towns in each district and under the control of the District Magistrate, who is the Head Magistrate for the whole of his district. Appeals from second- and third-class Magistrates go to the first-class Magistrate with appellate powers, or to the District Magistrate, who is assisted by one or more additional District Magistrates stationed in the large towns and subordinate to him. Appeals from the first-class Magistrates and District Magistrates go to the Court of Session manned by a Session Judge and additional Session Judges, whose jurisdictions normally extend through the district, but in some cases over two or more districts. Revisions from the appellate decisions of first-class Magistrates and District Magistrates go in the first place to the Sessions Court, which submits them with its recommendations for the orders of the High Court. The Session Court has the power of imposing any punishment, including death; but the death sentence is subject to confirmation by a Bench of two Judges in the High Court. Trials before the Courts of Session are held in certain cases with Assessors (whose opinion does not bind the Judge) and others with a Jury (whose verdict binds the Judge unless he thinks it

perverse, in which event he can refer the case with his opinion to the High Court to be decided by that Court). Appeals lie from the High Court to the Federal Court, but are admitted only very rarely.

The Chief Justices and Judges of the Federal Court are as follows:

FEDERAL COURT

Chief Justice: Hon. Mr. Justice MOHAMMAD MUNIR.

Judges: Hon. Mr. Justice ABU SALEH MD. AKRAM, Hons. A. R. CORNELIUS, MOHAMMED SHARIF, S. A. REHMAN.

HIGH COURT OF WEST PAKISTAN

The High Court of West Pakistan was established by an order dated October 9th, 1955, when the former High Court of Judicature at Lahore, the Chief Court of Sind, the Judicial Commissioners Courts in N.W.F.P. and Baluchistan, and other courts functioning as High Courts in the territories included in the Province of West Pakistan, ceased to exist. The High Court sits at Lahore, but has branches at Karachi and Peshawar and Circuit Courts.

Chief Justice: Hon. S. A. RAHMAN.

Lahore Branch. Hon. Justices M. R. KAYANI, B. Z. KHAUS, ABDUL AZIZ KHAN, AKHLAQ HUSAIN J. ORCHESON, MOHAMMAD YAKUB ALI, MOHAMMAD SHARIF.

Karachi Branch. Hon. Justices MOHAMMAD BACHAL, MOHAMMAD BAKHSH A. MEMON, INAMULLAH KHAN, Z. H. LARI, RAHIM BAKHSH MUNSHI.

Peshawar Branch. Hon. Justices S. H. MOHAMMAD SHAFI, HABIBULLAH KHAN.

EAST BENGAL HIGH COURT

Chief Justice: Hon. AMIN AHMED.

Judges: Hon. Justices SOMNATH CHAKRAVARTY, MAHBUB MURSHED

RELIGION

The Indo-Pakistan sub-continent is inhabited by two religious groups, Hindus and Muslims, who together form the bulk of the population. The fundamental differences between them led to the creation of two separate homelands; and the sub-continent of India was accordingly partitioned into Bharat and Pakistan on August 14th, 1947, on the basis of Hindu majority areas going to Bharat and Muslim majority areas going to Pakistan.

The part which comprises Pakistan has a population of 75.8 million, of which Muslims form 85.9 per cent, and the rest are Scheduled Caste Hindus, Caste Hindus, Christians and others (including Buddhists, Tribal People of Chittagong Hill Tracks and Parsees).

In Western Pakistan the population is almost entirely Muslim. In Eastern Pakistan, on the other hand, there are over 10 million Hindus among the population.

Pakistan has complete freedom of religious worship.

CHURCH OF INDIA

There is a diocese of the Church of India, Pakistan, Burma and Ceylon at Lahore, founded in 1877. The Bishop is the Rt. Rev. L. H. WOOLMER.

ROMAN CATHOLIC CHURCH

The Roman Catholic Church in Pakistan is divided into the Ecclesiastical Provinces of Karachi (for West Pakistan) and Dacca (for East Pakistan). The Archbishop of Karachi, the Most Rev. Dr. ALCUIN VAN MILTENBURG, O.F.M., is also the Vatican Chargé d'Affaires in Pakistan. The Archbishop of Dacca is the Most Rev. LAWRENCE GRANER. In addition, there are Bishops at Lahore, Multan, Rawalpindi, Chittagong, Dinajpur and Jessore.

BROADCASTING

Radio Pakistan: 71 Garden Road, Karachi.

Radio Pakistan has a network of seven broadcasting stations operating thirteen transmitters—six of which are short wave. The high-power short-wave transmitters at Karachi provide an aerial link for all the zonal stations for the broadcasting of national programmes and centralised news in various languages. Twelve external programme services, seven regular and five experimental, to other countries are also put out each day. The short-wave transmitter at Dacca provides an extended zonal service as well as a link between East and West Pakistan. Of the older stations, Lahore and Dacca also have additional short-wave transmitters.

During the eight years of its existence, Radio Pakistan has made considerable progress, but the process of building up continues. Several new projects are at various stages of completion. Two new 10-kW. short-wave transmitters at Karachi and a 10-kW. medium-wave transmitter at Rawalpindi have been installed. Another 10-kW. short-wave transmitter at Peshawar and three satellite stations in East Pakistan will be set up.

Economies in broadcasting dictated by the 1953 financial crisis led to the inauguration of a transcription service, whereby the Lahore and Karachi centres of Radio Pakistan exchange recorded programmes in alternate weeks.

Director-General: Z. A. BOKHARI.

FINANCE

TRANSPORT

RAILWAYS

Pakistan has two large rail systems: the Eastern Bengal Railway in Eastern Pakistan and the North-Western Railway in Western Pakistan. Both of these are State-owned and have a total route mileage of 7,047 miles. The Eastern Bengal Railway is mostly metre gauge and the North-Western Railway mostly broad gauge.

(See also tables in statistical section.)

Director-General of Railways: S. M. HASAN, Railway Division, Karachi.

SHIPPING

As the two zones of Pakistan are not geographically contiguous there is ample scope for development in the linking up of the two areas by sea. At the time of partition there were no shipping companies in the territories comprising Pakistan. Karachi and Chittagong have now been declared ports of registry, and the chief companies now operating in Pakistan are:

Gulf Steamships, Ltd.: "Steel House", West Wharf Road, Karachi; 1 tanker, 9,760 tons, 1 dry-cargo vessel, 7,350 tons; Managing Dir. IBRAHIM MOHAMEDALI; Sec. ZAINUDDIN A. DALAL.

Muhammadi Steamship Co.: Muhammadi House, McLeod Road (P.O.B. 4128), Karachi; agents in Colombo and principal Eastern and Pakistan ports; services, Pakistan and Eastern ports; 3 vessels, total gross tonnage 21,400 tons; Managing Dir. FAKHRUDDIN VALIBHAI.

East and West Steamship Co.: P.O. Box 7014, Kimari, Karachi; services, West Pakistan, India, Ceylon, East Pakistan; 7 ocean-going vessels, 4 coastal vessels, 2 deep-sea tugs, 1 salvage vessel, totalling 48,436 tons gross.

In addition, many foreign shipping companies run services to Karachi and Chittagong.

AIR SERVICES

Pakistan International Airlines Corp: Khuro Road, Karachi 4; est. 1955 as a result of merger of Orient Airways Ltd. with Pakistan International Airlines. The Corporation operates internal services and services to India, Cairo, London and Rangoon. Chair. MIRZA AHMAD ISPAHANI; Chief Administrative Officer M. M. SALIM.

Foreign airlines operating in Pakistan include:

Air Ceylon: Forbes Building, Dunolly Road, Karachi.

Air France: Passengers. Hotel Metropole, M. A. Khuhro Road, Karachi, Freight Safe Deposit Chambers, McLeod Road, Karachi.

Air India, Ltd.: Karachi House, McLeod Road, Karachi.

Air Services of India, Ltd.: McLeod Road, Karachi.

British Overseas Airways Corporation: McLeod Road, Karachi.

Indian National Airways: Finlay House, McLeod Road, Karachi.

Indian Trans-Continental Airways, Ltd.: Finlay House, McLeod Road, Karachi.

India Travel Service (Pakistan): Volkart Building, McLeod Road, Karachi.

Islamistan Airways, Ltd.: Khoru Garden, Karachi.

K.L.M. (Royal Dutch Airlines): Volkart Building, McLeod Road, Karachi

Pan-American World Airways: Finlay House, McLeod Road, Karachi.

Philippines Air Lines: 7 Beach Luxury Hotel, Karachi.

LEARNED SOCIETIES

All-Pakistan Association of Applied Psychology and Psychical Analysis: Karachi.

All-Pakistan Homoeopathic Association: Pakistan Chowk, Karachi; f. 1949; 5,780 mems; Sec. Dr. S. AKHTAR; publs. *Pakistan Homoeopathic Journal* (monthly), *Homoeopathic Light*.

Anjuman Taraqqi-e-Urdu Pakistan: Hospital Road, Karachi I; f. 1902, Pres. Dr. MAWLAWI ABDUL-HAQ, B.A., D.LITT.; Vice-Pres. Begam FAZLUR RAHMAN; Joint Sec. MOULVI SAYYID HASHIMI, Asst. Sec. F. Z. ABASSY; publs. *Urdu Tarikh-wa-Siyasiat*, *Science* (quarterlies), *Maashiyat* (monthly), *Qawmi-Zaban* (fortnightly); see also under Libraries.

Iqbal Academy, The: 134 Multi-Storey Building, Kingsway, Karachi; f. 1951, institutes scholarships and lectureships, publishes books and pamphlets, and awards literary prizes, special Iqbal research library; Pres. The Minister of Education; Dir. M. RAFI UD DIN.

Karachi Theosophical Society: 1 Bunder Road, Karachi I, activities include study of U.N. and its work, and discussions on problems of education and social welfare in Pakistan; Pres. Mrs. GOOL MINWALLA; Sec. Mrs. D. ENGINEER.

Pakistan Association for the Advancement of Science: c/o University of the Punjab, Lahore; f. 1947; Sec. Dr. BASHIR AHMAD; publ. *The Pakistan Journal of Science*, *The Pakistan Journal of Scientific Research*, and monographs and bibliographies.

Pakistan Economic Association: c/o Economics Dept., University of the Punjab, Lahore; publ. *Pakistan Economic Journal* (quarterly).

Pakistan Institute of International Affairs: Strachen Road, Karachi, f. 1947, 400 mems; library of 6,500 vols.; Sec. K. SARWAR HASAN, publ. *Pakistan Horizon*.

Pakistan Medical Association: Said Manzil, Bunder Road, Karachi.

Society of Arts and Literature: Hands Park, Chittagong; f. 1948 for the advancement of art, literature, education and culture through literary and musical conferences, debates etc.; over 500 mems and 1,000 associates, management vested in a General Council, which elects a working cttee.

University of the Punjab Historical Society: University Hall, Lahore, Punjab; f. 1911.

RESEARCH INSTITUTES

Astronomical Observatory of the University of the Punjab: Punjab University Observatory, Cust Road, Lahore, f. 1920; Curator M. ZIA-UD-DIN, M.A., PH.D.

Cancer Research Institute: Jinnah Central Hospital, Karachi; f. 1954.

Fazl-i-Omar Research Institute: Model Town, Lahore, f. 1946, objects to promote the study of science and the development of industries in the country; library 5,000 vols., Dir. MOHAMMAD ABDULLAH.

Malaria Institute of Pakistan: 50 Madan Mohan Basak Rd., Saha House, Dacca; f. 1947; library of 1,300 vols; training in malariology for medical graduates and sanitary inspectors, entomological, protozoological and malario-metric surveys; biological testing of insecticides; therapeutic and suppressive trials on anti-malaria drugs; Asst. Dir. Dr. M. Z. Y. HUSAIN, M.B., B.S.

Meteorological Institutes: Karachi, Lahore and Chittagong

Karachi: Frere Road, f. 1856; Dir. Met. Services S. N. NAQVI, M.Sc., F.R.MET.S.; Admin. Officer HASHMATULLAH KHAN, B.A.

Lahore: Jail Road; f. 1866; Dir. ABDUL HAYE, M.Sc.

Chittagong: Chowk Bazar; Dir. N. A. QUADIR, M.Sc.

Pakistan Animal Husbandry Research Institute: G.P.O.-Peshawar Cantt., W. Pakistan; f. 1949; 60 mems; Officer-in-Charge ABDUL WAHID, L.V.P., M.Sc.

Pakistan Animal Husbandry Research Institute: Comilla, East Pakistan, f. 1947; Officer-in-Charge M. M. HUQ, B.V.Sc., G.M.V.C.

Pakistan Central Jute Research Institute: Tejgaon, Dacca; f. 1951 under Pakistan Central Jute Committee, Government of Pakistan, for agricultural, technological and economic work on jute; Dir. of Agricultural Wing Dr. S. D. CHAUDHURI, PH.D., D.I.C.; research published in Annual Report of Pakistan Central Jute Committee.

Pakistan Forest College and Research Institute: Abbottabad, W. Pakistan, f. 1947; library of 10,500 vols; forestry museum; two training courses leading to Diploma or Certificate, Dir. Dr. A. H. KHAN; publ. *Pakistan Journal of Forestry*.

Silvicultural Research Division: Punjab Forest Department, 24 Cooper Road, Lahore, Punjab; Dir. M. Z. HAQ, K.B., I.F.S.

Varendra Research Society and Museum: Rajshahi, East Bengal; f. 1910; objects: investigation and encouragement of history, archaeology, anthropology, literature, and art in relation to India and Pakistan, and with special reference to Bengal; collection and preservation of archaeological and other relics, ancient MSS., etc., and publication of original works on these subjects; 32 mems; library of about 5,700 vols; 6,625 items in museum, including 3,940 ancient MSS.; Pres. RAJA PRATIVA NATH RAY BAHADUR OF DIGHAPATIYA; Hon. Sec. K. C. SARKAR, M.A., B.L.; Chair. of the Museum ALI HASAN, M.A.; Curator Dr. G. M. HILALI, M.A., D.Phil.; Librarian Prof. S. P. LAHIRY, M.A.

THE BRITISH COMMONWEALTH

LIBRARIES

Anjuman Taraqqi-e-Urdu Pakistan Libraries: Hospital Road, Karachi 1; comprises:

Kutub Khana-i-'Am (*Public Library*): f. 1948; 12,000 vols. in Urdu.

Kutub Khana-i-Khas (*Special Library*): f. 1948; 25,000 vols. in Urdu, Arabic, Persian and English; MSS. in Urdu, Persian and Arabic.

British Council Libraries: Karachi; 12,000 vols.; Lahore 10,000; Dacca 5,000 vols.

British Information Services Library: El-Markaz Building, Bunder Road, Karachi; Dir. A. C. HALL; Deputy Dir. R. HICKLING.

Central Government College for Women Library: Karachi.

Central Public Library: Dacca; Librarian AHMAD HUSAIN.

Central Secretariat Library: Karachi; 7,300 vols.

Dwarkanadas Library: Lahore; f. 1921; 24,000 vols.

Dyal Singh College Library: Lahore; f. 1910; 21,500 vols.; Librarian S. S. FATIMI, LIB.DIP.

Forman Christian College Library: Lahore; f. 1866; about 45,000 vols.; Hon. Librarian Prof JAMES C. MANRY.

Islamia College Library: Lahore; f. 1885; 30,000 vols.; Librarian SYED NASIR AHMED, B.A.

Khalidina Library and Reading Room: Karachi.

Lahore Government College Library: Lahore; f. 1864; 31,449 vols.; Librarian M. SIDDIQUE, B.A., LIB.DIP.

Liaquat Library: Liaquat Hall Garden, Karachi; f. 1852 as Frere Hall Library; 15,000 vols.; Librarian NEMATULLAH BEGG.

Punjab Private Library: Lahore; f. 1884; 125,000 vols.; Librarian KH. NUR ELAHI, B.A., LIB.DIP.

Sandeman Library: Quetta; f. 1886; 10,929 vols.; Librarian MUHAMMAD ABDUL RAZZAQ.

Talim-ul-Islam College Library: Lahore; f. 1944; 3,821 vols.; Librarian M. MOHAMMAD DIN, M.A., LIB.DIP.

U.S. Information Services Library: Karachi; Librarian MISS BARBARA PORTEOUS.

University of Dacca Library: Dacca; f. 1921; 150,000 vols. and over 35,000 MSS.; Librarian Dr. NAFIS AHMAD, M.A., PH.D.

University of the Punjab Library: Lahore; f. 1882; approx. 165,000 vols.; Hon. Librarian A. RAHIM KHAN, M.A.

University of Sind Library: Hyderabad (Sind); f. 1948; 24,000 vols.; Librarian J. W. SYED, M.A.

West Punjab Vedic Library: Lahore; f. 1885; 16,640 vols.; Librarian Pt. VISHWA NATH, M.A.

MUSEUMS

Pakistan Museum Association: Peshawar; f. 1949; objects: to advance and improve the work of museums in Pakistan; to establish close contact with universities, educational and services institutions; to open new museums in important towns in Pakistan; to provide facilities for the training of curators; to establish an archaeological laboratory; and to popularise museums in the country by the following means: (1) to start a travelling museum fully equipped with cinematograph films, (2) to hold exhibitions, (3) to deliver lectures, and (4) to publish literature on Pakistan museums; Pres. Dr. MAHMUD HUSAIN, PH.D.; Sec. M. A. SHAKUR, B.A.; publs. *Museums Journal of Pakistan* (two issues a year), *Museum Studies*.

National Museum of Pakistan: Frere Hall, Karachi; f. 1950; collections comprise antiquities of all kinds excavated at the prehistoric sites of Mohenjodaro and Harappa; Buddhist and Brahmanical sculptures, relics, and a series of terra cotta reliefs from Taxila and Paharpur; epigraphs in Arabic and Persian languages; Indo-Greek and Hindu coins and issues of the Sultan of Delhi, Mughal Emperors and of Indian States; textiles; armoury; Mughal and Rajput paintings; MSS.; Mughal official documents; specimens of modern arts and crafts of Pakistan; other Muslim relics and miscellaneous objects; Supt. S. A. NAQVI, M.A., LL.B., F.R.A.S., A.M.A.

Archaeological Museum: Harappa, Dist. Montgomery, West Pakistan; Custodian MOHD SAID AHMAD.

Archaeological Museum: Mohenjodaro, P.O. Dokri, Dist. Larkana, Sind; Curator S. M. ISHTEYAQUE, B.A.

Archaeological Museum: Taxila, Rawalpindi; Curator FAZIL QADIR.

Central Museum: Lahore, West Punjab; f. 1864; contains largest collection in the world of Graeco-Buddhist sculpture, one of the finest of Indian coins and miniature paintings of the Mughal, Rajput and Kangra schools; modern section recently enlarged; Curator MALIK SHAMS.

Dacca Museum: Ramna, Dacca, East Pakistan; f. 1913; library of 3,000 vols.; art and archaeology of Bengal; associated with the Asiatic Society of Pakistan, Curator AHMAD HASAN DANI, M.A., PH.D., F.R.A.S.; publ. *Annual Report*.

Dental Museum of the Montmorency College of Dentistry: Lahore.

Lahore Fort Museum: Lahore; under the charge of the Superintendent of Archaeology, Western Pakistan Circle, Lahore.

Peshawar Museum: Peshawar; f. 1907; the collections of this museum are devoted mainly to the sculptures of the Gandhara School; they comprise an unrivalled collection of images of the Buddha, Bodhisattvas, Buddhist deities, reliefs illustrating the life of the Buddha and Jataka stories, architectural pieces and minor antiquities excavated at Charsadda, Sahri-Bahlol, Shahji-ki-Dheri, Takht-i-Bahi and Jamal Garhi; also numismatic collection, an art gallery, and sections for industrial and mineral products, forestry, effigies of Red Kafirs, etc.; Curator M. A. SHAKUR, B.A.; publs. *Guides*, *Red Kafirs*, *Handbook*, etc.

Varendra Research Museum: see under Research Institutes.

UNIVERSITIES AND COLLEGES

UNIVERSITY OF DACCA

DACCA

Founded 1921

Chancellor: H.E. The GOVERNOR OF EAST BENGAL.*Vice-Chancellor:* W. A. JENKINS, C.I.E., D.SC.*Treasurer:* ENAYETUR RAHMAN, B.L.*Registrar:* A. HADY TALUKDAR, M.A.Library: *see* page 562.

Number of teaching staff: 171, including 12 professors.

Number of students: 2,560.

DEANS:

Faculty of Arts: Dr. W. H. A. SHADANI, M.A., PH.D.*Faculty of Science:* Dr. Q. M. HUSSAIN, M.A., PH.D.*Faculty of Law:* Dr. N. U. A. SIDDIQUI, M.A., B.C.L., LL.D.*Faculty of Agriculture:* Dr. M. O. GHANI, M.SC., PH.D.*Faculty of Medicine:* Dr. NAWAB ALI, M.B., D.T.M., M.R.C.P.*Faculty of Engineering:* Dr. Md. ABDUR RASHID, B.E., D.SC. (Acting).

COLLEGES:

Forty-seven colleges (27 first grade and 20 second grade) are affiliated to the University, and there are 7 constituent colleges.

UNIVERSITY OF KARACHI

Founded 1952

See also under University of Sind.

Chancellor: The PRESIDENT OF THE REPUBLIC.*Vice-Chancellor:* Prof. A. B. A. HALEEM.*Registrar:* M. ABDUR RAHIM, M.A., B.L.

DEANS:

Faculty of Arts: Prof. M. HUSAIN, PH.D.*Faculty of Medicine:* Lt.-Col. S. M. K. MALICK, M.D., F.R.C.P.*Faculty of Science:* Prof. M. A. H. QADRI, D.SC., PH.D.**THE UNIVERSITY OF PESHAWAR**

PESHAWAR, NORTH-WEST FRONTIER PROVINCE

Founded 1950

Chancellor: H.E. KHAN QURBAN ALI KHAN.*Vice-Chancellor:* M. RAZIUDDIN SIDDIQI, M.A., PH.D.*Registrar:* ABDUL HASHIM KHAN, M.A.*Librarian:* A. S. QASIMI.

Number of professors: 8.

Number of students: 2,380.

Volumes in Library: 10,590.

AFFILIATED COLLEGES:

Edwardes College: Peshawar; f. 1900; affiliated to the University for examinations in Arts and Science; Principal H. L. PHILLIPS.

Engineering College: University of Peshawar; Principal U. DURRANI.

Frontier College for Women: Peshawar; f. 1949; affiliated to the University for examinations in Arts and Science; Acting Principal Miss BASHIR-UN-NISA.

Government Akbar Memorial College: Mardan; Principal F. M. KHAN.

Government College: D. I. Khan; f. 1947; affiliated to the University for examination in Arts, Science and Theology; Principal MOHAMMAD JAN KHAN.

Government College: Abbottabad; f. 1944; affiliated to the University for examinations in Arts and Science; Principal IHSANULLAH KHAN, M.A., PH.D., P.E.S.

Government College: Bannu; Principal Prof. N. AHMAD.

Government College: Kohat; Principal M. ISMAIL SETHI.

Government Inter. College for Girls: Abbottabad; Principal Miss GOHAR SULTANA.

Islamia College: Peshawar; f. 1913; affiliated to the University for examinations in Arts, Science and Theology; library of 28,000 vols; Principal M. M. AHMAD.

Jahanzeb College: Saidu Sharif Swat State; Principal Prof. H. M. OSMAN.

Khyber Medical College: Peshawar; Principal Dr. A. K. M. ABDUL WAHID.

Law College: University of Peshawar; Principal MIR WALLIULLAH.

Pakistan Forest College and Research Institute: Abbottabad; Principal A. H. KHAN.

St. Francis Xavier's College: Peshawar; f. 1938; affiliated to the University for examinations in Arts subjects; Principal Rev. Mother Conception.

UNIVERSITY OF THE PUNJAB

LAHORE

Founded 1882

Chancellor: H.E. The GOVERNOR OF WEST PAKISTAN.*Vice-Chancellor:* MIAM M. AFZAL HUSAIN, M.SC., M.A.*Registrar:* M. BASHIR, B.SC.Library: *see* page 562.

Teaching staff: 200, including 11 professors.

Number of students: post-graduate 701, university colleges 1,520, affiliated colleges 28,489, other 793; total 31,503.

HEADS OF DEPARTMENTS:

Faculty of Agriculture: K. A. REHMAN.*Faculty of Arts:* Prof. M. M. SHARIF.*Faculty of Commerce:* M. HASSAN.*Faculty of Dentistry:* H. R. SHAH.*Faculty of Education:* Dir. of Public Instruction, Punjab.*Faculty of Engineering:* M. HAZAM KHAN.*Faculty of Law:* Justice S. A. RAHMAN.*Faculty of Medicine:* Col. F. M. KHAN.*Faculty of Oriental Studies:* MAULVI M. SHAFI.*Faculty of Science:* Dr. NIAZ AHMAD.*Faculty of Veterinary Science:* S. M. SARWAR.

COLLEGES OF THE UNIVERSITY:

Hailey College of Commerce: Lahore; f. 1927.

Principal: M. HASAN, M.A.

THE BRITISH COMMONWEALTH

Law College: Lahore; f. 1858.

Principal: ABDUL QAYYUM MALIK, B.A., Barrister-at-Law.

Library: 17,000 vols.

Oriental College: Lahore; f. 1870.

Principal: S. M. ABDULLAH, M.A., D. LITT.

AFFILIATED COLLEGES.

There are forty-seven affiliated colleges.

RAJSHAHI UNIVERSITY RAJSHAHI, EAST PAKISTAN

Founded 1954

Chancellor: Dr. I. H. JEZERI.

Vice-Chancellor: Dr. I. H. ZUBERI, M.A., PH.D

Registrar: OSMAN GHANI, M.A.

HEADS OF DEPARTMENTS:

Department of English: SYED ABU NASR ALI ASHRAF, M.A.

Department of Economics: TUZAMMUL HUQ, M.A., M SC

Department of History: Dr. A. R. MALLICK, M.A., PH.D.

Department of Mathematics: SYED QASIM HUSSAIN, M SC.

Department of Geography: AHMAD MOHAMMAD PATEL, M.A.

Department of Philosophy: Dr. K. M. JAMIL, M.A., D.LITT.

Department of Education: A. R. AKHUNJI, M.A., M.ED.

Department of Law: AUSAF ALI KHAN.

UNIVERSITY OF SIND

HYDERABAD, SIND

Founded in 1947 in Karachi, and transferred to Hyderabad, Sind, in 1951, when it was decided to found a separate Karachi University. There are central teaching departments but the university also functions as an affiliating and examining body.

Chancellor: H.E. The GOVERNOR of SIND.

Pro-Chancellor: Hon. The PRIME MINISTER of SIND.

Vice-Chancellor: ALLAMA I. I. KAZI.

Registrar: AGHA TAJ MOHAMMAD, B.A., B.T., M.R.S.T.

Deputy Registrar: MOHAMMAD HUSAIN, M.A.

Library: see page 562.

DEANS AND HEADS OF DEPARTMENTS:

Department of Education and Sindhi: Prof. Dr. NABI BALOCH BAKHAH KHAN, M.A., LL.B., ED.D.

Departments of Religion, Arabic and Islamic Culture: Prof. Dr. A. J. HALEPOTA, M.A., D. PHIL.

Departments of Philosophy and Psychology: Prof. Dr. K. A. HAMEED, M.A., PH D.

Departments of Economics, Political Science, and General History: Dr. N. A. G. KHAN, M.A., B.T., PH.D.

Department of Muslim History: AHMED MIAN AKHTAR KAZI.

Department of Urdu: MUHAMMAD MURTAZA QAZI, M.A.

Department of English: J. W. SAYED, M.A.

AFFILIATED COLLEGES:

There are fifteen affiliated colleges.

GEOGRAPHY

Physical Background. Ceylon consists of a mountain mass, rising in the south-centre to a maximum of 8,296 ft. in Pidurutalagala, from which rivers flow radially across surrounding coastal plains.

Structurally, the greater part of Ceylon is an old stable block of ancient crystalline rocks, hard and contorted by old folding movements, but owing its present major surface features to prolonged erosion. In this it resembles the Deccan of India, from which it is separated by only a narrow stretch of continental shelf in the north, on which the coral of Adams Ridge has accumulated. This shelf offers opportunities for sea-fishing which have not been fully exploited, and pearl fisheries are still important in the shallows to the south of Mannar. Weathering of the old hard rocks has produced graphite, gems such as rubies and sapphires and vast amounts of china clay, most of which is, however, impure and unsuited to pottery making.

Graphite mining reached a peak during the 1914-18 war, but has since declined due to competition from Madagascar. Recent developments have thrown into significance mesothorium, which was discovered as long ago as 1903 in the form of alluvial black sands, weathered from veins in the crystalline rocks. Thorium (nitrate) was at first used to impregnate gas mantles, and later was alloyed with tungsten, to increase the ductility of electric lamp filaments. Accompanying mesothorium is a substitute for radium, used in X-rays; and metallic thorium can be employed in nuclear fission.

This ancient block forms both the central hill country, where all the tea-gardens and most of the rubber plantations are to be found, and the maritime coastal plain in the south-west. In the north is a limestone plain, composed of soft, comparatively recent (Tertiary) limestone, whose soils are dry even though rainfall nearly everywhere exceeds 40 in. per year.

Climate. Everywhere, except in central hill country over 3,000 ft., the climate is equatorial, with mean annual temperatures of over 70°F. and restricted annual range—for no part of the country lies more than 10° north of the equator. On the basis of rainfall distribution, two climatic regions can be distinguished: the south-west receives most of its rainfall from April to November (82 per cent of Colombo's annual total of 83 in. falls in these 8 months). In these wetter districts two régimes stand out: Colombo is truly equatorial in its two-season rainfall at the equinoxes, and this is typical also of many coastal stations; but the high hill country lying athwart the path of the South-West monsoon experiences much higher totals (Watanala over 200 in.) and has a pronounced single monsoonal maximum in June.

In the north and east the greater part of the rain falls from October to January, for this part of the country is exposed to the retreating monsoon in November and December. Only in the north-west and south-east is there an average rainfall of less than 25 in. per year, yet all of Ceylon (apart from the heavily watered central hill mass and south-west coast) is liable to drought, for lower rainfall totals are accompanied by both greater variability from year to year and a longer and more marked dry season; Trincomalee, for example, has an average fall of 63 in. a year, but two-thirds of this come in the four months

October to January. Irrigation is therefore widely practised. There are no large snow-fed rivers in Ceylon, and tank irrigation is widely used, most of the "tanks" being merely dammed up streams which hold the wet season rainfall over into the dry weather.

Nearly everywhere, the concentrated rainfall is enough to produce leached lateritic soils, and in the south-west the very heavy annual fall combines with a short dry season to produce true ferruginous laterite, locally known as "Kabouk", which can be utilised for brick making. These soils are generally infertile, and in places carry tropical evergreen rain forest, which once covered most of the areas experiencing over 100 in. of rainfall. Deciduous monsoon forest, with a seasonal leaf-fall in a short dry season, is maintained by ground water carried over from the hot season. Teak and satinwood are commercially valuable tropical hardwoods, but only small amounts remain, for tea and rubber plantations have replaced the forest over wide areas. In the drier zone, especially in limestone country, scrub forest or dry jungle is common.

Cultivation. Apart from scattered areas in low country jungle where the "chena" system (a form of shifting cultivation) is practised, permanent cultivation is general. Paddy rice is grown, often under irrigation, in the alluvial parts of the coastal plain and on terraced hillsides in higher country. In the wet maritime plain of the south-west two crops a year are obtained, one after each rainfall maximum; nearer the hills a form of mixed tree cultivation is typical, based on yams, pepper and trees yielding mangoes, areca nuts, breadfruit and, most important, coconuts. (All other foodgrains cover only one-eighth of the area of paddy fields).

The main subsistence crop is rice, but home production is far from sufficient, and is exceeded by imports from India and Burma. The large import of foodstuffs is made both necessary and possible by the large acreage given over to the cultivation of cash crops, of which the most valuable is tea. It is grown almost entirely for export on British developed commercial estates or "gardens", which occupy about 40 per cent of the cropped land in the central hill country. Below the tea gardens are the slightly more extensive rubber plantations, which are to be found in an area stretching from 2,000 ft. on the western flanks of the central hills down to almost sea level in the wet maritime plain of the south-west. Coconuts are the most important crop of the maritime coastal plain and scattered coastal districts around the whole of the island. Coconut palms cover an acreage equal to that of paddy rice, and nearly as large as that devoted to tea and rubber combined. The coconut palm is perhaps the most useful all-round product of Ceylon, yielding food (and drink) for local consumption, leaves for thatching, coir for matting, and providing a useful source of cash income to peasant producers.

Compared with these three staples, other agricultural products are of very minor importance. Small amounts of cocoa are grown on the north-east flanks of the central mountain core, but production only amounts to a few thousand tons. Coffee once grew well on the richer "chocolate" soils of parts of the central hill country, but Javanese and Brazilian competition prevented the industry from recovering from epidemic disease. Considerable acreage is given over to the production of areca

(chewing) nuts and nearly the whole of the crop is exported to India. Java and Ceylon are important as the only two commercial producers of citronella oil. The export of cinnamon is a relic of the ancient trade in spices between Europe and the East.

Population, Composition and Distribution. A few thousand Veddah hunters survive as relics of the very early pre-Dravidian population of Ceylon. In the sixth century B.C. Dravidian-speaking Sinhalese invaded the country from India and three centuries later were converted to Buddhism which was introduced from the mainland. Descendants of those people now make up 70 per cent of the population and fall roughly into two groups: the Low Country people who have experienced 300 years of Dutch and Portuguese control before becoming part of the British Empire; and the less numerous Kandyans of the hills who remained independent until conquest by the British in 1815.

From the eleventh to the thirteenth century Tamil-speaking invaders settled in the drier north, which they rendered productive by means of widespread tank irrigation.

Although speaking another Dravidian language, the Tamils were followers of Hinduism and are regarded as "Indian" and distinct from the earlier Sinhalese peoples; they are often referred to as Ceylon Tamils to distinguish them from those Tamils who are recent immigrants from Southern India. The early Tamil "tank civilisation" has decayed, and their descendants are mainly peasant cultivators, skilled in the cultivation of grain and tobacco under irrigation.

Ceylon was the meeting place of Graccho-Roman and

Chinese traders, but in mediaeval times the Arabs dominated the commerce of the Indian Ocean; the several hundred thousand Mohammedan Moors in Ceylon are nearly all boatmen or fishermen.

The Portuguese made contact with Ceylon by sea early in the sixteenth century and established settlements in the south and west which were taken over by the Dutch in the middle of the following century. Much inter-mixture took place between Dutch, Portuguese and Sinhalese and the descendants of these unions are to-day known as Burghers.

Harbours. During the period of British rule the well watered plains and hill country of the south-west became indisputably the most productive part of the country. To serve this region an artificial harbour was begun along the lagoon and sand-bar coast at Colombo in 1873. It was completed in its present form in 1912 and to-day handles nearly all the foreign trade of the country. In recent years the net registered tonnage of shipping handled has been roughly the same as that of Bremen. Colombo's population of 425,000 in 1953 greatly exceeds that of any other town (*cf.* Jaffna 77,000; Galle 56,000; and Kandy 57,000). Trincomalee on the north-east coast possesses a fine natural rock harbour, but since it is remote from the main centres of economic development is important not as a trading port, but as a naval base.

The ability of Ceylon to support its increasing population depends upon the maintenance of export production, which enables the import of adequate amounts of food. This is a potentially dangerous situation, and an increase in subsistence output would be welcome if it could be achieved without detriment to commercial farming.

J.H.H.

HISTORY

Early History. The earliest people known to have inhabited Ceylon have left few traces, but a handful of their descendants, known as Veddahs, still live in the hills in the wildest parts of the island. The Sinhalese, who form the bulk of the present inhabitants came to the island from North India. The ancient chronicles of the island, the Mahawansa, the Dipawansa and the Pujawaliya give the traditional accounts of their coming, under their leader Wijaya. They soon established themselves, founded their earliest capital, Anuradhapura, and before long began building the great irrigation works ("tanks") which made of the hot dry districts in which they settled fertile lands and fields supporting a considerable population. Authentic history begins with the conversion of Ceylon to Buddhism, during the reign of Devanampiyatissa (247-207 B.C.). The country showed a rapid rise in civilisation, exemplified in the religious and secular buildings of the capital, the remains of which still exist. Tamil incursions from South India, however, broke the era of prosperity, and the Sinhalese were forced to build a new capital, Polonnaruwa, where however, under King Parakrama Bahu the Great (1153-1186) they reached the summit of their achievements. After his death the South Indian incursions began again, and the Sinhalese were forced gradually to retreat, founding as they went a new series of capitals. During this period the "tanks" were breached, and malaria and desolation spread over what had been the fairest part of the island. The Tamils from South India established new kingdoms of their own in the northern areas. By the beginning of the sixteenth century the greater part of the Sinhalese people had retreated to the hill country in the centre, and to the west and south-west of the island. New capitals were established at Siriwardhanapura (Kandy) and at Kotte near the modern Colombo.

Portuguese Period. The Portuguese arrived off Colombo in 1505. Trading was their first object, and with the assent of the King of Kotte they established a factory at Colombo. Before long however they found themselves involved in some family quarrels of the King of Kotte, whom they defended against his brothers. The King became more and more dependent on the Portuguese, and appointed the King of Portugal as his successor. In 1597 Phillip of Portugal was proclaimed King of Kotte. The latter part of the Portuguese period was occupied largely in fighting and expansion, and by the end of their rule in Ceylon they controlled the coastal districts in the West and South, and also the Tamil Districts in the North. The Portuguese were responsible for the introduction of Christianity to Ceylon.

Dutch Period. The Dutch were invited to Ceylon by Rajasinha II of Kandy, who hoped to play them off against the Portuguese. Colombo was captured in May 1656, after a long siege, and the Dutch gradually ousted the Portuguese and took over their territories. The Dutch came to Ceylon to trade, and their rule was essentially Company rule. They were good administrators, and the inhabitants of their "commanderies" (Colombo in the West, Jaffna in the North and Galle-Matara in the south-east) had the advantage of a good sound system of law—the Roman-Dutch—which is still the basis of Ceylon common law, and of the encouragement which the Dutch gave to agriculture and trade.

Early British Period. The Napoleonic wars at the end of the eighteenth century saw (in 1796) the end of Dutch rule, and the establishment of British rule. After a period of uncertainty regarding future administration, during which Ceylon was ruled from India, the island became in 1802 a Crown Colony and the early years were largely occupied in the establishment of an administrative system on the usual Crown Colony lines. It was not long however before the British administration became involved in intrigues which were disturbing the Kandyan Court. An expedition in 1803 entered Kandy, but ended in disaster. In March 1815 a convention was signed by the Governor and the principal Kandyan chiefs, which deposed the unpopular king, and vested the Kandyan Provinces in the British Sovereign, with various safeguards as regards religion and customs. The whole of Ceylon thus passed under British rule.

1832 to 1918. A very considerable change occurred in 1832, after the visit to Ceylon of a Royal Commission whose chairman was Lt. Col. Colebrooke. The reforms of that year provided *inter alia* for the abolition of the separate administration of the Kandyan Provinces, the unification of the whole country, and its division into six (afterwards increased to nine) provinces for provincial administration. For the first time the country had Executive and Legislative Councils, the latter including nominated members, Ceylonese as well as European, to represent special interests, but with a large official majority. Financial changes were also introduced, including the abolition of most Government monopolies, notably the monopoly on cinnamon, and the imposition of customs duties as the main means of raising revenue. The Constitution thus set up in 1832 remained in operation until 1910, with few alterations; and although there were occasional set-backs, the period was one of almost continual expansion and progress. The early staple, cinnamon, gave place to coffee, and the country prospered, but when the export was at its height a leaf disease gradually destroyed the coffee, causing great loss and depression. Cinchona (quinine) helped to tide over the worst period and prosperity was regained with the introduction and development of tea, which remains Ceylon's chief plantation crop. Rubber was introduced in the early part of the present century, and soon became an important crop. Coconut had long been grown, but systematic cultivation made it (in its various forms) one of the island's three main exports. Roads for vehicular traffic, which were practically non-existent when the British arrived, were constructed, and gradually a road system second to none in the East was built up. Railways followed, first to the planting districts, and then to the greater part of the island. Several Ceylon governors devoted much of their energy to the restoration of the ancient "tanks", and most of the important ones had been restored by the end of the British period. Local government institutions were established, village Councils (Gansabhawas) in the country, and local bodies on Western lines in towns; and the elective principle was gradually introduced. Education was looked after partly by missionary bodies, and partly by the central government, and health services made good progress.

The period of political reform really began in 1912, following a demand for a greater share in the government of the country by responsible and educated people in the

island. The Constitution of 1912 introduced the elective principle in the selection of members of the Legislative Council. Two European electorates were created, one rural and one urban, and provision was made for the election of a Burgher member, and for an "educated Ceylonese" electorate. The Council retained an official majority.

After 1918. The constitution of 1912 remained in operation through the first World War, but the demand for further reforms continued, receiving impetus from the repercussions which followed the suppression of certain religious riots in 1915. In 1919 the Ceylon National Congress was formed, and became the focus of a broadened political movement. In 1921 the Legislative Council was reconstructed to consist of 14 official and 23 unofficial members, (11 were elected on a territorial basis and 8 to represent special interests; and 4 nominated). In addition, the nature of the Executive Council was changed by the addition to it of three nominated unofficial members; and it was now agreed that the Colony could look forward to "fully responsible government". A further reconstruction of the Council took place in 1924, after discussions in the Legislative Council. The Constitution then introduced provided for 12 official members and 37 unofficial members, of whom 23 were elected by territorial constituencies, 11 on a communal basis, and 3 were nominated to represent special interests. The Executive Council was again increased by the addition of two of the elected members of the Legislative Council. This Constitution is an interesting one, and provided an important step on the way to self-government. It did not, however, prove very satisfactory in operation because the large unofficial majority had power, but no responsibility. Though the Councils were co-operative and helpful in most matters, and formed a good training ground for what was to follow, attacks on the public services, and on the government, for executive acts for which they had no responsibility made it increasingly difficult to carry on administration in face of what was virtually an opposition party with a majority of votes in the Council. It soon became obvious that the time had come for the next step in political advance, and accordingly a Special Commission under the chairmanship of the Earl of Donoughmore came to Ceylon in October 1927. A new Constitution, based on the Commission's report, came into operation in 1931 and formed the basis of the Government for the next sixteen years.

The Donoughmore and Soulbury Constitutions. The Donoughmore Constitution, a slightly eccentric one, which the Commissioners considered suitable for Ceylon's special needs, was intended for a transitional period, to overcome difficulties which in their opinion had arisen in the working of normal parliamentary practice. The Constitution was to be one further stage on the road to self-government, and apart from certain reserved powers of the Governor, gave almost complete autonomy in local affairs. The scheme of government was based on a fusion of executive and legislative functions. There was one chamber only, the State Council. Election was by territorial constituencies, based on universal adult suffrage, and there were only three official members (Officers of State), the Chief, Legal and Financial Secretaries who did not, however, possess a vote. The Council was divided into Executive Committees, each of which had charge of a number of government departments. The chairman of these committees, together with the Officers of State (each of whom had his own department), formed a Board of Ministers. The Board was not a Cabinet in the generally accepted sense of the term, as theoretically it was not responsible for policy. The Board, however, did have control of the annual budget and of expenditure generally;

and as time went on it tended to assume greater responsibility, until finally it was in practice (though not in authority) similar to an orthodox cabinet. The Governor had a special position. In normal cases he acted on the advice of his ministers, but he possessed powers of intervention and veto, and in particular the right to declare a matter to be of paramount importance, and then if he thought necessary to enact laws himself.

Considerable advance was made under the guidance of the Ceylonese ministers in agriculture, education, health, industry and social welfare generally, and the Constitution successfully bore the shock of the second World War. The form of government it introduced, however, was never very popular and was the subject of much criticism in and out of Council. Criticism was directed particularly against the Executive Committees and the Officers of State.

A commission headed by Lord Soulbury went to Ceylon in 1944 to advise on further political advance. It recommended a constitution based largely on a draft prepared by the Ministers, featuring a reversion to the usual pattern of parliamentary government on the British model. After considerable discussion, a Statement of Policy was issued which included the words:

"It is . . . therefore the hope of His Majesty's Government that the new constitution will be accepted by the people of Ceylon with a determination so to work it that in a comparatively short space of time . . . Dominion Status will be evolved."

The proposals were accepted, and the new Constitution brought into operation. Its main provisions included the establishment of a bi-cameral legislature, consisting of a House of Representatives with (in the first House) 95 members elected by territorial constituencies and 6 nominated members, and a Senate consisting of 30 members of whom one-half were elected by the House of Representatives, the remaining 15 being appointed by the Governor "in his discretion". Universal suffrage was retained as in the Donoughmore Constitution. A Cabinet of Ministers was constituted with full responsibility, save in regard to a few reserved subjects. The Ministers had charge of departments, each having a Permanent Secretary under him, and independent Public and Judicial Service Commissions were set up. The Officers of State disappeared, and that special feature of the Donoughmore Constitution, the fusion of legislative and executive functions, came to an end. A general election was held, and was fought on party lines, for the new Constitution, unlike its predecessor, encouraged the formation of political parties. The members of the old Board of Ministers and their followers formed the United National Party, which won an overwhelming victory at the poll. Its opponents were mainly members of Communist groups, who lacked cohesion, though those who were elected formed the opposition. The new Constitution came into full operation on October 14th, 1947.

Independence. The Constitution so established had but a short life. Negotiations had already started for the early implementation of the promise regarding Dominion Status contained in the Statement of Policy referred to above. The island undoubtedly had a good case for seeking this development; the manner in which the difficult Donoughmore Constitution had been worked, the co-operation with the British authorities during the war and the apparent political maturity of Ceylonese leaders, all indicated that the time was ripe for full independence. Agreement was finally achieved in regard to matters such as defence, external affairs and the public services, and the way was then open for the Declaration of Independence. Acts of the British and Ceylon Parliaments and an Order-in-Council completed the formalities, and on February 4th,

THE BRITISH COMMONWEALTH

1948, Ceylon became the first among British Crown Colonies to drop the colonial garb and become a fully self-governing Dominion within the British Commonwealth of Nations.

It was a position she had chosen for herself, and was one from which she could secede if she so desired. The transference of power did not present many difficulties, as the machinery of government set up under the Soulbury Constitution remained in operation with few alterations; the main changes were the removal of the reserve powers of the Governor, and an adjustment in the status of the Governor-General, whose powers and privileges were similar to those in other self-governing Dominions. The transference of power proceeded smoothly. At the express desire of Mr. D. S. Senanayake, the Prime Minister, who was largely responsible both for negotiating the grant of independence and for carrying it into effect, Sir H. Moore, the Governor, continued as Governor-General until he was succeeded by Lord Soulbury, who in turn was followed in 1954 by Sir Oliver Goonetilleke, the first Ceylonese Governor-General. There was no forced retirement of European officials, though provision was made for their voluntary retirement with compensation, and a number stayed on to help in the early stages of the new régime.

Ceylon has now enjoyed seven years of independence, during which she has prospered generally, although inevitably some problems still await a final settlement.

Though a small country compared with India, Ceylon has great diversity of race, religion, language and climate; conditions which naturally give rise to many special problems. The five million Sinhalese (Low Country and Kandyan) are Aryan and are mostly Buddhist by religion. The million or so Ceylon Tamils of the North and East are Dravidian and largely Hindus. Nearly half a million Ceylon Moors, who are Muslims, are spread through the country. They speak Tamil generally. In the planting districts and towns there are about three-quarters of a million Indians working as estate labourers, traders, etc. Christians number about six hundred thousand. Caste still features strongly, especially in the rural areas, and though officially frowned upon, it causes many local difficulties. It is noteworthy that at the transference of power there were no racial or religious difficulties. The way was made easier by a provision of the Constitution designed to ensure representation of substantial concentrations of "persons united by a community of interests". Religious differences were also taken into consideration by special provisions of the Constitution which forbade the making of laws involving religious discrimination.

Of greater immediate difficulty has been the problem of language. Some have urged that the official language should be that of the majority, Sinhalese, but the Government has always taken the view that the official languages should be Sinhalese and Tamil. The difficulty has been how and when to give effect to this policy. English was and still is the language of Government and commerce; all higher education is conducted in English, and its continued importance to the country, especially in these days of international intercourse, is well recognised. A recent announcement has affirmed acceptance of the principle that Sinhalese and Tamil should become the official

languages, while English should be a second language and be taught in all schools above the third standard. The transfer to Sinhalese and Tamil will be made gradually.¹

Ceylon's Place in Asia. Ceylon is separated from India by the narrow Palk Strait; but she has never been a part of India. She has her own long traditions, always distinct from, though often related to, those of south, and sometimes of north, India—traditions of which she is very proud. The tide of Asian nationalism has not passed her by without strengthening her own feeling of nationhood, and she has shown a fixed determination to retain her entity and individuality. The presence of a large number of Indians in the country has been and still is a source of some anxiety. The great majority of the Indians in Ceylon were recruited during the colonial period to work on the plantations, and to an appreciable extent the present prosperity of Ceylon is due to their industry. The Ceylon and the Indian Governments have negotiated about the future of these people. Those who wish, and are willing to accept the conditions of Ceylon citizenship, may remain and receive such citizenship. The question of citizenship, however, is not the only problem. There are others, relating, for instance, to repatriation and to replacement by local labour, and to the conditions of admission of non-Ceylonese to the island.

Apart, however, from the special nature of her relationship with India, Ceylon has established an important position for herself in south and south-east Asia. One reason for this lies in her geographical position, in the centre of the Indian Ocean on some of the most important main highways of sea and air traffic between Europe and Australia and the Far East. She possesses two of the best harbours in the Indian Ocean: the magnificent natural harbour of Trincomalee, which is mainly used for naval purposes, and is now the headquarters of the East India Fleet, and the man-made harbour of Colombo. These facts combine to give her a strategic position of the first importance. This, however, is only part of the story. Ceylon is in various ways making important contributions to Asian well-being, and has played her part in the various consultations between Asian countries which have taken place during the last few years. The Colombo plan, which is doing much for the economic development of south and south-east Asia was evolved at conferences in Colombo. In a number of other cases, e.g. the Bandung conference, Ceylon representatives have made valuable contributions to the discussions.

Ceylon has always proved a loyal and useful member of the Commonwealth. The visit of Her Majesty the Queen, as Queen of Ceylon, in 1954, provided an occasion for a display not only of Ceylon's traditional hospitality, but also of real friendship between the two countries. Thus both as a member of the Commonwealth and as a free and independent nation, Ceylon has built up for herself a respected position in south and south-eastern Asia.

C.W.C.

¹ The United National Party at their annual conference early in 1956 decided that Sinhalese only should replace English as the official language and that this should be a main issue in the April elections.

ECONOMIC SURVEY

Area and Population. According to the census of 1953 the population of Ceylon on March 20th, 1953, was 8,098,637 persons, of whom 7,091,513 were citizens of Ceylon. The great majority of the non-citizens were Indians (983,304) and there were also nearly 6,000 Pakistanis, about 7,000 Europeans (mainly British) and 11,000 others. The citizens of Ceylon consisted of Low-Country Sinhalese, Kandyan Sinhalese and Tamils, with smaller numbers of Ceylon Moors, Burghers and Malays.

Since the previous census (1946) the population has risen by an average of about 3 per cent each year. The increase is due both to an excess of births over deaths and to immigration. Recent years have shown a fairly steady birth-rate of about 38 to 40 per 1,000 and a steeply falling death-rate. The bulk of the immigrant population comes from South India to work on the tea and rubber estates. Arrivals have usually exceeded departures but since the middle of 1949 there has been a reversal as a result of the policy of restricting immigration.

The land area of Ceylon is 25,332 sq. miles which gives a population density of 320 persons per sq. mile. The population, however, is very unevenly distributed and the density varies from 1,558 per sq. mile in the Western Province to 92 per sq. mile in the Eastern Province and 57 per sq. mile in the North Central Province. Roughly 80 per cent of the population occupy one-third of the land area.

Production. The national income of Ceylon in 1953 was Rs.4,479 million. Over one-third of this income was derived from the cultivation, processing and export of three agricultural commodities—tea, rubber and coconuts. A substantial proportion of economic activity is also indirectly sustained by export incomes. All three crops are grown largely in the wet zone; rubber and coconuts mainly at low elevations, the latter along the coastal districts. The bulk of the area under tea lies in the central hill district, although there is a considerable acreage of "low-grown teas". In 1953 the estimated area under the three main crops was: tea 574,250 acres, rubber 657,427 acres, coconuts 920,942 acres (excluding gardens of 1 acre and less).

Most of the tea and rubber produced comes from large estates. In 1953 just over one-third of the area under rubber and about three-quarters of the area under tea was British-owned. The coconut estates are largely owned by Ceylonese proprietors. New planting of both tea and rubber is restricted by international agreements. After the war a large percentage of the acreage under rubber was found to be uneconomic, mainly as a result of the policy of intensive tapping adopted during the war years. In order to encourage the replanting of rubber lands with new and high-yielding strains the Government now operates a Replanting Subsidy Scheme financed by a cess on rubber exports. The most important subsidiary crops are arecanuts (100,000 acres), cinnamon (33,000 acres), cacao (26,000 acres), citronella (34,700 acres) and tobacco (13,600 acres). A portion of these crops, too, is exported. Because of the overwhelming importance of the export industries in the economic life of the country, conditions in Ceylon are extremely sensitive to the prices which her exports fetch in world markets.

A Census of Industry was taken for the first time in Ceylon in 1952. It excluded establishments engaged in the

processing of tea and rubber and revealed that the net output of factory industry amounted to only 5 per cent of the gross national income. Of the factories covered by the survey, nearly a third were connected with the processing of coconut products—copra, oil, desiccated coconut, fibre, etc. They contributed 42 per cent of the gross industrial output of Rs.620 million. The "Food, Drink and Tobacco" group was next in importance, with a gross output of Rs.100 million. This group included rice mills, distilleries, breweries, bakeries and factories engaged in the manufacture of confectionery, milk products, aerated and mineral waters, canned produce, cigars and cigarettes. In addition to the industries covered by the census there were the various handicrafts and cottage industries, such as pottery, lace-making, mat and basket-weaving and ropemaking, whose contribution to the national income is, however, negligible.

Employment Problems. At the 1946 population census, 1,339,000 persons were returned as being gainfully occupied in agriculture. This constituted 51.3 per cent of the gainfully occupied population. The agricultural workers fall into two broad groups—those employed on the estates and those in one way or another dependent on small-scale village agriculture. Rather less than half of those employed in agriculture worked on the estates. These figures, however, do not give a true picture of the extent of dependence of the population on village agriculture. For, while the figures for the estates include all members of the family employed on them, the figures for the villages usually include only the head of the household. Village agriculture consists in the main of the cultivation of paddy lands. The estimated area under paddy in 1953 was 913,239 acres and the estimated output approximately 22 million bushels.

Ceylon is predominantly a country of villages; no more than 15 per cent of the population can be classified as "urban", and over half of this urban population lives in Colombo and its suburbs; the towns are centres of trade rather than of industry.

The rapid population growth and its concentration in the south-western quarter of the island has led to a pressure of population on the land. This pressure is evidenced both by the extremely small size of land-holdings and by the large number of landless people. In a country in which the bulk of the population is rural, such a situation constitutes a serious social and economic problem. The average size of land-holdings in the island as a whole was 1½ acres (1946 census). The figure varied from 7 acres in the Batticalao District in the Eastern Province to nine-tenths of an acre in the Colombo District and three-fifths of an acre in the Kandy and Matale Districts. The greater pressure in the central hill district is due to the fact that most of the available land is taken up by the estates. A Sample Survey of Landlessness undertaken in 1952 revealed that 28.3 per cent of the agricultural families included in the Survey had no land, 42.3 per cent had less than half an acre and 54.1 per cent owned less than one acre.

The cultivation of tiny strips of land, either as a peasant proprietor or as an agricultural labourer, yields an income hardly adequate to maintain the cultivator and his family above a bare subsistence level. Methods of cultivation are extremely primitive. The age-old wooden plough and a pair of draught cattle are the only equipment; and the farmer is often too poor to own a pair of

THE BRITISH COMMONWEALTH

oxen. Nor does cultivation provide him with a whole-time occupation, for he is compelled to remain idle for the greater part of the year and the widely prevalent system of joint ownership of land entails cultivation by each of the owners in turn. This practice is not conducive to good farming in that none of the owners is likely to take a permanent interest in the land or to make improvements to it.

The major problem in rural Ceylon is under-employment. A substantial proportion of the agricultural population could be diverted to alternative occupations without a diminution in agricultural production. Every villager tends to call himself a farmer when he has nothing else to do and unemployment statistics give a misleading impression because they fail to reveal the lack of employment opportunities for the bulk of the population. Persons registering at the employment exchanges are usually drawn from the very small urban sector of the population.

Development Plans. Rural over-population may be relieved by the development of new industries and by the settlement of part of the surplus population in the thinly peopled region of the dry zone; government policy has encouraged this course for some years. Some of the irrigation schemes which existed in the dry zone during the time of the ancient Sinhalese kings have been restored, and new projects (such as the multi-purpose scheme at Gal Oya) have been started. Crown land, cleared of jungle and prepared for cultivation, has been given in small allotments, usually three acres of irrigable land, to landless peasant families drawn from areas where the need is most acute. During the six-year period 1947-53, 40,223 acres of irrigable paddy land, together with 22,085 acres of unirrigable high land, were alienated in these "colonisation schemes" (excluding the Gal Oya project). In Gal Oya itself 10,762 acres of paddy land and 14,272 acres of irrigable land were alienated. But much headway remains to be made before this policy can appreciably affect the situation.

As in all under-developed countries, there is in Ceylon an urgent need to raise national productivity. It is recognised that the Government must play an important part in this task. In framing economic policy, the authorities have been guided by the recommendations of *The Economic Development of Ceylon*, a report submitted in 1952 by a mission appointed by the International Bank for Reconstruction and Development. The budget proposals for 1955-56 envisage an investment programme of Rs 2,400 million spread over a period of six years. Plans for the rehabilitation of the rubber and coconut industries and an increase in the production of rice and other food crops have been included. The bulk of the investment is however to be devoted to public utilities such as transport, communications, housing, health services and irrigation.

The main task of investment in agriculture and industry, which is necessary in order to secure a rise in national income and in living standards, has been left to private investors. But private investment is hampered by the lack of capital and technical skill; and to facilitate the raising of funds for private investment the Government proposes to introduce legislation for the formation of a Development Finance Corporation. This was one of the recommendations of the Report of the International Bank. The Government also has plans for the development of selected industries in partnership with private capital. Foreign capital will be encouraged to enter the country in conformity with the national interest, and will be entitled to the same tax concessions as those enjoyed by local capital entering new industry. At present the Government makes initial allowances of 25 per cent on capital invested in plant and machinery and 15 per cent on capital invested in industrial buildings.

Mineral and Power Resources. No comprehensive geological survey of the island has yet been completed, though a systematic survey is being conducted, and information on the mineral resources is scanty. There are no known deposits of coal or petroleum; scattered deposits of iron ore exist as well as deposits of monazite and ilmenite sands. The only mineral of commercial significance is plumbago (graphite). In 1954, 7,728 tons of plumbago valued at Rs.4.3 million were exported.

In the absence of coal and oil, Ceylon must rely largely on the development of her water resources for supplies of electric power. The hydro-electric installation at Laxapana generates 25,000 kW. It is now being extended and output is expected to double within a few years. The new hydro-electric plant at Gal Oya was completed in 1952 and produces approximately 10,000 kW. In addition there are several potential sources of power, of which the most important is the Walawe River Scheme, with an estimated capacity of 11,000 kW.

Foreign trade. Ceylon's total exports for 1954 were valued at about Rs.1,700 million. The three major crops accounted for approximately 94.9 per cent of this total: tea 66.0 per cent, rubber 16.2 per cent and coconut products 12.7 per cent. The United Kingdom is the largest buyer of the island's tea and has been since the beginning of the tea industry in Ceylon. Until 1951, the United States took the bulk of the rubber; in 1952, however, with the conclusion of an agreement with China (whereby Ceylon agreed to supply rubber in exchange for imports of rice), that country has been the largest buyer of Ceylon's rubber.

Most of the island's requirements of food and manufactured articles are imported. In 1953 the total value of imports was Rs.1,608 million, of which approx. 49 per cent consisted of items in the "Food and Drink" category. Rice alone accounted for 20 per cent of the total, 40 per cent of the imports consisted of manufactured articles and 10 per cent of coal, oil, fertilisers and raw materials. The main suppliers were the United Kingdom, China, India and Australia.

Banking. Currency is issued by the Central Bank of Ceylon, which was established under the Monetary Law Act of 1949. The total currency circulation on December 31st, 1954, was Rs. 376 million. All but one of the banks in Ceylon have their head offices abroad, the most important foreign banks being the group of Exchange Banks and the State Bank of India (formerly the Imperial Bank of India). Some of the Exchange Banks have branches in the more important outstation towns—Kandy, Galle and Nuwara Eliya. The Bank of Ceylon, the only indigenous bank in the country, has 15 branches.

Public Finance. The Government's tax revenue for the fiscal year 1953-54 was Rs 821.7 million. Of this 40.3 per cent came from indirect taxation, 31.5 per cent from export duties, and 27.6 per cent from direct taxes consisting of income tax and profits tax. Out of a total expenditure of Rs 791.7 million from revenue, approximately Rs 300 million was applied to items broadly classified as "Social Services" and Rs.200 million to "Utility Services"; expenditure on "External Affairs and Defence" amounted to Rs 23.7 million. Income tax is charged on a graduated scale on all incomes arising in Ceylon and on all incomes arising abroad to persons residing in the island. The exemption limit is Rs 4,800 per annum. Companies pay a flat rate on their total income. Non-resident companies pay a 6 per cent income tax in lieu of death duties, which are not payable by non-resident shareholders of these companies. There is a profits tax, on agricultural, business

and professional incomes. The rate of tax is 25 per cent on any income over Rs.50,000 or 6 per cent of the capital employed, whichever is greater.

In general, the indications for the future are encouraging. There has been an improvement in the balance of trade in 1953-54, which has been accompanied by a rise in the holdings of gold and foreign exchange of the Central Bank and the Government. Inflation has, nevertheless, been avoided and prices have remained fairly steady. The Government has been able to abolish food subsidies and its

financial policy aims at ensuring that total revenue, including receipts from oversea loans, is not outstripped by total expenditure. Difficulties lie in the dependence of the economy on world tea prices, the growing population and the consequent need for large-scale foodgrain imports, but the Government's Six-Year Plan, with its stress on agriculture, is soundly based and should contribute to a strengthening of Ceylon's economic position.

H. A. de S. G.

STATISTICAL SURVEY

AREA AND POPULATION

CEYLON has an area of 25,332 sq. miles, with 1,140 miles of coastline.

The total population (excluding non-resident shipping and military population) was 8,098,637 according to the 1953 census, an increase of 21.6 per cent on the 1946 figure of 6,657,339.

According to the 1953 provisional figures, the average density is 320 per square mile. In the Western Province it is 1,558, and in the North Central Province 57 per sq. mile. About 80 per cent of the population of the island is concentrated in a third of the land surface.

INDUSTRY

MINERAL RESOURCES

The main work of the Department of Mineralogy is a systematic geological survey of the island with a view to developing her mineral resources and preparing a geological map of the island. The chief mineral industry is the mining of graphite (plumbago). The total quantity of plumbago exported during 1954 was 7,728 tons valued at Rs 4,257,885, as compared with 7,218 tons, valued at Rs 3,888,748 the previous year.

Ilmenite, iron ore and kaolin are also obtained; gems and precious stones are found in the island's numerous gem pits.

There are also workable deposits of glass sand, mica, cement material, building stones, silica and other refractories, and of soda.

FINANCE

CURRENCY AND EXCHANGE

The unit of currency is the Ceylon rupee, equivalent to rs. 6d. in terms of sterling. The Ceylon coinage follows the decimal system, the rupee being subdivided into 100 cents.

THE CONSTITUTION

The laws which embody the Constitution of Ceylon are contained in the Ceylon Independence Act of 1947 and in a number of Orders-in-Council. Amendments to the Constitution require a majority vote by two-thirds of the total membership of the House of Representatives.

PARLIAMENT

The Ceylonese Parliament consists of the House of Representatives and the Senate. The House of Representatives has 101 members, of whom 95 are elected and 6 nominated. The island is divided into 95 electoral districts, which have been so arranged as to make possible the representation of minorities united by race, religion or other strong ties; but if after a general election the Governor is of the opinion that any important group or interest is inadequately represented, he may appoint up to 6 members of the House. The normal life of the House is 5 years and there is universal adult suffrage.

The Senate has 30 members, of whom 15 are elected by the House of Representatives and 15 are nominated by the Governor-General. The Senate is not subject to dissolution; Senators are appointed for a term of 6 years, one third retiring every second year.

The Parliament has the power and the duty to legislate for the peace, order and good government of the island. Importance is attached to the need to make it constitutionally impossible for any one community or religious group to be favoured or neglected, or for Parliament to interfere with the constitution of any religious body without its consent, and specific legislation has been passed to this end.

THE CABINET

The Cabinet is collectively responsible to Parliament. The Prime Minister, who must be the leader of the largest Party or Group in the House of Representatives, is appointed by the Governor, who then appoints the other Ministers on his advice. At least two Ministers, including the Minister of Justice, must come from the Senate.

GOVERNORS-GENERAL OF CEYLON

Sir HENRY MONK-MASON MOORE, G.C.M.G., G.C.V.O.,
1948-49.

THE BRITISH COMMONWEALTH

POLITICAL PARTIES

The main political parties are:

United National Party: "Sri Kobha", Kollupituya, Colombo; a "Right-Centre" party with a considerable majority in the House of Representatives. Party members are drawn from all communities. Pres. Sir JOHN KOTELAWALA; publs. *U.N.P. Journal*, weekly in Sinhalese, Tamil and English.

Sri Lanka Freedom Party: 65 Rosmead Place, Colombo; f. Oct. 1951 by S. W. R. D. BANDARANAIKE; 70,000 mems. The aims of the party are politically democratic, economically socialist and culturally a revival of spiritual values and national languages and culture; publs. English and Sinhalese weeklies.

Lanka Sama Samaja Party: 49 Driebergs Avenue, Colombo, 10; f. 1935. The Party is a section of the 4th

International and has six Members of Parliament and controls several local government bodies. It claims to have considerable support among the urban and plantation workers, the rural population and the English-educated middle classes, Sec. LESLIE GOONEWARDENE; publs. *Samasamajaya*, *Sanadharnam* and *Samasamatist* (Trotskyist weeklies in Sinhalese, Tamil and English respectively).

Communist Party: 91 Cotta Road, Colombo, 8; f. 1943; 3,000 mems. The party polled 154,000 votes in the 1952 general election and holds three seats in Parliament and one in the Senate. It has control of 15 city and urban councils; Sec. Dr. S. A. WICKREMESINGHE; publs. *Maubima*, *Desabhimani*, *Forward*, *Navasakthi* (weeklies).

THE LEGAL SYSTEM

THE SUPREME COURT

This consists of a Chief Justice and eight Puisne Justices, who are appointed by the Governor-General. It has appellate and revisional jurisdiction in civil matters and as a general rule exercises no original jurisdiction in civil cases. It is a Colonial Court of Admiralty, and where the parties are British subjects domiciled in England it has the jurisdiction to make a decree for the dissolution of marriage and to make an order as to damages, alimony, maintenance, and custody of children.

The court has original jurisdiction in criminal cases and exclusive jurisdiction in respect of more serious offences, such as homicide, rape, and the graver types of house-breaking and robbery.

In practice it seldom tries cases which do not fall within its exclusive jurisdiction, usually trying cases committed for trial by the Magistrates' Court.

The court exercises appellate and revisional jurisdiction in criminal cases and may pass any sentence authorised by law. It has the power to issue writs of *habeas corpus*, etc., and to deal with advocates and proctors found guilty of deceptions, crimes, and mal-practices. Special jurisdiction is conferred on the Supreme Court to hear election petitions.

Judges of the Supreme Court are also Judges of the Court of Criminal Appeal, to which any person convicted on indictment at an Assize trial may appeal. This Court is empowered to quash a conviction or otherwise interfere with the verdict and sentence. It may also order a new trial.

Chief Justice: Hon. HEMA H. BASNAYAKE.

Puisne Judges: Hon. E. F. N. GRATIAEN, Q.C., C.M.G.,

E. H. T. GUNASEKARA, M. F. S. PULLE, Q.C., V. L. ST. C. SWAN, H. W. R. WEERASOORIYA, K. D. DE SILVA, M. C. SANSONI, H. N. G. FERNANDO.

DISTRICT COURTS

There are twenty-four District Courts in Ceylon. They have unlimited original civil jurisdiction and criminal jurisdiction in respect of all offences which are not within the exclusive jurisdiction of the Supreme Court. In the exercise of their criminal jurisdiction, District Courts try only cases committed to them for trial by Magistrates' Courts.

MAGISTRATES' COURTS

There are thirty-five Magistrates' Courts in Ceylon. A Magistrates' Court may not pass a sentence heavier than the following, except where an Ordinance has specially empowered it to do so:

- (a) Imprisonment up to six months.
- (b) Fine up to Rs.100.
- (c) Whipping if the offender is under 16 years.

COURTS OF REQUESTS AND RURAL COURTS

There are thirty Courts of Requests in the island, and they have original civil jurisdiction in all actions in which the debt, damage or demand, or the value of land in dispute, does not exceed Rs.300. The courts, with the exception of the Colombo Court, are presided over by a District Judge or a Magistrate, who acts as Commissioner of Requests in addition to his duties as a District Judge or Magistrate. The Colombo Court is presided over by a separate Commissioner. There are forty-eight Rural Courts in Ceylon.

RELIGION

According to the official estimates in 1953 the population of Ceylon was made up of 5,217,000 Buddhists, 1,614,000 Hindus, 715,000 Christians, 542,000 Muslims and 11,000 others.

BUDDHISM

This is the predominant religion in the island. It was introduced into Ceylon in the third century B.C. by Mahinda, the son, or possibly brother, of the Indian king, Asoka. Buddhist temples in the Kandyan country possess valuable lands, which are mostly held by hereditary tenants. Of the 138 chief Buddhist monks, 128 are principals of "pirivenas" or Buddhist temple schools. Three of the others are of the Siamese sect, five of the Amarapura sect, and two of the Ramanua sect.

HINDUISM

The Tamil population of Ceylon, including those long settled in the island as well as the immigrants from India, are Hindus.

MOHAMMEDANISM

The majority of the Muslims in Ceylon are styled Moors or Moormen, and claim descent either from Arab immigrants or the Indian traders from the mainland who settled in the island. The rest are Malays, mostly descended from soldiers and labourers from Java and Sumatra introduced into the island by the Dutch. There are a few Afghans and other Muslim settlers. Arab merchants dominated trade in the island until the appearance of the Portuguese in the sixteenth century.

CHRISTIAN CHURCHES

The Christian population of Ceylon includes members of Tamil, Sinhalese, and other communities, as well as members of the European population. Christian Churches represented in Ceylon include the following. There are also a number of missions.

CHURCH OF INDIA, PAKISTAN, BURMA AND CEYLON

Until March 1930 the Church of England in India and Ceylon was, in the eyes of the law, an integral part of the Church of England and subject to the general supervision of the Archbishop of Canterbury. This legal connection was severed by the Indian Church Act and the Indian Church Measure passed by Parliament in 1927, and on March 1st, 1930, the Church of England in India and Ceylon, now the Church of India, Pakistan, Burma and Ceylon, became wholly responsible for the management of its own affairs.

DIOCESE OF COLOMBO

Bishop: Rt. Rev. A. R. GRAHAM-CAMPBELL.

Diocesan Office: Yahala Building, Staples Street, Colombo 2.

DIOCESE OF KURUNAGALA

Sinhala Welenda Mandalaya (Sinhalese Merchants' Chamber): 63 Bankshall Street, P.O. Box 723, Colombo.

THE CO-OPERATIVE MOVEMENT

The first Co-operative Societies' Ordinance was passed in 1912, and made provision for the organisation of credit societies. At the end of 1953 there were 8,939 societies, the majority of these being stores, credit societies, and combined marketing and production societies.

The most important organisations on the consumer side are the Wholesale Stores Unions, which handle all food-stuffs and miscellaneous goods supplied by the Co-operative Wholesale Establishment, as well as running a large number of retail stores. The Co-operative Wholesale Establishment is at the head of the consumer co-operative movement. It was founded in 1943 and is administered by an autonomous Board of Directors appointed by the Minister of Food and Co-operative Development.

TRADE UNIONS

The trade unions with the largest membership are the plantation workers' unions. The most powerful union is the **Ceylon Workers' Congress**, representing the Indian labourers on tea and rubber estates. The total number of trade unions at the end of 1953 was 259.

TRANSPORT

RAILWAYS

All the railways in Ceylon are owned by the State. The Ceylon Government Railway Department is responsible for the management of the railways under the Ministry of Transport and Works. Of the 896 miles of railway (exclusive of sidings), 809 miles are broad gauge and 87 miles narrow gauge.

Ceylon Government Railway: Colombo; 228 steam and 5 diesel mechanical locomotives, 5 diesel hydraulic locomotives; gross receipts Rs.73,396,846; expenses Rs.81,556,886 (1953-54); Gen. Manager B. D. RAMPALA, M.B.E.; Operating Supt. D. de JONK (Acting); Chief Admin. Officer G. M. SPARKES.

ROADS

The principal road authority in Ceylon is the Public Works Department, under the Ministry of Transport and Works. This department maintains about 11,208 miles of roads, including the 4,377 miles of minor roads taken over from the District and Provincial Roads Committees in 1951. Of this total mileage of roads, 6,383 miles are metalled and tarred.

SHIPPING AND INLAND WATER TRANSPORT

Colombo is one of the most important ports in the East and is situated at the junction of the main trade routes. The other main ports of Ceylon are Galle, Trincomalee and Jaffna.

Colombo Port Commission: Box 528, Colombo; f. 1913; Chair. S. CHAUDRASOMA, O.B.E., C.C.S.; the Commission consists of the Chairman, the Principal Collector of Customs, the Director of Medical and Sanitary Services, the General Manager of the Railway, the Mayor of Colombo, the Master Attendant, the Harbour Engineer, and ten unofficial members nominated by the Minister for Transport and Works.

The waterway system is owned by the Government and its upkeep is the responsibility of the Public Works Department. There is a lengthy canal system, a legacy

from Dutch rule, extending 109.82 miles from Puttalam as far south as Galpotta on the Kalu Ganga. This continuous system of inland navigation makes full use of lakes and lagoons and streams on the west coast—Bologoda, Colombo, Negombo, Chilaw, Mundel and Puttalam Lakes, and the estuaries of the Kaluganga, Kelani Ganga, Maha Oya and Deduru Oya—in addition to cut canals.

AIR TRANSPORT

In March 1938 control of civil aviation was taken over by the Ministry of Communications and Works from the Chief Secretary of Civil Aviation. The Director of Public Works was appointed Director of Civil Aviation.

In February 1946 the Department of Civil Aviation became an independent organisation with its own Director who is at present Capt. D. KOTALAWALA.

Ceylon's two major airfields are at Ratmalana, 9 miles south of Colombo, and Negombo, 20 miles north of Colombo. Jaffna airport, which was taken over from the Royal Air Force in 1947, is also of growing importance.

Air Ceylon Ltd.: Head Office: Hemas Building, York Street, Fort, Colombo, 1; est. 1947; operates internal services and services to India; also to London and Amsterdam (the last two in conjunction with KLM); Chair. J. L. M. FERNANDO; Sec. and Manager KENNETH DE CROOS.

The following companies also run air services to and from Ceylon:

British Overseas Airways Corpn.: 63 Queen Street, Fort, Colombo.

Indian Airlines Corporation: Gaffoor Building, Fort, Colombo.

Qantas Empire Airways: 63 Queen Street, Colombo.

Royal Dutch Air Lines (KLM): Aitken, Spence and Co. Ltd., Lloyds Building, P.O. Box 5, Colombo 1.

UNIVERSITY AND COLLEGES

UNIVERSITY OF CEYLON

PERADENIYA

Founded 1942 by the incorporation of the Ceylon Medical College (f. 1870) and the Ceylon University College (f. 1921).

Chancellor. H. E. The GOVERNOR-GENERAL OF CEYLON.
Vice-Chancellor. Sir NICHOLAS ATIYGALLE, F.R.C.S.,
 F.R.C.O.G., D.L.O., L.M.S.

Registrar. H. J. BALMOND, B.A.
 Number of professors. 31.
 Number of students. 2,300.
 Library: *see under* "Libraries".

DEANS:

Faculty of Oriental Studies. Prof. G. P. MALALASEKERA.

Faculty of Arts. Prof. J. L. C. RODRIGO, C.M.G.

Faculty of Science. Prof. C. J. ELIEZER.

Faculty of Medicine. Prof. O. E. R. ABHAYARATNE.

Faculty of Engineering. Prof. E. O. E. PEREIRA

Faculty of Agriculture and Veterinary Science. Prof. C. A. MACGAUGHEY.

Ceylon Technical College: Colombo, course in engineering and commerce; *Director.* S. L. DE SILVA, B.Sc.,
 Ph.D., Dip.-Chem Eng.

Government Training College: Colombo-Maharagama; f. 1903 for the training of secondary school teachers.
Principal. E. H. DE ALWIS, M.A.
Vice-Principal: (Vacant).

Royal College: Colombo; f. 1835; 970 students; 45 teachers
Principal. DUDLEY K. G. DE SILVA, B.Sc.

School of Agriculture: Peradeniya; f. 1916, 110 students, 8 full-time lecturers; publ. *Krishakara* (annual).
Principal: M. L. C. ILANGAKOON, B.Sc., A.I.C.T.A.

MALDIVE ISLANDS

(Capital: Malé)

The Maldivé Archipelago, lying 400 miles south-west of Ceylon, consists of some 2,000 small coral islands, of which about 220 are inhabited (total population about 93,000). Coconut palms cover the islands and millet, fruit and edible nuts are also produced. The principal industry is fishing.

The Islands, which have a Sultanate Government, are British protected territory. An early record of the agreement with the United Kingdom is contained in an exchange of letters between the Sultan and the Governor of Ceylon in December 1887. In 1948, when Ceylon became a member country of the Commonwealth, a new agreement (whose provisions were re-affirmed on January 1st, 1953)

was signed between the Sultan and the United Kingdom Government. The Islands remain under the protection of the Crown and their external affairs are conducted by, or on the advice of, the United Kingdom Government, which, in turn, must refrain from any interference in the internal affairs of the Islands. Relations between the Maldivé Islands and the United Kingdom Government are conducted through the United Kingdom High Commissioner in Ceylon.

Sultan: H. H. AL AMIR MOHAMED FARID DIDI.

Prime Minister: IBRAHIM ALI DIDI.

GEOGRAPHY

SOUTHERN RHODESIA

SOUTHERN RHODESIA, the most important of the territories of the Central African Federation, occupies an area of 150,333 sq. miles between the Zambezi and Limpopo rivers (15°–22° S. lat., and 26°–34° E. long.) It is bounded to the North by Northern Rhodesia, to the east by Portuguese East Africa, to the south by the Union of South Africa (the Transvaal) and on the west by the Bechuanaland Protectorate. As is often the case in recently founded territories, major physical barriers are utilised as the frontiers. The Zambezi and Limpopo rivers form the northern and southern limits respectively, the eastern boundary follows the highest land in the Inyanga and Udzi Mountains, while the western boundary is drawn through the arid lands of Northern Bechuanaland.

Southern Rhodesia's isolation in the interior of southern Africa, which means that outlet to the ocean is possible only by passing through other territories, is an important feature of the situation. Shortest connection is to Beira on the Indian Ocean (374 miles from Salisbury), but this involves crossing Portuguese East Africa, while the journey to the ports of the Union is very long (2,032 miles from Bulawayo to Cape Town). This difficulty of communication with the outside world is one of the controlling factors in the development of the modern economic life of Southern Rhodesia.

Physical Features. Southern Rhodesia is a part of the great plateau massif of ancient rocks which is the major feature of the geography of southern Africa. The altitude of the country is moderately high, over 80 per cent of its area being more than 2,000 ft. above sea level, although less than 5 per cent is higher than 5,000 ft. For the most part the landscape is undulating, broken only by major river valleys.

The outstanding feature of the topography is a broad ridge stretching in a north-east-south-westerly direction across the whole country. This forms a belt of high plateau land about 400 miles long by 50 miles wide, standing between 4,000 and 5,500 ft. above sea-level, and known as the High Veld. The undulating plateau surface is surmounted by isolated granite tors or kopjes, a characteristic feature of the Southern Rhodesian landscape. Towards the north-east the ridge widens, and its eastern extension terminates in the massive scarp of the Inyanga and Udzi Mountains overlooking the coastal lowlands of Mozambique. Here is found mountainous relief and the highest land in Southern Rhodesia, the summit of Mount Inyangani reaching a height of 8,250 ft. above sea level. This continuous scarp forms a formidable barrier to direct movement between Southern Rhodesia and the Indian Ocean, and is broken only by one high level gap at Umtali which is utilised by the Salisbury-Beira railway. The height of the scarp declines gradually south and north towards the valleys of the eastward flowing Sabi and Zambezi rivers. Westwards, the height of the main central ridge falls away gently towards the Makarikari Depression in Bechuanaland.

The lowland areas of Southern Rhodesia are parts of depressions drained eastwards by the Zambezi and Limpopo rivers, and the term "lowland" is merely relative, since almost all of Southern Rhodesia lies at over 1,000 ft. The height of the land falls steadily away from the central

ridge towards these rivers, although in places the edge of the High Veld is marked by a steep scarp overlooking the Middle Veld, a plateau surface standing between 3,000 and 4,000 ft. above sea level. Deep river valleys have split the Middle Veld areas into great blocks of plateau country. The areas of Low Veld in the Zambezi and Limpopo depressions are broad plains, lying below 3,000 ft. in altitude and of a hot, inhospitable nature. In the northern area of Low Veld, the Zambezi has cut a great gorge in the reaches stretching for several hundred miles below the Victoria Falls.

Roughly 70 per cent of the surface area of Southern Rhodesia is made up of granite, schists and igneous rocks. These ancient formations outcrop along the area of the central ridge and have been exposed by the removal of a former covering of younger sediments. This core of ancient metalliferous rocks is the basis of Southern Rhodesia's mineral wealth and contains major deposits of gold, chrome, asbestos and iron ore. The younger sedimentary rocks, mainly sandstones and shales, have been preserved from erosion in the structural depressions of the Zambezi and Limpopo valleys. Vast deposits of excellent coal have been found in these beds in the north-west of the territory. In the extreme west are a series of unconsolidated sands of Tertiary age, which are generally valueless either for agriculture or as a source of minerals. The variety of rock type produces variations in the soils of Southern Rhodesia. The rocks underlying the High Veld usually weather into sandy or loamy soils, which are fertile in the adequate rainfall of this area. The sandstones of the Low Veld do not usually produce good soils, especially as rainfall is scanty, while the unconsolidated sands of the dry west are sterile and parched. Over much of the High Veld, however, irrespective of the underlying rock type, there has developed a fertile "black vlei" soil, approximating to a temperate steppe type of soil (i.e., like that of the wheatlands of Russia and the U.S.A.), which is the basis of much of the arable farming of the country.

The central ridge of Southern Rhodesia forms the main watershed of the region. Streams flow in roughly parallel courses down both sides of the ridge, north-westwards to the Zambezi, and south-eastwards to the Limpopo and Sabi rivers. Most of the major streams are permanent although in the west drought can dry up the rivers.

The flow of all streams reflects the seasonal nature of the rainfall, small watercourses of the winter being transformed into huge torrents in the summer, resulting in the dislocation of roads and communications. For this reason (in addition to the rapids and falls which occur along most stream-courses), rivers are almost useless for navigation. The flow of the majority of streams is also too irregular for the development of hydro-electric power: only the large rivers, such as the Zambezi, provide a sufficient all year round flow of water.

Climate. Although the whole of Southern Rhodesia lies to the north of the Tropic of Capricorn, the relatively high altitude of the plateau so modifies the climate as to make it quite pleasant and tolerable. It may be stated very generally that within Southern Rhodesia temperature decreases and rainfall increases with altitude; the coolest and wettest areas are therefore the eastern mountains, and the hottest and driest areas the Zambezi and Limpopo depressions, with other areas of the colony varying between

these two extremes. The climate of the whole region shows considerable variation according to the season. Winter is a dry, relatively cool season. This is the period of drought, only two to three per cent of the annual rainfall falling between the months of May and October. On account of their extreme altitude the eastern mountains experience orographic rain and mists which make them moister and cooler than the rest of the country during the winter. Along the central ridge, mean temperatures are usually between 55° F. and 58° F. during this period, while the northern and southern areas of the Low Veld are about 10° F. warmer.

Summer is a hot and wet season, the rainfall being monsoonal in character. Rains begin in the spring (October–November) with scattered convectional thunderstorms, which increase in intensity, culminating in very heavy equatorial-type rains from January to March. As the rain-bearing winds blow from the eastern quarter, the amount of rainfall decreases from east to west across Southern Rhodesia. The eastern mountains receive between 30 in. and 40 in. per annum, this figure declining steadily westwards through 31.9 in. at Salisbury to 23.6 in. at Bulawayo. The extreme west receives less than 20 in., rendering the area semi-arid in nature. In the sheltered depressions of the Zambezi and Limpopo valleys, rainfall is also very low, averaging between 20 and 25 in. in the northern area, and reaching a minimum for the country with less than 15 in. per annum in the Limpopo–Sabie depression. Summer heat on the central ridge is not excessive, as both the altitude of the area and the heavy rainfall lower the effective temperature. Maximum temperatures occur in October before the rains are sufficiently heavy to have any cooling effect. Along the central ridge mean temperatures are between 70° F. and 75° F., the hotter areas being towards the west. On the Low Veld, however, mean temperatures are between 77° F. and 85° F., with maxima of over 90° F. in the Zambezi area, and approaching 100° F. in the Limpopo basin.

Thus climatic conditions are reasonably pleasant and healthy along the central ridge area, with at the same time an adequate rainfall for agriculture. This area is conducive to white settlement, and is indeed the main area of European development. The lower areas of the Middle Veld are hotter and drier, and these are the areas at present occupied by the native populations of Southern Rhodesia. In the extreme west aridity precludes any habitation of the Middle Veld. The Low Veld is also unsuitable for human settlement, as those areas which are not arid are hot and unhealthy; in the Zambezi valley especially, malaria and the tsetse fly abound.

The seasonal nature of the rainfall means that there can be no great tree growth in Southern Rhodesia. The natural vegetation cover of most of the area is some form of Savannah grassland, the grasses flourishing luxuriantly during the summer rains, only to parch and die in the winter drought. This open grassland cover is interspersed with thorn bush and isolated flat-topped trees. Such trees are either of the water-storing type exemplified by the Baobab, or of the thorny type adopted to prevent excessive loss of moisture, in order to survive the months of drought.

Only along the central ridge is the rainfall heavy enough to enable a good growth of savannah (and temperate type grasses in the higher area)—even here there is a marked fall in the quality of the vegetation from east to west. Over half the area of Southern Rhodesia experiences a rainfall which is insufficient to support any useful vegetation, and a semi-arid savannah type persists, covering the western and southern regions with tufts of sparse coarse grasses and stunted acacia thorn bush. In the eastern highlands an all-year-round rainfall allows the growth of

exotic tropical evergreen trees, which provide a valuable source of hardwoods, including Rhodesian teak: in the highest area, however, the vegetation becomes montane in character. Along the banks of permanent rivers the presence of water all through the year results in the development of “gallery” forests of evergreens, this being especially true of the Zambezi Valley.

NORTHERN RHODESIA

Northern Rhodesia has the largest area of the three constituents of British Central Africa (287,640 sq. miles) extending from 18°–9° S. lat. and 23°–34° E. long.) lying between the Zambezi and the southern edge of the Congo Basin, in an even more remote interior position than that of Southern Rhodesia. The vast area and odd geographical shape of Northern Rhodesia are the result of the scramble for the territory in Central Africa during the late nineteenth century, which was carried out mainly with the aim of forestalling rival colonial powers by incorporating as much land as possible. Northern Rhodesia is bounded on the south by the British lands of Southern Rhodesia and Bechuanaland, to the west by Portuguese Angola, on the north by the Belgian Congo, on the eastern side by Tanganyika and Nyasaland and on the south-east by Portuguese East Africa. For the most part boundaries of the territory—unlike those of Southern Rhodesia—are arbitrarily drawn to cut across “natural” geographical regions, the colony being almost divided into two parts at a narrow “waist” (only 120 miles wide) produced by a south-eastwards extension of the Belgian Congo in the Katanga area, and the north-westwards prolongation of Mozambique up the Zambezi Valley. The northernmost part of Northern Rhodesia includes the southern tip of Lake Tanganyika, which is within 10° of the Equator; and this north-eastern lobe of Northern Rhodesia has both geographical and cultural affinities with Tanganyika and Nyasaland. Similarly the Rhodesian Copper Belt area has much in common with the Katanga copper mining area of the Belgian Congo, just across the frontier. Since the boundaries have now been firmly established despite the geographical and ethnic problems raised by such arbitrary division, rectification of the anomalies caused would seem impossible.

Northern Rhodesia suffers even more acutely than its southern neighbour from the effects of isolation within the heart of Central Africa. Rail outlet for its products is possible only by way of Southern Rhodesia and the Union, or through Mozambique, or across the Belgian Congo and Angola to Lobito; access to the Indian Ocean from eastern Rhodesia is possible only by roads to the railheads of Tanganyika and Nyasaland. Consequently the development of any external trade by Northern Rhodesia must concentrate on commodities sufficiently valuable to support the costs of such long rail hauls to ports.

Physical Features. The greater area of Northern Rhodesia is made up of a plateau standing between 3,000 and 4,000 ft. above sea-level. Much of the plateau has a flat surface, broken by upstanding kopjes, the result of countless ages of undisturbed erosion of the underlying ancient crystalline rocks. These rocks contain the bulk of Northern Rhodesia's wealth in the form of valuable deposits of copper, zinc, lead, vanadium and cobalt. The general level of the land falls gently southwards from the Congo–Zambezi divide in the north, towards the Zambezi depression in the south, the plateau being broken into huge blocks by valleys of the upper Zambezi and its major tributaries—of which the

THE BRITISH COMMONWEALTH

Kafue and Luangwa rivers are the largest. Higher ground occurs in the mountainous eastern district of Northern Rhodesia which, rising in places to over 8,000 ft., overlooks the western edge of the Great Rift Valley of Tanganyika and Nyasaland. These eastern highlands are isolated from the rest of Rhodesia by the great low-lying valley of the Luangwa river, a swampy and unhealthy region. The further barrier of the escarpment of the Muchinga Mountains, lying parallel to and immediately west of the Luangwa valley, emphasises the remoteness of this extreme eastern region. To the north of the Muchinga Mountains is an area of plateau land containing the shallow Lake Bangweulu and its associated swamplands, which are incompletely drained through Lake Mweru by the Luapula, a head stream of the Congo. In the extreme south of the country the Zambezi has entrenched itself in a series of gorges, with many rapids and falls the most famous of which are the Victoria Falls near Livingstone. These rapids and falls, which make the rivers of Northern Rhodesia unsuitable for through transportation, are a great potential source of hydro-electric power, although there are difficulties associated with the irregular flow of most Rhodesian streams. So far, development has been mainly on a small scale by mining concerns, as at Mulimaush and Lusenfwu which provide power for Broken Hill: there are plans, however, for larger schemes on the Kafue river and at the Kariba Gorge on the Zambezi which will profit both the Rhodesias.

Climate. Northern Rhodesia experiences a seasonal climate very similar to that of Southern Rhodesia, with a heavy summer rainfall and a prolonged period of winter drought, while the relatively high altitude of the plateau surface gives temperatures somewhat lower than the normal for these latitudes. The rains of the summer months are convectional thunderstorms, and these provide almost the whole of the annual rainfall. Heavy equatorial rains in December to March are preceded by small thunderstorms, which increase in frequency as the summer progresses. The amount of rainfall over Northern Rhodesia varies with altitude and also with latitude—the rainy season being somewhat longer in the north of the area (i.e. nearer to the Equator). Rainfall therefore varies between 50–60 in. per annum in the higher lands of the north and east, and 25–30 in. in the low lying areas of the Zambezi valley. As the total rainfall becomes less, so its reliability decreases; this applies particularly to the south-western region of Barotseland, where rainfall is less than 30 in. per annum, although the effects of such variations are felt most in the main plateau area of Central Rhodesia. The winter is a period of clear skies and prolonged sunshine, a pleasant and comfortable season extending from May to September when the average mean temperature on the plateau is 62° F. Immediately preceding the summer rains is the hottest period during which the average temperature on the plateau is 75° F. (October). In the lower lying areas of the Zambezi, Luangwa and Kafue valleys, however, mean temperatures at this period rise to 77° F. and 85° F., and the mean maximum temperature is well over 90° F. Conversely, the highlands of the north and east have somewhat cooler temperatures at this season, which suits European settlers. During the rains the mean temperature on the plateau falls to around 70° F., as a result of the cooling effect of the heavy rainfall, and the shielding effect of a continuous cloud cover.

Although the climates of the two Rhodesias are similar, the lower latitude of Northern Rhodesia means that the rainy season is more prolonged, and that the temperatures are somewhat higher and have a smaller range between winter and summer—a difference accentuated by the

lower height of the plateau. Northern Rhodesia is therefore not so attractive to white settlers as the lands further south, though the cooler conditions and more reliable rainfall of the high east areas provides a better basis for agriculture.

As with Southern Rhodesia, the general vegetation cover is of a savannah type adapted to conditions of seasonal rainfall. The open grass savannah is more thickly covered with the characteristic isolated trees and thorn bush, giving the landscape an appearance similar to that of English "parkland". In response to the heavier and longer rains near the Congo and Nyasaland borders, the parkland savannah merges into a thin forest transitional between grassland and the equatorial evergreen forests. In the drier areas of the south, however, the vegetation is poorer and thin thorn bush and sparse coarse grass are characteristic, except where a supply of water along stream banks permits tree growth.

NYASALAND

Nyasaland, the junior member of the Federation, occupies a land area of some 37,374 sq. miles along the western side of Lake Nyasa, extending southwards along the valley of the Shire river, the Lake's outlet. The territory is 520 miles long from north to south, and has a width varying between 50 and 100 miles. Its southern half is enclosed by Portuguese East Africa, while the north-west is bounded by Northern Rhodesia, and the north-east by Tanganyika. Although Port Herald in the extreme south is within 150 miles of the sea (at the Zambezi mouth), Nyasaland's main outlet is via the railway to Beira, which crosses the Zambezi by the great Sena bridge, opened in 1935. There is also a westwards connection with Northern Rhodesia by road, but northern Nyasaland tends to orient itself towards Tanganyika, with which there is road connection. With regard to its geographical position, physiography and economic activities, Nyasaland would seem to have greater affinities with eastern rather than with southern central Africa.

Physical Features. The physical features of Nyasaland are those associated with that part of the Great Rift Valley system of eastern Africa, which traverses the whole length of the territory from north to south as a deep trough let down between parallel faults or cracks in the earth's crust. (see EAST AFRICA). The northern part of the Rift Valley is occupied by Lake Nyasa, a vast area of water 360 miles long and from 10 to 50 miles wide; the surface of the lake is 1,565 ft. above sea level and its maximum depth is about 2,500 ft., so that the lowest part of the trough floor is here some 1,000 ft. below sea level. The lake is drained southwards into the Zambezi by the Shiré river flowing along the Rift Valley, which in the extreme south of Nyasaland is only 100 to 200 ft. above sea level. The eastern and western sides of the rift valley are steep and sometimes precipitous, without any major breaks and rising to high plateaux; around the shores of Lake Nyasa these escarpments sometimes leave a lowland fringe with an average width of only 2 to 3 miles, but in many places rise almost sheer from the water. West of the lake the plateau surfaces stand generally between 3,000 and 4,500 ft. above sea level, rising in places (such as the Nyika uplands of the north) to heights of over 8,000 ft. In southern Nyasaland the plateaux of the Shiré Highlands have a general elevation of only 2,000 to 3,500 ft. rising to the mountain masses of Mlanje (10,000 ft.) and Zomba (7,000 ft.). On the south-eastern boundary of Nyasaland are two minor lakes, Chiuta and Chilwa, which are drained eastwards.

Climate. Nyasaland experiences the seasonal rainfall of south Central Africa, although the highlands attract a rather heavier rainfall than that of the Rhodesias. The rainy season is from November to April, the earlier months being marked by violent thunderstorms, which give place to the steady rains of January to March. A dry period is most marked in the lowland areas of the rift, especially the Shiré Valley, since the highlands over 3,000 ft. receive mists and some rain throughout the winter. Amounts of rainfall vary with altitude from 30 to 40 in. in the lowlands of the Rift, through 50 to 60 in. in the Shiré Highlands, to over 80 in. on the mountains: in northern Nyasaland, the longer rainy season gives annual falls of 60 to 80 in. along the Lake shores, and over 100 in. in the mountains. Winter is a relatively cool season over most of Nyasaland, temperatures rising to their maxima in November, before the summer rains become heavy enough to have a cooling effect. Actual temperatures experienced vary with altitude. The southern highlands have mean summer tem-

peratures of about 75° F., falling to 70° F. in the rains, and to about 62° F. in the winter months from May to October—the highest mountains (having accordingly lower temperatures) are thus well suited to European settlement. In the lowlands of the Rift Valley summer temperatures average about 80° F. with extreme maxima of 115° F. in the lower Shiré Valley; these areas are hot and unhealthy, especially along the Lake shores, where the high humidity resulting from the proximity of the Lake makes conditions very trying.

On the whole, Nyasaland has an abundant and reliable rainfall, under which the most common vegetation is the thin forest "parkland" type of savannah, with a cover of low grasses. In the better-watered areas, this merges into patches of hardwood forest, mostly relics following centuries of native clearing and cultivation left upon hill tops and stream banks. The higher areas are often covered with a type of bamboo forest suited to the somewhat cooler conditions.

A.C.B.

HISTORY

THE BRITISH OCCUPATION

When the country which now forms the Rhodesias and Nyasaland began to be opened up in the mid-nineteenth century, most of the Bantu tribes who occupied it were totally lacking in effective political or military organisation, their little stockaded villages being almost if not entirely autonomous. They were easy victims for the Arab and Portuguese slave-traders from the east coast, and for the more warlike tribes, such as the Yao and Bemba, from whom the slave caravans frequently obtained slaves by purchase. They were also harried by two warrior tribes which were not much interested in the sale of captives, but relished slaughter for its own sake and raided to seize crops and cattle. These tribes were offshoots from the Zulus, and had migrated northwards from their homeland earlier in the century. One of them, the Matabele, had established itself in the western part of what is now Southern Rhodesia, whence it made frequent raids upon the medley of tribes to the east, known collectively as the Mashona, whom it reduced to subservience. The other, the Angoni, had crossed the Zambesi, broken into several fragments which remained formidable in isolation, and settled over a wide area, mainly on or near the watershed which later became the boundary between Nyasaland and Northern Rhodesia.

On the Upper Zambesi the Barotse, a branch of the Bechuana tribe, had created a relatively complex political structure, and had extended their control over a wide though ill-defined area both to the east and to the west. About 1836 they were conquered by the Makololo, a people of Basuto origin, and it was during the period of Makololo ascendancy that the country was visited by Livingstone. But in 1873, the year of Livingstone's death, the Barotse overthrew and almost annihilated the Makololo recovering their former position as a governing people.

Livingstone more than any other man was responsible for opening up the whole region to civilised influences. His great journey from Angola to Mozambique in 1854-56 gave him a prestige which made the British public deeply interested in his subsequent explorations, discoveries and revelations about the slave trade, and in 1875-76 two Scottish missions were founded in Nyasaland as the most appropriate memorial to his career. Their influence upon the country has been continuous and profound. In 1878 some Glasgow merchants set up a small trading company to relieve the missionaries of the responsibility for importing supplies and trade goods. The company also planned to open up trade with the native tribes in order to give them an opportunity of obtaining cloth by other means than the sale of slaves. Although the African Lakes Company, as it was called, had little capital and was incompetently managed, its pioneer work was important. It gradually established regular communications with the interior by way of the Zambezi, its tributary the Shire, and Lake Nyasa; it even made a rough road between the north end of Lake Nyasa and the south end of Lake Tanganyika.

The growth of British missionary and commercial activity in Nyasaland was viewed with distaste and apprehension by the Portuguese, who claimed that their African possessions comprised the whole enormous belt of country between the Angola and the Mozambique coasts. As their determination to make good their claim

to the Nyasa country hardened, Scottish public opinion became bitterly indignant at the prospect that the missions might be frustrated in their work and perhaps forced to abandon it because of the religious intolerance and nationalist malice of Portuguese officialdom. This Scottish pressure was by no means unwelcome to Lord Salisbury, the British Prime Minister and Foreign Secretary, and when the Portuguese eventually forced the issue by sending a mob of irregular native troops across the River Ruo—which Britain regarded as the boundary of their possessions—he despatched to the Portuguese Government an ultimatum, dated January 11th, 1890, requiring the withdrawal of their forces.

Before this crisis the British Government had been content with a mainly negative role in eastern and central Africa: it had endeavoured to maintain an open door to the interior, but had sought no privileged position for itself or its subjects. Its only interference in the affairs of the region had been for the purpose of suppressing the slave trade. The Portuguese, however, could, and did, withhold their co-operation with impunity, and the failure to intercept the traffic on the coast made the British consul at Mozambique increasingly interested in the possibility of doing something to check it at its source. In 1883 the Foreign Office went so far as to accredit a consul to the Nyasa chiefs, with the task of collecting information about the slave-routes and trying to persuade the chiefs to refrain from selling people to the Arab traders. The consul was at first received with respect, but his influence steadily diminished as it became evident that he had no forces at his command, and therefore no means of punishing those who defied him. Since the Treasury refused to allocate public money for a crusade in the heart of Africa, the Foreign Office could do no more. Nor did the Treasury change its attitude when, in order to deter the Portuguese from advancing across the Ruo, the acting-consul proclaimed the Shire Highlands a British protectorate (August 19th, 1889). The money required to establish British rule in Nyasaland, and also in the territory to the west, was provided not by the Imperial Government but by Rhodes and his Chartered Company.

The grant of a Royal Charter to the British South Africa Company on October 29th, 1889, was the outcome of developments south of the Zambezi. In 1885 a protectorate was declared over Bechuanaland, and on February 11th, 1888, Lobengula, chief of the neighbouring Matabele, put his mark on a treaty presented to him by a British Official, J. S. Moffat, who had begun his career as a missionary, from 1858 to 1865, in the Matabele capital. The Moffat treaty provided that Lobengula would not dispose of any part of his dominions without the previous knowledge and consent of the High Commissioner for South Africa. Its purpose was to prevent encroachments by Portuguese and Boers, but it necessarily implied that to some extent Matabeleland now lay within the British sphere of influence. It prepared the way for Rhodes, whose agent, C. D. Rudd, obtained from Lobengula before the year was out a concession of exclusive mineral rights, in return for a subsidy of £100 a month and a payment of 1,000 rifles. The existence of gold in Mashonaland had been known since the 1860's, and Lobengula had been increasingly troubled by concession-seekers. The Rudd concession contained no grant of political authority,

but it enabled Rhodes to form his company and to obtain the charter. A body of intending settlers was organised by the company, and these Pioneers, as they were called, advanced into Mashonaland in 1890, protected by several hundred armed European police. The company virtually assumed control of Mashonaland, and expected the Matabele to keep to the west of the Shasha river. It is not surprising that war broke out between the company and the Matabele in 1893; what is surprising is that Lobengula was able to hold his *impis* in check for so long. In 1891 he tried to counterbalance the Rudd concession by granting the sole right to dispose of land within his dominions to a German financier named Lippert. But Rhodes bought up the Lippert concession, thus acquiring for his own company the legal right to alienate land to settlers—though it had in fact been doing so since the occupation had been completed by the founding of Salisbury in September, 1890.

The defeat of the Matabele in 1893, and the suppression of their revolt and that of the Mashona in 1896–97, left the way clear for the peaceful development of Southern Rhodesia as a country of European settlement. At last, too, the company was able to send a Resident to Barotseland, which had been brought within its orbit when F. E. Lochner had obtained a concession from the paramount chief in 1890. The terms of this concession were modified by agreement negotiated in 1898 and formally ratified in 1900. It is by this latter agreement that Barotseland proper, an area of 37,000,000 acres, is to this day a native reserve. In return for an annual payment of £850, the Barotse authorities recognised the company's right to grant land and work minerals in the whole of their domain outside this reserve—that is, in an area which was presumed to embrace the rest of North-Western Rhodesia.

In North-Eastern Rhodesia, too, the company consolidated its control from 1895 onwards. Before that year the official responsible for administering the country between the River Kafue and the watershed west of Lake Nyasa had been the representative of the Foreign Office in the protectorate to the east of the watershed. This arrangement was based on an agreement made in February, 1891, between the company and the Foreign Office; the proclamation of the Nyasaland protectorate and the definition of its boundaries by Order-in-Council had taken place in the following May. In 1895, however, the British Treasury at last undertook to pay the administrative deficit on the protectorate, thus freeing it from dependence on an annual grant from the company; while the company appointed its own administrator for its "sphere" to the west, which soon afterwards came to be known as North-Eastern Rhodesia. In 1904 Nyasaland was transferred to the control of the Colonial Office.

By the end of 1895 the Yao and Arab slave-dealers within the protectorate had been subdued, after much hard fighting, by a small force of Sikhs under British command, throughout almost the entire territory. This achievement made considerably easier the task of the company in North-Eastern Rhodesia, where the slave trade was destroyed and effective control established over the whole area before the end of the century.

THE RHODESIAS UNDER COMPANY RULE

The government of the company's possessions was regulated by Orders-in-Council, issued in 1898 (for Southern Rhodesia), in 1899 (for North-Eastern Rhodesia) and in 1900 (for North-Western Rhodesia). In each of the three territories it was to be conducted by an Administrator appointed by, and responsible to, the company, but a supervisory control was to be exercised by the British Government, acting through the appropriate representa-

tive of the Crown in Africa. For both Southern and North-Western Rhodesia this role was occupied by the High Commissioner for South Africa; for North-Eastern Rhodesia it was assigned to the Commissioner and Consul General for Nyasaland. It was not until 1909 that North-Eastern Rhodesia was placed, at the company's request, under the same supervision as the other two territories. Two years later it was amalgamated with its western neighbour, for the sake of administrative economy, to form a united Northern Rhodesia.

The number of white settlers in Southern Rhodesia has at all times greatly exceeded the number on the other side of the Zambezi, and the Order-in-Council of 1898 gave them elective representation in a Legislative Council which it created and empowered to issue ordinances and control finance. But the elected members were outnumbered by the members whom the company was authorised to nominate, so that although the settlers were given full opportunity to express their views, they were not given the means to impose those views on the company. They were deeply dissatisfied with this position: and, indeed, Rhodes himself had intended from the beginning that the colony should become fully self-governing as soon as possible. But the constitutional issue was embittered by a prolonged controversy about conflicting economic interests, a controversy which involved litigation before the Judicial Committee of the Privy Council during the first World War. The decision, given in 1918, cleared the way for a general settlement. The settlers' political position had already been strengthened by constitutional changes effected by Order-in-Council in 1903 and 1911, increasing the number of elected members so that it became a majority of the Legislative Council. In December, 1921, the Secretary of State for the Colonies conceded the demand for self-government, but stipulated that a referendum should be held to determine whether the majority of the settlers preferred that Southern Rhodesia should work out its own future as a separate entity or should accept amalgamation with the Union of South Africa.

Rhodes himself had dreamt of a united self-governing South Africa, to which the company's possessions, north as well as south of the Zambesi, should belong; and Southern Rhodesia, at least, had come into being as an offshoot of Cape Colony. But it had been cut off from its base during the Boer War, and the independence of outlook which it had then developed had been further stimulated by its long struggle against the company. So, although General Smuts visited the territory and offered generous conditions, the referendum held on October, 27th, 1922, resulted in a majority of almost 3 : 2 in favour of responsible government.

In Northern Rhodesia at this time the white population was only about 3,000, barely a tenth of the number in Southern Rhodesia; and whereas for the previous decade Southern Rhodesia's revenue had balanced its expenditure, Northern Rhodesia was still burdened by a large annual administrative deficit. Its constitutional development was correspondingly retarded: it had no Legislative Council, though since 1917 it had had an Advisory Council, with a purely consultative function, consisting of five elected members. Immediate self-government was out of the question, while the alternative of amalgamation with a self-governing neighbour was not yet acceptable to the Southern Rhodesians, to whom it would have meant not an asset but a burden. Yet the settlers, few as they were, were keenly dissatisfied, and demanded that the Advisory Council should be given power to control finance and to veto legislation. They also contested the company's claim to ownership of the land and minerals and the Buxton Committee, which reported on the affairs of both Rhodesias

THE BRITISH COMMONWEALTH

in 1921, recommended that this dispute should be referred to the Judicial Committee of the Privy Council. But the company had had enough of litigation and determined to make the best bargain it could by negotiation with the Government. The resulting "Devonshire Agreement" (named after the Secretary of State for the Colonies), concluded on September, 29th, 1923, provided that the company should relinquish its administrative authority in both territories, but should retain its right to mineral royalties and also certain land rights.

Ten years later, in 1933, it transferred its mineral rights in Southern Rhodesia to the Government of that territory, in return for a payment of £2,000,000. And in 1949 it agreed to pay one-fifth of its net annual revenue from mineral royalties to the Northern Rhodesian Government, and to transfer to the Crown in 1986, without payment, any minerals that might still remain unexploited by that date.

COLONIAL SELF-GOVERNMENT AND IMPERIAL TRUSTEESHIP

Letters Patent which came into force on October 1st, 1923, established in Southern Rhodesia a constitution which, with certain modifications, has remained in operation ever since. They instituted government by a cabinet responsible to a single-chamber legislature consisting of thirty members, elected on a franchise open to all British subjects who occupied premises worth at least £150 or had an annual income of not less than £100. Since the territory was formally annexed to the Crown on September 12th, 1923, as a preliminary to the grant of self-government, the African natives are British subjects, and the franchise is therefore "colour-blind".

Southern Rhodesian self-government fell short of Dominion status in two main respects. It was limited to internal affairs, and it was subject to certain checks and controls retained by the United Kingdom Government to prevent possible discrimination against the native Africans. At first these controls included supervisory powers vested in the High Commissioner for South Africa, but in 1937 the High Commissioner's role in Southern Rhodesia was terminated by amending Letters Patent. No Southern Rhodesian enactment has ever been disallowed by a British Secretary of State, because it is politically impossible to overrule the settled policy of a self-governing colony.

The British Government therefore acquiesced in the Land Apportionment Act of 1930, which deprived Africans of the right to purchase land except in part of the territory specially set aside as a "native purchase area". Half the total area of the country, including almost the whole of the land traversed by railways or roads, was reserved for Europeans. Since about one-sixth of the total is unassigned and largely unassignable (part of it being forest reserve and most of the remainder infested by tsetse fly), the area left to the natives, whether for communal or individual use, has been only one-third. The provision for native needs is, however, far more adequate than in the Union of South Africa.

The territorial segregation introduced by this Act was basic to Southern Rhodesia's whole policy. European interests were frankly declared paramount in the European area, while African interests were paramount in the African area. Since all the townships, mines and industries were in the area assigned to the Europeans, this policy implied that any African who participated in modern economic life must accept a position of permanent and unalterable inferiority.

The passing of this Act happened to occur in the same year as the publication by the British Government of the

White Paper commonly known as the Passfield Memorandum, which formally and deliberately declared that, if the interests of native and immigrant races should conflict, the interests of the natives "must be paramount". The Memorandum roused the settlers of Northern Rhodesia to furious protest. They had been looking forward confidently to a steady growth in their own power, and their confidence had been strengthened by the growth of their numbers, which were shown by the 1931 census to have almost reached 14,000. After the termination of the company's control, on April, 1st, 1924, the territory had become a protectorate, ruled by a Governor responsible to the Colonial Office, assisted by an Executive Council, and legislating with the advice and consent of a Legislative Council, which included a minority of elected members and a majority of officials. In spite of the official majority, they were now in a better position to put pressure on the Government than they had been in the days when there had been only an Advisory Council. Although outnumbered 100:1 by the native population, they habitually described themselves as "the people" and "the public", and they thought it right and proper that the control of policy should before long be transferred from the Colonial Office to themselves. But the doctrine of "paramountcy" involved the indefinite prolongation of imperial control, to be exercised as a trust on behalf of the Africans. The elected members formally retorted that the interests of the British race ought to have priority over all other interests within the Empire. To appease their wrath, the Joint Select Committee of Parliament which considered East African affairs in 1931 gave the word "paramountcy" an interpretation which was regarded by both settlers and natives as an abandonment of the principle itself; and this interpretation has been upheld by the British Government ever since.

The most lasting effect of the Passfield Memorandum was the reaction which it stirred up in Northern Rhodesia in favour of amalgamation with the self-governing colony across the Zambezi. Since the direct road to self-government was blocked by the assertion of imperial trusteeship, this course seemed the best way of escaping from the Colonial Office and of making good the claims of white supremacy.

Confronted with this demand for amalgamation, the British Government temporised rather than refused, presumably because it did not wish to offend the settlers in Southern as well as in Northern Rhodesia. As they grew in numbers, resources and experience of self-government, the Southern Rhodesians were becoming increasingly disposed to favour amalgamation with a territory which, although still poor and backward compared with their own, was far more attractive as a potential acquisition than it had been before its chronic administrative deficit had been wiped out by the revenue from the Copper Belt, where development had begun in the late 1920's. In 1938 the British Government appointed a Royal Commission, with Viscount Bledisloe as chairman, to determine how far it was desirable to go towards creating closer union between the two Rhodesias and also Nyasaland. Its report, presented in March, 1939, favoured amalgamation of all three territories as an ultimate objective, but for the immediate future it recommended only functional co-operation, because it recognised that Southern Rhodesian native policy was "in some respects restrictive" and that there was "striking unanimity" in the opposition of Africans in Northern Rhodesia and Nyasaland to the termination of the Crown's protection as an unavoidable consequence of amalgamation. The outbreak of war with Germany in the following September caused the report to be shelved. In 1945, however, the Central African Council was formed, consisting of four leading members

from each of the three Governments. The Council met from time to time for several years to work out a common approach to common problems, but it had not itself any authority to implement its decisions.

FEDERATION

By 1948 it had become apparent to the advocates of amalgamation in both Rhodesias that their objective could not be achieved, because the British Government would never consent to it. They therefore began to plan federation, as a second-best solution. On February 16th and 17th, 1949, a conference was held at Victoria Falls, attended by Sir Godfrey Huggins (the Prime Minister of Southern Rhodesia), Mr. (now Sir) Roy Welensky (leader of the elected members in Northern Rhodesia), and other European delegates from the Rhodesias and also Nyasaland. The conference drew up and unanimously approved the outlines of a federal scheme.

The project encountered the opposition of Mr. Creech Jones, the Secretary of State for the Colonies; but in February, 1950, he lost his Parliamentary seat and, in consequence, his office. His successor, Mr. Griffiths, announced on November 8th, the Government's agreement to a fresh examination of the subject by a conference of civil servants from the three territories concerned, the Colonial Office, and the Commonwealth Relations Office. This conference met in London in March, 1951, and drafted a new scheme of federation, which, after some amendment and considerable elaboration in detail by subsequent conferences, was accepted by a majority of nearly 2 : 1 of the voters in a referendum held in Southern Rhodesia on April 9th, 1953, and was approved by the British Parliament and the Legislative Councils of Northern Rhodesia and Nyasaland. The Federation of Rhodesia and Nyasaland officially came into being on September 3rd, 1953.

The federal constitution is a unique compromise between settler ambitions and imperial trusteeship: a compromise based on what is called "partnership" between the races. "Partnership" has come into favour as an inoffensive substitute for the short-lived doctrine of "paramountcy". It allows the Africans to share in the control of the Federation, and though at first their share is only that of a junior partner, they are encouraged to hope that they may attain a more equal footing in the future, when their education and prosperity have sufficiently increased. There is, however, a dangerous ambiguity in the "partnership" theory, because the Africans can scarcely be expected to be content for all future time to aim at nothing higher than equal voting power with a European community which they outnumber, in the federation as a whole, by 30 : 1; whereas few of the Europeans would at present contemplate the possibility that their own votes or those of their descendants may eventually be swamped by those of an alien race.

"Partnership" implies racial inter-dependence and co-operation, and its adoption by Sir Godfrey Huggins and his supporters has involved a partial abandonment of the doctrine of segregation and "parallel development" within European and African areas. In September, 1948, their United Party won a decisive electoral victory over the more doctrinaire adherents of segregation, and the impression of growing liberalism conveyed by this victory helped to clear the way for Federation. Sir Godfrey Huggins has vigorously advocated the common electoral roll, which was much criticised in the 1930's as being inconsistent with the policy of segregation. Nevertheless his Government was responsible, in 1951, for raising the electoral qualifications from £150 to £500, in the case of

property, and from £100 to £240, in the case of income, and for creating a new obstacle to African enfranchisement by requiring the applicant to prove that he had an adequate knowledge of English. The raising of property and income qualifications was explained as merely restoring the real position existing before the inflation caused by the war and its aftermath, but, as only 420 Africans had yet reached the electoral roll when the change was made, it is clear that the common roll affords a very narrow ladder for the attainment by Africans of equal citizenship with Europeans. In June, 1950, Sir Godfrey Huggins expressed the hope that Africans would begin to obtain election as members of the Southern Rhodesian Parliament within a period of about twenty-five years.

In Nyasaland and Northern Rhodesia, however, Africans were already members of Legislative Council. In each territory two were chosen by a kind of electoral college, created not long after the end of the second World War, and consisting of representatives of the chiefs and commoners who work the highly important institutions of local government which were introduced in the 1930's in accordance with the principle of "indirect rule".

The Legislative Council of Nyasaland, though created as early as 1907, until recently retained a majority of officials over all other members. The reason is to be found in the smallness of the European population, which is itself due mainly to the lack of mineral development. The few hundred European planters and business men in the country are represented in the council by five nominated members, and the Indians, who are more numerous, by one nominated member. The inclusion of Nyasaland in the federation has been due, not to any local European ascendancy, but to Southern Rhodesia's interest in the supply of migrant labour which Nyasaland provides.

In Northern Rhodesia, by contrast, the settlers greatly strengthened their political position during the ten years following the outbreak of war. Their elected representatives became more numerous than the officials in the Legislative Council, though the votes of the officials added to those of the representatives of African interests remained sufficient to hold a balance. Elected Europeans were also brought into the Executive Council, where it was agreed that they should be responsible to their fellow elected members in the legislature. Though these arrangements stopped short of full cabinet government, and though the final responsibility still rested with the Governor and the Colonial Office, it would have been very difficult to carry on the government if the elected members withheld their co-operation.

The constitutions of the three territories have not been affected by the establishment of the federal authority except, of course, to the extent that that authority has relieved the territorial Governments of their former functions and powers. In particular, the two protectorates have still not been annexed, and their African inhabitants remain "British protected persons", not British subjects. The Native Trust Lands Orders-in-Council, first applied to Nyasaland in 1936 and to Northern Rhodesia in 1947, may not be repealed or amended by the federal legislature, so that in each protectorate about 95 per cent of the land remains virtually inalienable to non-Africans.

The federal institutions incorporate elements drawn from both Southern Rhodesia and the protectorates. There is a Governor-General whose functions, like those of the Governor of Southern Rhodesia, are mainly (though not entirely) non-political, while the conduct of government rests with a cabinet responsible to a single-chamber legislature, the Federal Assembly, consisting entirely of non-officials. The Assembly's membership, however, includes two Africans and one European representative of African interests from each of the three territories: that is,

THE BRITISH COMMONWEALTH

a total of 9 in a chamber numbering 35 in all (not counting the Speaker). Of the remaining 26 seats, occupied by elected members, Southern Rhodesia has 14, Northern Rhodesia 8 and Nyasaland 4. Thus, out of a total membership of 35 the representatives of the two protectorates hold a majority of one over those from Southern Rhodesia. Six of the nine representatives of the Africans (the European and one of the two Africans from each territory) form a standing committee known as the African Affairs Board, with the function of calling attention to any federal legislation or administrative action which in their opinion discriminates against Africans, and the right to ask the Governor-General to reserve for consideration and possible disallowance by the British Government any Bill which they regard as a "differentiating measure".

The powers of the Federal Assembly are of two kinds, listed respectively as "exclusive" and "concurrent". Subjects on the concurrent list remain within the competence of the territorial legislatures but, where a territorial law on any such subject conflicts with a federal law, the latter prevails. Over all subjects which are not on either list the power of the territorial legislatures remains unchanged. As in all federations, there is a Supreme Court with power to determine whether or not a particular enactment is within the competence of the legislature which passed it.

The federal powers are mainly economic and financial in character. They include the exclusive right to levy income tax, the proceeds of which are allocated as follows: 64 per cent to the Federation, 17 per cent to Northern Rhodesia, 13 per cent to Southern Rhodesia, and 6 per

cent to Nyasaland. Within limits a territory which wishes to raise additional revenue for its own purposes may do so by authorising the federal Government to impose a "territorial surcharge"; and in time of war or other grave emergency an additional "emergency tax" may be raised for federal purposes.

The Federation is also responsible for defence, and for external affairs in so far as they are not still the responsibility of the United Kingdom Government. It does not yet wish to burden itself with the need to find personnel and finance for a diplomatic corps, but it has taken over certain powers which Southern Rhodesia had formerly exercised by agreement with the United Kingdom, to make its own agreements on economic matters with other countries, particularly Commonwealth countries.

The constitution provides that it shall be reviewed at some date between 1960 and 1962 by a conference representing the Federation, its three territories, and the United Kingdom. And its preamble states that the goal of the Federation is full membership of the Commonwealth. Since the European settlers who control the federal Government have never abandoned their preference for amalgamation, the federal structure with all its elaborate safeguards for African interests is regarded in some quarters as merely an interim measure, possibly to be replaced after a period of probation and economic development by a unitary state. In any event, the future of the area as a sovereign member of the Commonwealth will depend entirely on the political sagacity of its own enfranchised citizens.

A J.H.

ECONOMIC SURVEY

Even before the controversy over plans for federation focused attention on Central Africa, it was well known that Southern Rhodesia had been absorbing thousands of immigrants each year since the war, that in the Copper Belt of Northern Rhodesia production had been expanded and that additional mines were to be established. Now that Northern Rhodesia, Southern Rhodesia and Nyasaland—a country of less spectacular economic growth—are associated in a federal system of Government it is desirable to review economic activity and prospects in the area as a whole.

This task has its difficulties. The Federation is only two years old and although much information is available, economic statistics for Rhodesia and Nyasaland as a unit are in some cases incomplete or refer only to a very small number of years. Moreover in examining the prospects of the economy of the country it is in some ways too early to assess the likely effect of the new constitutional arrangements.

One of the aims of the federal constitution was said to be to place economic functions very largely in the hands of the federal government. In assuming its powers that government has inevitably brought change in the constituent territories. For instance, the three territories had widely differing customs tariffs and trade relationships with the outside world. At the beginning of July 1954 these were replaced by a new federal customs and excise tariff and new trade agreements with neighbouring countries and Australia. Internally, free movements of locally produced goods is now permitted throughout the Federation. Again, the revenues of the three territories were not equally buoyant at the time of federation and direct taxes were not identical. Income tax is now a federal subject, although the territorial governments are entitled to impose a territorial surcharge of up to 20 per cent of the rates of taxation decided by the federal Parliament, and receive a share of the receipts from federal taxes on incomes as prescribed in the constitution.

Many other decisions have been taken by the federal government in the economic field and others are inevitable at an early date as part of the progressive process of the central government's assumption of power. It will take time before the full implications of these decisions become clear.

Federation may during the course of time affect the economy of Rhodesia and Nyasaland in another way. The preamble to the federal constitution contains a declaration of the intention of the governments concerned in particular to "foster partnership and co-operation between their inhabitants". Harmonious relationships between its peoples are a pre-requisite to the progressive and sustained growth of a country's economy, and in multi-racial communities such as the Federation race relationships can very much influence the use of its resources and the magnitude of its production. The extent to which the indigenous African progressively acquires knowledge and experience, and employs them by participating in a widening range of occupations may be one of the prime factors influencing the rate of economic progress which the country is likely to attain.

THE GENERAL PICTURE

The Federation is a country which has shown a great rate of development in the years since the war. Estimates of net national income for the country as a whole are available only for the last five years, but show an increase from £147 million in 1950 to £265 million in 1954.

Total population has risen from about 4.6 million in 1939 to just over 7 million in 1955. The greatest rate of increase has been in the European population which at 234,000 in the middle of 1955 was about three times its pre-war figure. This is largely due to the wave of migration to the Northern and Southern Rhodesia which has occurred since the war. The greatest absolute increase has, however, been in the African population, which has steadily increased from about 4.5 million to an estimated figure of 6.8 million in 1955.

Other indicators show a general increase in production. The total tonnage of goods hauled by the Rhodesia Railways, the railway serving Northern and Southern Rhodesia, in 1954 was about three times the figure for the last year before the war. The output of coal was just about double, and imports of petroleum fuels had risen even more rapidly.

Although production, particularly of base minerals, was stepped up during the war, the greater part of the increase in economic activity has occurred since. Railway traffics for instance in 1954 were twice their 1946 level which itself was little below the peak performance during the war years. The record since the war has been one of rapid progress in all sectors of the economy. The main economic purpose of the original European settlement of Central Africa last century was to produce gold and primary products for export to the Mother Country. In the last ten years settlement and investment has been much broader in its purpose and there has been a noteworthy expansion of manufacturing industries.

The Federation, however, is still essentially a producer of primary products and raw materials, producing food-stuffs for home consumption and commercial crops and base minerals principally for export. Most of the population is engaged in some form of farming, from large tea estates, ranches and tobacco farms to subsistence peasant farming, but mining is the greatest single factor in the money economy. Only just over 100,000 Africans and about 10,000 Europeans are directly employed in mining, but minerals accounted for more than two-thirds of the total value of the export trade in 1954. Copper exports alone were three-fifths of total exports.

The value of copper in the export trade does not in itself give an indication of the many ways in which the fortunes of the copper mines are of great importance to the country. The favourable conditions under which Rhodesian copper has been marketed in recent years has made revenue from copper mining the biggest single factor in the receipts of the federal government from direct taxation and in 1953 total mining enterprises contributed 48 per cent of the revenue of the four governments from direct taxes in 1953.

The price of copper on the London Metal Exchange fluctuated greatly during 1955, though generally between figures higher than those of 1954. The favourable price of

THE BRITISH COMMONWEALTH

copper has enabled the Federation to make a good start financially, but the price fluctuations last year serve as a warning of the country's dependence on conditions in the market for copper overseas.

The Federation is then firstly an agricultural and mining country, with the manufacturing industry assuming greater importance in recent years. Apart from foodstuffs for internal consumption, the emphasis of agriculture as well as mining is on production for export overseas, total exports last year being £153 million compared with a net national income of £265 million.

Such a broad picture ignores the different stages reached in the economic progress of the three territories which comprise the Federation. Nyasaland, the smallest of the territories, is an agricultural country, progressing slowly with no output of mineral and little manufacturing industry. Northern Rhodesia's chief industry—on the basis of the value of its output—is mining, but most of its people are engaged in agriculture. Southern Rhodesia, though settled for mining and farming, has seen manufacturing industry assume a position of some importance in recent years. However, if one considers the three territories as a unit, the story is one of great expansion in post-war years. The urge to invest, the inflow of settlers and continually rising production have led to great pressure on resources. It took time to provide basic services, such as transport and communications, water and electricity supplies, adequate to meet the new higher levels of demand. Similarly greater output of coal and construction materials could not be provided at once and social services, particularly to meet growing concentrations of population in urban areas, lagged behind.

These difficulties, in so far as the provision of basic services, fuel and construction materials are concerned, have now except for railway transport been almost entirely overcome, and further expansion has been planned to meet expectations of a continued growth in production.

AGRICULTURE

Farming is still conducted by Africans growing their own foodstuffs in the traditional manner of their ancestors, but in many areas improved systems have been adopted and Africans are now the largest maize producers in the country. In addition, European settlement has led to farming activities, mainly in Southern Rhodesia, but also to some extent in the other two territories, being conducted by Europeans using African labour. Maize and tobacco farms in Southern and Northern Rhodesia, cattle ranches in Southern Rhodesia and tea estates in Nyasaland are examples.

One of the main distinctions in agriculture in the Federation is in fact racial, and reference is made to "European" and to "African" agriculture according to the hands in which the control and management of production lies. Information concerning European production is much more easily obtainable than statistics of African agriculture, which often tend to be estimates, and so agricultural statistics are generally collected and maintained separately. The distinction also has constitutional significance in that "African Agriculture" is a subject for the territorial legislatures, whereas "European Agriculture" and Marketing are or can be made federal matters.

The federal government's *Economic Report 1955* states that the agricultural policies of the three territories since the war "have all been designed to secure a high level of self-sufficiency in such basic foodstuffs as are suitable to the local climatic and other conditions". Maize is the main foodstuff to be traded but basic foodstuffs vary with local conditions, small grains (munga and kaffir corn) being

included in the government marketing arrangements in Southern Rhodesia.

During the years 1946–52 Northern and Southern Rhodesia were net importers of about 400,000 tons of maize.¹ Since 1952 imports have died away and large reserve stocks have been built up. Vagaries of rainfall are the chief cause of these wide fluctuations and even Nyasaland, a country normally with a surplus of maize for export, had in 1949 to import large quantities of maize to feed drought-stricken areas. The uncertainty of the duration and intensity of the rains is in fact the principal reason why arrangements have been made to store large quantities of maize from one year to another.

The seasonal fluctuations mask both the great progress which has been made in maize farming and also the persistent increase in demand. Acreages put to maize have risen and much attention has been given to increasing yields, particularly by the introduction of hybrid maize. The acreage put to maize in European farms in Southern Rhodesia for instance rose from 252,000 in 1947 to an estimated figure of 400,000 for the 1954–55 crop.

The rise in demand is due to the progressive increase in the total African population, a higher proportion of which is tending to be found in urban areas where it depends on others to provide it with foodstuffs. Expectations of future increases in demand have led to a declaration in the *Economic Report 1955* that Southern Rhodesian production is likely over a run of seasons to be about 25,000 tons a year below demand until the end of this decade, though it is hoped that Northern Rhodesia will be self-sufficient.

Much time and money are being devoted in all three territories to the improvement of African agricultural methods. Preventive measures are being taken to stop the further deterioration of the land and better methods of husbandry with improved transport facilities are also being introduced, which should in time have an appreciable effect on output.

The chief commercial crop is tobacco, which is grown in all three territories. The most important variety is flue-cured Virginia grown by Europeans and marketed in Salisbury. During the post-war period tobacco growing has been stimulated by the policy of the United Kingdom of buying sterling area tobacco. In favourable seasons output in Southern Rhodesia is now just about double that at the end of the war (58 million lb. in 1946–47). The tobacco industry has gained experience and is now settling down to be a steady supplier of tobacco, principally for the United Kingdom market. One-eighth of world tobacco imports now come from the Federation, which has captured 42 per cent of the Commonwealth tobacco export trade.

The other commercial and food crops, though often the principal activity in the area where they are grown, are of less importance. Tea is grown on a large scale in Nyasaland and planting is taking place to increase production in Southern Rhodesia. Cattle, pigs and dairy farming, almost entirely for local consumption, are important in Southern Rhodesia; also timber, hardwoods in Northern Rhodesia; and softwoods and wattle in the east of Southern Rhodesia.

MINING

Southern Rhodesia has already yielded a wide variety of minerals. Northern Rhodesia is believed to be highly mineralised, but so far production has only been on a local scale. Mining is of no significance in Nyasaland at present. Prospecting is taking place in many parts of the

¹ All tons are short tons of 2,000 lb.

Federation and new mines are being opened up in Northern and Southern Rhodesia. Overall expectations are of further rises in mineral output for the rest of this decade.

It has already been said that copper dominates the economy of the Federation. In 1954 the output of copper represented over 78 per cent of its total mineral output and the Federation was the second-largest producer of copper in the world. The output was 426,000 tons, £91 million in value. Copper mining is confined to a small area of Northern Rhodesia adjoining the Katanga pedicle of the Belgian Congo. Production is expected to rise considerably during the next two years when two new mines, Bancroft and Chibuluma, come into operation, and to reach over 500,000 tons in 1958. A mine was opened in 1955 in Southern Rhodesia but its output is small compared with the Northern Rhodesia mines.

Copper mining in Northern Rhodesia is a manufacturing as well as a mining industry. The copper ore is smelted and much of it is electrolytically refined. Since 1949 the output of blister copper has moved within very narrow limits (230,000 tons in 1954), but as more refining plant has been installed the output of electrolytic copper has risen from 72,000 tons to 194,000 tons. A new refinery which is under construction should enable most of the output in the future to be in the form of refined copper.

Lead and zinc are Northern Rhodesia's other principal mineral products. These are produced from one mine at Broken Hill on the railway from Southern Rhodesia to the Copper Belt. In Southern Rhodesia, on the other hand, mineral production is fairly well distributed throughout the country and a wide range of ores is mined.

Gold was one of the factors which brought about the settlement of Southern Rhodesia at the end of the last century. It was for a long period the chief export, but since the war it has been the one important product of the Federation to show a declining output. Rising costs have made some mines unpayable and, unless the gold price is raised, the long-term trend of gold output should continue downwards; for the present, however, total output is fairly steady at around half a million ounces a year.

Southern Rhodesia's chief mineral products now are asbestos, chrome ore and coal. She is the leading world producer of high-grade asbestos, but only contributes about 6 per cent of total world production of asbestos of all kinds. The country, however, is the third largest producer of chrome ore, mining nearly 20 per cent of the world's output, and most of it goes to the United States. The output of both minerals rose steeply after the war and in 1954 the output of asbestos was 45 per cent, and of chrome ore 160 per cent, greater than in 1946. These figures were both slightly below peak levels attained in 1953. The recession in the United States affected chrome ore shipments for some time and the supply of short fibre asbestos was over-abundant.

The only coal at present being worked is at Wankie where large deposits of coking coal are available in thick seams. To increase coal supplies sufficiently to meet demand has been one of the major problems facing the country during the post-war period. Wankie is now able to mine sufficient coal, but railway transport capacity is still below requirements.

MANUFACTURING

The development of manufacturing industry in Southern Rhodesia since 1939, and particularly after the end of the war, has been spectacular. The number of manufacturing establishments recorded by the voluntary census of production rose from 299 in 1939 to 435 in 1946 and 714 in 1953. Net output has gone up from £2.5 million in 1939

to £7.6 million in 1946 and to about £26 million in 1953, while the volume of production in 1953 was nearly five times that of 1938 and nearly 50 per cent greater than output in 1949. In Southern Rhodesia the net output of manufacturing overtook mining in 1947 but is still below the gross output of European agriculture. Apart from the activities of the copper mines, manufacturing industry is limited in Northern Rhodesia and insignificant in Nyasaland.

In spite of this rapid growth, manufacturing industry in Southern Rhodesia and in the Federation as a whole is in its early stages of development. The first industries to be started were naturally those in which fixed capital requirements were small and which served the particular needs of the local market. Others which required substantial fixed capital often followed the conclusion of arrangements to aid them in securing the local market. The making of clothing from imported piece goods is the main industry in the first category and flour milling and sugar refining, both of imported products, are important in the second.

These industries were established before 1939. During the war difficulties in obtaining manufactured goods from normal sources overseas encouraged the processing of local raw materials. For instance a cotton wool factory was established which has been followed by the development of an important cotton spinning and weaving industry since the war.

Although the war undoubtedly helped, the greatest progress in manufacturing industry has been made since 1946. Apart from the creation of a sizeable cotton textile industry and the expansion of the manufacture of building materials, the most noteworthy development has probably been in the establishment of a small iron and steel works.

In the experiences of the Federation's manufacturing industries can be seen many of usual problems which confront industry in backward territories. The Federation has a wealth of mineral resources, including very good deposits of coal and iron as well as non-ferrous minerals. She has in fact the pre-requisites of an iron and steel industry but local demand is at present small and involves the high cost of producing a wide range of products in small quantities. African labour is, even now, in good supply but is largely untrained; and for complicated processes and supervisory tasks European workers must be imported, at high cost. The clothing industry, on the other hand, has gone ahead in recent months, using cheap African labour to produce articles for export to the Union of South Africa.

Apart from clothing and cotton textiles, manufacturing is carried on principally for the home market. Federation itself has created a larger domestic market overnight, but it is well to remember that the market is still small. The Federation is even now a poor country. National income in 1954 represented only £39 *per capita*, including the non-African population.

BASIC FACILITIES

The expansion of production has called for a greater provision of basic facilities such as transport and communications, fuel and power and water supplies.

The outstanding feature in railway transport in Central Africa is perhaps the great distances over which goods must be transported. Copper is carried 1,500 miles from the Copper Belt to the ports of Beira and Lourenço Marques. In Britain, coal is carried perhaps 150 miles from South Wales on Derbyshire to London. In the Federation, Salisbury and the Copper Belt, both principal consumers of Wankie coal and coke, are over 500 miles away from the coal mines.

THE BRITISH COMMONWEALTH

A small increase in production in Central Africa may therefore involve considerable additional investment in transport. Transport equipment still has to be obtained from overseas and as the expansion of the capacity of the Rhodesian railway system is a lengthy process, it has to be the subject of careful planning. Figures of the great rise in tonnages carried are quoted in the first section of this survey, but they give no guide to the adequacy of the performance. In fact the post-war years up to 1954 were years of great frustration to principal users of railway transport. In the last two years, however, the Rhodesia Railways have reached the stage of being able to carry all traffic offering with the exception of coal, which is worthy of special mention.

Coal-burning power stations have been sited in the Copper Belt and in Southern Rhodesia wherever the demand for electric power happened to be. This has proved a great disadvantage in the post-war period of expansion. Electricity output has gone up by leaps and bounds, but this has meant very great investment in coal mining and rail transport as well as in the power stations and distribution networks themselves.

The Federation is fortunate in having several good sites for the generation of hydro-electric power in the Zambezi basin and in 1955 it decided to go ahead with the construction of a dam and power station at the Kariba Gorge to serve the Copper Belt and the Bulawayo-Salisbury area. The scheme has an ultimate potential of over a million kilowatts at 70 per cent load factor, but the first power is unlikely to be generated until early in the 1960's, so a further expansion of thermal power stations is being undertaken meanwhile.

EXTERNAL TRANSACTIONS

With a low average income per head all this investment depends very much on interest overseas in making capital available to the Federation, as the amount of investment which can be financed from internal savings is very limited. An adverse balance of payments on current account representing a net inflow of capital is therefore to be expected.

This deficit has fallen from £49 million in 1951 to £16 million in 1954. The decline can be regarded as an indication of the increased capacity of the country to finance its own investment, particularly following the transfer of the copper companies domicile to Rhodesia and the favourable price of copper. It is also, however, a reflection of the decline in investment which has occurred in total, as well as in relation to national income, in the last two or three years. Home investment reached a peak of nearly £84 million in 1951, and has since fallen to £71 million in both 1953 and 1954. Investment has in fact fallen to more manageable proportions, with less intense pressure on resources than was the case during the five previous years when the desire to live and invest in Rhodesia was intense.

The progress of the country will however continue for many years to depend in large measure on investment by private and public bodies overseas. The United Kingdom

has been the traditional source of finance, but in these days this must be supplemented by private and public finance from other countries both in and outside the Commonwealth. In particular, funds for investment in public utilities such as power and transport installations, on which the development of production and a satisfactory return from investment in private undertakings depend, are a paramount requirement.

The governments of the Federation have recently produced development plans for the years to the end of the decade. These programmes have been described as an attempt to plan public investment on the basis of what funds are likely to be available, rather than on what is needed. This makes it all the more important that the works contemplated, together with that on the Kariba dam (which has been regarded as an additional though essential element), should all be carried through as planned.

But these development plans require borrowing from overseas as well as local finance. The external public debt of the Federation and private external holdings in its business undertakings have mounted since the war. It is clearly important that the future attraction of the country as a field for investment together with its external earnings should be sufficient to avoid difficulties in meeting its foreign payments. It has been stressed that the country is still basically a producer of primary foodstuffs for home consumption and of minerals for export, and from the fact that it is in mining, and particularly copper mining, that a noteworthy expansion of production is now being undertaken, lies the greatest assurance for the future.

To other members of the Commonwealth not only is the Federation a major source of basic raw materials and tobacco, and incidentally a net dollar earner, but also an important market for manufactured goods particularly from the United Kingdom and the Union of South Africa. Imports in 1954 were valued at £125 million. The United Kingdom and the Union of South Africa combined provided over three-quarters of the import trade, the United Kingdom's share of total imports being 42.6 per cent.

Imperial preference has always been a major factor in Northern and Southern Rhodesian tariffs. The policy has been perpetuated by the Federation whose new tariff is essentially preferential in character, though the Congo Basin treaties have prevented the extension of preferences to the north-eastern part of the country.

The Federation is now settling down after a period of excessive pressure on its resources and to a new system of government. Investment in the staple industries and programmes for the development of basic services lead to the conclusion that production should continue to go ahead in the next few years and that in time the Federation should, given sensible practices in race relations, become an even more attractive place to live and invest in.

This however will probably depend very largely on the continuing success of the Federation in selling a handful of commodities to industrial nations overseas. It may be this factor, as well as ties of kinship and origin, which gives it such a great interest in the fortunes of the Commonwealth and in particular of the United Kingdom.

FINANCE

CURRENCY

The currency of the Federation is linked to British sterling, is backed fully by balances held in London, and is controlled by the Central African Currency Board which issues Rhodesian silver and Rhodesian notes. These are gradually being replaced by Federal notes and coins (British denominations).

THE BRITISH COMMONWEALTH

REVENUE AND EXPENDITURE

The first Federal budget, covering the year ending June 30th, 1955, provided for a total estimated revenue of £36,888,000 and expenditure from revenue funds of £36,234,995. The 1955-56 budget provided for a revenue of £39,000,000 and an expenditure of £38,808,352.

THE FEDERATION

THE question of closer political association between the Colony of Southern Rhodesia and the Protectorates of Northern Rhodesia and Nyasaland was first seriously examined in 1938 by a Royal Commission, under the chairmanship of Lord Bledisloe. This Commission reported that the time was not then ripe for amalgamation or federation, but recommended the establishment of regular consultative machinery. This was achieved in 1945 with the setting up of the Central Africa Council, which consisted of four members from each of the three territories, under the chairmanship of the Governor of Southern Rhodesia. Its purpose was to promote greater co-ordination of policy and action, and many Standing Committees were appointed to deal with specialised questions. However, a growing consciousness of the limitations of purely consultative machinery led, in 1950, to the revival of the idea of closer political association, and a conference of officials of H.M. Government and of the three territories was held early in 1951. Its report rejected amalgamation, and recommended a scheme of federation under which the central government should have specific powers to deal mainly with the problems common to all three territories. It further proposed certain special safeguards for African interests. The Secretaries of State for Commonwealth Relations and for the Colonies attended another conference at Victoria Falls in September 1951, which endorsed the principle of federation. Informal talks were held in London in January 1952, and were attended by the Prime Minister of Southern Rhodesia and the Governors of Northern Rhodesia and Nyasaland. A reconvened conference met in London the following April and May and prepared a draft Federal Scheme, which was presented to the United Kingdom Parliament in June 1952. A final Ministerial Conference in January 1953 re-affirmed the belief that closer political association between the three Central African territories was essential if they were to develop their resources to the full. The conference gave careful consideration to amendments to the draft Federal Scheme suggested by Governments and delegates of the three territories and examined reports of three commissions. A number of improvements were agreed upon, and these were incorporated in a final draft of the Federal Scheme, published in February 1953. The Rhodesia and Nyasaland Federation Act, enabling the Queen to provide for the Federation of Southern Rhodesia, Northern Rhodesia and Nyasaland, received the Royal Assent in July 1953. In the following month two Orders-in-Council set out the Constitution and provided for its coming into force on September 3rd of the same year. In December 1953 the first Federal elections were held and the first Federal Cabinet appointed. Until Federal Law makes other provision, the title of the Federation is the Federation of Rhodesia and Nyasaland, and its capital is Salisbury.

THE FEDERAL CONSTITUTION

The preamble to the Constitution states that Northern Rhodesia and Nyasaland shall continue to enjoy separate Governments for so long as their respective peoples desire. It is also emphasised that under Federation the self-governing status of Southern Rhodesia and the protectorate status of the two northern territories are preserved.

The Federal Legislature. The legislative powers of the Federation are vested in a Federal Legislature consisting of a Governor-General,¹ representing the Queen, and a Federal Assembly. Those matters on which the Federal Legislature alone is empowered to make laws are specified in a Federal Legislative (Exclusive) List; they include external relations (in so far as they are entrusted to the Federation by the United Kingdom Government), defence, immigration, a number of important financial and economic questions, Federal Courts and education (except the primary and secondary education of Africans). Both Federal and Territorial Legislatures are empowered to deal with certain other matters specified in a Concurrent List, Federal Law prevailing where inconsistencies arise. Matters not explicitly transferred to the Federal Government remain with the Territorial Governments. The Federal Legislature has power to delegate by Federal Law to the Legislature of a territory, authority (whether general or special) to legislate for that territory with respect to any matter included in the Exclusive List.

The Federal Assembly consists of a Speaker and thirty-five members: seventeen from Southern Rhodesia, eleven from Northern Rhodesia and seven from Nyasaland. Of these, six African members (two elected from each territory) and three European members (one elected and two appointed) are charged with special responsibilities for African interests. The Federal Assembly is summoned to meet once at least in every year, and twelve months must not intervene between its last sitting in one session and the date appointed for its first sitting in the next session. The Governor-General is empowered at any time to prorogue or dissolve the Federal Assembly; he is required to dissolve the Federal Assembly at the expiration of five years from the first day on which it first met, if it has not been dissolved meanwhile.

The Executive. The Governor-General of the Federation is appointed by Her Majesty. He is empowered to appoint a Prime Minister and other Ministers with assigned functions, and also an **Executive Council**. This Council consists of the Prime Minister and such other persons, being Ministers, as the Governor-General may appoint on the recommendation of the Prime Minister. Except in very few instances, where for special reasons he would act at his discretion, the Governor-General must act in accordance with the advice of his Ministers.

The African Affairs Board is a Standing Committee of the Federal Assembly. It consists of the three European members representing African interests and one of the African members from each territory. The general functions of the Board are to safeguard the rights of the African in the Federation and, on the request of a Territorial Government, to render assistance to that Government in relation to the study of matters affecting Africans. The Board has also the particular function of drawing attention to any legislation which it considers of a differentiating character.

¹ As the authority who is empowered to assent to Bills, the Governor-General is part of the Federal Legislature. He will not preside in, or belong to, the Federal Assembly.

FEDERAL GOVERNMENT

Governor-General and Commander-in-Chief: The Rt. Hon. the Lord LLEWELIN, G.B.E., M.C., T.D., D.L.

THE CABINET

Prime Minister, Minister of External Affairs and Defence: The Rt. Hon. Viscount MALVERN, C.H., K.C.M.G.

Minister of Transport and Communications and of Posts: Sir ROY WELENSKY, C.M.G., J.P.

Minister of Commerce and Industry and of Power: Sir MALCOLM BARROW, C.B.E.

Minister of Agriculture and Health: J. M. CALDICOTT, C.M.G.

Minister of Finance: DONALD MACINTYRE, C.B.E.

Minister of Justice and Education: J. M. GREENFIELD, C.M.G., Q.C.

Minister of Home Affairs: F. S. OWEN.

FEDERAL ASSEMBLY

Speaker: TOM IAN FINLAY WILSON.

Clerk: COL. G. E. WELLS, O.B.E., E.D.

Chairman of the African Affairs Board: Dr. J. F. C. HASLAM, C.M.G., M.C.

Specially Elected African Members: WELLINGTON MANOAH CHIRWA, MASOTSHA MIKE HOVE, MATEYO KAKUMBI, CLEMENT ROBIN KUMBIKANO, JASPUR ZENZEZA SAVANJU, DAUTI LAWTON YAMBA.

Specially Appointed European Members: Rev. ANDREW BEVERIDGE DOIG, JOHN SMITH MOFFAT, O.B.E.

Specially Elected European Member: HARRY ELINDER DAVIES.

FEDERAL REPRESENTATIVES IN OTHER COUNTRIES

High Commissioner in the United Kingdom: Sir GILBERT RENNIE, G.B.E., K.C.M.G., M.C.

High Commissioner in the Union of South Africa: A. D. CHATAWAY, M.B.E.

Commissioner in East Africa: J. F. BOWLES.

Portuguese East Africa: R. B. N. WETMORE, M.B.E., J. G. W. BAGGOTT, M.B.E.

POLITICAL PARTIES

Federal Party: f. 1953; strongly advocates a policy of racial partnership and is opposed to segregation; 23 seats; Leader the Rt. Hon. Viscount MALVERN, C.H., K.C.M.G.

Dominion Party: f. 1956; an amalgamation of the former Confederate and Rhodesia Parties; opposes the non-segregation policy of the Federal Party, supports separate development and land apportionment as between European and African, and supports the principle of establishing a separate voters' role for Africans; Leader R. O. STOCKIL.

Commonwealth Party: f. 1956; advocates the principle of dual development and land apportionment, and realises that this policy may result in the consolidation of the Federation into black and white States; 1 seat; Leader G. F. M. VAN EEDEN.

THE FEDERAL JUDICATURE

The Supreme Court of the Federation which was inaugurated on July 1st, 1955, has exclusive jurisdiction in certain disputes between the Federation and a territory, or between territories; in the determination of any question as to the right of any person to be or to remain a member of the Federal Assembly; and in any matter involving a writ

of mandamus or an injunction, etc., against a Federal Officer. The Court also has exclusive jurisdiction in questions concerning the interpretation of the Federal Constitution which may be referred by a lower court for the decision of a higher court. The Court has exclusive appellate jurisdiction on any question as to the interpretation of the Constitution of the Federation or of a territory. Subject to certain limitations, the Federal Legislature is empowered to confer additional appellate jurisdiction, and the Federal Legislature or a Territorial Legislature to confer additional non-appellate jurisdiction.

The judges of the Supreme Court are:

Chief Justice: SIR ROBERT TREDGOLD, K.C.M.G.

Judges: SIR ARTHUR WERNER LEWEY, Q.C.

Mr. Justice CLAYDON.

The Chief Justices of the three territories of the Federation are also by virtue of their office members of the Federal Bench.

Geological Survey of Southern Rhodesia: P.O. Box 8030, Causeway, Salisbury, f. 1910, the library contains 4,000 vols., Dir. J. C. FERGUSON; Senior Geologist R. TYNDAL-BISCOE, Chemist (Vacant), Mineralogist N. E. BARLOW, publs. *Annual Reports of the Geological Survey of Southern Rhodesia, Mineral Resources Series*, bulletins, short reports, and maps issued at irregular intervals.

Malaria and Bilharzia Research Laboratory: P.O. Box 8105, Causeway, Salisbury, Dir. WILLIAM ALVES.

Pasteur Institute and Public Health Laboratory: P.O. Box 8079, Causeway, Salisbury, f. 1921; Dir. Dr. R. B. BAIRD; Government Pathologist Dr. H. DOUGLAS ROSS, Senior Technical Assistant V. CARLISLE.

Rhodes-Livingstone Institute: P.O. Box 900, Lusaka; f. 1937, Pres. H. E. The Governor of Northern Rhodesia, Sir ARTHUR EDWARD TREVOR BENSON, K.C.M.G., Dir. J. C. MITCHELL, D.Phil. (Oxon); Admin. Sec. Miss J. E. M. LONGTON; Librarian Mrs. U. K. STEVENSON (3,000 vols.); staff comprises six Research Officers and ten Research Assistants, publs. *Rhodes-Livingstone Papers*, six-monthly *Journal*, *Monographs* and *Communications* (occasional).

Rhodesia-Nyasaland Meteorological Service: P.O. Box 8066, Causeway, Salisbury; f. 1897; Dir. N. P. SELICK; publs. *Monthly Climatological Summaries*, daily weather reports and forecasts.

THE BRITISH COMMONWEALTH

Tobacco Research Board of Rhodesia and Nyasaland: P.O. Box 1909, Salisbury; a statutory body est. 1950 by Tobacco Research Act; board represents growers, buyers, and Ministry of Agriculture; operates two research stations; Chair. R. B. HARLAND; Dir. F. A. STINSON, M.S.A., PH.D.; Sec. A. D. S. MACDOUGALL; publs. *Progress and Interim Reports*.

LIBRARIES AND ARCHIVES

Central African Archives: Salisbury, Southern Rhodesia; f. 1935 as the Government Archives of Southern Rhodesia; incorp. 1947 Public Records of Northern Rhodesia and Nyasaland, 1954, Public Records of the Federation; comprises Divisions of Public Records, Records Management, Local Government and Private Records, Research Library (34,000 vols.), Pictorial and Map collections and Photographic Studio; Chief Archivist V. W. HILLER, O.B.E.; Advisory Body, the Royal Commission for Central Africa Archives, Chair. Sir HAROLD CARTMEL-ROBINSON, C.M.G., O.B.E.; Headquarters, Salisbury, Southern Rhodesia; Depots: Zomba, Nyasaland, and Cranborne, Southern Rhodesia; publs. *Oppenheimer Series, Reports, Bibliographical Series, Historical Documents of East and Central Africa*.

Ndola Public Library: P.O. Box 197, Ndola, Northern Rhodesia.

Public Library: P.O. Box 586, Bulawayo; f. 1896; headquarters of the Southern Rhodesia National Free Library Service, Beit Central Library for Schools, Southern Rhodesia Teachers' Reference Library and Circulation of Supplementary Readers for Schools; 40,000 vols.; Librarian D. NIVEN, O.B.E., F.L.A.

Queen Victoria Memorial Library: P.O. Box 1087, Salisbury; f. 1902; Chair. N. W. WILDING; Librarian and Sec. Mrs. M. ROSS-SMITH, F.L.A.

Turner Memorial Library: Umtali, Southern Rhodesia.

MUSEUMS

National Museum of Southern Rhodesia: P.O. Box 240, Bulawayo; f. 1901; nationalised 1936; administered by Board of Trustees appointed by the Governor; botanical geological and zoological exhibits covering the Ethiopian Zoological Region, with special reference to Southern Rhodesia; historical, ethnographical, and prehistorical exhibits appertaining to Southern Rhodesia and adjacent regions; Scientific Staff: Dir. and Keeper of the Dept. of Zoology REAY N. H. SMITHERS, B.Sc., F.Z.S.; Keeper of the Dept. of Antiquities R. F. H. SUMMERS, F.R.A.I.; Keeper of the Dept. of Geology G. BOND, B.Sc., PH.D., D.I.C., A.R.C.SC., F.G.S.; Hon.

Keeper of the Dept. of Entomology G. ARNOLD, O.B.E., D.SC., A.R.C.SC., F.R.S. (S.A.), F.R.E.S.; publ. *Occasional Papers*.

Queen Victoria Memorial Museum: P.O. Box 6, Causeway, Salisbury; f. 1902; archaeology and ethnology, botany, zoology, and entomology of Southern Rhodesia; controlled by Nat. Museum Trustees of Southern Rhodesia from April 1951; Keeper J. F. HOLLEMAN, M.A., PH.D.

Rhodes-Livingstone Museum: P.O. Box 124, Livingstone; f. 1934; ethnology of Northern Rhodesian native tribes; archaeology of Northern Rhodesia and South Central Africa; autograph letters and relics of David Livingstone; early maps of Africa; Pres. H.E. The Governor of Northern Rhodesia; Curator J. DESMOND CLARK, M.A., PH.D., F.S.A.; publ. *Occasional Papers of the Rhodes-Livingstone Museum*.

COLLEGES

THE UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

In February 1955 a Royal Charter was granted to the University College of Rhodesia and Nyasaland, which is to be built at Mount Pleasant, Salisbury. The College is open to men and women of all races, and the degrees awarded will be those of the University of London. The Faculties of Arts (including Education), Science and Agriculture have been established, and although the buildings are not complete classes began in March 1956.

President: Her Majesty QUEEN ELIZABETH THE QUEEN MOTHER.

Principal: Dr. WALTER ADAMS, C.M.G., O.B.E.

Librarian: D. A. CLARKE, M.A.

HEADS OF DEPARTMENTS

African Studies: J. C. MITCHELL, D.PHIL.

Agriculture: A. E. DAVIES, M.SC.

Botany: A. S. BOUGHEY, PH.D.

Chemistry: S. H. HARPER, PH.D., D.SC.

Education: H. J. ROUSSEAU, D.LIT., B. A. FLETCHER, M.A., B.SC.

English: N. H. MACKENZIE, M.A., PH.D.

Physics: E. L. YATES, M.SC., PH.D.

Zoology: E. B. EDNEY, PH.D., D.SC.

ATTACHED INSTITUTE

Institute of Education: Prof. B. A. FLETCHER, Visiting Professor of Education.

Rhodesian College of Music 23-26 Luck Street, Salisbury. Founded 1948.

Chairman: Sir THOMAS CHEGWIDDEN, C.B., C.V.O.

Founder and Director of Studies: Mrs. EILEEN M. REYNOLDS, F.R.A.M.

Secretary: Mrs. I. F. HORTON.

SOUTHERN RHODESIA

THE CONSTITUTION

SOUTHERN RHODESIA was opened to European colonisation by a pioneer column, organised by Cecil John Rhodes, which founded Salisbury on September 12th, 1890, and was administered by the British South Africa Company (founded by Rhodes in 1889) until 1923. In 1822 a referendum to decide whether the Colony should embark on self-government or enter the Union of South Africa resulted in a majority vote for self-government, and on September 12th, 1923, thirty-three years after the occupation, the country was formally annexed to the British colonial empire as a self-governing colony.

Full self-government was granted with the exception that legislation affecting native interests, the Rhodesian Railways and certain other matters were reserved to the Secretary of State. So far as internal affairs were concerned, these reservations fell away in time except for those which related to discriminatory legislation affecting the native population. Commonwealth relations, trade relations and relations with colonial territories in Africa were mainly conducted by the Southern Rhodesian Government direct until 1953, when the Federation of Rhodesia and Nyasaland was established (see page 616). Under the Federation, Southern Rhodesia preserves her self-governing status, although certain powers hitherto exercised by her Government relating to external affairs, defence, the regulation of commerce and industry, immigration, emigration, European agriculture and education, have now been transferred to the Federal Government. The Southern Rhodesian Government continues to be responsible for native administration, education and agriculture, local government and housing, internal security and industrial relations.

The Queen is represented by a Governor, and he is assisted by an Executive Council, the Cabinet.

The Cabinet

Before 1948 the Cabinet consisted of six ministers, one of whom was Prime Minister, but in 1948 the Constitution was amended so as to allow the appointment of a seventh minister.

The Legislative Assembly

The Legislature consists of thirty members elected to a Legislative Assembly for a five-year term, elections being conducted on party political lines. The Assembly is at present unicameral, but power exists to create an Upper House.

The Franchise

The franchise is accorded to all Southern Rhodesian citizens (a) who are twenty-one years of age or over, (b) who have resided not less than six months in Southern Rhodesia and at the time of their enrolment not less than three months in their electoral district, (c) who occupy premises to the value of £500 or who own a registered mining location in the Colony or who receive an income of not less than £240 per annum.

The voters' roll in 1953 numbered 50,475, of whom 594 were Asian, 570 coloured and 441 natives.

Native Affairs

Under the Land Apportionment Act of 1941 as amended, the Colony is divided into European and Native areas, in

which the interests of the respective races are predominant. Of the Colony's total acreage (96,213,000), roughly half, 48,395,000 acres, constitutes the "European area" (including the towns); 20,859,000 acres are set aside as Native Reserves (entirely for African occupation) 7,860,000 acres form the Native Purchase Area in which only Africans may purchase or lease land; 4,135,000 acres have been set aside as the Special Native Area exclusively for communal occupation by Africans; 987,000 acres constitute the "Forest area" in which natives may reside under certain conditions; and the remaining 13,976,000 acres are unassigned. 32,855,000 acres are so far assigned to African occupation only, and the bulk of the native population lives there. The establishment of Native Councils in the Reserves is provided for in the Act passed in 1937, and many such councils have been formed with fairly extensive local government powers. Under the Native Law and Courts Act—also of 1937—many Native Courts have been established, with jurisdiction limited at present to civil matters which can be decided by Native customary law. Native affairs are administered by the Native Affairs Department, headed by the Secretary for Native Affairs and Chief Native Commissioner, with five Provincial Native Commissioners, and Native Commissioners stationed throughout the country. The control of native urbanisation is provided for in the Native (Urban Areas) Accommodation and Registration Act passed in February 1946.

THE GOVERNMENT

Governor: Vice-Admiral Sir PEVERIL WILLIAM-POWLETT,
K C B, C B E., D S O.

THE CABINET

Prime Minister, Minister of Labour and Minister of Native Education: R. S. GARFIELD TODD

Minister of Justice and Internal Affairs: A. R. W. STUMBLES.

Minister of Native Affairs and of Lands: P. B. FLETCHER,
C M G

Minister of the Treasury and of Mines: C. J. HATTY.

Minister of Housing, Minister of Roads, Minister of Irrigation and of Surveys: G. ELLMAN-BROWN, O B E.

LEGISLATIVE ASSEMBLY

Speaker: Hon. W. ADDISON, O B E., M C., D.S.M.

Deputy Speaker and Chairman of Committees: R. KNIGHT,
Q.C.

Clerk of the House: J. R. FRANKS.

POLITICAL PARTIES

United Rhodesia Party: f. 1953, an amalgamation of the United Party and the Rhodesia Party; in the first territorial elections since Federation (January 1954) it won a large majority in the Legislative Assembly; aims to preserve racial harmony and to improve the standards of Africans by increasing their productive capacity and purchasing power. Leader R. S. GARFIELD TODD.

THE BRITISH COMMONWEALTH

Rhodesia Labour Party: f. 1924; 1 seat; Leader L. J. W. KELLER.
There are four independent members in the Assembly.

Salvation Army (Southern Rhodesia Territory): f. 1890; Territorial Commander Col. THEO HOLBROOK, P.O. Box, 14, Salisbury; Staff: 870 officers and teachers.

THE LEGAL SYSTEM

The legal system is Roman-Dutch, based on the system which was in force in the Cape at the time of the occupation. Cape Ordinances form the basis of much of the legislation. The laws are binding on all races alike, although there are certain laws applying particularly to the native population, relating to marriage, taxation, registration and permits. Natives are likewise subject to restrictions in connection with the possession of arms and ammunition and liquor.

The Chief Justice and three judges are stationed at Salisbury, and one judge at Bulawayo. The Rhodesia and Nyasaland Court of Appeal sat for the last time in August 1955, and its functions have been taken over by the Federal Supreme Court. Regular and periodical courts are presided over by Magistrates and Assistant Magistrates.

Chief Justice: The Hon. Mr. Justice MURRAY.

Judges at the High Court of Judicature:

Mr. Justice MORTON, C.M.G., O.B.E., M.C.
Mr. Justice BEADLE, O.B.E.
Mr. Justice QUENET.
Mr. Justice HATHORN.
Mr. Justice DENDY YOUNG.

RELIGION

Anglican Community: P.O. Box 7, Salisbury; the Diocese of Southern Rhodesia was established in 1891, and divided in December 1952 into the dioceses of Mashonaland and Matabeleland; in May 1955 a new Province of the Church of Central Africa, comprising the four dioceses of Mashonaland, Matabeleland, Northern Rhodesia and Nyasaland, was inaugurated in Salisbury, the Bishop of Mashonaland, The Rt. Rev. EDWARD F. PAGET, was elected as the first Archbishop of Central Africa; Bishop of Matabeleland, The Rt. Rev. WILLIAM J. HUGHES, D.D.; Bishop of Northern Rhodesia, The Rt. Rev. F. O. GREEN-WILKINSON, M.C., M.A.; Bishop of Nyasaland, The Rt. Rev. FRANK THORNE.

Jewish Community: Council for Rhodesian Jewry: P.O. Box 1017, Bulawayo; Pres. C. I. Jacobs, O.B.E.; Chair. A. LANDAU; Salisbury Hebrew Congregation. P.O. Box 342; Minister Rev. M. KONVISER, B.A., F.R.G.S.; Bulawayo Hebrew Congregation: P.O. Box 337; Minister Rev. W. YESORSKY, B.A., H.C.F.; Sephardic Hebrew Congregation: P.O. Box 1051, Salisbury; Minister Rabbi Dr. M. PAPO, PH.D.

Methodist Church: First Church est. in Salisbury in 1891; Chair. S. RHODESIA District and Gen. Supt. Rev. H. JESSE LAWRENCE; Synod Sec. Rev. A. W. HEATH, P.B. 163H, Salisbury; membership: full members (English) 1,537, (African) 16,532; 544 churches; publ. *Rhodesian Methodist* (quarterly).

Presbyterian Church: Salisbury, Bulawayo, Gwelo, Livingstone, Umtali; f. 1904; Minister in Salisbury, Rev. J. KENNEDY GRANT, D.D.; Session Clerk V. W. PREST; Sec. Miss M. W. ROBINSON, M.A., 68 Selous Avenue, Salisbury; membership 1,611.

Roman Catholic Church: Salisbury: Most Rev. ASTON IGNATIUS CHICHESTER, S.J., Archbishop and Metropolitan; Bulawayo: Rt. Rev. Bishop ADOLPH G. SCHMITT, C.M.M.

- Rhodesian Technical Press Limited:** P.O. Box 331, Bulawayo.

BROADCASTING

Broadcasting in Southern Rhodesia is under the control of the Postmaster-General, and caters for the Europeans of the three Territories. The service is centred in Salisbury, and small local transmitters at other centres are fed by land-line. In Northern Rhodesia the broadcasting service is administered by the Information Office, and caters mainly for African listeners.

A broadcasting commission appointed by Lord Llewellyn to inquire into the future of broadcasting in the Rhodesias and Nyasaland has recommended that a statutory corporation to be known as the Rhodesia-Nyasaland Broadcasting Corporation, should be established and operating by July 1st, 1956.

TRANSPORT

RAILWAYS

Southern and Northern Rhodesia share a common railway system, the Rhodesia Railways (see table on p. 615) which operate a route mileage of nearly 2,500 miles. In 1949 the ownership of the system passed to the Southern Rhodesian Government; Northern Rhodesia, however, is represented on the Rhodesia Railways Higher Authority which controls the undertaking. At present, trunk lines run from Bulawayo south to the Union of South Africa, north-west to Northern Rhodesia and the Belgian Congo, and north-east to Salisbury and Umtali. In August 1955 the Bannockburn-Lourenço Marques line was completed; Head Offices; Bulawayo, Southern Rhodesia.

ROADS

The total route mileage of roads in the Federation, excluding municipal areas, is over 51,000. The road system in Southern Rhodesia totals 28,500 miles of which 6,000 miles are designated main roads. Under the Federal Constitution, the Federal Government takes over responsibility for the construction, alteration and maintenance of all roads scheduled as inter-territorial.

AIR TRANSPORT

Central African Airways Corporation: P.O. Box 1979, Belvedere Airport, Salisbury, Southern Rhodesia; services throughout the Federation, East Africa and South Africa; Chair. Co. Sir ELLIS ROBINS, K.B.E., D.S.O., E.D.; Gen. Manager P. J. B. WIMBUSH.

Other companies operating services through the Central African territories are:

Airwork Ltd.: Salisbury Board of Executors Buildings, Manica Road, Salisbury.

B.O.A.C.: 313/5 Harvest House, Baker Avenue, Salisbury.

Hunting-Clan: Salisbury Board of Executors Buildings, Manica Road, Salisbury.

South African Airways: c/o B.O.A.C., Harvest House, Baker Avenue, Salisbury.

HEALTH

The Federal Government assumed responsibility for medical services on July 1st, 1954.

Malaria, bilharzia, venereal diseases and tuberculosis are the chief diseases among the African population. Anti-malarial spraying campaigns however, have considerably reduced the incidence of the fever in some districts. Government and State aided institutions provide approximately 10,000 beds for the African population. In 1954 there were 334,516 in-patients and 3,151,562 out-patients.

In addition to government hospitals and clinics throughout the colony, there are many hospitals and clinics provided by the Missions.

EDUCATION

Non-African education and all Higher education became the responsibility of the Federal Government on July 1st, 1954.

Southern Rhodesia has 19 Government high schools providing secondary education for Europeans, and nearly 100 Government European primary schools. Training in technical subjects is provided by two schools in Bulawayo and Salisbury, and a new Technical College has recently been established in Bulawayo. In addition to the Government schools there are also Church and private schools which provide both primary and secondary education for Europeans. Some receive financial aid from the Government and all are open to inspection by the Education Department.

Facilities for African education are provided by Government schools and aided schools, and approximately a quarter of a million children are enrolled on school registers. At present there is only one Government secondary school for Africans, but a new one will be ready by 1957. There are two Government boarding schools for African boys, providing courses in such subjects as agriculture, building and carpentry. Total enrolment in these schools was 559 in 1954. There are 21 Government primary schools for Africans of which 9 are in Salisbury and 6 in Bulawayo; five more primary schools are under construction. There are approximately 2,348 aided schools in the Colony which are for the most part under Mission control. The majority of these (approximately 2,119) are primary schools, with an enrolment of over 230,000 pupils. There are in addition teacher training schools, community schools (evening schools for men in employment and women), special schools (for the blind, deaf and dumb), post-primary schools and homecraft schools. In the post-primary group there are 11 secondary schools and 7 centres providing a three-year course in agriculture, building and carpentry.

University education for Europeans and Africans in the Colony is provided by the new University College in Salisbury (see above).

NORTHERN RHODESIA

THE CONSTITUTION

In the late nineteenth century North-Western and North-Eastern Rhodesia were included in a Charter granted to the British South Africa Company, whose administration was officially recognised by two Orders-in-Council in 1899 and 1900. In 1911 the two territories were amalgamated under the name of Northern Rhodesia, which continued to be administered by the Company until 1924, when it was taken over by the Crown. In the same year Orders-in-Council created the office of Governor of Northern Rhodesia, constituted an Executive Council, and made provision for the constitution of a Legislative Council. In 1935 the capital was moved from Livingstone to Lusaka.

In 1953 Northern Rhodesia became one of the component territories of the Federation of Rhodesia and Nyasaland, under which its protectorate status is preserved and its separate Government retained. It continues to exercise legislative power over any matter not specifically within the legislative competence of the Federal Government (see The Federal Constitution).

The Executive Council. The Executive Council consists of five official members and four unofficial members. One of the unofficial members is a nominated member of the Legislative Council representing African interests.

The Legislative Council. The Legislative Council consists of twenty-six members, of whom eight are official, twelve are elected Europeans, two are Europeans nominated by the Governor to represent African interests and four are Africans nominated by the Governor. It is presided over by a Speaker.

THE GOVERNMENT

Governor: SIR ARTHUR BENSON, K.C. M.G.

EXECUTIVE COUNCIL

President: SIR ARTHUR BENSON, K.C.M.G.

Chief Secretary: A. T. WILLIAMS, C.M.G., M.B.E.

Minister for Health, Lands and Local Government: H. J. ROBERTS.

Attorney-General: E. I. G. UNSWORTH, Q.C.

Financial Secretary: R. A. NICHOLSON, C.B.E.

Secretary for Native Affairs: W. F. STUBBS, C.M.G., C.B.E.

Development Secretary: L. F. LEVEREDGE, C.M.G.

Minister for Commerce and Industry: W. G. DUNLOP, J.P.

Minister for African Affairs: H. FRANKLIN, O.B.E.

Minister for Agriculture and Natural Resources: W. H. WROTH, O.B.E.

LEGISLATIVE COUNCIL

Speaker: T. S. PAGE, C.B.E., J.P.

Ex-Officio Members: The Chief Secretary, the Attorney-General, the Financial Secretary, the Secretary for Native Affairs, the Development Secretary.

Nominated Official Members: J. R. BROWN, K. V. MAC-QUIRE, O.B.E., C. E. COUSINS, A.M.I.C.E.,

Nominated Unofficial Members to Represent African Interests: H. FRANKLIN, O.B.E. (one vacant).

Nominated African Members: P. SOKOTA, R. M. NABULYATO, C. H. CHILESHE, L. H. NG'ANDU.

Clerk of the Legislative and Executive Councils: K. J. KNAGGS.

THE LEGAL SYSTEM

The law is administered in Northern Rhodesia by a High Court, consisting of a Chief Justice and one judge. Magistrate Courts are established throughout the country, presided over by Resident Magistrates.

Africans are subject, in general, to the same laws as apply to Europeans, but there are special restrictions relating to arms and ammunition, liquor, marriage, taxation and passports. African Commissioners have jurisdiction in criminal matters concerning native affairs. The First Court of Appeal for Northern and Southern Rhodesia, established in 1939, sat for the last time in August 1955, and its functions have been taken over by the Federal Supreme Court.

Chief Justice: SIR PERCY BELL, Q.C.

Puisne Judge: W. E. EVANS.

RELIGION

Anglican Community: The Diocese of Northern Rhodesia was first established in 1909; Bishop The Rt. Rev. F. O. GREEN-WILKINSON, M.C., M.A., Bishop's Lodge, P.O. Box 183, Lusaka; 35 clergy; publ. *The Eagle* (for details of the Province of the Church of Central Africa, see page 620).

Roman Catholic Church: P.O. Box 125, Lusaka; f. 1936; Bishops: Rt. Rev. MARCEL DAUBECHIES, Chilubula, Kasama; Rt. Rev. ADAM KOZLOWIECKI, Lusaka; Rt. Rev. FIRMAN COURTEMACHE, Fort Jameson; Rt. Rev. JOSEPH VAN DEN BIESEN, Bishops House, Abercorn; Rt. Rev. FRANCIS MAZZIERI, Ndola; Rt. Rev. PHELM O'SHEA, Livingstone. Rt. Rev. Mgr. RENATUS PAILLOUX, Fort Rosebery.

Salvation Army: Work in Northern Rhodesia under control of Territorial H.Q., Salisbury Southern Rhodesia; Social Service Centre: P.O. Box 75, Ndola; Divisional H.Q.; P.O. Box 17, Mazabuka; Cikankata Hospital: P.O., Mazabuka.

Pilgrim Holiness Church: Jembo Mission, Pemba; H.Q.; 230 East Ohio Street, Indianapolis, Ind.; Gen. Supt. Rev. L. W. STURK; Asst. Gen. Supt. Rev. W. H. NEFF; mission stations in Africa, Philippines, West Indies, South America and Mexico; publ. *Advocate* (weekly).

Other Churches established in Northern Rhodesia are:

African Methodist Episcopal Church.

Dutch Reformed Church.

Methodist Church.

New Apostolic Church.

Union Church in Copperbelt.

United Free Church of Scotland.

TRANSPORT

(see also under Southern Rhodesia)

RAILWAYS

The Rhodesia Railway in Northern Rhodesia runs approximately 642 miles from Livingstone to Ndola on the Belgian Congo. There is a system of branch lines which serves the copper belt.

ROADS

There is a total mileage of 18,628 maintained roads in the Territory, of which 4,384 miles are main roads and 5,443 roads are branch and district roads. The main arterial roads run from Otto Beit Bridge to Tunduma (the Great North Road), through the copper mining area to Solweşi (the Congo Border Road), from Livingstone to the junction of the Kafue River and the Great North Road, and from Lusaka to the Nyasaland border.

AIR LINES

Central African Airways operate services to East and South Africa and all internal services. For other air lines operating in the Federation see under Southern Rhodesia.

HEALTH

Public health is the responsibility of the Federal Government. There are eight Government European hospitals in Northern Rhodesia and during 1953 nearly 8,000 patients were admitted. Over 40,000 persons were admitted to the African hospitals run by the Government.

There are in addition 91 Government Rural Health Centres to which approximately 18,000 persons were admitted as out-patients in 1953.

In the larger towns in the Federal area there are x-ray facilities, maternity hospitals and infant welfare centres. Children in all European schools receive regular medical inspection free of charge; there is also a school dental service.

EDUCATION

Non-African and all higher education became the responsibility of the Federal Government on July 1st, 1954.

Education for Europeans is available at 24 Government, 2 Government-aided and 7 private schools. Except at Lusaka all the Government and Government-aided schools are co-educational. Of the 24 Government schools, 7 offer primary and secondary education up to and including Form V, the Overseas School Certificate examination being written at the end of Form IV year. There are no teacher-training or technical college facilities in Northern Rhodesia.

African education, as in the other Territories of the Federation, is for the most part provided by the missions with Government financial assistance. Annual recurrent expenditure on African education in Northern Rhodesia is approximately 6 shillings per head, and 168,000 children are enrolled in the Territory's schools. Instruction in agriculture is given in the rural primary schools and training in trades such as building, carpentry and blacksmithing is given in certain special schools.

Higher education facilities both for Africans and Europeans are provided by the University College of Rhodesia and Nyasaland.

THE BRITISH COMMONWEALTH

NYASALAND

THE CONSTITUTION

THE NYASALAND PROTECTORATE is one of the three territories composing the Federation of Rhodesia and Nyasaland, which was officially established in 1953. Under the Federation many functions formerly assumed by the territorial Government have been transferred to the Federal Government (see page 616), but exclusively territorial affairs are still administered by the Governor, the Executive Council and the Legislative Council. The Executive Council is presided over by the Governor, and consists of three *ex-officio* members, one official member and two unofficial members. Until the constitutional changes announced in June 1955 come into force in April, 1956, the composition of the Legislative Council is as follows: the Governor as President, three *ex-officio* members, seven official members and ten unofficial members. Under the new Constitution the Legislative Council will consist of (a) The Governor as President, (b) 4 *ex-officio* members, (c) seven official members, (d) eleven elected members of whom six will be non-African and five will be African. All non-African members are to be elected by constituencies instead of through associations, and all Africans by African Provincial Councils instead of being appointed by the Governor. Nyasaland holds its first elections under the new Constitution in April 1956. The franchise is extended to all British subjects over twenty-one years of age who have two out of three years residence and who are either in receipt of an income of £200 or who occupy property valued at not less than £250.

THE GOVERNMENT

Governor: SIR ROBERT PERCEVAL ARMITAGE, K.C.M.G., M.B.E.

EXECUTIVE COUNCIL

President: The Governor.

Chief Secretary: C. W. F. FOOTMAN, C.M.G.

Attorney-General: J. B. HOBSON, Q.C.

Financial Secretary: K. W. SIMMONDS.

Nominated Members: R. W. KETTLEWELL, C.M.G. (Director of Agriculture), G. G. S. J. HADLOW, C.B.E., L. J. RUMSEY.

LEGISLATIVE COUNCIL

President: The Governor.

Ex-Officio Members: The Chief Secretary, the Attorney-General, the Financial Secretary.

Official Members: Commissioner of Police (C. H. APTHORP, M.V.O.), Director of Agriculture, Director of Public Works (N. F. RICHARDS), Director of Education (R. F. STOWELL), Commissioner for Labour (H. H. ARMSTRONG), Deputy Chief Secretary (P. W. YOUNG).

Unofficial Members: E. A. MUWAMBA, A. C. W. DIXON, L. F. HUNT, H. K. GONDWE, L. J. RUMSEY, J. L. PRETORIUS, M. H. BLACKWOOD, S. KUMAKANGA, F. G. COLLINS, A. DICKINSON (Clerk).

THE LEGAL SYSTEM

The Courts of the Protectorate consists of the High Court and Subordinate Courts of the first, second, third and fourth class. Courts of the 1st class are held by Provincial

Commissioners, and second-, third- and fourth-class courts are presided over by the District Commissioners. Courts of the first and second class may try offenders for any offence other than treason, instigating invasion, murder or manslaughter, but any sentence of more than twelve months' imprisonment by a first-class court, and six months' imprisonment by a second-class court, is subject to confirmation by the High Court. The graver crimes are tried by the High Court. In civil matters, courts of the first and second class have jurisdiction in all matters in which the amount in dispute does not exceed £200 and £100 respectively. Appeals from subordinate courts in civil and criminal matters lie to the High Court and appeals from the High Court lie to the Federal Supreme Court.

The Native Courts Ordinance, 1933, provides for the setting up of Native Courts under the jurisdiction of the Native Authorities. In accordance with custom, no chief sits alone to hear cases, but is aided by assessors, who receive a fixed salary from the Native Treasury. The practice and procedure of the Native Courts is regulated in accordance with Native Law, subject to any rules which may be made by the Governor. They may exercise civil jurisdiction to the extent set out in their Warrants and in cases of a criminal nature, they may impose a fine or order imprisonment, they may not impose corporal punishment unless the penal code authorises such penalty or unless the offence is one against Native Law and custom.

Chief Justice: R. O. SINCLAIR.

Assistant Judge: F. SOUTHWORTH, Q.C.

RELIGION

No recent official statistics of religious affiliations are available for the Protectorate. The majority of Africans still follow their own traditional beliefs. Of the Asiatic population over 50 per cent are Muslims, about 25 per cent are Hindus, and the rest Christians or Sikhs.

Over 50 per cent of the European population are members of the Church of England, the next largest denominations being Presbyterians and Roman Catholics. Several missionary societies are working in the Protectorate.

Anglican Community: Nyasaland became a separate diocese in 1892; Bishop: The Rt. Rev. FRANK THOREN; (see page 620) for details of the Province of the Church of Central Africa).

Roman Catholic Church: Bishops: Rt. Rev. JOSEPH FADY, P.O. Box 33; Rt. Rev. JOHN BAPT. THEUNISSEN, S.M.M., Bishops House, Blantyre; Rt. Rev. Mgr. MARCELLUS, St. Denis, Northern Nyasa; Rt. Rev. LAURENCE HARDMAN, S.M.M., Bishops House, Zomba.

CHAMBER OF COMMERCE AND INDUSTRIAL ORGANISATIONS

Nyasaland Chamber of Commerce and Industry: P O Box 153 Blantyre, f. 1892.

Nyasaland Tobacco Association: P O. Box 153, Blantyre; f. 1928.

Nyasaland Tobacco Exporters' Association: P.O. Box 153, Blantyre. f. 1931.

TRADE UNIONS

Five trade unions are registered under the Trade Unions and Trade Disputes Ordinance.

Commercial African Employees' Trade Union, The: regd. 1952, approx. 50 mems.

Nyasaland African Motor Transport Workers' Association, The: regd. 1949, approx. 750 mems.

Nyasaland Employers' Association, The: regd. 1949; approx. 25 mems.

Nyasaland Railways African Workers' Union, The: regd. 1954; approx. 100 mems.

Nyasaland Railways Assian Union, The: regd. 1950; approx. 110 mems

Another Union, the Railways Workers' Trade Union was registered during 1954, but has not yet fully established itself.

None of the workers organisations are fully representative; the majority of workers are still unorganised and it has not yet been possible to set up formal machinery between employers and workers for collective bargaining and negotiation.

TRANSPORT

RAILWAYS

The Nyasaland Railway system consists of three companies which provide a route from Salima near Lake Nyasa to Dondo near Beira, where connection is made with the

FINANCE—EDUCATION

Beira Railway. The companies are the Nyasaland Railways, the Central African Railway (a wholly owned subsidiary) and the Trans-Zambezia Railway.

Nyasaland Railways Ltd.: Regd. offices: City Wall House, 129 Finsbury Pavement, London, E.C.2, Nyasaland office: P.O. Box 128, Blantyre, Chair and Managing Dir. W. M. CODRINGTON, C.M.G., M.C.; Sec. E. A. SHORT.

ROADS

The total road mileage in the Protectorate is 4,852. The spinal column of the road system runs from the Portuguese border northwards through Blantyre Lilongwe and Mzimba to join Tanganyika and Northern Rhodesia system at Tunduma. Most of the other important roads link this north south route with the railway and Lake Nyasa in the east and Northern Rhodesia and Portuguese East Africa in the west. The total mileage of main roads with a bituminous surface is 104.

During 1954 the Federal government assumed financial responsibility for inter-territorial roads, a total of 1,072 miles.

AIR LINES

Central African Airways operate all internal services and services to East and South Africa. For other air lines operating in the Federation see under Southern Rhodesia.

HEALTH

Public health is the responsibility of the Federal Government. There are 19 Government African hospitals and one mental hospital for Africans in the Protectorate. Attached to each hospital are a number of rural dispensaries, totalling 93. There are three Government European hospitals with a total of 39 beds and a further 790 beds are provided by the Mission hospitals.

EDUCATION

Non-African education and all Higher education became the responsibility of the Federal Government on July 1st, 1954.

There are 5 primary schools for European children in the Protectorate, 3 of which are conducted by the Education Department and two by missions with financial assistance from public funds. Many Europeans send their children over the age of eleven to larger schools outside Nyasaland, and grants are paid to all parents in respect of each child between the age of eleven and eighteen who is attending school in South Africa, Southern Rhodesia, Kenya or Tanganyika.

African primary education is still principally managed by the missions. Of the approximately 4,688 African primary schools 3 are managed direct by the Government and 762 are aided by the Government. Teacher training for Africans is provided by missions at ten Government assisted centres, which had an enrolment of 554 students in 1954. A Government-controlled trade school was opened at the beginning of 1954 which provided three year courses in carpentry and building. In the same year, total expenditure on African education from public funds amounted to £437,660. Facilities for higher education are available to Europeans and Africans at the new University College of Rhodesia and Nyasaland.

GEOGRAPHY

GAMBIA, SIERRA LEONE, the GOLD COAST and NIGERIA form part of a wider region, bounded on the north by the Sahara, in the south-east by the Cameroon mountains, and on the west and south by the Atlantic.

Physically, this region consists of an underlying ancient platform of old, hard, crystalline rocks, bearing traces of ancient north-south mountain ranges, now worn down and affecting the present relief only where, as in the Tɔgoland range of the south-east Gold Coast, they have influenced the direction of river valley formation. Very old (pre-Cambrian) sediments were deposited in hollows on this surface, and a remnant of one such structure forms the gold-bearing Tarkwa district of the southern Gold Coast. Deposition at a later geological period (Carboniferous) laid down many sandstones which now form very marked escarpments, including the Gambaga and Mampong scarps in the Gold Coast. Earth movements contemporaneous with those that formed the Pennines of England threw these sediments into parallel folds running NE.-SW.; but thereafter West Africa remained a land surface for a long period of geological time. Vast areas were stripped to reveal the ancient base, and the general surface was lowered.

The details of the present relief are the result of subsequent events which affected this eroded surface. The rigid underlying crustal block resisted folding, but underwent fracturing and local vertical movements, an important result of which was the outpouring of lavas along an old line of crustal weakness, to form the Cameroons range of south-east Nigeria. General uplift of the whole area also took place, renewing the erosive powers of the rivers, so that a "rejuvenated" landscape, characterised by freshly formed scarps, was etched out. There is evidence that this process of uplift and emergence has continued to produce rapids, which hinder river navigation, and also a coastline which, east of Freetown, is fringed by sand bars and lagoons. Only in the west are there natural harbours, of which Freetown, at the mouth of the Rokelle river, is the best.

Prolonged erosion and the resistance of the old rocks to folding account for the rather monotonous landscapes of plains and undulating plateaux below 3,000 ft. which cover vast areas of West Africa. The highest areas are all represented in Commonwealth territory: the Cameroons, which rise to over 13,000 ft. in south-east Nigeria, part of the Futa Jallon plateau, (rising to just over 6,000 ft.) in Sierra Leone, and the tin-bearing Bauchi plateau, all of which lies in Central Nigeria.

The climate of West Africa is truly tropical, for nowhere does the mean temperature of the coldest month fall below 70° F. A division of the region into climatic zones, and of the year into seasons, rests upon the annual total and seasonal distribution of the rainfall. Heating of the vast West African land mass in summer draws in warm, moisture-laden (equatorial maritime) air from the Gulf of Guinea, bringing rain to the interior and causing the summer "monsoon". This damp air replaces the dry air of the "Harmattan", which blows off the Sahara desert to give a long dry winter season at inland stations. Rainfall tends to be heaviest where these two air masses meet; and the advance and retreat of this rain belt brings two seasonal rainfall peaks to the southern parts of the Gold Coast and Nigeria. Further north (in Gambia, Sierra Leone, the far

north of the Gold Coast and central and northern Nigeria) the two peaks coalesce into a single rainy period.

Near the coast there is no true dry season and dense tropical rain forest is found as far north as Sierra Leone. An exception occurs however on the stretch of coast extending from the south-east of the Gold Coast eastwards towards the Nigerian border. Here the annual total falls below 40 in., and a long dry season appears, allowing the interior savanna, or tropical grass-woodland, to reach the coast.

Inland of the rain-forest belt rainfall decreases and a dry season imposes a resting period on the vegetation. Grasses flourish and trees become smaller and more scattered, giving a park-like landscape. In the extreme north towards the desert, trees are confined to species such as the baobab, which stores water in its bulbous trunk, and the various forms of acacia which are drought resistant. The grasses become less luxuriant and more patchy until finally semi-desert conditions prevail.

Comparatively little is known as yet about the soils of West Africa, but in general character they too, like the vegetation, reflect rainfall conditions. The soils of the rain forest and wetter parts of the savanna are mainly tropical Red Earths, which have undergone tropical leaching (or laterisation). Heavy and continuous downward percolation of soil water washes out many soluble mineral salts, leaving behind insoluble oxides and hydroxides of iron and aluminium, which impart a reddish colour to the soil. This process is responsible for the occurrence of bauxite (aluminium ore) in workable concentrations in the southern parts of the Gold Coast. The luxuriance of the vegetation is due to climate; for these are poor, fragile soils, which degenerate rapidly and are easily eroded when the forest cover is removed. In the drier parts of the savanna upward percolation of soil water is dominant and lime tends to accumulate a few feet below the surface, giving soils which are tropical counterparts to the Black Chestnut Brown Earths of the temperate grasslands (such as the American prairies and the Russian steppes).

The bush-fallow system of agriculture, which supports the bulk of the population, is widespread and, although to western eyes wasteful of land, is excellent for preserving the soil. Plots of land around each village are periodically cleared of bush or forest, and cultivated with the hoe, which does not disturb the soil to any depth. After a few years each plot is allowed to restore its natural fertility by reverting back to bush for a long period. Root crops such as yams and cassava, supplemented by maize and bananas, are typical of the rain forest; Sierra Leone is peculiar in having rice as the chief subsistence crop. In the drier north grain crops, notably various kinds of millets, predominate. There is a comparable contrast between the field crops grown for export in the north (e.g. groundnuts in the Gambia; groundnuts and cotton in Northern Nigeria), and the tree products (e.g. palm oil in Sierra Leone; cocoa in the Gold Coast; cocoa and palm oil in Nigeria) of the tropical rain forest areas. These contrasts cannot always have been so marked, since cocoa, groundnuts, maize and cassava, have all been introduced from South America by Europeans within the last 450 years.

West Africa is one of the most densely peopled areas in Africa south of the Sahara, and the Commonwealth territories include the major concentrations of population

nearly two-thirds of the total population of West Africa (now approaching 60,000,000) live in British West Africa, which covers only one-fifth of the total area.

The rain forest has formed a refuge for the dark-skinned, thick-lipped and woolly-haired Guinea negroes, who were pushed south and west by Hamitic peoples (many of whom were pastoralists and could not penetrate the tsetse-ridden forest country) advancing into West Africa along the Sudanese grasslands. Sudanese Negroes are characteristic of the savanna lands, and these groups show varying degrees of admixture with lighter-skinned, sharper-featured, Hamitic invaders. Hamitic influences increase eastwards, and are particularly noticeable in North Nigeria where the Fulani (Hamitic) pastoralists established political dominance over the Hausa agriculturalists, who are predominantly of negroid stock.

The village is the typical unit of settlement in West Africa, and even the large walled settlements of the Hausa in Northern Nigeria contain a predominantly agricultural population. The only settlements that can truly be called urban are the coastal ports which have their origin in long-standing contacts with Europe by sea.

Although the four British West Africa territories share some of the features of this general geographical background, each has developed individually and therefore merits separate consideration.

GAMBIA

Gambia is the smallest and poorest of the four territories, as well as being Britain's oldest and nearest African possession. It lies entirely within the savanna zone. At Bathurst, 98 per cent of the average annual rainfall of 48 in. falls in the five summer months, June to October, which also form the hottest part of the year, with mean monthly temperatures of about 80° F. The annual range of temperature is small (about 6° F.) and the coolest month is January. Fringing forests are found near to the river, where the water table is never far from the surface, but these are of little economic importance.

SIERRA LEONE

Until the closing years of the eighteenth century British interest in West Africa was concerned exclusively with trade. The first true "colony" (of freed American slaves of African descent), was "planted" at Freetown in 1787, and in 1807 Sierra Leone Colony was established, the earliest in West Africa. This coastal possession was enlarged in 1895 when, largely to forestall the French, protection was established over areas as far inland as the watershed of the Futa Jallon plateau.

Sierra Leone thus now embraces the basins of several short and swift rivers descending the flanks of an inland plateau which in places exceeds 5,000 ft. and culminates in Mount Loma (6,395 ft.). Headward erosion of these rivers threatens in time to capture the upper tributaries of the Niger, which rise in the Futa Jallon plateau and flow northwards. The vigour of the Sierra Leone rivers is due both to recent uplift of the land, and to heavy rainfall induced by the interior highland which lies athwart the summer monsoonal indraught of warm, damp air.

Heavy rainfall occurs everywhere and no part of the country has less than 60 in. a year. The heaviest totals fall near the mangrove swamp coast, which receives over 120 in. per year. The wettest areas have a dry season of several months in which plant growth is restricted: 80 per cent of Freetown's average annual rainfall of 157 in. is concentrated into the four months June to September, and there is a well-marked dry season from December to March in which less than 4 in. of rain fall. The hottest

part of the year precedes the rains (March, 82.4° F.), which cause a fall of temperature to a minimum (in August) of 77.9° F. Such conditions of rainfall cause heavy soil leaching and the formation of ferruginous laterites over considerable areas, but are less favourable to the full development of tropical evergreen rain forest. Rain forest maintains itself in coastal areas of heavy rainfall but has been much reduced and modified by clearing for cultivation. Inland, the forest gives place to more open brush and savanna country, in which cattle and millets assume importance.

The oil palm flourishes in the more open fringes of the rain forest. In Sierra Leone the fleshy outer pericarp of the tree yields comparatively little oil and much of this is consumed locally. Peasant production for export is thus concerned with palm kernels. Although Sierra Leone produces only about one-fifth of the Nigerian output, the crop equals that of the whole of French West Africa, and amounts to about one-tenth of world production, a figure only exceeded by the output of Nigeria and the Belgian Congo. Compared to this, other agricultural exports of Sierra Leone (which include small but increasing amounts of coffee), are of minor importance.

Minerals make up the remainder of exports. The development of mining has had but little effect and that purely locally, on the distribution of population and according to a 1952 estimate less than 10,000 persons out of a total population of just over 2,000,000 were classed as miners. On the average there are about 67 persons to the square mile, but in the Freetown peninsula and in parts of the rain forest country the figure is much higher. Densities fall to below 20 per sq. mile over most of the inland Futa Jallon plateau. Freetown is the largest town (64,000 in 1947), and is the main centre of the Creole descendants of the original colonists. The Mandingo and Temne people who make up a large proportion of the population of the Protectorate, are predominantly negroid, but contacts with the north-east have had their influence and some of them profess the faith of Islam.

Sierra Leone has a much better-balanced economy than Gambia, but lacks the population and wealth of the Gold Coast and Nigeria. One major problem facing Sierra Leone is the need to strike the balance between the interests of the more vociferous and sophisticated inhabitants of the "Colony", and the less-advanced peoples of the Protectorate, who make up the bulk of the population.

GOLD COAST

Just over fifty years ago first Ashanti and then the Northern Territories were added to the original coastal Gold Coast "Colony", and after the 1914-18 war the western half of German Togoland was attached to the Gold Coast as a Mandated Territory, boundaries being delimited without reference to demographic or tribal groupings. Until 1918, the Dagomba of the Northern Territories were separated from their kinsmen in Togoland, and the Ewe peoples occur in the south-east Gold Coast and in both British and French Togoland.

No part of the Gold Coast exceeds 3,000 ft. in height but there are several features of marked relative relief. In the south-east the Togo-Atakora ridge running SW.-NE. is an old structural line picked out by relatively recent erosion; the lower Volta river has maintained its course and cuts across this ridge in a well marked gorge, wherein is situated Adjena, the site of a proposed dam. When completed, this will provide electricity for smelting local bauxite and for domestic consumption, as well as irrigation water for the dry Accra plains. Work on the associated port of Tema (4 miles east of Accra) has already begun.

THE BRITISH COMMONWEALTH

The plains of the middle Volta river, uninhabited over large tracts, have been developed on down-warped old sedimentary rocks (mainly sandstones) whose up-turned edges form the Gambaga escarpment in the extreme north-east and Mampong scarp running NW.-SE. in Ashanti. The latter is an important divide separating the densely populated rain forest of SW. Ashanti from the very thinly populated brush and savanna of the plains of the middle Volta.

Old hard rocks of the underlying rigid platform comprise much of the coastal plain and the Ashanti plateau, and occur again in the extreme north and west. These ancient rocks are not associated with any one particular or well-marked feature of the present surface.

Several of the rivers, notably the Ankobra and stretches of the Volta, are navigable to small craft, but none is of more than local significance. The coastal lagoons and sand bars afford no natural harbours and until the completion of an artificial harbour at Takoradi in 1927 all imports, exports and passengers had to be handled by surf boats.

The mean temperature of each month is, throughout the Gold Coast, over 70° F. The hottest time of the year occurs just before the onset of the heavy summer rains (in Accra, this is in March when the mean temperature is 81.3° F.). Except in the extreme north, there are two rainfall peaks, separated by a less rainy, cool season usually in August (in Accra the August temperature is 74.7). In the south-west, over 60 in. of rain fall, on average, each year; and this is sufficient to support tropical rain forest despite a short relatively dry period of from 1-3 months. This dry season becomes longer inland and the vegetation grades into grass-woodland, even though most of the north-east plateau lands receive a total fall of over 50 in. The Accra plains of the south-east coastal areas are the driest part of the country and savanna reaches the coast.

A total area of nearly 92,000 sq. miles supports about 4,600,000 people, giving an average for the whole country of nearly 50 to the square mile. Densities of more than twice this figure obtain in the north-east of the Northern Territories, southern Ashanti and the central parts of the "Colony". The areas of higher density in the south are separated from those of the north by the sparsely populated Voltaian plains. The people of the northern grasslands, amongst whom the Moshi, Dagomba and Gonja are prominent, differ in many ways from the peoples of the rain forest. Before the Northern territories were amalgamated with Ashanti and the Colony in one political unit, they lived a life apart and orientated to the north; and to a large extent this is still true, although "Northern Territory boys" are to be found in increasing numbers in the southern towns and mining centres; and cattle from the north supply part of the needs of these markets.

The southern regions of dense population have been the scene of rapid economic developments in the last fifty years, during which the economic centre of gravity has shifted westwards and northwards from the early cocoa-growing area in the Aburi hills behind Accra, to the newer cocoa areas and mining centres of the central parts of the "Colony" and southern Ashanti, all of which lie in the rain-forest belt.

Cocoa, nevertheless, is more important to the Gold Coast itself, for not only does it account for over 70 per cent of export earnings, but these remain in the country either as payments to the farmer or as surpluses accruing to the Cocoa Marketing Board. Cocoa-growing in the rain forest dates only from the last decade of the nineteenth century, but has developed rapidly as a native-owned peasant industry, supplying over one-third of world exports. Compared with cocoa, other agricultural exports (hides and skins, lime-fruit, and palm products) are unimportant, and are exceeded in value by tropical hardwoods.

Nearly all major developments have taken place in the hinterland of Takoradi, where the harbour has been recently enlarged and further equipped to handle exports of timber and minerals in bulk. Urban growth has been stimulated, and Kumasi (80,000) and Sekondi-Takoradi (60,000) are only exceeded in size by the administrative capital, Accra (136,000) which is also an important commercial centre and the second port of the country. Town growth is to some extent symptomatic of a wider problem, that of the breakdown of village tribal life, which inevitably accompanies an increase in the tempo of economic development.

NIGERIA

Nigeria is the youngest British territory in West Africa, for its present boundaries were only finally established just over 40 years ago. In 1918 part of the German Cameroons was added as Mandated Territory. An area of about 373,000 sq. miles confirms Nigeria as the largest single British dependent territory and gives the comparatively high average density of 77 per sq. mile.

In the south, rainfall totals everywhere exceed 60 in. (in Lagos the rainfall is 72 in.) and in the south-east towards the Cameroons over 100 in. are common. There is no marked dry season and tropical rain forest backs a mangrove swamp coast. Monthly temperatures mount to over 80° F. until the heavier rains of June induce a slight fall in temperature, which is at its lowest in August (Akassa, 76° F.). At most stations a second rainfall peak occurs in October. Northwards the annual total decreases and a dry season occurs; north of the Bauchi plateau the rainy season, in which rarely more than 30 in. of rain falls, lasts at most from mid-June to the end of September, with an August maximum. A cool dry season then follows (December to February), in which monthly temperatures may fall as low as 70° F. Temperatures later mount to a maximum (which often exceeds 90° F.) in May before the rains break.

The resultant gradation from coastal rain forest through savanna to virtual semi-desert in the north-east is not closely reflected in the distribution of population. In northern Nigeria high population densities exist amongst the Hausa people, particularly around Kano and in the Sokoto valley, supported by the most advanced form of hoe cultivation practised in Africa. In places, irrigation allows cultivation in the dry season, and the shortness of the wet season, allowing only one harvest in the year, is partly offset by the use of manure (procured from Fulani herdsmen) which permits a shortened fallow period without diminishing yield.

The whole of the Nigerian production of groundnuts comes from the north. Part of the cotton produced is exported, while the remainder is used locally to produce the well-known Kano cloth. Cattle, in considerable numbers, are sent to markets in the south. All this has been made possible by the construction of railways leading to the coastal ports of Lagos and Port Harcourt. Fifty years ago the Hausa were effectively separated from the southern population groups by a zone of low density which runs across the centre of Nigeria and includes not only the unhealthy Benue valley, but also the salubrious and well-watered Bauchi plateau (much of which exceeds 3,000 ft.) This latter region supports only small numbers of primitive peoples, probably as a result of centuries of slave raiding from both north and south. Trade was conducted northwards by trans-Saharan camel caravans carrying "Moroccan" leather and metalware to the North African coast. The Hausa lived in numerous hamlets and a number of large walled towns; the largest, Kano, which now has a population of over 100,000, was the main industrial centre, Zaria the slave centre and Katsina a leading trading town.

The population of the north slightly exceeds that of the two centres of dense population which lie south of the central sparsely inhabited belt. In south-west Nigeria the large towns of the Yoruba country recall those of the north; Ibadan (pop. 335,000) is the largest purely African town south of the Sahara, yet most of its inhabitants are farmers. This south-west region produces all the Nigerian output of cocoa, which although much less than half that of the Gold Coast, is only exceeded by that country and Brazil.

East of the Niger delta is the forested Ibo country, where

a large number of villages house a population of very high density, exceeding 500 per sq. mile between Onitsha and Owerri. Here is found the greater part of the oil palm belt, which supplies one-half of the world export of palm products, all the result of native peasant enterprise.

Nigeria has a much wider basis to its agricultural economy than any other territory in British West Africa—although the advantages of this are partially offset by marked regional specialisation, and by a large and growing population.

J.H.H.

HISTORY

THE portentous fact of modern West African history is its long period of isolation from the influence of the civilisations of the Far East and the West. In the north, the Western Sahara constituted a formidable, though not an absolute, barrier to intercourse with the Mediterranean world; in the south, the Atlantic Ocean, which was known to the medieval Arab geographers as the "Green Sea of Darkness" and believed to be boiling hot and infested with monsters innumerable, had become the terror of the most intrepid mariners. Until the coming of the Portuguese pioneers in 1434, Cape Bojador remained the limit of human navigation. And yet West Africa was never completely isolated from the outside world; although Africa might be described as a "Dark Continent" by those ignorant of Arab and of African history, the northern sector of West Africa was known and frequented by Arabs, Berbers and a few Europeans both in ancient and medieval times.

Internally the geographic environment had decisive effects on the history of this region. A glance at the map will reveal the belt-like character of the West African landscape. There is first the humid forest belt along the coast, 200 miles deep in some places, less than 100 in others. This region harbours the typical mangrove swamps of the Guinea Coast, and here, for at least seven months of the year, the rainfall averages well over a hundred inches.

North of this is the open-woodland belt. These tropical "savannas" are characterised by orchard bush and are luxuriant with vegetation during the rainy season. All through the year they are covered with grass, interspersed with very low trees. Still further north from the coast, trees diminish and give way gradually to thorn bush; as the vegetation dwindles, the grass cover becomes thin and in turn gives way to the stretches of rocks and sand which constitute so much of the Sahara Desert. The open woodland belt is in some areas as much as a thousand miles in depth and it is within this belt that the area known in West African History as the Western Sudan, is located. As we shall see, the successive zones of forest, open woodland, grass and scrub that succeed one another as one moves from the coast to the Sahara, have largely conditioned the course of West African history.

Ethnically, West Africa is a hotch-potch of peoples and of cultures. But we can distinguish three principal stocks, namely the Negro, the Hamite or Berber and the Semite. It is generally agreed that the indigenous stock is the Negro and that the Hamites and Semites are intruders from the north and east. The Negro is in fact the largest racial group in all Africa and, the Bushman, Pygmy and Hottentot excepted, perhaps the oldest stock. West Africa—i.e. the region between the Guinea Coast and the Sahara, is believed to be the home of the true Negro. The many languages spoken by the West African tribes are sufficiently related to be called the Sudanic or "kwa" family of languages. This "kwa" family forms a tightly knit group and its various units are as close to each other as the Indo-Germanic languages of Europe.

THE ISLAMIC IMPACT

West African isolation from outside influences was never complete. "Despite its size and aridity, the Sahara Desert included a number of tracts that were permanently settled,

wider areas over which seasonal pasture was available and lines of water holes along which caravans could water men and beasts." This desert was therefore a kind of filter that restricted and selected the human and cultural forces that could penetrate and the sort of influence they could exert. An important event in early West African history was the introduction of the camel in North Africa during the period of the Roman occupation. It is not clear whether the Romans deliberately introduced the camel to solve the problem of transportation in the African interior, or whether it came with Asiatic migrants to Africa; one thing however is clear; the arrival of this Asiatic beast of burden bridged the Sahara Desert and linked the "land of the Negroes" with the Berbers of the Mediterranean, Islam and the Arab world.

Before the coming of the camel, fragmentary evidence existed in the writings of classical authors such as Herodotus, Pliny, Strabo and Ptolemy, of a trans-Saharan trade between Carthage and the Western Sudan. Even in Roman times and pre-camel days, Sudan products were handled in North African markets, and towns such as Leptis, at the head of the trade routes prospered greatly. But with the introduction of the camel, traffic that was originally a trickle became a moderate but constant flood.

In medieval times, four great highways linked northern West Africa (the Western Sudan) to North Africa. They were (i) the Sijilmasa-Walata highway, trading to the Senegal and the upper Niger—the main product of this area was gold; (ii) the Ghadames-Ghat route which led to Air and the agricultural Hausa States, (iii) the Tripoli-Fezzan-Kawar road, which led to Lake Chad and (iv) the Cyrenaica-Kufra-Wadai road. Through these highways the camel caravans linked West Africa with the world of the Mediterranean; without them Negroland would have been completely severed from the civilisation of the Arabs and the trade of the Barbary States.

The middlemen of this trans-Saharan traffic were the Tuaregs, the well-known desert tribe that controlled the trade routes. As E. W. Bovill pertinently observed, "to the Tuareg, who were never able to free themselves wholly from dependence on outside supplies, the maintenance of the carrying trade of the Sahara was an economic necessity; they levied tolls and other forms of blackmail on foreign merchants using the roads they controlled, but they were careful never to impose burdens greater than the trade could afford. Although the control of wells and pastures was a frequent source of inter-tribal strife within the desert, these feuds were seldom allowed to interfere with trade. That the negroid races were never cut off from the influence of the Mediterranean culture and that the wealth of the far interior was always accessible to the mercantile communities of the western world were due to the Tuareg and constitute their greatest contribution to the history of civilisation."

The Arabs, under the banner of Islam, attacked North Africa in the seventh century A.D., capturing Egypt in 638, Tripoli in 643, and Morocco in 681. The desert barred them from carrying their conquest to the land of the Negroes but four hundred years after the first invasion a new movement arose among the Arabs and Berbers of the Western Sahara, which was to plant Islam in the northern territories of West Africa.

This second invasion was led by uncouth, nomadic Arabs who were themselves new converts to Mohammedanism and whose practice of the faith was contaminated by their adherence to their ancestral religion. Their leaders came from various Sanhaja tribes of the Western Sahara and from the West African peoples of the Senegal basin. About the year 1020 these communities rallied round a chief of the Lemtuna tribe (the Lemtuna are related to the Tuaregs), a man by the name of Tarsina, who on his conversion to Islam assumed the name of Abdulla Abu Muhammad. In spite of his professions, his religion sat lightly on him and the campaigns he conducted in the name of the Prophet brought him more wealth than converts. On his death, his son-in-law Yahia Ibn Ibrahim, a deeply religious man, succeeded him.

Yahia made the pilgrimage to Mecca and, conscious of the superficiality of his people's religion and of their ignorance of Islamic theology, he employed on his way home from Mecca a learned teacher from Sijilmasa, Abdulla Ibn Yacin, to instruct them in the true faith. On his arrival in the Senegal, Ibn Yacin soon discovered that his austere and orthodox teaching made little impression; as in West Africa to-day, many of those who went by the name of Muslims still clung tenaciously to their customs, traditions and ancestral religion. In his attempt to force orthodoxy on the people, the Senegalese rebelled against Ibn Yacin, destroyed his house and forced him to take refuge on an island in the Senegal river where he founded a "ribat", or monastery. He was followed to this retreat by Yahia and his brother Abu Bakr, and the Senegalese tribes first from curiosity and then from admiration for the inmates of the monastery, began to join their ranks and gradually Ibn Yacin gathered thousands of followers. He called these enthusiasts Al-Mura-betin (i.e. people of the "ribat" or holy men, hence the Spanish corruption, Almoravid or Almoravides).

From this multitude Ibn Yacin, as leader, and Yahia, as commander-in-chief, built up an efficient fighting force and in 1042 abandoned the monastic life and embarked on a "jihad" (holy war) first against the Senegalese and later against the desert dwellers. They soon became masters of the Western Sahara and their army rose to 30,000 men. When Ibn Yacin died fighting in 1057, the foundations of a great empire had been laid, an empire which included almost all of the Western Sudan, the Sahara and the southern portions of modern Morocco.

At his death leadership fell to Abu Bakr and Yusuf Ibn Tarsin, the former in charge of the southern portions of the Almoravid empire and the latter in control of the north. Yusuf conquered not only Morocco but also Algeria and founded the city of Marrakesh. By 1087 the victorious Almoravid forces had occupied Spain. In the south, Abu Bakr had become master of the Ghana empire, the leading Negro kingdom in the West Africa of the time. In 1086, the Almoravid Empire, known to history as the Empire of the Two Shores, stretched from the Senegal River in West Africa to the Ebro in Spain and was, in every sense, an African empire but with Islam for its faith. Yusuf, the distinguished commander of the Almoravids, spoke, it is said no Arabic, and his army was composed of the West African Negroes and men from every tribe of the Western Sahara.

The story of the Almoravids and their equally distinguished successors, the Almohades, has its importance in modern West African history. Firstly, because it was they who imposed with the sword the religion of Islam on the tribes of the Sudan. The fact that the people of northern and western Nigeria, the northern territories of the Gold Coast, the greater part of Gambia and parts of Sierra Leone to-day profess the religion of the prophet is in no small measure due to the work of the Almoravids. Before

them, and following the first Arab invasions of the seventh century A.D., a trickle of Islamic teachers had at odd intervals and at widely scattered points preached the faith to West Africans. El Bekri for instance tells us that the ancient town of Ghana consisted of two settlements, one Muslim and the other pagan. He noted, however, that the King of Ghana was pagan and lived in the pagan sector of the town; it is not unlikely that the Muslim quarter was a settlement for foreign merchants. In any case, Islam had little influence on the indigenous population before the Almoravid invasions. Ghana fell to the invaders in 1076 and from that year, the conversion of the Sudanese communities became more general, and the masses began to feel the impact of the new religion.

Secondly as a result of the Almoravid campaigns, a cordon of Berber tribes settled along the desert fringes of Negroland; the famous Timbuktu, Berber and Muslim from the start, provides the perfect example of such a settlement. It was built where the Negro and Arab worlds met at the junction of the River Niger and the Sahara Desert, a strategic point where the products of North Africa and the Sahara could be exchanged for those of the West African forest belt. No wonder Timbuktu grew to be "a commercial metropolis and a centre of learning of recognised standing in the Muslim world."

Finally, the Berber conquests had their effect on the indigenous peoples of the Western Sudan. Before the rise of the Almoravids, organised Negro states had arisen in the Western Sudan. Ghana, the first, is believed to have been founded about A.D. 300. By the middle of the eleventh century Ghana was under a Negro dynasty of the Mandingo tribe. It owed its commercial fame to its geographical situation; lying at the southern end of the caravan route from Sijilmasa in Morocco through the famous Taghaza salt mines, Ghana became the entrepôt for the products of North Africa (cloths, brocades, beads, and copper), the salt of the Sahara and the gold dust of the Sudan. Kola nuts, slaves, ivory, yams, honey, corn and cotton came to it from the forest region. From all accounts, the volume of this trans-Saharan trade was considerable, and no wonder; medieval Europe before the discovery of the Americas, depended almost entirely for its gold supplies on the Western Sudan; traffic in gold kept the ports of Barbary filled with Christian galleys and there can be little doubt that the banking houses in Genoa and Venice depended to some extent on the West African supply. At its zenith the Kingdom of Ghana extended from the Niger bend westwards to the Atlantic seaboard and embraced many of the communities of the Western Sahara. When Abu Bakr led his Almoravid troops against it in 1076 he was spurred on as much by the desire to capture Ghana's wealth as to win the kingdom for Islam.

The story of the rise and fall of the Sudanese empires which succeeded Ghana form interesting and stirring chapters in the medieval history of West Africa but it is sufficient to record the period of their rule and the phenomena which gave rise to them; Ghana flourished from A.D. 300-1270. The kingdom of Mali which succeeded it and which acquired truly imperial dimensions occupied the years 1285-1468. Under its two great rulers Sundiata (1238-1255) and Mansa Musa (1307-1332) the empire attained its greatest strength, the trans-Saharan trade flourished as never before and celebrities from the Arab world, scholars, artists, and architects, visited the land of the Negroes. Mansa Musa made a famous pilgrimage to Mecca in the course of which he displayed his boundless wealth throughout the Middle East. As a result of this pilgrimage his fame reached from Arabia to Spain and fourteenth-century maps of Africa bear inscriptions such as "King of Mali" and "Musa Mali". A pious Muslim, Mansa Musa built two great mosques at Gao and Timbuktu.

THE BRITISH COMMONWEALTH

It was out of the old mosque near Timbuktu that the University of Sankore developed during the twelfth century and became a centre of enlightenment in medieval West Africa.

The Mali empire extended from the Atlantic to the Niger boundary of Hausaland, a distance of some 1200 miles. It was succeeded by the Empire of Songhay (1488-1591) founded by Sonni Ali (1488-1492) which under Askia the Great (Askia Mohammed I, 1493-1528) rivalled the two preceding kingdoms in power, prosperity and territorial expansion. Askia's conquests carried him to Kano, Katsina and Zaria and the frontier of the Songhay empire ultimately embraced Bornu.

But on October 16th, 1590, the Sultan of Morocco, El Mansur, sent an expeditionary force under Judah Pasha, across the desert, to attack the Songhay empire, capture the valuable salt mines of Taghaza and the gold for which the Sudanese kingdoms were famed. The task of subjugating the Negro kingdom was, however, more difficult than the Berber hordes and their European mercenaries expected; protracted and indecisive battles ensued and when Sultan Mansur died in 1603 the West African war had not been concluded. But his successors continued to pour men and armaments into the struggle and by the middle of the seventeenth century Berber depredations had obliterated the prosperity of the Western Sudan. At the end of the Moroccan invasion the greatness of the Sudanese kingdoms had disappeared.

To sum up: the achievements of the western Sudanese Negro in political organisation can, in part, be explained by geography. Movement was easy for man and beast in the open parkland of the Western Sudan. By contrast, the equatorial forest belt, further south, restricted the growth of large empires. The despotic kingdoms of Ashanti, Benin and Dahomey were exceptions. The Songhay empire rose along the 1,000 navigable miles of the river Niger.

Secondly, the Western Sudanese kingdoms lay on the only trade routes that linked medieval West Africa with the outside world. This means that the Negro peoples on the Niger bend never suffered the complete isolation that was the lot of the forest dwellers in the south. It is by the meeting and interaction of cultures (in this case Negro, Berber and Arab) that civilisation develops, and where suitable conditions existed West Africans evolved empires and wide confederacies. Finally the rise of the various empires was, in part, but in very great part, due to the need for peace and order in a vast trading area. Commerce can never flourish in disorder and lawlessness; consciously or unconsciously, therefore, it was the requirements of trade that called these empires into being; but for the imperial might of Ghana, Mali and Songhay, trade on the scale it was carried on in the Western Sudan would never have flourished.

THE EUROPEAN IMPACT

The arrival of Europeans in West Africa by way of the sea in the fifteenth century was not unconnected with the Arab and Berber trade with Negroland. The gold of the Sudan was well known in Europe. This gold was shipped to Europe by Pisans, Venetians and Genoese, from the North African port of Massa (the ancient Tamest). Massa became important as the outlet for Marrakesh, the northern terminus of the caravans carrying gold from the south across the Sahara to the Magreb. As early as the tenth century and according to Ibn Haukal, Masudi, Yakut and Idrisi, Marrakesh had become famous as the centre of the gold trade in North Africa.

The Portuguese Pioneers

The pioneer of the European connection with West Africa, the Infante Dom Henrique (known to history as Prince Henry the Navigator) saw the vision of a sea route to Negroland after the capture of Ceuta in Morocco, the first Portuguese territorial acquisition in Africa. (The chief industry of Ceuta itself was the cutting and polishing of coral beads for the Sudanese markets). In this campaign Prince Henry distinguished himself; but, even more important, he also secured information from the Moors about the lands to the south. But Henry was not impelled solely by the desire to trade. He had also scientific, political, missionary and religious motives. At a time when crusading zeal was the fashion and when Christians and Muslims were still divided into two warring camps Henry sought allies for his faith beyond the "Green Sea of Darkness".

But in spite of these qualifications, the main motive of the Portuguese voyages to the Guinea Coast was trade. Both in Asia and in Africa Muslim Turks, Arabs and Berbers barred the land routes to the treasures. Asiatic spice and African gold certainly reached Europe, but only at the termini of the trade routes (i.e. the Mediterranean ports) and at Muslim prices. The control of the Sudanese, and later Asian, trade was no doubt Henry's initial objective.

The magnitude of the task which confronted Prince Henry should never be minimised. He sent expedition after expedition on voyages of exploration down the African Coast. When he started, the Canary Islands and Cape Bojador were the limits of human navigation, and it was not until 1434 that Cape Bojador was finally rounded.

The rounding of Cape Bojador put an end to medieval geography; it was the triumph of experience over hearsay. After Bojador, the Portuguese exploration and the gradual discovery of the West African Coast and of the Cape route to India were logical developments. So far as West Africa is concerned, Portuguese activity may be divided into two parts—viz. (i) the period of exploration and (ii) the period of trade and partial settlement. By the time of Prince Henry's death in 1460, the whole of the Upper Guinea, including the coast of modern Gambia, had been explored; in the next two years (1461-62) a further 600 miles of coast were navigated. This included the mountainous region of Sierra Leone.

In 1470 the explorers reached São Jorge da Mina, on the shores of the modern Gold Coast. By 1471 Benin, the islands of São Thomé and Fernando Po, had been discovered. Between 1484 and 1485 Portuguese discoveries had been carried beyond the mouth of the River Congo.

Pattern of Guinea Trade

The history of European contact with West Africa from 1434 to 1807 follows one pattern. Trade was the dominant activity, and it was confined to the coast. But whereas the Islamic impact from the north brought Arab culture and civilisation to West Africa, nothing comparable to this occurred on the coast of Guinea. The native chiefs on the Atlantic seaboard opposed European penetration. In 1486 King John II of Portugal claimed to have created and maintained by force a West African empire, and assumed the title of "Lord of Guinea". These claims were not in keeping with the facts; they were largely pretensions designed to keep out European rivals. There were four Portuguese trading ports in West Africa: Arguim, Santiago Island, São Jorge da Mina and São Thomé Island, but these commercial outposts were never designed for launching expeditions into the vast interior, an impossible undertaking considering the multitude of Africans and the handful of Portuguese, the extensive coastline, and the limited and inadequate equipment at the disposal of the merchant adventurers. Whatever the original intentions of the

Portuguese might have been, West African opposition and physical conditions together confined their activities to trade and diplomacy, and allowed them little scope for conquest and empire.

The forts and settlements occupied commercially strategic areas. The Arguim base, for instance, was well placed to divert the desert trade towards the West Coast. São Jorge da Mina, their most important base, defended the important gold trade of the Gold Coast. That the Portuguese came to think almost exclusively in terms of trade is illustrated by the fact that sections of the coast came to be known by the commodities they produced; e.g. the Gum Coast, the Malaguetta or Grain Coast, the Tooth or Ivory Coast, the Gold Coast, and the Slave Coast.

Conversion to Christianity, intermarriage, treaties of friendship, and straightforward gifts were used to maintain good relations with West African traders. Only in extreme cases did the Portuguese resort to arms. When their European rivals, England, France and Holland, entered the West African trade, first as interlopers, and later as victors and successors to the Portuguese pioneers, they conformed to the pattern of trading on the Coast which the Portuguese had evolved. In other words, between 1434 and 1807 (when the Slave Trade was abolished) trade with Europeans did not alter the political contours of West Africa; during these years, the flag did not, in the main, follow trade, and the land and coasts of Guinea remained under native governments.

The trade commodity fluctuated from one century to another. In the fifteenth century gold constituted the main quest. During the seventeenth and eighteenth centuries the slave trade predominated. The bulk of the gold came from Mina (a name given to the coastal region of the modern Gold Coast). From the end of the sixteenth century to the beginning of the nineteenth, none of the old staples of trade—gold, ivory, malaguetta and Benin pepper—proved as permanent or profitable as the traffic in Africans themselves. This traffic was the principal item of European commerce with West Africa and became important to the economy of the European nations engaged in it. It has been estimated that between 1450 and 1850 ten million West Africans—five to six millions seem nearer the mark—crossed the Atlantic Ocean. This export of populations was at its height in the eighteenth century and averaged something between 70,000 to 80,000 a year.

European Rivals to Portugal

In the fifteenth century Pope Alexander VI had generously apportioned all the newly discovered lands to Spain and Portugal. According to the Treaty of Tordesillas (1494) a meridian 370 leagues west of the Cape Verde Islands was to be the boundary between the two empires. This line reserved the whole of the African Territories and Brazil to Portugal, while Spain retained the rest of the Americas. It was not to be expected, however, that the Europe of the Renaissance and the Reformation would sit back while Portugal enjoyed the benefits of the African trade. The initial attacks on the Portuguese monopoly of the West African commerce came first from Castille and later from England and France; William Hawkins of Plymouth made the first of the English trading voyages to the Coast which began in 1530. After 1550 others followed him, including his son Sir John Hawkins who initiated the English slave trade with West Africa when in 1562 he secured 300 slaves from the region of Sierra Leone and sold them to Spaniards in the West Indies. In 1618 the Company of Adventurers of London trading with Africa received a Royal Charter. From now on, many English companies, often with monopolistic charters from the Crown, competed with private traders for the African trade. The two forts built by the Company of Adventurers in Gambia and at Coromantine

in the Gold Coast formed the first English foothold in West Africa. The first English slave-trading company was formed in 1631, and the date is significant because it coincided with the rise of the European colonies in the West Indies. The agricultural development of these territories greatly increased the demand for West African labour and this in turn stimulated the traffic in men. About this time the Dutch came on the West African scene and played a leading part. In 1621 the Dutch West India Company was formed and in 1623 embarked on a lengthy war with the Portuguese in Brazil. In 1637 a Dutch fleet attacked and captured the headquarters of Portuguese trade with West Africa—the famous castle of São Jorge da Mina—in 1642 they took Fort St. Anthony at Axim and other Portuguese trading posts fell in rapid succession.

In brief, the Portuguese monopoly collapsed when challenged in the sixteenth and seventeenth centuries because her naval and military defences could not withstand the naval might of England, Holland and France. Henceforth West Africa from Cape Verde to the Congo became the scene of European enterprise and rivalry. In the scramble for African slaves even small nations such as Denmark, Sweden and Brandenburg fought for a share of the spoils. In the seventeenth and eighteenth centuries, however, the triangular trade—i.e. the trade between Europe, West Africa and the West Indies, was mainly in the hands of the English and the Dutch; towards the close of the eighteenth century and after England had gained the Assiento (1713)—i.e. the right of carrying slaves to the Spanish American colonies, she easily outstripped the Dutch in the Guinea traffic. From the second half of the eighteenth century, England became the chief carrier of slaves from West Africa to the New World.

The Dutch, most aggressive of all the European competitors of England, not only succeeded in driving out the Portuguese but became the bitterest rival of the English traders throughout the world. This rivalry made for interminable quarrels along the African Coast and led, on occasions, to war and violence, as for example when the Dutch burnt the English forts in the Gold Coast in 1664. As a result of acute competition in trade, European forts multiplied, and a chart of the Gold Coast about the year 1760 indicates that there were thirteen English forts, eleven Dutch, one Danish and one Brandenburg. The merchant adventurers used these fortifications in their wars against each other and to protect the "ordinary store and counting house" from interference by natives. The forts, were in short "public works", designed "to facilitate commerce". The lands on which they stood remained the property of the West African natives. Rent was regularly paid to the owners of the soil: £72 per annum was paid, for instance, as the rent of Cape Coast Castle. As the Company of Merchants trading to Africa declared, "we recognise the Sovereignty of the natives as lords of the soil and entitled to rent". Even so these forts were the shape of things to come. They were the springboards from which the assault on the hinterland was to be launched in the nineteenth century.

To sum up, the first period of European contact with West Africa, 1434–1807, was one of trade, not colonisation. On the whole the European avoided entanglement in native politics. So long as the existing native governments served their trade interests well—under these native governments the slave trade thrived amazingly—Europeans were prepared to work through them and to endure whatever hazards and inconveniences this entailed.

THE ABOLITION ACT OF 1807 AND ITS EFFECTS ON WEST AFRICAN HISTORY

The British abolition of the slave trade in 1807 opened a new era in West African history. The foundation of the

THE BRITISH COMMONWEALTH

colony of Sierra Leone is perhaps the greatest practical manifestation in West Africa of the humanitarian sentiment which had played so large a part in securing the abolition. Owing to the anti-slavery agitators, various groups of Negro slaves were liberated before the actual passing of the Act, but many of them found little comfort in freedom as they were for the most part destitute and ill prepared for the life of the Western communities in which they found themselves. Among these were hundreds of homeless Negroes, cast adrift by their former masters, in London. There were also the free Negroes who had fought on the British side in the American War of Independence and had later been settled in Nova Scotia, and who naturally disliked both the very cold climate and their general situation. It was to aid these groups that a "Committee for Relieving the Black Poor" was set up in London in 1786. Granville Sharp, the well-known member of the Clapham Sect, was its leading spirit. On February 22nd, 1787, 411 settlers were shipped to Sierra Leone which had been chosen on Dr. Henry Smeathman's recommendation as a suitable location for the settlement.

Everything went wrong from the start. The settlers were a mixed lot, and included sixty white prostitutes from London. (At this time, the British Government was anxious to rid the country of undesirables and believed that Sierra Leone and Botany Bay were fit places for the abandoned wastrels of Britain's capital.) The immigrants arrived in Sierra Leone at the worst time of the year—the rainy season. In 1789 when the infant settlement was struggling for survival a native chief from the Sierra Leone hinterland attacked it, as an indirect reprisal against the British, inflicting severe losses. In 1790 a new company, the Sierra Leone Company, took over the running of the settlement. This company was chartered in 1791 with William Wilberforce, Thomas Clarkson, Granville Sharp and Henry Thornton, as directors. In 1792 the first Governor was despatched, but the financial burden of running a free settlement of ex-slaves proved too much for the slender resources of the Company, and in 1808, after many vicissitudes, Sierra Leone was transferred to the Crown. Thus the British Government was saddled with the responsibility of maintaining a non-white Crown Colony, the first of its kind in British imperial history.

In order to make the Abolition Act of 1807 effective, Britain needed a base from which to suppress the contraband trade. Freetown, with its natural harbour, was found suitable for this purpose and there also were located the Vice-Admiralty Courts, in which, within international conventions, not only British but also slavers of foreign nations could be seized and their victims liberated. From then onwards the Sierra Leone population was continuously increased by slaves captured, then liberated and deposited there by the British Navy. These liberated slaves included men from every tribe of the West African hinterland.

In the Gold Coast, Britain retained those forts which were necessary for the protection of her interests. The Royal African Company received a Government subsidy to enable it to keep English forts in repair and so afford protection to British merchants.

In 1821, the Government, dissatisfied with the policy of the African Company towards the natives and with its inability to stop the slave trade, withdrew its charter and united the Gold Coast settlements to the Colony of Sierra Leone. For the first time the Gold Coast forts came under the control of the British Crown. British posts in Gambia were also brought under the Governor of Sierra Leone. With the abolition of the slave trade therefore, Sierra Leone became the headquarters of British administration on the coast.

The effects of abolition on this region may now be

assessed. In West Africa, the abolition of the slave trade precipitated a radical change in the economic sphere. It must be remembered that the trade was the economic mainstay of all the coastal principalities and of the great forest kingdoms such as Ashanti, Dahomey and Benin. For two centuries Britain had controlled the lion's share of the traffic; her dramatic withdrawal in 1807 therefore produced a crisis among the slave traders.

After the Act, the British slave trader, even if he had wanted to, could not for economic reasons withdraw from West Africa. He had sunk so much capital in the African trade that withdrawal would have spelled financial ruin. Investment in the slave trade involved not only the acquisition and equipment of a slaver, but also expensive shore establishments, such as barracoons or warehouses for the goods used for barter or for distribution on credit to reliable African middlemen. And so European slave traders, from Portugal, Spain and France, in co-operation with the African middleman, were prepared to brave the British blockade of the high seas, and to continue the traffic with the Spanish American colonies until the middle of the nineteenth century.

The Gold Coast

The main problem of West African history in the first half of the nineteenth century was to find an adequate substitute for the slave trade. In the Gold Coast it was hoped that "legitimate trade" might develop in rice, maize, indigo, gold, ivory, timber and palm oil, but these did not provide adequate compensation for the trade in men. In the years following the Abolition Act the purchasing power of the Gold Coast Africans gradually declined and it was doubtful whether the forts were worth the cost of maintenance. European imports which stood at over £1,500,000 in 1806 had fallen to less than £600,000 in 1810. This depression hit the African middleman as well, and was, in part, responsible for the conflict between the powerful inland kingdom of Ashanti on the one hand, and the Fanti and the British Government on the other. Put briefly, during the period of the slave trade, the Fantis, as middlemen of the coast trade, monopolised the trade with Europeans; in a large measure they barred the powerful Ashanti state from access to the sea.

The sole contact which the Ashanti had with white traders was through the Dutch fort at Elmina, which explains their friendship for the Dutch and their attachment to the Dutch connection. In the eighteenth century the tribute they drew from the surrounding conquered states, the plunder from their wars, the profits from the slave trade and from trade with the northern markets of Salaga, Kintampo and Atebubu, brought in considerable revenue. For this reason they were prepared to tolerate Fanti obstruction. Throughout this period, British policy was to protect their Fanti allies against the Ashantis who, but for British interference, would have long since become masters of the entire country. Abolition of the slave trade and the consequent decline in trade aggravated the bitter and traditional enmity existing between the two tribes and, in attacking the Fanti, the Ashantis came into headlong collision with the British, who believed that their commerce was safer with the weaker Fanti. Three Fanti-Ashanti wars had taken place in 1803, 1808 and 1813. In 1821 when the Gold Coast forts came under the Governor of Sierra Leone, Sir Charles McCarthy, the holder of that office, visited his new territory and rashly decided to close the Ashanti question by annexing that territory. He therefore precipitated the fourth Ashanti war, in which the British forces were annihilated, and the Governor himself lost his life. Though the British later conquered an Ashanti force, their prestige had fallen so low that they could do little to improve Anglo-Ashanti relations. So bad

was the situation that in 1828 Parliament decided to evacuate the Gold Coast, but merchants with commercial interests there protested and urged a return to company Government. A "Committee of London Merchants" assumed control in 1828 and received a Government subsidy of £4,000 a year to promote trade and maintain the forts. From 1828 to 1843, the committee's representative on the Coast, Captain George Maclean, was in all but name the Governor of the Gold Coast. Under this remarkable man the country knew peace and prosperity; African confidence in the British character was restored and relations with the Ashanti were regularised and placed on a healthy basis. But even Maclean could not stop the domestic slavery that was widely practised in the area of the forts and this, with other irregularities, provoked a Parliamentary inquiry in 1840. As a consequence, in 1843, the Crown once again assumed authority, but with Maclean's death in 1847, the administration fell into less efficient hands.

The Bights of Benin and Biafra

The position in the Bights of Benin and Biafra (the coasts of modern Nigeria) was vastly different from that in the Gold Coast. Here there were no European forts and settlements. The British traders made their sailing ships their home and apart from the barracoons and warehouses they maintained in the territories of friendly chiefs, they had no foothold on African territory. Early in the nineteenth century, however, measures for the suppression of the slave trade and for the protection of "legitimate trade" made it necessary for Britain to establish an operational base in the Bights. In 1810 a West African naval squadron for the suppression of the slave trade was formed, and from 1827 to 1834 a British settlement was maintained on the otherwise unoccupied Spanish island of Fernando Po, partly as a naval base and partly as a home for freed slaves. The Superintendent of this settlement, Captain W. F. W. Owen, was therefore the first permanent British official on the Nigerian Coast. The official occupation of the island came to an end in 1834 but British merchants still used it as the base of their trade with the Niger Delta. In 1843, John Beecroft, a British merchant resident on the island was appointed Governor of Fernando Po by the Spanish authorities, and in 1849 a British Consulate was set up with Beecroft as first Consul. Lord Palmerston, the Foreign Minister of the time, emphasised that the chief object of this appointment was to protect the growing "legitimate trade" in palm oil between Britain and the Bights.

Again, unlike the Gold Coast, the British traders in the Bights found in palm oil an adequate substitute for the slave trade. This oil was needed by industrialised Britain as a lubricant for the new railways, and for the making of soap and candles. By 1830 trade in this commodity was fast displacing the slave trade. In 1834 the value of oil exported was about £500,000; in 1850, over £1,000,000, and in the 1860's about £2,000,000 a year. Over 90 per cent of this production came from the Bights of Benin and Biafra.

In the Bights, the trade in palm oil and the trade in men went hand in hand. British traders complained that the activities of the foreign slave traders from Spain and Portugal threatened to ruin the developing trade in oil and urged their elimination. In 1851 the British Navy, attacked and captured Lagos in order to expel Portuguese slave traders entrenched there. This measure, it was hoped, would promote the "legitimate trade" in oil. In 1861 Lagos became a Crown colony and was therefore the first territory annexed by Britain in Nigeria. Measures were also taken against African rulers hostile to British power in the Bights. In 1854, for example, William

Pepple, the most powerful king in the Bight of Biafra, was removed and exiled, first to Ascension and later to London.

Gambia and Sierra Leone

In Gambia and Sierra Leone where trade was comparatively unimportant, the chief considerations were strategic. Under the Treaty of Versailles of 1783, the right to trade along the Gambia was ceded to Britain by France. During the next thirty years several settlements were established along the river banks by British traders. In 1816, under a Treaty with the King of Kombo, the island at the mouth of the river was ceded to Britain; the settlement built on it was called after Lord Bathurst, then Secretary of State for the colonies, and Bathurst remains the capital of the Colony to-day. In 1821 Gambia was placed under the jurisdiction of the Governor of Sierra Leone and was administered from there for twenty-two years. In 1843 it became a separate colony with its own Governor and Executive and Legislative Councils. In 1866 Gambia and Sierra Leone were once again placed under the same administration. The latter was enlarged by the addition of the Banana and Sherbro Islands in 1820 and 1861 respectively. Throughout this period Sierra Leone remained the headquarters of the British settlements in West Africa.

EUROPEAN PENETRATION OF THE AFRICAN INTERIOR

The growth of British power was not confined to the Nigerian coast lands. Economists pointed out that the West African forests harboured raw materials vital to the rising industries of England, and urged that the West African labour force be turned to agricultural production in Africa itself, instead of being taken away to exploit the West Indies and the Americas. Thus West Africa would provide not only raw materials for British factories but also markets for her manufactures. European penetration of the African interior began towards the end of the eighteenth century, and continued into the nineteenth and twentieth centuries. The travels of explorers in West Africa, such as Mungo Park, Hugh Clapperton, Richard and John Lander must be viewed as part of this movement. After 1830, when the Lander brothers had proved that the Niger entered the South Atlantic in the Bight of Biafra, British merchants looked to the Niger valley as the highway into the heart of the Nigerian hinterland. Led by Macgregor Laird, a succession of British commercial expeditions began to ascend the river and to open trading posts on its banks. Notable among these expeditions were those of 1832, 1841, 1854 and 1857. In the first two expeditions the mortality among the European members was so high that the attempt to open the hinterland to British commerce was nearly abandoned. Of the 48 Europeans who accompanied the 1832 expedition, only nine survived; in that of 1841 over 48 lost their lives in two months. In the ventures of 1854 and 1857, however, not a single life was lost, thanks to the skilful use of quinine by Dr. W. B. Baikie, leader of these expeditions.

Following these successful expeditions a Government station was set up in 1860, under Dr. Baikie, at Lokoja, at the confluence of the Niger and Benue. This was the first British Government post in the hinterland of Nigeria, and Baikie was the first consular official in the territory now known as Northern Nigeria. After his death another consul was appointed to succeed him, in 1866, but owing to African opposition to British penetration, the Lokoja Consulate was closed in 1867. Despite the closing of the station and continuing native attacks the traders remained in the Niger valley.

THE PARLIAMENTARY SELECT COMMITTEE OF 1865

As the narrative of events has shown, British policy in West Africa from the abolition of the slave trade to the

THE BRITISH COMMONWEALTH

sixties of the last century was desultory and uncertain. Critics of this policy were legion, and many doubted the wisdom of maintaining the Gold Coast posts at enormous expense when, in fact, there was little trade there. It was in the largely unprotected region of the Niger Delta that over half of Britain's trade with West Africa was carried on. The annual cost to the Imperial Treasury of the Gold Coast forts had risen from £5,000 in 1850 to about £12,000 in 1863 without a corresponding increase in revenue. Increasing involvement in West African native politics during 1863-64 meant a further increase in expenditure and in 1864 Colonel Ord was appointed special Commissioner to West Africa, one of his instructions being to recommend how this expenditure could be reduced without impairing the efficiency of the establishments. The Ashanti invasion of the Fanti country and the coastlands continued, and attempts to stem it meant an increase in expenditure year after year. It was to put an end to this state of affairs that the Parliamentary Select Committee of 1865 was called upon to study the report of Colonel Ord and determine what Britain's future policy in West Africa should be.

This famous report has been the subject of much comment by historians and one of its recommendations, namely, that Britain should gradually withdraw from West Africa, with the possible exception of Sierra Leone, has often been interpreted as meaning that in the 'sixties she was on the point of doing so. Nothing could be further from the truth. As a matter of history the recommendations of the Committee appeared at the very moment when British merchants and statesmen were implementing a vigorous policy of economic and political expansion in what is now Nigeria. Because the theories did not fit the facts, the resolution for eventual withdrawal came to nothing. The 'sixties and seventies, far from being the era of retraction, saw the rapid expansion of trade and empire in Nigeria.

Traders and missionaries who had a better grasp of the realities than the eloquent members of Parliament pleaded for consolidation and expansion of British power in West Africa. On the whole, the Colonial Office shared their view. Commercial and humanitarian bodies had taken deep roots in West Africa, and everything pointed to advance, not evacuation.

The Gold Coast, 1865-1919

In the Gold Coast, the years following the report of the Select Committee of 1865 saw great changes. In 1850, the Danes and in 1872 the Dutch sold their forts to the British, and withdrew from bases that had become commercially unprofitable (chiefly because of the unending wars between Fantis and the Ashantis). Britain thus became the sole European power in the Gold Coast. The Ashantis were angered by the transfer to Britain of the Dutch fort of Elmina—their sole means of access to the sea—and claimed that as suzerains of the territory, the fort should have been handed over to them. This led to the outbreak in 1873 of the sixth Ashanti war. The British now determined to settle the Ashanti problem by launching a major campaign against that kingdom. Under the command of General Sir Garnet Wolsey a considerable body of troops was brought from Britain and advanced through the forests to Kumasi, capital of the Ashanti confederacy. The Ashanti forces were defeated, the military might of the kingdom broken and its political power greatly diminished by the dissolution of the confederacy by Britain. The Ashantehene now became the King of Kumasi alone, and the subordinate tribes, formerly members of the confederacy, were released from their allegiance to him. The Ashantehene was also compelled to pay a large indemnity, in gold dust, to the British. The Treaty of Fomena which ended this war left Ashanti a ruined and broken kingdom.

In 1874 the British Government decided to assume full control over the Southern territories and annexed them as the Gold Coast Colony under a Governor, aided by an Executive and a Legislative Council. With the end of the Ashanti wars prosperity soon returned to the Gold Coast colony. In Ashanti, however, chaos prevailed. The British had broken Ashanti power but had not installed their own administration. In the vacuum thus created, the now independent members of the former confederacy began quarrelling among themselves and civil wars resulted. Even the Ashantehene in his distress appealed to the British, but without success, for help in restoring order. For a time Britain was reluctant to interfere, but when the scramble among European powers for African territory became acute in the 1880's, she hastened to establish her authority in Ashanti.

In 1896, the British entered Kumasi, declared Ashanti a protectorate and exiled King Prempeh, the Queen Mother, and other members of the royal family to the Seychelles Islands. There they remained until 1924. In 1901 a Royal Order-in-Council annexed Ashanti outright and declared a protectorate over the Northern Territories. At the beginning of the twentieth century, Britain had become the undisputed master of the Gold Coast with the country grouped in three administrative units, two protectorates and the colony.

Economically, the country was vastly better off in the twentieth century than in the nineteenth. The crop that was to bring economic wealth to the Gold Coast was, according to tradition, introduced into the country in 1879 by a Fanti labourer who smuggled the first cocoa pod to Mampong from Fernando Po. The development of this export crop was gradual. In 1890 only five tons were exported. Between the years 1891 and 1925 it had risen to 186,329 tons, constituting 40 per cent of the world's output. From 1926 to 1930 the export figure stood at 218,895 tons. It is mainly on this crop and partly on the exports of gold, aluminium, timber and rubber, that the prosperity of the Gold Coast is based. Economic development led to the improvement of communications. In 1901 the first railway linking Tarkwa in the gold-mining area to Sekondi was completed. It was later carried on to Kumasi. Another line begun in 1911 connected Accra with Kumasi. Better roads were also built and by 1919 the Gold Coast had 1,200 miles of motor roads.

Sierra Leone and Gambia

In Sierra Leone and Gambia, apart from the changes already indicated, the important territorial change was the declaration of a protectorate over the Sierra Leone hinterland in 1896, and the demarcation of the frontier with Liberia in 1911. In 1888 Gambia was separated from Sierra Leone and has ever since been under its own administration. An agreement reached in 1889 by the British and French Governments defined the boundary of the Gambia and Senegal, and a series of Protectorate ordinances passed between 1894 and 1902 brought the whole of the British controlled area, with the exception of the Island of St. Mary, under the protectorate system. The colony's legislature was empowered to make laws for the whole country, including the protectorate.

Nigeria, 1865-1914

Until 1866, Lagos had its own Governor; from 1866 to 1874, it was ruled by Administrators under the Governor of Sierra Leone, and from 1874 to 1886, by governors under the Governor of the Gold Coast. From 1886 to 1906 Lagos again had its own Governors. During this latter period, a number of military expeditions and "pacifying" missions brought Yorubaland under British rule, the whole territory under the Governor of Lagos being called the Colony and Protectorate of Lagos. From 1886

onwards the economic mainstay of Lagos and its hinterland was the trade in palm oil and cotton, the former being valued at about £1,000,000.

In the Bight of Biafra, that is in the Niger Delta area, trade developed not only on the coast but also in the hinterland. From 1832, British merchants began to go up stream and to trade with natives on the banks of the River Niger as far as Lokoja. When the use of quinine made it possible for Europeans to settle in the interior, hinterland trade rapidly developed and many English companies were formed to exploit the resources of the interior. Acute rivalry soon developed among them and in 1879, under the able leadership of Sir George Goldie, they amalgamated, forming the United (later National) African Company. By his foresight and energy Goldie defeated and eliminated a French rival company formed with the support of the French Government. Within four years the English company was supreme in the Niger valley. Having won victories in the economic sphere, the National African company began treaty-making with tribes of the middle Niger, offering them British protection in return for exclusive trade with the company; large land grants were made to the company, as well as mining concessions of all kinds. It was owing to the activities of this company and its leader, Goldie, that Britain was able to claim at the Berlin West African Conference of 1885, that her interests were paramount in the Niger territories. In 1886 a charter was granted to the National African company (which soon took the name of the Royal Niger Company) authorising it to administer the protected territories in Northern Nigeria. In 1894 a treaty was signed with Bornu, placing that territory under British protection and in 1897, a successful military campaign was carried out against the Emirates of Nupe and Ilorin.

In the same year the British Government formed the Royal West African Frontier Force to operate in the Company's territories. Finally, in 1899, the charter was revoked, the protectorate of Northern Nigeria was proclaimed and the company's territory came under the Crown.

On the coast, as in the hinterland, events moved swiftly. With the development of trade the British consular post on the Spanish Island of Fernando Po was removed to Old Calabar on the Eastern Nigerian Coast. Treaties were concluded with various coastal rulers placing their territories under British protection, and in 1885, the Oil Rivers Protectorate was declared. In 1891, the Consul (by then at Calabar) was created commissioner and in 1893 the territory was renamed the Niger Coast Protectorate.

Punitive expeditions were sent against African tribes and rulers who resisted the British invasion, e.g. in 1887 against King Jaja of Opobo, in 1894 against the Jekri Chief Nana; in 1895 against Brass, and in 1897 against the Oba of Benin. In 1899 the Niger Coast Protectorate was transferred to the Colonial Office. In 1900 it was renamed the Protectorate of Southern Nigeria, the boundary between it and the Colony and Protectorate of Lagos running along the Yoruba-Benin frontier. In the north, the Southern Protectorate met the Northern Protectorate at Idah, on the Niger river, in the east, the Protectorate extended to the border of the German Cameroons. In the administration of these new political units consuls were replaced by a High Commissioner and District Commissioners. Between 1900 and 1906, central and southern Iboland was occupied by British forces.

At the beginning of the twentieth century, therefore, British power had been firmly planted in the territories now known as Nigeria. The name itself has only a geographical meaning. The many communities inhabiting the Niger basin were different in race and language and in social and political organisation. The Muhammadan emirates

of Northern Nigeria had been under the impact of Islamic culture for over six centuries and had little in common with the Yoruba and Ibo tribes in the South. The problem before the British administration in the opening years of the century was how to weld these discordant elements into a coherent whole.

The unification or amalgamation of the two southern Protectorates (the Colony and Protectorate of Lagos and the Protectorate of Southern Nigeria) in 1906 into the Colony and Protectorate of Southern Nigeria was part of the attempt to create one country out of the diverse elements that composed Nigeria. A Governor was appointed and three provinces, Western, Eastern and Central were formed. This single administration of all Southern Nigeria continued until 1914.

The Northern region, as a political entity, was administered separately. In 1900 the Protectorate of Northern Nigeria replaced the administration of the Royal Niger Company. Its headquarters were first at Jebba, then from 1902 at Zungeru. The Chief Administrator had the title of High Commissioner until 1908 and of Governor thereafter. During the fourteen years of separate administration of Northern Nigeria, campaigns were carried out against centres of resistance to British rule in the North—e.g. Nupe (1901), Kantagora (1901), Bauchi (1902), Bornu (1902), Kano (1903), Sokoto (1903) and many other small tribal groups. A railway from Baro to Kano was completed in 1911, and met the Lagos line in 1912. Just as Sir George Goldie was instrumental in winning Nigeria, particularly the northern sector, for Britain, so it was Lord Lugard who carried out the pacification of Northern Nigeria. He won the goodwill of the Emirs (or rulers of the Northern States), by instituting the system of native administration or indirect rule. By this means, the defeated chiefs were allowed to govern their territory in accordance with their own laws and customs under the supervision of British officers who acted as 'advisers' to the Emirs and restrained their excesses, whenever native customs conflicted with the laws of civilised nations.

It should be clear even from so brief a summary that from the occupation of Lagos in 1851 onwards the main emphasis in Nigerian history has been towards unification and the development of a common nationality. This lengthy process reached its climax in 1914 when the two administrations (of Northern and Southern Nigeria) were amalgamated. Various factors had made this union imperative. Before 1914 it had become apparent that the North could not find sufficient funds to maintain its own administration, in spite of annual grants from the Imperial Treasury and from the Southern administration. At the time, the financial position of Southern Nigeria was exceedingly satisfactory, due in the main to the rapid development of her trade. Amalgamation, it was hoped would relieve the Imperial Treasury of its annual contribution towards the upkeep of the North. Other factors, mainly economic, encouraged the movement for unification. For instance, transport was the pre-requisite of economic development in Nigeria.

Without the control of a central authority the construction and maintenance of the much-needed railways, river and road facilities, would clearly be impeded by the clash of territorial interests. In 1914 the whole territory was united and named the Colony and Protectorate of Nigeria. Lord Lugard was appointed Governor-General and two Lieutenant-Governors (later Chief Commissioners) were put in charge of the two divisions, Northern and Southern. In 1939 the Southern provinces were divided into the Western and Eastern provinces, each under a chief Commissioner, with headquarters at Ibadan and Enugu.

Economic development had been the keynote of this period. A railway line was built in the East from Port

THE BRITISH COMMONWEALTH

Harcourt through Enugu to join the Lagos-Kano line. Groundnuts, cocoa and tin joined palm-products as Nigeria's contribution to the world's markets. Educational and social development proceeded apace.

CONSTITUTIONAL DEVELOPMENT AND WEST AFRICAN NATIONALISM

It has been shown that the British acquisition of the West African territories was accelerated by the European scramble for African territory between 1870 and 1914. The process was extremely rapid. Between 1885 and 1900, with the sole exception of the Republic of Liberia, every West African State or political unit lost its independence. Nowhere was subjugation willingly accepted or sovereignty voluntarily surrendered. The degree and intensity of resistance differed from one place to another. But all in all the imposition of European political control was resisted to the bitter end. This has been generally true of the history of West African relations with the European powers from the arrival of the Portuguese pioneers in the fifteenth century. There was no change in this native attitude to Afro-European relations until the forcible defeat of West African nationalism between the years 1885 and 1900.

After 1900, the problem that faced Great Britain in West Africa was immense. Conquest was followed by occupation. And the territory occupied was vast. Gambia (4,000 sq. miles), Sierra Leone (27,925 sq. miles), Gold Coast (91,842 sq. miles), and Nigeria (373,250 sq. miles), a total of 497,017 sq. miles. The population figures at the beginning of the century were mainly guesswork, but according to the 1952 Census, Nigeria has a total estimated population of 31.2 million people, Gold Coast 4,118,450 (1948 Census), Sierra Leone 2,005,000 (1952 estimate) and Gambia 289,060 (1953 estimate), an estimated total of 38 million.

The initial problem that confronted the British administration was the task of providing a system of government in place of the native governments it had displaced and of bringing law and order to a society disintegrated by the activities of the preceding twenty-five years. In detail the constitutional history of the British West African colonies differed greatly since, as has been indicated, they were acquired at different times and under varying circumstances. Basically, however, the constitution of all four conformed to the Crown Colony pattern of government.

The Gold Coast, 1919-1924

Although experiments in Colonial administration in West Africa began in Gambia and Sierra Leone, it was in the Gold Coast that the major constitutional developments of the twentieth century originated. The administration of the Gold Coast may be divided into two parts: (a) the central or direct government, in the hands of a Governor, assisted by the executive and legislative councils and a staff of political and technical officers; (b) the local government or indirect rule (sometimes known as Native administration) largely in the hands of chiefs, elders, and their councils, in theory advised but in fact controlled by British administrative officers. This was the position in the first quarter of the twentieth century. Native administration was legalised by the ordinance of 1883; in 1927 this ordinance was replaced by a new code. The theory behind the system of native administration is that masses of uneducated West Africans who still owed allegiance to their chiefs, their tribal councils and institutions would best be governed through the system of government they knew and respected. In all four colonies one form or other of native administration existed.

For the purposes of administration, the Gold Coast was

divided into provinces and districts: the Western Province with six districts, the Central Province with four, and the Eastern Province with eight. Ashanti and the Northern Territories had two provinces each. The political service was at this time the preserve of European officers and its numerical strength varied from time to time. In 1922, there were 89 administrative officers in the Gold Coast, but in the 1930's the Government was compelled by the economic depression to reduce the number.

The Gold Coast Legislative and Executive Councils were inaugurated in 1874 when the British Government decided to assume full control over the coastal areas by annexing them as the Gold Coast Colony. In 1916 and again in 1920, the Legislative Council assumed a new form and its membership included 11 official and 9 unofficial members. The unofficial members comprised three chiefs, three educated Africans from the coastal towns of Accra, Cape Coast and Sekondi, and three Europeans representing commercial interests. All were nominated by the Governor. The eleven official members included members of the Executive Council and heads of Government Departments—all European. Up to this time, the Legislative Council, as in other West African Colonies, had no real power; the Governor, like a benevolent autocrat, reigned supreme.

Nigeria, 1914-1947

The two separate administrations of Nigeria, the Northern and Southern Provinces, were amalgamated in 1914 and the unified territory was placed under a Governor-General, Lord Lugard. The country was divided for administrative purposes into the Colony of Lagos and the Northern and Southern Provinces, the two latter forming what is generally called the Protectorate. The Northern and Southern Provinces were placed under Lieutenant-Governors and the Colony under an Administrator. But amalgamation did not mean the complete fusion of the two administrations. In the Northern Provinces important departments such as Medicine, Education, Police and Prisons were separated in policy and control from their southern counterparts.

In addition to the Executive Council, there was a large deliberative body known as the Nigerian Council. Unlike the Gold Coast Legislative Council, the Nigerian Council was not a legislative body; it was devised merely to afford an opportunity for the expression of public opinion and at its meetings the Governor reported, "matters of interest during the last year", and emphasized and explained "any questions of policy and legislation of importance".

In addition to the Nigerian Council, the Lagos area was served by a small Legislative Council whose activities were strictly confined to the Colony. Both this body and the Nigerian Council were abolished in 1922 by Sir Hugh Clifford, Lord Lugard's successor, who felt that the Nigerian Council was little better than a debating society whose members could not take their position seriously. He substituted for this the Nigerian Legislative Council which, for the first time in West African history, had a number of elected members. It consisted of thirty official members and three elected unofficial members, representing the municipalities of Lagos and Calabar. Fifteen members were nominated by the Governor to represent commercial interests and areas of the Southern Provinces not represented by the elected members. The first elections took place in September 1923 and the Council was inaugurated in October. The Council legislated, however, only for the Colony and the Southern Provinces; in the Northern Provinces legislative power was vested in the Governor alone. It was not till 1933 that all the Northern Departments were unified with the Southern Administration. The establishment of a Legislative Council for the whole of the country was not achieved till 1947.

Sierra Leone and Gambia

It was in these two colonies, but in Sierra Leone particularly, that the experiment in representative government began in West Africa; from its foundation to the middle of the nineteenth century Sierra Leone has had one form or other of representative Council. In 1863, its Legislative and Executive Councils were inaugurated. Gambia developed the same institutions when it became a separate Colony in 1888. A new constitution was introduced in 1915. Under this constitution the Legislative Council included both official and unofficial members, but membership of the Executive Council was reserved for officials. The protectorate was not represented on either body.

WEST AFRICAN NATIONALISM

The great Constitutional changes that occurred in West Africa in the generation between 1924 and 1954, were due in the main to nationalist agitation. It has been shown that West African nationalism was defeated in the closing years of the nineteenth century; throughout the second half of that century, however, nationalist feeling strongly asserted itself whenever an opportunity of liberating the region from foreign control occurred. Thus when the Parliamentary Select Committee of 1865 recommended that Britain should withdraw from West Africa, the Fanti Confederation of 1871, a nationalist organisation, strongly agitated for the implementation of the Report. In fact in 1868, a West African intellectual, James Africanus Horton published a work of several hundred pages entitled—*West African Countries and Peoples: A Vindication of the Negro Race*—demonstrating that the conditions necessary for carrying out the recommendations of the Select Committee were present in West Africa. Again in 1897 the Aborigines' Rights Protection Society was founded to safeguard African lands and fundamental rights against foreign encroachment and in 1920 the West African National Congress agitated that "self-government be implemented so that the peoples of African descent should participate in the government of their own country". They asked that elective franchise be granted to the legislatures and that the "system of nomination to the Legislative Council be abrogated because it is not democratic". Through the work of the latter body the principle of representation was introduced in the Legislative Councils beginning with Nigeria in 1924 and the Gold Coast and others from 1925.

The work of the nationalists was of course greatly aided by world events such as the general impact of the two wars on West African society and by the great influence exerted by returning ex-service men. The fight of colonial and semi-colonial peoples in India, China, Indonesia, and the Arab world for freedom and independence worked powerfully on the imaginations of West Africans and was, no doubt, an important factor in the intensification of the fight for self-determination after 1945. In addition, there has been in recent times a great rise in the number of educated Africans—thanks to the liberal educational policy of the British Government and to the work of the missionaries.

Political Parties

The political parties which are now leading West Africa on the road to self-government were founded either during the war or immediately after it.

The National Council of Nigeria and the Cameroons (N.C.N.C.) led by Dr. Nnamdi Azikiwe, was founded in 1944 and was the pioneer of militant nationalism in West Africa. This was followed by the foundation of the United Gold Coast Convention (U.G.C.C.) in 1947 by Dr. J. B. Danquah. In 1949, a split occurred in the leadership of the U.G.C.C., and Dr. Kwame Nkrumah broke away to form the Convention Peoples Party (C.P.P.) which within a

few months eclipsed the U.G.C.C.; the C.P.P. thus became the dominant party in the Gold Coast. In Nigeria two important political parties, the Action Group (A.G.) under the leadership of Mr. O. Awolowo, and the Northern Peoples Congress (N.P.C.) emerged to dominate the politics of the Western and Northern regions. It was largely as a result of the agitation of West African political parties that far-reaching constitutional changes occurred in the years 1950–1955.

The Constitutional Position

Before the almost revolutionary changes of the 'fifties, the constitutions in existence in the Gold Coast and Nigeria, that is, the Burns' Constitution of 1946 and Richards' Constitution of 1947, did not seriously diverge from the Crown Colony type. Effective power remained with the Governor, the Executive Council (still nominated by him) and with the administrative staff of predominantly British officials, even though there were African majorities in the Gold Coast and Nigerian Legislative Councils. The nationalist parties therefore attacked a system that was at best merely a forum for animated debates but effected little change in the seat of political power.

In 1950 and 1951 new constitutions were put into force in the Gold Coast and Nigeria respectively. The Nigerian constitution, in some respects less advanced than that of the Gold Coast, was revised in 1953 and again in 1954 to bring it into line with the latter. The existing position in the several colonies is explained in the sections on constitution and government.

The Gold Coast is constitutionally the most advanced, and is now on the threshold of self-government. Its Legislative Assembly has an all-African membership of 104, directly elected from single-member constituencies, on a population basis. A general election was held in June 1954, and the C.P.P. under the leadership of Dr. K. Nkrumah, won 71 seats. The latter is now the Prime Minister of the country and has an all-African cabinet which is, in a large measure, responsible for running the internal affairs of the country. But External Affairs, Defence and the Police are under the direct control of the Governor. The declared policy of the Gold Coast nationalists is achievement of Dominion status within the British Commonwealth of Nations in 1956.

The position of Nigeria is a little different. Whereas unitary government prevails in the Gold Coast, Nigeria is a Federation. It is by far the largest dependent unit in the British Commonwealth. Its population of some 32,000,000 is made up of three principal ethnic groups—the Hausas, Ibos, and Yorubas. Because of its geographical extent, diversity in population and development, a large measure of autonomy was granted to Nigeria's three regional Governments (the North, West and East) in the new constitutions of the 'fifties. But the Federal Government retains such functions as are necessary for preserving the country's unity.

Under the 1954 Constitution each region has the right, subject to certain safeguards to the federation, to opt for self-government independently of the others. In December 1955 the Nigerian Western Regional House of Assembly adopted a resolution, put forward by the Premier and seconded by the leader of the Opposition, demanding full self-government for the Region in 1956.

The Action Group is the party in power in the Western Region, the N.C.N.C. in the Eastern Region and the N.P.C. in the Northern Region. Like the Gold Coast, Nigeria aims at self-government within the Commonwealth in 1956.

In Sierra Leone and Gambia similar constitutional changes are taking place, but in neither is the position so advanced.

K.O.D.

ECONOMIC SURVEY

GENERAL

The four territories of British West Africa present certain common features as far as climate, economic activities and social organisation are concerned. The majority of the people are self-employed and depend almost entirely on the production of crops raised on small farms. The number of those working full time for employers is small, although in the more populous and developed parts of each territory seasonal employment is common. The proportion of full-time wage-earners varies; the Gold Coast, with slightly under one-twentieth of the population working for employers in 1952, probably has the largest proportion of employed persons.

Judged by Western standards agricultural organisation is primitive and wasteful, and is marked by a low level of productivity. While it is difficult to assess income per head in self-contained communities which consume most of what they grow and have only small surpluses to sell, an estimate for Nigeria set the national average *per capita* income at £19 in 1950-51 and £21 in 1952-53. This, although low, is nevertheless higher (after allowance is made for the lower value of money nowadays) than in the decade before the war when the average value of net output in the Nigerian countryside, at local prices, was estimated at not more than £2.¹ Low agricultural output and earnings tend to keep wage levels depressed in other activities, since an appreciable rise in earnings from mining or employment in towns would serve to attract labour from the countryside and bring about even lower productivity in the main industry—agriculture—on which all countries depend. Rates for unskilled labour varied from about 3s. to 6s. per day in 1952-53, and for skilled labour from about 6s. to 13s. a day. It should, however, be borne in mind that the well-being of rural communities relying on their own labour and that of their families for subsistence cannot be measured entirely by money income.

It is into this framework of a poor but relatively stable society that efforts have been made since the war to fit the various plans for development. The aim has been to bring about orderly changes in the economic and social structure of each country and so raise the standard of living. To do this, direct expenditure on agriculture and industry is not enough; and the plans which have been framed have envisaged large-scale expenditure on health and education. Development has been financed in part from Colonial Welfare and Development funds, in part by external loans and loans from the various Produce Marketing Boards, and also by direct grants from the governments of the four territories. The general policy has been to raise loan funds to finance revenue-earning projects, some of them of a long-term nature; while reserving development funds as far as possible for social and other services of a non-revenue-producing nature, such as housing and education.

In one respect West Africa has been favoured since the war, in that the rise in the prices of the commodities it exports (which consist mainly of minerals, cocoa, groundnuts, oil-palm produce, cotton, timber and hides and skins) has made possible a rate of saving far exceeding pre-war capacity. Only a part of the larger income from exports

has been passed on to the primary producer by the Marketing Boards, which have consequently been able to build up considerable reserves, and make available a proportion of these for development. Inflation has been controlled by a policy of caution in the use of these funds; but stable conditions can be maintained only if, while such schemes are proceeding for starting new industries and improving communications and social services, agricultural output can be raised above its present level, and so provide not only foreign exchange, but cash surpluses for the purchase of the products turned out by the new industries. Professor W. A. Lewis in his Report *Industrialisation and the Gold Coast*, emphasized the need for making a concentrated attack on the system of growing food in the Gold Coast. This need is equally urgent for all the territories of the region.

There is also the danger that it may be impossible to maintain current levels of development expenditure if international prices fall. The insecurity increases where, as in the Gold Coast, there is too much dependence on a single cash crop. In the other territories, although this dependence is not as marked, a degree of over-specialisation exists, and export revenue is derived from a relatively few agricultural and mining commodities. At the same time, the development of new crops and increased production of those at present being grown require time for research and experimentation with new methods and equipment, and intensive educational work among farmers.

In these circumstances it is not surprising that only modest resources of domestic private capital are available for manufacturing industry. As has been stated above borrowing has been effected chiefly abroad or from the Marketing Boards. A loan of £500,000 floated in the Gold Coast in 1954 attracted little response from private African investors, and it has been necessary, not only in the Gold Coast, but in the other territories, for the governments concerned to undertake a fairly large-scale programme of industrial investment. Industrial Development Corporations in Nigeria and the Gold Coast, and a Development of Industries Board in Sierra Leone are the channels through which government investment in manufacturing industry is regulated. Nevertheless, even in these early stages, private capital is necessary. The Mission from the International Bank for Reconstruction and Development which reported on Nigeria in 1954, recommended the formulation of a national policy endorsed by all legislatures and political leaders of that country, setting forth clearly the terms on which foreign capital would be admitted. The Mission further suggested that government policy should neither discriminate against foreign investors nor grant them special privileges.

So far, the industrial undertakings which have been set up have been mainly concerned with processing local raw materials and developing local crafts. Because of its greater resources of manpower and its more diversified activities, Nigeria perhaps offers better opportunities for industrial development than the other territories. But here again, the Mission uttered a warning against easy optimism. Industrial expansion, it reported, would be modest during the next few years, chiefly owing to the lack of technological and managerial experience and the shortage of skilled workers.

¹ Mining, Commerce and Finance in Nigeria, ed. by M. Perham. Faber, 1948.

GAMBIA

The Gambia consists of a strip of territory some 300 miles long, and from 7 to 10 miles wide, along the River Gambia. The Colony with an area of 29 sq. miles, includes the Island of St. Mary, on which Bathurst stands, and the adjoining Division of St. Mary Kombo. They have their own system of administration. The Protectorate, 3,974 sq. miles in area, includes the Western, Central, MacCarthy Island and Upper River Divisions. The population of the Protectorate was estimated in 1953 as 261,564. A 1953 estimate of the population of Bathurst and Kombo St. Mary was 27,500.

Large deposits of ilmenite (titanium ore) have been discovered, exports of which were scheduled to begin at the end of 1955. At present, the Gambia relies to an unhealthy extent upon groundnuts as the main cash crop, which in most years accounts for some 90 per cent of total exports. Migrant farmers enter the Gambia from French Senegal during the groundnut season, and rent land from the local farmers, with whom they share the crop. There is no railway, and nearly all the crop is marketed through stations along the river, which is navigable to small boats throughout its length in the territory. Small quantities of palm kernels and hides and skins make up the remainder of the exports. Subsistence crops consist of rice, sorghums, millet and maize.

SIERRA LEONE

Sierra Leone consists of the Colony Peninsula, 25 miles long and 10 miles wide; and the much larger area of the Protectorate, which is divided into three provinces: Northern, South Western and South Eastern.

A ten-year development plan drawn up in 1946 was replaced in 1949 by another¹ based on a study of the country's resources and the means by which it could raise production in the following five years. As far as agriculture was concerned, the recommendation was made that upland areas should be used mainly for the cultivation of permanent tree crops, which in Sierra Leone are particularly valuable exports; while the inland valley swamps should be brought under food crops, especially rice. This involves a fundamental change in traditional farming habits, and will take time and organisation before it becomes established. The Plan also recognised the fact that increased agricultural output hinged on better road communications, and provided for the building of some 550 miles of new trunk roads and ten bridges. By 1953, 103 miles of new roads had been opened to traffic and further roads totalling 84 miles in length were being built.

Sierra Leone's staple crop is rice, which is grown almost entirely for domestic consumption. Production has fallen in the last two years, and supplies have had to be imported. Efforts are being made to extend cultivation in lowland areas, and mechanical cultivation by tractors has been introduced in the southern littoral grasslands and north central flood plains. Experiments are also being made with some success in growing rice on cleared swamps along the coast, in the Scarcies region, and in the smaller inland swamp regions of the north. A few rice mills are operated by the government and private enterprise. The Regional Rice Research Station at Rokupr, in Kambia District, is doing valuable work on the study of rice production, particularly on mangrove soil.

Palm kernels are the most valuable export, accounting in 1954 for 33 per cent of the total value of exports. The oil palm grows wild and the collection of the fruit is somewhat haphazard. The Plan recommended the setting up of Pioneer mills at sites to be decided on, and also the

installation of power-driven or hand-manipulated kernel-cracking equipment, to take the place of the uneconomic method of expressing the oil by hand. Eight Pioneer oil mills had been set up by the Sierra Leone Produce Marketing Board by 1954. The Agricultural Department is introducing improved varieties of oil palm, and maintains an oil palm nursery at Njala. Another important export, which is almost exclusive to Sierra Leone, is piassava fibre. The fibre is used for making good-quality brooms and brushes and is produced from the stalk of the raphia palm which grows almost entirely in the Bonthe and Pujehun Districts. The Plan recommended the cutting of new waterways into the more inaccessible swamps.

Table 6 shows the production for export of the main cash crops for 1938 and 1947-50, and the targets set by the Plan. Table 7 shows estimated production of crops in 1953. The most promising increases have occurred in coffee and cocoa production, which has risen from 317 and 1,620 tons respectively in 1950, to an estimated 1,500 and 1,777 tons in 1953. Mechanical coffee-hulling is being introduced.

Livestock. Only approximate figures are available. It was estimated that in 1954 there were some 150,000 head of cattle, 25,000 goats, 10,000 sheep and 4,000 pigs. There is an animal husbandry station at Musaia and herds are maintained at Newton in the Colony, Njala in South Western Province, and at Rokupr.

Minerals. Exports of diamonds, chrome ore and iron ore amounted to £4,555,592 in 1954 and represented about 40 per cent of the total value of exports. High-grade haematite iron ore is mined in the Marampa Chieftdom and exported by a short rail haul to the port of Pepel. The Company engaged in developing these deposits is extending its activities to larger deposits further inland, although development of the new areas has not yet started. Chrome ore is mined at Ngerihun, near Hangha; diamonds in the Kono District, around Yengema. There is some illicit mining of, and trade in, diamonds. Small amounts of platinum, gold and bauxite are mined, but are of minor significance. Promising deposits of rutile have been discovered near the southern seaboard, and are likely to be exploited soon.

Communications. There were, in 1953, 2,756 miles of roads in the country, of which 1,604 miles were maintained by the Public Works Department, 1,030 miles by local government bodies, and 122 miles by private companies. Only a small proportion of the roads is tarred.

There are 312 miles of railway open to the public. A line from Marampa to Pepel, 57 miles long, is owned and maintained by the Sierra Leone Development Corporation, and is not open to the public.

Launch routes, estimated at 493 miles in length, are an important part of the system of transport. This mileage includes the coastal services from Freetown to the estuaries of the Great and Little Scarcies, and from Freetown to Bonthe.

GOLD COAST

The Gold Coast is divided into 6 regions: the 4 regions of the Colony (Accra, Western, Eastern and Trans-Volta/Togoland), the Northern Territories and Ashanti. The capital is Accra which, at the time of the 1948 census, had a population of 133,192 Africans and 2,734 Europeans. Togoland, which is under United Kingdom Trusteeship, is divided for administrative purposes into a northern part, included in the Northern Territories; and a southern section (Ho Administrative District) included in the Colony. The 1955 population estimate for the whole country, including Togoland, is 4,619,000.

¹ *A Plan of Economic Development for Sierra Leone*, H. Childs, 1949.

THE BRITISH COMMONWEALTH

Development. The Development Plan of the Gold Coast, approved by the Legislative Assembly in 1951, originally provided for expenditure of £77·5 million over the period 1951–56. Under the revised Plan this total has been increased to £81·8 million. Expenditure on development for the three years 1951–52, 1952–53 and 1953–54 was, respectively, £6·5, £13·9 and £15·6 million, and it was estimated that works completed and in progress in 1954–55 would cost £25·6 million. Expenditure is financed primarily by contributions from cocoa duty; also from Colonial Development and Welfare funds, loan funds and other sources. The contribution from cocoa duty in the two years 1951–52 and 1952–53 amounted to £14·5 million and £12·8 million respectively.

Agriculture. Farming methods and the types of crops grown are similar to those of Nigeria, described later. The Gold Coast, however, is more dependent on a single crop (cocoa) to pay its way. In the northern zone yams, cereals, shea butter, pulses and groundnuts are produced; in the forest zone, cocoa, oil-palm products, coconuts, citrus fruit, root vegetables, cereals and groundnuts; and in the coastal belt, coconuts, root vegetables and pulses. Rubber, coffee, cotton, bananas and fibres are produced in relatively small quantities; they are, nevertheless, becoming of increasing value as exports.

The volume of food produced in 1954 was estimated at 2·9 million tons. Apart from the lack of variety in local diet—a feature common to all the West African territories—domestic production of subsistence food is insufficient, although it is difficult to assess the degree of insufficiency; and quantities of what might be termed basic foodstuffs—maize, rice and palm kernel products—are imported.

The Development Plan set out two objectives of agricultural policy: the long-term one of diversifying agriculture by expanding the production of other crops besides cocoa, and increasing livestock output; and a shorter-term policy of seeking to improve output within the existing agricultural framework. Work under the first heading includes tsetse-fly control, soil surveys and conservation and experimental work to test the suitability of climate and soils for new crops or crops which are grown at present on a relatively small scale. The Plan also took note of the need to introduce mechanised farming in selected regions. A large-scale experiment of this kind is being carried out at Damongo, in the south-west of the Northern Territories. There a reserve has been made of some 32,000 acres, of which approximately 4,000 acres have so far been cleared and planted with groundnuts, rice, tobacco and sorghums. The scheme is being administered by the Gonja Development Company, a subsidiary of the Agricultural and Fisheries Corporation.¹ Mechanised cultivation is also being tried in a few other areas.

In 1954, for the first time, loans were made to farmers other than cocoa growers (who receive loans through the Cocoa Marketing Board) and the service is being expanded.

Cocoa. In any consideration of the economy of the Gold Coast the relatively high value of cocoa output to total output, and the dependence of the country on cocoa exports stand out. In the years 1948–51 the value of cocoa produced was estimated at from 30 to 40 per cent of the value of all food crops,² and in 1953–54 the proportion had remained unchanged. In that year main crop cocoa was

purchased for £27,664,357, while the value of food crops consumed was estimated (in 1953) at approximately £71,812,000 (Table 16). The value of cocoa production was thus approximately 38 per cent of the total.

Even more marked is the increasing predominance of cocoa in the country's exports. In 1938 the value of cocoa beans exported was approximately 40 per cent of the value of total exports. Due to the larger increases in cocoa prices in the international market in relation to other Gold Coast exports, in post-war years the proportion has risen to a little over 70 per cent of the total value of exports. Volume of production has, however, declined as a result of the devastation caused by "swollen shoot" and other diseases. Maximum production was reached in 1936 when 311,151 tons were exported. Monthly averages of exports were (in tons) 21,936 in 1938; 15,020 in 1947, and over the five-year period 1950–54, about 19,300 tons. The increase in cocoa production in Ashanti has not yet been sufficient to compensate for the decline in the older cocoa-growing areas of the Eastern Region and the Colony. The danger of depending for earnings of foreign exchange on a single crop, further increase of which is hampered by the difficulty of pest-control and which is, moreover, subject to wide fluctuations in demand as tastes change, is understood, but the production of alternative crops will take time, and must be preceded by research and experimental work. Table 22 shows the values and quantities of agricultural products, other than cocoa, exported during 1953 and 1954.

There are two marketing boards: the Cocoa Marketing Board, and the Agricultural Produce Marketing Board which at present handles oil-palm produce, copra, coconut oil, shea nuts and butter, coffee and groundnuts. The Boards fix standards of quality and minimum purchasing prices, maintain reserves for research, and finance schemes benefiting the peoples of the producing areas. An Ordinance of October, 1954 provided for the raising of the export duty on cocoa if the price should exceed £260 per ton. The proceeds of the additional duty accrue to the Government and are to be used to assist the economy as a whole, especially agriculture. Cocoa prices fell during 1955.

Mining and Manufacturing. Mining products are the next important export after cocoa, earning in 1954 approximately £19,320,000. Gold is mined in the Colony around Tarkwa and Dunkwa, and at Obuasi in south Ashanti; diamonds in the Birim valley. A notable feature of diamond-mining in the last few years has been the increase in the quantity produced by African diggers, which accounted for 70 per cent of the total output of diamonds in 1952. The proportion has since declined.

The Gold Coast is an important source of high-grade manganese ore. The mining of bauxite is a fairly new development. Considerable reserves exist, but at present they are being mined only on a small scale by a British company.

In 1953 Professor W. A. Lewis submitted his report³ on the possibilities of developing industry in the Gold Coast. In it he suggested the establishment of the following industries or, where small factory production was already in existence (as in the case of beer, furniture and bricks and tiles) the expansion of those facilities: oil-expressing, canned fruits and vegetables, salt (to be produced by the evaporation of sea-water), beer, bricks and tiles, glass and wood products. He noted that larger supplies of palm kernels and of suitable fruit and vegetables would have to be built up before processing plant could begin to operate on an economic basis. High-quality glass sands are available locally. The establishment of factories producing lime, salt and alcohol would be the first stage in the development of a chemical industry. The *Economic Survey*

¹ At the end of March, 1955 the Gold Coast Assembly passed through the Committee stage a Bill to create an Agricultural Development Corporation which would take over the functions of the Agricultural and Fisheries Corporation, the Agricultural Produce Marketing Board and the Loans Section of the Ministry of Agriculture.

² Report on *Financial and Physical Problems of Development in the Gold Coast*, Dudley Seers and C. R. Ross, 1952.

³ *Industrialisation and the Gold Coast*, W. A. Lewis, 1953.

of 1954 describes the progress which has been made. The Industrial Development Corporation, a government organisation created in 1947, had by September 1954 received some £945,000 out of a maximum total allocated to it of £1,000,000, of which £696,000 had been spent and £249,000 fully committed for existing or new projects. Subsidiary limited companies had been established for furniture making, joinery and wood-carving, bread-making, the manufacture of matches from local wood, the production of sectional timber houses, and the manufacture of wire nails. The Corporation had also invested in two companies, an oil mill in Accra to refine edible oils, and a tyre-re-treading company. Other possibilities are being investigated, including the installation of refrigeration plant to provide cold storage on hire, and the manufacture of paper, soap and compressed board. A shoe factory using modern machinery has already been installed in Accra. New industries which are declared to be "pioneer" industries are exempted from income tax during the first five years of operation.

The habit of private investment by the better-off members of the community in manufacturing enterprises has not yet been formed. Apart from the fact that the supplies of surplus funds are not large, investment in government securities and Treasury Bills is unattractive because of the low rates of interest offered in comparison with the returns obtained from other activities. In 1954 the Government placed funds at the disposal of the Bank of the Gold Coast to enable it to engage in mortgage business, and this should help small entrepreneurs by providing them with working capital to start or expand business. Short-term loans are also negotiable through the Guarantee Corporation created in 1954.

Communications. Total road mileage in 1954 was 8,100, excluding the mileage of roads built and maintained by local authorities and by the timber companies.

The main railway line runs from Takoradi to Kumasi, thence to Accra. There were 535 miles of track open at the beginning of 1954, since increased by a 17-mile stretch of line from Accra to the new port at Tema. A branch line from Achiasi to Kotoku, built with funds provided by the Federal Operations Administration of the United States was opened in February 1956. This line will shorten the distance between Takoradi and Accra by 160 miles.

The Gold Coast has no good natural harbours. Until the completion of an artificial harbour at Takoradi in 1928, merchandise had to be transported by surf boats and lighters to and from ships, and this is still the method used at Accra, Winneba and other ports. Extensions to Takoradi Harbour were started after the war and have now been completed. In 1952 the Government decided to build a new port at the village of Tema, east of Accra. By the end of 1954 the new road and rail links with Accra had been finished, and work had started on the new port and town which is to replace the village.

Volta Scheme. The development at Tema is linked with a much more ambitious scheme, described in a White Paper of November 1952, for the exploitation of the Lower Volta River as a source of power. The scheme falls into three parts; the construction of a dam and power station at Ajena, some 70 miles from the mouth of the Volta; the building at Kpong of an aluminium smelter which would draw on local supplies of bauxite and obtain its power from the Ajena station; and the carrying out of extensive public works such as port facilities, railways, roads, housing and schools. Financing of the scheme would be shared by the Governments of the United Kingdom and the Gold Coast, a Canadian and a British aluminium company. A Preparatory Commission was appointed in 1952 to carry

investigations forward. The work which is now proceeding at Tema is capable of being fitted into the larger scheme, if it is decided to undertake it.

NIGERIA

Nigeria is divided into three regions: Northern, Eastern and Western, with their capitals respectively at Kaduna, Enugu and Ibadan. Lagos, separated since October 1st, 1954 from the Western Region, is the capital of the whole country. On the eastern boundary is that part of the Cameroons which is under United Kingdom Trusteeship. The Southern Cameroons, formerly included in the Eastern Region, has become, since October 1st, 1954 quasi-federal territory with its own legislature, over which the Commissioner of the Cameroons presides. The Northern Cameroons continues to be administered as a part of the Northern Region.

The Northern Region covers more than two-thirds of the country and has slightly more than half the total population. Population densities here are low in comparison with the other regions, although the Provinces of Kano and Katsina have densities of 204 and 157 per sq. mile respectively. The Western Region is more heavily populated, the highest density being reached in the Province of Ibadan with 365 people to the square mile. The Eastern Region is the smallest in area and the most heavily populated. Densities in the three largest provinces—Owerri, Onitsha and Calabar—are estimated respectively at 537, 363 and 247 persons to the square mile.¹

The proportion of the population depending on wage-earning for part or the whole of its income is small, as would be expected in an area where the vast majority are employed in agriculture on their own account. Exact year-to-year figures are not available for most occupations, with the exception of mining and government employment. A United Nations source² gave the following estimates for the wage-earning population in 1953: those engaged in agriculture and forestry, 47,300; building, 33,500; commerce, 23,500; transport, 42,700; government service, 64,000. The same source estimated the number of those employed in commerce and manufacturing in 1952 as 109,100, but the estimate is probably too high. These figures do not take into account those employed in domestic service, which in 1951 was estimated to absorb some 18,400 persons.

Agriculture. Information concerning the production of crops, area cultivated and general agricultural potentialities is extremely limited at present. No complete agricultural census has yet been taken. The Sample Census of Agriculture 1950-51, although valuable as a general guide, covers less than one per cent of the total number of villages in the country. Its estimates of production of some of the main crops are set out in Table 33. The later report prepared by the United Nations² confirms some of these estimates, although production figures of groundnuts and cocoa differ considerably from the Census figures. Since 1951 much educational, research and development work has been done, and increased production of export crops is shown in the rise in the volume of exports. On the other hand, the increase in subsistence crops may not have been so marked, and in some areas production may even have fallen, due to the greater attractiveness of cash crops.

Yet, despite the lack of full information, the Sample Census and the later estimates probably give a fairly accurate picture of the present position. Some 80 per cent of the population, engaged in growing mixed farm and tree crops on smallholdings which average from three to five acres,

¹ Census of 1952-53

² United Nations: *Review of Economic Activity in Africa, 1950-1954*

THE BRITISH COMMONWEALTH

produce about 56.1 per cent of the total gross domestic product, which in money terms is estimated at £382.2 million.

While in the decades before the war, more attention was paid to those crops which were valuable as exports, in recent years the need to increase and improve on crops consumed locally and introduce greater variety in order to remedy deficiencies in local diet has been recognised. The Agricultural Department, working in conjunction with the Regional Production Development Boards, is endeavouring to raise output by the use of fertilisers and more efficient tools, and by the introduction of some mechanised farming, necessarily on a limited scale at first, in specially selected areas. New crops have been introduced, and research work on soils and on control of plant pests and diseases is now more systematic. Experimental farms, group farming and land-settlement schemes, and the use of co-operative marketing and consumers' societies are some of the methods which are being tried.

Owing to the various modes of shifting cultivation by which land which has become unproductive is temporarily abandoned to permit a period of regeneration, only a small proportion of the total land area, estimated at 10 per cent, is in active use. Forests account for 32 per cent, and uncultivated land for about 57 per cent of the total. Much of the uncultivated land has, it is thought, been at some time or other under cultivation, and is capable of being brought into production again as more knowledge is accumulated about local conditions.

The variations in rainfall, humidity and temperature are described in the Geographical Survey, and need not be referred to here. Of the five main export crops, groundnuts and benniseed (sesame) are grown in quantity mainly in the dry northern belt, cotton in the southern provinces of the Northern Region, although a variety is grown in the Western Region, in parts of the Provinces of Oyo, Ondo and Ibadan. Cocoa is cultivated in the south-west, while the oil palm flourishes particularly in the Eastern Region. Subsistence crops, consisting mainly of root vegetables, pulses and cereals, are grown throughout the country, but the most productive area is in the so-called Middle Belt which exports food to regions where export crops are grown and where, consequently, less attention is paid to food crops. Rice cultivation is being encouraged in riverine and swamp areas, where work is being carried out to control and distribute the flood waters more equally over wide stretches of country.

Tree crops—cocoa, oil palm, kola trees, bananas, plantains and rubber—are an important feature of the economy in the south. Most of these are grown on smallholdings. There are, however, fairly extensive plantations of bananas, rubber and oil palms in the Cameroons operated under lease since 1946 by the Cameroons Development Corporation. Plantations of citrus fruit have also been established in the Ibadan area, and of oil palms and rubber by the United Africa Company in the Eastern Region, near Calabar and Sapele.

Farming is concentrated around the village, the size of the surrounding cultivated area varying according to population size, and the nature of the soil and terrain. There are few paid agricultural workers, except in the cocoa-producing areas and on the banana, oil palm and rubber plantations. Each adult has a plot of land on which he grows food for himself and his family. In most regions the plough is unknown, its place being taken by the hand hoe; nor are fertilisers used. In parts of the north, however, fields are manured by the herds of the nomadic Fulani which are allowed to graze on them during the dry season, after the harvest. "Green manure" (that is, a compost made of vegetable refuse) is used in areas where there are no cattle and in heavily farmed areas of the cattle zone,

particularly around Kano. The system of shifting cultivation allows for a period of fallowing. When the land becomes impoverished through cultivation over a period varying from one to three years, it is allowed to revert to bush while the farmer moves on to new land. In regions where the population density is low, land which has been cropped for a number of years is abandoned indefinitely; but this fallowing period tends to decrease in the more populous parts of the country. The advantage of bush fallowing is that it gives time for a cover of bush to grow which protects the soil from erosion.

Livestock. principally the Zebu strain of cattle, are concentrated in the tsetse-free area of the Northern Region and in the Bamenda Province of the Southern Cameroons, where they are kept by the pastoral Fulani. These herds, however, are subject to trypanosomiasis (sleeping sickness) and so cannot be introduced into the fly-infested Western and Eastern Regions, where small numbers of a strain of Muturu cattle, which have considerable tolerance of the disease, are kept. Experiments are being carried out on stock farms in the Provinces of Zaria, Oyo and Bamenda to up-grade Muturu cattle with imported herds, and produce a type of good milk and beef cattle capable of withstanding trypanosomiasis.

Goats and sheep are kept mainly in the Northern and Eastern Regions. The "Red Sokoto" goat, native to the Provinces of Sokoto and Kano, produces the bulk of the world's morocco leather.

Industry. The main industries are mining and building (including civil engineering), which were estimated as producing £57.8 million of the total gross domestic product in 1952-53.

Nigeria is a leading world producer of tin, ranking after Malaya and Indonesia, Bolivia and the Belgian Congo. Tin is mined near Jos in the Plateau Province. Approximately 95 per cent of the columbite available outside the U.S.S.R. is also produced in Nigeria. This mineral, invaluable in the production of special steels for modern aircraft engines, is found in association with tin in various parts of the Bauchi Plateau. About half a million tons of coal are produced annually at Enugu, in the Eastern Region, nearly the whole of which is consumed locally, mainly by the railways. Gold production has fallen considerably from approximately 26,000 troy ounces in 1937 to 912 troy ounces in 1954. It is entirely in the hands of small firms or private operators. Most of the gold mined is absorbed internally. Traces of oil have been found in Calabar Province, but it is not yet known whether the deposits are large enough for commercial exploitation.

There is little manufacturing industry. The main difficulties in planning development are those which are present in all under-developed regions. These are the problems of deciding priorities, of finding the necessary capital, and training managers and skilled workers. A beginning has been made, however, in the direction of setting up factories to process domestic raw materials. The United Africa Company operate a plywood factory at Sapele, and there are sawmills, soap factories, a brewery, a cigarette factory which uses a blend of imported and home-grown leaf, a fruit-canning factory, some light engineering works and tyre re-treading plants. In the Northern Region the British Cotton-Growing Association has established cotton ginneries, and there are groundnut oil mills in the Region. Pioneer oil mills for the more efficient extraction of oil from the palm kernel have been set up in various parts of the country. A margarine factory was started at Apapa in 1954. Two textile mills are in operation, at Kano and Lagos. Nevertheless, Nigeria is still at the handicraft stage of development. Weaving and spinning are done in

villages and on farms, and some 40 per cent of the cotton produced is consumed in home manufacture. Woodwork, basket-making and pottery are other home industries, and centres for the training and advice of craftsmen in these and other trades have been organised by the federal and regional governments.

Marketing and Development Boards: Co-operative Societies. The Marketing Boards have played an extremely important part in the economic and financial life of Nigeria—not only in raising the production and quality of the four main agricultural products of the country, but also in supplying development capital.

The Cocoa Marketing Board was set up in 1947; the Groundnut, Oil Palm Produce and Cotton Marketing Boards in 1949. In the post-war period, when prices of primary products have been rising, the boards have been able to accumulate large surpluses, part of which has been held as reserves against falls in export prices. Legislation in 1951 and 1954 transferred to the Regional Production Development Boards responsibility for the economic activities of the Marketing Boards and placed the latter on a regional basis. A Central Marketing Board has also been created, to set standards of quality and arrange for transport and overseas marketing. Price and stabilisation policies remain the concern of the regional boards.

Regional Development (Loans) Boards and Regional Production Development Boards were created in 1949. The latter are concerned with promoting schemes for land settlement and agricultural development, for the establishment of industries and the improvement of communications, and with encouraging scientific research. They are financed by the Marketing Boards from surpluses accruing from the sale of produce.

Co-operative Thrift, Credit, Marketing and Consumers' Societies function in each region.

Government Revenue and Expenditure. A feature of the Nigerian budget—and, indeed, of the budgets of the other B.W.A. territories—is the dependence on customs and excise duties for a large part of revenue and the comparatively small amounts contributed by direct taxes. Under the heading of "Direct Taxes" are included Company Tax, charged at a flat rate of 9s. in the £ on profits computed on principles similar to those applying in the United Kingdom, and income tax payable by non-Africans throughout the country, and by Africans who are resident in, or derive income from Lagos. Income tax is charged on incomes of £150 or less at a flat-rate, after deduction of personal reliefs, of 6s. to 18s. per annum. Higher incomes are taxed at a rate rising from 4½d. in the £ to 15s. in the £ (on incomes exceeding £10,000). The amounts paid by companies in the years 1953 and 1954 were respectively £6,410,000 and £4,477,000. Tax on personal incomes therefore, represents only a fraction of revenue (Table 38).

In 1938 and 1939 there were budgetary deficits of £34,000 and £1,056,000 respectively. In each year since the war surpluses have been registered, except in 1949 when there was a deficit of £87,000. The general revenue balance at March 31st, 1954 was £31,052,000. The Government's reserves are held in various funds, the largest being the Revenue Equalisation Fund, established to meet recurrent expenditure at present being met out of

Colonial Welfare and Development grants. At April 1st, 1954 the balance in the Fund amounted to £16,040,000.

The Lagos Conference which met in January-February of 1954 decided on important changes in revenue allocation to the Regions. Under the Nigeria (Revenue Allocation) Order in Council of 1951, regional legislatures were empowered to impose certain taxes, but the central government continued to collect, and to keep most of the proceeds of income tax, customs and excise duties and mining royalties. The system of regional distribution approved at the Lagos Conference provides for the allocation to the regions, on a derivation basis,¹ of the whole of the import duty on motor spirits, and of one-half of the proceeds of other customs and excise duties (including export duties); the distribution of mining royalties to the region of origin; the allocation of federal personal income tax proceeds to the region of the taxpayer's residence; and for the retention by the Federal Government of the proceeds of income tax on companies and on residents in Lagos. It was also further agreed that grants totalling £7 million would be made to the regions as their share of federal reserves. Since application of the principle of derivation might tend to aggravate regional differences in financial strength, the Fiscal Commissioner recommended that the Federal Government should have power to make discretionary grants to regions.

In March, 1955 the House of Representatives approved an interim development plan which includes a number of urgent projects recommended by the International Bank Mission. The interim plan will cost over £22 million, of which some £9 million will be spent during the financial year 1955-56.

Communications.

Railways: There are 1,903 miles of standard-gauge railway (2,218 miles of track), and 133 miles of narrow-gauge railway, from Zaria to Jos. There are main lines from Lagos and from Port Harcourt which meet at Zaria, to Gusau and Kaura Namoda to the west and to Nguru to the east. Over 80 per cent of the gross earnings of the railway is from goods traffic. Until 1955 the railway was under the direct control of the government, but in that year the Railway Corporation was established, so that the railway will in future be run as a commercial body and will have much greater administrative freedom. There are various plans and possibilities for development, some of which have been recommended by the International Bank, which the new Corporation is to consider.

Water Transport: Lagos and Port Harcourt are the principal ports of Nigeria, but there are smaller ports at Calabar, Burutu, Sapele, Warri, Victoria and Tiko. The Niger, which is navigable for 537 miles upstream to Jebba, and its main tributary, the Benue, are the chief inland waterways. The Nigerian Ports Authority, set up in 1955, is responsible for all inland waterways and port and shipping facilities.

The road mileage in 1953 was approximately 28,807, of which 1,631 were tarred. Lagos and Kano are international airports.

¹ That is, that the proceeds of taxes should be divided among the regions in the proportion in which the peoples of those regions have contributed to them.

REGIONAL ORGANISATIONS

WEST AFRICAN INTER-TERRITORIAL COUNCIL

The West African Inter-Territorial Conference was set up in 1951, following the dissolution of the West African Council. In 1953 the title was changed to the West African Inter-Territorial Council and it was agreed that the Governor of Nigeria should be its permanent President.

The functions of the council are.

- (a) to review progress on research on an inter-territorial basis
- (b) to receive reports on inter-territorial collaboration in social and economic matters and to recommend policy
- (c) to consider (a) and (b) above in their international context
- (d) to approve estimates submitted by the West African Inter-Territorial Secretariat, and to consider any matter referred to it by any West African government.

Chief Secretary: S. J. E. SOUTHGATE.

WEST AFRICAN COURT OF APPEAL

The West African Court of Appeal was set up in 1948 when the offices of President and Justice of Appeal were created. The judges of the Supreme Courts of the four West African territories are the remaining members of the Court.

President: SIR HENLEY COUSSEY.

Justice of Appeal: SIR KOBINA ARKU KORSALI.

REGIONAL COUNCILS AND INSTITUTES

West African Cocoa Research Institute: P.O. Box 8, Tafo, Gold Coast; sub-station at Ibadan, Nigeria; f. 1944; scientific investigation of all problems affecting cocoa production in West Africa; senior specialist staff of ca. 25; experimental station at Tafo (930 acres); publ. *Annual Report, Technical Bulletins*; Dir. J. LAMB, O.B.E.

West African Council for Medical Research: Headquarters: Yaba, Nigeria; f. 1954 following re-organisation of medical research in West Africa; Dir. Lt.-Col. J. H. WALTERS, M.D., M.R.C.P.

The Council incorporates:

West African Virus Research Institute.

Helminthisis Research Unit (Southern Cameroons).

Hot Climate Physiological Research Unit, Oshodi, Nigeria.

West African Council for Medical Research Laboratories, Private Bag 2582, Lagos, Nigeria.

West African Examinations Council: Headquarters: Achimota, Gold Coast; branch office in Nigeria, reviews examinations held in the four West African territories and aims to develop an examination system suitable to their needs; Registrar K. A. C. HUMPHREYS.

West African Fisheries Research Institute: Headquarters: Kissy, near Freetown, Sierra Leone; f. 1945; responsible for research in fish and fisheries (marine and fresh-water); possesses a well-equipped sea-going research vessel and two seine boats; Dir. A. G. TAYLOR.

West African Institute for Oil Palm Research: Headquarters: Bemin, Nigeria; sub-stations in Calabar Province, Nigeria and at Njala, Sierra Leone; responsible for research in oil palm production and for recommending improved methods; Dir. F. W. TOOVEY, O.B.E.; Deputy Dir. C. W. S. HARTLEY.

West African Institute for Social and Economic Research: Headquarters: University College, Ibadan, to which it is attached; f. 1950 to undertake and co-ordinate social and economic research in British West African territories.

West African Institute for Trypanosomiasis Research: stations at Vom and Kaduna, Nigeria; f. 1951 to undertake research into human and animal trypanosomiasis and to serve the four West African territories, Dir. (Vacant); Deputy Dir. T. A. M. NASH, O.B.E.

RELIGION

AFRICAN RELIGIONS

The beliefs, rites and practices of the peoples of West Africa are even more diverse than the peoples themselves. The diversity is not only between racial groups or geographical areas, but extends from tribe to tribe, from village to village and from family to family; and indeed, since in many places it must be decided individually for each child which god he or she shall worship, from individual to individual. It is extremely difficult to generalise sufficiently even to discuss African religions as a whole in any intelligible manner: but Mr. Geoffrey Parrinder, in his book *West African Religion* has suggested a workable classification:

First, there may be distinguished a supreme God or creator, sometimes above the other gods, sometimes the first among equals. Secondly, there are gods associated with natural forces—such as thunder, rain, wind or sun, which are usually non-human spirits. Thirdly, there is the ancestor cult: human gods who are invested with divinity after death, and become the moving spirit in the lives of their descendants. Fourthly, there are the inanimate gods, the charms and amulets round which, in some cases, a definite cult, with its own temple and priesthood, develops.

Many differing attitudes are taken up towards the supreme God, but he is usually more remote from human

affairs than the ancestors or the gods associated with natural forces. Most Africans recognise, in theory, a supreme God as the ultimate source of human inspiration, but it is the lesser gods, and often most of all the gods associated with the village or family, which most influence daily life.

In many cases, the categories overlap; the ancestor, or the god of wind or the water spirit often assumes the importance of a supreme God. The supreme God is sometimes identified with the sky god, often also paired with an earth god or goddess, or the nature gods may become sky, earth, water or forest-spirits and merge with fairies and departed souls. Thunder gods exist almost everywhere, and they and all nature gods are in general powerful but benevolent, whereas some earth gods, such as smallpox gods or gods associated with the snake cult, are unfriendly, respected but feared.

Appeasement is often as important as worship, and offerings and ceremonies play an important part in religious observance. Fear, but also vigorous self-discipline may result from religious belief. Discipline is also exerted by the priests, who themselves in many cases receive vigorous and exacting training and who not only exact the demands of the gods but also insist on standards, often very high standards, in daily life.

These are only some of the outlines, and it is not possible here to discuss the detailed manifestations or the lesser influences, the shrines, the charms, the diviners and oracles, and the magic; and knowledge of them, among foreigners, is in any case slight. What is beyond question is that religion to African peoples is a matter of seriousness and importance, and that, being polytheistic, there is no great resistance to other religions nor, except on particular issues, any sense of conflict. (It is, for instance, easy enough to identify the Christian God with the supreme God of African religions.) The beliefs of Ancient Egypt, Islam and more recently Christianity have influenced the development of religious belief in West Africa. There are a number of Mohammedans and Christians among West African peoples, and there are probably many others who, while continuing with their traditional religious beliefs have also absorbed and combined with them beliefs from outside.

ISLAM

In the eleventh century, a movement began among the Arabs and Berbers of the Western Sahara which was to spread the Mohammedan faith in West Africa; and to-day there are large numbers of Mohammedans in Gambia, in parts of Sierra Leone, in the Northern Territory of the Gold Coast and in Northern and Western Nigeria.

ANGLICAN COMMUNION

THE BRITISH COMMONWEALTH

GAMBIA

THE CONSTITUTION

The Gambia (Constitution) Order of 1954, whose provisions apply to both the Colony and the Protectorate, provides for an Executive Council of 4 *ex-officio*, one official and not less than 6 appointed members, thereby for the first time in Gambian history ensuring an unofficial majority. All the appointed members must be elected or nominated unofficial members of the Legislative Council. Three of the appointed members have been given the functions and responsibilities of Ministers, assisted in each case by an advisory council.

The Legislative Council consists of a Speaker, 4 *ex-officio* members, 1 nominated official member, 2 nominated unofficial members and 14 elected members. Of the elected members, 4 are directly elected to represent Bathurst and Kombo St. Mary, 7 are indirectly elected to represent the Protectorate and 3 are indirectly elected from names submitted by the Bathurst and Kombo St. Mary Municipal Councils.

THE GOVERNMENT

Governor and Commander-in-Chief: SIR PERCY WYN-HARRIS, K.C. M.G., M.B.E.

EXECUTIVE COUNCIL

President: The GOVERNOR.

Ex-Officio Members: The COLONIAL SECRETARY, The ATTORNEY-GENERAL, The FINANCIAL SECRETARY, The SENIOR COMMISSIONER.

Official Member: S. H. O. JONES, O.B.E.

Appointed Members: H. A. MADI, J.P., J. L. MAHONEY, K. K. SANNETH, LANDING SONKO.

MINISTERS

Education and Welfare: P. S. N'JIE, B.L.

Works and Communications: REV. J. C. FAYE, M.B.E.

Agriculture and Natural Resources: I. M. GARBA-JAHUMPA, J.P.

LEGISLATIVE COUNCIL

President: The GOVERNOR

Speaker: J. A. MAHONY, M.B.E., J.P.

Ex-Officio Members: The COLONIAL SECRETARY, The ATTORNEY-GENERAL, The FINANCIAL SECRETARY, The SENIOR COMMISSIONER.

Nominated Official Member: S. H. O. JONES, O.B.E.

Nominated Unofficial Members: E. F. SMALL, O.B.E., T. D. MALLINSON.

Elected Members: 14.

CIVIL ESTABLISHMENT

Colonial Secretary: A. N. A. WADDELL, C.M.G., D.S.C.

Attorney-General: L. WESTON.

Financial Secretary: A. R. CLARK, O.B.E.

Senior Commissioner: G. HUMPHREY-SMITH, O.B.E.

Directors of Departments: J. A. AUSTIN (Agriculture), J. W. FOREST (Education), S. H. O. JONES, O.B.E. (Medical Services), D. H. YARNOLD (Public Works).

POLITICAL PARTIES

Democratic Party: Leader: Hon. and Rev. J. C. FAYE, M.B.E.

Gambia Muslim Congress: Leader: Hon. I. M. GARBA-JAHUMPA, J.P.

United Party: Leader: Hon. P. S. N'JIE, B.L.

THE LEGAL SYSTEM COLONY

The legal system of the Colony is based on English Common Law but includes Colony Ordinance and other subsidiary legislative instruments enacted locally, and a Mohammedan Lay Recognition Ordinance by which a Mohammedan Court exercises jurisdiction in certain cases between, or exclusively affecting, Mohammedan natives of West Africa.

The Supreme Court has the same jurisdiction as the High Court of Justice in the United Kingdom. It is a Court of Appeal from the Lower Courts and has the right of revision and review over all proceedings in the Colony. Criminal cases are tried before a Judge with a jury of 12. All males between 21 and 60 who have some knowledge of English and are either members of a liberal or learned profession, or have a £7 property valuation, or are ratepayers to the value of £10 a year, or receive a salary of £50 or the equivalent, are liable to be called upon to serve on a jury. Any person charged with an offence other than a capital offence may elect to be tried by a Judge, assisted by assessors, rather than by a jury. Since all subordinate courts are courts of summary jurisdiction, any person charged with a grave offence (treason, murder, manslaughter or robbery with violence) must come before the Supreme Court. Any adult charged with an offence punishable by imprisonment of more than 3 years but triable as a summary conviction offence, may be tried summarily only with his recorded consent.

The Bathurst Police Court, The Court of Requests and the Subordinate Court of the Kombo St. Mary Division: the subordinate courts are all courts of summary jurisdiction presided over by the Colonial Magistrate or in his absence by two or more lay Justices of the Peace, who also have power to inquire into all cases punishable on information before the Supreme Court.

The Mohammedan Court has jurisdiction in matters between, or exclusively affecting, Mohammedan natives of West Africa and relating to civil status, marriage, succession, donations, testaments and guardianship. A Cadi, or where, in the opinion of the Governor, the Cadi is not a man of "uncontested ability", a Cadi and two assessors, presides over and constitutes the Mohammedan Court. Assessors of the Mohammedan Court are Justices of the Peace of Mohammedan faith.

Judge, Supreme Court: B. R. MILES.

PROTECTORATE

The law in force in the Protectorate is the law which is at any one moment in force in the Colony, together with such native law and custom as is not incompatible with it.

The High Court of the Protectorate is constituted by the Judge of the Supreme Court of the Colony and has in the Protectorate the same powers and functions as the Supreme Court has in the Colony, subject only to relaxation in specific instances on account of native law or custom. All cases, civil and criminal, are tried without a jury but the Judge may appoint assessors for advisory purposes only.

Subordinate Protectorate Courts are constituted by Commissioners of the Protectorate as *ex-officio* magistrates. They have restricted jurisdiction in both civil and criminal cases and this jurisdiction is concurrent with that of the Native Tribunals.

Native Tribunals are established by the Governor under the Native Tribunals Ordinance, 1933. Group Tribunals may try criminal cases which can be adequately punished by 12 months' imprisonment or a fine of £25 or both, and civil cases up to a £50 suit value. For District Tribunals the limits are 6 months and £10 for criminal cases and £25 for civil cases. Native Tribunals may also impose any punishment authorised by native law or custom which is not incompatible with British law or sense of justice and humanity. The Tribunals have jurisdiction over any member of an African race, but the Governor may exempt certain individuals or groups and the District Commissioner has the right of supervision and may direct that any case be transferred to a British subordinate court.

RELIGION

See also General Section on RELIGION page 668.

Gambia and Rio Pongas (Anglican) Mission: Bathurst; has a Cathedral in Bathurst in the Colony and, in the Protectorate, a Church and a Mission School at Kristikunda and a Medical Mission at Kumbul; also runs an elementary school in Bathurst; Leader The Rt. Rev R. N. COOTE, Bishop of Bathurst and Rio Pongas.

Roman Catholic Mission: Bathurst, The Holy Ghost Fathers and the Sisters of St. Joseph of Cluny; has a Church in Bathurst and 6 in the Protectorate; and Secondary and Elementary Schools in Bathurst, and 3 Elementary Schools in the Protectorate; Leader Mgr. M. MALONEY.

Methodist Mission (The Gambia): Bathurst has 2 Churches in Bathurst, 2 in the Colony and one in Georgetown (Protectorate); runs elementary and secondary schools, Leader The Rev. H. WAKEFIELD.

THE PRESS

Gambia Echo, The: Bathurst; weekly; circ. 400; Editor L. PETERS.

Gambia Outlook, The: Bathurst; weekly; circ. ca. 200; Editor Hon E. F. SMALL, O.B.E.

Gambia News Bulletin: Bathurst, a Government daily news sheet; circ. ca. 1,500; The Information Officer, The Secretariat.

BANK

Bank of British West Africa: Head Office: 37 Gracechurch Street, London, E.C. 3; branch in Bathurst; Bankers to the Governments of Gambia, Sierra Leone, Gold Coast and Nigeria.

TRADE AND INDUSTRY

TRADE ASSOCIATION

Bathurst Chamber of Commerce: Bathurst.

TRADE UNIONS

Bathurst Trade Union: Leader LEMU N'JIE.

Gambia River Traders and Commercial Workers Union: Leader N'DONG.

Motor Mechanics and Drivers Union: Leader J. W. N. 'DONG

TRANSPORT

For details of ROADS and RAILWAYS, see ECONOMIC SURVEY.

AIR LINES

Safari Air Lines operate through Bathurst.

West African Airways Corporation connects Gambia with Dakar and thence with B O A.C. routes.

HEALTH SERVICES

The most common diseases in the Gambia are malaria, sleeping sickness, ascariasis, yaws, bronchitis, leprosy and eye infections. Medical facilities are based on two General Hospitals: the Victoria Hospital in Bathurst, which has recently been largely rebuilt, and which caters for Bathurst and the surrounding area, and the Bansang Hospital which is the centre for the Protectorate. There is also a Sanatorium for tuberculosis and there are Health Centres and Dispensaries throughout the Protectorate, at which total attendances in 1953 were 234,162. The Health Services include special mosquito control units.

EDUCATION

SCHOOLS

Colony. There are 8 Government Primary Schools in Bathurst: 3 Anglican-Methodist (boys, girls and infants), 3 Roman Catholic (boys, girls and infants), and 2 Mohammedan (Boys and infants); and there are Government Schools for over-age pupils; a grant-aided Mission School, a Domestic Science Centre for girls and an Arts and Crafts Centre for boys. There are two Government Primary Schools outside Bathurst, but in the Colony.

There are 4 Secondary Schools in Bathurst, of which one, the Methodist Girls' High School, also runs preparatory and kindergarten departments. All four are run by the Missions, with substantial government grants.

Protectorate: In the Protectorate there are 24 village schools run by District Authorities and staffed by Government teachers seconded to them, and 7 primary schools run by the Mission (of which one is run jointly with the District Authority). There is also a Government Boarding School, the Armitage School, which gives secondary modern education.

HIGHER EDUCATION, TEACHER TRAINING

There is a teacher training College at Yundum. A small number of Gambians with Government Scholarships and a rather larger number of private students go to the United Kingdom (for 1954 the figures were 20 and 40 respectively).

LIBRARY

The British Council operates the only public library, in Bathurst.

THE BRITISH COMMONWEALTH

SIERRA LEONE

THE CONSTITUTION

The part of Sierra Leone which is administered as a Colony includes the Sierra Leone peninsula, Tasso, Banana and York Islands, and the town of Bonthe on Sherbro Islands.

In Sierra Leone, as in other West African countries, constitutional development is at present rapid and continuous. The present position is governed by Royal Instructions of 1951 which provide for an Executive Council of 4 *ex-officio* and no less than 4 unofficial members, appointed from the elected members of the Legislative Council. The Legislative Council consists of the Governor (who is President), a Vice-President, 7 *ex-officio* members, 7 members elected from the Colony, 12 members elected indirectly from the Protectorate District Councils, 2 members elected from the Protectorate Assembly and 2 nominated members appointed by the Governor. The procedure for elections to the Legislative Council is provided for in a local Statute, the Legislative Council (Elections) Order, 1951. By an Amendment to the Royal Instructions, dated April 1953, the six unofficial members of the Executive Council were invested with the title and responsibilities of Ministers.

THE GOVERNMENT

Governor and Commander-in-Chief: SIR ROBERT HALL,
K.C.M.G.

EXECUTIVE COUNCIL

President: The GOVERNOR.

Ex-Officio Members: The COLONIAL SECRETARY, The CHIEF COMMISSIONER, The ATTORNEY-GENERAL, The FINANCIAL SECRETARY.

MINISTERS

Chief Minister and Minister of Health, Agriculture and Forests: M. A. S. MARGAI, M.B.E.

Local Government Education and Welfare: A. M. MARGAI.
Works and Transport: M. S. MUSTAPHA.

Trade and Commerce, Posts and Telegraphs: A. G. RANDLE,
M.B.E.

Land, Mines and Labour: S. P. STEVENS.

Minister without Portfolio: BAI FARIMA TASS II.

Clerk: A. F. MEREDITH.

LEGISLATIVE COUNCIL

President: The GOVERNOR.

Vice-President and Acting Speaker: E. S. BEOKU-BETTS,
M.B.E.

Ex-Officio Members: The COLONIAL SECRETARY, The CHIEF COMMISSIONER of the PROTECTORATE, The ATTORNEY-GENERAL, The FINANCIAL SECRETARY, The DIRECTORS of MEDICAL SERVICES, EDUCATION and AGRICULTURE.

Nominated Unofficial Members: C. S. T. EDMONDSON, J. P. BIRCH.

Elected Members: 21.

CIVIL ESTABLISHMENT

Colonial Secretary: A. R. MACDONALD, C.M.G.

Financial Secretary: L. K. C. JACOBS, C.B.E.

Administrative Secretary: F. A. MONTAGUE.

Chief Commissioner: H. CHILDS, C.M.G., O.B.E.

Attorney-General: A. C. SPURLING, Q.C.

Solicitor-General: S. A. BENKA-COKER, O.B.E.

Directors of Departments: T. N. GREEVES, D.F.C., M.AGRIC. (Agriculture), D. H. CREED-NEWTON (Education), Dr. T. P. EDDY (Medical Services), J. D. BIRKETT (Veterinary Services).

POLITICAL PARTIES

National Council of Sierra Leone (N.C.S.L.): Freetown; Leader Dr. BANKOLE BRIGHT.

Sierra Leone People's Party (S.L.P.P.): Freetown; f. 1951 through a coalition of small groups; Leader M. A. S. MARGAI, M.B.E.

THE LEGAL SYSTEM

The Common Law of England and the doctrines of equity and Statutory Law which were applicable in 1880 are in force in Sierra Leone, and certain English Statutes after 1780 have from time to time been brought into force by Ordinance.

The Supreme Court has the same jurisdiction as the High Court of Justice in the United Kingdom, except in certain minor cases arising exclusively between natives, where native law or custom is decisive. It is the Court of Appeal for all subordinate courts; and appeal against its own decisions may be made to the West African Court of Appeal.

Magistrates' Courts have jurisdiction in civil cases

(a) in the Colony, "on any cause or matter which may lawfully be brought before them," and

(b) in the Protectorate, in any matter (except libel or slander) between or involving non-natives or between a native and the holder of a trading licence (whether a native or not).

In criminal cases the jurisdiction of the Magistrates' Courts is limited to summary cases and to preliminary investigations to determine whether a person charged with an offence triable by the Supreme Court shall be committed for trial.

Native Courts have jurisdiction, according to native law and custom, in all matters between natives which are not triable by any other court (see above).

In some cases, e.g. in trading cases which involve more than £50 or in land disputes involving two or more Chieftdoms, or cases which are of particular importance, the District Commissioner has the right to inquire and to decide whether the case shall go before the Supreme Court.

Chief Justice: J. P. BOURKE.

RELIGION

See General Section on Religion, page 668.

THE PRESS

Daily Guardian: 6 Percival Street, Freetown; circ. ca. 2,000.

BRITISH WEST AFRICA

Daily Mail: P.O. Box 53, 29-31 Rawdon Street, Freetown; publ. by West African Newspapers Ltd.; net sale 10,064.

Evening Despatch: Charlotte Street, Freetown.

Sierra Leone Observer: 3 Hospital Road, Bo; weekly circ. ca. 4,000.

BROADCASTING

The Government operates a wired broadcasting system in Freetown which re-diffuses the B.B.C. Overseas Service and local programmes arranged by the Public Relations Department. In August 1954 there were 818 privately owned sets in Sierra Leone.

FINANCE

BANKING

Barclays Bank D.C.O.: Head Office: 54 Lombard Street, London E.C.3.; branch in Freetown; Local Directors in West Africa L. C. DALDRY, F. A. BOREHAM.

British Bank of West Africa: Head Office: 37 Gracechurch Street, London, E.C.3., branch in Freetown; Bankers to Governments of Gambia, Sierra Leone, Gold Coast and Nigeria.

TRADE AND INDUSTRY

Sierra Leone Produce Marketing Board: f. 1949 to secure the most favourable arrangements for the marketing of Sierra Leone produce.

Sierra Leone Development Corporation Ltd.: Marampa.

There are 28 Co-operative Societies with a membership of 5,300

TRANSPORT

For details of RAILWAYS and ROADS, see ECONOMIC SURVEY.

SHIPPING

The following companies provide shipping services to Freetown

Barber Steamship Lines: cargo services to east coast ports of America.

Elder Dempster Lines Ltd.: passenger services to the United Kingdom; cargo services to the East Coast of America and to the Union of South Africa

Holland West Africa Line: services to Europe.

Palm Line Ltd.: services to the United Kingdom.

AIR LINES

The following Air Lines operate services through Freetown Airport, connecting Sierra Leone with other West African countries and with the United Kingdom and other European countries.

Air France, Hunting Clan/Airwork Services, West African Airways Corporation.

HEALTH SERVICES

The diseases which flourish most in Sierra Leone are malaria on the one hand and minor diseases of malnutrition on the other. Steps to control malaria are continual and concentrate on larvicidal methods assisted by residual spraying. The incidence of smallpox has been reduced to a

SIERRA LEONE

minimum by vaccination, and the treatment of leprosy is now a matter of course. The Endemic Diseases Control Unit visits different parts of the country to report progress and to promote new measures. The Connaught Hospital in Freetown and the Bo Hospital each provide training for nurses. There are a number of other hospitals throughout the country supported by Government Health Centres and Native Administration Health Centres.

In 1954 a total of 10,744 in-patients and 127,830 out-patients were treated in Government Hospitals and it was estimated that 139,414 new cases were treated at Government Dispensaries and Health Centres.

EDUCATION

Schools: In 1953 there were in Sierra Leone 2 Government Secondary Grammar Schools, 3 Government Secondary Central Schools, 4 Government Primary Schools, 9 Secondary and 257 assisted Primary schools; and 2 unassisted Secondary and 9 unassisted Primary schools. Most of the schools are in fact run by Missions, which however keep in close touch with the Department of Education through the two Education Secretaries, one for the United Christian Council and one for the Roman Catholic Mission, both of which are supported from government funds. The total number of pupils attending Primary Schools was 46,833 in 1954.

Higher Education: Fourah Bay College (see below) offers degree courses in arts and commerce, and facilities for post-graduates; and a Technical Institute, to which various government technical training centres, and the technical classes formerly held by Fourah Bay College were transferred, was set up in 1953. A liberal grant for scholarships, both to schools and institutions in Sierra Leone itself and for education abroad, is provided from government funds.

Teacher Training: Primary School teachers receive training at Fourah Bay College and St. Joseph's Convent, in the Colony, and in the Protectorate at Magburaka and Njala Government Training Colleges, at Bo Catholic Training College and at the Protestant Missions' Bunumbo Union College.

Literacy: In the past few years the Protectorate Literature Bureau, with its headquarters at Bo, have organised literacy campaigns, assisted by a C.M.S. van which tours remote parts of the Protectorate and carries a supply of many kinds of books. The Bunumbo Press, the Bible Society and the American Wesleyan Mission Press print readers and books in the vernacular. 35,000 books in Mande, Kono Temue and Kuranko were sold or distributed in 1953.

Libraries: There are libraries in schools, government departments and institutions throughout the country and two small public libraries in Freetown. Fourah Bay College has a library of 11,000 volumes and the British Council maintains a subscription library and makes bulk loans to the Protectorate in the Colony.

FOURAH BAY COLLEGE

FREETOWN, SIERRA LEONE

Founded 1827

Affiliated to Durham University 1872.

Library of 13,000 vols.

Number of Teaching Staff: 46.

Number of Students: 353.

THE BRITISH COMMONWEALTH

GOLD COAST

INCLUDING TRANS-VOLTA TOGOLAND
(U.K. Trusteeship)

THE CONSTITUTION

The constitutional development of the Gold Coast (including Togoland, which is under U.K. Trusteeship) has been rapid, particularly since 1945, and the Constitution which came into force on June 18th, 1954 is the third since 1950. Under this Constitution provision is made for a Cabinet consisting of not less than 8 members of the Legislative Assembly, appointed by the Governor who must act in accordance with the constitutional conventions applicable in the United Kingdom. The Prime Minister presides at Cabinets meetings, except when the Governor specially summons a meeting, in which case he himself presides. The Prime Minister may charge any Minister with responsibility for any Department or subject except those concerning defence or external affairs, for which the Governor is responsible.

The Constitution provides for the establishment of a Public Service Commission and a Judicial Service Commission, and for the appointment of Ministerial Secretaries from the Assemblies, of a Permanent Secretary to each Ministry, of a Secretary to the Cabinet and of an Auditor-General removable only by the Governor or on an address of the Assembly.

The Legislative Assembly consists of a Speaker elected by the Assembly and 104 members elected by direct election who represent 7 municipal and 97 rural electoral districts.

THE GOVERNMENT

Governor and Commander-in-Chief: SIR CHARLES ARDEN-CLARKE, G.C.M.G.
Deputy Governor: SIR GORDON HADOW, C.M.G., O.B.E.

CABINET

Prime Minister: DR. KWAME NKRUMAH.

MINISTERS

Interior: A. CASELY-HAYFORD.
Local Government: E. O. ASAFU-ADJAYE.
Education: J. H. ALLASSANI.
Communications: A. E. OFORI-ATTA.
Works: N. A. WELBECK.
Health: EMORU EGALA.
Finance: K. A. GBEDEMAN.
Trade and Labour: AKO ADJEI.
Agriculture: J. E. JANTUAH.
Minister of State and Housing: KOJO BOTSIO.
Secretary to the Prime Minister and to the Cabinet: D. A. CHAPMAN.
Attorney-General: G. M. PATTERSON, O.B.E., Q.C.

REPRESENTATIVE ABROAD

Commissioner in London: T. M. KODWO MERCER.

CIVIL ESTABLISHMENT

Economic Adviser: K. C. TOURS, C.M.G.

Chief Regional Officers: A. C. RUSSELL, S. MACDONALD-SMITH.

Secretary for Development: G. E. MERCER.

Special Commissioner (Development Corporations and Marketing Boards): J. A. E. MORLEY, M.B.E.

Attorney-General: G. M. PATTERSON, O.B.E., Q.C.

Commissioner of Police: M. N. K. COLLENS.

Commissioner of Lands: C. F. WILLIAMS.

Chief Medical Officer: L. G. EDDEY.

Departments: J. D. BROATCH (Agriculture), A. S. M. MCKINNON (Veterinary Services), B. E. CARMAN (Education), D. A. BATES, M.B.E. (Geological Survey), H. F. WINFUL (Housing), D. W. K. DAWSON (Rural Housing), R. J. MOXON (Information Services), J. B. MILLAR, O.B.E. (Broadcasting), D. J. SHERIDAN (Public Prosecutions), F. PALTRIDGE, D.S.O., E.D. (Posts and Telecommunications), C. B. MOSES (Prisons), I. WYN PUGH (Public Works), C. F. CHARTER, O.B.E. (Soil and Land-Use).

LEGISLATURE

Speaker: Sir Emmanuel Quist.

Clerk: K. B. Ayensu.

POLITICAL PARTIES

The first general elections in the Gold Coast were held on June 10th and 15th, 1954, and resulted in the following distribution

Convention People's Party	71 seats
Northern People's Party	12 "
Togoland Congress Party	2 "
Ghana Congress Party	1 "
Muslim Association	1 "
Anlo Youth Organisation	1 "
Independents	10 "

Convention People's Party: stood at the general election for immediate self-government as a step towards independence within the British Commonwealth, as did most parties and candidates; Leader Dr. KWAME NKRUMAH.

National Liberation Movement: Kumasi, Ashanti; emerged in 1955 as the rallying point of opposition, supported by the Northern People's Party, advocates at least a federal (as opposed to unitary) form of Government for the Gold Coast, at most Ashanti separation; Leader BAFFOUR AKOTO.

Northern People's Party: formed in April 1955 by a group of former members of the Assembly in the interests of the Northern Territories, demanded their economic development and recognition of the Chiefs as essential elements in administration; S. D. DOMBO.

Togoland Congress Party: advocates union of British and French Togoland as a step to federation with the Gold Coast and ultimate inclusion in a West African Union; opposes direct integration with the Gold Coast.

THE LEGAL SYSTEM

The Civil law in force in the Gold Coast is based on the Common Law, doctrines of equity and general statutes which were in force in England in 1874, as modified by subsequent Ordinances. African customary law is however the basis of most personal, domestic and contractual relationships and the Supreme Court has power to enforce it, provided that there is no incompatibility with English Law and equity, in cases between Natives and non-natives. Criminal law is based on the Criminal Code, enacted at the end of the nineteenth century and dependent on English Criminal Law, and since amended at intervals.

The Supreme Court has in the Gold Coast the same jurisdiction as the High Court of Justice in the United Kingdom, together with like powers of the Lord Chancellor in respect of guardianship. Trial by jury is practised in criminal cases in the Gold Coast and in the Southern section of Togoland: the Criminal Procedure Code provides that all cases punishable by death must be tried by a jury, but in addition the Governor-in-Council may in any particular case provide by Order for a trial by jury (he has in fact done so in all cases involving life-imprisonment). Appeals from the Supreme Court lie to the West African Court of Appeal, and it is itself the Court of Appeal for all subordinate courts in civil and criminal cases.

Magistrates' Courts. District Magistrates, or Government Agents sitting as Magistrates, exercise summary jurisdiction throughout the country. In criminal cases magistrates may impose sentences of imprisonment up to one year and fines not exceeding £100, and Government Agents, sentences of six months and fines of £50. Both may hear civil suits (involving up to £150 and £100 respectively).

Juvenile Courts have been set up in Accra, Kumasi and Sekondi. They consist either of three citizens selected from a panel of Juvenile Court Magistrates or of a Stipendiary Magistrate sitting with two of the panel. Most members of the panels are Africans and some are women. The public is excluded from proceedings of Juvenile Courts which are empowered to place a child in the care of a relative, Probation Officer or other suitable person, to negotiate with parents to secure the good behaviour of a child, and to order whipping. Within these limits their jurisdiction is exclusive.

Native Courts. There are Native Courts of various grades which exercise both civil and criminal jurisdiction, and which are traditional institutions which have been adapted to meet modern needs. In civil cases they enjoy exclusive jurisdiction in cases between Africans involving land, succession and marriages; and in personal suits up to £100. They also have limited criminal jurisdiction. Appeals lie in the first instance to Government Agents sitting as Magistrates and in relevant cases direct to the Lands division of the Supreme Court. Native Courts play an important part in the life of the Gold Coast in 1953, for instance, the 330 Native Courts heard 36,818 civil and 48,755 criminal cases.

Chief Justice: SIR MARK WILSON.

Puisne Judges: S. O. QUASHIE-IDUN, H. M. WINDSOR-AUBREY, T. A. DENNISON, L. G. LINGLEY, C. S. ACOLATSE, H. B. BENSON, W. B. VAN LARE, J. S. MANYO-PLANGE, O.B.E.

RELIGION

See General Section on RELIGION page 668.

THE PRESS

In the Gold Coast, as in other West African countries, the press has developed rapidly, although probably more smoothly than, for instance, in Nigeria. Here also the advent of the *Daily Mirror* group (West African Newspapers Ltd.) in 1947 has greatly stimulated the newspaper world, but there is as yet no rival, such as the Zik Press in Nigeria, to provide competition.

NEWSPAPERS

(Daily unless otherwise stated)

Ashanti Pioneer: Box 325, Kumasi, Ashanti; f. 1939; circ. 12,000; Editor SAMUEL ARTHUR.

Ashanti Times: Ashanti Times Press, Obuasi; f. 1947; publ. Ashanti Goldfields Corpn.; Tues. Fri; circ. 8,000, Editor I. K. NKUMAH

Daily Graphic: Brewery Road (P.O. Box 742), Accra; publ. West African Newspapers Ltd.; circ. 54,743

Daily Mail: Amalgamated Press Ltd., P.O. Box 217, Accra; f. 1956; Managing Editor R. B. WUTA-OFEI

Ghana Evening News: Heal Press House, Horse Road, Accra; circ. 7,000, Editor E. K. HERMANN.

SUNDAY NEWSPAPER

Sunday Mirror: Brewery Road (P.O. Box 742), Accra; f. 1953; publ. West African Newspapers Ltd; circ. 39,570.

PERIODICALS

The Catholic Mission Press publishes a weekly paper (*Standard*) and the Mfantseman Press Ltd. a weekly in Fante, both on the Cape Coast. The West African Trade Union Information and Advisory Centre (I.C.F.T.U.) publishes a monthly paper, *West African Worker* and the following companies publish various monthlies in vernacular languages:

Vernacular Literature Bureau: Weija Road, Kaneshi, Accra, (Ga, Fante and Twi).

Vernacular Literature Bureau: P.O. Box 57, Tamale, (Kasem, Dagbani).

Several periodicals published in the United Kingdom, such as *West Africa*, the *West African Review* and the *West African Medical Journal* both circulate in West Africa and specialise in West African affairs.

FINANCE

BANKING

Bank of British West Africa Ltd.: Head Office: 37 Gracechurch Street, London, E.C.3; branches in Accra and all principal Gold Coast towns; f. 1894; bankers to the Governments of Gambia, Sierra Leone, Gold Coast and Nigeria.

Bank of the Gold Coast: Head Office: Private Post Bag, Accra; branch in Kumasi; f. 1953; auth. cap. £1,000,000 p.u. £700,000; bankers to the Government; Chair. Sir LESLIE M'CARTHY; Managing Dir. A. EGGLESTON; Manager H. D. DUFF.

Barclays Bank D.C.O.: Head Office: 54, Lombard Street, London, E.C.3; Head Office for West Africa: 55 Marina, Lagos, Nigeria; branches in Accra and principal Gold Coast towns.

THE BRITISH COMMONWEALTH

INSURANCE

The following companies transact the bulk of insurance business in the Gold Coast. Many other British companies have agencies there.

British Commonwealth Insurance Co. Ltd: Head Office: Baltic Exchange Buildings, 21 Bury Street, London, E.C.3.; Gold Coast Office, Bank Chambers, Tudu Road, Accra (Private Post Bag); Acting Resident Inspector F. McR BONE.

Lion of Africa Insurance Co. Ltd: (Incorporated in Nigeria) Head Office in Lagos; Gold Coast Branch, Private Post Bag, Station Road, Accra; Manager J. V. BRADFIELD, A.C.I.I.

Royal Exchange Assurance: Thorpe Road (P.O. Box 50), Accra; Manager for West Africa C. W. SPENCER.

TRADE AND INDUSTRY

PUBLIC BOARDS AND CORPORATIONS

See also REGIONAL ORGANISATIONS page 668.

Agriculture Produce Marketing Board: Accra; f. 1952; is responsible for the regulation of marketing and export of agricultural produce, and the allocation of funds for promoting development in the producing industries.

Gold Coast Agricultural and Fisheries Development Corporation: Accra; f. 1952; to promote development and research.

Gold Coast Cocoa Marketing Board: Accra; f. 1947; responsible for the purchase, grading, export and selling of Gold Coast cocoa, and for assisting the development of the cocoa industry.

Gold Coast Guarantee Corporation: c/o Bank of the Gold Coast, Private Post Bag, Accra; f. 1954 to provide short-term credit for African traders, auth. cap £300,000; credit is issued by the Bank of the Gold Coast on the authority of the Corporation's local committees; the Managing Director of the bank is *ex-officio* Managing Director of the Corporation.

Gold Coast Industrial Development Corporation: Accra; f. 1951 to assist the development of industry in the Gold Coast; the Corporation is empowered (a) to investigate all relevant activities, including marketing, (b) to promote such activities; if necessary by taking them under its control, (c) to give assistance, including financial assistance, (d) to co-operate with the organisations or persons (including Government authorities) concerned as necessary.

Accra and Eastern Province (Gold Coast) Chamber of Commerce: P.O. Box 430, Accra

Association of Accountants in the Gold Coast, The: P.O. Box 266, Takoradi

Cape Coast Chamber of Commerce: P.O. Box 108, Cape Coast

Gold Coast Chamber of Commerce, The: Private Post Bag, Accra

Gold Coast Chamber of Mines: P.O. Box 73, Takoradi; represented in Accra: P.O. Box 991; London Office: 27 Clements Lane, E.C.4; affiliates most mining companies in the Gold Coast.

Gold Coast Timber Federation: P.O. Box 246, Takoradi.

Indian Merchants' Association: P.O. Box 89, Accra.

Kumasi Chamber of Commerce: P.O. Box 528, Kumasi.

Sekondi and Takoradi Chamber of Commerce: P.O. Box 45, Takoradi.

TRADE UNIONS

At the end of March 1955 there were 104 registered trade unions in the Gold Coast with a total membership of 46,309. Unions are established in Government Departments and in all the major industries, and the tendency in these industries has been towards the formation of "house unions" rather than unions based on trades and crafts.

TRANSPORT

See also ECONOMIC SURVEY page 664.

RAILWAYS

Gold Coast Railways, Harbours and Ports Administration: Takoradi, is responsible for the operation of the railways, the deep-water harbour at Takoradi, and the surf ports in Accra, Cape Coast and Winneba, and for the maintenance of lighthouses; Gen. Manager L. C. GARDNER.

SHIPPING

The following shipping companies operate services between the Gold Coast and the United Kingdom, Europe, South Africa, and the eastern seaboard of America:

Barber West African Line: P.O. Box 2241, Accra; P.O. Box 259, Takoradi; coastal services, services to North America

Compagnie Maritime des Chargeurs Réunis: c/o Palm Line, Ltd., P.O. Box 259, Takoradi, coastal services; services to Europe

Compagnie de Navigation Cyprien Fabre: c/o Palm Line, Ltd., P.O. Box 259, Takoradi; coastal services, services to North Africa and Europe.

Delta Line: Mississippi Shipping Co. Inc., P.O. Box 230, Takoradi, services to U.S. Gulf Ports and West Coast of Africa, and Angolan ports.

Elder Dempster Lines Ltd.: Elder Dempster Agencies Ltd., P.O. Box 66, Accra, coastal services, services to United Kingdom, Europe, U.S.A. and Canada.

Farrell Lines Inc.: Farrell Lines Inc., P.O. Box 117, Takoradi, coastal services, services to North America

Guinea Gulf Line, Ltd., The: Joh Hold and Co. (Liverpool) Ltd., P.O. Box 55, Accra, P.O. Box 261 Takoradi, services to United Kingdom and Europe.

Holland West Africa Lijn N.V.: P.O. Box 269, Accra, services to Europe, coastal services

Hanseatischer Afrika-Dienst: W. Bartholomew and Co. Ltd., P.O. Box 468, Accra, P.O. Box 243, Takoradi; services to Scandinavian and Continental ports.

Kawasaki Kisen Kaisha, Ltd.: The United Africa Co. Ltd., P.O. Box 180, Accra; cargo service to Japan and U.S. Pacific Coast, coastal services.

Lloyd Triestino: Palm Line Ltd., P.O. Box 2241, Accra; P.O. Box 259, Takoradi; services to Marseilles, Genoa and Leghorn.

Leif Hoegh and Co: W. Bartholomew and Co. Ltd., P.O. Box 468, Accra; services to Scandinavian and Continental ports, also Cameroun and Gabon.

Nautilus Line S.A.: Union Maritime et Commerciale, Private Post Bag, Accra; services to Mediterranean ports, Portugal, Spain and West Africa.

BRITISH WEST AFRICA

Osaka Shosen Kaisha: The United Africa Co. Ltd., P.O. Box 180, Accra; cargo services to Japan, and coastal services.

Palm Line Ltd: Palm Line Ltd., P.O. Box 2241, Accra; services to United Kingdom and Continental ports.

Scandinavian West Africa Line: W. Bartholomew and Co. Ltd., P.O. Box 468, Accra; services to Scandinavian and Continental ports.

Woermann-Line: Union Trading Co. Ltd., P.O. Box 298, Accra; services to Europe.

AIR TRANSPORT

There is an international airport at Accra, and aerodromes for internal services at Takoradi, Kumasi and Tamale.

The internal services are operated by:

West African Airways Corporation: Head Office: Airways House, Ikeja, Lagos, Nigeria; Gold Coast Office at Accra Airport; services between Nigeria, Gold Coast, Gambia, Sierra Leone and French Senegal; Chair. R. W. C. BAKER-BEALL, C.B.E.; Gen. Manager Col. M. C. P. MOSTERT, O.B.E.

The following international airlines call at Accra:

Air France.

British Overseas Airways Corporation.

Pan-American World Airways.

Union Aero Maritime Transport.

HEALTH SERVICES

The most prevalent diseases in the Gold Coast to-day include malaria, pneumonia, rheumatism, skin diseases, and affections of the respiratory system, of the eyes and of the digestive system. At the end of 1953 there were four central Government hospitals, with specialist facilities, in addition to 27 Government, 8 mission, 10 private hospitals and 11 hospitals run in connection with the mines. At the end of 1955 it was announced that the Government had provided 4 new hospitals in the Northern Territories, and had purchased the Gonja Development Company's hospital at Damongo, to be managed by the White Fathers Mission with Government assistance. Hospital services are supplemented by 18 Government and 102 non-Government dressing stations and by 3 Government health centres. In 1953 there were 61,824 in-patients, and 1,178,837 out-patients in Government hospitals.

There are schools of hygiene at Accra, Tamale and Kintampo for the training of health inspectors and superintendents. In October 1955 the Gold Coast Minister of Health announced that health education campaigns would be started in Togoland, and later in other regions. Medical Field Units investigate and initiate mass treatment for endemic diseases including sleeping sickness, yaws, leprosy and malaria.

EDUCATION

Schools: In 1953 there were in the Colony, Ashanti and the Northern Territories (excluding Togoland) 3,597 primary and middle schools with an enrolment of 423,604 and 55 secondary schools with an enrolment of 8,155. Togoland at the same date had 403 primary and middle schools with an enrolment of 44,514 and 4 secondary technical schools with an enrolment of 339.

Teacher Training: In 1953, 2,642 students (1,858 men and 784 women) were in teacher training colleges in the

GOLD COAST

Colony, Ashanti and the Northern Territories. The 3 teacher training colleges in Togoland had 297 students (250 men and 47 women).

Higher Education: Gold Coast has its own facilities for higher education at the University College of the Gold Coast, and at the College of Technology, Arts and Science in Kumasi, of which details are given below. In addition, a number of Gold Coast students go to the United Kingdom and the United States and a few to other countries abroad. In 1954 there were 854 students in the United Kingdom of which 237 held Government scholarships, 27 other scholarships, 105 were trainees in the Government Training Scheme and 485 were private students. On the same date there were 121 students in the United States.

Literacy: During 1953 just over 22,000 learners passed a literacy test and had been awarded a Gold Coast Literacy Certificate and by Dec 31st 1953 4,709 literacy classes had been established in 2,012 towns and villages.

LEARNED SOCIETIES AND RESEARCH INSTITUTES

COLLEGE OF TECHNOLOGY, ARTS AND SCIENCE

KUMASI

The College offers courses in civil, electrical and mechanical engineering and in accountancy, surveying, pharmacy and agriculture. There is a teacher-training department and provision is made for specialist courses in arts and crafts, domestic science, music and physical training. The number of students is 885 (1955).

NIGERIA AND THE CAMEROONS

CONSTITUTION

THE FEDERATION

The central political problem in Nigeria arises from the fact that the country includes three main ethnic groups, the Hausa peoples of the North, the Ibo Peoples of the East, and the Yoruba Peoples of the West. The difficulty has been to find a means of binding them together to form a nation while preserving for each sufficient autonomy to satisfy regional aspirations. A Federal Constitution was introduced in 1951, but it soon became clear that the three regions with their wide differences in character and development could not work together well in any closely knit Federation. It was therefore decided that the Constitution should be revised to allow for greater regional autonomy. The revision was carried out by a conference which met in London in July and August 1953 under the chairmanship of the Secretary of State for the Colonies. It was attended by delegates from each region in Nigeria and from the Cameroons, and re-assembled in Lagos in January 1954. The new Constitution, based on its recommendations and establishing the Federation of Nigeria, was introduced on October 1st, 1954.

The new Constitution defines the responsibilities of the Federal Legislature, leaving residual powers to the Regional Legislatures; and establishes the principal that Federal law prevails over Regional law in case of conflict.

House of Representatives

The House of Representatives, the Federal Legislature, is elected independently of the Regional Legislatures, and consists of a Speaker, 3 *ex-officio* members (who are also members of the Council of Ministers), up to 6 special members appointed by the Governor-General to represent interests or communities not otherwise adequately represented, and elected members as follows: 92 from the Northern Region, 42 from each of the Eastern and Western Regions, 6 from the Southern Cameroons and 2 from Lagos.

The normal life of the House is five years.

Council of Ministers

The Council of Ministers, the Federal Executive, consists of the Governor-General (who is President), 3 *ex-officio* members and 10 Ministers (three from each region and one from the Southern Cameroons).

Franchise

The Franchise is open to all British subjects or British protected persons of 21 or over who have the usual qualifications, except that in the Northern Region voting is confined to men, and in the Western Region to those who have paid taxes, or in the case of women, an annual rate of not less than £1.

Public Service

Separate public services are being established for the Federation and for the Regions, but the transitional period for the transformation of the existing unitary public service will not end before August 1956. A much longer transitional period is visualised before the necessary reorganisation of the judicial system can be completed.

THE REGIONS

EASTERN REGION

The Eastern Region has a single-chamber Legislature consisting of a House of Assembly, with a Speaker appointed by the Governor after consultation with the parties represented in the House, and 84 elected members. The Executive Council consists of the Governor, as President, and not less than 9 Regional Ministers appointed from the members of the House of Assembly.

WESTERN REGION

The Western Region has a bi-cameral Legislature consisting of:

(a) The Western House of Chiefs, with a President, up to 50 Head and other Chiefs, and up to 4 special members who will be chiefs nominated by the Governor-in-Council.

(b) The Western House of Assembly, consisting of a Speaker, 80 elected members, and up to 3 special members appointed by the Governor.

The Western Region Executive Council consists of the Governor, as President, and not less than 9 Regional Ministers.

NORTHERN REGION

The Northern Region has a bi-cameral Legislature consisting of:

(a) The Northern House of Chiefs, which includes the Governor, as President, all First-Class Chiefs and 37 other Chiefs, an adviser on Muslim Law and members of the Executive Council who are also members of the Northern House of Assembly.

(b) The Northern House of Assembly with a President appointed by the Governor, 4 official members, 90 elected members, and up to 10 special members appointed by the Governor.

The Northern Region Executive Council consists of a President, 3 *ex-officio* members and 13 Regional Ministers, one of whom is Premier.

Northern Cameroons is administered as part of the Northern Region.

SOUTHERN CAMEROONS

Southern Cameroons is quasi-Federal Territory. Regional matters are dealt with by a local legislature and executive constituted as follows:

(a) The Legislature consists of an Assembly composed of the Commissioner, as President, 3 *ex-officio* members, 13 elected members, 6 Native Authority representatives and (2 appointed) special representatives.

(b) Executive Council: The Commissioner for the Cameroons; 3 *ex-officio* members of the Legislature and 4 members nominated by the Governor-General, after consultation, from among the 21 unofficial members of the Legislature.

Lagos, the capital, is Federal Territory and is directly represented in the Federal Legislature.

THE BRITISH COMMONWEALTH

FEDERAL GOVERNMENT

Capital Lagos

Governor-General and Commander-in-Chief: SIR JAMES ROBERTSON, G.C.V.O., K.C.M.G., K.B.E.

Unofficial Members: Dr. E. M. I. ENDELEY (Leader of Government Business), S. A. GEORGE; The Rev. J. C. KANSEN, S. T. MUNA

CIVIL ESTABLISHMENT

Deputy Commissioner: A. BRAYNE-BAKER.
Legal Officer of the Southern Cameroons: C. R. BURBON.

POLITICAL PARTIES

The first elections to the House of Representatives were completed in December 1954 and resulted in the following distribution

Northern People's Congress (N.P.C.)	79 seats
National Council of Nigeria and the Cameroons (N.C.N.C.)	56 seats
Kamerun National Congress (K.N.C.)	6 seats
Others	16 seats

The N.C.N.C. won the majority of seats in the Eastern and Western Regions and so has 6 seats in the Council of Ministers. The N.P.C. won the majority in the Northern Region, and has 3, and the K.N.C. who won all seats in the Southern Cameroons, has the remaining seat.

Action Group (A.G.): Ibadan; f. 1949, stands for an independent Nigeria within the Commonwealth and Regional autonomy. Leader O. AWOLowo

National Council of Nigeria and the Cameroons (N.C.N.C.): National Headquarters, Lagos. f. 1944; the declared aims of the party are to achieve (a) self-government for Nigeria and the Cameroons within the Commonwealth, (b) political and parliamentary democracy (c) a united Nigeria and the Cameroons with a strong federal Government (d) a democratic socialist Commonwealth; Pres. Dr. the Hon. NNAMDI AZIKIWE, Gen. Sec. Hon. KOLAWOLE BALOGUN.

Northern People's Congress: Jema's Road (P.O. Box 76), Kaduna, f. 1947 as a social, and 1951 as a political party; aims (a) regional responsibility (b) local government reform based on a progressive Emirate system, tradition and custom (c) self-government for Nigeria within the Commonwealth (d) educational social and economic progress for the Northern Region (e) equality of opportunity and high standards in public life; Pres. Alhaji the Hon. AHMADU, SARDAUNA OF SOKOTO, C.B.E., M.H.A.; Gen. Sec. ABBA M. HABIB, M.H.A.

THE LEGAL SYSTEM

Both English and native law are in force in Nigeria. The Supreme Court and the Magistrates' Courts primarily administer English law and the Native Courts native law and custom. The law applied in the Supreme Court and the Magistrates' Courts is that which was in force in England in 1900, as modified by local legislation. The law administered by the Native Courts is that prevailing in the area over which the court has jurisdiction. Muslim law is administered by the Native Courts in the Mohammedan areas of the Northern region.

The Supreme Court has unlimited jurisdiction on subject matter, degree, area and persons. It sits as a court of first instance and is also the court of appeal for the Magistrates' Courts and for some Native Courts.

Magistrates' Courts have limited jurisdiction in personal actions for specified amounts varying from £25 to £200, according to the grade of the magistrate, and in criminal law in cases involving punishment up to a maximum of two years imprisonment.

Juvenile Courts have been established in various towns and consist of a magistrate sitting with lay accessors.

Native Courts. The jurisdiction of Native Courts is limited, and varies according to the grade of the court concerned. All Native Courts have jurisdiction in matters relating to native marriage and succession.

Regional Courts. The three regions of Nigeria are in the process of establishing Courts. The High Court for the Northern Region was set up in December 1955.

Chief Justice: SIR STAFFORD SUTTON.

Chief Justice, Eastern Region: Mr. JUSTICE AINLEY.

Chief Justice, Western Region: Mr. JUSTICE ADEJOKUNBO ADEMOLA.

Chief Justice, Northern Region: Mr. JUSTICE BROWN.

RELIGION

(See General Section on RELIGION, page 668.)

THE PRESS

The growth of the West African Press has been very rapid twenty years ago, newspapers were few and far between whereas to-day they play a vital and often turbulent part in public life. Most of them are published in English, and the vernacular press, such as it is, has comparatively little strength or influence, this is partly perhaps, due to lack of financial support and partly because most people who can read their own language can also read English. The two great milestones in the growth of the Nigerian Press were the entry into the newspaper world of Dr. Nnamdi Azikiwe and the formation of the Zik Press, in 1937, and the arrival of the *Daily Mirror* group (West Africa Newspapers Ltd.) ten years later. The following are probably the most important newspapers and periodicals

DAILIES

Daily Service: 5-7 Apogbon Street, P.O. Box 163, Lagos; nationalist; Western Nigeria, Editor V. O. ONABANJO

Daily Times: 172 Broad Street, P.O. Box 139, Lagos; f. 1925, bought by West Africa Newspapers Ltd. 1947; circ. 63,449; Editor E. ADESIOYE.

THE BRITISH COMMONWEALTH

Eastern Nigeria Guardian: 37 Aggrey Road, Port Harcourt, circ. 6,000; Editor A. Y. S. TINUBU.

Eastern States Express: 34 Park Road, Aba; circ. 3,000; Editor E. B. EFFIOM.

Evening Times: 172 Broad Street, Lagos; f. 1955; published West Africa Newspapers Ltd.; circ. 12,000.

Nigerian Daily Standard: 60 Fosby Road, Calabar; circ. 4,000.

Nigerian Spokesman: P.O. Box 46, Onitsha; f. 1943; circ. 6,000; Editor J. ONURIEZBUNA.

Nigerian Tribune: P.O. Box 78, Ibadan; f. 1949; Editor L. K. JAKANDE.

Southern Nigeria Defender: New Court Road, Ibadan; f. 1945; circ. 4,500; Editor F. O. EBUWA.

West African Pilot: 34 Commercial Avenue, Yabo Estate, Lagos, main organ of the Azikiwe Press; circ. 30,000; Editor H. M. OFFONRY.

SUNDAY PAPER

Sunday Times: P.O. Box 139, Lagos; f. 1953; published West Africa Newspapers Ltd; circ. 59,301.

WEEKLIES

Akede Eko: 2 Beecroft Street, P.O. Box 646, Yoruba; circ. 5,000; Editor I. B. THOMAS.

Eastern Outlook and Cameroons Star: c/o Nigerian Information Service, Post Office Avenue, Enugu; f. 1951; Editor A. K. S. EPELLE.

Elete-Ofe: 62 Kosoko Street, Lagos; English-Yoruba; Editor Taju THOMPSON.

Gaskiya ta fi Kwabo: Gaskiya Corp., Zaria; f. 1939; Hausa; circ. 22,000; Editor M. ABULJADIR.

Nigerian Citizen: Gaskiya Corp., Zaria; f. 1948; circ. 8,000; Editor C. W. SHARP.

Nigerian Statesman: 7 Kester Lane, Lagos; f. 1947; Socialist; Circ. 14,165; Editor AKANBI GIWA.

PERIODICALS

Several periodicals published in the United Kingdom, such as *West Africa*, the *West African Review* and the *West African Medical Journal* (see under Great Britain), circulate in West Africa and are also of interest in that they specialise in West African affairs. Official publications include the *Nigerian Trade Journal* (published by the Federal Department of Commerce) and *Nigeria*, a quarterly review with a circulation of 14,000.

BROADCASTING

The Government runs broadcasting stations in Lagos, Kaduna, Enugu and Ibadan. In 1953 there were 9,757 subscribers to the Radio-Diffusion Services. Wired distribution systems in the Northern and Eastern regions are operated by the Government and in the Western region by a private company under licence.

FINANCE

BANKING

Bank of British West Africa Limited: Head Office: 37 Gracechurch Street, London, E.C.3; branches in Lagos, Kano and all principal Nigerian towns. f. 1894; bankers

to the Government of Gambia, Sierra Leone, Gold Coast and Nigeria.

Barclays Bank D.C.O.: Head Office: 54 Lombard Street, London, E.C.3; Head Office for West Africa: 55 Marina, Lagos, branches in principal towns of Nigeria and the Cameroons; Local Directors in West Africa: L. C. BALDRY, F. A. BOREHAM.

British and French Bank (for Commerce and Industry) Ltd: Head Office 33-36 King William Street, London, E.C.4; Nigeria Office, 117 Broad Street, Lagos; branches in Kano and Ebute Metta; mem B.N.C.I. (Banque Nationale pour le Commerce et l'Industrie) group; Gen. Manager for Nigeria N. E. SCHOOLING.

National Bank of Nigeria Ltd.: Head Office 37 Marina Lagos, branches in principal towns; f. 1933; cap. auth. £250,000, p.u. £100,443.

INSURANCE

The following companies transact the bulk of insurance business in Nigeria. In addition many other British insurance companies have branches or agencies there.

British Commonwealth Insurance Co. Ltd.: Head Office Baltic Exchange Buildings, 21 Bury Street, London, E.C.3; Head Office for West Africa: 40 Park Street, Lagos, branches in Accra and Kano; Gen. Manager for West Africa E. SPINNEY.

British West Africa Corporation Ltd.: P.O. Box 109, Lagos, branches at Ibadan, Kano and Warri, all types of insurance; agents for Norwich Union Fire Insurance Society Ltd., Legal and General Assurance Society Ltd. Gresham Life Assurance and Norwich Union Life Insurance Society Ltd.; represented at Lloyds.

Lion of Africa Insurance Co. Ltd. (Incorporated in Nigeria) Private Post Bag 2055, 216 Broad Street, Lagos; branches and agents throughout Nigeria; Gen. Manager G. H. HILL, A.C.I.I.

Royal Exchange Assurance: Head Office, Royal Exchange, London, E.C.3., Nigeria Offices 31 Marina, Lagos and 12b, Post Office Road, Kano; Gen. Manager for West Africa: C. W. SPENCER.

Lagos Chamber of Commerce (Incorporated) 11-17 Tinubu Street (P.O. Box 109), Lagos; f. 1888, has Standing Committees on Customs and Transport, Import and Export, Development, Road Transport and Engineering, Timber, Engineering Contractors etc., Pres. C. M. BOOTH, O.B.E., M.R.H.; Vice-Presidents. L. P. OJUKWU, O.B.E., M.R.H., F. J. MANN, J. WALLACE; Sec. R. C. IRVING.

Calabar Chamber of Commerce: c/o B.B.W.A. Ltd. Calabar; is believed to have existed about 50 years; 15 mems. (trading and shipping companies).

Onitsha Chamber of Commerce: 50 Old Market Road, (P.O. Box 181) Onitsha; f. 1953; Chair C. T. ONYEKWELEY; Sec. ALEXANDER IBEKWE AGWUNA.

Port Harcourt Chamber of Commerce: P.O. Box 71, Port Harcourt; Pres and Sec. C. K. BROWNHILL.

Union of Importers and Exporters, Western Provinces: Amunigun Square (P.O. Box 115) Ibadan; f. 1949; Chair. E. A. SANDA; Sec. C. A. ADEGBESAN.

BRITISH WEST AFRICA

Nigerian Chamber of Mines: P.O. Box 545, Jos; f. 1950 by the amalgamation of two mining associations (both f. ca. 1910); Manager H. E. WILSON, O.B.E., E.D., M.H.R., Sec. E. BATHURST, M.H.R.

Kano Chamber of Commerce: P.O. Box 10, Kano, Hon. Sec. H. M. ARUNDALE.

Union of Remo Importers and Exporters: 37 Akarigbo Sheet (P.O. Box 123), Shagamu; f. 1951; Sec. JOHN KUYE FOLARIN.

TRADE UNIONS

There are in Nigeria a large number of small trade unions; and although many of these are very active there has never been much support for any central organisation.

There are (March 31st, 1955) 177 registered Trade Unions with a total membership of 165,130; 41 of these are affiliated to the All Nigeria Trade Unions Federation (ANTUF).

The Unions with a membership of more than 5,000 are the Nigerian Union of Teachers (31,213), the Nigerian African Mineworkers' Union (13,210), the Public Utility Technical and General Workers' Union of Nigeria and the Cameroons (11,085), the Railway Workers' Union of Nigeria (10,899), the Cameroons Development Corporation Workers' Union (10,220), the Nigerian Civil Service Union (6,488) and the Nigeria Union of Local Administrative Staffs (5,634).

Information on trade unions may be obtained from The Registrar of Trade Unions, c/o The Administrator General's Office, Lagos.

TRANSPORT

(See also ECONOMIC SURVEY, page 644)

RAILWAYS

Nigerian Railway Corporation: Ebutte Metta, Lagos; f. 1955; has wide powers to enable it to operate as a commercial undertaking and is responsible for the management and operation of Nigerian railways, including the fixing of rates and fares, subject to an upper limit fixed by the Federal Minister, who may also intervene on important matters of policy; Chair. and Gen. Manager Col. R. B. EMERSON, C.I.E., O.B.E., M.INST.T.

SHIPPING AND INLAND WATERWAYS

Nigerian Ports Authority: Lagos; f. 1955; is responsible for all inland waterway, port and shipping facilities, consists of 10 appointed and 6 elected mems., Chair C. A. DOVE, M.B.E.

The following British shipping companies run cargo and passenger services to Nigeria.

Elder Dempster Lines Ltd., Palm Line Ltd., John Holt Ltd., Elders and Fyffes.

Cargo services are also operated from Scandinavian ports by:

Hoegh Line., Scandinavian West Africa Line.

AIR TRANSPORT

Air transport is now a vital part of Nigerian life. There are international airports at Kano and Lagos and 16 other airports. Internal services are operated by:

West African Airways Corpn.: Airways House, 161 Broad Street, The Marina (P.O. Box 136), Lagos; operates internal services and links Nigeria with Gold Coast, Sierra Leone, Gambia, and Senegal; Chair. R. W. C.

NIGERIA

BAKER-BEALL, C.B.E.; Gen. Manager Col. M. C. P. MOSTERT, O.B.E.

Services run by the following international air-lines also touch Nigeria:

Air France—U.A.T.: 147 Broad Street (P.O. Box 661), Lagos.

B.O.A.C.: Airways House, The Marina (P.O. Box 13), Lagos.

K.L.M.: 1A Alexander Road (P.O. Box 334), Lagos

Sabena: Airways House, Lagos.

HEALTH SERVICES

The most prevalent diseases in Nigeria are malaria, yellow fever, sleeping sickness, meningitis, pneumonia, smallpox, leprosy, yaws, tuberculosis, dysentery and venereal and intestinal diseases. The incidence of sleeping sickness, smallpox and meningitis are steadily decreasing, due largely to vaccination and inoculation campaigns. Progress has also been made in the treatment of leprosy, for which there were about 50,000 patients in 1954.

There are 180 hospitals in Nigeria and a number of Dispensaries, Rural Health Centres and Maternity Centres. In 1954, 1,361,473 out-patients and 158,163 in-patients received hospital treatment and 10 million cases were dealt with at Dispensaries.

EDUCATION

Schools: In 1953 there were 9,651 Primary Schools in Nigeria with a total of 1,069,789 pupils. There were also 127 Secondary Schools with an enrolment of about 32,500 pupils.

Teacher Training: There are 139 teacher training centres and colleges with an enrolment of about 9,000 students.

Higher Education: In addition to the institutions for higher education of which details are given below, a number of Nigerian students go to the United Kingdom, the United States and Canada. During the academic year 1954-55, there were about 4,000 in the U.K., 318 in the United States and 45 in Canada.

LEARNED SOCIETIES AND RESEARCH INSTITUTES

See also REGIONAL ORGANISATIONS, page 668

Historical Society of Nigeria: P.O. Box 916, Ibadan, f. 1955, to encourage interest in and work in connection with the study of history, especially Nigerian history; Pres. Dr. K. O. DIKE, Sec. H. F. C. SMITH; publ. *Journal*.

MUSEUMS

The following museums are under the management of the Nigerian Antiquities Service (headquarters, Lagos). The Ife Museum is owned by the Western Regional Government, the remainder by the Federal Government.

Ife Museum: Oyo Province, f. 1954; antiquities of Ife.

Jos Museum: Jos Plateau Province; f. 1952, ethnography and archaeology of Nigeria.

Nigerian Museum: Onikan Road, Lagos; f. 1956, ethnography and archaeology of Nigeria.

Oron Museum: Calabar Province; wooden ancestor carvings, etc. of Oron Clan.

THE BRITISH COMMONWEALTH

UNIVERSITY COLLEGE

IBADAN

Founded 1947

The College is associated with London University.
Degree courses began in October 1948.

Principal: J. T. SAUNDERS, M.A., D.C.L.

Registrar: S. E. BIOBAKU, M.A., PH.D.

Librarian: W. J. HARRIS, B.A.

Library of 80,000 vols.

Number of teaching staff: 136, including 18 professors.

Number of students: 492 men, 21 women; total 513.

DEANS

Faculty of Arts: A. D. GALLOWAY, M.A., B.D., S.T.M., PH.D.

Faculty of Science: F. W. SANSOME, PH.D., F.R.S.E., F.L.S.

Faculty of Medicine: J. GRAYSON, M.SC., M.D.

Faculty of Agriculture and Veterinary Science: K. EBAS,
DR.IR.

THE NIGERIA COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY

Headquarters. ZARIA

The College is a federal organisation of three constituent colleges, one in each Region at Enugu, Eastern Region,

Ibadan, Western Region, and Zaria Northern Region.
The aim of the College is to provide professional training for engineers, architects, surveyors, accountants, pharmacists and secondary school teachers.

Chairman of the College Council: Sir SYDNEY PHILLIPSON,
C.M.G., M.A.

Principal: C. A. HART, T.D., D.SC.(ENG.), PH.D., M.I.C.E.,
M.I.MECH.E., F.R.I.C.S., A.M.I.STRUCT.E.

Number of Teaching Staff: 55.

Number of Students: 432.

YABA TECHNICAL INSTITUTE

YABA, LAGOS

Founded 1948

Principal: C. W. C. TURNER, A.M.I.MECH.E., A.M.I.N.A.,
M.I.MAR.E

Vice-Principal: J. R. SCOBIE, M.A.

Librarian: (Vacant)

Library of 5,000 volumes.

Number of teaching staff: 19 full time, 34 part time.

Number of students: 340 resident, 550 part-time.

GEOGRAPHY

KENYA, TANGANYIKA, UGANDA, ZANZIBAR, SOMALILAND

THE TERM "East Africa" is used to cover the territories of Tanganyika (363,000 sq. miles), Kenya Colony and Protectorate (225,000 sq. miles) and Uganda Protectorate (94,000 sq. miles) together with the nearby islands of Zanzibar (640 sq. miles) and Pemba (380 sq. miles). It is convenient to include with these territories the Somaliland Protectorate (68,000 sq. miles) though it displays in many aspects—structural, climatic, ethnic and cultural—marked differences from the rest of East Africa.

The other three territories have many common geographical features since (together with part of northern Mozambique) they form one well-marked physical unit—the Great Lakes Plateau. To the west, this plateau is clearly defined by a deep and almost continuous trough, part of the Great Rift Valley of Africa; to the north, there is a lowland corridor separating the Great Lakes region from the plateau of Abyssinia; and to the north-east there is a sharp contrast between the upland country of Kenya and the low-lying arid plains of Somalia.

The Lakes Plateau is essentially a continuation of the structures of southern Africa and the Rhodesias—a massive platform of ancient granites, covered here and there by relatively thin layers of younger sediments. In East Africa, however, there are two important differences: along the coast of the Indian Ocean there occurs a distinctive, though narrow coastal plain; and the interior is deeply furrowed by the Great Rift Valley system. This is a trough-like structure formed by a series of major dislocations and fractures that are thought to have occurred some 30 to 40 million years ago. The best developed part of the trough is seen in the Red Sea, where fracture lines along the Arabian and Egyptian-Sudanese coasts have led to downthrow of the intervening surface which has been flooded by the sea; but a narrower continuation of the same trough-like structure (or rift-valley) can be traced from the Red Sea due southwards through western Abyssinia, then east of Lake Victoria to Lake Nyasa, and finally to the coast at the mouth of the Zambezi river. A secondary rift valley joins the main rift just north of Nyasa and extends north-westward, including Lakes Tanganyika, Edward and Albert. The steeply-walled rifts produce narrow but extremely deep lakes: Tanganyika is the second deepest in the world (4,708 ft.), while Lake Victoria, which does not lie in a rift valley, is much larger but very shallow. It will be noted that the rift valley system runs from coast to coast between the Red Sea and Indian Ocean, and one authority has suggested that in the geological future, East Africa will be completely detached, as has already happened with Africa and Arabia.

A further effect of fracturing has been the rise of molten magma along zones of weakness, to produce enormous volcanic cones. Thus in East Africa there is the special feature of massive volcanic peaks superimposed upon an already high plateau, producing the highest summits in the continent—e.g., Kilimanjaro (19,320 ft.), Kimawenzi (18,870 ft.), Mt. Kenya (17,040 ft.), Ruwenzori (16,794 ft.), Mt. Meru (14,979 ft.) and Mt. Elgon (14,140 ft.).

Uganda and Kenya lie on the Equator and the northernmost point of Tanganyika is only a hundred or so miles away from it. Thus normal "seasons" do not prevail—instead, altitude and distance, north or south of the Equator, are the chief factors which influence day to day

weather. Whenever the sun is overhead (March and September at the Equator, June further north, December further south) there tends to occur a local rainy season; and so there are two such periods near the Equator and one especially wet season (summer) further north or south. Besides this general effect there is often a daily pattern of afternoon showers and clear nights and mornings. Amounts of rainfall also depend largely on altitude (higher parts receiving most) and on aspect. Temperatures vary little from month to month, but there are usually marked differences between day and night. Altitude is the chief influence on temperature. On the coastal plains near the Indian Ocean, and on the low-lying floor of the Rift Valley a monotonous régime of high temperatures prevails, but at heights of 5,000–8,000 ft. average conditions are those of an unvarying English spring, with the wetter periods distinctly chilly (when clouds obscure the sun). The higher mountains have permanent snow-caps, and an "Alpine" climate.

TANGANYIKA

This region extends between 1–12° S. lat., and 29–41° E. long., and is bounded on the north by Kenya and Uganda, on the west by the Ruanda-Urundi region of the Belgian Congo and by Nyasaland, with Lake Nyasa between; and on the south by Portuguese Mozambique. The largest of the East African territories, Tanganyika, includes some 200,000 miles of inland water.

The coastal lowland area is in places as much as 100 miles wide (e.g., near Dar es Salaam), but most of the territory consists of undulating plateau country of 3,000 ft. in average altitude, diversified by occasional ridges and isolated mountain masses which are much higher still (e.g., Kilimanjaro itself). There is a very gradual drop to the depression containing Lake Victoria, and this region is the most densely settled of the whole territory. Further to the west, there is a sharp descent to the shores of Lake Tanganyika, which in strong contrast is one of the least densely populated parts—an interesting example of the effect of physical geography upon human activity.

Climatic conditions vary considerably. On the low-lying coastal plain, temperatures are uniformly high, the average for the coolest month being 73–78° F., though the maxima are only 5–10° higher. Rainfall is also abundant, reaching 40–60 in. on the mainland, and as much as 60–80 in. annually on the offshore islands (Pemba and Zanzibar). Further inland there is a much lower rainfall. A few areas (e.g., Kilimanjaro, and some of the lake shores of Victoria and Northern Nyasa) receive 60 in. annually, but over much of Tanganyika the average is only 35 in., and there is a large area on the centre of the plateau (Dodoma) where only 20–25 in. occur. At altitudes of 200–300 ft. mean temperatures are still high (e.g., round Lake Victoria, where the coldest month averages 70° F.) and these districts are therefore not attractive to white settlement. Above 5,000 ft. the mean falls considerably giving a more temperate climate that attracts European settlers. Territory at this altitude amounts to little more than 5 per cent of the area of Tanganyika, but there are larger areas in Kenya. Conditions at Tabora are typical of most of the plateau: the coldest month (June) averages 70° F.,

and the warmest month (October) 78° F., with an annual rainfall of 34 in.

Over much of the central plateau, the characteristic vegetation is savannah grassland, interspersed with scattered trees. Several species of grass occur, some fairly short and edible by cattle, but others, notably the "elephant grass", inedible and of great height (10–15 ft.). This is then typical "big game" country, in which live the lion, elephant, rhinoceros, giraffe and many species of deer and reptiles. Large areas of Tanganyika are now designated as game reserves. In drier parts this grassland degenerates into scrub, and there are no trees, while round Kilimanjaro vegetation is especially luxuriant, with several unusual specimens, including a giant lobelia. Where rainfall is more abundant (i.e., towards the east, and in the extreme west) forest land occurs; 40 per cent of the total area of Tanganyika is classified as forest land of one kind or other, although trees are widely scattered, and "forest" in the European sense covers only 1–2 per cent of the total area. Most trees are of the softwood variety, but hardwoods and cabinet woods are also produced, and timber is one of the principal resources of the territory, both for internal use and for export. On the coastal plain there is a fringe of mangrove swamp, succeeded at a short distance inland by a zone of coconut palms, which soon passes into the savannah grassland.

Dar es Salaam (meaning in Arabic "The Abode of Peace") the capital of Tanganyika has a population of 100,000 (including 4,000 European and 23,000 Asiatics). It is also the chief port and the largest town. One physical drawback to an otherwise good harbour is a winding and difficult approach channel. Mombasa, in Kenya, has a larger, better harbour and has become therefore the main port in East Africa as a whole.

KENYA

Kenya Colony extends between 5° N. and S. lat. and 34–42° E. long., and is bounded on the north-east, by Somalia (formerly Italian Somaliland), on the north by Ethiopia, on the west by Uganda, and on the south by Tanganyika. The extreme north-east part of Lake Victoria is included in Kenya territory.

Kenya Protectorate is a strip of coastal territory 10 miles deep, which extends northwards from the frontier of Tanganyika for about 170 miles, almost to the frontier of Somalia. The Protectorate is the property of the Arab Sultan of Zanzibar, and is administered by Kenya Colony, which pays an annual rent to the Sultan.

Physical conditions in Kenya are broadly similar to those in Tanganyika, with one very important difference: the highland areas are more extensive, and plateau lying at 5,000–8,000 ft. or more occupies some 40,000 sq. miles, that is about one-fifth of the whole region. Here, a fertile soil and temperate climatic conditions offer great inducements to settlers.

The coastal lowland zone is narrow in the south, but widens rapidly to the north. Unfortunately, however, aridity also increases further north and temperatures are slightly higher so that while Mombasa, in the extreme south, has an annual rainfall of 48 in., and minimum monthly mean temperature of 76° F. (i.e., similar to conditions in Tanganyika), in the northern sector only 15–20 in. of rain occur, and the luxuriant plantations of sisal and groves of coco-palms, with heavy swamp in places, give way inland and northwards to scrub and finally to semi-desert.

The plateau surface is far from regular. In the centre occurs the detached mass of Mount Kenya (17,040 ft.) succeeded further to the west first by the Nyeri "plains", that lie between 6,000 and 7,000 ft., and then by the

Aberdare uplands in the west, and the Kikuyu plateau in the south-west. The Aberdare mountains are the most imposing: many areas lie at over 10,000 ft. with some peaks of 12,000–14,000 ft. The Kikuyu plateau lies at an altitude of 5,000 ft. near Nairobi, rising a further 3,000 ft. on the border overlooking the Great Rift Valley. Almost all these highlands have been produced by lava flows, so that there is a deep rich volcanic soil and the landscape is subject to erosion, giving a rapid succession of hill and valley, with very little level ground.

The uplands receive rainfall of the order of 40–55 in. round Nairobi and Fort Hall, with over 60 in. in the extreme west; drier conditions prevail towards the north and east, with only 20 in. in the north round Lake Rudolf. Temperatures also vary according to altitude: the warmest month in Nairobi (5,400 ft.) has a mean temperature of 66° F. and the coldest 59° F., and at higher levels on the plateau distinctly cooler conditions prevail, with night frost in some places. Conditions thus approach those of northern temperate latitudes—with the difference that there is very little seasonal variation.

Natural vegetation on the plateau responds to variation in rainfall. It ranges from scrub and semi-desert on the extreme north and east, first to increasingly rich savannah grassland, and on the higher parts (i.e., Mount Kenya, the Aberdare Mountains and Kikuyu plateau) to extensive areas of luxuriant and virgin forest, largely cedar and other temperate woods, which were once continuous over much wider areas, but have been partly cleared for cultivation. Towards the summits of the highest hills, forests give way to alpine meadowland. Much of the land between 5,000 and 9,000 ft., with a temperate equable climate, abundant rainfall, and deep rich soils, is given over to farming.

Nairobi, the capital of Kenya, lies at the eastern approach to the fertile high plateau, for which it is a communications centre; the railway runs northwards to the Mount Kenya district and north-westwards to Kikuyu territory and Uganda; and Nairobi also lies on the Great North Road linking Cape Town and Cairo—respectively 3,660 miles and 2,800 miles distant. The white population of Nairobi is very small, being limited to officials and a few traders; Asiatics are more numerous, but the bulk of the inhabitants are African. Mombasa, the second town and chief port, has an excellent harbour—the best in East Africa—and is rapidly consolidating its position as the chief outlet and entrepôt for the whole of East Africa, to the detriment of Zanzibar.

European and African in Kenya

No survey of Kenya would be complete without some mention of the geographical background to the Emergency which has existed since 1952. There is one obvious issue—competition for good farming land in a territory where conditions often limit cultivation of any kind; and to this are of course added racial and demographic problems.

The European plantation owner is usually concerned with large-scale production of crops for sale elsewhere—coffee, cotton, pyrethrum, sisal—few of which are useable locally. He has introduced capital, machinery, new plant strains and even labour (e.g., Asiatic) and has often transformed primeval savanna swamp or forest into productive farming land. The African population has of course benefited, from the cash wages, housing and the influx of goods from abroad. But against this, the best land has often become alienated from native use and the African population, with its huge numerical superiority, crowded into indifferently fertile or climatically unattractive areas. The native "reserves" more often than not fall into this category and, as in other parts of the world (e.g., the Red Indian reserves in the Middle West of the U.S.A.) are

THE BRITISH COMMONWEALTH

inviolable only in so far as they have little attraction for exploitation.

The native is thus frequently committed to subsistence farming and stock rearing on poorer land; he cannot compete with white plantations in cash crops, his methods are often primitive, and yields low—hence he must grow as many foodstuffs as possible. Rotation and conservation of fertility are therefore not much practised and grassland is overstocked: in either case, soil erosion can quickly develop.

Demographic factors also enter in. Before the European occupation, the death rate was high, owing to lack of sanitation and medical care, and births were not unduly numerous, because of elaborate social regulations concerning marriage, and the practice of native methods of birth control. But European occupation in Kenya has greatly reduced the death-rate, and at the same time broken down many tribal customs; so that the Kikuyu population increases at the rate of $1\frac{1}{2}$ –2 per cent per annum, while the area allotted for native farming decreases.

Demand for male labour has led to an exodus of men to the plantations—in the reserves as many as 60–75 per cent of the active men are absent—another factor in the low yields of crops, which are increasingly cultivated in the reserves by women, children and old men. The younger men are separated from their wives, and live either in mining compounds, or in “shanty” towns on the outskirts of white settlements, or on plantations. The breakdown of tribal organisation consequent on the migration of the men, and the fall in standards of living on the reserves has other serious effects. Kikuyu children were subjected to a careful process of precept, ordeal, and practice-training which, with all its limitations, induced some social discipline and belief in the dignity of the tribe and individual. The system has been largely destroyed by the absence of menfolk and by white rule, and the result is often at best the sophisticated or partly Europeanised native, and at worst, the rootless, vicious African hanger-on in slums of European towns. It is also a doubtful question whether a native society can reasonably be expected to rule itself (as is implicit in the system of “indirect rule”) if the social effectiveness of tribal organisation is progressively broken down by demands for labour, by the impact of western culture through administrators and missionaries, and by the economic disabilities imposed on the more intelligent native.

According to L. S. B. Leakey (himself a European but also a full initiate in the Kikuyu tribal system) the Kikuyu regard land as a possession that can only be transferred to a blood relation—mere cash sale or compensation is insufficient—and in order to transfer land to a stranger, the latter must first become a “blood-brother” by initiation. Hence to many Kikuyu land which white settlers now occupy (and which to their own way of thinking they have legitimately paid for) still remains tribal property. Another feature in Kikuyu society is the great respect for a spoken oath, even when taken under compulsion, and similar difficulties arise in the field of religion, where Kikuyu observance has long centred on fertility worship and animal sacrifices. None of these geographical social factors is in itself the cause of the Mau Mau outbreak; but together they provide the background against which it may be understood.

UGANDA

Bounded on the east by Kenya, on the north by the Sudan, on the west by the Belgian Congo and on the south by Lake Victoria and Tanganyika, Uganda repeats in broad outline the physiographic features characteristic of western Kenya. Southern Uganda is a lake-studded plateau, deeply trenched by a portion of the Great Rift Valley; but

in the north, the plateau becomes less uneven and begins gradually to drop towards the lowlands of the Sudan. Unlike Kenya and Tanganyika however, which are drained by rivers flowing in various directions without any single trend, Uganda is traversed by part of the Upper Nile Valley—a strongly defined single system with spectacular falls in a few places, though the extreme south (Lake Victoria) is a region of indeterminate, generally southward, drainage. Distinctly more low-lying than western Kenya, with an average altitude of only 3,000–4,000 ft., temperatures are markedly higher: the coolest month at Entebbe and Kampala has a mean of 69–70° F., while maxima are 73° F. Rainfall, on the other hand, is distinctly more abundant, averaging 40–50 in. over most of the country. Scrubland and semi-desert do not therefore occur: instead extensive and luxurious savannah-grassland covers much of the plateau, with woodland that approaches true equatorial forest on the lower riverine areas. There are also many patches of swamp.

These conditions offer only comparatively little inducement to white settlement, and there are less than 4,000 Europeans in the whole territory, most of whom are officials. On the other hand, native African society in Uganda is strong and progressive. The most important native group is the Baganda, a semi-pastoral people with a well developed “kingdom”, who comprise about one-quarter of the total population of 5 million. Further south there are other kingdoms, which include that of Bunyoro, but towards the north the tribe becomes the major unit.

The chief town, in point of numbers and commercial activity, is Kampala, the rail-head of the Uganda–Nairobi–Mombasa line: and here is the headquarters of the Baganda administration. The official British capital is however at Entebbe, a port on Lake Victoria, through which much of the raw cotton passes on its way to Mombasa and India (almost all East African cotton is used in India). Jinja, on the crossing of the Nile, is the economic centre of eastern Uganda, and likely to grow further with the development of hydro-electric power.

ZANZIBAR AND PEMBA

The islands of Zanzibar (640 sq. miles) and Pemba (380 sq. miles) lie some twenty miles off the coast of East Africa at 5–6° S. lat., between Dar es Salaam and Mombasa. Originally, they were Arab trading bases, from which commercial contacts and slave-raiding were organised throughout much of the adjoining East African mainland, but the former activity has declined owing to competition from Dar es Salaam and Mombasa, and the slave trade has come to an end. The islands are low-lying and hence experience an “equatorial” climate: unvarying moderate heat, with the thermometer between 75° and 85° F. throughout the year, and abundant rainfall: 60 in. annually in Zanzibar, and over 80 in. in Pemba.

Both islands were once covered in tropical forest, but this has been cleared to make way for plantations, on which cloves are grown. A surprising variety of plants occur—cultivated specimens having been introduced from Madagascar, India, Persia and the East Indies.

Zanzibar Protectorate is of interest as the meeting ground of several cultures. The name itself is part Persian, part Hindu, meaning “Land of the Black Man”, and there are important minorities of Arabs from southern Arabia and the Persian Gulf, together with Indians and Europeans. Many languages are current, but the chief, Swahili (coastal dweller) is basically a Bantu (African) language.

SOMALILAND

British Somaliland extends between 9–19° N. lat., and 42–49° E. long. and is part of the great eastern promontary

of Africa, fronting the Gulf of Aden. On the north-west the territory is bounded by French Somaliland; to the west, south and east by Ethiopia and its dependency Somalia (formerly Italian Somaliland).

Topographically, British Somaliland consists of a tilted, uneven plateau, lying at about 1,500 ft. in the extreme south, and rising gradually to a culminating east-west running ridge in the north, which attains heights of 6,000-7,000 ft. From this ridge lying parallel to the coast, there is a steep drop to a coastal plain, very narrow in the east, but up to 20-40 miles wide in the centre and west. Geological investigation is not complete, but it would appear that the ancient granitic platform underlying most of the African continent is continued into Somaliland, with a covering of later sedimentary rocks. Considerable faulting and dislocation has taken place in the north, where structures continuing those of the East African Rift Valley define the coastline and highland ridge—the whole of the Gulf of Aden is a vast rift valley.

In summer (May-September), winds blow from the south-west, and deposit much (though not quite all) of

their moisture on the higher plateau of Ethiopia, so that there is a perceptible but very slight summer rainfall in Somaliland. In winter, winds blow from the north-east (i.e., from off the dry Arabian peninsula), hence at this season there is hardly any rainfall at all. British Somaliland is thus a semi-arid territory, with an annual rainfall of less than 10 in. on the coast and no more than 20 in. in the interior. Temperatures are higher than those in East Africa proper, exceeding 90° in the summer at times, and rarely falling below 70° in winter—with however somewhat cooler conditions on the higher uplands. The population is almost entirely Muslim, and in culture and ethnic origins the inhabitants differ markedly from those of the other East African territories: racially and linguistically, the Somalis are close to the Ethiopians, while their religion makes them a part of the Arab world.

Hargeisa, in the cooler uplands, is the largest town (35,000) but Berbera is the capital and chief port. At least one-half of the population of 30,000 temporarily evacuates the town during the hot season.

W.B.F.

HISTORY

TANGANYIKA, KENYA, UGANDA, ZANZIBAR

The boundaries of the East African territories are as completely artificial as those of most of the other political divisions of tropical Africa. Geographically, and to a large extent historically, the region divides itself into a series of belts running north and south parallel with the coast of the Indian Ocean. First, the islands, Pemba, Zanzibar and Mafia, and the mainland's narrow, coastal plain, palm-fringed, fertile and well-populated, dotted with the towns of the sea-borne immigrants who have sailed in upon the north-east monsoon wind to trade and to settle. This, together with the rest of the eastern coastline from the Red Sea southwards to the Zambezi, is the East Africa of Islam, the East Africa of documented history. Next, the gently sloping eastern flank of the great central African plateau, dry and eroded, placing over most of its length a hundred to three hundred miles of brown and thorny wilderness between the greenness of the coast and that of the interior. Till the railway age it was a considerable if not an absolute barrier. Next, the plateau's highland rim, running in a great crescent from the Imatong range on the Sudan frontier, along the Karamoja escarpment, spreading over the vast massifs of Elgon, Kenya and Kilimanjaro, tapering through central Tanganyika to the Southern Highlands and the Livingstone Mountains which skirt Lake Nyasa. The three great peaks make their own climates, and in their well-watered valleys dense agricultural populations have long been established. Elsewhere the highland rim is dryer, its vegetation less luxuriant. Until recently it has been the country *par excellence* of the pastoral nomad, who has occupied it only sparsely but has kept others out by his predatory habits. Finally, beyond the rim, the country of the great lakes, and above all of the Lake Victoria basin, which, with its equable climate and evenly distributed rainfall, is and has always been the real centre of the African population, the goal and resting-place of many migrations, the only part of East Africa where indigenous man has organised large and enduring political units and tried to remember something of their history.

Until the nineteenth century it was only the first of these zones which had any direct contact with the world outside Africa. The monsoon winds, blowing every alternate six months from the north-east and south-west, made it easy and safe for Arab dhows to sail up and down the coast from bases in the Hadramout and the Persian Gulf, and by early medieval times there were well established trade-routes as far south as Madagascar, and on the mainland as far as Sofala, the port for Manica gold. The Arabs not only traded but settled, building stockaded towns with wooden houses, to which there were later added stone palaces and mosques. They built above all on the little islands just offshore—Lamu and Pate, Mombasa, Kilwa Kisiwani and Songo Mnara, which possessed at once natural defences against the inhabitants of the mainland and roadsteads sheltered from the violence of the ocean. The immigrants were not however self-contained. They took wives and concubines among the local negro women, and in the course of centuries there grew up a race more African than Arab, speaking Kiswahili, a Bantu tongue with some Arabic influence, but practising at least nominally the Mohammedan religion and modified in its social organisation and material culture by its contact with the world of Islam. Such influence did not however spread

beyond the coastal belt, and even there the urban aristocracies were reinforced by fresh settlement in every generation, so that wealth and power remained the monopoly of those least assimilated to the local environment.

So far as the future British East Africa was concerned, it was only these little outposts of Islamic city life which the Portuguese broke into when the sea route to India was opened by Vasco da Gama in 1497, and which they dominated in some measure for about two hundred years. Further south, in what is still Portuguese East Africa, they penetrated a considerable distance into the interior, diverting into their own channels the Manica gold trade upon the transit of which much of the prosperity of the more northerly cities had depended. Again, by the capture of Muscat and Ormuz and by the destruction of the Arab shipping in the Persian Gulf, they temporarily reduced the local trade in slaves and ivory, iron and mangrove poles, which had been exported directly from Kilwa and Mombasa, Malindi and Pate. From the beginning of the sixteenth century the Portuguese Indianmen sailed direct from Mozambique to Goa, so that in its impoverished state the coastline to the north held little interest for them. It was only after two successful raids from the Red Sea by a Turkish commander, Emir Ali, had stirred the whole Muslim population of East Africa into open revolt, that the Portuguese in 1593 razed Mombasa to the ground, built and garrisoned Fort Jesus and for about forty years made serious and partially successful efforts to bring this stretch of coastline under regular control. In 1631, however, the Portuguese-educated Sheikh of Mombasa, Yusuf bin Hassan, suddenly turned against his masters and organised a massacre of the entire Portuguese garrison. Fort Jesus was re-occupied with great difficulty in 1634 and a terrible vengeance was wreaked by the new governor, Francisco da Seixas e Cabreira, upon all the towns which had joined in the revolt. Nevertheless the massacre of 1631 marked the turning point of Portuguese prestige upon the northern section of the East African coast. The Portuguese settlers on Zanzibar and Pemba, Pate and Pate never regained their former confidence; the Arab population became increasingly independent; and Mombasa became more and more a solitary northern bastion of the Portuguese province to the south of Cape Delgado.

As the seventeenth century wore on the threat to Mombasa came no longer from the Turks in the Red Sea but from the little state of Oman in the Persian Gulf whose ruler, the Imam Sultan-bin-Seif, had expelled the Portuguese from Muscat in 1650. Two years later Sultan's navy launched the first of many attacks against the East African coast. By 1669 he was raiding as far south as Mozambique. In 1698 Fort Jesus fell to his son Seif-bin-Sultan after a siege lasting two and a half years, and although the Portuguese were able to re-occupy it for a year in 1728–29, it may be said that throughout the eighteenth century, as for most of the nineteenth, the coastal belt of East Africa was an Arab province. It was not at first a very cohesive province. Though nominally all were tributary to Oman, some towns reverted to their ancient dynasties, while in others, especially in Mombasa, the Omani governors quickly made themselves independent. When the Yorubi dynasty of Oman was replaced by the Albusaids in 1741, only Zanzibar remained loyal to the liberator. Yet the coast was no longer the backwater that

it had been in Portuguese times. There was a revival in the demand for African slaves from Persia and Arabia, as also from the new French sugar colonies of Mauritius and Réunion, and there is evidence that Kilwa at least was beginning to look for its supplies beyond the coastal belt in the direction of Lake Nyasa. The material remains of the eighteenth century, fortifications and mosques and tombs, and above all the immense quantities of cheap Chinese porcelain and Persian glazed ware, attest a state of prosperity which, if not equal in quality to the best of the mediæval period, was more pervasive and broadly based.

From 1800 till 1856 the throne of Muscat was occupied by an exceptionally capable ruler, Seyyid Said, who employed most of his energies in reconquering and developing the East African empire of the Yorubis. He first won the allegiance of the northern towns, Lamu and Pate, then occupied Kilwa, and finally faced his main rivals, the Mazrui governors of Mombasa. In 1814 and again in 1823 the Mazrui unsuccessfully appealed to the Bombay Government for protection. In 1824 the leader of a British naval surveying expedition, Captain Owen, provisionally accepted the offer of a protectorate, and for nearly two years the Union Jack flew over Fort Jesus. But he was not supported by the home government, and in 1828 the Mazrui capitulated to Seyyid Said. Meanwhile Zanzibar was being developed as the commercial centre of the whole region. A clove industry was started on the island which attracted the visits of trading vessels from Europe and America; British Indian merchants and traders multiplied; and the result was a growing stimulus to the exploitation of the mainland. The European firms did not buy slaves, but they paid good prices for ivory, and in so doing they introduced to the existing slave-trade an element which in the next half-century was to extend its operations to practically the whole interior of the continent. For the supply of ivory in any district was far more quickly exhausted than that of slaves; the ivory trader had a constant incentive to move on and tap new regions, and when he did so he took the slave-trade with him, because he needed slaves to transport the ivory. And so during the first half of the nineteenth century the opening up of the East African interior by Zanzibar Arabs proceeded apace. The shortest route to the lake region, that from Kilwa to Lake Nyasa, was probably open by the beginning of the century; Lake Tanganyika was reached by 1840, Uganda a decade later. "When pipes are played at Zanzibar", said a Swahili proverb, "they dance at the great lakes."

By 1840 the prosperity of Zanzibar was such that Seyyid Said moved his capital there from Muscat. In 1844 he was followed by the first British Consul, Captain Hamerton, and in the same year the Church Missionary Society posted two agents, Krapf and Rebmann, to found a station near Mombasa. Two years earlier the Bombay Government, in preparation for the abolition of the legal status of slavery in India, had secured by the so-called Moresby Treaty the first limitation of the Arab sea-borne slave-trade. From this time on British interests in East Africa grew steadily, with the abolition of the slave-trade as their unifying theme. The enforcement of the Treaty meant the presence in East African waters of a British naval squadron. The naval captures involved the establishment of a prize court at Zanzibar, and work for the missionaries who cared for the liberated slaves. The missionary societies worked up public opinion in England; the Government reacted by tightening consular pressure on the Sultan and so securing concessions which it took even more interference to enforce. But it was above all the missionaries who looked to the interior of East Africa, who stimulated exploration, took part in it themselves and were the first to follow it up. Krapf and Rebmann made several journeys inland from

Mombasa, reaching Kilimanjaro and sighting Mount Kenya, and the information which they collected at the Arab ports along the coast was the main inspiration of the explorers Burton and Speke, who in 1858 travelled up the main trade-route to Lake Tanganyika. Speke in addition made a detour to the south end of Lake Victoria, and in 1862 returned there with Grant, discovered the exit of the Nile at the Ripon Falls and continued his journey northwards to the Sudan and Egypt. In 1863 Baker, travelling up the Nile, discovered Lake Albert. Three years later the missionary explorer David Livingstone, who had already made two important journeys further south on the line of the Zambezi, set out on his last expedition to Lakes Nyasa and Tanganyika, the Upper Congo and Lake Bangweolo, which lasted till his death in 1873. It was the relief of Livingstone which occasioned Stanley's first expedition to tropical Africa in 1872, and likewise that of Cameron which crossed the continent in 1873-75. Stanley returned in 1875-77 on another great journey which took him first to Uganda and then down the Congo to its mouth.

The cumulative lesson of these explorations was first of all to show that the real evil of the slave-trade lay not in the comparatively mild form of domestic and praedial slavery prevailing on the coast and in the importing countries, but in the system of raiding and open warfare promoted by the traders in the interior in order to obtain their supplies, and in the horrifying conditions under which caravans of newly captured slaves were marched to the coast. It was plain to all the travellers that the naval blockade was having only slight results, and that the only effective policy was that of opening up the interior to legitimate commerce and other influences of civilisation. Unfortunately, apart from the tedious route up the Zambezi and the Shire to Lake Nyasa, there were no waterways to the interior and beasts of burden could not live in the tsetse infested country between the plateau and the coast. Railways would obviously have to wait upon political annexation, and meanwhile ivory was the only product which would repay the cost of human portage. The commercial prospects of penetration were therefore negligible. The missionary societies, however, went in. Between 1875 and 1885 Anglican and Presbyterian missionaries settled round Lake Nyasa, English Congregationalists and French Roman Catholics round Lake Tanganyika, Anglicans and Catholics in Uganda. It has been estimated that by 1885 no less than three hundred European missionaries were working or had worked on the mainland, and of these more than half had made their way to remote stations in the far interior. Though their work during this pioneer phase was restricted to the preliminary tasks of building and language study, and to gathering round themselves small communities, usually of freed slaves and refugees from tribal warfare, the growing points thus created were to make them an influence of at least as great an importance as the secular governments which were set up in the next generation.

While the missionaries were penetrating the interior, events at the coast were moving steadily towards political intervention. Zanzibar had been finally separated from Muscat in 1861, and from then on, and especially after 1866 when Sir John Kirk had begun his long career as Consul, British policy had aimed at controlling East Africa through Zanzibar, at securing international recognition of the Sultan's dominions while at the same time exercising a paramount diplomatic influence at his court. It was a dog-in-the-manger policy, and however adequate in the sixties and seventies, could not long survive the fever of acquisitiveness which overtook the principal European nations in the eighties and nineties. Foreseeing the change, Kirk in 1877 persuaded Sultan

THE BRITISH COMMONWEALTH

Barghash to offer a seventy years' concession of his mainland territories, including full powers of government, to a British syndicate headed by Sir William Mackinnon. The Government, however, refused to give Mackinnon the assurances of political support which he deemed necessary: there is indeed some evidence that the Foreign Secretary, Lord Salisbury, fearing to provoke an international scramble, deliberately bedevilled the negotiations. The failure of the concession put an end to all chances of a British occupation by peaceful means, and it therefore remained that some power less committed to support of the Sultan's territorial claims should test them by making a treaty of annexation with a mainland chief who did not recognise the suzerainty of Zanzibar. In the event this was done by the German agent, Carl Peters, in November 1884. The sequel was an international commission which on the basis of effective occupation limited the Zanzibar dominions to a narrow belt extending only ten miles inland from the coast, and a subsequent agreement between the British and German governments, reached in October 1886, dividing the remainder of the territory into two "spheres of influence" along the line of the present Kenya-Tanganyika frontier. The partition was completed by the Anglo-German Agreement of June 1890, whereby, in exchange for the cession of the island of Helgoland in the North Sea, Germany recognised Great Britain's right to a protectorate over Zanzibar, withdrew her claims to a small piece of territory at Witu north of Mombasa and agreed to the present frontiers dividing Uganda from Tanganyika and Tanganyika from British Central Africa. The Sultan of Zanzibar had already leased the part of his ten-mile strip adjacent to the British sphere to the Imperial British East Africa Company, which received a Royal Charter in 1888; he now sold the strip adjacent to the German sphere, retaining a direct jurisdiction only over the islands of Zanzibar and Pemba.

Partition, however, was far from synonymous with development, or even with the establishment of a regular administration. In the islands the Sultan's government continued under the increasingly close scrutiny of a British Agent and Consul-General. On the mainland, governmental responsibility in both the British and German spheres had been conferred in the first instance upon Chartered Companies, the German East Africa Company and the Imperial British East Africa Company, neither of which possessed resources remotely equal to the task before them. In 1888, two years after the first partition, the German company was faced with a serious uprising of the Arab population in the coastal belt, from which it was rescued only by Imperial troops and a joint blockade by the German and British navies. In 1890 it formally surrendered its governmental powers to an Imperial Commissioner. The British company was more tactful with the Arabs, but only by dint of spending a large proportion of its exiguous capital in salaries and subsidies to the former Zanzibar officials and their henchmen. A wharf and a warehouse were erected at Mombasa, and a tenuous caravan-route was opened across the Kenya highlands towards Uganda which could be used with moderate safety by well-armed caravans. Ivory was the only export which passed down this route, and that not on a scale sufficient to pay for the most rudimentary attempt at administration. Indeed, over the whole of what is now Kenya Colony, where the tribes were primitive and untouched even by missionaries, any attempt to tax or to govern would have resulted in the extermination of the Company's meagre personnel. In Uganda, where the Company had in 1889 become involved in a civil war within the native kingdom of Buganda, Captain Lugard with a hundred and fifty Swahili soldiers was able by great bravery and dexterous politics to gain a precarious

control over the state. By 1892, however, the Company was bankrupt, and in 1893-95 the Imperial Government reluctantly agreed to take over political responsibility and to establish two new Protectorates under the Foreign Office in Uganda and British East Africa (Kenya).

For roughly the first fifteen years of their existence the overriding preoccupation of these new governments was to secure the recognition of their authority by their subjects. It would however be a great mistake to imagine this period as one of almost unmitigated military activity. It was a period when direct taxation was impossible, and the revenue from indirect taxation negligible. The embryo administrations were supported almost entirely out of Imperial funds, grudgingly given. Military forces had for the most part to be recruited and trained on the spot by a handful of European officers. Civilian officials were numbered in tens, not in hundreds. Communications were non-existent. Supplies and equipment were limited to what could be carried on the human head. In these circumstances the territories could only be governed if the people who lived in them continued in the main to govern themselves. Peripheral districts and those away from the main supply routes were left severely alone for many years. Regular administration began among the most advanced peoples and, with their co-operation, was gradually extended to the rest. The administration of German East Africa was based, naturally enough, upon the co-operation of the Swahili people of the coastal belt. They were the most advanced. Theirs was the first district to be occupied. From them were recruited the first soldiers, policemen, clerks, interpreters, foremen, skilled craftsmen and household servants. As the Germans moved further inland all these classes of Swahilis went with them. The same was true at first of Kenya. But in Uganda, it was the people of Buganda, the kingdom on the north-western shores of Lake Victoria, who filled this rôle. The Baganda had a remarkably efficient political organisation of their own. They had had Christian missionaries living in their midst since 1877. They had signed a treaty with Lugard which was far more than a simple transfer of sovereignty to the Chartered Company. And now in the early years of the Protectorate it was they who supplied the native missionaries for the conversion, chiefs for the administration and, where necessary, military levies for the conquest of the neighbouring peoples. Far more completely than in the case of the Swahilis in the two neighbouring territories, they made it possible for the new régime, for the most part willingly accepted, to be a peaceful transition to better things.

If the first task and the first contribution of British and German government in East Africa was the establishment of peace, law and order, the second was certainly the provision of modern means of communication. Like the first, it was financially a charge upon the Imperial exchequers. To its great credit, and to the lasting benefit of Kenya and Uganda, the British Government, as soon as it had assumed political responsibility for the territories, set in motion the construction of a railway over five hundred miles long from Mombasa to Kisumu on the eastern shores of Lake Victoria. The line was begun in 1895 and completed in 1901 at a cost of five and a half million pounds, advanced originally as an interest-free loan and written off after the first World War as a free gift. German policy was by contrast hesitating and inept. Railway development was at first left entirely to private enterprise, with the result that by 1900 German East Africa had only twenty miles of line, running inland from the port of Tanga. The Imperial government then took over, adding sixty miles by 1905 and a further two hundred between 1909 and 1912, which brought this, the Northern Railway, to Moshi, in the foothills of Kilimanjaro. The Central

Railway, running from Dar es Salaam to Lake Tanganyika, had a similar and even more dilatory history. It was not until 1904 that private enterprise could be interested in the project. A hundred and fifty miles to Morogoro were completed by 1907, but the syndicate's capital was by then exhausted. The German Government had once again to acquire the controlling interest and find the additional capital required for the remaining six hundred and fifty miles, which was completed only a few months before the outbreak of war in 1914. Had it not been for the existence of the Uganda railway the western half of German East Africa (including, as it then did, the kingdoms of Ruanda and Urundi which contained nearly half the population of the colony) would have been completely undeveloped and practically ungoverned. As late as 1910 the normal route from Dar es Salaam to Lake Tanganyika was via Mombasa and Kisumu.

It was the railways of East Africa, and above all the Uganda Railway, tapping as it did the most densely populated part of all these territories, which made possible the development of the country beyond the first rudimentary stage of semi-military occupation. No longer was ivory the only product of the interior. Hides and skins immediately joined the list of exports, and it was possible for the first time to think of the introduction of cash crops such as cotton, coffee, rubber and tea. Similarly, with cheaper imports—a tin of kerosene had cost £4 in Kampala in 1897—came the incentive to the African population to become producers. Fifteen thousand coolies had been brought on contract from India to work on the railway, and many of these now stayed to perform an invaluable function as pedlars and shopkeepers. They were soon joined by free immigrants, and early administrators were loud in praise of their services in getting money into circulation and stimulating the first conceptions of an exchange economy among the native peoples. Above all, thanks to these developments it became possible for the first time to institute direct taxation and so to look ahead to the time when grants-in-aid, with all their humiliating accompaniments of Treasury control, could be dispensed with.

So at least the situation appeared to the administrators of the Uganda Protectorate which until Sir Harry Johnston's term as Commissioner (1899–1901) stretched as far east as the Rift Valley and included the western and largest half of what came to be the "White Highlands" of Kenya. When the railway was completed, however, it was thought desirable to make it the responsibility of a single government, and the frontier between the two Protectorates was accordingly shifted two hundred and fifty miles to the west. The new Commissioner for the East Africa Protectorate, Sir Charles Eliot (1902–04), moved his capital from Mombasa up to the little railway town of Nairobi and, upon surveying the economic problems which faced him, discovered that what should have been his greatest asset was in fact a serious liability. Upon him lay the responsibility for finding nearly £200,000 a year for the working expenses of the railway; and yet, so far as his own territory was concerned, it ran through less than a hundred miles of settled agricultural land and through more than four hundred miles of country thinly inhabited by nomadic or semi-nomadic pastoralists. It was in these circumstances that he recommended a policy of deliberately promoting European settlement in the highlands. It was an inevitable decision, reflecting real and fundamental differences both of geography and of population as between Uganda and the East Africa Protectorate and, judged by the standards of almost any other large-scale movement of people from one part of the world to another, it was carried through with surprisingly little disturbance to the previous occupants of the land. But its political consequences were far-reaching. For though the settlers

were few—they numbered only three thousand in 1914—they showed no more readiness than any other group of British emigrants to submit to the arbitrary rule of a home-based bureaucracy. Already, by the time the two territories were transferred to the Colonial Office in 1905, the settlers of the East Africa Protectorate had formed a Colonists's Association under the leadership of Lord Delamere. By 1907 they were represented in a Legislative Council. By 1908 they had secured a pledge from the Colonial Secretary, Lord Elgin, that land in the highlands should be sold or leased only to Europeans. By 1913 the campaign for responsible government had been launched, and though it was to have a long and tangled history which is still not concluded, the special character of the East Africa Protectorate as against that of Uganda was recognised in 1920 by its annexation, save for the Sultan of Zanzibar's ten-mile strip, as the Colony of Kenya.

On the outbreak of hostilities in Europe in 1914 East Africa too became a theatre of war. The British Navy bombarded Dar es Salaam in August 1914; German land forces replied by trying to cut the Uganda Railway near Voi, to the north-east of Kilimanjaro, and at Kisumu on Lake Victoria. The first attacks were beaten off by the King's African Rifles and by a hastily organised settlers' unit known as the East African Mounted Rifles. In 1915 reinforcements reached the British sphere from India and South Africa, and early in 1916 General Smuts arrived to take command of the offensive. One column under Smuts cleared the coast, another under Van Davenier pursued the main German force through Kondoa to the Central Railway at Dodoma; a third under General Northey marched up from Nyasaland into the Southern Highlands. A Belgian force from the Congo had meanwhile occupied Mwanza at the south end of Lake Victoria and was marching south to Tabora. By the end of the year German East Africa was virtually in Allied hands. The German general von Lettow-Vorbeck, however, carried out a magnificent fighting retreat, first into the south-west corner of the territory, then into Portuguese East Africa, finally surrendering at Abercorn in Northern Rhodesia after the end of the war. By the Treaty of Versailles Germany ceded all her overseas possessions to the allied powers, and at the Paris Conference German East Africa was divided under the Mandates system of the League of Nations between Great Britain and Belgium, Belgium receiving the delectable highland region of Ruanda-Urundi and Great Britain the rest, known thereafter as Tanganyika Territory.

The four territories of East Africa were thus at last united under the tutelage of a single European power. This fact did not however imply the existence of any real internal homogeneity which could form the basis of the wider political union that geographical contiguity suggested. No strong, centralising policy was shaped by the Imperial Government, and in its absence the three older British administrations continued to pursue their separate paths while the fourth struck out on a line of its own. In particular, Tanganyika produced its own version of the plural society, a form distinct from that of Kenya and offering perhaps a greater resistance to amalgamation with Kenya than Uganda, where there were no settlers. In German days, European settlement had been from the first a part of official policy, and in the north-eastern districts between Tanga and Kilimanjaro it had actually taken place on a scale which had caused rather more disturbance to the native population than in the Kenya Highlands. Elsewhere however it had been much hampered by the lack of communications, and geographical circumstances had not, as in Kenya, favoured the creation of large blocks of alienated land. After the war the German settlers were banished, and their estates put up to auction. Some few were bought by immigrants from Great

THE BRITISH COMMONWEALTH

Britain, but the majority by locally resident Indians and Greeks, the latter having been extensively employed by the Germans in connection with railway-building in pre-war days. Little more land was made available for settlement during the early years of the Mandate, and there thus emerged a pattern of immigrant agriculture which, already more interpenetrated with the native landholdings than in Kenya, was also in itself of much more varied composition. In the short run such a community was more prepared than that of Kenya to leave the main direction of affairs to the colonial administration provided by the mandatory power. In the long term it developed a healthy pride in its own cosmopolitanism, which was in sharp contrast to the Ulster-like "loyalty" of white Kenya.

Even if it did not produce a united East Africa however, the Mandate, or rather the new attitude to colonial affairs which underlay the whole Mandate system, did exert an influence which spread from Tanganyika to the other three territories. Immediately after the war a scheme for soldier settlement had been initiated in Kenya, and there were sharp reactions in the United Kingdom in 1920-21 when it was reported by missionaries and others that the Governor, General Northey, was attempting to alleviate the labour shortage by administrative pressure on the chiefs to send their people out to work on the European farms, and by discouraging the cultivation of economic crops by Africans on their own land. In 1920 Lord Milner, and in 1921 Mr. Churchill, intervened in published despatches to prohibit the abuses arising from these measures. In 1922-23 there was further friction when the Imperial Government proposed to alter the system of representation, which had been extended to the European and Asian communities in 1919, from a communal basis to that of a "common roll" with educational and property qualifications. After vigorous campaigning by the European community, in this case with the qualified support of the missionary interests, the system of communal representation was retained, but only after the Imperial Government had declared in an important White Paper that the principle of trusteeship for the native peoples applied in Kenya no less than in Tanganyika and Uganda, and that responsible government could not be granted to the members of one immigrant and minority race.

From this time on the Imperial Government at Westminster and the colonial administrations in East Africa concentrated their attention primarily upon native policy. In 1924 an inter-party Commission was sent out under Mr. Ormsby-Gore, which made important recommendations all pointing to the conclusion that a trusteeship policy was soundly based in economics. In a region only small parts of which were suited for European settlement, the economic prospects clearly depended upon the progress in numbers, in welfare and in economic aptitudes of the African population. The pursuit of such a policy meant the extension of government activity from its early functions of defence, law and order and public works to the provision of educational, medical, agricultural, veterinary and other social services which would enable the African tribesman to play his part more effectively in the modern world. Above all it meant a revolutionary programme of African education, elementary education to open the eyes of the masses, and further education of the few to provide the indispensable intermediaries between the government officer and the ordinary villager—educated chiefs; trained dispensers, dressers, nurses and midwives; agricultural and veterinary demonstrators; school-teachers and social workers. Very much more extraordinary than the recommendations of the report, however, was the speed with which they were put into practice. That this was possible was due almost entirely to the full co-operation of the Christian missions, which had previously been alone in the

field of social services and which, as the most persistent advocates of a policy of African development, were prepared to throw a very large proportion of their resources into making it work. The earlier years of the century had witnessed mass movements to Christianity in almost every part of East Africa except the Islamic coastal belt, which had been met, pending the emergence of an African clergy, by a system of village evangelists who combined the functions of schoolmasters and lay-readers. It was this cadre of evangelist-schoolmasters, remaining in the service of the missions, but from 1925 onwards subsidised, inspected and subjected to mounting tests of quality by the government education departments, that formed the backbone of the new educational system advocated by the Ormsby-Gore Commission. Missions and governments equally combined in the development of a limited number of boarding secondary schools, and by 1939 plans were already in hand to prepare at Makerere College, near Kampala, the beginnings of an East African university.

It was this revolution in African education, starting in the late twenties, much retarded by the fall in revenue resulting from the world slump of 1929-31, and gathering momentum steadily through the thirties, which more than any other factor gave the East African territories their present character. European settlement developed slowly, in Kenya and Tanganyika, earning for itself, besides its contribution to exports, an important place in the internal economy in the supply of food to the growing urban communities. Asian immigration into all four territories continued despite administrative restrictions, and Indians in particular maintained their hold over the distributive and certain other skilled trades. But by the outbreak of the second World War Africans too had begun to make a place for themselves in the modern life of their own countries. Geographically, their development was uneven. There were whole areas, such as the Northern Frontier District of Kenya, the Karamoja and West Nile districts of Uganda and vast stretches of southern and western Tanganyika, where life went on much as it had done through the preceding centuries. But such was not the general condition. African peasant farmers were in many areas making a significant contribution to the East African economy. An educated minority of Africans were filling subordinate, and not always subordinate, posts in the bureaucracy, in the medical and technical departments of government, in the native administrations, in the churches, and in the schools. Though their representation in the central councils of government was slight, they were a force which could no longer be politically ignored. Though the varying extent of vested interests among the immigrant communities in the three territories might dictate varying speeds of constitutional change, and might serve to keep the territories politically separate, the ultimate future of the African population in all of them was assured.

It is against this background of relatively certain historical achievement that the confused and still unassessable events of the post-war years need to be viewed. It was inevitable that the social and economic revolution effected in the African population by the colonial administrations in the period between the wars should lead to a quickening among the educated class of a desire to participate more directly in their own government. It was inevitable that the growth of such desires should be unnaturally accelerated by a war in which East African troops fought in the politically fermenting Asian theatre, and by a post-war world in which the former Italian colonies, the Sudan and the British West African territories were moving so rapidly towards independence. The emergence of nationalism did not therefore take either the Imperial Government or the colonial administrations altogether by surprise. Massive programmes were devised

for the development of the native tribal authorities into efficient modern units of local government. Chiefs of all grades were provided with councils, and the elective principle was introduced on a pyramidal basis whereby the lower councils formed the electoral colleges for the higher. In none of the territories was the policy more actively pursued than in Kenya. And yet it was in Kenya, among the Kikuyu, that there broke out in 1952 the most violent and the most retrograde expression of nationalism that has yet occurred in any part of the continent. The Mau Mau rebellion was a long-matured movement aiming to eliminate the immigrant populations, to seize political power and, more specifically, to capture the White Highlands for the Kikuyu people. To do this it was first necessary to achieve complete solidarity within the tribe itself by terrorising or eliminating those elements, such as the government-appointed chiefs and the most serious adherents of Christianity, who might betray the further development of the conspiracy. It was in this phase that hostilities opened and it is in this phase that they have largely continued, as a rebellion aimed ultimately against the government and the European population, but directed immediately against the supporters of law and order among the Kikuyu themselves. The steadfastness of this law-abiding minority through over three years of warfare and terror affords the best hope of a successful reconstruction of Kikuyu society at the end of the emergency.

The violent aspects of the Mau Mau movement have not so far been imitated elsewhere in East Africa. In Uganda, however, the post-war years have witnessed a tremendous growth of political consciousness, which, as in Kenya, has expressed itself mainly in the tribal unit of government. The Protectorate administration and above all the Legislative Council, though in this case palpably uncon-

nected with any settler interest, has been recognised as the instrument of the foreigner, which might at any moment vote Uganda into an unwanted federation with its neighbours, and which by pushing economic development beyond the agrarian to the industrial stage was dangerously increasing the European hold on the country. The tendency has been to oppose all measures of centralisation, whether internal or external, to boycott the central legislature and to press for the greatest amount of tribal autonomy. It was for his persistent and unconstitutional advocacy of such policies that the Kabaka of Buganda, Mutesa II, was deported by the Protectorate Government in November 1953. The powerful but entirely passive reaction of the Baganda to this event suggested that the Kabaka had, whether constitutionally or not, been expressing the popular will; and in June 1954 an outside mediator, Sir Keith Hancock, undertook a mission to work out with elected Baganda leaders a plan for constitutional reform which would on the one hand give the Baganda a substantial control over their own affairs and on the other secure their co-operation in the government of the Protectorate as a whole. The result was a triumph of peaceful negotiation, which may well prove a blueprint for the solution of similar difficulties not only in other districts of Uganda but in other parts of East Africa as well. Her Majesty's Government was so well satisfied with the proposed reforms that it was prepared, after their implementation in July 1955, to agree to the return of the Kabaka to his country as the constitutional ruler of the Baganda people. For it may well be that in the next phase of East African history it will be the diversity of local interests, as between district and district, tribe and tribe, rather than the diversity of interests between immigrant and indigenous races, which will be the dominant problem.

R.O.

ECONOMIC SURVEY

KENYA, TANGANYIKA, UGANDA, ZANZIBAR

The natural resources of East Africa are on the whole poor. Its mineral wealth, so far as is yet known, is not very great. In general its soils are of only moderate fertility and the rainfall is inadequate and unreliable. Vast tracts of land remain almost wholly unused because of aridity, the tsetse fly or lack of surface water. There are, however, certain areas, notably the Lake Victoria basin, the highlands of Kenya, the volcanic slopes of Mounts Elgon, Kilimanjaro and Meru, and parts of southern and western Tanganyika, where the soil is rich and the rainfall adequate for a prosperous agriculture, and it is on the exploitation of these limited areas that the economic progress of the region has mainly depended and still depends.

Agriculture and stock-rearing are the basis of the region's economy and the occupations of the vast majority of its inhabitants. The money incomes of individuals and Governments depend very largely on the export of a limited number of primary products. Of these, by far the most important are cotton, which is grown mainly in Uganda, sisal, chiefly from Tanganyika, and coffee, of which about half is produced in Uganda while the remainder is divided about equally between Kenya and Tanganyika. Production of these and other marketable crops is carried on partly by non-African planters and farmers, who also undertake ranching and dairy farming, and partly by African peasants who combine small-scale production for the market with subsistence farming. In this way a number of tribes have attained a modest degree of prosperity. But the survival of primitive systems of land tenure and land use, which are inappropriate in modern conditions of land shortage and market economy, not only hampers progress but threatens disaster in the form of soil exhaustion and erosion. Governments have tackled this problem vigorously by soil conservation measures and the reform of peasant farming methods, as well as by re-settlement schemes, and their efforts have already had a good deal of success in many areas. A further menace is the excessive multiplication of stock by the pastoral peoples, who pay much more attention to the numbers than to the economic value of their beasts.

The very favourable terms of trade which East Africa has enjoyed for the past decade, and the constructive policies adopted by the metropolitan and local Governments, have led to a rapid expansion of investment and consumption in recent years, which even Mau Mau has scarcely checked. One consequence has been a considerable growth of light manufacturing industry, particularly in Kenya, and, though the economy will remain essentially agricultural in character, further development of this kind can be expected to take place, especially perhaps in Uganda, where the construction of a hydro-electric station at Jinja has gone far towards solving the problem of power supply. There has also been a substantial increase in mineral production, which is likely to continue.

The human as well as the physical resources of the region leave much to be desired from an economic point of view. Although, given the present methods of production, population appears to be excessive in some areas, it is almost certainly too small in the region as a whole, providing neither an adequate internal market nor an adequate labour force for development. Moreover, sixty years ago the economic organisation and production methods of

East Africans were extremely primitive, and they are still far from having completed their adjustment to modern conditions. Their physique is generally poor, and though they lack neither intelligence nor mechanical aptitude they are mostly lacking in the qualities of reliability and assiduity required of workers in a modern economic system. Their wants are still few and their valuation of leisure is high. Until recently most of the labour requirements of estate agriculture, public works, industry and mining were met by temporary migrants, whose employment was too brief for them to acquire either skill or discipline, but in late years much has been done by Governments and private employers to stabilise labour, and much attention has been paid to the devising of incentive schemes. Wages have risen rapidly in the past few years but are still very low by the standards of most other countries.

In the past Africans have contributed to the economy almost solely as peasant cultivators and unskilled labourers, capital, skill and enterprise being imported from Europe and Asia. Many of the indigenous people, however, are now playing a more active role as substantial farmers, traders, skilled workers and professional men. It is a major objective of Government policy to accelerate their advance by, for example, providing them with technical instruction and easy credit and by organising co-operatives.

One of the most intractable of East Africa's problems is that of transport. Apart from the great lakes, internal waterways are almost entirely lacking. The single-track railway system leaves much of the region without an adequate outlet for its produce, and in spite of heavy capital expenditure since the war is barely able to cope even with the present volume of trade. Road construction and maintenance are very difficult and costly. Improved communications may be said to rank with education and better land use as East Africa's primary need.

In most respects the four territorial Governments pursue independent and at some points divergent policies, but since 1948 certain common services, notably railways and harbours, posts and telecommunications, customs and excise, income tax and scientific research, have been administered for Kenya, Uganda and Tanganyika by a central body, the East Africa High Commission.

The general poverty of its natural resources, the backwardness of most of its inhabitants and the difficulty of communications combine to make the economic development of East Africa no easy task. Progress is also hampered by the barriers between race and race, and between tribe and tribe, some of which, like the rigid demarcation of the Kenya highlands into white and black areas, have been erected or preserved by the deliberate policy of Governments, and which tend to impede the flow of capital, labour and knowledge. However, the potentialities of the region are not yet by any means exhausted; and, given peace, good government, a better understanding between the races and reasonably favourable external markets, a further increase in its wealth can confidently be predicted.

KENYA

All economic production in the Colony and Protectorate of Kenya is confined to the southern strip, comprising the low-lying coastal area, the plateau, 3,000–10,000 ft. above

sea-level, and part of the Great Rift Valley—the northern and north-eastern part of the territory, three-fifths of the total area of 224,960 sq. miles, being arid and comparatively waterless.

Agriculture. At present the resources of the Colony are mainly agricultural: and farming, including stock-rearing, is the principal occupation of both Europeans and Africans. Agriculture is possible from sea-level to altitudes of 9,000 ft., and tropical, sub-tropical and temperate crops are cultivated. The main agricultural exports of Kenya are coffee, sisal, wattle extract, tea, hides and skins, cotton, pyrethrum, wheat and maize. Less important but nevertheless valuable exports are castor seed, wool, butter, ghee, bacon and ham. Sugar cane is also produced but production is still inadequate for local requirements.

Coffee, tea and sisal are largely plantation grown, but the production of coffee and tea on a peasant basis has begun and will increase rapidly with the implementation of the Swynnerton Plan for African agriculture; and there is some African production of sisal. Cotton, hides and much of the maize and wattle are African grown, while most of the wheat and pyrethrum (valuable as a base for insecticides) come from European mixed farms which also produce dairy products, eggs, bacon, oats and barley. Kenya is the most important wheat growing land in the colonial territories; grown mainly by Europeans, the annual harvest has increased from about 20,000 tons pre-war to about 115,000 tons. A marked feature of Kenya's agricultural development in recent years has been the growth of mixed farming, encouraged by the Agricultural Rehabilitation Fund, set up in 1951.

Livestock. Current estimates of the livestock population are based to a considerable extent on censuses carried out by the Department of Veterinary Services, and the number of cattle in the African tribal areas is estimated at 6 million. Returns of livestock in the non-African farms showed that there are about 650,000 cattle, over 300,000 sheep, 35,000 pigs and 5,000 horses. In 1954, 60,000 cwt of hides and about 27,000 cwt. of sheep and goat skins were exported. The problem of immunising European-owned pedigree herds against diseases such as anthrax, carried by the mildly affected African Zebu strains, remains difficult to solve in a country possessing an abundance of susceptible game animals, although the use of vaccines during the 1954 outbreak saved many valuable cattle. Research into tsetse fly control is carried on by the Department of Veterinary Services, which also provides the essential basic educational instruction in animal husbandry and crop management.

The 1953 Report of the Troup Commission of Inquiry into the General Economy of Farming in the "White Highlands" recommended a ten-year development programme increasing the capital valuation of the European farming industry from £38,930,000 to £93,885,000 at the end of the period. Action has already been taken to implement the recommendations for the extension of facilities for research and farm planning and the revision of credit facilities is being considered.

A special organisation known as African Land Development or "ALDEV" has operated since 1946 under the Minister of Agriculture, injecting into the African areas funds and staff to carry out land development outside the ordinary range of the Agricultural Department. Re-settlement and other schemes benefitting the Machakos District, the development of the Coast hinterland by roads, dams and tsetse clearance; the opening up and settlement of Chepalungu and the Lambwe Valley in Nyanza together with instruction in soil conservation, have been part of the work of "ALDEV", financed by grants from Colonial

Development and Welfare Funds. The provision of work for Kikuyu tribesmen during the Emergency was also undertaken by "ALDEV" and effected a material change in the face of the Kikuyu countryside. Early in 1954 additional funds for the intensification of agriculture in the African areas within the framework of the Swynnerton Plan were provided by the U.K. Government to the total of £5 million over five years.

The very close interrelation between agriculture and rural water and irrigation needs no emphasis, for Kenya is short of surface water and rain over large areas. Irrigation projects have been investigated and designed in Baringo District (Perkerra River, 5,000 acres) and Embu District and at Garsen on the Lower Tana and in Nyanza Province.

Forestry. Only 2.5 per cent of the total area of Kenya is under forest and constant inroads are being made on the wooded regions for fuel, so that difficulty is experienced in maintaining stocks by replanting. To ensure a sustained yield from the Forest Estate, the policy has been to establish plantations of fast-growing exotic species, concentrated in blocks and sited in the regions most accessible to markets or to railheads. The plantations are expected to yield a vastly greater volume of timber per acre than has been obtained from the virgin forest.¹ Owing to the Emergency, however, thinning and pruning operations fell behind schedule to such an extent that both the quality and quantity of plantation timber may be seriously affected. The main valuable softwoods are podocarpus, cedar and cypress, although owing to the ravages of the borer beetle, the cultivation of the latter species has been largely replaced by that of pines. The main hardwoods exported are camphor and olive and measures to increase the standards in the lumber trade to meet growing competition have been taken so that the treatment of timber against insects is now regarded as an essential preliminary to sale. The value of wood and timber exported in 1954 was £52,000.

Fisheries. Trout fishing is possible in most of the high altitude rivers. The over-fishing of the Kenya waters of Lake Victoria has led to the prohibition of the seine net in order to preserve the stocks of lake fish. The use of terylene nets for sea fishing has resulted in greater catches of shark, which finds a ready market.

Mining and Industry. The potential value of Kenya's mineral wealth cannot yet be fully estimated as the necessary fundamental geological survey has only been completed over approximately one-fifth of the land area. The principal minerals exploited commercially are sodium carbonate, kyanite and gold. In 1954 the output of soda ash by the Magadi Soda Company Ltd. was 19,074 tons valued at £1,249,362. The value of salt extracted was £156,137. Both gold and kyanite production has shown a tendency to fall while the production of limestone and the less common minerals, diatomite, anthophyllite, vermiculite and gypsum, augurs well for the future. Large tonages of ore-bearing pyrochlore and rare mineral deposits have been established at Mrima, which lies in a very favourable situation near the coast, about forty miles from Mombasa. It is also estimated that copper ore reserves, amounting to one million tons, exist at the gold and mixed sulphide property at Macalder Mine in southern Nyanza.

While the economy of Kenya originally rested almost entirely on its agricultural and mineral industries, the post-war development of secondary industries, based on imported or locally produced raw materials, now accounts for over 10 per cent of the national income. There is a

¹ *Notes on Commerce and Industry in Kenya*, published by the Ministry of Commerce.

THE BRITISH COMMONWEALTH

vast and growing market, not only in British East Africa, but also in the adjoining territories, for consumer goods which have hitherto been imported. Thus, in addition to the processing of such primary products as wheat, maize, coffee, sugar, tea, oil seeds, copra, hides and skins, pyrethrum, wattle bark and sisal, a multitude of secondary industries have sprung up, including fruit and vegetable canning, bakeries, fertiliser and insecticide production; and shoe factories, clothing factories, blanket and textiles factories have been set up. The building trade has expanded to meet the heavy demands by the Government, industry and population. Ancillary industries for the production of building materials and light engineering works have sprung up. Aluminium ware, supplying the bulk of the essential needs of the three East African territories, is produced at Mombasa from imported ingots. The manufacture of metal window and door frames, cement, sacks and metal cans, glass ware and paper bags are all well established industries. Four large breweries supply the local market and cigarettes are manufactured from imported and East African grown tobacco. Other locally manufactured goods include plastic articles, plywood, soap and toilet preparations and brushes. The establishment of a motor car assembly plant and a plate and sheet glass factory is being considered.

No primary source of power on which heavy industry could be based has been discovered to date although oil and coal may be shown to exist on completion of the geological survey. Supplies of wood for fuel are limited and the use of imported coal or oil makes production costly. There has however been considerable development of electric power in the Nairobi area and a transmission line is being built to convey current from the great new turbines in Uganda.

Communications. The Kenya-Uganda railway runs north-west from Mombasa to Nairobi (330 miles) and thence to Nakuru, Eldoret and Kampala, in Uganda (879 miles). Construction is under way of an extension of the railway westwards from Kampala to connect with Lakes George and Edward on the border of Uganda and the Belgian Congo. There is a line from Nakuru, centre of the "White Highlands", to Kisumu on Lake Victoria and thence to Butere. Other branch lines are from Voi to Moshi, connecting the main line with the Tanganyika system, Konza to Magadi, Nairobi to Nanyuki, Gilgil to Thomson's Falls, Rongai to Solai and Lesuru to Kitale.

The total road mileage is about 20,500 miles but under 500 are bitumen surfaced. An extensive programme of road development is being steadily continued, but it is clear that only all-weather roads can lead to the full economic development of the land and natural resources. International air services link Kenya with Europe and the rest of Africa and internal air services are operated by the East African Airways Corporation between the main commercial centres of Kenya, Tanganyika, Uganda and Zanzibar. Regular steamship services call at the Kenya port of Mombasa which handles cargo for all the East African territories, although imports are restricted by a phasing system in accordance with the port's carrying capacity. The fact that both Nairobi and Mombasa serve East Africa as a whole rather than Kenya exclusively, is reflected in the trade figures for the year. Kenya's adverse balance of trade is partly attributable to the needs of the Emergency, colonial development and the import of capital goods such as railway stock, but there is no way of assessing in statistical form the value of such invisible imports as tourism, pensions, overseas investments and the proceeds from the High Commission controlled organisations. Kenya's figures must therefore be related to those for East Africa as a whole, which has no such adverse balance.

TANGANYIKA

Most of the inhabitants of Tanganyika are agriculturists, engaged in growing food to meet local requirements and producing a limited quantity of cash-crops for sale. The prevalence of the tsetse fly is still an obstacle to cattle rearing in many areas, although there are many African cattle owners, and some tribes, such as the Masai, are purely pastoral. It is the task of the administration, however, to encourage the replacement of a primitive form of subsistence agriculture by an efficient and economic system of land usage, the primary need being to secure increased production from all land under cultivation while at the same time preserving the fertility of the soil. Implementation of the £25 million Development and Welfare Plan 1950-56 is achieving much progress in the economic field, £5 million being devoted to the provision of rural water supplies, bush clearance and resettlement, agriculture, forestry and research training. It is the Government's view that, though the contribution made by non-African capital and enterprise has been and will remain vital, long-term stability and prosperity depend primarily on the African producers, who should be encouraged to take an increasingly active part in the economy and helped to obtain, individually or collectively, an increasing share in the ownership of resources.

Agriculture. By far the greater part of the area under cultivation is occupied by Africans growing for local consumption food crops such as maize, millet, sorghums, root crops, beans and pulses, bananas, wheat, rice and ground-nuts. Only in years of good harvests, however, is Tanganyika self-sufficient in foodstuffs. More generally, grain is imported from other East African territories. The chief cash crop grown for export is sisal, a cactus, from which twine is made, introduced from Mexico in 1893. There are three main areas of production: along the railway from Tanga to Moshi; along the Central line inland for 250 miles from Dar es Salaam; and in the Lindi area in the extreme south. Most of the plantations are owned by Asians and Greeks, who, better than northern Europeans, can live and work in the humid heat of the lowlands. Cotton is becoming increasingly important in the territory's economy, 1954 being a record year during which 99,000 bales, were produced, as compared to 77,700 in 1952 and 50,600 in 1953. The main cotton-growing area is in the north-west round Lake Victoria; the Eastern Province crop is small but increasing. The production of coffee is likewise expanding; both the Arabica and Robusta varieties are grown by native farmers around Bukoba in Lake Province, Arabica by Europeans and Africans in the Northern Province and by Europeans in the Southern Highlands. By 1965 it is estimated that coffee production will have risen to 60,000 tons annually.¹ Tobacco is grown on an increasing scale in the Southern Highlands Province by Europeans and African growers in the Songea District are producing good yield. A search is being made for a suitable Virginia variety to replace Ehlers. Tea production, which is entirely in the hands of non-Africans, has expanded in recent years. Practically all of it comes from the Iringa district. Most of the crop is exported to the United Kingdom, the United States or Canada, and the balance is sent to Kenya for blending with locally produced brands. Other cash crops exported on a small scale include pyrethrum, cashews, castor seeds, sunflower seeds, kapok, beeswax and copra, the last-mentioned commodity suffering from insect pests which are proving stubborn to exterminate.

The fact that the production of food supplies is affected by the climatic conditions and that droughts, such as that

¹ A. L. B. Bennett, Economic Adviser to Kilimanjaro Native Co-op Union.

experienced in 1953, can put an all too visible strain on the economy, has led to extensive irrigation development. Engineering surveys in Lower Uru, south of Kilimanjaro, the completion of the scheme at Mlali in the Eastern Province, the harnessing of the flood waters of the Bubus for the Gogo tribe, illustrate the efforts made to combat the fear of famine. Accurate topographical mapping, the first essential, is provided by the Directorate of Colonial Surveys and the local Survey Department. Grants have been allotted from Colonial Development and Welfare funds, the co-operation of engineers from Ceylon, India and the Sudan has been enlisted and small dam building is encouraged to meet immediate domestic needs of the villager and his stock. Water schemes are given priority in the Masailand Five-year Development Plan which started in 1951; and the establishment of the Makonde Water Corporation, whereby the guaranteed loan from local banks is to be paid by local contributions of 10/- per year, illustrates the administration's underlying aim to increase the wealth of Tanganyika by associating all sections of its population in the fullest possible development of its natural resources. One of the most encouraging signs of the post-war years has been the desire of Africans everywhere for assistance, advice and instruction in developing cash crops, irrigation schemes and participation in trade. The Tanganyika Agricultural Corporation, financed until 1957 by a grant from the Colonial Development and Welfare Fund, continues the work of the Overseas Food Corporation, giving instruction in economic agriculture and promoting research at centres such as Nachingwea.

Livestock. A severe limitation on cattle rearing is imposed by the prevalence of the tsetse fly in many areas. Many cattle are kept, and hides are an important export, but the quality of the breeds (Zebu and Sanga, or Ankole) is not good, partly because African owners bleed the animals regularly and are more concerned with increasing the size of the herds than with improving the breed. In 1954 it was estimated that there were in the territory 6,488,000 head of cattle and 7,433,700 sheep and goats. In areas cleared of the tsetse scourge, ticks and lack of water impede progress and rinderpest, bovine pleuro-pneumonia, trypanosomiasis, and helminthiasis present a formidable problem which, however, is yielding to a policy of immunisation and of limiting livestock to the carrying capacity of the land, although the problem of immunising calves of immune dams is still unsolved. The keeping of pigs is mainly confined to the European sectors and imported fowls, under proper management, do well.

Fisheries. Improved methods in the re-organised dagaa fisheries of Lake Tanganyika have resulted in greater catches and a consequent reduction in price to the consumer. Investigation is taking place into the fishery potential off the Tanganyika coast, while trout have been introduced into many of the territory's rivers for the benefit of the tourist.

Forests. Great strides have been made in implementing the Government's forest policy to demarcate and reserve in perpetuity, for the benefit of present and future inhabitants of the country, sufficient forested land or land capable of afforestation to preserve local climates and water supplies, stabilise land liable to deterioration and provide a sustained yield of forest production. The total forest estate of Tanganyika, 23,884 sq. miles or about 7 per cent of the land and swamp area of the territory, is badly distributed, and continued reservation is required, especially in Lake, Central and the Southern Provinces. It is hoped to increase the reserves to 8 per cent of the land area by 1962. The Forest Ordinance and Rules protect the forest estates maintained by the territory and the average

recorded cut of all classes of wood for the years 1952-54 was estimated as 25 million cubic feet or only one thirtieth of the normal African requirement which is taken from unreserved land for firewood and building. It is therefore clear that the perpetuation of wood supplies must cater mainly for the indigenous population although small quantities of forest products are exported each year, including mvule timber, podocarpus, muninga camphorwood and blackwood timber, mangrove poles and bark, beeswax, gum (Arabic and Copal), palm kernels and sansevieria fibre.

Mineral Resources. Tanganyika's actual and potential mineral resources have aroused much interest in recent years, with the gradual opening up of the untapped hinterland. The building of a branch railway line in 1950 in the Mpanda area and the consequent discovery of large mineral deposits, is a significant indication that Tanganyika's development must depend to a marked extent on the improvement of communications.

The minerals hitherto exploited on some scale are diamonds, gold and lead. The principal source of diamonds is a district on the borders of the Lake, Central and Western Provinces, some eighty miles due south of Lake Victoria. Production figures in recent years have fluctuated from under £1 million to over £4 million. Gold is found in many areas, including the Geita and Musoma districts of the Lake Province and the Lupa Goldfields near Chunya in the Southern Highlands Province. Development has to some extent been hindered by high production costs and the stable official price, although there was considerable expansion after the devaluation of 1949. An important lead-silver-copper-gold ore deposit is being developed at Mpanda in the Western Province. A railway about 125 miles long has been built to Mpanda from Kuluwa on the Central line, which facilitates exploitation. Tanganyika is also the chief Commonwealth source of mica, which is found in the Bagamoyo, Kigoma, Korogwe, Mbeya, Morogoro and Mpwapwa districts. Tin, salt, kaolin, magnesite, graphite, gypsum and phosphates are worked on a small scale. The fall in world market prices, however, has led to a decreased interest in prospecting, although a geological examination of the coastal area and adjacent islands and water has resulted in the sinking of the first deep test oil well on Mafia Island. Large deposits of coal have been proved in the territory, all remote from any railway and thus uneconomic to develop. The development of a coal mining industry and associated enterprises such as iron works, nitrogen fertiliser plants and pulpwood or paper industries are thus entirely dependent on improved communications.

Industries. While industry in the territory is concerned mainly with the processing of locally produced raw materials, such as cotton ginning, coffee and tobacco curing, sisal processing, sugar refining, tea manufacture, oil and flour milling, meat canning, cashew processing, leather tanning and fruit juice extraction, marked progress has been made in the establishment of secondary industries manufacturing clothing, tin cans, oxygen and allied products, paints and varnishes and coir matting. Breweries, soap factories, macaroni and bottling factories and printing works are now in operation and there are some local handicrafts, although the latter are not such as to be capable of extensive development in competition with manufactured articles. The tourist industry has become of increasing importance in recent years as is evidenced by the establishment of two organisations to promote it, the East African Travel Association and the Tanganyika Travel Committee. Industrial expansion to broaden the basis of Tanganyika's economy continues to be the aim of the Administration, who have granted tariff concessions for imported plant and machinery.

THE BRITISH COMMONWEALTH

Transport and Communications. The importance of adequate communications is self-evident. There exists in Tanganyika an incalculable African potential in agriculture and mineral development, yet the main railway, the Central Line, running from Dar es Salaam to Kigoma, with branch lines Msagali-Kongwa (18 miles), Tabora-Mwanza (237 miles) and Kaliwa-Mpanda (131 miles) serves country in many places economically unproductive. The completion in 1954 of the railway from Mtwara to Nachingwea (132 miles) in the Southern Province and the consequent flow of timber, worth about £250,000 per year, from the Rondo plateau, illustrates the effectiveness of improved communications in a territory where hitherto head portage had been the most efficient method of transporting goods in bad weather. The new aerodrome at Dar es Salaam, capable of handling every type of aircraft likely to pass through East Africa, maintains air links with the major cities of the world and is served by the main air lines, while an internal network of services links the smaller towns in the territory. Important extensions have been made to the three main ports, Mtwara, Tanga and Dar es Salaam, to facilitate the export and handling of the increased production. The Lake Province is served by lake steamers calling at the ports of Mwanza, Musoma and Bukoba and connecting them with the Kenya railway at Kisumu. Road surfaces are improving but there are still comparatively few stretches of metalled roads and earth and gravel surfaces become washed away during the heavy rains.

In the Government's Development Plan 1955-60, £99,000 have been earmarked for trunk road development and £20,000 for feeders in the Southern Province alone, the cost of road construction being estimated at £10,000 per mile. With the improvement in communications the Government hopes to break the vicious circle of inaccessibility preserving ignorance and hence economic backwardness.

UGANDA

Uganda is primarily an agricultural land in which the vast majority of the Africans meet their needs and fulfil their financial obligations by the cultivation of foodstuffs and cash crops, especially cotton, coffee and tobacco. As in other parts of Africa, however, the economy is full of precarious promise. Present and future prosperity is too closely linked with the staple crops, cotton and coffee, accounting for about 90 per cent of the country's exports and for one-third of its revenues, and it is the aim of the Government to establish a broader economic basis by the encouragement of improved methods of farming and by the establishment of secondary industries. By the 1950 Land Policy Pronouncement it was laid down that the use and benefit of the land outside towns and commercial centres was to be preserved for the African people. Uganda is not to be developed as a country for non-African farming and settlement.

Agriculture. The basis of agricultural production is the peasant farmer whose aim is self-sufficiency in food and the earning of a small cash income from the sale of economic crops or surplus foodstuffs. Apart from maintaining a supply of foodstuffs which in recent years has been entirely adequate, the African farmer is producing increasing yields for export, cotton being the most valuable, while coffee, which needs less labour and commands a higher price, is rapidly gaining ground. Considerable revenue is derived from cotton export tax, over and above the indirect benefit accruing from imports bought by the cotton growers with their proceeds. The crop is grown exclusively by individual Africans in all four provinces, particularly

in Eastern Province and Buganda, on plots of about three-quarters of an acre. The average yield is about 325 lb. of seed cotton to the acre, though yields of 1,000 lb. are obtained at the Namulange Research Station. Research in the evolution of better strains and the control of pests and diseases is continuing, but the fundamental problem seems to be the provision of incentives for the peasants.

Uganda is the largest producer of coffee in the Commonwealth and the high market prices are stimulating production. The Robusta variety is more suited to the climate and altitude of the country, and being less sensitive to disease than Arabica, is more profitable to grow in spite of its lower value. Arabica coffee is confined to the higher altitudes, the principal source of production being the Bugisu area where native owned plantations on the slopes of Mt. Elgon produce some 3,000 tons annually.

Some areas of Uganda have proved to be ideally suited for tea production. Estate yields are higher than those of India and Ceylon and it is estimated that production could reach 23 million lb. a year if all land licensed for tea growing were utilised. Being essentially a plantation crop, it is confined mainly to non-African interests, but the training of Africans in plantation agriculture has been started, by the Government, to stimulate production. The sugar crop fluctuates according to the rainfall, self-sufficiency and export surpluses being obtained only in good years. Yields vary from 2.3 tons to 4 tons of white sugar per acre of mature cane and production is in the hands of two Asian owned companies who harvest about 16,000 acres of cane each year. Tobacco is grown mainly by Africans, one of the chief centres of production being the Bunyoro district in the north of the Western Province. The bulk of the crop is fire-cured and is used to manufacture the type of cigarettes appealing to Africans. In 1954 1,980,000 lb. of fire-cured, 538,000 of air-cured and 4,420,000 of flue-cured tobacco were produced. Maize, which can be grown in conjunction with cotton, and groundnuts, castor seed, chillies and pulses are all exported in years of good yields. A wide variety of food crops is grown, including plantains, millet, bananas, sorghums, beans, cassava and sweet potatoes, local shortages are now supplemented and control over the movement and the sale of foodstuffs can be imposed at any time if scarcity threatens.

There is no labour problem to date owing to the fact that labourers farm on their own account whenever possible and to the influx of migrant labour from neighbouring territories, but these very practices often involve considerable wastage of land and skills. To combat the dangerously wasteful aspect of native agriculture there exists at Entebbe the Headquarters of the Department of Agriculture which has offices in each Province and District. Its work is concerned with increasing or preserving soil fertility by the introduction and practice of better farming techniques, which include soil and water conservation, mixed farming, crop rotation, manuring, the introduction of improved strains and the control of pests and disease.

Livestock. There are about 2,843,000 cattle in Uganda, mainly of the shorthorn Zebu variety, and about 3,855,000 sheep and goats, for which there exists the Department of Veterinary Services and Animal Industry concerned with experiment and research into stock-breeding and disease. In general, livestock are still regarded as criteria of wealth and in most districts except Buganda are the currency in which dowries are paid. Cattle are also regarded as easily realisable assets irrespective of the carrying capacity of the land. The consumption of livestock in 1954 amounted to approximately 360,000 cattle and over 1,000,000 sheep and goats and the quantity of hides and skins exported

showed a satisfactory improvement. Immunisation and vaccination against rinderpest and anthrax is achieving good results and the effectiveness of Antrycide pro-salt in combating tsetse infection has been proved with success in areas of light fly density. Instruction in spraying, breeding and marketing is provided by the Veterinary Department.

Forestry. Except for the mountain forests of Mts. Elgon and Ruwenzori, which resemble those of Kenya, Uganda's forests have an affinity to those of West Africa. The Government's policy aims at the reservation and control of adequate forest land for protective and productive purposes and it is therefore regenerated as it is exploited, the proportion of the more valuable indigenous timbers being increased. Exotics are planted where fast growing supplies of firewood and building materials are required. The controlled exploitation of the forest areas is carried out by licensed companies—wood fuel for the big towns is largely derived from the Forest Department's eucalyptus plantations while trees logged from the natural forests are converted into sawn timber.

Fisheries. Uganda's lakes and rivers are all rich in fish, the main production coming from Lakes Victoria, Edward, George, Albert and Kyoga. The fisheries are operated almost entirely by Africans with a few Europeans engaged in research, in the development, marketing and organisation of the industry and in the crocodile skin trade, which exports several thousand skins annually, mostly to the hard currency areas. The value of exports of dried fish to the Belgian Congo and of quick-frozen fillets flown to Kenya amounted to over £300,000 in 1954.

Mining and Industry. Even if Uganda's staples continue to expand, the need for a broader economic base is appreciated and various projects to diversify the economy are under way. A wide range of minerals exists in Uganda but except for wolfram and tin, exploitation has only just begun. Prospecting for niobium and tantalum is stimulated by high prices and output of copper from Kilembe in Western Uganda, to be smelted at Jinja on the Nile, is expected to reach 9,000 tons with 1,000 tons of cobalt precipitate. Apatite and pyrochlore at Sukulu await exploitation. No coal or oil has been discovered in Uganda and wood is the only natural source of fuel. The construction of the Owen Falls Power Station near Jinja, where the Victoria Nile is dammed, may therefore in the long run become a major factor in Uganda's economy. Eventual production will reach 135,000 kilowatts, of which one-third will go to Kenya, one-third to industry and one-third for domestic consumption.

Industry has hitherto been mainly devoted to the primary processing of local products, there exist numerous cotton ginneries, coffee hulleries and oil mills, grain conditioning is carried out at Jinja and sugar is refined at the factories of the two producing companies. The advent of mineral development and hydro-electric power, combined with the Government's policy of broadening the economic basis, has resulted in the establishment of breweries, cement factories at Tororo, a blanket factory near Kampala, a textile works at Jinja, and cigarette factories. There remains the problem of the shortage of skilled manpower at all levels from administrators to typists.

Communications. Uganda is linked with the Kenya port of Mombasa by a railway line which is now being extended westwards from Kampala to open up the Western Province particularly the Kilembe copper deposits. A line 7 miles long connects Kampala with Port Bell on Lake Victoria

and a branch line runs southwards from Tororo to Soroti through the important cotton areas of the Eastern Province. There are connections with the steamers of Lakes Victoria, Kioga and Kwanua, Albert and the Nile. Almost 3,000 miles of all-weather roads radiating from Kampala to the principal administrative districts are maintained by the Public Works Department, and Entebbe Airport, served by the major international airlines and the East African Airways Corporation, links Uganda with the rest of Africa and the principal cities of the world.

ZANZIBAR

The majority of the population of Zanzibar and Pemba are engaged in agriculture and paid labour is almost entirely dependent on the Protectorate's major industries, the processing and handling of cloves and coconuts. Zanzibar and Pemba together produce 80 per cent of the world's supply of cloves and with a half to two-thirds of the land area given over to this crop and the 20 per cent *ad valorem* duty on clove exports, it is one of the main sources of revenue. Copra, rice, tobacco, chillies and citrus fruits are produced on a small scale and much labour is drawn from Tanganyika by the Arab and Indian planters. The export of the mangrove tree for its bark was prohibited in 1947 to allow stocks to be built up. The principal exports other than cloves are clove oil, coconut oil, oil cake, soap and ivory. Lesser export crops are seaweed, tobacco and kapok, and there is some trade in hides and skins. Local food production is of considerable importance and quantities of cereals, of which rice is the principal, are grown, mainly in the coral areas. Cassava, yams and pulses are also produced.

There are over 33,000 cattle in the Protectorate, but owing to the prevalence of the tsetse fly in Zanzibar, three-quarters of the total number are found in Pemba which is practically self-supporting in meat. The fishing industry is most important; one in eight of the estimated population are fishermen and fish forms a large part of the diet of the people. There is in addition a small export trade in dried shark. There are only three small natural forests on the islands, but quantities of timber are exported and re-forestation is taking place with such trees as the casuarina and eucalyptus. Lime is the only mineral known to exist and is burned for local requirements.

The dependence of Zanzibar's economy on two agricultural products, cloves and coconuts, makes it highly vulnerable to fluctuations in crop and market conditions and, as in the other East African territories, efforts are continually being made to broaden the economic basis by the encouragement of new export crops, cacao, chillies, limes and pineapples, and to achieve self-sufficiency in foodstuffs. There is a large field for the expansion of agricultural production of all kinds by means of co-operative societies and since the establishment in 1952 of a Co-operative Development Office much progress has been achieved. The main marketing organisation, the Clove Growers' Association, formed to protect the producer from too violent market fluctuations, now assists in the marketing of other produce, notably tobacco, coconut oil, copra, chillies, derris root and cacao.

There are no railways on the islands but excellent roads link the towns and villages. Air services from Zanzibar link the Protectorate with the other East African territories and the port of Zanzibar is a port of call for the ships of the world and handles a considerable entrepôt trade.

ZANZIBAR

AREA

Zanzibar has an area of 1,020 sq. miles, the island of Zanzibar itself being 640 sq. miles and the island of Pemba 380 sq. miles.

POPULATION

(1948 Census)

	ZANZIBAR ISLAND	PEMBA ISLAND	TOTAL
Africans	118,652	81,208	199,860
Arabs	13,977	30,583	44,560
Indians	13,107	2,104	15,211
Comorians	2,764	503	3,267
Goans	598	83	681
Europeans	256	40	296
Others	221	66	287
TOTAL	149,575	114,587	264,162

AGRICULTURE

Most of the population is engaged in agriculture. The two main crops are cloves and coconuts, covering 50,000 and 78,00 acres respectively, and the growing of rice and other cereals accounts for a further 30,000 acres. Few production figures are available but in the 1953-54 season the clove crop was approximately 20,000 tons, the second largest on record.

REGIONAL ORGANISATIONS

EAST AFRICA HIGH COMMISSION

The High Commission consists of the Governors of Tanganyika, Uganda and Kenya; the chief officials are as follows: the Administrator (A. M. B. HUTT, C.M.G., O.B.E.), Commissioner for Transport (Major-General W. D. A. WILLIAMS, C.B., C.B.E.), Finance Member (J. C. MUNDY, C.M.G.), Postmaster-General (R. E. GERMAN, C.M.G.), the Legal Secretary (C. D. NEWBOLD, Q.C.), the Commissioner of Customs (F. BISHOP), the Economic Secretary (H. L. ADAMS).

In 1924, the Ormsby-Gore Commission was appointed by the British Government to secure closer co-ordination of policy on matters affecting the three dependencies and to report on measures to accelerate their economic development. The first step taken was the establishment of the East African Governors' Conference, with its own Secretariat.

In 1927 the Hilton Young Commission was set up with the same object and to include a customs union, but the Kenya settlers made their aim of self-government a condition of any form of closer union. The Commission proposed the appointment of a High Commissioner for East Africa.

In 1930 Lord Passfield, then Secretary of State, proposed the appointment of a High Commissioner as Chief Adviser to the Secretary of State on Native Affairs, and the introduction of a common electoral roll, but nothing came of the proposal and no solution was found to the problem until the outbreak of the second World War made co-operation imperative. A loose organisation of services and pooled resources developed during the war within the structure of the Governors' Conference, and in 1945 the whole problem of East African co-operation was re-opened.

Paper 191, containing the proposals of the British Colonial Office for a High Commission of the three Governors, and a Central Legislative Assembly based on the principle of equal racial representation, was welcomed in Tanganyika and Uganda, but opposed by the settlers in Kenya. The proposals were withdrawn and fourteen months later Paper 210 appeared, containing revised proposals. These proposals were accepted and the Central Assembly was set up with effect from January 1st, 1948.

The High Commission, whose headquarters are at Nairobi, Kenya, has power to legislate in respect of inter-territorial services, with the consent of the Assembly. It is also empowered to legislate (with the advice and consent of the Legislative Councils of the three territories) on any matter connected with the peace, order and good government of the territories.

Upon its formation the High Commission was charged with the administration of many inter-territorial services, and in recent years several new services have been formed and are administered by the Commission. Apart from the East African Railways and Harbours Administration and the East African Posts and Telecommunications Administration, which are self-contained and self-financing, the services are financed from the revenue of the High Commission. This is derived from contributions in agreed proportions by the three East African Governments, also by the Government of Zanzibar and certain other governments for which services are performed, and by Her Majesty's Government through contributions from the Colonial Development and Welfare Fund.

Among its services are the following:

Desert Locust Control: P.O. Box 5152, Nairobi, Kenya; Administrative and Finance Officer H. J. HOLMAN; and **Desert Locust Survey:** P.O. Box 5152, Nairobi; Dir. P. R. STEPHENSON, O.B.E.

East African Agriculture and Forestry Research Organisation: P.O. Box 21, Kikuyu, Kenya; Deputy Dir. Dr. H. C. PEREIRA.

East African Fisheries Research Organisation: P.O. Box 343, Jinja, Uganda; Dir. R. S. A. BEAUCHAMP.

East African Industrial Research Board: P.O. Box 1587, Nairobi, Kenya; Dir. H. B. STENT.

East African Institute of Malaria and Vector-borne Diseases: P.O. Amani, Tanganyika; Dir. D. BAGSTER-WILSON, O.B.E.

East African Leprosy Research Centre: P.O. Box 25, Busia, Uganda; Dir. J. ROSS INNES.

East African Literature Bureau: P.O. Box 2022, Nairobi, Kenya; Dir. C. G. RICHARDS.

East African Marine Fisheries Research Organisation: P.O. Box 668, Zanzibar; Dir. J. F. G. WHEELER.

East African Medical Survey: P.O. Box 162, Mwanza, Tanganyika; Dir. Professor E. G. HOLMES.

East African Meteorological Department: P.O. Box 931, Nairobi, Kenya; Dir. (Vacant).

East African Posts and Telecommunications Administrations: P.O. Box 311, Nairobi, Kenya; Postmaster General R. E. GERMAN, C.M.G.

East African Statistical Department: P.O. Box 1101, Nairobi, Kenya; Dir. C. J. MARTIN, M.B.E.

East African Tsetse and Trypanosomiasis Research and Reclamation Organisation: P.O. Box 2141, Nairobi, Kenya; Dir. J. FORD.

East African Veterinary Research Organisation: P.O. Box 32, Kikuyu, Kenya; Dir. H. R. BINNS, O.B.E.

East African Virus Research Institute: P.O. Box 49, Entebbe, Uganda; Dir. A. J. HADDOW.

Lake Victoria Fisheries Service: P.O. Box 271, Kisumu, Kenya; Chief Fisheries Officer J. D. KELSALL.

Office of the East African Council for Medical Research: P.O. Box 5335, Nairobi, Kenya, Sec. (Vacant).

East African Railways and Harbours Administration: P.O. Box 121, Nairobi, Kenya; Gen. Manager A. F. KIRBY.

The two railway systems formerly known as the Kenya and Uganda Railways and Harbours Administration and the Tanganyika Railways and Ports Services were amalgamated on May 1st, 1948 to form the East African Railways and Harbours Administration. The total length of open line is 3,245 miles. The main line in the Kenya-Uganda section covers 917 miles from Mombasa to Mityana via Nairobi. There are a number of branches from this line including a connection from Voi to the Kahe Junction with the Tanga-Arusha line in Tanganyika. In Tanganyika the main line is between Dar es Salaam and Kigoma, covering 780 miles, which has branch lines to Mwanza, Mpanda and

THE BRITISH COMMONWEALTH

Nogoro. There is also a line from Tanga, on the coast, to Arusha, connecting the Kenya and Tanganyika main lines from Kahe as described above. Steamer services are operated on Lakes Victoria, Kyoga, Albert and Tanganyika serving a total mileage of 2,770. The main ports of Kenya and Tanganyika are respectively Mombasa and Dar es Salaam. Mombasa has the best port facilities in East Africa but in view of the volume of traffic which has developed the East African Railways and Harbours Administration has embarked on a programme for further development.

EAST AFRICA CENTRAL LEGISLATIVE ASSEMBLY

Speaker: SIR VINCENT GLENDAY, K.C.M.G., O.B.E.

Ex-Officio Members: The ADMINISTRATOR, the COMMISSIONER FOR TRANSPORT, the FINANCE MINISTER, the POSTMASTER GENERAL, the LEGAL SECRETARY, the COMMISSIONER OF CUSTOMS, the ECONOMIC SECRETARY.

Nominated Official Members: E. A. VASEY, C.M.G. (Kenya), C. E. TILNEY, C.M.G. (Tanganyika), W. PADLEY, O.B.E. (Uganda).

Unofficial Members: *Kenya:* SIR ALFRED VINCENT, Major A. G. KEYSER, C.B.E., D.S.O., R. B. PANDYA, FILIP INGUTIA.

Tanganyika: SIR CHARLES PHILLIPS, C.B.E., A. Y. A. KARIMJEE, O.B.E., DAVID MAKWAIA, O.B.E., G. N. HOURY, Q.C.

Uganda: H. R. FRASER, C.M.G., O.B.E., A. N. MAINI, C.B.E., J. T. SIMPSON, B. J. MUKASA.

Arab Member: Sheikh MBARAK ALI HINAWY, O.B.E.

EAST AFRICAN COURT OF APPEAL

An Order in Council of December 8th, 1950, effected the constitution of the offices of President, Vice-President and Justice of Appeal as permanent members of the Court of Appeal for Eastern Africa. The permanent court was inaugurated at Nairobi in January 1951.

President: SIR NEWMAN ARTHUR WORLEY.

Vice-President: R. O. SINCLAIR.

Justice of Appeal: R. S. BACON.

The remaining members are the judges of the Supreme and High Courts of the territories.

SHIPPING SERVICES

Regular passenger and cargo services to East African ports are provided by the following companies

British India Line: services include a monthly service to the U.K. via Suez as well as irregular services to India.

Christensen Canadian South African Line: direct services to eastern Canadian ports via South Africa.

Clan-Hall-Harrison Lines: joint services to United Kingdom; the Clan Line Steamers Ltd. also runs a direct service to Australia.

Compagnie Maritime Belge and Messageries Maritimes: services to continental ports; the former company also runs a service to New York.

D.O.A.L. (Deutsche Ost Afrika Line): services to Europe.

Louis Dreyfus: services to Atlantic and Gulf ports and South Africa.

Eastern Shipping Corporation: services to India.

Farrell Line: monthly services to North America.

Halal Shipping Co.: services to Red Sea and Somaliland ports.

Holland Afrika Lijn: round-Africa services to and from continental ports.

India Natal Line: services to India, Burma and South Africa.

Indian African Line: services to India and Ceylon.

Lykes Lines: direct services to American East Coast and Gulf ports, with connections to Central and South American ports.

Lloyd Triestino Line: monthly service to Italy.

Nedlloyd Line: services to U.S.A., Atlantic, Canadian Pacific and South African ports.

Oriental Line: services to South Africa, Japan, Hong Kong and Malaya.

Oshaka Shosen Kaisher: services to Japan, Hong Kong, Malaya, South Africa and South America.

Robin Line: services twice monthly to U.S.A. via South African ports.

Royal InterOcean Lines: services to Singapore, Hong Kong, Manila and Japanese ports, with connections to other Far East, Pacific and Australian ports.

Shaw Savill Line: services to Australia and New Zealand.

Svedel Line: services to Europe.

Swedish East Africa Line and Scandinavian East Africa Line: services via Suez to Scandinavian, Baltic and North French ports.

Union Castle Line: round Africa services from London in each direction once a month.

RELIGION

African religions, beliefs and forms of worship show great variety not only between various races and tribes, but also from one district to another. The Arab community is Moslem; the Indians are 38 per cent Moslem and 48 per cent Hindu; and the Europeans and Goans are almost entirely Christian. The main organised European congregations are the Anglican and Roman Catholic Churches.

Moslems are found mainly along the coastline, but the

Moslem faith has more recently established itself among Africans around Nairobi and other towns up-country, and among some tribes of the Northern Frontier Province of Kenya. The African Moslem population of the coastal areas of Tanganyika is mostly of the Sunni school. In Zanzibar, Mohammedanism is the dominant religion.

Christian missions are active among the native populations of Kenya, Uganda and Tanganyika. Among the

BRITISH EAST AFRICA

Roman Catholic missions are the Mill Hill, Consolata and Holy Ghost missions, and prominent among the non-Roman organisations are the Church Missionary Society, Africa Inland Mission, Universities' Mission to Central Africa.

ANGLICAN COMMUNION

The Anglican dioceses in British East Africa are extra-provincial and come under the metropolitan jurisdiction of the Archbishop of Canterbury.

BISHOPS

Central Tanganyika: Rt. Rev. ALFRED STANWAY, TH.L., M.A., Dodoma.

Masasi: Rt. Rev. W. L. M. WAY, M.A., Masasi, Lindi, Tanganyika.

Mombasa: Rt. Rev. L. J. BEECHER, M.A., Nairobi, Kenya.

South-West Tanganyika: Rt. Rev. L. E. STRADLING, B.A., P.O. Uwemba, Njombe.

Uganda: Rt. Rev. L. W. BROWN, B.D., M.TH., Kampala.

Bishop on the Upper Nile: Rt. Rev. L. C. USHER-WILSON, M.A., Buwalasi, Mbale, Uganda.

Zanzibar: Rt. Rev. W. SCOTT BAKER, M.A., Muheza, Tanganyika.

The dioceses of Masasi, South-West Tanganyika and Zanzibar are supported by the Universities' Mission to Central Africa, those of Mombasa, Uganda and the Upper Nile by the Church Missionary Society and that of Central Tanganyika by the Australian Church Missionary Society.

THE BRITISH COMMONWEALTH

KENYA

CONSTITUTION AND GOVERNMENT

Kenya Colony and Protectorate are under the same administration. The Protectorate consists of a narrow coastal strip which is the mainland part of the Sultanate of Zanzibar, to whom a rent of £10,000 a year is paid. Under the Kenya Annexation Order-in-Council of 1920, all those territories formerly known as British East Africa, but outside the Sultan's dominions, were established as a Crown Colony.

The Governor is assisted by a Council of Ministers which was set up by Additional Royal Instructions dated April 13th, 1954, and by an Executive and Legislative Council. The 1951 Legislative Council Ordinance divided the territory into 21 electoral areas, of which 14 are European, 6 Asian and 1 Arab.

Governor: Hon. Sir EVELYN BARING, G.C.M.G., K.C.V.O.

Deputy Governor: Sir FREDERICK CRAWFORD, K.C.M.G., O.B.E.

COUNCIL OF MINISTERS

This is the principal instrument of government. The Additional Royal Instructions of 1954 laid down that the Council shall consist of the Governor, the Deputy Governor, 6 official members, 2 nominated members and 6 unofficial members, 3 European, 2 Asian and 1 African, appointed by the Governor.

The names given below are of those Ministers at present (March 1956) holding office:

Chief Secretary: Hon. R. G. TURNBULL, C.M.G.

Minister for Legal Affairs: Hon. E. N. GRIFFITHS-JONES, Q.C.

Minister for Finance and Development: Hon. E. A. VASEY, C.M.G.

Minister for African Affairs: Hon. E. H. WINDLEY, C.M.G.

Minister for Agriculture, Animal Husbandry and Water Resources: Hon. M. BLUNDELL, M.B.E.

Minister for Internal Security and Defence: Hon. J. W. CUSACK, O.B.E.

Minister for Local Government, Health and Housing: Hon. W. B. HAVELOCK.

Minister for Education, Labour and Lands: Hon. W. F. COUTTS, C.M.G., M.B.E.

Minister for Forest Development, Game and Fisheries: Hon. D. L. BLUNT, C.M.G.

Minister for Commerce and Industry: Hon. A. HOPE-JONES.

Minister for Works: Hon. I. E. NATHOO.

Minister for Community Development: Hon. B. A. OHANGA.

European Minister without Portfolio:

Hon. L. R. MACHONOCHE-WELWOOD.

Asian Minister without Portfolio: Hon. A. B. PATEL, C.M.G.

WAR COUNCIL

In April 1954, Additional Royal Instructions set up a War Council consisting of the Governor, the Deputy Governor, the European Minister without Portfolio, the Commander-in-Chief and the Secretary to the War Council (T. C. COLCHESTER).

Commander in Chief: Lt.-General G. LATHBURY, C.B., D.S.O., M.B.E.

EXECUTIVE COUNCIL

Although many of its former duties have, since April 1954, been taken over by the Council of Ministers, the Executive Council exercises certain residual functions including the review of death sentences and the approval of draft legislation. The Council consists of all members of the Council of Ministers with the addition of 1 Arab and 2 African members.

LEGISLATIVE COUNCIL

The Council consists of the Governor, who presides, a Vice-President and Speaker (Major the Hon. Sir F. W. CAVENDISH BENTINCK, C.M.G., M.C.) and 54 members, of whom 8 are *ex-officio* and 18 nominated by the Government. There are also 14 European, 6 Asian and 1 Arab elected members; and 1 Arab and 6 African representatives.

CIVIL ESTABLISHMENT

Administrative Secretary: J. L. H. WEBSTER.

Solicitor-General: D. W. CONROY.

Provincial Commissioners: C. M. JOHNSTON, C.M.G., C. H. WILLIAMS, O.B.E., D. O'HAGAN, E. A. SWEATMAN, N. F. KENNAWAY, R. E. WAINWRIGHT.

Directors of Departments: G. M. RODDAN (Agriculture), J. R. CUSACK (Audit), W. J. D. WADLEY (Education), J. M. SKINNER (Establishments), J. H. MARTIN (Acting Director of Department of Trade and Supplies), J. R. REISS (Information), T. F. ANDERSON (Medical Services), J. L. BROWN, C.B.E. (Public Works), M. H. COWIE (National Parks), R. J. BUTLER (Surveys), R. A. HAMMOND (Veterinary Services).

Commissioners: T. G. ASKWITH (Community Development), R. E. LUYT (Labour), A. W. HORNER (Lands), J. E. HUNTER (Local Government), W. D. HARVERSON (Mines and Geology), R. C. CATLING (Police).

POLITICAL PARTIES

United Country Party: P.O. Box 5487, Nairobi; f. 1954; aims to promote racial co-operation based on a common loyalty to Kenya and to the Crown; to support multi-racial government as a contribution to the stable development of the country, and to encourage and guide the economic, social and political progress of all its peoples.

Federal Independence Party: P.O. Box 55, Nakuru; f. 1954; does not favour a multi-racial government and wishes to maintain financial control of the White Highlands; at present (January 1956) holds no seat in the Legislative Council; Chair. Major B. P. ROBERTS.

THE LEGAL SYSTEM

The Supreme Court of Kenya was established under the 1921 Kenya Colony Order-in-Council.

The Supreme Court: this has final jurisdiction in both criminal and civil cases except for a right of appeal to the East African Court of Appeal. Its headquarters are in Nairobi but it holds regular sessions in other

towns. It consists of a Chief Justice and seven Puisne Judges.

Subordinate Courts: these are either Magistrates' Courts or, in predominately Muslim areas, Muslim Courts. They are graded respectively into First, Second and Third Class Courts and the Courts of Liwali, Cadi and Mudir.

Both have limited jurisdiction varying according to grade. The Supreme Court of Kenya is their Court of Appeal.

African Courts: there are 141 of these courts, most of them situated in native areas. Their present status and rights were established by the African Courts Ordinance of 1951. Justice is administered by Native Elders, chosen by the Provincial Commissioners and supervised by Administrative Officers. The Courts have limited jurisdiction in both criminal and civil cases exclusively concerning natives. Appeals are heard by the **African Appeal Courts** and thereafter, with certain conditions, to District Officers. The 1951 Ordinance also established a new Court, **The Court of Review**, which is the highest body in the African legal system, and whose decisions are final.

Chief Justice: Sir KENNETH O'CONNOR, Q.C., M.C.

Puisne Judges: Hons. E. A. J. EDMONDS, A. G. FORBES, G. B. W. RUDD, C. P. CONNELL, T. H. MAYERS, J. L. MACDUFF.

BROADCASTING

There is at present a broadcasting station in Kenya operated by Cable and Wireless Ltd. The Kenya Broadcasting Commission was set up to study both the existing situation and future possibilities. It recommended the establishment of a Kenya Broadcasting Corporation on the expiry of the present licence held by Cable & Wireless Ltd. but no decision has been yet taken by the Government. There is also an African Broadcasting Service under Government control, which gives daily broadcasts in English and in many of the vernacular languages. It is operated by the Department of Information.

FINANCE

BANKING

The East African Currency Board (see page 702) is the issuing authority for Kenya, as for all East African territories. There is only one Government Bank, which provides facilities locally:

Land and Agriculture Bank of Kenya: P.O. Box 1002, Nairobi; provides loans for farmers, co-operative societies and native authorities.

The following foreign banks operate in Kenya:

Bank of Baroda: Head Office: Baroda, India; f. 1908; branches at Nairobi (Manager C. P. SHAW) and Mombasa (Manager K. KRISHNAMURTI).

Bank of India: Head Office: Mahatma Gandhi Road, Fort, Bombay, India; f. 1908; branches at Nairobi (Manager V. M. DALAL) and Mombasa (Manager S. B. KAJI).

Barclays Bank D.C.O.: Head Office: 54, Lombard Street, London, E.C.3; branches at Bungoma, Eldoret, Gilgil, Kericho, Kimilili, Kisii, Kisumu, Kitale, Malindi, Molo, Mombasa, Nairobi, Naivasha, Nakuru, Ol'Kalou, Thika, Thomson's Falls; established by Royal Charter 1836, reincorporated by Act of Parliament 1925.

National Bank of India: Head Office: 26 Bishopsgate, London, E.C.2; f. 1863; branches at Eldoret, Kericho, Kakamega, Kisumu, Mombasa, Nairobi, Naivasha, Nakuru, Sotik, Thika.

Nederlandsche Handel-Maatschappij N.V.: Head Office: 32 Vijzelstraat, Amsterdam, Netherlands; f. 1824; branches at Nairobi (Manager H. D. DE ROD) and Mombasa (Manager H. P. K. DEN BOESTERD).

Standard Bank of South Africa: Head Office: Church Square, Pretoria, Union of South Africa; 10 branches in Kenya.

INSURANCE

John Holman and Sons (Nairobi) Ltd.: P.O. Box 5834, Nairobi.

Among the numerous foreign insurance companies which have branch offices in Kenya are the following:

Atlas Insurance Co. Ltd.: Head Office: 92 Cheapside, London, E.C.2; Kenya Branch Office: P.O. Box 120, Mombasa.

Liverpool and London and Globe Insurance Co. Ltd.: Head Office: 1 Dale Street, Liverpool 2; Kenya Branch Office: P.O. Box 587, Nairobi.

Pearl Assurance Co. Ltd.: Head Office: High Holborn, London, W.C.1; Kenya Branch Office: P.O. Box 6550, Nairobi.

THE BRITISH COMMONWEALTH

Phoenix Assurance Co. Ltd.: Head Office: Phoenix House, King William Street, London, E.C.4; Kenya Branch Office: c/o Post Office, Nairobi.

Prudential Assurance Co. Ltd.: Head Office: Holborn Bars, London, E.C.1; Kenya Branch Office: P.O. Box 1064, Nairobi.

TRADE AND INDUSTRY

TRADE ASSOCIATIONS

East African Grain and General Produce Association: Box 1244, Nairobi.

Railway African Union: P.O. Box 12920, Nairobi; 4,000 mems.

Tailors, Tent-Sail Makers and Garment Workers' Union: Ganga Singh Building, P.O. Box 12076, Nairobi; 240 mems.

Transport and Allied Workers' Union: Kiburi House, P.O. Box 5171, Nairobi, 10,500 mems.

Typographical Union of Kenya: Ganga Singh Building, P.O. Box 12067, Nairobi; 200 mems.

TRANSPORT

ROADS

There are approximately 20,500 miles of roads of varying quality. The maintenance and improvement of roads is the responsibility of the Kenya Road Authority but plans for development are hampered by the demands of the Emergency.

SHIPPING AND RAILWAYS

See Joint Railways and Harbours Administration of East Africa under REGIONAL ORGANISATIONS, page 713 and East African Shipping Services, page 714.

AIR TRANSPORT

There are over fifty airports of varying size and importance in Kenya, the largest being the Eastleigh Airport at Nairobi, which is also the headquarters of the East African Airways Corporation.

East African Airways Corporation: Airways Terminal, Sadler Street, P.O. Box 1010, Nairobi; f. 1946; the Corporation operates extensive internal services throughout Kenya, Uganda, Tanganyika and Zanzibar, also a weekly service to Durban; Gen. Manager Capt. M. SORSBIE.

The following international airlines run regular services to and from Kenya.

Aden Airways Ltd.: Esplanade Road, Crater, Aden, Kenya Office: P.O. Box 1019, Nairobi.

Air France: 2 rue Marbeuf, Paris 8e, France, Kenya Office: P.O. Box 5049, Nairobi

Air India International: New India Building, Mahatma Gandhi Road, Fort, Bombay, India; Kenya Office. P.O. Box 3006, Nairobi.

Airwork Ltd.: 15 Chesterfield Road, London, W 1; Kenya Office: P.O. Box 2474, Nairobi, and **Hunting Clan Transport Ltd.:** 5 Fitzhardinge Street, Portman Square, London, W.1; Kenya Office: P.O. Box 5515, Nairobi, Kenya, run a joint service

British Overseas Airways Corporation: Airways Terminal, Buckingham Palace Road, London, S.W.1; Kenya Office: P.O. Box 1010, Nairobi.

Caspar Air Charters: Head Office: P.O. Box 2238, Nairobi.

Central African Airways Corporation: P.O. Box 1979, Belvedere Airport, Salisbury, Southern Rhodesia; Kenya Office: P.O. Box 1010, Nairobi.

Ethiopian Air Lines Inc.: Haile Selassie 1st Square, Addis Ababa, Ethiopia; Kenya Office: P.O. Box 2901, Nairobi.

BRITISH EAST AFRICA

Israel Airlines Ltd.: 31 Rothschild Boulevard, Tel-Aviv Yafo, Israel; Kenya Office: P.O. Box 10865, Nairobi.

Sabena: 15, Rue Brederode, Brussels, Belgium, Kenya Office: P.O. Box 3708, Nairobi.

South African Airways: Rand Airport, Germiston, Johannesburg, Kenya Office: P.O. Box 1010, Nairobi.

HEALTH SERVICES

The most prevalent diseases are tuberculosis, malaria and typhoid. In 1953 there was a total of 8,661 beds available in hospitals, of which 506 were owned by Local Authorities, 1,190 by Missions, 6,469 by Government hospitals and 496 were maintained privately. During the year 162,635 in-patients and 1,091,709 out-patients were admitted to Government hospitals.

EDUCATION

In 1954 there was a total of 3,230 primary schools providing educational facilities for 347,892 African pupils, 19 were Government schools, 2,460 were Government-aided and the remaining were supported by voluntary organisations. 5,223 pupils attended the 62 intermediate and secondary schools.

There were 111 primary schools for Asians and 23 secondary schools serving 30,285 and 4,882 pupils respectively. 21 primary schools were administered by the Government, 83 were Government-aided and the remaining 10 were supported by voluntary organisations.

There were 40 primary schools providing education facilities for the European community. During 1954, 5,941 pupils attended the schools, of which 14 were Government schools, 15 Government-aided and 11 un-aided. The 10 secondary schools had a total of 2,061 pupils.

Educational facilities were provided for the Arab community by 1 Government secondary and 9 Government primary schools serving 90 and 1,993 pupils respectively.

Higher educational facilities are not available in Kenya and those wishing to study further must attend institutes of higher learning abroad, notably at Makerere College in Uganda.

LEARNED SOCIETIES AND RESEARCH INSTITUTES

See also Section on REGIONAL ORGANISATIONS, which includes details of Research Institutes under the East Africa High Commission, page 713.

Kenya Agricultural Research Institutes: The following are under the Director of Agriculture, Nairobi.

Coffee Research Station: P.O. Box 4, Ruiru; f. 1949; Officer-in-Charge A. R. MELVILLE, B.SC., A.I.C.T.A.; publ. *Annual Report*.

Pyrethrum Research Laboratories and Field Stations: P.O. Box 420, Nakuru, Officer-in-Charge N. H. HARDY.

KENYA

Scott Agricultural Laboratories: Department of Agriculture, Government of Kenya: P.O. Box 338, Nairobi; Officer-in-Charge R. H. LE PELLEY, B.SC., PH.D., A.R.C.S., D.I.C., F.R.E.S.; Senior Plant Pathologist R. M. NATRASS, B.SC.; Entomologist J. F. GRAHAM, M.SC.; Soil Chemist E. BELLIS, B.SC., A.I.C.T.A.; Senior Chemist (Pyrethrum) V. A. BECKLEY, O.B.E., M.C., M.A.

Sisal Research Station: Thika; Officer-in-Charge A. F. NICHOLS, D.I.C.T.A.

East Africa History Society: c/o Coryndon Memorial Museum, P.O. Box 658, Nairobi, f. 1909, 530 mems.; Pres. R. W. RAYNER, B.A., A.I.C.T.A.; Hon. Librarian R. A. F. BRENNAN, M.A., Sec. Miss D. M. EWING, publ. *Journal of the East Africa Natural History Society*.

Kenya Association: P.O. Box 825, Nairobi; f. 1932; 357 mems; works in association with the Government Settlement Board, Chair Major the Hon. Sir F. W. CAVENDISH BENTINCK, C.M.G., M.L.C.; Sec. J. MOSTYN SILVERSTER, B.A., J.P., publs. monthly and annual reports.

Kenya History Society: Box 4474, Westlands, Nairobi; f. 1955; objects are collection of documents and antiquities, publication of historical and antiquarian papers, Chair. Colonel R. D. CROFT WILCOCK.

Mombasa Law Society: P.O. Box 1386, Mombasa, f. 1922; 36 mems., Pres. U. K. DOSHI, B.A., LL.B.; Sec. B. T. PARKER, B.A.

LIBRARIES

Desai Memorial Library: Nairobi.

East African Agriculture and Forest Research Organisation Library: P.O. Box 21, Kikuyu, approx. 20,000 vols.; Dir. Sir BERNARD A. KEEN, D.SC., F.INST.P., F.R.S.; Librarian L. D. VERDCOURT, A.L.A.; publ. *Annual Report*.

McMillan Memorial Library and E. A. (Carnegie) Circulating Library: P.O. Box 791, Nairobi, f. 1931; number of vols.: Carnegie Circulating Libraries 66,250, McMillan Memorial Reference Library 5,945, Chief Librarian G. D. HAZELDINE, The Carnegie Circulating Library maintains 85 branch libraries, of which 76 are in Kenya Colony and 9 in Uganda and Tanganyika Territory.

MUSEUM

Coryndon Memorial Museum: P.O. Box 658, Nairobi; f. 1929, all branches of natural history, pre-history, and geology, controlled by Museum Trustees of Kenya; Dir. and Curator L. S. B. LEAKEY, M.A., PH.D., D.SC., F.R.A.S., F.G.S.

COLLEGES

East African Conservatoire of Music: P.O. Box 1343, Nairobi; Dir. NAT KOFISKY.

Royal Technical College of East Africa: Private Bag, Nairobi; this is a new college, which is scheduled to open in March 1956; Principal: Major-General COLIN BULLARD, C.B., C.B.E.

THE BRITISH COMMONWEALTH

TANGANYIKA

CONSTITUTION AND GOVERNMENT

Tanganyika consists of the part of the former colony of German East Africa which came under British mandate by the Versailles Peace Treaty of 1919. It was administered as a Mandated Territory until 1946 when it became a United Nations Trust Territory.

Tanganyika is administered by a Governor assisted by an Executive and Legislative Council. It is divided for administrative purposes into the Central, Eastern, Lake, Northern, Southern, Southern Highlands, Tanga and Western Provinces, under Provincial Commissioners; each Province is subdivided into Districts, under District Commissioners.

Governor and Commander-in-Chief: Sir EDWARD TWINING, G.C.M.G., M.B.E.

EXECUTIVE COUNCIL

At present (March 1956) the Executive Council consists of three *ex-officio*, five official and six unofficial members. Each of the officials are in charge of a group of Departments and is responsible for them to the Governor:

President: The GOVERNOR.

Ex-Officio Members: The CHIEF SECRETARY; The ATTORNEY GENERAL; The MEMBER FOR FINANCE.

Nominated Official Members: J. P. ATTENBOROUGH, C.B.E. (Member for Social Services); A. H. PIKE, O.B.E. (Member for Lands and Mines); A. E. TROTMAN, C.M.G. (Member for Agriculture and Natural Resources); J. F. R. HILL, C.M.G. (Member for Communications, Works and Development); F. H. PAGE JONES, C.M.G. (Member for Local Government).

Unofficial Members: Sir CHARLES PHILLIPS, C.B.E.; V. M. NAZERALI, O.B.E.; D. P. K. MAKWAIA, O.B.E.; G. N. HOURY, Q.C.; Chief ADAM SAPI, M.B.E.; I. C. CHOPRA, O.B.E., Q.C.

LEGISLATIVE COUNCIL

The constitutional changes which came into effect in August 1955, provide for a Legislative Council of 31 Government members (officials, unofficial members of the Executive Council and 8 other members); and 30 unofficial members (10 Africans, 10 Asians and 10 Europeans; there is one of each race to represent each of the eight provinces and Dar es Salaam; the remaining three are appointed by the Governor to represent any area or interest, which in his opinion would otherwise be inadequately represented).

CIVIL ESTABLISHMENT

Chief Secretary: R. DE S. STAPLEDON, C.M.G., C.B.E.

Attorney-General and Member for Legal Affairs: A. G. GRATTAN-BELLEW, Q.C.

Financial Secretary and Member for Finance and Economics: C. E. TILNEY.

Solicitor-General: Sir JAMES HENRY, Bt., M.C., Q.C.

Member for Agriculture and Natural Resources: A. E. TROTMAN, C.M.G.

Member for Communications, Works and Development Planning: J. F. R. HILL, C.M.G.

Member for Lands and Mines: A. H. PIKE, C.B.E.

Member for Local Government: F. H. PAGE JONES, C.M.G.

Member for Social Services: J. P. ATTENBOROUGH, C.B.E.

Senior Provincial Commissioners: E. G. ROWE, C.M.G., S. A. WALDEN, M. J. B. MOLOHAN, H. S. C. GILL.

Accountant-General: E. J. THOMPSON.

Administrator General: J. R. KENNEDY.

Public Relations Officer: K. B. DOBSON.

Directors of Departments: R. P. SOPER (Agriculture), C. W. HODGES, M.B.E. (Audit), G. H. RUSBRIDGER, O.B.E. (Education), C. B. BISSET (Geological Survey), C. MACE, O.B.E. (Lands and Surveys), J. M. LISTON (Medical Services), F. H. WOODROW, O.B.E. (Public Works), E. C. S. DAWE (Veterinary Services), W. A. GUTHRIE, O.B.E. (Water Supply).

Commissioners: Col. W. L. ROLLESTON, O.B.E. (Development and Housing), K. L. SANDERS, O.B.E. (Labour), V. T. HOCKIN (Mines), R. E. FOULGER, C.M.G. (Police).

THE LEGAL SYSTEM

The High Court: This was established under the Tanganyika Order in Council of 1920 and it has final jurisdiction in both criminal and civil cases, subject only to the right of appeal to the East African Court of Appeal. Its headquarters are at Dar es Salaam but it holds regular sessions in all provinces. It consists of a Chief Justice and five Puisne Judges.

Subordinate Courts: Their present status and rights were established by the Subordinate Courts Ordinance of 1941; they are situated in each district and are presided over by either a Resident Magistrate or a Magistrate of the first, second or third class. They have limited jurisdiction and there is a right of appeal to the High Court.

Local Courts: These were established under the Local Courts Ordinance of 1951, replacing the Native Courts Ordinance of 1929, and have limited jurisdiction in both civil and criminal cases which exclusively affect natives. Appeals are heard by a local Court of Appeal and may afterwards be taken to the District Commissioner or the Provincial Local Courts Officer, and finally to a specially constituted Central Court of Appeal.

Chief Justice: E. J. DAVIES, Q.C.

Puisne Judges: G. M. MAHON, J. S. ABERNETHY, E. D. W. CRAWSHAW, A. G. LOWE, C. D. G. HARBORD.

RELIGION

See General Section on RELIGION, page 714.

THE PRESS

The Government Public Relations Department publishes three newspapers in Swahili; a daily news-sheet, *Mwangaza* of which about 1,500 copies circulate in Dar es Salaam and Tanga; a weekly news summary, *Habari za Leo*, distributed free through District Offices; and a monthly paper, *Mambo Leo*, of which about 54,000 copies a month are sold.

The following privately-owned papers appear:

BRITISH EAST AFRICA

DAILY

Tanganyika Standard: P.O. Box 33, Dar es Salaam; f. 1929; Editor O. P. BLAKE.

SUNDAY PAPER

Sunday News: P.O. Box 33, Dar es Salaam; f. 1954 by the publishers of the *Tanganyika Standard*; Editor N. L. HUTTON.

WEEKLIES AND MONTHLIES

There are about 22 monthly local newspapers published in vernacular languages (mostly Swahili). All are edited by Africans and two, **Bukya na Gandhi** and **Zuhra**, are also privately owned by Africans.

Tanganyika Opinion: P.O. Box 55, Dar es Salaam; in English and Gujarati; weekly; f. 1924; Editor AMRIT PATEL.

BROADCASTING

The Tanganyika Broadcasting Service Station issues daily news bulletins and programmes which cover the whole territory.

FINANCE

BANKING

The East African Currency Board (*see* page 702) is the issuing authority for Tanganyika, as for all East African territories. There are two Government Banks which provide facilities locally:

Land Bank of Tanganyika: Dar es Salaam, f. 1949, provides loans to farmers, co-operative societies and native authorities for agricultural purposes.

Tanganyika Post Office Savings Bank: Offers banking facilities for small depositors, has branches throughout the territory.

The following foreign banks operate branch offices in the territory:

Barclays Bank D.C.O.: Head Office: 54 Lombard Street, London, E.C. 2, 15 branches in Tanganyika including 2 in Dar es Salaam.

Bank of India Ltd.: Head Office: P.O. Box 238, Bombay; Tanganyika Office: 69 Selous Street, Dar es Salaam; Branch Manager H. D. DESAI.

National Bank of India Ltd.: Head Office: 26 Bishopsgate, London, E.C. 2, branches at Bukoba, Dar es Salaam, Lindi, Mikindani (sub), Mbeya, Moshi, Mtwara, Mwanza, Tanga

Nederlandsche Handel-Maatschappij, N.V.: Head Office 32 Vijelstraat, Amsterdam; Tanganyika Office: Private Bag, Dar es Salaam; Branch Manager S. G. F. FRAENKEL.

Standard Bank of South Africa: Head Office: Church Square, Pretoria, South Africa; branches at Arusha, Bukoba, Dar es Salaam, Lindi, Morogoro, Moshi, Mtwara, Mwanza, Nachingwea, Tabora, Tanga

INSURANCE

Most main British and various other foreign insurance companies operate branch offices in the territory.

TRADE AND INDUSTRY

See also Section on TRADE AND INDUSTRY/KENYA, page 718 for inter-territorial organisations.

TANGANYIKA

CHAMBERS OF COMMERCE

Arusha Chamber of Commerce: Private Bag, Arusha.
Bukoba Chamber of Commerce: P.O. Box 196, Bukoba.
Dar es Salaam Chamber of Commerce and Agriculture: Box 41, Dar es Salaam; f. 1920; 121 mems.; Pres. C. C. MURRAY.
Indian Chamber of Commerce: Box 543, Tanga.
Indian Merchants' Chamber of Commerce: Box 12, Dar es Salaam.
Iringa Chamber of Commerce: Box 262, Iringa.
Mbeya Chamber of Commerce: Mbeya.
Morogoro Chamber of Commerce and Agriculture: P.O. Box 153, Morogoro.
Moshi Chamber of Commerce and Industry: Box 31, Moshi.
Mwanza Chamber of Commerce and Industry: Box 296, Mwanza.
Southern Province Chamber of Commerce: Box 33, Lindi.
Tanga Chamber of Commerce: Box 331, Tanga; Sec. BOVILL MATERSSON & Co. Ltd.

TRADE UNIONS AND CO-OPERATIVE SOCIETIES

In 1954 there were the following seven registered trade unions:

African Commercial Employees' Association.
African Staff Association of the Landing and Shipping Company: Dar es Salaam.
Dar es Salaam Asian Commercial Employees' Association: Dar es Salaam.
Dodoma District Masons' Association.
Kigoma-Ujiji Tailors' Association.
Kilimanjaro Drivers' Association.
Tabora Tailors' Association.

In 1954 there were 243 Co-operative Societies with a total membership of 196,775. They include among their various services the provision of bulk marketing, saving and educational facilities, the distribution of consumer goods, advice on seed and agricultural equipment and supplies, and crop finance

TRANSPORT

ROADS

In 1954 there were 3,427 miles of territorial main roads, 2,525 miles of local main roads, 10,874 miles of District roads, 514 miles of town and rural roads and approximately 8,000 miles of village roads.

SHIPPING AND RAILWAYS

See Joint Railways and Harbours Administration of East Africa under REGIONAL ORGANISATIONS, page 713, and East African Shipping Services, page 714.

AIR TRANSPORT

The Dar es Salaam international airport and terminal building was officially opened in October 1954 and there are in addition 21 aerodromes.

The following companies operate internal services and also link Tanganyika with neighbouring territories:

Central African Airways Corporation: Branch Office: Tancot House, P.O. Box 543, Dar es Salaam.

East African Airways Corporation: Branch Office: Tancot House, P.O. Box 543, Dar es Salaam.

In addition, the following international airlines run regular services to Dar es Salaam:

Air France: Branch Office: Tancot House, P.O. Box 543, Dar es Salaam.

THE BRITISH COMMONWEALTH

B.O.A.C.: Branch Office: Tancot House, P.O. Box 543, Dar es Salaam.

Sabena: Branch Office: P.O. Box 332, Dar es Salaam.

T.A.I.: Branch Office: P.O. Box 456, Dar es Salaam.

HEALTH SERVICES

The most prevalent diseases are human trypanosomiasis, malaria, ankylostomiasis, schistosomiasis, dysentery, pneumonia, venereal diseases, yaws and tuberculosis.

The Government Medical Department is responsible for the organisation and administration of the territory's health services, and for medical administrative purposes the country is divided into two regions and four provinces, each under the charge of a regional Assistant Director of Medical Services or a Senior Medical Officer.

On December 31st, 1954 there was a total of 196 hospitals (including dispensaries which were equipped to receive in-patients) which together provided 10,738 beds. These included 76 Government hospitals and dispensaries, 76 Mission hospitals, partially supported by the Government and 30 Mission dispensaries; in addition there were 14 hospitals supported by various industrial organisations. There were 803 out-patient dispensaries, 249 Maternity and Child Welfare Clinics, 18 centres for leprosy and 3 tuberculosis units. During 1954 197,502 in-patients and 11,046,518 out-patients were treated.

EDUCATION

African education is organised under a ten-year plan which provides for primary, middle and secondary school tuition. It is hoped that there will be 310,000 primary, 32,100 middle and 3,720 secondary school pupils by 1956. On November 1st, 1954 275,628 primary school, 25,480 middle school and 2,956 secondary school pupils were enrolled at Government, Native Authority and Private Schools.

Facilities for European, Indian and other non-African education are provided by the European and Indian

Education Authorities, each of which has its own fund which is supplemented by the Government grants.

As at November 1st, 1954 1,845 European children were enrolled for primary education and 200 for secondary education. 12,852 Indian pupils are at present attending three Government primary schools and 97 assisted primary schools, and 4,586 Indians are receiving secondary education at two Government and 32 assisted schools.

Higher Education: There are no institutions for higher education in Tanganyika but facilities are available at the University College of Makerere at Kampala, Uganda, and it is hoped that 200 students from Tanganyika will attend the College in 1956. A small number of Africans, and a rather larger number of Asians from Tanganyika go to the United Kingdom for higher education.

RESEARCH INSTITUTES

See section on Regional Organisations, which includes details of research institutes, under the East Africa High Commission, page 713.

LIBRARIES

British Council Library: Dar es Salaam.

Dar es Salaam Community Centre Free Library: Dar es Salaam, 3,000 vols in Kiswahili and English available for distribution in 85 library boxes throughout the Tanganyika Territory, and by individual postal service from East African Literature Bureau, P.O. Box 1408, Dar es Salaam.

Kilimanjaro Native Co-operative Union Library: Moshi.

MUSEUM

King George V Memorial Museum: P.O. Box 511, Dar es Salaam, f. 1940, ethnological, historical and scientific; also houses extensive library; Chair. J. P. MOFFETT, B.A., LL.B.; publ. *Tanganyika Notes and Records* (bi-annually).

UGANDA

CONSTITUTION AND GOVERNMENT

Under an Order in Council of 1920 Uganda is administered as a British Protectorate by a Governor with the assistance of an Executive and a Legislative Council. The territory is divided into four Provinces—Buganda, Eastern, Western, and Northern Uganda—which are further subdivided into a total of 16 administrative districts. Buganda is the most constitutionally advanced of the Provinces: subject only to the certain conditions of the Uganda Agreement of 1900 and to the Governor's consent it is ruled directly by its Chief, the Kabaka, with the assistance of his Prime Minister (*Katikkiro*), Chief Justice (*Omulamuzi*), Treasurer (*Omuwanika*) and the Native Council (*Lukiko*). In the other three provinces there are African local governments in various stages of development.

Governor and Commander-in-Chief: H.E. Sir ANDREW COHEN, K.C.M.G., K.C.V.O., O.B.E. (appointed 1952).

EXECUTIVE COUNCIL

Since the constitutional reforms which came into effect in 1955 the Council consists of the Governor, as President, eleven Ministers and two other members: C. A. L. RICHARDS (Resident of Buganda) and C. C. SPENCER (Commissioner on Special Duty).

MINISTERS

The names given below are of those Ministers at present (March 1956) holding office:

Chief Secretary: C. H. HARTWELL, C.M.G.

Attorney-General: R. L. E. DRESCHFIELD, Q.C.

Minister of Finance: W. PADLEY, O.B.E.

Minister of Natural Resources: A. B. KILLICK, C.M.G.

Minister of Local Government: L. M. BOYD, C.M.G.

Minister of Social Services: G. B. CARLAND, C.M.G.

Minister of Corporations and Regional Communications: A. N. MAINI, C.B.E.

Minister of Commerce and Works: C. H. BIRD, C.B.E.

Minister of Land Tenure: Z. C. K. MUNGONYA, M.B.E.

Minister of Rural Development: Y. K. LULE

Assistant Minister of Social Services: A. K. KIRONDE.

LEGISLATIVE COUNCIL

The Legislative Council consists of 60 members, half of them being Africans. The Government side, totalling 30, consists of 11 Ministers, 4 official members, 2 parliamentary secretaries, and 13 backbench members.

The Representative side, also totalling 30, is made up of Africans, Asians and Europeans.

CIVIL ESTABLISHMENT

Directors of Departments: M. J. BESSELL (African Housing), J. G. M. KING, O.B.E. (Agriculture), D. S. MILLER, O.B.E. (Education), J. LAW (Labour), E. A. TRIM, M.D. (Medical Services), J. B. WHITE (Public Works), A. P. MITCHELL, C.M.G. (Surveys, Land Officer and Commissioner for Mines), J. Y. MOGGRIDGE (Tsetse Control), J. B. RANDELL (Veterinary Services and Animal Industry).

Provincial Commissioners: Sir GEORGE DUNIZE, Bt.,

T. R. F. COX, R. M. BERE

Solicitor-General: P. E. H. PIKE, Q.C.

THE LEGAL SYSTEM

The High Court: This was established by the Uganda Order in Council, 1902, it has full criminal and civil jurisdiction over all persons and matters in the Protectorate. It has revisional jurisdiction and supervisory powers over the subordinate courts—both British and native—and also acts as Appellate Court for some of these subordinate courts.

Appeals lie to the Court of Appeal for East Africa, subject to some limitations. The High Court consists of a Chief Justice and four Puisne Judges.

Subordinate Courts: Their present status and rights were established under the Subordinate Courts Ordinance and the Criminal and Civil Procedure Codes of 1950. They have limited jurisdiction and are presided over by a Resident Magistrate.

Native Courts: The 1940 Buganda Courts and Native Courts Ordinances established the present status and rights of the Native Courts and, subject to the limitations imposed by the Ordinance, Native Courts have exclusive jurisdiction in all cases, which concern Africans only.

Each administrative area possesses a Central Court which has superior status to the County Chiefs Courts and the local Courts of Chiefs.

Chief Justice: Sir JOHN BOWES GRIFFIN, Q.C.

Puisne Judges: K. G. BENNETT, L. E. G. LEWIS, D. J. SHERIDAN, A. H. KEATINGE.

RELIGION

See General Section on RELIGION page 714.

THE PRESS

The Department of Information publishes four official newspapers, two weeklies and two monthlies, in the main vernacular languages. Their combined circulation is 320,000 copies a month.

The following are the main commercial newspapers:

DAILIES

Uganda Argus: P.O. Box 2511, Kampala; f. 1955; English; Independent, Editor W. BARRINGTON WARD.

PUBLISHER

Uganda Printing and Publishing Co. Ltd.: Box 84, Kampala.

BROADCASTING

The Uganda Broadcasting Service, which is a section of the Uganda Department of Information, transmits programmes in English and Luganda; its first regular transmission started in March, 1954.

FINANCE

BANKING

The East African Currency Board (*see* page 702) is the issuing authority for Uganda, as for all East African territories. There is one Government bank which provides facilities locally:

Uganda Credit and Savings Bank: P.O. Box 973, Kampala; f. 1950; Chair. Board of Management MINISTER OF FINANCE.

The following foreign banks have branches in Uganda:

Bank of Baroda: Head Office: Baroda, India; f. 1908; branches at Kampala; Branch Manager R. C. SHAW.

Bank of India: Head Office: Mahatma Gandhi Road, Fort, Bombay, India; f. 1906; branches at Jinji (Manager C. I. DIWAN) and Kampala (Manager S. L. KOTCHARI).

Barclays Bank D.C.O.: Head Office: 54 Lombard Street, London, E.C.3; est. by Royal Charter 1836, reincorporated by Act of Parliament 1925; branches at Fort Portal, Inganza, Jinji, Kabale, Kampala, Kamuli, Kilembe, Mbale, Mbabara, Tororo.

National Bank of India: Head Office: 26 Bishopsgate, London, E.C.2; f. 1863; branches at Entebbe, Fort Portal, Jinji, Kampala, Nasaka, Mbale, Mbabara, Soroti, Tororo.

Nederlandsche Handel-Maatschappij N.V.: Head Office: 32 Vijzelstraat, Amsterdam, Netherlands; f. 1824; branch at Kampala; Branch Manager A. J. DOORMAN.

Standard Bank of South Africa: Head Office: Church Square, Pretoria, Union of South Africa; f. 1862; branches at Jinji, Kampala, Masale, Mbale, Soroti.

INSURANCE

At the end of 1955 there were 35 separate companies with branches or agencies in Uganda.

The following are those which transact the greatest volume of business:

Alliance Assurance Co. Ltd.: Head Office: Bartholomew Lane, London, E.C.2; Uganda Branch Office: P.O. Box 1, Kampala.

Guardian Assurance Co. Ltd.: Head Office: 68 King William Street, London, E.C.4; Uganda Branch Office: P.O. Box 12, Kampala.

Ocean Accident and Guarantee Corporation Ltd.: Head Office: 36-44 Moorgate, London, E.C.2; Uganda Branch Office: P.O. Box 650, Kampala.

The Prudential Assurance Co. Ltd.: Head Office: Holborn Bars, London, E.C.1; Uganda Branch Office: P.O. Box 182, Kampala.

Royal Exchange Assurance Co.: Head Office: Royal Exchange, London, E.C.3; Uganda Branch Office: P.O. Box 866, Kampala.

TRADE AND INDUSTRY

See also Section on Trade and Industry/Kenya, page 718, for inter-territorial organisations.

CHAMBERS OF COMMERCE

Eastern Province Chamber of Commerce: P.O. Box 167, Jinji; f. 1925; 111 mems; Pres. JINALAL N. MEHTA.

Mbale Chamber of Commerce: P.O. Box 255, Mbale.

Uganda Chamber of Commerce: P.O. Box 2369, Kampala.

TRADE UNIONS AND CO-OPERATIVE SOCIETIES

In 1954 there were only four registered Trade Unions and even these were not very active as the majority of workers are migrant and therefore have little interest in trade unionism. Their central organisation is:

The Uganda Trades Union Congress: P.O. Box 271, Kampala.

The Co-operative Societies play a more important part in the country's economy, organising joint marketing and various other schemes. In 1954 there were 1,036 Co-operative Companies with a total membership of approximately 100,000.

TRANSPORT

ROADS

There are 2,839 miles of all-weather roads in the territory, many of them gravelled. The Buganda and African local governments maintain a further 8,300 miles of roads, which are of a lower standard and can only be used in good weather.

RAILWAYS

See Joint Railways and Harbours Administration of East Africa under REGIONAL ORGANISATIONS, page 713.

AIR TRANSPORT

The airport at Entebbe is one of the largest in Africa and there are also landing grounds at Kasese, Jinji, Tororo, Mbarara, Nasindi, Gula, Soroti, Arua, Lira, Moroto, Lolloa, Kasenyi and Murchison. The following airlines maintain regular services to and from Uganda:

British Overseas Airways Corporation: Airways Terminal, Buckingham Palace Road, London, S.W.1; Uganda Office: P.O. Box 523, Kampala.

Caspar Air Charters: P.O. Box 2238, Hardinge Street, Nairobi, Kenya; Uganda Office: c/o Entebbe Airport, Entebbe.

East African Airways Corporation: Airways Terminal, P.O. Box 1010, Nairobi, Kenya; Uganda Office: P.O. Box 68, Entebbe.

Sabena: 35 Rue Cardinal Mercier, Brussels, Belgium; Uganda Office: P.O. Box 23, Entebbe.

HEALTH SERVICES

The most prevalent diseases are malaria, respiratory and intestinal infections, yaws, schistosomiasis, venereal diseases and leprosy. The total number of beds provided by all hospitals in 1953 was 6,159. The Medical Department, together with the African Local Authorities, runs 18 hospitals at different centres, 10 rural hospitals and a network of 155 dispensaries and 101 aidposts. There are 9 Mission hospitals and 41 smaller units. During 1953, 77,275 in-patients and 675,491 out-patients were treated by Government hospitals.

EDUCATION

At the beginning of 1954 plans were drawn up and approved by the Advisory Council on African Education for the improvement and expansion of African educational facilities for the next few years. In 1953 there were 3,496 primary schools, 157 secondary schools and 5 institutes of higher learning (Makerere College and 4 junior secondary teacher-training colleges). There were 288,799 pupils in primary schools, 16,049 in secondary schools (including those in technical schools and teacher-training colleges) and 64 in junior secondary teacher-training colleges. With the exception of 10, all are controlled by the Government either directly or through grants-in-aid distributed to the various missionary schools.

Those wishing to study further may attend Makerere College, the University College of East Africa.

RESEARCH INSTITUTES

See also Section on Regional Organisations which includes details of Research Institutes under the East Africa High Commission, page 713.

East African Institute of Social Research: Makerere College, P.O. Box 262, Kampala; f. 1950; objects: social and economic research in East Africa (anthropology, urban surveys, economics, psychology); Dir. AUDREY I. RICHARDS; Sec. GRACE HUNTER; publ. *East African Studies* (occasional).

LIBRARIES

Kampala Municipal Council Library: P.O. Box 210, Kampala; f. 1953; the single public library in Uganda; 10,000 vols.

Makerere College Library: Kampala; approx. 40,000 vols.; Librarian H. HOLDSWORTH, M.A., F.L.A.

Makerere College Medical School Library: P.O. Box 2072, Kampala; approx. 12,000 vols.; Sub-Librarian Mrs. D. MILBURN, B.Sc.

MUSEUM

Uganda Museum: P.O. Box 365, Kampala; ethnology; special collection of African musical instruments.

COLLEGE

MAKERERE COLLEGE
(The University College of East Africa)
P.O. BOX 262, KAMPALA

Founded as a technical school in 1922, it has now been developed as the University College of East Africa. Courses leading to General Degrees of the University of London in Arts and Science were started at the beginning of 1950.

Visitor: H.E. The GOVERNOR OF UGANDA.

Chairman of the Council: Sir JOSEPH HUTCHINSON, C.M.G., SC.D., F.R.S.

Principal: B. DE BUNSEN, M.A.

Vice-Principal: Prof. F. B. WILSON, M.B.E., M.A.

Secretary: A. TATTERSALL, M.A.

Academic Registrar: P. F. VOWLES, M.A.

Library: see above.

Number of teaching staff: 90, including 13 professors.

Number of full-time students in residence: 531 men, 30 women, total 561.

DEANS

Faculty of Arts: K. INGHAM, M.C., M.A., D.Phil.

Faculty of Agriculture: F. B. WILSON, M.B.E., M.A.

Faculty of Science: EDNA M. LIND, B.Sc., Ph.D.

Faculty of Education: E. A. LUCAS, M.A.

Faculty of Veterinary Science: J. B. POLDING, Ph.D., B.Sc.

Faculty of Medicine: A. GALLOWAY, M.B.E., M.A., M.B., CH.B., D.Sc., F.R.S (S.A.)

THE BRITISH COMMONWEALTH

ZANZIBAR

CONSTITUTION AND GOVERNMENT

Under the 1924 and 1925 Zanzibar Orders in Council the Protectorate of Zanzibar is administered by a British Resident assisted by an Executive Council, presided over by the Sultan and by a Legislative Council. The Protectorate is divided for administrative purposes into the island districts of Zanzibar and Pemba, which are in the charge of three District Commissioners under a Senior Commissioner.

The Sultan: Seyyid Sir KALIFA BIN HARUB, G C M.G., G.B.E. (succeeded December 1911).

Heir Apparent: Seyyid ABDULLA BIN KHALIFA BIN HARUB, C.M.G.

EXECUTIVE COUNCIL

President: H.H. The SULTAN.

Vice President: The BRITISH RESIDENT.

Ex-Officio Members: The HEIR APPARENT, The CHIEF SECRETARY, The ATTORNEY GENERAL, The SENIOR COMMISSIONER, The FINANCIAL SECRETARY.

Official Members: A. K. BRIANT (Director of Agriculture); R. W. BLAXLAND (Director of Education), D. A. BLAIRD, O B.E. (Director of Medical Services).

LEGISLATIVE COUNCIL

This is presided over by the British Resident and consists at present (October 1955) of four *ex-officio*, five official and eight unofficial members, of whom three are Arab, two African and 1 European.

CIVIL ESTABLISHMENT

The British Resident: H. S. POTTER, C.M.G.

Chief Secretary: R. E. ALFORD, C M.G.

Financial Secretary: P. H. NIGHTINGALE.

Administrative Secretary: (Vacant).

Senior Commissioner: R. H. W. PAKENHAM, C.B.E.

Attorney General: J. P. MURPHY, Q.C.

Director of Agriculture: A. K. BRIANT.

Director of Education: R. W. BLAXLAND.

Director of Medical Services: D. A. BAIRD, O.B.E.

Director of Public Works, Electricity and Land Survey: R. V. TRACE.

THE LEGAL SYSTEM

High Court: This is the Supreme Court of the territory and has its headquarters in Zanzibar. It has final jurisdiction in all criminal and civil cases, subject only to a right of appeal to the East African Court of Appeal. It is the Court of Appeal for all subordinate courts within the territory.

Subordinate Courts: These are graded into three classes according to their respective status and power. They may be presided over by either a Resident Magistrate or District Commissioner in the First Class Courts, by an Assistant District Commissioner in the Third Class Courts, and by a nominee of the British Resident in the Second Class Court, who may also preside over the First and Third Class Courts.

Kathis and Mudir Courts: These are concerned with purely Arab and Mohammedan African affairs. The Mudir Courts have limited jurisdiction in both criminal and civil cases and the Kathis Courts in civil cases.

Chief Justice: Hon. R. WINDHAM.

RELIGION

See General Section on RELIGION, page 714.

THE PRESS

Adaf Insaf: Zanzibar; in English and Swahili; weekly.

Afrika Kwetu: Zanzibar; in Swahili; weekly.

Al Falaq: P.O. Box 105, Zanzibar; f. 1929; in English and Arabic; weekly.

Mwangaza: P.O. Box 133, Zanzibar; in English and Swahili; weekly.

Mwongozi: Zanzibar; in English and Swahili; weekly.

Samachar: P.O. Box 55, Zanzibar; in English and Gujarati; weekly; circ. approx. 7,342; Editor M. H. MASTER.

Zanzibar Times: P.O. Box 199, Zanzibar; f. 1954; daily edition in Gujarati; weekly edition in English and Gujarati.

Zanzibar Voice: P.O. Box 40, Zanzibar; daily edition in Gujarati, weekly in English and Gujarati; Editor I. K. NASSER.

Voices of Workers: Zanzibar; in English and Swahili; fortnightly.

FINANCE

BANKING

The East African Currency Board (see page 702) is the issuing authority for Zanzibar, as for all East African territories.

Two banks have branches in Zanzibar:

Standard Bank of South Africa Ltd.: Head Office: Church Square, Pretoria, Union of South Africa; f. 1862.

National Bank of India: Head Office: 26 Bishopsgate, London, E.C.2.

INSURANCE

Most main British and various other foreign insurance companies operate branch offices in the territory.

TRADE AND INDUSTRY

In 1952 the **Co-operative Development Office** was founded to encourage and develop co-operative societies. There were in 1954 16 registered co-operative societies with a total membership of 562. The most important single organisation is **The Clove Growers' Association** which assists the Government with the stabilisation of clove prices and distils and markets clove oil.

In 1954 there were 6 registered trade unions with a total membership of 917, the largest being **The Labour Association** with 633 members.

TRANSPORT**ROADS**

Zanzibar has 200 and Pemba 100 miles of road.

SHIPPING

The Zanzibar Government steamers run a weekly service between Zanzibar and Pemba and between Zanzibar and Dar es Salaam. There is a large harbour at Zanzibar and among shipping companies which operate regular services to the island are the following:

British India and Steam Navigation Co.: Monthly services to the United Kingdom via Suez, and South Africa, and fortnightly services to India.

Union Castle Mail Steamship Co.: Monthly services to the United Kingdom via Suez, or via West Africa and the Cape.

AIR TRANSPORT

The airport at Zanzibar was opened in 1950 and there is also a landing ground in Pemba, opened in 1952.

The East African Airways Corporation operates a service to the mainland twice daily.

HEALTH SERVICES

The most prevalent diseases are malaria, ankylostomiasis, venereal diseases, pneumonia, tuberculosis, leprosy and

typhoid. There is one combined Government hospital for Europeans, Asians and Africans at Zanzibar and two at Pemba. In Zanzibar there are nine rural dispensaries and seven in Pemba and there are in addition plans for several new ones. A new general hospital is being constructed and it is hoped that it will be completed during 1955. A tuberculosis sanatorium has been opened outside Zanzibar.

EDUCATION

In 1954 there were 61 primary schools with a total of 11,585 pupils, out of which 45 were Government schools, 12 Government-aided and 4 private. There were 4 secondary schools, serving 593 pupils, 2 were Government schools and 2 were Government-aided, and also 2 teacher-training colleges. There were in addition a large number of Kuranic schools with a total enrolment of 13,889 pupils.

The Mombasa Institute of Muslim Education provides technical training leading to the City and Guild examinations.

There are no facilities for post-secondary education and those wishing to study further must avail themselves of facilities abroad. Many attend the University College of East Africa, Makerere College, in Uganda.

RESEARCH INSTITUTES

See section on REGIONAL ORGANISATIONS which includes details of Research Institutes under the East Africa High Commission, page 713.

SOMALILAND

HISTORICAL AND ECONOMIC SURVEY

The Protectorate extends along the southern shore of the Gulf of Aden and is 68,000 sq. miles in area. It is inhabited by nomadic Somali tribes, followers of Islam and conscious of their Arabian origin. The Somalis are one of the best defined single ethnic groups in Africa; they are culturally and racially part of the ancient African stock of the Cushitic peoples or Eastern Hamites. There are nine main tribes (Esa, Gadabursi, Habr Awal, Habr Toljaala, Habr Yunlis, Arap, Eidegalla, Dolbahanta and Warsangeli). Most probably their ancestors migrated to Somaliland from Southern Arabia in the thirteenth or fourteenth centuries, displacing the Galla people who then inhabited the territory.

The first British treaty with a Somali tribe was negotiated in 1827 following the attack and plunder of a British ship off Berbera. In 1840 further treaties to secure safe harbour facilities for East Indiamen were concluded with the Sultan of Tajura and the governor of Zeilah. Egypt claimed the Somali territory in 1875, and the Khedive sent forces to occupy the ports of Tajura, Zeilah, Bulhar, Berbera and the inland town of Harar. These garrisons were withdrawn in 1884 during the Mahdi's revolt, and Zeilah, Berbera and Bulhar were occupied by British officials sent from Aden to administer them.

Until 1898 the territories were administered by the Resident of Aden, as a dependency of the Government of India. In 1898 the Foreign Office, and in 1905 the Colonial Office, assumed control. Treaties defining frontiers and spheres of interest in the area were concluded with France in 1888, with Italy in 1894 and 1929-30, and with Ethiopia in 1897. Britain's occupation of the territory was resisted for 20 years, from 1901-21, by Mohammed Abdullah bin Hassen, a Somali tribesman of the Ogaden, who preached a holy war against Britain. Several British military expeditions failed to reduce his authority and in 1910, Britain supplied the friendly tribes with equipment and ammunition to defend themselves, and withdrew to a "coast concentration" policy, occupying Berbera, Bulhar and Zeilah. From 1910-13 the interior was convulsed by tribal warfare and feuds and it was estimated that one-third of the male population was killed.

In 1913, it was decided to patrol the interior caravan routes and a camel police force of 150 men was organised under a British Commander Richard Corfield. In August 1913, this force encountered a Dervish raiding force of 2,000 near Dul Madoba in the Ain Valley, south-east of Burao. Corfield and half of his force were killed and great damage was inflicted on the Dervish force. The engagement provoked retaliatory action by the Dervishes and in 1914 they attacked Berbera. As a result, the policy of concentrating on the coast was abandoned, military headquarters were re-established at Burao in the interior, and between 1914-20 various counter offensives were undertaken against the Dervish forces. The main challenge came from Mohammed Abdullah bin Hassan whose stone fortress stood at Taleh in the south-east protectorate. In 1920, he was attacked at Medishe by land and air, and fled to Taleh. The fortress was bombed and Mohammed Abdullah bin Hassan found sanctuary on Ethiopian territory, where he died in February 1921. The ruined fort at Taleh, which was declared a national monument in 1947, remains as a memorial to the genius of the Dervish leader.

After Abdullah bin Hassan's defeat, peace returned to the Protectorate, until it was invaded by Italian troops from Ethiopia on August 4th, 1940. The British forces withdrew from the Protectorate to Aden, but returned reinforced in March 1941, and defeated the Italians. A military administration for the Protectorate was established until the Colonial Office reassumed responsibility in November 1948.

The population of the Protectorate is estimated to be 640,000; the number of inhabitants in each of the six towns varies from 3,000 and 30,000 and differs according to the time of the year.

The nomadic Somalis keep camels, cattle, sheep, goats and horses; their migrations are limited by ownership rights over grazing areas and water holes. Over-grazing in some areas has resulted in severe damage to the soil and has caused congested grazing in the south. This problem is at the root of quarrels which still arise between tribes. The country is semi-desert, steppe desert and thorn bush. With two rainy seasons a year agriculture is possible but uncongenial to the Somali. There are no mineral resources.

The growing of crops, though small, is increasing. It is estimated that there are some 12,000 small farms in the country, most of them less than 10 acres. Sorghum is the principal crop, but millet and gum are also produced.

The principal exports are sheep, sheepskins and goat-skins. In 1954, over 232,000 sheep to the value of £579,000 and more than 1,571,000 skins to the value of £414,000 were exported. These two items contributed over 85 per cent to the total value of domestic exports for 1954 (£1,208,644). Other exports are goats, cattle, gums and resins. Much of the potential value of the skins is at present lost through bad methods of flaying, drying and storage, but a grant of £17,000 from the Colonial Development and Welfare Funds is being applied to an improvement scheme. The possibility of direct shipment of skins to the British market is being considered. The main imports, which in 1954 totalled £2,360,880, consist of food-stuffs and textiles.

The total Protectorate revenue during the year 1954-55 (April to March) was £701,417, while expenditure amounted to £1,090,185. A Grant-in-Aid of £404,000 was provided by the United Kingdom Government and in addition, expenditure on Colonial Development and Welfare Schemes amounted to £90,170.

H.L.

CONSTITUTION AND GOVERNMENT

(Capital: Hargeisa)

The constitution of the Protectorate is based on the Somaliland Order in Council, 1929. Supreme executive and legislative power is vested in the Governor, who is advised by a non-statutory Council comprising the principal officials of the Government. In addition, there is a Protectorate Advisory Council, established in 1947, consisting of both elected and selected Somali representatives of all sections of the Somali community. The Somaliland Order-in-Council 1955 provides for the development of the Advisory Council into a legislative council: however this order has not yet (December 1955) been enacted locally. Local Government Councils have been set up in

BRITISH EAST AFRICA

the two principal towns, Hargeisa and Berbera. The country is divided into six Districts, each in the charge of a District Commissioner who acts on the instructions of the Governor through the Chief Secretary. The link between the District Commissioner and the people is the Akil (chief) who is paid by the Government to explain and implement policy and to maintain order.

THE ADMINISTRATION

Governor and Commander-in-Chief: Sir THEODORE PIKE,
K.C.M.G.

Chief Secretary: J. R. STEBBING, O.B.E.

Commissioner for Somali Affairs: P. CARREL, O.B.E.

Financial Secretary: (Vacant).

Accountant-General: C. GRIFFITH.

Director of Agriculture and Veterinary Services: J. M. WATSON.

Principal Auditor: R. FISHER (shared with Government of Aden).

Comptroller of Customs and Excise: H. FORRESTER, O.B.E.

Director of Education: C. S. THOMPSON.

Chief Geologist: J. A. HUNT, O.B.E.

Information Officer: J. M. WEBBER.

Attorney-General: J. S. R. COLE, Q.C.

Director of Medical Services: Dr. W. T. THOM.

Commissioner of Police: H. S. SWAIN.

Postmaster-General: J. HUDSON DAVIES (shared with Aden).

Commissioner of Prisons: P. E. CONROY.

Director of Public Works: E. P. WILDERS.

THE LEGAL SYSTEM

The officers of the Judicial Department are the Judge of the High Court and a Magistrate. The latter has the powers of a First Class Magistrate with jurisdiction in every district of the Protectorate. The system of law which is administered is: English common and statute law and locally enacted ordinances; the Indian Penal Code; Mohammedan law for matters of family concern; and Somali Custom. The courts are the High Court, the District Courts, and the Subordinate and Kadi's Courts. Tribal elders, however, deal with a large number of cases without reference to the Courts and customary law is used to settle many matters which would in more highly developed countries come before the Courts.

The High Court: This is the Supreme Court of the territory and jurisdiction is criminal and civil in an original, appellate and revisionary capacity. Appeals in criminal cases lie to the East African Court of Appeal. There is appeal to the Privy Council in civil cases where the amount in dispute is £500 or over.

District Courts: First Class District Courts have original civil jurisdiction to an unlimited amount and appellate and revisionary jurisdiction over the Subordinate Courts. Their criminal jurisdiction is limited as to sentence (imprisonment up to 4 years). Second Class District Courts have original civil jurisdiction where the subject matter does not exceed 1,500 shillings in value. Criminal jurisdiction extends to a sentence of imprisonment of up to six months or a fine.

The following Courts are presided over by Somalis:

Kadi's Courts: These Courts administer the Sheriat law and have jurisdiction only in matters affecting the family life of the Somali; appeal lies to the Court of the Chief

SOMALILAND

Kadi. There is at least one Kadi's Court in each district.

Subordinate Courts: This class of Court was introduced in 1945 and has jurisdiction over natives in civil and criminal matters as laid down in the warrant establishing the Courts. Appeals lie to a First Class Magistrate and thence in civil matters to the Subordinate Court of Civil Appeal and in criminal matters to the High Court.

Judge of the High Court: I. R. GREENE.

Resident Magistrate: F. D. ROBERTSHAW.

THE PRESS

Only one newspaper is published in the Protectorate: the fortnightly *War Somali Sidihi* (The Somali Courier) issued by the Information Department. It is printed in both Arabic and English and has a circulation of about 2,500.

BROADCASTING

The Information Department operates a broadcasting station known as Radio Somali which transmits daily on a wave-length of 7.126 from 4.30 to 5.45 p.m. with additional broadcasts on certain days. Radio sets are not licensed, but 160 Government radio sets have been distributed throughout the country and it is estimated that there are at least another 500 in the possession of the public. Plans are in hand for a new broadcasting station.

FINANCE

The East African Currency Board (*see* page 702) is the issuing authority for British Somaliland as for all East African territories.

The official currency is the British East African shilling, the exchange rate being 20 shillings for one pound sterling. In addition to the Government Savings Bank, the National Bank of India has branches at Hargeisa and Berbera.

TRANSPORT

The Protectorate has no railways. There are approximately 3,000 miles of gravel or earth roads, but the only hard surfaced ones are in Hargeisa. Sea communications consist of a fairly regular weekly steamer service between Aden and Berbera, and a monthly service (October to April) from the United Kingdom to Berbera operated by the Brocklebank Line; other sea communications are maintained by dhow. Regular air services between Hargeisa, Berbera and Aden and to East Africa and Addis Ababa, are operated by Aden Airways. There are no internal air services.

HEALTH SERVICES

The most common diseases are tropical ulcer, the respiratory diseases (particularly lobar pneumonia), venereal diseases, tuberculosis, eye complaints and malaria. There

THE BRITISH COMMONWEALTH

are six district hospitals with a total capacity of 600 beds. The Mental Hospital at Berbera has accommodation for 75 patients; a new group hospital in Hargeisa is in operation and the old hospital is being developed as a Tuberculosis Hospital with 140 beds. There are 14 district dispensaries manned by locally trained dressers, and over 75 Tribal Aids are now living and working amongst the nomads. During 1954 89,243 persons were treated at hospital out-patients' departments and of these 8,616 were admitted.

EDUCATION

All schools above the level of the Koranic schools are Government institutions; there are no mission schools in the Protectorate. There are 45 grant-aided private schools (39 for boys, 6 for girls) and Koranic schools, 19 Government elementary schools (including 1 girls' school); 2 intermediate boarding schools; 1 vocational training centre; 1 trades school and 1 secondary school. The total number of children in schools in 1954 was 3,000.

GEOGRAPHY

THE WEST INDIAN ISLANDS as a whole (including those of non-British allegiance) form a complex but well-defined garland or arc running between the Yucatan peninsula of Central America and the north-eastern zone of Venezuela. Geologists see in the central part of this garland a sunken fold structure related to the Andes and Cordillera of Central America. One link is traceable from the mountains of Honduras through a submarine ridge to Jamaica; and Trinidad, Barbados and Tobago are clearly detached fragments of the South American continent. The large islands forming the northern part of the archipelago—Cuba, Jamaica, Haiti, Puerto Rico and others—are considered to be a continuation of geological structures visible in Central America; and to this group the name Greater Antilles is applied. Further east, the arc continues as a cluster of much smaller but more numerous islands, the Lesser Antilles—which in the main are the sunken tops of old volcanoes, later enlarged outwards by coral growths. Some of the Lesser Antilles are low-lying, but others, despite their small size, are extremely mountainous; and in certain of these volcanic activity has by no means ceased. Finally, the arc re-unites with the South American continent through the islands of Barbados, etc. The Lesser Antilles are further divided into two groups—the Leeward Islands (north-west) and the Windward Islands (south and west). These names have no direct relation to prevailing winds (which are from the north-west) but refer to situation: the Windward Islands lie further east than the Leeward group—i.e. closer into the prevailing wind.

The British territories in the West Indies comprise (i) the island of Jamaica (Greater Antilles) and its dependencies; (ii) many—but by no means all—of the Leeward Islands: Anguilla, Barbuda, St. Christopher (St. Kitts), Nevis, Antigua, Montserrat, Redonda and a part of the Virgin Islands group; (iii) certain of the Windward Islands—Dominica, St. Lucia, St. Vincent, Grenada and the Grenadines, and also (iv) Barbados, Tobago and Trinidad.

Altogether, British island territories in the West Indies (excluding the Bahamas and Bermuda) comprise about 8 per cent of the total land area of approximately 100,000 sq. miles.

In view of the inter-tropical location of all the Islands, temperatures are generally high—approximately 80° F. at sea level, with restricted seasonal variation. Altitude can produce significant differences of up to 15° F., and the effect of sea-breezes is also marked. As regards rainfall, aspect and altitude are the main influencing factors—the windward sides of the islands (north-west) receiving up to 250 in. annually, the leeward sides as little as 15–25 in. Consequently, important contrasts can occur even within a short distance and, though none of the islands discussed here is large, important differences in climate may be experienced—drought and over-abundance of rain may coexist within the same small island.

Hurricanes, a feature of latitudes 20–35° N. and S. in many parts of the world, are in a sense similar to the familiar “depressions” of the British Isles, except that the energy, which is dispersed over many thousands of square miles in a “British” depression, is concentrated here into a very much smaller volume. Winds are more violent, frequently exceeding 100 m.p.h.; there is often a peculiar characteristic swirling vortex of cloud, and a whole hurricane moves rapidly on a narrow sharply defined path. But perhaps most destructive of all, there is a region of extremely low pressure at the centre of the hurricane, and this, passing suddenly over buildings, can produce the effects of an internal explosion. Hurricanes (“typhoons” or “cyclones” elsewhere in the world) tend to develop over oceans and move northwards (N. Hemisphere) or southwards (S. Hemisphere) in a curved path towards the nearest land and to affect the western flanks of the great oceans—e.g. southern U.S.A. and the West Indies, Japan, China, Polynesia and East Africa.

HISTORICAL AND ECONOMIC SURVEY

EARLY SETTLEMENT

The Spaniards, under whose patronage Columbus went on his voyages of discovery, were the first of the European nations to establish an empire in the Caribbean. First, the French and, later, the English and the Dutch challenged the Spanish monopoly, though not until 1670, by the Treaty of Madrid, did the Spaniards formally relinquish any part of their colonial empire.

The English were not at first concerned with the establishment of permanent settlements in the Americas and the exploits of Drake and his contemporaries against the Spanish Indies had as their more immediate objective the acquisition of bullion. Forces were at work, however, which made colonisation inevitable: by the end of the sixteenth century, capital had become available for investment overseas and the device of the joint stock company was being rapidly developed; the prevailing commercial theory, moreover, favoured the settlement of territories which would provide England with sub-tropical produce and in return absorb her manufactured goods. Unlike the Spaniards, who were concerned primarily with the discovery of the precious metals, the English came as planters and traders cultivating sub-tropical products and shipping them to England for home consumption or for re-export to continental Europe.

The Spaniards, drawn to the Greater Antilles and the American mainland by the lure of gold, had omitted to occupy the numerous islands of the Lesser Antillean chain, and it was in these islands that the English first established permanent settlements in the Caribbean.

The parent colony, St. Christopher—which, until 1713, was shared with the French—was settled in 1623, although abortive attempts had already been made to settle St. Lucia (in 1605) and Grenada (in 1609) and to establish a colony on the coast of Guiana. Barbados was settled in 1627, Nevis two years later, and Antigua and Montserrat in 1632. In the late 1630's, English logwood-cutters became active in the coastal districts of Central America, establishing the long-standing alliance with the Mosquito Indians and preparing the way for the colony of British Honduras. Finally in 1655 the conquest of Jamaica from Spain began, and in 1660 it was complete.

Barbados and Jamaica have been in continuous British occupation since the seventeenth century. Most of the other territories, however, have undergone fairly frequent changes of ownership, and their present position was not stabilized until the end of the Napoleonic Wars.

The territory now known as British Guiana was first settled in 1581 by the Dutch, who later, in the 1620's, became involved in fighting with the Spaniards. It soon became clear that the Spaniards, although they might retain what they possessed, were unable to extend their domain. England came to realise that to hasten the decline of Spanish authority was contrary to her real interests. Considered as the source of the precious metals and as a potential market for negro slaves and English manufactured goods, the Spanish empire offered a vast field for commercial enterprises. The English, therefore decided on a policy of amity and trade with the colonies of Spain.

The new relationship was in some respects an uneasy one, but trade relations developed rapidly and Jamaica, due to its geographical position, became the centre for the

supply of negroes, provisions and (in spite of the vigilance of Spanish officials) of English manufactured goods to the Spanish Main. The gold and silver that flowed into Jamaica enriched England and provided her North American colonies with most of their hard money. The new policy towards the Spanish colonies naturally involved the withdrawal of English official support from the buccaneers, the cosmopolitan sea-rovers who, in the decade preceding the Treaty of Madrid, had executed a series of campaigns against the Spanish Indies, sacking Maracaibo and capturing Panama. In the long run, however, economic penetration proved far more disastrous for the Spanish colonies than the activities of the buccaneers.

The world carrying trade at this period was largely in the hands of the Dutch, who, as late as 1660, were supplying English colonies with negro slaves. Dutch settlers arrived at St. Eustatius and Tobago in 1632, at Curaçao in 1634, at Saba in 1640 and at St. Martin in 1648; but they regarded these islands less as colonies than as trading posts and were, like the English, less concerned with territorial expansion than with commercial supremacy. For a time, it suited English policy to make use of Dutch organisation and experience, but the point was quickly reached where the further development of English colonial trade seemed to call for some reduction in Dutch commercial ascendancy. Consequently, the Navigation Acts of the Commonwealth and Restoration, which proclaimed England's intention of monopolising colonial trade, were directed primarily against the Dutch merchants, and the Anglo-Dutch Wars of 1652–54 and 1665–67 represent the unwillingness of the Republic to accept the situation that these Acts prescribed. But these wars were not alone responsible for ultimate English commercial supremacy: paradoxically, the economic decline of the Republic was largely the result of wars fought in alliance with England against Louis XIV. By 1713, England was rapidly replacing Holland as the principal commercial power in the Caribbean.

For a century and a quarter after 1688 the central issue in the history of the West Indies was the struggle for supremacy between England and France. The French had begun to intervene effectively in the West Indies in 1635, when they settled Martinique and Guadeloupe and established the *Compagnie des Isles d'Amérique*. The French West India Company was founded in 1664, powerful French fleets appeared in the Caribbean, French forces occupied St. Lucia and the buccaneers continued to function as an instrument of French policy. The trend of events was clear, and in the course of the eighteenth century England and France fought a series of wars for control of the sugar islands, although by 1715 the main emphasis in the Anglo-French colonial conflict had shifted to North America. In the long run, of course, everything turned upon superiority at sea, and expeditions to the Caribbean were an important feature of the naval warfare of the period. Until the final phase of the struggle, which opened in 1793, stern fighting produced only trifling territorial changes. In the Napoleonic Wars, however, France was deprived of all her West Indian possessions, with the important exceptions of French Guiana, Martinique and Guadeloupe, while Great Britain acquired Trinidad, Tobago, St. Lucia, Demerara, Essequibo and Berbice. British Guiana was ceded to Great Britain by the Dutch in 1814.

THE BRITISH COMMONWEALTH

SLAVERY AND ABOLITION

The early Spanish settlers, whose actions were governed largely by their greed for gold, rapidly reduced the aboriginal inhabitants of the Greater Antilles—the warlike Caribs—to slavery and then, when this supply began to fail, turned to the smaller islands to windward in search of additional labour for the mines of Hispaniola and Peru. Throughout the sixteenth century the extermination of the aborigines proceeded apace, and very few are left. There is, however, a Carib reservation in Dominica, and Caribs of mixed blood are still to be found in certain parts of Central America.

African slaves were shipped to the Spanish Indies as early as 1503 and were imported systematically after 1517. The contract for the supply of negroes to the colonies of Spain—which was a monopoly of the state—was farmed out, in the early stages, to the Portuguese and, later, to the Dutch, who retained control over the trade until the second half of the seventeenth century. From the outset, of course, there were interlopers such as John Hawkins, who carried negroes to the Spanish Main in the time of Elizabeth I.

The introduction of the sugar-cane to the English islands—it was first brought to Barbados from Brazil in 1641—had far-reaching effects on the development of West Indian society. Cultivation of sugar on a large scale called for abundant labour. Consequently, thousands of negroes were transported from Africa to the West Indies and their employment became the basis of sugar production throughout the islands, although slavery was not confined to the dark races, for there were also some European bondsmen, euphemistically described as 'white servants', who, during the term of their indentures, were probably treated more callously than the negroes.

In face of the influx of African slaves, the number of European smallholders rapidly decreased, and the fear of slave-insurrection became a constant factor in West Indian life. White immigrants were needed urgently but the attempt to maintain a fixed ratio of Europeans to negroes by means of "deficiency laws" did not meet with success. Emigration to the West Indies was at best an uncomfortable and a hazardous undertaking.

The abolition of the slave trade, which was regarded, for 150 years, as the foundation of British commercial prosperity, is a landmark in West Indian history. The Quakers denounced the trade as early as 1727 and as the eighteenth century advanced and humanitarian principles gained ground, the iniquities of the system by which the West Indian planters procured their labour evoked increasing hostility in England. Religious leaders condemned the trade as un-Christian; and in 1772 Chief Justice Mansfield ruled that the condition of slavery was obnoxious to English law.

The slave trade ceased to be respectable, and the foundation, in 1787, of a Society for its suppression gave unity of purpose to abolitionist opinion. Moral disapproval crystallised into political activity, and the movement found in William Wilberforce an ardent and unwearied advocate in the House of Commons. In March, 1807, after prolonged agitation, in which the evangelical revival played an important part, British participation in the slave trade was prohibited by Act of Parliament.

The abolitionists then proceeded to agitate for the emancipation of the slaves and in 1834, largely owing to their efforts, slavery was abolished within the British Empire. Compensation amounting to £20 million was granted to the West Indian planters. A system of apprenticeship, introduced to facilitate the transition from slavery to liberty and to prepare the negroes for life in a free society failed and was abolished in 1838. The mass of the

population showed little desire to reap the advantages of freedom and the majority appeared content to live in idleness and squalor. They tended, moreover, to drift away from the sugar plantations and, except in Barbados and Antigua, where the planters adopted a policy at once firm and generous, there was an alarming fall in production.

The abolition of the slave trade had already produced an acute shortage of labour, and in those colonies where development had been relatively backward and the population comparatively small, indentured labour was now introduced from India and China. The coolies were encouraged to remain after the expiry of their contracts, which were usually for five years, and by 1883 there were 50,000 established in Trinidad and 65,000 in British Guiana. The scheme was in operation from 1838 until 1917; and to-day, the "East Indians" make up 35 per cent of the total population in Trinidad and nearly 50 per cent in British Guiana.

SUGAR ECONOMY

In the period of the Old Empire, the West Indies were first in importance among the British overseas possessions; at the time of the Peace of Paris (1763), there was a lengthy debate in England as to whether Guadeloupe might not prove a more valuable acquisition than Canada. At the beginning of the nineteenth century, the West Indies accounted for one-third of Britain's export and import trade and, as late as 1830 were absorbing £2,800,000 worth of British goods, as against £1,900,000 for British North America.

The period of opulence, however, was brief. By 1815, West Indian prosperity was being undermined by the advance of economic liberalism. The Free Traders were eager to release the British consumer from his dependence upon the colonial sugar-grower, and provision was made in the 1840's for the gradual removal of the preference on West Indian sugar. From 1854, the West Indian planter was obliged to compete in the British market with the slave-grown sugars of Cuba and Brazil.

In the 1880's, competition began from the expanding and heavily subsidised beet-sugar industry of continental Europe. British imports of European beet-sugar increased rapidly while those of cane-sugar underwent a serious decline. In 1861, about 60 per cent of the British sugar imports originated in the West Indies; by 1900, this figure had shrunk to less than 3 per cent. To make matters worse, the important United States market was lost when, in 1898, the McKinley Tariff gave a heavy preference to Cuban sugar. The West Indies, therefore, with an increasing population, were finding themselves unable to maintain even their existing markets. It was this situation which led to the cultivation of other crops and to the rather different economic background of the twentieth century.

The Report of the Norman Commission, first published in 1897, prescribed the cultivation by the peasantry of crops other than sugar. Jamaica had already turned to the cultivation of bananas, which could be grown successfully on smallholdings, and sugar had fallen to second place in the list of Jamaican exports. Other colonies now planted cocoa or coffee, spices or sea island cotton; and in some of the smaller islands sugar was entirely replaced by some alternative staple. The Imperial Department of Agriculture was established in Trinidad in 1898 in order to foster the new experiments and to give a lead to research. In Barbados and the Leeward Islands, however, sugar remained predominant and actually increased its lead when, in 1903, Mr. Joseph Chamberlain induced certain countries to forgo their bounties on beet-sugar.

In 1897, Canada had given a 25 per cent preference, which she renewed in 1912, to West Indian sugar; and in

the decade preceding the first World War the West Indies were fairly prosperous. British policy, however, was still dominated by the principles of Free Trade. During the 1914-18 War, the West Indies went through a boom period, but in 1921 the price of sugar began to fall, and although the British Government introduced protective tariffs, these proved insufficient to keep up the price in the world market. From 1929, the fall was disastrous. A slight increase was brought about by the International Sugar Agreement of 1937, which limited world production on a quota basis, but the price, though no longer falling, was still extremely low.

CONSTITUTIONAL DEVELOPMENT

The labour shortage that resulted from emancipation together with competition from East Indian sugars and the progressive reduction of the preference given to West Indian sugar in the British market, weakened the economy and created social unrest. In the middle decades of the nineteenth century, political crises became more frequent and more violent; there were various suggestions for constitutional reform and one or two half-hearted attempts were made, particularly in Jamaica.

The forms of government acquired by these various British possessions in the West Indies naturally reflected their early history. British Guiana for instance retained until 1928, when the Crown Colony pattern of administration was introduced, elements of its original Dutch Constitution. British Honduras was until the nineteenth century governed by public meeting, whereas Barbados had had some form of representative government since the early seventeenth century. Where elective assemblies existed, the franchise was narrow and wholly European and the system highly oligarchical. In 1864, for instance, Jamaica with a population of 440,000 had less than 2,000 qualified electors. Crown colony government was instituted in most of the West Indian territories during the nineteenth century. The emphasis was generally on nominated, as opposed to elected, Legislative Councils, and in spite of minor reforms, it was not until the economic depression of the 1930's, when labour unrest became endemic, that constitutional reform and in particular the introduction of responsible government were seriously contemplated.

There were ugly riots in Trinidad in 1934, in Jamaica, in St. Christopher, St. Vincent and British Guiana in 1935, in Barbados and Trinidad in 1937 and in Jamaica and British Guiana in 1938. Public opinion in the United Kingdom was moved by the news of these events, and the Caribbean colonies emerged, temporarily, from the realm of chronic neglect. There was a demand for a constructive policy to ameliorate the conditions which had made the disturbances possible, and in July, 1938, a Royal Commission was appointed, under the chairmanship of Lord Moyne,¹ to investigate social and economic conditions in the Caribbean. While the Commission was not primarily concerned with constitutional issues, it made certain recommendations for constitutional reform which influenced the changes introduced subsequently.

The first constitutional revision, made in Jamaica in 1944, marked a new era in the Colony's political history. A bi-cameral legislature was established, consisting of a nominated Legislative Council and a House of Representatives elected by universal adult suffrage. The powers assigned to the House of Representatives were, in general, those enjoyed by the Legislative Council under the previous Constitution, while the principal duty of the new Legislative Council was the consideration of Bills sent up

from the House of Representatives. In the event of disagreement between the two Houses, Bills passed by the House of Representatives in two successive sessions and rejected by the Legislative Council, were—with certain safeguards—to be presented to the Governor for his assent. The Executive Council, the principal instrument of policy, was to consist of the Governor, who was to have a casting vote, three official members, two nominated from the Legislative Council and five members elected by and from the House of Representatives. From the beginning the elected members of the Executive Council were associated with the work of the five groups of government departments for which Standing Committees were set up in the House of Representatives. The framework of a ministerial system thus existed, and a further advance towards ministerial responsibility was made in 1953 when the elected members of the Executive Council, increased from five to eight and now in a majority on the Council, were given the duties and responsibilities of Ministers. Following United Kingdom practice, the leader of the majority party in the elected lower House of the Legislature assumed the principal ministerial office and selected his departmental ministers from among his party colleagues. Jamaica has thus advanced close to self-government. The Governor, however, retains his reserve powers and, under the 1953 amendment, may use them without reference to the Executive Council in the interests of public order and good government. The Colonial Secretary continues to be responsible for matters not covered by the Ministries' external affairs and defence.

Constitutional changes were also introduced in the other Colonies: in Barbados in 1946 (when four members of the House of Assembly, elected to the Executive Committee, were given responsibility for certain departments), in Trinidad in 1950 and in British Guiana and British Honduras in 1953 and 1954. Further constitutional changes for Trinidad are at present under consideration. With the single exception of British Guiana, the new systems have worked well, and elected members have co-operated with officials in the new tasks assigned to them. The party system, however, is still at its first stages of development, and only in the larger Colonies—notably Jamaica—have political parties with fairly well-defined programmes been evolved.

In the autumn of 1953 the attention of the British public was drawn to the Caribbean as a result of an unhappy series of events in British Guiana. A new Constitution was introduced in the Colony in April, 1953. At the first General Election the People's Progressive Party won 18 seats in the House of Assembly, thereby controlling the appointment of the six portfolio Ministers. These Ministers appear to have subordinated their administrative responsibilities to their political activities and gave grounds for the belief that they intended to pervert the Constitution and to turn British Guiana into a totalitarian state. By the end of September, the Colony was facing a rapid deterioration in the efficiency of its administration, in its economy and in its security. The Governor was therefore given emergency powers and, on October 4th the elected Ministers were deprived of their posts. On October 9th the British Government announced that steps were being taken to suspend the Constitution and British troops sent to Georgetown to preserve order, although it was emphasized that these drastic measures did not represent any change in the general policy of encouraging the political advancement of dependent peoples.

The Report of the special Commission of Enquiry, which was published in November, 1954, indicated that tension in the Colony had diminished and that stability was being slowly restored. It confirmed the accusations made against the P.P.P. leaders and emphasized the danger of extremists gaining power, especially those dominated by race hatred.

¹ *West India Royal Commission Report*, Cmd 6607 (1945).

THE BRITISH COMMONWEALTH

The Report made two main points: first, that there must be a period of "marking-time" before British Guiana continues its progress towards self-government; and, secondly, that the restoration of ordinary democratic processes cannot be permitted so long as the P.P.P. retains communist leaders and a communist policy. These conclusions have been accepted by the British Government.

A first step was taken in December, 1955 towards the restoration of civil liberties when members of the Legislative Council unanimously accepted a Bill to provide for the preservation of order in public meetings and processions.

The appeal of communism is powerful in communities whose standard of living is low, and, as Sir Stephen Luke has observed, to make comparably interesting such conceptions as parliamentary democracy and the Commonwealth, it is necessary not only to take energetic measures to improve unsatisfactory conditions but also to give due publicity to the work that is being done.

ECONOMIC AND SOCIAL DEVELOPMENT SINCE 1940

The Report of the Moyne Commission, which was not published until 1945, revealed a composite picture of poverty and ignorance, malnutrition and disease. The social and economic ills of the Caribbean had long been known, but the remedies applied had been half-hearted, and consequently ineffective. The principle had been accepted that budget deficits should be covered by grants-in-aid from the United Kingdom Treasury, which had also made special grants to meet losses resulting from hurricanes, earthquakes and other calamities. But the disbursement of large sums by the Imperial Government for planned development and welfare was a new idea. The Commission's findings were largely responsible for the passing of the Development and Welfare Act of 1940, which established a fund for the Colonial empire as a whole; and for the setting up of the Development and Welfare Organisation in the West Indies. The Organisation was made responsible for the planning, in collaboration with the colonial governments, of long-term programmes of social reform and economic development; the giving of technical advice to the governments concerned, the provision of effective machinery for regional co-operation on matters of common concern, and the preparation of progress reports. The Development and Welfare Act of 1945, and the Acts of 1949, 1950 and 1955 increased the annual amounts made available to the different colonies, and, up to March, 1955, the funds allocated to the British West Indies amounted to about £28 million, of which more than £22.5 million had been issued. The allocations for the period 1955-60 to the Region amount to over £3.5 million a year.

Funds have been made available for a variety of purposes: aided self-help schemes for housing, land settlement in British Guiana, Trinidad and Jamaica, road building in British Honduras, drainage and irrigation in British Guiana, and the improvement of health and educational services in the Region as a whole. A British Caribbean Advisory Council on Agriculture, which functions under the chairmanship of the Agricultural Adviser to the Comptroller for Development and Welfare, has been recently charged with the task of carrying out a survey of food production and consumption in the islands and British Guiana, and of making recommendations to avoid the overlapping of food production. In addition the West Indian auxiliary of the Colonial Development Corporation established in 1948 has been active in fostering agricultural and forestry development. Although some of its ventures

have been financial failures, others, notably its rice and timber schemes in British Guiana, have created new opportunities of development.

While Colonial Development and Welfare funds have provided the main source of long-term capital, these funds have been supplemented by local loans, loans raised on the London market, and by contributions from local revenue.

The opening phase of the programme initiated by the Moyne Commission's Report has now come to an end, and new programmes have been worked out for the next period—from 1955-60—of intensive development. Nevertheless, the fundamental problems of an increasing population and inadequate resources to meet its needs still remain, and the tone of West Indian opinion continues to be characterised by frustration and disillusionment. The population problem has in fact become more urgent in recent years. In all the territories of the region, the birth rate, already high in the thirties, increased during and after the War, and, at the same time, improved medical services and some amelioration of living conditions have brought about a decline in mortality.¹ Between 1931 and 1951, the population of the Caribbean colonies rose from 2,018,000 to 3,229,000; it is now approaching 3,400,000 and the region as a whole is showing an annual increase of 2.3 per cent. This high rate of increase is at the root of most of the problems facing the West Indies. The lack of family cohesion is a complicating factor. The institution of marriage, and with it a settled society based on family life, is less deeply rooted in the West Indies than in many other parts of the world.

Between the two World Wars, large numbers of British West Indians found employment in the United States, and to a less extent in Latin America and the Netherlands West Indies. Immigration into the United States is now carefully regulated. Only a small number of West Indians—between 7,000 and 8,000 who are mainly agricultural workers—are allowed to enter each year under short-term contracts arranged through a Regional Labour Board. Latin American countries have passed legislation effectively barring the entry of West Indians, and the oil refineries of Curaçao and Aruba are approaching the point where they will be able to dispense with imported labour.

As far as emigration from the overcrowded islands to the mainland colonies of British Guiana and British Honduras is concerned, the Evans Commission on Resettlement² which reported in 1948, recommended development schemes in those colonies which would have employed 25,000 persons and maintained a total of 100,000 immigrants. The Commission's recommendations have not been implemented for a number of reasons: although the mainland colonies are sparsely peopled in relation to their size, development of the interior is a gradual and long-term business. Moreover, under-employment and unemployment now exist in British Guiana; the living standards of workers there are already low; and plans now being put into effect are likely to do no more than provide employment for the rapidly increasing populations of both colonies.

The other fundamental problem—that of increasing productivity in existing activities and developing new sources of wealth—has been handled with vigour and with a measure of success. The dependence of the Caribbean colonies on imported foodstuffs has long been recognised as a serious economic weakness. In the plans drawn up since the war, particular emphasis has been placed on the increase of food crops for local consumption, as well as of export crops. Large sums have been set aside for agriculture, particularly schemes designed to help the small

¹ See Statistical Tables.

² Col. Office, *Report of the British Guiana and British Honduras Settlement Commission*, Cmd. 7533 (1948).

farmer. Work has been undertaken to regenerate soils, to introduce more scientific farming methods, and increase the resources of organisations specialising in agricultural credit. Marketing arrangements have been improved in a number of colonies and land settlement schemes introduced in Jamaica, Trinidad, British Honduras and British Guiana. Steps have been taken to increase the size of holdings too small to be economic. Nevertheless, the income of most of the colonies is derived chiefly from exports of agricultural products, mainly sugar and bananas; but also to a smaller extent, cocoa, coffee, citrus fruit, timber, cotton and other commodities. It is not surprising therefore, that there should be some concern about the position of these products in international markets, and a desire to increase and diversify production for export.

The vicissitudes of the West Indian sugar industry up to the beginning of the second World War have been previously referred to. In 1951, under the Commonwealth Sugar Agreement (which is to remain in force until 1962), the West Indies had been given a quota of 670,000 tons at an assured price to be negotiated annually, and a guaranteed market for 230,000 tons at the free market price plus imperial preference. Owing to the expansion of sugar-cane cultivation and the recovery of the European beet-sugar industry, world production had risen by that date to the point where it threatened the price structure of the free market, and the possibility of repeating the historic pattern of boom, crisis and depression led to the calling of a world sugar conference by the United Nations in 1953. The International Sugar Agreement which came into force on January 1st, 1954 gave the Commonwealth Sugar producers a quota of 2,300,000 tons, and the West Indies a quota of 900,000 tons—the quantities already written into the Commonwealth Sugar Agreement. In January, 1954 British Honduras and St Vincent joined the Agreement and were allotted quotas of 5,000 and 1,500 long tons respectively.

While the quota system gives the West Indian sugar industry a measure of protection, the decline in the price of "free" sugar is a bar to further expansion of the industry. Measures have been taken by both Jamaica and Trinidad to discourage production of quantities greatly in excess of their respective quotas.

The Jamaica Government, with the support of the United Kingdom Government, is endeavouring to build up to the pre-war level the export trade in bananas. At the same time, during and since the war considerable capital has been invested in citrus-growing and industries for the canning of citrus fruit have been established in Trinidad, Jamaica and British Honduras. In 1954 the future of the industry seemed to be threatened by a proposed agreement between the United Kingdom and the United States Governments, for the former to admit, under mutual aid arrangements, supplies of fresh and canned citrus from the United States. Delegations organised by the Regional Economic Committee (of which mention is made later) were sent to London and, as a result of their representations, the United Kingdom has agreed that no purchases of citrus would be made under any further programme of United States aid without previous consultation with the Colonial Governments concerned. A waiver under G.A.T.T. was sought and obtained in March, 1955, as a result of which it will be possible for the United Kingdom to increase preferences on such colonial products as citrus, bananas, tobacco and cigars, by increasing the rate of duty on those goods imported from non-Commonwealth countries. However, the United Kingdom has had to agree to hold discussions with the Governments of countries whose export trade may be affected by the operation of the waiver; and, in the event of disagreement, to submit the issue to arbitration.

INDUSTRIAL DEVELOPMENT

Although, as was pointed out by the Steel Mission,¹ industrial development in the Caribbean is not a post-war phenomenon, since the war particular importance has been attached to industrialisation as a means of increasing the colonies' resources and of providing employment. Measures have been passed by most of the governments of the region granting tax exemptions and relief from import duties on equipment for "new" industries. Governments have also played an important part in fostering industry by the setting up of organisations to examine schemes and provide credit and technical assistance. Training schemes have been started in an effort to remedy the shortage of foremen and skilled workers. Unfortunately, as far as the creation of employment opportunities was concerned, the Steel Mission's Report was pessimistic. It concluded that, while the 1952 level of manufacturing production would probably be doubled over the subsequent ten years—given stable political conditions and a favourable climate for investment—the labour force directly engaged in manufacture would only rise by about 25 per cent, and by a similar proportion in service industries such as public utilities, transport and retail distribution. This would be equivalent to the increase in population in a single year. Moreover, the disposal of the products of the various industries would be mainly limited to local markets which, because of the size of the population and its low purchasing power, would be small. It would therefore be necessary to overcome the tendency towards insularity and plan industrial development for the region as a whole.

THE GROWTH OF REGIONALISM

Despite the existence of similar geographical features and political institutions, and of social and economic problems common to the region, the West Indian Colonies up to 1939 were more closely linked culturally and economically with the United Kingdom and the United States than with each other. The partial severing of those links during the war years and developments since 1945 have tended to bring the individual territories closer to one another. Not unnaturally, perhaps—in view of the fact that some of the recently-won political liberties of individual colonies will be curtailed within a Federation—the co-ordinating of action in economic and social matters has presented fewer obstacles than co-ordination in the political sphere, and economic co-operation has preceded political federation.

A lead was given to the fostering of the idea of closer association by the setting up of the Development and Welfare Organisation. The establishment during the war of United States naval, military and air bases in a number of colonies played an important part in the birth of another regional body, the Anglo-American Caribbean Commission, which at first functioned mainly as a co-ordinating agency. In 1946 it was enlarged to allow of French and Dutch participation, and designated the Caribbean Commission. It works through two auxiliary bodies—the Caribbean Research Council, consisting of scientists, technical and professional men, most of them serving in the Caribbean area, which advises the Commission on research matters; and the West Indian Conference, a standing organisation set up to keep the Commission informed of the trend of developments are taking in the region. Sessions of the Conference, held every two years, provide regular means of consultation between delegates from the various territories

THE BRITISH COMMONWEALTH

on matters of common interest, and an opportunity for presenting to the Commission recommendations on such matters. The first Conference held in Barbados in 1944 dealt with such issues as increasing local food production, expansion of fisheries and industrial development; the sixth session, in Puerto Rico in 1955, with education and small-scale farming.

Another regional body is the Regional Economic Committee, set up in 1951, which has become a "rallying point for promoting, co-ordinating and servicing regional action". The Committee was responsible for starting an inter-island shipping service at the beginning of 1955, which will be subsidised by the United Kingdom Government for a period of three years, in the first instance; and for the establishment of a British Caribbean Air Transport Advisory Council in 1954. It has set up a small Standing Committee on Commerce and Industries, and during 1954 organised and sent delegations to London to put the West Indian Citrus Growers' case before the United Kingdom Government, and negotiate on the future of the banana industry.

Further examples of regional action were the adoption, in 1951, of a unified currency for Barbados, the Leeward and Windward Islands, Trinidad and British Guiana; and the acceptance of the principle of a customs union, following the publication in 1951 of the Report of the Customs Union Commission under the chairmanship of Mr. J. McLagan.¹

The idea of a West Indian Federation, already conceived before the war, received increasing attention after 1945. Demands for constitutional reform became linked with the idea of federation, and the emergence of a regional outlook was hastened by the establishment of the Caribbean Commission and the activities of the Development and Welfare Organisation.

The Conference held in Montego Bay in September, 1947, inaugurated the first practical approach to the issue of federation. Having accepted the principle of a federation in which each constituent unit would retain control over all matters not specifically assigned to the Federal Government, the Conference, which consisted of delegates from Barbados, British Honduras, British Guiana, Jamaica, Trinidad and the Leeward and Windward Islands, appointed a Standing Closer Association Committee, under the chairmanship of Sir Hubert Rance, to formulate proposals for a Federal Constitution. The Committee's Report was published in March, 1950.

In April, 1953 a Plan for a British Caribbean Federation, based on the recommendations of the Rance Committee, was drawn up in London by delegates of all the Caribbean colonies except British Guiana and British Honduras which, having decided against participation in the federal scheme, were represented only by observers.

The Plan provided for a federation of ten constituent units: Jamaica, Antigua, Dominica, St. Lucia, St. Vincent, Barbados, Grenada, Montserrat, Trinidad and Tobago and St. Christopher-Nevis-Anguilla. The Federal Legislature was to consist of a Governor-General, representing and appointed by the Queen, a Senate of 19 members and a House of Representatives of 45 members. The Senators (one for Montserrat and two for each of the remaining units) would be chosen by the Governor-General, while the members of the House of Representatives would be elected by universal adult suffrage. The principal instrument of federal policy would be a Council of State consisting of the Prime Minister, seven members nominated by that Minister from either House of the Legislature, three officials chosen by the Governor-General and three Senators appointed by the Governor-General-in-Council.

The Federal Government was to be given specific powers, which would be divided into two groups: exclusive and concurrent. The Federal Legislature alone would have power to make laws on subjects set out in the "Exclusive Legislative List", which would include defence, external affairs, immigration, exchange control, and the raising of loans for federal purposes. Both the Federal and the Unit Legislatures would be empowered to make laws on subjects in the "Concurrent Legislative List", which would include shipping and navigation, currency, banking, industrial development and trade unions. In the event of an inconsistency between a Federal and a Unit law, the Federal law would—to the extent of the inconsistency—automatically prevail. Powers that were not specifically assigned to the Federal Government would remain with the units. The Crown would possess overriding legislative power, however, in matters relating to defence, external affairs, financial stability and, under certain circumstances, the preservation of public order.

The judicial power of the Federation would be vested in a Supreme Court, which would have the original and appellate jurisdiction prescribed by the Constitution. Until alternative sources of revenue could be provided, the postal revenues from the date on which the Federation assumed responsibility for postal services, and a percentage, not exceeding 15 per cent, of the customs duties levied on imports into the territories would be allocated to the Federal Government. The Region would continue to share in such financial assistance towards development and welfare as the United Kingdom would make available in the future, and the British Government would also make special grants during the first ten years to cover the budget deficits of units which failed to pay their way.

In the course of 1954 the Plan was accepted by all the legislatures concerned. Reservations, however, were made on the question of immigration by Trinidad, and on the proposed site (Grenada) of the Federal capital. The Secretary of State for the Colonies, in a statement to Parliament in February, 1954 announced the measures he was taking to establish the Federation, which included the appointment of the Comptroller for Development and Welfare in the West Indies as Commissioner for the Preparation of the Federal Organisation, and the setting up of three commissions to work out the fiscal, civil service and judicial arrangements. In December, 1955, the Reports of the three Commissions were published.² The Report of the Fiscal Commissioner estimated recurrent expenditure during the first quinquennium at over £2 million a year. It concluded that the sources of revenue suggested under the London Plan of 1953 would be inadequate, and proposed that federal revenue should be obtained mainly from taxes under the direct control of the Federal Legislature. A conference held in London from February 7th to 23rd, 1956, attended by delegations from all the countries which had approved the Federation proposals and by observers from British Honduras and British Guiana, agreed that the London Plan should, with some modifications, form the basis of the Federal Constitution, to be drafted by the end of 1956. Federal elections are to be held as soon as practicable after January 1st, 1958.

At a conference held in Trinidad in March, 1955 to decide on the question of immigration, it was unanimously agreed that the Preamble to the Federal Constitution should state that there should be the greatest possible freedom of movement for persons and goods within the Federation. However, the control of the movement of persons between

units of the Federation should be placed on the "Concurrent Legislative List" with the provision that any unit legislation on this matter in force at the end of five years from the date of the setting up of Federal machinery should cease to have effect at the end of a further period of three months, unless meantime such unit legislation should have received the approval of both Houses of the Federal Legislature.

The question of the site of the Federal capital has not yet been finally settled.

British Guiana and British Honduras are still opposed to participation in the Federal Government. However,

in April, 1955 the interim Government of British Guiana passed a resolution in favour of British Guiana joining the Federation, and some relaxation of emergency measures was being considered, to make it possible for the state of public opinion towards federation to be ascertained.

As a result of the increased stability that may derive from federation, the West Indies hope to achieve the financial independence which would make Dominion status possible. In the more immediate future federation will provide an opportunity of dealing with common problems by a concerted effort and of achieving a greater measure of independence within the Commonwealth.

THE BRITISH COMMONWEALTH

FINANCE

Exchange Rates.—The unit of currency in Barbados, British Guiana, Trinidad and the Leeward and Windward Islands is the British West Indies dollar; in Jamaica, the £ sterling; and in British Honduras, the British Honduran dollar. Exchange rates are as follows:

B.W.I. \$1 = 4s. 2d.

£1 = B.W.I. \$4.80

B.H. \$1 = 5s.

£1 = B.H. \$4.0

For reciprocal arrangements regarding the currencies of the Eastern Caribbean Group and Jamaica, see p. 763.

THE BRITISH COMMONWEALTH

REGIONAL ORGANISATIONS

British Caribbean Air Transport Advisory Council: est. 1954 by the Governments of Barbados, British Guiana, British Honduras, Jamaica, the Leeward Islands, Trinidad and Tobago and the Windward Islands, which finance the organisation. The Council consists of 1 representative from each territory, and a representative of the United Kingdom as an observer. Its main functions are to promote the development of civil air communications in the British Caribbean area, and advise on such civil aviation matters as may be referred to it by the Governments of the member territories. A Standing Technical Committee of the Council, whose members are the Directors of Civil Aviation of each member Government, the Director of the British Caribbean Meteorological Service, the Resident Surveyor of the Air Registration Board and a representative of the United Kingdom as an observer, meets at least twice a year.

Board of Commissioners of Currency, British Caribbean (Eastern Group): Headquarters Treasury Chambers, Port-of-Spain, Trinidad; Commissioners: the Financial Secretaries of Barbados, British Guiana, Leeward Islands, Trinidad and Tobago and the Windward Islands

Caribbean Commission: Central Secretariat: Kent House, Port of Spain, Trinidad; Sec. Gen. E. F. H. DE VRIENDT. *See page 737.*

Colonial Development Corporation (West Indies) Ltd.: 134 Hope Road, St. Andrew, Jamaica; Regional Controller (Caribbean) A. C. GRIEVE.

Development and Welfare Organisation in the West Indies and British Section, Caribbean Commission. Headquarters. Hastings House, St. Michael 18, Barbados;

Comptroller Sir STEPHEN LUKE, K.C.M.G.; Administrative Secretary C. A. GROSSMITH, C.M.G., O.B.E. *See page 736.*

Regional Economic Committee for the West Indies, British Guiana and British Honduras: Secretariat; Hastings House, St. Michael 18, Barbados, est. 1951; the Committee consists of 1 member appointed by each participating Government. It advises Governments on all economic matters of regional significance, and is a means for the exchange of information between them, Executive Sec. J. S. MORDECAI, C.M.G. *See page 738.*

TRADE ORGANISATIONS

British West Indies Citrus Growers' Association: Kingston, Jamaica; Chair G. G. R. SHARP, O.B.E.

British West Indies Sugar Association (Inc.): 146 Harbour Street, Kingston, Jamaica; Chair R. L. M. KIRKWOOD.

Incorporated Chambers of Commerce of the British Caribbean: P.O. Box 499, Port-of-Spain, Trinidad; Pres. ARTHUR H. HALE; Sec. W. C. RENNIE.

West Indian Limes Association (Inc.): Department of Agriculture, St. Clair, Port-of-Spain, Trinidad.

West Indian Sea Island Cotton Association (Inc.): 54 Long Street, St. John's, Antigua.

PRESS

Caribbean Press Association: Kent House, Port-of-Spain, Trinidad; f. 1947; Pres. S. G. FLETCHER.

RELIGION

The following Christian denominations are represented in the West Indies: the Anglican Communion, Church of Scotland, Methodist Church, Congregational Union, Baptist Church, Moravian Church, Presbyterian Church in Canada, Presbyterian Church in Trinidad (Canadian Mission), Presbyterian Church of Jamaica, Lutheran Church, Roman Catholic Church, Salvation Army, Seventh-Day Adventists, Society of Friends.

In addition, there are Jewish communities and synagogues in most colonies, and in British Guiana and Trinidad large communities of Hindus and Moslems.

THE ANGLICAN COMMUNION

The Church of the Province of the West Indies

Bishop of Guiana and Archbishop of the West Indies and Metropolitan: Most Rev. A. J. KNIGHT, Georgetown.

ROMAN CATHOLIC CHURCH

Archbishop of Port-of-Spain: Most Rev. P. F. RYAN, Port-of-Spain.

BARBADOS

GENERAL SURVEY

The island of Barbados ($13^{\circ} 4' \text{ N. lat.}, 59^{\circ} 37' \text{ W. long.}$) has an area of 166 sq. miles and measures about 21 by 11 miles. Through the centre of the island runs a curved ridge rising to heights of over 1,000 ft. To the south of this ridge lies a broad depression, bounded again to the south by a second (lower) ridge which runs east and west and finally drops to sea-level in a series of slopes and terraces. The core of the island is made up of a series of grits, sands and clays upon which lie Miocene and recent coral limestones. There are no volcanic rocks present: this is because the island is a detached portion of the South American continent which was eroded and submerged, with recent limestones and corals laid down during temporary submergence. The island is as a result mostly very flat and bounded by barrier (coral) reefs.

Climate. The climate is surprisingly temperate, the temperature range being only about 4°F. ($76^{\circ}\text{--}80^{\circ}$). At Bridgetown (180 feet) there is a maximum temperature of only 80°F. , with a total rainfall of about 45 inches a year.

Population. In 1953 the population of the island was estimated at 223,000 persons, 7 per cent of whom are white. The capital and chief port is Bridgetown, with a population of 13,700. Speightstown (1,200 inhabitants) is also of importance.

Land Use and Agriculture. Of a total area of 106,500 acres a high proportion—94,346 acres—consists of arable land and pastures. Sugar plantations occupy some 77,000 acres of the agricultural land and small holdings the remainder.

The tendency to monoculture apparent in the region as a whole is more pronounced in Barbados, where cane cultivation and the manufacture of sugar and rum are the only major industries. Both soil and climate are admirably suited to sugar cane which is grown efficiently on smallholdings as well as on estates. Cane acreage harvested by estates in 1953 was 35,982, and by smallholdings 10,000. Total production of sugar in the same year was 151,011.3 tons; of fancy molasses (a speciality of Barbados) 9,740.3 tons. Both production and export of sugar and rum have increased appreciably since the war, due partly to a series of good crops years, partly to a profitable and more assured market for sugar. In 1953 exports were sugar 138,151 tons; rum 660,728 wine gallons, representing a considerable increase over the 1938 export figure of 80,912 tons of sugar and 99,544 wine gallons of rum.

A small amount of cotton is produced, and green and root vegetables, maize, pulses and citrus fruit are produced on smallholdings.

A central Livestock Station and six District Agricultural Stations, built from funds provided under the Colonial Development and Welfare Act of 1945, are doing valuable work in developing dairy farming and improving agricultural methods on small farms. The Government is also trying to expand the fishing industry. A Loan Scheme is in operation which provides loans for the building, repair and maintenance of fishing craft.

Manufacturing. There is little manufacturing industry apart from the manufacture of sugar and rum. Small factories make biscuits, confectionery, margarine, soap,

wax from sugar residue and shirts. There are also servicing and engineering shops for the repair and maintenance of vehicles and machinery, including sugar machinery.

Labour. The problems of unemployment and under-employment are more urgent in this island where the pressure of population on the land is extremely heavy. Population density is now over 1,340 to the sq. mile. As in Jamaica and other British West Indian islands, peasant holdings are often too small to support their owners—it is estimated that there are over 30,000 holdings of less than ten acres, and, apart from subsistence farming and work on sugar estates, there are few industries or activities to absorb surplus labour. The sugar industry is the largest employer, employing about 24,000 persons on estates and in sugar factories during the season, of whom some 10,000 are unemployed during the out-of-crop period. Approximately 1,000 workers a year are allowed to enter the United States for employment on short-term contracts of six months in the first instance. No large-scale emigration to the countries of the Western Hemisphere is possible, since most of these have passed legislation to restrict or ban the entry of immigrants seeking work. While no reliable figures of unemployment are available, an estimate of the distribution of workers in the main occupations in 1953 gave a total of 27,500 males and 29,000 females employed (of whom 14,000 were engaged in domestic and other personal services).

Trade and Finance. The visible balance of trade is always adverse. Invisible earnings in the form of interest received on overseas capital investments, remittances of workers abroad and the tourist industry cover only a part of the deficit. In 1952 and 1953, 40.5 per cent and 40.8 per cent respectively of imports came from the United Kingdom; 15.1 per cent and 16.8 per cent from Canada; and 8.3 per cent and 7.2 per cent from the United States. Destinations of exports were to the United Kingdom 49.4 per cent in 1952, and 73.5 per cent in 1953, Canada 36.0 per cent and 10.6 per cent; and the United States, 0.6 per cent and 2.3 per cent in the two years mentioned.

In 1948–49 and 1949–50 there were budget deficits of \$533,560 and \$736,560. Since 1950–51 revenue has exceeded expenditure in each year. The Tables in the Statistical Section show actual revenue and expenditure over a number of years, including C.D. and W. grants and expenditure. General Revenue Balance at April 1st, 1954 was \$5,376,354.

The Public Debt at December 31st, 1953 was \$3,405,728. The Sinking Funds amounted to \$1,630,462 at the same date.

Development. In 1952 the Government introduced a Five Year Plan of Development and Taxation which was estimated to cost \$16,500,000. Of this sum \$6,000,000 were to be raised from Loan funds, and the balance from available funds, including Colonial Development and Welfare grants. Development projects have included the development and distribution of water resources, the encouragement of food production, agricultural schemes, and the tourist industry, the establishment of a Development Board for secondary industries, housing loans and the improvement of the social services.

THE BRITISH COMMONWEALTH

Transport. Road communications are adequate, and the condition of the roads good. In 1953 623 miles of road, of which 331 miles were main roads, were maintained by the Department of Highways and Transport. In addition, there are local roads maintained by the parishes through which they run. There are no railways.

Bridgetown is the main port. The airfield is located at Seawell, about 12 miles from Bridgetown.

THE CONSTITUTION

Representative institutions in Barbados date from the Royal Charter granted by Charles I in 1627. The Legislature consists of a Legislative Council whose members are nominated, and an elected House of Assembly. Membership of the former was increased in 1948 from 10 to a maximum of 15. At present there are a President and 13 members, including the Chief Secretary and the Attorney-General.

The House of Assembly consists of 24 members (two members for each parish and two for the City of Bridgetown). In 1943 voting qualifications were reduced and women were given the vote; and in 1950 universal adult suffrage was introduced.

Executive power is vested in the Governor, the Executive Council and the Executive Committee. The Executive Council, presided over by the Governor, consists of the Chief Secretary, the Attorney-General (*ex-officio* members), the Premier and three other members. Its duties are now limited to advising the Governor with regard to the exercise of the Royal Prerogative of mercy.

The Executive Committee has become the principal instrument of policy. A step towards ministerial responsibility was taken in 1946 when four members of the House of Assembly whose names were submitted by the Leader of the Majority in the House for membership of the Committee, were made responsible for general policy relating to particular departments, and for the affairs of those departments in the Committee and in the House of Assembly. On February 1st, 1954 the Premier was appointed to the Executive Committee and the four House of Assembly members of the Committee became Ministers with responsibility for most of the departments of government. The Executive Committee's members now consist of the members of the Executive Council, one member of the Legislative Council nominated by the Governor, and the four House of Assembly members, called Ministers. It introduces all money votes, prepares the estimates and initiates all government measures.

THE GOVERNMENT

Governor and Commander-in-Chief: Sir ROBERT ARUNDELL, K.C.M.G., O.B.E.

EXECUTIVE COUNCIL

Chairman: The GOVERNOR.

Ex-Officio Members: The CHIEF SECRETARY, The ATTORNEY-GENERAL

Other Members: Sir JOHN SAINT, C.M.G., O.B.E., Sir JOHN CHANDLER, Sir ARCHIBALD CUKE, C.B.E., G. H. ADAMS, C.M.G., Q.C. (Premier).

EXECUTIVE COMMITTEE

The members of the Executive Council; Sir ARCHIBALD CUKE, C.B.E., M.L.C., Dr. A. S. CATO, and the following Ministers:

Premier: G. H. ADAMS, C.M.G., Q.C.

Social Services: H. G. H. CUMMINS, C.B.E.

Communications, Works and Housing: M. E. COX.

Trade, Industry and Labour: R. G. MAPP.

Agriculture, Lands and Fisheries: C. E. TALMA.

LEGISLATIVE COUNCIL

President: Sir ARCHIBALD CUKE, C.B.E.

Ex-Officio Members: The CHIEF SECRETARY, The ATTORNEY-GENERAL and 12 nominated members, including the President.

HOUSE OF ASSEMBLY

Speaker: K. N. R. HUSBANDS.

CIVIL ESTABLISHMENT

Chief Secretary: R. N. TURNER, C.M.G.

Financial Secretary and Commissioner of Currency: E. S. S. BURROWES.

Accountant-General: H. S. JERVOIS.

Auditor-General: E. F. L. MORRIS.

Attorney-General: (Vacant).

Solicitor-General: F. E. FIELD.

Postmaster-General: R. A. CLARKE.

Directors of Departments: C. C. SKEETE, O.B.E. (Agriculture), P. D. LOPEZ (Civil Aviation), Major C. G. REED (Education), N. BARRON (Highways and Transport), J. P. O'MAHONY (Medical Services).

POLITICAL PARTIES

The **Barbados Labour Party** under the leadership of Mr. Grantly Adams has a majority in the House of Assembly. Other parties represented in the House are the **Electors' Association**, the **Congress Party** and the **Democratic Labour Party**.

The life of the House of Assembly, originally three years, was extended to five, and elections are therefore due to be held in 1956.

THE LEGAL SYSTEM

The Chief Justice presides over the Superior Courts of the island, i.e. the Courts of Chancery, Common Pleas, Ordinary, Divorce, and Matrimonial Causes, Grand Sessions, the Colonial Court of Vice-Admiralty and the Courts of Escheat and Error which hears appeals from the Assistant Court of Appeal. Appeals lie from the Superior Courts (except the Court of Grand Sessions) to the West Indian Court of Appeal. There is at present a temporary Puisne Judge who exercises the same jurisdiction as the Chief Justice.

The Court of Grand Sessions sits three times a year. Before a person is brought before the Court for trial on a criminal charge a preliminary investigation is conducted by a Magistrate.

In Bridgetown, Magistrates preside over District Police Courts dealing with criminal cases, while there is a Petty Debt Court Judge to preside over civil cases. Outside Bridgetown, Magistrates deal with both types of cases.

Appeal lies from the District Police Courts to the Assistant Court of Appeal in its appellate jurisdiction. This Court has original jurisdiction in cases of debt where the value of the claim exceeds \$96 but does not exceed \$240, and in all pleas of personal action where the claim is over \$48 but does not exceed \$240.

THE BRITISH WEST INDIES

Chief Justice: Hon. Sir ALLAN COLLYMORE, Q.C.
Acting Puisne Judge: Hon. J. W. B. CHENERY.
Judges of the Assistant Court of Appeal: Hons. G. L. TAYLOR, H. A. VAUGHAN (*Acting*).
Judge of the Bridgetown Petty Debt Court: A. J. N. HANSCHHELL (*Acting*).

THE PRESS

Barbados Advocate: 34 Broad Street, Bridgetown; f. 1895; daily; circ. (weekdays) 10,000; also *Evening Advocate*; Managing Dir. Hon. V. C. GALE; London Rep. JOSHUA B. POWERS Ltd., 14 Cockspur Street, S.W.1.
Barbados Observer: Lucas Street, Bridgetown; weekly; Editor W. A. CRAWFORD.
Barbados Recorder: Victoria Street and Middle Street, Bridgetown; thrice weekly; Editor F. J. COLE, London Office 8 Red Lion Square, W.C.1.
Beacon, The: 143 Roebuck Street, Bridgetown; f. 1946; organ of Barbados Labour Party and Workers' Union; weekly; circ. 3,500; Editor: E. DE LISLE YEARWOOD.
Official Gazette: Bridgetown; twice weekly.

BROADCASTING

There is no local broadcasting service, but **Barbados Rediffusion Ltd.** (which took over Broadcast Relay Services Ltd. in 1951), gives sponsored commercial broadcasts and selected B.B.C. Overseas transmissions. Events covered by the British Broadcasting Corporation, such as race meetings and cricket fixtures are transmitted by arrangement between Barbados Rediffusion Service Ltd. and Cable and Wireless (West Indies) Ltd., on frequencies sanctioned by the Barbados Government.

FINANCE

BANKING

Barbados Co-operative Bank Ltd.: Bridgetown; privately owned bank incorporated in 1938 with a registered capital of \$240,000.
Barclays Bank D.C.O.: Head Office: 54 Lombard Street, London, E.C.3; Branch in Bridgetown; Manager: R. B. MACKENZIE; Agency in Speightstown.
Canadian Bank of Commerce: Head Office: 25 King Street West, Toronto 1; Branch in Bridgetown, Manager J. R. RODGER.
Peasants' Loan Bank: Bridgetown; est. 1937 with capital advanced by the Barbados Government of \$480,000, to make loans to peasant farmers.
Royal Bank of Canada: Head Office: 360 St. James Street West, Montreal; Branches in Bridgetown and Hastings; Manager (Bridgetown) F. H. B. INCE.
Sugar Industry Agricultural Bank: Bridgetown; f. 1907 with a grant of \$384,000 from the U.K. Treasury to assist the sugar industry. By an Act of 1943 the Bank was authorised to make loans to sugar factories (previously loans had been made to sugar plantations and for cane cultivation only).

INSURANCE

The leading British and a number of U.S. and Canadian companies have agents in the territory. Local insurance companies include the following:

BARBADOS

Barbados Fire Insurance Co.: Bridgetown.
Barbados Mutual Life Assurance Society: Bridgetown; f. 1840; Sec. A. C. BAILEY.
West Indies Life Insurance Co. Ltd.: Bridgetown; Managing Dir. MCD. SYMMONDS.

TRADE AND INDUSTRY

ASSOCIATIONS

Barbados Agricultural Society: Bridgetown; Pres. F. E. C. BETHELL.
Barbados Chamber of Commerce: Bovell and Skeete Building, Lucas Street, Bridgetown, f. 1827; Pres. T. BOWRING; Office Sec. ARTHUR M. JONES; publ. *The Barbados Commercial Journal* (monthly).
Barbados Sugar Producers' Association (Inc.): Bridgetown. Other organisations serving the sugar industry, and which are under the chairmanship of the Director of Agriculture, are
Sugar Industry Capital Rehabilitation Reserve Board.
Sugar Industry Price Stabilisation Reserve Board.
Sugar Production and Export Control Board.

EMPLOYERS' ORGANISATIONS

At the end of 1953 there were 9 registered employers' and workers' organisations, of which 6 were active. The employers' organisations were:

Bus Owners' Association, The: its nine members represented most of the smaller bus concessionaires.
Shipping and Mercantile Association, The: composed of 30 local steamship agents and general merchants.
Sugar Producers' Federation of Barbados, The: composed of owners of sugar factories and sugar plantations which together controlled about 70 per cent of the industry.

TRADE UNIONS

The main employees' organisations are.

Association of Assistant Teachers in Secondary Schools: with a membership of 50.
Barbados Workers' Union: Paid-up membership at the end of 1953 was 7,859. The Union's members are agricultural and factory workers in the sugar industry and port workers, although some other occupations are represented.
General Workers' Union: This Union, registered in 1953, has restricted its membership to casual Government employees, mainly artisans and labourers.

TRANSPORT

For other details see SURVEY.

Shipping. The following are the chief shipping lines calling at Bridgetown. Royal Netherlands Steamship Co., Lamport & Holt Ltd., Saguenay Terminals Limited, Alcoa Steamship Co., the Harrison Line and the Canadian National Steamship Co.

Air Lines. The following air lines operate services to Bridgetown, or maintain offices there: British Guiana Airways Ltd., British West Indian Airways Ltd., British Overseas Airways Corporation, Línea Aeropostal Venezolana and Trans-Canada Air Lines.

THE BRITISH COMMONWEALTH

HEALTH

The Central Public Health Authority consists of a General Board of Health and the Director of Medical Services, who is a member of the Board. Each of the 11 parishes has a Board of Commissioners of Health appointed on a parochial basis from the Vestry.

The Barbados General Hospital has accommodation for 332 non-paying and 44 paying patients. The Government also maintains a mental hospital and a leper hospital. Central Government institutions are equipped to deal with all general, medical and surgical cases, while local government institutions deal with minor illness and the care of the aged and infirm.

Preventive medicine is based on the Health Centre system. One such centre has been already established at Speightstown, and there are plans to establish another centre and also to increase the accommodation at the General Hospital.

EDUCATION

The central administration of education is vested in the Director of Education, assisted by the established staff of the Education Department. The Education Board, under the chairmanship of the Director of Education and consisting of 5 members appointed by the Governor, is an advisory body.

There were in 1953, 124 primary schools maintained by the Government and attended by 32,700 pupils. Two modern secondary schools were established in 1952 for children over the age of 11 years. There were also 10 government-aided secondary schools with an attendance of 3,081 pupils, and a number of independent secondary schools. Although there is no school medical service, some free medical, optical and dental treatment is available for children in primary schools.

Steps are being taken to increase school accommodation, which is at present inadequate, and ultimately to introduce compulsory education for all children between the ages of 5 and 14.

A teachers' training college, opened in 1948, provides residential training for 16 men and the same number of women each year.

Vocational Education is provided by a number of agencies which are either controlled, or aided by Government departments. Some training is available under a

scheme by which the Board of Industrial Training awards annual bursaries to 48 young persons, who are then apprenticed for a five-year period to master workmen. The Barbados Technical Institute opened in 1954, was set up to give more advanced technical and vocational training.

Adult and Higher Education. The Barbados Evening Institutes organise courses for adults in academic, commercial and technical subjects in Bridgetown and rural centres. Courses and single lectures for adults in Bridgetown and lectures and discussion groups in rural centres are also organised by a Resident Tutor appointed by the Extra-Mural Department of the University College of the West Indies (Jamaica).

LEARNED SOCIETIES

Barbados Museum and Historical Society: Bridgetown; est. 1933; the museum possesses valuable collections of books, pictures, models, specimens of birds and fishes, Arawak pottery and Carib stone implements. There is also a Children's Museum.

British Council, The: "Wakefield", Bridgetown, library of reference books, plays, films, film-strips, photographs, tape-recordings, records, reproduction of arts works, etc., for loan to institutions and individuals, Rep. W. LYNNDON CLOUGH, M.A., F.R.G.S.

COLLEGE

CODRINGTON COLLEGE

Founded 1710

The College was founded under the will of General Sir Christopher Codrington to train men for the Ministry of the Church of England. It was affiliated to Durham University in 1875, when Classical studies were included in the curriculum. In 1946 the College was recognised as the Provincial Theological College of the West Indies.

In 1955 the Community of the Resurrection assumed responsibility for it.

Teaching staff 4, students 32.

Principal: Rev. Fr. JONATHAN GRAHAM, C.R., M.A.

Vice-Principal and Treasurer: Rev. ANSELM GENDERS, C.R., M.A.

BRITISH GUIANA

GENERAL SURVEY

EXTENDING approximately from the Equator to 8° N. lat. and from 56–62° W. long., the territory of British Guiana covers some 83,000 sq. miles. With the two eastern neighbours, Dutch Guiana (Surinam) and French Guiana, which much resemble each other in geography, the three Guiana territories are the only foreign possessions on the South American mainland. Bounded to the north-west by Venezuela and to the south-west and south by Brazil, the frontiers of British Guiana correspond for the most part with watersheds of rivers: on the west, the boundary follows the limit of the Venezuelan Orinoco system, and on the south and west the divide between the smaller Guianan (north-flowing) rivers, and the Amazon system.

The territory is in the main a low plateau, between 1,000–2,000 ft. in altitude, and composed of the ancient crystalline basement rocks—granites, schists, etc.—which occur throughout most of eastern South America and form the primitive nucleus of the continent. To the north, erosion has reduced the surface to a low-lying coastal plain, upon which occur deposits of recent rocks disposed in shallow, horizontal layers, whilst along the coast itself considerable quantities of silt and coarser sands are being rapidly built up by deposition from the heavily charged river waters, and from the effects of sea currents, which carry the silt of the Amazon river north-westwards towards the Guiana coast. Consequently the coastal zone, some 500 miles long, has a line of shallow lagoons and partly dried-out basins, mangrove swamps, river bars and coastal sandspits.

In the extreme south, a thick layer of sandstone is superimposed upon the crystalline plateau surface, producing a surface topography of isolated, flat-topped, steep-sided hills, sometimes of considerable height—the largest being Mt. Roraima (8,620 ft.) which is the meeting-place of the Venezuelan-Brazilian-Guiana frontier. On the geological map, British Guiana would thus give the impression of a sandwich—a central zone of ancient rocks, overlain to the south by sandstones (cretaceous in age—i.e. similar to those of the Weald); and to the north by recent alluvial deposits. The marked differences in resistance to erosion offered by the rock sequences is responsible for a number of rapids and irregularities in river level. Where the rivers flow from resistant to softer rock, falls are often produced—the most imposing being the Kaieteur falls on the Potaro tributary of the Essequibo river (741 ft.). Frequency of rapids and falls is a considerable disadvantage to travel, which in the interior is almost exclusively confined to the rivers, owing to the impenetrable tropical forest.

As an area of, in the main, low-lying land, and situated almost on the Equator, temperatures are uniformly high, ranging from 75–85° F. throughout the year, with only slight monthly variation. Inland the mean is 82° F. and on the coast 80° F. Altitude produces some slight modification in the far south and west; and on the coast, there is a cooling effect from the strong sea-breezes. Open to the prevailing north-easterly winds, British Guiana receives an ample rainfall—100 in. or more annually on the coast, and a slightly smaller total to the south. Though no months are entirely without rain, equinoctial months (March–April and September–October) are the wettest

seasons: and between, there are two relatively dry periods—a “little summer” occurring in January and February (during which time a good deal of crop planting usually takes place) and May–August, which is the principal dry season.

With these climatic conditions of damp heat, the lowlands are mainly covered in equatorial forest—a dense tangle of tall palms, hardwood trees, lianas, and parasites, with a thick carpet of rotting vegetation at ground level. Near the coast, mangrove swamp is common, except where some of the alluvial basins have been artificially drained to make plantations. In the south, where the plateau is higher and rainfall smaller in amount, the forest gives place to savanna-tropical grassland, with varied species of grasses, some tall, some short, and scattered clumps of trees. Generally speaking, however, dense forest covers over three-quarters of the country, and many parts are totally unexplored. Including mangrove growths, some 85 per cent (or 70,000 sq. miles) of British Guiana is forested.

The chief occupation in British Guiana is plantation agriculture. The heavy alluvial soils of the northern coastlands are very productive if adequately drained, and the earliest European settlers (from Holland) constructed elaborate “polders” with high-level drainage canals, reminiscent of coastal Holland.

W.B.F.

POPULATION AND EMPLOYMENT

The Colony is divided into three counties. Demerara, Essequibo and Berbice. Both Georgetown the capital (population 87,279), and New Amsterdam (population approximately 13,000) lie on the coast. The estimate of population at Dec. 31st, 1954 (excluding Amerindians) was 460,000, distributed among the following racial groups. East Indians 221,382; Persons of African descent 169,785; Persons of Mixed descent 52,656; Portuguese 8,577; Europeans other than Portuguese 4,165; Chinese 3,435.

There are no complete year-to-year statistics of employment. The following figures show numbers employed in certain industries in the course of 1954; *Sugar*: approximately 22,054; employment varies with the time of the year, *Factories* 5,845, *Rice Mills*, employment is seasonal. It varied from 509 to 1,003 in the course of the year; *Bauxite* 2,596 at the end of the year, *Timber*: according to the 1946 Census 4,157 persons were engaged in the extraction of timber. The lowest number employed in sawmills in any one month of 1954 was 1,150; *Government Services*. 4,896.

AGRICULTURE

British Guiana shares development problems attending the expansion into an unknown and inhospitable backland with some of the mainland Latin American countries. As is still the case with Brazil and Venezuela, the large majority of its population is hemmed in along the coast, while vast areas of the interior remain virtually unexplored. Of its 83,000 square miles of territory only 0.5 per cent of the total (or 7.4 per cent of the coastal plain), in which approximately 94 per cent of the population lives, is under cultivation. This population is further concentrated in a

THE BRITISH COMMONWEALTH

particular area of the coast, between the Corentyne and Essequibo rivers, in the east of the Colony.

The coastal region is deeply divided by rivers, the wide estuaries of which make communication between one section of the coast and another difficult. The level of the land is below high tide level, and, in order to keep back the sea, extensive land reclamation and drainage systems are necessary.

Agriculture is the chief occupation, and the population is mainly rural, although underemployment in the countryside has led to a drift in recent years to the towns. In 1952 the working population, estimated at 160,700, was distributed as follows: 71,500 in agriculture, 4,600 in mining; 25,300 in manufacturing; 13,600 in trade and finance; and 45,700 in construction, transport, government services and other occupations.¹ The main short-term problem is to provide sufficient farming land in the coastal zone for a rapidly increasing population, the longer-term problem is concerned with the gradual penetration into the interior—a task which must be preceded by survey work, the building of roads and large-scale forest clearance.

The two main crops grown on the coast are sugar and rice: the former on plantations; the latter chiefly on the smallholdings of the East Indian community. The country's economy is heavily dependent on sugar. Seventeen sugar estates covering an area of approximately 86,600 acres, produce 98 per cent of the Colony's cane output, and sugar provides some 50 per cent of the total value of exports. However, while sugar production is static, that of rice is expanding. The Colony exported in 1954 36,609 long tons of rice out of a total of 58,004 long tons delivered to the Rice Marketing Board.² Its markets are mainly the Eastern Caribbean area, but Jamaica has arranged for the purchase of British Guiana rice in 1955 and 1956. The Rice Marketing Board, set up in 1922, is the sole authority for the sale of rice in the Colony and abroad. About 137,000 acres were under rice cultivation in 1954.

Subsistence crops, which include coconuts, ground provisions, fruit, cocoa, coffee and tobacco are also grown. The exploitation of timber and the raising of livestock are carried on in the interior. Estimates of livestock in 1953 were: 170,000 head of cattle, 40,600 sheep, 9,600 goats and 21,700 pigs.

Three land reclamation schemes are in hand which, it is estimated, will add about 67,000 acres to the cultivated area in the coastal zone, and provide land for the settlement of 3,000 new farmers and for enlarging uneconomical holdings of less than ten acres. One of these schemes, the Mahaicony/Abary Rice Development Scheme, is operated by the British Guiana Rice Development Company, a government-sponsored organisation, largely financed by the Colonial Development Corporation. This Company also operates a number of large rice mills. Mechanised cultivation of rice, introduced in this region during the war when supplies from Asia were cut off, has proved a success. Further schemes have been put forward for the control of drainage and irrigation over considerable areas of the coast between the main rivers. If carried out, they will eventually make available approximately one million acres of fertile land for intensive cultivation, particularly of rice. In the meantime, a soil survey of the coastal regions is being carried out by the University of Maryland, with funds advanced by the Foreign Operations Administration of the United States.

The longer-term task of exploiting the mineral and agricultural wealth of the interior is still only in the initial

stages. While the International Bank Mission, which visited the country in 1953, agreed that work would have to be concentrated on the coastal strip, it nevertheless recommended the extension of rice growing and mixed farming in the coastal backlands and the swamps along the river banks; and the extension and improvement of the livestock industry in the interior of Berbice County, and in the Rupununi Savannas, far to the south-west. Nevertheless, a beginning is being made on the tremendous task of developing the country's untapped resources. As a preliminary measure the Government is carrying out surveys of the interior to prepare the way for major agricultural and mineral development.

FORESTS

More than four-fifths of the total land area is covered in forests, which produce a number of varieties of hard timbers. Logging and milling are carried on by some nine large companies, including British Guiana Timbers Ltd. This Company, which is financed by the Colonial Development Corporation, has acquired concessions for the large-scale development of timber in the area known as the Bartica Triangle, on the Essequibo estuary. There are also a number of small logging operators. The industry has suffered as a result of the fragmentation of the accessible forest into a very large number of small concessions, but legislation passed in 1953 is designed to bring the forests of the country more effectively under the control of the Forest Department, to stop fragmentation, and introduce more orderly exploitation of timber stands. The most valuable wood exported is greenheart, used mainly in the shipbuilding industry. In spite of its vast timber resources, British Guiana imports white pine, and one of the Mission's recommendations was that local supplies of soft hardwoods should be used in the building, furniture and other local industries.

MINING

The chief minerals at present being exploited are bauxite, gold and diamonds. British Guiana is the second-largest producer of bauxite in the world, producing about one-fifth of the world's output. The bauxite area is believed to extend from Kwakwani on the Berbice, north-westwards to the mouth of the Essequibo River. Three companies are at present in operation, and the centre of the industry is Mackenzie. The mineral is exported in the form of dried ore to Canada, and calcined ore to the United States and Europe. In 1954 exports amounted to 2,126,000 tons, valued at \$23.2 million. Gold and diamonds are recovered by dredging operations in the network of rivers extending west of the Essequibo, and as far south as the Kaieteurian plateau. About 85 per cent of the gold is produced by British Guiana Consolidated Goldfields Ltd., in which the Colonial Development Corporation has an interest. Diamonds are recovered mostly by private operators. The mining of columbite is being started. The deposits, which are located over a wide area, are extensive.

Recent surveys have shown the presence of a number of other minerals, including manganese and iron ore, chromium and titanium. Silica sand and kaolin occur in the white sand areas adjoining the coastal plain. Deposits of monazite (a radio-active mineral containing thorium and, sometimes, uranium) have been discovered in the Rupununi District. Lateritic iron ore, estimated at some 920 million tons, is found in the Iron and Wamara Mountains between the Berbice and the Demerara. The grade of ore discovered is still too low for commercial exploitation. In 1955 the Government leased an area of some sixty

square miles in the North-West District to a company which is to engage in the mining of manganese and associated mineral deposits.¹ Manganese deposits in British Guiana are believed to be among the largest in the world.

MANUFACTURING

The main industries are sugar manufacture, saw-milling and rice-milling. The other factories in operation produce the light consumer goods—cigarettes, beer, soft drinks, fats, edible oils and clothing—which are currently manufactured in other colonies of the Region.

DEVELOPMENT

A Ten-Year Development Programme was launched in 1946 which, in addition to substantial allocations for education, health and social welfare, provided for drainage and irrigation works, the development of the interior and the development of agriculture and communications. Grants received under the Colonial Development and Welfare Acts of 1940 and 1945 amounted, at December 31st, 1953, to approximately £4.7 million. In addition other sums were received from the same source for specific projects. The I.B.R.D. Mission, while approving the main trend of development, considered that greater emphasis should be placed on economic expansion. It recommended an investment of £14 million over the five years 1954–58, about 70 per cent of which would be spent on agriculture, transport and communications, and the remainder on forestry, industrial projects, electric power, housing and public works. In 1954 the British Guiana Government announced draft proposals for the first two years of a Five-Year Plan, based on, but accelerating the Mission's recommendations. The two-year programme will cost approximately £9.2 million (\$44 million), of which over £3 million will be spent on transport, communications and public works; over £2.5 million on agriculture, forestry, drainage and irrigation schemes, £2.5 million for social development, and £1 million for agricultural and industrial credits to be administered by the recently established British Guiana Credit Corporation. As a first step the United Kingdom Government agreed to make available a further grant from C.D. and W. funds of £3,125,000, and provide facilities for loans to be raised as required in London up to some £3,417,000.²

The remainder of the sum was to be found by the British Guiana Government from unspent loan balances and general revenue balance. Greater emphasis is now being placed on expansion of smallholding cultivation, as opposed to plantation development. An Economic Council has been set up to supervise the various schemes, and it was proposed also to appoint regional committees with advisory and executive powers.

COMMUNICATIONS

There are two short railway lines, one running east from Georgetown for a distance of 60½ miles, to Rosignol on the west bank of the Berbice River, opposite New Amsterdam, and another 18½ miles long, from Vreed-en-Hoop on the Demerara River opposite Georgetown, to Parika on the east bank of the Essequibo.

There are approximately 260 miles of main roads in the coastal area, and some 58 miles of branch roads. Road mileage to points in the interior is approximately 244. More than 400 miles of trails are also maintained in the

Rupununi Savannas, some of which have been surfaced and are open to traffic all the year.

Atkinson Field on the Demerara is the only international airport. There is a landing pool at Georgetown, and a number of landing grounds in the interior, and landing pools on the rivers serve to maintain contact with settlements far in the interior.

The main ports are Georgetown, New Amsterdam and Springlands (on the Corentyne). River transport is important. The three main rivers—the Essequibo, Demerara and Berbice—are navigable by vessels of moderate draught for 35, 60 and 100 miles respectively. Although navigation on most of the rivers is interrupted frequently by rapids, there are long stretches in the upper rivers which can be navigated by launches. Ferry services are maintained across the estuaries of the main rivers.

THE CONSTITUTION

Following the recommendations of a constitutional commission in 1928 a Legislative Council was created which with the Governor as President, had ten official and 19 unofficial members (of whom 14 were elected and five nominated by the Governor). The Legislative Council thus had an unofficial, but not an elected majority. The Executive Council was increased, and consisted of the Governor, six official members and five nominated members of whom two were elected members of the Legislative Council.

Changes introduced in 1943 gave unofficial members in the Executive, and elected members in the Legislative Councils a majority, but responsibility for deciding and carrying out policy still rested with appointed officials. In 1945 the franchise qualifications were reduced. On the basis of the recommendations of a constitutional commission appointed in 1950 a new Constitution was drafted providing for a bi-cameral legislature with a lower chamber, the House of Assembly, which was to consist of three *ex-officio* members, 24 members elected by universal adult suffrage and a Speaker appointed from outside the House, and a State Council, with members appointed by the Governor (nine in his discretion, two on the recommendation of the six Ministers elected from the House of Assembly, and one after consultation with the independent and minority party members of the House of Assembly). The new Executive Council was to consist of the Governor, three *ex-officio* members, one member elected by and from the State Council to be Minister without Portfolio, and six members of the House of Assembly elected from amongst their number to be Ministers responsible for government departments, one of whom was to be the Leader of the House.

Elections under the new Constitution were held in April, 1953. The irresponsibility of the Party which won a majority of seats made it necessary for the United Kingdom Government to suspend the Constitution in October, 1953; and in January, 1954 an interim government was set up consisting of an Executive Council of three *ex-officio* members and not more than seven other members nominated by the Governor, four of whom held portfolios; and a Legislative Council (the members of the Executive Council, a Speaker and 17 appointed members). A Commission of investigation set up after the crisis reported in November, 1954 that responsible government could not be restored while the majority Party retained its leaders, and recommended a "period of marking time in the advance towards self-government". The conclusions of the Commission were accepted by the United Kingdom Government which, nevertheless, considered it "desirable to set

¹ Barclays Bank D.C.O. *Overseas Review* April, 1955.

² D.W.O., *Development and Welfare in the West Indies* 1954.

THE BRITISH COMMONWEALTH

some maximum term to the personal appointment of the present members of the Legislative Council without prejudice to when it may be possible to hold elections". The appointments to the interim government are to run for four years from January 1st, 1954.

THE GOVERNMENT

Governor and Commander-in-Chief: Sir PATRICK RENISON, K C M.G.

EXECUTIVE COUNCIL

President: The GOVERNOR.

Ex-Officio Members: The CHIEF SECRETARY; The ATTORNEY-GENERAL; The FINANCIAL SECRETARY.

Nominated Members: Sir FRANK McDAVID, C.M.G., C.B.E. (Portfolios: Agriculture and Forests, Lands and Mines); P. A. CUMMINGS (Portfolios: Labour, Health and Housing); W. O. R. KENDALL (Portfolio: Communications and Works); G. A. C. FARNUM, O.B.E. (Portfolios: Local Government and Social Welfare); L. A. LUCKHOO, Q.C.; R. B. GAJRAJ; R. TELLO.

LEGISLATIVE COUNCIL

Speaker: Sir EUSTACE WOOLFORD, O.B.E., Q.C.

Members: The CHIEF SECRETARY, THE ATTORNEY-GENERAL, THE FINANCIAL SECRETARY, other members of the Executive Council, and 16 further members appointed by the Governor. (There is one vacancy.)

CIVIL ESTABLISHMENT

Chief Secretary: F. D. JAKEWAY, C.M.G., O.B.E.

Financial Secretary: F. W. ESSEX.

Development Secretary: J. L. FLETCHER, O.B.E.

Attorney-General: C. WYLIE, Q.C.

Official Receiver, Public Trustee and Crown Solicitor: V. C. DIAS.

Postmaster-General: K. I. R. KIRKPATRICK.

Registrar-General: H. R. HAREWOOD, M.B.E.

Chief Information Officer: A. J. SEYMOUR.

Chairman, Public Service Commission: P. W. KING, O.B.E.

Directors of Departments: A. F. MCKENZIE (Agriculture), W. A. KNIGHT (Audit), J. NICOLE (Civil Aviation), R. A. LEEMING (Drainage and Irrigation), G. H. R. CLOUGH (Education), G. M. STOCKLEY (Geological Surveys), W. T. LORD (Land Settlement), L. A. P. SLINGER, O.B.E. (Medical Services), G. A. R. FARQUHARSON (Public Works).

Commissioners: G. C. L. GORDON (Co-operative Development), L. MAWSON (Housing), W. G. STOLL (Income Tax), J. B. BAMFORD (Interior), T. C. STIBBS (Lands and Mines), J. I. RAMPHAL (Labour), D. L. B. WICKHAM (Local Government), C. H. WARD, O.B.E. (Police).

POLITICAL PARTIES

The participation of political parties in government ceased with the suspension of the Constitution in 1953. Since that date, party activities have been very much restricted.

The elections of 1953 were won by the **People's Progressive Party**, an extreme left-wing organisation founded in 1950 by Dr. Cheddi Jagan. It obtained 18 seats out of 24, the remaining six being divided between a National Democratic Party and Independents. All six Ministers elected by the House of Representatives were drawn from the P.P.P. In October, 1953 a state of emergency was

declared and the Constitution was suspended. While the events leading to the suspension were the result of the actions of Dr. Jagan and his colleagues, the leader of the opposing groups at a press conference in London, 1953 emphasized that the most important reason for the P.P.P.'s success at the polls was the "poverty and squalor and consequent sense of frustration" in which the majority of the people of British Guiana lived. In February, 1955 there was a split within the P.P.P., when the less extremist members deposed Dr. and Mrs. Jagan from their offices of Chairman and Secretary of the Party. It is not yet clear which element will succeed in gaining control.

The **United Democratic Party** has come into being as the result of a merger of the groups opposed to the People's Progressive Party. Its Chairman, Mr. John Carter, has stated that it is neither conservative, liberal nor labour, but stood solely for the implementation of the I.B.R.D. Mission's Report. The Party supports the principle of complete internal self-government for British Guiana within a British West Indian Federation.

THE LEGAL SYSTEM

The Supreme Court of British Guiana consists of the Chief Justice as President of the Court, and five Puisne Judges. Its jurisdiction is both original and appellate. It has criminal jurisdiction in matters brought before it on indictment and a person convicted by the Court has a right of appeal to the Court of Criminal Appeal. The Supreme Court has unlimited jurisdiction in civil matters and exclusive jurisdiction in probate, divorce and Admiralty and certain other matters. Under certain circumstances, appeal in civil matters lies to either the Full Court of the Supreme Court, which is constituted by not less than two judges, or the West Indian Court of Appeal.

A Magistrate has jurisdiction to determine claims where the amount involved does not exceed \$250. Appeal lies to the Full Court.

Chief Justice: Hon. F. W. HOLDER, Q.C.

Puisne Judges: Hons. H. J. HUGHES, K. S. STOBLY, R. R. PHILLIPS, N. A. CLARE. (There is one vacancy.)

TRADE UNIONS

There were at the end of 1954 ten employers' associations and 37 workers' organisations, most of the latter very small. The **Transport Workers' Union**, with an estimated membership of 2,118, was one of the largest. The Manpower

BRITISH GUIANA

Citizens' Association (estimated membership in 1953 of 1,089) was, from 1939 until the formation of a rival organisation by the People's Progressive Party, the chief sugar workers' union. Following the report of the Commission of Enquiry which visited British Guiana in 1954 after the suspension of the Constitution, the T.U.C. sent out a retired trade union leader to assist the unions in the Colony to organise themselves as non-political bodies.

TRANSPORT

RAILWAYS

The East Coast Railway (Georgetown to Rosignol) and the West Coast Railway (Vreed-en-Hoop to Parika) were taken over in 1919 by the Transport and Harbours Department, which also operates a lorry transport service.

SHIPPING

The principal lines calling at Georgetown are the Booker Line, Harrison Line, the Royal Netherlands Steamship Company, the Compagnie Générale Transatlantique, the Canadian National Steamships Line, the Alcoa Line, Saguenay Terminals Ltd, and the Netherlands Government inter-colonial steamers plying between Surinam and British Guiana.

AIR LINES

There is one company incorporated locally, British Guiana Airways Ltd, (P.O. Box 102, Georgetown), which operates internal services, including charter flights to the interior, and external services to the Leeward and Windward Islands, Barbados and Trinidad.

Other air lines operating services to Georgetown, or maintaining offices there, are: British West Indian Airways Limited, Pan-American World Airways Ltd, K L M. (West Indies Division), Serviços Aéreos Cruzeiro do Sul (which started a service from Manaus to Georgetown in December 1953).

HEALTH

The Central Board of Health of which the Director of Medical Services is the Chairman, is the overriding authority in all matters concerning the health of the Colony.

There were in 1954, 5 Government general hospitals with a total of 1,000 beds; 2 private general hospitals with 266 beds, 19 cottage hospitals, located mainly on the sugar estates and equipped to handle minor cases, with 1,211 beds; and 20 dispensaries (excluding mobile dispensaries and dispensaries for the treatment of leprosy).

The irrigation canals in the coastal area are breeding-grounds for the malaria-carrying mosquito and, until quite recently, malaria was the chief cause of sickness and death. In 1947 a Colony-wide malaria control programme based on extensive spraying with D.D.T. was launched, which proved highly successful. The number of cases of malaria reported in 1953 was only 83, compared with 1,008 in 1951.

EDUCATION

There were at the end of 1954, 293 Government and aided primary schools (15 Government, 9 non-denominational and 269 denominational), with some 89,000 pupils. Most of these schools are in the coastal belt, but 89 cater

THE BRITISH COMMONWEALTH

for the population of the interior, including Amerindian children.

Primary schools provide free education for children from 5 to 16 years of age, and compulsory education for children from 6 to 14 years. Secondary schools (2 Government, 2 aided denominational and about 36 non-aided private) cater for about 7,600 pupils. It is estimated that nearly 80 per cent of the population is literate.

The Government Technical Institute trains industrial apprentices and organises evening classes. Technical and vocational education for women is provided by the Carnegie Trade School for Women and the Fredericks School

of Home Economics. The Extra-Mural Department of the University College of the West Indies organises, through its Resident Tutor, lectures and study courses for adults in Georgetown and centres outside the capital.

A Forestry School for the training of sub-professional staff was opened at Bartica in 1953.

The British Council (5 Robb Street, Georgetown) assists cultural and educational groups in the Colony through the distribution of periodicals and educational films to various organisations in Georgetown and the rural districts. It has a library of some 3,000 volumes. Rep. D. E. FREAN.

BRITISH HONDURAS

GENERAL SURVEY

GEOGRAPHY AND CLIMATE

THIS TERRITORY, the only British possession on the mainland of Central America, extends from 16–18° N. lat., and from 88–89° W. long., covering an area of 8,866 sq. miles (i.e. about the same size as Wales). Maximum length (N.–S.) is 174 miles, and breadth (E.–W.) 68 miles. The territory is bounded on the north-east by the Mexican province of Quintana Roo (formerly Yucatan), on the west and south by Guatemala, and on the east by the Caribbean Ocean.

Much of the south and west of British Honduras is occupied by highland massifs; the Cockscomb Mountains and Great Southern Pine Ridges, which attain 3,750 feet. This highland structure is composed of granites, other igneous rocks and slates, and is drained by a number of short swift rivers flowing eastwards and northwards to the sea. Heavy rainfall, rapid erosion, a thin poor soil and difficulties of communications have prevented much development of this hilly area, which is largely uninhabited except for small Spanish and Indian settlements in one district of San Antonio.

The northern part, comprising a little more than half of the total area, is lower lying, being composed of generally horizontal or only slightly tilted beds of limestones, shales and marls. Heights of the land rarely exceed 500 ft., and the rivers are correspondingly slower-flowing and broader. This northern region offers more opportunities for human activity, and is more developed economically, though still in many places very sparsely peopled.

The entire eastern coastal zone of British Honduras is marked by a low-lying belt of swamps and lagoons, 5–10 miles wide, which has only very recently been raised above sea-level by natural action. Further out to sea varying from 5–20 miles is a line of "cays"—sandspits and low-lying reefs—which greatly hinder navigation even to small ships, and entirely preclude the approach of ocean-going ships to the coast of British Honduras, except at one point opposite Belize, the capital, where there is a single deep-water channel. The coastal lowland area is fringed by mangrove swamp, succeeded inland by brackish lagoons, and low sandy ridges. These latter are largely infertile and carry a poor vegetation of rank tropical grass, unfit for animal pasture, or else a forest cover of pinewoods. Most of the pinewoods are periodically devastated by forest fires.

A special feature of the coastal lowlands is liability to flooding. The rivers erode masses of silt, which are deposited on the plains near the coast and gradually raise the bed of the river above the level of the neighbouring swamp lands by forming natural levées. Cultivated strips, where these occur, are largely placed on the levées and from time to time are overwhelmed by a rush of flood water which simultaneously destroys the levées and enlarges the swamps lying nearby. Floods have recently been increasingly more serious, because of destruction of forest in the interior, which allows more rapid run-off.

Open to the prevailing north-easterly winds, and backed in the interior by hills, British Honduras receives an ample—sometimes heavy—rainfall, that ranges from 50 in. in the northern lowlands to as much as 150–200 in. in the southern hills. 75–100 in. would appear to be average

for much of the inhabited territory of British Honduras, and whilst no season is without rain, there is a marked rainy season from June to October. Temperatures range from 50–95° on the coast, with a mean of about 80° F., whilst the interior shows more variation—reaching over 100° during the day in the dry season (when clouds are absent) but falling further at night. There is something of a winter season during November and December, when cool northerly winds may blow; but in general, lying well within the tropics, temperatures fluctuate more from day to day rather than from season to season. High humidity can be trying during August and September on the coast, and during the dry season forest fires are common—though the fires are usually not spontaneous, being started either by hunters to drive game, or in order to clear patches for cultivation. Largely uncontrolled, these fires cause serious economic loss to the colony. It was for long thought that British Honduras was not affected by the hurricanes that are common in the Caribbean area; but this was disproved by a serious visitation in 1931 when many lives were lost and extensive damage caused. However, it is clear that hurricanes are far less frequent than further east in the West Indian islands.

Apart from the small patches of cultivated land (6 per cent), and the mangrove swamp of the coast (5 per cent), British Honduras is entirely forest-covered. This forest ranges from a stunted, but dense grouping of hardwoods, (cedar, mahogany, sapodilla, rosewood, etc.) lianas, and palms, to an increasingly luxuriant complex of giant palms, hardwoods and parasitic creepers—altogether, one of the most luxuriant forest-growths in the world. Here and there, the forest changes from its primeval, untouched character, to secondary, less luxuriant species, indicating the occurrence of former areas once cleared and occupied by the Maya civilisation, that mysteriously declined after the sixth century A.D.

W.B.F.

POPULATION

At the 1946 Census the racial distribution of the population was: Creoles (mixtures of African and White) 41,053; Mayas 10,030; Caribs (descendants of those deported from St. Vincent in 1797) 4,112; White 2,329; East Indians 1,366; Syrians 128; Chinese 50. Race not stated 152. A 1952 estimate gave the population then as 71,900. The capital Belize, has a population of about 28,000.

LAND TENURE AND AGRICULTURE

The granting by the Crown in the early nineteenth century of unconditional freehold titles to land with no limitation of area, resulted in the establishment of *latifundia*, which is still a characteristic of British Honduran land tenure. Most of the large properties were chosen for their timber resources, but they include the most fertile and accessible land in the country. The Crown still retains approximately 3.3 million acres, of which about half a million acres are considered good agricultural land. Approximately 2.3 million acres are privately owned. The method of acquisition of Crown lands is by means of Location Tickets. Under this system a holder of a

THE BRITISH COMMONWEALTH

Location Ticket is compelled to cultivate the land which he applies for and is allotted, by planting at least one-half with permanent crops within five years, and to pay its purchase price (usually in ten semi-annual instalments), the Crown retaining rights to valuable timber and minerals. At the end of five years, the holder is given a permanent title, still subject to the reservation of mineral and certain timber rights to the Crown. In 1953 there were 3,390 Location Tickets in force, covering 62,103 acres.

Of the total land area, forests cover approximately 8,151 square miles. The cutting of timber and collection of *chicle* (the latex of the sapodilla tree used in the manufacture of chewing gum) are the most important activities. The chief exports are mahogany, cedar, pine and smaller quantities of rosewood, balsa and quiamwood. Exports of logs, sawn timber and *chicle* amounted in 1954 to \$4,296,497.

The Maya Indians are the chief subsistence farmers, farming the land with primitive tools, the machete, the machet and the planting-stock. A plot of land is cleared and cultivated for one or two seasons, and then abandoned. The Evans Commission¹ reported in 1948 that, although the area under cultivation appeared to be between 65,000 and 70,000 acres, an aerial survey of the country showed that extensive areas had recently been cultivated and left to revert to bush. The policy of the Agricultural Department is to substitute for the present wasteful methods more settled cultivation, and to endeavour to build up a number of small and medium farms which, it is hoped, may form the basis for further agricultural development. A system of price guarantees and seasonal crop loans has been instituted through its Marketing Board, clearing equipment and operators are provided, and technical advice given.

A most noticeable feature of the economy of British Honduras is its dependence on imported supplies of food, owing largely to the neglect of agriculture for the more lucrative occupation of cutting timber. The Report of the I B R D representative who visited British Honduras in 1954² drew attention to the fact that, over the past twenty-five years, the production and export of several of the main traditional products have decreased substantially, due to various causes - the depletion of accessible resources of mahogany and *chicle*, the ravages of "Panama" disease, which affects bananas; and hurricane damage to coconuts and mahogany. There has in fact been a striking decline in export production per head, even when allowance is made for the possibility of timber being undervalued in export declarations.

CROPS

The chief crops are maize, rice, pulses, bananas, coconuts, sugar cane, yams, pineapples and citrus fruit. Maize, grown on some 15,500 acres, is almost the only subsistence crop produced in excess of local requirements. The estimated acreage under rice in 1954 was 2,200; the acreage under coconuts, 8,000. Exports of coconuts in 1954 were valued at \$118,110, and of copra at \$53,153. Some 3,400 acres only were planted with sugar cane in the same year, and British Honduras is able to export only a fraction of the overall quota of 5,000 tons of sugar allocated to it under the Commonwealth Sugar Agreement which it joined in January, 1954. Sugar cane is grown mainly in the Northern District and is processed by one factory, the

capacity of which has recently been increased. Banana production is at present limited to some 500 acres and a negligible quantity, valued at \$513, was exported in 1954. Since the war a determined effort has been made to revive and establish the citrus industry on a sound commercial basis. The chief production area is the Stann Creek Valley. Valencia oranges are now being grown in addition to grapefruit, and artificial fertilisers and mechanically-driven implements for controlling weed growth have been introduced. The value of citrus exports for the three years 1952-54 were: Grapefruit (whole, segments, juices and concentrates) \$807,078, \$798,582, \$983,800. Oranges (whole, canned and concentrates) \$4,605, \$50,537; \$131,682. Some 800 acres were under grapefruit and 3,200 acres under oranges in 1954.

FISHING

The industry is carried on mainly by Caribs, who also do some agricultural work. In 1954 it was estimated that there were 400 full-time and 200 part-time fishermen. Fresh and salted fish, and lobsters are exported to Guatemala and Spanish Honduras, Mexico and the United States. Values of exports in 1954 were: fresh and salted fish \$34,819; lobsters \$106,288.

There is little manufacturing industry. Small factories in Belize produce cigarettes, soap, edible oils, processed lumber, window frames, dinghies and small craft. The canning of citrus fruit is carried out at a factory in Stann Creek, and tannic acid from mangrove bark is manufactured at Corozal.

TRADE

Trade figures show the Colony's overwhelming dependence on outside sources for a very large proportion of its needs. Exports and imports for 1952-54 were:

	1952	1953	1954
	\$	\$	\$
Exports (excluding			
Re-exports) .	5,615,483	6,810,486	6,226,568
Imports .	12,671,851	11,964,015	11,409,568

Imports include butter and fats, rice, flour, milk, meat and meat preparations, as well as clothing and fuel. In 1954 35.16 per cent of total imports were obtained from the United Kingdom, 33.37 per cent from the United States, 4.33 per cent from Canada and 6.97 per cent from Trinidad. Of the total exports 41.8 per cent went to the United Kingdom, 19.4 per cent to the United States, 21.6 per cent to Jamaica, 2.3 per cent to Canada and 1.3 per cent to Trinidad.

BUDGET

Between 1931 and 1950 budget deficits occurred, which were covered by grants-in-aid from the United Kingdom. In each of the years since 1951, however, up to and including 1954, revenue has exceeded expenditure. The Table in the Statistical Section shows "True" and Total Revenue and "True" and Total Expenditure in recent years.

DEVELOPMENT

A Development Plan was initiated in 1945, to which £600,000 was contributed from Colonial Development and Welfare funds. This was followed by a further allocation of £850,000 in 1949 (to implement the recommendations of the Evans Report), and of £800,000 in 1952 to complete the second stage of the Plan (1952-55). Loan funds of approximately £600,000 were also raised. The

¹ Report of the British Guiana and British Honduras Settlement Commission, Colonial Office, Cmd. 7533.

² The Economic Development Program of Br. Honduras by David L. Gordon. The International Bank for Reconstruction and Development, Dec. 1954.

THE BRITISH WEST INDIES

third stage of the Plan (1955-60) is estimated to cost £3 million, and an initial allocation of £1,250,000, to cover the first three years, has been made from Colonial Development and Welfare funds. The main emphasis of the schemes undertaken has been on agriculture and transport. Projects under the first heading already in operation include the Agricultural Department's Central Farm at Baking Pot, Land Use and Geological Surveys, an Agricultural Credit Fund and a Land Clearing Scheme for opening up new areas for permanent cultivation. The Land Use Survey was completed in 1954. The present projects for development were approved by the I.B.R.D. representative, who found that the best prospect for sustained economic growth was in the opening up of the country's unutilized agricultural land, and in the improvement of farming methods and market organisation.

COMMUNICATIONS

The completion in 1954 of the 32½ mile long Humming Bird Highway marked another stage in the opening up of the country. There is now all-weather road communication between Stann Creek and the agriculturally important Stann Creek Valley (south), El Cayo and Benque Viejo (west), Belize (east), Orange Walk and Corozal (north) and Chetumal in Mexico. There are 280 miles of all-weather main roads, 131 miles of feeder roads, 6 miles of cart roads usable by motor traffic most of the year, and 151 miles of government-maintained trails. In addition, there is an unknown but considerable mileage of private roads built by logging contractors, to which the public have access. The main port is Belize—there are no docks or deep-water quays, and cargo is transported to and from ships in barges.

THE CONSTITUTION

The Constitution of 1935 (which provided for an unofficial majority in the Legislative Council, and adult suffrage with a small income qualification) remained in force, with amendments, until 1954, when a new Constitution was introduced. The 1954 Constitution provides for an Executive Council with three *ex-officio* and six unofficial members. The latter are elected by members of the Legislative Assembly from amongst their number; and at least two of the six so elected must be nominated unofficial members. The Legislative Assembly consists of three *ex-officio* members, three unofficial members nominated by the Governor, nine unofficial members elected from nine constituencies, and a Speaker appointed by the Governor from outside the Assembly. On April 1st, 1954 the first elections on a system of universal adult suffrage were held for a new Legislative Assembly. In January, 1955 the first step towards the introduction of a ministerial system was taken, when the Governor assigned to three of the elected members the responsibility of steering the business of certain departments (grouped as Natural Resources, Social Services and Public Utilities) through the Legislative Assembly, and raising in Executive Council questions relating to these departments. Three associate members share these responsibilities. In August, 1955 a re-grouping of Government departments again took place, by which the responsibilities of the elected members of the Executive Council were further extended.

THE GOVERNMENT

Governor and Commander-in-Chief: C. H. THORNLEY, C.M.G., C.V.O.

BRITISH HONDURAS

EXECUTIVE COUNCIL

Chairman: THE GOVERNOR

Ex-Officio Members: The COLONIAL SECRETARY, the ATTORNEY-GENERAL, the FINANCIAL SECRETARY

Unofficial Members: P. S. W. GOLDSON, H. H. JEX, J. W. MACMILLAN, O.B.E., G. C. PRICE, L. I. A. RICHARDSON, E. W. M. BOWEN.

LEGISLATIVE ASSEMBLY

Speaker: A. N. WOLFFSOHN, C.M.G., O.B.E.

Ex-Officio Members: The COLONIAL SECRETARY, the ATTORNEY-GENERAL, the FINANCIAL SECRETARY

Nominated Unofficial Members: E. W. M. BOWEN, J. W. MACMILLAN, O.B.E., H. T. A. BOWMAN, J. P.

Elected Members: 9

CIVIL ESTABLISHMENT

Colonial Secretary: T. D. VICKERS

Financial Secretary: T. OATES, M.B.E.

Development Commissioner: G. C. HAMILTON

Accountant-General: D. R. B. GILL

Attorney-General: (Vacant).

Postmaster-General: P. M. EWING.

Directors of Departments: J. W. D. GOODBAN, M.B.E. (Agriculture), L. C. BALDERAMOS (Civil Aviation), E. B. V. BROWN (Education), G. G. SMITH (Medical Services), E. CAFFERY (Information and Communications), D. PEACOCK (Public Works), G. A. ELLIOTT, I.S.O., M.M. (Surveys).

POLITICAL PARTIES

People's United Party (P.U.P.): Founded in 1950, this leftist party is led by L. I. A. RICHARDSON, G. C. PRICE and P. S. W. GOLDSON (all three members of the present Executive Council). In the elections of April 28th, 1954, the Party won eight seats in the Legislative Council, in which there are nine elected members. Because of the Party's avowed anti-colonialism it was feared that a situation similar to that which arose in British Guiana in 1953 might develop. In the months following the elections, however, the elected members co-operated with officials in making the new Constitution work, and in October, 1954, it was decided that three elected members of the Council, with three associates, would be given responsibility for certain groups of departments.

The remaining seat in the Legislative Council is held by a member of the **National Party-Independent Group**.

THE LEGAL SYSTEM

District Courts, presided over by a Magistrate or District Commissioner, are established in each of the six magisterial districts. Their jurisdiction is limited to cases where the claims involved do not exceed \$150. Appeal lies to the Supreme Court, presided over by the Chief Justice, and with jurisdiction corresponding to that of the English High Court of Justice. Appeal lies from the Supreme Court to the Privy Council.

The Government of British Honduras has agreed to recognise the Federal Court of Appeal for the Caribbean Colonies when it is established. There will be a right of appeal to this Court from the Supreme Court with a right of ultimate appeal from the Federal Court to the Privy Council.

Chief Justice: Hon. E. R. L. WARD

THE BRITISH COMMONWEALTH

THE PRESS

Belize Billboard: 1138 Barracks Road, P.O. Box 79, Belize; f. 1946; Nationalist; daily, Sun to Fri. inclusive; circ 2,200; Chair. LINDBERGH GOLDSON; London Office: 122, Shaftesbury Avenue, W.1.

TRADE AND INDUSTRY

British Honduras Chamber of Commerce: P.O. Box 291, Belize, f. 1918, 57 mems, President. The Hon. E. W. M. BOWEN; Sec. VICTOR KATTAN

British Honduras Development Board: Belize; Chair H.E. The GOVERNOR.

TRADE UNION

The largest trade union, the British Honduras General Workers' Union, is affiliated to the International Confederation of Free Trade Unions through its regional Organisation, the Organización Regional Inter-Americana de Trabajadores (O R I T)

TRANSPORT

(See also GENERAL SURVEY)

SHIPPING

A regular service between Belize and Kingston is maintained by the Cayman Shipping Company. Vessels of the United Fruit Company and of T. & J. Harrison Ltd., call irregularly at Belize.

AIR LINES

Internal services are maintained by

British Colonial Airlines: P.O. Box 320, Fort George Hotel, Belize. The Company also operates services to Chetumal, on the British Honduras-Mexican border, Chair. of the Board RALPH B. ROGERS.

Services to Belize are also operated by British West Indian Airways (B.W.I.A.), Transportes Aéreos Centro Americanos, S.A. (T.A.C.A. International), Servicio Aéreo de Honduras S.A. (S.A.H.S.A.) and Transportes Aéreos Nacionales (T.A.N.).

HEALTH

Malaria, formerly the most prevalent disease, has declined in recent years as the result of semi-annual spraying with D.D.T. undertaken by the Government. There is 1 Government hospital in Belize and one in each of the 5 districts, with a total number of 244 beds. Eleven rural dispensaries are maintained

EDUCATION

There are two Government and 93 grant-aided denominational private schools with a total enrolment of 12,690. In addition, there are 27 non-aided primary schools. The 9 secondary schools are non-aided and denominational. In 1954 the Government opened a training college for teachers in Belize. The normal course of training is two years, followed by post-graduate short-term advanced courses. A Government Technical School also functions in Belize.

A number of scholarships are available at the University College of the West Indies, for students intending to read for degrees. Study courses and lectures are organised by a Resident Tutor of the University College of the West Indies.

JAMAICA

GEOGRAPHICAL AND ECONOMIC SURVEY

THIS island lies at 17° 43'–18° 32' N. lat., and 76° 11'–78° 21' W. long., about 90 miles south of Cuba and some 4,120 miles from London. In area it covers approximately 4,411 sq. miles, whilst its dependencies the Turks, Caicos and Cayman islands, extend over 202 sq. miles. Within the main island itself there are three administrative counties: Surrey, Middlesex and Cornwall, subdivided into 14 administrative parishes.

The island is very rugged; of its total area nearly one-half—2,100 sq. miles is over 1,000 ft. above sea level.

In the interior lie three mountain massifs the Blue, Clarendon and Jersalam Ranges, constituting the nucleus of the island, with the first-named reaching a maximum of over 7,000 ft.

All these hills are composed of upfolds of older (cretaceous) rocks, whilst surrounding this interior nucleus of old rocks is a former plateau region which rises to a height of 3,000 ft. and now forms a much dissected plain. This upland occupies nearly four-fifths of the island and is composed of soluble horizontal limestones (Tertiary in geological age like those of the London area) which have been weathered into basin valleys and deep gorges. There remain narrow coastal plains, consisting of elevated reefs, sea beaches, and littoral deposits of late Tertiary or Quaternary age (i.e. like those of East Anglia).

CLIMATE

Due to the mountainous character of the island and the direction (N.E.) of the prevailing rain-bearing winds, heaviest rainfall occurs on the north side of Jamaica. On the northern slopes of the Blue Mountains, rainfall amounts to 220 in. per annum, but at Kingston (on the south coast some 30 miles away) only 29 in. are received. The average temperature of the island at sea-level is 79° F. with a maximum of 88° F., but at 3,000 ft. figures are 68° F. and 75° F. respectively. Hurricanes of great destructive power attaining 80–120 m.p.h. are experienced in the island—particularly in the autumn months. Jamaica lies on one of the regular tracks which these West Indian hurricanes appear to take.

Jamaica's native name is "Xaymaca", which variously means Isle of Springs, Isle of Many Rivers or Land of Wood and Water. In 1953 the population of the island, excluding its dependencies, was estimated as 1,487,000. Estimates (1952) of the Cayman Islands were 7,580, and of the Turks and Caicos Islands 6,600. The capital of Jamaica is Kingston, with an estimated population, together with that of Port Royal, of 142,464.

The Cayman islands (93 sq. miles) are mainly composed of coral limestones. Principal occupations are fishing, turtle hunting and rope-making.

The Turks and Caicos islands (166 sq. miles) are noted for their salt ponds. The two groups consist of limestones of a generally horizontal bedding with low ranges of hill inland. The economy is purely a subsistence one, apart from the commerce in salt.

R.D.

AGRICULTURE

In the decades before the war, Jamaica's economy rested mainly on the export of two major products, sugar and bananas, and the growing of food for local consumption was of secondary importance. While it is still true to-day that the importance of food crops is not sufficiently recognised, much greater attention is being paid to their production and to the need for planning of agricultural development as a whole.

Some of the formidable obstacles to development are inherent in the land itself, others are a result of the disastrous techniques applied in the past. The rugged nature of the terrain (only about one-fifth of which is flat) has resulted in intensive farming of the hillsides, often under a system of shifting cultivation which has destroyed the forest cover and exhausted the soil.

The Agricultural census of 1943 and a sample survey of 1950 give an indication of how land is used and distributed. According to the 1950 Survey some 1,018,000 acres were used for agriculture, of which 423,000 acres were classified as arable, and 595,000 acres as permanent meadows and pastures. Of the remainder forests accounted for some 500,000 acres (of which an estimated 272,000 acres were Government Reserve Forests); 312,000 acres were in part under shifting cultivation, in part unproductive, 878,000 acres were wasteland (some of it potentially productive), and there were some 115,000 acres of built-up land. Classification of holdings by size in the 1943 Census showed great inequality in the distribution of the land. A total of 49,000 smallholdings of from 1 to 10 acres, occupied some 197,000 acres, while 17,400 holdings of from 10 acres to over 1,000 acres occupied 1,576,000 acres. In the light of the development which has taken place since 1950 these figures must be regarded as merely showing the general pattern of land use and distribution.

The I.B.R.D. Mission which visited Jamaica in 1952¹ found great inequality in the efficiency with which land was worked. As a rule the large sugar estates and banana properties, usually located on better land, were very efficient, the smaller holdings were generally inefficient, due partly to their location on less fertile land, partly to the lack of adequate farming techniques, tools and fertilisers, partly to the form of tenure. Much of the land is leased on yearly terms, a system which does not give the tenant sufficient security to undertake improvements. Moreover, because of the pressure of population, land prices have risen to such levels that the small farmer has had to make do with small plots, and build up his farm in separate fragments.

The Mission laid down the lines which development should take over the following ten years. Its recommendations included the carrying out of aerial and ground surveys, a soil conservation programme aiming at the rehabilitation of some 300,000 acres, the leasing of land to tenants for terms of at least 20 to 25 years, larger re-forestation projects, and expansion of loans for agriculturalists.

CROPS

The chief export crops are sugar, bananas and citrus fruit. Coffee, cocoa, ginger and pimento are exported on a

¹ *The Economic Development of Jamaica* Report by a Mission of the International Bank for Reconstruction and Development. The Johns Hopkins Press, Baltimore, 1953.

THE BRITISH COMMONWEALTH

small scale. Sugar production has risen from an average of 106,000 tons in 1936-38 to 363,575 tons in 1954. The assistance given to the small grower has resulted in a much sharper rise in the acreage cultivated by him from 35,000 acres in 1951 to 85,000 acres in 1955. Restriction of exports under the International Sugar Agreement of 1953 and the fall in price on the free market has put a brake on further expansion of the industry. In March, 1955, the Ministry of Agriculture announced that the island's production should be limited to a figure approximating the total export quota plus the quantity consumed locally.¹

Bananas. In 1938 Jamaica was the largest banana-exporting country in the world. The cessation of shipments during the war, the ravages of Panama disease and subsequent hurricane damage resulted in a decline in production and exports, which in 1954 were only 194,000 tons, compared with the 1936-38 export average of 386,160 tons. There has been an even larger reduction in the percentage represented by bananas in the total value of exports. In 1954 they represented only 18.7 per cent of that value, compared with 59.2 per cent in 1938. A Banana Board, set up in October, 1953 to regulate the development of the industry is the sole exporter. Under a Five-Year Price Assistance Scheme evolved in mid-1955, a Fund is to be established, to which the Board will make contributions at a specified rate when annual average prices rise above the present agreed level of £67 10s. to £70 a ton (landed United Kingdom); and, when prices fall below that level, the Board will receive advances from the Fund. If payments out of the Fund become necessary before it can be built up, they will be underwritten by the Jamaica Government in the first instance and, in the second, by the United Kingdom Government, which has agreed to make available interest-free loans up to a sum fixed initially at £1 million. This sum will be provided from Colonial Development and Welfare funds, over and above the allocations already made to Jamaica.²

Citrus. Growth of the citrus industry was encouraged during the war by Ministry of Food contracts for the supply of concentrated orange juice. A ten-year contract was signed with the Ministry in 1948 as a result of which the area under orange cultivation was increased by 12,000 acres. The difficulty has been to find assured markets for both oranges and grapefruit. Apart from some shipments to New Zealand, the United Kingdom and Canada are almost the only markets. The Citrus Growers' Association has full responsibility for the industry.

Subsidiary Exports. Schemes for rehabilitating coffee- and cocoa-producing regions are in operation. The Coffee Industry Regulation Law of 1948 regulated the growing, processing, purchase and sale of coffee for local consumption and export. Pulperies have been set up by the Coffee Industry Board and a central Cleaning and Finishing Works has been established on the Industrial Estate near Kingston. There has been no expansion of acreage, and work has been concentrated on rehabilitating existing areas. The Government is also trying to increase the production of *cocoa beans*, which had largely been supplanted by bananas before the war. A Cocoa Marketing Board was created in 1951. The bean is now processed locally, and supplies of drinking cocoa are sold on the domestic market. Some cocoa butter and pressed cake are exported.

Food Crops. These consist mainly of root vegetables, legumes, maize, rice and a variety of tree crops. The I.B.R.D. Mission pointed out that while the value of these accounted for over two-thirds of the value of all crops

produced, their cultivation had been neglected. The Department of Agriculture has been trying to increase yields by extension work among farmers, expansion of credit facilities through the Agricultural Loans Societies Board, and Land Settlement schemes. An Agricultural Development Corporation, set up in 1952, has been charged with the task of increasing rice production which, at about 8,000 tons a year, is well below the quantity required to make the island self-sufficient in this product. The Corporation has made loans to individual farmers and groups, provided storage and drying facilities, hired out farm equipment, and has bought or leased land which it has had planted with rice, or has made available to rice farmers. Inadequate marketing arrangements which resulted in high prices in distributing centres and losses of perishable commodities through delays are being improved by such organisations as the Jamaica Agricultural Society and the Lands Department. Progress is being made in replanting *coconuts*, which were badly hit in the hurricanes of 1944 and 1951. A research unit was set up in 1953 to investigate an unknown disease affecting some of the palms.

INDUSTRY

Considerable industrial expansion has taken place since the war. Unfortunately, the hope that factory employment would be able to absorb a considerable part of the unemployed labour force has not been realised, and the Report of the Steel Mission was not optimistic as far as that aspect of industrialisation was concerned. The number employed in factories almost doubled over the ten-year period 1943-53. However, factory and mining employment at approximately 27,000 in 1953 accounted for a relatively small percentage of the total working population. Sugar and rum production absorb about one-quarter of the total numbers of persons employed in industry.

Factory production is based very largely on the processing of local agricultural products. The increase of agricultural production has therefore become doubly important. About 15,000 persons were employed in 1954 in food processing plants producing a wide range of commodities, which included canned fruits, fruit juices and milk, beer, soft drinks, confectionery, oils and fats. A cement factory started production in 1952, and in 1954 there were some fifteen factories serving the building industry and producing concrete blocks, various types of tiles, pre-stressed concrete products, cement pipes, bricks, gypsum board and paints. A group of industries is engaged in turning out packaging materials; another in furniture and cabinet-making. A plant operated by the Industrial Development Corporation produces dehydrated fodder for livestock.

A few industries rely mainly on imported raw materials. These are the boot and shoe, textile and garment-making factories. A textile mill opened in 1950 supplies nearly 20 per cent of the local demand for cotton fabrics. The garment-making industry employs some 3,000 workers in registered factories, and, in addition, much work is done in small unregistered establishments and by workers in their homes.

The Government has introduced some protection of local industry by restricting imports of certain products manufactured locally such as shoes and drinking cocoa, from time to time. Factory production has been mainly directed to supplying a growing domestic market, although canned fruits and fruit juices and cigars are valuable export items.

The development of new industries and assistance to existing ones are in the hands of the Industrial Development Corporation, formed in 1952. This organisation

² C.O.I. *Commonwealth Survey*, August 9th, 1955.

THE BRITISH WEST INDIES

manages the Industrial Estate of 150 acres, established near Kingston.

MINING

While deposits of magnetic iron ore, lead, zinc and manganese are known to exist, the only minerals at present being commercially exploited are bauxite, gypsum and cave phosphates. The reserves of bauxite, estimated at 300 million tons, are thought to be the largest in the world. The mining of bauxite began in 1952 and three companies are at present operating. Two are engaged in shipping the unprocessed ore to the United States; the third, Alumina Jamaica Ltd., a Canadian Company, processes the bauxite to alumina (an intermediate product in the manufacture of aluminium from bauxite) for shipment to Canada. Production of bauxite ore rose from 412,000 tons in 1952 to 1,139,000 in 1953 and royalties collected, from £32,300 in the financial year 1952-53 to £68,869 in 1953-54. Exports of bauxite ore in 1954 amounted to 1,898,131 tons, and of alumina to 124,116 tons. Alumina Jamaica Ltd. is to expand its present capacity of 210,000 tons of alumina a year to 543,000 tons. Investments of the three companies were estimated to total £40 million in 1955. However, the labour employed—about 1,500 persons—is inconsiderable.

The quantity of gypsum produced in 1954 was 159,877 tons. There is no export of cave phosphates; the quantity sold locally in 1954 was 714 tons.

TRADE AND FINANCE

Jamaica's visible balance of trade has in most years shown a deficit. In 1952 that deficit reached a peak of over £17 million, which had been reduced by 1954 to £3.5 million, largely through the exports of bauxite. This is now the most valuable export item after sugar. Invisible earnings derived from the tourist industry and remittances of Jamaicans working abroad have in most years been sufficient to cover the deficit. In 1954, the number of tourists visiting Jamaica had risen to 112,800, and the earnings of the industry were estimated at £5.75 million.

Budget. Both revenue and expenditure have risen steeply, and, since 1951-52 there have been substantial budgetary deficits, due largely to expenditure on hurricane rehabilitation. In the three financial years 1952-53, 1953-54, and 1954-55 revenue earned from customs and excise duties amounted or were estimated to amount to £7.3 million, £8.2 million and £8.25 million. Direct taxation yields over the same period brought in £2.96 million, £3.23 million and £3.5 million.

The figures of revenue and expenditure shown in the Statistical Section include Colonial Development and Welfare receipts and expenditure and grant-in-aid receipts. In the three years mentioned, the former amounted to £628,673, £662,444 (revised estimate) and £382,312 (estimate).

The impact of the accelerated rate of development is shown in the estimates of expenditure for 1955-56. A supplementary budget was presented to the House of Representatives in July, 1955 calling for additional expenditure of £4.26 million, which brings the total estimated expenditure for the present financial year up to £24.25 million, the highest on record.

Currency. In December, 1954 the first step was taken towards unification of the currency of the British Caribbean Region by the passage of a Bill through the Jamaica House of Representatives to provide for the inter-changeability of local currency notes and dollar currency of the Eastern Caribbean Group. From October 1st, 1955,

JAMAICA

Jamaican notes were made legal tender in the Eastern Caribbean region and, similarly, notes issued by the Board of Commissioners of Currency (Eastern Group) became legal tender in Jamaica from that date.

COMMUNICATIONS

There are 207 miles of standard-gauge railway. The main lines are Kingston-Montego Bay, Kingston-Port Antonio, Kingston-Frankfield, Kingston-Linstead.

Jamaica has a good network of tar-surfaced and metalled motoring roads. There are some 2,000 miles of main roads, of which 831 miles are asphalted, the remainder being macadamized, and some 4,438 miles of parochial roads, of which approximately 2,137 miles are suitable for motor traffic.

The chief ports are Kingston, Montego Bay and Port Antonio, but there are a number of outports at which bananas and sugar are handled, and special ports have been built at Ocho Rios and Old Harbour to handle bauxite ore and alumina outbound and oil and other supplies inbound.

There are international airports at the Palisadoes (for Kingston) and Montego Bay, and six private airstrips. It is proposed to use a recently completed airstrip for internal air services.

DEVELOPMENT

A ten-year Development Plan was launched in 1945, the estimated cost of which was £21 million. Allocations from Colonial Development and Welfare funds amounted to £6,243,000, while the contributions from loan funds and local resources were estimated at £15,020,000. Estimates were reduced in 1951 and total expenditure on development over the ten years to 1955 has been in the region of £18 million. The Jamaica Government has recently announced a new Five-Year Plan, providing for an expenditure of £30 million. The amount available from Colonial Development and Welfare funds (including the balance unspent from the previous allocation) will be £4.2 million. The aim of the new Plan is to implement the recommendations of the International Bank Mission's Report, which envisaged a total expenditure of £34.5 million over a ten year period, of which £22.6 million was to be raised by loans. Under the Loans (General Development) Law of 1953 the Government was authorised to raise loans up to £5 million for development. Two instalments have so far been placed on the local market: the first, of £350,000, in April, 1954; the second, amounting to £600,000 in September, 1955. Both have proved a success. The amounts raised are being used for agriculture, irrigation, public works and industrial development.

In spite of the high level of unemployment, national income has risen considerably over the last twenty years. It was estimated to amount to £16.2 million at the peak of the depression (1934). By 1938 it had risen to £19.6 million, in 1943 to £40.5 million and by 1950 to £85 million.

THE CONSTITUTION

The Constitution of 1944 introduced universal adult suffrage, an all-elected House of Representatives, and an official and nominated Legislative Council. The power of the Governor's Privy Council was curtailed and an Executive Council set up as the principal instrument of policy. In 1953 certain changes were introduced. The Executive Council was enlarged to include a majority of elected members, each of whom was given ministerial status. Foreign Relations and Security and Legal administration remain

THE BRITISH COMMONWEALTH

the responsibility of the Colonial Secretary and Attorney-General respectively.

The Constitution therefore provides for: (a) a *Privy Council*, which advises the Governor on the exercise of his disciplinary powers over members of the Civil Service, and of the Royal Prerogative of mercy. Its members are the Colonial Secretary, the Officer Commanding the Troops, two Government officials and two nominated unofficial members; (b) an *Executive Council*, presided over by the Governor and consisting of three *ex-officio* members (the Colonial Secretary, the Attorney-General and the Financial Secretary), two unofficial members of the Legislative Council appointed by the Governor, and eight ministers from the House of Representatives, responsible respectively for Local Government and Housing, Finance, Agriculture and Lands, Education and Social Welfare, Trade and Industry, Communications and Works, Health and Labour. A Chief Minister is appointed by the Governor, subject to a vote of confirmation by the House of Representatives. He may be removed by the vote of a majority of the House. Other ministers are appointed and may be removed by the Governor on the recommendation of the Chief Minister; (c) a *Legislative Council* consisting of the three *ex-officio* members of the Executive Council, not more than two official members and no fewer than ten unofficial members nominated by the Governor. The Council elects its own President, who must be unofficial, and must not be a member of the Executive Council. The Council's chief duty is the consideration of legislation passed by the House of Representatives. In the event of disagreement between the two Houses, the Constitution provides that, with certain safeguards, a Bill that has been passed by the House of Representatives in two successive sessions and rejected by the Legislative Council on each occasion, may be presented to the Governor for his assent. Nominated members are appointed for the life of the Council which is normally five years, official members hold their seats during H.M.'s pleasure; (d) A *House of Representatives* with thirty-two members elected by single member constituencies. Any question may be debated in the House, but no money bills or bills intended to implement the policy of the Government can be introduced without the approval of the Executive Council.

There is a *Standing Finance Committee* consisting of all the members of the House of Representatives; and a *Public Service Commission*, set up in 1952, advises the Governor on appointments and other matters affecting the Public Service.

THE GOVERNMENT

Captain-General and Governor-in-Chief: SIR HUGH FOOT,
K.C.M.G., K.C.V.O., O.B.E.

EXECUTIVE COUNCIL

Chairman: The GOVERNOR.

Ex-Officio Members: The COLONIAL SECRETARY The ATTORNEY-GENERAL, The FINANCIAL SECRETARY.

Unofficial Members: SIR ROBERT BARKER, O.B.E., R. A. BURKE.

MINISTERS

Chief Minister and Minister of Agriculture and Lands:
N. W. MANLEY, Q.C.

Minister of Finance: N. N. NETHERSOLE.

Minister of Education and Social Welfare: I. S. LLOYD.

Minister of Labour: F. A. GLASSPOLE.

Minister of Trade and Industry: W. O. ISAACS.

Minister of Local Government and Housing: G. LOGAN.

Minister of Health: C. L. A. STUART.

Minister of Communications and Works: A. G. ST. C. COOMBS.

LEGISLATIVE COUNCIL

Ex-Officio Members: The COLONIAL SECRETARY, The ATTORNEY-GENERAL, The FINANCIAL SECRETARY.

Official Members: The DIRECTORS OF EDUCATION AND AGRICULTURE.

Unofficial Members: 10.

HOUSE OF REPRESENTATIVES

Speaker: B. B. COKE.

Elected Members: 32.

CIVIL ESTABLISHMENT

Colonial Secretary: JOHN M. STOW, C.M.G.

Financial Secretary: F. D. C. WILLIAMS.

Attorney-General: J. L. CUNDALL, Q.C.

Administrator-General, Protector of Immigrants and Custodian of Enemy Property: H. F. BARRY

Accountant-General: N. F. de B. HOLTZ

Auditor-General: E. A. GADISHAW.

Postmaster-General: J. GREEN.

Directors: H. HOUGHTON, C.B.E. (Education), J. WRIGHT, C.B.E. (Agriculture), I. CHILD (Prisons), E. V. WILLIAMS (Public Works), W. D. BURROWES (Statistical Services).

Commissioners: G. E. GROSETT (Income Tax and Stamp Duties), C. P. de FREITAS (Lands and Mines), Col. R. T. MICHELIN, C.V.O., O.B.E. (Police).

POLITICAL PARTIES

People's National Party (P.N.P.): Formed in 1938 by NORMAN MANLEY, the Party favours a moderate form of socialism, the more extremist members having been expelled in 1952. Its aims, as stated by Mr. Manley after the General Elections of January, 1955, include complete self-government for Jamaica in the shortest possible time, the encouragement of foreign capital investment in the island, and the intensification of agricultural development. The Party draws its supporters mainly from the middle classes and groups of workers who have joined the National Workers' Union. In the 1955 elections—the first since the introduction of the ministerial system—the Party won 18 out of 32 contested seats in the House of Representatives.

Jamaica Labour Party (J.L.P.): Founded in 1944 by SIR ALEXANDER BUSTAMANTE, the J.L.P. is more conservative—despite its name—than the P.N.P. Its supporters are chiefly to be found among the agricultural workers. During its years of office (1944–54) it also had the approval of most of the business community. Like the P.N.P., it is strongly in favour of self-government. Less well-organised than the P.N.P., it relies for its cohesion largely on the personality of its leader. The Party now holds 14 of the seats of the House of Representatives.

THE LEGAL SYSTEM

Justice is administered by three principal types of courts—the Supreme Court, Resident Magistrates' Courts and the Courts of Petty Sessions. The Supreme Court consists of the Chief Justice, a Senior Puisne Judge and

THE BRITISH WEST INDIES

four Puisne Judges, who sit individually in chambers or on circuit, and together in a body of three as a Court of Appeal. The Resident Magistrates' Courts are presided over by Resident Magistrates who exercise jurisdiction over both criminal and civil matters. Provision is made for 23 Resident Magistrates. The Courts of Petty Sessions are presided over either by Justices of the Peace or by the Resident Magistrate of the parish.

Chief Justice: The Hon. Sir JOHN CARBERRY.

Senior Puisne Judge: The Hon. C. M. MACGREGOR.

Puisne Judges: The Hons. A. B. RENNIE, ALEXANDER R. COOLS-LARTIGUE, D. H. SEMPER, C. G. X. HENRIQUES.

Master Printers' and Allied Trades' Association of Jamaica:
148 Harbour Street, Kingston; Pres. S. G. FLETCHER.

GOVERNMENT ORGANISATIONS

Agricultural Development Corporation: 83 Hanover Street, Kingston; est. 1952; Chair. G. G. R. SHARP, O.B.E.

Industrial Development Corporation: 4 Winchester Road, Kingston; est. 1952; Chair. N. N. ASHENHEIM.

TRADE UNIONS

Membership of the principal trade unions is about 68,000. The following is a list of the chief unions:

Bustamente Industrial Trade Union: 98 Duke Street, Kingston.

Independent Portworkers' Union: 1 North Street, Kingston.

Jamaica Clerical Workers' Association: 48 Duke Street, Kingston.

Jamaica Progressive Seamen's Union: 40½ Mountain View Avenue, Kingston

Jamaica Telecommunications Association: 12a Central Road, Kencot, Half-Way-Tree.

Licensed Sanitary Constructors' Association: 149 King Street, Kingston.

Machado Employees' Union: 65 Hanover Street, Kingston.

National Workers' Union: 65 East Street, Kingston; affiliated to the People's National Party.

Shipping Association of Jamaica Union: 2 Port Royal Street, Kingston

Shipping Tally Clerks' Association: 57 Barry Street, Kingston.

Trades Union Congress of Jamaica: 65 Hanover Street, Kingston.

United Port Workers' Union: 28 West Street, Kingston.

TRANSPORT

For other information see SURVEY.

SHIPPING

Regular cargo and passenger services with the United Kingdom are operated by Elders and Fyffes Ltd., the Jamaica Banana Producers' Association's Line, the Royal Mail Lines, the Harrison Lines and Compagnie Générale Transatlantique, with Canada by the Canadian National Steamship Company and Saguenay Terminals Ltd.; and with the United States by the United Fruit Company and the Alcoa Steamship Company.

AIR LINES

The chief air lines operating services to Kingston or maintaining offices there are: British Overseas Airways Corporation, British West Indian Airways Ltd., K.L.M. (West Indies Division), Pan-American World Airways Inc., Trans-Canada Air Lines, Aerovías Nacionales de Colombia S.A. (AVIANCA) and Compañía Cubana de Aviación S.A. Montego Bay Airport is also used by some of these lines and by Delta Chicago and Southern Airlines in the tourist season.

HEALTH

Public health has improved during the last 30 years, and disease rates compare favourably with those of the United States and Canada. The infant mortality rate is the second lowest in the British Caribbean region.

There were 21 general hospitals with a total of 2,440 beds in 1953, and 129 hospital out-stations and dispensaries. A hospital attached to the University College of the West Indies, which provides accommodation for 290 patients, was opened in 1952. Specialist services are available at the Kingston General Hospital.

EDUCATION

In 1953 there were 714 primary schools with 218,513 pupils and 27 secondary schools with 7,917 pupils. The Kingston Technical School had 528 students in the same year. There are four training colleges for teachers, and a School of Agriculture, established in 1910, to train students in practical agriculture.

At the 1946 Census 76 per cent of the population over the age of ten was literate, and the rate has probably increased since that date. The rate of literacy in the larger British West Indian islands—Jamaica, Trinidad and Barbados—and in British Guiana is high compared with that of Latin American countries, with the exception of Argentina. The criticism has been made, however, that education in the Region tends to be too academic, and one of the recommendations of the World Bank's Mission's Report on Jamaica was that greater stress should be given to education of a more utilitarian character.

LEARNED SOCIETIES AND LIBRARIES

British Council, The: 13 East Street, Kingston; small reference library; Rep. L. G. THOMAS.

Institute of Jamaica: Kingston, f. 1879; comprises a general library of 30,000 vols.; the West India Reference library of over 20,000 items; two junior centres; Museum (Natural History, History and Arts and Crafts); Colonial Archives and School of Arts and Crafts, Chair. Board of Governors H. A. LAKE; Dir. C. BERNARD LEWIS, B.A.; publs. *Science Series*, *Occasional Papers of the Museum of the Institute of Jamaica*, *Glimpses of Jamaica Natural History*

THE BRITISH COMMONWEALTH

THE LEEWARD ISLANDS

GOVERNMENT AND ADMINISTRATION

THIS West Indian group consists of: Antigua, Barbuda and Redonda; the British Virgin Islands; Montserrat; and Saint Christopher, Nevis and Anguilla. The total area is 423 sq. miles, supporting an estimated population of 124,330 in 1954.

The Leeward Islands are a Federation (established in (1871) bringing together the four Presidencies of Antigua, Montserrat, St. Christopher-Nevis-Anguilla, and the British Virgin Islands. Each of the Presidencies has an Executive Council and a Legislative Council. At the centre there is a Federal Executive Council and a General Legislative Council.

There is a majority of elected (now called representative) members on the General Legislative Council, there being five representative members each from the Presidential Legislatures of Antigua and St. Kitts-Nevis-Anguilla, two representative members from the Presidential Legislature of Montserrat and one representative member from the Presidential Legislature of the Virgin Islands, a total of 13 members. The representative members on the General Legislative Council are chosen by the unofficial members of the Presidential Legislatures from amongst the elected members of those Legislatures. The official members of the General Legislative Council are the Colonial Secretary, the Administrators of Antigua and St. Kitts-Nevis-Anguilla, the Attorney-General, the Commissioners of Montserrat and the Virgin Islands, and two persons holding office of emolument under the Government of the Colony or of any Presidency, appointed by the Governor, a total of eight members. There are also two nominated members, appointed by the Governor from amongst the nominated members of the Presidential Legislatures. The Governor is President of the Council and has a casting, but not an original vote.

The Federal Executive Council comprises four *ex-officio* members and ten appointed members, of whom three are official and seven unofficial.

The General Legislative Council has concurrent legislative powers with the local legislatures on certain subjects specified in the Act. Any island enactment on such subjects is void if repugnant to an enactment of the General Legislature, or may at any time be repealed or altered by one.

It was announced on December 21st, 1954 that, in accordance with the wishes of the Leeward Islands, the present Federal Government would be abolished as soon as practicable. The four Presidencies of the Leeward Islands will then become separate Colonies, the whole group remaining under one Governor. It has further been agreed that ministerial systems should be introduced in Antigua and St. Christopher-Nevis-Anguilla, on the lines of the constitutions already in force in Barbados, Trinidad and Jamaica. It is expected that these changes will take place in 1956.

Governor and Commander-in-Chief: SIR KENNETH BLACKBURNE, K.C.M.G., O.B.E.

FEDERAL EXECUTIVE COUNCIL

President: The GOVERNOR.

Ex-Officio Members: The COLONIAL SECRETARY, Lt.-Col. A. LOVELACE, M.B.E., M.C. (ADMINISTRATOR OF ANTIGUA)

Lt.-Col. The Hon. H. A. C. HOWARD (ADMINISTRATOR OF ST. KITTS-NEVIS-ANGUILLA), The ATTORNEY GENERAL.

Appointed Members (Official): CHARLESWORTH ROSS (COMMISSIONER OF MONTSERRAT), (Vacant) (COMMISSIONER OF THE VIRGIN ISLANDS), The ECONOMIC AND FINANCIAL ADVISER

Other Appointed Members: V. C. BIRD, E. H. LAKE, R. L. BRADSHAW, M. H. DAVIS, O.B.E., J. C. L. WALL, H. R. PENN, M.B.E., S. T. CHRISTIAN, O.B.E.

GENERAL LEGISLATIVE COUNCIL

President: The GOVERNOR

Official Members: The COLONIAL SECRETARY, The ADMINISTRATORS OF ANTIGUA AND OF ST. KITTS-NEVIS-ANGUILLA, The ATTORNEY-GENERAL, The COMMISSIONERS OF MONTSERRAT and of the VIRGIN ISLANDS, The ECONOMIC AND FINANCIAL ADVISER, The ACTING FEDERAL TREASURER

Nominated Members: S. T. CHRISTIAN, O.B.E., P. E. RYAN.

Representative Members: 13

CIVIL ESTABLISHMENT

Colonial Secretary: P. E. MACDONALD, C.M.G.

Attorney-General: P. C. LEWIS, Q.C.

Economic and Financial Adviser: C. S. ROBERTS.

Commissioner of Police: Lt.-Col. E. M. V. JAMES.

For LEGAL SYSTEM see Windward Islands.

TRADE AND FINANCE

The Leeward Islands are trying to attract a large number of tourists. The balance of trade has been adverse since 1948, except for the two years 1952 and 1953. Budget deficits, which occur in most years, are met by grants-in-aid from the U.K. Government.

ANTIGUA

BARBUDA AND REDONDA

The island of Antigua at 17° 6' N. 61° 45' W., is some 108 sq. miles in extent, with a population in 1954 of 50,300. St. John's (11,000) is the capital.

In the centre of the island there is comparatively level land, but in the south-west a mountainous belt rises in places to over 1,300 ft. whilst an undulating area with hills from 250 to 400 ft. in height constitutes the north-eastern portion. The three topographical units are of differing geological character. The southern mountains are composed of old igneous material, whilst the central portion of the island is based on eroded volcanic material—often clays and marine limestones. This latter type of rock is also dominant in the north of the island, where the beds consist of a series of earthy and compact limestones of great thickness.

Cultivation in the island is confined to the areas of clay (central part) where sugar is extensively grown, though total acreage is small. There are two sugar factories. Estimated production of sugar in 1955 is 22,000 tons and the estimated quantity available for export 20,300 tons.

THE BRITISH WEST INDIES

Sea Island cotton is also an important crop, production in 1954 amounting to 950,000 lb. of lint.

A factory for the extraction of cotton seed oil and by-products is being built by the Industrial Development Board. When in operation it will absorb the cotton seed produced on the island and meet a large part of the local demand for edible oil. In addition to sugar cane and cotton cultivation, subsistence farming and the raising of livestock are carried on.

The islands of Barbuda and Redonda lie about 30 miles to the north of Antigua. Barbuda has an area of approximately 63 sq. miles and Redonda has an area of half a sq. mile and is uninhabited. The two islands are composed wholly of coral limestones, resting on an ancient volcanic base. Because of the flat nature of the land, rainfall is at a minimum—as is also in consequence surface water. Only a meagre subsistence farming is possible.

Barbuda was the private property of the Codrington family from 1691 until 1872

TRANSPORT

There are 62 miles of main roads and 85 miles of secondary roads

Coolidge Airfield is used mainly by Pan American World Airways, British West Indian Airways and Air France

HEALTH

In 1952 there was hospital accommodation for 96 in-patients. Dispensaries and health centres are also maintained by the Government

EDUCATION

There are 30 Government primary schools, 1 grant-aided and 6 recognised primary schools, with a total enrolment of 10,574, 4 grant-aided and 1 denominational secondary school, with a total of 1,248 pupils; and a Teachers' College with accommodation for 40 women students

THE BRITISH VIRGIN ISLANDS

This group consists of 36 islands, 11 of which are inhabited. The total area is 67 sq. miles. with an estimated

LEEWARD ISLANDS

population in 1954 of 7,530. The Virgin Islands form a part of the main Lesser Antilles arc, with Tortola as the principal unit. The capital is Road Town (population 1,000).

In common with neighbouring islands, the Virgin group consists largely of folded cretaceous and older rocks overlain by thick limestones and other deposits of the Tertiary period.

The economy of the British Islands is largely concerned with cattle grazing, cotton-growing and fishing. Charcoal is produced by burning the meagre scrub. All external trade is directly handled by St. Thomas in the United States Virgin Islands, with which mail and passenger services are maintained by launches.

MONTSERRAT

The island of Montserrat has an area of 32 sq. miles containing a population of 14,145 (1954). The island, approximately 11 miles long and 7 at its widest, is composed chiefly of volcanic materials—hot springs and dying volcanoes being ample present-day evidence of its past geological history. It has a very rugged topography, the highest point being about 3,000 ft.

About one-third of this mountainous island is under cultivation, very small farms being the rule. The principal crop is Sea Island cotton, though tomatoes, limes and vegetables are also prominent exports. Vegetables are mainly grown on very small farms for both home and export needs. Plymouth, the chief port and town, has a population of about 2,500.

TRANSPORT

There are 33 miles of main roads and 30 miles of secondary unsurfaced roads. Irregular calls are made by vessels of the Alcoa Steamship Company and the Harrison Lines, and there is a motor launch service with Dominica and Barbados.

A regular weekly air service is operated between Montserrat and Antigua.

HEALTH

There is accommodation at the Government Hospital for about 55 beds. Health centres and outposts are maintained.

THE BRITISH COMMONWEALTH

EDUCATION

The number of Government primary schools is 12. In addition there is 1 aided private primary school. The Government secondary school had 129 pupils in 1953.

ST. CHRISTOPHER-NEVIS-ANGUILLA

St. Christopher

Commonly known as St. Kitts, this island is about 68 sq. miles in extent, and measures approximately 28 miles in length and 5 in width.

Most of St. Kitts is composed of a volcanic ridge rising to over 4,300 ft. The basement rocks of the island (lavas and other igneous material) are exposed only in places, being for the most part covered with more recent volcanic deposits especially ash. The topography of the island is therefore varied, with level land very restricted in amount.

Despite this topographical drawback, every inch of the island where possible is cultivated, as climatic conditions are very favourable. The economy of the island is based mainly on sugar of which about 51,000 tons are produced per year. There is one sugar factory located in Basseterre. Sea Island Cotton is also grown, production being approximately 750,000 lb. a year.

The salt ponds which evaporate sea brine provide the main industrial pursuit of St. Kitts.

The chief port and capital of the island is Basseterre, with a population of approximately 13,600.

Nevis

This lies but three miles to the south-east of St. Kitts and is 50 sq. miles in area.

The island is composed of one single volcanic mountain over 3,500 ft. in height, hot springs and other volcanic phenomena being present. A very destructive earth tremor took place in 1952.

Cultivation is confined to very small farms which once prospered exclusively on sugar. But because of competition from St. Kitts, Sea Island cotton and coconuts have become the staple crops, though some sugar is still produced.

Anguilla

Some 34 sq. miles in extent, Anguilla lies to the north of St. Kitts.

The island has a basement of old igneous rocks on which limestones rest unconformably and the surface, like that of Redonda Island, is low-lying and for the most part quite flat. Because of the low elevation the rainfall is precarious, and surface water lacking. A meagre subsistence agrarian economy is the result. The estimated population of the three islands in 1954 was 54,800.

TRANSPORT

In St. Kitts there are approximately 50 miles of roads, in Nevis approximately 63 miles and in Anguilla 35 miles. One airport, near Basseterre, serves the islands.

HEALTH

In 1954 there were 2 general hospitals, with 150 beds, 2 cottage hospitals with 24 beds, 10 health centres and 9 outposts. Further health centres are being built with a grant from Colonial Department and Welfare funds.

EDUCATION

There were in 1954, 33 Government primary schools, and 1 denominational aided school, with a total enrolment of 10,928 pupils. Five secondary schools (4 Government and 1 private) had 822 pupils.

TRINIDAD AND TOBAGO

GENERAL SURVEY

With an area of approximately 1,863 sq. miles, Trinidad (Trinity) measures 65 miles by 48, and is roughly rectangular in shape, with an irregular south-west extension. Located at 10° 30' N. lat. and 61° 20' W. long., it is 176 miles south-west of Barbados and about 7 miles from the mainland of South America, from which it is separated by two narrow straits.

The land may be regarded as a quadrangular plain traversed by three more or less parallel lines of hills running on a general east and west direction. The most northerly ridge (Northern Range) follows the north coast and consists of the oldest rocks occurring in the region—principally limestones but also some schists and igneous intrusions. The two parallel ranges to the south (Central Range and Trinity Hills), one crossing the middle of the island and the other following the south coast, are of geologically younger rocks (Tertiary). Associated with these Tertiary rocks, are petroleum and asphalt deposits, which usually occur in a series of domes running from east to west across the island. Escapes of gas and other material are also a feature. The famous Pitch Lake is connected with these outflowings. Highest land is found in the north of Trinidad, where heights of over 3,000 ft. are attained, and low-lying swamp is frequent along the east and west coasts.

Most of the islands of the Caribbean have two distinct rainy seasons, but Trinidad is unusual as having only one, lasting from June until December. As the prevailing winds are from the north-east (N.E. Trade Winds), the eastern side of the island has the highest rainfall—amounting in parts of the Northern Range to as much as 150 in.; while the south-western tip has under 50 in. During the wet season, two days in three are rainy. Port-of-Spain (100 ft.) has an average temperature of 77° with a range of only 3° F., while in certain deep valleys on the southern slopes of the Northern Range an even more pronounced tropical climate is found with distinctly higher temperatures. Hurricanes normally blow at intervals between August and October.

Originally, the whole of the island was forest-covered, but due to clearing of land for agricultural purposes forest is now only found in upland areas, principally the Northern Range. The swamps of the east and west coasts, with their typical mangrove vegetation, are an important feature. Because of the varied underlying rock formations, soils are generally rich and productive, though extensive belts of infertile sands on the east and west littorals are also present. Hence, in the main, the island offers favourable conditions for agriculture. Though about 40 per cent of the island is still under forest this is confined principally to the highland areas, and in particular to the Northern Range, where extensive teak plantations are found.

The principal port is the capital, Port-of-Spain (1953 population 111,150) which is limited to accommodating vessels of up to 29,000 tons.

Tobago (11° N. lat., 60° W. long.) lies 21 miles north-east of Trinidad and has an area of approximately 116 square miles. The population of Tobago was 32,600 in 1953, Scarborough, the chief town, having a population of 1,034.

The island of Tobago rests on the north-easterly extension of the same continental shelf which supports Trinidad. The hills of Tobago, therefore, correspond in structure and rock character with the northern mountains of Trinidad, both being wholly composed of metamorphic (heat-changed) rocks, with numerous igneous intrusions. The rest of Tobago is composed of limestone. A ridge (Main Ridge) traverses the northern part of the island from north-east to south-west, having a culminating height of 1,800 ft. There is a small low-lying plain in the extreme south-west.

The climate of Tobago is similar to that of Trinidad, though the mean average temperature is higher (85° F.) and the temperature range greater (81–88° F.). The annual rainfall total is about 80 in. over most of the island, there being distinctly less of a "rain shadow" effect than in the lee of the hills in Trinidad.

Most of the island is extremely well wooded, but there are also large plantations of cocoa and coconuts on the coasts, and subsistence agriculture and fishing are important occupations. Most if not all of Tobago's trade is with Trinidad, and consists primarily of the delivery of copra, cocoa, livestock, poultry, vegetables, coconut oil and fibre, all for re-export.

An estimate of the population of Trinidad and Tobago in 1954 gave the figure of 697,550 persons. The 1946 Census gives the following distribution of the various racial groups. African 47 per cent, East Indian 35 per cent, Mixed 14 per cent, European 3 per cent, Chinese 1 per cent.

R D.

ECONOMIC DEVELOPMENT

Land Use and Agriculture. Distribution of area under cultivation in Trinidad and Tobago was estimated in 1953, at 310,000 acres, and the area under pastures at 15,000 acres. Semi-derelict crops and shifting cultivation account for 115,000 acres, abandoned tree crops, bush and secondary growth for some 125,000 acres, while the area under forest is 578,050 of which 552,050 are State forests, the rest being privately owned.

The main export crops are sugar cane, cocoa, coffee, citrus fruits and coconuts. A small quantity of Tonka beans is also exported. The subsistence crops are similar to those grown in other parts of the West Indies. About 90,000 acres are under *sugar cane* grown mainly on the western side of the island, on estates and by small farmers. Crop season employment on sugar estates in 1954 was 19,400 persons, and out-of-crop employment 15,373 persons. Both yields per acre and total tonnage produced on small holdings were less than those of the large estates. Estates' and farmers' cane are milled by seven sugar factories. In 1954 production reached a peak of 172,793 tons. It was estimated that, after the local market had been provided for, some 169,793 tons would be available for export, which exceeds the quota allotted to Trinidad under the Commonwealth Sugar Agreement by 11,893 tons. The Sugar Manufacturers' Association, therefore, warned sugar growers in August, 1955 that, although the bulk of the excess had been disposed of in the export market, some 3,000 tons would have to be carried over to the 1955–56 crop, and farmers should not continue to produce more cane than the quantity covered by existing

THE BRITISH COMMONWEALTH

contracts. *Cocoa* is grown on 120,000 acres on small holdings and plantations, which carry out the initial processing of the beans. The crop is marketed chiefly through licensed dealers. Production declined during the thirties as a result of low prices, and the ravages of a disease affecting the plants. In order to arrest the decline, the Government instituted a Cocoa Subsidy Scheme in 1940 to assist planters to replant cocoa on their good soil and plant other crops or raise livestock on poorer land. The Scheme is operated by a Cocoa Board which maintains plant-propagating stations and distributes plants to growers. A determined effort is also being made to eliminate disease. The 1936-38 average of exports, however, at 14,440 tons has not been reached in the post-war period, in spite of the high prices now being offered, and efforts to rehabilitate the industry. Exports in 1954 were 7,875 tons. *Citrus*. As in Jamaica the growing of citrus fruit on a commercial scale was started in the early thirties with the object of reducing the island's dependence on sugar and cocoa. With the establishment of the Co-operative Citrus Growers' Association of Trinidad and Tobago in 1932, the export of fresh and canned fruit and juices developed. The Cocoa Board has encouraged the planting of citrus on land which has become too exhausted to support cocoa. Estimated acreage under oranges and grapefruit in 1954 was 16,000 (9,000 acres of which were under grapefruit). The Mission, which reported on the West Indian citrus industry in 1955,¹ found that it was efficiently organised in Trinidad, that it absorbed a high proportion of labour and a high rate of capital investment. About 30 per cent of the oranges grown are consumed in the local market. The remainder is exported, chiefly to Barbados, British Guiana and Bermuda. Most of the grapefruit are exported. The value of citrus fruit in export trade is, however, small compared with that of sugar and cocoa. *Rice* is grown mainly on small holdings, by the East Indian community. Accurate figures of production are not available, but it is estimated that about half the island's requirements are produced locally. The crop is raised mainly on swamp lands, but there is also some upland cultivation. The Government has recently received a grant from the Special Development and Welfare Rice Allocation to be spent in surveys in the Caroni and Nariva swamps, where it is believed that the soil might be suitable for rice cultivation. *Coconuts* cover approximately 40,000 acres. Production is mainly on plantations. The Coconut Growers' Association operates a plant for the processing of the fruit into copra and copra products.

Mining. Trinidad's more favoured economic position compared with the other B.W.I. islands is largely due to the presence of extensive deposits of petroleum, natural gas and asphalt. The petroleum industry is the largest earner of foreign exchange, and one of the largest employers of labour, with 17,192 persons on its payroll in 1954. The deposits, located in the south-east and south-west of the island, are mined by eleven companies. Three companies operate refineries. Quantities of crude petroleum are imported from the mainland (from Venezuela and Colombia) and refined for re-export. Production of crude oil increased from an average of 2,078,000 tons a year in 1936-38, to 3,250,000 tons in 1954. Daily average production per well, however, has been declining since 1941 and the increase in overall production has resulted from the drilling of a larger number of less profitable wells. Imports of crude and production of refinery products have shown an even greater increase. In 1936-38 the yearly average quantity of crude imported for refining locally was only 65,000

tons, which had risen to 2,315,400 by 1954. Production of refinery products, 2,597,100 tons in 1939, had reached 4,942,100 tons in 1954. The main market for crude in the latter year was Canada; the main markets for petroleum products were the United Kingdom, Brazil and Argentina. Kerosene and motor petrol are exported to other British West Indian territories. A Table in the Statistical Section shows the quantities of crude oil produced and imported, and the export of refinery products.

Production of natural gas was 38,494 million cubic feet in 1954, as compared with 34,596 million cubic feet and 31,503 million cubic feet in 1953 and 1952, respectively.

Asphalt is produced from the pitch lake at La Brea. Total production for the period 1950-54 was (in thousand tons): (1950) 132.8, (1951) 154.7; (1952) 170.6; (1953) 143.2; (1954) 142.1. Exports in the form of dried asphalt and asphalt cement over the same period were 70.1, 84.6, 104.6, 76.3 and 72.8 thousand tons. Bauxite imported from Surinam is treated at Port Tembladora, west of Port-of-Spain and re-shipped to the United States.

Employment. According to a mid-1951 estimate, based on data obtained from a Parliamentary Survey for the revision of the cost-of-living index, the total estimated working population was 203,290, distributed as follows: Agriculture, Forestry and Fishing 64,760, Mining and Quarrying 11,770, Manufacturing 30,350; Government Services 24,940; Personal and Recreative Services 19,520, Commerce 15,960; Construction 10,600, Transport; 9,980, Other Occupations 15,410.

Manufacturing Industry. The manufacture of light consumer goods is already being undertaken on a fairly large scale. As in Jamaica, greatest progress has been made with the processing of local materials, but the manufacture of shoes and cotton textiles is growing. The long list of manufactured products is evidence of the progress already made. These include petroleum products, sugar, rum and alcohol, Angostura bitters, canned fruit juices, condensed milk, confectionery, biscuits, margarine, lard and edible oils, essential oils (mainly lime oil), cigarettes, soaps, matches, paper and paper board from bagasse, paints, optical appliances, glass containers and concrete products. There are facilities for general engineering and foundry work, and ship and aircraft repair work. A cement factory was established in 1954 by the Portland Cement Company in association with the Colonial Development Corporation. The factory has an annual capacity of 100,000 tons of cement. A company is now engaged in the manufacture of sulphur for export. Due largely to its proximity to the other islands of the Eastern Caribbean and to British Guiana, Trinidad has been able to build up a not inconsiderable trade with these territories. In addition it exports crates and boxes to British Honduras and Bermuda. The trade in manufactured goods is likely to grow with the expansion of manufacturing in Trinidad, and with the development of inter-island communications.

In order to attract foreign capital the Government passed in 1950 the Aid to Pioneer Industries Ordinance, which granted to industries considered to be "pioneer", exemption from income tax and import duties on machinery and equipment during the first five years of operation.

Trade. Between 1941 and 1947 inclusive, the visible balance of trade was unfavourable. In 1948, 1950, 1953 and 1954 exports exceeded imports. In 1954 Trinidad obtained 45.9 per cent of its imports from, and shipped 51.5 per cent of its exports to the sterling area. Other percentage distributions were U.S.A. and Canada—imports 17.8 per cent, exports 10.8 per cent; other American Account countries—imports 26.6 per cent, exports 1 per

¹ *The West Indian Citrus Industry*. Report of a Fact-Finding Mission, February 25, 1955.

THE BRITISH WEST INDIES

cent; non-dollar Western Hemisphere countries—imports 0.4 per cent, exports 9.7 per cent; O.E.E.C. countries—imports 8 per cent, exports 11.1 per cent; other imports 1.4 per cent; other exports including ships' stores and bunkers 15.9 per cent. Percentage of total imports from the five largest suppliers was: United Kingdom 37.9, Venezuela 25, Canada 9.2, U.S.A. 8.6, and the Netherlands and Netherlands Possessions 3.9. The percentage analysis of exports for 1954 showed that crude petroleum and petroleum products accounted for 75 per cent of the total value, and sugar and rum for 11.4 per cent.

Finance and Development. The Table in the Statistical Section shows total revenue and expenditure for the period 1950-54 and the amounts collected in direct taxes (i.e. income tax on companies and individuals) and customs and excise duties. About one-third of revenue is contributed by the oil companies. Estimated revenue and expenditure for 1955 are \$78.5 million and \$75.2 million respectively; proposed expenditure from surpluses (\$12.1 million) and loan funds (\$9.6 million) is included.

A Five-Year Plan was drawn up for the period 1951-55 the cost of which, estimated at \$38 million, was to be covered by C.D. and W. grants (\$4.8 million), surplus balances (\$6 million) and loan funds (\$28 million). Revision of the Plan in 1954 necessitated an increase in the original estimates by approximately \$14 million.

Communications. The Trinidad Government Railway operates 108 miles of railway linking Port-of-Spain with Arima in the east of the island, and with San Fernando in the south-west. The chief branch lines are from the Port-of-Spain/San Fernando main line to Rio Claro.

In 1953 there were 1,000 miles of main roads and 1,318 miles of secondary roads, many of them surfaced with pitch.

The main airfields are Piarco, approximately 16 miles from Port-of-Spain, and Crown Point on Tobago. There are a number of airstrips, two of which are owned by the United British Oilfields of Trinidad Limited.

THE CONSTITUTION

The 1924 Constitution provided for a Legislative Council of 7 elected members, 6 nominated and 12 official members. A change was introduced in 1941 when provision was made for an unofficial majority by increasing the number of elected members to 9 and reducing the number of official members to 3. At the same time, the unofficial membership of the Executive Council was increased. In March, 1946, universal adult suffrage was introduced and women became eligible for the first time for membership of the Legislative Council. Further advances towards self-government were made in the Constitution of 1950, which provided for elected majorities in both the Legislative and the Executive Councils. The former now consists of 26 members (of whom 18 are elected, 5 are unofficial nominated and 3 are *ex-officio*). The Council is presided over by a Speaker appointed by the Governor from outside its members. The Executive Council, the principal instrument of policy, consists of the Governor as Chairman, 3 *ex-officio* members, 1 nominated unofficial member and 5 unofficial members elected by the Legislative Council from among its elected members. The unofficial members of the Executive Council have now taken over certain ministerial duties. The Governor has a casting, but not an original vote.

TRINIDAD AND TOBAGO

THE GOVERNMENT

Governor and Commander-in-Chief: SIR EDWARD BEETHAM, K.C.M.G., C.V.O., O.B.E.

GORDON, (Surveys and Sub-Intendent of Crown Lands), A. A. PEAT (Medical Services), W. A. GRINSTED (British Caribbean Meteorological Service), W. L. OSBORNE, O.B.E. (Works and Hydraulics).

Commissioners: N. P. BOWEN (Co-operative Development), J. A. BAIN (Industry and Commerce), C. I. WILLIAMS (Inland Revenue), J. A. M. BRAITHWAITE (Labour), W. FUNG (Local Government), E. H. F. BEADON, G.B.E. (Police).

POLITICAL PARTIES

Party affiliations are not so clearly defined in Trinidad as in some of the other West Indian territories—notably Jamaica; and greater importance attaches to personalities than to programmes. There are, however, the **Party of Political Progress**, of conservative tendencies, led by Dr. A. G. FRANCIS; the Party of URIAH BUTLER, leader of the oilfield workers; and other smaller groups.

THE BRITISH COMMONWEALTH

THE LEGAL SYSTEM

The Supreme Court of Trinidad consists of the President, designated the Chief Justice of Trinidad and Tobago, one First Puisne Judge and 5 Puisne Judges. Its jurisdiction corresponds to that of the English High Court of Justice. Civil actions and proceedings are usually heard and determined by a single Judge, but there is provision for such matters to be tried by a Jury of nine. In Port-of-Spain the Civil Court sits continuously except during the vacations.

Appeals are heard by the Full Court constituted by two, occasionally by three Judges; and by the Court of Criminal Appeal. Appeal lies from the Supreme Court to the West Indian Court of Appeal (which is usually constituted by any three Chief Justices of the Colonies of Trinidad, British Guiana, Barbados and the Leeward and Windward Islands, and sits in the Colony from which the appeal comes).

District Courts. The Chief Magistrate, 2 Senior and 16 stipendiary magistrates preside over the District Courts established in various parts of the Colony. In these Courts the work of the Petty Civil Courts (which have jurisdiction to try civil matters where the cause of action does not exceed \$240), the Magistrates' Courts and the Coroners' Courts is conducted.

Chief Justice: Hon. Sir JOSEPH MATHLIEU PEREZ, Q.C.

Puisne Judges: Hons S. E. GOMES, E. M. DUKE, F. J. CAMACHO, C. V. H. ARCHER, P. WATKIN-WILLIAMS (There is one vacancy.)

BROADCASTING

The Trinidad Broadcasting Company Ltd., a subsidiary of Broadcast Relay Service (Overseas) Ltd., of London, operates the transmitting station Radio Trinidad. This station broadcasts Government and commercially sponsored programmes and selected B.B.C. Overseas transmissions. A Regional Broadcasting Officer to the Eastern Caribbean was appointed in 1951, to be responsible for the production of "live" and recorded programmes, and for the general direction of efforts to increase the use of broadcasting time by the Governments of Trinidad, Barbados and British Guiana. An extensive system of wired broadcasting is operated by Radio Distribution (Trinidad) Ltd. (also a subsidiary of Broadcast Relay Service (Overseas) Ltd.) in Port-of-Spain and San Fernando.

FINANCE

BANKING

Barclays Bank D.C.O.: Head Office 54 Lombard Street, E.C.3, branch in Port-of-Spain, Manager N. J. ROWLAT, 14 other offices in Trinidad, one in Tobago (Manager M. L. E. THOMAS).

Canadian Bank of Commerce: Head Office 25 King Street West, Toronto 1, Ontario, Port-of-Spain Office 72 Marine Square; Manager F. C. W. HYDE.

Gordon Grant and Co. Ltd.: 6 St. Vincent Street, Port-of-Spain; Managing Director C. S. BUSHE.

Royal Bank of Canada: Head Office 360 St. James Street West, Montreal; Manager, Port-of-Spain Office, G. V. S. SHARPE; 2 other branches in Trinidad.

Trinidad Co-operative Bank: 80-84 Charlotte Street, Port-of-Spain; f. 1914; cap. £30,000; Managing Dir. PERCY A. PHILIP; Secretary-Manager S. A. WATKES.

INSURANCE

The leading British and a number of U.S. and Canadian companies have agents in Port-of-Spain. Local insurance companies include **Cocoa Planters' Assets Association of Trinidad Ltd.**, and the **Trinidad Motor Insurance Co. Ltd.**

TRADE AND INDUSTRY

Cocoa Planters' Association of Trinidad Ltd.: P.O. Box 346, Port-of-Spain; f. 1915; 197 members; Chairman J. de VERTEUIL; Manager JAMES FORBES.

Coconut Growers' Association: Port-of-Spain; Pres. E. VERNON WHARTON, C.B.E.; Sec. Manager F. D. GRAY.

Co-operative Citrus Growers' Association of Trinidad and Tobago Ltd.: Port-of-Spain; f. 1932; 280 mems.; Pres. D. McBRIDE, O.B.E.; Secretary F. W. ALLEN.

Oilfields Employers' Association of Trinidad: 14D Royal Road, San Fernando; 6 mem. companies; Manager P. HOBSON; Sec.-Treasurer G. R. GOUDE.

Petroleum Association of Trinidad: Port-of-Spain; Pres. J. B. CHRISTIAN.

Shipping Association of Trinidad: Port-of-Spain; Pres. F. CLARK.

Sugar Manufacturers' Association of Trinidad: 80 Abercromby Street, Port-of-Spain; f. 1920; 6 mems.; Chairman Sir HAROLD ROBINSON; Sec. W. B. PYETT.

Trinidad Chamber of Commerce, Inc.: Port of Spain, Pres. W. G. GRANT.

TRADE UNIONS

There are some 40 registered workers' unions, the two largest of which are **The Federated Workers' Trade Union** and **The Oilfields Workers' Trade Union**. Most of the active unions are members either of the **Trinidad and Tobago Federation of Unions**, affiliated to the I C F T U or **The Trinidad and Tobago Trades Union Council** (which disaffiliated itself in November 1953 from the World Federation of Trade Unions).

TRANSPORT

Trinidad is well served by shipping companies. The chief lines whose vessels call at Port-of-Spain are Harrison Lines, Canadian National Steamship Co., Elders and Fyffes Ltd., Moore McCormack Lines Inc., Blue Star Line, Cunard Steamship Co. Ltd., Compagnie Générale Transatlantique, Horne Lines Ltd., Alcoa Steamship Co. Inc., Compañía Anónima Venezolana de Navegación, Saguenay Terminals Ltd., Royal Netherlands Steamship Co. Inc., Argentine State Line, American Pioneer Lines, Furness Lines, Royal Mail Lines and Nourse Line.

AIR LINES

The following air lines operate services to Port-of-Spain or maintain offices there:

British West Indian Airways Ltd.: Airways House, 17, Chacon Street, P.O. Box 604, Port of Spain incorporated 1948; although the shares are entirely owned by B O A C, the company operates as a separate entity with its own directors; points served include Kingston (Jamaica), Miami, Belize, Puerto Rico, Barbados, Caracas, Grenada, and Georgetown; Gen. Manager J. H. RAHR.
and Aerolíneas Argentinas, Real-Aerovías Brasil, Air France, British Guiana Airways Ltd., British Overseas Airways Corporation, KLM (West Indies Division), Línea Aeropostal Venezolana, Pan American World Airways and Trans-Canada Air Lines.

HEALTH

There are 17 Government hospitals including three general and eight district ones, as well as hospitals special-

ising in certain conditions and diseases, with a total number of 3,778 beds. Health centres and rural dispensaries are maintained in the townships and larger villages.

EDUCATION

Responsibility for educational policy rests with the Minister of Education and Social Services, subject to the approval of the Governor in Executive Council. The Minister is advised by a Director of Education, who is himself advised by an Education Board. Primary schools are conducted by the Government and by denominational bodies. Primary education is free and compulsory for all children between the ages of 6 and 12 who live within two miles of a Government or Assisted School.

At the end of 1953 there were 363 primary schools (66 Government and 297 assisted denominational), 8 intermediate schools (2 Government and 6 assisted), 138 private primary (non-assisted), 14 secondary schools (2 Government and 12 assisted) and 16 private (non-assisted) schools providing secondary education. The number of pupils was: primary 130,974; intermediate 6,057, Government and assisted secondary 6,944, and private secondary 4,637.

There are three Training Colleges for teachers (one Government and two denominational).

A Board of Industrial Training is responsible for organising the training of apprentices. The oil companies also operate training schemes, and part of the cost of the new Technical College at San Fernando, opened in 1954, was borne by three oil companies operating in the Colony.

Courses for adults are organised by the Education Department and by the Extra-Mural Department of the University College of the West Indies under a Resident Tutor.

LEARNED SOCIETIES AND RESEARCH INSTITUTES

Agricultural Society of Trinidad and Tobago: 27 Henry Street, Port-of-Spain, 450 mems.; Hon. Pres. H. E. THE GOVERNOR; Sec. JOSHUA E. WARD.

THE BRITISH COMMONWEALTH

Trinidad Music Association: Bishop Anstey H.S., Abercromby Street, Port-of-Spain; f. 1941; 300 mems.; Pres. Hon. ALBERT GOMES, Sec. Miss O. ABDULAH.

LIBRARIES

Carnegie Free Library: Harris promenade, San Fernando; Chair. The MAYOR of SAN FERNANDO; Librarian A. WARNER, B.A., A.L.A.

Central Library of Trinidad and Tobago (County Library Dept. of the Government); "Whitehall", Maraval, Port-of-Spain (P.O. Box 547); f. by grant from the Carnegie Corporation, later supplemented by the British Council 1942-49; 90,000 vols; Chairman Advisory Board Rev F. H. SWAN.

Eastern Caribbean Regional Library: P.O. Box 67, Port-of-Spain; f. 1941; 75,000 vols.; Regional Dir. for East Caribbean S. W. HOCKEY, F.L.A.

Imperial College of Tropical Agriculture Library: St. Augustine; f. 1926, approx 21,000 bound vols; 78,000 unbound pamphlets and periodicals; Head of Library and Publications Dept Miss M. E. M. PRICE.

Trinidad Public Library: Knox Street, Port-of-Spain; f. 1851; 60,000 vols; Chair. Hon ALBERT GOMES; Librarian and Sec. C. N. COMMA; publ. *Annual Report*.

COLLEGES

Eastern Caribbean Farm Institute: Centeno, Arima; opened 1954. The Institute was built with funds provided by the Development and Welfare Organisation and by the Governments of Trinidad, Barbados and the Leeward Islands, and it receives students from those Colonies and British Guiana. It offers training in practical agriculture.

Imperial College of Tropical Agriculture: St. Augustine, Trinidad. Founded as the West Indian Agricultural College 1921 on the recommendations of a Committee appointed in 1919 by Viscount Milner. In 1924 its name was changed to The Imperial College of Tropical Agriculture Incorporated by Royal Charter 1926.

President: Sir ERIC MACFADYEN, M.A., J.P.

Chairman of Governing Body: Professor Sir F. L. ENGLEDDOW, C.M.G., F.R.S., M.A., B.Sc.

Principal: G. A. C. HERKLOTS, M.Sc., Ph.D., F.L.S.

Dean and Registrar: G. G. GIANETTI, M.A., Dip. Agric. (ECON).

Bursar: J. SHIELDS, F.C.I.S.

Secretary: London Office: Mrs. N. H. YOUNG, M.B.E., 40 Norfolk Street, London, W.C.2.

Library: *see above*.

Number of students: 93.

Publication: *Tropical Agriculture* (quarterly; General Editor: G. B. MASEFIELD, M.A., A.I.C.T.A.).

WINDWARD ISLANDS

GOVERNMENT AND ADMINISTRATION

THE WINDWARD ISLANDS consist of the four islands of Dominica, Grenada, St. Lucia and St. Vincent, together with several smaller islands known as the Grenadines, which lie between St. Vincent and Grenada and are administered partly by these islands.

The four islands are grouped for administrative purposes under one Governor, who is normally resident in Grenada. The Government of each of the colonies is administered by a resident Administrator, subject to the instructions of the Governor. Each island retains its own institutions and there is no common Legislature, revenue nor tariff. Their present Constitutions date from 1951. In each colony there is a Legislative Council (elected by universal adult suffrage), presided over by the Administrator who has a casting vote only, and consisting of 2 official members and 11 unofficial members, of whom 3 are nominated and 8 are elected. There is also an Executive Council consisting of an official President, 3 *ex-officio* members, 1 official member nominated by the Governor and 4 unofficial members of whom 1 is nominated and 3 are elected.

Since 1954 some departmental responsibility has been assigned to elected members. New constitutions providing for the introduction of a ministerial system have been approved in principle.

There is a joint High Court for the Windward and Leeward Islands, consisting of a Chief Justice and three Puisne Judges.

Governor and Commander-in-Chief: C. M. DEVERELL, C.M.G., C.V.O., O.B.E.

Chief Secretary: L. COOLS-LARTIGUE, O.B.E.

Attorney-General: C. F. HENVILLE, Q.C.

Principal Auditor: N. CATERALL

Financial and Economic Adviser: D. J. KIRKNESS (seconded from the Colonial Office).

Labour Adviser: (Vacant).

Assistant Secretary (Finance and Economics): K. A. AUGIER

Assistant Secretary (Administrative): H. M. CHRISTOPHER.

Executive Architect: M. V. SMITH.

Administrators: H. L. LINDO (Dominica), W. MACMILLAN (Grenada), J. K. R. THORP, M.B.E. (St. Lucia), A. F. GILES, M.B.E. (St. Vincent).

THE LEGAL SYSTEM

The Supreme Court of the Windward Islands and Leeward Islands was established by Order in Council in 1939, and as from January 1st, 1940 the Supreme Court of the Leeward Islands and the Supreme Court of each of the Windward Islands ceased to exist.

The Court is presided over by a Chief Justice, and there are 3 Puisne Judges. In Grenada there are two jurisdictions of the Court: original and summary, in which latter monetary claims are limited to £50. Appeal from this Court lies in civil matters to the West Indian Court of Appeal or the Leeward Islands and Windward Islands Court of Appeal, and in criminal matters to the latter only, and from both to the Privy Council.

Chief Justice: Sir DONALD JACKSON, Kt

Puisne Judges: Hons. W. A. DATE, K. L. GORDON, J. L. WILLS

Chief Registrar: G. C. RENWICK.

DOMINICA

This island at 15° N. lat., 61° W. long. is 305 sq. miles in extent, and roughly rectangular in shape, being approximately 29 miles long (N. to S.) and at the most, 15 miles in width. Dominica is of volcanic origin, consisting of a mass of recently formed sands and igneous rocks (volcanic) resting on an older volcanic core. The surface of the island is of a very rugged nature, with a generally cliffed coastline, and the soil, owing to its volcanic origin, is extremely fertile. There are extensive forests and a considerable production of timber for local use.

Climatic conditions are regarded as distinctly favourable. Average temperatures vary from 85° F. on the coast to 55° F. at an altitude of 4,500 ft., and rainfall, whilst being generally ample, is not too heavy. Winters are especially mild, but the summer months are often humid.

About one-fifth of the total area of the island is under cultivation—exploitation being limited to the volcanic soils. The chief agricultural pursuit is the growing of citrus fruit, particularly the lime, which besides producing edible fruit and juices, also yields various essential oils which are of value in pharmaceutical products. Banana production is expanding rapidly. About 4,000 acres are at present under cultivation, and in 1954 1,387,066 stems were exported. Oranges, cocoa, vanilla and coconuts are other crops. Production is mainly carried on from small-holdings owned and worked by peasant farmers, who supply both home needs and an export trade. Exports include bananas, lime juice and oil, copra, bay oil, vanilla, cacao, citrus fruit and rum.

Because of the mountainous nature of the island, settlements are found only on the coast. Total population (1955 estimate) was about 62,000 of which less than 2 per cent was white. Roseau (12,000 inhabitants) is the chief town and port.

TRANSPORT

ROADS

There are 102 miles of surfaced roads, 244 miles of secondary roads and 332 miles of tracks. Extensive road development is taking place.

SHIPPING

Vessels of the Alcoa Steamship Company, the Canadian National Steamship Company and the West Indies Navigation Company maintain services with the island. The main ports are Roseau and Portsmouth.

HEALTH

The Health Department and its auxiliary, the Public Health Engineering Unit, is under the control of the Senior Medical Officer, who is also Chairman of the Central Board of Health. This Board is responsible to the Government for the initiation and carrying out of public health measures.

There are 5 Government hospitals, with a total of 183 beds, and 19 dispensaries throughout the island.

EDUCATION

There are 47 primary schools with a total enrolment of 11,576 pupils; 4 secondary schools with 865 pupils; and 8 private or temporary schools with 850 pupils.

GRENADA

This island at 12° N. lat., 61° W. long., with its dependencies, the Grenadines (of which Carriacou is the largest island), has an area of about 152 sq. miles. Grenada itself covering 133 sq. miles is oval in shape, and is, like Saint Lucia, extremely picturesque. Much of the surface is mountainous. There is a very rugged central mass of volcanic peaks, with accompanying phenomena of crater lakes, hot springs, and gaseous vents—which point to dormant or very recent volcanic activity, and the island as a whole is built up of accumulated volcanic debris surrounding a central core. Climatic conditions are on the whole good, but rainfall is distinctly heavier than in some other parts of the West Indies; Saint George's (the capital) on the west—drier—coast, having an annual total of 70 in., and other more exposed parts as much as 200 in.

Grenada is known as the "Spice Island"—the chief product of this kind being nutmeg, though cloves and

vanilla are also grown. These three spices, together with mace (from nutmeg) are the chief exports, but sugar, cocoa, cotton, coffee, coconuts and citrus fruit are also significant and there is some subsistence agriculture and fishing.

Grenada is the seat of the Windward Islands Government, and the wealthiest of the Windward Group. Population at end-1954 was estimated as 86,589, with St. George's (4,000) the largest town and port.

Grenada Coconut Growers' Association; Grenada Banana Co-operative Society; Grenada Co-operative Nutmeg Association; Grenada Tourist Trade Development Board (all in St. George's).

TRANSPORT

ROADS

There are approximately 472 miles of goods roads, of which about 234 miles have oiled surfaces.

SHIPPING

The chief ports are St. George's and Grenville on Grenada and Hillsborough on Carriacou. The chief lines serving the Island are the Harrison Line, the Canadian National Steamship Company and the Alcoa Steamship Company. The West Indies Navigation Company, recently-formed, also calls at Windward Island ports.

AIR LINES

British West Indian Airways Ltd. maintain a regular service with Grenada. The airfield is at Pearls, 23 miles from St. George's.

THE BRITISH WEST INDIES

HEALTH

Assistance is being provided by the World Health Organisation and U.N.I.C.E.F. in connection with an Insect Control Programme. There are 2 Government hospitals in Grenada, 21 district medical visiting stations and 3 main health centres. Carriacou also has a Government hospital and 3 medical visiting stations.

EDUCATION

Compulsory education is enforced in St. George's and 1 other area where school accommodation is considered adequate. There are 54 primary schools, of which 11 are Government, and the rest aided denominational; and 6 secondary schools (1 Government and 5 aided) with a total enrolment of 1,231.

SAINT LUCIA

This island at 14° N. lat., 61° W. long, is nicknamed "The Helen of the West Indies", owing to its picturesqueness. It is 238 sq. miles in extent and stretches some 27 miles from north to south, and 14 at its greatest width. Like its neighbours Dominica (approximately 80 miles to the north-west) and Martinique (French Windward Islands), Saint Lucia is of volcanic origin, its largest crater, Soufriere, being well known for its destructive eruption in 1766. (It should also be noted that there is another volcano named Soufriere in the adjacent island of Saint Vincent, q.v. below.) Saint Lucia is generally mountainous, reaching a culminating height of 3,145 ft., and is composed primarily of a central dome enlarged by a covering of later volcanic accumulations. The slopes of the higher ground are almost completely covered by forest and dense tropical vegetation. Climatic conditions are broadly similar to those of Dominica, but Saint Lucia (or at least parts of it) seems rather less affected by hurricanes.

The principal crop raised on the island is sugar-cane, there being three large plantations, together with numerous smallholdings. Bananas, cocoa, citrus and coconuts are important secondary crops; and furthermore there is a significant market gardening industry, the products of which, together with the crops detailed above, are largely exported. The chief industries are the manufacture of sugar and rum, edible oils, cigarettes and mineral waters, the processing of citrus fruit and cotton ginning. An oil factory at Soufriere ships refined and crude coconut oil to British Guiana, Barbados and Martinique, and has started the manufacture of soap.

The 1955 population was estimated at 86,219. Castries, the capital, has the finest natural harbour in the entire West Indies, enhanced by its relative immunity from hurricanes, and its population is 18,000 (1952 estimate).

TRANSPORT

ROADS

There is a total of approximately 371 miles of roads, of which 106 miles are main roads, 96 miles are second-class roads, and 170 miles are unclassified roads.

SHIPPING

Vessels of the Canadian National Steamship Company, the Harrison Line, the Alcoa Steamship Company and other lines call at Castries.

AIR LINES

Air services with the other islands are operated by British West Indian Airways Ltd. Charter flights are operated by K.L.M. and British Guiana Airways. There are two airports, the Vigie and the Beane Field Airports.

HEALTH

The number of beds available in hospitals is 164. Fifteen dispensaries and a number of Health Outposts are also maintained.

EDUCATION

The number of primary schools is 50, with an enrolment of 15,240. There are 2 secondary schools, attended by 650 pupils. Adult education classes are organised by the Extra-Mural Department of the University College of the West Indies.

SAINT VINCENT

This island at 13° N. lat., 61° W. long. has an area of 150 sq. miles, and, like Dominica and Saint Lucia, is also rectangular in shape, being about 18 miles long (N. to S.), and 11 broad. Population in 1954 was 75,200 of which some 18,000 lived in Kingstown, the capital.

The island exhibits an old igneous basement, with volcanic accumulations above. Soufriere (not to be confused with the Soufriere of Saint Lucia) is a huge volcanic crater, and the highest point (4,048 ft.); its last major eruption was in 1812. The island as a whole is very rugged, level land being at a minimum.

Saint Vincent is the leading world producer of arrow-root, a semi-medicinal foodstuff derived from the plant of the same name; annual production averages 9-10 million pounds. Another important crop is Sea Island cotton, which grows well under the slightly damper climatic conditions of the island. Copra, coconuts, rum, sugar, cocoa and cassava are also produced, and about one-quarter of the whole area is cropped, ownership being vested in large estates. Efforts are being made to increase the acreage under cocoa and bananas. Small tenant-holdings of one acre or more number about 4,500 and, with a few large estates, account for 45,000 acres of cropped land.

THE BRITISH COMMONWEALTH

Main exports are arrowroot, copra, bananas and cotton. In January, 1954, St. Vincent joined the Commonwealth Sugar Agreement, and was allotted an overall export quota of 1,500 long tons.

In outlook and ways of life, Saint Vincent is said to be more English than the other components of the British Windward group. A larger fraction of the population is European, some 2,400 Portuguese colonists having settled just over a century ago.

The number of beds available for general, maternity and tuberculosis cases is about 190. Dispensaries are maintained by the Government in various parts of the island.

EDUCATION

In 1954 there were 42 Government and assisted primary schools with an enrolment of 16,249 pupils, 2 Government secondary schools and 1 grant-aided secondary school, with a total of 559 pupils. A number of private institutions also maintain primary schools.

BAHAMAS

GENERAL SURVEY

GEOGRAPHY AND CLIMATE

THE BAHAMAS consist of 22 inhabited islands and over 3,000 "cays" (reefs) and rocks, extending south-east from the coast of Florida over 600 miles into the Atlantic Ocean. The total land area is 4,400 sq. miles. The main islands of the Western group are Grand Bahama, New Providence and Andros; and of the Eastern group Great Abaco, Eleuthera, Cat Island, the Exumas, Acklins Island, Mayaguana, Great Inagua, Long Island and San Salvador or Watling's Island.

Structurally the islands are of coral formation covered by wind-blown deposits. Owing to the remarkable flatness of relief there are few streams, and the water supply is largely derived from wells. The climate is very agreeable. Average winter and summer temperatures are 74° F. and 80° F. respectively, and the average annual rainfall is 50 in. The rainy season lasts from May to October, while hurricanes of varying intensity can occur towards the end of the period.

Soils are generally thin, but in places relatively fertile. Only one-eighth of the total land area is cultivated, but in favourable conditions a considerable variety of vegetables and fruits are grown. Forests are widespread and timber is one of the most valuable exports. The forests are, however, of small value in relation to their extent.

W.B.F.

HISTORICAL DEVELOPMENT

The Bahamas were the first islands sighted by Columbus in his voyage from Spain in 1492. The Spaniards made no European settlement and transported the aboriginal inhabitants, some 40,000 Caribs, to work in the mines of Haiti. Very little trace of them remains to-day. In 1629, the Bahamas were included in a Royal Grant to Sir Robert Heath, and settlers from Bermuda began to pay occasional visits. In 1647, a company of "Eleutherian Adventurers" was formed in London to colonise the Bahamas, and despite the earlier Royal grant, was given the rights over the islands by Parliament. An Act authorising settlement was passed by Cromwell's Parliament in 1649 and permanent settlement began in 1666 when 250 people from Bermuda settled in New Providence. In 1670 a second Royal Grant of the islands was made, this time by Charles II to six of the Lord Proprietors of Carolina. From 1672 they appointed governors to New Providence whose main task was to suppress the pirates who had become virtual rulers of the island. The governors often became the pirates' first victims. In 1673, a governor was captured and deported to Jamaica, another in 1690 was imprisoned; those fortunate enough to keep their freedom left the inhabitants undisturbed by disciplinary administration.

The threat of foreign invasion was frequent. The Spaniards, for whom Columbus had claimed the Islands, continually resisted the British in New Providence. In 1680 and again in 1703 with their ally, France, they destroyed the settlement. The Governor was deported to Cuba and in the second attack the negro slaves were transported and the white settlers fled to Carolina. When a new governor arrived in 1704 he found New Providence uninhabited and returned to England. Nassau was re-established by

pirates within a few years. By 1718 their depredations had become so widespread that Britain undertook their suppression. Capt. Woodes Rogers, the famous seaman and adventurer, was sent as governor with full authority to restore order. One of his first measures was to execute eight pirate leaders. In 1729, the British Crown assumed direct control of the Bahamas, and a General Assembly was established. The comparative peace which followed Rogers's administration was broken in 1776 when Nassau was taken by a fleet of the rebellious American Colonies, it was evacuated within a few days. During the War of American Independence a number of loyalists from Georgia and Carolina emigrated to the Bahamas and introduced the cultivation of cotton. Spanish forces attacked the colony successfully in 1782 and held Nassau until repelled by a British expedition in the following year. The Treaty of Versailles, which was signed in 1783, confirmed Britain's title to the Bahamas and the islands have since remained in undisputed British possession. The major event in the colony's history during the nineteenth century was the abolition of slavery which brought about great economic and social change. Following the outbreak of civil war in North America, the colony experienced several years of considerable prosperity as a depot for vessels running the "blockade" imposed against the Confederate States. The colony's prosperity throughout its history, has depended on its trade with the United States.

The "Eleutherian Adventurers", who came to the Bahamas from Bermuda after the Parliamentary grant of 1647, brought with them the concept, and established the machinery of representative government in the new settlement. An administration by a governor, nominated council and elected senate was instituted. An elected House of Assembly was provided for in the Charter of 1670 but it was not created until 1729. The constitution, which set up representative though not responsible government, resembled those of the North American colonies prior to the War of Independence, and has remained basically unaltered until the present day.

During the second World War, the Bahamas assumed a certain strategic significance; a British garrison was re-established in 1942, the first since 1891; it was later relieved by Canadian forces which remained until March 1946. By the 1941 exchange agreement with the U.S.A. Great Exuma, an island 150 miles south of New Providence was leased for 99 years as a naval base. Since the peace, the base has been dismantled and the American forces withdrawn. During 1942-43 Oakes airfield was extended and Windsor airfield constructed to serve both the Imperial and U.S. governments. New Providence became a staging post on the trans-Atlantic ferry service, and served as a base for air patrol during the submarine campaign in the west Atlantic and Caribbean waters. The importance of the Island on the air and sea routes between North and South America, and between the West Indies and Britain, remains. The capital, Nassau is, moreover, a regular port of call for Canadian and American warships.

H.L.

ECONOMIC ASPECTS

Population. At the Census of December 1953 the total population of the islands numbered 84,853, with the following racial distribution: European 10,709; African

THE BRITISH COMMONWEALTH

61,627; Mixed 12,371; Mongolian 144. Andros is the largest island of the group, but New Providence is the most populous, and contains the capital Nassau (population approximately 46,000). At December 31st, 1954 the total population was 92,598.

Agriculture, Forestry and Fishing. Some 30,000 acres of land are under cultivation; about 1,500 acres are grazing land and forests cover approximately 800,000 acres.

The main crops are vegetables and fruit. Tomatoes and akro are exported in quantity to the United States and Canada, and the canning of tomatoes and tomato juice is done locally. Fruit crops include pineapples, citrus fruit and bananas. There is a small livestock industry, but both meat and milk are imported to supplement local supplies. In 1954 there were 3,330 head of cattle, 22,200 sheep, 14,200 goats and 10,000 pigs.

The forested area in the Western Islands is estimated at some 800,000 acres, of which 700,000 acres are pine forest and approximately 100,000 acres sub-tropical broadleaf forest. The acreage under forests is mainly Crown property. Exploitation is limited to the islands of Grand Bahama and Andros, where the logs are sawn and exported in the form of lumber and pit props.

The fishing industry employs some 2,500 persons. Crawfish is exported to the United States. A small fish-processing plant has been established in Nassau. Formerly sponge collecting in the surrounding seas was a profitable occupation, but the industry has declined owing to a widespread disease in the sponge beds. However, there have recently been signs of recovery, and a small quantity of sponges, was harvested in 1954.

External Trade. As will be seen from the Table in the Statistical Section (which includes re-exports), the external trade of the Bahamas shows a large adverse balance. The value of domestic exports amounted in the period 1951-53 to £729,012, £926,275 and £1,045,260: while total imports for the same years were valued at £7,649,645, £8,819,016 and £8,797,396 respectively. Like Bermuda, the Colony depends on a flourishing tourist industry to correct its adverse balance. In 1954 the number of tourists visiting the Colony reached the record figure of 109,605. As a result of this trade and the remittances of individuals and companies, net dollar earnings in 1954 amounted to U.S. \$6,215,000 as compared with U.S. \$4,016,000 in 1953.

Revenue and Expenditure. Expenditure exceeded revenue in 1949, 1950, and 1953. Customs duties account for the bulk of the revenue, and in the period 1951-54 inclusive, amounted to: £1,212,315, £1,416,964, £1,443,668 and £1,700,808 out of total revenue collected of £2,044,385, £2,397,097, £2,610,678 and £3,095,541.

The Public Debt outstanding at December 31st, 1954 amounted to £1,211,000. Investments in sinking funds for the redemption of the Debt stood at £314,473 at the same date.

Development. In mid-1955 the Free Port Act for Grand Bahama was passed, which provides facilities for the establishment of a free port area of some 50,000 acres on Grand Bahama. The Act grants exemption from import and export duties over a period of 99 years, and from various taxes over a period of 30 years, to industries established in the free-port area. It also permits such industries to bring in skilled personnel, and unskilled labour subject to such labour not being available locally.

Communications. There are no railways in the Colony. In New Providence there are 168 miles of public motor roads and 39 miles of private roads. A limited mileage of roads, which may be used by motor traffic, is maintained on some of the Out Islands. In Eleuthera there are 60 miles of asphalted main roads and on Grand Bahama 65

miles. The roads in the other Out Islands are cart tracks.

The chief port is Nassau, although two other ports are in use: Mathew Town, Inagua, which handles export consignments of salt; while lumber and pit props are shipped from Hawksbill Creek, Grand Bahama.

The main airport in use is Oakes Airport, Nassau. Internal air services to the Out Islands are operated by a fleet of amphibian aircraft.

THE CONSTITUTION

Under the present Constitution the Governor, who has the power of veto, is advised by an Executive Council of not more than nine members (three of whom are official and six are non-official with seats in the House of Assembly). There are a Legislative Council which forms an upper House, and consists of nine nominated members; and a lower House of Assembly, with 29 elected members representing the fifteen districts of New Providence and the Out Islands. The franchise is subject to a property qualification, as is also membership of the House of Assembly. Women have no vote.

Legislative Acts of 1939 and 1944 instituted and made permanent the secret ballot in New Providence; and this provision was extended to the Out Islands in 1946.

THE GOVERNMENT

Governor and Commander-in-Chief: The Rt Hon. The Earl of RANFURLY, K.C.M.G.

EXECUTIVE COUNCIL

Ex-Officio Members: The COLONIAL SECRETARY, The ATTORNEY-GENERAL, The RECEIVER-GENERAL.

Unofficial Members: R. T. SYMONETTE, R. R. A. FARRINGTON, C.B.E., A. R. BRAYNEN, E. A. P. DUPUCH, C. W. F. BETHELL.

LEGISLATIVE COUNCIL

President: G. W. K. ROBERTS, C.B.E., J.P.

HOUSE OF ASSEMBLY

Speaker: A. H. PRITCHARD.

Deputy Speaker: F. H. CHRISTIE.

CIVIL ESTABLISHMENT

Colonial Secretary: K. M. WALMSLEY, O.B.E.

Attorney-General: L. A. W. ORR, Q.C.

Receiver-General and Treasurer: W. H. SWEETING

Postmaster: C. S. THOMPSON, M.B.E.

Solicitor-General: K. G. L. ISAACS.

Registrar-General: JAMES LIDDELL.

Directors of Departments: O. S. RUSSELL (Agricultural and Marine Products), R. BROADBENT (Civil Aviation), T. E. HUTCHINSON (Education), N. M. MACLENNAN (Medical Services), G. C. STUBBS (Public Works), A. K. COLE, O.B.E. (Supplies), K. R. INGRAHAM, O.B.E. (Telecommunications).

THE LEGAL SYSTEM

The Supreme Court is presided over by the Chief Justice, and has a jurisdiction similar to that of a High Court of England. Appeals in all matters lie to the Privy Council. The principal magisterial courts (there are two) are each presided over by a Stipendiary and Circuit Magistrate, and appeal lies from these to the Supreme Court.

The Commissioners in charge of districts in the Out Islands, and Justices of the Peace also have Magisterial powers, and appeal from these Courts lies to the Circuit Magistrates.

THE BRITISH WEST INDIES

Chief Justice: Hon. G. W. McL. HENDERSON.

Stipendiaries and Circuit Magistrates: M. J. THOMPSON,
(there is one vacancy).

THE PRESS

Herald, The: 538 East Bay Street, Nassau; weekly; organ of the progressive Liberal Party; circ. 4,500; Editor CYRIL ST. JOHN STEVENSON.

TRADE UNIONS

The following registered trade unions were in operation in 1955: The Bahamas Trades and Labour Union, the Bahamas Taxi Cab Union, the Bahamas Typographical Union, The Bahamas Federation of Labour, The Bahamas Painters' Union, The Bahamas Masons' Union, The Union of Carpenters and Joiners, The United Brotherhood of

BAHAMAS

Longshoremen, The Grand Bahama Trade and Labour Union, The Nassau Transport Drivers' Union, The Bunini Building Trade and Labour Union, The Bahamas Plumbers' Union and the Bahamas Musicians' Union. Total membership figures will not be known until returns are made in June 1956. The Labour Board Act of 1946 provides for the establishment of a Labour Board to act as a conciliatory body in disputes, and to report and make recommendations to the Governor-in-Council.

A Labour Office which has functioned since 1943, is concerned in organising and supervising the arrangements for recruiting labourers for agricultural work in the United States.

TRANSPORT

(For other details see SURVEY).

SHIPPING

The following are the chief shipping lines calling at Nassau: Canadian National Steamships Line, Royal Mail Line, Pacific Steam Navigation Line, Florida Caribbean Line and the North Atlantic and Gulf Steamship Line.

AIR LINES

Bahamas Airways Ltd. (B.A.L.): P.O. Box 65, Oakes Field Airport, Nassau; operates services between Nassau and the Out Islands and charter flights when required.

The following foreign Air Lines also operate services to Nassau: British Overseas Airways Corporation, Mackey Airlines Inc., Pan American World Airways and Trans-Canada Air Lines.

HEALTH

The Medical and Public Health Service is administered by a Board of Health with the Chief Medical Officer as adviser. The Government medical staff in Nassau consists of the Chief Medical Officer, seven Medical Officers, an anaesthetist and an eye specialist. There are six District Medical Officers and eight unqualified medical practitioners in the Out Islands. In 1953 the Bahamas General Hospital in Nassau was completed. It provides accommodation for 210 beds, and the service of the Hospital is largely free. A programme for mosquito control has been arranged with the World Health Organisation, which has also been approached regarding a tuberculosis control campaign.

EDUCATION

The Board of Education is responsible for all education except that given in the secondary schools which are governed by separate Acts. Of the 180 primary schools 105 are Board schools and 25 are grant-aided, the remainder being private and denominational. Secondary education is provided by the Government High School, Queen's College (Wesleyan), St. Andrew's School, St. Xavier's College, St. Augustine's College (Roman Catholic), St. John's College (Diocesan), Bahamas Junior Academy (Seventh-Day Adventist) all in Nassau; by St. Vincent's Academy (Roman Catholic) in Harbour Island and by Long Island Christian Institute at Simms', Long Island. A Training College for teachers was established in 1950, and there is also a technical school. The number of children attending primary schools in 1954 was 21,366; those attending secondary schools and the technical school were 1,301 and 1,327 respectively. A school circulating library was instituted in 1951.

THE BRITISH COMMONWEALTH

BERMUDA

GENERAL SURVEY

GEOGRAPHY AND CLIMATE

THE COLONY OF BERMUDA is a group of small islands and reefs, over 300 in number, lying at 32° 15' N and 64° 31' E in the West Atlantic ocean. Bermuda is 670 miles from New York and approximately 2,700 miles from London. The total land area of the archipelago is about 21 sq. miles. Only twenty of the numerous islands are inhabited—the civil population was estimated in 1954 at 40,500 (15,500 white and 25,000 coloured). There is in addition a considerable military contingent in the islands. Hamilton, on Long Island, with a population of 2,800 is the chief town.

Formed of coral and wind-blown materials, the islands are possibly built upon the summit of a submarine volcano. Bermuda lies in the path of the Gulf Stream, and the climate is equable and healthy—the mean annual temperature being 70° F. The islands are remarkable for their lack of streams and wells, and the only water supply is derived from rainwater storage tanks.

W B F

HISTORICAL DEVELOPMENT

The islands were visited by the Spanish navigator and historian d'Oviedo in 1515, who recorded that they had been discovered by Juan de Bermudez. No Spanish settlement was made, and the islands remained uninhabited. In 1527, the Bermudas were granted to Fernando Camelo by Philip II of Spain. In July 1609, the crew and colonists of Admiral Sir George Somers' flagship *Sea Venture* landed on the Bermudian islands, claimed them, and named them Somers Islands. The *Sea Venture* was one of nine vessels *en route* from Plymouth with settlers for Virginia when storms scattered and damaged the fleet. From Somers Islands two attempts were made to reach the mainland of America some 570 miles distant.

The second attempt made during May 1610, in two locally constructed vessels, reached Jamestown after fourteen days, only to find the settlement in a state of famine. The men returned to Somers Islands for supplies. The Virginia Company sought to make the link with the fertile islands permanent and were granted an extension of their charter to include them by James I. In 1612 a colony of 60 settlers under a governor, Richard Moore, was established. In the following year, the Virginia Company sold their rights over the islands to "the Governor and Company of the City of London for the plantation of the Somers Islands". The new administration transferred the seat of government from Smith's island to St. George, and forts were built to defend the harbour. In 1615, James I granted a new charter to this company with authority to call a general assembly provided its law-making was in accord with British statutes. During its first session in 1619, 32 bills were passed. The colony by this time numbered 1,500; the land had been divided into parishes, much ground cleared for agriculture, tobacco and potatoes being the main crops. The attitude of the colony during the Commonwealth induced the Long Parliament to prohibit its trade with Britain. During the mid-seventeenth century its administration deteriorated and in 1679 the colonists petitioned the Crown against the company. By

legal action under a writ of *quo warranto* the government of the colony passed to the Crown in 1684.

During the eighteenth century, the colonists built up a large fleet of merchantmen and engaged actively in the carrying trade to North America. They quickly recovered from the setback of the embargo over this trade imposed during the war with the thirteen colonies. In 1789, 40 new vessels were built. During the war between Britain and the U.S.A. 1812–15, Bermudian vessels carried important trade between the West Indies and Newfoundland. As with the West Indies, the Emancipation Act of 1834 was applied to Bermuda and the slaves freed. With the advent of the steamship in the nineteenth century, the colony's export trade in vegetables prospered, and encouragement was given to a developing tourist industry which has become of major importance in the islands' economy.

Details of the Constitution are given below under that Section. Mention should be made here, however, of the joint committee of the Legislative Council and the House of Assembly which was appointed in April, 1947 to consider the petition of the Bermuda Workers' Association for a Royal Commission to investigate social, economic and political conditions in the colony. It reported in March, 1948. The committee recommended the abolition of plural voting, though not the deprivation of rights of those at present on the electoral roll. It reported against the adoption of universal suffrage though recommended an increase of the electorate by lowering the property qualification. It also recommended the appointment of a further committee to prepare a plan for a greater degree of responsible government for the colony. These recommendations were accepted by the Legislative Council with the amendment that rental values as well as property should be investigated as a basis for the franchise reform.

In April 1953, a select Committee of the Bermuda House of Assembly was appointed to consider the problem of race relations within the colony. (At the 1950 census, the population comprised 14,700 white and 22,000 coloured people). The committee, consisting of 5 white and 4 coloured members of the House of Assembly, presented a unanimous report which was debated in the House in February, 1954, and will now go before the Bermuda Legislative Council. The committee were of the opinion that racial tension had increased in the colony during the past ten years and that if the trend continued it would lead to serious difficulties. They made several recommendations, that consistent with the policy to maintain and improve efficiency in the government service there should be no colour bar, that in hospital appointments and administration the argument of maintaining standards should not be used to discriminate on the basis of race; that the segregation of patients in wards was unreasonable and that there should be equal training facilities and opportunity of employment for coloured nurses. In education the committee was satisfied that government funds were divided equitably and, mindful of the social difficulties which would result if the schools were integrated, recommended no alteration in the system until changes in social thinking invited reconsideration. In non-government and unaided organisations, it hoped that restrictions would gradually be modified and that the churches would give a lead in promoting better racial understanding.

The local defence of the colony was not provided for by the Crown in 1684. The colonial legislature maintained the

fortifications and raised troops. The first Imperial garrison was sent from the Bahamas in 1797. Since 1767, except for the period 1902-13, Bermuda has been the base for an Atlantic squadron. The indented coastline, and the curve of islands protect great lagoons and give excellent anchorage. The Imperial government, in 1809, purchased Ireland island for use as a naval dockyard. The establishments were built by slave labour, and from 1824 to 1863 by convict labour supervised by British technicians. They were supplemented in 1819 by a detachment of Royal Engineers. In 1869, a floating dock, 381 ft by 124 ft. and 74 ft. deep, then the largest in the world, was towed to the island from Britain. It was replaced in 1902 by another, 545 ft long, which was in constant use in the second World War; in 1944, 142 ships were docked. A second dry dock was towed from Alexandria in 1946. The Admiralty decided in 1950 to close the Bermuda dockyard as an economy measure and the floating dock was towed to Britain. In November 1952, the War Office prepared for the withdrawal of the British garrison, which was completed by April 1953. Bermuda's defence has since become the responsibility of the North Atlantic Treaty Organisation, since the islands are within the operational zone of the Supreme Allied Commander, Atlantic. Even so, a British garrison of about 400 men was re-established in 1954 on the decision of Sir Winston Churchill after the Bermuda conference with President Eisenhower in December 1953. With the consent of the Bermuda House of Assembly, Morgan and Tucker and St David's islands were leased for 99 years to the U.S. as sea and air bases under the Anglo-American agreement of March 27th, 1941.

H.L.

ECONOMIC ASPECTS

The economy of Bermuda rests almost entirely on a flourishing tourist industry and on accommodation, goods and services for the U.S. Forces. There were over 104,000 tourists in 1954, and the amount spent by visitors to the islands was estimated at about £8 million. Apart from the tourist trade, scope for economic activity is limited, and the inability of the islanders to meet their requirements of essential goods is reflected in the size of the visible adverse balance of trade. Exports and imports by value in recent years are shown in the Statistical Section and recorded re-exports and the distribution of trade between the United Kingdom, Canada and the United States are shown below. When the value of re-exports is deducted from the total, the "true" exports of the Colony are seen to be extremely small. Another peculiar feature of Bermuda's commerce is the high value of imports in proportion to the population. With a population of 40,500, the Colony imported £12.5 million worth of goods in 1954. While the need to maintain high standards in establishments serving the tourist trade is the chief cause of this high level of imports, Bermuda's

imports are larger than those of the Bahamas with a population more than twice as numerous as the former and with an approximately similar intake of tourists. Invisible items such as revenue from tourists, accommodation, goods and services supplied to the United States air bases (estimated in 1954 to be worth about £2 million), repairs to shipping, and United Kingdom capital investments in Bermuda bearing a low rate of interest, have hitherto generally covered the adverse balance. Local exports consist mainly of essential oils, cut flowers, plants and bulbs and fresh vegetables. The manufacture of mineral water concentrates, pharmaceutical products and brass electrical contacts for export is a new development, started since 1951. The United States is the largest supplier, and in most years the largest customer, in the external trade of the Colony.

Land resources are small, and the acreage available for agriculture tends to decrease with the growth of the population and the encroachment on land for building purposes. In 1954 it was estimated that only about 1,000 acres of land were used for agriculture, of which 908 acres were under crops. Less than 2,700 acres were grazing land, supporting approximately 1,400 head of cattle and about 1,500 pigs. Most of the agricultural holdings are less than ten acres, about four-fifths is cultivated by tenant farmers. Crops consist mainly of vegetables, some citrus fruit and bananas. Fishing is an important activity, the catch amounting in 1954 to over a million lb.

Revenue and Expenditure. In most years the Colony has a surplus of revenue over expenditure. The position was reversed in 1952 and 1954, when there were deficits of £63,018 and £413,130 respectively. Most of the revenue is derived from indirect taxes, and customs receipts are a particularly valuable source of revenue. Over the period 1951-54 these accounted for 73.59 per cent, 72.12 per cent, 67.89 per cent and 65.05 per cent, respectively, of total revenue collected.

Communications. The railway is no longer in operation. Road mileage maintained by the Public Works Department is approximately 128. In addition there is a considerable mileage of unsurfaced private roads. Motor traffic is now permitted, and a government bus service has been introduced since the closing down of the railway in 1947. In 1954 there were about 7,642 motor vehicles of various types.

The two ports are Hamilton and St. George. There is an international airport, while a small landing-pool for seaplanes is used by a local company for sightseeing trips.

In view of the local practice of attributing imports and exports to the country from or to which the carrying vessel proceeds, the above distribution of trade is not entirely accurate.

THE BRITISH COMMONWEALTH

THE CONSTITUTION

Representative government was introduced in the Colony in 1620. The present Legislature consists of the Governor, the Legislative Council and the House of Assembly. The Governor is assisted by an Executive Council consisting of three official and four unofficial members. The Legislative Council consists of eleven nominated members (three official and eight unofficial). The House of Assembly has 36 elected members, four for each of the nine parishes. There are property qualifications both for voters and for members of the House of Assembly—in the case of the former the possession of freehold property of a value of not less than £60; and in the case of the latter the possession of freehold property of not less than £240. Women were enfranchised in 1944.

Executive Boards, usually under the chairmanship of a member of the House of Assembly, composed of unofficial members nominated by the Governor, control several government departments under the advice of the head of the department.

THE GOVERNMENT

Governor and Commander-in-Chief: Lieut -Gen Sir JOHN WOODALL, K.B.E., C.B., M.C.

EXECUTIVE COUNCIL

Chairman: The GOVERNOR.

Ex-Officio Members: The COLONIAL SECRETARY, The ATTORNEY-GENERAL, The COLONIAL TREASURER

Unofficial Members: H. D. BUTTERFIELD, C.B.E., J.P., M.C.P., N. H. P. VESEY, C.B.E., M.C.P., H. T. WATLINGTON, M.C.P.; J. E. PEARMAN

LEGISLATIVE COUNCIL

President: The CHIEF JUSTICE.

Ex-Officio Members: The COLONIAL SECRETARY, The ATTORNEY-GENERAL

Unofficial Members: 8.

HOUSE OF ASSEMBLY

Speaker: Sir JOHN COX, C.B.E.

Deputy Speaker: Lt.-Col. J. C. ASTWOOD, O.B.E.

CIVIL ESTABLISHMENT

Colonial Secretary: A. G. T. CHAPLIN

Attorney-General: (Vacant).

Solicitor-General: J. B. PINE

Colonial Auditor: G. L. YOUNG, O.B.E.

Directors of Departments: (Agriculture) G. R. GROVES, (Civil Aviation) Wing-Comdr E. M. WARE, D.F.C., (Education) C. G. G. GILBERT, O.B.E., M.C., (Health Services) S. M. FRAZER, (Public Works) C. H. SMITH, O.B.E.

THE LEGAL SYSTEM

There are two courts in Bermuda. The Supreme Court was established under the Supreme Court Act of 1905. It has jurisdiction over all serious criminal matters and has unlimited civil jurisdiction. In addition Acts of Parliament of the United Kingdom have conferred on it certain admiralty and prize jurisdiction. The commonest type of offences tried in the Supreme Court involves dishonesty (i.e. offences against property, chiefly theft). The Court also hears civil and criminal appeals from the Court of Summary Jurisdiction. The last-named Court has jurisdiction over all petty offences, and has a limited civil jurisdiction.

There are two Magistrates in the Colony who exercise jurisdiction in criminal, civil and other cases conferred on them by law.

Chief Justice: The Hon. Sir J. TROUNSELL GILBERT, C.B.E., Q.C.

Assistant Justice: The Hon. Sir ALLAN C. SMITH, M.C.

Senior Magistrate: HENRY MARTIN GODET, J.P.

Magistrate: LEONARD MARCHANT MINTY, J.P.

THE PRESS

Bermuda Mid-Ocean News and Colonial Government

Gazette: Toddings Buildings, Hamilton; f. 1911; approx: circ. (weekdays) 6,219, (Saturdays) 8,144; Editor THOMAS A. BURTON; London Reps. S. S. KOPPE AND Co. LTD., 69 Fleet Street, E.C.4.

Bermuda Recorder, The: Court Street, Hamilton, f. 1925; Independent; Editor A. B. PLAICE.

Bermudian, The: East Broadway, Hamilton; f. 1930; monthly; pictorial and resort magazine; circ. 6,820; Editor RONALD JOHN WILLIAMS.

Royal Gazette, The: Reid Street, Hamilton; f. 1928; morning; circ. 7,500; Editor E. T. SAYERS; London Office: 8 Red Lion Square, W.C.1.

Royal Gazette Weekly, The: Hamilton; f. 1947; circ. 7,500; Editor MARTIN DIER; London Office: 8 Red Lion Square W.C.1

BROADCASTING

The Bermuda Broadcasting Company Ltd. which operates two stations running daily radio programmes, is responsible to the Government. The studios of both stations are situated in Hamilton. Events covered by the British Broadcasting Corporation, such as race meetings and cricket fixtures, are transmitted by the Bermuda Broadcasting Company and in addition it relays many other B.B.C. programmes

FINANCE

Bank of Bermuda Ltd.: Hamilton; est. 1889, inc. 1890, cap. £125,000, res. (1953) £313,483; Manager H. J. TUCKER, C.B.E.; branches at St. George's and Somerset.

Bank of N. T. Butterfield and Son Ltd.: Hamilton; f. 1858, Pres. Lieut-Col. A. T. GOSLING; Manager H. D. BUTTERFIELD, C.B.E.; branch at St. George's.

TRADE AND INDUSTRY

Bermuda Chamber of Commerce: Hamilton; f. 1905, approx 400 mems; Pres EDMUND COOPER

Trade Development Board: Hamilton; Chair. Hon. N. H. P. VESEY, C.B.E., M.C.P.

During 1953 and 1954 there were the following registered trade unions

Bermuda Civil Service Association: 53 mems.

Bermuda Industrial Union: 1,114 mems.

Bermuda Union of Teachers: "Hermil", St. John's Road, Pembroke, f. 1919; 159 mems.

Teachers' Association of Bermuda: 51 mems

TRANSPORT

(For further details see SURVEY)

SHIPPING

The following are the chief shipping companies whose vessels call at Bermuda: Canadian National Steamship, Cunard Line, Furness Bermuda Line, Holland America Line, Montreal, Australia and New Zealand Line, New Zealand Shipping Company, Pacific Steam Navigation Company, Royal Mail Lines and Booth American Shipping Corporation.

THE BRITISH WEST' INDIES

AIR LINES

The following air lines operate services to Bermuda or maintain offices there: British Overseas Airways Corporation, Colonial Air Lines, Pan American World Airways Inc., Aéroviás Nacionales de Colombia, S.A. (AVIANCA), Compañía Cubana de Aviación, S.A., Trans-Canada Air Lines, Royal Dutch Airlines (K.L.M.) and Líneas Aéreas Españolas (Iberia).

HEALTH

The organisation and maintenance of the health services are the responsibility of the Medical and Health Departments, which are supervised by the Board of Health. This consists of non-officials appointed by the Governor, who is advised by the Director of Health. Each of the 9 Parishes runs a clinic, which is supported by the Parish Vestries.

There are 4 hospitals in Bermuda, of which 3 are Government-aided. The King Edward VII Memorial Hospital is fully equipped and provides 138 beds; the Cottage Hospital has 25 beds and the Mental Hospital 110; the Isolation Hospital provides facilities for 11 patients.

EDUCATION

The central administration of education is the responsibility of the Board of Education, which consists of a Chairman and 9 or 10 members, appointed by the Governor and usually chosen to represent the 9 Parishes; the Board is advised by the Director of Education. At present schools are not classified into primary and secondary schools, as many secondary schools have primary departments, and a reorganisation is not possible until the transport facilities are improved and the school building programme further advanced. There are, however, two main types of schools—vested and non-vested, the vested schools are administered by local authorities supported by Government aid and the non-vested schools are run directly by the Government.

BERMUDA

Education is compulsory for all children between the ages of 7 and 13. In 1953 and 1954 there was a total of 8,330 and 8,770 pupils respectively. In 1954 there were 19 Government schools, attended by 5,684 pupils, 9 Government-aided schools with 1,802 pupils and 18 private schools which provide facilities for a further 1,284 pupils.

LEARNED SOCIETIES AND RESEARCH INSTITUTES

Bermuda Agricultural Experiment Station: Paget East; f. 1898; Dir. G. R. GROVES; Veterinary Officer E. R. EARL, V.S., B.V.Sc.; Plant Pathologist I. W. HUGHES; Inspector of Produce T. A. HOLLIS; Horticulturist C. A. BAKER; Agricultural Assistant C. V. S. EARLY; Re-afforestation Officer G. S. G. SCOTT; Marketing Officer CARLYLE HOLLIS; publ. *Annual Report*, *Monthly Bulletin*, occasional special reports and bulletins.

Bermuda Art Association: Hamilton; f. 1946, 150 mems.; Pres. EMERSON BAINBRIDGE; Treas. and Sec Sir STANLEY SPURLING, C.M.G., O.B.E.

Bermuda Biological Station: St. George's West; f. 1903; the station is conducting research in marine biology and oceanography; Chancellor H.E. The GOVERNOR; Pres. Dr. GORDON A. RILEY; Dir. W. H. SUTCLIFFE, Jr.; publ. *Contributions of the Bermuda Biological Station*.

Bermuda Historical Society: East Broadway, Hamilton; 150 mems.; Sec. Mrs A. F. SMITH; publ. *Bermuda Historical Quarterly*.

LIBRARY

Bermuda Library: Hamilton; f. 1839, consists of reference and circulating departments and serves schools throughout Bermuda, 40,000 vols., Librarian Miss A. E. GOSLING, M.B.E.

GEOGRAPHICAL AND ECONOMIC SURVEY

WITHIN the larger grouping of South-East Asia there are five Commonwealth territories—the Federation of Malaya, Singapore, Sarawak, North Borneo, and the Sultanate of Brunei. These territories form an incomplete crescent around the southern gulf of the South China Seas, whose floor consists of a shelf about 100 ft. below sea level. This shelf, the Sunda platform, is a former land surface. At the close of the Ice Age (about 100,000 years ago), a vast amount of water which had been held locked in the great continental ice sheets was liberated, raising the sea level and drowning much of the region. Malaya and Borneo represent the upland zones of the former land which stretched into the Kra Peninsula, north Java, Cochin China and eastern Sumatra. Long ago the whole area was one of great mountain ranges and steep-sided valleys, such as one finds to-day in the island areas of Java and Sumatra to the south, but millions of years of heavy rains and powerful river-flow have worn away the summits and smoothed out the slopes. Streams no longer fall in mountain cascades, but meander placidly in broad, open valleys. Only rarely are steep slopes to be found. The generally smooth outlines are enhanced by a deep mantle of soil, produced by intense chemical weathering in a hot humid climate. A luxuriant equatorial vegetation further rounds off the natural landscape.

Only the higher summits are free from forest; along the coast, woodland and shrubs spread on to the beaches wherever these are sandy. Mangrove trees grow where coastal waters are muddy, and their roots help to consolidate new mud flats. The tree-trunks of the main Rain Forest, apart from a few buttressed varieties, are straight and would be bare but for the lanes which use them as gigantic pea-sticks. The forest floor is covered by grasses and shrubs, while 60 ft. above is a canopy of leaves. From the air one sees this canopy as a rolling surface through which the crowns of individual giant trees rise to heights of nearly 200 ft. Although the natural vegetation is so rich, the fertility of the soil is low—dead vegetation rots quickly away in this damp humid warmth and mineral plant foods are leached from the soil by the heavy rainfall.

The territories under consideration lie just to the north of the Equator between lat. 1° and lat. 8°, so close in fact, that there is little change of temperature as between "summer" and "winter". There is however a marked daily rhythm in weather. Four "seasons" may be distinguished, and these depend largely on wind direction. In the months of December to February powerful winds blow from the north-east, but during May-August winds are mainly from the south-east. This predominant pattern of easterly winds derives from South-East Asia's position in relation to the Trade Wind belts, which girdle the earth in low latitudes, and give steady winds from the east. Between the two "windy" seasons are periods of calm.

An exception to this general situation occurs in Malaya, which, lying between Asia and Australia, is subject to alternate influences from both continents. South-westerly winds occur between June and August, producing characteristic "Monsoon" conditions resembling to a lesser degree those of India.

Rainfall is mainly convectional, i.e., falling almost daily as heavy showers in the late afternoon. These showers occur especially in the calm seasons, and along the "front"

which forms when two different masses of air (from north and south of the equator respectively) come into contact. A distinct dry season occurs only in northern Malaya, and even then the term is purely relative. Elsewhere the four-fold seasonal pattern is—wet; very wet; wet; very wet—this region is one of the rainiest on earth. Annual rainfall totals of over 80 in. are commonplace, and amounts well over 200 in. are not unknown.

Temperatures remain fairly steadily at about 80° F., falling during the clear nights by a few degrees to rise again to a peak in the mid-afternoon. Factors of relief and exposure to one or other Trade Wind may be important, while temperature locally may be affected by the extent of forest clearance and by the incidence and violence of storms. Humidity is always high, and slight variations in this factor are liable, more than any other climatic element, to influence from time to time the local activities of plant or man.

Tides tend to be complex; they enter from both the Indian and Pacific Oceans, converging near Singapore. As is often the case in shallow seas, the tides here are considerably influenced by the strong seasonal winds. Coasts are flat and swampy. An enormous amount of material is continually being swept from the highlands by heavy rain and swollen rivers and is dumped at the river mouth into a shallow sea, where it forms mud-flats; these quickly evolve into salt-marsh, then fresh-water swamp, and finally become part of the continually advancing land surface. The best example of this process in South-East Asia is the large alluvial plain of eastern Sumatra which has covered part of the Sunda Platform. The waters of these shallow seas are very muddy and have a low salt content; both factors make them a poor home for the coral polyps, so reefs are typical only on the "outer" coasts of North Borneo. While this outline of the geographical situation is generally true for the whole of our area, Christmas Island and the Cocos-Keeling Islands¹ provide exceptions, lying as they do in the Indian Ocean. This group of islands is discussed separately in the more detailed accounts of the geography and economy which follow.

It is possible in these accounts to deal only with present-day conditions within the five territories and discussion of each cannot be equally full. Greater emphasis will therefore be given to Malaya and Singapore than to the territories in British Borneo. There are several reasons for this. Pan-Malaya (i.e., the Federation of Malaya and the colony of Singapore) has a slightly larger area than any other of the three and a disproportionately larger population; it is much more fully developed economically; and it contains Singapore. This city is unique in the east, and probably in the world; as a trade centre its influence is greater than its population of one million might suggest (compare for example the capital of Indonesia, Djakarta, which has a population twice this size). This influence, passing beyond the political frontiers of the Commonwealth, has enabled Singapore to become the only contender for the title of regional capital to this fragmented zone of South-East Asia.

¹ The Cocos-Keeling Islands were formally transferred to Australian Sovereignty on November 3rd, 1955.

THE FEDERATION OF MALAYA

The structural skeleton of the Malaya Peninsula consists of two series of granite ranges. Trending NNE. in the north and NNW. in the south the two systems meet in the latitude of Ipoh, forming the highest land in Malaya (some 7,000 ft. above sea level). These ranges pass northward into Thailand and southward to the east of Sumatra where their summits form the islands of the Lingga Archipelago. Coarse sandstones, limestones and shales form a second group of associated mountain and foothill zones. Harder quartzites and metamorphosed limestones in the "junction" zone between sedimentary and granitic rocks give rise to rugged topography, which contrasts with the mature rounded appearance of the granites. Away from the mountains Malaya tends to flatness. Many valleys are broad and marshy, while on the coastal plain, long belts of Freshwater Swamp Forest, standing some little way back from the beach, occupy a large arc of land from South Pahang, by way of Johore into Southern Kedah. This landscape is ripe for change, as the zone is becoming important for reclamation under Government and smallholders' schemes.

The pattern of upland and lowland, with the watershed lying well to the west, has considerable influence on the regional make-up of the peninsula. It also influences the pattern of drainage. Major streams tend to flow parallel to the main ranges in a generally north-south direction, making sharp turns before entering the sea. A large-scale example of this is the Pahang River. In some central areas, the ridges and vales are not unlike those of eastern England (though covered, of course, with a dense mantle of jungle), and a trellis-like drainage pattern, with alternating gorge and marshy flat, is characteristic.

A few patches of peaty soil occur in badly-drained areas, but most soils are heavily leached of their minerals and other constituents. Typical dense Rain Forest covers over 60 per cent of the land area, and thus remains untouched by modern economies. However, it seems likely that a good deal of it has been burnt-over by aboriginal shifting cultivators in the past. Small groups of these peoples still roam interior Malaya, and, with the even more primitive non-agricultural peoples (such as the Semang already referred to), they cause considerable concern to the authorities.

Malaya is relatively sheltered from south-westerly winds, but lies exposed to the north-east Monsoons which blow steadily from the China Sea from November to March. Heaviest rainfall coincides with the period of change of wind at the beginning and end of this period, except on the exposed east coast, where, for example at Trengganu, about half the annual total falls in the months of north-easterly winds. This side of the peninsula has the largest rainfall totals in the Federation, exceeding 125 in. per annum over a large area. Nevertheless, individual peaks in the eastern uplands have even greater amounts, though over much smaller areas.

Two types of activity dominate the Malayan economy, plantation agriculture, and mining for tin and coal. After experiments with several other crops plantation agriculture is now occupied largely with rubber production, and of the cash crops grown in the Federation rubber holds by far the most important place. Approximately 64 per cent of the planted area is put to rubber, and it accounts for just over 50 per cent of the Federation's exports. Some 290,000 persons find employment in tapping and curing the latex; most of these are Chinese, but there are a number from the Tamil region of southern India. The industry is divided between estates, owned for the most part by Europeans, and small holdings, all of which are owned by Asians. There are over 2,000 estates in operation, varying

in size from a few hundred to several thousand acres. They lie mainly in the western foothills where natural conditions are suitable, but the availability of emigrant labour and an excellent railway system are probably equally important factors in the choice of site.

In recent years the continued expansion of the synthetic rubber industry has provided a serious threat to the future of the natural rubber industry, and the Malayan Government has realised that increased efficiency and yields are necessary if it is to hold its position on a competitive market. In 1953 it was estimated that the average yield of rubber on estates was approximately 473 lb. per tapped acre, although actual yields on some farms were as low as 300 lb. per acre. To increase production replanting schemes are in progress and a high-yielding planting material is being used. According to recent reports it is possible to raise yields to 2,000 lb. per acre from the high-yielding clonal and bud grafted stock where soil conditions are ideal. However, at the present time only 727,755 acres of this stock have been planted by estates and 73,000 by smallholders. Many of the owners have in the past been discouraged from replanting as it is so costly, and while a number of estates have been able to finance adequate replanting plans, the majority of the smallholders found the financial burden too great. With this situation in mind the Malayan Government introduced a smallholders' replanting scheme in 1952, under which a cess of 4½ cents per lb. was levied upon all rubber exported, the smallholders' share being paid into a fund from which grants up to 500 Malayan dollars per acre have been made. This scheme has met with fair success, and in 1954 33,000 acres were replanted and applications for grants covering 60,000 acres were registered in 1955. Following the report of the Mudie Mission in 1954, legislation has now been passed providing for a fluctuating export duty related to the market price of the commodity and for financial assistance to the industry as a whole over the next eleven years to meet the cost of replanting with high-yielding material. In this way production costs will be greatly reduced and the position of natural rubber *vis-à-vis* the synthetic product will be considerably strengthened.

Other plantation crops grown in the Federation include oil palms, pineapples, coconuts and tea. At the end of 1954 there were 63 palm oil estates, the largest of these extending to 16,500 acres. Some 15,000 workers were employed, the majority of these being Tamils.

Before the war Malaya accounted for 27 per cent of the world production of pineapples and 80 per cent of the world export trade, but in 1945 most of the land formerly under production had reverted to jungle. The Federal Government is now re-establishing the pineapple canning industry and in 1954 exports had risen to the value of \$25,275,000.

Coconut plantations are to be seen almost everywhere in the Federation and especially they are found in low coastal plains and near the lower reaches of rivers. Competition from the low-cost peasant producers who farm approximately 450,000 acres of this crop as a side-line to their fishing or rice production is severe in slump years; it has been estimated that the smallholders account for 70 per cent of Malay copra production. The cultivation of the coconut is eminently suited to the soil of the territory, and yields of 1,600 per acre are by no means uncommon.

Like the pineapple industry, the tea industry in Malaya suffered through neglect and destruction during the war. It is mainly grown by estates but there are also Chinese smallholders. Approximately 8,700 acres are under tea, and production has increased from 301,870 lb. in 1946 to 4,590,000 lb. in 1954.

Of the food crops, rice is the most important, and is in fact the staple diet of most of the population. The wet padi depends on a highly developed system of water control, and

THE BRITISH COMMONWEALTH

recently a drainage and irrigation department has been set up by the Government, which, in 1953, was responsible for the irrigation of 292,780 acres. Although it is the main food crop produced in the Federation it is still necessary to import large quantities, and the Federal Department of Agriculture is investigating the possibility of improving yields.

The Malay and Chinese frequently supplement their agricultural activities with fishing, and it has been estimated that persons primarily employed in this industry number over 60,000. In 1954, fish landings for east and west coasts amounted to 109,934 tons.

The Federation is one of the foremost tin producers of the world and in 1953 it accounted for approximately 32 per cent of the world output. At the end of 1954 there were 719 mines actually producing tin, 61 per cent European owned and 38 per cent Asian. The bulk of the worked deposits are alluvial, lying in the valleys of the foothill zones both to east and west of the central ranges. Exploitation has, however, been much more rapid on the western side. Here the alluvials are nearer the coast, consequently the import of labour, machinery and food, and the export of tin concentrates was less costly. Chinese capital pioneered the industry, and in the early stages most of the labour was imported from China. Chinese still form the bulk of the 40,000 labour force, but much of the capital is now British, especially where the highly mechanised technique of dredging is adopted. By this method an enormous dredger digs and sorts the alluvials, forming a large pit which, in this type of country, is always full of water. The dredger floats forward in the pond, filling in behind with discarded waste. Other means employed vary from the moderately costly gravel pumping to simple panning by hand. Of the total production of 60,690 tons of tin concentrates (1954), dredging yielded 52 per cent, and gravel pumping 37 per cent. Smelting is done in Penang and Singapore, the ore moving along a dense network of rail and roads which has grown up in the "Tin Belt" between Taiping and Kuala Lumpur, the Federal Capital.

There has been almost no prospecting for new ore-bearing land since 1948, and this lack of development is becoming a matter of grave concern to the industry of the country as a whole. The Government is fully aware of the need to locate new deposits before the old areas begin to fail, and prospecting parties in underdeveloped areas are now being protected by security forces wherever this may be necessary.

The prices of tin have to a great extent been controlled by artificial means since the end of the war. World production in 1954 at 194,500 long tons was 36,900 tons in excess of consumption, which is an unfavourably high differential. To meet this situation an agreement has been drawn up by the International Tin Study Group which provides that tin production should be correlated to consumption by restriction of output, and that a buffer pool stock of metal should be assembled and operated to keep the world price within laid-down high and low limits. These conditions should make for stability in the industry and a period of great expansion can be hoped for.

The only coalfield worked in Malaya is at Batu Arang in Selangor. In 1954 production was 124,468 tons from open-cast and 100,072 tons from underground mines. The future of the industry is threatened in the face of competition from imported fuel oil, and decline in the consumption of coal will undoubtedly continue with the widespread shift from coal to oil burning. In December 1954 the labour force employed had dropped to 1,224 from 2,043 in the previous year.

Iron-ore is the other chief mineral resource. The industry is handicapped by the situation of the ores, on the

stormy, relatively undeveloped eastern flank of the peninsula. Although the iron content of this haemetite ore is as high as 50-60 per cent (compare, for example, the best English ores—32 per cent) it is by nature a product in which weight is high in relation to value, and transport is costly. By 1952, the industry had reverted to its pre-war pattern, most of the 1 million tons production being exported to Japan, whose nationals founded the industry. Open-cast methods are adopted, and most of the labour is Chinese.

Other exploited mineral resources include gold (obtained mainly in Pahang), ilmenite, tungsten and manganese (worked as by-products), and bauxite. There is the possibility of further development of bauxite mining in conjunction with expanded refinery capacity in Australia.

SINGAPORE

Trade is the paramount *raison d'être* of the city and colony of Singapore. Founded in 1819 by the East India Company, the colony has something in common with the older Penang. Both are island situations. Penang saw its heyday with the once dominant land route across the Kra Peninsula, its rival depends on the sea routes of the Straits of Malacca. Each has attracted large numbers of Chinese traders who form the bulk of the population. But there is an enormous difference of scale. The entrepôt trade of Penang is \$191 million, as against \$3,027 for Singapore, and Singapore's population of just over 1 million is four times greater.

The island has an area of 230 sq. miles, about one-sixth of which is covered by the city. Of the rest, one-third is forested, by rain forest in the central area—the catchment zone for the city's water supply—and by swamp forest along the coast. The island is low-lying, consisting of denuded scarplands and plateau resting on a granite core.

Rubber and coconut plantations are important, but vegetable farming by Chinese (who use intensive methods to supply the urban market) is of greater economic significance. The 7,000 acres of land used in this way yield annually 25,800 tons of fresh vegetables.

There is little true manufacturing industry in the colony. Industrial activity is mainly concerned with processing, sorting or refining the materials which pass through in the course of trade. Tin is smelted on a small island in Singapore harbour. Coconut oil is extracted from imported copra, and rubber is sorted, milled and packed. Nearly all this industry is concerned with increasing the ratio of value to weight in order to reduce the cost of shipping these raw materials to the manufacturing countries overseas.

Fishing is an important native activity throughout South-East Asia. It is mainly inshore fishing using small boats or shallow-water traps. Only in Singapore has the good harbourage and availability of capital encouraged the growth of an off-shore fleet in any way comparable with those of temperate latitudes. This fleet is still in the early stages of development, but in 1952 it accounted for 40 per cent of the total catch. In 1950 the off-shore catch was negligible; hence this new activity was a real increase in the food supply of the colony, as the contribution of inshore fishing remained constant at about 3,500 tons. Food is one of the colony's major problems; her high population density (5,050 per sq. mile) is largely responsible for the Pan-Malayan rice deficit.

Singapore has become the world business capital for two commodities—rubber and tin. It deals with the marketing of these products not only from Malaya but from the other countries of South-East Asia. Its total trade currently amounts to some \$7,000 million, 22 per cent of this trade

being with the Federation from which there is a net import of \$229 million. No details are published of this trade, but undoubtedly rubber and tin concentrates bulk large on the import side. For the rest, entrepôt trade amounts to half the total value. Malaya, Indonesia and Thailand are the chief participants, and in each case imports exceed exports in the ratio 7 to 4. During the Korean crisis Singapore's general trade showed a considerable bias towards the export side, for tin and rubber were greatly in demand. Singapore retains this advantage in its trade with the U.S.A. thereby earning useful dollars. The United Kingdom, Europe, other Commonwealth territories and the U.S.A. dominate the general trade, but Japan, India, Pakistan and China (with Hong-Kong) are also represented.

The value of the rubber trade exceeds that of any other commodity. In the export list it is followed by tin, motor spirit, cotton textiles, spices, liquid fuel, rice and artificial silk goods. Rubber again leads the list of imports, followed by motor spirit, liquid fuel, rice, cotton textiles, artificial silk piece goods, iron and steel manufactures, machinery and spices. It should be noted that this analysis excludes trade with Malaya, and that the occurrence of a commodity high on each list probably indicates that it is important in the entrepôt trade.

Malaya and Singapore are well-developed territories by comparison with British Borneo. The relevant population densities are illuminating—

	<i>Density of Population per sq. mile</i>
Malaya	109
Singapore	5,050
Sarawak	13
Brunei	22
North Borneo	12

But the Pan-Malayan economy is far from stable; there is a great deal of dependence on rubber and tin, and the world demand for these shows rapid variations of great amplitude.

CHRISTMAS ISLAND AND THE COCOS-KEELING ISLANDS¹

Although they lie in the Indian Ocean, many hundreds of sea miles from Singapore, Christmas Island (11° S. lat., 106° E. long) and the Cocos-Keeling Islands¹ (12° S. lat., 97° E. long) are administered as part of the Colony. In geographical environment they present a striking contrast to the other British Commonwealth territories in South-East Asia.

Rising abruptly from oceanic depths to a maximum altitude of 1,170 ft. above sea level, the 64 sq. miles of Christmas Island lie mainly in a single plateau at about 650 ft. From the plateau, terraced cliffs of coral limestone fall to the sea, and although broken here and there by small valleys the coast offers no adequate natural harbour. A thin soil supports dense woodland which remains uncleared, due to the complete absence of aboriginal inhabitants and the total preoccupation of the present population with mineral exploitation. Bird guano, collecting in the valleys during an early and prolonged period of arid climate, has since reacted with the coral limestone sub-soil to form extensive deposits of lime-rich phosphates. These are mined at the northern and southern tips of this T-shaped island. Extraction began in 1900 with Chinese labour. By 1952, annual shipments had increased to 362,497 tons, and in that year the population

numbered 1,743, of whom 69 per cent were Chinese and 20 per cent Malays; there were also 86 Europeans.

The Cocos-Keeling group presents something of a contrast. Even more isolated than Christmas Island, 530 miles to the east, the group was also uninhabited until modern times. There are over a score of islands scattered irregularly around a lagoon seven miles in diameter. Some miles to the north of the atoll is the single island of North Keeling. All are low-lying and the "soil" of coral sand lying on the reef provides root-hold for a dense vegetation of coconut palms. Settlement began here in 1826, and has always been essentially agricultural. During the nineties of the last century the price of coconut products was high. These are the islands' only real wealth, and this period consequently saw the peak of prosperity, with annual receipts from copra rising as high as £25,000. With falling prices and typhoon damage the position has deteriorated. In 1946 the population numbered about 1,800, and with the failure of the copra trade their position became hopeless. Emigration has been encouraged, and by 1952 all but 400 of the Malaysians had left, mainly for North Borneo. The islands have certain strategic advantages: there is a relay station on the submarine cable, and an airfield on the route between Australia and South Africa. These are responsible for the relatively large European population, which numbered 123 in 1952.

SARAWAK

Sarawak, Brunei and North Borneo are all situated in the north-western sector of the large island of Borneo, which has, as its physical core, a radial pattern of mountain ranges. The colony of Sarawak lies to the west of the central north-south range and to the north of a western limb of the radial system. Draining westward and northward, the rivers, with a remarkable rectilinear pattern, carry the colony's ample rainfall to the South China Sea. They pass through three types of country. Deep in the interior lie the mature mountain landscapes of old, mainly metamorphic rocks. Then comes a belt of undulating foothills, which in places rises to heights of 2,000 ft. Coal- and oil-bearing strata are amongst the sediments of more recent age which form this zone. Emerging on to the coastal plain of soft marine and fluvial deposits, the rivers flow sluggishly, to find their way to the sea through a maze of coastal bars thrown up by the violence of the north-easterly winds of the wet season, which takes place during the monsoon period of October to March. An abundant rainfall of 100 in. near the coast, and over 200 in. inland nourishes the dense vegetation characteristic of each zone. Inland wandering tribes of Dyaks, little disturbed by the coastal influences of civilisation, carry on a primitive shifting agriculture, and for them head-hunting was a sport of the very recent past.

Only along the coast and in narrow riverine strips has Sarawak been developed economically. River transport is still the only means of speedy contact with the interior, and three river-side towns are the centres of administration, trade and commerce. Kuching, the capital, and Sibu are ports and administrative centres, while Niri (an oilfield and surrounded by plantations) is populated largely by Chinese, who altogether comprise 27 per cent of the colony's people; 18 per cent are Malaysian; and 34.8 per cent and 7.7 per cent respectively belong to groups known collectively as Sea- and Land-Dyaks. The total population is approximately 605,000.

Commercial agriculture is on a small scale, apart from five large rubber plantations. Management and labour in the rubber industry are poor, stock is inferior and in a period of falling prices, production is diminishing. Rubber exports, normally the highest in value, have given way to

¹ The Cocos-Keeling Islands were formally transferred to Australian Sovereignty on November 3rd, 1955.

THE BRITISH COMMONWEALTH

pepper, the produce of a few score acres. Sarawak is a potential producer of food for Malaya and Singapore, and land of suitable quality is available which might extend the acreage of wet padi for rice growing well above the present 200,000 acres. Dry rice, with lower yields, is cultivated under a shifting system on 500,000 acres of poor hill land each year. Sago is another important crop.

The forest and fishery resources of the colony are scarcely touched, while an adequate assessment of mineral resources, which include gold and bauxite, awaits survey reports.

In the north-eastern oil-field area the refinery of Lutong is fed by pipeline from the adjacent territory of Brunei. The export of this oil, crude and refined, inflates Sarawak's export trade to give it a favourable trade balance of \$60 million instead of what would otherwise be an actual deficit of \$5 million. Very little oil is now exploited within the territory.

BRUNEI

The Mohammedan Sultan of Brunei, whose ancestors once ruled most of the island of Borneo, now governs a state of about 2½ thousand sq. miles, split into two by a sector of Sarawak, which has a population of approximately 56,000. Smaller than its two neighbours, and with a proportionally longer coastline, Brunei is however more developed, and has a greater density of population. Nevertheless, 71 per cent of the land area is in forest, of which more than half is statutory forest reserve. The climate and natural vegetation correspond with those of Sarawak. Rubber, rice, sago, coconuts and vegetables are the main crops. Rubber occupies 30,000 acres and rice (both wet and dry) 9,060 acres. Crude oil follows rubber as a dominant export; firewood and natural gas (to Sarawak) are also important.

The oil occurs in Tertiary strata which underlie the soft sediments of the western part of Brunei, and exploration is now in progress to find whether the field extends under the adjacent shallow sea. With a production of 5 million tons of crude oil each year, the state is the largest Commonwealth producer after Canada. The oilfield has brought about the growth of a local population to a total (1952) of 12,000, rivalling the 10,500 of the capital, Brunei. The latter, situated on the Brunei river, is predominantly Malayan in population and physical character. Apart from its administrative centre, the town is built on piles in the river bed.

These urban populations provide a market for food; and whilst the local fishing industry provides for one basic need, two-thirds of the State's rice requirements have to be imported.

Oil is the main source of wealth, and in 1954 it accounted for \$262,206,468 out of a total export figure of \$264,460,260. The high import figures—in 1954 they amounted to \$111,666,395—include a considerable amount of equipment for the oilfield.

NORTH BORNEO

The colony of North Borneo, roughly triangular in shape and with a long indented coastline, covers 29,000 sq.

miles of the northern extremity of Borneo, and has a population of approximately 360,600. Coastal waters are deeper here than to the south—the territory marks the edge of the Sunda Platform. Otherwise the physical features and general landscape are comparable to those of Sarawak. The main mountain watershed, running from north to south, and dominated by Mount Kinabalu, divides the territory unequally into a larger eastern and a smaller western zone. In the west there are three narrow belts of scenery (mountain, foothill and downs) and a coastal plain. Hemmed in by mountains, the western part of North Borneo faces the China Sea and has lain open to maritime influence; here development has proceeded more rapidly; here too are the colony's only railways, and most of its made roads. The eastern area has only one advantage—that of long, slow-flowing streams suitable for motor launch traffic. Population densities of 31 and 6 persons per sq. mile respectively emphasise this general contrast between west and east.

There are four chief towns and ports, each with a good harbour. Jesselton is the capital, Tawau and Sandakan serve the east coast, and Weston, formerly one of the Straits settlements, deals with the trade of Brunei Bay and the Seria Oilfield. Chinese form a large proportion of the urban population, as traders, artisans and small-holders. The latter grow rubber, rice, coconuts, fruits and vegetables and raise pigs. Dusuns form the largest native group (35.5 per cent) and are agriculturalists concerned mainly with rice production, for which the colony is a deficit region. Most of the remaining indigenous people are fishermen, or casual farmers whose activities currently affect 11 per cent of the land area. A further 77 per cent of the territory is forested, and 26 per cent is commercially valuable. Forest output is for the time being small, but timber, firewood and charcoal have value as exports. Rubber is again the mainstay of the economy, with rice, copra, sago and pepper as other important commodities. \$2 million worth of tobacco is produced on an East Coast plantation, while in the humid area round Mount Kinabalu there is a considerable acreage in native smallholdings. Freshwater and in-shore fish are important in the diet. Experiments are being made in Kota Belud with a cattle ranch on 6,000 acres of rough grazing land. The Cocos Islanders transferred to the colony are mainly concerned with east coast turtle and pearl fisheries.

The Commonwealth Territories in South-east Asia are at different stages of development, yet have much in common. All are producers of basic, mainly agricultural, raw materials. Malayan tin and Brunei oil are exceptional, but important, contributions. Trade is vital to prosperity, and variations in world prices have rapid repercussions. Much of this trade passes through Singapore, but direct trade, especially with the United Kingdom, is increasingly significant. A special feature is the large contribution made to the total population by Chinese and Indian immigrants. Hence the development of good race relations is one pre-requisite of economic expansion, which will also depend on considerable investment of external capital.

P.K.M.

HISTORY

Britain's territorial interest in Malaya dates from 1786, when the Island of Penang was acquired by the East India Company as a naval station and a port of call on the trade route to China. A strip of territory on the mainland opposite Penang, known as Province Wellesley, was added in 1800. The town of Malacca, occupied for a time during the Napoleonic Wars, was ceded to Britain by Holland in 1824, and Singapore, most important of the three outposts which were known collectively as the Straits Settlements, was occupied by Sir Stamford Raffles in 1819. The international basis of the British position on the Straits was the Anglo-Dutch Treaty of 1824 which, in addition to ceding Malacca, recognised Malaya as a British sphere of interest, and confined Dutch political interests to Sumatra and the islands south of Singapore.

Malacca was from the beginning of the British connection a quiet backwater. But Singapore and to a lesser extent Penang quickly became thriving sea-port towns with a polyglot Asian and European population amongst whom the Chinese were the most important element. Singapore's commanding position and its freedom from customs restrictions enabled a group of private traders, the "Straits merchants", to develop a lucrative trade with the islands of Indonesia and the independent states of South-East Asia which soon became an important British interest. In the eyes of the Home Government and the East India Company however the main importance of these settlements was the protection they afforded to the vital trade route through the Straits of Malacca and the South China Sea. After 1833, when its China monopoly came to an end and its trading activities in the Far East ceased, the Company itself no longer obtained any direct benefit from the Straits Settlements. But it continued to administer them, and to bear the cost of their administration, in the interests of British trade in general, and of the China trade in particular.

It was the safety of the China trade which prompted the acquisition of another island colony, Labuan, off the north coast of Borneo. This was occupied in 1846 to serve as a coaling station and a harbour of refuge half-way up the South China Sea, and as a centre for operations against the Dyak and Iban pirates who infested the area. At the same time a British Consul-General was established at the town of Brunei, whose Sultan claimed suzerainty over the whole of the north coast of Borneo. One of the moving spirits in this affair, Sir James Brooke, had come to the north coast in 1839 as a private adventurer and had established himself in Sarawak as a vassal of the Sultan. He was now appointed Consul-General and the first Governor of Labuan, and he seized the opportunity to make himself in 1846 an independent ruler in Sarawak. The colony of Labuan was administered by the Colonial Office, and in 1867 the Straits Settlements, which had become an unwanted burden on the Indian treasury, also passed under Colonial Office control. There was by then an ill-defined but very real British paramountcy over the coastline bordering the Far Eastern trade route, based on four trading settlements from Penang at the entrance to the Straits of Malacca to the North-west, to Labuan on the South China Sea to the East. It was from these four small settlements that the British position in Malaya and North Borneo developed.

In this early period the Straits Settlements had few direct interests in the Peninsula itself. The wealth of the

Singapore and Penang merchants came not from Malaya but from the China trade, and from the fact that Singapore was the centre of the commerce of South-East Asia. The Indian Government saw to it that no foreign power was allowed to maintain a foothold on the Straits of Malacca. The Anglo-Dutch Treaty of 1824, in addition to excluding Dutch influence from the Peninsula, also guaranteed the independence of Achin, in North Sumatra, on the other side of the Straits. Again, the Indian authorities intervened to prevent the west-coast states of the Peninsula falling under Siamese control, and after 1826 the states of Perak and Selangor were guaranteed by treaty against external invasion. At the same time, the East India Company, and after 1858 the India Office, always refused to allow their officials to interfere in the internal affairs of the Malay States, and vetoed the acquisition of additional territory or responsibility.

After the middle of the nineteenth century this policy of non-intervention was maintained with increasing difficulty, and though it was at first continued by the Colonial Office when they took over the Straits Settlements in 1867 circumstances soon forced the British Government to assume an increasing responsibility for the administration of some of the peninsular states.

In part this was due to the disintegration of government in some of the Malay States. There had been no strong Malay authority in the Peninsula since the overthrow of the Moslem Sultanate of Malacca by the Portuguese in 1511. After that date neither the Portuguese nor the Dutch interfered much in Malay affairs, but they controlled the sea-lanes and monopolised trade, so that the little Malay successor states of Malacca, left to themselves, tended to stagnate. This process was accelerated when British protection against Siam removed the last threat of external interference, and left the local Malay chiefs free to pursue their own internecine feuds with impunity. In the north the states of Kelantan, Trengganu, Perlis and Kedah were nominally under Siamese suzerainty. Kedah, and in the extreme south of the Peninsula Johore, whose ruler leaned on the advice of the Singapore merchants and officials, were relatively stable. But in all the other states the titular rulers were weak, and power was divided amongst a number of chiefs, all more or less independent and at odds with each other. From their stockades the chiefs controlled the rivers, the only means of communication. They lived on dues levied on the river traffic, and on what they could wring from the depressed peasantry. Otherwise their main occupation was a judicious mixture of trade and piracy. There was in practice no law save the arbitrary will of the local chief and civil war and widespread disorders were common.

This unsettled state of affairs was complicated by the presence of the Chinese tin-miners, who first began to push into the Malay States from the Straits Settlements in considerable numbers after about 1850. In Johore, where the Chinese worked pepper and gambier estates, the ruler was able to control this new development, and use it to lay the basis of his own prosperity. But in the tin states of Perak, Selangor and Sungai Ujong, the absence of any strong central authority to control the Chinese meant that they merely added another element of instability to the prevailing disorder. They brought with them their own clan feuds and secret societies, and groups of Chinese formed alliances with Malay chiefs already at odds with each

THE BRITISH COMMONWEALTH

other. In Larut, a coastal province of Perak, two groups of Chinese belonging to rival secret societies fought an irregular war against each other after 1862 for possession of the best tin-mining areas. Since the miners had the headquarters of their secret societies in the Straits Settlements, and since they were financed by groups of Chinese merchants domiciled there, these quarrels tended to spread to the British settlements. Between 1868 and 1873 there was increasing gang-warfare and violence amongst the Chinese communities of Penang and Singapore, and Chinese piracy developed, so that the British authorities were forced to intervene to maintain the security of their own territory, to protect trade, and to safeguard capital invested in the mining industry.

In part however British intervention in the Malay States was prompted by the need for a new policy to maintain British interests in the face of changed economic conditions and increased activity on the part of other European powers in South-East Asia. The Dutch began to extend their direct control over the native states of the outer islands of Indonesia, France embarked on a colonial adventure in Indo-China, and Germany, though she had not yet begun her quest for colonies, showed an increased interest in the activities of the numerous German merchants in the area. In the economic sphere the tariffs and blockades which accompanied the extension of Dutch and French control tended to diminish the area open to free trade. At the same time the opening of the Suez Canal, the introduction of the steamship as a freight carrier, and the extension of the European telegraph to Singapore intensified competition. The interests of the Straits merchants, anxious that their own hinterland at least should remain open to trade and investment on equal terms, and of the British Government, concerned to ensure that no other power should establish itself in the Peninsula, alike demanded some form of British intervention.

Between 1874 and 1888 therefore British Residents were established in the States of Perak, Selangor, Negri Sembilan (a confederacy of small states behind Malacca of which Sungai Ujong was one), and Pahang. The juridical basis of the Resident system differed from state to state, but the following provisions, whether embodied in a formal treaty or implicitly accepted, were common to all four states.

1. The states agreed to accept British protection, and to have no dealings with foreign powers except through the British Government.
2. Great Britain guaranteed the states against attack from foreign powers.
3. It was agreed that the advice of the British Resident must be asked and followed on all subjects except those concerned with religion and Malay custom.

It was intended that the Residents should confine their activities to the giving of advice, and that no executive or administrative responsibility should fall on them or on the British Government. But in practice this was not possible. The Residents were expected to provide pensions for local chiefs whose independent rights of taxation were taken from them, to construct roads and public works, and to create from nothing a sound administrative and financial system so that the development of the states could proceed. They had neither time nor opportunity to educate the Malay chiefs and carry them with them, and were forced to take matters into their own hands.

From the beginning the Residents were in fact the chief executive officers of the states. At first too-precipitate action not always based on an adequate knowledge of local conditions led to a good deal of resentment, and there were risings in Perak (1875-76) and in Pahang (1891-92). As the states developed however the Sultans and their chiefs became reconciled to a system which gave them security

and an assured income without any of the burdens of administration.

The shifting of power from the hands of the Malay rulers was accentuated in 1895 when the four states were formed into a Federation. They then came under the control of a Resident-General at Kuala Lumpur, in Selangor, who acted under the authority of the Governor of the Straits Settlements in his capacity of High Commissioner for the Malay States. This made for increased efficiency of government and uniformity of development in the separate states, which were just on the threshold of a great tin and rubber boom necessitating the rapid extension of government services. But it also meant that control over policy, which had previously resided in the Residents, passed into the hands of the secretariat and the specialist departments at Kuala Lumpur, and the Federated Malay States became in effect a centralised union of states.

The political development of the Unfederated Malay States, as those outside the Federation were called, was somewhat different. The states in the north, Kedah, Perlis, Kelantan and Trengganu, were transferred from the Siamese to the British sphere of influence by a treaty between Britain and Siam in 1909, and British officers were attached to them as "Advisers". Johore, which had always had special links with Singapore but was yet a strong and independent state, received an Adviser in 1914. The position of these Advisers was on paper the same as their fellows in the Federated states—their advice had to be asked and taken on all matters of administration. But for various reasons, though British control over policy was as strong as in the Federated Malay States, the Advisers seem usually to have confined themselves to the giving of influential advice, and never took over the executive government of the state.

The concern to prevent any other power establishing itself in an important strategic area, which was one of the motives for the British Government's intervention in the Malay States also gave rise in the 1880's to the acceptance of increased responsibilities on the north coast of Borneo. In this case however it was not necessary for Britain to interfere in the internal affairs of the area. Sarawak had successfully survived the death of its first "white raja" in 1868, and under his nephew Charles Brooke the state was consolidated and expanded at the expense of the declining Sultanate of Brunei. In north-east Borneo a private syndicate, which had secured the cession of a large area of land from the Sultans of Brunei and Sulu in 1872, secured a Charter as The British North Borneo Company in 1881. In 1888 Sarawak, Brunei, and the North Borneo Company's holdings were declared British protectorates, so that the whole of this coast came under British control so far as its external affairs were concerned. The Crown had however no internal jurisdiction, except for the extra-territorial rights granted to the British Consul in Brunei to try cases involving British subjects. In 1890 it handed over the colony of Labuan, which had been a complete failure, to the administration of the North Borneo Company. In 1906 the Consul-General in Brunei was replaced by a British Resident acting under the Governor of the Straits Settlements as High Commissioner for Borneo, and with exactly the same powers over the administration of the state as an Adviser in one of the Unfederated Malay States. At the same time the administration of Labuan was resumed by the Crown, and it became part of the Straits Settlements, which had by this time also acquired two dependencies in the Indian Ocean, the Cocos-Keeling Islands, taken over from Ceylon in 1886, and Christmas Island, annexed in 1888.

After the introduction of the Resident system the economic development of Malaya proceeded rapidly. Until the creation of the Federation this development was

mainly due to tin-mining, financed largely by Chinese capital and employing Chinese labour, and in a lesser degree to the planting of crops such as sugar and coffee. The year 1895 saw the beginning of a boom period, associated at first with large-scale European (largely British) investment in tin-mining, and the introduction of advanced mechanical methods. Between 1889 and 1904 tin exports, which had been 26,000 tons in the former year, doubled, and in the same period the revenue realised in the Federated Malay States from the duty on tin increased eight-fold. Even more important was the coming of the large European managed rubber estate, worked with imported Indian labour. The first rubber trees were introduced into the Singapore Botanic Gardens in 1877, but in 1897 there were still only 345 acres under rubber in Malaya. The great expansion of rubber came after 1905, with the development of the motor-car in the West. Under the impetus of rising prices, which jumped from 2s. 6d. per lb. in 1905 to a peak of 12s. 0d. per lb. in 1910, before falling gradually to around 3s., production soared from 200 tons in 1905 to 196,000 tons in 1920, when it was 53 per cent of world production. This spectacular progress was accompanied by the extension of government activities, the provision of posts, telegraphs and medical services, large-scale construction of roads and railways, and the opening of the new port of Port Swettenham. There was also a spectacular increase in population, which thanks largely to Indian and Chinese immigration nearly doubled between 1901 and 1920, thus increasing the importance of Malaya as a market for consumer goods, and emphasising the significance of the Straits Settlements, through which all this traffic flowed. Not only did their trade double itself between 1895 and 1905, and again between that date and 1920, but they acquired important secondary industries such as tin-smelting and rubber processing and packing.

This development was not however uniformly spread over the whole of Malaya, but was at first confined to the Federated Malay States of Perak, Selangor and Negri Sembilan, where the bulk of the tin deposits were located and where the centralised administration gave greater assurance of stability to investors. The completion in 1903 of a north-south railway from a point opposite Penang to Singapore encouraged the development of rubber in Johore and South Kedah, and the latter state became an important rice grower. But the east coast states, particularly Kelantan and Trengganu which did not come under British influence until 1909, were difficult of access because of the terrain and the lack of harbours on their exposed coastline, and remained undeveloped.

The growth of population was similarly unevenly distributed between the various states and the different racial groups in Malaya. By 1921 the Chinese accounted for 35 per cent of the 3½ million total population of Malaya. The Indian accounted for 14 per cent, the Malays for 49 per cent. The importance of the Chinese was not however sufficiently indicated by their growth in numbers. They predominated in the Straits Settlements, Singapore being practically a Chinese city, and were about equal to the Malays in the Federated States of Perak, Selangor and Negri Sembilan taken as a whole. Only in the relatively undeveloped states of Johore and Kedah, and in the backward east coast states did the Malays retain a clear majority. Moreover, though the two main industries were by 1920 dominated by European capital, it was the Chinese who built up and controlled the distributing and retail trades and the secondary industries. The economic development of Sarawak and British North Borneo followed a similar, if less spectacular, course to that of Malaya. In both territories rubber became the mainstay of both trade and revenue, the rubber boom in the early nineteenth-hundreds coming just in time to avert a serious financial crisis

in North Borneo. Both territories enjoyed by 1920 favourable trade balances and revenue surpluses, and in both Chinese immigrants were becoming increasingly important in the commercial life of the country.

The whole of this political and economic structure was supported on the dual pillars of rubber and tin. Their exports paid for the administration, and for the importation of machinery, consumer goods, and about 60 per cent of the country's food, and provided the atmosphere of prosperity which reconciled the Malays of the Federated Malay States to the passing of political and economic control into the hands of the immigrant communities. The economic stringency of the early twenties and the depression of the thirties of the present century had therefore serious results for Malaya. First rubber, then tin suffered a reduction in prices, coupled with mounting production and accumulating stocks. Rubber fell from an average of around 2s. per lb. in 1919 to 8½d. in 1922, and tin from £302 per ton in 1920 to £162 in 1922. Restriction of rubber output under the Stevenson plan was only partially successful since the production of the Dutch East Indies was not affected, and the position had been only partly restored when Malaya was caught up in the world depression of the thirties. The depths of commercial recession were reached when rubber averaged 2½d. per lb. in 1932, a price below the cost of production of most European estates, and tin £120 per ton in 1931. Thereafter there was a slow but painful recovery, helped by international agreements for the restriction of production between the tin and rubber producing areas of the world. The trade of the Straits Settlements inevitably suffered not only from the recession in tin and rubber, but from the effect on its entrepôt traffic of the general contraction of world trade in the thirties. The external trade of Malaya as a whole, which reached a peak of \$2,266,526,000 in 1926, had fallen by 1932 to \$700,174,000. Thereafter there was a slow recovery, but in 1938 it was still only \$1,115,925,000.

Apart from the economic aspect of the depression, and the social problems arising from unemployment and a general fall in the standard of living, it also reacted on the political life of Malaya. Between 1921 and 1924 and again after 1930 government revenues shrank drastically. This was especially true of the revenues of the Federated Malay States, which were largely dependent on dues levied on tin and rubber exports. After 1928 they did not again cover a much reduced expenditure until 1934. The prosperous years 1910-18 had stimulated ambitious programmes of Government works entailing charges against future revenue, and it now became necessary to float loans in London to meet these commitments.

It was against this background of financial stringency that criticism of the existing machinery of government in the Federated Malay States developed after 1920. It was suggested that excessive centralisation had led the Secretariat at Kuala Lumpur to ignore the advice of the Residents and their District Officers, and that extravagance and over-expansion of the technical services had resulted. At the same time the rulers of the Federated States began to contrast their position unfavourably with that of the Sultans of the Unfederated States, who exercised far more control over the machinery of government, and were consistently consulted by their British Advisers. In Johore, for instance, though the technical officers were British, the administrative service was largely Malay, and the chief executive officer was the *mentri besar* or chief minister. The Sultan occupied a position of dignity and authority in the state, and the Adviser's right to insist that his advice be followed was rarely enforced against the Sultan's wishes.

The idea of limiting the powers of the Federal Secretariat and the Chief Secretary, and restoring to the individual

THE BRITISH COMMONWEALTH

Residents "the fullest control in State matters compatible with proper supervision and co-ordination" therefore became a live issue after 1922. In 1924 the Sultan of Perak, whilst on a visit to England, asked the Secretary of State to transfer to the States control over their own domestic affairs. Proposals on these lines were put forward by Sir Lawrence Guillemard (High Commissioner and Governor of the Straits Settlements) with the approval of the British Government in 1924, but these came to nothing. The desire to sustain the position of the Sultans and to safeguard the interests of the Malay community was a cardinal point of British policy, as it was enunciated by Mr. Ormsby Gore, who visited Malaya when Secretary of State in 1928, and by Guillemard's successor, Sir Hugh Clifford. The gulf between intentions and practice however remained. The brief return of prosperity between 1925 and 1928 quietened criticism of Federal administration, and strengthened the position of European and Chinese business interests in the Federated states. These interests transcended state boundaries. They demanded centralisation, efficiency and uniformity in government, and feared that any weakening of central control would injure their prosperity, and impair the confidence of investors in the credit and stability of the Federation.

Proposals for extensive de-centralisation produced by a new Governor, Sir Cecil Clementi in 1931, in the midst of the depression, therefore aroused considerable controversy. Broadly these envisaged the transfer of all Federal departments except such common services as railways to the control of the state governments, with the existing Federal heads of departments acting as advisory co-ordinators. At the same time the four State Councils were to be strengthened so as to deal with their new responsibilities, and it was hoped that ultimately the Residents would be able to reduce their executive activity, so that their functions would approximate to the Advisers in the Unfederated States. The opposition to these proposals was very widespread because they were envisaged by Clementi as part of a more ambitious re-organisation which would include the formation of a Customs Union for the whole of Malaya. He also hoped that with the approximation of conditions in the Federated States to those in the Unfederated States the way would be open for a Pan-Malayan Union in which all the states could join. When Sir Samuel Wilson, the Permanent Under-Secretary at the Colonial Office, visited Malaya in 1932 he was assailed with protests—from commercial interests in the Federated States, who feared the deterioration of government there; from the merchants of the Straits Settlements whose devotion to free trade made them view with horror a Customs Union with a protective tariff; from the Sultans of the Unfederated States who had no wish to be assimilated into a union; from leaders of the Chinese community, who were afraid that increased Malay authority in the Federated States would react adversely on them.

As result of this controversy the projected Customs Union and the wider scheme for the political assimilation of the Unfederated States were abandoned. In the Federated States there was a compromise. It was decided to proceed with the transfer of departments to state control, but the actual authority of the states was limited by the retention of financial control at the centre. Instead of the states controlling their own sources of revenue they received an annual block grant from the Federal Council, and expenditure was closely supervised by the Federal Treasurer. The implementation of these changes was spread over a much longer period than Clementi had envisaged, so that the effect of each instalment of decentralisation could be judged before the next step was taken.

As a result of this cautious procedure only a very limited amount of decentralisation had been achieved by the

outbreak of the Japanese War in 1941. The Chief Secretary at Kuala Lumpur was replaced in 1935 by a Federal Secretary with reduced powers. But only the Medical, Public Works and Prisons Departments passed fully under state control. Other developments were the strengthening of the State Councils to enable them to cope with their new responsibilities, and the increased employment of Malays in the Clerical services and the Malayan Civil Service (a Malay Administrative Service, for which only Malays were eligible had existed since 1910). At the same time programmes were set on foot to develop local co-operative and credit societies and marketing organisations, so as to enable the Malays to face the economic competition of the immigrant communities, and to free them from chronic indebtedness and dependence on Chinese marketing and handling rings.

At the same time as they grappled with the issue of decentralisation the governments of Malaya also became concerned with several problems connected with the Chinese community, which by 1931 made up 39 per cent of the 4½ million population of Malaya, including the Straits Settlements. The island of Singapore contained nearly half a million Chinese and only 140,000 inhabitants of other races. In general the governments of Malaya had always interfered as little as possible with the Chinese whose language few officials understood. The operation of Chinese custom was to a certain extent influenced by decisions relating to marriage and inheritance in the Straits Settlements' Courts, which applied the Law of England modified in the light of local conditions. But the most important administrative influence on Chinese life was that of the Chinese Protectorate, a department established first in Singapore in 1877, and later extended to the other Straits Settlements and the Malay States. The Protectors of Chinese were initially concerned to bring under control the secret societies which were associated with gang warfare, extortion and organised rioting. They tried also to mitigate the social evils which followed from uncontrolled immigration and the preponderance of males in the Chinese community—abuses in the labour traffic, or the "pig trade" as it was called, and the traffic in women and girls. In time however they developed considerable prestige as arbitrators in Chinese domestic disputes, and in dealing with claims for wages and conditions of work under the Labour Code. In the twentieth century, when his title became Secretary for Chinese Affairs, the "Protector", was at once the chief medium of contact between the Government and the Chinese community, and the main adviser of Government on social and political matters affecting the Chinese.

Before the first World War the existence of this large Chinese community interested more in the politics of China than those of Malaya caused little uneasiness. Even the Kuomintang, or Chinese Nationalist Party, was duly registered as a permitted society in 1912, since it was not directed against the Governments of Malaya. But in the 1920's, it extended its activities from the collection of funds for the support of the Kuomintang in China to the dissemination of anti-imperialist and anti-British propaganda, especially through the Chinese schools, which up to 1920 were not in any way supervised by Government. Its extremist or left-wing elements began to organise Communist youth parties and labour unions. It was therefore declared illegal. A difficult position was thus created when in 1927 the British Government recognised the Kuomintang as the Government of China. The British Foreign Office, after prompting from China, pressed the Colonial Government to cease treating the Kuomintang in Malaya as a prohibited society. This the governments of Malaya were very reluctant to do, not only because of the subversive activities of some Kuomintang elements in Malaya, but

because they feared that it would enable the Kuomintang to bring pressure on local Chinese, and because they were opposed on general grounds to the creation of an organised *imperium in imperio* in the country.

The position changed somewhat when Chiang Kai-Shek purged the Kuomintang in China of its Communist elements at the end of 1927 and the extremists in Malaya split off from the party, and became an independent underground movement, working both against the British Government and the Kuomintang for a Communist revolution. In 1931 the Malayan Governments therefore acquiesced in a compromise whereby it became legal for any Chinese in Malaya to be a member of the Kuomintang Party of China, so long as their activities were not directed against the Government, and so long as no Kuomintang branches and no party organisation were set up. These terms were extremely difficult to enforce, but in practice the existence of the Kuomintang in Malaya caused the British authorities no serious embarrassment until the outbreak of the Sino-Japanese War in 1937. After this date it was frequently necessary to curb demonstrations and other activities of the Kuomintang directed against Japan and Japanese trade, since until December 1941 Britain was at pains to give the Japanese Government no cause for offence.

The position of the Communist Party in Malaya during this period was somewhat anomalous. It was concerned as a Chinese movement to foster opposition to Japan, and to support the National Salvation Movement which was launched after the reconciliation between the Kuomintang and the Communists in China in face of the Japanese menace. But it did not cease its attacks upon the British Government or its agitation in industry until the German attack on Russia in June 1941, and it was not until the end of December 1941, when the Japanese invasion of Malaya had been in progress for nearly a month, that a common war front, the Chinese Mobilisation Committee, was formed with the support of both the Communists and the Kuomintang, to support the Government. By then, though a Chinese contingent fought with great bravery in the defence of Singapore, it was too late for effective action.

On December 8th, 1941, on the same day as their declaration of war after the raid on Pearl Harbour, the Japanese bombed Singapore and landed troops on Malaya's east coast beaches at Kota Baharu (Trengganu), and at Singgora and Patani, just over the Siamese frontier. Within a week the long and painful 550-mile rearguard action down the peninsula to Singapore had begun. The capital ships *Prince of Wales* and *Repulse* had been sunk from the air, the main British prepared position in north Kedah had been broken, and the Japanese air forces had overwhelmed the obsolete planes which opposed them and secured command of the air. On January 9th, when Japanese troops were already on the northern boundary of Selangor, it was decided to fall back on Johore. Even this state however could not be held, and on the night of January 30th, 1942, the last defending units were withdrawn over the causeway into Singapore Island. But shorn of air cover the troops and the civilian inhabitants of the island were exposed to continuous bombing and shelling, as well as to the attack of a Japanese force which was thrown across the Johore Strait on February 8th. On February 15th, when the water supply had broken down and further resistance seemed useless, the Island surrendered. The occupation of Sarawak, Brunei, North Borneo and Christmas Island quickly followed as the Japanese seized control of Indonesia.

For most of the inhabitants of Malaya and North Borneo the Japanese occupation period was one of painful insecurity and severe economic hardship. An initial Japanese "terror", directed mainly against the Chinese

community, was followed by a shortage of consumer goods and food, and a rapidly increasing inflation, so that the Japanese paper currency soon became worthless. In Malaya the Malay rulers and Malay administrative personnel retained their positions, and for lack of any practicable alternative accepted Japanese control, even in the states of Perlis, Kedah, Kelantan and Trengganu which were nominally handed over by Japan to Siam. The only positive force in the country, apart from the Japanese, was the Malayan Peoples' Anti-Japanese Army (M.P.A.J.A.). This was a Chinese guerrilla force which maintained itself in jungle camps. Its Communist leaders made use of their existing underground connections to build up a supporting organisation in the towns and Chinese villages, the Malayan Peoples' Anti-Japanese Union, from which they drew supplies and information. In most areas the guerrillas were well-disciplined and thoroughly indoctrinated Communist formations. Their ultimate aim was the creation of a Communist republic, but they collaborated with British officers dropped by parachute or landed from submarines, through whom they received arms. Inevitably however there were also contingents of ruffians with no political or patriotic motive, who used the guerrilla techniques of levying contributions and protection money, and of eliminating Japanese collaborators, to cover robbery, extortion and private vengeance. Inhabitants of rural areas became accustomed to paying taxes to both the Japanese régime and the guerrilla forces. There was widespread bribery and corruption, and respect for government and law largely disappeared in a country in which individual ambition was centred on survival. The fact that the resistance groups were, with a few minor exceptions, entirely composed of Chinese, made for the growth of friction between them and the Malays, and this was aggravated by the Japanese who used the Malay police force against the guerrillas.

From the time when the news of Japan's surrender reached Malaya in mid-August 1945, until British troops began to arrive early in September, there was an interval of about three weeks. This time-lag enabled the Communist guerrillas and their under-cover supporters in the towns to consolidate their position, and to pay off old scores, under the pretext of eliminating "collaborators". The principal sufferers were Kuomintang Chinese, and others who had helped the Japanese or refused to subscribe to Communist funds, but there was some coercion of Malays which set off a series of reprisals, and sporadic inter-communal clashes occurred for several months. The organisation of Communist-controlled trade unions in this period was another development which was to be an important source of trouble in the future. For the moment however the M.P.A.J.A. who seem to have expected a Chinese occupying army, and to have been taken by surprise, offered no organised resistance to the British Military Administration. They were disbanded without incident during December 1945 and the first part of 1946, 6,800 men handing in their arms and receiving gratuities of \$350.

During the war years there had been a major revaluation in British colonial policy. The old concept of limiting the functions of government to the maintenance of law and order, and the provision of basic amenities like communications and public health, so that colonial government merely held the ring whilst external commercial forces shaped the development of colonial territories in their own interests, was abandoned. The policy worked out under the war-time Coalition Government, and implemented by the Labour Government which came to power in 1945, placed the interests of the local peoples first, and regarded their education for eventual self-government as its primary aim. As regards Malaya the Government's policy was defined in the House of Commons in December 1943: "the

THE BRITISH COMMONWEALTH

main object of H.M. Government as regards the political future of Malaya will be the development of its capacity for self-government within the Empire".

The first step towards this goal was a rationalisation of the constitution and administrative framework of Malaya and British Borneo. In April 1946, Singapore, with Christmas Island and the Cocos Islands,¹ became a separate Crown Colony, and a new constitutional unit, the Malayan Union, which included the Settlements of Penang and Malacca, was created by Order in Council. Sarawak and North Borneo (into which the old Colony of Labuan was again merged) became Crown Colonies in July 1946, only the state of Brunei retaining its status as a Protectorate. At the same time Mr. Malcolm Macdonald was appointed Governor-General of all these territories. In addition to bringing the whole area directly under British control, and enabling the British Government to exercise closer supervision over its development, this arrangement so far as it affected Malaya was part of a broader plan for establishing there a unitary state with wide citizenship qualifications which would enable the immigrant communities to associate themselves with the Malays in the working out of representative government. This project, and the Malayan Union itself, had however to be abandoned in the face of Malay opposition.

The juridical basis of the Malayan Union was a series of treaties concluded with the rulers of the nine peninsular States at the end of 1945 by Sir Harold MacMichael, the representative of the Secretary of State. These treaties gave to the Crown full power and jurisdiction within each state. They enabled the British Government to proceed with the elaboration of its proposals for a centralised unitary constitution and for a common citizenship, open to all who qualified by birth in Malaya or a period of residence there, and who were prepared to swear allegiance to Malaya. These proposals provoked widespread opposition amongst the Malay community, and on March 1st, 1946, the United Malays' National Organisation (U.M.N.O.) was founded in Kuala Lumpur under the leadership of Dato Onn bin Jaafar, with the aim of securing the withdrawal of the Union scheme. There was also severe criticism in the United Kingdom from retired colonial officials and other interested parties. Malay opinion was disturbed by the transfer of sovereignty from the hands of the Sultans, but its main concern was with the new citizenship proposals. These it was feared would result in a shifting of political predominance into the hands of the immigrant communities, who already controlled most of the country's economic resources, and who because of their wealth and better educational facilities would be better able to take advantage of representative institutions when these were introduced.

The British Government had no option but to bring into force the administrative arrangements of the Malayan Union to replace the Military Administration in April 1946. But faced with Malay opposition it took no action on the citizenship proposals, and initiated negotiations with the Sultans and U.M.N.O. to work out an acceptable alternative. This alternative was brought into force by the Federation of Malaya Agreement, 1948. It involved the cancellation of the MacMichael treaties, the return of all executive authority in the states to the rulers, and the creation of a Federation of the nine Malay States and the two British settlements of Penang and Malacca, with a British High Commissioner at the head of the Federal Executive. Mr. Malcolm Macdonald's position as Governor-General was now constitutionally untenable, and he became Commissioner-General for the United Kingdom in South-East Asia, serving and co-ordinating British

interests in the area in an advisory capacity, and reporting both to the Colonial Office and the Foreign Office.

The powers allotted to the Federal Government were defined in the Federation Agreement, and all residual authority was vested in the member states, so that the new Federation was in no sense a disguised union, as the old Federated Malay States had been. Since 1948 the British Advisers in the states have confined their activities to the giving of advice when it has been sought, and the actual executive head in each state has been the *Mentri Besar* or Chief Minister, acting in the name of the Sultan. At the same time the executive and legislative powers actually delegated to the High Commissioner and the Federal Executive and Legislative Councils were very wide, and in addition to obvious Federal powers such as defence, external affairs and communications they included the co-ordination and policy guidance of almost all the important state activities except the administration of Moslem Law and Custom. The Federal Legislative Council created in 1948 was composed of 26 official members and 50 nominated unofficial members, 14 of whom were Chinese and 22 Malay, but the number of Malays amongst the official members raised this latter total to 34. The Federation Agreement recorded the intention of the British Government and the Rulers to transform this Legislative Council, and the various State Councils, into elected assemblies "as soon as circumstances and local conditions will permit". In view of this the citizenship clauses of the Federation Agreement were doubly important, since Federal Citizenship was a condition of unofficial membership of the Legislative Council, and by implication of the right to vote at a future election.

The requirements for citizenship under the Federation Agreement were far less indulgent to non-Malays than had been those which had earlier provoked the opposition of U.M.N.O. An Indian or a Chinese born in Malaya did not qualify automatically for citizenship unless he were a British subject or unless both his parents had also been born in Malaya. Failing this he had to have resided in the country for eight out of the preceding twelve years (or for fifteen years if he had not been born in the Federation) and to show "an adequate knowledge" of either English or Malay with, in the case of the latter language, a literacy test). It was estimated that of the 1,952,682 Chinese in the Federation in 1949 only 375,000 became automatically Federal Citizens under these provisions.

The Constitution thus established, especially of course its citizenship clauses, was bitterly attacked by Chinese organisations in Malaya, from the Chinese Chambers of Commerce to the Communist Party. It was the British Government's opinion, nevertheless, that it provided a "stable basis for further political development". That development was however prevented for some time by the outbreak of a Communist insurrection.

At first after the re-occupation of Malaya the activities of the Communist Party and its associated organisations merged into the general unrest in the country. The Communists organised strikes and trade union activities, fomented discontent against the inevitable shortages of food and consumer goods, and high prices, and joined with other non-Malay bodies in protests against the Federation proposals. These included a "*hartal*" or stoppage of work which brought all business and transport to a standstill on October 20th, 1947, and a boycott of the new Singapore Legislative Council elections first held in 1947. By the beginning of 1948 however it was apparent that these under-cover activities would not be sufficient to overthrow the colonial government. Malaya's problems of economic and social rehabilitation were being gradually surmounted, the development of non-Communist trade unions was being fostered by the Government, and a

¹ See note on p. 790

powerful and increasingly articulate body of Malay opinion had rallied to U.M.N.O., refusing to have any connection with the Communist-affiliated Malay Nationalist Party. At the same time Malaya's tin and rubber production was recovering, and beginning to make a vital contribution to the dollar resources of the sterling area.

In February 1948 delegates from the Malayan Communist Party attended the Second Congress of the Communist Party of India, at Calcutta, at which a strong Russian delegation was also present. Apparently as a result of decisions taken at this conference there were outbreaks of violence in India, Burma, Indonesia and Malaya in the first half of the year. In Malaya these outbreaks took the form of the murder of anti-Communist Chinese leaders and of European planters, and of attacks on isolated police stations to provide captured arms for the Communists massing in the jungle. At the same time there was widespread intimidation of Chinese communities, especially the "squatters" living on the fringes of the cultivated areas, by the *Min Yuen*, the Communist organisation whose duty it was to provide the fighters in the jungle with food and money.

On June 18th, 1948, a state of emergency was declared in the Federation of Malaya, and soon afterwards this was also extended to Singapore. On the Communist side the Malayan People's Anti-Japanese Army issued a manifesto calling on all former comrades to take up arms against the British imperialists. It was clear by the end of 1948 that the Communists would not succeed in their objective of overthrowing the Governments of Malaya and Singapore, nor were they able to create "liberated areas", or seriously to disrupt rubber and tin production. But the Government security forces on their side were not able to deal effectively with the Communist terror. The Government's policy turned on the resettlement of the Chinese squatter communities outside the reach of the guerillas, so that they could be more easily denied supplies, and on the creation of a Malayan Home Guard to provide static defence for estates, mines and villages, so that the regular police and troops could be freed for active operations. This policy was developed under Lieut.-Gen. Sir Harold Briggs, appointed Director of Operations in April 1950. It was continued with energy and ruthlessness by Gen. (now Field Marshall) Sir Gerald Templar, who became High Commissioner with jurisdiction over military and civil affairs in January 1952, after his predecessor Sir Henry Gurney had been killed in a terrorist ambush. Throughout 1952 the numbers of terrorists killed and captured rose, and their attacks diminished. But a Communist directive captured at the end of 1952 but dated October 1st, 1951, made it clear that this diminution was as much the result of a change of policy on their part as of the Government's offensive against them. Communist military groups retreated deeper into the jungle, emerged only when engaged on specific missions, and then disappeared again to rest and re-organise, so that police and troops found it harder to make contact with them. At the same time the so-called Malayan "Politburo" began to devote more attention to under-cover work in the towns, the formation of youth cells, propaganda work, and activities in the trade unions. Communist terrorism was contained and damped down, but Communism survived as an organised force, so that sporadic violence and insecurity continued in the life of Malaya.

Though the Communist insurrection failed in its principal objective of gaining control of the country, it seriously retarded Malaya's post-war development. Its effect was least serious on production and trade. Thanks to the devotion of planters and miners, and their staffs, Communist terrorism failed to disrupt the production of rubber and tin. The desire of shopkeepers to limit their

stocks and thus their risk during the early years of the emergency caused some limitation of imports, but by 1951 this trade was again buoyant. Rubber and tin exports rose steadily, reaching their peak at the time of the Korean commodity boom in 1951; thereafter exports declined and prices fell. This however was due to a contraction of world demand, and had nothing to do with Communist terrorism. The same trends affected rubber exports from Sarawak and North Borneo. In the case of Sarawak however there was a saving feature in the continued development of the petroleum industry. The dollar earnings of these exports, the bulk of which have gone into the central pool in London, have been a vitally important element in the dollar resources of the sterling area.

Though the Emergency failed to halt production it imposed an increasingly onerous financial burden on the Federation Government. This burden rose from \$136 million in 1950 to nearly double that amount in 1953. With the revenue from exports falling with falling rubber prices this meant that in 1953 Malaya entered on a period of deficit financing. There were surpluses from the boom years on which to draw, and the British Government and the Governments of Singapore and Brunei made loans and grants to help meet the cost of the Emergency. In addition development schemes drawn up for Malaya, Singapore, North Borneo, Sarawak and Brunei under the auspices of the Colombo Plan provided for the investment of some £60 million of outside capital in the area. Nevertheless financial stringency and pre-occupation with the military aspects of Malaya's security problems meant that development in the fields of education, food-production, and social services suffered.

The Emergency also had a detrimental effect on political and constitutional development. The broad lines on which it was hoped that development would proceed were clear. The main points included the introduction of the elective principle into the Legislative Councils, the holding of elections on a gradually widening franchise, the identification of leading non-official members of the Legislative Councils with the Executive government, and the development of widely based political parties able to operate such a system. But especially in the Federation of Malaya a government grappling with harrying problems of internal security was naturally loath to institute constitutional experiments, whilst Malay opinion had been exacerbated by the Chinese nature of the terrorist campaign and less inclined than ever to concede wider rights of citizenship to other communities. Furthermore, the Emergency Regulations and the fear of identification with subversive elements were two major factors which inhibited the growth of new political parties. In Singapore there was some development. Elections to 9 seats in the 22-member Legislative Council were held in 1947, and in 1951 the number of elected members was increased to 12. At the same time non-communal parties, the Labour and Progressive Parties, developed. But in the Federation such political organisations as developed before 1952 were with one exception communal organisations, such as UMNO (the Malay movement), MCA (Malayan Chinese Association), and the Malayan Indian Congress. The exception was a party founded in September 1951 by Dato Onn (who had been the leading spirit behind the formation of UMNO), called the Independence of Malaya Party (IMP). The IMP however failed to win any wide support amongst the Malay or Chinese communities (its chief followers being the more politically conscious Indians) and its failure to develop a policy with a wide social appeal was marked by the foundation of the Pan-Malayan Labour Party in June 1952.

The only constitutional developments were the introduction of the Member system in 1951 whereby nominated unofficial members of the Federal Legislative Council

THE BRITISH COMMONWEALTH

became the heads of some administrative departments as a prelude to some sort of cabinet government, and a slight widening of the basis of Federal Citizenship in 1952, which it was estimated would comprehend about 50 per cent of the adult Chinese population.

Towards the end of 1953 however the tide of constitutional development began to flow again, and bodies of enquiry were appointed to report on future development in Singapore and in Malaya. In Singapore a Commission under the chairmanship of Sir George Rendel recommended in February 1954 the transformation of the colony's Legislative Council into a Legislative Assembly with 25 elected members out of a total of 32. It also advocated the replacement of the old Executive Council by a Council of Ministers containing 3 official and 6 unofficial members. Of these one, the leader of the majority party in the Assembly, would be styled Chief Minister, and the other five would be appointed on his recommendation. The Council of Ministers was thus envisaged as a Cabinet; it would be the chief policy-making body in the government, and the principle of collective responsibility would apply to it. In the Federation of Malaya a Committee on elections and constitutional changes reported at about the same time, and made broadly the same kind of proposal, although the proportion of elected members in the Federation legislature would be smaller than that thought practicable for Singapore.

In both cases the reports were in general accepted by the British Government, and the elections for the two legislatures were held in 1955, those in Singapore in March, and

in the Federation in July. In Singapore the largest number of seats in the Assembly was secured by the Labour Party, led by Mr. David Marshall, who became Chief Minister. In the Federation of Malaya all seats save one were secured by an alliance made up by UMNO, MCA and the Malayan Indian Congress which had originally been formed by UMNO and the MCA to take part in the Kuala Lumpur municipal elections in 1952. As a result, the leader of the alliance, Dato' Sir Abdul Rahman, became Chief Minister and formed an administration. The programmes of both governments had in common a determined opposition to the activities of the Malayan communists, and the intention to work for complete self-government, and whilst agreeing to operate the new constitutions they announced that they would shortly ask for the British Government's approval to an extension of their powers which would give them complete internal autonomy. In pursuit of this objective, Mr. Marshall visited London in December 1955 and Dato' Abdul Rahman in January 1956 for discussions with the British Government.

The problems bequeathed to Malaya by her history are not however wholly or even principally, constitutional. The establishment of internal security, the allaying of inter-racial friction, and the achievement of higher living standards based on a stable economy, are all essential prerequisites for a free and independent Malaya. And in the struggle to achieve them, external factors such as the foreign policy of Communist China and the world market price of rubber and tin are as important as events in Malaya itself.

THE CONSTITUTION

SINGAPORE was created a separate Colony by Order in Council of March 1946, and provision was made for it to be administered by a Governor with an Executive Council and a Legislative Council. The Executive Council consisted of a Chairman (the Governor); four *ex-officio* members; two nominated official members; four nominated unofficial members; and two members elected by the nominated unofficials of the Legislative Council. The Legislative Council consisted of a President (the Governor), four *ex-officio* members; five nominated official members; four nominated unofficial members; and (from 1951) twelve elected members.

This Constitution was replaced in 1955, when the Singapore Colony Order in Council established the new Constitution recommended by the Rendel Commission. The

Legislative Council is superseded by a Legislative Assembly, which has a total membership of thirty-two, comprising twenty-five elected unofficials, three *ex-officio* members holding ministerial posts, and four nominated unofficials. It is presided over by a Speaker, who is appointed by the Governor. The Executive Council is replaced by the Council of Ministers, which consists of the three *ex-officio* members of the Assembly together with six of the elected members appointed by the Governor on the recommendation of the leader of the majority party. It assumes responsibility for Government policy in all fields except external affairs, internal security and defence.

Following the recommendations of the Rendel Commission the island is divided into twenty-five electoral divisions, and registration of voters is automatic. Electors must be British citizens, twenty-one years of age and ordinarily resident in the Colony. The electoral registers

THE BRITISH COMMONWEALTH

contain 299,850 names, of which the Chinese total 60 per cent, Malays 21 per cent, and Indians 11.5 per cent. The first Legislative Assembly elections were held on April 2nd, 1955.

Local administration of the municipal area is exercised by the City Council, which is composed of twenty-seven members under an official President nominated by the Governor after consultation with the Councillors. Of the twenty-seven members, nine are nominated by the Governor at his discretion and eighteen are elected from six wards in annual elections. Councillors serve for a period of three years, one-third retiring in December each year.

Local administration of rural areas, including the surrounding islands, is delegated to a Rural Board, composed of six official and twelve unofficial members. The Board administers directly such matters as water supply, markets, parks and a building inspectorate, while health and rural engineering are administered by the appropriate Government departments.

The Legislative Assembly has decided that an inquiry should be made into the desirability of decentralising the powers and functions of the City Council and Rural Board, with a view to setting up District Councils. These would replace the Rural District Committees which were first established in 1947.

THE GOVERNMENT

The Governor of Singapore: Sir ROBERT BLACK, K.C.M.G.

THE COUNCIL OF MINISTERS

Chief Minister and Minister of Commerce: DAVID MARSHALL.

Minister of Communications and Works: CHE ABDUL HAMID BIN HAJI JUMAT.

Telecommunications Department: Fullerton Building, Director of Telecommunications J. C. DALLOW.

POLITICAL PARTIES

The Labour Front: f. 1949; holds ten seats in the Legislative Assembly; a non-racial party, aiming at the independence of Malaya.

The Progressive Party: f. 1948, holds four seats in the Legislative Assembly, a non-racial party which aims at a future confederation of Malaysia within the Commonwealth, to include the Federation of Malaya, Sarawak, North Borneo and Brunei.

People's Action Party: f. 1955; holds three seats in the Legislative Assembly; led by young professional men who call for the immediate independence of a united Malaya.

U.M.N.O.-M.C.A.—Singapore Malay Union Alliance: holds three seats in the Legislative Assembly.

Democratic Party: f. 1955; two seats in the Legislative Assembly; sponsored by the Chinese Chamber of Commerce to represent the interests of the Chinese merchants.

(The remaining seats in the Assembly were won by independent members.)

THE LEGAL SYSTEM

The civil procedure of the Colony is governed by Rules of Court made under the Courts Ordinance, and criminal procedure is governed by the Criminal Procedure Code. The Courts Ordinance also provides for the constitution of the Supreme Court, District and Police Courts.

There were two Civil District Courts in 1954, and altogether thirteen Criminal Districts and Police Courts at the end of 1953. District Courts are presided over by District Judges, who are empowered to try civil cases in which the

amount in dispute does not exceed 500 dollars, and criminal cases in which sentences are less than two years' imprisonment and 1,000 dollars fine. Police Courts are presided over by a Magistrate, with powers which in general extend to the award of six months' imprisonment and 1,000 dollars fine.

More serious civil cases are heard in the High Court, which has unlimited jurisdiction and which is presided over by the Chief Justice or a Puisne Judge. Appeals from the High Court are heard by the Court of Appeal which is composed of three judges. Grave criminal offences are tried in the High Court at a monthly Assizes, presided over by a judge of the High Court with a jury of seven. An appeal lies from the High Court to the Court of Criminal Appeal, consisting of the Chief Justice and two or more judges.

Chief Justice: JOHN WHYATT, Q.C.

RELIGION

Precise figures for the religious communities of Singapore and the Federation are not available. The majority of the Malaysians is Muslim. Three per cent of the Chinese population are Christian, and the remainder are followers of Buddhism, Confucianism and Taoism. Of the Indian community, about 70 per cent are Hindu, 20 per cent are Muslim, 5 per cent Christian, and 2 per cent Sikh. The total strength of the Christian community (1955) is 133,605, of which 86,144 are Roman Catholics and 47,461 are Protestants.

The aboriginal inhabitants in the Federation are represented by a small number (32,000) of Negrito peoples—the Semang, the Saki, and the Jakun. These still follow their own traditional beliefs.

CHURCHES

Church of England—Diocese of Singapore: The Lord Bishop of Singapore Rt. Rev. H. W. BAINES, M.A., 4 Bishops-gate, Bishopsbourne, Singapore.

Archdeacons: Archdeacon of Singapore Ven. R. R. WOODS, M.A., 83 Cavenagh Road, Singapore.

TRADE AND INDUSTRY

CHAMBERS OF COMMERCE

Singapore Chamber of Commerce: Fullerton Building; Chair. I. G. SALMOND; Secs. Gattay and Bateman.

Indian Chamber of Commerce: 94 Robinson Road; Pres. J. JUMABHOY, O.B.E.; Sec. J. M. DURAI RAJ.

Chinese Chamber of Commerce: Sec. Miss S. C. WANG, 47 Grange Road.

TRADE UNIONS

The Ordinance providing for the registration of trade unions was passed in 1941, and in 1947 the Registry of Trade Unions became part of the Labour Department. Twenty new unions, seventeen of employees and three of employers, were established during 1954, making a total of 181 registered unions with a membership of 81,741. Many of these are affiliated to the Trade Union Congress, established in 1951.

Registration provides protection for the union and its members from liability for damages in respect of restraint of trade, and insistence on properly kept accounts provides protection for members against wrongful expenditure of the union's funds by union officials. For those industries which possess inadequate negotiating machinery of their own, the Wage Councils Ordinance of 1953 provides for minimum wages and conditions of employment to be laid down by wage councils.

A Trade Union Adviser acts for both the Governments of Singapore and the Federation of Malaya.

Trade Union Adviser, Federation of Malaya and Singapore: J. A. BRAZIER, M.B.E.

TRANSPORT

ROADS

Singapore Island has 400 miles of well-built roads, 225 miles of which are maintained by the Colony Public Works Department, and 175 miles by the City Council's civil engineer.

RAILWAYS

The Malayan Railway system, which is owned by the Government of the Federation of Malaya, also serves Singapore. There are sixteen miles of metre-gauge track and four railway stations in the Colony.

AIRWAYS

Malayan Airways Ltd.: Head Office: Ocean Building, Collyer Quay, Singapore; scheduled services are operated between Singapore and the main cities of the Federation as well as to Indo-China, Sumatra, Thailand, North Borneo and Sarawak.

Foreign companies with air services operating in Singapore include:

British Overseas Airways Corporation: Head Office: Airways House, Brentford, Middlesex, England; branch office: Raffles Hotel, 86 Bras Basah Road, Singapore.

Cathay Pacific Airways: Head Office: 1 Connaught Road, Central, Hong Kong; branch office: Ocean Building, Collyer Quay, Singapore.

Garuda Indonesian Airways: Head Office: 15 Djalan Nusantara, Djakarta; branch office: Union Building, Collyer Quay, Singapore.

Air-India International: Head Office: New India Building, Mahatma Gandhi Road, Bombay, India; branch office: Adelphi Hotel, Colemann Street, Singapore.

K.L.M.—Royal Dutch Airlines: Head Office: 1 Plesmanweg, The Hague, Netherlands; branch office: K.P.M. Building, 1 Finlayson Green, Singapore.

Pan-American Airways Inc.: Head Office: 135 East 42nd Street, New York 17, U.S.A.; branch office: Mansfield & Co., Ocean Building, Singapore.

MALAYA

Qantas Empire Airways Ltd.: Head Office: Shell House, Carrington Street, Sydney, N.S.W., Australia; branch office: Raffles Hotel Building, 86 Bras Basah Road, Singapore.

Thai Airways Co. Ltd.: Head Office: Airways House, 6 Larn Luang Road, Bangkok, Siam; branch office: Sime Derby & Co., 5 Malacca Road, Singapore.

HEALTH

There have been no cases of indigenous malaria for several years and the major problem confronting the health departments is the high incidence of tuberculosis.

Public health services are provided by the Colony Medical Department, the City Council Health Department and the Rural Board, supplemented by the hospitals and facilities of other voluntary agencies. Hospitals in the Colony have approximately 2,200 beds, three-quarters of which are provided by the Government. There are in addition dispensaries and a large clinic operated by the Royal Singapore Anti-Tuberculosis Association.

In 1954 public expenditure for health and medical services amounted to approximately \$39 million. Under the Ten Year Medical Plan adopted by the Colony in 1948 it is hoped to double the capacity for hospital in-patients and to increase clinical resources. Provision of 600 beds in district or cottage hospitals has been scheduled for 1958-60.

EDUCATION

Singapore has English, Chinese, Malay and Indian primary schools, and English and Malay secondary schools. The Government maintains the Malay schools and its own English schools and aids the others.

In 1954 158,500 were enrolled in registered primary schools and 21,900 in secondary schools. Gross public expenditure on education in 1954 was estimated at \$38 million.

* Statistics for the Kelantan section of the Malayan-Siamese border were not compiled prior to January 1949.

† Prior to January 1st, 1950, Eurasians were included in Other Races.

‡ As from January 1st, 1950, Siamese are included in Other Races.

LABOUR

About 250,000 persons are self-employed in peasant agriculture or fishing, while the majority of the remaining working population is engaged in the rubber industry. Mid-year 1955 employment figures are as follows:

Rubber Plantations and Estates . . .	281,390
Coconut, Oil Palm and Tea Plantations . . .	26,028
Tin Industry	37,515
Bus Companies	6,320
Civil Government—Labourers	62,661
Armed Forces—Labourers	4,938
Miscellaneous Undertakings	68,305

Except for bus companies these figures apply only to "labourers" as defined in the Labour Laws of the territory, i.e. all types of Asian manual labourers, both skilled and unskilled.

THE CONSTITUTION

The Constitution of the Federation of Malaya came into existence in February 1948 as a result of: (a) the Federation of Malaya Agreement between the British Government and Their Highnesses the Rulers of the Malay States of Johore, Pahang, Negri Sembilan, Selangor, Perak Kedah, Perlis, Kelantan and Trengganu; (b) the State Agreements between the British Government and Their Highnesses the Rulers of the Malay States; and (c) the Federation of Malaya Order in Council.

The State Agreements provide that the Rulers shall enjoy the prerogative, power and jurisdiction which they enjoyed prior to the Japanese occupation, while the British Government has complete control of the defence and of the external affairs of the Federation. Each Malay Ruler undertakes to govern his State subject to the provisions of a written constitution.

The Federation of Malaya Agreement establishes, under the protection of Great Britain, a Federation which consists of the nine Malay States and the Settlements of Penang and Malacca. The Agreement provides for a High Commissioner, a Federal Executive Council and a Federal Legislative Council.

The responsibilities of the High Commissioner include: protecting the rights of the Malay States and Settlements and the powers of the Rulers; safeguarding the financial stability and credit of the Federal Government; and looking after the special position of the Malays and the legitimate interests of other communities. In discharging these responsibilities the High Commissioner is empowered to

give appropriate directions to the government of any State or Settlement, and on certain financial matters he has powers to make general orders for the whole of the Federation. He also has reserve powers to reverse the decision of the Federal Legislative Council on any issue which he considers involves public order or good government.

The composition of the Executive Council was originally 3 *ex-officio* members, not fewer than 4 official members and not fewer than 5 or more than 7 unofficial members, of whom at least 2 in the former case and 3 in the latter case were to be Malays. To-day the Executive Council consists of 3 *ex-officio* members and a Council of Ministers. It is presided over by the High Commissioner.

The Legislative Council originally totalled 75 members. It consisted of 3 *ex-officio* members, 11 representatives of States and Settlements, 11 official and 50 unofficial members, these last two categories being nominated by the High Commissioner. In 1951 the "Member" system was introduced into the Legislative Council. Under this system, nine of the nominated official members were made responsible for various departments and functions of government with the following portfolios: Home Affairs, Economic Affairs, Agriculture and Forestry, Health, Education, Industrial and Social Relations, Lands, Mines and Communications, Works and Housing, Railways and Ports, and (in 1953) Local Government and Town Planning. All "Members" of the Legislative Council were members of the Executive Council. In 1953 a Speaker was appointed to preside over the Legislative Council.

The Federation Agreement did not provide for any elected element in the Legislative Council, and in 1953 a

committee was appointed by the High Commissioner to examine the constitutional changes which elections would entail. The committee submitted their recommendations, which were subsequently discussed by the High Commissioner and the Rulers. In April 1954 the proposals for elected representation on the Legislative Council were accepted by the Secretary of State as the basis of the new constitution, which came into force in 1955. There is now an elected majority of 6 in a Council of 98 members, excluding the Speaker. The composition of the Council is as follows: 3 *ex-officio* members, 11 State and Settlement representatives, 22 representatives of scheduled interests, 3 representatives of racial minorities, 7 nominated reserve members, and 52 elected members. "Members" with portfolios, now known as Ministers, sit on the Executive Council.

There is in each State a State Executive Council and a Council of State. The Council of State may pass laws on all subjects not reserved for the Federal Legislative Council and on all matters relating to Muslim religion and Malay custom. The Ruler is advised by a Chief Executive Officer, or Menteri Besar, who is also the State's representative on the Federal Legislative Council. Each Settlement has a Settlement Council, with legislative powers similar to those of the State Councils, and a small Nominated Council. The Chief Executive Officer on the Settlement Council is the Resident Commissioner. Elections to the legislatures of the State and Settlement Governments were introduced during 1954 and 1955.

Elections to the Federal Government were held for the first time in July 1955, and the total poll was over eighty per cent of the electorate. All adult citizens have the right to vote; there is a common electoral role for all races, and candidates are elected directly by individual territorial constituencies.

THE GOVERNMENT

FEDERAL EXECUTIVE COUNCIL

President: The High Commissioner, Sir DONALD MACGILLIVRAY, K.C.M.G., M.B.E.

Ex-Officio Members: The CHIEF SECRETARY; The ATTORNEY-GENERAL; The FINANCIAL SECRETARY.

Attorney General: M. J. P. HOGAN, C.M.G., Q.C.

Financial Secretary: C. J. THOMAS, C.M.G.

Federation Establishment Officer: A. J. GRACIE.

Secretary for Chinese Affairs: D. GRAY.

Accountant General: J. H. NEWBIGGING (Acting).

Commissioner of Prisons: O. V. GARRATT, O.B.E.

Chief Social Welfare Officer: J. C. McDOWALL.

Registrar of Statistics: H. FELL.

POLITICAL PARTIES

United Malay National Organisation (U.M.N.O.): The
Malayan communal party, first established in 1946 as a
focus of resistance to the Malayan Union; aims at
achieving an independent and sovereign State of
Malaya.

Malayan Chinese Association (M.C.A.): f. 1949 primarily to
protect the interests of the Chinese community; strives
for an independent State of Malaya (including Singa-
pore) within the British Commonwealth.

Independence of Malaya Party: f. 1951 by members of all
communities; aims at establishing a sovereign, inde-
pendent State of Malaya within a period of not more
than nine years from the date of its foundation; its
programme includes free elementary education, im-
proved social services and minimum wages for all
workers.

Pan-Malayan Labour Party: f. 1952; aims at national
independence, and democratic control of the economic
resources of the community; its programme includes
free and compulsory education, guaranteed prices for
food producers and improved social services.

Party Negara: f. 1954; aims to promote national unity on
an inter-communal basis, to uphold the position of the
Malay Rulers and to work for the gradual transfer of
power by constitutional means; Leader Dato Sir ONN
BIN JAAFAR.

Triple Alliance Party: f. by the U.M.N.O., M.C.A. and the
Malayan Indian Congress; aims to establish an indepen-
dent Malaya, and to work for certain constitutional
reforms; strongly criticises the High Commissioner's
powers of veto; opposes union with Singapore; 51
seats in the Legislative Council; Leader Tunku
ABDUL RAHMAN.

Pan-Malayan Muslim Party: 1 seat in the Legislative
Council.

THE LEGAL SYSTEM

Since January 1st, 1949, when the Courts Ordinance,
1948, came into force, the Judicial Department has taken
full responsibility for all the magistrates' courts. The
Judicial Department, therefore, now consists of the
Supreme Court (which is a Court of Record, including the
High Court and the Court of Appeal), the Sessions Courts,
and the Magistrates' Courts. The Sessions Court is pre-
sided over by a President, who is a member of the
Colonial Legal Service and is a qualified barrister or
solicitor. The Magistrates consist of officers from the
administration seconded to the Judicial Department for
varying periods up to three years.

Chief Justice: Sir CHARLES MATHEW, K.C.M.G., Q.C., Kuala
Lumpur.

TRADE UNIONS AND EMPLOYERS' UNIONS

After the liberation in 1945 trade unions on modern lines began to be formed. The growth, both in the number of trade unions and their individual membership, was rapid, and by April 1946 it was decided that a Trade Union Adviser to act for the Governments both of Singapore and of the Federation of Malaya (then Malayan Union) was necessary.

There are 240 registered trade unions of employers and employees, consisting of 140 Civil Servants' Unions, 93 Industrial Workers' Unions and 7 Employers' Unions (1955). The total membership is 109,846, of which 72 per cent are Indian, 12 per cent Chinese and 14 per cent Malays. Many trade unions are affiliated to the Malayan Trade Union Council, which was established in 1950.

Trade Union Adviser, Federation of Malaya and Singapore: J. A. BRAZIER, M.B.E.

TRANSPORT

(See also Statistical Survey.)

ROADS

There are 6,200 miles of metalled roads in the Federation of which 2,200 are maintained by the Federal Public Works Departments and the rest by the States and Settlements Public Works Departments. Between 1955 and 1959 the Federal Works Department is to spend \$126 million on trunk roads and \$60 million on other metalled roads. Proposed new roads are to run from Gemas to Rompin and from Bahan to Menkuang. A new 29-mile road was opened in June 1955, reducing the journey from Kuala Lumpur to Kuantan by 68 miles.

RAILWAYS

Malayan Railways: Kuala Lumpur; the main line runs from Singapore 488 miles northwards to Prai, opposite Penang Island; short branch lines run to the coast at Port Dickson, Port Swettenham, Telok Anson and Port Weld; a longer branch line (99 miles) runs northwards from Bukit Mertajam to connect with the State Railway of Thailand at the frontier; the East Coast Line runs northwards from Gemas in Johore to Tumpat on the north-east coast of the peninsular (327 miles); Gen. Manager J. O. SANDERS, C.M.G.

SHIPPING

The principal ports in the Federation are Port Swettenham, Penang and Prai; Malacca is now only an occasional port of call for ocean vessels. Services to and from the United Kingdom are provided by the main shipping companies on the Far Eastern service.

AIRWAYS

Federation Air Service: Malayan Railway Headquarters, Kuala Lumpur; serves thirteen small towns in the Federation; owned by the Government and operates under the management of the Malayan Railway Administration.

Malayan Airways Ltd.: Head Office: Ocean Building, Collyer Quay, Singapore; serves the eight main airports in the Federation (Kuala Lumpur, Ipoh, Taiping, Penang, Alor Star, Kota Bharu, Kuantan and Malacca)

International air transport serving Malaya is centred in Singapore.

HEALTH

The major tropical diseases are not so widespread in the Federation as they are in many other equatorial countries. There is a high incidence of malaria, but in recent years this has been declining. Other diseases common to the territory include tuberculosis, yaws and dysentery.

The Federal Government have an over-all responsibility for public health, and the States and Settlements have most of the executive authority. In 1953 there were 70 Government hospitals with nearly 20,000 beds. All hospitals have out-patients departments, and there are also small dispensaries situated in many of the smaller towns, and travelling dispensaries operating on the main roads.

National medical services are largely free to all residents. Expenditure in 1954 on public health and medical services amounted to \$55 million.

EDUCATION

There are Malay, Chinese, Indian and English primary schools in the Federation. Some are maintained by the Government, some are non-profit-making schools to which the Government gives financial aid, and some are private schools entirely dependent on their own resources. Secondary courses are only offered by English and Chinese schools. Vocational training is available in four post-primary technical schools. In 1954 there were over 800,000 pupils receiving primary and secondary education, of whom over 700,000 were in Government and aided schools.

The sections on RESEARCH INSTITUTES, LIBRARIES, MUSEUMS and UNIVERSITIES AND COLLEGES which follow are applicable to both THE COLONY OF SINGAPORE and THE FEDERATION OF MALAYA.

M. W. F. TWEEDIE, M.A., C.M.Z.S.; Librarian L. M. HARROD, F.L.A.

Other museums include the Malacca Settlement Museum, the Negri Sembilan Museum and the Penang Museum, all of which were founded in 1954.

UNIVERSITY AND COLLEGES

UNIVERSITY OF MALAYA

SINGAPORE

Founded 1949

(Formerly Raffles College and King Edward VII College of Medicine)

Chancellor: The Rt. Hon. MALCOLM MACDONALD, P.C., M.A., LL.D., D.LITT.

Pro-Chancellors: Sir DONALD MACGILLIVRAY, K.C.M.G., M.B.E. Sir HAN HOE LIM, C.B.E., LL.D., M.B., CH.B., Dr. Dato HAJI MOHAMED EUSOFF, C.B.E., LL.D.

Vice-Chancellor: Sir SYDNEY CAINE, K.C.M.G., B.SC. (ECON.).

Chairman of the Council: The Hon. Dr. Dato Haji MOHAMED EUSOFF BIN MOHAMED YUSOFF, C.B.E., J.P.

Registrar: MAURICE BROWN, LL.B.

Bursar: LIM CHEE POE, A.A.C.A.

Librarian: EARNEST H. CLARK, B.A.

The main library contains 197,000 vols., including 130,000 in the Chinese Library; the library of the Medical Faculty contains 26,500 vols.

Number of students: 990 men, 230 women, total 1,220.

DEANS:

Faculty of Arts: Prof. ERNEST H. G. DOBBY, B.A., PH.D.

Faculty of Science: Prof. JOHN C. COOKE, M.A.

Faculty of Medicine: DESMOND W. G. FARIS, C.B.E., M.B., B.S., M.R.C.S., D.P.H.

COLLEGE OF AGRICULTURE

SERDANG, SELANGOR, MALAYA

Founded 1931

Principal: O. M. LEE, M.I.BIOL., A.I.MECH.E., F.L.S., F.G.S.

Teaching staff of 2 senior lecturers, 2 assistant lecturers, and 3 agricultural assistants.

FEDERAL TECHNICAL COLLEGE

KUALA LUMPUR, SELANGOR, MALAYA

Founded 1954

The College was formally opened in 1955. It has facilities for 750 students and is equipped for teaching physics, chemistry, metallurgy, electrical and structural engineering, soil mechanics and hydraulics. Students from British Borneo and Singapore as well as from the Federation are to be accepted.

SULTAN IDRIS TRAINING COLLEGE

TANJONG MALIM, PERAK, MALAYA

Founded 1922 by the amalgamation of two older colleges, the Malacca Training College and the Matang Training College

There are seven Malay Practising Schools associated with the College.

Principal: R. A. GOODCHILD, E.D., M.A., DIP.ED.

Vice-Principal: ZAINAL ABIDIN BIN ALI, E.D.

Librarian: A. D. BAKER, B.A.

The library contains 2,599 vols.

Number of Instructors: 29.

Number of students: 420 men.

Publication: *Chendera Mata*, a Malay magazine published twice yearly.

SARAWAK

(Capital: Kuching)

THE CONSTITUTION

In 1946 the Rajah of Sarawak renounced his powers of administration, and by an Order in Council the State became a British Colony on July 1st of that year.

The Constitution grants legislative and financial jurisdiction to the Council Negri, consisting of 25 members, 14 of whom are official members appointed from the Sarawak Civil Service and 11 of whom are unofficial members representative of the several peoples inhabiting the country. The Governor in Council appoints the unofficial members, and these remain in office for a period of three years. In addition to the 25 members there are 4 standing members on the Council. Furthermore, the Constitution Ordinance provides that a native of Sarawak who was a member of the Council Negri prior to the enactment of the Ordinance, and who is not a member of the Council under the provisions of the Ordinance, shall be deemed to be a member of the Council; he shall have the right to vote in the Council and to attend all its meetings.

The Council Negri has the power to make laws for the peace, order and good government of the country and no public money may be expended or any charge whatsoever made upon the revenue of the country except with the consent of that body.

The Constitution Ordinance also provides for a Supreme Council composed of not less than 5 members, a majority of whom shall be members of the Sarawak Civil Service, and a majority of whom shall be members of the Council Negri.

All powers conferred upon the Rajah or the Rajah in Council by any written law enacted prior to the Cession of Sarawak to the British Crown are vested in the Governor in Council. In the exercise of his powers and duties the Governor shall consult with the Supreme Council, except in making appointments to the Supreme Council and in cases (a) where he considers that by doing so he would materially prejudice the British Government, or (b) in which the matter is, in his opinion, too unimportant, or (c) where the matter is too urgent to admit of their advice being given by the time within which it may be necessary for him to act.

Sarawak is divided for administrative purposes into five Divisions, each in charge of a Resident. Each Division is sub-divided into a number of Districts, administered by District Officers, assisted by District Advisory Councils.

THE GOVERNMENT

Governor and Commander-in-Chief: Sir ANTHONY ABELL, K.C.M.G.

THE SUPREME COUNCIL

The Chief Secretary; The Financial Secretary; ABANG HAJI MUSTAPHA, O.B.E. (Datu Bandar); H. EARNSHAW, O.B.E. (Director of Education); D. C. WHITE, O.B.E. (Resident); TAN KUI CHOON; G. E. STRICKLAND, Q.C. (Attorney-General); J. C. H. BARCROFT (Senior Resident); J. H. ELLIS (Deputy Chief Secretary).

COUNCIL NEGRI

Official Members: The Chief Secretary; The Financial Secretary; Residents of the Five Divisions; The Secretary for Native Affairs; The Secretary for Chinese Affairs; ABANG HAJI MUSTAPHA, O.B.E. (Datu Bandar); Attorney-General; Director of Education; Director of Agriculture; Director of Public Works.

Unofficial Members: ABANG HAJI ADBULRAHMIN, ONG HAP LEONG, O.B.E., M. SOCKALINGAM, TAN KUI CHOON, A. T. WEDGWOOD, KHOO PENG LOONG, PENGHULU JUGAH ANAK BARIENG, PENGHULU BARAT, JACK BRODIE, TEMONGGONG TAMA WENG AJANG, M.B.E., CHIA CHIN SHIN.

Standing Members: Datu ABANG HAJI ZIN, M.B.E.; Datu ABANG YAN, M.B.E.; ABANG MUSTAPHA; Datu ABANG OPENG, ABANG AHMAT, ABANG BUN HAJI DAUD.

CIVIL ESTABLISHMENT

Chief Secretary: R. G. AIKMAN.

Financial Secretary: C. J. THOMAS, C.M.G.

Development Secretary: B. A. ST. J. HEPBURN.

Director of Public Works: C. F. BIRT.

Director of Medical Services: W. G. EVANS, O.B.E.

Director of Lands and Surveys: F. R. K. KITTO.

Director of Geological Surveys: F. W. ROE.

Attorney-General: G. E. STRICKLAND, Q.C.

THE LEGAL SYSTEM

Apart from Imperial legislation the law of Sarawak is mainly to be found in local ordinances and native customary law. Chinese customary law is recognised to a certain extent, but only in so far as such recognition is to be found in a local ordinance.

Where Sarawak law cannot be applied the Courts enforce the common law of England, subject to such qualifications as local circumstances and native custom render necessary.

On 1st December, 1951, the Sarawak, North Borneo and Brunei (Courts) Order in Council came into force. This established one Supreme Court of Judicature, consisting of a High Court and a Court of Appeal, for the Colonies of Sarawak, North Borneo and the State of Brunei. The Court of Appeal has its headquarters in Kuching, but sits as may be required in other places of Sarawak, North Borneo and Brunei.

The lower Courts, presided over by magistrates, consist of the District Court (Civil and Criminal), the Court of Small Causes (Civil), the Police Court (Criminal) and the

THE BRITISH COMMONWEALTH

Petty Court (Civil and Criminal). One legally qualified magistrate sits at Kuching, and the remainder are administrative officers.

There are in addition Native Courts constituted under the Native Courts Ordinance, consisting of the District Native Court, the Native Officer's or Chief's Court and the Headman's Court. An appeal lies from the District Native Court to the Court of a Magistrate of the First Class sitting with a Native Officer or Chief and two assessors. There is a further appeal to the Supreme Court, in which the Judge sits with the Secretary for Native Affairs and with two assessors who must be Native Officers or Chiefs. As a general rule Native Courts are competent to try cases in which all the parties are natives.

Chief Justice of Sarawak, North Borneo and Brunei:
E. H. WILLIAMS

RELIGION

Of the indigenous population the Sea Dyaks, or Iban, are by far the most numerous, and although many of them have been converted to Christianity or Islam a great many still retain their traditional beliefs. Very briefly, the Iban believe in an indefinite number of spiritual beings or "gods" termed *petara* without whose sanction no decision or action of any importance is undertaken. There are also beliefs in *antu* or spirits which are supposed to fill earth, air, sea and sky, and these are the adversaries or helpers of men. Both *petara* and *antu* are propitiated by the killing of animals and by offerings of food.

Numerically the Chinese are the second most important group and a large proportion of these are followers of Buddhism.

Missionary enterprise in Sarawak began over a hundred years ago, and there are now Christian Missions throughout the country. The Roman Catholic Church has a Vicar Apostolic in Kuching (Rt. Rev. Mgr. GIOVANNI Vos).

THE PRESS

Utusan Sarawak: Kuching, f. 1949; Malay; bi-weekly.

BROADCASTING

Radio Sarawak was officially opened on June 7th, 1954. It has a single transmission on medium and short wave bands, and programmes are broadcast in English, Malay, Chinese and Iban. By the end of 1954 total daily programme output had reached nearly six hours. The World News is relayed daily from the B.B.C. in English, Chinese and Malay and a local bulletin of home news from British Borneo has just begun.

FINANCE

By virtue of the Currency Ordinance, 1951, Sarawak and British North Borneo notes and coins are being withdrawn from circulation and have now ceased to be legal tender. With effect from January 1st, 1953, only the notes and coins issued by the Board of Commissioners of Currency, Malaya and British Borneo, are legal tender in Sarawak. At the end of 1954 there were \$30,310,956 of Malayan currency in circulation and \$754,267 of Sarawak currency. Revenue in 1954 amounted to \$43,800,621 and expenditure to \$33,264,706.

Banking facilities are provided by the Chartered Bank of India, Australia and China, in Kuching, Sibü and Miri, and the Oversea Chinese Banking Corporation in Kuching. There are also four Chinese Banking Trading Banks in Sarawak. The Sarawak Co-operative Central Bank Limited was registered in October 1953. It receives and invests funds from member Societies, acts as an agent for supplying them with various essentials and makes loans.

TRADE AND INDUSTRY

Important agency houses are the leading European companies and several Chinese firms. These import proprietary articles for which they are the sole distributors and they also carry on a certain amount of export trade.

Twenty-five new Co-operative Societies with a membership of 1,125 were registered during 1954, making a total of 137 Societies in Sarawak.

TRANSPORT

ROADS

There are approximately 107 miles of hard surfaced roads, 62 miles of gravelled or metalled roads, 106 miles of dry weather earth roads and 195 miles of dry weather tracks.

SHIPPING

The Sarawak Steamship Co.: Kuching, operates a weekly service between Kuching and Singapore and maintains regular coastal services.

Straits Steamship Co. Ltd.: Head Office: Ocean Building, Singapore, maintains regular steamship services between Singapore and the ports of Kuching, Sibü and Miri.

AIRWAYS

There are two airports, one at Kuching and one at Sibü. **Malayan Airways Ltd.:** Head Office: Ocean Building, Singapore; operates five services weekly between

SOUTH-EAST ASIA

Singapore, Kuching, Sibu and Labuan; also operates an internal service five times weekly between Labuan, Brunei, Anduki and Lutong.

HEALTH

Principal diseases include malaria, yaws and trachoma. There are 660 beds in Government hospitals, of which 100 are reserved for mental cases. Draft plans for a Mental Hospital have already been approved and it should be ready for occupation some time in 1956.

There are 23 static dispensaries where 176,106 patients were treated in 1954, and 16 travelling dispensaries where 58,842 patients were treated.

Total Government expenditure on medical services in 1954 was £3,219,526.

EDUCATION

At the end of 1953 there were 512 schools in Sarawak, 32 of which provided secondary education. The total

BRUNEI

enrolment in 1954 rose to 52,788 pupils as compared with 49,072 in 1953; the largest increase was among Chinese children, but there were appreciable increases in Malay and other native children.

Post primary education is provided by the Higher Primary and Secondary classes at Batu Lintang and the Higher Primary sections of the Aided Schools where the Government gives assistance with fees in the case of a very promising pupil. Secondary education however is still mainly provided by Christian Missions.

There is a Teacher-training Centre at Batu Lintang, where teachers are trained for all types of school.

Estimated Government expenditure on education in 1954 was \$1,042,137.

MUSEUM

Sarawak Museum: Kuching; f 1886; anthropological and ethnological collections; houses the Sarawak Public Library; Curator and Government Ethnologist TOM HARRISSON.

BRUNEI

(Capital: Brunei Town)

THE CONSTITUTION

Supreme authority is vested in the Sultan in Council. He presides over a State Council of 12 members, including the British Resident. Any enactment of legislation requires the assent of the Council, and any important questions of policy are referred to it.

General administrative functions are carried out by the British Resident under the supervision of the Governor of Sarawak as High Commissioner. By a Treaty of 1906, the Resident's advice must be acted upon in all questions other than those affecting the Mohammedan religion. There are Assistant Residents at Kuala Belait and at Headquarters. The State is divided into four administrative districts, in each of which there are Malay District Officers who are responsible to the Resident. European Officers are generally in charge of the Public Works, Medical, Agricultural, Forestry, Police, Customs and Education Departments.

THE GOVERNMENT

STATE COUNCIL

President: H.H. The Sultan Sir OMAR ALI SAIFUDDIN, K.C.M.G.

British Resident: J. O. GILBERT.

Duli Pengiran Bendahara: Pengiran MUDA HASHIM.

Duli Pengiran Pemancha: Pengiran ANAK HAJI MOHAMED ALAM, O.B.E.

State Treasurer: D. H. TRUMBLE, O.B.E.

Chief Kathi: Pengiran HAJI MOHAMED SALLEH.

Pengiran Maharaja Laila: Pengiran MUDA KAHAR.

Pehin Orang Kaya Di-Gadong: AWANG HAJI MOHAMED YUSOFF.

Wireless Engineer: Pengiran MOHAMED BIN Pengiran PIUT, M.B.E.;

HAJI IBRAHIM BIN MOHAMED JAHFAR, O.B.E.

GEORGE NEWN AH FOOTI.

CIVIL ESTABLISHMENT

British Resident: J. O. GILBERT

State Agricultural Officer: HAMIDON BIN AWANG DAMIT.

Officer in Charge of Audit: HANAFIAH BIN ABDULLAH.

State Treasurer: D. H. TRUMBLE, O.B.E.

State Education Officer: H. J. PADMORE.

State Engineer: G. T. MYLES.

State Forest Officer: B. E. SMYTHIES.

State Medical Officer: E. C. VARDY.

Chief Police Officer: A. C. FATELL.

Superintendent of Posts and Telegraphs: KONG EN CHOI.

State Electrical Engineer: E. RAJARATNAM.

Wireless Engineer: Pengiran MOHAMED BIN Pengiran PIUT, M.B.E.

Chief Kathi: Pengiran HAJI MOHAMED SALLEH.

State Surveyor: (Vacant).

THE LEGAL SYSTEM

The judicial system was created by the Sarawak, North Borneo and Brunei (Courts) Order in Council, 1951, and the Courts Enactment, 1951. The courts administering civil and criminal law in the State are: the Supreme Court of Sarawak, North Borneo and Brunei, consisting of the

THE BRITISH COMMONWEALTH

Court of Appeal and the High Court; and Courts of Magistrates of the First, Second and Third Class.

The Supreme Court: Consists of the Chief Justice and as many Puisne Judges as may from time to time be appointed. Not less than three Supreme Court Judges constitute the Court of Appeal. One Supreme Court Judge constitutes the High Court, which has unlimited original jurisdiction in all civil matters other than the annulment of marriages solemnised between Christians in the United Kingdom or any British Colony, and matters concerning Mohammedan marriage, religion and divorce. It has unlimited criminal jurisdiction.

Courts of Magistrates: The Court of a Magistrate of the First Class has original civil jurisdiction in suits involving not more than \$500 and original criminal jurisdiction in the case of offences for which the maximum term of imprisonment does not exceed two years and the maximum fine does not exceed \$5,000. The Courts of the Second and Third Class Magistrates have civil and criminal jurisdiction in suits involving smaller sums and terms of imprisonment.

In addition, there are the **Courts of Kathis** which deal solely with questions concerning Mohammedan religion, marriage and divorce, and which may impose a fine not exceeding \$50. Appeals lie from these Courts to the Sultan in Religious Council.

Chief Justice of Sarawak, North Borneo and Brunei: E. H. WILLIAMS.

THE PRESS

NEWSPAPERS

Borneo Bulletin: P.O. Box 69, Kuala Belait; f. 1953; English weekly; Saturday; circ. 5,500.

Salam: P.O. Box 69, Kuala Belait; free staff newspaper published by the British Malayan Petroleum Co. Ltd.; English and Romanised Malay editions, the latter being the only Malay language newspaper in Brunei; weekly; Saturday; circ. 4,805 (Malay edition), 3,750 (English edition).

There is one publishing firm:

Brunei Press, The: P.O. Box 69, Kuala Belait; f. 1953.

BROADCASTING

There are no broadcasting services in the State, but provision for broadcasting is included in the State's Five Year Development Plan and it is hoped that a scheme will be launched in 1956.

FINANCE

The Malayan dollar, valued at 2s. 4d. sterling, is the currency of the State. In December, 1954 the currency in circulation was estimated at \$43,313,193. The Hongkong and Shanghai Banking Corporation has branches at Brunei Town and Kuala Belait; during 1954 Savings Bank facilities were added to the services provided.

TRADE AND INDUSTRY

Trade in Brunei is largely conducted by the agency houses, including both European and Chinese companies, and by Chinese merchants. There are no trade unions. The British Malayan Petroleum Company, the largest industrial concern in the State (employing about 5,000 workers), has organised welfare committees which meet once a month; elected members discuss with the management such subjects as working conditions and grievances. These welfare committees are to be replaced in the future by a Labour Force Committee with broader powers of discussion and representation from management.

TRANSPORT

ROADS AND RAILWAYS

Apart from the road between Brunei and Kuala Belait, most of the internal communications in the State are by river transport. One of the main features of the Development Plan for Brunei State is the construction of an adequate road system. At present there are approximately 75 miles of all-weather bitumen or concrete-surfaced roads, 14 miles of metalled roads and 71 miles of earth roads. Some 67 miles of road have been built and maintained by the British Malayan Petroleum Company. This firm maintains the only railway, a line eight miles long.

SHIPPING

The main ports are Brunei Town and Kuala Belait. A number of Straits Steamship coaster-type vessels ply regularly between Kuala Belait and Labuan; native craft also operate from Kuala Belait carrying local produce and merchandise up and down the Belait river and on short coastal voyages. The British Malayan Petroleum Company also maintains a fleet of vessels. The Straits Steamship Company provides, in addition to shuttle services between Labuan and Brunei and other ports in Brunei Bay, a regular service between Singapore and Brunei.

The State operates a thrice-weekly motor launch service for mail and passengers between Brunei Town and Labuan.

AIR

During 1954 **Malayan Airways Ltd.** extended their North Borneo service to include the two airfields, Brunei and Anduki. Construction of an airport at Berakas, three miles from Brunei, began in 1953 and is now almost completed. Anduki airfield is maintained by the British Malayan Petroleum Company. Sea-planes, landing in the Brunei and Belait rivers, provide a further method of air communication.

HEALTH

Tuberculosis, helminthic infections and malaria are three of the more prevalent diseases. A T.B. clinic was established in 1954. There are 2 general hospitals (150 beds in Brunei Town and 30 beds in Kuala Belait), 2 out-station dispensaries, 13 urban and rural ante-natal clinics, and 4 river and 2 road travelling dispensaries. There is also a general hospital belonging to the British Malayan Petroleum Company. In 1954 a total of 2,311 in-patients and 27,860 out-patients received attention.

EDUCATION

In 1954 the following schools were in existence:

	<i>Schools</i>	<i>Pupils</i>
Malay vernacular	35	3,175
Chinese	7	2,150
English (Mission)	4	1,608
English (Government)	2	248
Trade School (British Malayan Petroleum Co.)	1	131

The total enrolment in primary schools in 1954 was 6,951. Until 1954 there was no secondary education, but there are now facilities for junior secondary schooling for 230 pupils. Facilities for modern secondary education are planned. The approximate total expenditure on education in 1954 was \$1,551,565 (an increase of 50 per cent on 1953).

NORTH BORNEO

(Capital: Jesselton)

THE CONSTITUTION

The constitution of North Borneo, which became a Crown Colony in July, 1946, is regulated by the North Borneo Letters Patent, 1946, as amended by the North Borneo (Amendment) Letters Patent, 1950. These instruments provide for the appointment of a Governor and Commander-in-Chief and the establishment of a Legislative Council and an Executive Council. The two Councils, formed under the 1950 Amendment, replaced the Advisory Council with the aid of which the Governor had administered the Colony since July, 1946.

Legislative Council consists of the Governor (as President), 3 *ex-officio* members, 9 official members and 10 nominated members

The Executive Council consists of 3 *ex-officio* members, 2 official members and 4 nominated members.

THE GOVERNMENT

Governor and Commander-in-Chief: Sir ROLAND E. TURNBULL, K C M.G.

EXECUTIVE COUNCIL

Chairman: The GOVERNOR.

Ex-Officio Members: The CHIEF SECRETARY; The ATTORNEY-GENERAL; The FINANCIAL SECRETARY.

Official Members: R. G. P. N. COMBE, M.C. (Resident, West Coast), H. O. E. SYKES (Acting Resident, East Coast)

Nominated Members: P. LEE TAU SANG, O.B.E., J. MITCHELL, C.B.E., R. B. LUTTER, O. K. K. MOH'D YASSIN BIN HAJI HASHIM, M.B.E.

LEGISLATIVE COUNCIL

President: The GOVERNOR.

Ex-Officio Members: The CHIEF SECRETARY; The ATTORNEY-GENERAL; The FINANCIAL SECRETARY.

Official Members: R. G. P. N. COMBE, M.C. (Resident, West Coast); H. O. E. SYKES (Acting Resident, East Coast); J. E. LONGFIELD, O.B.E. (Resident); O. K. K. TAM-BAKAU, M.B.E.; R. M. WOOD (Director of Public Works); J. L. GREIG (Director of Agriculture); I. R. BARNETT-SMITH (Commissioner of Trade and Customs); J. M. WILSON (Director of Education); A. M. GRIER (Development Secretary).

Nominated Members: J. C. BRYANT, O.B.E.; P. LEE TAU SANG, O.B.E.; J. MITCHELL, C.B.E.; CHAN TIAN JOO O.B.E.; B. S. WILLIE, M.B.E.; CHUNG CHAO LUNG; G. S. SUNDANG, M.B.E.; O. K. K. MOH'D YASSIN BIN HAJI HASHIM, M.B.E.; O. K. K. MOHAMED UGI BIN ALI; R. B. LUTTER.

CIVIL ESTABLISHMENT

Chief Secretary: R. N. TURNER.

Financial Secretary: A. N. GOODE.

Development Secretary: A. M. GRIER.

Senior Resident: R. G. P. N. COMBE, M.C.

Attorney-General: C. E. PURCHASE, Q.C.

Directors of Departments: (Agriculture) J. L. GREIG (Education) J. M. WILSON, (Lands and Surveys) D. K. INGLE, (Medical Services) L. J. CLAPHAM, (Posts and Telegraphs) R. W. STEPHENS, (Public Works) R. M. WOOD.

Commissioner of Labour and Welfare: (Vacant).

Commissioner of Trade and Customs: L. R. BARNETT-SMITH

Commissioner of Police: J. B. ATKINSON.

THE LEGAL SYSTEM

The Application of Laws Ordinance, 1951, provides that (except insofar as other provision is made by written law in the Colony) the Common Law of England and the doctrines of equity, together with statutes in force in England when the Ordinance became valid, shall be in force in North Borneo. The basis of the criminal law is the Indian Penal Code, with certain modifications.

The courts administering civil and criminal law throughout the Colony are:

The Supreme Court of Sarawak, North Borneo and Brunei, comprising the Court of Appeal and the High Court. The High Court sits chiefly in Jesselton, but also visits various districts on circuit. Five sessions of the Court of Appeal were held at Jesselton during 1954.

Magistrates' Courts, comprising Courts of the First, Second and Third Class. There are 26 Magistrates of the First, 9 of the Second and 14 of the Third Class. None are full time Magistrates and all are drawn from the Administration.

Native Courts number 35 in the Colony, and adjudicate in all cases where native custom has been breached. These Courts are distinct from the Magisterial Courts.

THE BRITISH COMMONWEALTH

Chief Justice of Sarawak, North Borneo and Brunei: E. H. WILLIAMS.

RELIGION

The majority of the native peoples follow their traditional beliefs, the two largest groups being the Dusuns and the Muruts. There is, however, a considerable proportion of Muslims, particularly among the coastal communities and including the Bajaus, the Bruneis, and the Malays. The Chinese non-Christians are Confucianists. In the 1951 Census a total of 29,092 persons (or less than 10 per cent) declared themselves to be Christians. Roman Catholic, Church of England, Lutheran and other missions are active in the Colony. The Roman Catholic Vicar Apostolic at Jesselton is the Rt. Rev. Mgr. GIACOMO BUIS (P.O. Box 289).

THE PRESS

DAILIES AND PERIODICALS

North Borneo News and Sabah Times: P.O. Box 71, Sandakan; f. 1954 as an amalgamation of the *Sabah Times* (North Borneo's first English daily newspaper), and the *North Borneo News*; daily; editor T. J. BROOKE.

Hua Chiau Jit Pao (*Overseas Chinese Daily News*): P.O. Box 139, Jesselton; Chinese; founded before the war, the first newspaper to be printed daily in the Colony.

Kinabalu: review of recreational and sporting activities in the Colony; quarterly.

Api Siang Pao (*Jesselton Commercial Press*): Jesselton; f. 1954.

BROADCASTING

Radio Sabah, an experimental station, provides regular lunchtime broadcasts including news items in Chinese, Malay and English. Transmissions are planned and produced by the Information Office. There are at present some 2,750 licence holders. The small power of the station does not give a Colony-wide coverage except during daylight hours and even then is subject to seasonal variation. A Colonial Development and Welfare Scheme includes plans for the construction of a new transmitting station.

FINANCE

The Malayan dollar, valued at 2s. 4d. sterling, is the currency of the Colony. There is also in circulation a small quantity of British North Borneo Chartered Company notes and coins, although these ceased to be legal tender in 1953. Currency in circulation in 1954 totalled \$40,000,000.

BANKING

There are branches of the Chartered Bank of India, Australia and China at Jesselton and Sandakan, and of the Hongkong and Shanghai Banking Corporation at Jesselton, Sandakan and Tawau.

TRADE UNIONS

Trade Unionism is still in its infancy in the Colony. The Commissioner of Labour and Welfare is the Registrar of Trade Unions for the Colony and contact is maintained with the Trade Union Adviser in Kuala Lumpur. Three trade unions have so far been registered with a total membership of about 500 workers. None of these organs has affiliations with any metropolitan or international organisations.

TRANSPORT

ROADS

There are 172 miles of metalled roads with bitumen sealed surface; 52 miles of other metalled roads; 213 miles of earth roads and 587 miles of bridle paths.

RAILWAYS

The total length of the railways is 116 miles. The line is of metre gauge and runs from Jesselton serving part of the west coast and the interior. In 1954, passenger miles amounted to 6,130,302 and freight ton miles to 1,578,232; revenue for the year totalled \$1,209,484.

General Manager: H. G. FOLLENFANT, O.B.E., T.D.

SHIPPING

The chief ports are Labuan, Sandakan, Jesselton, Kudat, Tawau and Lagad Datu.

The shipping lines listed below run regular services to and from the Colony. Local services are maintained by a fleet of seven coastal steamers and numerous small craft to all ports in the Colony, Brunei and Sarawak. In 1954, 14,249 vessels entered and cleared the ports of the Colony.

American Mail: From U.S.A. ports.

Australian West Pacific Line: From Japanese and Australian ports.

Eastern and Australian Steamship Co.: From Japanese and Australian ports.

Hong Kong Transportation Co. Ltd.: Ocean tugs and lighter service between Labuan and Singapore

Indo-China Steam Navigation Co.: Weekly service from Hong Kong.

Netherlands Royal Dutch Mail: From United Kingdom and other European ports.

Royal Inter-Ocean Line: From Australian, Indonesian and Thailand ports.

Royal Rotterdam Lloyd: From United Kingdom and other European ports

Straits Steamship Co.: Weekly cargo, passenger and mail service from Singapore.

AIR

There are three civil airports, at Jesselton, Sandakan and Labuan, the last-named being of international standard. External services are provided by:

Cathay Pacific Airways: Twice weekly from Hong Kong.

Garuda Indonesian Airways: Once a week from Djakarta.

Malayan Airways Ltd.: Six times weekly from Singapore.

Qantas Empire Airways Ltd.: Once a week from Australia.

An internal service linking the main towns has operated

since 1953 and is run by Malayan Airways under a special arrangement with the Government. During 1954 there were 8,529 movements of aircraft at the three main airfields.

HEALTH

The principal diseases are malaria, pulmonary tuberculosis, acute respiratory disease, bowel infections and skin complaints. There are two general hospitals (100 beds), two out-station hospitals (32-45 beds) and 11 dispensaries. In addition there are 12 dispensaries in outlying districts under the supervision of District Medical Officers. Health centres, specialising in maternity work and child welfare are maintained at Jesselton, Sandakan and Tawau, and there are 20 subsidiary rural health clinics. There is a mental hospital at Sandakan and a leprosy settlement on Berhala Island with accommodation for 60 patients.

LIBRARIES

The Secretariat maintains a reference library and there are reference and lending libraries at the headquarters of the Education Department and at the Information Office, Jesselton. A number of branch libraries have been organised by the Information Office in the smaller towns.

EDUCATION

The following schools are in existence:

		<i>Post</i>	
		<i>Primary</i>	<i>Primary Secondary</i>
Government . . .	68	2	—
Government-aided . . .	47	—	1
Unaided	112	—	1

115 of the schools are Chinese. The primary school course is of six years, with Malay, Chinese or English as the medium of instruction. Secondary schooling is either a five-year course (English Mission school) or a three-year course (Chinese middle school). The two Government post-primary schools are the Trades School (21 pupils) and the Teachers' Training College (89 students). No secondary technical or post-secondary education is provided. The total enrolment of pupils in 1954 was 24,105, of whom 1,607 were receiving secondary and 22,498 primary education.

GIBRALTAR

GEOGRAPHICAL-ECONOMIC SURVEY

World Position. The rocky promontory of Gibraltar, extending some $3\frac{1}{2}$ miles from north to south and $\frac{1}{2}$ mile in width, and comprising an area of $2\frac{1}{2}$ sq. miles, (1,360 acres including recent reclamation), is situated on the Mediterranean near the southern extremity of Spain in latitude $30^{\circ} 7' N.$ and longitude $5^{\circ} 21' W.$ Gibraltar is not the southernmost point of the European mainland—this title belongs to the Spanish territory of Cape Tarifa, some 20 miles to the south-west, but it commands the entrance to the Mediterranean, being only 14 miles distant from the African Coast at Point Almira.

Physical Features. Structurally, Gibraltar consists of a detached rocky ridge, rising to a maximum elevation of 1,396 ft., which is linked to Spain by a low sandy plain forming the frontier. The ridge is bordered on the East by a precipitous rock face, but on the western flank the ground drops more gradually in conformity with the slope of the rock measures. At its southern end the ridge falls abruptly to the plateau of Windmill Hill (370 ft.) and Europa Flats (130 ft.). The component rocks consist mainly of beds of limestone dipping at high angles to the west, overlaid by shales, grits and mudstones, and considerably complicated by disturbances indicating a diversified geological history not yet fully interpreted. Structure is certainly by no means as simple as the term "The Rock" suggests. Final severance of Europe at this point from the African continent is regarded as fairly recent in geological time, but again the precise interpretation of the undoubted structural links between Spain and North Africa is by no means agreed. The famous Genista caves (a natural formation in the limestone) have yielded much of valuable geological and anthropological interest.

Vegetation. Soils, where they exist, are sandy; but over much of the area bare rock is exposed. Despite the thinness and scantiness of the soil cover, natural vegetation is surprisingly rich. Some 400 species of plants have been identified, the Gibraltar Candytuft being found nowhere else in Europe. Xerophytic trees and shrubs, (i.e. those adapted to dry conditions) occur on the lower western slopes, especially the aloe, prickly pear and geranium. Among fauna native to Gibraltar are foxes, badgers, wood pigeons and partridges, which mainly inhabit the rocky crags. There are also the controversial Barbary apes—opinion differs as to whether they are native or were introduced from abroad. If native, they are the only monkey inhabitants existing under natural conditions in Europe.

Climate Climatic conditions are those known as "typically Mediterranean". The meteorological station (at 49 ft. above sea-level) records an annual average precipitation of 35.3 in., of which 33.3 in. falls between October and March. Winter is thus the rainy period but is typically mild, the average temperature (October to March) being $58.4^{\circ} F.$ Lack of cloud in the summer gives rise to high temperatures—the average between June and September is 71.4° , and the day maximum during August exceeds $80^{\circ} F.$ Some mitigating effect is felt from the sea—in Seville, further to the north, temperatures of over $100^{\circ} F.$ are not unusual.

Population. At the 1951 Census the population (consisting mainly of descendants of Italian and Spanish settlers) totalled 22,848. Births in 1951 totalled 396 and

deaths 280, giving a crude birth rate of 17 per thousand and a death rate of 12 per thousand. An estimate of the population at the end of 1953 gave the figure of 24,736.

The town itself is situated on the western shore, facing the Atlantic. Lack of space between the sea and the steep slopes necessitates a series of roads parallel to the sea. To the south of the town are the dockyards, and to the east the Admiralty harbour, enclosing 440 acres of deep water. There are defensive excavations on the rocks above the town, and in tunnels below. Also underground are the fresh-water storage tanks, replenished by rainfall.

The predominant religion is Roman Catholicism but there are also an Anglican Cathedral and four Anglican churches.

Economic Considerations. Gibraltar's economy is largely determined by her status as a port enjoying the advantages of an extensive shipping trade. In 1954, vessels with a total tonnage of just over 8,131,395 were cleared. The greater part of Gibraltar's activity is concerned partly with this transit traffic, and with the supply of fuel to ships.

Though there are import duties on a few articles, export duties are restricted to oil fuels—thus Gibraltar is something of a "free port", though less so (owing to sterling restrictions) than its neighbour, Tangier. Local industries are less significant than the transit trade, but fish is canned for export and various commodities are manufactured for home consumption—chiefly tobacco, roasted coffee and macaroni. The colony is dependent on imports for most of its supplies. Meat from Spain, and fruit, poultry and eggs from Morocco are sold in the market.

Chief sources of the colony's revenue are port-dues, rent from crown property in the town and customs duties. Annual revenue and expenditure have fluctuated since the war but both have increased rapidly. The figures in 1953 were Revenue, £1,029,319, Expenditure, £914,261. Exports and imports have markedly increased in volume since the war but there is inevitably an excess of imports over exports. The registered labour force of Gibraltar totalled 20,500 in 1952, most of the workers being affiliated to one of the 13 trade unions. Well over half the working population, (approximately 8,500 men and 500 women) are Spanish residents who cross the frontier daily, and of the remainder 7,400 are permanent residents of Gibraltar and 350 are British expatriates. The majority are employed by Service Departments, the Colonial Government and the City Council, a much smaller number find employment in local industries. In addition to the harbour facilities the colony has an airstrip, dealing primarily with mail. Its short east-west length together with the pronounced local eddies of wind sometimes make landing hazardous. British European Airways operates a daily airmail service in the summer and five times weekly in winter, whilst a direct airmail service between Gibraltar and Tangier is operated by Gibraltar Airways. Gibraltar is also linked by road with La Linea on the Spanish mainland.

Gibraltar is thus a complex unit, and rather an anomaly. Although it has no inherent material resources, this comparatively barren rock supports a population of over 23,000, crowded into one sector; and owing to its geographical position it can claim significance out of all proportion to its size.

J.B.T.

HISTORY

There is evidence of British interest in Gibraltar as early as the seventeenth century—its value as a strategic base was discussed by Pepys—after the abandonment of Tangier in 1684. The squadron which was sent against the Bey of Algiers in 1687 was based on Gibraltar; and during the early wars against Louis XIV, when Britain and Spain were allied members of the League of Augsburg, the base was used freely by the British squadron. The accession of Philip V ended the friendly relations and Britain had either to find an alternative base or take possession of the fortress.

During the war of the Spanish Succession the combined fleets of Britain and Holland, under the command of Sir George Rooke, were instructed to capture either Cadiz or Gibraltar. When the attack on the former failed the fleets, assisted by a land force of 2,000 men under the command of Prince George of Hesse-Darmstadt, besieged Gibraltar and secured its surrender in July, 1704. The Treaty of Utrecht, 1713, formally gave Britain possession of Gibraltar and of Port Mahon in Minorca; a covering clause gave Spain preference if the possession of Gibraltar was ever alienated. The Treaties of Seville in 1729 and Vienna in 1731 in effect confirmed Britain's title to Gibraltar, but Spain never accepted the loss. In the autumn of 1704, a Franco-Spanish force, under the command of the Marquis of Villadarios, supported by a powerful French squadron, failed to take the base after a six-month siege. Again in 1720 Spain planned its reconquest, but the design of the Marquis of Leda, leading a Spanish fleet ostensibly for the relief of Ceuta, was countered by timely reinforcements from Minorca.

During the following half-century, Gibraltar served as a secure rear base to Minorca which, though vulnerable on its landward side, provided from 1708 a base for the squadrons covering Toulon. The strategic value of Gibraltar appeared less important and Britain made several proposals for its restoration to Spain. It was suggested in 1712 that Philip of Spain, in return, should accede to the Quadruple Alliance, and in the offer of 1721 that the fortress should be exchanged for Florida. But the Spanish king rejected reciprocal exchange as a basis of negotiation and again sought allies for the reconquest of Gibraltar. An unsuccessful attack was made in 1727 and after a five-month siege the Spanish forces withdrew.

In 1757, Pitt reverted to the policy of exchange, being anxious to secure Spain's friendship against France and the recovery of Minorca, which had been temporarily lost. Public opinion, however, stimulated by the heroic defence of the Fortress in 1727, valued its possession highly and this factor seems to have influenced subsequent policy.

During the Maritime war of 1778–83, when the British navy was over-extended in American and Indian waters and Minorca had been lost a second time, Gibraltar endured its severest siege, which lasted three years and seven months. The garrison, under its indomitable commander Elliot, was twice starved almost to surrender. Three times it was relieved in January, 1780 by Admiral Sir George Rodney; in April, 1781, by Admiral Darby, who found that the ordinary means of subsistence in the garrison had long been exhausted; and finally by Lord Howe in February 1783. Throughout the siege the garrison had shown great heroism and resourcefulness in defence. Elliot, who had been appointed Governor in 1777, had reported then on the ruinous condition of the fortifications, which had not been strengthened since 1727, and had asked for reinforcements and for authority to take in a reserve of supplies, but without success.

In the negotiation of the peace treaty, France offered

Martinique and Guadeloupe to Britain, proposing that Britain should return Gibraltar to Spain and that Spain should cede San Domingo to France. The Cabinet favoured the proposal but Parliament refused to discuss it. By the Treaty of Versailles, 1783, Spain yielded her claim to Gibraltar in return for Minorca and Florida.

The strategic value of Gibraltar was fully realised during the campaigns against the Directorate and Napoleon Britain, militarily unprepared for the conflict, was compelled by 1795 to withdraw from the Mediterranean, retaining Gibraltar as an outpost. The re-establishment of naval supremacy by 1798, and the victories of Cape St Vincent and Camperdown, which averted the threat of direct invasion, allowed a counter-offensive in the Mediterranean with Gibraltar supporting the thrust to Aboukir Bay. Its usefulness as a supply base became increasingly evident, particularly in 1805, and it served as an observation base countering Villeneuve's fleet. After the defeat of the French fleet, Gibraltar played a significant part, second to Lisbon, in supporting and provisioning the Peninsular Campaign. It became, with Malta and Heligoland, a point through which the "Continental System" could be successfully breached. In 1807 exports through Gibraltar amounted in value to £750,000, in 1808 to £1,370,000 and in 1812 to £2,420,000. The acquisition of Malta and later Cyprus underlined the strategic value of Gibraltar as a link in the chain of Mediterranean bases. Its importance as a commercial coal station increased dramatically with the opening of the Suez Canal in 1869.

The evolution of warships and naval armament and the German challenge to British sea power towards the end of the 19th century prompted reconstruction of the Mediterranean fortresses. Gibraltar was converted into a first-class naval base with docks capable of taking the largest battleships. Anti-torpedo breakwater defences and efficient coaling yards were constructed. The work was begun in 1893 and completed before 1914. During the first World War it was particularly important as a supporting base for the Allied navies in the anti-submarine campaigns in the Atlantic and Mediterranean and as an assembly point for convoys.

By 1938, under pressure of recurrent international crises, it was recognised that the fortress was ill prepared against modern land and air attack. Steps were taken to enable the essential work of the base to continue under bombardment. Vast extensions of the underground galleries were tunnelled; by 1942, Gibraltar was equipped with underground workshops, hospitals, kitchens, accommodation for thousands of men, and subterranean roadways for tanks and lorries. Underground storage for food, fresh water, petrol and ammunition was also constructed. The debris from the excavations was used to lengthen the air-strip to 1,800 yards and to fill the sea on the exposed side of the defences. The entire fortress was protected by formidable anti-aircraft batteries.

During the second World War, Gibraltar filled in new measure its role as a naval base and, in addition, gave vital support in November 1942 to the allied invasion of North Africa, as an aircraft refuelling station. The base was directly attacked in September 1940 by French planes from Morocco; and in the critical months of 1941–42 a combined assault on the fortress seemed imminent. The civilian population had been evacuated to the United Kingdom in 1940 and their repatriation and housing became the colony's first peace problem. Under the N.A.T.O. Mediterranean Command, Gibraltar is now a base available to the Western powers. Between 1951–53 Spain agitated anew for the restoration of Gibraltar, but there is no evidence of change in British policy.

H.L.

THE BRITISH COMMONWEALTH

CONSTITUTION

The Crown colony is administered in accordance with the Gibraltar Letters Patent 1950 and the Royal Instructions dated February 28th, 1950 by a Governor, who is also the Commander-in-Chief, assisted by an Executive Council of 4 *ex-officio* and 3 unofficial members. The Executive Council was originally set up by the 1922 Letters Patent. A Legislative Council defined by an Order-in-Council of February 3rd, 1950 was inaugurated by H.R.H. the Duke of Edinburgh on November 23rd of that year. It consists, under the presidency of the Governor, of 3 *ex-officio* members, 2 members nominated by the Governor (of whom at least 1 must be unofficial) and 5 elected members. Nominated and elected members hold their seats normally for 3 years. Election is by proportional representation. The franchise is given to all adult British subjects ordinarily resident in Gibraltar for a continuous period of 12 months, though provision is made for the registration of electors who may be resident in neighbouring Spanish territory during part of the qualifying period. At the first elections, held in November 1950, 7,200 votes were polled out of a total electorate of 13,500. From the 5 members elected to the Legislative Council, the Governor nominated 3 Gibraltarians to serve on the Executive Council; in the Legislative Council the two nominated members were also Gibraltarians. Reserve powers enable the Governor to legislate if he considers it expedient and upon reporting the circumstances to the Secretary of State.

The City Council. In 1830 the first Charter of Justice was given to the City and a Magistracy established. On December 1st, 1921, the creation of the City Council gave the inhabitants of Gibraltar some representation in the management of municipal affairs. The City Council was reconstituted on August 1st, 1945, when provision was made for an unofficial majority.

GOVERNMENT

Governor: Lt.-Gen. Sir HAROLD REDMAN, K.C.B., C.B.E.
Deputy Fortress Commander: Brig. G. LUCAS, C.B.E.

THE LEGISLATIVE COUNCIL

President: H.E. The GOVERNOR.
Ex-Officio Members: The COLONIAL SECRETARY, the ATTORNEY-GENERAL, the FINANCIAL SECRETARY.
Nominated Members: H. J. COELHO, (one vacancy).
Elected Members: J. A. HASSAN, M.V.O., J.P., A. R. ISOLA, Q.C., J.P., A. J. RISSO, A. W. SERFATY, J.P., J. E. ALCANTARA.

THE EXECUTIVE COUNCIL

President: H.E. The GOVERNOR.
Ex-Officio Members: The DEPUTY FORTRESS COMMANDER, the COLONIAL SECRETARY, the ATTORNEY-GENERAL, the FINANCIAL SECRETARY.
Unofficial Members: J. A. HASSAN, M.V.O., J.P., H. J. COELHO, S. P. TRIAY, Q.C.
Clerk of the Council: E. H. DAVIS.

CIVIL ESTABLISHMENT

Colonial Secretary: J. D. BATES, C.V.O.
Financial Secretary: J. HAYWARD, O.B.E.
Chief Assistant Secretary: (Vacant).
Principal Auditor: K. A. W. JOHNSON.
Director of Education: Miss O. GIRALDI, O.B.E.
Director of Labour and Welfare: S. JACOB.
Attorney-General: D. W. CONROY, Q.C., T.D.

Commissioner of Lands and Works: C. McGRAIL.
Chief Medical Officer: K. EDMUNDSON.
Commissioner of Police: A. L. ABRAHAM, M.V.O.
Captain of the Port: Commdr. G. B. NASMYTH, R.N.R., F.R.G.S., F.R.MET.S., J.P.
Colonial Postmaster: E. A. CANOVAS.
Royal Navy: Rear-Admiral R. S. FOSTER-BROWN.
Royal Air Force: Air Commodore G. G. BARRETT, C.B.E.

CITY COUNCIL

Elected Members: Hon. J. A. HASSAN, M.V.O., J.P. (Chair), O. L. CHAMBERLAND (Vice-Chair.), Hon. J. E. ALCANTARA, E. J. ALVAREZ, J.P., Mrs. D. G. ELLICOT, A. MONTEGRIFFO, Hon. P. G. RUSSO, C.B.E., J.P.
Nominated Members: Dr. J. J. J. GIRALDI, O.B.E., Col. D. M. ELEY, Wing Commdr. J. B. HOLGATE, D.F.C., A.F.C., R.A.F., Capt. J. C. STOPFORD, O.B.E., R.N., C. J. GOMEZ, M.B.E.
Ex-Officio Members: Dr. K. EDMUNDSON (Chief Medical Officer).

THE LEGAL SYSTEM

SUPREME COURT OF GIBRALTAR

Chief Justice: H. J. M. FLAXMAN.
Stipendiary Magistrate: S. W. WELDON.
Attorney-General: D. W. CONROY, Q.C., T.D.
Registrar, Supreme Court: E. PIZZARELLO, I.S.O.

RELIGION

	Per cent of Population (1951 Census)
Catholic	87.9
Church of England	7.54
Church of Scotland	0.48
Methodist	0.23
Hebrew	3.01
Hindu	0.54
Other Religions	0.3

Catholic: Bishop of Gibraltar (to be appointed); St. Mary's Cathedral, Main Street.
Church of England: Bishop of Gibraltar, Rt. Rev. F. W. T. CRASKE, B.A.
Church of Scotland: (St. Andrew's Presbyterian), Gibraltar, Chaplain Rev. A. R. R. TORRIE, M.A., D.C.F.; St. Andrew's Manse, 29 Seud Hill.
Methodist: Rev. JOHN F. JACKSON; Epworth House, Prince Edward's Road.
Hebrew: Managing Board of Hebrew Community; Pres. D. BENAÏM, O.B.E.

THE PRESS

Calpense, El (*The Calpean*) (in Spanish): College Lane, Gibraltar; f. 1868; daily; Editor ARTHUR PARRAL.
Gibraltar Chronicle: 2 Library Gardens, Gibraltar; f. 1801; daily; English; Editor E. F. E. RYAN.
Gibraltar Directory and Guide Book: 27 Hospital Ramp (P.O. Box 131), Gibraltar; f. 1873; annual; Editor B. R. MILES.

THE MIDDLE EAST

Gibraltar Gazette: f. 1948; publ. by Colonial Secretariat; Fridays; circ. 500.

Gibraltar Post: 1 College Lane; London Office: 69 Fleet Street, E.C.4; Editor M. K. FEATHERSTONE.

Quarterly Official Directory of the Colony and Garrison: 2 Library Gardens; Jan., April, July, Oct.; Editor E. F. E. RYAN.

FINANCE

BANKING

Barclays Bank Ltd. D.C.O.: 83/89 Irish Town; Manager G. D. THOMAS.

Crédit Foncier d'Algérie et de Tunisie: 206-210 Main Street, Gibraltar; Head Office, Paris; London Office, 62 Bishopgate, E.C.2; f. 1880; Manager (Gibraltar) HERBERT SANÉ (acting).

A. L. Galliano: 46 Main Street; est. 1855; private bank and correspondents for Midland Bank Ltd.; Partners Mrs. LUISA GALLIANO, J. J. GALLIANO, and F. L. GALLIANO.

INSURANCE

Rock Fire Assurance Co. Ltd., The: 2 Crutchett's Ramp, Gibraltar, P.O. Box 260; f. 1841; share cap £10,000; gen. res. £10,000; Chair. EDWARD B. COTTRELL, C.B.E., J.P.; Sec. ADOLPHUS J. RUSSO.

TRADE AND INDUSTRY

The Trades Unions and Trades Disputes Ordinance provides for the compulsory registration of trade unions and the appointment of a Registrar of Trade Unions.

Registrar of Trade Unions: The Director of Labour and Welfare.

TRANSPORT

The chief shipping company is:

M. H. Bland and Co. Ltd., Cloister Building, Gibraltar; f. 1810; Chair and Managing Dir Sir GEORGE GAGGERO, O.B.E., J.P.; Dirs. E. H. WATTS, J. L. CABEDO, J. J. GAGGERO; Alternate, DAN LUKE, A. R. ISOLA, J.P.; mail, passenger and cargo service between Gibraltar and Tangier; steamship agents, salvage and towage contractors, engineers and ship repairers, bunker coal suppliers, aviation, travel and insurance agents.

There is a ferry service of twin-screw motor vessels between Gibraltar and Algeiras; seven sailings daily each way except on Saturdays and Sundays. The ferry boats

GIBRALTAR

are under the direction of **Vapores Pynta de Europa:** Waterport, Gibraltar; owner CARLOS DE LAS RIVAS MONTERO.

In addition, many long distance liners call at Gibraltar.

AIR TRANSPORT

Gibraltar Airways Ltd.: Cloister Building; also Bland House, Tangier; f. 1947, services between Gibraltar and Tangier twice daily; aircraft: DC3 Pionairs; Chair. Sir GEORGE GAGGERO, O.B.E., J.P.; Deputy Chair. LORD AMHERST, M.C.; Dirs. J. L. CABEDO, M.A., A. CARO, J. J. GAGGERO, A. C. PING.

The following airlines have branch offices in Cloister Building:

British European Airways Corporation (B.E.A.C.).

Hunting-Clan Air Transport.

Malta Airlines, The.

EDUCATION

Education is compulsory between the ages of 5 and 15 years. There are (Jan. 1956) six secondary, one technical and 16 primary and infant schools with a total of 3,417 pupils. There is a fully representative Board of Education which is responsible for all schools.

Board of Education: Chair. W. A. GRACE, M.A. (Director of Education); Members. Rt. Rev. R. FITZGERALD, D.D. (Roman Catholic Bishop); Very Rev. H. M. LLOYD, M.A. (Dean of Gibraltar); D. BENAÏM, O.B.E. (Pres., Managing Board, Hebrew Community); The Command Education Officers (Navy and Army); CHARLES GAGGERO, O.B.E., MANUEL GARRO, B.A.; Sec. Miss O. GIRALDI, O.B.E.

LEARNED SOCIETY

Calpe Institute, The: Main Street; f. 1944; British Council Centre to foster cultural, educational and recreational facilities in Gibraltar; Pres. H.E. The GOVERNOR; British Council Rep W. G. INGHAM; Librarian Miss M. R. IMOSI; Hon. Accountant J. A. D. BARTON.

MUSEUM

Gibraltar Museum: Ordnance House, Bomb House Lane, founded 1930; controlled by a Committee of Management comprised of members of the Navy, Army and civil community; the Museum contains an important collection of pottery from Ur of the Chaldees and exhibits of local archaeological and geological interest. Curator M. McEWEN.

MALTA

GEOGRAPHICAL-ECONOMIC SURVEY

THERE are five separate islands forming what might be described as a "Maltese archipelago"; Malta itself (95 square miles), Gozo (26 square miles), Comino (1 square mile) and two uninhabited islets, Cominotto and Filfla. Gozo is situated seven miles to the north-west of Malta, with Comino between. The whole group lies some 60 miles off the southern coast of Sicily, to which it is connected by a submarine ridge; and the nearest African coast (in Tunisia) is about 180 miles distant and that of Tripolitania (due south) about 220 miles.

Structure. Malta and Gozo have a simple geological structure, which consists essentially of almost horizontal beds of limestone (mainly Miocene in age), separated by a layer of blue clay. The upper limestone bed is resistant, but has been worn away in many areas, and now forms a capping only in the north-west. The blue clay series is important in that it is impervious and consequently, at its junction with the porous upper limestone just mentioned there is a water-table that gives rise to a number of springs. Below the blue clay lies a second series of porous limestone, and this continues below sea level. Hydrostatic pressure from sea water acting through the rock produces a second and main water-table at sea level—a matter of considerable importance to the islands. Since much of the rock surface is permeable, there is little surface water on the islands, and supplies for agriculture must be sought in wells, occasional springs, or artificial cisterns. As however the lower limestone is also porous to sea water, undue lowering of the main water-table by excessive consumption in wells allows inflow from the Mediterranean, and well-water becomes contaminated. This has now become a serious problem in parts of Malta where demands for water are greatest—e.g. round Valletta—and from time to time suggestions have been put forward that sewage effluent should be used for agriculture.

The whole rock structure is very slightly tilted, producing a somewhat high and bold coastline in the west, with frequent cliffs, that are succeeded immediately inland by a range of low hills. From the highest point (786 ft.) there is a gradual drop to a more low-lying coastline on the east. Fracturing of the rocks followed by local subsidence has produced a number of depressions or valleys, several of which, partly occupied by the sea, produce deep water harbours, the largest of which is the remarkable Grand Harbour of Valletta.

Climate. Climatically, Malta experiences the normal Mediterranean régime of hot, almost rainless summers, and rainy, generally mild winters. Annual rainfall averages 20 inches, with January, February the wettest months. No month is quite without rain, and in winter downpours of considerable intensity occur, with sleet or even a few snowflakes—though the coldest month has an average temperature of 53°. Summer temperatures vary between 78° and 88° F., and an unpleasant feature of this season is high humidity near the coasts. Another drawback is exposure to the sirocco—a scorching, dust-laden wind from North Africa—but in the main, the climate of the islands is genial and very similar to that of lowland Italy.

Though the islands are fairly low-lying, their surface is surprisingly broken, with soil occurring mainly as dis-

continuous patches or strips, interspersed with areas of bare limestone rock. Terracing is practised on a very considerable scale, giving much of Malta (especially in the centre and south) the aspect of a series of low walls. Fields are small, and often totally enclosed, so that the principal open spaces are now those used as airfields.

Agriculture. A wide range of Mediterranean crops is grown, some for local consumption, some for export. Wheat, barley and vines are in the first category: vegetables (especially potatoes and tomatoes) and fruit are exported. Malta, lying farther south even than some parts of North Africa, has a rapid growing season, hence early vegetables are produced for sale at high prices in Britain. There is a small wine industry, but quality is far from outstanding.

Pasture is not widespread, and dairy cattle are few; but goats are more numerous—though their milk can be the carrier of "Malta fever", a moderately severe disease which is endemic to the island. There is some fishing, but mainly because of the deep water that surrounds the islands on all but the north-east side, this activity is less significant than might be expected.

Economy. The islands possess few industrial raw materials, but there is a home lace industry catering for foreign buyers. The economy of Malta is however overwhelmingly influenced by the presence of British garrisons—chiefly the main Naval base at Valletta, but also large Army, Air Force and Fleet Air Arm stations. Over 20,000 Maltese work in the Naval Dockyards, and the presence of Servicemen with their families provides a source of livelihood for many Maltese in catering and associated activities.

The Maltese islands are in consequence far from being self-sufficient in food, and there are considerable imports of wheat, flour, tinned foods, meat and wine. Of recent years the value of imports has been five to ten times that of exports but this figure is partially misleading in view of the presence of the non-Maltese garrisons. Nevertheless, there is a considerable economic problem confronting the island—that of maintaining a rapidly growing native population upon markedly restricted resources.

Population. In 1955 Malta had a total (Maltese) population of some 330,000 giving a density of nearly 3,500 to the square mile. Birth-rates average 25.30 per thousand, and death-rates 20 per thousand, giving an annual excess of 8,000 births. Already water-supplies are severely strained, and the problem of supporting this expanding population has become a major issue. Some emigration takes place to the Americas (chiefly the U.S.A.) and to Australia, and there are also colonies of Maltese in some Mediterranean towns, especially Alexandria and Tripoli. A strongly developed family sense among many Maltese tends sometimes to inhibit emigration, or leads to temporary emigration only. The acute demographic and financial difficulties of Malta have recently led to a serious proposition that Malta should be more closely linked to the United Kingdom, possibly under the administration of the Home Office more or less like an English county and at the time of writing this question is under discussion in London.

Ethnically, the Maltese population is said to be of Punic origin—i.e., to derive from Tunis and Algiers, the ancient Carthage—but there are many other racial elements, mainly from Italy and other Mediterranean countries. The Maltese language is most probably of Semitic origin,

having certain affinities to Arabic, but also possesses some loan-words from Italian. Until 1934 Italian was an official language. In religion, the island is strongly Roman Catholic, and religious influence on culture, daily life and political activities is considerable.

W.B.F.

HISTORY

On September 5th, 1800, the French, then in occupation of Malta, surrendered to General Pigot. They were compelled to do so by the combination of a Maltese revolt and blockade of the island by British and Neapolitan squadrons. The Knights of St. John, to whom the island had been granted in full sovereignty by Charles V in 1530, had retained control until June 1798, when the Knights of the Order had surrendered the fortress to Napoleon's armies. The French might have gained the loyalty of the Maltese, but for their anti-clerical policy, against which the people revolted in September 1798, in January 1799 they petitioned Nelson to give them British protection and assistance in ousting the French, they also invited Captain John Ball, in command of the blockading squadron, to preside in their national assembly, and petitioned the King of Naples, to whom sovereignty of the island had reverted on the fall of the Order, to transfer possession of Malta to Britain. With the capitulation of the French in Valletta, however, the Maltese understood that sovereignty reverted to the Maltese people, and that they freely offered it to Britain under certain conditions, which they interpreted to include the grant of a representative legislative assembly. From this derives the political opposition to the constitutions they received from Britain in the 19th and early 20th centuries. By Article X of the Treaty of Amiens (1802) Britain returned the island to the Knights of St. John, whose Grand Master was then Czar Paul I; but as suspicion of France remained, forces were retained in the island and when hostilities were resumed Malta served as a British base. In 1813 Sir Thomas Maitland was appointed Governor. Britain's possession of Malta was confirmed at the Congress of Vienna in 1815.

The Crown colony was administered during the 19th century by military governors, except during the few years (1847-51) of Richard More O'Ferrall's appointment. In 1835, a nominated Advisory Council was appointed, 2 of whose 7 members were Maltese. A partly elected Legislative Council was granted by Letters Patent on May 11th, 1849, of its 18 members, 8 were to be elected; of the official members 5 were to be Maltese. The Maltese, who from 1832 had been agitating for a fully representative national assembly, continued their agitation at the council meetings, causing recurrent crises by bloc resignation. By Letters Patent dated December 12th, 1887, they were granted a majority of 14 in a council of 20 members, three of the elected members were included in the executive council. The tension between the Maltese and the Government did not diminish and gradually the opposition in the Council was controlled by rescinding substantial parts of the Constitution. On 3rd June 1903, the 1887 Constitution was replaced by the political system of 1849.

During the first World War, the Maltese remained deeply loyal to Britain. Squadrons of the allied navies conducted their anti-submarine offensive from the base at Valletta. Malta was of value also as a military transit camp and supply base. After the war, distressed economic conditions and political discontent produced disorder and rioting. The island was granted a large measure of self-government in 1921, but again in the years which followed the political powers granted to the Maltese were gradually revoked owing to recurrent domestic political crises. Twice the constitution was suspended, in 1930 owing to a deadlock

on religious policy and in 1933 as a result of the pro-Italian sympathies of the Maltese ministry. In 1936 self-government was withdrawn and full authority re-invested in the Governor. The subsequent demonstrations of discontent were met by renewed efforts from the central Government to solve Malta's political dilemma. That of an island which cannot be economically or financially self-sufficient, which has become an important strategic base and which has a politically conscious civilian population. Letters Patent of February 14th 1939 re-established representative government with a partly elected Legislative Council (10 elected, 8 official and 2 nominated members); the Executive Council was to be composed of 5 official and 2 or more nominated unofficial members. The outbreak of the second World War postponed further constitutional development. During the war, and in particular during the siege and aerial bombardment of their island, the Maltese served again with loyalty and heroism. The island was awarded the George Cross in April 1942; and in 1943 the Maltese were promised the restoration of self government. The Current Letters Patent came into force in 1947.

The Maltese have not accepted the present Constitution as final. Their government's proposal, in 1953, for the transfer of Maltese affairs from the Colonial Office to the Commonwealth Relations Office with demands for eventual dominion status were answered by the Colonial Secretary's counter-proposal that Malta should come within the jurisdiction of the Home Office. Negotiations between the two governments were re-opened in 1955 and in October a round-table conference was held in Valletta. The Maltese Government proposed integration with the United Kingdom, involving the representation of Malta at Westminster by three M.P.s elected in exactly the same way as United Kingdom M.P.s. The conference recommended British approval of this proposal, subject to its prior acceptance by the Maltese people. It was also suggested that the authority of the Maltese Parliament should be extended to all matters other than defence and foreign affairs. Responsibility for Maltese affairs in London should be transferred to the Home Secretary, who should have a representative in Malta. Important issues should be dealt with by advisory committees in Malta and London.

A referendum on these issues was held in Malta in February, 1956 and the integration proposals secured the support of about 75 per cent of those who voted.

Malta's position in the Mediterranean has made it important in both European and Middle East strategy. The magnificent harbour at Valletta is protected by massive fortifications built by the Knights of St. John against Saracen attack. Malta is the base of the Mediterranean fleet, its naval dockyard the main industry of the island, it is an important coaling station for merchantmen and an entrepôt of trade in transit. At the outbreak of the second World War it was ill-prepared in air defence and the exploits of the three Gladiators based on the island in 1939 are now part of the island's history. In 1952 the North Atlantic Council announced the formation of an Allied Mediterranean Command, subordinate to the Supreme Allied Commander Europe, with its headquarters at Malta. Even in the atomic age the island's strategic importance is maintained.

H.L.

STATISTICAL SURVEY

AREA AND POPULATION

THE MALTESE ISLANDS form a group in the Mediterranean Sea. The length of Malta is about 17 miles by 9 miles in breadth. Its area is 94·876 square miles; that of Gozo 25·899 square miles, and that of Comino about 1 square mile. The whole group covers about half the area of the Isle of Man.

THE BRITISH COMMONWEALTH

The island is highly cultivated. Besides the products for home consumption, early potatoes, onions, cumin seed, and oranges are exported. The chief manufactured goods exported are buttons, gloves, and smoking pipes.

A large number of the inhabitants are employed in connection with the trade of Valletta as a coaling station and port of call.

The capital, Valletta, has a population of 19,145 (estimated, December 31st, 1954), and its suburb, Floriana, 5,817. The population of the "Three Cities" is: Senglea, 4,367; Cospicua, 8,345; Vittoriosa, 3,710. The former capital, Mdina, has, with its suburb Rabat, a population of 14,880.

Victoria, the chief town of Gozo, has 6,512 inhabitants.

THE CONSTITUTION

A Council of Government, appointed by the Governor, was granted in 1835; a Council of Government, partly elected, was constituted by Letters Patent in 1849 and reconstituted in 1887, the Letters Patent being amended in 1898 and 1903. Under further Letters Patent of April 1921 the Council of Government gave place to a Legislature composed of two Houses, a Senate and a Legislative Assembly.

SUSPENSION OF THE CONSTITUTION

The Constitution was suspended by the Governor from 1930 until 1932, and again suspended in November 1933, the Senate and Legislative Assembly being dissolved and the Government dismissed. The reason given for this suspension was, in the first case, clerical interference in State affairs, and, in the second, that the Nationalist Government were evading the provisions of the Letters Patent, chiefly by encouraging the teaching of Italian

in the elementary schools and enforcing it as a subject for civil service examinations. Excessive public expenditure was also alleged.

During this suspension of the Constitution the Governor assumed full powers. He was assisted by a Nominated Council, and was directly responsible to the Colonial Office.

The continued suspension of the Constitution was challenged in unsuccessful cases before the Maltese Courts. Appeal made to the Privy Council was cut short by the passing of an Act of Parliament.

THE 1936 LETTERS PATENT

The Constitution was finally revoked by Letters Patent dated August 12th, 1936, and promulgated in Malta on September 2nd, 1936. They provide for an Executive Council consisting of five *ex-officio* members (the Lieutenant-Governor, the Legal Adviser, the Treasury Counsel, the Treasurer and the Secretary to the Government), and not less than three members nominated by the Governor.

THE BRITISH COMMONWEALTH

THE 1939 LETTERS PATENT

The Letters Patent, dated February 14th, 1939, which came into operation on July 21st, 1939, and the instructions to the Governor dated July 25th, 1939, provide for an Executive Council consisting of five *ex-officio* members (Lieutenant-Governor, Legal Secretary, Attorney-General, Treasurer, Secretary to the Government), and of such nominated members as the Governor may appoint. They also provide for a Council of Government composed of the five *ex-officio* members of the Executive Council, three official members, two unofficial members, nominated by the Governor, and ten elected members.

THE 1947 LETTERS PATENT

New Letters Patent came into force in September 1947 and provide a form of government which in its dyarchical structure is unique in colonial constitutions. The Imperial Government, represented by the Governor, retains legislative authority on matters dealing with the defence of the colony, the three Services, immigration, currency, treaties and foreign relations. He is assisted by an Executive Council consisting of the Maltese Prime Minister and other ministers, by a Nominated Council of the Lieut-Governor the Legal Secretary and the 3 senior officers of the three Services; and by a Privy Council of the Executive and Nominated Councils sitting together. A Maltese Legislative Assembly of 40 members is elected by universal suffrage on a system of proportional representation, and legislates for the "peace, order and good government of Malta". Elections were held on October 25th, 1947 and the new legislature was inaugurated by H.R.H. the Duke of Gloucester on November 10th, 1947.

OFFICIAL LANGUAGES

According to the Letters Patent, the English language and the Maltese language are the official languages of administration, and the latter of all Courts of Law. Provision has been made by Ordinance for the use of the English language in any proceedings where a party or an accused person is not Maltese-speaking. If the proceedings cannot be followed in English they are translated by an interpreter.

English and Maltese are the languages of instruction and study in elementary as well as in secondary schools. In the secondary schools and the university Italian is on the same footing as any other foreign language.

Maltese is the language of general intercourse in the Islands.

THE GOVERNMENT

THE GOVERNOR

H.E. Major-General Sir ROBERT EDWARD LAYCOCK,
K.C.M.G., C.B., D.S.O. (1954).

EXECUTIVE COUNCIL

The Governor.

Prime Minister and Minister of Finance: D. MINTOFF, B.Sc.,
B.E. and A., M.A. (Oxon.), A. and C.E.

Minister of Works and Reconstruction: JOSEPH ELLUL
MERCER.

Minister of Emigration and Labour: E. C. TABONE.

Minister of Education: Miss AGATHA BARBARA

Minister of Industry and Commerce: F. BONACI.

Minister of Health and Social Services: A. V. HYZLER, M.D.,

Minister of Justice: JOS. CASSAR, LL.D., B.A.

Minister of Posts and Agriculture: J. J. COLE.

NOMINATED COUNCIL

The Governor.

Lieutenant-Governor: TRAFFORD SMITH, C.M.G. (*ex-officio*).

Legal Secretary: A. M. I. AUSTIN (*ex-officio*).

Air Officer Commanding, R.A.F.: Air Vice-Marshal V.
REYNOLDS, C.B.E.

General Officer Commanding, Garrison: Major-Gen. B.
DAUNT, C.B.E., D.S.O.

Flag Officer: Rear-Admiral J. F. SALTER, D.S.O.

Clerk to the Council: Lieut-Colonel V. G. VELLA, C.V.O.,
O.B.E., E.D.

The Privy Council consists of the Executive Council and Nominated Council sitting together.

LEGISLATIVE ASSEMBLY

The Legislative Assembly consists of 40 members, five representing each of the eight electoral divisions.

Speaker: N. LAIVIERA.

Clerk to Legislative Assembly: V. A. DILLON, M.B.E.

HEADS OF DEPARTMENTS

Attorney General: Prof. ANTH. J. MAMO, O.B.E., LL.D., B.A.

Commissioner for Gozo: E. G. MONTANARO

Commissioner of Inland Revenue: Notary V. GATT, LL.D.

Commissioner of Police: G. CACHIA, L.P.

Secretary to the Prime Minister: CARMEL THAKE, C.B.E.

Electoral Registrar and Principal Electoral Officer: C. A.
GILBERT.

Comptroller of Industrial Organisations: M. GAUCI.

Controller of Fisheries: J. AXIAK.

Postmaster-General: A. C. CROCKFORD.

**Public Relations Officer and Officer-in-Charge Tourist
Bureau:** A. A. CASTILLO.

Auditor: E. FIORINI LOWELL

Chief Govt. Medical Officer: Prof. J. GALEA, M.B.E., M.D.,
D.P.H.

Treasurer: E. CUSCHIERI, C.B.E.

Statistician: A. WIRTH.

Manager of Water and Electricity: A. A. FALZON, O.P.E.

Collector of Customs: A. CAMILLERI

Directors of Departments: J. P. VASSALLO (Education),
(Vacant) (Emigration), S. Mizzi (Trade and Industry),
Major F. E. AMATO GAUCI, M.B.E., B.Sc. (Labour), J.
ZAMMIT (Printing Office), G. J. RANSLEY (Prisons), J.
MIFSUD (Public Lotto), Dr. J. SCICLUNA, LL.D. (Public
Registry), S. MANGION, A. and C.E. (Public Works),
J. G. BORG CARDONA (Social Welfare), R. BIASINI
(Agriculture).

REPRESENTATIVES ABROAD

Commissioner-General in London: EDWARD ELLUL, 39
St. James's Street, S.W.1

Commissioner for Malta in Australia: Capt G. STIVALA,
O.B.E., 108 Queen Street, Melbourne.

POLITICAL PARTIES

STATE OF PARTIES IN THE LEGISLATIVE ASSEMBLY

(after General Election of February 26th-28th, 1955)

Malta Labour Party	23
Nationalist Party	17
Progressive Constitutional Party	0

—
40

Malta Labour Party: proposes that Malta should become an integral part of the British Isles, with representatives in the British Parliament, but retaining her own Legislative Assembly. This process would take place over

THE MIDDLE EAST,

a period of 20 years. The full rights and privileges of the Roman Catholic Church would be safeguarded. Leader DOMINIC MINTOFF.

Nationalist Party: advocates Dominion status for Malta. Leader Dr. G. BORG OLIVIER.

Progressive Constitutional Party (P.C.P.): Central Office: 4 St. Paul Street, Valletta; f. 1953 when it broke away from the Constitutional Party. The P.C.P. stands to maintain Malta's autonomy, working hand in hand with Britain and the Commonwealth. It aims at the curtailment of Reserved Matters in the Constitution and underlines the need for long-term financial aid for the economic and social development of the islands. Any constitutional agreement reached with the British Government would be subject to the maintenance of Maltese rights embodied in the Declaration of Rights of 1802. Leader Hon MABEL STRICKLAND, O.B.E.; Hon. Sec. ANTHONY MONTANARO.

Workers' Party: is prepared to work for the transfer of Malta's affairs to the Home Office or the Commonwealth Relations Office, whichever may be more favourable. The party did not contest the 1955 elections. Leader Sir PAUL BOFFA

JUDICIAL BENCH

Chief Justice and President of the Court of Appeal: His Hon. Mr. Justice Sir L. A. CAMILLERI, LL.D.

Judges: The Hon. Mr. Justice A. J. MONTANARO-GAUCI, C.B.E., K.M., LL.D.

The Hon. Mr. Justice W. H. HARDING, LL.D., B.LITT.

The Hon. Mr. Justice T. E. GOUDER, LL.D.

The Hon. Mr. Justice A. V. CAMILLERI, LL.D.

The Hon. Mr. Justice J. CARUANA COLOMBO, LL.D., B.LITT.

The Hon. Mr. Justice A. MAGRI, LL.D., B.LITT.

The Hon. Mr. Justice J. FLORES, LL.D., B.L.

Registrar, Superior Courts: Dr. G. VELLA, LL.D.

Registrar, Courts of Judicial Police: Dr. L. PACE, LL.D.

Registrar, Courts of Gozo: Dr. V. BORG GRECH, LL.D.

RELIGION

The great majority of the population profess the Roman Catholic faith

Archbishop of Malta: His Grace Mgr. M. GONZI, K.B.E., D.D., B.LITT., J.C.D., G.C.O.J.

Vicar-General: His Lordship Mgr. E. GALEA, D.D., B.LITT., J.C.D., K.O.J., Titular Bishop of Tralles in Asia

Bishop of Gozo: His Lordship Mgr. J. PACE, S.T.H.D., J.C.D., PH.D., K.O.J.

CYPRUS

GEOGRAPHICAL-ECONOMIC SURVEY

THE ISLAND OF CYPRUS, some 3,572 sq. miles in area, is situated in the north-eastern corner of the Mediterranean Sea, closest to Turkey (which is easily visible from its northern coast), but also under 100 miles from the Syrian coast. Its greatest length, including the long, narrow peninsula of Cape Andreas, is 140 miles.

PHYSICAL FEATURES

Cyprus owes its peculiar shape to the occurrence of two ridges that were once part of two much greater arcs running from the mainland of Asia westwards towards Crete. The greater part of these arcs has disappeared, but remnants are found in Cyprus and on the eastern mainland, where they form the Amanus Range of Turkey. In Cyprus the arcs are visible as two mountain systems—the Kyrenia Range of the north, and the much larger and imposing Troödos Massif in the centre. Between the two mountain systems lies a flat lowland, open to the sea in the east and west and spoken of as the Mesaoria. Here also lies the chief town, Nicosia.

The mountain ranges are actually very different in structure and appearance. The Kyrenia Range is a single narrow fold of limestone, with occasional deposits of marble, and its maximum height is 3,000 ft. As it is mainly porous rock, rainfall soon seeps below ground, and so its appearance is rather arid, but very picturesque, with white crags and isolated pinnacles. The soil cover is thin. The Troödos, on the other hand, has been affected by folding in two separate directions, so that the whole area has been fragmented, and large quantities of molten igneous rock have forced their way to the surface from the interior of the earth, giving rise to a great dome that reaches 6,000 ft. above sea-level. As it is impervious to water, there are some surface streams, rounder outlines, a thicker soil, especially on the lower slopes, and a covering of pine forest.

CLIMATE

The climate in Cyprus is strongly "Mediterranean" in character, with the usual hot dry summers and warm, wet winters. As an island with high mountains, Cyprus receives a fair amount of moisture, and up to 40 in. of rain falls in the mountains, with the minimum of 12 to 15 in. in the Mesaoria. Frost does not occur on the coast, but may be sharp in the higher districts, and snow can fall fairly heavily in regions over 3,000 ft. in altitude. In summer, despite the nearness of the sea, temperatures are surprisingly high, and the Mesaoria in particular can experience over 100° F. A feature of minor importance is the tendency for small depressions to form over the island, giving a slightly greater degree of changeability in weather than is experienced elsewhere in the Middle East.

Relatively abundant rainfall together with high average temperatures were in the past responsible for a heavy incidence of malaria in the island. After the second World War, however, an energetic campaign was waged against mosquitoes, and Cyprus is now entirely free from the disease.

ECONOMIC LIFE

The presence of the Troödos Massif has had important effects on economic life. In the first place, the occurrence of surface streams offers scope for small-scale irrigation

projects—the building of small dams and storage basins—which have been greatly extended within the last twenty years. Secondly, the deep soil, rich in iron and other mineral salts, that weathers from the igneous rocks, provides excellent conditions for the growing of carobs, specialised seed stocks, tobacco and vines. Thirdly, among the igneous rocks of the Troödos occur deposits of copper (whence the name of Cyprus—from *cuprum*), iron, asbestos and chromium, all of which are commercially exploited. In addition, the contact of molten rocks with other strata has produced special deposits: marble, greatly used in building and sculpture, and coloured earths, amber and green, which are exported for use as pigments. Finally, the cool summer climate of the mountains, together with a pleasant wooded countryside, considerable natural beauty, and many monuments of historical interest, have fostered the growth of a tourist traffic that now draws visitors from adjacent countries. This in turn provides a market for the embroidery work in linen and silk that is carried on by many women as a home occupation.

Easy accessibility by sea has also led to the growth of another curious but important industry—the making of buttons from vegetable ivory imported from Africa. Other Cypriot products—gypsum, marble, tobacco, wine, and mules—can reach outside markets unusually cheaply. In Haifa, for example, gypsum from Cyprus is cheaper than the home-produced article, and Cypriot wine can undersell that of France. In the past, access by sea was something of a disadvantage, as pirates abounded, particularly off the coast of Asia Minor. Hence many villages are not placed on the sea-coast, as would be expected, but lie some distance inland, on defensible sites in hills. One result of this is that the fishing industry, though active, is less developed than might be expected in an island.

The economy of Cyprus is based on its unusually diversified agricultural industry. The main activity is the cultivation of grain cereals in the fertile central plain. A variety of other crops, potatoes, grapes, cotton, fruit, olives, almonds, harvest beans, carobs, citrus and tobacco are also produced.

One problem in Cyprus concerns the relationship between animal herding (chiefly of goats) and cultivation. The goats were held to be in large part responsible for severe agricultural losses, progressive deforestation, and soil erosion, since the animals grazed widely over forest and semi-cultivated land, and their omnivorous appetites destroyed growing vegetation. A scheme designed to reduce grazing by goats and to provide an alternative livelihood for their herdsmen in forest preservation and in re-afforestation, is now being implemented.

The mining of cupreous and iron pyrites, asbestos and chromite has been developed and its increasing importance to the economy of Cyprus is apparent from the fact that the value of mineral products exported in 1954 amounted to £9,575,621, representing 59 per cent of the total value of all exports in the Colony; comparative figures for 1953 were £7,783,515 and 50 per cent. There are also several tobacco, soap and footwear factories, and a newly established cement industry. Cyprus exports mainly to Germany, the United Kingdom and the U.S.A.; and imports wheat, machinery, woollen and cotton pieces goods from the United Kingdom, Australia, Italy and the U.S.A.

During the first half century of British administration, the population of Cyprus almost doubled, revenue was

THE BRITISH COMMONWEALTH

increased, a stable currency established, and imports and exports increased in value six-fold; the production of cereals trebled, the mining industry developed and measures of re-afforestation, water conservation and irrigation undertaken. The Cyprus Ten Year (1946-56) Development programme entails expenditure of nearly £7½ million of which nearly £2 million will come from the U.K. Colonial Development and Welfare Funds. It is being applied mainly to the improvement of agriculture, communications and industry.

W.B.F.

HISTORY

The island of Cyprus occupies an important position in the Eastern Mediterranean. It lies 240 miles north of Egypt, 60 miles west of Syria and 40 miles south of Turkey. In 1954, the total civilian population was estimated at over 517,000 of which about 80 per cent are Greek speaking, though the island has never formed part of a Greek Kingdom. There were, in ancient times, several Greek settlements in Cyprus as well as settlements from other areas. The Greek-speaking Cypriots belong mainly to the Autocephalous Church of Cyprus, an independent branch of the Eastern Orthodox Church. About 18 per cent of the present population are Muslims of Turkish origin, and the remaining 2 per cent include Armenians and Maronites.

In its early history, Cyprus was conquered in turn by the Egyptians, Assyrians, Persians, Romans and Arabs, and by the Byzantine Empire, whence it received its religion. Richard Cœur de Lion took possession of Cyprus in 1191 and then turned it over to the Knights Templars in return for contributions to the Crusades. The Templars, unable to control the island, returned it to Richard. He then gave it to Guy de Lusignan, who had been driven from his Kingdom of Jerusalem by Saladin. The Lusignan dynasty ruled Cyprus for three centuries, receiving the support, from time to time, of the fleets of European rulers. In 1489, the widowed queen of Cyprus, a Venetian, confided the island to Venice, to receive in return the protection against the advance of the Turks of the most powerful maritime force then existing in the Mediterranean. Under the Venetians, Cyprus enjoyed great commercial prosperity, but by the sixteenth century the power of Venice had greatly declined and in 1570 Cyprus was taken by a Turkish fleet. Ottoman rule continued for three centuries during which the population and prosperity of the island diminished, until it held an almost entirely agricultural community of about 180,000. As the power of the Ottoman Empire itself declined, during the nineteenth century, the expansionist policy of Russia in the Near East became more evident, particularly during the Greek war of Independence, the Mehemet Ali crisis of 1833, during the Crimean war, and again during the Russo-Turkish war of 1877-78. The Treaty of San Stefano, at the end of that war, which gave Russia considerable power in the Balkans, was rejected by the Great Powers, and a different settlement for the Near East was eventually negotiated at the Congress of Berlin in 1878. But the Sultan had meanwhile concluded a defensive alliance with Britain, on 4th June 1878, and by the "Convention of Defensive Alliance between Great Britain and Turkey with respect to the Asiatic provinces of Turkey" which is better known as the "Cyprus Convention", Britain was to occupy and administer Cyprus and from it to defend the Sultan if Russia retained possession of Batum, Ardahan and Kars, and if at any time the Ottoman Asiatic possessions were threatened. The Sultan retained sovereignty of Cyprus and was to receive a money payment for the lease. The British administration of

Cyprus continued on this basis for 46 years. At the outbreak of war in 1914, the Sultan joined the Central Powers. According to international law, the outbreak of hostilities between two powers terminates any bilateral agreement which they may have signed. Britain was thus left in friendly occupation of the territory of an enemy country; and the juridical anomaly was resolved by the annexation of Cyprus by Order in Council of November 5th, 1914. In the following year, Britain offered Cyprus to Greece on condition that Greece gave Serbia her immediate and complete military support. The Greek Government rejected the proposal and the offer lapsed. The British annexation of Cyprus was confirmed by the Treaty of Lausanne which came into force on August 6th, 1924, and was specifically recognised by Turkey under Article 20 of the Treaty.

Until 1880, when it was transferred to the Colonial Office, Cyprus was administered by the Foreign Office under the Foreign Jurisdiction Act, and until 1882, authority was vested in a High Commissioner assisted by an Executive Council and a nominated Legislative Council. In 1882, the dependency was granted a partly elected Legislative Council; 12 elected members were to sit with 6 official members; 3 of the elected were to be voted by the Muslim inhabitants and 9 by the non-Muslim. The Constitution was one of the early instances of communal representation in council as an alternative to representation of territorial constituencies. By Letters Patent of March 10th, 1925, the island was constituted a Crown Colony: its High Commissioner was appointed Governor; the Executive Council was increased to 7 nominated members, and the Legislative Council was increased to 24 members, 9 official and 15 elected. Twelve of the elected were to be chosen by the non-Muslim electorate, and 3 by the Muslim.

Under British administration, the prosperity of Cyprus was renewed, but the Cypriots remained politically dissatisfied. Long before 1878, the Ethnarchy, or Church Leadership, had led the movement for liberation from Turkish rule, and when an independent Greek Kingdom was established in 1830-32, the movement became identified with the idea of union with Greece. *Enosis* gathered power during the last quarter of the nineteenth century. Cypriots had expected the same policy to be applied to their island as had been adopted towards the Ionian Islands, which had been placed under British protection in 1815 and ceded to Greece in 1864. Resentment in Cyprus deepened when Britain continued to levy the annual tribute, which was applied to the reduction of a Turkish debt to Britain, after the grant of Crown Colony status and until 1927. In the main, the *Enosis* movement, though violent in its language, pursued a peaceful policy until 1931 when the activities of the leaders of the Ethnarchy led to violence. Riots broke out, property was destroyed and some lives were lost. Following the disturbances, two bishops and eight other Cypriots were exiled, and the Legislative Council, with its elected majority, had to be suspended. Authority was reinvested solely in the Governor and restrictions were imposed on the right of assembly and on the freedom of the press. The tension eased slowly and in 1933 a nominated advisory council of 4 official and 10 non-official members was appointed. The antipathy towards Britain lessened with the aggressions of Mussolini and the growth of Cypriot reliance on British protection. In 1936, the restrictive laws which had been imposed were relaxed but legislation continued to be promulgated by the Governor alone, although plans were maturing for the re-establishment of a representative council. During the second World War, the organisation of political parties was permitted and municipal elections were held. The most powerful party and the one most successful at the 1946 municipal elections was the communist AKEL. It

supports Enosis, having repudiated its original policy of independence for Cyprus. But the Greek Orthodox Ethnarchy remains in control of the movement, and it is the personality of Archbishop Makarios, the elected head of the Ethnarchic Council, which gives it inspired leadership.

In October 1946, the Colonial Secretary suggested that steps should be taken for the greater participation of Cypriots in the internal government of their island: a consultative assembly was to be called to discuss and recommend a new constitution. This assembly was convoked by the Chief Justice of Cyprus in 1947 and although originally planned to consist of 40 nominated representatives of all groups in the island, the right-wing Enosists refused the invitation to participate, and it met eventually as a body of 18 members, (8 left-wing Greek, 6 Turkish and 4 other Cypriots). A demand for full responsible government was immediately presented by the Greek representatives and forwarded as a memorandum to the Secretary of State. The Minister in reply, in May 1948, offered the Cypriots a legislative assembly of 26 members, 4 of whom were to be officials and 22 elected—18 in the general electoral register and 4 in the Turkish communal register. The only subject excluded from discussion by the legislature would be the status of Cyprus within the British Commonwealth. The Governor's consent would be required for the introduction of money bills, and bills affecting defence, external affairs, the special interests of minorities or any bill amending the Constitution. It was also proposed that 3 Greek members of the legislature, and 1 Turkish, should sit with 4 official members in the Executive Council to discuss the formulation of policy. Since their request for responsible government had been rejected, the Greeks refused to discuss the alternative proposal and left the consultative assembly. The remaining members accepted the proposal by 11 votes to 7; but this was considered unrepresentative and, although the proposal remained open, the assembly was dissolved. Throughout the discussions on constitutional affairs in 1947-48 as well as in 1954, when Lord Munster re-affirmed the constitutional proposals of 1948, it was clear that the United Kingdom did not contemplate any change in the island's sovereignty: the reasons given were strategic—that without Cyprus, the United Kingdom would be unable to carry out her military obligations in Europe, the Mediterranean and the Middle East.

Cyprus is not an ideal base, particularly to-day, while its people remain politically restless. It is dependent for its supplies on imports, and Famagusta, though a fair harbour, has certain disadvantages. During the first World War, it proved to be of no great strategical importance, in the second World War, however, it regained significance when the Germans in 1941 thrust across the Mediterranean to Crete and when Rommel, in 1942, threatened Alexandria. With the withdrawal of British troops from the Suez Canal Zone in 1954, Cyprus has become the focus of further strategic attention, as an alternative Middle East headquarters. On this point, the Enosists have offered a compromise: if union with Greece were granted, the United Kingdom might retain military bases on the island. But British policy must take into account the attitude of Turkey, to whom she is allied in the North Atlantic Treaty Organisation, and Turkey is opposed to the cession of Cyprus because she regards its defence as vital to Turkish security; and there is concern for the Turkish minority on the island.

In August 1954, the Greek representative at the United Nations presented a formal request to the U.N. Secretary General for the inclusion of the Cyprus question on the Agenda of the U.N. General Assembly which was to meet for its ninth session in September 1954. In December, the U.N. General Assembly's First (Political) Committee

adopted a New Zealand resolution that it did not for the time being appear appropriate to adopt a resolution on the question of Cyprus. The U.K. delegate, while supporting the resolution, stated that his action did not imply acceptance of the General Assembly's competence in the matter. Her Majesty's Government maintain that the status of Cyprus is covered by Article 2 (7) of the Charter which states that the United Nations have no powers to discuss a question which lies entirely within the domestic jurisdiction of a member government. Greece planned a second appeal to the United Nations in the summer of 1955, and meanwhile, agreed to attend a conference on defence in the Middle East, including Cyprus, together with Turkish and British representatives.

The conference met in London in September 1955, and the United Kingdom again put forward proposals for the constitutional development of Cyprus which in her view would give the island the fullest measure of internal self-government compatible with the strategic requirements of the international situation. The constitution would provide for an Assembly with an elected majority, a proportionate quota of seats being reserved for the Turkish community. All departments of the Cyprus Government would be progressively transferred to Cypriot Ministers responsible to the Assembly, except those concerned with foreign affairs, defence and public security which would be reserved to the Governor. A proportion of ministerial portfolios would be reserved for the representatives of the Turkish community. A Cypriot Chief Minister to head the new Cypriot Administration would be chosen by the Assembly with the approval of the Governor. The Greek delegation was unable to accept the proposals and re-affirmed the policy of self-determination for Cyprus. The Turkish Foreign Minister, on the other hand, re-emphasised the security aspect of Turkey's interest in Cyprus and pointed out that a change in the status of Cyprus would be a modification of both the Treaty of Lausanne and of the system of security established under it. The conference ended in deadlock, in a serious deterioration in the relations between Greece and Turkey and in the consequent weakening of N.A.T.O.'s position in the Eastern Mediterranean.

On September 21st, 1955, the U.K. won a moral victory in the Steering Committee of the U.N. General Assembly when it decided, by 7 votes to 4 (with 4 abstentions) not to recommend the Assembly to consider the Cyprus question. This second appeal to the United Nations contrasted with the first, when the Steering Committee agreed by 9 votes to 3 to include Cyprus on the Assembly's agenda; undoubtedly, the changed policy of the U.S.A., who abstained in the voting on the first appeal, was of great importance. In 1955, the United Kingdom was supported by the U.S.A., and by Norway, France, New Zealand, Luxembourg and Chile; Russia, Poland, Mexico and Egypt voted for the inclusion of Cyprus on the Agenda; China, Siam, Ethiopia and Haiti abstained.

The breakdown of the London conference was followed by a wave of terrorist activities in Cyprus. There was evidence that Archbishop Makarios had enlisted the support of the Communists, particularly of the Communist mayors of Famagusta and Larnaca, in connection with the calling of a general strike on September 29th. The Communists are following an opportunist policy, outwardly supporting *Enosis*, for they would gain no public support otherwise, but in the knowledge that the success of *Enosis* would bring them under the authority of a government which has already outlawed Communism in Greece. To maintain order, British Commandos from Malta and reinforcements from the United Kingdom were sent to Cyprus. In October Field-Marshal Sir John Harding was appointed Governor and Commander-in-Chief, in succession to Sir

THE BRITISH COMMONWEALTH

Robert Armitage. Sir John Harding stated that his first aim was to restore law and order, his second to improve the economic and social conditions of Cyprus, and his third to prepare the way for constitutional reforms. Four hours after his arrival in Nicosia on October 3rd, 1955, he communicated with Archbishop Makarios and arranged to meet him for discussions. Negotiations continued throughout the winter of 1955-56 and early in 1956, when the Secretary of State for the Colonies joined in the discussions it looked as though it might be possible to reach agreement. But the negotiations broke down; and on March 9th the United Kingdom Government announced that Archbishop Makarios had been deported to the Seychelles, on the grounds that

he was too much identified with the terrorism in the island and that his removal was necessary in the interests of law and order.

H.L.

STATISTICAL SURVEY AREA AND POPULATION

The area of Cyprus is 3,572 sq. miles, of which approximately 2,300 sq. miles are cultivable land. The civilian population at the end of 1954 was 517,000, representing a density of 145 per sq. mile.

BIRTH, DEATH AND INFANT MORTALITY RATES

	BIRTH RATE (per thousand of mean population)	DEATH RATE (per thousand of mean population)	INFANT MORTALITY RATE (per thousand live-births)
1950	30.0	8.2	63.4
1951	29.3	8.4	60.5
1952	26.8	7.6	58.8
1953	26.6	7.0	47.1
1954	27.0	7.2	52.2

EMPLOYMENT

The mid-1954 potential working population was 303,000, of which 260,000 were gainfully employed. Approximately 143,000 were engaged in agriculture, 47,000 in manufacturing and professional services, 25,000 in the distributive trades and 14,000 in public administration.

THE CONSTITUTION

The island of Cyprus is administered under the Letters Patent of November 12th, 1931, in which it is stated that legislative authority, subject to the power of the British Government to disallow local legislation or to legislate for the Colony by Order-in-Council, is entrusted to the Governor. The Governor is President of the Executive Council, whose function is to advise him on new legislation, on the exercise of the power reposed in him, and on major policy.

For administrative purposes the island is divided into six districts, Nicosia, Larnaca, Limassol, Famagusta, Paphos and Kyrenia. The Government is represented by a Commissioner in each of these districts except Kyrenia, which comes under the supervision of the Commissioner for Nicosia.

Village affairs are managed by Village Commissions appointed by the Governor: each one consists of a headman and four elders. For the six big towns and for ten of the most important villages there are Municipal Corporations; each has a Municipal Council composed of a Mayor with 6 to 12 Councillors elected by a general vote of the male population over the age of 21. In addition each District has a District Council with the Commissioner of the District as Chairman. These Councils are advisory bodies consulted by the Commissioners on questions affecting the rural population.

THE GOVERNMENT

The Governor and Commander-in-Chief: Field-Marshal
SIR JOHN HARDING, G.C.B., C.B.E., D.S.O., M.C.

EXECUTIVE COUNCIL

The GOVERNOR (President).

The DEPUTY GOVERNOR

The ADMINISTRATIVE SECRETARY

ATTORNEY GENERAL.

FINANCIAL SECRETARY.

MEHMED SOUBHI KIAMIL KANAAN BEY.

JOHN CLERIDES, C.B.E., Q.C.

COMMISSIONERS

Nicosia and Kyrenia: W. F. M. CLEMENS, M.C.

Larnaca: I. M. G. WILLIAMS, O.B.E.

Limassol: R. C. ROSS-CLUNIS.

Famagusta: B. J. WESTON.

Paphos: O. F. MUFTIZADE, M.B.E.

CIVIL ESTABLISHMENT

Deputy Governor: G. E. SINCLAIR, O.B.E.

Administrative Secretary: J. W. SYKES, C.V.O.

Attorney General: CRITON TORNARITIS, Q.C.

Financial Secretary: A. F. BATES.

Director of Agriculture: W. ALLAN, C.B.E.

Director of Audit: W. J. D. COOPER

Commissioner for Co-operative Development: W. G.
ALEXANDER, M.B.E.

Director of Education: G. F. SLEIGHT, O.B.E.

Director of Information Services: L. G. DURRELL.

Commissioner of Labour (vacant)

Director of Medical Services: W. W. DILL-RISSELL.

Commissioner of Police: G. H. ROBINS, M.B.E.

Director of Public Works: D. McVEAN.

Director of Welfare Services: W. CLIFFORD

POLITICAL PARTIES

Even before the administration of Cyprus by Great Britain resulting from the Anglo-Turkish Convention of 1878, the demand for union with Greece was strongly favoured by the Greek inhabitants of the island. *Enosis*, meaning union with Greece, is considered by the various Cypriot political parties as their main aim, and the desire for union with Greece provides the common link between the Left, represented by the Communists and the Right, led by the Church. The Ethnarchic Council claims to be the authentic and sole representative of the people, but there is a staunchly pro-British Turkish community, numbering 90,000 people.

THE LEFT WING

National Liberation Front: This is the co-ordinating body of the Left-Wing parties and claims a total membership of 30,000, it comprises

The Reform Party of the Working People (AKEL).

Pancyprian Labour Federation (PEO).

Small Shopkeepers' Federation (PEM).

Youth Organisation (AON).

Farmers' Union (EAK).

THE RIGHT WING

The Right-wing nationalists are organised under the **Ethnarchy** (the Cyprus Holy Synod), at the head of which is Archbishop MAKARIOS, who was elected to the throne by the Right-wing vote. In the Right-wing camp are:

The Cyprus Confederation of Workers (New Trade Unions, (SEK).
Cyprus National Party (KEK).
Pancyprian Agrarian Union (PEK).

There are also several young men's and women's unions, graduates' associations, etc.

THE TURKS

The Turks (numbering 90,000) continue to rely on British rule in Cyprus to protect their minority rights and foresee in *Enosis* the complete loss of these safeguards.

Turkish Minority Defence Organisation (KATAK).

THE LEGAL SYSTEM

Law and justice throughout the Island of Cyprus are administered by the Courts of Justice Laws, 1953.

Supreme Court. This Court consists of a Chief Justice and two or more puisne judges, with appellate jurisdiction, civil and criminal, over the decisions of all other courts, and original jurisdiction (a) as a Colonial Court of Admiralty under the Imperial Act of 1890, (b) in matrimonial causes, and (c) to issue prerogative orders and exercise the powers of the High Court of Justice of England. On hearing appeals the court is composed of two or three judges, or as the Chief Justice may determine.

Assize Courts. There are six Assize Courts established in the island, with unlimited criminal jurisdiction and power to order compensation up to £500. These courts are composed of a judge of the Supreme Court, sitting with a President of a District Court and a District Judge, or with two District Judges. This bench of three is nominated by the Chief Justice whenever a sitting is to be held.

District Courts. There are six District Courts, consisting of a President and such District Judges and magistrates as the Chief Justice may direct, established in each of the six districts. The District Courts exercise original civil, and criminal jurisdiction, the extent of which depends on the bench constituting the court.

In civil matters a President and one or two District Judges sitting together have unlimited jurisdiction. A President or a District Judge, sitting alone, has jurisdiction up to £200, and a Magistrate up to £50. The limit of jurisdiction of any President sitting alone may be increased to £500, and of any Magistrate to £100 by order of the Governor. Any member of the court can, even in an action beyond his jurisdiction, settle issues or make an order without disposing of the action on its merits, or give judgment when the defendant fails to appear or admits the claim. The decisions of Magistrates are subject to appeal to the President of the District Court.

In criminal matters, the jurisdiction of a District Court is exercised by its members sitting singly, and is of a summary character. A President has power to try any offence punishable with imprisonment up to three years, or with fines up to £500, or with both, and may order compensation up to £300; a District Judge has power to try offences punishable with imprisonment up to one year, or with fines up to £200, or with both; and a Magistrate has power to try offences punishable with imprisonment up to six months, or with fines up to £50, or both, and may order compensation up to £50.

Subject to these limits of punishment, which the members of the court cannot exceed, a President, a District Judge or a Magistrate may also try any offence punishable with imprisonment, or fine exceeding his jurisdiction if the Attorney-General, and the person accused, consent. In

addition, members of a District Court have power to hold a preliminary inquiry into an offence not summarily triable, and to commit the accused person for trial by an Assize Court.

The jurisdiction above described may be exercised over Cypriots and non-Cypriots, but the law states that it does not confer any jurisdiction upon the courts it establishes to hear any matrimonial cause where either party is a member of the Greek Orthodox Church, and the marriage was celebrated in accordance with its rites, or where either party is a member of the Moslem faith, and the marriage was contracted in accordance with the Moslem Sacred Law or to hear any other matter which, under the principles of the Ottoman Law previously enforced in the colony, was cognisable by an ecclesiastical tribunal, or which is within the jurisdiction of the Turkish Family Courts pursuant to any enactment in force for the time being.

The Law Courts apply the local laws, the Common Law and the rules of equity, and any statutes of the Imperial Parliament applicable to the colonies in general or to Cyprus in particular, unless modified by local law. The Family Law of the various religious communities, which had received legal recognition under the Turkish rule, is expressly preserved. There are two Turkish Family Courts—one for Nicosia, Kyrenia and Famagusta, and another for Limassol, Paphos and Larnaca. Their jurisdiction is over persons of the Moslem faith in matters of marriage, divorce, maintenance, registration of Vakfihs and administration of infants' estates.

Chief Justice of the Supreme Court: SIR ERIC HALLINAN.

Puisne Judges: C. N. ZANNETIDES, M. ZEKIA.

Presidents, District Courts: N. G. PIERIDES, V. R. DERVISH, G. S. VASSILIADIS, L. E. ZENON.

District Judges: G. J. THEOCHARIDES, V. DERVISH, A. S. STAVRINIDES, M. MICHAELIDES, D. D. KACATHIMIS, A. M. ATALIDES, N. K. PATTICHIS, CH. K. PIERIDES, J. P. JOSEPHIDES, S. EVANGELIDES, B. H. EKREM.

RELIGION

Of the inhabitants in Cyprus the Greeks (about 80 per cent) are members of the Orthodox Church of Cyprus, and the Turks (about 18 per cent) are members of the Islamic Faith. Other religious communities in Cyprus include Armenians, Roman Catholics, Maronites and members of the Church of England. The census of 1946 gave the following figures:

Greek Orthodox . . .	361,199
Muslim (Turkish) . . .	80,361
Armenian Apostolic . . .	3,686
Maronite . . .	2,083
Roman Catholic . . .	1,014
Church of England . . .	654
Others . . .	930
TOTAL . . .	449,927

The Orthodox Church of Cyprus: The Autocephalous Orthodox Church of Cyprus, a part of the Eastern Orthodox Church, enjoys the privilege of independence with the right to elect its own Archbishop.

Archbishop of Nova Justiniana and all Cyprus: Archbishop MAKARIOS.

Islam: Most of the adherents in Cyprus are Sunnis of the Hanafi Sect. The religious head of the Moslem community is the Mufti.

The Mufti of Cyprus: MUDERRIS DANA.

Armenian Apostolic Church: The majority of Armenians in Cyprus (approximately 4,000) are members of the Armenian Apostolic Church; the remainder (approximately 300) are Protestants.

Armenian Prelate: Bishop GHEVONT TCHEBEYAN.

Catholic Church: The Catholic Church in Cyprus is of the Maronite Rite. Cyprus forms a diocese with part of the Lebanon, where the Archbishop resides. The Latin Rite is also represented in Cyprus.

Representative of the Latin Rite: The Rev. Father CARMEL MERCIÉCA, O.F.M.

Head of the Maronite Rite in Cyprus: Rt. Rev. ELIA FARAH.

Church of England: Cyprus comes within the jurisdiction of the Archbishop of Jerusalem and the East.

Representative in Cyprus: The Rt. Rev. D. N. GOLDIE.

INSURANCE COMPANIES

Most of the large British Insurance Companies are represented in Cyprus.

TRADE AND INDUSTRY

CHAMBERS OF COMMERCE AND INDUSTRIAL ORGANISATIONS

Association of Cyprus Industries: P.O. Box 55, 232 Ledra Street, Nicosia, f. 1941; Chair. D. N. DIMITRIOU, O.B.E.; Vice-Chair. G. SCHIZA, J. E. POULIAS, O.B.E.; Sec. TH. TAVERNARIS.

Cyprus Chamber of Commerce: P.O. Box 55, 232 Ledra Street, Nicosia; f. 1927; Chair. J. M. SCHISA; Vice-Chair. E. PANTELIDES; Sec. TH. TAVERNARIS.

The Chamber has a branch in Limassol and corresponding secretaries in Famagusta, Larnaca and Paphos, who are authorised to issue certificates on behalf of the Chamber.

Cyprus Federation of Trade and Industry: 223 Ledra Street, Nicosia; P.O. Box 262; a Chamber of Commerce and a Federation of Industries; Chair. C. P. MANGLIS; Vice-Chair. PETER MANTOVANI, Sec. C. MONTIS; brs. at Nicosia, Limassol, Famagusta, Larnaca, Paphos; membership 592; publ. *Cyprus Trade Journal*.

ASSOCIATIONS OF EMPLOYERS

Cyprus Building Contractors' Association: Kykko Buildings, Ledra Street, Nicosia.

THE MIDDLE EAST

New Limassol Master Bakers' Association: 95 George VI Street, Limassol.

New Limassol Master Tailors' Association: 108 St. Andrew Street, Limassol.

Nicosia Master Tailors' Association: P.O. Box 183, 111 Tricouppi Street, Nicosia.

TRADE UNIONS

Cyprus Workers' Confederation (New Trade Unions). 124 Ledra Street, Nicosia; Gen. Sec. MICHAEL PISSAS; a nationalist dominated group, affiliated to the International Confederation of Free Trade Unions and to the Greek Confederation of Labour.

Pancyprian Federation of Labour: 23 Patriarchou Gregoriou Street, Nicosia; a Communist-dominated group, affiliated to the World Federation of Trade Unions.

There are in addition independent Trade Unions without any political orientations, unregistered Trade Unions whose membership is restricted to persons in the civil employment of the Crown, and the Turkish Trade Unions, few in number, whose membership is restricted to persons belonging to the Turkish community.

CO-OPERATIVE SOCIETIES

There are 759 co-operative societies in Cyprus, of which 475 are credit societies and savings banks. Total membership of the movement is just over 120,000. Credit societies are available to every farmer for short-term credit, supply of agricultural requirements and, in some cases, the pooling of produce for sale.

TRANSPORT

AIR LINES

Cyprus Airways: Head Office 18 Homer Street, Nicosia; f 1047; associated with BOAC and BEA, regular services throughout the Middle East, to Europe and the U.K.

Other airlines operating through Cyprus include the following:

Air Ceylon: Head Office 3 Lotus Road (P.O. Box 692), Fort, Colombo, 1, Ceylon.

Air France: Head Office 2 rue Marbeuf, Paris 8^e, France; Cyprus Office Amathus Navigation Co. Ltd., 19 Evagoras Avenue, Nicosia.

Air Jordan: Head Office P.O. Box 274, Amman, Jordan; Cyprus Office Amathus Navigation Co. Ltd., 19 Evagoras Avenue, Nicosia.

D.H.Y. (Devlet Hava Yolları—Turkish State Airlines): Head Office: Umum Muduru, Ankara, Turkey.

El Al (Israel Airlines): Head Office 31 Rothschild Boulevard, Tel-Aviv; Cyprus Office: Louis Tourist Agency, 155 Ledra Street, Nicosia.

CYPRUS

M.E.A. (Middle East Airlines): Head Office Parliament Square (P.O. Box 206), Beirut, Lebanon, Cyprus Office: Hull Blyth and Co. (Cyprus) Ltd., Metaxas Square, Nicosia.

Misrair, S.A.E. (Egyptian Air Lines): Head Office. Almaza Airport, Heliopolis, Cairo, Egypt; Cyprus Office: A. L. Mantovani and Sons, Larnaca.

S.A.S. (Scandinavian Airlines System): Head Office. Bromma Airport, Stockholm 40, Sweden; Cyprus Office Amathus Navigation Co. Ltd., 19 Evagoras Avenue, Nicosia.

Sabena (Société Anonyme Belge d'Exploitation de la Navigation Aérienne): Head Office. 13 rue Bréderode, Brussels, Belgium; Cyprus Office: Amathus Navigation Co. Ltd., 19 Evagoras Avenue, Nicosia.

Skyways Ltd.: Head Office: Berkeley Street, London, W.1; Cyprus Office 8 Heraclion Avenue, Nicosia.

T.A.E. (National Greek Airlines): Head Office 12 Merlin Street, Athens, Cyprus Office Amathus Navigation Co. Ltd., 19 Evagoras Avenue, Nicosia.

ROADS

The island has an admirable network of asphalt roads (739 miles), linking all important centres, as well as some 1,990 miles of gravel roads. Buses run from Nicosia to the main towns and most villages, and there are taxi services between the principal towns.

SHIPPING

Famagusta is the main port of the island and has a natural harbour. There is open-roadstead accommodation at Larnaca and Limassol. The harbours of Paphos and Kyrenia offer good anchorage to small vessels and fishing craft.

A number of British and foreign cargo vessels call regularly at Cyprus on voyages between Continental and Mediterranean ports. These include vessels of the Aktiebolaget Transmarin, Det Forenede Dampskibs-Selskab, Aktieselskab, Ellerman and Papayianou, Ellerman's Wilson, Furness Withy, General Steam Navigation, Golden Cross, John Bruce, Johnston Warren, Moss, Nordenfjeldske Steamship Services, Prince, Royal Netherlands Steamship Company, Svenska Orient Linien, Westcott and Laurance lines. Many of these have accommodation for a few passengers. Cargo and passenger vessels are run between Cyprus and neighbouring countries of France, Greece, Italy and Turkey by the Adriatica Società Anonima di Navigazione, Hellenic Mediterranean Lines, Ltd., Turkish State Lines, and the Cyprus Shipping Co. Ltd. Numerous other ships call at irregular intervals.

HEALTH

Although Cyprus is a sub-tropical region the pattern of disease is much more akin to that of north Europe. Bilharzia and hookworm, prevalent in certain of the neighbouring countries, do not exist on the island and since the anti-malaria campaign in 1949 no primary case of malaria has been reported.

General hospitals are maintained by the Government in all the principal towns, the Nicosia hospital, with 191 beds, being the specialist centre. New hospitals are under construction at Limassol, Famagusta and Paphos, with 80, 60 and 50 beds respectively. There are in addition two sanatoria, a mental hospital, a leper settlement and an isolation hospital. Thirteen small rural hospitals, maintained by local subscription and Government subsidy are

THE BRITISH COMMONWEALTH

situated at various village centres throughout the island. Infant welfare centres, organised either by voluntary associations, municipalities or the Government, function in all the principal towns and many of the larger villages.

EDUCATION

Education is not compulsory in Cyprus but over 90 per cent of the children of school age attend the elementary schools. Each section of the community has its own schools and instruction is given in the mother tongue. English is taught in the two top classes of the Greek and Turkish schools. In the year 1953-1954 there were 495 Greek schools with an enrolment of 56,860, 214 Turkish schools with an enrolment of 13,171, and 16 other schools with an enrolment of 1,509. The curriculum and administration of the elementary schools are controlled by the Government, and the cost of running them is shared between the Government and the Town School Committees and Village Commissions.

The most important group of secondary schools in Cyprus is made up of the Greek Classical Gymnasiums and the Turkish Orta Okuls and Lycée. The Gymnasiums are recognised by the Greek Government as being equivalent to Gymnasiums in Greece, and graduates from the sixth class are admitted to the University of Athens without further examination. The Orta Okuls and the Lycée follow courses approved by the Turkish Government, and graduates of the Lycée are admitted to certain institutions in Turkey (other than universities) without further examination.

There are in addition grant-aided and public-aided secondary schools, for which, in return for the money spent, the Government lays down certain conditions regarding fees and the terms of appointment offered to teachers.

Although only about a quarter of the children leaving elementary schools enter secondary schools, yet these are all overcrowded and in 1953 the number of pupils enrolled was four times as large as the enrolments in 1939.

In addition to the elementary and secondary schools there are certain other schools, run by the Government, which train boys of secondary school age in technical subjects. There is the Apprentices' Training Centre in Nicosia, which accepts boys from all communities for a five-year course in engineering, and a technical school at Lefka for Turkish pupils.

Facilities for post-secondary education in Cyprus are provided by the Teachers' Training College at Morphou and the Mistresses' Training Centre in Nicosia.

LEARNED SOCIETY

Etaireia Kypriakon Spoudon (*Society of Cyprus Studies*)

P.O. Box 34, Nicosia; f. 1936, aims: the collection, preservation and study of material concerning all

periods of the history, dialect and folklore of Cyprus, and the organisation of popular art there; the Society maintains a Museum of Cypriot Folk Art; Pres. Dr. K. SPYRIDAKIS; Vice-Pres. K. MYRIANTHOPOULLOS; Sec. and Librarian G. PAPACHARALAMBOUS; Treas. N. CLERIDES; 250 mems.; publ. *Kypriakai Spoudai* (Cyprus Studies) 1937.

LIBRARIES

Cyprus Public Library: Nicosia; f. 1926 as a private institution with a Government grant, reorganised 1938; now run by the Municipality; Librarian M. BISTIS.

Library of Phaneromeni: P.O. Box 237, Nicosia; f. 1934, 16,000 vols.; Librarian CONSTANTINE HADJIPSALTIS.

Library of the Archbishopric: P.O. Box 50, Nicosia; f. 1821; 5,000 vols.; Librarian The Rev. Deacon DOROTHEOS TOMAZOU.

Library of the Cyprus Museum: P.O. Box 448, Nicosia; f. 1883, incorporated in Dept. of Antiquities (Dir. A. H. S. MEGAW) 1934; 5,000 vols.; Librarian D. Y. DANIEL.

Library of the Pan-Cyprian Gymnasium: P.O. Box 34, Nicosia; f. 1927, 23,500 vols.; Librarians G. N. ROSSOS, H. ELIADON.

MUSEUM

Cyprus Museum, The: P.O. Box 448, Nicosia; f. 1883; inc. in Dept. of Antiquities 1934 (Dir. A. H. S. MEGAW); Curator P. DIKAIOS.

The Cyprus Museum displays (1) pottery from the Neolithic and Chalcolithic periods to the Roman Age, and a small collection of medieval pottery; (2) terracotta figures of the first millennium B.C.; (3) limestone and marble sculpture from the Archaic to the Roman Age; (4) jewellery from the Bronze Age, and especially the Mycenaean period (1400-1200 B.C.) to early Byzantine times, and coins from the sixth century to Roman times; (5) miscellaneous collections, including inscriptions (Phoenician, Cypriot and Greek), bronzes, glass, alabaster, bone, etc. An interesting feature is the room of reconstructed tombs. Extensive reserve collections are available for students. Medieval objects are temporarily housed in annexes.

An archaeological library is housed in the Cyprus Museum building and is open to students.

ADEN COLONY AND PROTECTORATE

GEOGRAPHY

ADEN consists of a Colony (75 sq. miles), and a Protectorate (113,000 sq. miles) together with the islands of Perim (5 sq. miles) Kamaran (22 sq. miles) Socotra (1,400 sq. miles) and the Kuria Muria group. Aden lies at the southern end of the Arabian peninsula, approximately between long. 43° and 56° E., with Perim Island a few miles due west, in the strait marking the southern extremity of the Red Sea; Kamaran Island some 200 miles north of Perim; Socotra and the Kuria Muria groups in the extreme east, the former at the entrance to the Gulf of Aden, the latter near the coast of Oman. Aden has land frontiers with the Yemen, Saudi Arabia, and Oman, but none of these frontiers is fully delimited, and actually in some instances a matter of dispute. Atlases still show considerable variation in the precise boundaries of all four territories, or sometimes do not indicate them at all. The Colony of Aden is the small district immediately adjacent to Aden port, near the entrance to the Red Sea: the Protectorate comprises an Eastern and a Western portion, in both of which are Arab Sultanates and Sheikhdoms protected and subsidised by the British Government.

Physically Aden Colony and Protectorate comprise the broken and dislocated southern edge of the great plateau of Arabia. This is an immense mass of ancient granites, once forming part of Africa, and covered in many places by shallow, generally horizontal layers of younger sedimentary rocks. The whole plateau has undergone downwarping in the east and elevation in the west, so that the highest land (over 10,000 ft.) occurs in the extreme west, near the Red Sea, with a gradual decline to the lowest parts (under 1,000 ft.) in the extreme east. The whole of the southern and western coasts of Aden were formed by a series of enormous fractures, which produced a flat but very narrow coastal plain, rising steeply to the hill country a short distance inland. Percolation of molten magma along the fracture-lines has given rise to a number of volcanic craters, now extinct, and one of these, partly eroded and occupied by the sea, forms the site of Aden port.

An important topographic feature is the Wadi Hadhramaut, an imposing valley running parallel to the coast at 100–150 miles distance inland. In its upper and middle parts, this valley is broad, and occupied by a seasonal torrent: in its lower (eastern) part it narrows considerably, making a sudden turn south-eastwards and reaching the sea. This lower part is largely uninhabited, but the upper parts, where alluvial soil and intermittent flood water are available, are occupied by a farming population.

The details of climate in Aden are simple to state, but extremely difficult to explain. Rainfall is everywhere scanty, but relatively more abundant on the highlands and in the west. Thus Aden town itself has 5 in. of rain annually, entirely in winter (December–March), whilst in the lowlands of the extreme east, it may rain only once in five or ten years. In the highlands a few miles north of Aden town, falls of up to 30 in. occur, for the most part during summer, and this rainfall also gradually declines eastwards, giving 15–20 in. in the highlands of Dhofar. Ultimately, to the north and east, rainfall diminishes to almost nil, as the edges of the Arabian Desert are reached. Why the coast should have most rain in winter, and the hills, a few miles away a maximum in summer has not been fully elucidated—there are theories (and no more) to

explain this anomaly, but they are too involved to discuss in the space here. Temperatures are everywhere high, particularly on the coastal plain, which has a southern aspect: mean figures of 76° F. (Jan.) to 89° (June) occur at Aden town, but maxima of over 100° are common.

Except on the higher parts, which have a light covering of thorn scrub (including dwarf trees which exude a sap from which incense and myrrh are derived), and the restricted patches of cultivated land, the territory of Aden is devoid of vegetation. Cultivation is limited to small level patches of good soil on flat terraces alongside the river beds, on the floor and sides of the Wadi Hadhramaut, or where irrigation from wells and cisterns can be practised. The most productive areas are Lahej, close to Aden town; two districts near Mukalla, (about 300 miles east of Aden) and parts of the middle Hadhramaut. Irrigation from cisterns hollowed out of the rock has long been practised, and Aden town has a famous system of this kind, dating back many centuries.

In itself this largely barren land has little to commend it, and could support relatively few inhabitants; it is due both to the ingenuity of its people and to the development schemes now in progress that the difficulties of the environment do not seriously impede its economic prosperity.

W.B.F.

HISTORICAL-ECONOMIC SURVEY

ADEN COLONY

Aden possesses the only good harbour on the main ocean trade route between Egypt and India. Its importance as a commercial entrepôt, serving Europe via the Red Sea, declined in the fifteenth century with the discovery of the Cape route to the east, but with the Napoleonic campaign in Egypt in 1798, Aden assumed strategic importance in Britain's plan of containment. In 1799 Britain occupied the island of Perim. Shortage of water compelled a withdrawal to the mainland where friendly relations were established with the Sultan of Lahej with whom later in 1802 a commercial treaty was concluded. However, the need to possess a base in these waters under the British flag doubled with the coming of the steamship. Negotiations began for the purchase of the island of Socotra, which in 1834 was temporarily occupied by the East India Company, they might have succeeded had not the relations with the Sultan suddenly deteriorated in 1837 following the plunder near Aden of a wrecked Indian vessel flying the British flag. The incident was followed by the despatch by the East India Company of a British force from Bombay, under the command of Captain Haines of the Indian navy, which, on January 16th, 1839, captured Aden. By the peace treaty, the Sultan was guaranteed an annual sum of 6,000 dollars and Aden became part of the British Empire, administered by the government of Bombay. The Sultan did not finally abandon his efforts to regain Aden until 1857 when permanent peace was established with Britain. Perim Island was ceded in the same year. The Kuria Muria Islands had already been acquired in 1854 from the Sultan of Oman. With the opening of the Suez Canal and the revival of the Red Sea route, Aden, which had been a free port since 1853, increased in importance.

THE BRITISH COMMONWEALTH

In the twentieth century with the partial replacement of coal by oil, Aden, closely linked to the Persian Gulf area may enhance its historic position as a fuelling station by serving the two great airfields as well as the harbour. Aden's strategic value is also based on plentiful supplies of fresh drinking water from the artesian wells at Shaikh Othman ten miles inland, territory which was purchased in 1882. It is, moreover, the main distributing centre of local trade.

In 1932, the administration of Aden passed to the Governor-General of India in Council; in April 1937, it was invested in a separately appointed governor, who was also commander-in-chief, and who was assisted by an Executive Council. Crown Colony status had in fact been granted two years previously by the Government of India Act 1935. A Legislative Council for Aden, granted in 1944, was inaugurated in 1947. It is composed, under the presidency of the Governor of 4 *ex-officio*, 4 official and 8 nominated unofficial members. The Governor of Aden also administers Perim and the Kuria Muria Islands, and, since 1949, the Island of Kamaran in the Red Sea, which was taken from Turkey in 1915 and its position left undefined by the treaty of Lausanne in 1923. The detribalised Arabs of Aden Colony have accepted British administration; those who wished have been free to return to their tribe in the interior. The elective principle was introduced in local government by the Townships Ordinance 1945 and the first elections were held in 1949.

In November 1952 work began on the construction of an oil refinery and port at an estimated cost of £50 million, for the Anglo-Iranian Oil Company. The oil refinery is designed for a through-put of 5 million tons of crude oil a year. Until it is in operation, crude oil from the Persian Gulf is carried to the U.K. for refinery, then the required oil shipped back the 4,000 miles to Aden to fill bunkers. The oil port is planned to accommodate four 32,000 ton tankers at a time. For the construction work the contractors have employed 2,500 British, American and European technicians and 10,000 Arabs and Indians. In the construction, 110,000 tons of steel have been used, 1.5 million tons of rock quarried, 2 million cubic yards of earth moved and some 6 million cubic yards of sand pumped ashore to reclaim 200 acres of land. The products of the refinery will include bunker oil for ships of which some 4,500 call at Aden every year. The bunkering installation at Aden harbour will be supplied by 2 pipelines conveying over 2 million tons of bunker oil a year. Petrol, kerosene and diesel oil are also being produced for the markets of the Red Sea and Indian Ocean. Over 100 tanks are being constructed, some holding 7 million gallons of crude oil. About one and three-quarter million gallons of refined oil a day will be applied to industrial and municipal use. It is expected that a permanent personnel of 250 British and 1,500 Arab and Indian employees will be required, and housing estates are being built to accommodate them.

There is no agriculture in the colony, the only local products are salt, and dried and salted fish. Aden is an important entrepôt of trade. skins, hide, coffee, cotton, piece goods, cotton yarns, dates, grain, pulse and flour, sugar, tea, spices, tobacco and gum are the cargos in transit. Small factories produce soap, soft drinks, aluminium household equipments, cigarettes and printed cloth for local demand. The main occupation of the people is at the port. The population of Aden Colony (area 75 sq. miles), which in 1839 was 500, numbered 130,000 in 1952, of which about 58,000 were Arabs and 10,000 Indians, 4,000 Somalis, 700 Jews and 366 Europeans. Under the Colonial Development and Welfare Act, the Colony was granted £300,000 which is being applied to housing (there are 250,000 squatters huts in this colony), the development of civil aviation facilities and a new hospital.

ADEN PROTECTORATE

Behind Aden and stretching some 600 miles along the coast, are the territories of 23 Arab States, whose rulers, between 1882-1914, entered into protective treaty relations with the British government and acknowledged the authority of the Governor of Aden as Governor of the Protectorate. Many of the States have since entered into closer treaty relations, and, while retaining independent control in the internal affairs of their respective territories, the rulers accepted the advice on administration offered by British Agents and Political Officers appointed by the Governor. Britain guarantees protection to the States and they agree not to cede territory to foreign powers.

The Eastern Protectorate comprises the Hadhramaut (consisting of the Qu'aiti State of Shihr and Makalla, and the Kathiri State of Sai'un), the Mahra Sultanate of the Qishn and Socotra, the Wahidi Sultanates of Belhaf and the Bir'Ali, and the Sheikhdoms of Irqa and Haura. In 1954 the total population of the area was estimated at 350,000. The Qu'aiti Sultan first concluded a protectorate treaty with Britain in 1888. In 1918 following an agreement between the Qu'aiti and the Kathiri Sultans, the latter accepted the protectorate treaty as extending to his State. Both Sultans agreed by further treaties, signed in 1937 and 1939, to accept the advice of a British Agent in all matters except those concerning the religion and custom of Islam. The British Agent for the Eastern Protectorate is stationed at Makalla in the territory of the premier chief, the Qu'aiti Sultan of Shihr and Makalla. Both he and the Kathiri Sultan are constitutional rulers, the former being assisted by a state council. Close co-operation exists between the two states in constitutional and in economic matters.

In 1949 an advisory treaty was concluded with the Wahidi Sultan of Belhaf. The Mahra Sultan of Qishn and Socotra signed a treaty of protection with Britain in 1866 and by it the Island of Socotra and the Abd Alkuri and Brothers Islands came within the protectorate.

The Western Protectorate comprises 18 states, whose population in 1954 was estimated at 450,000. Five of the States, in 1944 and 1945, agreed by advisory treaties with Britain to accept the advice of the Governor of Aden on administrative affairs—the Fadhlī, the Lower 'Aulaqi and the Lower Yaf'i Sultans, the Sherif of Beihan and the Emir of Dhala. In 1952 similar treaties were signed by the Upper 'Aulaqi Sheikh and the Audhali Sultan; and a joint advisory and protectorate treaty was accepted by the newly elected Sultan of Lahej. The British Political Officers and the Arab Assistant Political Officers for the Western Protectorate are under the supervision of a British Agent whose headquarters are in Aden. The tribes of the Protectorate nominate their chiefs who subsequently have to receive recognition from the Governor of Aden.

In January 1954, the Governor convened a meeting of the rulers of the Western Protectorate and proposed a federation of their States. The plan was accepted in principle, though some rulers feared colonisation. The proposal was that two federations should be formed, one for the Eastern and one for the Western protectorate. A High Commissioner exercising the powers now held by the Governor would be at the head of each federation. A council of rulers of the States which had joined the federation would be formed and an executive council and a legislative council. The federal administration would deal with education, public health, communications, customs and postal services. All other matters would continue to be dealt with, as at present, either by the State rulers or by the High Commissioners. The proposal was intended as a framework for discussion with the rulers and if agreement is reached, recommendations will be submitted to the Secretary of State. But Britain has no intention of

THE MIDDLE EAST

forcing federation. British interests in this area of South Arabia are almost exclusively concerned with the security of Aden and the maintenance of the friendship of the Arabs of the region.

The British Government has done a great deal to help the people of the Protectorate. Some 1,400 tribes of the ancient country of the Hadhramaut were persuaded in 1937 to make peace after centuries of war. Since then, the economic development of the territory has rapidly progressed. The Western Protectorate has maritime plains and a high plateau broken by mountains, ravines and valleys; some of the valleys are very fertile. The greater part of the Eastern Protectorate is desert and barren mountain, but again, there are some fertile valleys. The total area, including the island of Socotra, is 112,000 sq. miles; the total estimated population in 1954 was 800,000. An allocation of £500,000 has been provided from the Colonial Development and Welfare Funds for the Protectorate. The major project under development is the Abyan Scheme of irrigation and land utilisation in the Western Protectorate; 50,000 acres of land have been irrigated and by 1953-5 some 22,000 acres were under cotton. The scheme is administered by the Abyan Board, a partnership between states, Government and tenant farmers. Other developments schemes are for communications, social services and surveys. In the Hadhramaut, under a loan scheme financed by the Governments of Qu'aiti and Kathiri states, 500 diesel pumps have been sold to the farmers during the last five years. They are to draw water from the wells in the territory, a task which for centuries had been carried out by camel and donkey. Sorghum and bulrush millet are two of the most important crops grown in the Protectorate, and wheat, barley and dates are also cultivated. It exports coffee, skins, hides, lime, Hamami tobacco, cattle, ghee, sheep, goats, fish and cotton; and imports grain, flour, rice, dates, sugar, sesame oil, tea, kerosene, spice, cotton cloth and piece goods, tobacco, cigarettes, soap and glassware.

The total revenue of the Protectorate for the period April 1954 to March 1955 is estimated at £17,422; the total expenditure will amount to £573,180; the balance will be met by U.K. grants and the contribution from the Colonial Development and Welfare Fund. In addition, the U.K. will meet the cost of defence, including the R.A.F. and Aden Protectorate levy establishments. Besides the security forces maintained by the U.K. Government there are tribal guards in the Western Protectorate partially supported by the States, and the Makalla Regular army maintained by the Qu'aiti state.

Relations between the Protectorate and the neighbouring State of the Yemen have usually been delicate. Frequent encroachments led to the demarcation of frontiers which were accepted in a convention signed with the Ottoman government in March 1914. During the first World War, the Turkish troops from Yemen occupied the greater part of the Protectorate, and though in 1919 most of the chiefs resumed their treaty relations with Britain, the Imam of Sanaa, who exercises the principal religious authority in Yemen and is the most powerful of the Chieftains, maintained his claim to the entire territories. He sought to enforce it by occupying the Amiri district including the Radhfan tribes and parts of Hanshab, Subeihi and Upper Yafa'i territory, and the Audhali plateau. He also occupied territory not then within the Protectorate, the district of the Beidha Sultan. Britain continually repelled the Imam's advance and in 1928 he was compelled to withdraw from most of the Amiri territory. The Anglo-Yemenite treaty of peace and friendship was signed in February 1934, and was to be valid for 40 years; the two powers agreed to respect the *status quo*, and to negotiate for the classification of frontiers: Britain

ADEN COLONY AND PROTECTORATE

recognised the independence of the Yemen and the Imam agreed to evacuate the remainder of the Amiri district. In 1950 they agreed further to set up a frontier commission and to exchange diplomatic missions. Despite the treaties and exchange of notes the possibility of frontier friction remains.

H.L.

STATISTICAL SURVEY

AREA AND POPULATION

The area of Aden Colony is 75 square miles (exclusive of Perim and the Kuria Muria Islands) and the estimated population in 1954 was 150,000. Aden Protectorate is approximately 112,000 square miles (including Socotra) and it is divided into Western and Eastern Areas, the populations of these are estimated at 450,000 and 350,000 respectively.

LABOUR

The principal occupations in the Colony are those connected with the port and with the oil refinery. In the Protectorate over 90 per cent of the population are engaged in agriculture.

Annual Report for 1954, Department of Agriculture,
Aden Protectorate.

Trade Bulletin, Colony of Aden (monthly).

Information transmitted by H.M. Government to the
United Nations, 1954.

THE CONSTITUTION

Under the provisions of the Government of India Act, 1935, the administrative control of the Aden Settlement was transferred from the Government of India to the Colonial Office on April 1st 1937, from which date Aden assumed the status of a Crown Colony. The colony is administered by a Governor, who is also Commander-in-Chief. The Governor is aided by an Executive Council in the administration of the colony. Under the provisions of the Aden Colony (Amendment) Order, 1944, a Legislative Council was set up. It consists of the Governor as President, four *ex-officio* members, not more than four official members, and not more than eight unofficial members. The management of the port is under the control of the Board of Trustees, which was formed in 1888, and Aden is a free port without Customs tariff. Township authorities for the towns of Aden and for Sheikh Othman were constituted under the Townships Ordinance, 1945.

The interests of the Western Aden Protectorate are represented by a small group of British political officers and Arab assistants, with headquarters at Aden. They give advice to the local rulers on the administration of their areas, since the British Government does not administer the Protectorate directly. The chiefs of the tribes have control over their subjects, and some of them employ, for internal security, tribal guards, who are under the joint control of the British Agent and the chiefs. There are now State Councils in Lower Yafai, Amiri, Lower Aulaqi, Shu'eibi, Fadhlī, Dathina, Beihan, and Upper Aulaqi, and a Legislative Council in Lahej. In the Eastern Aden Protectorate the principal states, Qu'aiti and Kathiri, are administered by their constitutional rulers, and have State Councils.

THE GOVERNMENT

Governor and Commander-in-Chief: Sir TOM HICKINBOT-
HAM, K.C.M.G., K.C.V.O., C.I.E., O.B.E.

Public Relations Officer: N. J. V. WATT.
Commissioner, Kamaran Island: Lt.-Col. R. G. W. E.
ALBAN, O.B.E.

ADEN PROTECTORATE

Deputy British Agents: E. S. KENNEDY (West); A. WATTS (East).
Director of Agriculture: Major J. L. CONGDON.
Fisheries Officer: P. D. PROUDE.
Health Adviser: N. L. CORKHILL.
Commandant, Government Guards: R. F. TRING, O.B.E.

THE LEGAL SYSTEM

The administration of justice within the Colony is entrusted to the Supreme Court, a Court of Small Causes for certain specified civil cases, and Magistrates' Courts for criminal cases. Appeals from the Supreme Court, formerly made to the High Court at Bombay, are now made to the Court of Appeal in Nairobi. The Governor has power to legislate for the Colony, subject to such laws as those of the Indian Statutes applicable in 1937 which have not since been repealed. The rules of Common Law and Equity prevailing in England are applied. The law of the Protectorate is largely tribal custom, but in certain chiefdoms the Sharia (Muslim Law) is recognised, especially in the Qu'aiti State of Shuhr and Makalla, which State alone also has certain published decrees.

Judge of the Supreme Court: RALPH A. CAMPBELL.

TRANSPORT

AIR LINES

Aden Airways: Head Office: 2-4 Esplanade Road, Crater, Aden; internal services and services throughout Arabia, to Egypt and the Sudan.

Other companies operating services include the following

Air India International: Head Office: New India Assurance Building, Mahatma Gandhi Road, Fort, Bombay, India; Aden Office: Mitchell Cotts and Co., Esplanade Road, Crater, Aden

B.O.A.C.: Head Office: Airways House Brentford, Middlesex, England, Aden Office: 2-4 Esplanade Road, Crater.

Ethiopian Air Lines: Head Office: Jijiga Building, Churchill Road (P.O. Box 1755), Addis Ababa, Ethiopia; Aden Office: Immediate Transport Co., Steamer Point, Aden.

THE MIDDLE EAST

Misrair: Head Office: Almaza Airport, Heliopolis, Cairo, Egypt; Aden Office: Mitchell Cotts and Co., Esplanade Road, Crater, Aden.

Airfields, for internal transport and for the use of transit services, are maintained by the Royal Air Force.

ROADS

There are no railways in the Colony or in the Protectorate and communication is mainly by road. The Colony has just over 76 miles of roads of which nearly 58 are bituminous macadam surfaced. In the Protectorate roads are very rough and are infrequently repaired.

SHIPPING

The vessels of the principal steamship companies call regularly at Aden. Small powered craft and coastal steamers make occasional calls to Makalla and Shihr in the Protectorate.

HEALTH

Aden Colony

Pneumonia, dysentery and tuberculosis are some of the most common diseases in the Colony, but figures for these have been decreasing in recent years. There are 360 beds in the Civil Hospital, 72 in the Mission Hospital, 50 in the Maternity Clinic and 31 in the Infectious Diseases Hospital. In 1954 the Civil Hospital in-patients numbered 5,025 and the out-patients 129,697. There are 3 Government and 2 private dispensaries. Total expenditure on medical and allied services in 1954 was £239,444.

Aden Protectorate

In the Protectorate malaria, dysentery and tuberculosis are the most prevalent diseases. A Health Adviser is

ADEN COLONY AND PROTECTORATE

responsible for health services in both Areas. Organised health services exist in the West in Fadhlī, Lower Yafā and Lahej, and in the East in the Qu'aiti and Kathiri States. Elsewhere States contribute in varying degrees towards services provided by the British Government. There are 3 hospitals, with approximately 50 beds, 57 rural health units and 10 mobile doctor units.

EDUCATION

Aden Colony

Education in Aden Colony is under the control of a Director, who also advises in the Protectorate. In 1954 there were 3,820 pupils in Government schools, 2,650 in grant-aided schools and 1,500 in recognised private schools. The Government maintains 10 primary schools, 2 intermediate schools and two colleges, Aden College and a Technical College, both providing secondary education for boys. The Government also provides a two-year course of teacher training for girls.

Education expenditure in the Colony for the year 1953-54 amounted to £129,403.

Aden Protectorate

In the Protectorate it is hoped to build up self-supporting State Departments of Education, responsible for organising village schools, central primary schools and, in the case of the larger States, intermediate schools. In the Western area there are now approximately 30 aided primary schools and a secondary school at Lahaj in Abdali State; in the Eastern Area there are over 50 primary schools and a secondary school near Makalla. There are in addition a number of Koranic schools throughout the Protectorate.

Expenditure on education in 1954 amounted to nearly £66,000.

HONG KONG

GEOGRAPHICAL-ECONOMIC SURVEY

CONTRARY to what is often imagined, Hong Kong Colony consists not merely of the single Hong Kong Island itself, but also includes the island of Lantau, the Kowloon Peninsula, and a further small expanse on the Asiatic mainland leased from China including Miro Bay, Deep Bay and adjacent islands, which are known collectively as the New Territory. Hong Kong Island is however the nucleus of the Colony, situated at the Eastern outlet of the Chu Kiang estuary 91 miles south of Canton. The Colony occupies an area of 396 square miles between latitudes $22^{\circ} 9'$ and $22^{\circ} 17' N$, and longitudes $114^{\circ} 5'$ and $114^{\circ} 18' E$.

Physical Features. Hong Kong owes its "mature" type of landscape to the combined action over a long period of surface weathering, erosion by streams and fluctuating sea levels. Much of the terrain (island and mainland) is upland, deeply eroded to give a rugged topography. The highest point is 3,130 ft. (in the New Territory). Hong Kong Island itself consists of a long mountain ridge dominated by Victoria Peak (1,770 ft). Erosion still continues at a rapid pace, due to the high rainfall and the fluctuating but generally high temperatures, which produce chemical and physical changes in the rocks. Material worn from the upland areas is washed down to the coast, where it forms small alluvial plains which steadily push further out to sea year by year. Such alluvial tracts form almost the only lowland in Hong Kong colony. A rise in sea level since the Ice Age has led to the "drowning" of lower sections of the river valleys, thus producing a long indented coast, which is characteristic both of Hong Kong and adjacent regions of China.

The rocks of Hong Kong consist mainly of granite, forming part of a single granitic structure extending from eastern China as far as Thailand. Smaller expanses of sands and limestones, remnants of a former more extensive structure, are also present. Soils are mainly of a loam character—some inclined to be sandy, others more clayey. Because of their acidity they are not naturally suited to heavy cultivation and considerable liming is necessary.

Climate. The climate of Hong Kong is sub-tropical, with prevalence of seasonal monsoons. The south-west summer monsoon, with winds blowing from sea to land, brings the highest rainfall (16.3 in. in June, on average) and the highest temperature ($82^{\circ} F$. in July). Atmospheric humidity is as high as 90 per cent in this period—a distinctly unpleasant feature. The north-east winter monsoon with winds originating from the interior of China, brings cooler, drier conditions and February, the coldest month, has a temperature of $58^{\circ} F$. and rainfall of only 1 inch. Annual rainfall totals 108 in., but varies locally with elevation and aspect. A characteristic of the climate is the occurrence of violent typhoons. Most of the former natural vegetation of sub-tropical forest and grasses has now been cleared.

Population. The population of Hong Kong is overwhelmingly Chinese. The total is affected by migration rather than by births and deaths, but in 1950 was estimated at 2,360,000, of which 13,000 were of British origin. Population is densest around the harbour area of the straits between Hong Kong Island and Kowloon.

Victoria, the capital settlement (with a population exceeding a million), is the commercial centre, built largely on land reclaimed from swamp. The city is healthier than its site and its population density (of 80,000 inhabitants per sq. mile) might suggest. Water supply on the island comes from reservoirs, supplemented from the New Territories. Outside the harbour area of Victoria and Kowloon, which lie on opposite sides of the straits a mile apart, the population is less dense, but there are several flourishing market towns in the New Territory. The site of the harbour offers many advantages including space for manoeuvre, safe sheltered moorings and opportunities for dock construction, it is in an excellent position in relation to world trade routes and has a productive and accessible hinterland. Low customs dues and the prestige which has grown with settled Government also attract shipping to Hong Kong.

Economic considerations. The economy of Hong Kong is governed by its status as a port dealing principally but not exclusively with transit traffic trade from China, South-East Asia and the industrial nations of the world. Europe, North America, and to some extent the Middle East and India. Other economic activities include engineering, manufacturing, mining, agriculture and fishing. About one-fifth of all imports and exports consist of textiles and associated goods. Other articles of trade include oils, chemicals, minerals and metals. The only duties imposed are on the import of alcohol, tobacco, medicines and hydrocarbon oils. In 1954 total imports were valued at 3,435 million Hong Kong dollars and exports at 2,417 million Hong Kong dollars. This adverse balance on visible trade is offset by invisible trading—insurance, etc. As regards imports, China with 22 per cent of the total is currently the largest trading partner. Some 13 per cent of the imports are from Japan, 12 per cent from the United Kingdom and 6 per cent from the U.S.A. China and Indonesia each take about 18 per cent of Hong Kong's exports and Malaya 14 per cent, while in 1954 the British Commonwealth took 24 per cent. Hong Kong is visited by shipping lines operating across the Pacific and is in direct communication with Europe, South Africa, Australia and the Americas via the Pacific seaboard, Panama Canal, and Suez routes. Hong Kong acts as the port for Southern China, since Canton is inaccessible to vessels over 5,000 tons. Industrial products are chiefly cotton yarn and cement. Shipbuilding is carried on, and light metals, plastics and knitted goods are manufactured. Iron ore is mined within the colony—though production is normally less than 200,000 tons, almost all being exported to Japan. Agriculture is restricted to rice and vegetable cultivation; and pigs, poultry and some cattle are kept. Fish is important as an article of diet, and between 1948 and 1950, 26,000 metric tons were landed.

Communications. The Colony has about 430 miles of roads including links to the road system of China. There are 19 miles of electrified tramway and also a railway from Kowloon to Canton—operation of this latter depending on relations with China. The airport handles frequent services to all parts of the world.

International Role of Hong Kong. Although a British Colony for more than a century, the significance of Hong

Kong lies in its contribution to world trade, and in its relations with China. By no means an insignificant producer, Hong Kong is nevertheless *par excellence* a depot, concerned in handling goods produced and consumed elsewhere; and owing to the special political conditions prevailing has become a principal outlet for southern China. Overwhelmingly Chinese, with a temporary and numerically insignificant population of European merchants and officials, Hong Kong cannot be regarded as a British Colony in the normal sense of that word. Its future is inevitably bound up also with developments in China.

I.B.T.

HISTORY

In ancient times, most of China south of the Yangtse, including the area which is now the Crown Colony of Hong Kong, was inhabited by the Maan tribes. Little is known of them until they began to absorb Chinese culture from the North, about the third century A.D., but by the end of the Sung dynasty, in the thirteenth century A.D., the area had become an integral part of China.

For many centuries there was little contact with the rest of the world. Arabs reached Canton in the seventh century, but it was not until the sixteenth century that seafaring Europeans penetrated into Chinese waters in their quest for trade. Portuguese, Spanish, Dutch and English adventurers made contact with the China coast, at first entirely without official support; although Queen Elizabeth I appears to have written a letter, probably never delivered, to the Emperor of China. The Portuguese founded a settlement at Macao and in 1681 the East India Company bought a house there and began regular trade with Canton. During the eighteenth century these pioneers were followed by the French, Dutch and Americans, and their trade, regulated by the Chinese themselves, prospered.

Attempts were made, in 1793 by Lord Macartney and in 1816 by Lord Amherst, to establish official relations with the Manchu Court in Peking, but these came to nothing and the traders, in particular the East India Company who had an official monopoly until 1831, continued to make their own arrangements, independent of Government backing. There were many relatively trivial matters affecting day-to-day trading activities which were in need of regulation, but there was no one empowered to negotiate for the foreign traders as a body. In 1834 Lord Napier was appointed H.M. Chief Superintendent of Trade, with headquarters in Canton, but died soon after his arrival. Captain Charles Elliot, R.N., succeeded him and spasmodic negotiations with Chinese officials took place over the next five years.

Meanwhile the increase in trade had brought with it an increase in opium traffic, as opium from India was used by many of the western traders to pay for the Chinese goods, and was taken ashore by local smugglers. Chinese officials often turned a blind eye, but in 1839 the Chief Commissioner, Lin Tse Su, decided to suppress the opium traffic and representatives of British firms who were working as middlemen in Chinese factories were imprisoned. This and other, mostly minor, grievances on both sides led to local hostilities.

In January 1841 Captain Elliott announced a provisional agreement with the Chinese, which would end hostilities and which involved "the cession of the island and harbour of Hong Kong to the British Crown", but this agreement was never ratified and was later denounced by both the Chinese and the authorities in London, and hostilities were renewed. Sir Henry Pottinger succeeded Captain

Elliot as British representative and negotiations began again.

The Treaty of Nanking of August 1842, and a supplementary agreement of 1843, ended the war: the island of Hong Kong, 32 sq. miles in area, was ceded in full sovereignty to the British Crown; four Chinese ports in addition to Canton were opened to western trade; a fixed tariff, for the trade which affected foreigners, was established; and Britain was granted partial jurisdiction over her subjects in China and the right to participate in any further trading privileges which might be negotiated with China by other foreign powers. The treaty granted most of the concessions sought by British traders; and thereafter the authority of the Superintendent of Trade over British merchants in the Far East could be more efficiently maintained, because a British court of law could be, and was, established on the island. It was hoped that Hong Kong would become a great emporium comparable to Singapore or Bombay. Sir Henry Pottinger was appointed first Governor but retained his office as Plenipotentiary and Superintendent of Trade, in which capacity he remained responsible to the Foreign Office. The Governors continued in this dual role until 1859, when the first regular diplomatic representative was sent to China, in accordance with the Treaty of Tientsin, concluded in the previous year.

Tremendous problems confronted the early administrators, whose troubles included two severe typhoons in 1841, fever among the population, difficulty in organising an efficient police force and consequent insecurity, and piracy on neighbouring waters. There was confusion in the titles to land because property rights which had been granted in 1841 were not given legal recognition until after the ratification of the Treaty in 1843. Hong Kong was declared a free port, but much of the trade with China continued to pass through Canton and the four treaty ports. A form of economic blockade was imposed by China which, until an agreement was signed with the Imperial Maritime Customs in 1886, hindered the local junk trade. Taxation to make the colony self-supporting (except in defence) aroused opposition and a demand for some measure of self-government. But these problems were overcome and the history of Hong Kong, from the day it became a British Crown Colony, is the story of its development as a centre of trade and commerce. Within the first few years roads, markets, schools, hospitals and churches were built; and every encouragement was given to merchants to build business premises. A start was made with the opening of shipbuilding yards, eventually to become a major industry, and commercial relations with other parts of China, including Shanghai, and with Siam and the United States were established. As time went on, the port and harbour of Hong Kong became the centre of its existence; above all a centre of trade and commerce, but also a transit centre for the emigration of Chinese labourers to many parts of the world.

The territory of the Colony was enlarged by the cession in 1860 of the peninsula of Kowloon and Stonecutters Island and, by the ninety-nine year lease of 1898, of the New Territories, mainland regions lying behind Kowloon, and surrounding islands. The total land area of the Colony was thus increased to 391 sq. miles.

Meanwhile the population increased in a phenomenal manner. At the first census after 1842, there were 3,650 villagers and fishermen living on land and about 2,600 on boats in the harbour. By April 1844 the population had reached 19,000 largely by the influx from the mainland of labourers who saw the prospect of work. By 1855, it was estimated at 72,000 and by 1861 at 120,000. By 1882 overcrowding had begun to be a serious problem and a Sanitary Commissioner was sent out. As a result of his report

THE, BRITISH COMMONWEALTH

a Sanitary Board was set up, but only after an outbreak of bubonic plague was the problem of sanitation and housing tackled seriously.

The Chinese community in Hong Kong was in 1843 made subject to British police magistrates in the matter of law and order, but left in free possession of its social customs. English Common Law and the statutes which were in force in England in April, 1843 formed the basis of the legal system of the Colony; and a large volume of legislation for the improvement of education and health was passed before the turn of the century.

Commercial development was encouraged by the introduction of the steamship, by the easier relations with China which prevailed after 1886 and by the opening of the Suez Canal in 1869, which brought Asia and Europe, in terms of trade, so much closer together. The volume of shipping in Hong Kong harbour increased from less than 2,000,000 tons in 1868 to over 5,000,000 tons in 1878.

Meanwhile the development continued. Reclamation schemes began in 1851, banking facilities, both Chinese and western, multiplied, telegraphic links with other countries were established, building of every description continued, and Hong Kong soon took on the appearance of a modern town. Every encouragement was given to the local business community and to business men from Britain, and both took advantage of it. Chinese merchants played a more and more active part in commercial life, building wharves and warehouses and investing heavily in real estate.

From the start, there was an emphasis on the wish to make Hong Kong a centre not only of trade but also of education. A Board of Education was established in 1845 and schools took high priority at every stage; in 1847 the China Branch of the Royal Asiatic Society, dedicated to foster contact between east and west, was founded; the Hong Kong College of Medicine for the Chinese, later (in 1908) to expand into Hong Kong University, was founded in 1887, and served both the Chinese in Hong Kong and also many thousands from the mainland.

Hong Kong was not much affected by the 1914-18 war, but felt the repercussions of the depressions of 1921 and 1929-30 and in 1935 abandoned the silver standard for a managed paper currency.

International events in the Far East since 1918—the Chinese revolution, the setting-up of a Nationalist government in 1928, the Sino-Japanese war, the war in the Pacific in 1941 and the establishment of a Communist government in Peking in 1949—have of course had their effect on Hong Kong's economic development and strategic importance. During the Chinese revolution and the internal struggles which followed the establishment of the Nationalist Government, and even more so after the Japanese invasion of China in 1937, many thousands of Chinese from the mainland flocked to Hong Kong.

Administrative and social problems increased, but in spite of these and the periodical trade depressions Hong Kong continued in reasonable prosperity between the wars, and relations with China were good.

Victoria harbour, with its seventeen square miles of sheltered anchorage, has always been of potential strategic as well as of commercial significance; and on December 8th, 1941, the day after the attack on Pearl Harbour, Japanese planes based on Canton and powerful army and navy units attacked Hong Kong. The garrison repelled the first assault but surrendered, after heavy fighting on Christmas Day. The Japanese occupation lasted three and a half years, during which the population fell by two-thirds. In August, 1945, two weeks after the capitulation, the British Pacific fleet re-entered the harbour. Military government was established and was replaced on May 1st, 1946, by a civil administration.

Between 1937 and 1941, during the Sino-Japanese war, the population had risen to over one and a half million. After 1946 many Chinese returned to the Colony, and some 390,000 refugees from the Communist régime sought shelter there. In May, 1950, the population of Hong Kong reached 2,360,000, and in 1954 about two and a half million. The housing of the refugees, who have settled in flimsy shacks crowded near the industrial centre of the town, is Hong Kong's most serious social problem. It was estimated in 1952 that new housing was required for 250,000 people, but the problem was aggravated when, in December 1953, fire devastated the largest squatter area in Kowloon, leaving 60,000 people homeless, and in the following year further fires destroyed the homes of another 42,000 people. Otherwise, Hong Kong has made a remarkable recovery and many new commercial enterprises, including a scheme for airport development estimated to cost over £6,000,000, are under way.

There has been pressure, especially since 1946, for constitutional change. The then Governor, Sir Mark Young, put forward a scheme for a fully representative municipal council and proposed that the official element in the Legislative Council should be reduced. His recommendations were accepted in principle by the Secretary of State, but the consultations with influential groups in Hong Kong, which he advised, postponed action. In 1949 new proposals from the colony were forwarded to London with the unanimous support of the unofficial members of the Legislative Council. They urged among other things that the establishment of a municipal council should be deferred but that elected members should be included in a newly constituted Legislative Council. After much consideration, the Secretary of State, in consultation with the Governor, decided that such major constitutional changes were inopportune at the time (1953); but there can be little doubt that changes will take place before long.

STATISTICAL SURVEY

Area: about 391 sq. miles.

Population: estimated at about 2,500,000 (end of 1954).

Registered births (1954) 83,317.

Registered deaths (1954) 19,283.

The overwhelming majority of the population is Chinese. The non-Chinese minority of permanent residents includes 9,500 persons of United Kingdom or Commonwealth origin (excluding service personnel and their dependants), 850 Portuguese, 300 United States and 80 Dutch.

THE BRITISH COMMONWEALTH

THE CONSTITUTION

The Government of Hong Kong, which consists of the Governor, the Executive Council and the Legislative Council, is constituted under the authority of Letters Patent and Royal Instructions.

The Executive Council is consulted by the Governor on all important administrative questions. In addition to five *ex-officio* members official and unofficial members may be appointed.

The Legislative Council, which advises on and approves the enactment of the Colony's laws and approves all expenditure from public funds, consists of the five *ex-officio* members who sit on the Executive Council, four other official members and eight unofficial members. It has three Standing Committees, concerned with finance, law and public works respectively, select Committees may be set up on an *ad hoc* basis.

THE GOVERNMENT

Governor: Sir ALEXANDER W. G. H. GRANTHAM, G. C. M. G.
EXECUTIVE COUNCIL

President: The GOVERNOR

Ex-Officio Members: The COMMANDER BRITISH FORCES, The COLONIAL SECRETARY, The ATTORNEY-GENERAL, The SECRETARY FOR CHINESE AFFAIRS, The FINANCIAL SECRETARY.

Nominated Official Member: B. C. K. HAWKINS, C. M. G., O. B. E.

Unofficial Members: CHAU TSUN NIN, C. B. E., Sir MAN KAM LO, C. B. E., Dr CHAU SIK-NIN, C. B. E., LEO D'ALMADA E CASTRO, C. B. E., Q. C., C. BLAKER, M. C., E. D., J. KESWICK, C. M. G.

LEGISLATIVE COUNCIL

President: The GOVERNOR.

Ex-Officio Members: The COMMANDER BRITISH FORCES, The COLONIAL SECRETARY, The ATTORNEY-GENERAL, The SECRETARY FOR CHINESE AFFAIRS, The FINANCIAL SECRETARY.

Nominated Official Members: T. L. BOWRING, O. B. E., D. J. S. CROZIER, K. M. A. BARNETT, E. D., Dr YEO KOK CHEANG.

Unofficial Members: Dr. CHAU SIK-NIN, C. B. E., C. BLAKER, M. C., E. D., C. E. M. TERRY, LO MAN WAI, O. B. E., NGAN SHING KWAN, DHUN J. RUTTONJEE, KWOK CHAN, O. B. E., Dr. A. M. RODRIGUES, M. B. E., E. D.

CIVIL ESTABLISHMENT

Colonial Secretary: E. B. DAVID, C. M. G.

Financial Secretary: A. G. CLARKE, C. M. G.

Secretary for Chinese Affairs: R. R. TODD

Attorney-General: A. RIDEHALGH, Q. C.

THE LEGAL SYSTEM

The laws in force in Hong Kong are those which existed in England on April 5th, 1843, excluding any that are inapplicable to local circumstances or have been modified by Hong Kong legislation.

Supreme Court. The Supreme Court is composed of the Chief Justice and three Puisne Judges.

Criminal and civil cases are heard before a jury. Criminal sessions, for the hearing of cases committed to

the Supreme Court by magistrates' courts, are held once a month. As a Court of Equity the Court has authority to appoint and control guardians of infants and their estates and keepers of persons of unsound mind. All civil claims above HK\$5,000 and proceedings concerning estates, appointments of trustees and company matters are also heard.

Cases in the Probate, Divorce, Admiralty and Bankruptcy Jurisdictions of the Court are usually heard by the Chief Justice.

Any person wishing to dispute the decision of a magistrate's court may appeal to a judge of the Supreme Court. This form of appeal is heard by one judge, who may pass it on for consideration by a Full Court, consisting of two or more judges.

District Court. This court, which has two branches, one in Hong Kong and one in Kowloon, was founded in 1953 to take over the functions of the old Summary Court, in which civil claims up to HK\$5,000 used to be heard by Puisne Judges, and to try certain criminal cases which would otherwise have had to be passed from magistrates' courts to the criminal sessions of the Supreme Court.

Cases arising from the Workmen's Compensation Ordinance are also heard in this Court.

Magistrates' Courts. There are eight magistrates' courts in the Colony, which try minor civil and criminal offences. Serious criminal offences must be given a first hearing in a magistrate's court and committed for trial in the District Court or the Supreme Court.

Chief Justice: M. J. P. HOGAN, Q. C.

RELIGION

BUDDHISM

Mahayana is the type of Buddhism most widely practised in the Colony. The Buddhist community has sponsored free schools and medical centres and welfare work.

There are about ten Buddhist monasteries and over two hundred hermitages.

CHRISTIANITY

Council of Churches. In 1954 the non-Roman Catholic Churches formed a Council to take common action on such questions as refugee housing, child welfare centres and medical assistance to out-patients.

Anglican Communion. The diocese of Hong Kong, which includes Macao, has 9 parish churches and 8 mission chapels in addition to the cathedral.

The Anglican Church has been active in primary, secondary and university education.

Bishop of Hong Kong: Rt. Rev. R. O. HALL, The Bishop's House, Hong Kong.

Christian and Missionary Alliance. A new church has recently been built in Kowloon.

Church of Christ in China. The Hong Kong district of the Kwangtung Synod has 16 churches.

Methodism. The Chinese Methodist Church is expanding its educational and evangelistic activities.

There is an English-speaking Methodist church on Hong Kong Island.

Pentecostalism. A Pentecostal church has recently been built in Yaumati.

ISLAND TERRITORIES

Roman Catholic Church. The diocese of Hong Kong, which extends to the Chinese mainland, was instituted in 1946. The number of Roman Catholics in the colony was estimated at 53,821 in June, 1954. There are about 30 churches, and 76 schools, some with an English, and some with a Chinese curriculum. There are also a number of seminaries in the Colony and many missions have their Far Eastern headquarters there. About 400 nuns of various orders run schools and care for orphans, blind girls, cripples and aged people.

The Society of St. Vincent de Paul, the Hong Kong branch of which dates back to 1863, organises welfare work in the Colony.

The Catholic Welfare Committee operates a mobile clinic. The **Catholic Resettlement Bureau** collaborates in the organisation of welfare centres in the refugee and resettlement areas. Schools with a total of 4,000 pupils are run in conjunction with these centres. **The Catholic Women's League** is also active.

Bishop of Hong Kong: Rt. Rev. LORENZO BIANCHI.

Russian Orthodox Church. There are two groups, each of less than a hundred. One recognises the present Patriarch of Moscow, the other, formed in 1949 and known as the Orthodox Church, does not.

Union Churches. Some Free Church denominations have joined together to establish Union Churches, which are attended by increasing numbers of Chinese.

HINDUISM

The first Hindu temple to be built in the Colony was completed in 1953.

ISLAM

There are about 5,000 Chinese and about 1,500 Indian and Pakistani Muslims. The only mosque is in Shelley Street.

JUDAISM

The Jewish community at present numbers about 250.

PARSEES

There has been a community of Parsees since about the time of the British arrival in 1841. The present prayer-hall is in Leighton Hill Road.

SIKHISM

The Sikh community at present numbers about 1,000. Their temple is in Queen's Road East.

Tung Fong (*East Pictorial*): 141 King's Road; weekly.

Yah Chow (*Asia Pictorial*): 88 Yee Wo Street, Causeway Bay; monthly.

BROADCASTING

Radio Hong Kong: f. 1928 under the control of a Broadcasting Committee; after periods of direction by the Postmaster General and, later, the Public Relations Officer, an independent Broadcasting Department was set up in 1954 headed by a Controller of Broadcasting. News bulletins are supplied by the Public Relations Office.

At the end of 1954 there were 44,159 wireless licence holders.

English and Chinese are the main languages used in transmissions; there are weekly programmes in French and Portuguese.

A television service is to come into operation by the end of June 1956.

BANKING

The following banks have their head office in Hong Kong:

Bank of Canton, Ltd., The: 6 Des Voeux Road Central; incorporated in Hong Kong in 1912; brs. in Bangkok, Macao, Singapore and other places; cap. auth.

THE ,BRITISH COMMONWEALTH

HK\$8,053,520; p.u. HK\$7,761,720; res. HK\$5,000,000; Chief Manager D. S. YUAN.

Bank of East Asia, Ltd., The: 10 Des Vœux Road Central; incorporated in Hong Kong in 1918; cap. auth. HK\$50,000,000, p.u. HK\$10,000,000; res. (1951) HK\$6,250,000; dep. (1951) HK\$95,591,458; Chair. Hon. Sir SHOUSON CHOW; Chief Manager KAN TONG PO.

Hongkong and Shanghai Banking Corporation, The: 1 Queen's Road Central; f. 1864; incorporated in Hong Kong; offices in London, Paris, Hamburg, New York, San Francisco and throughout the Far East; cap. issued and fully p.u. HK\$25,000,000; res. £8,000,000; Chair. C. BLAKER, M.C., E.D.; Chief Manager MICHAEL W. TURNER.

Wing On Bank Limited, The: 26 Des Vœux Road Central; incorporated in Hong Kong in 1931; br. in Kowloon; cap. auth. HK\$10,000,000, p.u. HK\$2,295,288; res. HK\$1,500,000; Chair. JAMES GOCKLOCK; Chief Manager PHILIP GOCKCHIN.

INSURANCE

A number of British insurance companies have branches in Hong Kong.

TRADE AND INDUSTRY

There are 70 employers' associations, 223 workers' unions and 4 mixed unions of employers and workers.

Most of the trade unions are affiliated to one or the other of the following movements:

The **Trades Union Council (T.U.C.)** commands the allegiance of the majority of unions. It supports the Chinese Nationalist Government in Formosa.

The **Federation of Trade Unions (F.T.U.)** is a left-wing organisation which supports the Central People's Government of China.

TRANSPORT

ROADS

The colony has 113.48 miles of concrete roads, 160.70 miles of bituminous macadam, 136.21 miles of waterbound macadam and 26.21 miles of earth roads.

RAILWAYS

The main railway line is 22 miles long and runs from the terminus at Kowloon to the Chinese frontier at Lowu. Through passenger services to China have been in abeyance since 1949; all passengers are obliged to change trains at the frontier. There is a through service in goods traffic, however. In 1954 3,834,478 passengers and 119,218 tons of freight were carried and 45,768,740 passenger miles travelled.

SHIPPING

Ships belonging to a large number of shipping companies from the United Kingdom, western Europe and Far Eastern countries visit the port of Victoria.

CIVIL AVIATION

Hong Kong airport is under the control of the Director of Civil Aviation. It is suitable for both land and sea aircraft, being adjacent to Kowloon Bay.

Cathay Pacific Airways Ltd.: 1 Connaught Road Central; services to Bangkok, Rangoon, Calcutta, Singapore, Indo-China, the Philippines and Borneo.

Hong Kong Airways: 14-16 Pedder Street; service to Tokyo.

FOREIGN AIRLINES WITH OFFICES IN HONG KONG

Air France: 5 Connaught Road Central.

Air India International: Fu House, 7D Ice House Street.

Air Vietnam: 5 Connaught Road Central.

British Overseas Airways Corporation (B.O.A.C.): 14-16 Pedder Street.

Canadian Pacific Airways Ltd. (C.P.A.L.): Union Building, Connaught Road Central.

Northwest Airlines (N.W.A.) (U.S. line): St. George's Building, Ice House Street.

Pan American World Airways (P.A.A.): Alexandra House.

Philippine Air Lines (P.A.L.): Peninsular Hotel, Salisbury Road, Kowloon.

Qantas Empire Airways (Q.E.A.) (Australian): 14-16 Pedder Street.

Scandinavian Airlines System (S.A.S.): Queen's Building, 1 Ice House Street.

Thai Airways Co. (T.A.C.): Peninsular Hotel, Salisbury Road, Kowloon.

EDUCATION

Education is voluntary and under the general control of the Director of Education. The numbers of schools and pupils were as follows in June, 1954:

	SCHOOLS	PUPILS	TEACHERS
Government . . .	40	17,589	558
Grant-aided . . .	20	14,247	648
Subsidised . . .	327	47,705	1,670
Private . . .	719	142,942	6,290
Special Afternoon Classes . . .	—	12,179	—
	1,106	234,662	9,166

RESEARCH INSTITUTE

Royal Observatory: Hong Kong; f. 1884; library of 4,000 vols.; Acting Dir. C. S. RAMAGE; publs. *Meteorological Results* (annually), *Seismological Bulletin* (monthly), *Occasional Memoirs and Technical Notes*.

LIBRARY

University of Hong Kong Library: f. 1911; contains about 74,000 books and about 10,500 bound vols. of journals, and includes the valuable Hankow collection of books in European languages on China; also the Morrison collection; Chinese books totalling about 99,000 are separately housed in the **Fung Ping Shan Library:** Librarian Mrs. DOROTHEA SCOTT, A.L.A.; Deputy Librarian G. W. BONSALE, M.A.; Temp. Asst. Librarian, Chinese Library, Miss NG TUNG KING, B.A.

Number of students (Jan. 1956): 905.

ST. HELENA ASCENSION TRISTAN DA CUNHA

ST. HELENA

(Capital: Jamestown)

GENERAL SURVEY

ST. HELENA is situated in the South Atlantic Ocean in 16° S. lat., 6° W. long., about 1,200 miles from the African coast and 1,800 miles from South America. The island has an area of 47 sq. miles. St. Helena is the top of an isolated volcanic peak which is probably Late Tertiary in age. The island consists of a compact group of rugged basaltic hills which rise to 2,700 ft. above sea level. Small amounts of limestone occur in the hills. The peaks are deeply dissected by steep valleys which contain small streams. The coast generally consists of steep cliffs. There are no adequate harbours, but the anchorage at the principal settlement lies in the lee of the island.

St. Helena is situated in the trade-wind belt of the South Atlantic, hence south-easterly winds persist throughout the year. At sea-level, the mean temperature varies between 76° F. in March and 67° F. in August, but in the hills, where most meteorological observations have been made, the mean temperatures are about 10° cooler. Annual rainfall totals vary considerably with altitude, exposure and from one year to another. Between 20 and 40 in. of rain fall at 2,000 ft.; between 5 in. and 17 in. of rain fall on the lee coast at Jamestown. The period from March to July is wetter than the rest of the year.

Owing to the extreme isolation of the island, the natural climax vegetation appears to have consisted of a few species of highly specialised plants. During the long period of settlement, great changes have taken place and indigenous plants have been greatly outnumbered by introduced species. Much of the island was formerly covered by forest, but forest fires, uncontrolled grazing by stock, the accidental introduction of termites and cutting of timber for fuel have severely reduced the extent of woodland. About one square mile of the island is arable land, about five square miles are planted with New Zealand hemp (*Phormium tenax*), some seven square miles are pasture and about 1½ square miles is forest. The remaining two-thirds of the area consist of waste land, part of which could be re-afforested, but most of which is completely barren. Soil erosion is a major problem on the island.

When St. Helena was discovered by the Portuguese navigator, Juan de Nova Castella, in 1502, the island was uninhabited. At first the Portuguese used it as a secret port of call for their East India fleet. Later, English and Dutch merchant ships began to visit the island for water and to refit, and between 1633 and 1673, St. Helena was occupied by the English and Dutch at different times. When England finally annexed the island in 1673, the land was granted to the East India Company, who had first occupied it in 1659, by Royal Charter. The island was brought under the direct Government of the Crown in 1834, after the East India Company had administered it for about 180 years. Napoleon Bonaparte was exiled to St. Helena in 1815 and died there six years later.

During the period of British rule, the population grew, partly by the introduction of Indian, Malayan and Chinese labourers, partly by the liberation of African slaves, partly by free miscegenation amongst these peoples and European stock. The population rose to 5,000 at the end of the nineteenth century, but fell to about 4,800 thereafter.

It was estimated that the population totalled 4,878 at the end of 1954. The natural increase in population is largely offset by emigration to the United Kingdom and South Africa.

Jamestown is the principal settlement. It is situated on a small bay on the north-west coast of the island, and is the only coastal settlement and port. It is also the administrative centre of the Colony.

The production of *Phormium* hemp is the main agricultural industry of the Colony. Two companies own most of the land under cultivation and operate all the mills. The hemp is exported in the form of raw hemp, tow and rope, and these constitute 99 per cent of the exports (£46,294 in 1954). The bulk of the exports are sent to the United Kingdom, although small quantities are also sent to South Africa. Lily bulbs are grown on a small scale for export. The rest of the cultivable land is devoted to the production of food for local consumption. Some fishing is carried on. Small amounts of gypsum and other minerals occur on the island but have not been exploited.

During the nineteenth century, St. Helena was an important port of call for shipping bound for the Indian Ocean. Just as the importance of the Falkland Islands declined with the opening of the Panama Canal, so the value of St. Helena declined with the cutting of the Suez Canal. Nevertheless, St. Helena lies close to the route from Europe to South Africa, and about thirty ships visit the Colony during the year *en route* from Cape Town to the United Kingdom.

ADMINISTRATION

The Crown Colony of St. Helena is administered under Royal Instructions of 1890 and 1939, which provide for a Governor, assisted by Executive and Advisory Councils. There is no Legislative Council. The Executive Council consists of the Governor, the Government Secretary and the Colonial Treasurer as *ex-officio* members, and such other nominated members as may be approved. The Advisory Council consists of up to 6 persons not holding any office under the Crown, 2 being nominees of the Friendly Societies and 1 representing the interests of the *Phormium* flax industry. The Governor alone makes Ordinances, but power is reserved to Her Majesty in Council to legislate by Order.

Governor: Sir JAMES HARFORD, K.B.E., C.M.G.

EXECUTIVE COUNCIL

The GOVERNOR (President).

The GOVERNMENT SECRETARY.

The COLONIAL TREASURER

N. HUMPHREY, O.B.E. (Agricultural and Forestry Officer).

G. J. CLARKE (Senior Medical Officer).

ADVISORY COUNCIL

The GOVERNOR (President).

E. J. MOSS, M.C., J.P.

J. H. JAMESON.

H. J. CORKER, Junior.

J. A. THORPE.

F. C. GRAHAM.

ISLAND TERRITORIES

CIVIL ESTABLISHMENT

Government Secretary and Magistrate: K. B. SCOTT, M.B.E.
Colonial Treasurer and Collector of Customs: A. HALEY.
Agricultural and Forestry Officer: N. HUMPHREY, O.B.E.
Senior Medical Officer: G. J. CLARKE.
Superintendent of Works: G. F. GAMMER, M.B.E.
Auditor: J. W. ADSHEAD.
Education Officer: N. R. KERR.
Superintendent of Police: H. TYLER.
Postmaster: C. J. GEORGE.
Acting Chief Justice: The GOVERNOR (*ex-officio*).
Justices of the Peace: The GOVERNMENT SECRETARY; F. J. WARREN; E. J. MOSS, M.C.; R. F. BROADWAY; E. A. THORPE.

RELIGION

The population is Christian. The Church of the Province of South Africa, Diocese of St. Helena (Anglican) is in the charge of the Rt. Rev. GILBERT PRICE LLOYD TURNER, L.T.H. (Bishopsholme, St. Helena). There are also Baptist, Salvation Army and Seventh-Day Adventist missions in the island.

FINANCE

The Colony's currency consists of Bank of England notes and United Kingdom coins; South African currency is also accepted. Total currency in circulation at the end of 1954 was estimated at £40,000. St. Helena is dependent on a substantial grant-in-aid from the United Kingdom to balance its budget. Contributions from the Colonial

ST. HELENA, ASCENSION

Development and Welfare funds have been used to assist housing projects, agricultural development and the medical and education services.

COMMUNICATIONS

Ships of the Union Castle Line call, under normal conditions, at intervals of four weeks *en route* from England to South Africa and on the homeward journey. These are the only regular mails. Cable and Wireless Ltd. operate a cable station connecting with Cape Town and Ascension. There is no broadcasting service in the Colony. Some 65 miles of roads in the island are all-weather roads for motor traffic.

HEALTH

The island is healthy and none of the ordinary tropical diseases is endemic. There is one hospital in Jamestown with 34 beds. During 1954 the number of in-patients totalled 768. There are 5 out-patient dispensaries at different centres in the island, and these are visited regularly by the doctors and the health sister.

EDUCATION

There are 11 primary schools and one secondary school. The total number of scholars at the end of 1954 was 1,250. Expenditure on educational services in 1954 was £13,858 compared with £980 in 1935.

There is a free public library subsidised by the government and managed by a committee, of which the Education Officer is chairman.

ASCENSION

Position. Situated in the South Atlantic Ocean (latitude 8° S, longitude 14° W) some 700 miles north-west of St. Helena is its dependency, the island of Ascension. The island (34 sq. miles in area), is the top of a volcanic peak situated on the Mid-Atlantic Rise, and rough basaltic hills rise to nearly 2,900 ft. above sea-level. Although the island is geologically extremely young, there has been no sign of volcanic activity during the period of human settlement.

Climate. While Ascension lies much nearer the Equator than St. Helena, it is situated in the zone of south-easterly trade winds which control the climate. The mean temperature at sea-level varies between 80° F. in April and 77° F. in September. Temperatures seldom exceed 90° F. or fall below 68° F. The total annual rainfall is about 4-6 in. on the protected north-west coast, and between 30 and 40 in. in the hills. It is believed that rainfall totals are significantly greater than they were fifty years ago.

Vegetation. The lowlands are virtually devoid of natural vegetation, and most of the island is covered with barren, dry, volcanic clinker. The only vegetation occurs in the hills, where Green Mountain provides the sole source of fresh water, the only grazing for stock, and the only possibility for cultivation. Large numbers of turtles visit the island between December and May.

History. The island was uninhabited until 1815, when a Naval garrison was placed there and maintained until

1922. By Letters Patent of September 12th, 1922, the island was made a dependency of St. Helena and control was transferred from the Admiralty to the Colonial Office.

Economy. The present members of the population are almost all employed by Cable and Wireless Ltd., who maintain radio and telecommunications between Africa and South America; a radio-telephone service to the United Kingdom was opened in November, 1955. There are 173 inhabitants.

The principal settlement is Georgetown, on the lee shore of the island. A small farm is situated on Green Mountain to supply the inhabitants with fresh food. Cable and Wireless Ltd. also maintain a medical officer.

During the 1939-45 war, Ascension island was an important staging post maintained by the U.S.A.A.F. for trans-Atlantic flights, but the landing strip has now been abandoned.

ADMINISTRATION

The Government of St. Helena is normally represented in the Dependency by the local manager of Cable and Wireless Ltd., who is appointed Resident Magistrate for this purpose and is assisted by another employee of the Company, who is appointed a Justice of the Peace.

Resident Magistrate: A. R. HARRISON.

THE 'BRITISH COMMONWEALTH

TRISTAN DA CUNHA

Position. The group of islands centred on Tristan da Cunha, the other dependency of St. Helena, is situated in the South Atlantic Ocean (lat. 37° S; long. 12° W.) about 1,500 miles south-west of St. Helena. The group consists of Tristan da Cunha—the only inhabited island and three others: Inaccessible and Nightingale (each about 20 miles from Tristan) and Gough Island, lying 230 miles further south.

All are volcanic peaks rising from the ocean bed. Tristan da Cunha itself has an area of about 40 sq. miles and consists of a symmetrical volcanic cone rising to an extinct crater summit at nearly 7,000 ft. above sea-level. All the islands are surrounded by high cliffs and landing is everywhere difficult, owing to the almost continuous swell.

Climate. The climate is temperate and oceanic. Few adequate instrumental records are available for any of the islands, but the mean temperature at sea-level probably varies between 65° F. in February and 54° F. in August. There are no records of temperatures higher than 78° F. or lower than 39° F. Rainfall averages 55-66 in. per annum at Edinburgh, the only settlement, and is equally distributed throughout the year. During the winter, the upper slopes of the peak are often snow-covered and snow is occasionally recorded at sea-level. Strong winds and low clouds are common at all seasons, and the weather is extremely variable from day to day.

Vegetation. The islands support woodland on their lower, sheltered slopes. Elsewhere, to a height of 5,000 ft., grass-heath vegetation is usual.

History. The main group of islands was discovered by a Portuguese fleet, under the command of Tristan da Cunha, in 1506. Thereafter they were occasionally visited by ships bound for the Indian Ocean and, during the seventeenth century, by the sealers who frequented the Southern Ocean.

A settlement was originally made by three Americans in 1810 and the first British settlement was a garrison established in 1816 during Napoleon's residence on St. Helena. The garrison was soon withdrawn, but three members elected to remain with their families and thus constituted the nucleus of the population. They were occasionally joined by whalers, the survivors of wrecked ships, and others. Until about 1875 visits by ships were relatively frequent, and extreme isolation only came when sailing ships were replaced by steam vessels. During the last quarter of the nineteenth century misfortunes accumulated. 15 of the able-bodied men were lost at sea, rats infested the island, in the surrounding seas the whales and seals were almost exterminated, and the replacement of sail by steam meant the loss of regular communications. Nevertheless, attempts to move the inhabitants to South Africa at the beginning of this century were only partially successful. The population rose to 102 in 1880, fell to 73 in 1901 and had reached 292 on December 31st, 1954.

Tristan, together with the neighbouring Nightingale, Inaccessible and Gough Islands, became a dependency of St. Helena in 1938 (Letters Patent of January 12th), but, for all practical purposes, it had been considered a British possession for nearly 80 years (an Order in Council had been drafted in 1876 but was never formally completed). Little attempt was made at first to administer the islands, whose population was left very much to itself. The Society for the Propagation of the Gospel has maintained a missionary teacher on the island since 1922 (a number of missionaries had also served on the island prior to this) and in 1932 the missionary was officially recognised as Honorary Commissioner and Magistrate. An Administrator was appointed in 1950 following the development of the fishing industry.

Economy. All the inhabitants live in the settlement of Edinburgh, which is one of the few beaches on the north coast of the island where landing is possible. Until 1942, and the arrival of a Naval garrison, the islands remained isolated. The inhabitants engaged in primitive crofting agriculture, principally the cultivation of potatoes, gathering young sea birds and eggs and maintaining a few stock and poultry. There was no monetary economy. Occasional visiting ships brought gifts from the United Kingdom. In 1937-38 a Norwegian Scientific Expedition visited the group for the purpose of studying the natural science of the islands and the sociology and health of the community.

The arrival of the Navy in 1942 re-introduced the islanders to the outside world and marked their emergence from a state of dependence on charity, for a naval chaplain recognised the possibilities of a crawfish industry at Tristan. In 1948 an agreement between the Governor of St. Helena and a South African fishing company, enabled the latter to set up a fishing and canning industry on conditions which included the maintenance on the island at the company's expense of a doctor, nurse, agriculturist and teacher. In 1949 the Tristan da Cunha Development Company began operations; in 1950 the United Kingdom Colonial Development Corporation acquired a controlling interest. The Company has 2 refrigerator vessels and a cannery: in 1952-53 some 27,000 cases of frozen crawfish and nearly 1,000 cases of tinned crawfish were exported, mainly to the American market. Since 1951 the island's labour force has been insufficient to meet the demands of the industry and a number of fishermen have been recruited from Cape Town.

ADMINISTRATION

Though a Dependency of St. Helena, the Tristan da Cunha group has, for practical convenience, continued to be directly supervised by the Colonial Office. The first Administrator assumed office early in 1950. He is also the Magistrate. There is an Island Council of 21 members, of whom 15 are elected. Nominated members include the resident chaplain, the head man and the head woman and representatives of the Tristan da Cunha Development Company. The Island Council was first organised in 1932 by the Rev. A. G. Partridge, who was the commissioner and magistrate; it was reorganised in 1950 by the administrative officer, H. Elliot.

Administrator: P. R. FORSYTH THOMPSON.

Medical Officer: K. J. FAWCETT.

The Island Council has power to levy local rates and taxes and to make and enforce by-laws. It administers a local government fund, whose revenue depends almost entirely on a contribution from the fishing company. There is also a Trust Fund in South Africa. Since 1952 there has been some revenue from the sale of postage stamps. Two Colonial Development and Welfare grants have been made for Tristan; the second provided for an afforestation programme.

Education: There are about 60 children in the island school. The salary for a second teacher for three years was provided for under the first of the above grants.

Communications: A meteorological and wireless station built by a detachment of the South African Defence Force in 1942, and manned during the rest of the war by the Royal Navy, is now operated by the South African Government and provides daily contact with passing shipping. Normally the only means of visiting the island is by one of the vessels of the fishing company which make voyages at about six-weekly intervals to Cape Town between September and May.

FALKLAND ISLANDS

(Capital: Stanley)

GEOGRAPHICAL-ECONOMIC SURVEY

THE FALKLAND ISLANDS are situated in the South Atlantic Ocean, between latitudes 51° and 53° S. and longitudes 57° and 62° W., on the edge of the Patagonian Continental Shelf. The islands are about 400 miles north-east of Cape Horn. The group consists of two main islands, East and West Falkland, and about 200 smaller islands, with a total land area of about 4,600 sq. miles.

The islands are composed of sedimentary rocks of Palaeozoic and early Mesozoic age which show certain affinities with the sedimentary rocks of South Africa. In the north of the Falkland Islands, the quartzitic rocks have been intensely folded and form rolling ranges of hills rising to 2,300 ft in height. The southern part of East Falkland, known as Lafonia, is a great flat plain of sandstone which seldom rises more than 100 ft. above sea-level. An indented coastline provides a multitude of excellent harbours everywhere in the group. The land surface is frequently covered with thick deposits of peat which impede surface drainage, so that there are few active rivers. No minerals of economic importance are known, and the geological structure suggests that it is unlikely that any will be discovered. Limestone is totally absent and all soils are acid in reaction.

The climate is temperate and oceanic, similar to that of the Scottish Hebrides. At Stanley, the temperature seldom rises above 70° F. or falls below 20° F. The mean January temperature is 49° F.; that of July is 35° F. Rainfall generally totals about 26 inches per annum and is equally distributed throughout the year. It is, however, believed that the southern and western lowlands of the islands are warmer and drier than the extreme north-east, where most of the meteorological observations have been made. The principal features of the climate are its extreme variability and prevalence of wind. The weather characteristic of any season may be experienced on any day of the year. Gales are frequent, and strong westerly winds occur at all seasons.

The cool, windy climate has prevented natural tree-growth. Consequently the natural vegetation of the Falkland Islands is a grass-heath complex, which is similar to the moorland vegetation of Great Britain. Few crops can be grown without special attention. The only fuel is peat, and timber, for all purposes, must be imported from South America.

The population is wholly white, predominantly of British stock, with a small admixture of Scandinavian and Latin American blood. By 1900, the population had risen to about 2,000 and was reckoned at 2,300 in 1955. Natural increase is more or less balanced by emigration which is necessary owing to the lack of economic opportunity in the islands. More than half the population live in the capital, Stanley (sometimes referred to as Port Stanley). The rest live in scattered, isolated settlements on all the larger islands. No other settlement has more than a hundred inhabitants.

During the early development of the Colony, great emphasis was placed upon its strategic position, both as a naval base and as a port of call for ships rounding Cape Horn. Large numbers of wild cattle, descended from those introduced by de Bougainville, were killed for beef and hides. After 1850, however, the cattle were gradually replaced by sheep. Throughout the nineteenth century,

Stanley remained an important revictualling port with a primitive ship-repairing industry. This industry dwindled as steam replaced sail, and died altogether after the Panama Canal was opened and shipping forsook the Cape Horn route to the Pacific.

Most of the land was acquired freehold by a few sheep-farmers, and the tendency has been for estates to grow in size and diminish in number. The Falkland Islands Company Ltd. now owns more than half the total area of the islands. Few landowners live in the islands. Extensive ranching of sheep for wool is virtually the only economic activity and occupies between 400 and 500 men. The wool is exported to the United Kingdom. A few skins and some tallow are also exported, the latter to Holland. Plans are in operation to broaden the economy by producing meat. A small freezing plant, for mutton and beef, has been established by the Colonial Development Corporation at Ajax Bay and went into limited use in 1953, but has since closed.

There are about 600,000 sheep in the islands, but the number has been falling slowly since 1890 owing to deterioration of the grassland. It is believed that, if better farming techniques were adopted, the land could support more stock.

Other industries have been attempted but none have succeeded. Sealing has been carried out sporadically, both for fur seals, which are now protected, and for the oil of the sea lion and elephant seal. Whaling was attempted until 1916, when the station moved to South Georgia.

D.H.M.

HISTORY

The Falklands are believed to have been first sighted in 1592 by Captain John Davies, a member of Admiral Cavendish's expedition sailing to the Philippines and China via Cape Horn. The first landing was made in 1690 by Captain John Strong who named the islands after the Treasurer of the Navy, Viscount Falkland. Three-quarters of a century later, Captain John Byron was instructed to establish a base in the area. A settlement was made at Port Egmont in West Falkland and the territory claimed for Britain. Byron was unaware that a French expedition, under de Bougainville, had established a settlement at Port Louis in East Falkland in the previous year (1764) and had claimed the whole group of islands for Louis XV. The French maintained their claim until 1768 when they yielded it to Spain on receiving a sum of £24,000. The Spaniards regarded the whole area as within their empire and left a garrison in the Falklands under the authority of the Imperial Governor at Buenos Aires. They requested Britain to leave the Falklands and in 1770 despatched a force to Port Egmont which expelled the settlers. The negotiations with Spain which followed provided for the restoration of the *status quo ante*; Spain disavowed her act of dispossession, and the British settlement was re-established. It was abandoned shortly afterwards, in 1774, for reasons of economy; the British claim to the islands was, however, maintained. In 1776, the Spanish constituted the Captaincy-General of Buenos Aires as the Viceroyalty of La Plata which claimed to include the Falkland Islands. The Spanish settlement in the Falklands was withdrawn in

THE 'BRITISH COMMONWEALTH

1811, but in 1820, the Buenos Aires Government, which had declared its independence from Spain in 1816, laid claim to the Islands. In 1829, it issued a decree claiming sovereignty over the Falklands and appointed a governor; a small colony was maintained from 1828-31. Britain protested against the decree. The United States Government sent a warship to disperse the colonists in 1831, after protesting against the seizure of one of her schooners. A British reoccupation of Port Egmont was completed in 1832-33, and British occupation and administration has continued uninterrupted since that date. The Buenos Aires Government, renamed the Argentine Confederation Government, protested on the grounds of its succession to the disputed Spanish title. Palmerston denied justification of the Argentine protest. In 1841, the British Parliament legislated for the establishment of a Government of the Falkland Islands, and a Governor was appointed. Between 1841 and 1849 the Argentine Government made further protests. Meanwhile, the British settlement had increased in number to 800 in 1851, and in that year the Falkland Islands Company was incorporated by Royal Charter. The sheep-farming industry was developed and health and education services for the settlers introduced. In 1884-85 Argentina renewed her claim to the Islands on the basis of their proximity to Argentine territory, but remained quiescent during the following 20 years. Letters Patent issued in 1908 and amended in 1917 formally constituted the Islands and their dependencies British territory. Argentine interest in the Falklands revived and further protests against the British occupation were made. In recent years, Argentina has asserted her claim less by protest than by, for instance, refusing to allow Falkland Islanders visiting the Argentine to return home without applying for and acquiring Argentine nationality papers, and by the publication of maps and stamps showing the islands as part of Argentine territory.

In the two world wars, the Falklands served as a naval base from which world shipping was protected from commerce raiders. It was from the Falklands that Admiral Sturdee destroyed Graf von Spee's squadron in 1914, and H.M. ships *Exeter*, *Ajax* and *Achilles* were based there at the time of the destruction of the *Graf Spee* in the Battle of the River Plate. In 1942, following the declaration of war with Japan, an Imperial garrison of 2,000 officers and men was despatched to the Falklands and remained there until 1944.

H.L.

THE CONSTITUTION

The present Constitution came into force on January 1st, 1949. The Colony is administered by a Governor, assisted by an Executive Council consisting of 3 *ex-officio* members, one appointed official and 3 nominated unofficial members; and a Legislative Council. In December, 1951, the Constitution was amended to allow an unofficial majority in the Legislative Council; it is composed of 5 official members, 2 nominated unofficial members and 4 elected members. The electoral principle was introduced, on a basis of universal adult suffrage in 1949. There is a Town Council for Stanley.

THE GOVERNMENT

Governor: O. R. ARTHUR, C.M.G., C.V.O.

EXECUTIVE COUNCIL

The GOVERNOR.

The COLONIAL SECRETARY.

The SENIOR MEDICAL OFFICER.

The AGRICULTURAL OFFICER.

S. G. TREES, M.V.O. (Colonial Treasurer).

A. G. BARTON, C.B.E., J.P.

N. K. CAMERON, O.B.E., J.P.

H. C. HARDING, J.P.

LEGISLATIVE COUNCIL

President: The GOVERNOR.

Official Members: The COLONIAL SECRETARY, The SENIOR MEDICAL OFFICER, The AGRICULTURAL OFFICER, S. G. TREES, M.V.O. (Colonial Treasurer), A. MERCER, O.B.E. (Superintendent, Posts and Telegraphs).

Nominated Unofficial Members: W. F. MCWHAN, M.B.E., W. W. BLAKE.

Elected Members: A. L. HARDY, J.P. and S. C. LUXTON (Stanley), K. W. LUXTON, J.P. (West Falkland), T. A. GILRUTH, J.P. (East Falkland).

CIVIL ESTABLISHMENT

Colonial Secretary: A. G. DENTON-THOMPSON.

Chief Constable and Keeper of Prisons: D. E. J. IKKINT.

Collector of Customs: W. J. GRIERSON.

Colonial Treasurer: S. G. TREES, M.V.O.

Harbour Master: J. S. R. HUCKLE, D.S.C.

Registrar-General, Registrar of Supreme Court: H. BENNETT.

Senior Medical Officer: R. S. SLESSOR.

Superintendents of Departments: (Education) E. M. CAWKELL, (Posts and Telegraphs) A. MERCER, O.B.E., (Works) A. E. LIVERMORE.

Veterinary Officer: E. T. FERN.

Auditor: I. C. GLEADELL.

RELIGION

About 1,500 of the population are members of the Church of England. The Bishop of the Falkland Islands Diocese is the Rt Rev. DANIEL IVOR EVANS, C.B.E. (Calle 25 de Mayo, 282, Buenos Aires, Argentina). The Roman Catholic Church is represented by a Prefect Apostolic: Rev. P. J. IRELAND (Catholic Church, Stanley, Falkland Islands). The United Free Church of the Falkland Islands is headed by Rev. W. F. MCWHAN (The Tabernacle, Stanley, Falkland Islands).

BROADCASTING

There is a Government-operated broadcasting station at Stanley. The number of licence-holders in 1953 was 361. The Government also operates a rediffusion service in Stanley (261 subscribers in 1953) and a wireless station on the West Falkland, to which most of the farms are linked by telephone. The East Falkland has similar telephone facilities.

FINANCE

The only banking facilities are those offered by the government savings bank. The currency is British coinage and local £5, £1, and 10s. notes which are interchangeable with sterling at par.

In the period 1946-54, the financial position of the Colony improved from a deficit of £24,000 to an anticipated surplus of £17,000. The Colony received an allocation of £150,000 under the Colonial Development and Welfare Act of 1945 as a contribution to a 10-year development programme; this was revised in 1950 and it is proposed to spend approximately £265,000 between 1950 and 1956, the extra funds being provided mainly by Falkland Islands revenue. The total is to be spent on: Basic Services (including buildings and roads) £110,736; Social Services (mainly health and education) £98,350; and on Productive Services £56,500.

ISLAND TERRITORIES

TRADE AND INDUSTRY

The Falkland Islands Company, founded in 1851, is the largest landowner and trading company. Apart from Stanley, where the population is employed on Government and public services, trading and shipping, the main occupation is sheep-farming. There is a Falkland Islands Labour Federation which has a 90 per cent membership of eligible labour.

TRANSPORT

A mail and passenger service between the Colony and the mainland of South America (Montevideo) is maintained approximately monthly by the Falkland Islands Company's vessel s.s. *Fitzroy*. Internal sea communications are provided by the Government-owned *Philomel*, the *Fitzroy* and by small private vessels. A Government-owned local air service was introduced in 1949. There are no roads, except in Stanley, and no inland waterway or rail services. Travellers generally use horses when moving from one settlement to another on the mainland.

HEALTH

The chief ailments are the common cold, nasopharyngitis, bronchitis, gastro-enteritis and rheumatism in its chronic form. The incidence of tuberculosis is higher than in the United Kingdom. There is one general hospital in Stanley (32 beds). The Government Medical Department employs one Senior Medical Officer and 3 Medical Officers (1 at Stanley, 1 at Darwin and 1 at Fox Bay); a Tuberculosis Officer is engaged on a survey. The Government air service is used extensively for medical transport to and from Stanley. The m.v. *Philomel* is also at the disposal of the Medical Department when weather does not permit the use of aircraft.

EDUCATION

In 1953 there were 360 children of school age in the Colony. Government schools in Stanley cater for children between the ages of 5 and 14, though a number stay until they are sixteen. Outside Stanley education is carried on either in settlement schools (some of which are very small) or by itinerant teachers. In 1953 a maximum of 17 teachers were employed among the 185 children outside Stanley, but owing to the remoteness of some houses, some 20 per cent of Camp children were receiving no education.

LIBRARIES

There are 2 lending libraries in Stanley operated by the Town Council and the Falkland Islands Company respectively.

FALKLAND ISLANDS DEPENDENCIES

The Falkland Islands Dependencies, five in number, fall into two groups: (a) South Georgia, 800 miles to the east of the Falklands, together with South Orkney and South Sandwich, lying 450 miles to the south-west and south-east respectively of South Georgia; (b) South Shetland and Graham Land (which is part of the Antarctic continent).

Practically all the land within this enormous area has been influenced by very extensive glaciation. All coasts, except that of South Georgia, are ice-bound for much of the year and many parts of the continental coast are ice-free only for a few days each summer.

The principal island groups are aligned along the belt of structural deformation known as the Scotia Arc. It is believed that the Tertiary earth movements responsible

ALKLAND ISLANDS

for the formation of the Andes continued along the Scotia Arc to the Graham Land peninsula and thence across Antarctica. Many of the islands consist of intensely folded metamorphic and sedimentary rocks. Crystalline igneous rocks occur in the south of South Georgia. Some islands are actively volcanic, notably the South Sandwich Islands and certain of the South Shetland Islands. Most of the islands are mountainous, with steep rocky and glacier coasts. Peaks rise to 9,000 ft. in South Georgia, to 7,000 ft. in the South Shetlands and to 4,000 ft. in the South Orkneys.

Graham Land consists of an elongated narrow peninsula which rises abruptly to heights of 7,000 ft. in the north and 10,000 ft. in the south. Mesozoic and Tertiary sedimentary rocks, often capped with igneous sheets, are known in the north; southwards metamorphic and igneous rocks predominate. No minerals of economic value have so far been discovered.

The climate of this large area is dominated by the circulation of air from the Antarctic continent. The Polar plateau acts as a reservoir of very cold air which may penetrate far beyond the edge of the continent. Thus, at Cumberland Bay, South Georgia, the latitude of which is the equivalent to that of Scarborough, the monthly mean temperature varies between 42° F. in February and 28° F. in August. In higher latitudes, temperatures seldom rise above freezing point and may fall very low indeed. In the South Orkneys, South Shetlands and West Graham Land, mean temperatures are commonly 30–32° F. in January, falling to 5–10° F. in July. Temperatures normally range between 45° F. and minus 40°. In South Georgia, about 60 in. of rainfall are recorded annually in the lee of the mountains, much of which falls as snow. Further south, rain is almost unknown and there are no reliable measurements of the total annual snowfall. Frontal depressions move eastwards along the margin of the continent almost continuously; hence the weather is overcast and stormy for much of the year. Snow falls on nine days out of ten. The only settled conditions occur in winter, when cold anticyclonic weather penetrates northwards. In the continental interior, most of which is an elevated plateau of ice, the climate at all seasons is less stormy, but always very cold.

In South Georgia, the climate is sufficiently temperate to support the growth of 20 species of hardy grass and other flowering plants. Reindeer have been introduced and appear to thrive. In the rest of the Dependencies, only two species of vascular plant are known and these are confined to a few favourable localities. Elsewhere, any snow-free ground is partly covered with mosses and lichens. There are no terrestrial mammals.

The island of South Georgia, which has an area of about 1,450 sq. miles, was first sighted by a British expedition under Anthony de la Roché in 1675. It was explored and claimed for Britain by Captain Cook in 1775. In that year he also discovered the South Sandwich Islands. The South Shetlands were discovered and claimed for Britain by William Smith in 1819. Captain Bransfield discovered part of the Graham Land coast in 1820 but the territory was not claimed for Britain until the exploration of John Biscoe in 1832. The South Orkneys were discovered by Captain Powell in 1821 and since that date the Islands and other territories of the Dependencies have remained in continuous British possession. The continental interior is mostly unexplored. In 1948, a party of the Falkland Islands Dependencies Survey reached 74° 42' S. lat. on the east coast of Graham Land. This is the most southerly latitude reached on land in this sector, although several American explorers have flown nearer the Pole. The coasts and plateau of the Graham Land peninsula have been explored and most of the outlying islands have been visited from time to time.

THE ' BRITISH COMMONWEALTH

Claims to the Islands of the Dependencies have been made in recent years by Argentina and Chile and their naval and military parties have occupied a few bases. Proposals by the United Kingdom that their claims should be submitted to the International Court of Justice have so far met with a negative response.

The only economic activity within the Dependencies is whaling, though a little sealing is permitted on certain beaches in South Georgia. In the eighteenth and early nineteenth centuries South Georgia was frequented by sealers of many nationalities, who reaped a rich harvest from the immense numbers of fur seals and elephant seals of these shores. By 1815, however, the slaughter of seals had reached such proportions that sealers were beginning to look elsewhere. The seals of the South Orkney Islands were also quickly exterminated and after 1830 there were very few visits to the islands.

Towards the end of the nineteenth century, interest in the Dependencies was renewed and a few abortive whaling and sealing voyages were made in Antarctic waters. These were followed by the first scientific expeditions, beginning with the Belgian Antarctic Expedition of 1897-99 and followed by Swedish, British and French parties.

The principal development took place in 1903, when C. A. Larsen founded the first modern whaling company. Other companies followed and the harbours on the east coast of South Georgia were used as bases. Factories have been built at Prince Olaf Harbour, Leith Harbour, Husvik, Grytviken and Godthul. Although these shore stations have been partly superseded by floating factories, those on South Georgia remain actively concerned with the processing of whales and the maintenance of the whaling fleet. Land stations were also operated at Signy Island (South Orkneys) and Deception Island (South Shetlands) but are now derelict. Since 1945 three companies have traded as lessees of the Dependencies administration.

The only inhabitants are those working at the three whaling stations, on the sealing grounds and at the ship repair base. In the summer of 1953 they numbered 1,449; in winter, after the end of the whaling season, the population is less than half. Apart from this there are the handful of scientists employed by the Falkland Islands Dependencies Survey, who occupy bases in the South Shetlands, South Orkneys and Graham Land. The Survey (financed by revenue from the whaling industry) was established during

1951 and by 1954 a complete survey had been made of the islands and important meteorological work carried out. The Falkland Islands Dependencies Meteorological Service was established in 1950 and is an integral part of the Survey.

Its headquarters are at Stanley and it includes forecasting offices at South Georgia and Stanley. The Meteorological Service broadcasts observations for international use and collects and publishes climatic data. Aerial surveys of the Antarctic have been carried out from the meteorological base on Deception Island during the Antarctic summer of 1955-56 as a preparation for the International Geophysical Year (1957-58). The British Antarctic expedition, which forms part of the plans for investigations during the Geophysical Year, will be led by Dr. Vivian Fuchs, Director of the Falkland Island Dependencies Scientific Bureau.

Labour in the Dependencies is recruited mainly from Norway and the United Kingdom. During the 1951-52 season, 2,270 whales were killed, giving 119,905 barrels of oil valued at £1,399,880, and 103,233 bags of meat, valued at £359,660. The accident rate among the whaling crews is high. The annual catch of seals is now restricted to 6,000 from which, in 1953, 11,475 barrels of oil were obtained. The United Kingdom is the main market and the principal supply country for the Dependencies. South Georgia is served by vessels engaged in the whaling industry and the R.R.S. *John Biscoe* calls there and elsewhere in the Dependencies during the Southern summer.

H.L.
D H.M.

Administration

The Letters Patent of 1948 empower the Governor of the Falkland Islands to legislate for the Dependencies. An administrative officer, who is also a magistrate, represents the Governor in South Georgia. Representatives of the Government accompany the whaling expeditions. The whaling stations are organised by the managers of the companies who own them. In the other Dependencies there is a magistrate at each of the Survey Posts, who is also a member of the Survey Party.

Administrative Officer, South Georgia: R. E. SPIVEY.
Secretary to the Falkland Islands Dependencies Survey:
F. K. ELLIOTT.

MAURITIUS

(Capital: Port Louis)

GEOGRAPHICAL-ECONOMIC SURVEY

THE ISLAND OF MAURITIUS lies in the Indian Ocean at 20° S. lat. and 57° E. long., and 550 miles east of Madagascar. It is elliptical in shape and about 36 miles in length and 23 miles broad. The island, together with its numerous dependent groups of coral islands, comprises an area of about 800 sq. miles; the total land area of the dependencies is about 47½ sq. miles.

The island, rising from a submarine ridge, is mountainous and volcanic in origin. The surrounding tropical seas are shallow and coral reefs encircle the coast to such a degree as to hinder shipping. The extinct volcanic craters are now largely eroded away, but some still contain lakes (e.g. Grand Bassin).

Population. The great increase in population during the last century has made Mauritius one of the most densely populated regions of the world. At the end of 1953 there were 525,000 persons in Mauritius itself, a population density of over 600 persons per sq. mile (cf. United Kingdom 550). The population of Rodrigues is (1953) 14,000 and of the Lesser Dependencies 1,700. As a consequence there is a problem of over-population in relation to resources, and it does not seem probable that any increase in production will be able to keep pace with the future increase in numbers. The problem is not only one of supplies but of actual space. If the present rate of population increase continues it will be difficult in 50 years time even to find adequate housing room on the island for the inhabitants. The largest racial group is Indo-Mauritian, (immigrants from India and their unmixed descendants) forming 67.1 per cent of the population; 29.3 per cent are Europeans and descendants of Europeans and people of African and mixed origin, 3.6 per cent are immigrants from China and their unmixed descendants.

Climate: Mauritius experiences a hot summer—temperatures of over 95° F. are recorded on the lowlands; and high humidity increases the adverse effect of the heat. The uplands of the interior are more pleasant and healthy. Winters are generally cool and rainfall is everywhere abundant but heaviest during the hot season (November to April). The south-east is much the wettest coast due to rainfall brought in by the south-east trade winds. Cluny on the south-east coast has a mean annual rainfall of 145 in. whilst Albion on the west coast records only 31 in.

Mauritius is subjected to frequent typhoons which occur mostly between January and April, often causing extensive damage. In 1892 a cyclone killed 1,200 people and in 1943 three cyclones completely disorganised life on the island.

Production. Large-scale planting of sugar has reduced the native flora, but there are still considerable standing timber reserves. The fertile, volcanic soils of Mauritius support extensive sugar plantations; and sugar accounts for over 90 per cent of the total exports—about 500,000 tons are cropped each year (1953. 512,076 tons; 1954: 499,000 tons). Other commodities are by-products of sugar-cane (molasses, rum), tea, tobacco, aloes (the manufacture of sugar bags from aloe fibre is an important industry developed during the 1939-45 war), maize and

timber. Agriculture is by far the most important occupation, employing two-thirds of the total wage earners.

Because of specialisation in sugar production a wide variety of commodities must be imported. The island's commerce passes entirely through Port Louis, the capital, on the north-west coast, and most trade is with the British Commonwealth.

F.H.A.-A.

HISTORY

Mauritius, with Bourbon and other dependencies, was taken from France by a British expedition sent from India in December, 1810. A centre of local trade, with the advantages of an excellent harbour, except in the hurricane season, Mauritius had throughout the wars of the eighteenth century supplied French fleets which preyed upon British commerce in the Indian Ocean. By the Treaty of Paris (1814), Mauritius and its dependencies, which the French had possessed for a century, were ceded to Britain. Bourbon was restored to France. The dependencies include Rodrigues, 365 miles to the north-east, Chagos Archipelago, 1,180 miles to the north-east in the direction of Ceylon, Agalega, 580 miles and Cargados Carajos 250 miles north of Mauritius.

The economy of Mauritius was seriously affected by the severance of political ties with the fertile island of Bourbon and the loss of the Madagascar trade which had formerly passed through Port Louis, and from the fact that Cape Town served Britain better as a commercial entrepôt for East African exchange. Some of these difficulties were eased when Port Louis was opened to trade under reciprocity regulations in 1819, though there was opposition to Britain's determination to enforce the abolition of the slave trade.

To replace the labour supply from Madagascar, Indian immigration was encouraged and by 1861 the population, which since 1833 had trebled to 300,000, included nearly 200,000 settlers from India. The sugar industry established by the Dutch in the seventeenth century, and nurtured by the French Governor, Mahé de la Bourdonnais (1735-46), flourished in the period following 1825. In recent years, sugar has governed the entire economy of the island. From 1823-33 the crop increased from 14,000 to 34,000 tons and in 1953 a peak production of 512,076 tons was reached.

During the nineteenth century, Mauritians suffered severe epidemics; of cholera in the 1850's, of malaria which was constantly present (the epidemic in the 1860's caused 20,000 deaths in Port Louis), and of bubonic plague in 1899. Epidemics of malaria appeared again in the 1930's, and infantile paralysis in 1945. The research mission of Sir Ronald Ross in 1908 promoted valuable anti-malarial measures, and, with the development of the Malaria Eradication Scheme launched in 1948 with financial aid from the Colonial Development and Welfare funds, malaria had by 1952 almost completely disappeared from the island.

During the early years of British rule authority was vested solely in the Governor. From 1825 he was advised

THE BRITISH COMMONWEALTH

by a council of 4 officials. A Legislative Council, introduced in 1832, included 7 unofficial members, chosen from the chief landowners and principal merchants, and 7 official members. In 1885 a partly elected Legislative Council was constituted; it was composed of 8 *ex-officio* members, 9 nominated members (of whom at least 3 were without public office) and 10 elected members, of whom 2 represented Port Louis. In July 1933, the proportion of unofficial nominated members was increased to two-thirds and it was tacitly accepted that their vote in Council should be free. The constitution of the Executive Council was also amended to allow the appointment of additional non-official members. During the second World War, the last Council under the 1933 constitution was extended beyond its normal term of 5 years and continued from 1936 to June 1948. By that time a new, liberal constitution, which had been promised, had been negotiated and is still in force. See THE CONSTITUTION, below.

Since 1951 the unofficial members of the Council have been brought into the formulation of departmental policy. In 1948, Civil Commissioners were appointed to administer local affairs and to co-ordinate government machinery in the three administrative districts. Forty partly elected village councils were established in 1947, and by 1953 their number had risen to 81. They were empowered in 1952 to raise taxes, make by-laws and own property. In the same year three District Councils were set up, with a mainly elected membership, to advise the Civil Commissioner in each District. The municipal privileges which Port Louis had enjoyed since 1849 were revised in 1950; the membership of the municipal council was then increased from 12 to 16 and the suffrage extended.

The island commands the sea routes linking Australia, India and the Far East with Africa. During the 1939-45 war, its significance increased with the closing of the Suez Canal and the threat to India by Japan. From an airfield constructed during the war a regular air service was maintained between London and Paris and Mauritius, and in 1952, the trans-ocean service from Africa to Australia, by way of Mauritius, was inaugurated.

H L.

THE CONSTITUTION

Authority is vested in a Governor, with an Executive and a Legislative Council. Letters Patent, Royal Instructions and an Order-in-Council dated December 9th, 1947, provide for a Legislative Council composed of 3 *ex-officio*, 12 nominated unofficial and 19 elected members, under the Presidency of the Governor. The Executive Council consists of 3 officials and 4 members selected by the Legislative Council from amongst the non-official members. Royal Instructions provide for the appointment of other members to the Executive Council and, in September 1953, 1 nominated and 1 elected member were appointed. Tenure of Office of appointed members is 3 years.

In March 1956 proposals for important constitutional changes were announced. Under these, membership of the Executive Council would be increased to 12, including 7 unofficial members elected by the Legislative Council (giving for the first time a majority to elected members), 2 unofficial members nominated by the Governor and 3 *ex-officio* members; the number of Legislative Council members would be increased from 19 to 25, the maximum number of nominated members being 12 (the 3 *ex-officio* members to be retained); and for the first time a Speaker would be appointed to the Legislative Council. In addition it is proposed to abolish the literacy qualification for the

right to vote and to introduce universal adult suffrage at the 1958 general election. The proposals include a change of function for the Executive Council which would become an executive instead of an advisory body; all members would become Ministers. The increase in membership of the Executive Council and the introduction of the ministerial system are planned to take effect in the autumn of 1956.

The official languages are English and French.

THE GOVERNMENT

Governor and Commander-in-Chief: Sir ROBERT SCOTT, K.C.M.G.

EXECUTIVE COUNCIL

The GOVERNOR (President).

The COLONIAL SECRETARY.

The PROCUREUR and ADVOCATE-GENERAL.

The FINANCIAL SECRETARY.

S. RAMGOOLAM, C. E. MILLIEN, R. SEENEVASSEN, A. L. NAIRAC, C.B.E., A. GUJADHUR, F. G. MARTIAL, O.B.E.

LEGISLATIVE COUNCIL

Ex-Officio Members: The GOVERNOR, The COLONIAL SECRETARY, The PROCUREUR and ADVOCATE-GENERAL, The FINANCIAL SECRETARY.

Elected Members:

Port Louis Constituency; M. J. J. ROZEMONT, R. SEENEVASSEN, C. E. MILLIEN, A. R. MOHAMED. Riv. du Rempart Constituency: S. RAMGOOLAM, A. BEEJADHUR, H. R. VAGHJEE.

Savanne Constituency: S. BISSOONDOYAL, G. VENKATASAMY, L. P. ROZEMONT.

Moka-Flacq Constituency: A. GUJADHUR, S. BOOLELL, V. RINGADOO.

Black River Constituency: J. M. KOENIG, J. G. FORGET, R. BHAGEERUTTY, L. R. CHAPERON, P. G. R. RAULT, S. F. CHADIEN.

Nominated Members: A. L. NAIRAC, C.B.E., F. G. MARTIAL, O.B.E., A. M. OSMAN, O.B.E., A. E. de CHAZAL, O.B.E., J. E. M. AH-CHUEN, M. A. D. MAIGROT, O.B.E., A. G. SAUZIER, J. E. PIAT, Q.C., H. BAHEMIA, L. A. CELESTIN, G. J. M. SCHILLING, D. TAYLOR.

CIVIL ESTABLISHMENT

Colonial Secretary: R. NEWTON, C.M.G.

Financial Secretary: H. J. HINCHEY.

Deputy Colonial Secretary: F. L. SIMPSON.

Civil Commissioners: K. J. W. LANE (North), J. L. BRADSHAW (South), M. H. M. ROUSSET (Moka-Flacq), L. P. TOUREAU.

Accountant-General: A. R. HARVAIS.

Directors of Departments: M. N. LUCIE-SMITH (Agriculture), H. F. KYNASTON-SNELL, M.B.E. (Education), R. T. STEVENS, O.B.E. (Electricity and Telephones), J. A. R. LAVOPIERRE (Medical Services), E. G. DAVY (Observatory), R. M. A. BERENGER (Public Works and Surveys), M. V. M. HERCHENRODER (Statistics).

Labour Commissioner: J. STIRLING, O.B.E.

Procureur and Advocate-General: J. R. ESPITALIER-NOEL, Q.C.

Commanding Officer, Mauritius Naval Volunteer Force: Cmdr. C. R. E. de JERSEY, O.B.E., R.N. (Retd.).

Commissioner of Police: N. P. HADOW.

Conservator of Forests: L. F. EDGERLEY, O.B.E.

ISLAND TERRITORIES

LEGAL SYSTEM

The laws of Mauritius are mainly based on the French Codes. The French Civil Code, Penal Code, Code of Commerce and Code of Civil Procedure, with amendments to suite local conditions, are still to a large extent in force in the island. There are also a great number of Ordinances.

The Bankruptcy Law, the Law of Evidence and the Law of Civil and Criminal Procedure are, however, mostly English, as well as the whole system of the Labour Laws.

The highest judicial authority is the Supreme Court, presided over by the Chief Justice assisted by three Puisne Judges.

A Court of Criminal Appeal was set up in January, 1955. Previously, the right of appeal from the Supreme Court of Mauritius had been to the Judicial Committee of the Privy Council. The new court hears appeals from adjudications of the Supreme Court in the exercise of its original criminal jurisdiction.

Chief Justice: Sir FRANCIS HERCHENRODER, Q.C.

Puisne Judges: A. R. M. OSMAN, E. B. SIMMONS, Q.C.,
R. NEERUNJUN, O.B.E.

RELIGION

The main religion of those of European descent is Roman Catholic (approximately 160,000 adherents); the Bishop is the Rt. Rev. DANIEL LISTON, Port Louis. The Indo-Mauritians are mostly Hindus, but there are some Moslems. In 1952 there were approximately 6,000 members of Protestant denominations. The Anglican Bishop of Mauritius is the Rt. Rev. H. V. L. OTTER-BARRY, C.B.E. The Minister for the Presbyterian Church of Scotland is the Rev. D. S. MACGILLIVRAY, M.B.E.

THE PRESS

DAILY AND SUNDAY NEWSPAPERS

Advance: 5 Dumat Street, Port Louis; English and French, daily; Editor Hon. AUNAETH BEEJADHUR.

Chinese Commercial Paper: 34 Rampe Street, Port Louis; Chinese, daily.

Chinese Daily News: 49 Desforges Street, Port Louis; Chinese, daily.

Janata: Port Louis; Hindi, twice weekly.

La Vie Catholique: Port Louis; French, Sundays.

Le Cerneen: Felicien-Mallefille Street, Port Louis; French, daily; Editor HERVE de SORNAY.

Le Mauricien: Port Louis; French, daily.

BROADCASTING

The Government-operated Mauritius Broadcasting Service has a monopoly in the Colony. There were 16,852 wireless licences in force in June, 1954. A new studio and transmitting building are to be erected under a scheme for technical improvements.

Manager, Broadcasting Service: C. de CHAZAL.

FINANCE

The unit of currency is the rupee, valued at rs. 6d. Currency in circulation consists of notes of Rs.1,000 (legal tender between banks and government only), Rs.25, Rs.10, Rs.5 and Re.1; cupro-nickel coins of Re.1, 50 cents, 25 cents and 10 cents, and bronze coins of 5, 2 and 1 cent. There is a branch of Barclays Bank D.C.O. and of the Mercantile Bank of India at Port Louis; the

MAURITIUS

Mauritius Commercial Bank operates at Port Louis, Rose Hill and Curepipe.

Government revenue before 1937 derived mainly from tariffs, but it doubled itself within ten years when a graduated poll tax on incomes was introduced. In July, 1951, the poll tax was replaced by income tax and in 1953-54 nearly one-third of the revenue was derived from income tax. The Public Debt at the end of June, 1954, amounted to Rs.60,812,100.

TRADE AND INDUSTRY

The entire sugar production is marketed by the Sugar Syndicate, the price being fixed by agreement with the Ministry of Food. There are about 275 registered co-operative societies, with a membership of 23,431 (April, 1953). Turnover in goods and services for the year 1952-53 amounted to almost Rs 28 million.

TRANSPORT

Roads: The Colony has approximately 500 miles of main roads, 200 miles of branch roads and 54 miles of roads in villages and extra-urban areas; 341 miles of main and branch roads have been asphalted.

Railway: There are 92 miles of railway, 4ft. 8½ in. gauge. In 1952-53 2,128,966 passengers and 470,111 tons of freight were carried. The General Manager of Railways is P. CANTIN.

Shipping: Port Louis is the only port and it can accommodate 10 ocean-going and 4 small vessels at any one time. During 1953 a total of 330 vessels entered the port, giving a total of 1,164,412 net tons. Regular cargo services from the United Kingdom are provided by the Clan Line, Union-Castle Line and Bullard King Ltd., and from continental ports by the French companies Messageries Maritimes Ltd. and Nouvelle Cie Havraise Peninsulaire, also by a combined French and Swedish company, Svedel Lines. Passenger services from the United Kingdom direct to Mauritius are infrequent, but French vessels provide a good service from Marseilles. The Dutch Royal Interocean Line vessels call regularly on their Far East-South Africa-South America service, providing a passenger and cargo service to and from South Africa.

Air: There is an airport at Plaisance, operated by the Colonial Government, and the island is linked by air with Africa, Europe and Australia. Air France provides a service 3 times a week between Paris and Mauritius (through Cairo, Nairobi, Madagascar, and Reunion). Qantas Empire Airways operate a fortnightly service between Sydney and Johannesburg, via Melbourne, Perth, Cocos Islands and Mauritius.

There are no internal services.

HEALTH

Malaria has almost completely disappeared from Mauritius. The most common ailments are influenza, diseases of the respiratory and digestive systems and anæmias.

In 1953 there were, 1174 beds in general hospitals, 693 at the Mental Hospital, 228 at the Orthopaedic Centre, 62 at the Leper Asylum and 73 in prison hospitals; in addition 33 sugar estates each have a small hospital for their employees, with a total of 738 beds. There are also 5 private nursing homes, 45 static and 4 mobile dispensaries and a mobile dental clinic. The Maternal and Infant Welfare Service provides 10 static centres and a mobile antenatal clinic. Admissions to hospitals in 1953 numbered 31,909; attendances at static dispensaries were 399,899 and at mobile dispensaries 111,849.

THE BRITISH COMMONWEALTH

EDUCATION

Of the 297 educational establishments in Mauritius (1953), 240 are primary schools (of which 72 Government and 76 State-aided), 55 are secondary schools (3 Government, 9 State-aided), one is a Government post-primary school and one is a post-secondary school (the Government College of Agriculture). The Government also conducts a training college for teachers. There are a number of private day and evening schools teaching such subjects as the Koran, Urdu and Hindi. The development of technical education is under review and scholarships are awarded for higher education overseas. In 1953 over 250 Mauritians were attending universities in the United Kingdom and the Republic of Ireland.

College of Agriculture: Reduit; f. 1923; Chair. of Advisory Board A. N. COOMBES, B.Sc., Principal J. R. LAGESSE, B.Sc.

LIBRARIES AND MUSEUMS

Mauritius Archives: Sir William Newton Street, Port Louis; f. 1815; contains records of the French Administration (1721-1815) and the British Administration (1810 onwards): comprises Divisions of Manuscript Records, Printed Records, Notarial Registry, Land Registry and Maps and Plans, and a Photographic Service; Chief Archivist Dr. A. TOUSSAINT; serial publs. *Annual Reports*, *Memoranda of Books*, *Bulletin*; other publs. *Atlas-Souvenir de l'Abbé de la Caille* (1953); *Early American Trade with Mauritius* (1954); *Bibliography of Mauritius* (1956).

There is also a Natural History Museum (with a small art gallery) at Port Louis and a Naval Historical Museum at Mahebourg, both run by the Mauritius Institute.

There are six libraries: three at Port Louis (the Municipal Library, Police Library and Mauritius Institute Library); two at Rose Hill (British Council Library, Town Council of Beau Bassin/Rose Hill Library); and one at Curepipe (Carnegie Library).

DEPENDENCIES OF MAURITIUS

RODRIGUES

Rodrigues, a mountainous island, 42 sq. miles in area, has a population of 14,000. The inhabitants are mostly descendants of the African slaves of French planters. Much of the land is used for pasturage for goats and sheep. The fertile areas, leased by the Crown in small plots for farming, yield maize, which is the staple diet of the people. Beans, onions, garlic, lemons, livestock and salted fish are produced and exported to Mauritius.

In 1810 the island was the assembly point for the British attack on Mauritius. The first official British administrators, a police officer, a constable and five guards, arrived in 1844. At present a Magistrate and Civil Commissioner from Mauritius administers the island, and is advised by a committee of 17 islanders appointed by the Government of Mauritius.

THE LESSER DEPENDENCIES

The Lesser Dependencies, or "Oil Islands" are Chagos Archipelago, Agalega, and Cargados Carajos. The total area of the three groups is 47½ sq. miles and the population (1953) 1,700. The islands produce copra, which is exported for the edible oil industry of Mauritius.

SEYCHELLES

(Capital: Port Victoria)

GENERAL SURVEY

Geography. The Seychelles archipelago lies in the West Indian ocean at about 4° S. lat., and 53° E. long. There are, including Amirantes, Aldabra and other small groups, altogether 92 islands, with a total land area of 156 sq. miles.

The archipelago represents possibly a sunken remnant of a much larger continental mass. The Seychelles themselves rise from warm, shallow seas—hence, although generally granitic towards the centre, they are usually partially fringed by extensive coral reefs. Most of the dependencies are wholly coral islands formed on submarine banks. The coral limestone provides an important and attractive building material.

The principal islands of the Seychelles group are Mahé (56 sq. miles) Praslin (9,700 acres) and Silhouette (4,900 acres). Port Victoria, the capital, stands on the north-east coast of Mahé, and has a good harbour.

Climate. In spite of their proximity to the equator the islands are healthy; and typhoons, so devastating and regular in Mauritius, are rare. The warm, moist climate supports luxuriant woodlands, and the mangrove and coconut are characteristic of the coastal regions. Coco-de-Mel, the world's largest fruit, rather like a huge double coconut, is indigenous only to Praslin, while rubber trees have been introduced into the islands only in the last fifty years. The fauna largely resembles Madagascan types, but the Aldabra islands possess a unique giant tortoise.

Population. Victoria has a population of about 10,000 and the total population of the colony in 1952 was 37,129. The islands were uninhabited before European settlement, consequently the present population is entirely of outside origin, consisting of European, Chinese, Indian and Negroid elements. A large proportion are either of French origin or descendants of Mauritian or African slaves freed during the nineteenth century. They speak Créole, a patois of French, and are mainly Roman Catholic.

Economy. The main occupation of the population is agriculture. Most of the land is under coconuts, the colony's main crop. Cinnamon bush and forest occupy the slopes of the granitic islands and vanilla, a crop of less importance, is grown in the coastal soil of Praslin. The coconuts are produced by both small and large landowners; the former sell their crop to the copra manufacturers, the latter convert it themselves. In 1952, the total production of copra amounted to 6,210 tons which was exported mainly to markets in East Africa and India. Cinnamon is produced by large landowners who either distil their own leaf crop or sell it to distillers. The 65 distilleries also produce patchouli oil. There is no unemployment in the colony as work is always available on the coconut estates. A project to foster a fishing industry in 1952 failed owing to high operating costs and two poor fishing seasons, but the people of the Seychelles are skilled fishermen and inshore fishing produces sufficient for local needs. The making of tortoiseshell products for home use and for export provides another occupation. There is no mining in the colony. Grants from the Colonial Development and Welfare funds are assisting schemes to improve the medical services, and the water supply irrigation.

Copra is the chief export, while rice, sugar and cotton goods compose the principal imports. The bulk of the imports are from Commonwealth countries and include cotton goods, machinery, cigarettes and wines.

Communications with Mauritius, Madagascar (610 miles distant) and Mombasa (990 miles distant), and with India are infrequent, and for this reason it has not been possible to develop the tourist traffic. There is no air-service but negotiations are being conducted to provide a fortnightly flying-boat service between Mombasa and the Seychelles. Telegraphic communications exist with Ceylon, Zanzibar, Mauritius and Aden.

HISTORY

The French first explored the Seychelles Islands in 1742 and in 1756 claimed possession of them. Before this they had been uninhabited. In 1794 the French garrison surrendered to Captain Newcome of H M S. *Orpheus*, but the Commandant, M. de Quincy, continued his administration on behalf of the French Republic until 1810. The Treaty of Paris (1814) finally confirmed British possession of the Seychelles and of the Île de France, now known as Mauritius. The two colonies continued to be administered as a single unit and de Quincy continued in office until his death in 1827, having served the French for twenty years and the British for eighteen.

The Seychelles were administered by a series of Commissioners appointed from Mauritius until 1872, when the first steps towards separation were taken with the appointment of a Board of Civil Commissioners with financial autonomy. The powers of this Board were extended in 1874, and in 1888 an Order-in-Council was passed giving the Seychelles an administrator with a nominated Executive and Legislative Council. In 1897 the Administrator was given full powers of Governor and six years later, by the Letters Patent of 1903, the separation of Mauritius and the Seychelles was completed and Seychelles became a Crown Colony with its own Governor and Executive and Legislative Councils.

CONSTITUTION AND GOVERNMENT

The Legislative Council consists of the Governor, as President, 6 official members, 4 elected and 2 nominated unofficial members. The Executive Council consists of the Governor, as President, 3 official members, and such other persons (one at least of whom must be an unofficial member of the Legislative Council) as the Governor may appoint.

Governor: SIR WILLIAM ADDIS, K C M.G.

EXECUTIVE COUNCIL

President: THE GOVERNOR.

Members: THE SECRETARY TO THE GOVERNMENT, THE ATTORNEY-GENERAL, THE TREASURER, DR HILDE STEVENSON-DELHOMME, D. BAILEY, N. P. F. BONNETT.

THE BRITISH COMMONWEALTH

LEGISLATIVE COUNCIL

President: The GOVERNOR.

Official Members: The SECRETARY TO THE GOVERNMENT, The ATTORNEY-GENERAL, The TREASURER, The DIRECTORS OF MEDICAL SERVICES, EDUCATION and AGRICULTURE.

Nominated Unofficial Members: D. BAILEY, E. STEVENS.

Elected Members: A. DELTEL, J.P. (South Mahé), E. DE COULHAC MAZERIEUX (Central), Dr. H. DELHOMME (North Mahé), H. SAVY (Praslin).

CIVIL ESTABLISHMENT

Secretary to the Government: G. M. HECTOR.

Attorney-General: A. F. SAUZIER.

Treasurer and Collector of Customs: S. MARTHIOT, O.B.E.

Directors of Departments: P. M. JOSEPH, M.B.E. (Medical Services), G. I. MICHAEL (Education), A. JEFFERISS (Agriculture).

Chief Justice: M. D. LYON.

RELIGION

There are about 31,000 Roman Catholics; the Bishop is the Rt. Rev. MARCELLO O. MARADAN, P.O. Box 43, Port Victoria. Members of the Church of England are served by the Anglican Bishop of Mauritius, the Rt. Rev. H. V. L. OTTER-BARRY, C.B.E. Members of other Christian denominations include a number of Seventh-Day Adventists.

PRESS

There is a Government Bulletin published daily in Port Victoria, and also one commercial newspaper:

Le Seychellois: P.O. Box 32, Port Victoria; f. 1898; publ. in French and English; Conservative; Editor FRANÇOIS DELHOMME.

TRADE AND INDUSTRY

A Development Plan for the years 1946-56, which covers the building of new roads, schools, hospitals and clinics as well as housing, afforestation and the development of health services, is now in operation. The plan was financed by a grant from the Colonial Development and Welfare

Fund, which has been supplemented from local funds. There are no co-operative societies in the Seychelles, but a Copra Producers and Shippers Committee is responsible for the marketing arrangements for copra. The Seychelles Agricultural Bank provides credit for agricultural purposes.

TRANSPORT

Government motor launches operate between Port Victoria, Mahé and the Islands of Praslin and La Digue. British Indian Steam Navigation Company ships on the Bombay-Mombasa service call at Seychelles, once a month from Mombasa and about seven times a year from Bombay. The Royal Inter-Ocean Line ships on the route between the Far East and East Africa call in both directions once a month, and cargo steamers from the United Kingdom call once a quarter. There is no air service.

HEALTH

Seychelles, although it lies within the tropics, has practically none of the diseases usually found in tropical climates. There is no malaria, and leprosy is very rare. The instances of venereal diseases and of intestinal infections are rapidly being brought under control. The main hospital is the Seychelles Hospital in Port Victoria, which has 110 beds and a fully equipped laboratory and X-ray plant. There are also smaller hospitals at Anse Royal, Mahé, Baie St. Anne, Praslin and at La Digue Island, and there are a number of out-patients clinics.

EDUCATION

In 1953 there were 2,450 boys and 2,521 girls in primary schools of various kinds in the Seychelles, 751 boys and 789 girls in secondary schools, 20 technical apprentices, and a small number of students are studying in the United Kingdom and the Republic of Ireland.

LIBRARIES

There is a library established by the Carnegie Trust, in Port Victoria and other small libraries run by the Co-operative Book Society and by the French Consulate.

FIJI

(AND THE PITCAIRN ISLANDS GROUP)

FIJI

(Capital: Suva)

GEOGRAPHICAL-ECONOMIC SURVEY

THE Crown Colony of Fiji, lying 1,100 miles north of New Zealand between 14° and 22° S. lat. and about on the 180° meridian, consists of 322 islands, of which just over one-third are inhabited, with a total land area of rather more than 7,000 sq. miles.

Formation. The islands are largely of volcanic origin; and although volcanic activity has now ceased there are numerous hot springs. Coral limestones are generally very common around the coasts and in some areas they also appear inland as older, elevated masses. Several of the islands consist solely of coral formations, and in these the absence of relief contrasts strongly with the rugged, mountainous character of the volcanic islands. Viti Levu (4,053 sq. miles) and Vanua Levu (2,137) are the largest islands of the Fiji group and are of volcanic origin. Suva, the capital (pop. 25,000) lies on the south-east coast of Viti Levu and has an excellent harbour.

Climate. The prevailing on-shore winds from the south-east bring heavy rainfall throughout the year on the windward sides of the islands—Suva has an average rainfall of 130 in. In summer (November to January) the western sides of the island, otherwise relatively dry, are subject to heavy rains, which occasionally culminate in destructive hurricanes brought by the north-west monsoonal winds. Coastal temperatures seldom rise above 80° F. in summer or fall below 70° F. in winter. Temperatures at hill stations are considerably cooler—at Nandariatu (over 2,000 ft. above sea-level) means are nearly 10° lower than on the coast. Humidity is not high for an oceanic island and the climate, although sometimes enervating, is not unhealthy.

Vegetation. The islands are heavily wooded and ever-green forests extend to the mountain tops. There is a marked contrast between the wet, windward sides covered with forest and the dry, grass-covered leeward slopes, or *Aalasinga* (sun-burnt land). The forests are of little commercial value owing to their inaccessibility and to the absence of large stands of any one species, and have been extensively cleared for cultivation. Mangrove wood from the coastal forests is however important as a source of fuel for both domestic and industrial purposes.

Population. The population, according to the latest estimate (December 31st, 1954) numbers 329,255 (excluding the dependency of Rotunwali), of which 8,460 are Europeans. It is mainly concentrated in the towns and a proportion is only semi-permanent, consisting of people who are in government service or attached to commercial or industrial firms; many of the latter are recruited in Australia or New Zealand. Part-Europeans number 7,748. The number of Indians has increased steadily and they are now the largest single group in Fiji. In December 1954 it was estimated to be 160,303. The majority are now engaged as peasant farmers on leased land, cultivating sugarcane, mainly for export, and rice for the local market. Indians are also found in large numbers in the towns. Most of them (about 85 per cent) are locally born and

distinctions due to diversity of origin are gradually disappearing. The Fijians themselves are a Melanesian people, with an admixture of Polynesian stock. In the nineteenth century their numbers were declining so seriously that there was anxiety for their survival, but the trend changed about 1920 and the numbers are now rising again. The latest estimate (December 1954) is 143,100. The estimate of 150,000 before the measles epidemic of 1875 is now believed to have been far too high. The population also includes about 4,000 Chinese.

Land Tenure. Fijian life is still organised on a communal basis and the ownership of land is vested in the kinship unit known as the *malangali*. After the cession of Fiji to the British Crown in 1874 some 400,000 acres were granted in freehold to settlers who could prove their titles. The Crown to-day holds about 30,000 acres and the remaining 3,900,000 belong to Fijians. The sale of Fijian land is prohibited, except to the Crown, and then is allowed only when it is needed for some public purpose; but leasing is allowed and has taken place on a large scale. In 1940 a Native Land Trust Board was set up to manage Fijian lands and a Commission is now at work demarcating areas to be set aside in perpetuity for Fijians, while the remainder will be available for leasing. Tenants on Fijian reserves will be given other land as their leases expire.

Production. The damp, tropical climate and the rich volcanic soils support an abundant and varied plant-vegetation, but sugar is the principal item of the economy and comprises about half the total value of exports from Fiji. Sugar-cane production is largely in the hands of the Indians. Coconut products (copra, coconut oil), and molasses are next in importance. Bananas and pineapples are significant both as export items, which include canned pineapples and juice, and for home consumption. Rubber, rice, cotton, hides and *bêche-de-mer* (a sea-slug sold in China and elsewhere) are also produced in small quantities.

Mining. With the igneous rocks are associated several metalliferous deposits. Gold is one of the leading exports. Deposits of lead, zinc, tin, nickel and osmiridium have also been found.

Development. A 10-year Development Plan was adopted in 1949 and expenditure is estimated at £4,538,053. Of this, approximately 17·4 per cent is allocated to production and development of natural resources, 22·1 per cent to social services, 37·9 per cent to communications, 12·8 per cent to water supplies and 9·8 per cent to engineering staff and quarters.

F.H.A.A.

HISTORY

The Fiji Islands were declared a possession of the British Crown on October 10th, 1874. Tasman was the first European explorer to sight the islands (1643) and he was followed in 1774 by Captain Cook who discovered the remote island of Vatoa in the south-east of the archipelago. To

THE BRITISH COMMONWEALTH

Captain Bligh of the *Bounty*, who sailed through the group in 1789 after being cast adrift by the mutineers and revisited the islands in 1792, belongs the credit for the most numerous and important discoveries. At the close of the century, Captain Wilson of the missionary ship *Duff* visited the Lau group in the east. For a decade from 1805 ships crowded to the Bua coast of Vanua Levu for sandalwood. When the supply was exhausted Fiji was visited only by an occasional whaler, until the search for *bêche-de-mer* for the markets of China drew the traders back again in the 1830's.

Deserters and shipwrecked sailors remained on the islands and taught the natives how to use the musket, which became an important article of trade. In the period before the establishment of British rule, tribal warfare was incessant. Loss of life, however, was not great. More devastating was the introduction of new diseases. In September 1839 an epidemic of influenza took a heavy toll of lives and it was believed that measles caused the deaths of one-third of the population in 1875.

Missionaries followed closely on the traders. Two Tahitian teachers of the London Missionary Society arrived in 1830, but the pioneer Europeans were William Cross and David Corgill of the Wesleyan Methodist Society, who reached Tubou, on the island of Lakemba, from Tonga on October 12th, 1835. They were followed in August 1844 by Roman Catholics of the Marist Society. Methodism, however, became the religion of the majority of the Fijians. The Wesleyans secured a notable convert when Cakobau, one of the leading Fiji chiefs, harassed by reverses in battle and urged on by King George of Tonga, whose support he needed, publicly announced his acceptance of the "lotu" on April 30th, 1854.

In 1858 Cakobau was pressed by the United States Government for the payment of some £9,000 in compensation for losses suffered by Americans in the group. Being quite unable to pay, and influenced also by fear of Ma'afu, a kinsman of King George on Tonga, who had established a firm hold on eastern Fiji, he offered to cede the country to Britain. The newly-appointed Consul, W. T. Pritchard, hastened to London to urge acceptance of the offer and, on his return, summoned a meeting of the principal chiefs at the Consulate (December 14th, 1859), which endorsed Cakobau's action.

Colonel W. T. Smythe was, however, sent out to investigate the situation in 1860 and on his advice the offer was rejected and the Consul dismissed for excess of zeal (1862).

An influx of settlers in the 1860's, chiefly from Australia and New Zealand, complicated the situation in Fiji. Guided by European advisers, the chiefs formed a confederation in 1865, but the rivalry between Cakobau and Ma'afu led to its dissolution in 1867. Two separate confederations were then set up. Owing to Ma'afu's administrative ability and the loyal support of the settlers, one of the confederations worked fairly successfully. But in Cakobau's realm white settlers were numerous and turbulent, and malcontents were encouraged in their intransigence by the hostility of the British Consul at Levuka. In March 1869 and again in June 1871 the government was reorganised, but without marked success. The constitution was over-elaborate and it was found necessary to relegate the native members of the legislature to the Privy Council, so that the Assembly came to be composed solely of elected Europeans. The government suffered from the refusal of Britain to grant more than *de facto* recognition. Some of the Ministers were very unpopular, although they included able men, notably J. B. Thurston, later Governor of Fiji. There were charges of financial mismanagement and of refusal to pay taxes and serious differences developed between the Assembly and the Executive on questions of native policy.

It was evident in 1873 that Fiji was drifting into a state of anarchy, and a renewed appeal to Britain to take over the responsibility of government resulted in a fresh inquiry by Consul Layard and Commodore Goodenough. The terms negotiated by the commissioners were not acceptable to the British Government and Sir Hercules Robinson, Governor of New South Wales, was sent to Fiji to obtain an unconditional cession from the chiefs. Various pledges were, however, given to the latter and these were embodied in the Deed of Cession.

The first Governor, Sir Arthur Gordon, succeeded in winning the confidence of the Fijians by respecting their own institutions and customs as far as practicable. He confirmed them in the ownership of their land and imported Indians under indenture to satisfy the settler demand for labour, as the earlier Melanesian sources were drying up. Gordon and his successors had very meagre funds for administration, and particularly during the depression of the 1880's the Governors had to exercise a stringent economy. The Imperial loan of £100,000, though interest-free, was swallowed up in the settlement of the debts of the former Government. Customs duties and native taxation were the main sources of revenue. The latter was derived from the sale of crops grown on communal plantations, for Gordon had decisively rejected the alternatives of labour and poll taxes.

From the outset, the intention of the British Government was to set up a strict Crown Colony régime in Fiji with all real power in the hands of the Governor, advised by a nominated Executive Council and a Legislative Council composed of officials and nominated settlers. In the 1880's and again at the close of the century, there was some agitation by the Europeans for more liberal institutions, and even for union with an Australian colony or New Zealand. The latter proposal was rejected by the Colonial Office, but the principle of elections to the Legislative Council was conceded in 1904. There have been various constitutional amendments since that date, which have had the effect of increasing the size of the Council and giving Indians, as well as Fijians, fuller representation. The present constitutional position is governed by the Letters Patent of 1937 and by various Royal Instructions.

E D.

THE CONSTITUTION

Under the Letters Patent, 1937, and the relevant Royal Instructions, the Governor presides over an Executive Council consisting of the Colonial Secretary, the Attorney-General, the Financial Secretary (as *ex-officio* members), and 6 nominated members (2 of whom are officials). There is a Legislative Council, presided over by the Governor, consisting of 16 official and 15 unofficial members. Of the unofficial members, 5 are Europeans (3 elected, 2 nominated), 5 are Indians (3 elected, 2 nominated), and 5 are Fijians, who are nominated by the Governor from a panel of names of Fijians selected by secret ballot by the Council of Chiefs, itself consisting of elected and nominated members. In 1955 the Letters Patent were amended to enable the Governor to appoint some person as Speaker of the Legislative Council, who would preside in his own absence. The Speaker would be independent and would not take part in debates; in the event of a tie in voting, the Governor or the Speaker would have a casting vote, and if not exercised, the motion would be lost. Each communal group in the Legislative Council elects one of its number to a seat on the Executive Council. The Governor is required to consult with the Executive Council but may act in opposition to its advice, provided that he gives his reasons to the Secretary of State. The Royal Instructions forbid him to assent to Bills dealing with certain specified subjects,

ISLAND TERRITORIES

among them racial discrimination, without the prior approval of the Secretary of State.

For Administrative purposes, the Colony is divided into three districts (an increase in the number is under consideration), each under a District Commissioner responsible to the Governor through the Colonial Secretary. Each District Commissioner is assisted by a number of District Officers.

The Fijian Administration constitutes a local government system with jurisdiction over all Fijians in the Colony. The Fijian Affairs Ordinance of 1944 upheld the principle that Fijian affairs should be mainly administered by Fijians. At the head of the Fijian Administration is the Fijian Affairs Board, consisting of the Secretary for Fijian Affairs (as Chairman), the 5 Fijian members of the Legislative Council, a Legal Adviser and a Financial Adviser. For purposes of Fijian Administration, the Colony is divided into 14 provinces (each headed by a *Roko*), which are subdivided into divisions.

THE GOVERNMENT

Governor and Commander-in-Chief: Sir RONALD GARVEY, K.C.M.G., K.C.V.O., M.B.E.

EXECUTIVE COUNCIL

The GOVERNOR.

The COLONIAL SECRETARY.

The ATTORNEY-GENERAL.

The FINANCIAL SECRETARY.

The SECRETARY FOR FIJIAN AFFAIRS.

Nominated Members: Ratu E. T. T. CAKOBAU, O.B.E., M.C.
C. ELLIOT, J.P., J. MADHAVAN, J. N. FALVEY, Ratu Sir LALA SUKUNA, K.C.M.G., K.B.E.

LEGISLATIVE COUNCIL

President: The GOVERNOR.

Speaker: Ratu Sir LALA SUKUNA, K.C.M.G., K.B.E.

Ex-Officio Members: The COLONIAL SECRETARY, the ATTORNEY-GENERAL, the FINANCIAL SECRETARY.

Official Members: G. K. ROTH, O.B.E. (Secretary for Fijian Affairs), Dr. J. M. CRUIKSHANK, C.M.G., O.B.E. (Director of Medical Services), J. F. GRIFFITHS (Acting Accountant-General), R. O. HASSAL (Acting Commissioner of Police), H. G. R. McALPINE, M.V.O. (District Commissioner Western), Ratu G. K. CAKOBAU, O.B.E., J. A. MARAIS (P.M.G.), R. A. EMERY (Comptroller of Customs), H. A. RAGG (Director of Public Works), J. G. RODGER (Acting Director of Education), N. PEARSON (Commissioner of Labour), C. HARVEY, C.B.E. (Director of Agriculture), J. R. B. ANGUS (Conservator of Forests).

Unofficial Members:

European, Elected: J. N. FALVEY (Southern Div.); H. M. SCOTT, D.F.C. (N. Western Div.); H. B. GIBSON (Eastern Div.)

European, Nominated: Rev. S. G. C. COWLED, O.B.E., W. G. JOHNSON.

Fijian Members: Ratu G. C. TUISAWAU, O.B.E.; JOELI K. RAVAI, O.B.E.; Ratu T. W. T. VUIYASAWA; Ratu E. T. T. CAKOBAU, O.B.E., M.C.; Ratu K. K. T. MARA.

Indian, Elected: VISHNU DEO, O.B.E. (Southern Div.); J. MADHAVAN (Eastern Div.); AYODHYA PRASAD (N. Western Div.)

Indian, Nominated: K. S. REDDY; ABDUL SAMAD.

CIVIL ESTABLISHMENT

Colonial Secretary: A. F. R. STODDART, C.M.G.

Financial Secretary: H. W. DAVIDSON, M.B.E.

Secretary for Fijian Affairs: G. K. ROTH, O.B.E.

Commerce and Industries Officer: R. W. PARKINSON.

FIJI

Administrative Officers: (Class I), H. G. R. McALPINE, M.V.O.; C. C. LEGGE; Ratu E. T. T. CAKOBAU, O.B.E., M.C.; S. G. MARSHALL.

Commissioners: Ratu Sir LALA SUKUNA, K.C.M.G. (Native Lands and Native Reserves); W. J. DRYSDALE (Inland Revenue); N. PEARSON (Labour); E. K. LAWS, M.V.O. (Police).

Directors of Departments: (Agriculture) C. HARVEY, C.B.E., (Education) W. W. LEWIS-JONES, (Lands, Mines and Survey) R. V. COLE, (Public Works) H. A. RAGG, (Medical Services) J. M. CRUIKSHANK, C.M.G., O.B.E.

Conservator of Forests: J. R. ANGUS.

Attorney-General: B. A. DOYLE, Q.C.

Solicitor-General: W. G. BRYCE.

Public Relations Officer: L. G. USHER.

THE LEGAL SYSTEM

Justice is administered in the Colony by the Supreme Court and by Magistrates' Courts of the first, second and third class. Provincial and District Courts also exercise a limited criminal jurisdiction over Fijians.

The Fijian Affairs Board has power to make regulations affecting Fijians as a whole; regulations are based as far as practicable on custom, and require the sanction of the Legislative Council.

Under the Fijian Affairs Ordinance power is also given to District Councils to make orders and to Provincial Councils to make by-laws concerning the welfare and good government of the Fijians. Such orders or by-laws have the force of law when sanctioned by the Secretary for Fijian Affairs.

Two grades of courts deal with offences against the regulations, by-laws and orders: the lower (*Tihina* or District) Courts, and the higher, or Provincial Courts. District Courts consist of one Fijian Magistrate; Provincial Courts consist of three Fijian Magistrates or two Fijian Magistrates and a District Officer. There is provision for appeals against verdicts and the Legal Adviser to the Board reviews all cases.

Chief Justice: R. HYNE.

Puisne Judge: W. D. CAREW.

In the island of **Rotuma** (added to the Colony in 1881) language and customs differ from those in Fiji; the District Officer is the chief executive authority and also has limited magisterial powers. A Rotuman Regulation Board makes local rulings.

RELIGION

The majority of the non-Indian inhabitants belong to the Methodist Church, the approximate number of adherents (1951) being 118,000. There are approximately 22,000 Roman Catholics, 4,000 members of the Church of England and 1,700 Seventh-Day Adventists. Of the Indian population, over 99,000 are Hindus, 17,000 Muslims and 1,000 Sikhs.

The Vicar Apostolic for the Roman Catholic Church in Fiji is the Most Rev. Bishop V. FOLEY, D.D. (Titular Bishop of Petinesso), Suva.

THE PRESS

NEWSPAPERS AND PERIODICALS

Fiji Guardian: P.O. Box 338, Suva; English, weekly; Editor J. THORNTON.

Fiji Royal Gazette: Government Buildings, Suva; f. 1954; Fridays.

Oceania Publishing Co.: P.O. Box 338, Suva.

Tara Press: Nasinu, Suva.

BROADCASTING

A broadcasting service is provided by the Fiji Broadcasting Commission from stations at Suva. Licensed radio receivers number approximately 4,500.

FINANCE

The currency is the Fijian £, the rate of exchange with sterling being £Fiji = £100 sterling. There is a Standing Committee on Finance, composed of the 15 unofficial members of the Legislative Council, usually under the chairmanship of the Financial Secretary, which meets monthly. Revenue and expenditure for recent years was as follows:

	Revenue	Expenditure
	£'000	£'000
1950 . . .	3,798	3,589
1951 . . .	3,613	3,574
1952 . . .	4,186	4,410
1953 . . .	4,109	4,308
1954 . . .	5,031	4,619

Customs and excise duties form the chief source of revenue.

The Public Debt stood at £2,597,962 on December 31st, 1954.

BANKING

There is a Government savings bank (Head Office at the G.P.O. Suva), with 28 branches throughout the Colony. The Bank of New South Wales, the Bank of New Zealand and the Australia and New Zealand Bank, have branches and agencies in the Colony.

TRADE AND INDUSTRY

The Copra Board buys and arranges for the export of all copra and copra products,¹ cane growers sell their produce to the Colonial Sugar Refining Company. All bananas for export are purchased by licensed buyers. There are 47 co-operative societies (39 Fijian and 8 Indian). The co-operative movement was regulated by an Act in 1947.

¹ In 1951 a Fijian Development Fund was established, into which a proportion from the sales of copra is paid, interest at 2 per cent being credited to the producer. Money accumulated in the fund may only be spent on works or schemes which will be beneficial to the Fijians. By July 31st, 1954 the fund had reached £397,571.

Though the bulk of the population is not a wage-earning one there are 29 registered trade unions with a membership of approximately 22,000.

TRANSPORT

Shipping: The chief sea ports are Suva and Lautoka.

Railway: There are private small-gauge railways totalling 380 miles belonging to the Colonial Sugar Refining Company.

Roads: There are 1,083 miles of road, mainly on Viti Levu.

Air: Nandi (135 miles by road from Suva) is one of the main airports on the trans-Pacific route. Trans-Pacific airlines using Nandi airport are the Canadian-Pacific Airlines Ltd., Pan-American World Airways (Inc.), Qantas Empire Airways Ltd., and Tasman Empire Airways Ltd. Fiji Airways operate daily local services.

HEALTH

The principal infectious diseases are ankylostomiasis, influenza, pertussis, infantile diarrhoea, pulmonary tuberculosis. Malaria does not occur. Hospitals, mainly government institutions, have a bed capacity of about 2,000. There are 43 dispensaries in rural areas. In 1953 in-patients in government hospitals totalled 17,063 and out-patients (including those treated at dispensaries) totalled over 390,000. There is a leprosy hospital at Makongai. A tuberculosis survey has been made with the assistance of a United Kingdom grant. A four-year course in medicine and dentistry is provided at the Central Medical School, which is attended by students from many South Pacific territories.

EDUCATION

At the end of 1954 there were 58,835 children enrolled in schools (mission, private and government). There are 439 registered schools where staff and accommodation are regarded as satisfactory and 47 recognised schools of a lower standard. Registered teachers in government service numbered 1,295 in 1954; in addition there were 183 registered teachers in private schools or engaged in the service of particular missions. There is a government Teachers' Training College, at which about 160 students attend the 2-year course. Expenditure on education during 1954 amounted to £580,805, more than ten times the sum spent in 1935.

LIBRARIES AND MUSEUMS

The Fiji Museum at Suva contains a fine historical and ethnological collection relating to Fiji and Western Pacific Territories.

The chief libraries are the Carnegie Library at Suva and the Shri Ramkrishna Library at Nandi.

The Fiji Society, dealing with subjects of historic, scientific and antiquarian interest to Fiji, has recently published the record of its work.

PITCAIRN ISLANDS GROUP

The Pitcairn group consists of the small volcanic islands of Pitcairn, Henderson, Ducie and Oeno, lying midway between Australia and South America. Of these, only Pitcairn, with an area of 2 sq. miles, is inhabited. It was settled in 1790 by the mutineers of the *Bounty*; in 1831 the

ISLAND TERRITORIES

inhabitants moved to Tahiti, but returned in the following year. There was another migration to Norfolk Island in 1856, but 40 returned and formed the nucleus of the present population of about 130.

In 1898 the island came under the jurisdiction of the High Commissioner for the Western Pacific who was also Governor of Fiji, and on the separation of these offices in 1952 Pitcairn was transferred to the administration of the Governor of Fiji.

An annually elected council composed of the chief magistrate, two assessors and a secretary, watches over local affairs. **Chief Magistrate:** JOHN CHRISTIAN.

Fiji

The religion of the islanders is Seventh-Day Adventist. Stamps are the principal source of revenue. A variety of crops, such as breadfruit, bananas, potatoes, taro, sweet potatoes, coconuts, sugar, citrus fruits, pineapples, melons and English vegetables, is grown. Food is supplemented by fishing and the raising of goats and chickens.

There are local crafts of boat-building, wood-carving, and the making of hats and sandals. Ships passing between New Zealand and Panama call at the island. Medical attention is given by a nurse resident on the island, assisted in cases of emergency by doctors from passing ships. There is a government school with a trained teacher.

KINGDOM OF TONGA

(Capital: Nuku'alofa)

GEOGRAPHICAL-ECONOMIC SURVEY

SITUATED in the South Pacific 300 miles east of Fiji, at approximately 20° S. lat. and 175° W. long., the Tonga islands form an independent kingdom under British protection. They consist of 150 small islands with a total land area of 270 sq. miles and a population (in 1953) of 52,500, among whom foreign elements were very small.

The islands form three main groups, from north to south—Vava'u, Ha'apai and Tongatapu. Tongatapu is much the largest (100 sq. miles) and includes the capital—Nuku'alofa (population 5,500).

Structure. Structurally, the islands form two groups; volcanic islands (predominating in the west and south), and coral formations (predominating in the east). This is a very general distribution, and in some islands coral and volcanic formations are found together. The coral limestone islands are low-lying and level—although with abrupt coasts: those of volcanic origin are higher and more rugged. Volcanoes are still active, and large scale eruptions have occurred in recent times with considerable crop destruction and loss of life. Several islands of recent volcanic origin have been observed in the last century to appear and disappear.

Climate. The climate, for a tropical oceanic island, is comparatively dry, cool and healthy. Average annual rainfall exceeds 60 in. and is generally heaviest in the summer; but the seasonal pattern shows a certain unpredictable variety and agriculture suffers from occasional drought. Temperatures range from 60° to 75° F. Humidity also varies but is generally high, especially in the northern islands. Hurricanes are liable to occur in summer but are more frequent in the northern islands, where they cause extensive damage to crops and buildings.

Vegetation and Agriculture. The fertile, volcanic soils and tropical climate support dense evergreen hardwood forests, of which, however, large areas have been cleared for cultivation. With the exception of fishing the resources of Tonga are entirely agricultural. On reaching the age of 16 years every male Tongan is entitled to 8½ acres of land for cultivation. The chief occupation of the native farmers is growing vegetables for home-consumption—yams, tapioca, sweet potatoes, taro and plantains—while, for a Pacific island, the rearing of livestock—pigs, horses, cattle, fowls and ducks—is on a considerable scale. Coconuts, bananas and pineapples are also important. Copra is the mainstay of the export trade but the adverse effects of droughts, hurricanes, shipping difficulties and price fluctuations make dependence on this single export commodity highly dangerous; and banana production has been encouraged as a secondary activity. In 1952 copra and bananas together represented almost 99 per cent (by value) of the total exports. In 1954, 14,223 tons of copra were exported. The United Kingdom Government takes the whole copra production under a 9-year agreement, which expires in 1957. Textiles, flour, preserved meats, sugar, hardware, soap etc., are imported, mainly from Commonwealth countries. Two minor experimental industries for processing fruit and candlenuts have been established.

F.H.A.-A.

HISTORY

Tonga, while remaining a self-governing Kingdom, became a British Protected State by a treaty signed in 1900 and ratified in 1901. Tongans are of Polynesian stock and, despite the impact of Western civilisation, have retained their own culture and social organisation.

The ancient Tu'i Tonga dynasty was probably founded about 950 A.D. and gradually extended its overlordship over a vast area of Polynesia, whence it received tribute. In the mid-fifteenth century, a Tu'i Tongan, while retaining his sacred powers, transferred much of his executive authority to his brother, so that there were in Tonga two kings, the spiritual and the temporal. The temporal ruler made a second delegation of executive authority in the mid-seventeenth century to another member of his family, who took the title Tu'i Kanokupolu. Gradually both spiritual and temporal powers passed to the Tu'i Kanokupolu and were wholly vested in the ruler George Tupou I, founder of the present dynasty, who succeeded in 1845. The evolution of a sacred line of chiefs is not without historic parallel, though the double delegation of powers in Tongan dynastic history renders difficult an understanding of the ancient Tongan policy. The present ruler, Queen Salote, who succeeded her father George Tupou II in 1918, is head of the Wesleyan Free Church of Tonga to which a large proportion of Tongans belong.

Tongatapu was first discovered by Tasman in 1643. Cook visited the islands in 1773–74 and again during his third voyage in 1777. He named the group the Friendly Islands, unaware of a plot against his life. In 1789, Captain Bligh visited the Ha'apai group and it was in these waters that the mutiny on the *Bounty* occurred. Missionaries of the London Missionary Society arrived in Tonga in 1797, but withdrew shortly after three of their members had been killed in the civil wars which followed the murder of the Tu'i Kanokupolu in 1799. In 1826, after an initial failure in 1822–23 a Wesleyan mission was established. Christianity spread through Tongatapu and in 1830 was accepted by the Chief, Alea Motua. His great nephew, Tanfa'shan, chief of the Ha'apai, was baptised in the following year. The latter, who took the name George Tupou on his succession as king of Tonga, was perhaps the most remarkable man the Pacific islands have hitherto produced. Born in 1797, this great warrior statesman ruled until 1893 and transformed his country from a collection of warring pagan islands to an organised peaceful Christian kingdom governed from 1875 by a Constitution on the British pattern. He sent decisive aid to Thakombau, the Fijian Chief, in 1855, and concluded treaties with France in 1855, with Germany in 1876, with Britain in 1879 and with the U.S.A. in 1888. In his late years he was much influenced by the Wesleyan minister, Shirley Baker, who became his prime minister. Baker tried to compel adherence to the Free Wesleyan Church of Tonga, which had seceded in 1885. Britain intervened to prevent persecution, in 1887, and Baker was expelled three years later. On his death, George Tupou I was succeeded by his great-grandson, George Tupou II, who negotiated the treaty of protection with Britain. In April 1952 administrative responsibility was transferred from

ISLAND TERRITORIES

the High Commissioner for the Western Pacific to the Governor of Fiji.
H.L.

THE CONSTITUTION

The Constitution of Tonga is based on that granted in 1875 by King George Tupou I. It provides for a government consisting of the Sovereign, a Privy Council and Cabinet, a Legislative Assembly and a Judiciary. Limited law-making power is vested in the Privy Council and any legislation passed by the Executive is subject to review by the Legislature.

The Legislative Assembly consists of the Speaker (as President), the members of the Cabinet (including the two Governors of Vava'u and Ha'apai who are *ex-officio* Cabinet members), 7 nobles elected by their peers and 7 representatives of the people elected by popular franchise. Franchise is granted to all male Tongans of 21 years of age and over who pay taxes and can read and write. There are elections every three years and the Assembly must meet at least once each year.

Tongan Ministers control all departments of State except that of Finance which is administered by a European member of the Tongan civil service.

The British Consul and Agent in Tonga is responsible to the Governor of Fiji.

THE GOVERNMENT

The Sovereign: Queen SALOTE TUPOU, G.C.V.O., G.B.E.

MINISTERS

Premier: H.R.H. TUNGI, C.B.E.

Speaker of the Legislative Assembly: KALANIVALU.

Minister of Works: Hon. TU'IHA'ATEIHO.

Minister of Health, and Lands and Survey: H.R.H. TU'IPELEHAKE.

Minister of Agriculture, and Education: H.R.H. TUNGI, C.B.E.

Minister of Police: Hon. ULUKALALA-ATA.

Minister of Finance: Hon G. GOODACRE.

Minister without Portfolio: Hon. T. FOTU.

Governor of Vava'u: Hon. AHOME'E.

Governor of Ha'apai: Hon FIELAKEPA.

British Consul and Agent: C. R. H. NOTT, O.B.E.

THE LEGAL SYSTEM

The courts consist of a Supreme Court, a Magistrate's Court and a Land Court. British and foreign nationals charged with any offence against the laws of Tonga, not including crimes punishable by death or imprisonment for over 2 years, are subject to the jurisdiction of the Tonga courts. In other respects they are subject to the jurisdiction of the Court of the High Commissioner for the Western Pacific (to be transferred in due course to the Supreme Court of Fiji).

RELIGION

The population is Christian, the majority of the people belonging to the Wesleyan Church or to branches of this Church. At the December 1952 census approximately 50 per cent declared themselves adherents of the Wesleyan Church, 18 per cent Free Church of Tonga (Wesleyan), 10 per cent Church of Tonga, 14 per cent Roman Catholic, 6 per cent Latter-Day Saints; the remaining 2 per cent being Seventh-Day Adventists or members of the Church of England.

Wesleyan Free Church of Tonga: The head is Queen SALOTE of TONGA.

KINGDOM OF TONGA

Roman Catholic Church: Rt. Rev. Mgr. JOHN RODGERS, Vicar Apostolic; Nuku'alofa.

FINANCE

Tonga has its own note-issue. The unit is the Tonga £ which has the same official exchange value as the Australian £. The note issue has denominations of £5, £1, 10s. and 4s. Most of the coinage in use is Australian, though United Kingdom, New Zealand and Fiji coins also circulate. There is no public debt and revenue has exceeded expenditure for the past five years.

TRADE AND INDUSTRY

Under the provisions of the Agriculture Organisation Act, 1940, the Tonga Copra Board and the Tonga Banana Board have been set up; both are non-profit making concerns, charged with purchase, sale and marketing in the interests of the producers. There are no co-operative societies.

As Tonga is essentially agricultural, with peasant proprietors, there is virtually no recruitment or employment of labour.

TRANSPORT

Roads. There are approximately 60 miles of metalled road in Tongatapu and 18 miles in Vava'u. In addition 150 miles of graded earth roads are usable by motor traffic in dry weather.

Shipping. Regular monthly passenger and cargo services from New Zealand (via Fiji) are operated by the Union Steam Ship Co., of New Zealand. Cargo services are also maintained by the Bank Line. Sea communications between the islands are maintained by the Government. The chief ports are Nuku'alofa and Vava'u. In 1953 the former entered 99,674 and cleared 51,780 tons of shipping.

Air. There is a good aerodrome on the island of Tongatapu, and limited seaplane facilities at Nuku'alofa and Vava'u harbours. By arrangement with the Government, Tasman Empire Airways operate a monthly charter flying boat service between Tonga and Fiji.

HEALTH

There are 3 public hospitals, 2 subsidiary hospitals and several dispensaries. In 1951, 1,364 in-patients and 25,908 out-patients were treated. Free medical benefit and education is provided under an arrangement whereby all male Tongans pay a poll tax of 32s. a year on reaching the age of 16 years.

EDUCATION

Since 1927 education has been compulsory for all Tongans between the ages of 6 and 14 years. Free education is provided through payment of the poll tax (see HEALTH) Most adults read and write in Tongan and those with a secondary education also read and understand English. The first schools were established by Wesleyan and Roman Catholic missionaries during the first half of the nineteenth century. In 1953 there were 133 primary schools (70 State and 63 Mission schools); 2 State and 5 Mission secondary schools; and a training school for Government and Mission primary school teachers. Total attendance at primary schools for 1953 was 11,311; for secondary schools 2,314. Government expenditure on education (exclusive of buildings and maintenance) amounted to £43,799 in 1953-54 (compared with £5,835 in 1934-35).

THE BRITISH COMMONWEALTH

WESTERN PACIFIC HIGH COMMISSION

(Headquarters: Honiara, British Solomon Islands)

The Office of High Commissioner for the Western Pacific was created by the Western Pacific Order in Council of 1877. His jurisdiction was later extended to foreigners and (in most cases) natives of British settlements or protectorates covered by the Order. The territories administered by the High Commission have varied slightly from time to time and in 1952 the posts of High Commissioner for the Western Pacific and Governor of Fiji were separated, and the headquarters of the High Commission were moved from Suva to Honiara, as from January 1st, 1953.

The islands at present under the High Commission are:

British Solomon Islands Protectorate; Central and Southern Line Islands; Gilbert and Ellice Islands

Colony (including the Phoenix and Northern Line Islands groups).

The High Commissioner is also responsible for United Kingdom obligations in respect of the Anglo-French Condominium of the New Hebrides.

High Commissioner: JOHN GUTCH, C.M.G., O.B.E.

Chief Secretary: R. S. MINNITT, C.M.B.

Financial Secretary: A. MACLEOD-SMITH.

Senior Assistant Secretaries: C. A. KIRKMAN, (Vacant).

Inspector-General, South Pacific Health Service: (responsible also for other British Pacific Administrations)
J. M. CRUIKSHANK, C.M.G., O.B.E.

Advisers: C. HARVEY, C.B.E. (Agriculture), W. W. LEWIS JONES (Education), P. N. DALTON (Legal Affairs).

BRITISH SOLOMON ISLANDS PROTECTORATE

THE BRITISH SOLOMON ISLANDS consist of two parallel chains of islands extending over 900 miles from north-west to south-east in latitudes 5 to 12 degrees south. A Protectorate was declared over the South Solomons (Guadalcanal, Savo, Malaita, San Cristobal and the New Georgia Islands) in 1893, when they were put under the administration of the High Commissioner for the Western Pacific whose headquarters were then at Suva, Fiji. In 1898 and 1899 the Santa Cruz Islands were added and in 1900 Ysabel, Choiseul and Ontong Java, of the Shortlands group, were transferred to the Protectorate by a treaty signed with Germany, as part of the arrangement whereby the United Kingdom withdrew from Western Samoa. Bougainville Island, though geographically part of the Solomons group, was not included in the Protectorate; it remained German until it was occupied by an Australian force in 1914, and is now part of the Trust Territory of New Guinea, administered by Australia.

HISTORY

The Solomon Islands were discovered by the Spaniard, Mendana, in a voyage of exploration from South America in 1568. The islands were so named in the belief that they had supplied gold to Jerusalem in ancient times. Gold has now been found in Guadalcanal. On a second expedition some 27 years later, Mendana failed to find Guadalcanal and settled a small colony, which did not however survive, in the Santa Cruz Islands. The Santa Cruz group was rediscovered by Carteret in 1767. European explorers, however, made little impression on the indigenous inhabitants who continued to live in small communities and in some cases to practise head-hunting and cannibalism.

The inauguration of coconut plantations in Queensland and Fiji, and the arrival of missionaries, brought tremendous changes in the Solomon Islands, which became a main source of labour. The methods of recruitment soon shocked European opinion on the one hand and provoked savage reprisals in the islands on the other. It was in an effort to stem the abuses that the United Kingdom declared the Protectorate. However, the Solomons continued

to supply labourers for Queensland until 1903, and for Fiji, Samoa and Tonga until the first World War. Meanwhile the spread of Christianity had influenced social behaviour.

ECONOMY

Production. About 94 per cent of the land of the Protectorate is tree-covered. Most of the arable land is confined to the coastal regions of the larger islands and if fully cultivated could probably support a much larger population than now exists. About three-quarters of the forested area is regarded as accessible and productive; timber exports in 1954 were valued at £70,000 and the productive area could be increased if the interior of the islands were opened up by new roads. In 1905, a copra industry was started and in 1954 some 19,022 tons of copra, valued at £1,623,142, were exported, a figure close to the pre-war rate. Some two-thirds of the pre-war figure of 64,000 acres of cocoa plantations are being worked, and the remaining areas are gradually being brought into production. Production is mainly under the management of independent companies: Lever Brothers, Burns Philp and Co. Ltd. and W. R. Carpenter and Co. Ltd. have extensive interests in the group. Most of the copra is bought by the Copra Board and sold to the U.K. Ministry of Agriculture, Fisheries and Food. Some is exported under licence from the Board by Levers Pacific Plantations Pty. Ltd., and is sold mainly to Australia. Some of the European plantations are worked by a wage-earning labour force, while others employ natives on a share basis or by contract at a fixed price for each ton of copra produced. Native producers grow just under half of the Protectorate's copra.

Currency. British, Australian and French currencies are legal tender in the islands.

Population. The majority of the population are Melanesian and are estimated at 94,000; they occupy the larger islands. The Polynesians, who number about 4,350, inhabit the smaller islands and atolls. There are in the Protectorate about 438 Europeans, 220 Chinese and 10

ISLAND TERRITORIES

other Asiatics. There is no one dominant language, a variety is spoken even on the main islands and this has resulted in the wide use of pidgin English. Most of the native population live in more or less strict conformity with native custom and the clan or extended family group is the basis of social organisation.

POST-WAR DEVELOPMENTS

In 1942, the Protectorate was occupied by Japanese forces and for three years was the scene of constant warfare. The Solomon Islanders gave invaluable assistance to the allies in guiding spearhead attacks, protecting coast watchers and escaping airmen, and in co-operating in the final allied counter-attack. The Shortland Islands were not re-occupied until the surrender of Japan in 1945.

The post-war years saw great political tension between the government and "Marching Rule", a native opposition movement which originated in Malaita during the war. This sought to control native affairs in the Protectorate and at first agitated for an improved agricultural policy, and non-cooperation with the officials and missionaries. The decision taken in August, 1951, to separate the Office of High Commissioner for the Western Pacific from that of the Governor of Fiji, which meant that closer attention could be paid to the needs of the Solomons, undoubtedly did much to ease tension. Until 1951, the High Commissioner had been represented at Honiara (Guadalcanal) by a Resident Commissioner. In December, 1952, the new High Commissioner took up permanent residence in the capital after an extended visit through the Protectorate. He continued the administration's efforts to reach agreement with the leaders of opposition in Malaita where, except in Malaita district, popular support for "Marching Rule" had been diminishing. In 1951, the movement, whose non-cooperation policy had restricted the labour supply to other islands and lowered the standard of living on its own, became the "Federal Council" movement aiming at an "independent administration" for Malaita.

GOVERNMENT AND ADMINISTRATION

By the end of 1952, negotiations for Malaitan co-operation in the setting up of a native council succeeded. The new Malaita Council met in January, 1953; it is composed of delegates from the several districts of the island under the presidency of their own selected leader, who may, if they wish, represent Malaita in the Protectorate

WESTERN PACIFIC HIGH COMMISSION

Advisory Council. During 1953-54 the principle of establishing native councils was extended; in November 1953, a council for Guadalcanal was established. Native councils for San Cristobal and Ulawa have also been instituted; only the remote outlying islands of the Protectorate are now without a local native authority. All the councils established since the Native Administration Regulation of September 1953 have a majority, and in some cases, their entire membership elected or chosen by the people. The councils derive their revenue from the native poll tax, fines and fees from the native courts and in some cases from a special local levy, their expenditure covers the payment of administrative staff, the equipping of dispensaries, native health and welfare, and village development. Within the four Districts, there are native courts empowered to judge on native custom and minor offences against the Protectorate laws.

For purposes of administration the Protectorate is divided into four districts, each under a District Commissioner; the districts are further divided into sub-districts under headmen appointed by the High Commissioner. Most sub-districts have councils which have wide responsibility in local affairs.

The financial difficulties of the Protectorate have been partially met by grants-in-aid from the U.K. Government and contributions from the Colonial Development and Welfare Fund. Plans for agricultural development emphasise the rehabilitation of the coconut plantations and the development of cocoa production and mineral and forest resources.

H.L.

CIVIL ESTABLISHMENT

(For Secretariat see also Western Pacific High Commission.)

Senior Administrative Officers: Class A: G. A. SKIPPER, V J. ANDERSON, M.B.E.

Senior Agricultural Officer: D. A. DONALD.

Senior Education Officer: S. L. CHAMBERLAIN.

Judicial Commissioner: G J HORSFALL.

Senior Medical Officer: F. R T. HOLLINS.

TRANSPORT

There are three airfields in the Protectorate, one of them near Honiara. An air service between Sydney and Honiara is operated by Qantas Empire Airways, and the aircraft land at each of the three airfields on both the inward and outward flights

CENTRAL AND SOUTHERN LINE ISLANDS

THE CENTRAL AND SOUTHERN LINE ISLANDS are administered direct by the High Commissioner for the Western Pacific and consist of:

Flint Island, discovered in 1801. Various British companies have grown copra and guano there since 1872. In 1951 the island was leased to Mr T H Bambridge of Tahiti

Caroline Island, discovered in 1705 by Captain W. R. Broughton of H.M. Sloop *Providence* and has been worked by various British companies since 1846. Also leased to Mr. Bambridge of Tahiti.

Vostock Island, discovered by Captain Bellinghausen, the Russian explorer, during his Antarctic expedition in 1820. It has been worked spasmodically but is now unoccupied.

Malden Island, discovered by Lord Byron, Captain of H.M.S. *Blonde*, in 1825. An Australian company worked its guano deposits between 1860 and 1927 but the island is now unoccupied.

Starbuck Island, discovered in 1823 by Captain Starbuck of the whaler *L'Arle* of London. Attempts have been made to grow coconuts and to work for guano, but the island has been unoccupied since 1920.

THE BRITISH COMMONWEALTH

GILBERT AND ELLICE ISLANDS

THE GILBERT AND ELLICE ISLANDS colony comprises 37 islands and coral atolls spanning the central Pacific ocean with a land area of approximately 369 sq. miles, of which about half is occupied by Christmas Island alone, and a sea area of about one million square miles. It is 2,200 miles from Ocean Island to Christmas Island in the east and about 1,000 miles from Washington Island to Ninlakitā in the south. There are four main groups of islands: 16 Gilbert Islands, 9 Ellice Islands, 8 Phoenix Islands and 3 Line Islands, and Ocean Island lying about 250 miles from the Gilberts. The total estimated population in 1954 was 40,000 of which about three-quarters are Micronesians (almost entirely Gilbertese) and the remainder mainly Polynesians (almost entirely Ellice Islanders). •

The islands were probably first sighted by the Spanish explorer Mendana in 1567-68 but the officially recorded discoveries were made mainly by the British Navy. The Gilbert group was discovered between 1764 and 1824; Nikunau by Captain Byron in 1764; the northern islands by Captains Gilbert and Marshall in 1788, Fanafuti by Captain Peyter in 1819. Cook discovered Christmas Island in 1777, and the American Captain Fanning, the Fanning and Washington Islands in 1798. The Phoenix group was discovered in the early nineteenth century, also by British and American ships.

From 1850, trading vessels began to call regularly at the islands, and the European settlement, which had begun in 1837, gradually increased. Between 1860-70, the islands were raided by "black-birders" for labour in the South American guano mines and coffee plantations, and for Fiji, Tahiti and Hawaii. The Gilbertese fiercely resisted the raiders and their islands were not so seriously depopulated as were the Ellice Islands, with their friendly and trusting inhabitants.

During the nineteenth century, until 1877, some of the islands were controlled by wandering European sailors, some by missionaries and some by native governments. The people of both Gilbert and Ellice Islands are remarkably advanced politically and owe little in this respect to the settlers. They have developed in each island a form of government based on elected native magistrates and headmen, known as Kaubure in Gilbertese and Faipule in Ellice; and in each island there is a Head Kaubure and a native scribe.

This local government organisation, which existed before European settlement, now functions within the British Commonwealth administration. There were two exceptions to the island democracies, the most northern of the Gilbert Islands, Little Makin and Butaritari (or Great Makin) were ruled by a dynasty of High Chiefs; while in Abemama, in the central Gilberts, another branch of the same family ruled. The exploits of King Tem Binoka of Abemama and the bloody rule of the last Kings of the Makins are recorded by Robert Louis Stevenson in *In The South Seas*.

British subjects in the area were brought under the jurisdiction of the High Commissioner for the Western Pacific by an Order in Council of 1877. Christmas Island was annexed in 1888; in 1889, the High Commissioner's jurisdiction was extended over six of the Phoenix Islands. A protectorate over the Gilbert Islands and Gardner Island was declared in 1892 and, with the consent of the inhabitants, extended to the Ellice Islands. Ocean Island was annexed in 1900. The soil of Ocean Island is composed of almost pure phosphate rock and with the development of the industry it became the most frequented port of call in the group and the centre of the administration was moved there from Tarawa in 1907. After consultation

and at the request of the native councils, the Gilbert and Ellice Islands were annexed in November, 1915, and the Protectorate became a Colony. Ocean, Fanning and Washington Islands came within the colonial boundary in 1916. A second Order in Council of that year included the islands of Fakaaku, Nukunono and Atafu of the Union group, which had been part of the Protectorate since 1889, but in 1925 these islands were transferred to the jurisdiction of the Governor-General of New Zealand. In 1919, Christmas Island, which had been leased in 1914 to the Central Pacific Coconut Plantations Company for 87 years, was included within the Colony.

Canton and Enderburg Islands were placed under joint Anglo-American control for 50 years by a settlement of April, 1939. The agreement followed an American claim to the islands in 1938. A British Officer had represented the High Commissioner there from 1937. Canton, which has an American civil airfield, is now an important link in communications between Australia and North America.

Ocean Island was bombed two days after Pearl Harbour. The island's position was untenable and the Europeans were evacuated to Australia in February, 1942. Japanese land forces raided Tarawa and Butaritari. When American forces occupied the Ellice Islands, the colony's administration was transferred from Sydney, its first war-time base, to Fanafuti, whence it controlled the Ellice, Phoenix and Line Islands until November 1943, when the Gilberts were retaken. The headquarters of the administration were then re-established, as they had been before 1907, at Tarawa. Ocean Island surrendered to Australian forces in 1945. Much of the island's soil had by then been used in the phosphate industry and the returning inhabitants were resettled in the newly purchased island of Rabi in the Fiji group.

Land is of great social and economic significance to the people of the islands. During the period of inter-island warfare, the defeated were enslaved and deprived of their land; and landlessness remains to-day a status of humiliation. Native families are most concerned to restrict the transfer of land under customary law, and to increase their holdings.

H.L.

GOVERNMENT AND ADMINISTRATION

The Government of the Colony is under the High Commissioner for the Western Pacific whose headquarters are at Honiara in the British Solomon Islands and who is represented at Tarawa by a Resident Commissioner. There are 5 District Commissioners and 27 native island councils, or Native Governments, as they are officially called. The Native Governments exist on all of the 16 Gilbert Islands, also on 8 of the Ellice Islands and on the 3 inhabited Phoenix Islands. Presiding over each is a Magistrate who combines executive and judicial authority. In the former he is assisted by the island council on which there is a freely elected minority, and in the latter by a native court on which elected Kaubure sit as jurors. Since the population of each island is small, it has not been necessary to separate the executive from the judiciary and the Kaubure, like the Magistrate, perform certain executive duties in their village districts. The Magistrate is assisted by a Chief of Kaubure, a native Scribe and a Chief of Police; all are appointed by the Central Government although the island council is usually consulted beforehand. The island councils are legislative bodies subject to the right of veto of the Resident Commissioner. They have, as yet, no

ISLAND TERRITORIES

financial responsibility, which limits their control of local affairs; but proposals are under consideration for their reconstitution with fairly wide financial powers. Native Courts have jurisdiction over all natives and may pass sentences of imprisonment of up to 10 years (subject to review by the District Commissioner) and of death (subject to confirmation by the High Commissioner). In February, 1951, the first experiment of co-ordinating administration in the Colony was carried out when Magistrates of the Gilbert Islands assembled in conference at Tarawa; the conference was most successful in spite of language difficulties.

CIVIL ESTABLISHMENT

Resident Commissioner: M. L. BERNACCHI, O.B.E.

Secretary to Government: G. W. JONES.

Administrative Officers: Class A: F. N. M. PUSINELLI, M.C.; Class B: P. B. LAXTON, M.C.; R. G. ROBERTS; K. NICHOLSON; I. G. TURBOTT; R. TURPIN; D. M. FREEGARD; R. J. S. HUTCHINSON; J. B. McCRAIG; H. R. R. L. COOPER.

Accountant-General: W. J. S. BRABANT.

Senior Medical Officer: J. S. HOGG.

RELIGION AND EDUCATION

During the nineteenth and twentieth centuries Christianity was spread in the island by missionaries. Protestant, Roman Catholic and Seventh-Day Adventist missions are maintained.

WESTERN PACIFIC HIGH COMMISSION

During 1953 there were 7,408 pupils in mission schools and 711 in government primary schools. A scheme to establish government controlled primary schools on each of the islands is being developed.

FINANCE

Australian currency is in use in all the islands of the group. Revenue in 1953 was £396,000 and expenditure £357,000.

TRADE AND INDUSTRY

The production of copra is the main occupation of the islanders. In the Fanning, Washington and Christmas Islands the copra plantations are managed by companies; throughout the rest of the colony it is grown by individual native producers. The production of copra varies considerably with the rainfall and severe droughts are common. In 1954, 5,770 tons of copra were exported. The phosphate industry of Ocean Island, the only industry in the colony, produced some 294,012 tons in 1954; but the phosphate resources are likely to be exhausted within 30 years.

TRANSPORT

An airstrip at Tarawa was constructed by American Forces in 1943 and, unlike many of its kind, is still in use. Since 1951 an air service links the colony with Honiara. For external sea communication, the islands are dependent on the phosphate and copra vessels.

COMMONWEALTH ORGANISATIONS

Anti-Locust Research Centre: c/o British Museum (Natural History), Cromwell Road, London, S.W. 7; f. 1945 to be responsible for the technical direction of anti-locust campaigns, and to act as a centre for the co-ordination of locust information; Chair. Sir GEOFFREY EVANS, C.I.E.; Sec. A. T. THOMPSON.

Applied Nutrition Unit: London School of Hygiene and Tropical Medicine, Keppel Street, Gower Street, London, W.C.1; f. 1952; studies and exchanges information on colonial nutrition and food technology; advises and assists in field work and investigations, Dir. Prof. B. S. PLATT, C.M.G.

Association of British Malaya: Royal Empire Society Building, 18 Northumberland Avenue, London, W.C.2; open to all connected with or interested in Singapore, Federation of Malaya, North Borneo, Sarawak and Brunei; Pres. Sir PATRICK MCKERRON, K.B.E., C.M.G.; Sec. H. P. BRYSON, M.C.; publ *Malaya* (monthly).

Association of Universities of the British Commonwealth (formerly Universities Bureau of the British Empire) 36 Gordon Square, London, W.C.1, f. 1912 to act as a liaison office and information bureau for the universities in the British Commonwealth, its functions include help, when required, in the selection of candidates for certain overseas academic vacancies; it also provides the secretariat for the Cttee of Vice-Chancellors and Principals of the Universities of the United Kingdom; Chair. R. S. AITKEN, M.D., F.R.C.P., Sec. J. F. FOSTER, M.A., LL.D.; publs. *The Yearbook of the Universities of the Commonwealth*, *Reports of Proceedings of Congresses of the Universities of the Commonwealth* (quinquennial), *Reports of Proceedings of Conferences of the Home Universities* (annual), *Higher Education in the United Kingdom*; *A Handbook for Students from Overseas* (in conjunction with the British Council).

British Academy Archaeological and Historical Advisory Committee for the Colonial Territories: British Academy, Burlington Gardens, London, W.1; f. 1954; a consultative committee to advise on all matters relating to the archaeology and history of the overseas territories; Sec. Sir MORTIMER WHEELER.

British Commonwealth Forestry Conference and the Standing Committee on British Commonwealth Forestry: 25 Savile Row, London, W.1; established to discuss questions of forest policy in the Commonwealth and the wider technical aspects of forestry, Sec. G. D. ROUSE.

British Commonwealth Scientific Conference and its Standing Committee: Africa House, Kingsway, London W.C.2; the Conference held in 1946 set up a Standing Committee to follow up its recommendations and decisions, to consider the best means of ensuring collaboration between the government scientific organisations of the British Commonwealth and to offer advice on the organisation and development of research laboratories to any country which may ask for it, Chair. Sir IAN CLUNIES-ROSS, C.M.G., D.Sc., Sec. O. F. BROWN, C.B.E.

British Commonwealth Producers' Organisation: 25 Victoria Street, Westminster, London, S.W. 1; f. 1916, aims to promote interests of Commonwealth primary producers who are its constituent members, to promote development of reciprocal trade; and to collect, co-ordinate and distribute information on all subjects related thereto within the Commonwealth, to communicate opinions of Commonwealth producers to Governments and to seek effective use of preferences for safeguarding and expansion of Commonwealth trade Chair J. K. VAUGHAN-MORGAN, M.P.; Deputy Chairmen H. ALAN WALKER, Sir DENYS LOWSON, Bart; Sec. P. B. BROADBENT, publ *Commonwealth Producer* (bi-monthly).

British Council: see page 152.

British Empire Leprosy Relief Association: 8 Portman Street, London, W.1, f. 1923 to investigate and carry out research in the causes and treatment of leprosy, and to assist those carrying on leprosy work within the Empire by grants and staff, Gen. Sec. H. S. M. HOARE, Medical Sec. J. LOWE, C.B.E.

E. CASSELTON ELLIOTT, C.B.E., Deputy Chair. H. WAKEFORD; Sec. A. E. V. BARTON, C.B.E.; publ. *The West India Committee Circular* (monthly to mems.).

BOOK LIST

To compile a comprehensive bibliography for all the countries and territories of the British Commonwealth would be a gigantic task, and all that has been attempted here is to give a list of the standard works and of some other, mostly recent, publications which may be useful to the general reader. Official publications are not included, but full lists of both routine and occasional reports may be obtained from H.M. Stationery Office (York House, Kingsway, London, W.C.2), from the Crown Agents for Oversea Governments and Administrations (4 Millbank, London, S.W.1), and from the Public Relations Departments of the overseas Governments concerned. The Royal Empire Society, Northumberland Avenue, London, W.C.2 has published both comprehensive and shorter bibliographies, details of which may be obtained from the Librarian.

Abbreviations: C.U.P. = Cambridge University Press;
H.M.S.O. = Her Majesty's Stationery Office,
O.U.P. = Oxford University Press
