Thus this negotiation, begun under such favourable auspices, both with England and Russia, broke off with both powers on the subject of the possession of Sicily and of the mouths of the Cattaro. Apparently these were very inconsiderable objects to revive so dreadful a contest, and bring the armies of the south and north of Europe to Eylau and Friedland; but in reality the secret ends which the hostile powers had in view, in contending for these distant possessions, were more considerable than might be at first imagined. It was not merely as an appanage of the crown of Naples that Napoleon so obstinately insisted on Sicily for his brother; it was as the greatest island in the Mediterranean, as opening the way to the command of that inland sea, and clearing the route to Egypt and the Indies, that it became a paramount object of desire. It was not an obscure harbour on the coast of the Adriatic which brought the colossal empires of France and Russia into collision; it was a settlement on the skirts of Turkey, it was the establishment of a French military station within sight of the Crescent, which was the secret matter of ambition to the one party, and jealousy to the other. Thus, while Sicily and Cattaro were the ostensible causes of difference, India and Constantinople were the real objects in the view of the parties;[2] and the negotiation

[1] **Bign. v. 163, 365.**

CHAP. XLII.

1806.

broke off upon those eternal subjects of contention between England, Russia, and France—the empire of the seas, and the dominion of continental Europe.

81. State of affairs at Berlin. Prussia's ultimatum, and preparations for war on both sides.

The intelligence of the refusal of Alexander to ratify d'Oubril's treaty with France excited an extraordinary transport at Berlin, which was mucli heightened when shortly after it became evident that the negotiations at Paris for an accommodation with Great Britain were not likely to prove successful. The war party became irresistible ; a sense of national degradation had reached every heart; the Queen was daily to be seen on horseback at the head of her regiment in the streets of Berlin.[1] The enthusiasm was universal; but in the guards and officers of that distinguished corps it rose to a pitch approaching to frenzy. In proportion to the force with which the bow had long been bent one way, was the violence with which it now rebounded to the other. Wiser heads, however, saw little ground for rational confidence in this uncontrolled ebullition of popular effervescence ; and even the heroic Prince Louis let fall some expressions indicating that he hoped for more efficient support in the field than the declaimers of the capital.*

[1] Bign. v. 403.

Aug. 26. Lucchesini, who had so long conducted the Prussian diplomacy at the French capital, sent despatches to his government full of acrimonious complaints of the cabinet of the Tuileries, which either by accident or design fell into the hands of the French police, and were laid before Napoleon. He instantly demanded the recall of the

Sept. 3. obnoxious minister, who left Paris early in September, and was succeeded by Knobelsdorf, whose mission was mainly to protract matters, that the cabinet of Berlin

Sept. 7. might complete its preparations, and if possible gain time

*** He repeated with emphasis the lines of the poet Gleims, in allusion to the warlike bards of Berlin:—**

" Sie singen laut im hohen chor
Vom Tod, furs Vaterland uns vor :
Doch kommt ein einziger Husar,
So lauft die ganze Barden Schar."

for the distant succours of Russia to arrive on the Elbe. But as the troops on both sides were hastening to the scene of action, and it was evident of how much importance it was that the strength of Russia should be thrown into the scale before a decisive conflict took place, Napoleon easily penetrated their design, and resolved himself to commence hostilities. His forces were so great that they might well inspire confidence in the issue of the contest. He had four hundred and fifty thousand men on foot, of whom a hundred and fifty thousand were in the interior, and a hundred and seventy thousand with the Grand Army in the centre of Germany, besides fifty thousand in Lombardy. Thirty thousand horse, and ten thousand artillerymen, formed part of the force with which he would first commence operations. His troops for some weeks past had been rapidly defiling from Braun au, the Inn, and the Necker, towards the banks of the Elbe, and one hundred thousand men were approaching the Thuringian Forest. He set out, therefore, from Paris to put himself at their head on the night of the 26 th September, conveyed the Guard by post to Mayence, and was already far advanced on his journey to the theatre of war, when the Prussian ultimatum was delivered at Paris by M. Knobelsdorf. Its conditions were—1st, That the French troops should forthwith evacuate Germany, commencing their retreat from the day when the King of Prussia might receive the answer of the Emperor, and continuing it without interruption. 2d, That the districts on the Wesel should be detached from the French empire. 3d, That no obstacles should be thrown in the way of the formation of a counter-league in the north of Germany. No stronger proof of the infatuation which had seized the cabinet of Berlin can be desired than the fact of their having, in the presence of Napoleon and the Grand Army, and without any present aid either from Russia, Austria, or England, proposed terms suitable rather to the day after the rout of Rosbach than the eve of the battle of Jena.[1]

82. Murder of Palm. Great sensation which it occasioned.

The public mind was at this period violently excited in Germany against the French, not merely by their prolonged stay beyond the Rhine, and the enormous expenses with which it was attended, but by a cruel and illegal murder committed by orders of Napoleon on a citizen of one of the free cities of the empire, who had sold a work hostile to his interests. Palm, a tradesman in Nuremberg, had been instrumental with many other booksellers in circulating the celebrated pamphlet by Gentz, already mentioned, in which the principle of resistance to French aggression was strongly inculcated, and another by Arndt, entitled " The Spirit of the Age," of a similar tendency, but in neither of which was any recommendation of assassination or illegal measures held forth. The others were fortunate enough to make their escape; but Palm was

Aug. 12. seized by the French soldiers, dragged before a military commission of French officers assembled by the Emperor's orders at Braunau, and there sentenced to be shot, which inhuman decree was immediately carried into execution, without his being so much as allowed to enter on his

Aug. 25. defence.* This atrocious proceeding, for which there is not a shadow of excuse, either in the nature of the publication charged, or in the law of nations, excited the most profound indignation in Germany. Men compared the

Proceedings of the military commission by which he was condemned.

*** The judgment of the military commission convicting Palm, and sentencing him to death, bore in its preamble :—" Considering that wherever there is an army, the first and most pressing duty of its chief is to watch over its preservation ; that the circulation of writings tending to revolt and assassination menaces not only the safety of the army, but that of nations; that nothing is more urgent than to arrest the progress of such doctrines, subversive alike of the law of nations and the *respect due to crowned heads;* injurious to the people committed to their government; in a word, subversive of all order and subordination—declares unanimously, That the authors, printers, publishers, and distributors of libels bearing such a character, should be considered as guilty of high treason, and punished with death." Such were the doctrines in which the frenzy of the French Bevolution, which began by prodaiming war to the palace and peace to the cottage, the contest which opened by an invitation to the people of all countries to throw off the yoke of crowned heads, terminated ! It is hard to say whether the barefaced falsehood, delusive sophistry, or cold-blooded cruelty of this infamous conviction are most conspicuous. The pamphlets which Palm had sold contained no doctrines whatever recommending assassination, or any private crime. If they had,**

loud declamations of the republican partisans in favour of the liberty of the press with this savage violation of it by their military chief; and concluded, that the only freedom which they really had at heart was license for their own enormities, and the only system of government which was to be expected from their ascendency, that of military violence. A dignified proclamation, issued about the same time by the senate of Frankfort, after recounting the enormous contributions which they had paid to the French armies in 1796, 1799, 1800, and 1806, concluded with declaring their inability to preserve the independence of their country, which had been transferred to the Elector of Mayence, and recommending submission to the arms of France. Augereau replied to this proclamation by a stern requisition to have the authors of it delivered up to him in twenty-four hours: the fate of Palm was universally anticipated for the magistrates of the state: but after they had been arrested, Napoleon, alarmed at the universal horror which that tragic event had excited, deemed it prudent to drop further proceedings.[1]

Aug. 19.

Aug. 27.

[1] Hard. ix. 246, 250. Bign,v.337,

The death of this unfortunate victim did not pass unrevenged, either upon Napoleon or the French people. It fell deeply and profoundly on the generous heart of Mr Fox, whose enthusiastic hopes of the extension of general

they were published, not in the dominions of France, or by any person who owed allegiance to its Emperor, but in the free city of Nuremburg, in the heart of the German empire; and they were addressed, not to the subjects of Napoleon, but to Germans, aliens to his authority, and enemies of his government. The French armies, contrary to the express terms of the peace of Pressburg, were remaining in and devouring the resources of that country, upon the hollow pretext that *Russia,* a separate power at war with France, had in the usual course of hostility conquered a town ceded by Austria to the French empire. The pamphlets published were nothing but appeals to the Germans to unite against this foreign oppression, and certainly never had men a more justifiable cause of hostility. Applying Napoleon's principles to himself, what punishment would they fix on the head of him who published proclamations calling on the Venetians, the Irish, and Swiss, to throw off the yoke of their respective governments, and avowed his intention, when he landed in England, to call on the whole subjects of the British empire to throw off the rule of their sovereign and parliament, and to establish annua] parliaments and universal suffrage ?—See BIGNON, V. 337,338.

CHAP. XLII.

1806.

freedom by the spread of republican principles were thus cruelly belied by the deeds perpetrated by its leaders in the name of the French people, and contributed, perhaps more than any other circumstance, to produce that firm resolution to adhere to the basis originally laid down by Napoleon for the negotiations which ultimately led to their abandonment. The carnage of Spain, the catastrophe of Moscow, the conquest of France, the exile to St Helena, are thus directly associated with this deed of blood. The brave and the free thenceforward saw clearly, in every part of Europe, that no hope for public or private liberty remained but in a determined resistance to the aggressions of France : that slavery and chains followed in the rear of the tricolor flag. Napoleon has frequently said, that if Mr Fox had lived, peace would have been concluded, and all the subsequent misfortunes of his reign averted; but the truth of history must dispel the illusion, and the English annalist cannot permit the insidious praises of an enemy to tear from one of the brightest ornaments of his country the honour of having at last been awakened to a sense of the nature of revolutionary ambition, and of having possessed the magnanimity, in opposition to his former long-continued delusion, instantly to act upon the conviction.

83. Influence which it has on the rupture of the negotiation with England.

84. Mr Fox's eyes are at last opened to the real nature of the war.

In his last instructions, dictated a few weeks before his death, to Lord Yarmouth, there is to be found the firmest resolution to insist on the original basis of the negotiation, and never to consent to any other: Earl Spencer, who succeeded him, had merely to follow out the path thus clearly chalked out. * In several of the speeches which

Last instructions of Mr Fox to Lord Lauderdale.

*** " In the instructions," says Mr Fox in his last important official despatch, " given to Lord Lauderdale, the repeated tergiversations of France during the negotiation are detailed. It is from thence alone that any delay has arisen. The offers made through Lord Yarmouth were so clearly and unequivocally expressed, that the intention of the French government could not be doubted. But they were no sooner made than departed from. In the first conferences after his Lordship's return to France, Sicily was demanded; in the former, it had been distinctly disclaimed. This produced a delay attributable solely to France: our answer was immediate and distinct: the new demand was declared to be a breach of the principle of the proposed negotiation in its most essential**

he had delivered, after he had obtained the direction of foreign affairs, is to be found a candid admission that his opinion as to the necessity and justice of the war had undergone a total alteration.* Thus the discord of earlier years was at length by this great man forgotten in the discharge of patriotic duty : the two lights of the age came finally to concur in the same policy. If Mr Pitt struggled for fifteen years, amidst difficulty and disaster, to carry on the war, it was Mr Fox who bequeathed the flood of glory in which it terminated to his successors ; and who, after having spent the best part of his life in recommending less honourable and enlightened measures of

parts. To obviate the cavil on the want of powers, full powers were sent to you, but with an express injunction not to use them till the French government should return to its former ground with respect to Sicily. M. Talleyrand, upon being informed of this determination, proposed to give the Hanse Towns in lieu of Sicily to the King of Naples. The moment this proposal was received here it was rejected; and the same despatch which conveyed that rejection carried out his Majesty's commands, if the demand for Sicily should still be persisted in, to demand his passports and return to England. M. Talleyrand upon this made fresh proposals, supported by Russia, as affording the means of preventing the meditated changes in Germany; and stated, ' that these changes were determined upon, but should not be published if peace took place.' That despatch was received here on the 12th, and on the 17th, in direct violation of these assurances, the German confederation treaties were both signed and published. Such are the unfounded pretences by which the French government seeks to attribute to delays on our part the results of its own injustice and repeated breach of promise." Such was Mr Fox's dying view of the negotiation up to the beginning of August; and it surely contains no confirmation of Napoleon's assertion, that, if he had lived, peace would have been concluded. Its last stages, down to his death on 17th September, were conducted in strict conformity to the instructions he had given to Lord Lauderdale.—See Mr Fox's *Despatches, August Sd and 14th,* 1806; *Parl. Deb.* viii. 138, 164.

*** In the debate on Mr Windham's military system, on April 3,1806, Mr Fox said, with admirable candour :—" Indeed, by the circumstances of Europe, I am ready to confess that I *have been weaned from the opinions which I formerly held* with respect to the force which might suffice in time of peace: nor do I consider this as any inconsistency, because I see no rational prospect of any peace which would exempt us from the necessity of watchful preparation and powerful establishments. If we cannot obtain a safe and honourable peace, of which it is impossible in the actual state of affairs to be sanguine, and if we are not successful in carrying on the war, we must be reduced to that state which I for one cannot contemplate without apprehension,—'toto divisos orbe Britannos,'—and be left to our own resources and colonial possessions. In such an arduous and difficult struggle, demanding every effort and every exertion, or indeed under any system which we may act upon, a large army is indispensable."—*Part Deb.* vi. 715, 716.**

CHAP. XLII.

85. Death of Mr Fox. His character.

concession to his country, in his last moments " nailed her colours to the mast," *

The health of this illustrious man had for some weeks past been declining; and in the middle of July he was compelled to discontinue his attendance in parliament, though he was still assiduous in his duties at the Foreign Office. Notwithstanding all the efforts of medical skill, his complaint daily became more alarming. Symptoms of dropsy rapidly succeeded, and yielded only for a brief space to the usual remedies. On the 7th September he sank into a profound state of weakness, and on the 13th of the same month breathed his last, having entertained almost to the end of life confident hopes of recovery.[1] Thus departed from the scene of his greatness, within a few months after his illustrious rival, Charles Fox. Few men during life have led a more brilliant career, and none were ever the object of more affectionate love and admiration from a numerous and enthusiastic body of friends. Their attachment approached to idolatry. All his failings, and he had many, were forgotten in the generous warmth of his feelings, and the enthusiastic temper of bis beart. " The simplicity," says Mackintosh, " of his character communicated confidence; the ardour of his

Sept. 13.

[1] Ann. Reg. 1806,258.

*** This memorable final coincidence of opinion between Pitt and Fox, on the necessity of continuing the war, is not the only instance of a similar approximation equally honourable to both parties. Ten years before, the champions of the constitution and of revolution, Mr Burke and Sir James Mackintosh, the well-known author of the *Vindicice Gatticce,* had in like manner come to view the origin of the convulsion in the same light. " The enthusiasm," said Mackintosh in a letter to Burke, " with which I once embraced the instruction conveyed in your writings, is now ripened into solid conviction by the experience and conviction of more mature age. For a time, seduced by the love of what I thought liberty, I ventured to oppose, without ever ceasing to venerate, that writer who had nourished my understanding with the most wholesome principles of political wisdom. I speak to state facts, not to flatter: you are above flattery. I am too proud to flatter even you. Since that time a melancholy experience has undeceived me on many subjects, in which I was then the dupe of my own enthusiasm. I cannot say I even now assent to all your opinions on the present politics of Europe. But I can with truth affirm that I subscribe to your general principles, and am prepared to shed my blood in defence of the laws and constitution of my country." Burke answered from the bed of death:—"You have begun your opposition by obtaining a great victory over yourself; and it shows how much your own sagacity, operating on**

eloquence roused enthusiasm ; the gentleness of his manners inspired friendship."—" I admired," says Gibbon, " the powers of a superior man, as they were blended in his attractive character with the simplicity of a child. No human being was ever more free from any taint of malignity, vanity, or falsehood/' Nothing can more strongly mark the deep impression made by this part of Mr Fox's character than the words of Burke, pronounced six months after all intercourse between them ceased :— " To be sure, he is a man made to be loved I " [1] *

[1] Mackintosh's Mem. i. 324.

86. His vices and failings.

A man of pleasure in every sense of the word ; dissipated and irregular in private life; having ruined his private fortune at the gaming-table, and often emerging from such haunts of vice to make his greatest appearances in parliament, yet he never rose without, by the elevation of his sentiments, and the energy of his language, exciting the admiration, not only of his partisans, but of his opponents. The station which he occupied in the British parliament was not that merely of the leader of a powerful and able party. He was at the head of the friends of freedom in the human race. To his words the ardent and enthusiastic everywhere turned as to those of the gifted spirit intrusted with their cause. To his sup-

your own experience, is capable of adding to your own extraordinary talents and to your early erudition. It was the show of virtue, and the semblance of public happiness, which could alone mislead a mind like yours. A better knowledge of their substance alone has put you on the way that leads the most securely and certainly to your end." What words between such men !—See MACKINTOSH'S ***Memoirs,*** **i. 87, 88.**

*** The convivial talents of Fox were great, as may well be believed from his so long being the idol of the brilliant circle of wits and beauties who in his early days did homage to the rising sun of the Prince of Wales. With men his conversation often partook of the licentious character of the fashionable and unscrupulous society in which he lived; but in the company of elegant women no man was more scrupulously well-bred, or often more felicitous in the delicate expression of flattery. On one occasion, when he was at a supper at the house of the young and beautiful Duchess of Devonshire, a sort of game went round, in which each gentleman presented the lady next him with fruit of some kind, accompanied by an impromptu line or verse: " Come, Mr Fox," said the Duchess, "you have given me nothing as yet: what are you thinking of?" He immediately took a bunch of grapes, and presented it to the Duchess with the words, " Je plais jusqu'a l'ivresse."**

CHAP. XLII. 1806.

port the oppressed and destitute universally looked as their last and best refuge in periods of disaster. "When he pleaded," says Chateaubriand, "the cause of humanity, he reigned—he triumphed. Ever on the side of suffering, his eloquence acquired additional power from his gratuitous exertions in behalf of the unfortunate. He crept even to the coldest heart. A sensible alteration in the tone of the orator discovered the man. In vain the stranger tried to resist the impression made upon him; he turned aside and wept."

87. His extraordinary talents in debate.

Mr Fox was the greatest debater that the English parliament ever produced: he has been styled by a most competent judge, "the most Demosthenian orator who has appeared since the days of Demosthenes."* Without the admirable arrangement and lucid order which enabled Mr Pitt to trace, through all the details of a complicated question, the ruling principle which he wished to impress upon his audience, he possessed a greater power of turning to his own advantage the incidents of a debate or admissions of an antagonist, and was unrivalled in the power and eloquence of his reply. In the outset of his speech he often laboured under hesitation of expression, and was ungainly or awkward in manner; but as he warmed with the subject, his oratory became more rapid, his delivery impassioned, and, before it closed, the enraptured senate often hung in breathless suspense on his words. He was an accomplished classical scholar, and was master of an extraordinary power of turning to the best advantage the information which he possessed, or had gained during the debate. But his habits were too desultory—his indolence too great—his love of pleasure too powerful, to permit him to acquire extensive knowledge.† Respectable as a historian, the fragment on the annals of the English Revolution which he composed is justly

*** Sir James Mackintosh.**

+ No man more frequently referred to Adam Smith; yet he had never read the "Wealth of Nations."

admired for the purity of its style and the manliness of its sentiments; but the pen was too cold an instrument to convey the fervid bursts of his eloquence, and the reader will look in vain for the impassioned flow of the parliamentary orator. * It is in the debates of the House of Commons that his real greatness is to be seen ; and a vigorous intellect will seldom receive higher gratification than from studying the vehement declamation—the powerful and fervent reasoning—by which his great speeches there are distinguished.

88. His fame is on the decline as a just thinker.

But, notwithstanding all this, the fame of Mr Fox is on the decline, not from a diminished sense of his genius, but an altered view, among the thinking few at least, of his principles. With the extinction of the generation which witnessed his parliamentary efforts—with the death of the friends who were captivated by his social qualities, his vast reputation is sensibly diminishing. Time, the mighty agent which separates truth from falsehood—experience, which dispels the most general illusions—suffering, which extinguishes the warmest anticipations when unfounded in human nature, have separated the wheat from the chaff in his principles. In so far as he sought to uphold the principles of general freedom, and defend the cause of the unfortunate and oppressed, in whatever country—in so far as he protected in legislation the freedom of the press, and opposed the infamous traffic in human flesh, his efforts will ever command the respect and sympathy of mankind. But in so far as he sought to advance this cause by advocating the principles of democracy—in so far as he supported the wild projects of the French revolutionists, and palliated when he could not defend their atrocious excesses—in so far as he did his utmost to transfer to this country the same

*** This is the more remarkable, as he had so elevated a conception of the proper character of history that he classed the chief works of thought thus:—1. Poetry. 2. History. 3. Oratory. This was no slight homage to the historical muse, when coming from the first orator of his own, or perhaps any age. —Sec Fox's *History*, Introd. p. vii.**

CHAP. XLII.

1806.

destructive doctrines, and, under the name of Reform, sought to give an entrance here to Jacobin fanaticism and infidel zeal—in so far as he counselled peace and recommended concession, when peace would have been the commencement of civil warfare, and concession a crouching to revolutionary ambition—he supported principles calculated to destroy all the objects which he himself had in view, and induce the very tyranny against which the thunders of his eloquence were directed.

89. Reasons of this.

The doctrines, that all abuses are owing to power being confined to a few hands—that the extension of political influence to the lower classes is the only antidote to the evil—that virtue, wisdom, and intelligence will be brought to bear on public affairs when those classes are intrusted with their direction—and that the growth of democratic ascendency is the commencement of social regeneration,—are sometimes amiable, from the philanthropy of those who support them, and always will be popular, from the agreeable flattery they convey to the multitude. They are liable to only one objection—that they are altogether visionary and chimerical, founded on a total misconception of human nature, and a fatal forgetfulness of the character of the vast majority of men who in every rank are swayed by selfishness or stimulated by passion. They invariably lead, when put in practice, to results diametrically the reverse of what were held forth or expected by their supporters. Abuses, by the introduction of a democratic regime, it is soon found, instead of being diminished, are multiplied tenfold; tyranny, instead of being eradicated, is enormously increased; personal and social security, instead of being established, is kept in perpetual jeopardy; the weight of public opinion, instead of an antidote to evil, becomes its greatest promoter, by being exerted in favour of those by whom its enormities are perpetrated. It is by the opposing influence of these powers that the blessings of general freedom are secured under a constitutional

monarchy; no hope remains of its outliving the spring-flood which drowns the institutions of a state, when these antagonist forces are brought for any length of time to draw in the same direction.*

90. His errors as a political philosopher.

The liberties of England long survived the firm resistance which Mr Pitt opposed to revolutionary principles; but those of France perished at once, and perhaps for ever, under the triumph in which Mr Fox so eloquently exulted on the other side of the Channel. Taught by this great example, posterity will not search the speeches of Mr Fox for historic truth, or pronounce him gifted with any extraordinary political penetration. On the contrary, it must record with regret, that the light which broke upon Mr Burke at the outset of the Revolution, and on Mr Pitt before its principal atrocities began, only shone on his fervent mind when descending to the grave. It can only award to him, during the greater part of his career, the praise of an eloquent debater, a brilliant sophist, but not that of a profound thinker or a philosophic observer. But recollecting the mixture of weakness in the nature of all, and the strong tendency of political contention to dim

* "In the contests of the Greek commonwealth," says Thucydides, "those who were esteemed the most depraved, and had the least foresight, invariably prevailed; for, being conscious of this weakness, and dreading to be over-reached by those of greater penetration, they went to work hastily with the sword and poniard, and thereby got the better of their antagonists, who were occupied with more refined schemes."—"In turbis atque seditionibus, "says the Roman annalist, "pessimo cuique plurima vis; pax et quies bonis artibus alun-tur."—" Enfin je vois," said the French demagogue when going to the scaffold, " que dans les revolutions l'autorite toujours reste aux plus scelSrats."—" A democratic republic," said the British statesman, "is not the government of the few by the many, but of the many by the few; with this difference, that the few who are thus elevated to power are the most worthless and profligate of the community." "Democracy," says the author of the *Vindicim Gallicce,* "is the most monstrous of all governments, because it is impossible at once to act and to control; and consequently the sovereign power is there left without any restraint whatever. That form of government is the best which *places the efficient direction in the hands of the aristocracy', subjecting them in its exercise to the control of the people at large"* What a surprising coincidence between the opinions of such men in such distant ages ! He is a bold speculator who, on such a subject, differs from the concurring authority of Thucydides, Sallust, Danton, Mr Pitt, and Sir James Mackintosh.—THUCYDIDES, 1. iii. c. 89; SAL-LUST, *de Bello Cat;* RIOUFFE, 67; *Parl, Hist.* xxx. 902; MACKINTOSH'S *Memoirs,* i. 92.

the clearest intellect and warp the strongest judgment, it will, while it condemns a great part of his principles, do justice to his motives and venerate his heart,—it will indulge the pleasing hope, that a longer life would have weaned him from all, as he honourably admits it had done from many, of his earlier delusions; and admire the magnanimous firmness with which, on the bed of death, he atoned for his past errors, by bequeathing, in a moment of extraordinary gloom, the flag of England unlowered to his successors.

CHAPTER XLIIL

CAMPAIGN OF JENA—FALL OF PRUSSIA.

CHAP. XLIII.

1806.

1. Natural disadvantages of Prussia.

No monarchy in Europe is less indebted than the Prussian, for its political power and importance, to the advantages of nature. Its territory, flat, sandy, and in great part comparatively sterile, can only be brought to a high state of cultivation by long-continued efforts, and the unsparing application of human industry. Its sea-coast has few advantageous harbours; its rivers, though numerous, and in general navigable, descend for the greater part of their course through the territories of separate or rival states. Without the natural fertility of the Sarmatian plains, or the mineral wealth of the Bohemian mountains; destitute alike of the flocks of Hungary and the herds of Switzerland; enjoying neither the forests of Norway nor the vines of France — it depends entirely on grain crops and pastures, and for them the bounty of nature has afforded no peculiar advantages. Vast tracts of gloomy heath or blowing sand, hardly less unproductive, form a large part of its surface; in other places, cheerless, desolate plains, thickly strewn with rushes or stunted firs, convey a monotonous, mournful impression to the mind of the traveller. Yet have the industry and perseverance of man conquered all these disadvantages: the arid sands have been covered with waving crops, the rushy fields with rich pastures;[1] and in no country in Europe is agriculture now advancing with more vigor-

2. Political situation and inhabitants of Prussia.

ous strides, or population increasing with such steady rapidity.*

If Prussia owes little to her natural advantages, she is indebted still less to the political facilities of her situation, or the homogeneity in character of her inhabitants. Her territory, which has gradually been enlarged by the talents or good fortune of her rulers, is widely scattered from the Rhine to the Vistula, with other states in some places intervening, and in general in such long shreds as equally to expose her to attack and to deprive her of the advantages of a compact formation of defence. Her population is composed of different races, speaking in some places different languages, and but recently actuated in any by a common bond of national attachment. The old electorate of Brandenburg originally formed part of the vast monarchy of Poland, and broke off from that unwieldy commonwealth during the weakness of its unbridled democracy; Silesia, conquered by the Great Frederick in the middle of the eighteenth century, is a province of Bohemia, and is chiefly inhabited by Slavonian tribes; while Prussian Poland was the fruit of the iniquitous spoliation of that unhappy state in 1772 and 1794, and its inhabitants retain all the mournful recollections and national traditions by which the Sarmatian race is characterised in every part of the world. Yet does the Prussian monarchy now form a united and prosperous whole : its rise during the last century has been rapid beyond example; it singly defeated, under

* Prussia contains at present—

or nearly 111,000 square English geographical miles. Twenty-one thousand four hundred and ninety arpents make a square German geographical mile.—See TCHOBORSKI, i. 115; and FORSTER and WEBER, *Statutiques de la Prusse,* 17, 21.

the Great Frederick, a coalition of the three most powerful monarchies in Europe; and it yields to no country in the world in patriotic spirit, and the glorious efforts which it has since made to maintain its independence.

3. Population and extent of Prussia.

Augmented as it has been by the acquisitions made at the treaty of Paris in 1814, the Prussian monarchy now contains upwards of fifteen millions of inhabitants, who are diffused over a territory embracing one hundred and eleven thousand four hundred and eighty-eight square English miles—a surface little less than that of Great Britain and Ireland, which contain one hundred and twenty-two thousand. At the commencement of the war of 1806, however, both were much less considerable; the former only amounting to nine million five hundred thousand souls, the latter to seventy-two thousand square miles of territory. If this considerable population was placed on a compact and defensible territory, it would form a great and powerful monarchy, having nearly the resources, in population and territory, of the British empire in Europe at the commencement of the Revolutionary war ; but both population and territory are so scattered over a long and narrow extent of level surface, that they seem at first sight to be a source rather of weakness than strength. They extend from the banks of the Niemen to those of the Sarre, over a space three hundred leagues, or nine hundred miles, in length; while the greatest breadth does not exceed a hundred and thirty leagues, and their average is not above forty. These straggling territories are in many places interrupted by the possessions of foreign princes, enclosed within those of Prussia, which, on the other hand, has no inconsiderable portion of its dependencies imbedded in the dominions of other states. Thus the Prussian dominions present an irregular strip stretching along the whole north of Germany, having its back to the Baltic Sea and German Ocean, the harbours of which

CHAP. XLIII. 1806.

are liable to be blockaded by the superior fleets of Britain; while its long front is exposed to the incursions of Austria, and its two extremities lie open, with no natural frontier capable of defence, and but few artificial strongholds, to the incursions of the great monarchies of France and Russia—the former possessing above twice, the latter nearly four times, its military resources.[1]

1 Malte Brun, v. 294, 295.

Towns and manufacturing industry of Prussia.

The urban population of Prussia bears a remarkably large proportion to the rural, for the former amounts to a fourth of the whole inhabitants. The number of towns and burghs is ten hundred and twelve, of which thirty-seven contain above ten thousand inhabitants.^ This great number and size of towns indicates either extraordinary riches in the adjacent territory, as in Lombardy and Flanders, or considerable manufacturing advantages, such as those which have raised the cities to such a stupendous magnitude in the north of England and the west of Scotland. Such, accordingly, is the case; and the manufacturing industry of Prussia, in spite of the prohibitory system adopted generally by the Continental states, is very considerable. Inferior of course, by more than a half, in proportion to the square league of terri-

tory to that of Britain, it is considerably superior to that of France.* The iron-works and manufactories of zinc and copper, as well as the salt-works, in its dominions, are very extensive ; and the cotton manufactures, though recently established, are making, under the shelter of the heavy protective duties established against those of England, rapid progress. The total amount of its exports in 1828 was 24,102,000 thalers, or nearly £4,000,000, and four thousand merchant vessels bore the flag of Frederick-William.[1]

[1] Malte Brun, v. 291, 292.

5. **Rapid agricultural progress of Prussia.**

The main strength of Prussia, however, lies in its agriculture; and it is in the patriotic spirit and undaunted courage of the class engaged in it, that the monarchy in every age has found the surest bulwark against foreign aggression. So rapid has been the increase of sheep of late years in Prussia, that their number, which in 1816 amounted only to 8,261,400, had risen in 1825 to 14,156,000—that is, nearly doubled ; and the most decisive proof of the general increase of rural produce is to be found in the fact, that though population in Prussia is now advancing more rapidly than in any country of Europe, so as to double, if the present progress should continue, in twenty-six years, yet no importation of foreign grain is required.[2†] Subsistence, under the influence of increased production, so far from becoming scarce, is constantly declining in price, and the augmented comforts and wants of a prosperous people are amply provided

1806.

for by the labours of the agricultural portion of the community.

6. Slow progress of Prussia at first, and her rapid subsequent growth.

It was by slow degrees, however, and by the successive efforts of more than one generation of great men, that Prussia was raised to its present prosperous condition. The monarchy, in reality, dates from the accession of Frederick the Great; but during the short period which has since elapsed, it has made unexampled progress. The treasure, indeed, amassed by that great warrior and able prince, had been wholly dissipated during the succeeding reign; but, both under his sway and that of his successor Frederick-William, the monarchy had made important advances in territory, wealth, and population. By withdrawing from the alliance against France in 1794, the cabinet of Berlin succeeded in appropriating to itself a large portion of the spoils of Poland; while the open preference to French interests which they evinced for the ten years which followed the treaty of B&le, was rewarded by a considerable share of the indemnities—in other words, of the spoils of the ecclesiastical princes of the empire; and a most important increase of influence, by the place assigned to Prussia as the protector of the neutral leagues situated beyond a fixed line in the north of Germany. During this long period of peace, the industry and population of the country rapidly advanced; a large portion of the commerce of Germany had fallen into its hanjls, and the whirl and expenditure of war, so desolating to other states, was felt only as increasing the demand for agricultural produce, or augmenting the profits of neutral navigation.[1]

[1] Hard. v. and vi. 379, 247, 249. Bign. ii. 291, 292.

7. Statistical details.

At the death of the Great Frederick in 1786, the population of the monarchy was 7,000,000 of souls, and its revenue 31,000,000 thalers, or about £4,600,000 sterling. By the shares obtained of Poland on occasion of its successive dismemberments, and the acquisition of Anspach, Baireuth, and other districts, its population was raised to 9,000,000; and although the treasure of 70,000,000

thalers (£10,500,000) left by the Great Frederick had disappeared, and given place to a debt of 28,000,000 of thalers, or £4,200,000, yet this was compensated by the increase of the revenue, which had risen to 36,000,000 thalers, or £5,400,000. Various establishments had been set on foot at Berlin, eminently calculated to promote the interests both of commerce and agriculture. In particular, a bank and society of commerce were established in that capital, and institutions formed in the provinces to lend money to the landed proprietors on reasonable terms. By the aid of these establishments, and the effect of long-continued peace and prosperity, the finances of the state were in the most flourishing condition in 1804; all the branches of the public service were provided for by the current revenue, and some progress was even made in the reduction of the debt. The large share of the German indemnities, obtained through French and Russian influence by this aspiring power, made a considerable addition to the public resources : the acquisition of 526,000 souls raised the population to 9,500,000 souls, and the increase of 2,375,000 thalers yearly revenue swelled the income of the public treasury to 38,375,000 thalers, or £5,750,000 sterling—a sum equivalent, from the difference in the value of money, to at least ten millions sterling in Great Britain. This revenue, as in Austria, was the net receipt of the exchequer, and independent, not merely of the expenses of collection, but of various local charges in the different provinces. The regular army was nearly 200,000 strong, brave, and highly disciplined, but not to be compared to the French, either in the experience and skill of the officers, or in the moral energy which had been developed by the events of the Revolution.[1]

Bign. ii. 193, 297.

8. State of religion in Prussia.

Unlimited toleration prevails in Prussia. The Protestant is the religion of the sovereign and of the state, but persons professing all creeds are equally eligible to all offices under government, and, practically speaking, no difference is made between them. On the whole, two-

CHAP. XLIII. 1806.

thirds of the inhabitants are Protestants, one-third Catholics; but the proportions between these two great divisions of Christians vary considerably in the different provinces.[4]* Each religion has its separate ministers and bishops. Berlin is every five years the seat of a general synod; that capital has a Protestant bishop, and Konigsberg another; but the Catholics have two archbishops and six bishops in the Prussian dominions. Like the Austrian government, however, the Prussians are careful not to admit the slightest interference in matters not purely spiritual by the court of Rome, and Catholic ministers of vacant livings are appointed by a variety of lay patrons, as in Great Britain, without any serious collision with the Holy See.[1]

[1] Malte Brun, v, 282.

9. Revenue and expenditure of Prussia.

The revenue of Prussia, like that of all other countries in Europe, is derived partly from direct, partly from indirect taxation.† The total revenue is 79,810,000 florins, or nearly £8,000,000 sterling—a sum at least equal to

£14,000,000 sterling in Great Britain, if the difference in the value of money is taken into consideration. The expenditure is somewhat less, amounting only to 75,238,571 florins, or £7,523,857 sterling, leaving a balance of above 5,000,000 florins, or £500,000 yearly to go to the discharge of the principal of the public debt.* The public debt of Prussia in 1833 amounted to 723,450,000 francs, or £29,000,000 sterling. In 1823 the debt was 908,950,000 francs, or £36,350,000; so that in ten years they havereduced the debt by £7,000,000, at which rate it will be entirely extinguished in 1872. It would appear, therefore, that the finances of Prussia are in a more prosperous state than those of Austria, France, or Great Britain, in all of which, although their national resources are incomparably greater, the expenditure generally exceeds the income by a very considerable sum, and all thoughts of a sinking-fund, or of a permanent system for the reduction of the debt, have been practically abandoned. This fact speaks volumes as to the patriotic spirit of the Prussian people, and the economy and far-seeing policy of its government, especially when the large military establishment they are obliged to keep up to secure their independence is taken into consideration.[1]

[1] Tchoborski, Finalisæs de TAiiiriche et de la Prusse, i. 1, 10. Maite Bran, v. 285, 310.

10. Military establishment.

The military establishment of Prussia is greater, in proportion to its population, than that of any other country in Europe. It consists, in time of peace, of one hundred and twenty-two thousand men : but so admirable are the arrangements for the augmentation of this force in time of war, and such the ardent and patriotic spirit of

CHAP. XLIII.

1806.

the people, that the state could then without difficulty call forth an army of five hundred thousand combatants. The regular army is composed of three classes. 1st, Of voluntary recruits, who are received from seventeen to forty years of age. 2d, Of young men who are balloted for: a burden to which all the inhabitants of the kingdom, without exception, are subject. 3d, Of veteran soldiers who prolong the period of their service voluntarily beyond the period required by law. Every Prussian, without exception, from the royal family downwards, between the ages of twenty and fifty, is liable to be drawn for the military service in some department or other; but he is only bound to serve in the regular army five years; and of these he is only three years actually with his colours, the other two being allowed to be spent at home. Thus the military duty is so short that it is never considered as a burden, but rather as an agreeable mode of spending the first three years of manhood; and there are very few who either can or wish to avoid it. The *cadres* of the regiments, or permanent staff, and a certain proportion of the privates, are fixed, and hold to arms voluntarily as a profession for life; and this gives to the troops, notwithstanding the frequent change of the privates, the consistence and steadiness of old soldiers, while, at the same time, it spreads through a large part of the people a practical acquaintance with military duties. It is to this system, introduced by the Great Frederick, but matured and brought to perfection by those able statesmen, Stein and Scharnhorst, after the treaty of Tilsit, that the stability and continual progress of the Prussian monarchy is, beyond all doubt, to be ascribed.[1]

[1] Malte Bran, v. 286, 287.

11. The Land-wehr and Landsturm.

Besides the regular army, the military establishment of Prussia embraces also the *landwehr* and *landsturm*, which, in time of need, can quadruple its effective strength. The former is divided into two *bam:* the first comprehending all the young men from twenty to thirty-two who have not gone through the five years' service in

the regular army; the second formed of persons, whether they have served or not, from thirty-two to fifty years of age. After that period all obligation of military service entirely ceases. During peace, the landwehr, which consists of infantry, cavalry, and artillery, are never called into active service, or removed from home; but they are not on that account the less carefully and regularly instructed during a certain number of days in the year in their military duties. In case of war or invasion, the first ban are called out, and united to the regular forces, to whom they are soon scarcely inferior in discipline and prowess: the second ban form the garrisons of strong places, and perform the service of the interior. In addition to this immense force, which numbers fully two hundred thousand combatants, there is organised in Prussia a second reserve, called the landsturm, which embraces every man, without exception, not already enrolled in one of the other services, between the ages of seventeen and fifty years. Such a force in many countries would be little more than a tumultuary rabble, more likely to be burdensome than available in real service; but in Prussia, where almost all the citizens have at one period or another served in the ranks, it forms a much more efficient body, and actually performed good service on many occasions during the glorious struggle of 1813.[1]

[1] Malte Bran, v. 285, 286.

12. Great diffusion of education in Prussia.

Education is more generally diffused in Prussia than in any other country of equal extent in Europe. Over the whole of its dominions, one in seven of the whole population is at school; while in France the proportion is one in twenty-three; in England one in fifteen; and in Scotland one in eleven. There can be no doubt that this is the greatest proportion of persons undergoing instruction which obtains in the world. Instruction is there compulsory: the laws compel the sending of children to school by their parents, and, when necessary, that duty is enforced by the magistrates. In general, however, it is unnecessary, so great is the desire of parents and relations

CHAP. XLIII. 1806.

to give their children the blessings of education. Schools are established in every parish, and the costs of instruction are very trifling, so as to be within the reach of the humblest of the people; and to the destitute it is given gratuitously. The tree of knowledge, however, has in Prussia, as elsewhere, brought forth its accustomed fruits of good and evil. In Prussia there are, according to the most recent returns, no less than *twelve times* as many crimes committed, in proportion to the population, as in France, where education is not diffused to a third of the extent it is in Prussia—a fact which demonstrates, equally with the experience of every other country, the sedulous care which it is indispensable to take before that great instrument of *power* is put into the hands of the people.[1]*

[1] Malte Bran, v. 277, 278.

13. Manners and court of Berlin.

The Prussian capital had long been one of the most agreeable and least expensive in Europe. No rigid etiquette, no impassable line of demarcation, separated the court from the people : the royal family lived on terms of friendly equality, not only with the nobility, but with the leading inhabitants of Berlin. An easy demeanour, a total absence of aristocratic pride, and of extravagance or parade, distinguished all the parties given at court, at which the king and queen mingled on terms of perfect equality with their subjects. Many ladies of rank, both at Paris and London, spent larger sums annually on their dress than the Queen of Prussia; none equalled her in dignity and grace of manner, and the elevated sentiments with which she was inspired. Admiration of her beauty, and attachment to her person, formed one of the strongest feelings of the Prussian monarchy; and nothing contributed more to produce that profound

* In France and Prussia there were in 1826 :•

irritation at France, which, in the latter years of the war, pervaded all classes of its inhabitants, than the harshness and injustice with which Napoleon, to whom chivalrous feelings were unknown, treated, in the days of her misfortune, that captivating and high-spirited princess.[1]

[1] Bign. ii. 297, 299.

14. Its state policy and diplomacy.

A spirit of economy, order, and wisdom, pervaded all the internal arrangements of the state. The cabinet, led at that period by Haugwitz, but in which the great abilities of Hardenberg and Stein soon obtained an ascendency, was one of the ablest in Europe. Its diplomatists, inferior to none in information, penetration, and address, had long given to Prussia a degree of influence at foreign- courts beyond what could have been expected from the resources and weight of the monarchy. The established principles of the Prussian cabinet, under the direction of Haugwitz, ever since the peace of B&le in 1795, had been to keep aloof from the dangers of war, and take advantage, as far as possible, of the distresses of their neighbours to augment the territory and resources of the monarchy. From a mistaken idea of present interest, not less than the influence of former rivalry with Austria, they inclined to the alliance with France, and derived great temporary benefits from the union, both in the accessions of territory which they received out of the ecclesiastical estates of the empire, and the increase of importance which they acquired as the head of the defensive league of the north of Germany. Little did they imagine, however, in what a terrible catastrophe that policy was to terminate, or anticipate, as the reward of their long friendship, a severity of treatment to which Austria and England were strangers, even after years of inveterate and perilous hostility. The interview at Memel in 1802, and the open support given by Russia to the Prussian claims in the matter of the indemnities, had already laid the foundation of an intimate personal friendship between Frederick-William and the Emperor Alexander.[2] But it was at first an alliance of policy

[1] Bign. ii. 300, 301. Hard. vi. 401-7,411.

CHAP. XLXII.

1806.

rather than affection, and acquired the warmth of impassioned attachment at the tomb of the Great Frederick and on the field of Leipsic.

15. Efforts of Prussia to obtain the aid of Russia and England.

Notwithstanding the inconsiderate haste with which Prussia had taken up arms, the cabinet of Berlin made some attempts to induce the other powers of Europe to share with them the dangers of the conflict. With England it was no difficult matter to effect a reconciliation. At the first authentic accounts of the change in the policy of Frederick-William, an order in council was issued, raising the blockade of the Prussian harbours. M. Jacobi, the Prussian minister in London, returned to that capital

Sept. 25.

immediately after he had left it; and the British ministry had the generosity to resume its amicable relations with the cabinet of Berlin before an explanation had been

Aug. 17.

given on the subject of Hanover. With Sweden an accommodation was also without difficulty effected, on the footing of the troops of that power taking possession of Lauenberg, which they did in the name of the King of Great Britain. It was not so easy a matter to convince the cabinet of St Petersburg of this unlooked-for change in the Prussian councils; and, taught by the long vacillation of its policy, they were for some time unwilling to yield to the general joy which was diffused through the Russian capital, on the intelligence that war was resolved on. But no sooner was Alexander informed, by confidential letters brought by General Krusemark from the King of Prussia, that he had embarked seriously in the contest,

Sept. 18.

than he instantly wrote promising an immediate succour of seventy thousand men, and announcing his intention of himself marching at the head of a chosen army to aid in the support of his ally.[1]

[1] Hard. ix. 272, 275. Bign.v.413, 415. Dum. xr.285,287.

16. And of Austria.

Important as the announcement of the intentions of Russia was, the accession of Austria would have been of still more value to the common cause, from its closer proximity to the scene of action, and the strong positions which the Bohemian mountains afforded on the flank of

the probable theatre of war. The Prussian ambassador accordingly was indefatigable in his endeavours to rouse the cabinet of Vienna to a sense of the vital importance of joining heart and hand in the approaching conflict for the liberties of Europe. He represented to Count Stadion, then prime minister at Vienna, "that the losses inflicted on Austria by the treaty of Pressburg were so immense, that the emperor, of necessity, must at some future period look out for the means of repairing them. The province of the Tyrol is of such irreparable importance to Austria, that no doubt can be entertained that she will take advantage of the first opportunity to resume it from Bavaria, by rousing the patriotic attachment of the inhabitants of that important province to their ancient masters. Napoleon has justly conceived the most serious apprehensions for the faithful observance of that treaty which he himself has been the first to violate. Does he not, in defiance of his engagements, still hold the fortress of Braunau and the line of the Inn, six months after he was bouud by a solemn treaty to have evacuated Germany with all his forces? The recent establishment of the Confederation of the Rhine, and dissolution of the Germanic empire, too clearly demonstrate with what ulterior views the French government is actuated in regard to the countries beyond the Rhine. Honour, necessity, the existence of his people, have forced the King of Prussia to take up arms alone; but a powerful Russian army, and the well-known generosity of England, diminish the perilous chances of the conflict. Now, therefore, is the time for Austria and Prussia to lay aside their jealousies springing from the conquest of Silesia, and unite their forces against the common enemy, who is about to make the Confederation of the Rhine an outwork from whence to enslave all the other states of Germanic origin."[1]

[1] Hard. ix. 277, 281.

Forcible as these considerations were, and strongly as the cabinet of Vienna felt their justice, there were yet many circumstances which forbade them to yield on this

CHAP. XLIII.

1806.

17. Bat the cabinet of Vienna resolves to remain neutral.

occasion to their inclinations. The conduct of Prussia for ten years had been so dubious and vacillating; her hostility to Austria, especially on the division of the indemnities, so evident; her partiality for the French alliance so conspicuous: her changes of policy during the last year so extraordinary, that no reliance could be placed on her maintaining a decided line of conduct for any length of time together, and, least of all, on her continuing steadfast in that sudden and perilous hostility in which she had now engaged, and the vehemence of which was the worst possible guarantee for its endurance. Who could insure that she would not desert this alliance as she had done the first coalition against France, or abandon her policy as suddenly as she had done her recent hostility against England, and leave to Austria, irrevocably embarked, the whole weight and dangers of the contest? The Archduke Charles, on being consulted as to the state of the army, reported that the infantry, which had not yet been rejoined by the prisoners taken during the campaign, was hardly a half of its full complement; the cavalry but recently remounted, and for the most part unskilled in military exercises; the artillery numerous, but the majority of the gunners without any experience. The treasury was empty; some of the most valuable provinces of the monarchy had been torn away, and those which remained were exhausted by enormous war contributions, wrung from them by the enemy. Influenced by these considerations, the cabinet of Vienna resolved to preserve a strict neutrality, and issued a proclamation to that effect. However much the historian may lament that determination, from a knowledge of the boundless calamities which an opposite course might have saved to both monarchies, it is impossible to deny that, situated as Austria was at that time, it was the most prudent resolution which its government could have adopted;[1] and that, if Prussia was left single-handed to maintain the cause of European independence,

Oct. 6.

it was no more than she was bound to expect from the selfish and temporising policy which she had so long followed. *

18. Spain long obsequious to France under the Prince of Peace.

Hopes were not wanting to the cabinet of Berlin of efficacious aid in another quarter where it was least expected, and of a kind to paralyse a considerable part of the French forces. Spain, bereft of her navy by the battle of Trafalgar, blockaded in her harbours, destitute of commerce, cut off from all intercourse with her colonies, had felt all the burdens of war without any of its glories. The public indignation was hourly accumulating against the Prince of the Peace, whose ignoble birth, exorbitant power, and immense wealth, rendered him as much an object of jealousy to the Castilian noblesse, as the uniform disasters which had attended his administration made him detested by the people. Still, however, that ruling favourite persevered, against the almost unanimous wishes of the kingdom, in the French alliance, till his pride was offended at the haughty conduct of Napoleon, who excluded the Spanish ambassador from any share in the negotiations for a general peace at Paris, and it was revealed to him, that in those conferences the French Emperor had seriously proposed to take the Balearic islands from the Spanish crown, and confer them as an indemnity for Sicily, together with a revenue drawn from Spain, on the King of Naples.[1] At the same time the assembling of a powerful army at Bayonne, ostensibly

[1] Lucches. ii. 99, 100. Hard. ix. 285, 286.

* The instructions of Mr Adair, the British ambassador at Vienna at that period, were, not to stimulate the Austrian government to hurry into a war, of which the consequences, if unsuccessful, might be fatal to that country, but to offer its government, if they deemed the opportunity favourable for engaging in hostilities, or if the necessities of their situation compelled them .to such a course, the whole pecuniary aid which Great Britain was capable of affording. Of the wisdom of this course of proceeding, no one who considers the precarious situation of Austria at that crisis can entertain a doubt; and it affords another proof of the clear insight which Mr Fox at that period had obtained as to the insatiable ambition of Napoleon, and of the magnanimity with which that upright statesman instantly acted upon his conviction. " A man," says the Marquis Lucchesini, " unjustly styled by Napoleon and his adherents, the last prop of the pacific dispositions of the cabinet of St James's."— *Vide* LUCCHESINI, ii. 96, 97, *note;* and BIGNON, V. 417.

Instructions bo Mr Adair cm the subject.

CHAP. XLIII. 1806.

frontier, and twelve thousand were in observation in Westphalia, for the approaching campaign; the remainder being dispersed in garrisoned depots, or not yet put in a state for active operations. Such was the general enthusiasm, and so little did they anticipate the terrible reverses which awaited them, that the Prussian guards marched out of Berlin, singing triumphant airs, amidst the shouts of the inhabitants, almost in a state of sedition from the tumultuous joy they experienced on at length being about to measure their strength with the enemy. Napoleon's forces were much more considerable. They amounted in Germany alone to one hundred and ninety thousand men; of whom twenty-eight thousand were the terrible reserve cavalry under Murat, and they were directed by the ablest and most experienced marshals in the French army.[1] *

[1] Lucches. ii. 117,118. Dum. xv. 289. Jom. ii. 275,276. Hard. ix. 299, 300. Thiers, vii. 42, 43.

22. Her grievous want of foresight and defensive measures.

The memorable military operations of the year 1813, and the tenacious hold which Napoleon then kept of the fortresses on the Elbe, when assailed by the greatly superior forces of the coalition, have demonstrated that no position in Europe is more susceptible of defence than the course of that river; and that supported by the ramparts of Magdeburg, Wittenberg, Torgau, and Dresden, an inferior force may there for a considerable time prolong its defence against an enemy possessing an overwhelming superiority in the field. Had these fortresses been pro-

* Napoleon's army was divided into nine corps, and stationed as follows, on the 3d October, when he arrived at Wurtzburg,—

	MEN.
First corps—Bernadotte—at Lichtenfelds,	20,000
Second do.—Marmont—Illyria,	
Third do.—Davoust—Bamberg,	27,000
Fourth do.—Soult—between Amberg and Bamberg,	32,000
Fifth do.—Lefebvre, succeeded by Lannes—in front of Schweinfurt,	22,000
Sixth do. Ney—Nuremberg,	20,000
Seventh do.—Augereau—Wurtzburg,	17,000
Cavalry do.—Murat—between Wurtzburg and Kronach,	28,000
Imperial Guard — Bessieres and Lefebvre, after Lannes got the 5th corps—Wurtzburg,	20,000
	186,000

The bulk of the army was grouped round Coburg and Bamberg. The whole

perly armed and provisioned, and the Prussians been commanded by a general capable of turning to the best advantage the means of defence which they afforded, it is probable that as protracted a contest might have been maintained as Napoleon supported in 1796 on the Adige, or Kray in 1800 around the bastions of Ulm, and time gained for the arrival of the Russians before a decisive blow was struck in the centre of Germany. But not only had no preparations for such a defensive system been made, but the nation, as well as its rulers, were in such a state of exultation as to despise them. None of these important bulwarks were provisioned; hardly were guns mounted on their ramparts. The interior fortified towns on the Oder and in Silesia were for the most part in the most deplorable state. No depots were formed; no provision was made for recruiting the army in case of disaster. They had not even a rallying point assigned in the event of defeat, though the strong fortresses of Magdeburg, Wittenberg, and Torgau lay immediately in the rear of the theatre of war, and the Elbe spread its ample stream to arrest the victor. Careless of the future, chanting songs of victory, and enjoying its triumphant march through the villages, the army bent its steps towards Erfurth; strong in the recollection of the Great Frederick, stronger still in the anticipation of the overthrow of Napoleon,[1]

[1] Hard. ix. 297, 300. Lucches. ii. 117, 120.

force bearing on the Prussians, exclusive of Marmont in Illyria, was 186,000 men.

The Prussians, when the campaign opened, were divided into three armies: the right wing, under General Ruchel, of 30,000 men, was stationed on the frontiers of the Hessian territories; the centre, 55,000 strong, commanded by the King in person, with his lieutenant-general, the Duke of Brunswick, under his orders, was in front of the Elbe around Magdeburg, with its advanced guard on the Saale; the left wing, composed of 40,000 men, including the Saxons, was commanded by Prince Hohenlohe, with Prince Louis, the King's brother, under him. In all 125,000—a noble force, but as much inferior to that at the command of Napoleon, as was the capacity of their leader compared to his. It was assembled in Saxony: its extreme left rested on the Bohemian mountains, and its advanced posts were pushed as far as Hof and the Kirchberg. A detached corps of 12,000 men, in Westphalia, was under the orders of a general destined to future celebrity—BLUCHER.—See DUMAS, XV. 290, 514; JOM. ii. 275, 276; *Official Report of the Prussian strength to the Duke of Brunswick,* HABD. ix. 484, App. G.; and THIEBS, *Consulat et l'Empire,* vii. 42.

CHAP. XLIII. 1806.

and dreaming rather of the banks of the Rhine or the plains of Champagne, than of the shores of the Vistula and the fields of Poland.

23. Imprudent conduct of the Prussian generals.

But if the infatuation of the army was great, greater still was the delusion of its commanders. The Duke of Brunswick, though an able man of the last century, and enjoying a great reputation, was altogether behind the age, and ignorant of the perilous chances of a war with the veteran legions and numerous columns of Napoleon. The disasters of the late campaigns were by him ascribed entirely to timidity or want of skill in the Austrians ; the true way to combat the French, he constantly maintained, was to assume a vigorous offensive, and paralyse their military enthusiasm by compelling them to defend their own positions. That there was some truth in this opinion, no one acquainted with the character and history of the French army could deny; but unfortunately, it required, for its successful application, both a general and an army very different from the Prussian at this period. The former did not possess the energy and rapidity, the latter the strength or experience, requisite for so perilous a system. Bold even to rashness in the original conception of the campaign, the Duke of Brunswick was vacillating and irresolute when he came to carry it into execution ; and, while his opponent was counting hours and minutes in the march of his indefatigable legions, he frequently lost whole days in deliberation or councils of war, or changed the destination of the forces when their movements were half completed. The troops, indeed, were numerous and perfectly disciplined : the artillery admirable ; the cavalry magnificent; the staff skilful and highly educated, but in matters of theory and detail, rather than the practical disposal of large masses in presence of a powerful and enterprising enemy. But what the whole army, from the general to the lowest drummer, were alike ignorant of, was the terrible vehemence and rapidity which Napoleon had introduced into modern war, by the

union of consummate skill at headquarters with enormous masses and a vast application of physical force ; combining thus the talent of Caesar or Turenne with the fierceness of the sweep of Scythian warfare. Applying then to the present the experience of the past age, the usual error of second-rate men, they calculated their measures upon the supposition of a war of manoeuvres, when one of annihilation awaited them ; and advanced as against the columns of Daun or Laudohn, when they were in presence of Napoleon and a hundred and fifty thousand effective men.[1]

Hard. ix. 301, 303. Jom. ii. 279.

As usual in such cases, the contending parties prefaced the war of arms by mutual manifestoes calculated to rouse the spirit of their respective forces, or vindicate their hostility in the eyes of Europe. That of Napoleon, which bore intrinsic evidence of his composition, was, as usual, admirably calculated to dazzle and stimulate his followers. " Soldiers! the order for your return to France was already issued : you had already approached it by several marches : triumphal fetes awaited you ; preparations for your reception were already made in the capital: but whilst we were surrendering ourselves to a too confident security, new conspiracies were formed under the mask of friendship and alliance. Cries of war have been heard from Berlin: for two months provocations have daily been offered to us; the same insane spirit which, taking the advantage of our dissensions fourteen years ago, conducted the Prussians into the plains of Champagne, still prevails in their councils. If it is no longer Paris which they propose to raze to its foundation, it is now their standards which they announce their intention of planting in the capitals of our allies; it is Saxony which they wish to compel to renounce, by a shameful transaction, its independence, and range itself by their side ; it is your laurels which they wish to tear from your brows: they insist upon our evacuating Germany at the mere sight of their army! The fools! Let them learn that it is a thousand times easier to destroy the great capital than to wither

24. Proclamation of Napoleon to his soldiers. 7th Oct.

CHAP. XLIII. 1806.

the honours of a great people and its allies. Their projects were then confounded: they found in the plains of Champagne defeat, shame, and death: but the lessons of experience are forgotten; and there are men in whom the feelings of hatred and jealousy are never extinguished. Soldiers! there is not one among you who would return to France by any other path but that of honour. We should never re-enter there except under triumphal arches. What then! shall we have braved the seasons, the seas, the deserts—vanquished Europe, repeatedly coalesced against us—extended our glory from the east to the west—to return at last to our country like deserters, after having abandoned our allies, and to hear it said that the French eagle fled at the mere sight of the Prussian standards? But they have already arrived at our advanced posts. Let us then march, since moderation has not been able to awaken them from this astonishing trance: let the Prussian army experience the same fate which it did fourteen years ago: let them learn that if it is easy, by means of the friendship of a great people, to acquire power and dominions, its enmity, though capable of being roused only by an abandonment of every principle of wisdom and reason, is more terrible than the tempests of the ocean/'[1]

[1] Dum. xiv.

25, Manifesto of Prussia,

Less fitted to rouse the military passions and warlike enthusiasm of its subjects, than this masterpiece of Napoleon, the Prussian manifesto, drawn by Gentz, was yet a model of dignified reason, and concluded with a sentiment as to the ultimate issue of the contest, which subsequent events have rendered prophetic. "All our efforts, and those of our allies, to preserve peace have proved unsuccessful; and if we are not willing to abandon to the despotism of an implacable enemy, and to deliver over to his devouring armies, the whole north of Germany, and perhaps of Europe, a war is inevitable. His majesty has resolved upon it, because the honour and security of the state are in danger: he would have deemed himself happy

could he have attained the same end by pacific means; but it is with the firmest confidence that he takes the command of the army which is about to combat for its country and national honour, because the cause in which it is engaged is just. His majesty is well aware that for long the army desired war; and even when circumstances prevented him from yielding to its wishes, these wishes commanded his respect, because they took their origin in those feelings of honour and patriotism which have ever distinguished the Prussian forces. The nation, in a body, has manifested the warm interest which it takes in this conflict; and that strong expression of enthusiasm has confirmed his majesty in the opinion, that now it is not only unavoidable, but in unison with the wishes of all the people. His majesty is convinced that the desire to preserve unchanged the national honour, and the glory which the Great Frederick has shed over our arms, will suffice to excite the army to combat with its accustomed valour, and to support with constancy all its fatigues.

26. The true character of the war as asserted in it.

"But this war possesses even a more general interest. We have to deal with an enemy who all around us has beaten the most numerous armies, humbled their most powerful states, annihilated their most venerable constitutions; ravished from several nations their honour, from others their independence. A similar fate awaited the Prussian monarchy: numerous armies menaced your frontiers; they were daily augmenting; it had become your turn to fall into the gulf, to bow beneath a stranger yoke; and already his pride and rapacity coveted the spoils of the north of Germany. Thus we combat for our independence, for our hearths, for all that is dear to us; and if God gives victory to the just side, to our arms, to the courage which burns in the heart of every Prussian, we shall be the liberators of oppressed millions. Every warrior who shall fall on the field of battle will have sacrificed his life in the cause of humanity; every one who survives will acquire, besides immortal glory, a just

CHAP. XLIII.

1806.

title to the gratitude, the triumph, the tears of joy of a liberated country. Who amongst us could endure the thoughts of becoming the prey of a stranger? While we combat for our own safety, to avert for us the deepest humiliation to which a nation can be subjected, *we are the saviours of all our German brethren;* the eyes of all nations are fixed on us as the last bulwark of liberty, security, or social order in Europe."[1]

[1] Dum. xvi. 8,10.

27. Reflections on these proclamations.

The opposite style of these two eloquent proclamations is very remarkable. Both are addressed to the strongest passions of the human breast; both are masterpieces of manly oratory; but the language which they severally employ is strikingly characteristic of the different situations in which their authors respectively stood. Napoleon speaks to his soldiers only of an insult offered to their arms—of glory and triumphs, and victories to be won; Frederick-William, equally firm, but less sanguine as to the result, disguises not the dangers and chances of the struggle, but reminds them of the duty they owe to themselves, their country, the cause of the human race. The former invokes the eagles of France, and calls on the soldiers to follow their glorious career: the latter appeals to the God of battles, and anticipates from his aid a final triumph to the arms of freedom. The battle of Jena and chains of Tilsit seemed for long to have announced an abandonment of this cause by the care of Providence; but let these words be borne in mind, and compared with the final issue of the contest.

28. Napoleon's insult to the Queen of Prussia.

Napoleon had no gallantry or chivalrous feeling in his breast. The Prussian minister had, with the ultimatum of the cabinet of Berlin, given a pressing request for an answer to the Prussian headquarters by the 8th October. " Marshal," said he to Berthier, " they have given us a rendezvous for the 8th; never did a Frenchman refuse such an appeal. We are told that a beautiful queen is to be a spectator of the combat; let us then be courteous,

and march without resting for Saxony." Francis I. might have used the same language; but what followed in the first bulletin of the campaign, dictated by Napoleon himself ? " The Emperor was right when he spoke thus: for the Queen of Prussia is with the army, dressed as an Amazon, wearing the uniform of her regiment of dragoons, writing twenty letters a-day to spread the conflagration in all directions. We seem to behold Armida in her madness setting fire to her own palace. After her follows Prince Louis of Prussia, a young prince full of bravery and courage, hurried on by the spirit of party, who flatters himself he shall find a great renown in the vicissitudes of war. Following the example of these illustrious persons, all the court cries to ' To arms!' but *when war shall have reached them with all its horrors, all will seek to exculpate themselves from having been instrumental in bringing its thunder to the peaceful plains of the North."* Such was the language in which Napoleon spoke of the most beautiful princess in Europe, rousing her subjects to patriotic resistance ! How singularly prophetic is the concluding part of the sentence of what he himself experienced, just six years afterwards, in the frozen fields of Russia.[1]

[1] Nap. Bulletin, ii. 11, 12.

29

Preparatory movements of the Prussians.

Animated by those heart-stirring addresses, the forces on both sides rapidly approached each other; and their advanced outposts were in presence on the 8th October. Then began the terrible contest of the north with the south of Europe; never destined to be extinguished till the domes of the Kremlin were reddened with flames, and the towers of Notre Dame were shaken by the discharges of the Russian batteries. The first plan discussed at Berlin was for the whole army to debouche in separate columns by the two great roads, those of Adorf and Saalfeld, and Eisenach and Gotha, and commence the offensive towards the valley of the Maine, on the east and west of the Thuringian Forest, the intermediate passes of which were to be occupied by a central corps;

Atlas, Plate 39.

CHAP. XLIII. 1806. Sept. 27.

but this plan was soon abandoned, as exposing the army to a perilous division of force in presence of so powerful and enterprising an enemy. The design ultimately adopted was to advance with the right under Ruchel in front, which was pushed on to Eisenach; next in echelon followed the centre, commanded by the King in person, which, united with the corps of Hohenlohe, was to advance upon Saalfeld and Jena, while each wing was covered by a detached corps of observation, the right by Blucher on the confines of Hesse, the left by Tauenzein, on the side of Baireuth. The object of this movement was to determine the hesitation of the Elector of Hesse-Cassel, and effect the junction of his contingent to the Prussian army, and at the same time pierce the centre of the valley of the Maine, which was the base of the enemy's operations, and cut them off from their communications with France. Both objects were important, and the design was well conceived, had the Duke of Brunswick possessed a force adequate to its execution. But it necessarily involved his army in great hazard in presence of a numerous and skilful enemy; and by leaving open to his advance the great roads to Dresden and Leipsic, exposed the Prussians to the very danger of being themselves turned and cut off from their communications and magazines, when endeavouring to inflict that injury on their opponents.[1]

[1] Dum. xvi. 19. Jom. ii. 279, 280.

30. Counter movement of Napoleon. His system of providing for his troops.

Napoleon was not a man to let slip the opportunity which this hazardous attempt of the Prussians to pass his position afforded, of not merely defeating, but destroying their army. Confident in the numbers and experience of his troops, which rendered a situation comparatively safe to them, which was to the last degree perilous to their opponents, he instantly resolved to retort upon the enemy the measure they were preparing to play off upon him; and by throwing forward his army with the right in front, turn the Prussian left, and cut them off from their magazines on the Elbe, and the heart of the monarchy.

On the 8th October, the French army was concentrated round Bamberg; at three o'clock on the morning of the 9 th, Napoleon put himself in motion, and his columns marched towards Saxony, on three great roads, by echelon, the right in front. On the right, Soult and Ney with a Bavarian division moved from Baireuth by Hof, on Plauen; in the centre, Murat with the cavalry, as also Bernadotte and Davoust, marched from Bamberg by Kronach, on Saalburg; on the left, Lannes and Augereau, breaking up from Schweinfurt, advanced by Coburg and Graffenthal upon Saalfeld. The effect of these movements was to bring the centre and right of the French directly upon the Prussian magazines and reserves, while they were stretching forward on the left, to interpose between their antagonists and the Rhine. In commencing these movements, the French Emperor put in practice his usual system for providing for his army. This was to make his troops subsist daily, in general, on the resources of the country which they occupied,—to extend themselves sufficiently to obtain supplies, but not so as to be beyond concentration in case of attack,—and to have in reserve in waggons bread adequate for several days, to meet any sudden emergency. This reserve store, carefully husbanded and duly replenished when drawn upon, served for all cases of concentration before or after battles. To convey it, Napoleon allowed two caissons for a battalion, and one for a squadron. Adding to that the carriages provided for the sick and wounded, he calculated that four or five hundred waggons should suffice for the largest army. The most peremptory orders were issued against any general or officer applying any part of these public conveyances to his private purposes ; and in one instance, having discovered that one of his marshals made such use of them in the outset of the campaign, he manifested the utmost displeasure, and declared Berthier responsible for all such evasions of his orders in future.[1]

[1] Jom. ii. 280, 281. Dum. xvi. 19,26. Bign, v. 465,466. Norv.ii.456, 457. Thiers, vii.38.

The Prussians were in the midst of their perilous

CHAP. XLIII.

1806.

31. The Duke of Brunswick renounces the offensive. Description of the theatre of war.

advance to the French left, when intelligence of this rapid accumulation of forces against their own centre and left reached the Duke of Brunswick's headquarters. It was indispensable to renounce forthwith the hazardous enterprise ; and orders were instantly despatched to countermand the advance, and direct the concentration of the army in the neighbourhood of Weimar: the principal column, commanded by the King, at Erfurth ; Ruchel at Gotha; Hohenlohe at Hochdorf; the reserve, under the Duke of Wiirtemberg, at Halle. Thus the Prussians, in presence of the greatest general and most powerful army of modern times, were thrown into a change of position, and a complicated series of cross movements, with their flank exposed to the enemy—the situation of all others the most perilous in war, and which, not a year before, had proved fatal to the combined army, when attempting a similar movement in front of Austerlitz. To complete their danger, the concentration, from the orders which they received, took place on the centre and right; whereas it was on the left, towards Hof, that it should have been made, to resist the rapid march of the invaders upon their magazines and resources. The Thuringian Forest, which those movements promised to render the first theatre of approaching hostilities, is a range of broken hills, for the most part covered with wood, which, branching off from the central chain that encircles Bohemia, stretches to the northwards until it subsides into the plains of Westphalia, where it terminates. This range separates the valley of the Rhine from that of the Elbe, the waters from the western slope flowing into the former, those from the eastern into the latter. It thus runs directly athwart the line of communication between France and Prussia, and requires to be traversed in one quarter or another in going from the one country to the other. Three great roads cross this broken woody region, and conduct the traveller from the banks of the Rhine to the sands of Prussia. The first, starting from Mayence, follows the windings of the Maine, as far

as Coburg, where it approaches the summit of the Thuringian ridge, from which the Maine flows in one direction, the Saale in another. Three defiles penetrate the summit level: that of Baireuth to Hof, that of Coburg to Saalfeld, that of Kronach to Schleitz. The second route, which is the one usually followed by travellers going from Mayence to Saxony or Berlin, passes the wooded summits of the Thuringian Forest to the left of their highest elevation. It branches off from the valley of the Maine at Hanau, ascends the lateral valley of the Fulda, and, after surmounting the ridge, descends by Eisenach, Gotha, and Weimar into the Saxon plains and the banks of the Elbe. The third, by striking far to the north, avoids entirely the Thuringian range, and, leaving the Rhine at Wesel, makes straight for the Westphalian plains between the northern extremity of the hills and the sea. Of these routes Napoleon chose the first, which brought him by Wiirtzburg to the sources of the Saale; and it was there that he came in contact with the Prussian army, in the very act of making their perilous movement from left to right.[1]

[1] Jom. ii. 280. Dum. xyi. 26,31. Bign.v.466, 467. Hard. ix. 303. Thiers, vii. 59,60. Perjonal observation.

But before the junction of the Prussian forces, even in this false direction, could be effected, the formidable legions of Napoleon were already upon them. As might have been expected, when surprised in this manner in the middle of a lateral movement, they were attacked at the same time in different quarters, and in all by greatly superior columns of the enemy. The French masses, dense and strong, marching on the great chauss&s, fell perpendicularly upon the flank of their opponents when endeavouring, by cross and often deplorable roads, to reach the points of rendezvous assigned to them. The consequences might easily have been anticipated. They were defeated in every quarter, and lost, in the very outset of the campaign, the moral influence of an advance. On the 9th, Tauenzein, who was at the moment in front of Schleitz with six thousand Prussians and three thousand Saxons, was attacked by Bernadotte, at the head of greatly supe-

32. Commencement of hostilities, and defeat of detached bodies of Prussians.

Oct. 9.

CHAP. XLIII.

1809. Oct. 10.

rior forces, and after a gallant resistance dislodged from his position with the loss of several hundred men. The day following, Murat marched on Gera, and on the road fell in with and captured a convoy of five hundred carriages and a pontoon train—an extraordinary proof of the advantage the French had already gained, when, on the third day after hostilities had commenced, they had fallen in with and captured a large part of the reserve trains and heavy baggage of the enemy.[1]

Oct. 11. [1] Bign. v. 468, 470. Dum. xvi. 51,58.

33. Success of the French left against Prince Louis.

Nor was the French left, under Lannes and Augereau, less successful. On the 10th, the former of these generals arrived on the heights of Saalfeld, and animated his troops to the highest degree by reading to them the proclamation of Napoleon on the opening of hostilities ; and on the same day, in continuing his advance upon Saalfeld, he fell in with Prince Louis, who commanded the rear-guard of the Prussian left, and had been stationed at Rudolstadt and Blankenburg by Prince Hohenlohe to cover the cross-march of his columns, who were then endeavouring to reach the points of rendezvous assigned them by their commander-in-chief. This gallant prince, in common with his immediate superior Prince Hohenlohe, had long expressed the opinion, which they had in vain endeavoured to impress upon the Duke of Brunswick, that Napoleon meditated an attack on the Prussian left, and that a concentration of their troops in that direction should have been made some days before.* Unable to prevent the disastrous resolution to assemble on the right, he now set himself with heroic bravery to mitigate its effects. The forces under his command were only eleven batta-

* In the great council of war, held on the 5th October at Erfurth, when the Duke of Brunswick's project of continuing the march across the Thuringian Forest was discussed, Prince Hohenlohe, Prince Louis, and Colonel Massenbach, his chief of the staff, strongly represented that, by continuing the march in that direction, the army would be exposed to certain ruin; that they would soon arrive at a country where the ground was entirely favourable to the operations of the enemy, and adverse to their own method of fighting ,* and that if the French were inclined, as seemed more than probable, to turn either of the wings of the army, nothing could favour this design so much as the

lions and eighteen squadrons of hussars, with eighteen pieces of cannon; and with these he had to withstand the shock of Lannes, with twenty-five thousand men. Notwithstanding this fearful preponderance of force, he resolved to hold firm during the remainder of the day, to gain time for the evacuation of the considerable magazines which were collected close in his rear at Saalfeld.[1]

Oct. 9. [1] Lucches. ii. 137, 139. Dum. xvi. 55, 57.

34. Death of that prince.

In this gallant but unhappy determination he was confirmed from an opinion that it was only by resuming the old Prussian system of a vigorous offensive, that the spirits of the soldiers, which had been much sunk by the general order to retreat on the preceding day, could be revived. The sensible increase of the enemy all around him on the following day—even the turning of his right flank by Suchet with a powerful body of light troops, which rendered his position no longer tenable, could not induce him to abandon his ground ; and, when the attack commenced, the Prussians were surrounded on all sides. Notwithstanding this, they made a gallant resistance, and enabled the artillery and chariots to leave Saalfeld in safety. Returning from the town to his gallant comrades, who still made good their ground in its front, Prince Louis found them dropping fast under the murderous fire of the French tirailleurs. Soon their retreat was converted into a rout by the ravages of the hostile artillery ; and the prince himself, while combating bravely with the rearguard, and striving to restore order among the fugitives, was surrounded by the enemy's hussars—"Surrender, colonel," said their chief, not knowing the rank of his opponent, " or you are a dead man." Louis answered only by a blow with his sabre, which wounded

plunging the Prussian host by columns into the forest. These sage observations made no sort of impression on the Duke of Brunswick; and all the modification of his plan which these generals could effect, was that the troops should halt for a day on the 8th October, and on the following morning throw out strong reconnoitring parties, and receive bread for eight days before entering the denies of Thuringia. It may safely be affirmed that that council, *by* continuing this fatal advance, determined the result of the campaign.—See DUMAS, xvi. 25, 26; and *Saalfeld, Algemeine Gewhichte,* iii. 299.

CHAP. XLIII.

1806.

without disabling his adversary, who replied with a mortal stroke, which laid the heroic prince dead at his feet

85. Discouragement of the Prussians, who are completely turned by the French.

In this disastrous encounter the Prussians lost twelve hundred prisoners, besides eight hundred killed and wounded, and thirty pieces of cannon. But this was the least part of their misfortunes : the heroic Prince Louis was no more. He had fallen, it is true, while bravely combating on the field of honour; but his body had remained the trophy of the victors, and the continued advance of the enemy too surely indicated that defeat had attended the first serious encounter of the Prussian arms."* Their army was now broken in upon in several points; its magazines in part seized; its concentration interrupted; and the dejected columns, without any fixed rallying points, were wandering about in every direction, while the terrible French legions, in dense masses, were falling perpendicularly on their flank. These disasters rapidly communicated their depressing effect to the minds of the soldiers. The death of Prince Louis, above all, equally dear to the officers and private men, diffused a universal gloom. So grievous a calamity in the outset of the campaign was regarded as the worst augury of its future fortunes; and, as is usual with great bodies in a violent state of excitement, the transition was immediate from the preceding exultation to an extraordinary degree of depression.[1]

[1] Lucches. ii. 137, 140. Bign.v. 468, 470. Dum. xvi. 51, 58.

Meanwhile the movements preparatory to a decisive battle continued, though in a very different spirit, on both sides. In deep dejection, and with infinite difficulty, the Prussians at length concentrated their forces in two

*** No sooner was the rank of the prince known, than Marshal Lannes, with deserved courtesy, showed his corpse all the honours due to so illustrious a character. It was interred with military honours in the cemetery of the princes of Coburg, at Saalfeld; and Berthier wrote on the 12th to the chief of the Prussian staff, announcing that the Emperor had ordered it to be restored, if it was desired that his remains should rest in the tomb of his ancestors—an offer which the disasters immediately ensuing rendered it impossible for the royal family at that time to accept.—BIONON, V. 469.**

36. Movements on both sides preparatory to a general action.

great masses under the King in the neighbourhood of Weimar, and under Hohenlohe near Jena. It was in the highest exultation, on the other hand, and in the full anticipation of victory, that the French made a sweep which brought them completely round the Prussian army. The early triumphs with which the campaign had opened had given Napoleon hopes of rapid and decisive success. He no longer feared, as he admitted he had done at first, that he would be obliged to have recourse to the mattock.* The confusion of the enemy's columns had dissipated the prestige of the Great Frederick. Encouraged by these events, he now hesitated not to follow out the brilliant career which had opened to his arms. A complete conversion, turning on the pivot of the left, took place in the direction of his columns, who wheeled round so as to face the Northern Ocean. Davoust, Bernadotte, and Murat marched upon Naumburg, where, on the next day, they made themselves masters of considerable magazines; Soult was advancing on Jena, where Lannes was already established; while Ney and Augereau were at Roda and Kahla, in its immediate neighbourhood. Such was the confusion of the Prussian movements, and the bad understanding which already prevailed between them and the Saxons, that, when the French took up the ground which the Allies had just quitted in the environs of Jena, they found the fields and roads covered with arms, cuirasses, and chariots, like the scene of a defeat. The Saxons had pillaged the Prussians, and the Prussians the Saxons. Baggage and ammunition waggons had been abandoned by their drivers, and lay scattered in confusion, while some guns had even been spiked to prevent their being of service to the enemy.[1]

* In setting out for the Prussian campaign, Napoleon expected to experience a more formidable resistance than he had yet met with in Europe, The exploits of the Seven Years' War had filled him with the highest idea of the troops trained in the school of its illustrious hero, and he said to his assembled officers at Mayence, " We shall have earth to move in this war."—See JOMINI, ii. 282.

CHAP. XLIII.

1806.

37. Result of these manoeuvres.

The result of these different marches was in the highest degree favourable to the French arms. By the advance on Naumburg they had cut the enemy off from the line of retreat to Leipsic, and thrown their left back in such a manner that the French on the banks of the Saale had their back to the Elbe, and faced the Rhine; while the Prussians had their back to the Rhine, and could only hope to regain their country by cutting their way through the enemy. Finding affairs in a situation so much more favourable than he could possibly have anticipated, Napoleon, to gain additional time to complete the encircling of his antagonists, despatched, on the 12th, an officer of his household with proposals of peace to Frederick-William, taking care meanwhile not to suspend for one instant the march of his columns; but the letter did not reach that monarch till the battle was over. In the evening of the 12th the army of Hohenlohe, which, with all the additions it had received from Ruchel, did not exceed forty thousand men, was grouped in dense masses on a ridge of heights to the north on the road from Jena to Weimar, between the Um and the Saale. Its advanced posts were on the Landgrafenberg, a steep hill between its position and the town of Jena, from the summit of which the whole lines of the Prussians could be descried, and over which the only road to the attack of their position in front lay.[1]

Oct. 12.

[1] Dum. xvi. 72,76. Jom. ii.284. Lucches. ii. 141.

Concentration of the Prussian forces near Weimar.

The army of the King of Prussia, on the other hand, under the immediate command of the Duke of Brunswick, sixty-five thousand strong, was concentrated at the distance of somewhat more than a league in the rear of Hohenlohe, near Weimar. Thus the whole Prussian army, consisting of above a hundred thousand men, of which eighteen thousand were superb cavalry, with three hundred pieces of cannon, was at length assembled in a field of battle, where their far-famed tactics had a fair theatre for development; and notwithstanding the early disasters of the campaign, an opportunity was afforded

them of reinstating affairs at the sword's point. Each army had passed its opponent, and mutually intercepted the other's communications. But there was this extreme difference between the two, that the army of the Duke of Brunswick, cut off from all its magazines, had no resource but in victory ; whereas that of Napoleon, though severed from the Rhine, had a clear line of retreat, in case of disaster, to the Maine and the Danube.[1]

[1] Dum. xvi. 72,79. Jom. ii. 284, 285. Bign.v.471, 478. Luc ches. ii. 151. 151.

39. The Prussian army is again divided. The King marches to Auerstadt.

It would have been well for the Prussians had they continued and given battle in this concentrated position ; but the intelligence of the advance of Davoust and Murat upon Naumburg, which arrived at headquarters on the night of the 12th, led to a renewed separation, attended in the end with the most frightful disasters. Conceiving that the French Emperor had no intention of immediate combat, and being anxious for the safety of that town where the principal magazines of the army were placed, the Duke of Brunswick came to the ruinous resolution of again dividing his forces ; and while Hohenlohe was left in position near Jena, as a rear-guard to cover the retreat of the army, the principal body, with the King at its head, moved at daylight for Suiza, and at night arrived on the heights of AUERSTADT. Thus at the very moment when Napoleon, with above a hundred thousand men, was making his dispositions for a general battle on the day following, and surmounting the difficulties of the approach to the enemy's position on the heights in his vicinity, the Prussian general dislocated the imposing mass of his soldiers, and diverging to the left with two-thirds of his forces, engaged in a hazardous flank-march of ten leagues in presence of his antagonists, leaving a comparatively inconsiderable rearguard to be crushed by more than double its force in its position at Jena. Such was the dearth of provisions which already prevailed in the Allied camp from the capture of their magazines by the enemy, that no regular supply of bread was dealt out to the men after the long and fatiguing march;[2]

Oct. 13.

CHAP. XLIII.

1806.

but great numbers lay down, wearied and supperless, to sleep on the ground which was to cover their graves on the morrow.

40. Napoleon's dispositions for the battle.

Meanwhile Napoleon, never suspecting this division of the enemy's force, and supposing they were to follow the principles of the Great Frederick, which were to combat in concentrated masses and on as confined a field of battle as possible, was endeavouring, with his wonted energy, to overcome the all but insurmountable difficulties of the passage of the Landgrafenberg, by which access was to be afforded to his columns for the attack of the Prussian position. No sooner had the French light troops dislodged the enemy's patrols from these important heights, than the Emperor repaired to them in person, from whence he distinctly beheld the portion left of the Prussian army still reposing at leisure on its formidable position on the opposite ridge. Not doubting that he would have to deal with their whole force on the following day, he pressed without intermission the march of his columns ; and soon arranged the forces of Lannes, who with his infantry first reached its summit by the steep and rugged ascent, in such formidable masses around its declivities on the other side, that the enemy, who were now sensible of their error in abandoning so important a point, and were making preparations to retake it, were obliged to desist from the attempt. This valuable height, therefore, from which the whole of the Prussian position and all the movements of their troops were distinctly visible, remained in the hands of the French; and its elevation not only gave them that advantage, but entirely concealed from the observation of the Prussians the rapid concentration of troops on the Jena side of the mountain, which would at once have revealed the intention of a decisive attack on the following day. Still the difficulty of surmounting the ascent was very great, and for artillery and waggons it was as yet totally impassable.[1]

[1] Jom. ii. 285, 286. Saalf. iii. 301, 805. Camp. de Saxe, i, 260.

Nothing, however, could long withstand the vigour of

41. And vigorous efforts to surmount the Landgrafenberg.

Napoleon and his followers* He stood on the spot till the most rugged parts of the ascent were widened by blasting the solid rock, or smoothed by pioneers; and when the men were exhausted, revived their spirits by himself working with the tools, and exhibiting his old experience as a gunner, in surmounting the difficulty of dragging the cannon up the pass. Animated by such an example, and the vigorous exertions of the successive multitudes who engaged in the task, the difficulties which the Prussian generals deemed altogether insurmountable were rapidly overcome; before eight in the evening the ascent was passable for cavalry and artillery ; and at midnight the whole corps of Lannes, with all its guns and equipage, reposed in crowded array on the ridges and flanks of the mountain. The Imperial Guard, under Lefebvre, lay on its summit; Augereau on its left; Soult and Ney received orders to march early in the morning before daybreak to the right, in order to turn the enemy by his left, after the combat was begun; Murat bivouacked during the night near Dornburg, but he was ordered up to Jena, and was in reserve before the action was far advanced; while Davoust and Bernadotte were directed to advance from Naumburg, the first upon Apolda, in order to threaten the enemy's rear, the second upon Dornburg, to cut off his retreat to the Prussian dominions. The two armies now lay so near that their fires were within cannon-shot, and the lines of sentinels in communication : the lights of the Prussians, dispersed over a space of six leagues, threw a prodigious glow over the whole heavens to the northwest; those of the French, concentrated in a small space, illuminated the heights in the middle of their position. Surrounded by his faithful Guards, the Emperor, after having despatched his last orders to his marshals, wrapped himself in his cloak, and shared the frigid bivouac of the soldiers on the summit of the Landgrafenberg.[1]

[1] Jom. ii. 285, 286. Bign.v.473, 474. Dum. xvi. 83,94. Saalf. iiu 301, 807. Camp, de Saxe, i. 260.

At four in the morning of the 14th he was already on

CHAP. XLIII.

1806.

42. Situation of the armies on both sides, on the morning of the 14th.

horseback, and, surrounded by his generals, rode along the front of the line of Suchet's and Gazan's divisions, which were first to be engaged, and were already under arms. "Soldiers!" said he, "the Prussian army is turned, as the Austrian was a year ago at Ulm; it now only combats to secure the means of retreat The corps which should permit itself to be broken would be dishonoured. Fear not its renowned cavalry; oppose to their charges firm squares and the bayonet." Loud acclamations rent the air at these words : but the morning was still dark; the first streaks of dawn were only beginning to appear, and a thick cold fog obscured every object around. Burning with impatience, the soldiers awaited the signal of attack, but for two long hours they were kept shivering in their lines. At length at six, when the day, though still misty, was light, and the Emperor judged that his marching columns would be so far advanced on their respective routs as to justify the commencement of the action in front, he gave the signal for the attack. Meanwhile the Prussians, little suspecting the tempest which was about to burst on them, were securely reposing in their position, and, anticipating a day of complete rest on the 14th, had made no provision either for marching or battle. This fatal security had been increased by the opinion generally entertained at Hohenlohe's headquarters, that the bearer of the flag of truce who had appeared at their advanced posts on the preceding day, and had been forwarded with his despatches to the king, brought proposals of peace, and that nothing serious would be attempted till his answer was received. Their position was strong and admirably chosen : secure from attack on either flank, and approachable in front only by narrow and steep defiles, in which, if the heads of the enemy's columns were vigorously resisted and hindered from deploying, horse, foot, and cannon would be jammed up together, and the disaster of Hohenlinden might have been repaid with interest to the French army.

CHAP. XLIII.

1806.

But the departure of the king with nearly two-thirds of the army, and the total absence of any preparations for an attack on the part of those who remained, deprived them of the advantages which they might otherwise have gained from this position, and relieved Napoleon from a risk in the outset of the campaign, greater, perhaps, than he underwent even during the perilous changes which signalised its later stages.[1]

[1] Lucches. ii 154, 155. Saalf. iii. 305, 307. Personal observation.

43. Battle of Jena, 14th October.

Atlas, Plate 40.

Great was the astonishment of the Prussian outposts, when, through the gray mist of the morning, they beheld the French battalions close upon them, and advancing swiftly in the finest order to the attack. They made, however, a gallant resistance, and did their utmost to prevent the French, led by Suchet, from debouching from the defiles at the mouth of which they were stationed; but being altogether unprepared for the attack, and completely surprised, they were not long able to make good their post, and fell back, with the loss of twenty pieces of cannon, to the main body of the army. The ground thus gained by Suchet was of the utmost importance, for it enabled the heads of the French columns, after emerging from the defiles, to extend themselves to the right and left, and gain room for the successive corps as they came up to deploy. Roused by the first discharge of firearms in front, Prince Hohenlohe rode through the mist from his headquarters in the rear at Capellendorf towards the front; but, still confident that it would only prove a skirmish, he said to General Muffing, "that his troops should remain quiet in their camp till the fog had risen; and that, if circumstances demanded it, he would move forward the division of Grawert, as he did not wish the Saxons to combat at all that day." Soon, however, messengers arrived in breathless haste from the outposts with urgent demands for assistance, and Grawert was rapidly advanced towards Vierzehn-Heiligen to support Tauenzein, who there with difficulty held his ground against the impetuous attacks of Suchet. Meanwhile the

CHAP. XLIII.

1806.

whole army of the Prussians, alarmed by the sharp and incessant fire of musketry in their front, stood to their arms, and reinforcements were sent to the points in advance which were menaced: but in spite of all their exertions the enemy gained ground; the villages of Closwitz and Kospoda, at the foot of the eminence on which the lines of Hohenlohe were posted, were successively carried; and all the low grounds in front of his position were filled with troops. Still the mist was so thick as to be almost impenetrable; the contending bodies could not see each other till they were within a few yards' distance; and under cover of this veil, and in the midst of the confusion arising from an unexpected attack, the movements of the assailants were completed, the defiles passed, and the precious moments, when the heads of their columns might have been driven back into the gorges by a vigorous attack, as those of the Imperialists had been at Hohenlinden, for ever lost.[1]

[1] Lucches. ii. 154,156. Jom. ii. 286, 287. Dum. xvi. 94, 97.

44. Defensive measures of the Prussians.

At length at nine o'clock, the increasing rays of the sun dispersed the fog, and his light shone forth in unclouded brilliancy. Then, and not till then, the Prussians perceived the full magnitude of the danger. On every side they were beset by assailants, no longer struggling through steep and narrow gorges, but deployed, with all their cavalry and artillery, on the open expanse to which these led. Directly in their front, the whole corps of Lannes, having made itself master of the villages at the foot of the Prussian position, was preparing to ascend the slope on which the latter stood: immediately to the right, Ney, and beyond him Soult, had already cleared the defiles, and were drawn up in line or column on the open ground; while Augereau on the left was pressing forward to turn their flank; and the Imperial Guard, with Murat's cavalry, were stationed in reserve on the slopes of the Landgrafenberg. Above ninety thousand men had outflanked on either side, and were preparing to crush forty thousand, in a strong position,

indeed, but totally inadequate to so desperate an encounter. Surprised, but not panic-struck, the Prussians drew up their lines in admirable order in the form of an obtuse triangle, with the apex in front, to avoid the danger of being turned on their flanks ; and instructions were despatched to Ruchel, who, with the reserve, twenty thousand strong, was at a short distance on their right, to hasten his march to the scence of action. Before he could arrive, however, the battle had commenced : the preparatory movements were made on either side in the finest style — the French columns advancing, and the Prussian retiring to their chosen ground with all the precision of a field-day.[1]

[1] Dum. xvi. 97, 105. Jom. ii. 286. Saalf. iii. 306.

45. Commencement of the battle.

But though they stood their ground bravely, and received their assailants with a close and well-directed fire, the odds were too great to give any hopes of success. Ney, indeed, whose impetuous courage led him to begin the attack before his columns were properly supported, and who had, by a charge of cuirassiers, carried a battery of thirteen pieces on an eminence, which severely galled his soldiers, was for a few minutes in imminent danger. The Prussian cavalry broke the French horse, and enveloped the infantry in such numbers as would inevitably have proved fatal to less resolute troops; but the brave marshal instantly formed his men into squares, threw himself into one of them, and there maintained the combat by a rolling fire on all sides, till Napoleon, who saw his danger, sent several regiments of horse, under Bertrand, who disengaged him from his perilous situation. But on all other points the French obtained early and decisive success. Ney, extricated from his difficulties, with an intrepid step ascended the hill, and after a sharp conflict carried the important village of Vierzehn-Heiligen, in the centre of the Prussian position. In vain Hohenlohe formed the flower of his troops to regain the post; in vain these brave men advanced in parade order, and with unshrinking firmness, through a storm of musketry

CHAP. XLIII.

1806.

and grape; the troops of Lannes came up to Ney's support, and the French established themselves in such strength in the village as to render all subsequent attempts for its recapture abortive. Emboldened by this success, Ney next attacked the right of the Prussian line towards Isserstadt, which Augereau with the French left had already carried. A devouring fire ran along the whole right wing, and the French were for some time arrested by the intrepid resistance of their adversaries; but the odds were too great, and, despite of all their efforts, the Prussians were compelled to give ground in that quarter. But on the left of Vierzehn-Heiligen, they obtained some advantage: their numerous and magnificent cavalry made several successful charges on the French infantry, when advancing on the open ground beyond its enclosures; several cannon were taken, and Hohenlohe for a short time flattered himself with the hope of obtaining decisive success.[1]

[1] Dum. xvi. 97, 115. Jom. ii. 286, 287. Bign. v. 475,476. Saaif. iii. 306. Lucches. ii. 156.

46. The Prussians are defeated.

Matters were in this state when the approach of Ruchel with his corps, twenty thousand strong, to the field of battle from the right, confirmed the Prussian general in these flattering anticipations; and he despatched a pressing request to him to direct the bulk of his forces to the village of Vierzehn-Heiligen, already the theatre of such desperate strife.* Thither, accordingly, the brave Prussian directed his steps; but before he could arrive at the decisive point, matters had essentially changed for the worse, and he came up only in time to share and augment the general ruin. The lapse of time had now enabled the French to bring their immense superiority of force to bear upon the enemy at all points : Soult, by a heavy and well-directed fire, had driven the cavalry from

* At this crisis, Hohenlohe wrote to Ruchel—" It is highly gratifying to me bo hear at this moment that your Excellency has arrived to my support. Send all the force you can to the village of Vierzehn-Heiligen, the chief point of attack. You are a brave man and sincere friend. At this moment we beat the enemy at all points; my cavalry has captured some of his cannon."—DUM. XVi. 114.

the field on their left; while Lannes and Augereau, pressing them at once in front and flank on their right, had forced back the infantry above half a mile. Emerging from the tillages which had been the theatre of such obstinate conflict, the French forces advanced with loud shouts and in irresistible strength towards the Prussians, who, weakened and dispirited, and in some places almost mown down by the terrible fire of their adversaries, were now yielding on all sides. Up to this time, however, their retreat was conducted in the most orderly manner. Napoleon saw that the decisive moment had arrived, and from his station on the heights in the rear, sent orders to Murat with the whole cavalry to advance and complete the victory. This terrible mass was irresistible. Fifteen thousand horse, fresh, unwearied, in the finest array, animated by the shouts of triumph which they heard on all sides, bore down with loud cheers on the retiring lines of the Prussians. In an instant the change was visible. In vain their cavalry, so brilliant and effective in the early part of the day, strove to make head against the assailants, and cover the retreat of the infantry and cannon: their horses, wearied by eight hours of fighting or fatigue, were unable to withstand the fresh squadrons and ponderous cuirassiers of Murat, and by their overthrow contributed to the disorder of the foot-soldiers. After a gallant resistance, the lines were broken: horse, foot, and cannon pressed tumultuously together to the rear, closely followed by the bloody sabres of Murat. In the general confusion all order was lost: the infantry and cavalry were blent together, the guns and caissons abandoned to the victors.[1]

[1] Dum. xvi, 97, 120. **Bign.y.476.** Jom. ii. 287. Saalf. iii. 307, 308. Camp. de Saxe, i. 262,263.

In the midst of this appalling scene, the columns of Ruchel, still in battle array, emerged through the cloud of fugitives to stem the torrent.* It was a movement

* The rapid change for the worse in the prospects of the Prussians since **he first** approached the field, may be discerned in the altered tone of the next letter despatched to him by Prince Hohenlohe—"Lose not a moment in advancing with your as yet unbroken troops. Arrange your columns so that through your open*-

CHAP. XLIII.

1806.

47. Arrival of Ruchei, who is *over*--whelmed.

extremely similar to the arrival of Desaix on the field of Marengo: but he had to meet Napoleon, not Melas. The fresh troops, though advancing in good order, and with an undaunted countenance, were speedily assailed on all sides: an ephemeral advantage gained by their cavalry was rapidly, in the disorder of success, turned into disaster: in front they were charged with the bayonet by the French grenadiers, in flank assailed by an endless succession of Murat's dragoons; the villages of Romstedt and Capellendorf were strewed with their dead; and Ruchei himself, while bravely animating his men, was wounded in the breast by a musket-ball, and carried off the field. After a terrible combat of an hour's duration, this powerful reserve, which in any other circumstances would have changed the fortune of the day, was broken, dispersed, and almost totally annihilated. It was no longer a battle, but a massacre. In frightful disorder the whole army rushed like an impetuous torrent from the field: but nearly the whole right wing was cut off by the rapidity of Soult's advance, and made prisoners. Almost all the artillery of the Prussians was taken, and the victors entered Weimar pell-mell with the fugitives, at the distance of six leagues from the field of battle. Behind that town, on the road to Auerstadt, Hohenlobe, at six o'clock, collected twenty squadrons, whose firm countenance till nightfall gave some respite to the wearied foot-soldiers, now dispersed through the fields in every direction; while Napoleon, according to his usual custom, rode over the bloody theatre of death, distributing prizes to those who had most distinguished themselves, and giving directions for the care and consolation of the wounded.[1]

[1] Dum. xvi. 120, 133. Bum. v. 475, 476. Lucches. ii. 157, 158. Hard. *ix.* 305, 306. Saalf. *Hi*, 307, 308.

While this terrible disaster was befalling the united sorps of Hohenlohe and Ruchei, the King of Prussia was combating under very different circumstances, but with

ngs there may pass the broken bands of the battle: be ready to receive the charges of the enemy's cavalry, which in the most furious manner rides on, presses and sabres the fugitives, and has driven into one confused mass the nfantry, cavalry, and artillery."—LUCCHESINI, ii. 157.

48. Preparatory movements which led to the battle of the King's army.

little better success, on the plateau of AUEBSTADT. Little expecting any engagement on the morrow, this fine army, commanded by the Duke of Brunswick in person, had bivouacked in close array around the village of that name: the Queen was only prevailed on by the most pressing entreaties to retire late in the evening, with a slender guard, to Weimar. Informed of the occupation of Naumburg by a considerable force, the Duke directed the division of Schmettau to occupy the heights of Koessen, and present themselves in battle array before the enemy, whom he supposed to be at the utmost a few thousand strong, while under their cover the remainder of the army leisurely continued its march towards the Elbe. These orders were obeyed; but Schmettau's division, contenting themselves with occupying the heights in the neighbourhood, neglected to send forward detachments to seize the defile of Koessen—an omission which was speedily taken advantage of by Davoust on the morning of the 14th, who, Oct. 14. advancing from Naumburg according to his directions, early seized upon this important pass. At six on that morning, the French marshal had received an order from Napoleon, dated three o'clock A.M., from his bivouac on the Landgrafenberg, in which he announced his intention to attack in a few hours the Prussian army, which he imagined to be concentrated in his front, and ordered Davoust to march without loss of time upon Apolda, in order to fall upon their rear, leaving him the choice of his route, provided he took a part in the action. The despatch added: "If the Prince of Pontecorvo (Bernadotte) is with you, you may march together; but the Emperor hopes that he will be already in the position assigned to him at Doraburg." Davoust instantly repaired to the headquarters of Bernadotte, who at that moment was in communication with his corps in the neighbourhood of Naumburg, and showed him this order, proposing that they should march together to Apolda;[1] but that officer, relying on the ambiguous expression in the

CHAP. XLIII. 1806.

despatch—which indicated that the Emperor "hoped he would be in the position assigned to him at Dornburg"—did not conceive himself entitled to deviate from his previous instructions, and set out with his whole corps in the direction of that town.

49. Battle of Auerstadt. Atlas, Plat© 41.

Left thus to his own resources, Marshal Davoust notwithstanding began his march in the direction which Napoleon had assigned. His forces were considerable, amounting to twenty-six thousand infantry and four thousand horse—a body perfectly adequate to its destined task of falling on the rear of the Prussian army, when defeated in front by Napoleon, but little calculated to withstand the shock of fifty thousand infantry and ten thousand cavalry, whom the King was leading in person to the encounter. The Prussians, on their side, were as little prepared for an action; and, deeming their march sufficiently secured by Schmettau's division on the heights of Koessen, were in open column and straggling, advancing on their march towards the Elbe, when suddenly, at eight o'clock, they were met on the plateau by the vanguard of Davoust, which had emerged from the long and steep ascent so well known to travellers who visit that memorable field, and was already drawn up in battle array on its summit. The thick mist which here, as at Jena, concealed the movements of the opposing armies, prevented the troops seeing each other till they were only a few yards distant; and both parties deeming their adversaries only an inconsiderable detachment, fell back to collect forces to clear their advance,—the Prussians, to drive the enemy back again down the defile, and secure the flank of the army from insult; the French, to clear their front, and pursue their route to Apolda.[1]

[1] Jom. ii. 290,291. Dam. xvi. 139, 147. Bign.v.480, 481. Saalf. iii. 306. Personal observation.

50. Additional forces come up on both sides.

Speedily reinforced, both sides returned to the charge. Davoust supported the advanced guard by the whole division of Gudin, with instructions to maintain themselves to the last extremity on the level space at the upper end

of the defile, in order to gain time for the remainder of the corps to debouch; while the King of Prussia, impatient at the check given to the march of his army, ordered Blucher, with two thousand five hundred hussars, to ride over the Sonnenberg and clear the plateau of the enemy. Little anticipating the formidable resistance which awaited them, the Prussian cavalry were thrown into disorder by the close and steady fire of the French infantry, which speedily formed themselves into squares. Their cavalry were, indeed, overthrown by the overwhelming numbers of the Prussian horse; but all the efforts of that gallant body, even when guided by the impetuosity of Blucher, were shattered against the compact mass of Gudin's infantry, and the terrible discharges of grape which issued from his artillery. Surprised at the obstinacy of the resistance, the King, adopting the opinion of Marshal Moellendorf, who insisted that it was only a detached column which occasioned the delay, and disregarding the advice of the Duke of Brunswick, who strongly counselled a general halt, and formation of the army in order of battle, till the mist cleared away and the enemy's force could be ascertained, continued the attack by means merely of successive divisions as they came up to the ground. The divisions of Wartensleben and the Prince of Orange were ordered to pass the defile of Auerstadt, where the road runs through a winding hollow skirted with copse-wood or rough slopes, and advance to the support of the discomfited cavalry. The former, who first emerged from the defile, was directed to assail the flank of Gudin's division, which had advanced on the plateau beyond the village of Hassenhausen. At this moment the mist was dissipated, and the sun shone in full brilliancy on the splendid squadrons and regular lines of the Prussians.[1]

[1] Jom. ii. 292, 293. Saalf. iii. 306. Dum. xvi. 139. 150.

The Duke of Brunswick put himself at the head of the infantry, and led them gallantly to the attack, while Schmettau and Blucher pressed them with their respec-

CHAP. XLIII. 1806.

tive divisions of foot and horse on the opposite flanks. But the brave troops of Gudin, forming themselves into squares, resisted all the charges with unconquerable resolution; and the nature of the ground, which permitted the successive divisions to come up to the support of either side only by degrees, the one by the long and winding defile of Auerstadt, the other up the steep ascent of Koessen, rendered it impossible for the Prussians to bring all their overwhelming force to bear at once upon the enemy. The conflict, therefore, was more equal than might have been imagined, and most severe. The French troops, stationed behind the hedges, enclosures, and garden-walls of Hassenhausen, kept up an uninterrupted and murderous fire upon the enemy. The Duke of Brunswick was mortally wounded by a ball in the breast while leading on a charge. Schmettau experienced the same fate. Wartensleben had his horse shot under him; and the Prussians, discouraged by the loss of their leaders, wavered in the attack, which, being made in line, and not in column, was not pressed with the requisite vigour. Still the terrible discharge of artillery and fire-arms continued. Gudin's division had lost nearly half its numbers, and it was evident they could not long maintain their ground against their redoubtable and hourly increasing adversaries.[1]

51. Desperate conflict which ensued at the summit.

[1] Jom. ii. 292, 293. Dum. xvi. 139,156. Bign.v.482. Saalf. iii. 306.

From this peril, however, they were at length relieved by the arrival of the other divisions of Davoust's army, Morand was the first who got up the defile. His troops, as they successively arrived on the summit, drew up on the left of Gudin, towards the Sonnenberg; and shortly after Friant, with his division, debouched upon the right, and extended to the foot of the Speilberg. The combat was now equal, or rather the advantage was on the side of the French, for their three divisions were superior in strength to those of Schmettau, the Prince of Orange, and Wartensleben, to which they were opposed. Prince William of Prussia, at the head of a powerful body of

52. Arrival of other divisions on the field. Progress of the battle.

cavalry, which had surmounted the Sonnenberg and arrived on the French left, furiously assailed Morand's division immediately after it formed; but these veteran troops, with admirable coolness, threw themselves into squares, and with rapid discharges received the repeated and impetuous attacks of the Prussian horse. In vain these gallant cavaliers, with headlong fury, drove their steeds up to the very muzzles of the French muskets. In vain they rode round and enveloped their squares : ceaseless was the rolling fire which issued from those flaming walls; impenetrable the hedge of bayonets which the front rank, kneeling, presented to their advances. The heroic devotion of Prince William in vain led them again and again to the charge; still the fire continued, still the bayonets remained firm. At length he himself was wounded, half his followers were stretched on the field, and the remainder sought refuge in disorder, partly on the heights of the Sonnenberg, partly in the enclosures of Neu Zulza.[1]

[1] .Tom. ii. 192, 193. Dum. xvi. 156, 161. Bign.v.483. Saalf. iii. 506.

53. Desperate struggle around the Sonnenberg on the Prussian right.

While this desperate conflict was going on on the left of Hassenhausen, the division of Friant had debouched from the defile, extended itself on the ground to its right, and chased the enemy who assailed it back to the village and heights of Speilberg, which were speedily carried. The left of the Prussians was thus threatened; but it was not there that the principal danger lay. The progress of Morand on their right was much more alarming. On that side, not content with repulsing the furious attacks directed against them, the French had now assumed the offensive, and were rapidly pressing forward to the heights of Sonnenberg, from whence their guns would command the whole field of battle, and render untenable the position of the Prussian reserves, which had hitherto taken no part in the action. Sensible that the battle was irrecoverably lost if these important heights fell into the hands of the enemy, the King put himself at the head of a chosen body of troops, and bravely led them to the

CHAP. XLIII. 1806.

charge. But if the attack was gallant, the defence was not less obstinate: Morand himself was to be seen at the head of his regiments, and for some minutes the balance quivered. Insensibly, however, the French gained ground, and at length their artillery, dragged up to the summit of the heights, was placed in battery, and opened such a tremendous fire of grape and cannister upon the enemy's columns, as completed their discomfiture in that quarter; and with the blood-stained Sonnenberg and the village of Rehausen, the whole left of the field of battle fell into the hands of the invaders.[1]

[1] Dum. xvi 161, 164. Bigu.v. 483, 484. Jom. ii. 294. Lucches. ii. 146,147.

The experienced eye of Marshal Davoust now told him that the moment for striking the decisive blow had arrived. The heights at Eckartsberg commanded the line of the enemy's retreat, as those of Sonnenberg did the field of battle : by moving forward his centre and seizing that important point, their defeat would be rendered complete, and all possibility of their rallying prevented. Thither, accordingly, Gudin's division advanced, driving before them the broken remains of Schmettau's and Wartensleben's divisions, which had lost nearly half their numbers during the sanguinary strife in which they had been engaged. But the Prussians made one effort more to regain the day. Their broken battalions, which had retired from the field, were rallied under cover of the powerful reserve commanded by Kalkreuth, who assumed the direction upon Moellendorf being wounded: this consisted of two divisions which had hitherto taken no part in the action, and were placed in front; while the whole cavalry, re-formed under Blucher's orders, was posted in a second line immediately behind the infantry, to take advantage of any hesitation which might appear in the enemy's columns. Wearied by a morning's march and four hours[1] hard fighting, the French soldiers had now to withstand the shock of fifteen thousand fresh troops, to whom they had no corresponding reserve to oppose. Had the quality of the troops on the opposite sides been equal, this power-

ful addition to the enemy's forces, at snch a moment, must have proved decisive : but nevertheless they were totally defeated; and this last success put the keystone to the arch of Marshal Davoust's fame. Though strongly posted on an eminence, and protected by the fire of a powerful battery, they were charged with such intrepidity by Gudin's division, supported by a part of Friant's, that they were driven from their position with the loss of twenty pieces of cannon. At the same time, Morand repulsed an attack against the troops which he had stationed on the heights of Sonnenberg : the artillery, from that commanding position, carried death through all the ranks of the enemy; and at length his gallant forces descended from the eminence, and, carrying all before them, drove the reserves opposed to their advance through the defile of Auerstadt. Thither Blucher's cavalry followed the retreating columns : the Guards still kept their ranks, and retired in good order in open square, and by their firm countenance enabled the broken infantry to rally at a distance from the field of battle, where Davoust reposed amidst his heroic followers.[1]

[1] Dum. xvi. 164, 171. Jom.ii.294. Lucches. ii. 146,148. Bign. v. 485, 486.

55. **Disastrous retreat of the Prussians during the night fiom both fields of battle.**

The King of Prussia, who, during this disastrous day, had manifested the most signal coolness and intrepidity, and, during the repeated charges which he made at the head of his troops, had lost two horses killed under him, gave directions for the army to retreat in the direction of Weimar, intending to fall back on the corps of Prince Hohenlohe, of whose disaster he was still ignorant. But as the troops, in extreme dejection, and with little order, were following the great road which leads to that place, they were suddenly startled in the twilight by the sight of an extensive line of bivouac fires on the heights of Apolda. These lights were made by the corps of Bernadotte, who, adhering to his original instructions to march to Dornburg, had arrived in this position, after passing that town, late in the evening, and, ignorant of the com

CHAP. XLIII.

1806.

bats which had taken place, was preparing to fall on the rear of the Prussian army on the following day. His too strict adherence to the letter of the orders he had received deprived him of the glory of sharing in either battle, endangered Daroust's corps, and had wellnigh cost him his own life, from the indignation of the Emperor: but, nevertheless, this sudden apparition of a fresh corps of unknown strength upon the flank of their line of retreat at that untimely hour, compelled the Prussians to change their direction and abandon the great road.[1] *

[1] Dum. xvi. 171,177. Jom.ii.295, 297. Hard, ix. 306,307. Saalf. iii. 307.

56. **Meeting of the two discomfited armies in their flight.**

About the same time, obscure rumours began to circulate through the rauks of a disaster experienced on the same day at Jena; and soon the appearance of fugitives from Hohenlohe's and Ruchel's corps, flying in the utmost haste across the line which the troops retiring with the King were following, announced but too certainly the magnitude of the defeat sustained in that quarter. A general consternation now seized the men—despair took possession of the firmest hearts, as the cross-tide of the battalions flying from Jena mingled in increasing numbers with the wreck which had survived the fight of Auerstadt The confusion became inextricable, the panic universal. Infantry, cavalry, and artillery disbanded, and, leaving their guns, horses, and ammunition waggons, fled in mingled disorder across the fields, without either direction, command, or rallying point.[2] The King himself

[2] Dum. xvi. 171, 178. Jom. ii. 295, 298. Bign. v. 486, 487. Hard. ix. 307. Lucches. ii 148.

* Napoleon's anger at Bernadotte, on account of his not supporting Pavoust, and taking a share in the battle of Auerstadt, knew no bounds. " If I should send him to a council of war," said he, " nothing could save him from being shot. I will not speak to him on the subject; but I will let him see what I think of his conduct. He has too much honour not to be aware himself that he has committed a disgraceful action." In truth, however, Napoleon had no sufficient grounds for this ebullition. If Bernadotte did not take a part in the action, it was because his own latest instructions expressed a hope that he should go to Dornbuig rather than march toward Auerstadt with Davoust. Had he violated these instructions, and, in consequence, the Prussian army had escaped by Dornburg, its natural and most probable line of retreat, what defence could Bernadotte have offered for his conduct] "I was piqued," said that marshal, "to be addressed in the language of authority by Davoust; but I did my duty. Let the Emperor accuse me if he pleases, I will answer him. I am a Gascon, but he is still more so."—BOTJRRIENNE, Vii. 161, 162.

narrowly escaped being made prisoner during the tumult and horrors of the night; and it was not till five in the morning that, by a long circuit, he arrived at Sommerda, where he received the official news of the melancholy disaster at Jena, accompanied by the letter, offering an accommodation, so insidiously despatched by Napoleon the day before that great victory.

57. Loss on both sides in these actions.

Such were the astonishing battles of Jena and Auerstadt, which, in a single day, prostrated the strength of the Prussian monarchy; and did that in a few hours which the combined might of Austria, Russia, and France, in the Seven Years' War, had been unable to effect. The subsequent disasters of the campaign were but the completion of this great calamity—the decisive strokes were given on the banks of the Saale. The loss of the Prussians was prodigious: in the two fields there fell nearly twenty thousand killed and wounded, besides nearly as many prisoners; and two hundred pieces of cannon, with twenty-five standards, were taken. Ten thousand of the killed and wounded fell at Auerstadt—an honourable proof that, if infatuation led them into the field, valour inspired them when there. Nor was that victory bloodless to the conquerors: their total loss was fourteen thousand men; of whom seven thousand five hundred belonged to Davoust's corps—a striking indication of the dauntless intrepidity with which they had fought.[1] Napoleon,* with

[1] Dum. xvi. 177. Camp, de Saxe, i. 265. Dum. xvi. 180.

*** Napoleon's official account of the battle of Jena, in the fourth bulletin of the campaign, is characterised by that extraordinary intermixture of truth and falsehood, and that unfailing jealousy of any general who appeared to interfere with his reputation, which in one who could so well afford to be generous in that particular, is a meanness in an especial manner reprehensible. Davoust was the real hero of the day, since, with thirty thousand men, he had defeated the King of Prussia in person, at the head of sixty thousand. His own achievement in overthrowing forty thousand, or, including Ruchel, sixty thousand, with ninety thousand veteran troops, including the whole cavalry of Murat, is nothing in comparison. Nevertheless, he represents the action as all fought in one field; speaks of the enemy, eighty thousand strong, as being commanded by the King and the Duke of Brunswick in person, and after dilating fully on his own achievements, dismisses the wonderful exploits of Davoust in the following words :–" On our right, the corps of Marshal Davoust performed prodigies. Not only did he keep in check, but maintained a running fight for three leagues, with the bulk of the enemy's troops, who were seeking**

CHAP. XLIII. 1806.

his usual disregard of truth, called his whole loss in both battles four thousand, little more than a fourth part of its real amount.*

58. Unparalleled disasters of the retreat.

Great as were these results, however, they were but a part of the effects which ultimately flowed from these memorable battles. The disasters consequent on the retreat of the Prussians exceeded anything hitherto recorded in modern history, and were* equalled only by the still greater calamities which followed the flight from Waterloo. No provision had been made for such a contingency ; no rallying point assigned, no line of march prescribed, no magazines collected. The extraordinary circumstance of the four principal generals of the army —the Duke of Brunswick, Marshal Moellendorf, General Schmettau, and General Ruchel—being killed or disabled by wounds, left the confused mass of fugitives without a head. The unparalleled calamity of the survivors from two different defeats, experienced on the same day, crossing each other, and becoming intermingled during the horrors of a nocturnal retreat, rendered it impossible for them to know whose orders were to be obeyed. Thus, when morning dawned on the scene of ruin, the soldiers from the three armies of Ruchel, Hohenlohe, and the Duke of Brunswick, collected, as chance threw them together, in disorderly groups, and inspired only with a common panic, fled in different directions, as accident or intelligence guided their steps. Vast numbers of stragglers wandered at large through the fields, or hurried with so little knowledge of the country, from the scene of

to debouch on the side of Koessen. That marshal has displayed alike the distinguished bravery and firmness of character which are the first qualities of a warrior. He was seconded by Generals Gudin, Friant, Morand, Daultanne, chief of the staff, and by the rare intrepidity of his brave corps." Who could imagine that it was the glorious battle of Auerstadt which was here narrated1 The injustice to Davoust is so manifest that it is admitted even by the eulogists of Napoleon.—See BIGNON, V. **487, 488; and *Fourth Bulletin,* 1806, in *Camp, de la Saxe, i.* 265.**

*** Davoust's loss at Auerstadt was 270 officers and 7200 privates, killed and wounded. Of these 134 officers and 3500 privates belonged to Gudin's division of 7000 men: in other words, more than a half of that band of heroes had**

danger, that, instead of avoiding, they rushed headlong into the jaws of the enemy. It is in the extraordinary confusion arising from this disastrous retreat, and the terror which seized the minds of both officers and men at finding themselves thus huddled together with soldiers to whom they were perfect strangers, that the true cause of the unparalleled disasters which followed the battle of Jena is to be found.[1]

[1] Dum. 178, 182. Bign. vi. 3, 5. Jom. ii. 297. Hard. is. 307.

59. Capture of Erfurth with 14,000 men. Oct. 15.

Atlas. Plate 39.

The effect of the general consternation which prevailed speedily appeared in the fate which befell the fragments of the mighty army. Six thousand fugitives, almost without leaders, had taken refuge, the day after the battle, in Erfurth, whose embattled walls and almost inaccessible citadels promised the means of at least a temporary defence. It contained also the grand park and reserve artillery stores of the army, with the greater part of its camp equipage. Thither also the Prince of Orange, Marshal Moellendorf, and a great number of the wounded of distinction, besides seven thousand private soldiers, also wounded, had been conveyed. Such, however, was the terror of the governor at finding himself thus suddenly overwhelmed by a mass of wounded and stragglers, incapable of aiding in the defence, but who would speedily consume his slender stock of provisions, that he thought the best thing he could do was to negotiate a capitulation, on condition that the officers should retire on their parole into Prussia, and the private men remain prisoners of war.[2] On these terms the place surrendered, and with it fourteen thousand men, including

[2] Dura. xvi. 200,202. Jom. ii. 298. Lucches. ii. 159.

fallen. This was the bravest action fought by the French troops during the whole contest: but the valour both of the corps and the division was inferior to that displayed by the English in more than one action of the Peninsular war, if the number of killed and wounded, a fair test with armies both of which have been victorious, is taken as a criterion. At Talavera, out of 19,500 English soldiers, 5000 were killed and wounded; nearly the same proportion as fell of the victors at Auerstadt: but at Albuera, out of 7000 English troops, only 1500 were unwounded at the close of the fight; and 8481 red-coats fell at Waterloo, out of a force of native English not exceeding 29,000 men.—See DUMAS, **xvi. 177;** NAPIER'S ***Peninsular War,*** **iii. 541; and** WELLINGTON'S ***Official Account of the Battle of Waterloo, Ann. Reg.*** **1815, *App. to Chron.***

CHAP. XLIII. 1806.

the *dying* Marshal Moellendorf and the Prince of Orange; a hundred and twenty pieces of cannon, and immense military stores, fell into the hands of the enemy.

60. The King of Prussia gives the command to Hohenlohe, and retires to Magdeburg.

Hohenlohe, who had retired, covering the retreat of the fugitives beyond Weimar with a considerable body of cavalry, in good order, at nightfall on the 14th found himself so completely overwhelmed by the crowd of stragglers who attached themselves during the night to his squadrons, that by degrees his array melted away; and it was only by making frequent circuits, and repeatedly crossing the fields, that he was enabled to reach Dernstedt at seven on the following morning, at the head of sixty horsemen. On the day following, the King, who had arrived at Sondershausen, accompanied only by his aides-de-camp, conferred the command of all the troops which had combated at Jena and Auerstadt upon Prince Hohenlohe, with the exception of the two divisions under the orders of Kalkreuth, the reserve at the latter battle, which it was thought would still be in some sort of order; but in the general confusion this corps had dispersed like the rest, and there remained only eight battalions around his standard. Magdeburg was assigned as the rallying point to the army, within the almost impregnable walls of which fortress it was hoped the wreck of its once mighty array could be reorganised, and a defensive struggle maintained till the arrival of the Russians from the Vistula, and of the reinforcements which were collecting in the interior of the kingdom. Thither accordingly the King repaired, attended only by a few horsemen, to make preparations for the reception of the army; and there he was quitted by the British envoy, Lord Morpeth, who, seeing no chance of diplomatic concerns being attended to amidst the general confusion, returned to London to render an account to his bewildered cabinet of the extraordinary events which he had witnessed in the outset of his mission.[1]

Oct. 16.

[1] Dum. xvi. 184,192. Bign. vi 7, 8. Hard. ix. 307.

But if there was any one thing more than another in

61. Measures of Napoleon to follow up the victory.

which the genius of Napoleon shone prominent, it was in the vigour and ability with which he followed up a beaten enemy. The present was not an opportunity to be lost of displaying this essential quality of a great general. Without an instant's delay, therefore, he prepared to pursue the extraordinary advantages he had gained. From all parts of Germany his forces had been assembled to one point, in order to strike the decisive blow. That done, the next object was to disperse them like a fan over the conquered territory, to carry everywhere the impression of their victory, and the terrors of their arms. On the night after the battle, Napoleon, instead of retiring to rest, sat up dictating orders to all the corps of his army for the directions they were to follow in pursuing the enemy. On the extreme right, Bernadotte, whose numerous corps was still untouched, received orders to advance from Apolda to Neustadt, to cut off the line of retreat from Weimar to Naumburg, and so shut out the army from the great road to Magdeburg. Davoust was to return to Naumburg to hold that important post, and keep himself in readiness to debouch on the Elbe before the enemy could arrive there; Soult was to move on Buttelstadt, the point in rear of the fields of battle, where the greatest number of fugitives had assembled; Murat and Ney to march direct upon Erfurth, and reduce that important place: while Lannes and Augereau were directed to take a position in advance of Weimar; and the Imperial Guard and Napoleon's headquarters were transferred to that town. The general object of Napoleon in these movements was, that while the corps of Soult, Murat, and Ney, pursued the broken remains of the Prussian army to Magdeburg, those of Bernadotte, Lannes, Davoust, Augereau, and the Guard, under his immediate orders, should cross the Elbe at Barby, Dessau, and Wittenberg, and, moving upon Berlin and Spandau, intercept the line of retreat of the Prussians to Stettin and the Oder.[1] This was the more easy, as

[1] See the orden in Dum. xvi. 192,193.

CHAP. XLIII.

1806.

62. Soult defeat Kalkreuih.

the French held the chord of the arc along which the Prussians had to move.

Soult was the first who came up with the enemy. At Greussen his cavalry reached the retiring squadrons of Kalkreuth's division, which alone preserved any semblance of an army. That general proposed a suspension of arms, in order to gain time, declaring that he knew an armistice had been concluded, and for the purpose of arranging its conditions repaired to the advanced posts in order to a conference with the French general. The terms, as might be expected, could not be agreed ou. The statement was made in perfect good faith, under the impression founded on the letter from Napoleon offering an accommodation, written the day before, but not received till the night after the battle ; and it gave the Prussian commander leisure to cause a considerable part of his forces

Oct. 15. to defile in safety to the rear. Enraged at finding himself thus overreached, Soult, the moment the conferences were broken off, attacked the Prussian rearguard posted in front of Greussen, which, after a short resistance, was cut to pieces, and the victors entered that town pell-mell with the vanquished. Following up his success, the French marshal, early the following morning, resumed the pur-

Oct 16. suit, and came up with the enemy at Nordhausen, where they were again defeated with the loss of twenty pieces of cannon, and three thousand men. Unable, from want of provisions, to keep his men together, and having no other means of escape to any part of his forces, the Prussian general divided his troops into two bodies, with instructions to follow different routes to Magdeburg. An almost total dispersion immediately followed this order. The stragglers came into that fortress by companies, squadrons, and groups of single men in hardly any array ; and thus was the disorganisation of the only divisions of the array which still preserved their ranks rendered complete within three days after the battle.[1] Collecting prisoners at every step, Soult continued rapidly to advance, and on the 21st

[1] Dum. xvi. 191,200. Jom.ii.299. Norv.ii.465, 466. Lucche8.ii. 161. Oct. 21.

his vanguard reached the Elbe, and planted their victorious standards around the walls of Magdeburg.

A more important action awaited the arms of Bernadotte. This able chief, whose too literal adherence to the letter of his instructions had deprived him of his share of the laurels of Auerstadt, was burning with anxiety to achieve some exploit worthy of the deeds of his comrades and his own renown, when fortune threw the wished-for opportunity in his way. Prince Eugene of Wiirtemberg, who commanded the Prussian reserve, fourteen thousand strong, stunned by the intelligence of the disasters of the army at Jena, was preparing to make the best of his way back to Magdeburg and the Elbe, when he was beset on all sides at Halle by the corps of Bernadotte. The Prussians who were brought into action had not shared in the preceding defeats: notwithstanding the great superiority of force on the part of the French, they made a brave resistance ; and there might be seen what elements of success existed in their army had they been opposed by less, or guided by greater ability. Assailed with the utmost impetuosity by the vanguard of the French, under Dupont, at Passendorf, they were driven in haste back to the islands in the Saale, over which the road passes : but in that defile they stood firm, and, supported by a cloud of light troops who lined the dikes on either hand along the margin of the stream, long withstood their assailants, and debarred all access to the gates. After an obstinate resistance, however, a column of grenadiers, headed by Dupont himself, rushed across the bridges, carried the guns which enfiladed them ; and, rapidly pursuing their success, pushed on and made themselves masters of the town.[1]

63. **Prince** Eugene **of** Wiirtemberg is defeated by Bernadotte **at** Halle. Oct. 17.

[1] Saalf. iii. 307, 308. Jom. ii. 300, 301. Dum. xvi. 214, 223.

The Prussians had now no alternative to gain time for the retreat of their main body to Magdeburg, but to prevent as long as possible the French troops from debouching from the gates on its opposite side: and the gallant efforts of the Duke of Wiirtemberg long delayed them at that

64. **Desperate action which ensued on his retreat,**

CHAP. XLIII. 1806.

important point; but at length the increasing numbers of the French, and the murderous fire of the artillery which they brought up and planted on the ramparts, drove the Prussians from their strongholds in the gardens and walls of the suburbs, and enabled the columns to issue from the gates. Charged while retreating in open square along the level plain, the Prussians, during a running fight of four leagues, sustained severe loss from the enemy, and lost nearly their whole artillery. Still they combated with heroic resolution, and yet kept their ranks, when the pursuit ceased on the approach of night. Then the combat terminated on the right bank of the river; but on the left bank a greater disaster awaited the Allied arms. Three thousand Prussians had broken up from their quarters near Magdeburg, in order to join the main body of the reserve at Halle, and, ignorant of the occupation of that town by the French, fell into the midst of such superior forces that they were almost all either killed or made prisoners. Honourable as this affair was to the Prussians, it augmented in an alarming degree the dangers of the army by dissipating its last regular corps : four thousand prisoners and thirty pieces of cannon remained in the hands of the victors, whose loss did not exceed twelve hundred men; while the broken remains of the vanquished crossed the Elbe at Dessau in such haste, that they were unable completely to burn the bridge behind them, which was speedily restored by the French, who established themselves in force on the right bank, and drew their posts round Magdeburg.[1]

65. Saxony is overrun by the French. Oct. 18.

Meanwhile the other corps of the army continued their triumphant progress, with hardly any opposition, through Saxony. Four days after the battle of Auerstadt, Marshal Davoust took possession of Leipsic : strange coincidence, that the French army should for the first time enter that city on the very day on which, seven years afterwards, they were there to experience so terrible an overthrow ![2] Napoleon gave testimony of the rigorous warfare which he

[2] On Oct. 18, 1813.

CHAP. XLIII.

1806.

was about to commence against English commerce, by there issuing an edict of extraordinary severity against British merchandise. * Rapidly following up his success, Davoust, two days afterwards, reached Wittenberg, at the very time that the retiring Prussians were preparing to blow up its great bridge over the Elbe ; the French grenadiers rushed so rapidly over it, that the enemy had not time to set fire to the train, and thus that important passage was secured. On the same day, Lannes made himself master of the passage at Dessau. Thither Napoleon followed with his Guards three days afterwards; and, regarding the capture of Berlin as certain and a secondary object, he already began to give directions for the march of his troops from the Elbe to the Oder. Davoust's corps was pushed on towards that capital—Napoleon having permitted, as a reward for his transcendant heroism at Auerstadt, that his corps should be the first to enter the capital of the fallen monarch.[1]†

Oct. 19.

66. Investment of Magdeburg, which is abandoned by Hohenlohe. Oct. 22.

Such was the rapidity of the French advance, that they arrived round Magdeburg before a large portion of the broken Prussians had taken refuge within its walls. Napoleon saw clearly the importance of accumulating as large a number as possible of the enemy in a situation where it was evident they would ere long become his prisoners, and therefore he gave orders to leave the entrance to the place open, and dispersed his cavalry in

* " Your city," said Napoleon, " is known throughout Europe as the principal depot of English merchandise, and on that account the enemy most dangerous to France. The Emperor and King commands—1. Within four-and-twenty hours immediately following this notification, every banker, merchant or manufacturer, having in his possession any funds *the produce of English manufactures,* whether they belong to a British subject *or the foreign consignee,* shall declare their amount in a register appointed for that special purpose. 2. As soon as these returns are authentically received, domiciliary visits shall be made to all, whether they have declared or not, to compare the registers with the stock in hand to ascertain its exactness, and punish by military execution any attempt at fraud or concealment." Well may the honest Genera] Mathieu Dumas exclaim, " What a deplorable abuse of victory 1"—DUMAS, xvi 225.

† Bernadotte was unavoidably detained a day longer than he was ordered in marching to the Elbe, and in consequence did not cross that river till the 23d

CHAP. XLIII. 1806.

all directions to drive the stragglers into that devoted fortress.* Murat's horsemen, in consequence, inundated the adjacent plains; and the garrison of the town, ill provided with subsistence, already began to feel the pangs of hunger from the multitude of useless soldiers who were driven to its shelter. Summoned to surrender by Marshal Soult, the governor replied, that he hoped to gain the esteem of the besiegers by an honourable defence; but the confusion of the garrison, and the evident discouragement of the multitudes of insulated men who thronged round the gates, rendered it more than probable that his resistance could not be prolonged for a very long period. Hohenlohe, despairing of preventing the investment of the place with so disorganised a wreck as was collected within its walls, and aware that the want of provisions would soon compel its surrender, resolved to depart with all the forces which still maintained the appearance of order, and make for the great line of fortresses on the Oder; but such was the universal confusion which prevailed, that he could only collect fifty battalions and a hundred and sixty squadrons in a state to keep the field. With these he departed on the day following, leaving fifty skeleton battalions, hardly containing, in all twelve thousand combatants, within the walls.[1]

[1] Bign. vi. 10,11. Dum. 223,237. Jom. ii. 304, 308.

Upon leaving Magdeburg, Hohenlohe, abandoning Berlin to its fate, made for Stettin, situated near the mouth of

and 24th, instead of the 21st and 22d, before which time the corps of the Duke of Wurtemberg had defiled through Magdeburg, and was in full march for the Oder. This escape of a considerable part of the best organised corps of the Prussians excited to the highest degree the indignation of Napoleon, who took occasion bitterly to reproach him with this delay, as well as with his conduct in not marching with Davoust to Auerstadt. Already were to be seen the germs of that mutual discontent which, seven years afterwards, on those very plains, brought Bernadotte in arms against the French Emperor on the field of Leipsic. —BIGNON, vi. 9; DUMAS, xvi. 230.

*** " Magdeburg," said Napoleon, " is a net where all the isolated men who have wandered about since the battle may be taken. We must, therefore, invert our manoeuvres, and beat all the country for fifteen leagues around: we shall thus collect numbers of prisoners, and also gain accounts of the direction taken by the strong columns of the enemy, of whose route we have as yet no certain intelligence."—DUMAS, xvi. 232.**

1806.

the Oder, by the route of Spandau. But when he drew near to the latter place, he received intelligence that on that very day it had capitulated to the first summons of the advanced posts of the cavalry under Murat, and that Davoust on the same day was to make his entrance into the capital. Driven thus to a circuit to avoid the captured towns, he moved by Gransee and Zeydenick, in order to reach before the enemy, if possible, the defile of Locknitz, near Stettin, which would have secured his retreat to that important fortress. Aware of the importance of anticipating the Prussian general in these movements, Napoleon sent Murat forward with the cavalry, to get before him to the defile, while Lannes advanced as rapidly as possible in pursuit of his steps with his indefatigable infantry. By forced marches, Murat got the start even of the horsemen who formed the advanced-guard of Hohenlohe's corps; and on leaving Zeydenick, the point where the road from Spandau and Berlin falls in with that from Magdeburg to Stettin, they were assailed by that active officer himself, at the head of Lasalle's dragoons. Confounded at being thus anticipated in a quarter where they expected a leisurely retreat, the Prussian horse made but a feeble resistance. Even the renowned regiment of the Queen's dragoons was repulsed after a short effort, surrounded, and almost cut to pieces; and the Prussian cavalry were compelled to fall back on Templin, while their main body had to renounce all hope of pursuing the direct road to Stettin. Driven thus from his line of retreat, and his right flank being exposed to the attack of Marshal Lannes, Hohenlohe, after waiting at Gransee three hours in the vain hope of being joined by Blucher, who had retreated to the same quarter, changed his direction, and moved upon Boitzenberg, where he arrived on the 27th, hoping to reach Stettin by this circuitous route of Prentzlow; but in attempting to do so, the unhappy prince found himself again beset by his indefatigable pursuers.[1]

67. Who is pursued and assailed.

68. Is utterly-defeated at Prentzlow. Oct. 28.

No sooner was Murat informed of his change of direction, than he marched across the country all night, from the one road to the other, again got before him, and assailed the Prussian horse at once in front and flank with his terrible dragoons, on the following morning, as they were continuing their march two leagues beyond Prentzlow. To troops wearied by incessant marching for a fortnight together, and discouraged by such a succession of disasters, the shock of his victorious squadrons was irresistible: the Prussian cavalry were speedily broken, and fell back in disorder to the suburbs of Prentzlow, already encumbered with infantry and artillery. To complete their misfortunes, Marshal Lannes appeared at this critical moment on their right flank, having, with indefatigable perseverance, marched all night from Templin on the direct road. Murat now summoned Hohenlohe to surrender, which the latter refused, and brought up a powerful battery of cannon to answer the fire of the French artillery, which was severely galling his troops as they attempted to debouch from the town. This battery was immediately attacked and carried, and a regiment of infantry and cavalry which advanced to support it broken and made prisoners. Prince Augustus of Prussia, at the head of his regiment, which was still two leagues in the rear of Prentzlow, was surrounded, and after heroically resisting the repeated charges of the French cuirassiers, during a march in hollow square of four miles, was at length made prisoner, with almost all his men, while bravely resisting to the last.[1]

[1] Dum. xvi. 285, 290. Jom.ii.308, 310. Hard. ix. 312.

69. And compelled to surrender. Profound grief of the Prussian troops.

Overwhelmed by such a multitude of calamities, and seeing no chance of escape, while every hour increased the forces against him by permitting the formidable battalions of Lannes to arrive on his rear and flank, Prince Hohenlohe, after several unsuccessful attempts to obtain a capitulation, was obliged to lay down his arms, on condition that the officers should be dismissed on their parole. With him were taken fourteen thousand

men, including the flower of the Prussian army; the Guards, six chosen regiments of cavalry, forty standards, and fifty pieces of field-artillery. Notwithstanding the many defeats and disastrous circumstances which had occurred, this grievous surrender did not take place without the most profound grief on the part of the Prussian troops. The officers retired from the circle where it had been agreed to in stern silence, or shedding tears ; many of them fiercely and indignantly accused their commanders of treachery, and invited their comrades to cut their way through the enemy, sword in hand. The private soldiers, by loud sobs and lamentations, gave vent to their grief, and, flinging their muskets on the ground, slowly and mournfully pursued their way into the town ; while a loud flourish of trumpets, the quick rattle of drums, and the triumphant shouts of the soldiers, announced the successive arrival of the French regiments at the scene of their triumph.[1]

[1] Dum. xvi. 275, 299. Jom.ii. 308, 312. Bign. vi. *19*, 21. Saalf. iii. 309, 310. Hard. ix. 313.

70. March and escape of he Duke of Saxe-Weimar.

Meanwhile another Prussian column—consisting of six regiments of cavalry, four of infantry, and eight pieces of artillery, which, avoiding Prentzlow, was moving upon Passewalck—was overtaken by Milhaud's light cavalry, and surrendered. Of the army, lately so splendid and numerous, there remained only in the field the corps of the Duke of Weimar and General Blucher. The former of these, which formed the advanced-guard of the host that advanced to the Saale, and had been pushed on through the Thuringian Forest to Verra, with the view of threatening the rear of the French army, had become entirely detached by subsequent events from the principal body, and thus escaped the catastrophes of both defeats. Almost forgotten in the rapid succession of succeeding triumphs, the duke was left to his own discretion; and he no sooner received accounts of the ruin of the main army, than he took steps for making the best of his way back to the Elbe. He had much difficulty in steering his course through the numerous corps of enemies which traversed

CHAP. XLIII.

1806.

the intervening country in every direction ; but by great exertions he contrived to escape, and, rallying to his standard a considerable detachment of RucheFs corps, which had been separated from the remainder, reached the Elbe in safety at Stendal, by Seesen, Lutter, and Schladen, with fourteen thousand men. He was there superseded in the command by the King of Prussia, and his corps passed into the hands of General Winning, who gave it a day's rest at Kyritz. As the approach of the French corps rendered those quarters dangerous, ho broke up and retired towards the Oder, and by good fortune, and no small share of skill, he succeeded in reaching Kratzemberg, near the lake of Muritz, in the first week of October, where he joined Blucher with the cavalry which had escaped from Aucrstadt. Their united forces now amounted to twenty-four thousand men.[1]

71. Disgraceful surrender of Stettin and Ciistrin

Meanwhile the fortresses on the Oder fell in the most disgraceful manner. The day after the capitulation of Hohenlohe, a brigade which had escaped from the wreck of his corps, presented itself at the gates of Stettin ; the governor sternly refused them admittance, upon the pretence that his provisions were only adequate to the support of his own garrison. Next day, however, he capitulated, on the first summons, to the advanced-guard of Marshal Lannes; and the French, without firing a shot, became masters of a fortress of the first order, armed with a hundred and fifty pieces of cannon, and garrisoned by six thousand men. The brigade of Prussians, shut out from its walls, was soon after surrounded at Anclam and made prisoners. Encouraged by these repeated successes, the French soldiers deemed nothing beyond the reach of their arms ; and the advanced-guard of Davoust's corps, which had traversed the district between the Elbe and the Oder without meeting with any enemies, presented itself before Custrin, and threatened the garrison with a severe bombardment if they did not

Oct. 29.

instantly capitulate. This menacing outpost consisted merely of a regiment of foot, and had only two pieces of artillery at its command. On the other hand, the governor of the town had ninety pieces of cannon mounted on the ramparts, and four hundred in the arsenal; four thousand brave men for a garrison, and every requisite for a prolonged defence. Nevertheless, such was the terror produced by Napoleon's arms, and such the skill with which the French officer, General Gauthier, concealed the real amount and description of his force, that the Prussians capitulated almost on the first summons; and one of the strongest places in the kingdom, amply garrisoned, situated in an island of the Oder, and invested only on one side, had the disgrace of surrendering to a regiment of foot with only two pieces of cannon. The besiegers could not approach it to take possession till the garrison furnished them with boats.[1]

72. Reflections on these events. Depots at Erlurth and Wittenberg formed by Napoleon.

These disgraceful capitulations, at which the brave troops involved in them were so much exasperated that it was with difficulty they could be induced to yield obedience to their officers in carrying them into execution, demonstrated that the Prussian generals were so overwhelmed by the magnitude of their misfortunes, that they deemed the monarchy irrevocably ruined, and that *sauve qui peut* had become the only remaining principle of their conduct. Astonished at his good fortune in effecting the reduction of such a fortress without firing a shot, Marshal Davoust inspected the fortifications on the day following, which he found in the best condition; and, deeming his base on the Oder now sufficiently secured, pushed on his light troops to Posen, in Prussian Poland; while six thousand Bavarians formed the investment of Glogau, the only remaining stronghold on its banks which was still in the hands of the enemy; and Augereau established himself at Frankfort. Meanwhile Napoleon, after resting a day at Wittenberg, which he ordered to be put in a respectable posture of defence, in order to give him the com-

CHAP. XLIII. 1806.

mand of the bridge over the Elbe, and where he established one of his chief depots, was busied with preparations for securing his rear during the perilous advance, so far from the base of the operations, in which he was about to engage. The grand park of artillery was established at Wittenberg, where immense depots of ammunition and provisions were ordered to be formed; while, at Erfurth, a grand depot was by his provident care formed for the collecting of horses from all parts of Germany. All the cavalry regiments were directed through that town, while those on foot were mounted, and those indifferently provided with horses soon found themselves in possession of hardy and powerful steeds.[1]

Nov. 3. [1] Dum. xvii. 13,20. Bign, vi. 23. Jom. ii. 314. Thiers, vii. 168, 169.

73. Blucher's corps is pursued to Lubeck.

The only corps of the Prussian army which had hitherto escaped destruction was that formed by the union of Blucher's cavalry with the Duke of Saxe-Weimar's infantry, and commanded by the former of these generals. Before this junction was effected, Blucher's cavalry had been hard pressed by a brigade of horse under the French general, Klein, and escaped in consequence of his affirming that an armistice had been concluded on the propositions for an accommodation sent to Napoleon after the battle by the King of Prussia. Whether the Prussian general really believed the report to that effect, which unquestionably prevailed through the whole army at that time,[2] or whether he made use of this very questionable military stratagem as a device to extricate his troops from present danger, does not appear; and therefore neither praise nor blame can in this uncertainty be awarded on the subject. But this much is clear, that if he knowingly affirmed a falsehood, as the French assert, no necessity, how pressing soever, no advantage, how great soever, can suffice as any apology.* Though the

[2] Hard. ix. 320.

*** But when the French historians inveigh with such severity against Blucher's conduct on this occasion, and affirm, "In the campaigns of the Revolution, the Austrian generals have frequently had recourse to that strange *ruse de guerre—the French never*"[3] they forget or wilfully conceal immediately preceding events, on which they bestow no sort of censure. What is to be**

[3] See Bign. vi 7, and Norv. ii. 466.

resistance of this corps, however, was more honourable, its ultimate fate was not less calamitous. No sooner was Napoleon informed of the junction of these two corps in the north of Prussia, than he ordered their pursuit by forces so considerable, that escape became impossible. Bernadotte was instructed to follow closely on their footsteps ; while Murat was despatched by a circuit to cut them off, on the right, from Stralsund and Rostock, under the cannon of which they might have found shelter; and Soult threw himself on the left, to bar the communication with the lower Elbe. Blucher arrived at Boitzenburg the day after the ill-fated Hohenlohe had left that town ; and having there learned the catastrophe which had befallen that brilliant portion of the army, he renounced all hope of retiring before the enemy, and retraced his steps in order to unite with General Winning and the Duke of Saxe-Weimar's corps, which he effected at Kratzemberg on the day following, Finding himself now at the head of eighteen thousand infantry, six thousand cavalry, and sixty pieces of cannon, he resolved to move to the right, recross the Elbe, raise the siege of Magdeburg, and, supported by that fortress and Hameln, maintain himself as long as possible in the rear of the Emperor's army.[1]

Oct. 28.

Oct. 29.

[1] Dum. xvi. 308, 318. Saalf. iii. 311, 312. Jom.ii.217.

The project was boldly conceived and intrepidly followed out; but the three corps now directed against him, numbering nearly sixty thousand combatants, rendered

said to General Lecourbe, who, in November 1799, escaped destruction at the hands of the Austrian general Starray, solely by falsely affirming that a negotiation for peace was commenced ? to Lannes and Murat, in the campaign of Austerlitz, who won the bridge of Vienna by the fallacious declaration that an armistice had been concluded, which they well knew was not the case * or to the latter of these marshals, who a few days afterwards tried a similar piece of deceit with Kutusoff, and was only foiled by the superior finesse of that astute commander ? All the French historians, Bignon, Norvins, and Thiers, mention these unworthy stratagems not only without censure, but with the highest admiration.[2] It would be well, if, in making such random assertions, they would calculate less confidently on the want of information or recollection in their readers; and if, in the survey of the conduct of their own officers, they would display a little of that warm anxiety for the great principles of public morality, to which they so loudly appeal when any violation of it occurs to their disadvantage on the part of their enemies.

74. Where he is shut up.

its execution impossible. A sharp conflict took place with his rearguard at Nossentin, in which five hundred prisoners fell into the hands of the French; and the next day the junction of Bernadotte with Soult rendered it necessary for the gallant Prussian to be more circumspect. An opportunity, however, soon occurred of taking his revenge. Next day the French hussars were charged and put to the rout by the Prussian light dragoons, at the entrance of a defile. Colonel Gerard and three hundred horsemen were made prisoners: but the cavalry having fallen back on the support of their infantry, headed by Bernadotte in person, the Prussians were in their turn repulsed with severe loss. Finding the enemy's forces so considerable, that all chance of making good his way to the lower Elbe was out of the question, Blucher resolved to fall back by Gadebusch on Liibeck, where he hoped to find resources to recruit his wearied troops, and the decayed bastions of which he flattered himself he would soon be able to put in a respectable state of defence. Before arriving at that city, he was summoned by Bernadotte to surrender, and informed that he was beset by forces triple his own. "I will never capitulate," was the brief and characteristic reply of the Prussian general; and, continuing his march, he entered Liibeck on the evening of the 5th, closely followed by his indefatigable pursuers. In the course of the pursuit, a detachment of twelve hundred Swedes fell into the hands of Bernadotte, who treated them with unusual courtesy and kindness. From the gratitude of the Swedes for this treatment, arose the interchange of good deeds which terminated in his elevation to the throne of Gustavus Adolphus. At that period, events, in appearance the most trivial, were big with the fate of nations.[1]

[1] Dum. xvi. 308, 321. Bign. vi. 23, 24. Jom. ii. 317. Saalf. iii. 311,312.

Unfortunately for Lubeck, it was still surrounded by a ruined wall and deep ditches filled with water; and this gave Blucher an excuse for representing it as a

military post, and disregarding all the remonstrances of the magistrates, who loudly protested against this violation of their neutrality. Hastily planting the few heavy cannon which he still retained to defend the principal gates, Blucher caused the greater part of his forces to defile through the town, and take post on the low marshy ground on the opposite side, on the confines of the Danish territory. At daybreak on the following morning the French columns were at the gates, and every preparation was made for an instant assault. In spite of a heavy fire of grape and musketry from the old walls, the French approached with their accustomed gallantry to the assault. The corps of Bernadotte advanced against the Burg-Thor, the gate which looked to the north; that of Soult approached the Huxtor-Thor and Muhien-Thor, the gates of Hanover. After sustaining a terrible discharge from the bastions, which were armed with the Prussian field-pieces, the French advanced-guard, under Generals Merle and Fr&re, succeeded in breaking through with their hatchets the exterior palli-sades of the Burg-Thor, and, rapidly following the Prus-sian regiments which held that outwork, entered the gate pell-mell with the fugitives, and made themselves masters of the adjoining bastions. At the same moment Soult's divisions threatened the gates opposed to their attack; but so murderous was the fire which the Prus-sians kept up from the walls flanking their approaches, that the assailants were unable to make any progress, till Bernadotte's divisions, having penetrated into the town, threatened to take the defenders in rear.[1]

75. And is there defeated after a des-perate con-flict.

[1] Dum. xvi. 322, 328. Jom. ii.317, 318. Hard. ix. 322. Bign. vi. 24.

Even then, nevertheless, the brave Prussians at this gate, to the number of two thousand, faced both ways, and, besieged in their turn, sustained the double attack from within and without. Posted on the roofs of houses, and on the summits of the ramparts, they kept up an incessant fire till their cartridges were exhausted, when they were all either killed or made prisoners. So rapid,

76. Desperate defence of the town.

CHAP. XLIII.

1806.

however, was the advance of the French through the Burg-Thor, that Blucher, who had retired to his lodgings, after having made his dispositions, to dictate orders, had barely time to mount his horse with his son and a single aide-de-camp, and ride off: all the rest of his staff were made prisoners. Having joined the remaining troops in the town, that brave general, with his gallant followers, prolonged the defence. He himself repeatedly charged along the Konig-Strasse at the head of a body of cavalry, but was unable to clear it of the French soldiers, who had now broken into the houses near the gate, and from thence kept up a fire of such severity upon the street as rendered it impossible for the dragoons to advance to its further extremity. Presently the besiegers brought up their field-pieces, the guns on the ramparts were turned upon the town, and repeated discharges of grape from both sides swept the pavement, and occasioned a terrific slaughter. With invincible resolution, however, the Prussians maintained the combat. From street to street, from church to church, from house to house, the conflict continued. Blood flowed on all sides. The incessant rattle of the musketry was almost drowned in some quarters by the cries of the wounded and the shrieks of the inhabitants, who in that day of woe underwent all the horrors consequent on a town being carried by assault. By degrees, however, the superior numbers of the French, who were soon reinforced by part of Murat's corps, prevailed over the heroic resolution of the Prussians. With difficulty Blucher succeeded, towards evening, in collecting five thousand men, with whom he forced his way through by the gate of Holstein, and rejoined his cavalry, which lay at Schwertau on the opposite side of the town, near the Danish frontier; while the remainder of his corps in the town, consisting of eight thousand men, were slain before nightfall in that fearful fight, or fell into the hands of the enemy.[1]*

[1] Dum. xvi. 332, 333. Jom. ii. 317, 318. Bign. vi. 24, 25. Saalf. iii. 313. Hard. ix. 322.

* The French writers made it a just reproach to the English army that its

CHAP. XLIII.

1806.

The situation of Blucher, with his cavalry and this slender body of infantry, was now altogether desperate. He was driven up to Ratkau, in the extremity of Germany, on the very edge of the Danish territory, where a powerful body of troops was collected to prevent his entrance. In the night he received intelligence that Travemunde, a fortified town on the sea-coast, to which he proposed to have retired, had been taken by Murat, along with a battalion which he had sent forward to garrison that important post, where he hoped to have embarked; and to complete his misfortunes, information arrived in the morning that the salt-marshes between Schwertau and that town were not passable by the army. At the same time a flag of truce arrived from Murat, while his numerous squadrons had already driven the Prussian infantry out of Schwertau, and were closing in, in all directions, on his last position. Overcome by stern necessity, the hardy veteran, with tears in his eyes, agreed to a capitulation, in virtue of which all his troops laid down their arms. On this occasion were taken ten battalions and fifty-three squadrons, amounting to four thousand foot-soldiers, and three thousand seven hundred cavalry, with forty pieces of cannon, the remainder of his fine train of artillery having been left on the ramparts of Lubeck.[1]

77. He retires to Ratkau, and is there made prisoner.

[1] Dum. xvi. 333, 339. Jom. ii. 317, 319. Hard, ix. 321, 322. Saalf. iii. 313.

To complete the disasters of the Prussian monarchy, nothing was wanting but the surrender of Magdeburg; and that important bulwark was not long of falling into

78. Fall of Magdeburg.

soldiers committed such disgraceful excesses at San Sebastian, Ciudad Rodrigo, and Badajos, when these fortresses fell by assault. It is the duty of the historian to condemn equally such outrages, by whomsoever committed; and certainly in this work no veil shall be thrown over those atrocities when they come to be recounted. But it would be well if they would reserve a little of their humane indignation for the sufferers under their own soldiery on similar catastrophes. On this occasion, though they pass it lightly over, the cruelties and devastation committed by Bernadotte's and Soult's corps for two days after the town was taken, notwithstanding all the efforts of these marshals, were equal to the very worst deeds that ever stained the British arms.—See the frightful details, drawn with a graphic hand, in *Lettre de Villers a la Comtesse Fanny Beauharnais,* Amst. 1808.

CHAP. XLIII.

1806.

the hands of Marshal Ney. Although its garrison was in great part composed of fugitives of all regiments, who had made their escape into that asylum from the disastrous fields of Jena and Auerstadt, yet such was the strength of its works, and the ample store of provisions and magazines of all sorts which existed within its walls, that a prolonged defence might confidently have been anticipated. Nevertheless, if its fall was not quite so disgraceful as that of Stettin and Custrin, it was such as to affix a lasting stigma on the Prussian arms. After fifteen days of a blockade, Marshal Ney commenced operations in form ; but before having recourse to the tedious method of regular approaches, he resolved to try the effect of a bombardment. Furnaces for this purpose were heated, and arrangements made to throw four-and-twenty pound shot, red-hot, into every part of the town, while a copious array of bombs was prepared to bring terror and conflagration upon the inhabitants. It was not necessary, however, to proceed to these extremities. The citizens of Magdeburg preserved a vivid traditional recollection of the horrors which their forefathers underwent after the memorable storm by Count Tilly in 1631, when the whole town was reduced to ashes. No sooner, therefore, did the first flaming projectiles begin to descend upon their houses than they besieged General Kleist, the governor, with entreaties for a surrender. That officer, deeming the Prussian monarchy destroyed, and seeing no use in singly prolonging a contest now become hopeless,

Nov. 8.

agreed to a capitulation on the same terms as Stettin, in virtue of which this important frontier town, the bulwark of the monarchy, with its redoubtable ramparts still untouched, and not even an outwork lost, containing twelve thousand troops in arms, and four thousand in hospital, six hundred pieces of cannon, eight hundred thousand pounds of powder, a pontoon train complete, and immense magazines of all sorts, fell into the hands of the enemy, who hardly mustered a greater force without its walls.[1]

[1] Dum. xvi. 343, 347. Jom.ii.319. Bign.vi.26. Saalf. iii. 313.

After these stunning calamities, it was not to be expected that the fortresses on the Weser, which were now left far in the rear of the storm of war, should long continue to hold out. A host of fugitives from Jena and Auerstadt had taken refuge in these strongholds, particularly Hameln and Nienburg; into the former of which General Lecocq, who had been separated in the confusion of the disastrous night which followed these battles, had thrown himself with four thousand men who still preserved a military array. There he speedily found himself blockaded by the forces of the King of Holland, who had advanced by Wurtzburg and Paderborn to the banks of the Weser. The disastrous state of the monarchy gave him too plausible a ground for assailing the fidelity of the besieged. "You are insulated," said he, "without hope of succour. Abandoned, and more than a hundred leagues in the rear of the victorious invaders, what can your efforts do to avert the fall of the Prussian monarchy %" These arguments, supported by the official intelligence of the fall of Magdeburg and the surrender of almost all the fragments of the army, produced the desired impression; and it was speedily agreed that the fortress should be evacuated, the private soldiers made prisoners, and the officers return on their parole to Prussia. A mutiny broke out among the soldiers upon learning the terms of this disgraceful capitulation; but it was speedily suppressed by Savary's dragoons, the men disarmed, and the fortress, in admirable condition, delivered over, with five thousand prisoners, to the French. Nienburg speedily followed the same example, and, with its untouched fortifications and garrison of three thousand men, capitulated to the victors; and with it all the elements of resistance expired between the Weser and the .Oder.[1]

Fall of Hameln and Nienburg on the Weser.

diplomatic objects, was preparing the means of further triumphs, and a more complete consolidation of the power which fortune and genius had thus combined to place at his disposal. His first care was to detach Saxony from the coalition ; and after the defeat of its army in those disastrous days, and occupation of its territory by the conquerors, this was easily accomplished. The Saxons have a hereditary jealousy of the Prussians, by whom they have a presentiment they are one day to be swallowed up. Necessity, not inclination, had brought them into the field with their ambitious neighbours; and they gladly availed themselves of the first opportunity to range their forces on the side to which their secret inclinations had long pointed, and which seemed to be recommended alike by prudence and necessity. Early in the campaign, Napoleon had addressed to them a proclamation, in which he called on them to assert their national independence, and throw off that withering alliance with Prussia from which nothing but ultimate ruin was to be anticipated.* This address had already produced a great impression on the Saxon troops, when the victory of Jena seemed to dissolve at once the bonds which held the two nations together. Improving on these dispositions, Napoleon assembled the Saxon officers, three hundred in number, who had been made prisoners at Weimar, strongly represented to them the impolicy of any longer uniting their arms to those of their natural enemies the Prussians ; and offered, upon their subscribing the oath tendered to them of fidelity to its fortunes, to admit them into the Confederation of the Rhine. Gladly the

Oct. 17.

*** "Saxons! the Prussians have invaded your territory. I have come to deliver you. They have violently dissolved the bond which united your troops, and incorporated them with their own ranks. You must, forsooth, shed your blood, for interests not merely foreign but adverse to those of your country I Saxons ! your fate is now in your own hands. Will you float in uncertainty between those who impose and those who seek to liberate you from the *yok* ? My success will secure the independence of your country and your prince. The triumph of the Prussians would rivet on you eternal chains. To-morrow they will demand Lusatia; the day after, the right bank of the Elbe. But what do I say] Have they not already done so? Have they not long endeavoured to force**

officers, for themselves and the troops under their command, subscribed the conditions ; and immediately they were all, with the private soldiers, six thousand in number, sent back to Dresden. The Elector shortly after recalled the remainder of his forces from the Prussian standard; he accepted first neutrality, then an alliance with the conqueror ; and before the war in Poland was concluded, his troops were to be seen actively engaged under the French eagles. Such was the origin of that intimate union which, down to the close of the war, subsisted between Napoleon and the Saxon government, and which, though in the end fraught with numberless calamities to that electorate, must ever command respect, from the fidelity with which its engagements were adhered to under adverse fortune.[1]

CHAP. XLIII.

1806.

[1] Dum. xvi. 204, 207. Bign. vi. 3, 4.

It was shortly after having detached Saxony from the Prussian, and united it to his own alliance, that Napoleon received an answer from the King of Prussia to the elusory proposals of accommodation made by him before the battle of Jena, and which that unhappy monarch eagerly caught at after that disaster, as the only light that seemed to break upon his sinking fortunes. The times, however, were not now the same: there was no longer any need of dissembling; the Prussian army was routed, and he was not the man to let slip the opportunity of completing its destruction. He therefore coldly replied, that it was premature to speak of peace when the campaign could hardly be said to have commenced; and that, having resolved to try the fate of arms, the king must abide by its issue. At the same time, he made amends to

your sovereign to recognise a feudal supremacy which would soon sweep you from the rank of independent nations' Your independence, your constitution, your liberty, would exist only in recollection; and the spirits of your ancestors, of the brave Saxons, would feel indignant at seeing you reduced, without resist* ance, by your rivals, to a slavery long prepared by their councils, and your country reduced to the rank of a Prussian province." None could descant more fluently than Napoleon on the withering effect to inconsiderable states of an alliance with a greater power; for none put it in force so invariably towards his own tributary states.—DUMAS, xvi. 205.

1806.

the infantry of Lannes' corps, which, in consequence of their not having been mentioned by Murat in his report of the successes at Prentzlow, in which they had borne so glorious a part, had not been mentioned in the bulletin regarding that event, by replying to a letter of remonstrance from Lannes on the subject. "You and your soldiers are children. Do you suppose I do not know all you have done to second the cavalry? There is glory enough for all. Another day it will be your turn to fill the bulletins of the Grand Army." When Lannes read these words to his soldiers, they were so transported with joy that they raised the cry "Vive l'Empereur d'Occident!" Nothing could have more completely answered the secret wishes of the Emperor than both the title with which he was saluted by these brave men, and the circumstances so closely resembling those of the Roman legions under which it arose.[1]

82. Napoleon visits Potsdam and the tomb of Frederick. Oct. 25.

Following the march of his victorious armies, Napoleon continued his progress, by Weimar, Naumburg, Wittenberg, and Potsdam, towards Berlin. On the march he passed the field of Rosbach, the well-known theatre of the Prussian victory over the French, and ordered the column erected in commemoration of that triumph, which had been thrown down by the soldiers of his army, to be preserved from further injury, and transported as a trophy to Paris. At Potsdam he visited, with eager haste, the palace of Sans-Souci and the tomb of the Great Frederick. Everything in the apartments of the illustrious monarch had been preserved as when he breathed-his last: the book which he read shortly before his death remained on the table; the furniture was untouched; the writing materials still there: the simplicity of all surprised the conqueror, who was accustomed to the magnificence of St Cloud. By a singular coincidence, but one of the many with which the history of Napoleon is full, he visited the sepulchre on the anniversary of the day on which Alexander, just a year before, on the same spot, had sworn

fidelity to Frederick-William. Such had been the confusion of the Prussian flight, that on the tomb there still remained the cordon of the black eagle, the scarf and sword of the hero, which he had worn in the Seven Years' War, as well as the standards of his guard. With deep emotion Napoleon approached the awful monument; but even at that solemn moment unworthy feelings gained the ascendency. He himself seized the venerable relics, and sent them with indecent haste off to Paris. "I will make a present of them," said he, "to the Hotel des Invalides: the old veterans of the Hanoverian war will receive with religious respect all that once belonged to one of the greatest captains of whom history has made mention/' Such an act could not injure the dead; his glory was enshrined in imperishable lustre in the page of history: but it lowered the living, and sullied the triumph of Jena by an unbecoming act of rapacity. Little did Napoleon at that moment anticipate the advent of times when the Prussians, now so humbled, were to have the mastery of his proudest trophies, and naught was to remain but veneration for the remains of the dead to protect his own ashes in a foreign and far distant land from the rude hand of the spoiler.[1] *

[1] Bign. vI. 11,12. Jom. ii. 302, 303. Dum. xvi. 249, 250.

This interesting episode did not interrupt for a moment the military movements of the corps immediately around the person of the Emperor. The same weakness and infatuation appeared there, as elsewhere, to have seized the

* How much more honourable as well as magnanimous was the conduct of the Russian officer who, instead of destroying the monument erected at Coblentz to commemorate the campaign of 1812, simply engraved below the inscription the words, "Seen and approved by the Russian governor of Cologne, January 1,1814." It is for the interest of all nations to preserve the trophies of their enemy's victory and the remains of the dead from insult; for it is impossible to foresee how soon they may themselves suffer from an opposite system. Nor is such forbearance without its reward. It obliterates the disgrace of defeat in the magnanimity of subsequent victory. The Pillar of Austerlitz, in the Place Venddme, is now a monument not less to German generosity than to French valour. It would be well for the memory of Napoleon if more instances of moderation in victory, and regard for the vanquished, were mingled with his military triumphs.

CHAP. XLIII.

1806.

83. Berlin, Spandau, and Charlottenburg occupied by the French. Oct. 25.

Prussian authorities. On the same day Marshal Dayoust, agreeably to the promise of Napoleon, headed the splendid vanguard which, with all the pomp of war, entered Berlin. No words can describe the mingled feelings of rage, astonishment, and despair, which animated the inhabitants at this heart-rending spectacle, occurring in less than a fortnight after hostilities had commenced. With speechless grief they gazed on the proud array which defiled through their gates, and drank deep, in the agony of that dreadful moment, of the punishment for the political sins of their government during the last ten years. On the same day the strong fortress of Spandau, with its strong citadel and a garrison of twelve hundred men, surrendered, without firing a shot, to Marshal Lannes;* and Napoleon, after inspecting that stronghold, on the day following made his triumphal entry into the capital. He had not the same delicacy towards the feelings of its inhabitants which he had previously evinced towards those of Vienna: the palace of Charlottenburg would have answered his purpose of a residence as well as that of Schoenbrun had done; but he seemed as anxious to lacerate the feelings of the Prussians as he had been to spare those of the Austrians, and determined to punish ten years of subservience and ten days of warfare more than he had done the inveterate hostility of twelve campaigns. Surrounded, therefore, by all the splendour of the empire, in the midst of a brilliant staff, preceded by his splendid Guards on horseback in their richest attire, and environed by

Oct. 26.

Oct. 27.

*** Napoleon spoke thus of this fortress:—"The citadel of Spandau, situated on the Spree, fully victualled for two months, is an inestimable acquisition. In our hands it could sustain two months of open trenches. But such was the general confusion that the batteries were not even armed."—19th *Bulletin*. It is evident that treachery, or selfishness equivalent to treachery, occasioned the sudden fall of so many of the Prussian fortresses at this period; and Bignon tells us that he became convinced of that when, on being sent by the Emperor to superintend the capitulation of Spandau, he found the governor, Benckendorf, occupied with no other consideration but disputes with the French commander as to some wretched culinary articles which he alleged the capitulation authorised him to remove! —BIGNON, vi. 13.**

Berthier, Duroc, Davoust, and Augereau, Napoleon, in his usual simple costume, made his triumphal entry under the arch erected to the honour of the Great Frederick. The "observed of all observers," the object of eager gaze to the speechless assembled multitude, the mighty conqueror traversed the long street which leads from the gate Charlottenburg, and advancing through an innumerable crowd, in whom passion, admiration, and wonder were mingled in some cases with joy, alighted at the gates of the old palace.[1]

[1] Thiers, vii. 175. Dum. xvi. 250, 252. Bign. vi. 13. Hard. ix. 313.

84. Affair of Prince Hatzfeld.

Prince Hatzfeld, one of the leaders of the war party, in the total absence of any authority emanating from the King, had been besought by the principal inhabitants to take an interim direction of affairs, and assume the command of the burgher guard. In doing so he had issued a proclamation, in which he said, "Nothing remains for us now but to assume a pacific attitude: our cares should not extend beyond what is within our own walls: that constitutes our sole interest, and as it is of the highest importance, we should bestow our exclusive attention upon it." This prince, as the chief of the pacific authorities, presented himself at the head of the magistrates before Napoleon at Potsdam, and was well received. He again waited on him when he arrived at the palace; but the conqueror received him with a severe air, and averting his head said, "Do not present yourself before me; I have no need of your services; retire to your estates." Shortly after the astonished nobleman withdrew, he was arrested by orders of Napoleon, who had commanded him to be seized *and executed* before six o'clock that evening. In fact he had transmitted to Prince Hohenlohe a letter, containing military details in regard to what he had seen at Potsdam when waiting on Napoleon, which had been intercepted by Davoust and brought to the Emperor. The imperious commands of the conqueror left his subordinate authorities no alternative but submission; although Berthier, shocked at the deed of violence

CHAP. XLIII.

1806.

which was in contemplation, did his utmost to avert the storm, and even refused to write out the warrant, which Rapp was called in to do. He could not, however, prevent Napoleon from ordering another murder as atrocious as that of the Due d'Enghien, and the death-warrant was signed, and Rapp was directed to send it to Davoust for immediate execution.[1]

[1] Rapp, 109, 110. Hard. ix. 315.

85. His pardon by Napoleon.

The former brave and generous man, at his own imminent hazard, took upon himself to delay its transmission; and in the mean time the Princess of Hatzfeld, having arrived in the antechamber of the palace, was informed of the danger of her husband, and sank in a swoon on the floor. Rapp advised her, after she recovered, to endeavour to throw herself in Napoleon's way at the hotel of Prince Ferdinand, where he was going in a short time; she did so, and fell at his feet in the extremity of despair. Her grief and beauty touched Napoleon, who, though subject to violent fits of passion, was not insensible to generous emotions. Rapp warmly seconded the return to feelings of humanity, and orders were despatched to Davoust to suspend the execution till further directions. Meanwhile the princess was enjoined to repair to the palace, whither Napoleon soon after returned. He ordered her to be brought into the room which he occupied. "Your husband," said he with a benign air, "has brought himself into a distressing situation; according to our laws, he has incurred the penalty of death. General Rapp, give me the letter: take it; read, madam. Is it your husband's writing?" She did so trembling. "I cannot deny his subscription," she replied, almost fainting with emotion. Napoleon then took it from her, tore it, and threw it into the fire. "I have no longer any proof; your husband is pardoned." He then desired Rapp to bring him back immediately from Davoust's headquarters; that officer ventured to admit that he had not even sent him there:[2] the Emperor manifested no displeasure, but on the contrary seemed gratified at the

[2] Rapp, 109, 110. Bign. vi. 14. Hard. ix. 315.

delay which had taken place in the execution of the order. *

Shortly after his arrival at Berlin, Napoleon paid a visit of condolence to Prince Ferdinand, brother of the great King of Prussia, and father of Prince Louis who fell at Saalfeld, and manifested the most delicate attentions to the widow of Prince Henry, as well as the Princess Electoral of Hesse-Cassel. At the same time he addressed an animated proclamation to his troops, in which he recounted with just pride their astonishing exploits, and promised to lead them against the Russians, who, he foretold, would find another Austerlitz in the

86. Napoleon's proclamation and addresses to his soldiers. Oct. 30.

* It is always pleasing to record a generous action, and doubly so when it occurs in an enemy; but justice compels the admission that, by delaying the transmission of this order, Rapp conferred a greater favour on Napoleon than on the intended victim of his passion ; for the one he saved only from death, the other from the guilt of murder. Rapp informs us that the Prince of Hatzfeld had come to Potsdam on the 25th, and it was for the account transmitted to Hohenlohe on that day of what he there saw that he was about to be condemned. The 25th was the day on which Davoust entered Berlin. The information objected to was collected, and the letter written, therefore, before the prince had come under the military government of the French Emperor. There is no law against a private citizen, or a civic authority of one nation, transmitting to its military officers details which have come to his knowledge regarding an enemy, when not yet subject to their authority—Napoleon himself called on the French prefects and magistrates to do so a hundred times. If the circumstance of Hatzfeld having collected and transmitted this information, while on a civil mission to the Emperor at Potsdam, exposed him to the penalty of death, what is to be said to Savary the year before, who, by orders of Napoleon, when conferring with the Emperor Alexander on the proposed terms of accommodation, obtained and brought to him military details of inestimable importance in regard to the temper and strength of the Allied army on the eve of the battle of Austerlitz;[1] or to Napoleon himself, who in 1797 transmitted orders to his brother Joseph, when holding the sacred office of ambassador at Rome, to do all in his power to revolutionise the Eternal City, and overturn the papal authority.[2] What the Prince of Hatzfeld did was no more than all ambassadors do, or than Napoleon invariably required from all his diplomatic agents. The character of the intended transaction may be judged of by what Berthier, with generous warmth, said on the occasion —" Your majesty will surely not shoot a man connected with the first families in Berlin for so trifling a thing; the supposition is impossible—you will not do so;" and from his positive refusal to write out the order, as well as from Rapp's delaying its transmission. Had the prince been shot, it would have been, like the death of the Due d'Enghien and the bookseller Palm, an act of deliberate murder. History, therefore, cannot award to Napoleon the praise of having pardoned, on this occasion, a criminal who had forfeited his life either by the laws of war or the principles of justice; but it must not refuse **the** meed due to a conqueror who returns to generous feelings, alter **having**

heart of Prussia.* Next day he reviewed the corps of Marshal Davoust on the road to Frankfort, and, assembling the officers in a circle, assured them of the admiration which he felt for their achievements, and the grief which he had experienced at the numerous losses which had thinned their ranks. " Sire," answered the marshal, " the soldiers of the third corps will ever be to you what the tenth legion was to Caesar." Already, in the emulation of the different corps, the mutual knowledge and attachment of the officers and men, were to be found the happy effects of that permanent organisation into separate armies and divisions, which, first of the moderns, Napoleon had adopted from the ancient conquerors of the world.[1]

[1] Dum. xvi. 259, 261.

87. Unpardonable severity of Napoleon to the Duke of Brunswick.

While Napoleon and his followers were thus indulging in an excusable pride at the retrospect of their wonderful achievements, the Prussian officers who had traversed the country, or reached the capital in virtue of the several capitulations which had been granted, were exposed to the most grievous humiliation. The officers of the Guard, especially, who had escaped from the wreck of Hohenlohe's corps, were ostentatiously marched by the Emperor through Berlin to Spandau. Words cannot describe the mortification of those high-spirited young men, at the unparalleled calamities in which their inconsiderate

been led, in a moment of irritation, to command an atrocious deed; and joyfully seizes on this incident as illustrative of that ascendency which, in his cooler moments, humane feelings obtained over ruthless passion in the mind of this extraordinary man.—RAPP, 108.

* " Soldiers ! you are worthy defenders of my crown, and of the great people. As long as you are animated with your present spirit nothing can resist you. Behold the result of your labours ! One of the first powers in Europe, which recently had the audacity to propose to us a shameful capitulation, is annihilated. The forests and defiles of Franconia, the Saale, the Elbe, which our fathers would not have traversed in seven years, we have surmounted in seven days, besides, during the same period, fighting four combats and a great battle. We have arrived at Potsdam and Berlin sooner than the renown of our victories ! We have made sixty thousand prisoners, taken sixty-five standards, including those of the royal guards, six hundred pieces of cannon, three fortresses, twenty generals, while half the army regret their not having had an opportunity of firing a shot. All the Prussian provinces, from the Elbe to the Oder, are in our hands. Soldiers ! the Russians boast that they are advancing

CHAP. XLIII.

1806.

passions had involved their country; wherever they went crowds beset their steps, some lamenting their sufferings, others reproaching them as the authors of all the public misfortunes. Napoleon made a severe and ungenerous use of his victory. The old Duke of Brunswick, respectable from his age, his achievements under the Great Frederick, and the honourable wounds he had recently received on the field of battle, and who had written a letter to Napoleon, after the battle of Jena, recommending his subjects to his generosity, was in an especial manner the object of invective. His states were overrun, and the official bulletins disgraced by a puerile tirade against a general who had done nothing but discharge his duty to his sovereign. For this he was punished by the total confiscation of his dominions. So virulent was the language employed, and such the apprehensions in consequence inspired, that the wounded general was compelled, with great personal suffering, to take refuge in Altona, where he soon after died.[1]*

[1] Bign. vi. 15, 33, 34. Camp. de Saxe, ii. 155, 295.

88. And to the Queen of Prussia, and the Elector of Hesse-Cassel.

The Queen, whose spirit in prosperous and constancy in adverse fortune had justly endeared her to her subjects, and rendered her the admiration of all Europe, was pursued in successive bulletins with unmanly sarcasms; and a heroic princess, whose only fault, if fault it was, had been an excess of patriotic ardour, was compared te Helen, whose faithless vices had involved her country *in*

to meet us: let us march to encounter them; we will spare them the half oi their journey; they will find an Austerlitz in the heart of Prussia. A nation which has so speedily forgot the generosity which we manifested towards it after the battle when its Emperor, its court, the wreck of its army, owed its safety entirely to the capitulation which we granted to it, is a nation that will never be able to contend with us."—DUMAS, xvi. 259, 260.

*** " If the Duke of Brunswick," said the bulletin, " has richly deserved the animadversions of the French people, he has also incurred that of the Prussian army and people: of the latter, who reproach him as one of the authors of the war; of the former, who complain of his manoeuvres and military conduct The false calculations of the young may be pardoned, but the conduct of that old prince, aged seventy-two, is an excess of insanity, and his catastrophe car excite no regret. What can there be respectable in gray hairs, when to the faults of age are united the inconsideration and folly of youth) For these extravagancies he has justly incurred the forfeiture of all his dominions."–23 and 27th *Bulletins, Camp. de Saxe,* ii 216, 293.**

CHAP. XLIII. 1806.

the calamities consequent on the siege of Troy.* The whole dominions of the Elector of Hesse-Cassel were next seized; and that prince, who had not even combated at Jena, but merely permitted, when he could not prevent, the entry of the Prussians into his dominions, was dethroned and deprived of all his possessions. Animosity to England was the secret motive for all those acts of robbery. So strongly was Napoleon influenced by these feelings that he made no attempt to disguise that it was the ruling principle which governed all his measures towards the vanquished, † The Prince of Orange, brother-in-law to the King of Prussia, in favour of whom the Prussian plenipotentiaries then at Berlin made the strongest representations, shared the same fate; while to the nobles of Berlin he used publicly the cruel expression, more withering to his own reputation than theirs[1]—"I *will render that noblesse so poor that they shall be obliged to*

[1] Bign. vi. 15,33,34, 23d and 27th Bulletins. Camp de Saxe, ii. 155,195, 214.

* "All the world accuses the Queen as the author of all the calamities which have befallen the Prussian nation. The public indignation is at its height against the authors of the war, especially Gentz, a miserable scribbler, who sells himself for money. After her ridiculous journey to Erfurth and Weimar, the Queen entered Berlin a fugitive and alone. Among the standards we have taken are those embroidered by the hands of this princess, whose beauty has been as fatal to her people as that of Helen was to the citizens of Troy."—27th and 23d *Bulletins, Camp, de Saxe,* ii. 215. It is worthy of observation, that M. Gentz, who is here stigmatised as a miserable hireling sold to England, was one of the most distinguished writers of the age, and one with whom Sir James Mackintosh, the eloquent apologist of the French Revolution, maintained a constant and valued correspondence down to the time of his death. That distinguished author, in reply to a letter from Gentz, which he received at Bombay, where he then was holding a high judicial appointment, thus speaks of the pamphlet to which Napoleon alluded :—"I received by the mail your two precious fragments. I assent to all you say, sympathise with all you feel, and admire equally your reason and your eloquence throughout your masterly fragment. I have read your letter fifty times since I received it, with the same sentiment which a Roman in the extremity of Mauritania would have felt, if he had received an account of the ruin of his country after the battle of Pharsalia, written the morning after that calamity, with the unconquerable spirit of Cato, and the terrible energy of Tacitus. He would have exulted that there was something which Caesar could not subdue, *and from which a deliverer and avenger might yet spring."*—MACKINTOSH'S *Memoirs,* i. 304. Certainly of all the unaccountable peculiarities in the mind of Napoleon, the most extraordinary is his total insensibility to the ultimate ascendant of truth over falsehood, and the extent to which he calculated on palming off falsehood and misrepresentation on the credulity or ignorance of mankind.

† M. Bignon, who was present on the occasion, gives the following curious

beg their bread" When a conqueror, in the midst of his greatest triumphs, uses such insulting language to the vanquished, and makes such an atrocious use of his victory, it is impossible to sympathise with his fall, and Waterloo and St Helena are felt to be a just measure of moral retribution.

Enormous contributions levied on Prussia and the north of Germany.

Meanwhile the French armies, without any further resistance, took possession of the whole country between the Rhine and the Oder; and in the rear of the victorious bands appeared, in severity unprecedented even in the armies of the Republic, the dismal scourge of contributions. Resolved to maintain the war exclusively on the provinces which were to be its theatre, Napoleon had taken only twenty-four thousand francs in specie across the Rhine in the military chest of the army. It soon appeared from whom the deficiency was to be supplied. On the day after the battle of Jena appeared a proclamation, directing the levy of an extraordinary war contribution of one hundred and fifty-nine million francs (£6,360,000) on the countries at war with France, of

account of the conversation which led to the dethronement of the Elector of Hesse-Cassel; — " Duroc and I said everything we could, during breakfast, in favour of the Elector. He only petitioned to be allowed to resume possession of his estates; his fortresses were all to be ceded to the French arms; his troops, twelve thousand strong, were to be joined to their forces, and a heavy contribution paid. These offers appeared to make a considerable impression on the Emperor, especially the offer of so many troops; but after musing a while, he said abruptly, 'Bah! Brunswick, Nassau, Cassel: all these princes are essentially English; they will never be our friends,'—and instantly set out for a review. Two days afterwards appeared the 27th bulletin, containing the announcement of their dethronement."—See BIGNON, **vi. 35.**

which one hundred million was to be borne by the Prussian states to the west of the Vistula, twenty-five million by the Elector of Saxony, and the remainder by the lesser states in the Prussian confederacy. This enormous burden, equivalent to at least £12,000,000 sterling, if the difference between the value of money in England and Germany is taken into account, was levied with unrelenting severity; and the rapacity and exactions of the French agents employed in its collection aggravated to a very great degree the weight and odious nature of the imposition. Saxony, in the scourging contributions with which she was overwhelmed, had soon abundant cause to regret the French alliance; while Berlin, as well as the Hanoverian and Prussian states which had been occupied, experienced, in the rapacity of General Clarke and his subordinate agents, all the bitterness as well as the humiliation of conquest.[1]

[1] Hard. ix. 317. Bign. vi. 51, 53. Bour. vii. 219.

90. Cruelties exercised towards the conquered districts.

Nor was this all. The whole civil authorities who remained in the abandoned provinces were compelled to take an oath of fidelity to the French Emperor,*—an unprecedented step, which clearly indicated the intention of annexing the Prussian dominions to the great nation; while General Clarke, governor of Berlin, acting towards the magistrates as if they were already his subjects, barbarously shot a burgomaster of the town of Kyritz,† whose only fault was that he had, when destitute of any armed force, been unable to resist the abstraction of the arms of the burgher guard and local militia by Colonel Schill, who commanded a flying detachment, that still, in

* The oath was in these terms: — "*I* swear to exercise with fidelity the authority which is committed to me by the Emperor of the French, and to act only for the maintenance of the public tranquillity, and to concur with all my power in the execution of all the measures which may be ordered for the service of the French army, and to maintain no correspondence with its enemies." —BIGNON, vi. 51.

† At a dinner given by Louis XVIII. in 1815, to the King of Prussia, this murder became the subject of conversation. " Sire," said Clarke, then Duke of Feltre, " it was an unhappy error."—" Say, rather, an unworthy crime I" replied the indignant monarch.—HARD. ix. 318.

the open country, maintained its fidelity to the colours of the monarchy. Even the highest authorities gave way to the indiscriminate passion for pillage : " the name of General Clarke," says Bourrienne, " became justly odious from every species of exaction, and a servile execution of all the orders of Napoleon;" while the great reputation of the conqueror of Auerstadt was disgraced by the pillage of the noble library at Tempelberg, the country-seat of Baron Hardenberg, minister of state, which took place by his authority, while he was in person occupying the edifice.[1]

[1] Hard. ix. 317. Bign. vi. 51, 53. Dum. xvii. 40,49. Bour. vii.219.

91. Military organisation of the country from the Rhine to the Vistula.

These evils great as they were, and disgraceful to the arms and generals of France, were however, in the ordinary case, only transitory; but it soon became evident that in the case of Prussia and the adjoining states they were to be permanent, and that the iron grasp of the conqueror was to be not only laid, but retained, on the north of Germany. Early in November there appeared an elaborate ordinance, which provided for the complete civil organisation and military occupation of the whole country from the Rhine to the Vistula. By this decree the conquered states were divided into four departments; those of Berlin, of Magdeburg, of Stettin, and of Custrin; the military and civil government of the whole conquered territory was intrusted to a governor-general at Berlin, having under him eight commanders of provinces into which it was divided. Receivers-general were appointed in each province, charged with collecting its whole revenue and all the war contributions imposed on it, and their transmission to the French governors. Magistrates, police, gendarmes, all were nominated by the authority of Napoleon; the whole civil and military government of the country was concentrated in his hands. Clarke was governor-general, aided in the details of government by Count Daru, whose great capacity soon appeared in the admirable order which he introduced into every branch of the administration, and which would have

Nov. 3.

CHAP. XLIII. 1806.

been worthy of the highest admiration if it had not been rendered instrumental to the most cruel and universal system of public extortion. The same system of government was extended to the duchy of Brunswick, the states of Hesse and Hanover, the duchy of Mecklenburg, and the Hanse Towns, including Hamburg, which was speedily oppressed by grievous contributions, in exacting which the Dutch generals and troops were peculiarly conspicuous. The Emperor openly announced his determination to retain possession of all these states till England consented to his demands on the subject of the liberty of the seas. Careful, at the same time, to mingle with these important civil changes such deeds as might captivate the imaginations of his subjects, he paraded before the deputation which came to Berlin from the senate of Paris, to congratulate him on his victories, three hundred and forty grenadiers of his Imperial Guard, each bearing a standard taken from the enemy in this short campaign—the most splendid display of military trophies seen in Europe since the triumphs of the Roman generals.[1]

[1] Dum. xvii. 54,61. Bign. vi. 72. Bour. vii.217,219.

92. Negotiations with Prussia, and the first demands of Napoleon acceded to.

Meanwhile the negotiations for the conclusion of a separate peace between France and Prussia were resumed. The misfortunes of the King rendered it almost indispensable that a respite should be obtained on any terms, while it was not less advantageous for Napoleon to reap at once the fruits of his triumphs, without undergoing the fatigues and dangers of a winter campaign in the frozen plains of Poland. Plenipotentiaries, accordingly, were appointed on both sides: on that of France, Duroc; on that of Prussia MM. Lucchesini and Rastrow. There was no need of lengthened conferences; the situation of the parties gave to the one the power of demanding whatever he pleased, and deprived the other of that of withholding anything which was required. Napoleon insisted that Prussia should renounce all the provinces she possessed between the Rhine and the Elbe, pay a contribution of a hundred millions of francs for the

expenses of the war, cease to take any concern in the affairs of Germany, and recognise in the princes of the Confederation of the Rhine whatever titles the conqueror chose to confer upon them. Not daring to refuse these conditions, and yet unwilling to take upon themselves the responsibility of making so great a sacrifice, the Prussian envoys referred the matter to the King and his cabinet. They returned an answer agreeing to all the exactions which were required; but in the interval matters had essentially changed for the worse, the wreck of the Prussian armies had been almost totally destroyed, and the demands of Napoleon rose in proportion.[1]

Oct. 27.

[1] Bign. vi. 48, 49. Lucches. ii. 182, 186. Martens, viii. 537.

93. Convention signed by the plenipotentiaries.

Perpetually haunted by the idea that it was the influence of England which he required to combat, and that the northern powers were brought into the field only to maintain her cause, he next insisted that the Prussian troops should retire entirely to Konigsberg and the small portion of the monarchy which lies to the east of the Vistula; that Colberg, Dantzic, Graudentz, Thorn, Glogau, Breslau, Hameln, and Nienburg, shoidd be placed in the hands of the French; and that no foreign troops should be suffered to enter any part of the Prussian territory."* In agreeing to terms so ruinous to the monarchy, the Prussian plenipotentiaries could hardly expect that the King would ratify them; but so desperate had its affairs now become, that it was of importance to obtain a delay even of a few days, in the departure of Napoleon for Posen, in order to gain time for the arrival of the Russian troops on the Vistula. They signed the

* " He was persuaded," says the Marquis Lucchesini, " that it was the intrigues of England which had arrayed the northern courts against France, which had brought about the refusal of the Emperor Alexander to ratify the treaty of Paris, and pushed forward Prussia into the field of battle. It was England, therefore, which it had become necessary to strike in Prussia; and it was on the conduct of the cabinet of London, in regard to the restitution of conquests, that the Emperor announced he would measure his own .steps for the future fate of the Prussian monarchy."—LUCCHESINI, ii. 176,177 ; BIQNON, vi. 44.

CHAP. XLIH.

1806. Nov. 16.

convention at Charlottenburg accordingly, stipulating only for its ratification by the King of Prussia. In fact, however, no hope remained to either side that it would lead to a permanent accommodation; for, a few days before the truce was concluded, Talleyrand openly announced to the Prussian plenipotentiaries that they must look for no restitution of his conquests by the Emperor Napoleon, and that the vast territory from the Rhine to the Vistula would be retained until a general peace, as a means of compelling England to surrender its maritime acquisitions, and forcing Russia to evacuate the principalities of Wailachia and Moldavia, which had recently been invaded by its arms. Thus the unhappy Prussian monarchy was made responsible for the ambition or successes of other powers, over whose measures it had no sort of control; and the negotiations at Berlin, diverging from their original object, were degenerating into a mere manifesto of implacable hostility against the cabinets of London and St Petersburg.*

[1] Dum. xvii. 66,67.Bign. vi. 48, 49. Lucches. ii. 182,185. 186. Martens, viii. 537.

94. Which the King of Prussia refuses to ratify.

The severity of the terms demanded, as well as their express assurances that no concessions, how great soever, could lead to a separate accommodation, as Napoleon was resolved to retain all his conquests until a general peace, led, as might have been expected, to the rupture of the negotiations. Desperate as the fortunes of Prussia were, what was to be gained by the cession of three-fourths of its dominions, and its fortresses still unsubdued on the Vistula, to the French? Reft as he was of his kingdom and his army, the King still preserved his honour, and nobly resolved to continue faithful to his engagements. He declined, therefore, to ratify the armistice, which was presented to him for signature at Osterode, by Duroc, on the part of France, and at the same time published a melancholy but noble proclamation, in which, without attempting to disguise his hopes, or conceal the deplorable state of his affairs, he rose superior to the storms of fortune,[2] and declared his

[2] Lucches. ii. 223,225. Bign. vi. 48, 49. Dum. xvii.69,71.

resolution to stand or fall with the Emperor of Russia.* This refusal was anticipated by Napoleon. It reached him at Posen, whither he had advanced on his road to the Vistula; and nothing remained but to enter rigorously on the prosecution of the war in Poland.

95. Famous Berlin decree against English commerce.

To this period of the war belongs the famous Berlin decree of the 21st November, against the commerce of Great Britain. But this subject is too vast to be adequately touched on in the close of a chapter embracing such a variety of objects as the present; and it will be fully enlarged on in a subsequent one, which will include also the Milan decree which followed in 1807, the Continental System, and the Orders of Council adopted as a measure of retaliation by the British government.

96. Affairs of Poland. Napoleon's language to the Polish deputies.

Napoleon set out from Berlin for the Vistula soon after he had fulminated this anathema against English commerce, and at Posen, in Prussian Poland, gave audience to the deputies of that unhappy kingdom, who came to implore his support to the remains of its once mighty dominion. His words were calculated to excite hope which his subsequent conduct never realised: "France," said he, "has never recognised the partitions of Poland; but, neyertheless, I cannot proclaim your independence until you are resolved to defend your rights as a nation at every sacrifice, even that of life itself. The world reproaches you with having, in your continual civil dissen- Nov. 29. sions, lost sight of the true interests and safety of your country. Taught by your misfortunes, now unite, and prove to the world that the same spirit animates the whole

*** "Matters," said the proclamation, "had arrived at that pass, that Prussia could no longer hope to obtain peace, even at the price of the greatest sacrifices. It was not in his power to make the Russian forces retrograde, since already their own frontiers were menaced. The Emperor of France has shown a determination, even when he acceded to the basis of a negotiation, not to suspend for one moment his military operations; and he has protracted the conferences till his successes enabled him to declare that the conquest of Prussia should afford him the means of dictating peace to England and Russia. Compelled thus to resume hostilities, the King is not without hopes of yet bringing them to a successful issue. He hopes that the governors of the fortresses on the Vistula will not imitate the weakness of those on the Oder**

CHAP. XLIII.

1806.

Polish nation." Universal acclamations attended his arrival at Posen; all the population advanced to meet his carriage; four magnificent triumphal arches were erected to the victor of Rivoli, Marengo, Austerlitz, and Jena. Count Palatine Radzerminski, at the head of the deputation from Great Poland, addressed him in terms of Eastern adulation, mingled with strange expressions, which proved prophetic: "The universe knows your exploits and your triumphs; the west beheld the first development of your genius; the south was the recompense of your labours; the east became to you an object of admiration; *the north will be the term of your victories.* The Polish race, yet groaning under the yoke of the Germanic nations, humbly implores your august highness to raise up its remnant from the dust."—Napoleon replied, —"That which has been destroyed by force cannot be restored except by force. I would with pleasure behold the independence of Poland restored, and a barrier formed by its strength against the unbounded ambition of Russia; but petitions and discourses will not achieve this work; and unless the whole nation, including nobles, priests, and burghers, unites and embraces the firm resolution to conquer or die, success is hopeless. With such a determination it is certain; and you may always rely on my powerful protection."[1]

[1] Dam. xvii. 60, 64.

While the main body of the French army was advancing by rapid strides from the Oder to the Vistula, Napoleon, ever anxious to secure his communications, and clear his rear of hostile bodies, caused two different armies to

and Elbe, and all the disposable forces of the monarchy will hasten to unite their colours on the Vistula and the Wartha to the brave Russian battalions. Such a proof of courage and constancy is not new to the Prussian nation. In the Seven Years' War the capital and provinces were also occupied by the enemy; but the firmness and intrepidity of the nation brought it safe through all its perils, and excited alike the admiration and astonishment of posterity. Then Prussia combated alone the greatest powers of Europe: now the powerful and magnanimous Alexander is about to take his place by her side, with all the forces of his vast empire. Their cause is the same; they will stand or fall together."—DUMAS, xvii. 70, 71.

1806.

advance to support the flanks of the invading force. To Jerome Buonaparte, who commanded the ninth corps, consisting of twenty-five thousand Bavarians and Wiirtembergers, and who had Vandamme for his adviser, was intrusted the difficult task of reducing the six fortresses of Silesia—Glogau, Breslau, Brieg, Neisse, Schweidnitz, and Glatz—containing in all a force nearly equal to his own. Glogau, however, with its garrison of three thousand men, made but a show of resistance, and, early in December, fell into the hands of the French. The other bulwarks of the province exhibited more determination, and operations in form were commenced against them. Mortier, on the extreme left, was intrusted with the subjugation of Hanover and the Hanse Towns, and the occupation of Hamburg, which was accomplished with hardly any resistance. Having done this, he advanced to observe Stralsund and the Swedes; while a fresh reserve was collecting on the Elbe, under the command of Louis, King of Holland. Thus, though the Grand Army was advancing by rapid strides to the shores of the Vistula, its flanks on either side were protected by subordinate corps ; and fresh forces, stationed in echelon in the rear, overawed the intermediate states, and kept up the communication with the Rhine. The whole of the north of Germany was overrun by French troops, while a hundred thousand were assembling to meet the formidable legions of Russia in the heart of Poland.[1]

Advance of Jerome into Silesia, of the French army to the Vistula, and Mortier to Hamburg.

Dec. 8.

[1] **Bign. vi. 69,71.Dum. xvii. 50,53.**

Vast as the forces of Napoleon were, such prodigious efforts over so great an extent of surface rendered fresh supplies indispensable. The senate at Paris was ready to furnish them ; and on the requisition of the Emperor, eighty thousand were voted from the youth who were to arrive at the military age in 1807. " In what more triumphant circumstances," said the Emperor, "can we call on the youth of France to flock to our standards ? They will have to traverse, in joining their comrades, the capital of their enemies, and fields of battle made illustrious by immortal

98. Levy of a lew conscription in Prance. Dec. 5.

CHAP. XLIII. 1806.

victories," It may easily be conceived with what transports this appeal was received by a nation so passionately attached to military glory as the French, and the Emperor resolved to turn it to the best account. Not content with this great addition to his prospective resources, he instituted corps of volunteers to receive the numerous and enthusiastic youth, whom even the conscription could not drain off in sufficient numbers ; additional battalions were added to the Imperial Guard, the troops of Hesse taken in a body into French pay, and the most energetic measures adopted to augment as much as possible the military resources of the Confederation of the Rhine. Detailed instructions were at the same time transmitted to Marmont in Illyria, and the Viceroy Eugene Beauharnais, to have their forces disposed on the Austrian frontiers in the most advantageous position ; and the King of Bavaria was informed by the Emperor himself of all that he should do for the defence of his dominions. The activity displayed in the fortresses on the Adige, the Isonzo, and the Inn, looked as if he was making preparations rather for a defensive struggle in the plains of Bavaria, or the fields of Italy, than for a decisive stroke at Russia on the shores of the Vistula.[1]

[1] Bign. vi. 69,71. Dum. xvii. 50,55. See the orders in Dum. Xvii. Pieces Just.

99. Treaty between France and Saxony.

A treaty, offensive and defensive, between Saxony and France, was the natural result of these successes. This convention, arranged by Talleyrand, was signed at Posen on the 12th December. It stipulated that the Elector of Saxony should be elated to the dignity of king; he was admitted into the Confederation of the Rhine, and his contingent fixed at twenty thousand men. By a separate article, it was provided that the passage of foreign troops across the kingdom of Saxony should take place without the consent of the sovereign—a provision which sufficiently pointed it out as a military outpost of the great nation —while, by a subsidiary treaty, signed at Posen three days afterwards, the whole minor princes of the house of Saxony were also admitted into the Confederacy.[2]

[2] Dec. 15. Dum. xvii. 88,89. Martens, viii. 552, and 555.

100. Immense results of the campaign.

Such was the astonishing campaign of Jena, the most marvellous of all the achievements of Napoleon, that in which success the most unheard-of attended his steps, and his force appeared most irresistible to the bewildered nations. Europe had hardly recovered the shock arising from the fall of Austria in three months, during the campaign of Austerlitz, when she beheld Prussia overthrown in as many weeks by the shock of Jena. Without halting one day before the forces of the enemy, without ever once pausing in the career of conquest, the French troops had marched from the Rhine to the Vistula ; the fabric reared with so much care by the wisdom and valour of Frederick the Great had fallen by a single blow; and one of the chief powers of Christendom had disappeared at once from the theatre of Europe. Three hundred and fifty standards, four thousand pieces of cannon, six first-rate fortresses, eighty thousand prisoners, had been taken in less than seven weeks. Of a noble array of a hundred and twenty thousand men, who had so lately crowded on the banks of the Saale, not more than fifteen thousand now followed the standards of the King to the shores of the Vistula.[1] Results so astonishing were altogether unprecedented in modem Europe : they recalled rather the classic exploits of Caesar or Alexander, or the fierce inroads of Timour or Genghis Khan, than anything yet experienced in Christendom. But they possessed this superiority over the achievements of antiquity or the sanguinary conquests of modern barbarism, that it was not over inexperienced tribes or enervated nations that the triumphs had been won, but the most warlike nation of the civilised world that had been overthrown, and the army which had not long before withstood the banded strength of Europe which had been dissolved.

[1] Jom. ii. 325.

The talents displayed by Napoleon in this campaign, though of a very high order, were not equal to the transcendant abilities evinced at Ulm and Austerlitz. Doubtless the celerity with which the hazardous advance of the

19. Enormous contributions levied on all the conquered states, 303
20. Positions and force of the French on the Vistula, 304
21. And of the Russians, ... 306
22. Positions of the troops, and their evacuation of Warsaw; and Alexander's proclamation to his soldiers, ... *ib.*
23. Application for assistance in men and money to England. Its impolitic refusal, ... 308
24. The Russians resume the offensive, ... *ib.*
25. Napoleon advances to Warsaw. General enthusiasm there, . 309
26. And resumes the offensive against the Russians, 310
27. Forcing of the passage of the Ukra by the French, 311
26. Kamenskoi loses his presence of mind, and orders the sacrifice of the artillery, ... 313
29. Object of Napoleon in these movements, ... 314
30. Description of the field at Pultusk, and of the positions of the two hostile armies, ... *ib.*
81. Battle of Pultusk, ... 315
82. Which turns out to the disadvantage of the French, . 317
83. Combat of Golymin, ... *ib.*
34. Its doubtful issue, ... 319
35. Napoleon stops his advance, and puts his army into winter-quarters, . 320
36. The Russians also go into winter-quarters, ... 321
87. Results of this winter campaign, and impression which it produces in Europe, *ib.*
38. Positions of the French army in winter-quarters, 323
89. Napoleon's measures to provide food and secure his cantonments, 324
40. Reduction of the fortresses in Silesia, ... 325
41. Siege and fall of Breslau, ... *ib.*
42. Capture of Brieg and Schweidnitz, and total conquest of Silesia, 326
43. Operations on the left towards Pomerania and Dantzic, 327
44. Operations of Marmont in Illyria, ... 328
45. Napoleon's efforts to stimulate the Turks to vigorous resistance, *ib.*
46. Delightful residence of the French at Warsaw, 330
47. Enthusiastic reception of the French by the Polish women, . 332
48. Kamenskoi goes mad, and Benningsen assumes the command. He advances against Bernadotte, ... *ib.*
49. Rapid advance of Benningsen towards Konigsberg, 333

S		Page
50.	H e surprises Ney's corps,	334
51.	Bernadotte, attacked near Mohrungen, escapes with difficulty,	335
52.	Graudentz is relieved, and the French left wing driven back by the Russians,	336
53.	Dangerous situation o f Napoleon,	337
54.	Vigour of Napoleon in assembling his army,	338
55.	Napoleon marches to the rear of Benningsen,	339
56.	Who discovers his design and falls back,	340
57.	The French pursue the Russians, who resolve to give battle,	341
58.	Combat o f Landsberg,	342
59.	Combat of Leibstadt and retreat of Lestocq,	343
60.	Relative forces o n both sides,	344
61.	Bloody combats round Eylau the day before the battle,	345
62.	Anxious situation of both armies in their night-bivouac,	347
68.	Description of the field of battle, and the positions of either army,	*ib.*
64.	Distribution o f the French forces,	349
65.	Battle o f Eylau. Defeat o f Augereau,	350
66.	Imminent danger o f Napoleon,	351
67.	Grand charge by the cavalry and Imperial Guard on the Russian centre,	352
68.	Great success of Davoust on the French right,	354
69.	Bagavout is defeated on the Russian left,	*ib.*
70.	Benningsen throws back his left to arrest the evil,	355
71.	Lestocq at length appears on the Russian right, and restores the battle,	356
72.	Schloditten is carried by Ney, and retaken by Benningsen,	357
73.	Benningsen, contrary to the wishes of his officers, resolves to retreat,	358
74.	Results of the battle, and losses on both sides,	359
75.	Aspect of the field of battle on the following day,	360
76.	Inactivity and losses of the French after the battle,	361
77.	Napoleon calls in all his reinforcements, and proposes peace,	362
78.	Which i s refused b y Prussia,	363
79.	Napoleon retreats, and goes into cantonments on the Passarge,	364
80.	The Russians advance, and also go into cantonments. Both parties claim the victory a t Eylau,	365
81.	Operations of Essen against Savary. Combat of Ostrolenka,	366
82.	Immense sensation excited by the battle of Eylau in Europe,	367
83.	Unwise refusal of military succour by England,	369
84.	Universal consternation at Paris on the news being received of Eylau,	370
85.	Napoleon demands a third conscription since the beginning of the war,	*ib.*
86.	Immense activity of Napoleon to repair his losses,	372
87.	Extreme danger of Napoleon's situation at this juncture,	373
88.	Ruinous effect of the surrender of the Prussian fortresses,	374
89.	Observations on the movements of both parties,	375

CHAPTER XLV.

DOMESTIC AND FOREIGN MEASURES OF MR FOX'S ADMINISTRATION. FEBRUARY 1806—MARCH 1807.

1. Important civil changes which originated during the war, 377

2. Effects of the accession of the Whigs to power, 378

§ Page
3. Their plan for a new system for the recruiting of the army, 379
4. Great change in the composition of the army. Arguments in support of it by Mr Windham, ... 380
5. Impracticability of forced conscription, ... 381
6. Inefficiency of voluntary enlistment, ... 382
7. Means by which he proposes to render it more efficient, 383
8. Advantages of short periods of enlistment, as securing a better class of soldiers, ... 384
9. Proposed limitation of that period, ... 385
10. Reply of the former ministers on the subject, ... 386
11. The limited enlistment already partially in operation, . 387
12. The circumstances of Great Britain peculiar, and without precedent in those of any foreign state, ... 388
13. Arguments against the reduction of the volunteer force, 389
14. And in favour of raising the additional force required by ballot, 390
15. The bill passes, ... 391
16. Reflections on the measure, ... *ib.*
17. Error of the ministerial plan so far as regards the volunteers, 393
18. Temporary service now in a great degree abandoned, . . 394
19. Abolition of the slave trade, ... 395
20. Arguments against the change by the West India interest, *ib.*
21. Alleged evil effects of abolition of the trade, ... 396
22. The slave trade asserted not to be the cause of the degraded state of Africa, 397
23. Arguments of Mr Wilberforce and others for the abolition, 398
24. Their answer to the assertion of the necessity of the trade to maintain the supply of negroes, ... 399
25. Alleged gradual improvement of the race should the trade be abolished, 400
26. Its demoralising effect on Africa, ... 401
27. Abolition tends to promote the gradual abrogation of slavery itself, . 402
28. The abolition is carried, ... 403
29. Deplorable effects of the change hitherto on the negro race, . 404
30. But they are not chargeable on its authors, but subsequent changes, . 405
Enormous present extent and horrors of the slave trade, . *note ib.*
Immense increase of produce in the slave colonies of late years. Comparatively stationary condition of the British islands, . *note,* 406
Enormous fiscal injustice to which they have been exposed, . *note, ib,*
31. Ruinous effects of emancipation of negroes, ... 408
Rapid decline of West India produce since emancipation, . *note, ib.*
32. Which are to be ascribed to the emancipation of the negroes, not to the abolition of the slave trade, ... **409**
33. Lord Henry Petty's plan of finance, ... **411**
34. Argument in favour of it. Advantages of the sinking-fund, . **412**
35. Proposed measures for the redemption of the successive loans, **413**
36. And for providing the charges on them, . **414**
37. Advantages of the proposed system, ... ***ib.***
38. Argument against it by Lord Castlereagh and Mr Perceval, . . **416**
39. Counter-plan proposed by them, ... ***ib.***
40. The ministerial scheme as threatening to break up the sinking-fund, . **418**
41. Budget for 1807, ... **419**
42. Reflections on this subject, ... ***ib.***
43. Prejudicial effect in the end of these discussions, . . *4***421**

§
44. Lord Henry Petty's plan was the preferable of the two, 421
45. General character of the Whig measures of domestic administration at this period, ... 422
46. Foreign transactions. Fresh expedition to South America, and capture of Monte Video, ... 423
47. A second expedition against Buenos Ayres is resolved on, 425
48. Preparations for its defence, ... 426
49. Failure of the attack, ... 427
50. Court-martial on General Whitelocke, who is cashiered, 428
51. Reflections on this event, ... *ib.*
52. Capture of Curacoa, and establishment of the republic of Hayti, 429
53. State of affairs in Turkey, ... 430
54. Cause of rupture between Turkey and Russia, ... 431
55. Dismissal of the Waiwodes of Wallachia and Moldavia by Sultaun Selim, *ib.*
56. Violent remonstrances of Russia and England, which produce a repeal of the measure, ... 433
57. Meanwhile the Russian armies invade the principalities, 434
58. And war is declared, ... 435
59. Rapid progress of the Russians in the principalities, 436
60. The Russians require the aid of a naval attack by England on Constantinople, which is agreed to, *ib.*
61. Description of the Dardanelles, ... 437
62. Ultimatum of Great Britain, and declaration of war by Turkey, . 438
63. Sir John Duckworth resolves to pass the Dardanelles, 439
64. The Straits are forced after much resistance, ... 440
65. The Divan resolves on submission, as Constantinople was defenceless, 441
66. Intrepid conduct of Sebastiani, ... *ib.*
67. The Turks negotiate to gain time, and complete their preparations, . 442
68. Vast energy displayed by the Mussulmans in their defence, . 443
69. The English renounce the enterprise, ... 444
70. The British fleet repass the Straits, ... 445
71. Blockade of the Dardanelles, ... 446
72. Naval actions off Tenedos, ... 447
73. Descent by the British on the coasts of Egypt. Macleod defeated at El Hammed, ... 448
74. Evacuation of Alexandria, ... *ib.*
75. Great discontent at these repeated defeats throughout Great Britain, 449
76. Measures for introducing the Catholics into the army and navy brought in by Lord Howick, ... *ib.*
77. Arguments in favour of it by Lord Howick, ... 450
78. Arguments against it by Mr Perceval, ... 451
79. The alleged tendency of the measure, ... 452
80. Repugnance of the King to the bill, which is withdrawn, 453
81. The King requires a written pledge that no further concessions should be made to the Catholics. Change of ministry, 454
Composition of the new cabinet, ... *note,* 456
82. Arguments in parliament against the Kong's conduct, . 456
83. And in support of it by Mr Perceval and Mr Canning, . 457
84. The sovereign had been left in the dark as to the extent of the measure, 458
85. Defence of his conduct in requiring the pledge from ministers, 459
86. Dissolution of parliament, and great majority for the new ministers, . 460

§ Pago
87. Biography of Lord Eldon, ... 461
88. His rise at the bar to the office of chancellor, ... 462
89. His character as a lawyer and statesman, ... 463
90. Character of the "Whig ministry, and effects of their fall, 464
91. Eeflections on their foreign measures, ... 465
92. And their glaring neglect of the Russian war, ... 467
Repeated and ineffectual applications which Alexander had made for aid from England during the Polish war, . . . *note,* 468
93. The Dardanelles expedition is an exception to the general inexpedience of their foreign policy, ... 468
94. These defeats were ultimately beneficial, ... 470

CHAPTER XLVI.

CAMPAIGN OF FRIEDLAND, AND PEACE OF TILSIT.

1. Negotiations and treaties between the Allies for the vigorous prosecution of the war, ... 471
2. Austria strives to mediate between the contending powers. Treaty between Prussia and Russia at Bartenstein, 472
3. To which England and Sweden accede, ... 473
4. But too late to prevent the irritation of Russia, ***ib.***
5. Negotiations of Napoleon during the same period. Auxiliary forces obtained under Romana from Spain, ... 475
6. Operations in Pomerania, and views of Napoleon regarding Sweden, . 477
7. Armistice between the Swedes and French, ... 478

HISTORY OF EUROPE.

PORTRAIT IN VOLUME VII.

Fox, ... *Frontispiece.*

manent support. When surrounded by the wreck of other states, when surviving alone the fall of so many confederacies, it was in their inexhaustible resources that England found the means of resolutely maintaining the contest, and waiting calmly, in her citadel amidst the waves, the return of a right spirit in the neighbouring nations. Vain would have been the prowess of her seamen, vain the valour of her soldiers, if her national finances had given way under the strain. Even the conquerors of Trafalgar and Alexandria must have succumbed in the contest they had so heroically maintained, if they had not found in the resources of government the means of permanently continuing it. Vain would have been the reaction produced by suffering against the French Revolution, vain the charnel-house of Spain and the snows of Russia, if

CHAP. XLI. 1805.

Britain had not been in a situation to take advantage of the crisis. If she had been unable to aliment the war in the Peninsula when its native powers were prostrated in the dust, the sword of Wellington would have been drawn in vain ; and the energies of awakened Europe must have been lost in fruitless efforts if the wealth of England had not at last arrayed them in dense and disciplined battalions on the banks of the Rhine.

2. Astonishing financial efforts of England during the war.

How, then, did it happen, that this inconsiderable island, so small a part of the Roman empire, was enabled to expend wealth greater than ever had been amassed by the ancient mistress of the world; to maintain a contest of unexampled magnitude for twenty years ; to uphold a fleet which conquered the united navies of Europe, and an army which carried victory into every corner of the globe ; to acquire a colonial empire that encircled the earth, and subdue the vast continent of Hindostan, at the very time that it struggled in Spain with the land forces of Napoleon, and equipped all the armies of the north, on the Elbe and the Rhine, for the liberation of Germany ? The solution of the phenomenon, unexampled in the history of the world, is without doubt to be in part found in the persevering industry of the British people, and the extent of the commerce which they maintained in every quarter of the globe. But the resources thus afforded would have been inadequate to so vast an expenditure, and must have been exhausted early in the struggle, if they had not been organised and sustained by an admirable system of finance, which seemed to rise superior to every difficulty with which it had to contend. It is there that the true secret of the prodigy is to be found ; it is there that the noblest monument to Mr Pitt's wisdom has been erected.

The national income of England at an early period was very inconsiderable, and totally incommensurate to the important station which she occupied in the scale of nations. In the time of Elizabeth it amounted only to £400,000

3. Historical details. Public income before the Commonwealth. Large increase consequent on the Great Rebellion.

a-year; and in that of James I. to£450,000, and, even including all the subsidies received from parliament during his reign, only to£480,000 a-year—sums certainly not equivalent to more than £800,000 or £1,000,000 of our money.[1] That enjoyed by Charles I. amounted on an average to £895,000 annually—a sum perhaps equal to £1,500,000 in these times.[2] It was the Long Parliament which first gave the example of a prodigious levy of money from the people of England—affording thus a striking instance of the eternal truth, that no government is so despotic as that of the popular leaders, when they are relieved from all control by the other powers in the state. The sums raised in England during the Commonwealth—that is, from 3d November 1640, to 5th November 1659—amounted to the enormous, and, if not proved by authentic documents, incredible sum of £83,000,000,—being at the rate of nearly £5,000,000 a-year ;* or more than five times that which had been so much the subject of com plaint in the times of the unhappy monarch who had

[1] Hume, v. 412; vi. 112.

[2] Ibid. vii. 341.

* " It is seldom," says Hume, " that the people gain anything by revolu tions in government; because the new settlement, jealous and insecure, must commonly be supported with more expense and severity than the old: but on no occasion was the truth of this maxim more sensibly felt than in England after the overthrow of the royal authority. Complaints against the oppression of ship-money and the tyranny of the Star Chamber had roused the people to arms, and, having gamed a complete victory over the Crown, they found them selves loaded with a multiplicity of taxes formerly unknown, while scarce an appearance of law and liberty remained in any part of the administration."[3]

[3] Hume, vii. 115.

The following are some of the items in this enormous aggregate of £83,000,000 raised from the nation during the Commonwealth,—a striking proof of the despotic character of the executive dunne: that period:—

Land-tax, ...	£32,000,000
Excise, ...	8,000,000
Tonnage and poundage,	7,600,000
Sale of Church lands,	10,035,000
Sequestration of bishops, deans, and inferior clergy, for four years,	3,528,000
Sequestration of private estates in England,	4,564,000
Fee-farm rents for five years,	2,963,000
Composition with delinquents in Ireland,	1,000,000
Sales of estates in Ireland,	3,567;000
Other lesser,	10,074,000
Total, . .	£83,331,000

—PEBRER, 139,140.

CHAP. XLI.

1642-1688.

preceded it. The permanent revenue of Cromwell from the three kingdoms was raised to £1,868,000 : or considerably more than double that enjoyed by Charles I.* The total public income at the death of Charles IL was £1,800,000, under James II. £2,000,000 ; sums incredibly small, when it is recollected that the price of wheat was not then materially different from what it is at the present moment.[1†]

[1] Pebrer, 129, 143.

4. Permanent addition to them on the accession of William III.

These inconsiderable taxes, however, were destined to be exchanged for others of a very different character, upon the accession of the house of Orange to the throne. The intimate connexion of the princes of that family with Continental politics, and the long wars in which in consequence the nation was involved, soon led to a more burdensome system of taxation, and the raising of sums annually from the people which in former times would have been deemed incredible. The Prince of Orange brought from the republic of Holland, where it had been already practised and Mas thoroughly understood, the important secret of governing popular assemblies, and extracting heavy taxes from popular communities. Like the Roman emperors, he did not discard the senate, but he contrived to render it the instrument of his will. He did not, like the Stuarts, engage the throne in a contest with parliament : on the contrary, he did everything by its votes, and concealed the exactions of the crown under the shadow of the authority of the house of Commons. His

* Of this sum, there was drawn from England, £1,517,274

from Ireland, 207,790

Total. £1,868,716

—PEBRER, 140.

† The quarter of wheat, from 1636 to 1701, was on an average 51s. 11½d..
from 1700 to 1765, . . 40s. 6d.
from 1764 to 1794, . . 44s. 7d.

In 1835 the average of the quarter in Great Britain was 39s. 8d., and the average of the five years preceding 1836 was only 48s. The price was much higher during the next five years, but that was the result of uncommonly rainy seasons coming in succession during that whole period.—SMITH'S *Wealth of Nations,* i. 358 ; and *Corn Average,* 1835.

whole efforts were directed to gain the majority of the constituencies in the country by corruption, and of votes in parliament by patronage. A vast government expenditure, incurred in a cause at first highly popular, and the profuse contracting of loans on the security of the revenue of future years, afforded the means of doing both. This system proved entirely successful, and it is to its success that the subsequent greatness of the empire is mainly to be ascribed. But for it, the means of raising taxes adequate to the protection, and necessary for the defence, of the empire, would never have been discovered; and England, like Poland, would have fallen a prey to the ambition of the adjoining nations, the resources of which had been drawn forth by the force of despotic power, while no means of developing its own had been discovered. Great as have been the obligations which England owes in many different views to the Revolution, it is beyond all question the greatest that it brought in a sovereign instructed in the art of overcoming the ignorant impatience of taxation which is the invariable characteristic of free communities, and thus gave it a government capable of turning to the best account the activity and energy of its inhabitants, at the same time that it had the means given it of maintaining their independence.

5. Reahonh which led to the introduction of the national debt.

So great was the increase of the public burdens during the reign of William, that the national income, in the thirteen years that he sat on the throne, was nearly doubled : being raised from £2,000,000 a-year to £3,895,000. But the addition made to the public revenue was the least important part of the changes effected during this important period. It was then that the NATIONAL DEBT began ; and government was taught the dangerous secret of providing for the necessities, and maintaining the influence of present times, by borrowing money and laying its payment on posterity. Various motives combined to induce the government, immediately after the Revolution, to adopt the system of borrowing on

CHAP. XLI.

1688-1700.

the credit of the state. Notwithstanding the temporary unanimity with which the Revolution had been brought about, various heart-burnings and divisions soon succeeded that event, and the exiled dynasty still numbered a large and resolute body, especially in the rural districts, among their adherents. Extensive patronage and no small share of corruption were necessary to secure the influence of government over a nation thus divided : foreign wars were rightly deemed requisite to maintain the ascendant of the Protestant principles to which the king owed his accession to the throne; and the Continental connexions of the house of Orange imperiously required the intervention of Great Britain in those desperate struggles by which the very existence of the commonwealth of Holland was endangered. The same cause which led to nearly the duplication of the public burdens of France by Louis Philippe,* after the revolution of 1830, produced a similar increase in the taxes of Great Britain after the change of dynasty in 1688, and originated the dangerous system of borrowing on the security of the assessment of future years. It was justly thought, that the present influence of government could in this way be increased to an extent altogether impracticable if the expenditure of each year were to be limited to the supplies raised within itself; and that, by the distribution of the debt

Corresponding increase of the expenditure of France on the accession of Louis Philippe.

* The following is a statement of the budgets of France before and after the Revolution of July. It is a curious and instructive object of contemplation to observe a similar convulsion leading, in countries so widely different in their character, customs, and institutions, as France and England were at the accessions of the dynasties of Orange and Orleans to their respective thrones, to a result so precisely similar .—

among a great number of public creditors, an extensive and influential body might be formed, attached by the strong tie of individual interest to the fortunes of the ruling dynasty; because they were aware that their claims would be disregarded by the legitimate monarchs if restored to the throne. The expedient, therefore, was fallen upon of contracting a debt transferable by a simple power of attorney, in the smallest shares, from hand to hand ; and capable of being used almost like the highest and most valuable species of bank-notes, in the transactions of the nation. To the steady prosecution of this system, and the formation of a secure deposit by its means for the savings of the nation, much of the subsequent prosperity and grandeur of England is to be ascribed. But, like all other human things, it has its evils as well as its advantages: and in the perilous facility of borrowing, which the magnitude of the national resources and the fidelity with which the public engagements were fulfilled produced, is to be found the remote but certain cause of financial embarrassments, now to all appearance irremediable.[1]

[1] Pebrer, 59, 60. Alison's Marlborough, 246, 249.

6. Progressive growth of the public debt during the succeeding century.

It is unnecessary to follow the successive steps by which both the public revenue and the national debt of Great Britain were increased after this period. Suffice it to say, that both were largely augmented during the glorious war of the Succession; that the long and pacific administration which followed, effected no sensible reduction in their amount; that the checkered contest of 1739, and the more triumphant campaigns of the Seven Years' war, contributed equally to their increase; and that the disasters of the American struggle were attended by so great an augmentation of the national burdens, that at its termination in 1783, in the opinion both of Mr Hume and Adam Smith, they must inevitably prove fatal in the end to the independence of the nation. At the close of the last contest the public revenue was £12,000,000, and the debt £240,000,000, the interest of which absorbed so large

CHAP. XLI.

1784.

a proportion as £9,319,000 of the annual income of the state; the loans contracted during its disastrous continuance having been no less than one hundred millions.[1]*

[1] Pebrer, 245.

It was at this period that Mr Pitt came into office, on the resignation of Mr Fox and the coalition ministry. His ardent and sagacious mind was immediately turned to the consideration of the finances, and the means of

Table illustrating its increase.

* The following table exhibits, in a clear and condensed form, the increase of the public revenue, and progressive growth of the debt, from the Revolution in 1688 to the present times.

	Debt.	Interest.	Public Revenue.
National Debt at the Revolution,	£664,263	£39,865	£2,001,885
Increase during the reign of William,	15,730,439	1,271,087	
Debt at the accession of Queen Anne,	16,394,702	1,310,952	3,895,205

—MOREAU and PEBRER'S *Tables*, 70, 89,153, 245; and PORTER'S *Pari Tables*, i. 1.

extricating the nation from the embarrassments, to ordinary observers inextricable, in which it had been involved by the improvident expenditure of preceding years. It was evident, from a retrospect of history, that no sensible impression had been made on the debt by any efforts of preceding times; that though a sinking-fund had long existed in name, yet its operations had been very inconsiderable; and that all the economy of the long periods of peace which had intervened since the Revolution, had done little more than discharge a tenth of the burdens contracted in the preceding years of hostility. The interest of the debt absorbed now more than two-thirds of the public revenue. It was impossible to conceal that such a state of things was in the highest degree alarming; not only as affording no reasonable prospect that the existing engagements could ever be liquidated, but as threatening at no distant period to render it impossible for the nation to make those efforts which its honour or independence might require. Little foresight was required to show, that, in the course of events, wars and changes must arise, which would render it indispensable for the government to assume a menacing attitude, and possibly engage in a long course of hostilities. But how could any administration venture to assume the one, or the people bear the other, if an immense load of debt hung about their necks, absorbing alike by its interest their present revenues, and paralysing by its magnitude the credit by which their resources might be increased on any unforeseen emergency?

7. **Alarming financial aspect of the country on Mr Pitt's accession to power in 17B4.**

These dangers took strong possession of the mind of Mr Pitt; but instead of sinking in despair under the difficulties of the subject, he applied the energies of his understanding with the utmost vigour to overcome them. Nor was it long before he perceived by what means this great object could with ease and certainty be effected, The public attention at this period had been strongly directed to the prodigious powers of accumulation of

8. **Principle ou** which he **proposed to remedy the existing evils.**

CHAP. XLI.

1784.

money at compound interest; and Dr Price had demonstrated, with mathematical certainty, that any sum, however small, increasing at that ratio, would in a given time extinguish any debt, however great. * Mr Pitt, with the instinctive sagacity of genius, laid hold of this simple law to establish a machine by which the vast debt of England might, without difficulty, be discharged. All former sinking funds had failed in producing great effects, because they were directed to the *annual* discharge of a certain portion of debt; not the formation, by compound interest, of a fund destined to its future and progressive liquidation ; they advanced, therefore, by addition, not multiplication—in an arithmetical, not a geometrical ratio. Mr Pitt saw the evil, and not merely applied a remedy, but more than a remedy : he not only seized the battery, but turned it against the enemy. The wonderful powers of compound interest, the vast lever of geometrical progression, so long and sorely felt by debtors, were now to be applied to creditors; and, inverting the process hitherto experienced among mankind, the swift growth of the gangrene was to be turned from the corruption of the sound to the eradication of the diseased part of the system. Another addition, like the discovery of gravitation, the press, and the steam-engine, to the many illustrations which history affords of the lasting truth, that the greatest changes both in the social and material world are governed by the same laws as the smallest; and that it is by the felicitous application of familiar principles to new and important objects, that the greatest and most salutary discoveries in human affairs are effected.

Mr Pitt's mind was strongly impressed with the incalculable importance of this subject of the finances,—one before which all wars or subjects of present interest, excepting only the preservation of the constitution, sank into insig-

*** A penny laid out at compound interest at the birth of our Saviour, would, in the year 1775, have amounted to a solid mass of gold eighteen hundred times the whole weight of the globe.**

9. His strong expressions on the importance of the subject in parliament.

nificance. From the time of his accession to office in 1784, his attention had been constantly riveted upon it, and he repeatedly expressed, in the most energetic language, his sense of its overwhelming magnitude. "Upon the deliberation of this day," said he, in bringing forward his resolutions on the subject on 29th March 1786, "the people of England place all their hopes of a full return of prosperity, and a revival of that public security which will give vigour and confidence to those commercial exertions upon which the flourishing state of the country depends. Yet not only the public and this House, but other nations are intent upon it; for upon its deliberations, by the success or failure of what is now proposed, our rank will be decided among the powers of Europe. To behold this country, when just emerging from a most unfortunate war, which had added such an accumulation to sums before immense, that it was the belief of surrounding nations, and of many among ourselves, that we must sink under it—to behold this nation, instead of despairing at its alarming condition, looking boldly its situation in the face, and establishing upon a spirited and permanent plan the means of relieving itself from all its encumbrances, must give such an idea of our resources as will astonish the nations around us, and enable us to regain that pre-eminence to which on many accounts we are so justly entitled. The propriety and even necessity of adopting a plan for this purpose is now universally allowed, and it is also admitted that immediate steps ought to be taken on the subject. It is well known how strongly my feelings have been engaged, not only by the duties of my situation, but by the consideration of my own personal reputation, which is deeply committed in the question, to exert every nerve, to arm every vigilance, to concentrate all my efforts towards that great object, by which alone we can have a prospect of transmitting to posterity that which we ourselves have felt the want of,— an efficient sinking-fund for the national debt[1] To

[1] Parl. Hist, xxvi. 1295, 1313, 1109.

CHAP. XLI.

1786.

accomplish this is the first wish of my heart; and it would be my proudest hope to have *my* name inscribed on a pillar to be erected in honour of the man who did his country the essential service of reducing the national debt."

10. And his simultaneous adoption of measures for national defence.

It is worthy of especial notice, however, that though thus deeply impressed with the paramount importance of raising up an effective sinking-fund for the reduction of the public debt, Mr Pitt was equally resolute not to attempt it by any measure by which the public security might be impaired; and, on the contrary, he at the very same time strongly advocated and carried a bill for the fortification of Portsmouth and Plymouth, which required several hundred thousand pounds. " He would not be seduced," he said, " by the plausible and popular name of economy—he would not call it only plausible and popular, he would rather say the sacred name of economy—to forego the reality; and for the sake of adding a few hundred thousand pounds at the outset to the sinking-fund, perhaps render for ever abortive the sinking-fund itself. Every saving, consistently with national safety, he would pledge himself to make; but he would never consent to starve the public service, and to withhold those supplies without which the nation must be endangered."[1] Every measure of this great man was directed to great and *lasting* national objects. He was content to impose present burdens, to forego present advantages, and incur present unpopularity, for the sake of ultimate public advantage ; the only principle which ever yet led to greatness and honour, either in nations or individuals, as the opposite system, gilded by present popularity or enjoyment, is the certain forerunner of ultimate ruin.

[1] Pari. Hist, xx vi. 1109.

In pursuance of these designs, Mr Pitt proposed that a million yearly—composed partly of savings effected in various branches of the public service, to the amount of £900,000, and partly of new taxes, to the amount of £100,000—should be granted to his Majesty, to be vested

in commissioners chosen from the highest functionaries in the realm ; that the payments to them should be made quarterly; and that the whole sums thus drawn should be by them invested in the purchase of stock, to stand in the name of the commissioners, the dividends on which were to be periodically applied to the further purchase of stock, to stand and have its dividends invested in the same manner. In this way, by setting apart a million annually, and religiously applying its interest to the purchase of stock, the success of the plan would be secured; because the future accumulations would spring, not from any additional burdens imposed on the people, but from the *dividends on the stock thus bought up from individuals, and vested in the public trustees.* The powers of compound interest were thus brought round from the *side of the creditor to that of the debtor*—from the fundholders to the nation ; and the national debt was eaten in upon by an accumulating fund, which, increasing in a geometrical progression, would, to a certainty, at no distant period, effect its total extinction* " If this million," said

* The following table will exemplify the growth of capital when its interest, at the rate of five per cent, is steadily applied to the increase of the principal. Suppose that £20,000,000 is borrowed; and that, instead of providing by taxes for the interest merely of this large sum, provision is made for £1,200,000 yearly, leaving the surplus of £200,000 to be annually applied to the purchase of a certain portion of the stock, by commissioners, for the reduction of the principal, the dividends on the stock so purchased being annually and progressively employed in the same manner. The progressive growth in ten years will stand as follows:—

First year's surplus, . . .	£200,000	
Second,	210,000	
Third,	220,500	
Fourth,	231,250	
Fifth,	242,562	
Sixth,	253,078	
Seventh,	*265,654:*	
Eighth,	278,286	
Ninth,	292,114	
Tenth,	306,661	
		£2,500,105

The wonderful rate at which this fund increases must be obvious to every observer, and it is worthy of especial notice, that this rapid advance is gained without imposing one farthing additional upon the country, by the mere force of an annual fund, steadily applied year after year, with all its fruits, to the xeduction of the principal debt.

CHAP. XLI.

1786.

Mr Pitt, "to be so applied, is to be laid out, with its growing interest, it will amount to a very great sum in a period that is not very long in the life of an individual, and but an hour in the existence of a great nation; and this will diminish the debt of this country so much, as to prevent the exigencies of war from raising it to the enormous height it has hitherto done. In the period of twenty-eight years, the sum of a million, annually improved, would amount to four millions per annum. But care must be taken that this sum be not broken in upon. This has hitherto been the bane of this country; for if the original sinking-fund had been properly preserved, it can easily be proved, that our debts at this moment would not have been very burdensome; but this, as yet, has been found impracticable, because the minister has uniformly, when it suited his conveniency, gotten hold of this sum, which ought to have been regarded as most sacred. To prevent this, I propose that this sum be vested in certain dignified commissioners, to be by them applied quarterly to buy up stock; by which means no considerable sum will ever be open to spoliation, and the fund will go on without interruption. Long, very long, has the country struggled under its heavy load, without any prospect of being relieved; but it may now look forward to the object upon which the existence of the country depends. A minister could never have the confidence to come down to the House, and propose the repeal of so beneficial a law—of one so directly tending to relieve the people from their burdens. The essence of the plan consists in the fund being invariably applied in diminution of the debt; *it must for ever be kept sacred, and especially so in time of war.* To suffer the fund at any time, or on any pretence, to be diverted from its proper object, would be to ruin, defeat, and overturn the whole plan."[1]*

[1] Parl. Hist. xxvi. 1309, 13*22.

*** The speech delivered by Mr Pitt on this occasion, which went over the whole details of our financial system, is one of the most luminous of his whole parliamentary career. An intimate friend of his has recorded, " That having passed the morning of this most important day in providing and examining the**

CHAP. XLI.

1786. 12.

Mr Fox gives this plan his cordial support.

Nor was Mr Fox behind Lis great rival in the same statesmanlike and heroic sentiments; but he pointed out with too prophetic a spirit the dangers to which the reserved fund might be exposed, amidst the necessities or weaknesses of future administrations. " No man," said he, " in existence, was, or ever had been, a greater friend to the principle of a sinking-fund than I have been, from the very first moment of my political life. I agree perfectly with the right honourable gentleman in his ideas of the necessity of establishing an effective sinking-fund, for the purpose of applying it to the diminution of the national debt, however widely I may differ from him as to the subordinate parts of the plan. Formerly, the payment of the national debt was effected by a subscription of individuals, to whom the faith of parliament had been pledged to pay off certain specified portions at stated periods. Under that system, when the nation, or when parliament, stood bound to individuals, the pledge was held as sacred as to pay the interest of the national debt at present; whereas, under the new system, when no individual interests were concerned, nothing would prevent a future minister, in any future war, from coming down to the House and proposing the repeal of the sinking-fund, or enabling government to apply the whole money or stock in the hands of the commissioners to the public service. What would prevent the House from agreeing to the proposition ? or was it at all likely that, under the exigency

calculations and resolutions for the evening, he said he would take a walk to arrange in his mind what was to be said in the House in the evening. His walk did not last above a quarter of an hour, and when he came back he said he believed he was prepared. He then dressed, and desired his dinner to be sent up; but hearing that his sister, and another lady residing with her in the family, were going to dine at the same early hour, he desired that they might dine together. Having passed nearly an hour with those ladies, and several friends who called on their way to the House, talking with his usual liveliness and gaiety, as if he had nothing on his mind, he then went immediately to the House of Commons, and made that elaborate and far-extended speech, as Mr Fox called it, without one omission or error.—See WILLIAM PITT—No. V.; ***Black wood's Magazine,*** **xxxvi. 852; a series of papers on the character of this illustrious man, by Dr Croly, one of the ablest writers of the age, containing by far the best account of his policy and character extant in any language.**

CHAP. XLI.

1786.

of the moment, they would not immediately agree to it, when so much money could so easily be got at, and when they could so readily save themselves from the odious and unpleasant task of imposing new taxes on themselves and their constituents ?"[1] Memorable words from both these great men! when it is recollected how exactly the one predicted the wonderful effects which experience has now proved his system was calculated to have produced, in reducing, in a period of time smaller than the most ardent imagination could have supposed, a debt double the amount of that which he estimated as so great an evil; and with how much accuracy the other pointed out the vulnerable point in the composition of his scheme, and predicted the cause, springing from the necessities or weakness of future administrations, which would ultimately prove its ruin!

[1] Parl. Hist. xxvi. 1318.

The bill passed both Houses without a dissentient voice; and on the 26th May, the King gave it the royal assent in person, to mark his strong sense of the public importance of the measure.

13. It is passed by the legislature, and afterwards made applicable to all future loans.

The sinking-fund thus provided was amply sufficient to have discharged all the existing debt within a moderate period; and so well aware was its author of its vast productive powers, that he observed, that when it rose to four millions, it should be submitted to parliament whether it should thenceforth be suffered to increase at compound interest. But the events which followed soon not only rendered illusory all danger of the debt being too rapidly reduced, but made an addition to the system unavoidable to meet the new and overwhelming obligations contracted during the war. Some expedient, therefore, was necessary to provide for the liquidation of these vast additional debts; and it was in the means taken to do so that the extensive foresight and unshaken constancy of Mr Pitt is to be discerned. He laid it down as a principle, which was never on any pretence whatever to be departed from, that, when any additional loan was contracted, provi-

sion should be made for its gradual liquidation. "We ought," said Mr Pitt, "not to confine our views to the sinking-fund, compared with the debt now existing. If our system stops there, the country will remain exposed to the possibility of being again involved in those embarrassments which we have in our own time so severely experienced, and which apparently brought us to the verge of bankruptcy and ruin. To guard against such dangers hereafter, we should enact that, whenever any loan shall take place in future, unless it be raised on annuities, which will terminate in a moderate number of years, there should of course be issued out of the consolidated fund,* to the commissioners for the reduction of the national debt, *an additional sum sufficient to discharge the capital of such loan in the same period as the sinking-fund, after reaching its largest amount, will discharge what will then remain of the present debt.* To do this, one hundredth part of the capital borrowed would be sufficient to be raised from the country on such emergencies; for instance, supposing it were necessary to raise by loan ten millions, £100,000 should be raised in addition to the existing funds appropriated to the redemption of the debt, in order to relieve the country within a given time of this additional burden. In addition to this, I propose that £200,000 a-year additional should, from this time forward, be regularly granted out of the ordinary revenue of the country to the sinking-fund." Mr Fox stated, "That he had ever maintained the necessity of establishing a fund for reducing the national debt, and that as strongly when on the Ministerial as when on the Opposition benches. He had not the power to promote it as effectually as Mr Pitt, but he wished it as warmly."[1] In conformity with the united opinion of these great men,

[1] Parl. Hist. xxix. 1050, 1058.

* The consolidated fund was a certain portion of the ordinary taxes, which were amassed together and devoted to certain fixed objects of national expenditure. The surplus of this fund, as it was called, or the excess of those branches of revenue above the charges fixed on them, was annually appropriated during war among the ways and means to the current war expenditure.

CHAP. XLI.

1792-1802.

it was enacted by the statute passed on the occasion, " That whenever in future any sums should be raised by loans on perpetual redeemable annuities, a sum equal to one per cent on the stock created by such loan should be issued out of the produce of the consolidated fund quarterly, to be placed to the account of the commissioners."[1] Every additional loan was thus compelled to draw after itself, as a necessary consequence, a fresh burden, by the annual payment of which the extinction of the principal might to a certainty be expected in little more than forty years.

[1] 32 Geo. III. c. 69.

14. Modification of the system introduced in 1802.

Under this system the whole loans were contracted, and the sinking-fund was managed, till 1802; and as immense sums were borrowed during that period, the growth of the sinking-fund was far more rapid than had been originally contemplated. In that year an alteration of some importance was made, not indeed by Mr Pitt, but by Mr Addington, then Chancellor of the Exchequer, with his consent and approbation. " The capital of the debt," said he, "is now £488,000,000; its interest, including the charges of the sinking-fund, £23,000,000. It is impossible to contemplate either the one or the other without the utmost anxiety. What 1 now propose is, that the limitation which was formerly provided against the accumulation of the original sinking-fund should be removed ; and that both that original fund and the subsequent one, created by the act of 1792, should be allowed to accumulate till they have discharged the whole debt." This proposition was unanimously agreed to : it being enacted, " that this fund should accumulate till the whole existing redeemable annuities should be paid off." By this act, the original sinking-fund of £1,000,000, with the £200,000 subsequently granted, and the one per cent on all the subsequent loans, were combined into one consolidated fund to be applied continually, at compound interest, till the whole debt then existing was paid off, which it was calculated would be in forty-five years.[2]

April 14.

[2] **Parl.** Hist *xxxv*. 890, 892.

Under these three acts of 1786, 1792, and 1802, the sinking-fund continued to be administered with exemplary fidelity, not only during Mr Pitt's life, but after his death, till 1813, when a total change in the system took place, which eventually led to its ruin, and has, to all appearance, rendered the financial state of the country almost desperate. To obtain a clear view of the practical effects of Mr Pitt's system, it is necessary to anticipate somewhat the march of events, and give a summary of the operation of the sinking-fund which he established, down to the period when it was abandoned by his more embarrassed and less provident successors.

15. Immense results of the sinking-fund.

From the accounts laid before parliament, it appears that the sinking-fund of a million which Mr Pitt established in 1786, had increased, by accumulation at compound interest, and the great additions drawn from the one per cent on the vast loans from 1792 to 1812, to the enormous sum of *fifteen millions and a half yearly* in 1813, while the debt which it had discharged during that period amounted to no less than £238,231,000 sterling. This great increase had taken place in twenty-seven years; whereas Mr Pitt had calculated correctly that his original million would be only four millions in twenty-eight years; the well-known period of the quadruplication of the sum at compound interest of five per cent. The subsequent £200,000 a-year granted, undoubtedly accelerated in a certain degree the rate of its advance ; but the true cause of the extraordinary and unexpected rapidity of its increase is to be found in the prodigious accumulation which the one per cent on subsequent loans produced. This distinctly appears from the table on next page, showing the sums paid off by the sinking-fund in every year from 1786 to 1813—the loans contracted during that period—the stock redeemed by the commissioners, and the proportion of each loan paid to them for behoof of the public debt. It thence appears how rapidly and suddenly the sinking-fund rose, with the immense sums

CHAP. XLI. 1802.

borrowed at different periods during the war; and when it is recollected that the loans contracted from 1792 to 1815 were £585,000,000, it will not appear surprising, that even the small sum of one per cent on each, regularly issued to the national debt commissioners, should have led to this extraordinary and unlooked-for accumulation.*

16. **Obloquy to which it became exposed.**

It is this subsequent addition of one per cent on all loans contracted since the institution of the sinking-fund, which has been the cause at once of its extraordinary increase and subsequent ruin. While the nation in general were entirely satisfied with Mr Pitt's financial statements, and, delighted with the rapid growth of the sinking-fund, never examined whether the funds for its prodigious extension were provided by the fictitious supply

Table showing the progressive growth of the sinking-fund.

of loans, or the solid growth of the revenue above the expenditure, a few more sagacious observers began to inquire into the solidity of the whole system, and, mistaking its past operation, which had been almost entirely *during war*, for its *permanent* character, which was to appear chiefly on the return of peace, loudly proclaimed that the whole was founded on an entire delusion : that a great proportion of the sums which it paid off had been raised by loans; that at all events, a much larger sum than the amount of the debt annually redeemed, had been actually borrowed since the commencement of the war; that it was impossible that a nation, any more than an individual, could discharge its debts by mere financial operations; and that the only way of really getting quit of encumbrances was by bringing the expenditure permanently under the income.[1]

[1] **Hamilton on the sinking-fund, and others.**

17. **General diffusion of this delu-**

These doctrines soon spread among a considerable part of the thinking portion of the nation; but they made little general impression till the return of peace had diverted into other channels the attention of the people, formerly concentrated on the career of Napoleon; and democratic ambition, taking advantage of national distress, had begun to denounce all that had formerly been done by the patriots who had triumphed over its principles. Then they speedily became universal. Attacks on the sinking-fund were eagerly diffused and generally credited —the delusion of Mr Pitt's system, the juggle so long practised on the nation, were in every mouth. The meanest political quacks, the most despicable popular demagogues, ventured to discharge their javelins at the giants of former days. The heedlessness of future consequences, which ever distinguishes the masses of mankind, came to infect general opinion: the aversion to taxation, so general among the many, made them lend a ready ear to any proposed reduction of taxation, without the slightest regard to its influence on the future fortunes of the empire ; and a system on which the greatest and best of

CHAP. XLI.

1802.

men in the last age had been united—in commendation of which Fox had vied with Pitt, and Sheridan with Burke—was universally denounced as the most complete and ruinous deception that ever had been palmed off by official fraud on the credulity of mankind.

18. Which is the more dangerous, as it involves much abstract truth mixed with error.

Had these doctrines been confined to the declamations of the hustings, or the abuse of newspapers, they would have furnished the subject only of curious speculation on the way in which principles, just to a certain extent, and truths, undeniable as they were originally stated, became perverted, when they were employed, beyond what their authors intended, as an engine for the purposes of faction or ambition. But unhappily the evil soon assumed a much more serious complexion. The prevailing ideas spread to the legislature; and the statesmen who succeeded to the government, imbued partly with the declamation of the period, influenced partly by the desire of gaining a temporary popularity by the reduction of the public burdens, without any regard to the interests of future times, went on borrowing or abstracting from the sinking-fund till it was totally extinguished. During the great convulsion of 1832, the commissioners for the reduction of the national debt issued an official intimation that their purchases for the public service had altogether ceased. The same mournful notice has since repeatedly been sent forth from the same office, accompanied, in some cases, with the still more alarming intelligence, that during a profound peace a considerable addition had been made annually to the total amount of the national debt. The principle acted upon since 1823, when it was first announced in parliament, has been to apply to the reduction of debt no more than the annual surplus of the national income above its expenditure; and as that surplus, under the jealousy of expenditure incident to a democratic system, can never be expected to be considerable, Mr Pitt's sinking-fund may now, to all practical purposes, be considered as destroyed."*

*** The following table exhibits the progression and decline of the sinking-**

19. Comparison of the arguments for and against the sinking-fund.

In the preceding observations, the march of events has been anticipated by nearly thirty years, and changes alluded to which will form an important subject of analysis in the subsequent volumes of this, or some other history. But it is only by attending to the abandonment of Mr Pitt's system, and the effects by which that change has been, and must be attended, that the incalculable importance of his financial measures can be appreciated, or the wisdom discerned which, so far as human wisdom could, had guarded against the evils which must, to all appearance, in their ultimate consequences, dissolve the British empire. It is perfectly true, as Mr Hamilton and

fund from the time of its being first instituted in 1786, till it was broken upon by Mr Vansittart in 1813, and till its virtual extinction in 1838 :—

—PORTER'S *Parl. Tables*, i. and ii. 6, 8; PEBRER'S *Tables,247;* MOREAU'S *Tables;* PORTER'S *Progress of the Nation*, ii. 260 ; and for 1833,1834,1835,1836, pp. 3, 4, each year.

N.B.—This table exhibits the progress of the sinking-fund and stock redeemed in Great Britain and Ireland, which explains its difference from the preceding table, applicable to Great Britain alone.

Since 1838 to 1843, no money has been applied to the reduction of the national debt; on the contrary, fresh debt, to the amount of £10,000,000, **has** been contracted, being at the average of £1,650,000 a-year. About as much has been paid off since 1843, but wholly by the operation of the war income-tax.—PORTER'S *Parl. Tables*, vii. 4, and viii. 4.

CHAP. XLI.

1802.

the opponents of the sinking-fund have argued, that neither national nor individual fortunes can be mended by mere financial operations—by borrowing with one hand, while you pay off with another ; and unquestionably Mr Pitt never imagined that if the nation was paying off ten millions a-year, and borrowing twenty, it was making any progress in the discharge of its debt. In this view, it is of no moment to inquire what proportion of the debt annually contracted was applied to the sinking-fund; because, as long as larger sums than that fund was able to discharge were yearly borrowed by the nation, it is evi dent that the operation of the system was attended with no *present* benefit to the state ; nay, that the cost of its machinery was, for the time at least, an addition to its burdens. But, all that notwithstanding, Mr Pitt's plan for the redemption of the debt was founded not only on consummate wisdom, but on a thorough knowledge of human nature. To be convinced of this we have only to look to the causes which have led to the abandonment of the sinking-fund since the war, and the state in which that abandonment has left the finances of the empire.

20. Value of the system in time of peace.

Mr Pitt never looked to the sinking-fund as the means of paying off the debt while loans to a larger amount than it redeemed were contracted every year : he regarded it as a fund which would speedily and certainly effect the reduction of the debt *in time of peace** It was then that its real effect was to be seen : it was then that the debt contracted during war was to be really

Pitt clearly saw the ob jections since urged against the system.

" Mr Pitt's speech on the budget in 1798, affords decisive evidence that he laboured under no delusion on the subject of the operation of the sinking-fund during war; but always looked forward to its effects when loans had ceased, in consequence of the return of peace, as exemplifying its true character, and alone effecting a real reduction of the debt. " By means of the sinking-fund," said he, " we had advanced far in the reduction of the debt previous to the loans necessarily made in the present war, and every year was attended with such accelerated salutary effects as outran the most sanguine calculation. But having done so, we have yet far to go, as things are circumstanced. If the reduction of the debt be confined to the operations of that fund, and the expenses of the war continue to impede our plans of economy,—we shall have to go far *before the operation of that fund, even during peace, can be expected to counteract the effects of the war.* Yet there are means by which I am confident

discharged. And the admirable nature of the institution consisted in this, that it provided a system, with all the machinery requisite for its complete and effective operation, which, although overshadowed and subdued by the vast contraction of debt during war, came instantly into powerful operation the moment its expenditure was terminated. This was a point of vital importance; indeed, without it, as experience has since proved, all attempts to reduce the debt would have proved utterly nugatory. Mr Pitt was perfectly aware of the natural impatience of taxation felt by mankind in general, and the especial desire always experienced, when the excitement of war ceases, that its expenditure should draw to a termination. He foresaw, therefore, that it would be impossible to get the popular representatives, at the conclusion of a contest, to lay on *new* taxes, and provide for a sinking-fund to pay off the debt which had been contracted during its continuance. The only way, therefore, to secure that inestimable object, was to have the whole machinery constructed and in full activity during war, so that it might be at once brought forward in entire and efficient operation, upon the conclusion of hostilities, without any legislative act or fresh imposition whatever, by the mere termination of the contraction of loans.

From what has now been stated, it will readily be discerned in what the grand merit of Mr Pitt's financial system consisted. It was the imposition, by law, of sufficient *indirect* taxes to meet not only the interest of

it would be possible, in not many years, to restore our resources, and put the country in a state equal to all exigencies. Not only do I conceive that the principle is wise and the attempt practicable to procure large supplies out of the direct taxes from the year, but I conceive that it is equally wise, and not less practicable, to make provision for the amount of the debt incurred and funded in the same year: and if the necessity of carrying on the war shall entail upon us the necessity of contracting another debt, this principle, if duly carried into practice, with the assistance of the sinking-fund to co-operate, will enable us not to owe more than we did at its commencement. I *cannot indeed take it upon me to say that the war will not stop the progress of liquidation;* but if the means I have pointed out are adopted, and resolutely adhered to, it will leave us at least stationary."—*Pari Hist* xxxiii. 1053,1054.

1802.

22. Proof of these principles afforded by the result during tho last twenty

The result has completely proved the wisdom of these views. Crippled and mangled as the sinking-fund has been by the enormous encroachments made upon it by the administrations of later times, it has yet done much during the peace to pay off the debt—amply sufficient to demonstrate the solidity of the principles on which it was founded. In the sixteen years from 1816 to 1832, even after these copious reductions, it has discharged more than eighty-two millions of the debt, besides the addition of seven millions made by the bonus of five per cent granted to the holders of the five per cents, which were reduced to four: that is, it has paid off in that time nearly ninety millions.* It is not a juggle which, in a time so short in the lifetime of a nation, and during the greater part of which Great Britain was labouring under severe distress in almost all the branches of its industry, was able, even on a reduced scale, to effect a reduction so considerable.

23. It is clearly the only way of effecting a reduction of the debt.

Nor has the experience of the last twenty years been less decisive as to the absolute necessity of making the provision for the liquidation of the debt part of a permanent system, to which the national faith is absolutely and unequivocally bound, and which depends for no part of its efficiency upon the votes or financial measures of the year. Since this ruinous modification of Mr Pitt's unbending self-poised system was introduced; since the fatal precedent was established of allowing the minister to determine, by annual votes, how much of the sinking-fund was to be applied to the current services of the year,

1802.

and how much reserved for its original and proper destination, the encroachment on the fund has gone on continually increasing, till at length it has, to all practical purposes, swallowed it entirely up. The sinking-fund, when thus broken upon, has proved the subject of continual subsequent violation, till the shadow even of respect for it is gone. If such has been the fate of this noble and truly patriotic establishment, even when no increased burden was required to keep it in activity, and the temptation which proved fatal to its existence was merely the desire to effect a reduction of taxes long borne by the nation, it is easy to see how utterly hopeless would have been any attempt to make considerable additions to the annual burdens upon the conclusion of hostilities, with a view to effect a diminution of the public debt; and how completely dependent, therefore, the sinking-fund was for its very existence upon Mr Pitt's system of having all its machinery put in motion at the time the loans were contracted during war, and its vast powers brought into full view, *without any application to the legislature,* by the mere cessation of borrowing, on the return of peace."[5]

Durable and far-seeing system which he had established.

* In Mr Pitt's Financial Resolutions, in the year 1799, which embrace a vast variety of important financial details, there is the clearest indication of the lasting and permanent system to which he looked forward with perfect justice for the entire liquidation of the public debt. One of these resolutions was,— " That supposing the price of 3 per cent stock to be on an average, after the year 1800, £90 in time of peace, and £75 in time of war, and the proportion of peace and war to be the same as for the last hundred years, the average price of peace and war will be about £85 ; that the whole debt created in each year of the present war will be redeemed in about forty years from such year respectively, and the whole of the capital debt existing previous to 1793 will be redeemed in about forty-seven years from the present time; that from 1808 to 1833 (at which time the capital debt created in the first year of the present war would be redeemed, and the taxes applicable to the charges thereof would become disposable,) taxes would be set free in each year of peace to the amount of £133,000, and of war to that of £168,000; that the amount of the sum annually applicable to the reduction of the debt would, in the course of the same period, gradually rise from £5,000,000 to £10,400,000; and that, on the suppositions before stated, taxes equal to the amount of the charges created during each year of the present war will be successively set free, from 1833 to 1840, to the amount in the whole of £10,500,000, and about 1846, further taxes to the amount of £4,200,000, being the sum applicable from 1808 to the

24. Had it been adhered to, the whole debt would **have been discharged in 1845.**

Not a shadow of a doubt can now remain that Mr Pitt's and Mr Addington's anticipations were well founded, and that if their system had been adhered to since the peace, the whole national debt would have been discharged by the year 1845. The payment of eighty millions, under the mutilated system, since 1815, affords a sample of what might have been expected had its efficiency not been impaired. Even supposing that, for the extraordinary efforts of 1813, 1814, and 1815, it had been necessary to borrow from the commissioners the whole sinking-fund during each of these years, still, if the nation and its government had possessed sufficient resolution to have resumed the system with the termination of hostilities, and steadily adhered to it since that time, the debt discharged by the year 1836 would, at five per cent, have been above five hundred millions, and the sinking-fund would now (1835) have been paying off above forty millions a-year.* Or, if the national engagements would only have permitted the sinking-fund to have been kept up at ten millions yearly from the produce of taxes, and if the accumulation were to be calculated at four per cent, which, on an average, is probably not far

reduction of the debt existing previous to 1793; making in all, when the whole debt is extinguished in 1846, a reduction of £19,000,000 yearly." Such was the far-seeing and durable system of this great statesman; and experience has now proved that, if his principles had been adhered to, and the taxes applicable to the charges of the debt had not been imprudently repealed, these anticipations would have been more than realised, notwithstanding the vast increase of the debt since that time.[1]

[1] **Pari. Hist. xxxiv. 1135.**

* Table I., showing what the sinking-fund, accumulating at five per cent, if maintained at £15,000,000 a-year, would have paid off from 1816 to 1836 :— **Tables showing the progressive growth of a sinking-fund of fifteen and one of ten millions, from 1816 to 1836.**

1816	£15,000,000	Brought forward,	£212,660,625
1817	15,750,000	1827	25,530,240

CHAP. XLI. 1802.

from the truth, the fund applicable to the reduction of the debt would now have been above twenty millions annually, and the debt already discharged would have exceeded three hundred and thirty millions! A more rapid reduction of funded property would not probably have been consistent, either with a proper regard to the employment of capital, or the due creation of safe channels of investment, to receive so vast an annual discharge from the public treasury.

25. Causes which have led to the decay *of* this system.

Everything, therefore, conspires to demonstrate that Mr Pitt's system for the reduction of the national debt was not only founded on just principles and profound foresight, but on an accurate knowledge of human nature, a correct appreciation of the principles by which such a salutary scheme was likely to be defeated, and the means by which alone its permanent efficiency could be secured. And no doubt can now remain in any impartial mind, that, if that system had been resolutely adhered to, the whole debt contracted during the wars of the French Revolution might have been discharged in little more than the time which was occupied in its contraction.

Table I I., showing what the sinking-fund, if maintained from the taxes at £10,000,000 sterling, and if accumulating at four per cent only, would have paid off from 1816 to 1836 •—

1816 . . .	£10,000.000	Brought forward,	£138,243,700
1817	10,400,000	1827	16,032,580

1826	15,415,944	1836	23,107,724
Carry forward,	£138,243,700	Total in 20 years,	£331,005,428

Supposing the stock, in the first case, purchased on an average at 90 by the commissioners, the £533,708,430 sterling money would have redeemed a tenth more of the stock, or £587,000,000. Supposing it bought, in the second case, at an average of 85, which would probably have been about the mark, the £342,000,000 sterling money would have purchased nearly a seventh more of stock, or £385,357,000, being just about a half of the debt existing at this moment, (1835.)

What is it, then, which has occasioned the subsequent ruin of a system constructed with so much wisdom, and so long adhered to under the severest trials with unshaken fidelity ? The answer is to be found in the temporary views and yielding policy of succeeding statesmen: in the substitution of ideas of present expedience for those of permanent advantage; in the fatal contraction of the currency in 1819, which rendered the continuance of the indirect taxes which formed the basis of the sinking-fund difficult, and in the end impossible; in the advent of times when government looked from year to year, not from century to century ; in the mistaking the present applause of the unreflecting many for that sober approbation of the thoughtful few, which it should ever be the chief object of an enlightened statesman to obtain.

26. It was the desire for present popularity in the government.

When a Greek orator was applauded by the multitude for his speech, the philosopher chid him ; " for," said he, " if you had spoken wisely, these men would have given no signs of approbation." The observation is not founded on any peculiar fickleness or levity in the Athenian people, but on the permanent principles of human nature, and that general prevalence of the desire for temporary ease over considerations of permanent advantage, which it is the great object of the moralist to combat, and to the influence of which the greatest disasters of private life are owing. And, without relieving subsequent statesmen of their full share of responsibility for an evil which will now in the end probably consign the British empire to destruction, it may safely be affirmed that the British people, and every individual amongst them, must bear their full share of the burden. A general delusion seized the public mind. The populace loudly clamoured for a reduction of taxation, without any regard to the consequences, not merely on future times, but their own present advantage. The learned fiercely assailed the sinking-fund, and, with hardly a single exception, branded the work of Pitt and Fox as a vile impos-

CHAP. XLI.

1802.

ture, incapable of standing the examination of reason or experience. The Opposition vehemently demanded the remission of taxes; the government weakly granted the request. Year after year passed away under this miserable delusion; tax after tax was repealed amidst the applause of the whole nation;* the general concurrence in the work of destruction for a time almost obliterated the deep lines of party distinction, and, amidst mutual compliments from the Opposition to the Ministerial benches, the broad foundations of British greatness were loosened; the provident system of former times was abandoned; revenue, to the amount of forty millions a-year, surrendered without any equivalent; and the nation, when it awakened from its trance, found itself saddled for ever with eight-and-twenty millions as the

interest of debt, without any means of redemption, and with a democratic constitution which rendered the construction of any such in time to come utterly hopeless.

27. Great error in not repealing at once all the direct taxes on the peace.

The people were entitled to demand an instant relaxation from taxation upon the termination of hostilities; the pressure of the war taxes would have been insupportable when the excitement and expenditure of war were over. The income tax could no longer be endured; the assessed taxes and all the direct imposts should at once have been repealed; no man, excepting the dealers in articles liable to indirect taxation, should have paid anything to government. This was a part, and a most important part, of Mr Pitt's system. He was aware of the extreme and well-founded discontent which the payment of direct taxes to government occasions; he knew that nothing but the excitement and understood necessities of war can render them bearable. His system was, therefore, to provide for the extra expenses of war entirely by loans or direct taxes, and to devote the indirect taxes to the interest of the public debt and the permanent charges of government — those lasting burdens which could not be reduced without injury to the national credit or security, on the termination of hostilities. In this way a triple object was gained. The nation, during the continuance of war, was made to feel its pressure by the payment of heavy annual duties, while upon its conclusion the people experienced an instant relief in the cessation of those direct payments to government, which are always felt as most burdensome; and at the same time the permanent charges of the state were provided for in those indirect duties which, although by far the most productive, are seldom complained of, from their being mixed up with the price of commodities, and so not perceived by those who ultimately bear their weight. Mr Pitt's system of taxation, in short, combined the important objects of heavy taxation during war, instant relief on peace, **and** a permanent provision for the lasting expenses of the state,

CHAP. XLI.

1816-1832.

in the way least burdensome to the people. The influence of these admirable principles is to be seen in the custom so long adhered to, and only departed from amidst the improvidence of later times, of separating, in the annual accounts of the nation, the war charges from the permanent expenses, and providing for the former by loans and temporary taxes, for the most part in the direct form, while the latter were met by lasting imposts, which were not to be diminished till the burdens to which they were applicable were discharged.

28. Imprudent remission of indirect taxes since 1816.

Following out these principles, the income tax, the assessed taxes, the war malt-tax, and in general all the war taxes, should have been repealed on the conclusion of hostilities, or as soon as the floating debt contracted during their continuance was liquidated: but on the other hand, the indirect taxes should have been regarded as a sacred fund set apart for the permanent expenses of the nation, the interest of the debt, and the sinking-fund, and none of them repealed till, from the growth of a surplus, after meeting those necessary charges, it had become apparent that such relief could be afforded without trenching on the financial resources of the state. That the growth of population, and the constant efforts of general industry, would progressively have enabled government, without injuring these objects, to afford such relief, at least by the repeal of the most burdensome of the indirect taxes, as the salt tax, the soap and candle tax, and part of the malt tax, is evident, from the consideration that the taxes given up since the peace amount to £42,000,000, while £5,000,000, only have been imposed during the same period; and consequently, after the repeal of the income tax, assessed taxes, and these oppressive indirect taxes, an ample fund for the maintenance of the sinking-fund, even at the elevated rate of fifteen millions a-year, would have remained. Thus Mr Pitt's system involved within itself the important and invaluable qualities of providing amply for the necessities

of the moment, affording instant relief on the termination of hostilities, and yet reserving an adequate fund for the liquidation of all the national engagements in as short a time as they were contracted.*

29. **Little good has been derived from this repeal of indirect taxes.**

If, indeed, the nation had been positively unable to bear the burden of the sinking-fund of fifteen millions drawn from the indirect taxes, it might have been justly argued that the evil consequences of its abandonment, however much to be deplored, were unavoidable; and therefore that the present hopeless situation of the debt may be the subject of regret, but cannot be reproached as a fault to any administration whatever. But unfortunately this was by no means the case. To all appearance, the nation has derived no material benefit from a great part of the taxes thus improvidently abandoned, but has, on the contrary, suffered in all its present interests, as well as its future prospects, from the change. In proof of this, it is only necessary to recollect, that during the war the nation not only existed, but throve under burdens infinitely greater than have been imposed since its termination, and that, too, although the exports and imports at that period were little more than *half* of what they have since become. During the four last years of the war, the sum annually raised by taxes was from sixty-five to seventy-five millions, while twenty years after it was from forty-five to fifty; although, during the first period, the exports ranged from forty-five to sixty millions, and the imports from

twenty-five to thirty; while, during the latter, the exports had risen to seventy-five millions, and the imports to forty-five; and in the last year the former had swelled to the enormous amount of one hundred and five millions, and the latter to sixty.[45]

30. Immense burdens under which the nation prospered during the war.

Without doubt, the prosperity of the later years of the war was in a great degree fictitious: most certainly it depended to a certain extent on the feverish excitement of an extravagant issue of paper, and was also much to be ascribed to a large portion of the capital of the nation being at that period annually borrowed and spent in an unproductive form, to its great present benefit and certain ultimate embarrassment. It is equally clear, that if this had gone on for some years longer, irreparable ruin must have been the result. But there is a medium in all things. As much as the public expenditure before 1816 exceeded what a healthful state of the body politic could bear, so much has the expenditure since that time fallen short of it. Violent transitions are as injurious in political as in private life. To pass at once from a state of vast and unprecedented expenditure to one of rigid and jealous economy, is in the highest degree injurious to a nation; it is like reducing a patient suddenly from an inflammatory diet to the fare of an anchorite. It may sometimes be unavoidable, but unquestionably the change would be much less perilous if gradually effected.

CHAP. XLI.

18164832. 31. Argument on this subject.

It was unquestionably right, at the conclusion of the war, to have made as large a reduction as was consistent with the public security in the army and navy, and to stop at once the perilous system of borrowing money. Such a reduction at once permitted the repeal of the whole direct war taxes. But having done this, the question is, Was it expedient to go a step further, and make such reductions in the indirect taxes, of which no serious complaint was made, as amounted to a practical repeal of the sinking-fund? That was the ruinous measure. The maintenance of that fund at twelve or fifteen millions a-year, raised from taxes, with its growing increase, would to all appearance have been a happy medium, which, without adding to, but, on the contrary, in the long run diminishing, the national burdens, would at the same time have prevented that violent transition from a state of expenditure to one of retrenchment, under the disastrous effects of which, for twenty years after the peace, all branches of industry, with only a few intervals, continued to labour. No one branch of the government expenditure would have gone further to uphold, during this trying time, the industry and credit of the country, and diffuse an active demand for labour through all classes, than that which was devoted to the sinking-fund. Such a fund, beginning at twelve or fifteen millions a-year derived from taxes, and progressively rising to twenty, thirty, and forty millions annually, applied to the redemption of stock, must have had a prodigious effect, both in upholding credit and spreading commercial enterprise through the country. It would have produced an effect precisely opposite to that which the annual absorption of the same sum in loans, during the war, occasioned.

The public funds, under the influence of the prodigious and growing purchases of the commissioners, must have been maintained at a very high level; it is probably not going too far to say, that, since 1820, they would have been constantly kept at from ninety to one hundred. The

CHAP XLI. 1816483

effect of such a state of things in vivifying and sustaining commercial enterprise, and counteracting the depression consequent upon the great diminution of the government expenditure in other departments, must have been immense. The money given for the stock purchased by the commissioners would have been let loose upon the country; their operations must have continually poured out upon the nation a stream of wealth, constantly increasing in amount, which, in the search for profitable investment, could not have avoided giving a most important stimulus to every branch of national industry. The sinking-fund would have operated like a great forcing-pump, which drew a large portion of the capital of the country annually out of its unproductive investment in the public funds, and directed it to the various beneficial channels of private employment. Doubtless the funds necessary for the accomplishment of this great work could only have been drawn from the nation, as the proceeds of the stock purchased by the commissioners, just as the produce of the taxes is all extracted from the national industry. But experience has abundantly proved that such a forcible direction of a considerable part of the national income, to such a productive investment, is often more conducive to immediate prosperity, as well as ultimate advantage, than if, from an undue regard to popular clamour, it is allowed to remain at the disposal of individuals. It is like compelling a spendthrift and embarrassed landowner, not only to provide annually for the interest of his debts, but to pay off a stated portion of the principal, which, when assigned to his creditors, is immediately devoted to the fertilising of his fields and the draining of his morasses.

32. Great immediate as well as ultimate advantages which would have attended keeping up the sinking fund.

Nor is this all The high price of the funds consequent upon the vast and increasing purchases of the commissioners, would have gone far not only to keep up that prosperous state of credit which is essential to the well-being of a commercial country, but have induced numbers of private individuals to sell out, in order to realise the

33. Beneficial result which would have arisen from keeping up the price of the funds.

great addition to their capitals which the rise of the public securities had occasioned. To assert that this forced application yearly of a considerable portion of the national capital to the redemption of the debt, would hare altogether counteracted the decline in the demand for labour consequent on the transition from a state of war to one of peace, would be going further than either reason or experience will justify. But this much may confidently be asserted, that the general prosperity consequent on this state of things could not have failed to have rendered the taxation requisite to produce it comparatively an endurable burden—that the nation would, to all appearance, have been much more prosperous than it has been under the opposite system, and, at the same time, would have obtained the incalculable advantage of having paid off, during these prosperous years, above two-thirds of the national debt. This prosperity, doubtless, would have been partly owing to a forced direction of capital; but, whatever danger there may be in such a state of things while debt is annually contracted, there is comparatively little when it is continued only for its discharge—and when an artificial system has contributed to the formation of a burden, it is well that it should not be entirely removed till that burden is reduced to a reasonable amount.

34. Public errors which led to its abandonment, and their distressing effects.

Every one, when this vast reduction of indirect taxes was going on, to the entire destruction of the sinking-fund and Mr Pitt's provident system of financial policy, looked only, even with reference to present advantage, to one side of the account. They forgot that if the demands of government on the industry of the nation were rapidly reduced, its demands on government must instantly undergo a similar diminution ; that if the exchequer ceased to collect seventy millions a-year, it must cease also to expend it. Every reduction of taxation, even in those branches where it was not complained of, was held forth as an alleviation of the burdens of the nation, and a reasonable ground for popularity to its rulers; whereas,

CHAP. XLI.

1816-1832.

in truth, the relief even at the moment was more nominal than real Though a diminution of those burdens was effected, it took place frequently in quarters where they were imperceptible, and drew after it an instantaneous and most sensible reduction in the demand for labour and the employment of the industrious classes, at a time when such demand could ill be spared, from the same effect having simultaneously ensued from other causes. Great part of the distress which has been felt by all classes since the peace was the result of the general diminution of expenditure, which the too rapid reduction of so many indirect taxes and consequent abandonment of the sinking-fund necessarily occasioned, and which the maintenance of its machinery, till it had fulfilled its destined purpose, would to a very great degree have alleviated. It augments our regret, therefore, at the abandonment of Mr Pitt's financial system, that the change had not even the excuse of present necessity or obvious expedience for its recommendation, but was the result of undue subservience to particular interests, or desire for popularity on the part of our rulers, unattended even by the temporary advantages for the sake of which its incalculable ultimate benefits were relinquished.

35. Lord Castlereagh's error regarding the income tax.

Lord Castlereagh made a most manly endeavour, in 1816, to induce the people to submit for a few years to that elevated rate of taxation by which alone permanent relief from the national embarrassments could be expected; but he committed a signal error in the tax which he selected for the struggle, and deviated as much from Mr Pitt's principles in the effort to maintain that heavy impost, as subsequent administrations did in their abandonment of others of a lighter character. The income tax, being a direct war impost of the most oppressive and invidious description, was always intended by that great statesman to come to a close with the termination of hostilities; and its weight was so excessive, that it was impossible and unreasonable to expect the people to submit any longer

to its continuance. Nothing could be more impolitic, therefore, than to commit government to a contest with the nation on so untenable a ground. It was the subsequent repeal of indirect taxes to the amount of above thirty millions a-year, when they were not complained of, and when the fall in the price of the taxed articles, from the change in the value of money, had rendered their weight imperceptible, which was the fatal deviation from Mr Pitt's principles.

The nation was mainly responsible for this change of

The administrations by whom this prodigious repeal was effected are not exclusively responsible for the result. It is not unlikely that, from the growing preponderance of the popular branch of the constitution, it had become impossible to carry on the government without the annual exhibition of some such fallacious benefit, to gain the applause of the multitude ; and it is more than probable that, from the excessive influence which in later years it acquired, the maintenance of any fixed provident system of finance had become impossible. But they are to blame, and history cannot acquit them of the fault, for not having constantly and strenuously combated this natural, though ruinous, popular weakness ; and if they could not prevail on the House of Commons to adhere to Mr Pitt's financial system, they should at least have laid on them the responsibility of all the consequences of its abandonment. And as the repeal of indirect taxes during peace was the fatal error, so the return to an income-tax during the burdens of the Chinese, and the disasters of the Affghanistaun wars, in 1842, was a wise and manly measure, as much in accordance with the spirit of Mr Pitt's financial policy as the previous calamitous reductions of indirect taxes had been against it.

It was impossible to explain Mr Pitt's system for the reduction of the debt, without anticipating the course of events, and unfolding the ruinous results which have followed the departure from its principles. The paramount importance of the subject must plead the author's

CHAP. XLI. 1816.1832.

apology for the anachronism; and it remains now to advert, with a different measure of encomium, to the funding system on which that statesman so largely acted, and the general principles on which his taxation was founded.

37. Advantage! of the fund-ing system.

It is evident that, in some cases, the funding system, or the plan of providing for extraordinary public expenses by loans, the interest of which is alone laid as a burden on future years, is not only just, but attended with very great public advantage. When a war is destined apparently to be of short endurance, and a great lasting advantage may be expected from its results, it is often impossible, and if possible would be unjust, to lay its expenses exclusively upon the years of its continuance. In ordinary contests, indeed, it is frequently practicable, and when so it is always advisable, to make the expenses of the year fall entirely upon its income; so that, at the conclusion of hostilities, no lasting burden may descend upon posterity. But in other cases this cannot be done. When, in consequence of the fierce attack of a desperate and reckless enemy, it has become necessary to make extraordinary efforts, it is often altogether out of the question to raise supplies in the year adequate to its expenditure; nor is it reasonable, in such cases, to lay upon those who, for the sake of their children as well as themselves, have engaged in the struggle, the whole charges of a contest of which the more lasting benefits are probably to accrue to those who are to succeed them. In such cases, necessity in nations, not less than individuals, calls for the equalisation of the burden over all those who are to obtain the benefit; and the obvious mode of effecting this is by the funding system, which, providing at once by loan the supplies necessary for carrying on the contest, lays its interest as a lasting charge on those for whose behoof the debt had been contracted. Nor is it possible to deny, amidst all the evils which the abuse of this system has occasioned, its astonishing effect in suddenly augmenting the resources of a nation; or to resist the conclusion

deducible from the fact, that it was to its vigorous and happy application, at the close of the war, that the extraordinary successes by which it was distinguished are in a great degree to be ascribed. *

But this system, like everything good in human affairs, has its limits; and if extraordinary benefits may sometimes arise from its adoption, extraordinary evils may still more frequently originate in its abuse. Many individuals have been elevated, by means of loans contributed at a fortunate moment, to wealth and greatness; but many more have been involved, by the fatal command of money which it confers for a short period, in irretrievable embarrassments. Unless suggested by necessity and conducted with prudence—unless administered with frugality and followed by parsimony, borrowing is to nations, not less than individuals, the general road to ruin. It is the ease of contracting compared with the difficulty of discharging; the natural disposition to get a present command of money, and leaving the task of paying it off to posterity, which is the temptation that, to communities not less than single men, so often proves irresistible. Opulent nations, whose credit is high, become involved in debt from the same cause which has overwhelmed almost all the great estates in Europe with mortgages. The existence of the means of relieving present difficulties by merely contracting debt, is more than the firmness either of the heads of families or the rulers of empires can resist. And there is this extraordinary and peculiar danger in the lavish contraction of debt by government, that, by the great present expenditure with which it is attended, a

Its dangers.

*** Loans contracted by the British government in the latter years of the war:—**

1812,	**£24,000,000**	**1814,**	**£58,763,000**
1813,	**27,871,000**	**1815,**	**18,600,000**

Of these great loans upwards of £12,000,000 was, in 1813, 1814, and 1815, applied annually to the subsidising of foreign powers, in consequence of which the whole armies of Europe came to be arrayed in British pay on the banks of the Rhine; while, at the same time, the Duke of Wellington, at the head of 80,000 men, was maintained on the southern frontier of France.—MOBEAU'S *Tables;* PEBRBB, 246.

CHAP. XLI. 1816-1832.

very great impulse is communicated at the time to every branch of industry, and thus immediate prosperity is generated out of the source of ultimate ruin.

Mr Pitt's viewsonthis subject.

Mr Pitt was fully aware both of the immediate advantages and of the ultimate dangers of the funding system. His measures, accordingly, varied with the aspect which the war assumed, and the chances of bringing it to an immediate issue which present appearances seemed to afford. During its earlier years, when the Continental campaigns were going on, and a rapid termination of the strife was constantly expected, as was the case with the Spanish revolution in 1823, or the Polish in 1831, large loans were annually contracted, and the greater part of the war supplies of the year were raised by that means; provision being made for the permanent raising of the interest, and of the sinking-fund for the extinction of these loans, in the indirect taxes which were simultaneously laid on, and to the maintenance of which the national faith was pledged, till the whole debt thus contracted, principal and interest, was discharged."* It is no impeachment of the wisdom of this system, so far as finance goes, that the expectations of a speedy termination of the contest were constantly disappointed, and that debt to the amount of a hundred and sixteen million pounds was contracted before the Continental peace of Campo Formio in 1797, without any other result than a constant addition to the power of France. The question is not, whether the resources obtained from these loans were beneficially expended, but whether the debts were contracted yearly under a belief, founded on rational grounds, that by a vigorous prosecution of the contest it might

	LOANS CONTRACTED.

speedily be brought to a successful issue ? That this view, so far as mere finance considerations are concerned, was well founded, is obvious from the narrow escapes which the French Republic repeatedly made during that period, and the many occasions on which the jealousies of the Allies, or the niggardly exertion of its military resources by Great Britain, let slip the means of triumph when within their grasp.

40. Modification which they received after the first Continental peace in

The financial measures of the British minister, therefore, during this period, were justifiable and prudent : the real error consisted in the misapplication or undue husbanding of the land forces of the country, for which it is not so easy to find an apology. But after the peace of Campo Formio, in 1797, this system of lavish annual borrowing, in expectation of an immediate and decisive result, necessarily required a modification. Great Britain was then left alone in the struggle. Her Continental allies had ail disappeared from the field of battle; and the utmost that she could now expect was, to continue a defensive warfare till time or a different series of events had again brought their vast armies to her side. To have continued the system of borrowing for the war expenses of the year, in such a state of the contest, would have been to go on with measures which were likely to lead to perdition. The war having now assumed a defensive and lasting complexion, the moment had arrived when it became necessary to bring the taxes within the year nearer to a level with the expenditure. This change, and the reasons for it, are thus detailed in Mr Pitt's speech on the budget for the year 1798 :—

" Nineteen millions is the sum which is required for extraordinary expenses in the present year. According to the received system of financial operations, the natural and ordinary mode of providing for this would be by a loan. I admit that the funding system, which has so long been the established mode of supplying the public wants, is not yet exhausted, though I cannot but regret

CHAP. XIX

1798.

the extent to which it has been carried. If we look, however, at the general diffusion of wealth, and the great accumulation of capital; above all, if we consider the hopes which the enemy has of wearing us out by the embarrassments of the funding system, we must admit that the true mode of preparing ourselves to maintain the contest with effect and ultimate success, is to reduce the advantages which the funding system is calculated to afford within due limits, and to prevent the depreciation of our national securities. We ought to consider how far the efforts we shall exert to preserve the blessings we enjoy, will enable us to transmit the inheritance to posterity unencumbered with those burdens which would cripple their vigour, and prevent them from asserting that rank in the scale of nations which their ancestors so long and gloriously maintained. It is in this point of view that the subject ought to be considered. Whatever objections might have been fairly urged against the funding system in its origin, no man can suppose that, after the form and shape which it has given to our financial affairs, after the heavy burdens which it has left behind it, we can now recur to the notion of making the supplies raised within the year, on such a scale of war expense as we are now placed in, equal the expenditure. If such a plan, how desirable soever, is evidently impracticable, some medium, however, may be found to draw as much advantage from the funding system as it is fit, consistently with a due regard to posterity, to afford, and at the same time to obviate the evils with which its excess would be attended. We may still devise some expedient by which we may contribute to the defence of our own cause, and to the supply of our own exigencies; by which we may reduce within equitable limits the accommodation of the funding system, and lay the foundation of that quick redemption which will prevent the dangerous consequences of an overgrown accumulation of our public debt.

" To guard against the undue accumulation of the pub-

lie debt, and to contribute that share to the struggle in which we are engaged which our abilities will enable us, without inconvenience to those who are called upon to contribute, to afford, appears essentially necessary. I propose, with this view, to reduce the loan for this year (1798) to twelve millions, and to raise seven millions by additional taxation within the year. I am aware that this sum does far exceed anything which has been raised at any former period at one time; but I trust that, whatever temporary sacrifices it may be necessary to make, the House will see that they will best provide for the ultimate success of the struggle, by showing that they are determined to be guided by no personal considerations; and that, while they defend the present blessings they enjoy, they are not regardless of posterity. If the sacrifices required be considered in this view—if they be taken in reference to the objects for which we contend, and the evils we are labouring to avert—great as they may be compared with former exertions, they will appear light in the balance. The objects to be attained in the selection of the tax to meet this great increase are threefold. One great point is, that the plan should be diffused as extensively as possible, without the necessity of such an investigation of property as the customs, the manners, and the pursuits of the people would render odious. The next is, that it should exclude those who are least able to contribute or furnish means of relief. The third, that it should admit of those abatements which, in particular instances, it might be prudent to make in the proportion of those who might be liable under its general principles. No scheme, indeed, can be practically carried into execution in any financial arrangement, much more in one embraced in such difficult circumstances as the present, with such perfect dispositions as to guard against hardship in every individual instance ;[1] but these appear to me to be the principles which should be kept in view in the discussion of the proper method to be adopted for meeting

He proposes to augment the supplies raised within the year.

1 Parl. Hist xxxiii. 1042. 1045.

CHAP. XLI. 1798.

the large deficiency which, from the contraction of the loan, it will become necessary to make good by taxation within the present year."

43. Tiebling of the assessed taxes.

In pursuance of these admirable principles, Mr Pitt proposed to treble the assessed taxes, which fell chiefly on the rich, such as servants, horses, carriages; and that the house and window taxes, which in a great measure are borne by the middle ranks, should only be doubled; both under various restrictions, to restrain their severity in affecting the humbler class of citizens. This was agreed to by the committee of the House of Commons; and thus the first step was made in the new system of contracting the loan within narrower limits, and making the supplies raised within the year more nearly approach to its expenditure. But the produce of the tax fell greatly short of the expectations of government, as they had calculated on its reaching seven millions, whereas it never exceeded four millions and a half—a deficiency which demonstrated that the limits of indirect taxation on these objects had been passed, and rendered a recurrence to borrowing necessary in that very year. The trebled assessed taxes thus imposed, however, were, according to Mr Pitt's plan, to be continued only for a limited time, and kept up only as a war burden.[1]

[1] Parl. Hist xxxiii.1076.

44. In Mr Pitt's view, these heavy burdens were to be temporary only.

"I propose," said he, "that the increased assessment now voted shall be continued till the principal and interest of the loan contracted this year shall be discharged: so that after the seven millions shall have been raised within this year, the same sums continued next year, with the additional aid of the sinking-fund, will pay off all that principal and intermediate interest. If you feel yourselves equal to this exertion, its effects will not be confined to the benefits I have stated in the way of general policy; it will go to the exoneration of the nation from increased burdens. Unless you feel that you have a right to expect that, by less exertion, you will be equally secure, and indulge in the hope that, by stopping short of this effort, you

will produce a successful termination of the war, you must put aside all apprehensions of the present pressure, and, by vigorous exertion, endeavour to secure your future stability; the happy effects of which will soon be seen and acknowledged. I am aware it will be said that it would have been fortunate if the system of funding had never been introduced, and that it is much to be lamented that it is not terminated; but if we are arrived at a moment which requires a change of system, it is some encouragement for us to look forward to benefits which, on all former occasions, have been unknown, because the means of obtaining them were neglected. Raise the present sum by taxation in two years, and you and your posterity are completely exonerated from it; but if, on the other hand, you fund its amount, it will entail an annual tribute for its interest, which, in forty years, will amount to no less than forty millions. These are the principles, this is the conduct, this is the language, fit for men legislating for a country that, from its situation, character, and institutions, bears the fairest chance of any in Europe for perpetuity. You should look to distant benefits, and not work in the narrow circumscribed sphere of shortsighted selfish politicians. You should put to yourselves this question, the only one now to be considered, ' Shall we sacrifice, or shall we save to our posterity, a sum of between forty and fifty millions sterling *V* And above all, you should consider the effect which such a firm and dignified conduct would have on the progress and termination of the present contest, which may, without exaggeration, involve everything dear to yourselves, and decide the fate of your posterity."[1]

[1] Parl. Hist. xxxiii.1054, 1055.

45. Great change of system thus introduced.

Here was a great change of system, and a remarkable approximation to a more statesmanlike and manly mode of raising the supplies required for the existing contest. Instead of providing taxes adequate to the interest merely of the sums borrowed, direct burdens were now to be imposed, which in two or three years would discharge

CHAP. XLI. 1799.

the whole principal sums themselves. Au admirable plan and the nearest approximation which was probably then practicable to the only safe system of finance—that of making the supplies raised within the year equal, or nearly equal, to the expenditure. It was soon, however, departed from amidst the necessities or profusion of future years; and from the heavy burdens which it imposes at the moment, and its withdrawing as much capital from the private employment of labour as it adds to the public, it was necessarily attended both with greatly more present suffering, and far less counteracting prosperity, than the more encouraging and delusive system of providing for all emergencies by lavish borrowing, which had previously, and for so long a period, been adopted.

46. First introduction of the income-tax.

The new system, thus commenced, was continued with more or less resolution during all the remainder of Mr Pitt's administration. But, in spite of the clear perception which all statesmen had now attained of the ultimate dangers of the funding system, it was found to be impossible to continue the new plan to the full extent originally contemplated by its author. In the next year, the war again broke out under circumstances the most favourable to the European powers, and sound policy forbade a niggardly system of finance, when, by a great combined effort, it appeared possible to obtain, during the absence of Napoleon on the sands of Egypt, all the objects of the war in a single campaign. Impressed with these considerations, Mr Pitt proposed the income-tax in 1799; a great step in financial improvement, and, if considered as a *war* impost, and regulated according to a just scale, the most productive, and, for such circumstances, the most expedient, that could be adopted. The grounds on which this addition to the national burdens was proposed, were thus stated by Mr Pitt:—

Feb. 1799.

" The principles of finance which the house adopted last year, were, first, to reduce the total amount to be at

47. **Mr Pitt's speech introducing this impost, and his plan.**

present raised by loan; and next, to provide for the deficiency by a temporary tax, which should extinguish the loan within a limited time. The modifications, however, which it became necessary to introduce into the increase of the assessed taxes last year, considerably reduced its amount; and it is now necessary to look for some more general and productive impost, which may enable us to continue the same system of restraining the annual loan within reasonable limits. With this view, it is my intention that the presumption on which the assessed taxes is founded shall be laid aside, and that a general tax shall be imposed on all the leading branches of income. No scale, indeed, can be adopted which shall not be attended with occasional hardship, or withdraw from the fraudulent the means of evasion: but I trust that all who value the national safety will co-operate in the desirable purpose of obtaining, by an efficient and comprehensive tax upon real ability, every advantage which flourishing and invigorated resources can confer upon national efforts." In pursuance of these principles, he proposed that no income under £60 a-year should pay anything: that, from that up to £200 a-year, it should be on a graduated scale; and that for £200 a-year and upwards, it should be ten per cent. No one was to be called on to make disclosure to the commissioners; but if he declined, he was to be liable to be assessed at the sum which they should fix: if he gave in a statement of his receipts, he was, if required, to confirm it on oath. Funded property was to be assessed as well as other sources of income, and the profits of tenants were to be estimated at three-fourths of the rack-rent of their lands. The total taxable income of Great Britain he estimated at £102,000,000 a-year, and calculated the produce of the tax at ten millions sterling. In consideration of this great supply, he proposed to reduce the trebled assessed taxes to their former level, and to restrict the loan to £9,500,000,[1] for which the income-tax was to be mort-

CHAP. XLI.

1799.

48. Objections urged against it.

gaged, after the mortgage imposed for the loan of the former year had been discharged.

In opposition to this bill, it was argued by Sir William Pulteney and a considerable body of respectable members, " That the general and wise policy of the country, from the Revolution downwards, had been to lay taxes on consumption, and consumption only; and to this there was no exception but the land-tax, which was of inconsiderable amount; for even the window-tax was a burden on a luxury which might be diminished at pleasure. Now, however, the dangerous precedent is introduced of levying a heavy impost, not on expenditure or consumption, but on income: that is, of imposing a burden which, by no possibility, can be avoided. If this principle be once introduced, it is impossible to say where the evil may stop; for what is to hinder the government to increase the tax to a fifth, a third, or even a half: that is, to introduce the confiscations which have always distinguished arbitrary governments, and have been in an especial manner the disgrace of the French Revolution \ The great danger of this tax, therefore, is, that it not only sanctions a most odious and dangerous inquisition into every man's affairs, but it is so calculated as to weigh with excessive severity on the middle orders of society, while it would bear but slightly in comparison upon the highest, and totally exempt the lowest. It would destroy the middle class, and do it soon: it would totally prevent the accumulation of small capitals, the great source of general prosperity; and then we should have only two classes in the community—and a miserable community it would be—of noblemen and peasants. The principle that every man should contribute according to his means, is doubtless just: but is this a contribution according to means? Quite the contrary—it is a tax which falls with undue severity upon some classes, and improper lightness on Others. A person possessing permanent and independent income may spend what portion of it he chooses,

without injury to his heirs: but income resulting from personal industry, or from profession, stands in a very different situation; for it is necessary that a part of the income of these descriptions should be laid by as a provision for old age or helpless families. Expenditure, therefore, is the only sure criterion of taxation, because it alone is accommodated to the circumstances or necessities of each individual taxed: and if a few misers, under such a system, may avoid contributing their proper share, they are only postponing the day of payment to their heirs, who, in all probability, will be the more extravagant: and far better that such insulated individuals should escape, than the far-spread injustice be inflicted which would result from the adoption of the proposed alteration."[1]

[1] Parl. Hist. xxxiv. 134, 147.

4.9. [t is adopted by parliament.

The income-tax, notwithstanding these objections, was adopted by the House of Commons in the year 1799; the loan of that year being, for Great Britain and Ireland, £18,500,000, besides £3,000,000 of exchequer bills. But in comparing the amount of the loans which would have been necessary, if this system of increasing the supplies raised within the year had not been adopted, with that actually contracted under the new system, it was satisfactorily shown by Mr Pitt that no less than £120,000,000 would ultimately be saved to the nation by the more manly policy, when the interest which was avoided was taken into account—a striking proof of the extraordinary difference to the ultimate resources of a country, which arises from raising the supplies within the year, and providing them in great part by the funding system. The system of Mr Pitt, however, in regard to these direct taxes, was, in one important particular, a deviation from his general financial policy; and the embarrassing consequences of this deviation speedily became conspicuous. At the first imposition of the treble assessment it was intended as an extraordinary resource, which there was no likelihood would be required

CHAP. XLI. 1799-1806.

beyond one or two years; and, in consequence, it was mortgaged for a considerable proportion of the loans contracted in the years when it was in operation; and the same principle was continued when it was commuted for the income-tax. But when this system continued for several years in succession, it came to violate the principle that these direct taxes, being a burdensome impost, should be continued only while the war lasted; for in the years from 1798 to 1801, the amount thus fixed as a preferable burden on the direct war taxes was no less than fifty-six millions.

50. Change subsequently introduced on the system.

The magnitude of this mortgage obliged Mr Pitt, in 1801, to return to his old mode of contracting loans, by providing, in the increase of indirect taxes, for their interest and the sinking-fund required for their redemption; and, in 1802, when Mr Addington came to arrange the finances for a peace establishment, he got quit altogether of this embarrassing load on the direct taxes, which would have required them, contrary to all principle, to be continued for nine years after the war had ceased, and boldly funded at once the whole of this £56,000,000, as well as £40,000,000 of unfunded debt which existed at the end of the war. For the whole of this immense sum of £96,000,000 he contrived to find sufficient taxes, even when adhering to Mr Pitt's system of making provision in the funding of loans, not only for its annual interest, but for the sinking-fund destined for its redemption. There can be no doubt that this was a very great improvement, and that it restored this branch of our finances to their true principle—which is, that the whole sums required for the interest and redemption of the debt should be raised by indirect taxes, and that direct burdens should be reserved only for the extraordinary efforts made during the continuance of the war—to make the supplies raised within the year as nearly as possible equal its expenditure.[1]

[1] Pari. Deb. viii. 573, 576.

The changes which have now been mentioned embraced

51. Advantages of the new system.

all the leading principles of Mr manciai *system*. In subsequent years the same policy was adopted which had been introduced with so much success in later times, of augmenting as much as possible the supplies raised within the year, and diminishing as much as might be the loan which it was still necessary annually to contract. And of the success with which this system was attended, and the rapid growth of the machinery erected for the extinction of the debt, the best evidence is preserved in the honest testimony of his Whig successor in the important office of chancellor of the exchequer :—" In the year 1803/' said Lord Henry Petty, afterwards Lord Lansdowne, " the proportion of the sinking-fund to the unredeemed debt was as one to eighty-two ; the former being £5,835,000, and the latter £480,572,000. But in the year ending 1st February 1806, the sinking-fund amounted to £7,566,000, and the unredeemed debt was then £517,280,000; making the proportion one in sixty-eight. After this, it is unnecessary for me to enter into any eulogium on the sinking-fund, or to detain the house with any panegyric on its past effects or future prospects. Its advantages are now fully felt in the price of stock and contracting of loans; and independent of all considerations of good faith, which would induce the house to cling to it as their sheet-anchor for the future, they were called to support it, from having had positive experience of its utility. And of the vast importance of raising a great part of the supplies within the year, no better proof can be desired than is furnished by the fact that, during the first ten years of the war, the increase of the debt was £253,000,000—being at the rate, on an average, of twenty-five millions a-year ; whereas, during the three years of the present war, from 1803 downwards, the total sum borrowed has been £36,000,000, being at the rate of twelve millions a-year only."[1]

[1] Ann. Reg. 1806, 70. Parl. Deb. Parl.567,570.

With the exception, however, of the war taxes thus imposed for a special purpose, and which were pledged

CHAP. XLI. 1805-1810.

52. Mr Pitt's permanent taxes were all in the indirect form. Their advantages.

to be temporary burdens, enduring only for the year in which they were raised, or at most for a year or two after it, all the other taxes imposed by Mr Pitt were in the indirect form. And in particular, the interest of the loans annually contracted, when laid as a permanent burden on the nation, and the amounts requisite for the immediate redemption of the principals of which the war taxes were not mortgaged, as was done in 1799, were all proyided for in this mitigated form. The wisdom of this arrangement cannot be better stated than in the words of Mr Hume :—" The best taxes are such as are levied upon consumption, especially those of luxury, because such taxes are least felt by the people. They seem in some measure voluntary, since a man may choose how far he will use the commodity which is taxed. They are paid gradually and insensibly; they naturally produce sobriety and frugality, if judiciously imposed; and being confounded with the natural price of the commodity, they are scarcely perceived by the consumers. Their only disadvantage is, that they are expensive in the levying. Taxes, again, upon possessions are levied without expense, but have every other disadvantage. Most statesmen are obliged to have recourse, however, to them, in order to supply the deficiencies of the others. Historians inform us that one of the chief causes of the destruction of the Roman state was the alterations which Constantine introduced into the finances, by substituting a *universal direct tax in lieu of almost all the tithes, customs, and excise which formerly composed the revenues of the empire.* The people in all the provinces were so grinded by this imposition, that they were glad to take refuge under the conquering arms of the barbarians, whose dominion, as they had fewer necessities and less art, was found to be preferable to the refined tyranny of the Romans."[1] It is to be regarded, therefore, as a capital excellence in Mr Pitt's financial measures, that he not only provided, in permanent imposts, for the interest of the whole public debt and the sinking-

[1] Hume's Essays, i. 365, 366.

fund necessary for its redemption, but made that provision exclusively in taxes in the indirect form, the burden of which is imperceptible, and is never the subject of any general complaint; whereas the direct taxes, which are always felt as so oppressive, were reserved, as a last resource, for the unavoidable exigencies of war, and specially restricted to those years only during which the excitement and necessities of the actual contest were experienced.

53. Arguments for indirect taxation.

In addition to these forcible reasons for always, except in cases of obvious necessity, and when national resources are exhausted, preferring indirect to direct taxation, there is another of perhaps still greater importance which has never yet met with the attention it deserves. It has often been observed with surprise by travellers, that though the sums which are extracted from the people in a direct form by the Turkish Pashas or the Indian Rajahs, have frequently the effect of totally ruining industry, yet they are inconsiderable when compared to the immense revenue derived from the customs and excise in the European states, without any sensible impediment to its exertions. The reason, though not apparent at first sight, when stated appears entirely satisfactory. It consists in a difference to the resources of the state similar to that experienced in agriculture upon the meadows beneath, between drawing off water from the fountain-head and drawing it off at a vast distance below, after it has fertilised numerous plains in its course. If you abstract money in a direct form from the cultivator or the artisan, the revenue taken goes at once from the producer to the public treasury ; but if you withdraw it from the person who ultimately sells the manufactured article to the consumer, it has, *before it is withdrawn,* put the industry of a dozen different classes of persons in motion* The sum received by the government may be the same in both cases : but how immense the difference between the effect upon general industry when it is seized upon by the

CHAP. XLI. 1806-1810.

tax-collector early in its course, and only withdrawn after it has given all the encouragement to different branches of employment it is capable of effecting! Fifty different individuals are often put to their shifts to meet the burden of an indirect tax, and, by their united efforts and increased economy in production, discharge it without difficulty ; a direct one falls in undivided severity on one alone, and if he attempts to throw it upon another, he is immediately met by a diminished sale for his produce. So important is this distinction, that it may safely be affirmed that no nation ever yet was ruined by indirect taxation ; nor can it be so, for before it becomes oppressive it must cease to be productive. Many, however, have been exterminated by much smaller sums levied in the direct form; that method of raising the supplies being attended with this most dangerous quality, that it is often most productive when it is trenching most deeply on the sources of future subsistence.

54. Reply to the objections against them.

Nor is there any foundation for the obvious reply to this argument, based on the observation, that if the productions of industry are taxed in the person of the consumer, he must diminish the quantity which he can purchase, and thus industry will be as effectually paralysed as if the impost were laid directly upon the producer. Plausible as this argument undoubtedly is, the common sense and experience of mankind have everywhere rejected its authority. No complaint was made during the war of fifty-five millions levied annually, by means of indirect taxes, on the people of Great Britain ; but so burdensome was the income-tax, producing only fourteen millions a-year, felt to be, that all the efforts of government could not keep it on for one year after its termination. When the voice of the people was directly admitted, through the portals opened by the Reform Bill, upon the legislature, it was not the forty-two millions levied annually in the indirect form, but the four millions and a half extracted directly by the assessed taxes,

which were made the subject of such loud complaint, that a great reduction in those burdens became indispensable. The people, however unfit to judge of most matters in legislation, may be referred to as good authority in the estimation of the burdens which are felt as most oppressive by them at the moment.

55. Reasons of the superior lightness of indirect taxation.

Nor is it difficult to perceive the reason of this universal opinion among all practical men, how adverse soever it may be to the theoretical opinions of philosophers. Indirect taxes, if judiciously laid on, and not carried to such an excess as to render them unproductive, often do not in reality fall on any one individual with overwhelming severity; they are defrayed by the economy, skill, or improved machinery of all the many persons who are employed in the manufacture of the taxed article. The burden is so divided as to be imperceptible. Portioned out among fifteen or twenty different hands, the share falling on each is easily compensated. A slight increase in the economy of the manufacturer, a trifling improvement in the machinery for production of the article taxed, in the many hands engaged in its preparation, more than extinguishes the burden. The proof of this is decisive: the manufactures of England not only existed, but prospered immensely, under the combined pressure of the heavy indirect taxation and the enormous rise of prices occasioned by the suspension of cash payments during the war: many of them, though the value of money had fallen to a half during that period, were sold at half the price at its termination which they brought at its commencement. Of all the parts of Mr Pitt's financial system, none was more worthy of admiration than that which provided for all the *permanent* expenses of the nation by the indirect taxes'; of all the errors committed by his successors, none has been more prejudicial than the obstinate retention during peace of direct, and the lavish relinquishment of indirect taxes,

It results from these principles, that when an indirect

CHAP. XLI.

1806-1810.

56. **Cases in which indirect taxes, by being excessive, become direct burdens on production.**

tax is very heavy, and laid on a raw material, or one subjected to but a slight manufacturing process, it is frequently impossible for the producer either to compensate the tax by increased skill or economy of the article, or te lay it upon the consumer. In such cases the tax ceases to be an indirect impost on consumption; it becomes a direct burden on production, and, if unduly heavy, may terminate in the total ruin of the class on whom it was imposed. A signal instance of this occurred in Great Britain in regard to the heavy import duties on sugar. The burden formerly of thirty shillings, then of twenty-seven shillings, and afterwards of twenty-four shillings the hundredweight on West India sugar, was little felt during the war, when that article sold for forty or forty-five pounds the hogshead (from £6 to £6, 10s. the cwt.:) but when, on the return of peace, prices fell to twelve or fifteen pounds the hogshead (from 50s. to 60s. the cwt.,) including duty, it became intolerably severe. It then became nearly a hundred per cent on the rude material—the same as if a duty of fifty shillings a-quarter had been laid on wheat raised in England for the home consumption. Nor had either the planter or the refiner the means of eluding this tax to any considerable degree, by either raising the price of the article to the consumer, or diminishing by economy or machinery the cost of its production. The cost of raising rude agricultural produce can hardly ever be diminished to any considerable extent by the application of machinery; and the stoppage of the slave trade necessarily, in the first instance at least, increased the cost of production, while the only way in which it seemed possible to render the burden tolerable was by augmenting the quantity raised, which necessarily depressed to an undue extent the price which it bore in the market. Being unable to diminish the cost of production from these causes, all the efforts of the planters to make head against their difficulties, and defray the interest of their mortgages, by raising more extensive

crops of sugar, only tended to lower prices, and throw the taxes as an exclusive burden on themselves. The proof of this is decisive: the price of sugar in America is generally higher than in England, if the duty be deducted, sometimes by fully a third. In 1831, the price per hundredweight was, in Great Britain, twenty-three shillings and eightpence, excluding duty; while in America it was thirty-six shillings per hundredweight in the same year. Taking into view the greater expense of freight to Britain than to America from these islands, there can be no doubt that almost the whole tax has been paid in many years by the producers, amounting though it now does to a hundred per cent. Nothing more is requisite to explain the almost total ruin which had fallen on these splendid colonies, even before the last fatal measure of emancipating the slaves was carried into effect.[1]

[1] Commons' Rep. on West Indies, 1832, p. 7.

57. Important difference between indirect taxes on rural and manufactured produce.

In all fiscal measures on this subject, there is one principle to be constantly kept in view, to the neglect or oversight of which, more than anything else, the ruin of the West Indies is to be ascribed. This is, that while many branches of manufacturing industry possess the means, by improvements in machinery or the division of labour, of compensating very heavy fiscal burdens, *the raisers of rude produce can hardly ever do the same;* so that, unless they can succeed in laying the tax upon the consumer, which is very often altogether beyond their power, they are forced to pay it entirely themselves, and it becomes a ruinous direct burden on industry. No doubt can exist on this head, when it is recollected not merely how slight is the improvement which agriculture has ever received from the aid of machinery, but that, while in the most highly civilised states, such as England, the cost of raising manufactures is always, notwithstanding heavy taxes and a plentiful currency, less than in ruder states, that of producing agricultural produce is always much greater. Great Britain can undersell the world in manu-

CHAP. XLI.

1806-1810.

factures, but her farmers would be ruined without a corn-law—a fact strikingly illustrative of this vital distinction, and pointing to a very different rate of indirect taxation when applied to rude produce and manufactured articles, which has never yet met with adequate attention.

58. General character of Mr Pitt's financial measures. Their grandeur and foresight.

Such were the general features of Mr Pitt's financial policy. Decried by the spirit of party during his own lifetime, and that of the generation which immediately followed; stigmatised by the age which found itself oppressed by the weight of the burdens he had imposed, and which had forgotten the evils he had averted; obliterated almost, amidst the temporary expedients and conceding weakness of the governments by which he was succeeded, it is yet calculated to stand the test of ages, and appears now in imperishable lustre from the bitter and experienced, though now irrevocable, consequences of it3 abandonment. Grandeur of conception, durability of design, far-seeing sagacity, were its great characteristics. It was truly conceived in a heroic spirit. Burdening, perhaps oppressing, the present generation, it was calculated for the relief of future ages; inflicting on its authors a load of present odium, it was fitted to secure the blessings of posterity when they were mouldering in their graves. Founded on that sacrifice of the present to the future which is at once the greatest violence to ordinary inclinations, the invariable mark of elevated understandings, and the necessary antecedent of great achievements, it required for its successful development, patience, self-denial, and magnanimity in subsequent statesmen equal to his own. It fell, because such virtues could not be found in the age by which he was succeeded. It was abandoned, because the Revolution of 1832 placed a single class of society, that of the moneyed men and traders, in the chief possession of political power. In contemplating his profound plans for the ultimate and speedy liberation of England, even from the enormous burdens entailed on its finances by the Revolutionary war, we feel that we are

conversing with one who lived for distant ages, and who voluntarily underwent, not the fatigues which are forgotten in the glory of the conqueror, but the obloquy consequent on the firmness of the statesman, in the prosecution of what he felt to be for the ultimate good of the nation. In comparing his durable designs with the temporary expedients of the statesmen who preceded and followed him, we experience the same painful transition as in passing from the contemplation of the stately monuments of ancient Egypt, wrought in granite, and constructed for eternal duration, to that of the gaudy but ephemeral palaces of the Arabs who dwell amidst their ruins, and whose brilliancy cannot conceal the perishable nature of the materials of which they are composed.

59. Their errors. Undue extent of the funding system.

While doing justice, however, to the great qualities of this illustrious financier, it is indispensable that we should not draw a veil over his faults; and the application of his own principles to the measures which he sometimes adopted will best explain the particulars in which he was led astray. I. The first great defect which history must impute to the financial measures of Mr Pitt, is having carried too far, and continued too long, the funding system, and not earlier adopted that more manly policy of raising as large a portion as possible of the supplies within the year, the benefits of which he himself afterwards so fully explained. During the years 1793 and 1794, indeed, when formidable armies menaced France on every side, and the iron barrier of the Netherlands was broken through to an extent never achieved by Marlborough or Eugene, a speedy termination of the war might reasonably be expected, and it was just, therefore, to lay the vast expenses of those years in a great degree on the shoulders of posterity. But after that crisis was past—after Flanders and Holland had yielded to the victorious arms of Pichegru—after Spain and Prussia had retired from the struggle, and when the Republic, instead of contending for its existence on the Rhine, was pursuing, under Napo-

CHAP. XLI.

1790-1806.

leon, the career of conquest in Italy, it became evident that a protracted contest was to be expected, and measures of finance suitable to such a state of things should have been adopted. The resolute system of raising a considerable portion of the supplies within the year should have been embraced, at latest, in 1796, and the enormous loans of that and the two following years reduced to one-half. These loans amounted to seventy-five millions; if forty millions had been raised in the time by taxation, in addition to the imposts actually paid, the difference in the sum since paid by the nation down to this time, on account of the loans of these years, would have been above £120,000,000 ! So prodigious is the difference, as regards the ultimate accumulation of burdens, between the energetic and intrepid system of raising a large portion of the supplies within the year, and the more acceptable but delusive policy of providing at the moment only for the interest, and leaving to posterity the charge of providing for the liquidation of the principal.

60. Niggardly use of the military-forces of England.

IL But if the insidious advantages of the funding, were to be preferred to the ultimate benefits of the taxing system, it was indispensable that the warlike resources of the state should have been put forth on a scale, and in a way, calculated to reap sudden advantages commensurate to the immense burdens thus imposed on posterity; that the contest, if gigantic and expensive, was at least to be short and decisive. That the military power of England was capable, if properly directed and called forth, of making such an effort, is now established by experience. The more the histories of the campaigns from 1793 to 1800 are studied, the more clearly will it appear that the armies of France and the coalition were very equally poised; that the scale sometimes preponderated to one side and sometimes to the other, but without any decisive advantage to either party. After three years of protracted strife, the Republican armies, in the close of 1795, were still combating for existence on the Rhme, and gladly

accepted a temporary respite from the victorious arms of Clairfait: after three additional years of desperate warfare, they were struggling for the frontiers of the Var and the Jura against the terrible energy of Suwarroff, and the scientific ability of the Archduke Charles. No doubt can remain, therefore, that the forces on the opposite sides of that great contest were, at these periods at least, extremely nearly matched. With what effect, then, might not the arms of England have been thrown in upon the scene of warfare ; and how would the balance, so long quivering in equilibrium, have been brought down by the addition of fifty thousand British soldiers, then reposing inactive in the British islands, on the theatre of Blenheim or Ramilies !

61. **This was his great defect.**

Herein, therefore, lay the capital error of Mr Pitt's financial system, considered with reference to the warlike operations it was intended to promote. While the former was calculated for a temporary effort only, and based on the principle of great results being obtained in a short time by an extravagant system of expenditure, the latter was arranged on the plan of the most niggardly exertion of the national strength, and the husbanding of its resources for future efforts, totally inconsistent with the lavish present dissipation of its funds. No one would have regretted the great loans from 1793 to 1799, amounting though they did to a hundred and fifty millions sterling, if proportionate efforts in the field had at the same time been made, and if it was evident that nothing had been omitted which could have conduced to the earlier termination of the war. But our feelings are very different when we recollect that during these six years, big with the fate of England and the world, only two hundred and eight thousand men were raised for the regular army, and that a nation reposing securely in a sea-girt and inaccessible citadel, never had above twenty thousand soldiers in the field, out of a disposable force of above a hundred thousand, and that only in the two first years of the war. Mr Pitt's plans for military operations

CHAP. XLI. 1790-1806.

were all based on the action of Continental armies, while the troops of his own country were chiefly employed in distant colonial expeditions; picking off pawns in this manner at the extremity of the board, when by concentrated moves he might have given checkmate to his adversary at the commencement of the game. His military successes, in consequence, amounted to nothing, while his financial measures were daily increasing the debt in a geometrical progression : and thence, in a great measure, the long duration and heavy burdens of the war.

62. **Injudicious system of borrowing in the three per cents.**

III. But the greatest of all Mr Pitt's errors, and the one which was the most inexcusable, because it was most at variance with the admirable foresight and enduring fortitude of his other financial measures, was the extent to which he carried the ruinous system of borrowing in the three per cents—in other words, inscribing the public creditor for £100 in the books of the bank of England, in consideration of only £60 advanced to the nation. That this policy had the effect of lowering the interest of the loans contracted, and thereby diminishing the burdens of the nation at the moment, may be perfectly true; though even that advantage, as will immediately appear, was very trifling. But what was the advantage thus gained, compared to the enormous burden of saddling the nation with the payment of forty pounds additional to every sixty which it had received 1 The benefit was temporary and inconsiderable; the evil permanent and most material. Of the seven hundred and eighty millions which now compose the national debt, about six hundred millions have been contracted in the three per cents; and if this whole debt were to be paid off at par, the nation would have to pay in all two hundred and fifty millions more than it ever received. Supposing it to be redeemed by a sinking-fund at 80, on an average —which, taking a course of years together, of peace and war, is probably not far from the mark, and which coincides with Mr Pitt's estimate in 1799—the surplus to be

paid above what was received, would still be one hundred and fifty millions.

Nor have the evils of this improvident system of borrowing been limited to the great addition thus unnecessarily made to the capital of the national debt. Its effect upon the burden of the interest has been equally unfortunate. Doubtless the loans were, in the first instance, contracted during the war on somewhat more favourable terms, as to interest, than could have been obtained if the money had been borrowed in the 5 per cents—that is, if a bond for £100 had been given for each £100 only paid into the treasury. But as a set-off against this temporary and inconsiderable advantage, what is to be said to the experienced impossibility, with great part of the funds so contracted, of reducing the interest in time of peace? It is impossible to lower the interest of the three per cents till interest generally falls below three per cent; because if it were attempted when the rate was higher, all the stockholders would immediately demand their money, and government, being unable to borrow below the market rate, would become bankrupt. Nevertheless, it may safely be affirmed that interest, on an average, since 1815, has not exceeded, if it has reached, four per cent. Had the national debt all been contracted in the five per cents, it might all have been subjected to the operation which in 1824 proved so successful with the five per cents, and which, on £157,000,000 only of the debt, the amount of that stock, saved the nation at that time £1,700,000 a-year, to which is to be added the half of that sum since gained by the reduction of the same stock to three and a half; the two together, after taking into view the dissentients, having saved the nation, *for ever,* £2,400,000 yearly. Calculating the interest of the £600,000,000 in the three per cents (£360,000,000 sterling) at £18,000,000 a-year, the proportion of this annual burden, which would have been saved by the first reduction of one per cent, would have been £3,600,000, and by the second of one-

63. Its effect in preventing the reduction of interest on peace.

CHAP. XLI.

1790-1806.

half per cent, £1,800,000 more; in all £5,400,000 for ever. The sum already saved to the nation, on interest alone, paid since 1824, would have been above fifty millions sterling. Every twenty years in future the sum saved, with interest, would exceed a hundred and fifty millions.

64. The temporary diminution of interest was no adequate compensation for these evils.

The temporary reduction of interest obtained by contracting the debt in this ruinous manner will bear no sort of comparison with these serious losses, with which the system was ultimately attended. It appears, from the curious table of loans contracted during the war, compiled by Moreau, that the difference in the interest of the loans in the 3 per cents and the 5 per cents was seldom above a half per cent, generally not more than a quarter.'* What

* Take, for example, the following loans contracted in the 3 and 5 per cents, at different periods during the war .—

	Amounts actually paid into Treasury.	Interest	Rate per cent.
	£	£	
1794. Loan in 5 per cents, .	1,907,451	96,326	5 per cent.
Do. in 3 per cents, .	10,806,000	502,791	4⅝ per cent.
1795. Loan in 5 per cents, .	1,490,646	80,494	5⅜ per cent.
Do. in 3 per cents, .	17,777,163	841,374	4¾ per cent.
1796. Loan in 5 per cents, .	2,034,389	101,744	5 per cent.
Do. in 3 per cents, .	8,500,000	493,145	5⅛ per cent.
1797. Loan in 5 per cents, .	17,815,978	1,006,242	5⅛ per cent.
Do. in 3 per cents, .	13,000,000	825,500	5⅜ per cent.
1801. Loan in 5 per cents, .	2,227,012	111,380	5⅛ per cent.
1806. Loan in 3 per cents, .	27,519,544	1,344,487	5⅛ per cent.
1807. Loan in 5 per cents, .	1,293,200	64,660	5⅛ per cent.
Do. in 3 per cents,	10,800,000	512,400	4½ per cent, but £140 stock created for each £60 paid.
1809. Loan in 5 per cents, .	7,932,100	408,678	5⅛ per cent.
Do. in 3 and 4 per cents,	11,600,000	536,433	4⅝ per cent.
1811. Loan in 5 per cents, .	4,909,350	258,315	5⅛ per cent.
Do. in 3 and 4 per cents,	11,925,243	569,500	4½ per cent.
1814. Loan in 5 per cents, .	5,549,400	277,470	5⅛ per cent.
Do. in 3 per cents, .	12,345,076	574,362	4¾ per cent.
1815. Loan in 5 per cents, .	10,313,000	603,310	5⅞ per cent.
Do. in 3 and 4 per cents,	27,000,000	1,517,400	5½ per cent.

—See PEBRER'S *Tables*, 246, from MOREAU.

It clearly appears, from this remarkable table, that the difference between the interest paid on loans in the 3 and the 5 per cents, from the beginning to the end of the war, varied only from a half to an eighth per cent. And the real difference was even less than here appears; for the public creditors were frequently, in the three per cents, inscribed for much more than £100 in consideration of £60 advanced. In particular, in 1807, they received no less than £140 of stock for each £60 paid.

is the additional burden thus undertaken during the contest, to the permanent reduction which the opposite system would have enabled government to have effected on the return of peace ? Even supposing the difference of interest on the loans while the war lasted had been on an average one per cent, what was this burden, during its continuance, to the reduction of the interest *for ever* to four or three-and-a-half per cent % This thing is so clear that it will not admit of an argument. And if the public necessities had rendered it impossible to have raised the additional interest during the year, it would have been better to have contracted an additional loan every year while the inability lasted, to defray the additional interest, than, by contracting the debt on such disadvantageous terms, to have disabled posterity for ever from taking advantage of the return of peace to effect a permanent reduction of the public debts. * So strongly, indeed, has the impolicy of this mode of contracting debt now impressed itself upon the minds of our statesmen, that, by a solemn resolution in 1824, parliament pledged itself never again, under any pressure, to borrow money in any other way than in the 5 per cents : a resolution worthy of the British legislature, and which it is devoutly to be hoped no British statesman will ever forget, but which is too likely to be overlooked, like so many other praise-

* The author was early in life impressed with the disastrous effects of this borrowing in the three per cents, but it was long before he found any converts to an opinion now generally received. In the year 1813, when a student at college, he maintained the doctrines stated in the text on this subject in a company consisting of the most eminent and intelligent bankers in Scotland; and, in particular, contended, that if Mr Pitt could not have afforded to pay annually from the taxes a larger interest for his loans than he actually undertook, he should have "borrowed a *little loan* to pay the interest of the great loan, rather than have contracted debt in the three per cents." They all, however, disputed the justice of the opinion, maintaining that the money could not have been obtained on other terms; and the "little" loan became a standing joke against the author for many years after. Should these lines meet the eye of Mr Anderson of Moredun, one of the oldest and most valued of the author's friends, and now one of the leading partners of the highly respectable firm of Sir William Forbes and Co. of Edinburgh, he will recur, perhaps, not without interest, to this incident.

CHAP. XLI.

1790-1806.

worthy determinations, amidst the warlike profusion or democratic pressure of subsequent times.

65.

In Mr Pitt's view, the sinking-fund was to remedy all these evils.

It is true, as Mr Pitt contemplated the extinction of the whole public debt before the year 1846 by the operation of the sinking-fund, and had provided means which, if steadily adhered to, would *unquestionably have produced that result* even at an earlier period, the disastrous effects which have actually occurred from this mode of contracting so large a portion of the debt are not to be charged so strongly as an error in his financial system. In the contracting of loans, present relief was, in his estimation, the great object to be considered, because the means of certainly redeeming them within a moderate period, on the return of peace, were simultaneously provided. It was of comparatively little importance that the interest of the 3 per cents could not be reduced during peace, when the speedy liquidation of the principal itself might be anticipated; and the addition of nearly double the stock to the sum borrowed appeared of trifling moment, when the only mode of redeeming the debt which any one contemplated, was the purchase of stock by the sinking-fund commissioners at the current market rates. Still, though these considerations go far to excuse, they by no means exculpate Mr Pitt as regards these measures. Admitting that the reduced rate of interest during the war might be considered as a fair set-off against the enhanced rate for the pacific period of nearly the same amount which elapsed before the debt was discharged, still what is to be said in favour of a system which redeems at 85 or 90 a debt contracted at 58 or 60 ? In looking forward to this method of liquidating the debt, as calculated to obviate all the evils of inscribing the public creditor for a larger amount of stock than he had advanced of money, Mr Pitt forgot the certain enhancement of the price of stock by the admirable sinking-fund which he himself had established; and the more strongly and justly he elucidated the salutary tendency of its machinery to

uphold the public credit, the more clearly did he demonstrate the ruinous effects of a method of borrowing which turned all that advance to the disadvantage of the nation in discharging its engagements.*

To Mr Pitt's financial system there belongs a subject more vital in its ultimate effects than any which has been considered, and the whole results of which are even

* It is a common opinion that the great expenses of Mr Pitt's administration were owing to the subsidies so imprudently and needlessly advanced to foreign powers, to induce or enable them to carry on the contest. This, however, is a mistake. The loans and subsidies to foreign powers during the whole war only amounted to £52,528,470; of which no less than £33,000,000 were advanced during the three last years. At Mr Pitt's death the sum was only £6,370,000. The subsidies granted, with the years when they were received, and the other items of the expenditure of the war, were as follows :—(MOREAU,) (PORTER.)

Table of the whole expenses of every year, in every department, during the war.

This most instructive table proves at a glance how little share either the foreign subsidies or civil expenditure had in the vast outlay of fifteen hundred millions during the war. The first was only a thirtieth, the latter hardly a forty-eighth of the total expenditure. The vastness of the sums absorbed by the debt is a striking feature, amounting to more than a third of the whole; but it was in a certain degree unavoidable. The cost of the navy, amounting to about a fifth, is not to be regretted; for it gave England the naval dominion of the globe. It was the prodigious expenditure for the army, amounting to a fourth of the whole, which is the real subject of regret, attended as it was with no exploits worthy of being recorded till the last eight years of the war; coinciding thus with what every other consideration indicates, that it was the niggardly use of that arm, and the ignorance which prevailed as to its efficiency, which was the real reproach of Mr Pitt's administration.

CHAP. XLI.

1797.

66. Vast effects of the suspension of cash payments in 1797.

yet far from being exhausted. The SUSPENSION OF CASH PAYMENTS in 1797, already noticed in the transactions of that year, was a measure of incomparably more importance than any financial step of the past or the present century. When taken in conjunction with the almost total destruction of the productiveness of the Spanish mines in America, in consequence of the revolution which broke out in that country in 1808, and the subsequent and unavoidable resumption of cash payments, by the bill of 1819, in Great Britain, it led the way to a series of changes in prices, and, of consequence, in the relative situation, power, and influence of the different classes of society, more material than any which had occurred since the discovery of the mines of Potosi and Mexico, and which has already subverted the former balance of power in the interior of Great Britain. To it the future historian will perhaps point as the principal cause of the great revolution of England in 1832, and the ultimate decline of the British empire. This important and vital subject, however, so momentous in its consequences, so interesting in its details, requires a separate chapter for its elucidation, and will more appropriately come to be considered in a future volume, when the effects of the monetary changes during the whole war are brought into view, and the commencement of another set of causes, having an opposite tendency, from the rapid decay of the South American mines at its close, is at the same time made the subject of discussion.

67. Causes which produced the suspension of cash payments in 1797. Its powerful operation in increasing the present resources of the state.

At present, it only requires to be observed, that the effects of the suspension of cash payments, whether good or evil, are not fairly to be ascribed to Mr Pitt. They were not, like the consequences of the issue of assignats in France, the result of a barbarous and inhuman confiscation, nor, like the subsequent changes of a similar kind in this country, of moneyed selfishness and theoretical opinions. They were forced on the British statesman by stern necessity. Bankruptcy—irretrievable national

bankruptcy, stared him in the face, if the momentous step was any longer delayed. Once taken, the fatal measure could not be recalled; a resumption of cash payments during the continual pressure and vast expenditure of the war was out of the question. The nation has had ample experience of the shock it occasioned, and the protracted misery it produced, at subsequent periods, even in the midst of profound peace. To hare attempted it during the whirl and agitation of the contest, would at once have prostrated all the resources of the kingdom. No doubt, however, can remain that the suspension of cash payments contributed essentially to increase the available resources of Great Britain for carrying on the war, and is to be regarded as the principal cause of its successful termination. An extension of the circulating medium, especially if accompanied by a great and increasing present expenditure, never fails to have this effect. It is when, from over-issue, it becomes depreciated, or, from distrust of government, discredited, or when the subsequent stoppage or contraction takes place, that the perilous nature of the experiment becomes manifest. Great immediate prosperity to all around him is often produced by the prodigality of the spendthrift; but if he trenches deep, amidst this beneficent profusion, on the resources of future years, the day of accounting will inevitably come alike to himself and his dependants. In seeking for the causes of the vast and continued warlike exertions of England during the war, and of the apparently boundless financial resources which appeared to multiply, as if by magic, with every new demand upon them, just as in investigating the causes of the difficulties under which all classes have laboured since the peace, a prominent place must be assigned to the expansion of the currency, as productive of present strength, as the opposite system of contracting it, after the contest was over, was conducive to future weakness. No financial embarrassments of any moment were experienced while the war lasted, subse-

CHAP. XLI.

1797.

quent to 1797. In vain Napoleon waited for the failure of the funding system, and the giving way of England's financial resources. Year after year the enormous expenditure continued; loan after loan, with incredible facility, was obtained; and at the close of the war, when the revenues of France and all the Continental states were fairly exhausted, the treasures of Great Britain were poured forth with a profusion unexampled during any former period of the struggle.

68. It was the mainspring of the financial strength of the nation during the war.

No existing wealth, how great soever, could account for so prodigious an expenditure. Its magnitude points to an *annual creation* of funds even greater than those which were dissipated. It is in the vast impulse given to the circulation by the suspension of cash payments, and subsequent extension of paper credit of every description, that the great cause is to be found of the never-failing resources of Great Britain during so long a period. Her fleets commanded the seas; her commerce extended into every quarter of the globe; her colonies embraced the finest and richest of the tropical regions; and in the centre of this magnificent dominion was the parent state, the quickened and extended circulation of which spread life and energy through every part of the immense fabric. Great as was the increase of paper in circulation after the obligation to pay in specie was removed, it was scarcely equal to the simultaneous increase in exports, imports, and domestic industry ; and almost boundless as was the activity of British enterprise during those animating years, it must have languished from want of commensurate credit, if it had not been sustained by the vivifying influence of the extended currency. It is evident, also, that the funding system, with all its dangers and ultimate evils, of which the nation since the peace has had such ample experience, was eminently calculated to increase this feverish action of the body politic, and produce a temporary flow of prosperity, commensurate, indeed, to the ultimate embarrassments with which it was to be attended,

but still exciting a degree of transient vigour, which could never have arisen under a more cautious and economical system of management.*

69. Great temporary advantages of the funding system.

The contracting and immediately spending of loans, to the amount of thirty or forty millions a-year, in addition to a revenue of equal amount, raised by taxation, had an extraordinary effect in encouraging every branch of industry, and enabling the nation to prosper under burdens which at first sight would have appeared altogether overwhelming. Government is proverbially a good paymaster, and never so much so as during the whirl and excitement of war. The capital thus sunk in loans was indeed withdrawn from the private encouragement of industry; but it was so only in consequence of being directed into a channel where its influence in that respect was still more

*** Table showing the amount of bank-notes in circulation from 1792 to 1815, with the commercial paper under discount at the Bank during the same period, and the gold and silver annually coined at the Bank, with the exports, imports, and revenue for the same period.**

Thus, in the twenty-four years from 1792 to 1816, the circulation of England, including the large and small notes and commercial paper discounted at the Bank, was more than tripled; the revenue tripled, the exports more than doubled, and the imports increased a half. The increase of commercial paper, from 1792 to 1810, was *sevenfold*—indicating, perhaps, the greatest and most rapid rise in mercantile transactions in the whole history of the world.

CHAP. XLI. 1797-1816.

powerful and immediate than it ever would have been in the hands of individuals. It was in great part dissipated, indeed, in a form which did not reproduce itself, and afforded no means of providing for its charges hereafter; but still that circumstance, how prejudicial soever to the resources of the state in future times, did not diminish the temporary excitement produced by its expenditure. Under the combined influence of this vast contraction of loans and extended paper circulation, the resources of the nation were increased in a rapid and unparalleled progression : exports and imports doubled, the produce of taxes was continually rising, prices of every sort quickly rose, interest was high, profits still higher, and all who made their livelihood by productive industry, or by buying and selling, found themselves in a state of extraordinary and increasing prosperity. That these favourable appearances were to a certain extent delusive ; that the flood of prosperity thus let in upon the state was occasioned by exhausting, in a great degree, the reservoirs of wealth for future emergencies; and that a long period of languor and depression was to follow this feverish and unnatural period of excitement, is indeed certain. But still the effect at the moment was the same; and in the activity, enterprise, and opulence thus created, were to be found the most powerful resources for carrying on the contest. How beneficial soever to the finances of the state in future times it might have been, to have raised the whole supplies by taxation within the year, it was impossible that from such a prudent and parsimonious system there could have arisen the extraordinary vigour and progressive creation of wealth which resulted from the lavish expenditure of the national capital in maintaining the conflict; and but for the profuse outlay, which has been felt as so burdensome in subsequent times, the nation might have sunk beneath its enemies, and England, with all its glories, been swept for ever from the book of existence.

Had Mr Pitt's system, attended as it was, however, with

70. The undue ascendency of popular power led to the undoing of Mr Pitt's durable system for reduction of the debt.

this vast expenditure of capital instead of income on the current expenses, made no provision for the ultimate redemption of the debt thus contracted, it would, notwithstanding the prodigious and triumphant results with which it was attended, have been liable to very severe reprehension. But every view of his financial policy must be imperfect and erroneous, if the sinking-fund, which constituted so essential a part of the system, is not taken into consideration. Its great results have now been completely demonstrated by experience : and there can be no question that, if it had been adhered to, the whole debt might have been extinguished with ease before the year 1845 ; that is, in nearly as short a time as it was created. Great as were the burdens of the war, therefore, he had established the means of rendering them only temporary; durable as the results of its successes have proved, the price at which they were purchased admitted, according to his plan, of a rapid liquidation. It is the subsequent abandonment of the sinking-fund, in consequence of the unnecessary and imprudent remission of so large a proportion of the indirect taxes on which it depended, which is the real evil that has undone the mighty structure of former wisdom ; and for a slight and questionable present advantage, rendered the debt, when undergoing a rapid and successful process of liquidation, a lasting and hopeless burden on the state. The magnitude of this change is too great to be accounted for by the weakness or errors of individuals; the misfortune thus inflicted upon the country too irreparable to be ascribed alone to the improvidence or shortsighted policy of subsequent governments. Without exculpating the members of the administrations who did not manfully resist, and, if they could not prevent, at least denounce the growing delusion, it may safely be affirmed, that the great weight of the responsibility must be borne by the nation itself. If the people of Great Britain have now a debt of seven hundred and seventy millions, with hardly any fund for

CHAP. XLI. 1797-1816.

its redemption, they have to blame, not Mr Pitt, who was compelled to contract it in the course of a desperate struggle for the national independence, and left them the means of its rapid and certain liquidation, but the blind democratic spirit which first, from its excesses in a neighbouring state, made its expenditure unavoidable, and then, from its impatience of present sacrifice at home, destroyed the means of its discharge.

71. And it must ultimately ruin the British empire.

"All nations," says M. Tocqueville, in his profound work on American democracy, "which have made a great and lasting impression on human affairs, from the Romans to the English, have been governed by aristocratic bodies: the instability and impatience of the democratic spirit render the states in which it is the ruling power incapable of durable achievements."[1] The abandonment of a system fraught with such incalculable future advantages as the sinking-fund, but requiring a present sacrifice for its maintenance, affords decisive evidence that the balance of the constitution had become overloaded in reality, before it was so in form, on the popular side, and that the period had arrived when an "ignorant impatience of taxation" was to bring about that disregard of everything but present objects, which is the invariable characteristic of the majority of mankind. During nearly thirty years of aristocratic rule in England, that noble monument of national foresight and resolution progressively prospered : with its decline, the efficiency of the great engine of redemption was continually impaired under the increasing influence of the unthinking multitude; and at length, upon the subversion of that aristocratic predominance by the great change of 1832, it was finally to all practical purposes destroyed. Irretrievable ultimate ruin has thus been brought upon the state ; for not only is the burden now fixed upon its resources inconsistent with the permanent maintenance of the national independence, but the steady rule has been terminated, under which alone its liquidation could have been expected.

[1] Tocqueville, ii. 237.

72. **The contraction of the currency by the bill of 1819 was the cause of this.**

In truth, the abandonment of the sinking-fund, in consequence of the weak and vacillating conduct of the successive administrations in yielding to partial clamours, raised by interested parties for a reduction of taxation affecting themselves, was so enormous an error, and is fraught with such evidently disastrous effects to the future independence and existence of the country, that it would be wholly unaccountable, in an age of intelligence and political activity, were it not explained by the dreadful effects of the sudden and prodigious contraction of the currency which took place in consequence of the act compelling the Bank of England to resume cash payments in 1819. Whoever will cast his eye over the instructive table given in the Appendix to the last volume of this work, will at once perceive that this fatal measure, which, at the very time that the annual supply of the precious metals for the globe had been reduced a half by the effects of the South American revolutions, curtailed the paper circulation of the British islands by *another half*, had the effect of lowering prices for the next thirty years by fully fifty per cent.[45]" The remuneration of industry in every department being so greatly reduced, while money engagements of all sorts, public and private, underwent no diminution, the payment of most of the indirect taxes became impossible. It was an easy matter for the masters engaged in the principal branches of manufacture in the kingdom to prove to the Chancellor of the Exchequer that, under the forcible reduction of prices which the contraction of the currency had produced, they could not carry on their operations without a great reduction or entire liberation from taxation. Such relief had become to them, in many cases, the price of existence. Hundreds of thousands would be thrown out of employment if it was not given. This explains, and can alone explain, the otherwise inexplicable infatuation of so many different administrations in

* See Appendix, Chap. xcv.

CHAP. XLI. 1797-1816.

abandoning to so great an extent the indirect taxes, the sheet-anchor of the British finances. Disastrous as it was, that abandonment was an effect, not a cause. It was the direct and unavoidable effect of a violent and uncalled-for contraction of the currency to the extent of a half, at the very time when the failure in the wonted supplies of the precious metals for the use of the globe, and the prodigious increase of population and transactions in the British islands, most loudly called for its increase.

73. Which was itself owing to the ascendency of the moneyed interest produced by the

But this only removes the difficulty a step further back. How did it happen that government could ever have been induced to give their consent to a measure fraught with such ruinous consequences as this contraction of the currency has proved to be ? It affected the exchequer at least as much as the general industry of the country; it at once stopped the liquidation of the public debt, starved down the military and naval establishments of the empire to a scale inconsistent with its lasting defence, and has kept the treasury ever since in almost ceaseless embarrassments. The solution of this enigma is to be found in the weight acquired in the country by a body previously little regarded, but which has now become paramount to all others, in consequence of the success of the war,—the *moneyed interest.* So vast had been the accumulation of capital during the contest, so immense the numbers, and powerful the influence, of the trading and commercial classes who had risen to affluence while it continued, that they had now come to overshadow all the other classes of the state put together. The classes had become all-powerful whose interest was bo buy cheap and sell dear. The consumers were enabled so set the producers at defiance. The Reform Act, proluced by the wide-spread and universal suffering occasioned by this important change, gave the moneyed interest a permanent sway in the state; for it bestowed two-thirds of the seats in the House of Commons on the

members for burghs, and two-thirds of the votes in every burgh on the trading or moneyed classes, or the persons whom they could influence. Thence the entire deviation of British legislation since that time from all the principles which formerly regulated it. Thence the abandonment of the sinking-fund to cheapen government, of the corn-laws to cheapen labour, of colonial protection to cheapen sugar and wood, of the navigation laws to cheapen freights. England, like imperial Rome, had fallen under the rule of a body of moneyed patricians, whose interests were adverse to that of all the industrious classes in the state, but whose influence outweighed them all put together. They desired to cheapen everything except money, and that they sought to make as dear as possible. Ultimate ruin will be brought upon the British as it was on the Roman empire, from the same cause, and in the same way. And thus the entire success of the measures of protection and a sufficient currency, which formed the leading features of Mr Pitt's domestic policy, was the immediate cause of their abandonment by the next generation, because they reared up a wealthy moneyed class whose interests were at variance with those of industry, but whose influence was beyond its control.

74. These causes will impel the British race to the New World.

But if the sun of British greatness is from these causes setting in the Old, it is from the same cause rising in renovated lustre in the New World. The impatience of the democratic spirit, both in the British isles and on the shores of the Atlantic—the energy it develops, the desires it creates, the burdens which it perpetuates, the convulsions which it induces, all conspire to impel the ceaseless wave of emigration to the west; and the very distresses consequent on an advanced stage of existence force the power and vigour of civilisation into the primeval recesses of the forest. Two hundred thousand of the Anglo-Saxons or Celtic race are now annually impelled, by necessity, ambition, or restlessness,

CHAP. XLI. 1797-1816.

from the British islands to the shores of the New World. * In two centuries the name of England may be extinct, or survive only under the shadow of ancient renown; but a hundred and fifty millions of men in North America will be speaking its language, reading its authors, glorying in its descent. Nations, like individuals, were not destined for immortality; in their virtues equally as their vices, their grandeur as their weakness, they bear in their bosoms the seeds of mortality. But in the passions which elevate them to greatness, equally as in those which hasten their decay, is to be discerned the unceasing operation of those principles at once of corruption and regeneration which are combined in humanity; and which, universal in communities as in single men, compensate the necessary decline of nations by the vital fire which has given an undecaying youth to the human race.

* **In** the year 1848, 258,000 emigrants sailed from the British islands, of whom 244,000 were destined for the United States or Canada, and in 1849 the number was still greater.

*

CHAPTER XLII.

FROM THE PEACE OF PRESSBURG TO THE RENEWAL OF THE CONTINENTAL WAR. JANUARY—OCTOBER, 1806.

CHAP. XLII.

1806.

I. Immense results of the campaign of Austerhtz.

THE peace of Pressburg seemed to have finally subjected the Continent to the empire of France. The greatest and most formidable coalition which had ever been arrayed against its fortunes was dissolved. The military strength of Austria had received, to all appearance, an irreparable wound; Prussia, though irritated, was overawed, and had let the favourable moment for striking a decisive blow elapse without venturing to draw the sword; and even the might of Russia, hitherto held in undefined dread by the states of southern Europe, had succumbed in the conflict, and the northern autocrat was indebted to the generosity of the victor for the means of escaping from the theatre of his overthrow. When such results had been gained with the great military monarchies, it was of little moment what was the disposition of the lesser powers; but they, too, had been terrified into submission, or retired from a contest in which success could no longer be hoped for. Sweden, in indignant silence, had withdrawn to the shores of Gothland; Naples was overrun; Switzerland was mute; and Spain consented to yield its fleets and its treasures to the conqueror of northern Europe. England, it is true, with unconquerable resolution and unconquered arms, still continued the contest; but after the prostration of the Continental

CHAP. XLII.

1806.

armies, and the destruction of the French marine, it appeared no longer to have an intelligible object; while the death of the great statesman who had ever been the uncompromising foe of the Revolution, and the soul of all the confederacies against it, led to a well-founded expectation that a more pacific system of government might be anticipated on the part of his successors.

2. The premiership offered to Lord Hawkesbury, and declined.

The hopes entertained by Napoleon of such a temporary accommodation with England as might leave him at liberty, by fostering his naval power, to prepare the means of its final subjugation, were soon to all appearance likely to be realised. The death of Mr Pitt dissolved the administration of which he was the head. His towering genius could ill bear a partner in power or rival in renown. Equals he had none — friends few ; and with the exception of Lord Melville, whom the pending accusation had compelled to retire from government, perhaps no statesman had ever possessed his unreserved confidence. There were many men of ability and resolution in his cabinet, but none of weight sufficient to take the helm when it dropped from his hands; and when he sank into the grave, the ministry, which was supported by his single arm, fell to the earth. The King, indeed, who was aware of the danger of introducing a change of policy in the midst of a desperate conflict, and still retained a keen recollection of the humiliation to which he had been subjected in consequence of the India bill introduced by the Whigs in 1784, made an attempt to continue the government in the hands of the same party, and immediately after Mr Pitt's death commissioned Lord Hawkesbury to form a new administration on the same basis. But that experienced and cautious statesman soon perceived that the attempt, at that period at least, was impossible, and the only use he made of his shortlived power was the dubious one of accepting the wardenship of the Cinque Ports,[1] which had been held by Mr Pitt, and was the most lucrative sinecure in the gift

[1] Ann. Reg. 1806,18,21. Parl. Deb. iv. 67, 75. Pellew's Sidmouth, ii. 414.

of the crown. This office was pressed upon him by the King, and had undoubtedly been well deserved by his faithful services, for which he had hitherto declined any remuneration; but, being the sole act of a shortlived power, it was much commented on, and gave rise to keen and acrimonious discussions in both houses of parliament under the succeeding administration.

3. **Public opinion on the necessity of a coalition of parties.**

Independently of the acknowledged weakness of the ministry after Mr Pitt ceased to sustain its fortunes, the state of public opinion rendered it extremely doubtful whether any new administration could command general support which was not founded on a coalition of parties, and a union of all the principal statesmen of the time, to uphold the fortunes of the state. The defeat of Austerlitz, and the consequent exposure of Great Britain to the necessity of maintaining the war single-handed against the forces of combined Europe, had made a deep impression on the public mind. Many believed some change of system to be necessary; and the opinion was sensibly gaining ground, that, having unsuccessfully made so many attempts to overthrow the power of revolutionary France by hostility, the time had now arrived when it was not only expedient, but necessary, to try whether its forces might not be more effectually disarmed by pacific relations. Complaints against the abuses of government—some real, some imaginary — during the conduct of so long and costly a war, had multiplied to a great degree. The Opposition journals had increased in number and vehemence of declamation; and the vote against Lord Melville in the House of Commons had shaken the opinion of numbers in the integrity of government, in that point where Mr Pitt's administration had hitherto been regarded as most pure. The Tories, it was said, are exhausted by perpetual service for twenty years ; the hopes of the state are to be found in the ranks of the Whigs; or, at all events,,the time has now arrived when those absurd party distinctions should cease, and all true

CHAP. XLII. 1806.

friends to their country, on whichever side of politics, must unite for the formation of a liberal and extended administration, on so broad a basis as to bring its whole capacity to bear on the fortunes of the state during the perilous times which are evidently approaching. A general wish, accordingly, was felt for the formation of a government which should unite "all the talents" of the nation, without regard to party distinction — a natural wish at all times, and frequently indulged by the British people, but which has never led to any good result in the history of England. It never can do so, except in such a crisis of national danger as would have led the Romans to appoint a dictator, and as calls for the suspension of all difference in foreign or domestic policy for the warding off immediate danger, by which all are equally threatened.[1]

[1] Ann. Reg. 1806,17,25.

4. Mr Fox is sent for.

Yielding, at length, though unwillingly, and with sinister presentiments, to the inclinations of the people and the necessity of his situation, the King, on the 26th January, sent a message to Lord Grenville, so long the firm supporter of Mr Pitt's foreign administration, requesting his attendance at Buckingham House, to confer with his Majesty on the formation of a government. Lord Grenville suggested Mr Fox as the person he should consult on the subject. The King, though personally averse to that statesman, instantly saw the necessity of making his private feelings give way to the public good. "I thought so, and I meant it so," replied the King: and immediately the formation of an administration was intrusted to these two illustrious men. No time was lost in sending for Mr Addington, recently before created Lord Sidmouth, who agreed to form part of the administration. The anxious wish expressed both by the sovereign and the nation that the government should be formed on the broadest possible basis, so as to include all the leading men of the country, led to a coalition of parties,[2] which, although it gave great apparent stability

[2] Ann. Reg. 1806, 21. Pellew's Sidmouth, ii. 414.

at the outset, was little calculated in the end to insure the permanence of the administration.

5. State of parties in the country, and their principles.

Three distinct and well-defined parties, independent of the partisans of Mr Pitt's cabinet, then divided the legislature and the nation. The ardent Whigs, who had adhered through all the horrors of the French Revolution to democratic principles, were represented by Mr Fox and Mr Erskine, and embraced all the zealous adherents of highly popular institutions throughout the country. Parliamentary reform, Catholic emancipation, the repeal of the test acts, the abolition of slavery, peace with France, were inscribed on their banners. Another section of the Whig party existed, who had recently been arrayed in fierce hostility against their former allies. They were composed of the old Whig families which had seceded with Mr Burke, at the commencement of the French Revolution, from the popular side, and acted with Mr Pitt till his resignation in 1800, but never coalesced with his government after his resumption of power. This party, led in parliament by Lord Grenville, Earl Spencer, and Mr Windham, embraced many powerful aristocratic families, and a large portion of private worth and ability, but their hold on the affections of the populace was not so considerable as that of their stancher brethren. In hostility to France, and fierce opposition to revolutionary principles, they yielded not to the warmest partisans of Mr Pitt; but in domestic questions they inclined to the popular side, although they might be expected to form a salutary check on the innovating ardour of the more democratic portion of the government. Less considerable from general support or parliamentary eloquence than either of these great parties, though highly respectable from the weight of private character, the adherents of Mr Addington's administration, who had remained in Opposition ever since they were displaced from power, were still of importance from their business talents and the intimate acquaintance they had

CHAP. XLII. 1806.

with the machinery of government. Lord Sidmouth (formerly Mr Addington) was the leader of this portion of the old Tory administration, whom exclusion from office had led to coalesce, not in the most creditable manner, with their ancient antagonists; and, from the known pacific inclinations of their chief, no serious difference of opinion in the cabinet was anticipated, at least so far as foreign affairs were concerned.

6. Composition of the cabinet.

The leaders of these three parties were combined in the new cabinet; but the preponderance of Mr Fox's adherents was so great as to render the ministry, to all intents and purposes, a Whig administration, which speedily appeared in the universal removal of all Tory functionaries from every office, even the most inconsiderable, under government. Mr Fox, though entitled, from his talents and influence, to the highest appointment under the crown, contented himself with the important office of Secretary for Foreign Affairs, deeming that the situation in which most embarrassment was to be expected, and where his own principles were likely soonest to lead to important results. Lord Grenviile was made First Lord of the Treasury; Mr Erskine, Lord Chancellor; Lord Howick, (formerly Mr Grey,) First "Lord of the Admiralty; Mr Windham, Secretary at War; Earl Spencer, Secretary of State for the Home Department. * The cabinet exhibited a splendid array of ability, and was anxiously looked to by the country, with the undefined hope which naturally arises upon admitting

*** The Cabinet was composed of the following members:—**
Lord Erskine—Lord Chancellor.
Earl Fitzwilliam—President of the Council.
Viscount Sidmouth—Lord Privy Seal.
Lord Grenviile—First Lord of the Treasury.
Lord Howick—First Lord of the Admiralty.
Earl Moira—Master General of the Ordnance.
Earl Spencer—Secretary of State for Home Affairs.
Mr Fox—Foreign Affairs.
Mr Windham—Secretary at War.
Lord Henry Petty—Chancellor of the Exchequer.
Lord Ellenborough—Chief Justice, with a seat in the Cabinet.
—*Ann. Meg.* 1806, 26.

a party whose leaders had been so long celebrated by their eloquence and genius, for the first time, after so long an exclusion, to the administration of public affairs. But, amidst the general satisfaction, there were many who observed with regret that all the members of the recent government were excluded from office, and anticipated no long tenure of power to a coalition which departed thus widely from the path of its predecessors, and voluntarily rejected the aid of all who had grown versant in public affairs. By a stili greater number, the admission of the Lord Chief-Justice into the cabinet was justly regarded as a most dangerous innovation, fraught with obvious peril to that calm and dispassionate administration of judicial duties, which had so long been the glory of English jurisprudence.[1]

7. **First measures of the new ministry. The budget.**

Notwithstanding the essential and total change which the ministry had undergone, and the accession of a party to power who had so long denounced the measures of their rivals as fraught with irreparable injury to the best interests of the state, no immediate change in the policy of government took place; and Europe beheld with surprise the men who had invariably characterised the war as unjust and impolitic, preparing to carry it on with a patience and foresight in no degree inferior to that of their predecessors—a striking circumstance, characteristic alike of the justice of the reasons which Mr Pitt had assigned for its continuance, and the candour of the party who had now succeeded to power. The budget of Lord Henry Petty was but a continuation of the financial system of his great predecessor, modified by the altered situation of affairs, and the necessity which had obviously arisen of making provision for a protracted maritime struggle. The system of raising as large as possible a proportion of the taxes within the year, so happily acted upon since 1798 by the late government, was continued and extended; and, in pursuance thereof, it was proposed to carry the war taxes from fourteen to nineteen millions

CHAP. XLII. 1806.

and a half—an increase which was effected by raising the income-tax from six and a half to ten per cent, and by an addition of 3s. a hundredweight to the duty on sugar. The loan, notwithstanding this great addition, was still £18,000,000, to provide for the interest of which, and for a sinking-fund to redeem the principal, the war wine-duty was declared permanent, producing £500,000 a-year, and an additional duty laid on pig-iron, calculated to produce as much more, besides lesser duties, to the amount in all of £1,136,000.* The great addition to the income-tax was loudly complained of as a grievous burden, and a total departure from all the professions of economy so often made by ministers; but there is reason to believe that indirect taxes could not have been relied on to produce so great an increase as was required in the public revenue ;[1] and there can be no doubt that, in adopting the manly course of making so great a demand on present income

rather than increase the debt, they acted a truly patriotic and statesmanlike part.

a

Return of Napoleon to Paris. Financial crisis there.

The return of Napoleon to Paris, where he arrived on the night of the 26th January, to the great disappointment of the municipality and people, who had made the most magnificent preparations for his triumphal reception, had become necessary, from the financial crisis which had there occurred, and which threatened to involve the government in the most serious embarrassments. This catastrophe, partly arising from political, partly from commercial causes, had long been approaching, and the public consternation was at its height when the Emperor re-entered the Tuileries. Matters had arrived at such a pass, that the public service could no longer be carried on, and nothing but the Emperor's unparalleled victories and speedy return could have averted a national bankruptcy. He had often, during the preceding years, declared his resolution not to issue treasury bills; but he forgot to follow the only rule by which that resource could be averted, that of keeping his expenditure within his income. As it was, he instantly applied his mind, with its wonted vigour, to the consideration of the tremendous crisis which had arisen. Without undressing or going to bed, he sent for the minister of finances at midnight, and spent the whole remainder of the night in a minute and rigid examination of that functionary, and all the persons connected with his establishment. At eleven next day, the council of finance was assembled : it sat nine hours; and when it broke up, M. Mollien was appointed minister of finances, and M. de Marbois, the former minister, dismissed.[1]

[1] Bign. v. 96. Bour. vii. 111. Thiers, \i. 25,187,188.

9. Its ostensible causes.

This panic, which at the time excited such consternation at Paris, and which, if the issue of the campaign had been doubtful, might have been attended with the most disastrous effects, arose from very simple causes. During the whole of 1805, the Bank of France, yielding to the flood of prosperity which on all sides flowed into the empire,

CHAP. XLII. 1806.

and urged on by the constant demand for accommodation on the part of all the contractors and others engaged in the public service, rendered necessary by the expenditure of government constantly keeping in advance of the receipts of the treasury, had been progressively enlarging its discounts. Before the Emperor set out for the army, they had risen from thirty to sixty millions, double the usual amount. In the midst of the apparent prosperity produced by that excessive increase, the sagacious mind of Napoleon perceived the seeds of future evil; and amidst all the turmoil of his military preparations at Boulogne, he repeatedly wrote to the minister of finances on the subject, and warned him of the danger of the Bank of France trusting too far the delusive credit of individuals engaged in extensive transactions, or pushing to an undue length, in the form of a paper circulation, the royal privilege of coining money. * The immense discounts which occasioned the peril were almost entirely granted to the functionaries engaged in the public service, and who, being obliged to make good their payments to government by a certain day, and embarrassed by the remote period to which all payments from the public treasury were postponed, were unavoidably driven to this resource to supply the deficiencies arising from the backward payments of individuals, and the peremptory demands of the treasury, and their credit was in some sort interwoven with that of the general administration.[1] The Bank of France was the quarter to which they in general applied for accommoda-

[1] Bign. v. 85,88. Bour vii. 92, 96. Thiers, vi. 188, *189*, 191.

*** His words are, in a letter to the minister of finances[2]—" The evil originates in the bank having transgressed the law. What has the law done? It has given the privilege of coining money in the form of paper to a particular company; but what did it intend by so doing? Assuredly, that the circulation thus created should be based on solid credit. The bank appears to have adopted a most erroneous principle, which is to discount to individuals, not in proportion to their real capital, but to the number of shares of its capital stock which they possess. That, however, is no real test of solvency. How many persons may be possessed of fifty or a hundred such shares, and yet be so embarrassed that no one would lend them a single farthing ? The paper of the bank is thus issued in many, perhaps a majority of cases, not on real credit, but on a delusive supposition of wealth. In one word, in discounting after this**

[2] From Boulogne, Sept. 24,1805.

tion; but the pressure thus occasioned upon that establishment was so severe that, even after the successes at Ulm, they had announced to the Emperor that they could not continue their advances, and that the drain of specie was such that they themselves stood in the most imminent danger.

1806."

10. Vast speculations of M. Ouvrard.

To relieve the pressure on the bank, attempts had been made to obtain a supply of the precious metals from every quarter whence they could be drawn. For this purpose, recourse was had to certain great mercantile companies, who were engaged in most extensive speculations in all parts of the world, and so deeply implicated in the furnishing of the precious metals to that establishment, that their support on its part was almost a matter of self-preservation. The greatest of these was that of which Ouvrard was the leading partner; and its engagements with the Bank of France were to an enormous amount. This great capitalist had for several years been engaged in vast contracts for the service of the Spanish fleet; and so extensive were his transactions, that almost all the treasures of Mexico found their way into his coffers. Gradually he had introduced himself into the principal departments of the French service ; and before the middle of 1805, nearly seventy millions of francs (£2,800,000) was owing chiefly to the company of which he was a member by the public treasury of that country. The long delays thrown in the way of the liquidation of this debt by the government occasioned an excessive multiplication of paper securities, which soon fell considerably in value in the money market; but so implicated was the

manner, the bank *is coining false money.* So clearly do I see the dangers of such a course, that, if necessary, I would stop the pay of my soldiers rather than persevere in it. I am distressed beyond measure at the necessities of my situation, which, by compelling me to live in camps, and engaging me in distant expeditions, withdraw my attention from what would otherwise be the chief object of my anxiety, the first wish of my heart—a good and solid organisation of all that concerns the interest of banks, manufactures, and commerce." What admirable wisdom in these remarks, written at the camp of Boulogne, in the midst of the boundless arrangements which the march of the army to Ulm, already commenced, must have required, and of which his correspondence furnishes such ample proof!—See BIGNON, V. 85, 86.

CHAP. XL1I. 1806.

treasury in these transactions, that it was compelled to go on in the same perilous course, and thus increase the depreciation, which had already become sufficiently alarming. M. Desprez, a great capitalist, engaged also in the collection of specie, and who had long supported the bank, became embarrassed, and himself solicited aid from that establishment. The consequence was, that the bills of the public contractors sank so much in value that they would no longer pass current in the market; at length they fell so low as 10 instead of 100. A universal disquietude prevailed, and the demands upon the public treasury had already become very heavy, at the moment when it had little else than paper securities in its coffers.[1]

[1] Bign. v. 85,93. Hour. vii. 92,100. Thiers, vi. 197, 201.

11. The immediate cause of the explosion was the absorption of gold for the German war.

Matters were in this critical state when the breaking out of the German war, and departure of the army for the Rhine, occasioned an immense and immediate demand for metallic currency, which alone would pass in foreign states, both on the part of government and individuals. Napoleon, for the different branches of the public service, took fifty millions of francs (£2,000,000) from the Bank of France, without the slightest regard to its necessary effect upon the credit of that establishment. Unable, after this great abstraction, to meet his other engagements, the minister of finances had recourse to Ouvrard, Vanlerbergh, and Seguire, who advanced 102,000,000 francs (£4,080,000) to the public treasury, and received in return long-dated bills for 150,000,000 francs. To meet this advance Ouvrard hastened to Madrid, to obtain a supply of piastres from the Spanish government; and such was the ascendency which he had acquired at that capital, that he shortly after concluded a treaty with the King of Spain, in virtue of which his company, during the whole remainder of the war, acquired "an *exclusive* right to carry on the whole trade to the Spanish colonies, and to import the *whole treasures* and merchandise brought from thence to the European shores." Never before had such a power been vested in any company :

nearly the whole treasures of the world were to pass through their hands. But though this treaty gave Ouvrard the prospect of obtaining from America, before a year expired, 272,000,000 francs (£11,400,000) in hard dollars, yet this would not furnish a supply for present necessities; and the efforts of all the capitalists of the Continent, which were put in requisition for the occasion, were unable to meet the crisis or avert a catastrophe. Desprez—who had demanded a loan of 100,000,000 francs (£4,000,000) from the Bank, which they could not give him—and several other of the greatest capitalists,—including M. Recamier, the splendour of whose living, as well as the beauty of his wife, had long riveted public attention—failed. This immediately occasioned a terrific run upon all the other public functionaries, as well as the bank and the treasury. Paper would no longer pass; credit was at an end ; and M. Vanlerbergh, one of the greatest of the national contractors, was prevented from failing solely by an advance to a great amount from the public funds. The consequences would have been fatal to the empire had a disaster at the same time occurred in Germany, for the government were absolutely without the means of replenishing any branch of the public service. But the battle of Austerlitz and the treaty of Pressburg operated like a charm in dispelling the panic: with the cessation of Continental war the demand for the precious metals immediately ceased ; and the crisis was in fact over, when the return of the Emperor to the Tuileries entirely restored the public confidence. The danger, however, had been so pressing, that nothing but the instantaneous termination of the war could have averted it: and, by merely protracting the contest in Moravia for a few weeks, the Allies would infallibly have brought the French government to a national bankruptcy.[1]

[1] Bign. v. 89,94. Bour. vii.100,111. Sav. ii. 157, 162. Thiers, vi. 197,201.

Napoleon was highly indignant at these embarrassments, and fully appreciated the magnitude of the peril from which he had been extricated by the fortunate

CHAP. XLII.

1806.

12. Measures of Napoleon in consequence.

rictory of Austerlitz.* Public opinion, as usual, followed the impulse set by its leaders ; the imprudent facility of M. de Marbois, the minister of finances, became the general object of reprobation, and the greatest wits of the capital exerted their talents in decrying his administration.† The Emperor minutely scrutinised the embarrassments of the bank and the treasury: it was found that the total deficit of the public contractors to the government amounted to 141,000,000 francs, (£5,600,000,) of which Ouvrard and Vanlerbergh owed nearly two-thirds, and prosecutions were immediately ordered against all the defaulters, including M. Desprez, who were thrown into prison without distinction. Measures of the last severity were threatened against Ouvrard and his partners, who were offered their choice between standing the chances of a criminal prosecution, and the immediate cession of all they possessed. They preferred the latter, and in consequence that gigantic company was reduced to bankruptcy: but in the end nearly the whole deficit was recovered for the nation. The system of providing for the public service by means of contractors was shortly after abandoned : but a few years after, the government was under the necessity of resuming it: and Napoleon ultimately made the most ample amends to the injured M. de Marbois, by appointing him president of the Chamber of Accounts.[1]

[1] Bour. vii. 111. Bign. v. 96, 97. Thiers, vi. 377.

13. Real cause of the catastrophe.

In fact, though it suited the interests of the Emperor to represent this alarming catastrophe as exclusively the result of the imprudent facility of the minister of finances, and the inordinate profusion of discounts by the bank, yet the evil in reality lay a great deal deeper, and the crisis was, in fact, occasioned by the vicious system to

* "Beaten," says Savary, "in the depths of Moravia, deprived by inconceivable imprudence of all the resources on which he was entitled to calculate, he would have been wholly unable to repair his losses, and his ruin from that moment was inevitable."—SAVART, il 161.

† The unbending firmness of M. de Marbois being mentioned in laudatory terms in presence of Madame de Stael, "He," said she, "is nothing but a willow painted to look like bronze."—BOUR. vii. 111.

which the extravagant expenditure of the imperial government had driven the finance ministers. Although the budgets annually presented since Napoleon seized the government had exhibited the most flattering aspect, yet in reality they were in a great degree fictitious, and intended to conceal the distressed condition of the finances. The actual receipts of the treasury for the last five years had been a hundred millions of francs below the annual expenses. In addition to this, the payments of the finance minister required to be almost all made in the course of each year; while the period of his receipts for the same time, according to the established mode of collecting the revenue, extended to eighteen months. Hence arose an indispensable necessity for recourse to money-lenders, who advanced cash to the treasury, and received in return bills payable when the tardy receipts of the revenue might be expected to be realised. In this way, while the receipts and expenditure, as exhibited in the budget annually presented to the Chambers, were nearly equal, there was in reality a most alarming deficit, which was daily increasing; and it was only by largely anticipating, by the discount of bills accepted by the treasury, the revenue of succeeding terms or years, that funds could be provided for the liquidation of the daily demands upon it.[1]

Bign. 88, 103. Thiers, viii. 86, 97.

14. Means by which the crisis had hitherto been avoided.

Recourse was at first had to the receivers-general of the departments to make these advances : and this system succeeded, though with some difficulty, during the comparatively economical years of 1803 and 1804. But the vast expenditure of 1805, occasioned partly by the equipment of the expedition at Boulogne, partly by the cost of the Austrian war, rendered these resources totally insufficient ; and it became necessary to apply to greater capitalists, who, in anticipation of future payments, could afford to make the great advances required by government. M. de Marbois was thus driven by necessity to M. Ouvrard and the company of the Indies, who were already the contractors for the supplies to almost all the forces, both

CHAP. XLII. 1806.

by land and sea; and thus became invested with the double character of creditor of the state for advances made on exchequer bills, and also for payment of the supplies furnished to the different branches of the public service. Thence the deep implication of this company with the transactions of government, and the necessity of the Bank of France supporting, by extraordinary and lavish discounts, the credit of individuals or associations, from whom alone government derived the funds requisite for its immense engagements. The monetary embarrassments of 1805, therefore, like almost all others, were occasioned by an extravagant expenditure : but they arose not on the part of individuals, but of government; the crisis was not commercial but political.[1]

[1] Bign. v. 87, 88.

15. The root of the evil was the extravagant expenditure of government.

Thence the singular and instructive fact, that the whole inordinate discounts, of which Napoleon so loudly complained, were made not to individuals engaged in private undertakings, but to the contractors for the public service. The root of the evil lay in the extravagant expenditure of the Emperor himself, which rendered the anticipation of future revenues indispensable, to a perilous extent, in every branch of government. He often boasted that he never had, and never would, issue government paper. This was quite true; but it was equally true, what he passed over, that his expenditure of a hundred millions of francs annually, beyond his income, drove all the government contractors to that perilous expedient. Considered in this view, this financial crisis was not a mere domestic embarrassment, but an important event in the progress of the contest : it indicated the arrival of the period when France, almost destitute of capital from the confiscations of the Convention, and severely weakened in its national credit by the injustice committed during its rule, was unable from its own resources to obtain the funds requisite for carrying on the gigantic undertakings to which its ruler was driven in defence of its fortunes; and when foreign conquest and extraneous spoliation had become

indispensable, not merely to give vent to the vehement passions, but to maintain the costly government and repair the financial breaches occasioned by the Revolution. Napoleon, however much he was disposed to lay the fault, according to his usual system, on others, was in secret perfectly aware of the perilous pass to which his financial affairs had now been brought, and, like Alexander, he trusted to his sword to cut the Gordian knot. Marbois had long before represented to him the danger of "having for the bankers of the state those to whom its ministers were indebted;" and Napoleon was so sensible of this, that he had expressed his resolution, in military fashion, to have M. Ouvrard arrested, and made to disgorge some of what he called his ill-gotten wealth, but he had never been able to emancipate himself from his influence.[1] *

[1] Bign. v. 87, 88. Thiers, viii. 97, 99.

16. **Financial changes in consequence introduced in France.**

The crisis of 1805, however, made decisive measures necessary. "I will have no alliance," said he, "between the bank and the treasury. If such existed, a simple movement of the funds might reveal the most important state secrets. We cannot too soon sign a decree for the emancipation of the treasury." The difficulty was, that the treasury had to pay every twelve months a hundred and twenty millions of francs (£4,800,000) more than it received, in consequence of the backwardness of all payments to the exchequer. To liquidate part of this debt, sixty millions (£2,400,000) were funded in the five per cents; the capital of the Bank of France was doubled; and deposit banks, under the name of "caisses de service," where the receivers-general of the revenue were invited to

* "Bourrienne," said he, in 1800, "my part is taken: I will cause M. Ouvrard to be arrested."—"General," replied the secretary, "have you any proofs against him?"—"Proofs? What are required? He is a contractor, a scoundrel. He must be made to disgorge. All of his tribe are villains. How do they make their fortunes? At the public expense. They have millions, and display an insolent extravagance when the soldiers are without shoes or bread. I will have no more of this." He was accordingly arrested and thrown into prison; but as there was no evidence whatever against him, he was speedily liberated, and soon, from his great capital, regained all his former influence with the government.—BOUR. vii. 94, 95.

CHAP. XLII.

1806.

deposit the sums they had drawn as soon as they were received, and encouraged to do so by being offered interest for all sums so deposited prior to the time when they were bound to make them forthcoming. By this means, the necessity of having recourse to paper credit to raise funds upon anticipated revenues was in a great measure avoided, and the collection of the taxes conducted with much greater regularity than formerly.[1]

[1] Bign. v. 89, 189, and 195.

17. And imposition of the French armies as a burden on foreign states. Nov. 18.

But these financial improvements, great as they were, did not strike at the root of the evil, which was a permanent expenditure by government greatly beyond its income. To cure this by means of loans, the well-known practice in Great Britain, was impossible in a country so ruined in its commercial relations and interests as France then was. The victories of Ulm and Austerlitz provided the means of solving the difficulty. From the moment the Grand Army crossed the Rhine, it was fed, clothed, lodged, and paid at the expense of Germany.* On the 18th November, an edict of the Emperor directed the transmission of all funds to the army of the north to cease; and on the 18th of December a similar order was given in regard to the army of Italy. Thus the three principal armies of the empire ceased to be any longer a charge upon its finances, and the tributary or conquered states bore the burden of the greater part of that enormous military force by which they were overawed or retained in subjection. This system continued without intermission during the whole remainder of the reign of Napoleon; and the budgets annually presented to the Chambers were in consequence, as the Duke de Gaeta,[2] their principal compiler, himself confesses, no true statement of the imperial expenses.[3] They were delusive even in what concerned the domestic

[2] Gaeta, 1. 272, 434.

[3] Bign. v. 99, 100.

*** From the castle of Louisberg in Wurtemberg, Napoleon wrote, so early as 4th October 1805, to the minister of finances at Paris—" The army maintains the most exact discipline: the country hardly feels the presence of the troops. We live here on *Bom : I have no need of money from you"* These *Bons* were treasury bills, which were discharged by the French government out of the contributions levied on the inhabitants, or the sums extracted from the conquered countries.—BIGNON, V. 100.**

finances of France, by always exaggerating the income and diminishing the expenditure; and, as concealing the greater part of the enormous contributions levied by the army in the conquered states, totally fallacious.

18. French budjet for 1805, and exposition by the minister of the interior.

The budget of France for 1805, presented to the Chambers in February 1806, accordingly exhibited a most deceptive picture of the national finances; but even as it was, it showed an expenditure of 666,000,000 francs (£26,600,000,) and an income of only 589,000,000 francs (£23,600,000,) the balance being made out by contributions levied from foreign states.* But although Napoleon knew as well as any one the perilous nature of the crisis which the government had recently experienced, it was no part of his policy to permit his subjects to share his disquietude, and he resolved to dazzle the world by a

CHAP. XLII. 1806.

splendid exposition of the state of the empire. The report drawn up by Champagny, minister of the interior, contained a picture of the imperial dominions, which, from the magnitude of the victories it recounted, and the splendour of the undertakings it commemorated, might well bear a comparison with Pliny's panegyric of Trajan. It represented the navigation of the Seine and the Saone as essentially improved; Alessandria as surrounded with impregnable fortifications; Genoa furnishing its sailors and naval resources to France ; Italy delivered from the presence of the English ; the sciences, the arts encouraged; the capital about to be adorned by the most splendid monuments; the Alps and the Appenines yielding to the force of scientific enterprise, and the noble routes of the Simplon, Mont Cenis, the Corniche, and the Mont Genevre, opening to loaded chariots a path amidst heretofore impassable snows; numberless bridges established over the Rhine, the Meuse, the Loire, the Saone, and the Rhone; harbours and wet-docks in a state of rapid construction in five-and-thirty maritime cities ; the works of Antwerp and Cherbourg promising soon to rival the greatest naval establishments of England.[1]

[1] Bign. v. 104,108.

19. Exposition of *we* triumphs of France: silence as to Trafalgar.

The exposition concluded with a rapid view of the advantages which France had derived from the successive coalitions which had been formed against its existence. " The first coalition, concluded by the treaty of Campo Formio, gave the Republic the frontier of the Rhine, and the states which now form the kingdom of Italy; the second invested it with Piedmont; the third united to its federal system Venice and Naples. Let England be now convinced of its impotence, and not attempt a fourth coalition, even if subsequent events should render such a measure practicable. The house of Naples has irrevocably lost its dominions; Russia owes the escape of its army solely to the capitulation which our generosity awarded: the Italian peninsula, as a whole, forms a part of the great empire; the Emperor has guaranteed, as

chief supreme, the sovereigns and constitutions which compose its several parts/' In the midst of these just subjects for exultation, Napoleon had not the moral courage to admit the terrible disaster of Trafalgar. That decisive event was only alluded to in the following passage of his opening speech to the Chambers:—" The tempests have made us lose some vessels after a combat imprudently engaged in. I desire peace with England ; I shall not on my side retard its conclusion by an hour. I shall always be ready to terminate our differences on the footing of the treaty of Amiens." Thus, while the Neapolitan dynasty, for merely making preparations for war, was declared to have ceased to reign, England, which had struck so decisive a blow at his maritime strength, was invited to a pacification on terms of comparative equality —a striking instance of that resolution to crush the weak, and temporise, till the proper time arrived, with the powerful, which formed so remarkable a feature of Napoleon's policy.[1]

Bign. v. 104, 110. Hard. ix. 91.

The return of Napoleon to Paris was the signal for the commencement of magnificent public structures in that capital. The municipality voted a monument to the Emperor and the Grand Army, which, after much hesitation as to the design, it was at length resolved to make a triumphal column, composed of the cannon taken in the Austrian campaign, surmounted by a statue in bronze of the Emperor. The design was speedily carried into effect; five hundred Imperial guns, melted down and cast anew, assumed the mould of the principal actions of the campaign, which wound, like the basso-relievo on Trajan's pillar at Rome, to the summit of the structure, one hundred and twenty feet from the ground, where the statue of Napoleon, afterwards carried off by the Emperor Alexander as a trophy of victory to St Petersburg, was placed. Since the accession of Louis Philippe, it has been replaced by an admirable bronze representation of the great conqueror in his gray riding-coat, the dress which has become

20. Erection of he Column n the Place fendome.

CHAP. XLII. 1806.

canonised in the minds of the French by the feelings of admiration, almost amounting to devotion, with which his memory is regarded. The standards taken from the enemy during the campaign—one hundred and twenty in number—were brought with great pomp through the streets of Paris on the 1st of January, and divided between the senate, the tribunate, the city of Paris, and the cathedral of Notre Dame. "These standards/' said the Archbishop of Paris, when they were placed beneath the sacred roof, "will attest to our latest posterity the efforts made by Europe against us; the glorious deeds of our soldiers; the protection vouchsafed by heaven to France; the prodigious success of our invincible Emperor, and the homage which he has rendered to God for his victories." The senate decreed that his birth-day should be one of the national fetes. Magnificent rejoicings were projected by the Emperor to signalise the return of the Grand Army to the capital; but they were adjourned, first on the account of the sojourning of the troops on the Austrian frontier, next from the menacing aspect of Prussia, and finally abandoned after the gloom and bloodshed of the Polish campaign.[1]

[1] Bign. v. 112, 113. Thiers, vi. 372, 374.

21. Advance of the French against Naples.

The ominous announcement, made from the depths of Moravia, that the dynasty of Naples had ceased to reign, was not long allowed to remain a dead letter. Massena was busily employed, in January, in collecting his forces in the centre of Italy, and before the end of that month fifty thousand men, under the command of Joseph Buonaparte, had crossed the Pontifical States and entered the Neapolitan territory in three columns, which marched on Gaeta, Capua, and Itri. Resistance was impossible; the feeble Russian and English forces which had disembarked to support the Italian levies, finding the whole weight of the war likely to be directed against them, withdrew to Sicily; the court, thunderstruck by the menacing proclamation of 27th December, speedily followed their example; the governors of the cities first exposed to invasion hast-

ened to appease the conqueror by submission ; a futile attempt at negotiation by means of Prince St Theodore did not suspend for an instant the march of the victorious troops. In vain the intrepid Queen Caroline, who still remained at Naples, armed the lazzaroni, and sought to infuse into the troops a portion of her own indomitable courage ; she was seconded by none. Capua opened its gates ; Gaeta was invested ; the Campagna filled with the invaders ; she, vanquished but not subdued, compelled to yield to necessity, followed her timid consort to Sicily; and, on the 15th February, Naples beheld its future sovereign, Joseph Buonaparte, enter its walls.[1]

[1] Dum. xv. 95,99. Bign. v. 114, lib'. Hard. ix. 56, 58.

22. Successful invasion of Calabria.

But although the capital was thus occupied by the invaders, and the reigning family had taken refuge in the sea-girt shores of Sicily, the elements of resistance still existed in the Neapolitan dominions. The Prince of Hesse-Philipsthal had the command of Gaeta, and he had inspired the garrison of eight thousand men which he commanded with a share of his own heroic resolution. When summoned to capitulate, this gallant officer replied, that his honour would not permit him to lower his colours till the last extremity; and the long resistance which he made, coupled with the natural strength of the place, which could be approached, like Gibraltar, only by a neck of land strongly fortified, inspired the Sicilian cabinet with the hope that something might yet be done for the deliverance of its Continental dominions. During the first tumult of invasion, the peasantry of Calabria, in despair at the universal desertion of the kingdom, both by their government and its allies, submitted to the enemy; and General Reynier, with a considerable corps, in the outset experienced little resistance in his occupation of the principal strongholds of the country. But the protraction of the siege of Gaeta, which occupied Massena with the principal army of the French, gave them time to recover from their consternation; and the cruelty of the invaders, who put to death without mercy all the

CHAP. XLII.

peasants who were found with arms in their hands, on the pretence that they were brigands, drove them to despair. A general insurrection took place in the beginning of March, and the peasants stood firm in more than one position. But they were unable to withstand the shock of the veterans of France, and in a decisive action in the plain of Campo-Tenese their tumultuary levies, though fifteen thousand strong, were entirely dispersed. The victorious Reynier penetrated even to Reggio, and the standards of Napoleon waved on its towers, in sight of the English videttes on the shores of Sicily.[1]

[1] Bot. iv. Hard. ix. 88, 90. Dum. xv. 107, 116.

23. Joseph Buonaparte createdKing of the Two Sicilies. March 30.

When hostilities had subsided, Joseph repaired in person to the theatre of war, and sought, by deeds of charity, to alleviate its distresses, while his beneficent mind contemplated great and important public works to ameliorate that savage and neglected district. He visited the towers of Reggio, admired the magnificent harbour of Tarentum, and had already formed the design of canals and roads to open up the sequestered mountains of Calabria. In the midst of these truly princely projects he received at Savigliano, the principal town of the province, the decree by which Napoleon created him king of the Two Sicilies. By so doing, however, he was declared not to lose his contingent right of succession to the throne of France ; but the two crowns were never to be united. At the same time the states of Venice were definitively annexed to the kingdom of Italy, and that capital was to give his title to the eldest son of its sovereign. The beautiful Pauline, now married to Prince Borghese, received the duchy of Guastalla, subsequently united to the same dominions; the Princess Eliza was created Princess of Lucca Piombino; Murat was made Grand-duke of Berg, with a considerable territory: and the Emperor reserved to himself twelve duchies in Italy, of which six were in the Neapolitan dominions, which were bestowed on the principal officers of his army.[2] Thus, while he was elevating the members of his family to the neighbouring thrones, the

April 4.

military hero of the Revolution gave abundant indications of his design, by reconstructing the titles of honour which it had cost so much bloodshed to destroy, utterly to overturn its principles.*

24. Naples is threatened by Sir Sidney Smith. General Stuart lands in the Bay of St Euphemia.

Events, however, soon occurred which showed the infant sovereign what an insecure tenure he had of his dominions. Hardly had he returned to Naples to receive the congratulations of his new subjects on his elevation, when the island of Capri, the celebrated retreat of the Emperor Tiberius, whose romantic cliffs bound the horizon to the south of the bay of Naples, was wrested from his power by an English detachment. Nothing but the generous forbearance of the commander of the squadron, Sir Sidney Smith, saved his capital and palace from a bombardment amidst the festive light of an illumination. Shortly after, a still more serious disaster occurred in the southern provinces of his dominions, attended in the end with important effects on the fortune of the war. Encouraged by the prolonged resistance of Gaeta, and the accounts which were brought from all quarters of the disaffection which prevailed in Calabria, the English commanders in Sicily resolved upon an effort by land and sea, with the double view of exciting an insurrection on the one side of the capital, and relieving the fortress which so gallantly held out on the other. In the beginning of July an **Jul) 1.** expedition set sail from Palermo, consisting of somewhat less than five thousand men, which landed in the Gulf of St Euphemia: and the commander, Sir John Stuart,

*** " The interest of our crown," said Napoleon, " and the tranquillity of the continent of Europe, require that we should secure in a stable and definitive manner the fate of the people of Naples and Sicily, fallen into our power by the right of conquest, and *forming part of the great empire*—we therefore declare our well-beloved brother Joseph King of the two Sicilies." By the same decree* Berthier was created Prince of Neufchatel, which had been ceded by Prussia; Talleyrand obtained, with the title of Prince of Benevento, the principality of the same name, which belonged to the Pontifical States , Bernadotte became Prince of Pontecorvo; Cambaceres and Lebrun, Dukes of Parma and Piacental. Substantial reservations in favour of the crown of France accompanied the creation of these inferior feudatories: a million yearly was reserved from the Neapolitan revenues to be distributed among the French soldiers.—HARD, ix. 94,95; BIGN. V. 131.**

CHAP. XLII.

1806.

issued a proclamation calling on the Calabrians to repair to his standard and unite their efforts to expel the intruding sovereign. Few or none, however, of the peasantry appeared in arms; no intelligence of more distant armaments was received; and the English general was beginning to hesitate whether he should not re-embark his troops, when advices were received that Reynier, with a French force not greatly exceeding his own, was encamped at MAIDA, about ten miles distant. With equal judgment and resolution, Sir John Stuart immediately resolved to advance against his opponent; and if he could not expel the enemy from the Neapolitan territories, at least give the troops of the rival nations an opportunity, so much longed for, of measuring their strength on a footing of comparative equality. He moved forward his forces, accordingly, in quest of the enemy. On the 5th July the outposts of the two armies were within sight of each other, and both sides prepared for a decisive conflict on the following morning: the French never doubting that they would speedily drive the presumptuous islanders into the sea; the English anxious, but not apprehensive, that it would be found, in the hour of trial, that they had not degenerated from their ancestors of Blenheim or Poictiers.[1]

[1] Bot. iv. 210,211. Colletta, ii. 19. Ann. Reg. 1806, 142. Dum. xv. 142,145.

25. Reynier resolves to attack him.

When the English army arrived in sight, the corps of Reynier, consisting of five thousand infantry, six hundred cavalry, and a battery of horse-artillery, was strongly posted on a range of wooded heights which skirted the little plain stretching from their feet toward the sea; while the British, bivouacking in that marshy and unhealthy expanse on the banks of the Amato, were in a situation of all others the most exposed to the pestilential influences of the malaria, at that sultry season in full activity. But Reynier was inspired with a supercilious contempt for his opponents, with whom he had combated in Egypt, and the defeats from whom, there received, he bad entirely ascribed, in his subsequent publication, to the

CHAP. XLII.

1806.

errors of General Menou. He was encouraged, besides, by the arrival of reinforcements in the night, which raised his forces to seven thousand five hundred men, and, resolving to leave nothing to the diseases of the climate, he marched at once to the encounter. Hastily, therefore, he descended from the heights, crossed the sluggish stream, and advanced against the enemy.[1]

[1] Bot. iv. 211. Bum. xv. 144. Ann. Reg. 1806, 142.

26. Battle of Maida. July 6.

Surprised, but nothing dismayed, at the unexpected appearance of forces so much more considerable than they had anticipated, the British troops awaited, with undiminished resolution, the attack. Their right rested on the Amato, at the point where its lazy current falls into the sea; the thickets and underwood which enveloped its mouth were filled with light troops, who kept up a destructive fire on the assailants as they approached. Notwithstanding the heavy loss which they sustained in consequence, the French bravely advanced, and, impatient of victory, after a few volleys had been exchanged, rushed forward with the bayonet. But they little knew the enemy with which they had now to deal. No sooner did the English right, consisting of the light companies of the 26th, 27th, 35th, 58th,61st, 81st, and 85th regiments, perceive the levelled steel of their opponents, than they too advanced with loud cheers to the charge; the 1st light infantry, a famed French regiment, as gallantly pressed forward; and the rival nations approached each other till their bayonets literally crossed. At that appalling moment French enthusiasm sank before British intrepidity; their battalions broke and fled, but were instantly overtaken amidst deafening shouts, and assailed with such fury, that in a few minutes seven hundred lay dead on the spot, and a thousand, including General Compere, were made prisoners. Taking advantage of this overthrow, the brigade under General Auckland, which was immediately to the left of the victorious right, also pressed forward, and drove the enemy in that quarter from the field of battle. Defeated thus in the centre and right, Reynier

CHAP. XLII.

1806.

made an attempt with his cavalry, in which arm the British were totally deficient, to overwhelm the other flank. A rolling fire of musketry repelled them from the front of the line; but their squadrons, rapidly wheeling round the immovable infantry, succeeded in turning its left. This movement might have yet retrieved the day, had not the French cavalry, in the midst of their advance, been assailed by a close and well-directed fire in flank from the 20th regiment, which had that morning landed, and came up most opportunely at the decisive moment to take a part in the action. This unexpected discharge totally disconcerted the horse, which fled in disorder from the field of battle; and the enemy, routed at all points, withdrew his shattered battalions across the Amato, weakened by the loss of half their numbers.[1] *

[1] Sir J. Stuart's Despatch, Ann. Reg. 1806, 591, 593. Bot.iv.211, 212. Colletta, ii. 20. Dum. xv. 146, 148.

27. Great moral effect of this victory.

The battle of Maida, though hardly noticed by the French nation amidst the blaze of Ulm and Austerlitz, had a most important effect upon the progress of the war. It is often by the feelings which it excites, and the moral impression with which it is attended, more than by its immediate results, or the numbers engaged on either side, that the importance of a victory is to be estimated. In this point of view, seldom was success more important than that thus achieved. True, the forces engaged were inconsiderable, the scene remote, the probable immediate advantages trifling: but what mattered all that? it was a duel between France and England, and France had succumbed in the conflict. At last the rival states had come into collision, on terms approaching to equality, and free from the paralysing influence of lukewarm or dubious allies. The result had been decisive: the veterans of Napoleon had fled before the British steel. Indescribable was the national exultation at this glorious result. The disasters of the early years of the war were forgotten, or

*** The total loss of the British was only 44 killed and 284 wounded. The Duchess of Abrantes states the entire loss of the French at 6000 men.—D'ABRANTES, ix. 136; and Sir J. STUART'S *Despatch, Ann. Beg.* 1806, 594.**

ascribed to their true cause, —general inexperience in the military art; confidence, the surest presage of victory, when guided by prudence, was transferred from the naval to the land service; and, reposing securely on the fights of Alexandria and Maida, all classes openly expressed their ardent desire for an early opportunity of measuring the national strength on a greater scale with the conquerors of continental Europe. Publications began to issue from the press which strongly urged the adoption of a more manly system of military policy,[45]* and the descent of the British in large bodies on the shores of Germany or Italy: the people no longer hesitated to speak of Cressy and Azincour. The British historian need entertain no fears of exaggerating the moral influence of this success, even with so inconsiderable a force. He will have occasion to portray a similar result to the enemies of his country, from the successes of the Americans with detached ships at the close of the war. Napoleon was well aware of its importance : he received the accounts of the defeat at Maida with a degree of anguish which all his matchless powers of dissimulation could not conceal.[1] " Sive tanta, sive minor, victoria fuit, ingens eo die res, ac nescio an maxima illo bello, gesta sit; non vinci enim ab Hannibale, vincentibus tunc difficilius fuit, quam postea vincere."[2]†

[1] D'Abr. ix. 136.

[2] Liv. xxiii. 16.

28. Its immediate results are less considerable.

But, though productive in the end of the most important consequences from the moral feelings which it inspired, the victory of Maida was not attended at the moment with any durable results. In the first instance, indeed, considerable advantages were gained. Every town and fort along the coast of Calabria fell into the hands of the victors. The whole artillery, stores, and

1806.

ammunition collected for the invasion of Sicily, were taken or destroyed. The French forces made a precipitate retreat on all sides, and the insurrection spread like wild-fire through the whole southern provinces of the Neapolitan dominions. A few days after, the town of Crotona, containing a thousand men, chiefly wounded, surrendered to the insurgents. The detachments of the French were cut off on all sides, and massacred with savage cruelty by the peasantry, whose ferocity General Stuart in vain endeavoured to appease, by a proclamation earnestly imploring them not to disgrace their cause by a deviation from the usages of civilised warfare. So general were the losses, that Reynier was unable to stop his retreat till he reached the intrenched camp of Cassano, where the junction of Verdier's division enabled his shattered army, weakened by the loss of eight thousand men, at length to make head against the enemy.[1]

[1] Dum. xv. 148, 155. Ann. Reg. 1806, 595. Bot.iv.213 Jom.ii.238 Bign.v.126

29. Surrender of Gaeta.

These disasters might have been attended with important results upon the whole campaign in the Peninsula, could Gaeta have held out till the combined English and Neapolitan forces approached its walls. But the progress of the siege, and the vigour of Massena, who commanded the attacking army, rendered this impossible. After a gallant resistance, and the display of great skill on both sides, which rendered this siege one of the most memorable of the whole war, a practicable breach was effected in front of the citadel, while a second, of smaller dimensions, was formed on its flank. Already a column of three

July 18.

thousand grenadiers was prepared for the assault. Prince Hesse Philipsthal had some days before been mortally wounded by the bursting of a shell, and removed on board an English vessel to Sicily : his successor was not animated with his dauntless spirit; proposals of capitulation were made; and Massena, glad on any terms to render his force disposable for still more pressing exigencies, granted them the most honourable conditions.[2*] The

[2] Bign. v. 127, 128. Dum. xv. 155, 170. Bot.iv.214.

* The physical difficulties experienced by the assailants in this memorable

garrison, still seven thousand strong, marched out with the honours of war ; and on the 18 th July the French flag waved on its classic and almost impregnable battlements.

30. Retreat of the English. Suppression of the insurrection.

The surrender of Gaeta, by rendering disposable the whole besieging force of Massena eighteen thousand strong, made the insurrection in Calabria hopeless, and the ulterior stay of the English army on the Neapolitan shores impossible. Sir John Stuart, therefore, slowly bent his steps towards the straits of Messina; and at length, on the 5th September, after a residence of two months, the last detachments of the English embarked for Palermo, leaving of necessity, though on this occasion for the last time, the stain too often thrown on their arms, of exciting a people to resistance whom they subsequently abandoned to their invaders. Meanwhile the advance of Massena, though stubbornly resisted and attended with great bloodshed, was a succession of triumphs. The insurgents stood their ground bravely at the romantic defile of Lauria, so well known to travellers in Calabria, but were at length turned by the Monte Galdo, and defeated with great slaughter. A guerilla warfare ensued, attended with savage cruelty on both sides. The stream of the Calore, which flowed through the theatre of the contest, descended to the sea charged with the bodies of the slain. But after several months of carnage, the French troops regained all the ground they had occupied prior to the descent of the English;[1]

siege were of the most formidable description; its details, which are fully given by General Mathieu Dumas, are highly interesting to the military reader. No less than 120,000 cannon-shot and 22,000 bombs were fired by the garrison upon the besiegers before they returned a single gun; but when their batteries were opened on the 10th July, the superiority of their fire became soon apparent.—Gaeta, named after the nurse of *Æneas*,* underwent a desperate siege from the Austrians in 1707, when it surrendered only after a murderous assault by Marshal Daun. Thirty years afterwards it was besieged and taken when defended only by an insufficient garrison.—See DUMAS, XV. 155, 170.

1806. Nov. 10.

and an amnesty, judiciously published by King Joseph, at length put a period to this sanguinary and hopeless contest, in which they lost by sickness and the sword little short of fifteen thousand men.

31. Domestic reforms of Joseph in Naples.

No monarchy in Europe stood more in need of reformation than that of Naples when Joseph took possession of its throne. The administration of justice, the regulation of the finances, the general police of the country, stood equally in need of improvement. Hence the remarkable fact, so common on the Continent, so rare in England, that the most democratically inclined of the whole community were those of the higher ranks who had travelled, or received the advantages of a liberal education; while the supporters of the arbitrary government, and all the abuses following in its train, were to be found among the rabble of the cities and the peasantry of the country. A state of things which, however at variance with what is generally prevalent in a constitutional monarchy, arises naturally from the feelings brought into action in such circumstances as here occurred, and has been since abundantly verified by the experience of the southern monarchies of Europe, when exposed to revolutionary convulsions. Joseph Buonaparte, who was endowed by nature with an inquisitive and beneficent spirit, found ample room for, and soon effected, the most extensive ameliorations. Without conceding in an undue degree to the democratic spirit, he boldly introduced reforms into every department. The estates held by the nobles by a military tenure were deprived of their unjust exemption from taxation; their castles, villages, and vassals subjected to the common law of the realm; the number of convents was restricted; part of their estates appropriated to the discharge of the public debt, part devoted to the establishment of schools in every province for the youth of both sexes. Academies for instruction in the military art, in naval science, in drawing, a national institute, and various other useful institu-

tions, were established in the capital. Roads, bridges, harbours, and canals, were undertaken or projected; and a general spirit of activity was diffused by the energy of the government. Great part of these improvements have survived the ephemeral dynasty with which they originated, and constitute part of the lasting benefits induced in other countries by the disastrous wars of the French Revolution.[1]

[1] Colletta, ii. 1, 15. Bign. v. 135, 139.

32. Miserable state of Holland since its conquest by France,

The conquest of Naples and ascent of the throne of the Two Sicilies by the brother of Napoleon was not the only usurpation which followed the peace of Pressburg. The old commonwealth of Holland was destined to receive a master from the victorious Emperor; while the republic of Venice, incorporated by the decree of 30th March with the kingdom of Italy, furnished a noblesse to surround and support his throne. Since their conquest by the French, under the victorious arras of Pichegru, the Dutch had uniformly shared in all the revolutionary convulsions of the parent republic; and the authority latterly conferred on the grand pensionary in 1805, had almost established among them a monarchical government. Meanwhile the misfortunes of the state were unparalleled. Its most valuable colonies had been conquered by the English, and were to all appearance indefeasibly united to that absorbing power. The Cape of Good Hope had become a half-way house to their vast dominions in Bengal; the island of Ceylon had recently been added to their possessions in the Indian Archipeligo; and Surinam itself, the entrepot of the commercial riches of Holland in the eastern seas, had fallen into their hands. Their harbours were blockaded, their commerce ruined, their flag had disappeared from the ocean; and the state, as usual at the close of revolutionary convulsions, had fallen under the despotic rule of ignoble men, whose tyranny over others was equalled, only by their base adulation to the foreign rulers of the commonwealth.[2] The people, despairing of relief, and worn out by the exactions of obscure tyrants, in the

Hard. *ix.* 99, 100. Bign. v. 11.

CHAP. XLII. 1806.

election of whom the respectable classes had taken no share, were desirous of any change which promised a more stable and creditable order of things.

33. Napoleon's measures to place his brother Louis on the throne of that country. May 26.

Encouraged by these dispositions, Napoleon resolved to place his brother Louis on the throne of Holland. With this view, a Dutch deputation, composed of persons entirely in his interest, was instructed to repair to Paris and demand his appointment. A treaty was soon concluded, which, on the preamble " that it had been found by experience that the annual election of a chief magistrate was the source of continual discord, and that in the existing state of Europe a hereditary government could alone guarantee the independence and furnish securities to the civil and religious liberties of the state," declared Louis king of Holland. A few days after, the new monarch was proclaimed, and issued a decree, in which he promised to maintain the liberties of his people, whose independence was guaranteed by the Emperor. But the elusory nature of that independence was made painfully evident by the characteristic speech which Napoleon made to his brother on the occasion:—" Never cease to regard yourself as a Frenchman. The dignity of constable of the empire shall be reserved to you and your descendants. It will recall to your recollection the duties you have to discharge *towards me*, and the importance which I attach to the guardianship of the strong places which I intrust to you, and which compose the northern frontier of my states."[1]

June 5.

[1] Hard. ix. 99, 100. Bign. v. 141, 142.

34. Creation of military fiefs in the kingdom of Italy.

At the same time, the incorporation of the Venetian states with the kingdom of Italy afforded the Emperor an opportunity of laying the foundation of that territorial noblesse by which he hoped to add stability and lustre to his throne. Twelve military fiefs were created out of the ceded districts, which Napoleon reserved for the most distinguished of his marshals and ministers; while a fifteenth of the revenue which these states yielded to the treasury at Milan was set apart to form appanages suitable to

those dignities. A revenue of one million two hundred thousand francs (£48,000) was on this occasion set apart from the taxes of the kingdom of Italy, to form a fund out of which he was to recompense his soldiers, and which was soon divided among a great variety of claimants. Thus Napoleon was rendering the conquests of his arms not only the source of power to himself, but of emolument to his followers in every degree.[1]

[1] Bign. v. 139,140.

35. Napoleon's secret views in these measures.

The system upon which Napoleon now openly entered, of placing his relations and family on the thrones of the adjoining kingdoms, and surrounding France with a girdle, not of affiliated republics, but of dependent dynasties, was not, as has been sometimes imagined, a mere ebullition of personal vanity or imperial pride. It had its origin in profound principles of state policy, and a correct appreciation of the circumstances which had elevated him to the throne, and continued to surround him when there. He clearly perceived that it was revolutionary passion, converted by his genius into the spirit for military conquest, which had placed him on his present pinnacle of power, and that he was regarded with a jealous eye by the old European dynasties, who both dreaded, from dear-bought experience, the fervour which had elevated him to the throne, and were averse to the principles which had overturned the ancient family. He felt that, of necessity, however disguised under the semblance of friendship, his hand was against every man, and every man's hand against him. This being the case, the only permanent bond of alliance to which he could trust was that which united him to his own family, and identified with his own the interests of inferior royalties, dependent on the preservation of his great parent diadem. " I felt my isolated position," says he, " and threw out on all sides anchors of safety into the ocean by which I was surrounded; where could I so reasonably look for support as in my own relations'? could I expect as much from strangers ?" Such were the views of Napoleon; and that, *situated as he was,* they were founded

CHAP. XL1I. 1806.

on reason, is perfectly obvious. That the measures to which they led him, of displacing the adjoining monarchs, and seating on their thrones the members of his own family, were calculated to excite in the highest degree the jealousy and hostility of the other Continental powers, and thus had a powerful influence in producing his ultimate overthrow, is indeed equally certain. But these considerations afford no ground for impeaching the soundness of the principles by which his conduct was regulated. They show only that he was placed in circumstances which required a hazardous game to be played; and add another to the many illustrations which the history of this eventful period exhibits of the eternal truth, that those who owe their elevation to revolutionary passion, whatever form it may have assumed, are driven on before a devouring flame, more fatal in the end to those who are impelled by, than to those who resist its fury.[1]*

[1] Bign. v. 132,143. Las Cas vii. 127.

36. Audience given to the Turkish ambassador.

On the same day on which a king was given by the French Emperor to the United Provinces, an ambassador arrived from the Grand Signior, who came to congratulate him on his accession to the imperial dignity. He was received with the utmost condescension; and the words used by Napoleon on the occasion are well worthy of being recorded, when taken in conjunction with his subsequent conduct to that power by the treaty of Tilsit. "Everything," said he, "that can happen, either of good or bad fortune, to the Ottomans, will be considered in the same light by France. Have the goodness, M. Ambassador, to transmit these words to Sultan Selim. Let him ever recollect that my enemies, who are also his own, may one day penetrate to his capital. He never can have any cause of apprehension from me: united to my throne, he need fear nothing from his enemies,"[2] Within a year after these words were spoken, Napoleon signed on the Niemen

[2] Bign. 145.

* "The truth is," said Napoleon, "that I was never master of my own movements—I was never altogether my own. I was always governed by circumstances."—LAS GAS. vii. 124,125.

a treaty with Russia for the partition of the whole Turkish territories in Europe.

1806.

37. Naval operations. Sailing and division of the Brest fleet.

But while fortune seemed thus lavishing her choicest gifts on Napoleon by land, and the dynasties of Europe were melting away before his breath, disaster, with equally unvarying course, was attending all his maritime operations, and the sceptre of the ocean had irrevocably passed into the hands of his enemies. The victory of Trafalgar, with the subsequent achievement of Sir Richard Strachan, had almost entirely destroyed the great combined fleet which under Villeneuve had issued from Cadiz : but the squadrons of Rochefort and Brest, upon the co-operation of which Napoleon had so fondly calculated, still existed; and he was not yet sufficiently humbled by disaster to renounce altogether the hope of deriving some advantage from their services. He resolved to employ the remainder of his naval forces, not in regular battles with the English fleet, but in detached operations in smaller armaments, against their remote colonies or merchant vessels. Half the Brest squadron, consisting of eleven line-of-battle ships, was victualled for six months ; and in the middle of December, when the Channel fleet was blown off the station by violent winds, they stood out to sea, and shortly after divided into two squadrons. The first, under Admiral Leissegues, consisting of five ships of the line and two frigates, was destined to carry out succours to St Domingo ; while the second, under Willaumez, embracing six ships of the line and two frigates, received orders to make for the Cape of Good Hope, and do as much injury as possible to the English homeward-bound merchant fleets. But a cruel destiny awaited both squadrons, which nearly annihilated the enemy's remaining naval force, and almost closed the long series of British maritime triumphs during the war.[1]

Dec. 13, 1805.

[1] Dum. xv. 84,86. Ann. Reg. 1806,

Admiral Leissegues arrived without any accident at St Domingo, and disembarked his troops and stores ; but the damage he had experienced from the wintry stoma

CHAP. XLII.

1806.

during the passage of the Atlantic rendered some repairs necessary, which were undertaken in the open roadstead of that harbour. The imprudent security which had dictated that resolution was soon severely punished. On the 6th February Admiral Duckworth, who had been detached from the blockading squadron before Cadiz in pursuit of the enemy, hove in sight with seven ships of the line and four frigates. Four of the English ships engaged each a single adversary, while the three others united against the Imperial, a splendid vessel of a hundred and thirty guns, which bore the Admiral's flag, and was equal to the encounter of any two of its opponents. So unequal a contest as that with three, however, could not be of long endurance. Notwithstanding all their efforts to escape, the French squadron were overtaken and brought to close action : a desperate conflict of two hours ensued, which terminated in the whole of their line-of-battle ships being taken or destroyed ; three having struck their colours, and two, including the superb Imperial, being driven ashore and burned. The frigates stood out to sea during the confusion of this murderous engagement, and escaped. Nothing could exceed the gallantry with which the French in all their ships stood to their guns : on board the three taken alone, the killed and wounded were no less than *760 ;* while the total loss of the British was only 64 killed, and 294 wounded. The Imperial, before it ran ashore, had seen 500 of its bravest sailors mowed down by the irresistible fire of the English vessels.[1]

Defeat of the first squadron at St Domingo.

[1] Duni. xv. 86,89. Ann. Reg. 1806, 229. Bign. v. 156.

39. Though not overtaken by so overwhelming a disaster, the cruize of Admiral Willaumez, with the remainder of the Brest fleet, was in the end nearly as calamitous. Having received intelligence, when he approached the Cape, of the capture of that settlement by the British, he stood over for Brazil, where he watered and revictualled at Bahia, and moved northward towards the West Indies, in hopes of falling in with the homeward-bound Jamaica

Disasters of Willaumez's squadron.

fleet. Thither he was tracked by Sir Alexander Cochrane, with four sail of the line, who, though not in sufficient strength to risk an engagement, followed him at a distance, and, by means of his look-out frigates, observed all his movements. On the 12th July, Sir John Borlase Warren arrived from England at Barbadoes. His squadron had been fitted out and performed the voyage with unexampled rapidity, having left Spithead only on the 4th June : Sir Richard Strachan soon after made his appearance with a second fleet in the same latitude; while a third, under Admiral Louis, put to sea in the end of August, to intercept the return of the French. As it was now evident that the attention of the English government was fully fixed on this squadron, the last which the enemy had at sea, the most serious apprehensions began to pervade the French that they would share the fate of their comrades on the coast of St Domingo ; and under the influence of these feelings the Veteran, of seventy-four guns, commanded by Jerome Buonaparte, separated from the rest of the squadron, and without any orders stood away in the night of the 30th July for France. Discouraged by this defection, and perceiving no possibility of maintaining his position, Willaumez saw no resource but to make sail for the first friendly harbour in Europe. In doing so, however, he was assailed by a furious tempest, which totally dispersed his fleet. The Foudroyant, severely disabled, with difficulty reached the Havannah, pursued by the English frigate Anson under the very guns of the Moro Castle; the Impetueux was standing in for the Chesapeake, when she was descried by Sir Richard Strachan's squadron, driven ashore and burned, her crew being made prisoners; two other seventy-fours were destroyed by the English in the same bay; the Cassard alone, which was supposed to have foundered at sea, regained Brest about the middle of October in the most deplorable condition. Jerome Buonaparte, in the Veteran, made a rich prize in returning to Europe; but, chased by

some English vessels when he reached the bay of Biscay, he was obliged to let go his booty, and after a hard run only reached the coast of France by steering his vessel ashore under the batteries of the little harbour of Concarneau, where she was abandoned, but the crew and guns got into safety.[1]

40. Capture of Linois, and other naval operations. Sept. 18, 1805.

The squadron under Admiral Linois, which had so long wandered almost unmolested in the Indian Ocean, and done very great damage to our commerce in the East, after its inglorious repulse by the China mercantile fleet, of which an account has already been given,* made an attack on the Centurion, fifty guns, and two English merchantmen, in the bay of Vizigapatam. But though they took one of the merchantmen, and drove the other on shore, they could make no impression on the line-of-battle ship, which, with undaunted resolution, bore up against triple odds, and at length succeeded in repulsing the enemy. Finding that the Cape of Good Hope had been conquered by the British, Linois reluctantly bent his steps homeward, and had reached the European latitudes, when he fell in the night into the middle of Sir John Borlase Warren's

March 13, 1806.

squadron, and after a short action was taken, with the Marengo of eighty, and the Belle Poule of forty guns.

March 14.

Next day, five large frigates, with troops on board bound for the West Indies, were met at sea by a British squadron under Sir Samuel Hood, and, after a running fight of several hours, four out of the five were captured. The only division of the enemy at sea at that period which escaped destruction was the Rochefort squadron, under Admiral Lallemand, which had the good fortune not to fall in with any of the British fleets, and at length, after a cruise of six months, regained its harbour, having made eight hundred prisoners from merchant vessels in the course of its voyage. From its singular good fortune in eluding the pursuit of all the fleets sent in search of it by the British government, Lallemand's was called by the

English sailors the Invisible Squadron. He had the fortune to meet and capture the Calcutta of fifty guns, which, while convoying some merchantmen, fell into the middle of his fleet of four line-of-battle ships, and surrendered after a gallant resistance; and his safe return was celebrated as a real triumph by the French, who in those disastrous days accounted an escape from the enemy at sea as equivalent to a victory.[1]

1806. Dec. 15, 1805.

[1] Ann. Reg. 1806, 220. Bign. v. 153, 154.

41. Reflections on these last naval disasters of France.

These maritime transactions conduct us to an important epoch in the war—that in which the French and Spanish navies were TOTALLY DESTROYED, and the English fleet, by general consent, had attained to UNIVERSAL DOMINION. There is something solemn, and apparently providential, in this extraordinary ascendency acquired on that element by a single power. Nothing approaching to it had occurred since the fall of the Roman empire. Napoleon afterwards acquired important additions of maritime strength. The fleets of Russia, the galleys of Turkey, the important harbours of Denmark, were put at his disposal: but he never again ventured on naval enterprises; and, with the exception of an unhappy sortie of the Brest fleet, which was soon terminated by the flames of Basque Roads, no sea-fight of any moment occurred to the conclusion of the war. Fearless and unresisted, the English fleets thenceforward navigated the ocean in every part of the globe, transporting troops, convoying merchantmen, blockading ports, with as much security as if they had been traversing an inland sea of the British dominions. Banded Europe did not venture to leave its harbours. All apprehensions of invasion disappeared; and England, relieved alike from danger of domestic warfare and of colonial embarrassment, was enabled to direct her undivided attention to land operations, and launch forth her legions in that career of glory which has immortalised the name of Wellington.

It was not thus at the commencement of the struggle, nor had it been thus in the preceding war. The mild

CHAP. XLII. 1806.

and pacific Louis X V I . had nursed up the French marine to an unprecedented pitch of power. The French and Spanish fleets had ridden triumphant in the Channel. Gibraltar had been revictualled in presence of superior forces only by the admirable skill of Admiral Howe; and more than once it had seemed for a moment doubtful whether the ancient naval greatness of England was not about to yield to the rising star of the Bourbons. When the war broke out, Louis bequeathed to the Convention a gallant fleet of eighty ships of the line, and a splendid colony in St Domingo, which equalled all the other sugar islands of the world put together. But revolutionary convulsions, however formidable in the creation of a military, can never produce a naval power. The insanity of Brissot and the society of Les Amis des Noirs cut off the right arm of the maritime strength of France by the destruction of St Domingo; the confiscations of the Convention utterly ruined her commercial wealth; the blockade of her harbours deprived her of the only means of acquiring naval experience. One disaster followed another, till not only her own fleets were destroyed, but the navies of all Europe were so utterly paralysed, that the English flag alone appeared on the ocean, and the monarch whose will was obeyed from Gibraltar to the North Cape, and from the Ural Mountains to the Atlantic Ocean, did not venture to combat the sloops which daily insulted him in his harbours.

42. Greatness of the French navy under Louis XVI.

43. Napoleon's change of system in regard to the naval war.

This astonishing result led to a total change in the weapons by which Napoleon thereafter combated Great Britain, and impelled him into that insatiable career of conquest which ultimately occasioned his ruin. He at once perceived that it was in vain, at least for a very considerable time, to make any attempt to withstand the English at sea, and that the prospect of ultimately rivalling their power on that element could only be entertained after a costly construction of ships of war, during a long course of years, in all the harbours of Europe.

Abandoning, therefore, all idea of renewing any maritime contest, till his preparations, everywhere set on foot, for the formation of a navy were completed, he turned his mind to the conversion of his power at land to such a course of policy as might strike at the root of the commercial greatness of England. Thence the CONTINENTAL SYSTEM, based on the project of totally excluding British goods and manufactures from all the European monarchies, which required for its completion the concurrence of all the Continental powers, which could everywhere be enforced only by the most rigid police, and could succeed only through the intervention of universal dominion. From the moment that this ruling principle obtained possession of his mind, the conquest of Europe, or at least the subjection of all its governments to his control, became a matter of necessity; for if any considerable state were left out, the barrier would be incomplete, and through the chasm thus left in the defences, the enemy would speedily find an entrance. The termination of the maritime war, therefore, is not only an era of the highest importance, with reference to the separate interests of England, but it is the commencement of that important change in the system of Continental warfare which necessarily brought Napoleon to the alternative of universal dominion or total ruin.

44. Reflections on the growth of the English maritime power.

Doubtless the highest praise is due to the long line of brave and illustrious men, who, during a series of ages, reared up the astonishing maritime power of England. It was not, like the empires of Napoleon or Alexander, constructed in a single lifetime; nor did it fall with the fortunes of the heroes who gave it birth. It grew, on the contrary, like the Roman power, through a long succession of ages, and survived the death of the most renowned chiefs who had contributed to its splendour. So early as the time of Edward I I I . the English navy had inflicted a dreadful wound on that of France; thirty thousand of the vanquished had fallen in a single engagement; and the

CHAP. XLII. 1806.

victory of Sluys equalled in magnitude and importance, though, from the frequency of subsequent naval triumphs, it has not attained equal celebrity with, those of Cressy and Azincour. The freeborn intrepidity of Blake, the fire of Essex, the dauntless valour of Hawke, contributed to cement the mighty fabric. It grew and hardened with every effort made for its overthrow. The power of Louis XIV., the genius of Napoleon, were alike shattered against its strength ; the victories of La Hogue and Trafalgar equally bridled, at the distance of a century from each other, the two most powerful monarchs of Europe ; and the genius of Nelson only put the keystone in the arch which already spanned the globe. The world had never seen such a body of seamen as those of England during the revolutionary war. Dauntless to their enemies, yet submissive to their chiefs—brave in action, yet cool in danger—impetuous in assault, yet patient in defence—capable of the utmost efforts of patriotic devotion, yet attentive to the most minute points of naval discipline—submissive to orders equally when facing the muzzles of an enemy's broadside, or braving the storms of the northern ocean—capable of enduring alike the vertical rays of the torrid zone, or the frozen severity of an arctic winter—cherishing, amidst the irregularities of naval life, the warmth of domestic affection; and nursing, amidst the solitude of the waves, the ennobling sentiments of religious duty. By such virtues, not a transient, but an enduring fabric is formed. It is by such fortitude that a lasting impression on human affairs is produced.

45. Character of the French navy.

But amidst all our admiration of the character of the British navy, destined to rival in the annals of the world the celebrity of the Roman legions, we must not omit to pay a just tribute to the memory of their gallant and unfortunate, but not on that account less estimable antagonists. In the long and arduous struggle which for three centuries the French navy maintained with the English, they were called to the exercise of qualities not

CHAP. XLII.

1806.

less worthy of admiration. Theirs was the courage which can resolutely advance, not to victory, but defeat: the heroism which knows how to encounter not only danger but obloquy; which can long and bravely maintain a sinking cause, uncheered by one ray of public sympathy ; which, under a sense of duty, can return to a combat in which disaster only can be anticipated; and sacrifice not only life, but reputation, in the cause of a country which bestowed on success alone the smiles of general favour. Napoleon constantly lamented that his admirals, though personally brave, wanted the skilful combination, the daring energy, which distinguished the leaders of his land forces, and gave the English admirals such astonishing triumphs. But had he possessed more candour, or been more tolerant of misfortune, he would have seen that such daring can be acquired only in the school of victory ; that, as self-confidence is its soul, so despondence is its ruin ; that the vehement bursts of anger with which he visited the leaders under whom disasters at sea had been incurred, was the chief cause of this nervous dread of responsibility; and that, in reality, the admirals who encountered not only danger but disgrace in combating the arms of Nelson, were often more worthy of admiration than those who led his land forces to certain victory at Austerlitz or Jena.

46. Probable future influence of the British navy on the world.

As the English navy has thus risen by slow degrees to universal dominion, so the analogy of history leads to the conclusion, that great and durable results are to be produced by its agency. And without presuming to scan too minutely the designs of Providence, in which we are merely blind though free agents, it may not be going too far to assert, that the ultimate object for which this vast power was created, is already conspicuous. The Roman legions bequeathed to the world the legacy of modern Europe; its empires and monarchies are but provinces of their dominion, regenerated by the fierce energy of northern valour. The English navy will transmit to mankind

CHAP. XLII. 1806.

the still more glorious inheritance of Transatlantic and Australian greatness. A new world has been peopled by its descendants, and imbued with its spirit: freedom, tempered by power, will follow in its footsteps: more closely than it did the march of the Roman legions will the career of civilisation follow the British flag. The era is fast approaching in this narrative, when another power, equally slow in its growth, equally permanent in its progress, will come before us, arising to greatness in the east of Europe. The Cross is inscribed on its banners : Wo to the Crescent! is the watch-cry of its people; and while the brilliant meteor of Napoleon, rising on the fleeting ascendant of passion and crime, is extinguished in blood, these two colossal empires, irresistible, the one by sea and the other by land, will each lay the foundations of the spread of Christianity through half the globe.

47. Reduction of the Cape of Good Hope. Jan. 8.

These defeats of the French naval squadrons were not the only maritime operations of this year. Before Mr Pitt's death, he had prepared an expedition, under Sir David Baird, consisting of five thousand men, for the reduction of the Cape of Good Hope, the naval armament being under the direction of Sir Home Popham. On the 4th January 1806, the whole reached Table Bay; but the violence of the surf precluding the possibility of disembarking in that quarter, they were obliged to land in Leopard Bay, from whence they moved immediately towards the capital. On the 8th they came up with the Dutch forces, five thousand strong, chiefly cavalry, in battle array, upon an elevated plateau which the road crossed on the summit of the Blue Mountains. The Hollanders stood several discharges without flinching; but no sooner were preparations made for charging with the bayonet, than they broke and fled, leaving seven hundred killed and wounded on the field of battle; while the loss of the victors was only two hundred and twelve. This action decided the fate of the colony : Cape Town surrendered ; General Jansens, who had retired with three thou-

sand men towards the Hottentot country, was induced by an honourable capitulation, which provided for his safe return to Europe with all his forces, to abandon a hopeless contest; and within eight days from the time when the troops were first landed, the British flag waved on all the forts, and this valuable colony was permanently annexed to the British dominions.[1]

[1] Ann. Reg, 1806, 233, 234. Dum. *xv. 69,* 73.

48. Sir Home Popham resolves to attack Buenos Ayres.

This well-concerted enterprise added an important settlement to the British colonial girdle, which already almost encircled the earth : but the facility with which it was achieved, inspired the commanders with an overweening confidence, which ultimately led to serious disasters. Sir Home Popham had at a former period been privy to certain designs of Mr Pitt for operations in concert with General Miranda in South America, and had even been appointed, in December 1804, to the Diadem of sixty-four guns, " for the purpose of co-operating with General Miranda, to the extent of taking advantage of any of his proceedings which might tend towards our attaining a position on the continent of South America favourable to the trade of this country."[2] This intention, however, had been afterwards abandoned, or at least suspended, in consequence of the urgent remonstrances of Russia against any such remote employment of the British forces; and when he arrived at the Cape, Sir Home had no authority, express or implied, to employ any part of the forces under his command on any other expedition. But his ardent imagination had been strongly impressed by the brilliant results, both to the nation and the officers engaged in the service, which might arise from such a destination of part of the force which had effected the reduction of the Cape of Good Hope ; and having persuaded Sir David Baird, the governor of that settlement, to a certain extent to enter into his views, he set sail in the beginning of April from Table Bay, taking with him the whole naval force under his command, and fifteen hundred land troops.[3] With these, and two companies which he had the address

[2] Lord Melville's evidence in Sir H. Popham's trial. March 9, 1807.

CHAP. XLII.

1806, 49.

to procure from St Helena, he steered straight for the mouth of the Rio de la Plata.

Which falls. 28th June.

The expedition reached the neighbourhood of Buenos Ayres on the 24th June, and the troops were immediately disembarked. General Beresford, who commanded the land forces, at once proceeded against that town, while the naval forces distracted the attention of the enemy, by threatening Monte Video, where the principal regular forces were collected. Buenos Ayres, chiefly defended by militia, was unable to withstand the energetic attack of the invaders; and a capitulation was soon concluded, which guaranteed private property—a stipulation which the English commanders religiously observed, though cargoes of great value were lying afloat on the river, and might, by the established usages of war, have been declared good prize. But public stores to a great amount fell into the hands of the victors; of which 1,200,000 dollars were forthwith forwarded to government, while quicksilver to double the amount was seized for the benefit of the captors.[1]

[1] Ann. Reg. 1006, 235, 236. Dum. xv. 74, 75.

50. Embarrassment of government on this success.

Government were extremely embarrassed how to act when intelligence of this unlooked-for success reached the British islands. Not that they felt any doubt as to the inexpedience and unhappy tendency of the enterprise; for on the first information that the expedition was in contemplation, they had despatched orders to countermand its sailing; which unhappily arrived too late to put a stop to its progress. But they were unable to stem or moderate the delirium of joy which pervaded the minds of the mercantile classes on receipt of the despatches. The English, subject beyond any other people, perhaps, of whom history makes mention, to periodical, though fortunately not very lasting, fits of insanity, were suddenly seized with the most immoderate transports. Boundless fields of wealth, it was thought, were opened, endless markets for the produce of manufacturing industry discovered; and those fabled regions which formed the Eldorado of Sir Walter Raleigh, appeared about to pour

their inexhaustible treasures into the British islands. Under the influence of these highly excited feelings, every principle of reason, every suggestion of sense, every consideration of policy, every lesson of experience, was swept away: speculations the most extravagant were entered into, projects the most insensate formed, expectations the most ridiculous entertained; and government, unable to withstand the torrent, were obliged to dissemble their real feelings, and give a certain countenance to ideas which could be fraught only with ruin to all who acted upon them.[1]

[1] Ann. Reg. 1806, 237, 238.

51. Buenos Ayres is retaken by the South Americans. Aug. 4.

But long before the cabinet of St James's were either required to come to a resolution in what manner they were to act in regard to their new acquisition, or the boundless consignments which were in preparation could have crossed the Atlantic, the conquest itself had returned to the government of its former masters. Ashamed of their defeat by a handful of foreigners, and recovered from the consternation which the unwonted occurrence of an invasion had at first produced, the Spaniards began to entertain serious thoughts of expelling the intruders. An insurrection was secretly organised in the city of Buenos Ayres, almost under the eyes of the English commanders, without their being aware of what was going forward. The militia of the surrounding districts were assembled; Colonel Linieres, a French officer in the Spanish service, favoured by a thick fog, succeeded in crossing over from Monte Video at the head of a thousand regular troops; and on the 4th August the small English garrison, assailed by several thousand men from without, found itself menaced with insurrection within the city. The state of the weather rendered embarkation impossible; a desperate conflict ensued in the town; and the English troops, after sustaining for several hours an unequal conflict with the enemy, in greatly superior force in the streets, and a still more deadly because unseen foe in the windows and on the roofs of houses, were obliged to capitulate. The terms of the surrender

CHAP. XLII. 1806.

were afterwards violated by the Spaniards, and the whole remaining troops, thirteen hundred in number, made prisoners of war, after having lost nearly two hundred in killed and wounded. Sir Home Popbam, the author of these calamities, succeeded in making his escape with the squadron, and cast anchor off the mouth of the river, where he maintained a blockade till reinforcements enabled the British to resume the offensive, attended, in the end, with still more unfortunate circumstances in the succeeding year. General Miranda, whose projects against South America had been the remote cause of all these disasters, disappointed in his expectations of assistance both from the British and American governments, set sail from New York at the head of a most inadequate force of one sloop and two schooners; and after undergoing many hardships, and landing on the Spanish main, was obliged to re-embark and make the best of his way back to Trinidad.[1]

[1] Ann. Reg. 1806, 240, 241.

52. Differences with America in regard to neutral rights.

Differences at this period arose, which threatened to involve the British government in a far more serious contest with the United States of North America. They originated in grievances which unquestionably gave the Americans much ground for complaint, although no fault could be imputed to the English maritime policy; and they were the necessary result of their having engrossed a large portion of the lucrative carrying trade between the belligerent powers. The first subject of complaint was the impressment of seamen said to be British in the American service: the next, the alleged violation of neutral rights, by the seizure and condemnation of vessels engaged in the carrying trade between France and her own or allied colonies. The first, though a practice of all others the most likely to produce feelings of irritation among those upon whom it was exercised, arose unavoidably from the similarity of habits and identity of language in the two states, which of course rendered desertion frequent from the one service to the other; and was a

necessary consequence from the right of search which the American government, by a solemn treaty in 1794, had recognised, and which constituted the basis of the whole maritime laws of Europe. It was impossible to expect that when British officers, in the course of searching neutral vessels for contraband articles, came upon English sailors who had deserted to the service of these neutrals, and whom they recognised, they should not reclaim them for their own country. If abuses were committed in the exercise of this delicate right, that was a good reason for making regulations to check them as far as possible, and provide for a due investigation of the matter, but none for abrogating the privilege altogether.[1]* The second arose from the decisions of the English admiralty courts, which now declared good prize neutral vessels carrying colonial produce from the enemy's colonies to the mother state, though they had landed and paid duties in the neutral country, contrary to the former usage, which admitted that step as a break in the continuity of the voyage, and protected the cargo.[2]

[1] The Essex, May 1805, per Sir W. Scott. Robinson's Rep. ii. 184.

[2] Case of Polly, July 5, 1800. Rob. ii. 368.

The ground of the distinction, as explained by Sir William Scott, was, that to bring the neutral within the

* On the part of the Americans it was contended, " that the practice of searching for and impressing seamen on board their vessels was not only derogatory to the honour of their flag as an independent nation, but led to such outrages and abuses, that, while it continued, no lasting peace or amity could be expected with Great Britain. It continually happened that native Americans were impressed, and obliged to serve in the English navy on pretence of their being British-born subjects; and such was the similarity of language and external appearance between the two nations, that even with the fairest intentions such mistakes must frequently happen. A practice which leads to such abuses cannot be tolerated by an independent state. It is in vain to appeal to abstract right, or the practice of other states; the close similarity of the Americans and English renders the exercise of it infinitively more grievous in their case, than it could be in any other. The American government are willing to concur in any reasonable measures to prevent British deserters from finding refuge on board the American ships; but they can no longer permit the liberty of their citizens to depend on the interested or capricious sentence of an English oflacer."

To this it was replied on the part of Great Britain, " That no power but her own could release a British subject from the allegiance which he owed to the government of his nativity; and that, provided she infringed not the jurisdiction of other independent states, she had a right to enforce their services wherever she found them: that no state could, by the maritime law, prevent its merchant

CHAP. XLII.

1806.

53. Grounds of the conduct of England as explained by Sir W. Scott.

exception, it was necessary that there should be a *bona fide* landing and payment of duties; and so it had been expressly stated in Lord Hawkesbury's declaration on the subject, issued in 1802; whereas, under the system of revenue laws established in the United States, this was not done. On the contrary, the payment of the duties was only secured by bonds, which were cancelled by debentures for the same sums the moment the goods were re-exported, which was usually done, without unlading, next day, so that the whole was a mere evasion, and cost only 3½ per cent on the amount of the sums nominally paid. It was strictly conformable to legal principle to refuse to recognise such an elusory proceeding as sufficient to break the continuity of the voyage, and permit the goods to set out on their travels anew, as from a neutral state; but it was equally natural that the sufferers under this distinction should exclaim loudly against its severity, and ascribe to the British courts inconsistent conduct, in first recognising as legal a trade from the enemy's colony to the mother state, interrupted by payment of duties at a neutral harbour, and then,[1] after extensive capital had, on the faith of that recogni-

[1] Robinson's Reports,, iii. 241, '249. Ann. Keg. 1806, 246, 248.

vessels being searched for contraband articles; and if in the course of that search her subjects were discovered, who had withdrawn from their lawful allegiance, on what principle could the neutral refuse to give them up *1* It is impossible to maintain that a belligerent may search neutral vessels for articles of a certain sort, held contraband and belonging to that neutral, and not at the same time reclaim its own subjects, if simultaneously discovered. The right of impressment is a necessary corollary from the right of search; it is in truth the exercise of a still clearer privilege. The difficulty of distinguishing an Englishman from an American is no reason for abandoning the right of searching for subjects of the former state, whatever reason it may afford for discrimination and forbearance in the exercise of it. If the right is abused, the officer guilty of the wrong will meet with exemplary punishment; if the Americans can show that a native of the United States has by mistake been seized for a Briton, he will be immediately released; but it is impossible for Great Britain to relinquish for an instant a right essential to the existence of her navy, and the knowledge of which alone prevents her ships of war being deserted for the higher wages whioh the lucrative commerce of neutrals enables them to offer, as a bribe to the principal defenders of her independence. If such a change is ever to be made, it can only be on the neutrals providing some substitute for the present practice equally efficacious, and not more liable to abuse, which has never yet been done."—See *Ann. Meg,* 1806, 244, 245,

mtionj been sunk in the traffic, declaring the vessels engaged in it good prize.

54. **Violent measures of Congress.**

To these serious and lasting subjects of discord, was added the irritation produced by an unfortunate shot from the British ship Leander, on the coast of America, which killed a native of that country, and produced so vehement a commotion, that Mr Jefferson issued an intemperate proclamation, forbidding the crew of that and some other English vessels from entering the harbours of the United States. Meetings took place in all the principal cities of the Union, at which violent resolutions on all the subjects of complaint were passed by acclamation. Congress caught the flame, and after some preliminary angry decrees, passed a non-importation act against the manufactures of Great Britain, to take effect on the 15th November following. The English people were equally loud in the assertion of their maritime rights, and everything announced the commencement of a Transatlantic war by a state already engaged with more than half of Europe.[1]

April 18.

[1] Ann. Reg, 1806, 247, 249.

55. **The commissioners on both sides adjust the differences.**

But, fortunately for both countries, whose real interests are not more closely united than their popular passions are at variance, the adjustment of the matters in dispute was placed in wiser and cooler heads than the excited populace of either. Commissioners were sent from America to negotiate with Great Britain, and endeavour to obtain some clear and precise rule for regulating their trade with the enemy's colonies, not liable to be changed by orders of council or decisions of courts as to the intentions of parties. These commissioners were Mr Munroe and Mr Pinckney on the part of the United States, and Lords Holland and Auckland on that of Great Britain. The instructions of their respective governments were of the most conciliatory kind, and the gentlemen on both sides entered upon their important duties in a corresponding spirit. Under such auspices the negotiation, how difficult and embarrassing soever,

CHAP. XLII. 1806.

could hardly fail of being brought to a successful issue. With respect to the impressment of seamen, the subject was found to be surrounded with such difficulties, that the American commissioners, in opposition to the letter of their instructions, found themselves constrained to be satisfied, in the mean time, with a pledge by the British government, that they would issue directions for the exercise of this right with the greatest delicacy and forbearance, and would afford immediate redress upon any representation of injury sustained by America, reserving the final discussion of the matter to a future opportunity. But on the other points in controversy a satisfactory adjustment was effected. A clear and precise rule was laid down for the regulation of the circuitous trade between the colonies and parent states of the enemy, which defined the difference between a continuous and interrupted voyage, and stipulated that, besides the goods being landed and the duties paid, there should remain, after the drawback, a duty of one per cent on European, and two per cent on colonial produce; and an extension of the maritime jurisdiction of the United States was agreed to, five miles from the shore of their territory. Thus, by good sense and moderation on both sides, were these difficult questions satisfactorily adjusted, and the British nation honourably extricated from an embarrassment which threatened, under far more perilous circumstances, to renew the dangers of the armed neutrality or the northern coalition.[1]

[1] Ann. Reg. 1806, 248, 250. Art. 11 and 12, Treaty.

56. Continental affairs. Coldness between France and Prussia.

While England was thus extending her naval dominion into every part of the globe, and asserting with equal forbearance and spirit the maritime rights essential to the preservation of the vast fabric, Napoleon was rapidly advancing in his career of terrestrial empire. Prussia was the first power which felt the humiliation to which these incessant advances led in all the adjoining states. The singular treaty has already been mentioned

which was concluded by Count Haugwitz on the 15th December, whereby he substituted for the intended war-like defiance an alliance purchased by the cession of Hanover from the unconscious and neutral, if not allied, England. Great was the embarrassment of the cabinet of Berlin when the intelligence of this unexpected arrangement arrived. On the one hand, the object of their ambition for the last ten years seemed now about to be obtained, and the state to be rounded by an adjoining territory which would bring it an addition of nearly a million of souls. On the other, some remains of conscience made them feel ashamed of thus partitioning a friendly power, and they were not without dread of offending Alexander by openly sharing in the spoils of his faithful ally. At length, however, the magnitude of the temptation and the terror of Napoleon prevailed over the king's better principles, and it was determined not to ratify the treaty unconditionally, but to send it back to Paris with certain modifications. As a colour to the transaction, and also, perhaps, as a salve to their own consciences, it was agreed to " accept the proposed exchange of Hanover for the Margravates, on condition that the completion of it should be deferred till a general peace, and the consent of the King of Great Britain in the mean time be obtained *f* while it was represented to the English minister at Berlin that arrangements had been concluded with France for insuring the tranquillity of Hanover, which " stipulated expressly the committing of that country to the exclusive guard of the Prussian troops, and to the administration of the king, until the conclusion of a general peace." But not a word was said of any ulterior designs of definitely annexing Hanover to the Prussian dominions; and in the mean time the French troops were replaced by the Prussian in that electorate, a large part of the army was disbanded, and a proclamation to the same effect issued by the king on taking possession of that territory.[1]

Jan. 26.

But it was alike foreign to the character and the designs

CHAP. XLII.

1806.

57. Increasing jealousies between the two cabinets. Prussia seizes on Hanover.

of Napoleon to admit any modifications, how trifling soever, in the treaties which he had concluded with the ministers of inferior powers. The utmost indignation, therefore, was expressed at St Cloud at the modifications proposed to be inserted in the treaty. "From that moment," says Bignon, "on the part of Napoleon the question was decided; all sincere alliance was become impossible between Prussia and him; it was regarded only as a suspected power, whose hollow friendship had ceased to have any value in his eyes." On the 4th February it was officially announced to Haugwitz, that "as the treaty of Vienna had not been ratified within the prescribed time by the Prussian government, the Emperor regarded it as no longer binding." This rigour had the desired effect; Prussia had not resolution enough to resist; and on the 15th February a new and still more disgraceful treaty was signed by Haugwitz at Paris, which openly stipulated not only the annexation of Hanover to the Prussian dominions, but the exclusion of the British flag from the ports of that electorate. It was ratified on the 26th, and immediately carried into execution. Count Schulenberg took possession of Hanover on the part of the Prussian monarchy, and immediately issued a proclamation, closing its harbours against English vessels. Finally, on the 1st April a patent appeared, formally annexing the electorate to the Prussian dominions, on pretence that, when belonging to Napoleon by the right of conquest, it had been transferred to Prussia, in consideration of three of her provinces ceded to France.[1]

58. Measures of retaliation by Great Britain,

This system of seizing possession of the territories of neutral or friendly states, in order to meet the wishes or suit the inclinations of greater potentates, when bounding their dominions, to which Napoleon, through his whole administration, was so much inclined, had succeeded perfectly when the objects of spoliation were powers, like Venice or Naples, too weak to manifest their resentment. But Prussia was egregiously mistaken when she applied

1806.

it to Great Britain. So early as the 3d February, Count Munster, the Regent of Hanover, had protested against the occupation of that electorate by the Prussian forces, from having observed in the conduct of their generals various indications of an intention to do more than take possession of it for a temporary purpose. At the same time the mildest remonstrance, accompanied by a request of explanation, had been made by Mr Fox, when the intentions of the cabinet of Berlin became still more suspicious. But no sooner did intelligence arrive of the exclusion of the English flag from the harbours of the Elbe, and the Prussian proclamation appear announcing that they took possession of the country in virtue of the French right of conquest, than that spirited minister took the most decisive measures to show that perfidious government the dispositions of the power they had thought fit to provoke. The British ambassador was immediately recalled from Berlin; the Prussian harbours were declared in a state of blockade; an embargo was laid on all vessels of that nation in the British harbours ; while a message from the King to both houses of parliament announced his resolution "to assert the dignity of his crown, and his anxious expectation for the arrival of that moment when a more liberal and enlightened policy on the part of Prussia should remove every impediment to the renewal of peace and friendship with a power with whom his majesty had no other cause of difference than that now created by these hostile acts." An order in council was soon after issued, authorising the seizure of all vessels navigating under Prussian colours ; and such was the effect of these measures, that the Prussian flag was soon almost swept from the ocean; and before many weeks had elapsed, four hundred of its merchant vessels had found their way into the harbours of Great Britain.[1]

disgraceful part which Prussia had taken in this transaction. " The Emperor of Russia," said he, " after he left Austerlitz, abandoned the whole direction of his troops that remained in Germany to the King of Prussia, and this country had promised him powerful assistance in pecuniary supplies. These were the means which he possessed of giving weight to his negotiations ; and what use did he make of them ? Why, to seize a part of the territories of those powers who had been supporting him in the rank and situation that had enabled him to negotiate on fair terms with the French Emperor. At first he pretended only to take interim possession of the electorate of Hanover, till the consent of its lawful sovereign could be obtained to its cession at a general peace; but latterly this thin disguise was laid aside, and he openly avowed that he accepted it in full sovereignty from France, to which it belonged by right of conquest. Such a proceeding rests upon no other conceivable foundation, but that worst emanation of the disorders and calamities of Europe in recent times—the principle of transferring the people of other states from one power to another, like so many cattle, upon the footing of mutual ambition or convenience. We may not at present be able to prevent the transfer ; but let us protest solemnly against its injustice, and vigorously make use of the forces which Providence has given us to make the guilty league feel the consequences of our just indignation. The pretext that Prussia received this territory from Napoleon, to whom it belonged by right of conquest, is as hollow as it is discreditable. It was merely occupied in a temporary way by the French troops ; it formed no part of the French empire ; above all, its cession had never been agreed to by this country —and where is there to be found an instance in history of such a cession of military acquisition pending the contest % The conduct of Prussia in this transaction is a compound of everything that is contemptible in servility, with everything that is odious in rapacity.[1] Other nations

1 Parl. Deb. vi. 890,892. 892. Ann. Reg. 1806, 161.

have yielded to the ascendant of military power—Austria was forced, by the fortune of war, to cede many of her provinces; Prussia alone, without any external disaster, has descended at once to the lowest point of degradation—that of becoming the minister of the injustice and rapacity of a master."

60. Napoleon's opinion of Prussia in this transaction.

In consenting to this infamous transaction, the cabinet of Berlin were doubtless actuated by the desire to deprecate the wrath and conciliate the favour of the French Emperor. It is worth while to examine, therefore, whether that object was gained, and in what light their conduct was viewed by that dreaded conqueror. " From the moment," says Bignon, " that the treaty of 15th February was signed, Napoleon did more than hate Prussia—he conceived for that power the most profound contempt. All his views from that day were based on considerations foreign to its alliance : he conceived new projects—he formed new plans, as if that alliance no longer existed. In the mean time, he pressed the execution of all the stipulations it contained favourable to France : he would not permit the delay of a single day."[1] Hardenberg had the good fortune to escape the disgrace of being privy to these proceedings : he had, from his known hostility to Napoleon, been obliged to withdraw from the Prussian cabinet before they were finally consummated.[2]

[1] Bign. 232.

[2] Hard. ix. 107.

61. His further measures of aggression on Germany.

The effects of this unmeasured contempt of Prussia soon appeared in a series of measures which overturned the whole constitution of theGermanic empire, and ultimately brought the former power into hasty and ill-fated collision with the French empire. On 15th March, Murat, without any previous concert with the cabinet of Berlin, was invested with the duchies of Berg and Cleves, ceded to France, by the treaty of 15th February, by Bavaria, in exchange for the Prussian provinces of Anspach and Baireuth in Franconia. The establishment of a soldier of fortune, the brother-in-law of Napoleon, in the very heart of the Westphalian provinces, was not calculated to allay the now

CHAP. XLII. 1806.

awakened jealousy of the Prussian government; and this feeling was strongly increased when the French troops, towards the end of April, took possession of the abbacies of Warden, Essen, and Elten, on pretence that they belonged to the duchy of Cleves, without any regard to the claims of Prussia to these territories, founded on a prior right. This irritation was augmented by the imperious conduct of the French generals in the north of Germany, who openly demanded a contribution of four million francs (£160,000) from the city of Frankfort; and, in terms equally menacing, required a loan from the city of Hamburg to a still larger amount; while, in Bremen, every kind of merchandise suspected to be English, was seized without distinction, and committed to the flames. Six millions of francs (£240,000) was the price at which the imperial robber condescended, in a time of profound Continental peace, to tender to the city of Hamburg and the Hanse Towns his protection. The veil which had so long hung before the eyes of the Prussian government now began to fall; they perceived, with indescribable pain, that their long course of obsequiousness to France had procured for them only the contempt of that power, and the hostility of its enemies.[1]

[1] Bign. v. 247, 270. Ann. Reg. 1806, 164. Hard. ix. 136, 224, 225. Bour. vii. 137,158.

62. Universal indignation in the north of Germany.

No words can paint the mingled feelings of shame, patriotism, and indignation, which animated all ranks in Prussia, when the rapid course of events left no longer any doubt, not only that their rights and interests were totally disregarded by France, in favour of whom they they had made so many sacrifices; but that they had sunk to this depth of degradation without any attempt to assert their dignity as an independent power. The Queen and Prince Louis, who had so long mourned in vain the temporising policy and degraded position of their country, now gave open vent to their indignation; nor did they appeal in vain to the patriotic spirit of the people. The inhabitants of that monarchy, clear-sighted and intelligent beyond almost any other, as well as

enthusiastic and brave, perceived distinctly the gulf into which their country was about to fall. One universal cry of indignation burst forth from all ranks. It was not mere warlike enthusiasm, but the profoundest feeling of national shame and humiliation which animated the people. The young officers loudly demanded to be led to the combat; the elder spoke of the glories of Frederick and Rosbach: an irresistible current swept away the whole nation. Publications, burning with indignant eloquence, issued from all the free cities in the north of Germany where a shadow even of independence was still preserved ; * and that universal fervour ensued which is the invariable forerunner, for good or for evil, of great events. Guided by wisdom and prudence, it might have led to the most splendid results ; impelled by passion and directed by imbecility, it induced unheard-of disasters.[1]

[1] Ann. Reg. 1806, 165. Hard. ix. 117,119. Thiers, vi. 416, 420.

63. Formation of the Confederacy of the Rhine.

While these generous feelings were gaining strength in the north of Germany, unbounded discontent arose in the south, from the exactions of the French army, which retired from Austria after the peace of Pressburg. According to Napoleon's usual policy, the whole of these immense bodies of men were fed, clothed, and lodged, at the expense of the territories in which they were quartered, or through which they passed; and a large part of their pay was also laid on the unhappy Germans, under pretence of retaining it, as a gratuity for the men, in the imperial exchequer, when they returned home. Unbounded was the exaspe-

* One of the most remarkable of these was a pamphlet published by the celebrated Gentz, which at the time produced a very great sensation. "The war hitherto conducted against France," said he, "was just and necessary in its origin, and certainly it has not become less so during its progress. If it has hitherto failed from false measures, are we to regard everything as lost *1* Is Germany destined to become what Holland, Switzerland, Spain, and Italy now are? But how is our salvation to be effected? By assembling what is dispersed, raising what is fallen, resuscitating what is dead. *We* have had enough of the leagues of princes; they have proved as futile as they are precarious. There remains to us but one resource—that the brave and the good should unite; that they should form a holy league for our deliverance: that is the only alliance that can defy the force of arms, and restore liberty to nations, and peace to the world. You, then, who amidst the universal shipwreck have yet preserved the freedom of your souls, the honesty of your hearts; who have

Gentz's pamphlet on the subject.

CHAP. *XUL* 1896.

ration which this iniquitous system excited in the countries in which it was enforced. But strong as were the feelings of patriotism and indignation which the conquests and rapacity of the French had awakened in a large portion of the German people, they were not as yet universal: the hour of the resurrection of the Fatherland had not arrived. By appealing to the blind ambition of some of their princes, and flattering the inconsiderate feelings of many of their people, Napoleon had contrived to animate one portion of its inhabitants against the other; and on this division of opinion he had formed the project of reducing the whole to servitude. The first design of the CONFEDERATION OF THE RHINE had been formed, as already noticed, the year before, during the residence of the Emperor at Mayence ; but it was brought to maturity, from his witnessing the enthusiasm excited among the lesser states of Germany by the victories in which they had shared, gained under the standards of France over Austria, and the regal dignity to which these had elevated their sovereigns. France, on this occasion, played off with fatal effect the policy so uniformly follpwed by its chiefs since the Revolution—that of rousing one portion of the population in the adjoining states against the other, and raising itself, by their mutual divisions, to supreme dominion over both. As his differences with Russia assumed a more envenomed character, and the hostility of Prussia became more apparent, Napoleon felt daily

hearts capable of sacrificing your all for the good of your fellow-citizens, turn your eyes upon your country; behold it mutilated, bleeding, weighed down, but not destroyed: in all but the grave there is hope. It is neither to England nor Eussia that we must look for our deliverance, how desirable soever the co-operation of these powers may be; it is *for Germany alone that the honour of our deliverance is reserved.* It is Germany which must raise itself from its ruins, and accomplish the general emancipation. We shall do more: *we shall deliver France itself, and restore to that power a free and pacific existence,* consistent with the independence of Europe." GENTZ, *Europe en* 1806; and HARD. ix. 122, 123. On the eve of the battle of Jena, what could appear more misplaced than this prophecy ! yet how exactly it was accomplished at a future time !—a remarkable instance of the manner in which genius, piercing through the clouds of present events, can discern the ultimate changes in which they are to terminate.

CHAP. XLII. 1806.

more strongly the necessity of uniting the states in alliance with him into a durable confederacy, which should enable him at all times to direct their military resources to his own purposes. It was no small matter to have such an outwork beyond the great frontier rampart of the Rhine ; their contingents of troops would place nearly a fourth of the military force of Germany at his disposal; and, what was to him perhaps of still greater importance, under the pretence of stationing the vast contingent of France in such a situation as to protect its allies, he might lay the whole expenses of two hundred thousand men on their resources.[x]

[1] Hard. ix. 153,155. Bign.v.300, 305. Luc-ches. i. 124, 131.

64. Powers admitted to the confederacy.

Influenced by such desires on both sides, the negotiations for the conclusion of the treaty were not long of being brought to a termination. The plenipotentiaries of all the powers who were to be admitted into the confederacy assembled at Paris in the beginning of July ; and on the 12th of that month, the act of the confederation was signed. The members of it were—the Emperor of the French, the Kings of Bavaria and Wiirtemberg, the Archbishop of Ratisbon, the Elector of Baden, the Grand-duke of Berg, the Landgrave of Hesse-Darmstadt, the Princes of Nassau-Weilburg, Nassau-Usingen, Hohenzollern-Hechingen, Hohenzollern-Sigmaringen, Salm-Salm, Salm-Kirburg, Isemburg-Birchstein, Aremberg, Lichtenstein-Darmberg, and the Count de la Leyen. The Archduke Ferdinand, Grand-duke of Wurtzburg, acceded to the confederacy a short time afterwards. By the act of confederation, the states in alliance were declared to be *severed for ever from the Germanic empire*, rendered independent of any power foreign to the confederacy, and placed under the protection of the Emperor of the French. Any hostility committed against any of them was to be considered as a declaration of war against the whole.[2] Several of the allies received accessions of territory or dignity : the free towns of Frankfort and Nuremberg were handed over, the first to the Prince Primate of

Sept. 30.

CHAP. XLII.

1806.

Ratisbon, the second to the King of Bavaria: all the members of the confederacy were invested with the fall sovereignty of their respective states, and received a gift of the foreign territories enclosed within their dominions,[1] Lastly, a separate article provided the military contingent which each of the confederates was to furnish for their common protection; which were, for France, two hundred thousand, and for the German states, fifty-eight thousand men. But subsequent experience soon proved that Napoleon exacted and received military aid to double that number from them.[2]*

2 See Treaty, Ann. Reg. 1806, 818. Martens' Traites, viii. 480, 506.

65. The Emperor renounces the crown of Germany.

This confederacy was by far the most important blow which Napoleon had yet levelled at the independence of the European states. It was no longer an inconsiderable power, such as Switzerland, Venice, or Holland, which received a master from the conqueror: the venerable fabric of the Germanic empire had been pierced to the heart, and some of her fairest provinces had been reft from the empire of the Caesars. The impression produced in Europe by this aggression was proportionally great. Sixteen millions of men were by a single stroke transferred from the empire to a foreign alliance ; and profound pity was felt for the Emperor, the first sovereign of Christendom, who was thus despoiled of a large portion of the dominions which, for above a thousand years, had been enjoyed by his predecessors. Charlemagne had been crowned emperor in 800; Napoleon dissolved the empire in 1806. Immense was the sensation which this violent aggression produced in Europe. Nor was this feeling of commiseration lessened

The contingents were settled as follows :—

by what immediately followed. On the 1st August notification was sent to the Diet of Ratisbon of the formation of the confederacy, both on the part of the Emperor of France and the coalesced princes. The former deemed it unnecessary to assign any reasons for his conduct ; but the latter pleaded, as their excuse for violating their engagements to the empire, the inconsistency between their present situation and their ancient bonds, and the necessity, amidst the weakness of their former chief, of looking out for a new protector, who might possess power adequate to secure them from insult. Under such flimsy devices did these selfish princes conceal a dereliction of loyalty and desertion of their country, calculated to produce unbounded calamities to Germany, and which they themselves were destined afterwards to expiate with tears of blood. But how keenly soever the Emperor Francis might feel the open blow thus levelled at his dignity, and the formation of a separate and hostile state in the heart of his dominions, he was not in a situation to give vent to his resentment. Soult still held the battlements of Braunau ; on one pretext or another the evacuation of the German states, which by the treaty of Pressburg was to be effected at latest in three months, had been delayed; the French battalions were in great strength on the Inn; the prisoners made during the campaign had not been restored; while the dispirited Austrian troops had not yet recovered the rude shocks of Ulm and Austerlitz. Wisely yielding, therefore, to a storm which they could not prevent, the Imperial cabinet dissembled their feelings; and, justly considering this stroke as entirely subversive of the empire, the Emperor Francis, by a solemn deed, renounced the throne of the Caesars, and declared himself the first of a new series of Emperors of Austria.[1]*

Aug.6 and 9. Jom. ii. 240,243. : ign.v.317, 119. Hard. x. 157. Martens, iii. 501. Thiers, vi. 605.

*** Napoleon set forth, in his communication to the Diet of Ratisbon, announcing the Confederation of the Rhine :—" The German constitution is no longer but a shadow; the Diet has ceased to have any will of its own. His majesty the Emperor and king can, therefore, no longer recognise its existence. He has accepted, in consequence, the title of Protector of the Confederation**

CHAP. XLII.

1806.

Though in appearance levelled at the Emperor Francis as chief of the empire, this violent dislocation of the Germanic body was in reality still more formidable to Prussia, from the close proximity of its frontier to the coalesced states. The sensation, accordingly, which it produced at Berlin was unbounded. All classes, from the cabinet of the King to the privates in the army, perceived the gulf which was yawning beneath their feet; they saw clearly that they were disregarded and despised, and reserved only for the melancholy privilege of being last devoured. The increasing aggressions of Napoleon or his vassals speedily made them aware that this was their destiny. The senseless declamations of Murat, in particular, contributed not a little to open the eyes of all persons in the north of Germany to the dangers which awaited them. His companions said at table, " Yours is a pretty principality, indeed, for the brother-in-law of so great an emperor. Doubtless you will soon be King of Westphalia, and get a noble kingdom carved out of that despicable Prussia, which has betrayed all the world." Bernadotte, who was established at Anspach, indulged in still more extravagant chimeras; and Augereau's officers at Wiirtzburg drank toasts openly, to success in the approaching war with Prussia. Nor were these vain and senseless words only. Murat advanced claims seriously to the principality of Embden, and the three abbacies which formed part of the indemnity awarded to Prussia for its cessions in Franconia, as

66. Great sensation which these events produce at Jierlin.

of the Rhine. In his pacific views, he declares that he will never carry his views beyond that river. He has hitherto been faithful to all his promises." The confederate princes declared,—" The results of the three last wars having proved that the Germanic body was really dissolved, the princes of the West and South have deemed it expedient to renounce all connexion with a power which has ceased to exist, and to range themselves under the banners of the Emperor of the French, who is bound alike by the interests of his glory and those of his empire to secure to them the enjoyment of external and internal tranquillity." With more truth and dignity the Emperor Francis said, in his act renouncing the throne of the empire :—" Being convinced of the impossibility of discharging any longer the duties which the Imperial throne imposed upon us, we owe it to our principles to abdicate a crown which could have no

Addresses of Napoleon and the Emperor Francis to the German States.

well as to the free cities of Hamburg and Bremen, The twenty-fourth article of the Confederation of the Rhine conferred on that military chief the sovereignty of all the German principalities of the House of Orange, and rendered its head, brother-in-law to the King of Prussia, tributary to the vassal of Napoleon; while the injurious treatment to which the Prince of Latour and Taxis, brother-in-law of the Queen of Prussia, was exposed, was a fresh outrage to that monarch in the most sensitive part. To avoid, however, if possible, an immediate rupture with the court of Berlin, Prussia was given to understand by the French Emperor, that if she was desirous to form a league of the states who were attached more or less to her in the north of Germany, France would not oppose its formation.'* But that power was informed shortly after, that the Hanse Towns, which Napoleon reserved for his own immediate protection, could not be permitted to join that northern confederacy; that Saxony could not be allowed to form a part of it against its will; while the Elector of Hesse was invited to join the Confederacy of the Rhine, and on his refusing to comply, was struck at by a resolution which cut off his access to part of his own dominions.[1]

[1] Hard. ix. 167, 176. Bign. v. 369, 390. Ann. Reg. 1806, 167. Thiers, vi. 507,551.

But all these grievances, serious as they were, sank into insignificance compared to that which arose, when it was discovered by M. Lucchesini, the Prussian ambassador at Paris, that France had entered into negotiations with England on the footing of the restitution of

value in our eyes, when we were unable to discharge its duties and deserve the confidence of the Princes Electors of the empire. Therefore it is that, considering the bonds which unite us to the empire as dissolved by the Confederation of the Rhine, we renounce the Imperial crown, and by these presents absolve the electors, princes, and states, members of the supreme tribunal, and other magistrates, from the duties which unite them to us as their legal chief." See HARD. ix. 159,162.

* "L'Empereur Napoleon verra sans peine, et meme avec plaisir, que la Prusse range sous son influence, au moyen d'une confederation semblable a celle du Rhin, tous les etats du nord d'Allemagne, On promettait de n'apporter aucun obstacle a une confederation de ce guerte. *Napoleon a l'ambassadeur Frangais a Berlin,* Septembre 29,1806.'—THIERS, vi. 507.

CHAP. XLII.

1806.

67. Fresh umbrage of Prussia at the treaty of France with Russia. Warlike preparations of Prussia,

Hanover to its lawful sovereign; that while continually urging the cabinet of Berlin to look for indemnities for such a loss on the side of Pomerania, Napoleon had engaged to Russia, in the treaty signed with d'Oubril, its ambassador at Paris, to prevent them from depriving the King of Sweden of any part of his German dominions ; and that while still professing sentiments of amity and friendship to Frederick-William, he had offered to throw no obstacles in the way of the re-establishment of the kingdom of Poland, including the whole of Polish Prussia, in favour of the Grand-duke Constantine. Irritated beyond endurance by such a succession of insults, and anxious to regain the place which he was conscious he had lost in the estimation of Europe, the

Aug. 9.

King of Prussia put his armies on the war-footing, despatched M. Krusemark to St Petersburg, and M. Jacobi to London, to endeavour to effect a reconciliation with these powers; opened the navigation of the Elbe; concluded his differences with Sweden; assembled his generals, and caused his troops to defile in the direction of Leipsic. The torrent of public indignation at Berlin became irresistible: the war party overwhelmed all opposition; in the general tumult the still small voice of reason, which counselled caution and preparation in the outset of so great an enterprise, was overborne. Prince Louis and his confederates openly boasted that Prussia, strong in the recollection of the Great Frederick, and the discipline he had bequeathed to his followers, was able, single-handed, to strike down the conqueror of Europe ; the young officers repaired at night to sharpen their sabres on the window-sills of the French ambassador ; warlike and patriotic songs resounded, amidst thunders of applause, at the theatres; and the Queen roused the general enthusiasm to the highest pitch, by displaying her beautiful figure on horseback in the streets of Berlin, at the head of her regiment of hussars, in the uniform of the corps.[1]

1 Hard. ix. 176,181. Bign.v.409, 415. Ann. Reg. 1806,

68. Renewed causes of discord between France and Russia.

While Prussia, suddenly and violently awakening from the trance of ten years, was thus taking up arms and rushing headlong into a contest, single-handed, with the conqueror of southern Europe, negotiations of an important character, terminating in a resolution equally warlike, had taken place with Russia and England. The retreat of the Emperor Alexander and his army from the disastrous field of Austerlitz, had apparently extinguished all causes of discord between the vast empires of Russia and France. Their territories nowhere were in contact. The vast barrier of Germany, with its two thousand walled cities, and forty millions of warlike inhabitants, severed them from each other. They had parted with mutual expressions of esteem, and the interchange of courteous deeds between the victor and the vanquished. The conclusion of the peace of Pressburg, by releasing the Czar from all obligations towards his unfortunate ally, seemed to have still further removed the possibility of a rupture ; while the withdrawing of Austria from the Continental alliance left no rational ground for renewing the contest on account of any danger, how imminent soever, to the balance of power from the aggressions of Napoleon. "Napoleon," said Prince Czartorinski to Alexander, "is at present victorious, but he may not be always so. Austria is beat down, but she detests her conqueror. Prussia is divided between the war and peace pursuit, but she will end by ranging herself on the side of German independence. Await your time : protract affairs till one or other of these powers is ready to act. Meanwhile remain united to England, and ready to resume your arms on the first favourable opportunity. You will in the end compel Napoleon to give you what is your due."—"When we contend/' replied Alexander, " with that man, we are children contending with a giant. Without Prussia we can do nothing. She is the only power that has not been conquered by France." There appeared, therefore, no chance of an immediate collision between the powers. But not-

CHAP. XLII.

1806.

withstanding these favourable circumstances, the secret ambition of these potentates again brought them into collision; and the quarter where the difference arose, indicated that it was the glittering prize of Constantinople which brought them to the fields of Eylau and Friedland.[1]

[1] Thiers, vi. 425, 426.

69. **Differences about Cattaro, which is occupied by the Russians.**

Cattaro, a small barren province situated to the south of Ragusa, on the eastern coast of the Adriatic, derives its value from the excellence of its harbour, which is the largest and safest in that sea, and the skill of its seamen, which has always secured them an honourable place in its naval transactions. By the treaty of Pressburg, it had been provided that this province should be ceded by the Imperialists to the French within two months after its final ratification. When this period had expired, the French commissioners authorised to take possession had not arrived; and the Russian agent there, taking advantage of that circumstance, succeeded in persuading the inhabitants, who were almost all of Greek extraction, that their intended transference to France had fallen to the ground, and that they were at liberty to tender their allegiance to whom they chose. In pursuance of these instigations, the people, who are styled Montenegrins, and ardently desired the establishment of a power professing the Greek faith within their bounds, rose in a tumultuous manner, shut up the Austrian commander, who had only a slender garrison at his disposal, within the fortress, and commenced a strict investment, in which they were soon supported by a Russian man-of-war, which arrived from Corfu. After a short blockade, he surrendered the place to the insurgents, who immediately transferred it to the Russians, by whom it was occupied in force. But the circumstances attending the transaction were so suspicious, that the Austrian subaltern officers in the fortress protested against its conditions, and the governor was afterwards brought to a court-martial at Vienna for his conduct on this occasion, and sentenced to confinement in a Transylvanian fortress for life,[2]

March 4.

[2] Ann. Reg. 1806,140, 150. Bign. v. 258,262. Hard. ix. 195,196.

Nothing that has since transpired authorises the belief that Austria was privy to this transaction; nor does any motive appear which could induce her, for so trifling an object, to run the risk of offending the Emperor Napoleon, whose terrible legions were still upon the Inn. But no sooner did he receive intelligence of it, than Napoleon ordered Marshal Berthier to delay the evacuation of the fortress of Braunau, on the Austrian frontier, and the march of all the French troops towards the Rhine was countermanded. In this way the important object was gained of keeping a hundred and fifty thousand men still at free quarters on the German states. He made no effort to dispossess the Russians and Montenegrins from Cattaro; but, on the pretext that because the Austrians had failed in performing their obligations to him, he was at liberty to look for an indemnity wherever he could find it, seized upon the neighbouring city of Ragusa, a neutral power with which he had no cause whatever of hostility. There Lauriston, who commanded the French garrison, was shortly after besieged by the Russians both by land and sea; but before anything of moment could be transacted in that quarter, the Austrians, exhausted by the prolonged stay of such an immense body of men on their territory, made such energetic remonstrances to the cabinet of St Petersburg on the subject, that they agreed to the evacuation of Cattaro; and M. d'Oubril, who was despatched from the Russian cabinet to Paris, ostensibly to negotiate the exchange of prisoners, but really to conclude a treaty between the two powers, brought authority for its surrender to the French. In consequence, however, of that ambassador having exceeded his instructions, the treaty which he concluded was not ratified by the Emperor Alexander; and as hostilities for that reason still continued, Lauriston was reduced to the last extremity in Ragusa, and saved from destruction only by the opportune arrival of Molitor, who advanced at the head of reinforcements from Dalmatia. The territory of Ragusa was now

fully occupied by the French, and continued in their hands till the end of September, when it was invaded by a powerful body of Russians and Montenegrins. But these troops, having been drawn out of their intrenchments by a skilful stratagem on the part of Marmont, were attacked and defeated with great loss, and even experienced some difficulty in regaining the fortresses of Castel Nuovo and Cattaro, from whence they had issued.[1]

[1] Ann. Reg 1806,150, 151. Bign. v. 258, 265. Hard. ix. 219, 221.

71. D'Oubril concludes a treaty at Paris between France and Russia.

M. d'Oubril came to Paris by Vienna; but, notwithstanding his conferences with the English and Austrian ministers at that capital, he appears, when he arrived at Paris, to have acted in a way not agreeable to the cabinet of St Petersburg or his instructions. Talleyrand and the French ministers made such skilful use of the dependence of the negotiations with England, which Lord Yarmouth was at that moment conducting at Paris, and of the threat totally to destroy Austria if hostilities were resumed, that they induced in the Russian ambassador a belief that a separate peace with these powers was on the eve of signature, and that nothing but an instant compliance with the demands of the Emperor could save Europe from dismemberment, and the Czar from all the consequences of a single-handed contest with Napoleon. Under the influence of these fears and misrepresentations, he suddenly signed a treaty as disgraceful to Russia as it was contrary to the good faith which she owed to Great Britain. Not content with surrendering the mouths of the Cattaro, the subject of so much discord, to France, without any other equivalent than an illusory promise that the French troops should evacuate Germany in three months, he stipulated also, in the secret articles, " that if, in the course of events, Ferdinand IV. should cease to possess Sicily, the Emperor of Russia should unite with the Emperor of France in all measures calculated to induce the court of Madrid to cede to the Prince-Royal of Naples the Balearic Isles, to be enjoyed by him and his successors with the title of king —the harbours of those islands being shut against the

British flag during the continuance of the present war; that the entry to these isles should be closed against Ferdinand himself and his queen; and that the contracting parties should concur in effecting a peace between Prussia and Sweden, without the latter power being deprived of Pomerania." Ragusa also was to be evacuated, and the integrity of the Ottoman dominions guaranteed by both the contracting parties—a provision which forms a striking contrast to the agreement for the partition of that power concurred in within a year afterwards at Tilsit. Thus did Napoleon and d'Oubril concur in despoiling the King of Naples of the dominions which were still under his command, without any other indemnity than a nominal throne of trifling islands to his son; gift away Sicily, garrisoned by English troops, without consulting either the court of Palermo or the cabinet of London; dispose of the Balearic Islands, without the knowledge or consent of the King of Spain; and stipulate the retention of Pomerania by Sweden, at the very moment that France held out the acquisition of that duchy as an equivalent which should reconcile Prussia to the loss of Hanover.[1]

[1] Martens, viii. 309, 472. Hard, ix.119,120. Bign.v.325, 329.

72. Which is disavowed by the cabinet of Petersburg.

M. d'Oubril seemed to be aware, at the time he signed this extraordinary treaty, that he had exceeded or deviated from his instructions ; for no sooner was it concluded, than he set off in person to render an account of it at St Petersburg, observing, at the same time—"I go to lay the treaty and my head at the feet of my imperial master." In effect, before he reached the Russian capital, intelligence of the formation of the Confederation of the Rhine had arrived, which unexpected event greatly strengthened the influence of the party hostile to France. A change of ministry had ensued: Prince Adam Czartorinski, and the chiefs inclined for a separate accommodation, were displaced, and succeeded by the Baron Budberg, and the nobles who supported the English in opposition to the French alliance. The treaty was, in consequence of these events, formally disavowed by the

Aug. 25.

Imperial government, as "entirely in opposition to the instructions which d'Oubril had received," though they professed their willingness to resume the negotiations on a basis which had been communicated to the cabinet of the Tuileries. By this disavowal, indeed, the Russian government was saved the dishonour which must for ever have attached to it had so disgraceful a treaty been unconditionally ratified ; but upon comparing the powers conferred on the ambassador by one ministry, with the refusal to ratify the treaty by its successor, it was difficult to avoid the inference, that the difference in reality arose from a change of policy in the Imperial cabinet, between the time of issuing the instructions and signing the treaty, not any deviation from those instructions on the part of its ambassador. And all reflecting men began to conceive the most serious apprehensions as to the consequences which might ensue to the liberties of Europe from the alliance of two colossal powers, which thus took upon themselves, without any authority, to dispose of inferior thrones, and partition the territories of weaker states.[1] *

[1] Bign. v. 330, 344. Hard. ix. 221, 222.

73. Opening of negotiations between France and England.

The rapid succession of more important events left no time for the advance of the fresh negotiations thus pointed at by the cabinet of St Petersburg. All eyes in Europe were turned to the conferences between France and England, which had been long in dependence at Paris; and the turn which they were now taking left little hope that hostilities, in every quarter, could be brought to a termination. This celebrated negotiation took its rise from a fortuitous circumstance equally creditable to the government of both powers. An abandoned exile, in a private

*** The powers conferred on M. d'Oubril bore:—"We authorise, by these presents, M. d'Oubril to enter into negotiations with a view to the 'establishment of peace, with whoever shall be sufficiently authorised on the part of the French government, and to conclude and sign with them an act or convention on bases proper to consolidate peace between Russia and France, and to prepare it between the other belligerent powers; and we promise on our imperial word to hold good and execute faithfully whatever shall be agreed to and signed by our said plenipotentiary, and to adhibit to it our imperial ratification in the terms that shall be specified." On the other hand, the act of disavowal bore—" The pretended act of pacification concluded by M. d'Oubril has been**

audience with Mr Fox, in February, had proposed to that minister to assassinate Napoleon. Either penetrating the design of this wretch, who had once been an agent of the police in Paris, or inspired by a generous desire to prevent the perpetration of so atrocious an offence, the English minister, after having at first dismissed him from his presence, had the assassin apprehended, and sent information to M. Talleyrand of the proposal. This upright proceeding led to a courteous reply from that minister, in which, after expressing his satisfaction at the new turn which the war had taken, which he regarded as a presage of what he might expect from a cabinet of which he fondly measured the sentiments according to those of Mr Fox, "one of the men who seem expressly made to feel the really grand and beautiful in all things," he repeated that passage, in the exposition of the state of the empire by the Minister of the Interior, wherein Napoleon declared that he would always be ready to renew conferences with England on the basis of the treaty of Amiens. Mr Fox replied that he was inspired with the same sentiments; and thus commenced a negotiation under the most favourable of all auspices—mutual esteem on the part of the powers engaged in it.[1]

74. England insists on Russia being a party to the negotiation. April 1.

The basis proposed by Mr Fox was, that the "two parties should assume it as a principle, that the peace was to be honourable to themselves and their respective allies." —"Our interests," said Talleyrand, "are easily reconciled, from this alone, that they are distinct. You are the masters of the sea. Your maritime forces equal those of all the kingdoms of the earth put together. We are a great

submitted to a council specially summoned to that effect, and compared with the instructions which he had received here, and the instructions transmitted to him at Vienna before his departure from that town; and they found that M. d'Oubril, in signing that treaty, has not only deviated from the instructions he had received, but acted in a manner directly contrary to the sense and spirit of the orders themselves." The penalty inflicted on the ambassador, however—that of mere banishment to his estates—did not look as if there had been any very serious deviation from instructions.—See MARTENS' *Sup.* iv. 308, 312; and HARD. ix, 222.

CHAP. XLII. 1806.

Continental power; but other nations have as great armies on foot as ourselves. If, in addition to being omnipotent on the ocean from your own strength, you desire to acquire a preponderance on the Continent by means of alliances, peace is not possible." Talleyrand strongly urged the English minister to lay all the allies on either side out of view, and conclude a separate accommodation; but in this design he was unsuccessful. Mr Fox insisted, with honourable firmness, that Russia should be made a party to the treaty. " Do you wish us to treat," said he, "conjointly with Russia ? We answer, Yes. Do you wish us to enter into a separate treaty, independent of that power ? No." Finding the English minister immovable on this point, M. Talleyrand had recourse to equivocation ; and it was agreed that the accession of the Continental powers to the treaty should be obtained.[1]

Despatch, April 20.

[1] Parl. Deb. viii. 103, **108.** Bign. v. 267,274.

75. Basis of *uti possidetis* fixed.

The next step in the negotiation was to fix the basis on which the interests and honour of England and France themselves were to be adjusted. To ascertain this important point in a manner more satisfactory than could be done by the slow interchange of written communications, M. Talleyrand sent for Lord Yarmouth, one of the English travellers whom Napoleon had detained a prisoner ever since the rupture of the peace of Amiens, and proposed to him the basis on which France was willing to enter into an accommodation. These were the restitution of Hanover, which, after great difficulty, Napoleon was brought to agree to—although he had only a few months before ceded it to Prussia—and the retention of Sicily by England or its allies ;* the recognition of the Emperor of France by England, and the guaranteeing of the integrity of the Ottoman dominions by France.[2] These

[2] Lord Yarmouth's Commun. Parl. Deb. **viii.** 110.

* "I inquired," said Lord Yarmouth, "whether the possession of Sicily would be demanded, it having been so said. 'Vous l'avez,' he replied—'*now ne vow la demandons pas;* si vous ne la possediez pas, elle pourrait augmenter de beaucoup les difficultes.' Considering this to be very positive, both from the words and the manner of delivering them, I conceived it would be improper to make further questions. We ask nothing of you (nous ne vous demandons rien,) amounting to an admission of *uti possidetis,* as applicable to

terms Lord Yarmouth justly considered as equivalent to the establishment of the principle of *uti possidetis*, and stated them as such in his communication made the same day to Mr Fox on the subject.

76. Which France departs from. June 13.

At the time when the proposals were made by the French government, no accommodation had been effected with Russia ; and it was an object of the highest importance to induce Great Britain, on any terms, to accede to the basis of a negotiation. But when the next communication from Talleyrand was made, circumstances had entirely changed. D'Oubril had expressed his willingness to sign a separate peace in behalf of Russia, and Napoleon was resolved to take advantage of this circumstance to exact more favourable conditions than he had at first agreed to from the British government. When pressed, therefore, by Lord Yarmouth to adhere to the principle of *uti possidetis*, and in particular to agree *to the King* June *16.* of Naples retaining Sicily, he replied, that though the sentiments of the Emperor in favour of peace had undergone no alteration, "yet that *some changes had taken place*, the possibility of which he had hinted at when I last saw him," alluding to the readiness of Russia to treat separately; and further mentioned that the Emperor had received reports from his brother, and the general officers under his command, stating that *Naples could not be held without Sicily*, and the probability they saw of gaining possession of that island ; that the restitution of Hanover for the honour of the British crown, the retention of Malta for the honour of the navy, and of the Cape of Good Hope for the interests of commerce, should be sufficient inducements to the cabinet of St James's to enter into the negotiation; that if a confidential com-

his Majesty's conquests." Talleyrand concluded with these words:—'Les sentiments de la France sont enticement changes : l'aigreur qui characterisait le commencement de cette guerre n'existe plus. Et ce que nous desirous le plus, c'est de pouvoir vivre en bonne intelligence avec une aussi grande puissance que la Grande Bretagne.'"—LOBD YABMOUTH'S *Communication*, No. 12; *Parl. Deb.* viii. 110.

CHAP. XLII. 1806.

munication had been made three months before, the questions both of Holland and Naples might have been arranged in the manner most satisfactory to Great Britain; but that now, when their dominions had been settled on the Emperor's brothers, any abandonment of any portion of them would be "considered by the Emperor as a retrograde measure, equivalent to an abdication." Lord Yarmouth continued to insist, in terms of Mr Fox's instructions, for the basis of *uti possidetis* as the one originally proposed by France, and to which Great Britain was resolved to adhere; that it was alone on the faith of this basis, more especially as applied to Sicily, that the conferences were continued; that any tergiversation or cavil, therefore, on that capital article would be considered as a breach of the principle of the negotiation in its most essential part; that full powers were now communicated to him to conduct it; but that the possession of Sicily was a *sine qud non,* without which it was useless to continue the conferences. Talleyrand upon this offered the *Hanse Towns* as an equivalent to the King of Naples for the loss of that island: and when this was refused, to give Dalmatia, Albania, and Ragusa as an indemnity to his Sicilian majesty: looking out thus, according to the usual system of Napoleon, in every direction for indemnities at the expense of minor neutral states, rather than surrender one foot of his own acquisitions.[1]

77. Continuation of the negotiations, and gradual estrangement of the parties.

This clear departure on the side of France from the basis of the negotiation originally laid down by its own minister, and open avowal of the principle that neutral and weaker powers were to be despoiled in order to reconcile the pretensions of the greater belligerents, augured but ill for its ultimate success; and the notes which were interchanged gradually assumed a more angry character; but the conferences were still continued for a considerable time. Mr Fox, with the firmness which became a British minister, invariably insisted that Sicily

1806.

should be retained by the King of England, and enjoined on Lord Yarmouth to demand his passports if this was not acceded to. The changes in Germany consequent on the Confederation of the Rhine were admitted by Talleyrand, but offered to be modified, if peace with Great Britain was concluded. Mr Fox refused to be any party to the project of despoiling Turkey and Ragusa, independent and neutral states, to provide an equivalent for the abandonment of Sicily; but threw out a hope that by the cession of part of the Venetian States, with the city of Venice, from the kingdom of Italy to the King of Naples, an accommodation might be listened to. To this, as making the proposed equivalent come from his own allies, Napoleon would by no means consent. Advices were received at Paris that an army of thirty thousand men had been assembled at Bayonne. All the officers in that capital belonging to corps in Germany received orders instantly to join their respective regiments, and the approaching signature of a separate treaty between France and Russia, in which the cession of Sicily in exchange for the Balearic Isles, taken from Spain, was a principal article, came to the knowledge of the British plenipotentiary.[1]

78. Progress of the negotiation.

The conclusion of the separate peace between Russia and France on the day following these communications, did not, of course, lessen the expectations of the latter power, though it removed all difficulty arising from the condition to which Great Britain had uniformly adhered, of making the cabinet of St Petersburg a party, either directly or in substance, to the pacification. But the demands of France did not rise in the manner that might have been expected after so great an advantage: she was still willing to allow Great Britain to retain Malta, the Cape, and her acquisitions in India, and to restore Hanover: full powers were given to Lord Yarmouth, which were exchanged with those of General Clark. Specific retention of Sicily by the King of Naples was

July 21.

CHAP. XLII. 1806.

no longer insisted for, it being agreed by Great Britain that an adequate equivalent, if provided by lawful means, should be accepted. Napoleon continued to urge the acquisition of the Hanse Towns, either by Prussia, as a compensation for Hanover, or by his Sicilian majesty: and held out the menace that, by not acceding to such an arrangement, the invasion of Portugal would be rendered inevitable, for which an army was already assembled at Bayonne. Nay, he even hinted at ulterior views in regard to the Spanish peninsula, which the resistance of England would cause to be developed, as similar ones had been in Holland and Naples. But, regardless of these threats, Mr Fox firmly insisted for the original basis of *uti possidetis,* as the only one which could be admitted ; and as matters appeared as far as ever from an adjustment, Lord Lauderdale was sent to Paris with full powers to treat from the British government.[1]

July 30.

[1] Lord Yarmouth's and Mr Fox's Despatches, July 28. August 3, 1806. Pari, Deb. Viii. 125,138.

79. The negotiation is broken off.

Under the auspices of this able nobleman, the negotiation was protracted two months longer without leading to any satisfactory result. The English minister continued incessantly to demand a return to the principle of *uti possidetis* as the foundation of the negotiation ; and the French cabinet as uniformly eluded or refused the demand, and insisted for the evacuation of Sicily by the English troops, and its surrender to Joseph, and the abandonment of all the maritime conquests of the war, with the exception of the Cape of Good Hope, by Great Britain. Lord Lauderdale in consequence repeatedly demanded his passports, and the negotiation appeared on the point of terminating, when intelligence was received in London of the refusal of the Emperor of Russia to ratify the treaty signed by M. d'Oubril. This important event made no alteration in the proposals of Great Britain, further than an announcement that any treaty now concluded must be with the concurrence of Russia; but it considerably lowered those of Napoleon, and Talleyrand announced that France " would make great con-

Sept. 3.

Sept. 18.

cessions for the purpose of obtaining peace," These were afterwards explained to be the restoration of Hanover to Great Britain; the confirmation of its possession of Malta; the cession of the Cape, Tobago, and Pondicherry to its empire; and the grant of the Balearic Isles, with an annuity *from Spain,* in lieu of Sicily, as a compensation to the King of Naples. To these terms the English cabinet would by no means accede ; and as there was no longer any appearance of an accommodation, Lord Lauderdale demanded and obtained his passports, nine days after Napoleon had set out from Paris to take the command of the army destined to act against Prussia.[1]

80. Real views of the parties in this negotiation.

Thus this negotiation, begun under such favourable auspices, both with England and Russia, broke off with both powers on the subject of the possession of Sicily and of the mouths of the Cattaro. Apparently these were very inconsiderable objects to revive so dreadful a contest, and bring the armies of the south and north of Europe to Eylau and Friedland; but in reality the secret ends which the hostile powers had in view, in contending for these distant possessions, were more considerable than might be at first imagined. It was not merely as an appanage of the crown of Naples that Napoleon so obstinately insisted on Sicily for his brother; it was as the greatest island in the Mediterranean, as opening the way to the command of that inland sea, and clearing the route to Egypt and the Indies, that it became a paramount object of desire. It was not an obscure harbour on the coast of the Adriatic which brought the colossal empires of France and Russia into collision; it was a settlement on the skirts of Turkey, it was the establishment of a French military station within sight of the Crescent, which was the secret matter of ambition to the one party, and jealousy to the other. Thus, while Sicily and Cattaro were the ostensible causes of difference, India and Constantinople were the real objects in the view of the parties;[2] and the negotiation

[1] **Bign. v. 163, 365.**

CHAP. XLII.

1806.

broke off upon those eternal subjects of contention between England, Russia, and France—the empire of the seas, and the dominion of continental Europe.

81. State of affairs at Berlin. Prussia's ultimatum, and preparations for war on both sides.

The intelligence of the refusal of Alexander to ratify d'Oubril's treaty with France excited an extraordinary transport at Berlin, which was mucli heightened when shortly after it became evident that the negotiations at Paris for an accommodation with Great Britain were not likely to prove successful. The war party became irresistible ; a sense of national degradation had reached every heart; the Queen was daily to be seen on horseback at the head of her regiment in the streets of Berlin.[1] The enthusiasm was universal; but in the guards and officers of that distinguished corps it rose to a pitch approaching to frenzy. In proportion to the force with which the bow had long been bent one way, was the violence with which it now rebounded to the other. Wiser heads, however, saw little ground for rational confidence in this uncontrolled ebullition of popular effervescence ; and even the heroic Prince Louis let fall some expressions indicating that he hoped for more efficient support in the field than the declaimers of the capital.*

[1] Bign. v. 403.

Aug. 26. Lucchesini, who had so long conducted the Prussian diplomacy at the French capital, sent despatches to his government full of acrimonious complaints of the cabinet of the Tuileries, which either by accident or design fell into the hands of the French police, and were laid before Napoleon. He instantly demanded the recall of the

Sept. 3. obnoxious minister, who left Paris early in September, and was succeeded by Knobelsdorf, whose mission was mainly to protract matters, that the cabinet of Berlin

Sept. 7. might complete its preparations, and if possible gain time

*** He repeated with emphasis the lines of the poet Gleims, in allusion to the warlike bards of Berlin:—**

" Sie singen laut im hohen chor
Vom Tod, furs Vaterland uns vor :
Doch kommt ein einziger Husar,
So lauft die ganze Barden Schar."

for the distant succours of Russia to arrive on the Elbe. But as the troops on both sides were hastening to the scene of action, and it was evident of how much importance it was that the strength of Russia should be thrown into the scale before a decisive conflict took place, Napoleon easily penetrated their design, and resolved himself to commence hostilities. His forces were so great that they might well inspire confidence in the issue of the contest. He had four hundred and fifty thousand men on foot, of whom a hundred and fifty thousand were in the interior, and a hundred and seventy thousand with the Grand Army in the centre of Germany, besides fifty thousand in Lombardy. Thirty thousand horse, and ten thousand artillerymen, formed part of the force with which he would first commence operations. His troops for some weeks past had been rapidly defiling from Braun au, the Inn, and the Necker, towards the banks of the Elbe, and one hundred thousand men were approaching the Thuringian Forest. He set out, therefore, from Paris to put himself at their head on the night of the 26 th September, conveyed the Guard by post to Mayence, and was already far advanced on his journey to the theatre of war, when the Prussian ultimatum was delivered at Paris by M. Knobelsdorf. Its conditions were—1st, That the French troops should forthwith evacuate Germany, commencing their retreat from the day when the King of Prussia might receive the answer of the Emperor, and continuing it without interruption. 2d, That the districts on the Wesel should be detached from the French empire. 3d, That no obstacles should be thrown in the way of the formation of a counter-league in the north of Germany. No stronger proof of the infatuation which had seized the cabinet of Berlin can be desired than the fact of their having, in the presence of Napoleon and the Grand Army, and without any present aid either from Russia, Austria, or England, proposed terms suitable rather to the day after the rout of Rosbach than the eve of the battle of Jena.[1]

82. Murder of Palm. Great sensation which it occasioned.

The public mind was at this period violently excited in Germany against the French, not merely by their prolonged stay beyond the Rhine, and the enormous expenses with which it was attended, but by a cruel and illegal murder committed by orders of Napoleon on a citizen of one of the free cities of the empire, who had sold a work hostile to his interests. Palm, a tradesman in Nuremberg, had been instrumental with many other booksellers in circulating the celebrated pamphlet by Gentz, already mentioned, in which the principle of resistance to French aggression was strongly inculcated, and another by Arndt, entitled " The Spirit of the Age," of a similar tendency, but in neither of which was any recommendation of assassination or illegal measures held forth. The others were fortunate enough to make their escape; but Palm was

Aug. 12. seized by the French soldiers, dragged before a military commission of French officers assembled by the Emperor's orders at Braunau, and there sentenced to be shot, which inhuman decree was immediately carried into execution, without his being so much as allowed to enter on his

Aug. 25. defence.* This atrocious proceeding, for which there is not a shadow of excuse, either in the nature of the publication charged, or in the law of nations, excited the most profound indignation in Germany. Men compared the

Proceedings of the military commission by which he was condemned.

*** The judgment of the military commission convicting Palm, and sentencing him to death, bore in its preamble :—" Considering that wherever there is an army, the first and most pressing duty of its chief is to watch over its preservation ; that the circulation of writings tending to revolt and assassination menaces not only the safety of the army, but that of nations; that nothing is more urgent than to arrest the progress of such doctrines, subversive alike of the law of nations and the *respect due to crowned heads;* injurious to the people committed to their government; in a word, subversive of all order and subordination—declares unanimously, That the authors, printers, publishers, and distributors of libels bearing such a character, should be considered as guilty of high treason, and punished with death." Such were the doctrines in which the frenzy of the French Bevolution, which began by prodaiming war to the palace and peace to the cottage, the contest which opened by an invitation to the people of all countries to throw off the yoke of crowned heads, terminated ! It is hard to say whether the barefaced falsehood, delusive sophistry, or cold-blooded cruelty of this infamous conviction are most conspicuous. The pamphlets which Palm had sold contained no doctrines whatever recommending assassination, or any private crime. If they had,**

loud declamations of the republican partisans in favour of the liberty of the press with this savage violation of it by their military chief; and concluded, that the only freedom which they really had at heart was license for their own enormities, and the only system of government which was to be expected from their ascendency, that of military violence. A dignified proclamation, issued about the same time by the senate of Frankfort, after recounting the enormous contributions which they had paid to the French armies in 1796, 1799, 1800, and 1806, concluded with declaring their inability to preserve the independence of their country, which had been transferred to the Elector of Mayence, and recommending submission to the arms of France. Augereau replied to this proclamation by a stern requisition to have the authors of it delivered up to him in twenty-four hours: the fate of Palm was universally anticipated for the magistrates of the state: but after they had been arrested, Napoleon, alarmed at the universal horror which that tragic event had excited, deemed it prudent to drop further proceedings.[1]

Aug. 19.

Aug. 27.

[1] Hard. ix. 246, 250. Bign,v.337,

The death of this unfortunate victim did not pass unrevenged, either upon Napoleon or the French people. It fell deeply and profoundly on the generous heart of Mr Fox, whose enthusiastic hopes of the extension of general

they were published, not in the dominions of France, or by any person who owed allegiance to its Emperor, but in the free city of Nuremburg, in the heart of the German empire; and they were addressed, not to the subjects of Napoleon, but to Germans, aliens to his authority, and enemies of his government. The French armies, contrary to the express terms of the peace of Pressburg, were remaining in and devouring the resources of that country, upon the hollow pretext that *Russia,* a separate power at war with France, had in the usual course of hostility conquered a town ceded by Austria to the French empire. The pamphlets published were nothing but appeals to the Germans to unite against this foreign oppression, and certainly never had men a more justifiable cause of hostility. Applying Napoleon's principles to himself, what punishment would they fix on the head of him who published proclamations calling on the Venetians, the Irish, and Swiss, to throw off the yoke of their respective governments, and avowed his intention, when he landed in England, to call on the whole subjects of the British empire to throw off the rule of their sovereign and parliament, and to establish annua] parliaments and universal suffrage ?—See BIGNON, V. 337,338.

CHAP. XLII.

1806.

freedom by the spread of republican principles were thus cruelly belied by the deeds perpetrated by its leaders in the name of the French people, and contributed, perhaps more than any other circumstance, to produce that firm resolution to adhere to the basis originally laid down by Napoleon for the negotiations which ultimately led to their abandonment. The carnage of Spain, the catastrophe of Moscow, the conquest of France, the exile to St Helena, are thus directly associated with this deed of blood. The brave and the free thenceforward saw clearly, in every part of Europe, that no hope for public or private liberty remained but in a determined resistance to the aggressions of France : that slavery and chains followed in the rear of the tricolor flag. Napoleon has frequently said, that if Mr Fox had lived, peace would have been concluded, and all the subsequent misfortunes of his reign averted; but the truth of history must dispel the illusion, and the English annalist cannot permit the insidious praises of an enemy to tear from one of the brightest ornaments of his country the honour of having at last been awakened to a sense of the nature of revolutionary ambition, and of having possessed the magnanimity, in opposition to his former long-continued delusion, instantly to act upon the conviction.

83. Influence which it has on the rupture of the negotiation with England.

84. Mr Fox's eyes are at last opened to the real nature of the war.

In his last instructions, dictated a few weeks before his death, to Lord Yarmouth, there is to be found the firmest resolution to insist on the original basis of the negotiation, and never to consent to any other: Earl Spencer, who succeeded him, had merely to follow out the path thus clearly chalked out. * In several of the speeches which

Last instructions of Mr Fox to Lord Lauderdale.

*** " In the instructions," says Mr Fox in his last important official despatch, " given to Lord Lauderdale, the repeated tergiversations of France during the negotiation are detailed. It is from thence alone that any delay has arisen. The offers made through Lord Yarmouth were so clearly and unequivocally expressed, that the intention of the French government could not be doubted. But they were no sooner made than departed from. In the first conferences after his Lordship's return to France, Sicily was demanded; in the former, it had been distinctly disclaimed. This produced a delay attributable solely to France: our answer was immediate and distinct: the new demand was declared to be a breach of the principle of the proposed negotiation in its most essential**

he had delivered, after he had obtained the direction of foreign affairs, is to be found a candid admission that his opinion as to the necessity and justice of the war had undergone a total alteration.* Thus the discord of earlier years was at length by this great man forgotten in the discharge of patriotic duty : the two lights of the age came finally to concur in the same policy. If Mr Pitt struggled for fifteen years, amidst difficulty and disaster, to carry on the war, it was Mr Fox who bequeathed the flood of glory in which it terminated to his successors ; and who, after having spent the best part of his life in recommending less honourable and enlightened measures of

parts. To obviate the cavil on the want of powers, full powers were sent to you, but with an express injunction not to use them till the French government should return to its former ground with respect to Sicily. M. Talleyrand, upon being informed of this determination, proposed to give the Hanse Towns in lieu of Sicily to the King of Naples. The moment this proposal was received here it was rejected; and the same despatch which conveyed that rejection carried out his Majesty's commands, if the demand for Sicily should still be persisted in, to demand his passports and return to England. M. Talleyrand upon this made fresh proposals, supported by Russia, as affording the means of preventing the meditated changes in Germany; and stated, ' that these changes were determined upon, but should not be published if peace took place.' That despatch was received here on the 12th, and on the 17th, in direct violation of these assurances, the German confederation treaties were both signed and published. Such are the unfounded pretences by which the French government seeks to attribute to delays on our part the results of its own injustice and repeated breach of promise." Such was Mr Fox's dying view of the negotiation up to the beginning of August; and it surely contains no confirmation of Napoleon's assertion, that, if he had lived, peace would have been concluded. Its last stages, down to his death on 17th September, were conducted in strict conformity to the instructions he had given to Lord Lauderdale.—See Mr Fox's *Despatches, August Sd and 14th,* 1806; *Parl. Deb.* viii. 138, 164.

*** In the debate on Mr Windham's military system, on April 3,1806, Mr Fox said, with admirable candour :—" Indeed, by the circumstances of Europe, I am ready to confess that I *have been weaned from the opinions which I formerly held* with respect to the force which might suffice in time of peace: nor do I consider this as any inconsistency, because I see no rational prospect of any peace which would exempt us from the necessity of watchful preparation and powerful establishments. If we cannot obtain a safe and honourable peace, of which it is impossible in the actual state of affairs to be sanguine, and if we are not successful in carrying on the war, we must be reduced to that state which I for one cannot contemplate without apprehension,—'toto divisos orbe Britannos,'—and be left to our own resources and colonial possessions. In such an arduous and difficult struggle, demanding every effort and every exertion, or indeed under any system which we may act upon, a large army is indispensable."—*Part Deb.* vi. 715, 716.**

1806.

85. Death of Mr Fox. His character.

concession to his country, in his last moments " nailed her colours to the mast," *

The health of this illustrious man had for some weeks past been declining; and in the middle of July he was compelled to discontinue his attendance in parliament, though he was still assiduous in his duties at the Foreign Office. Notwithstanding all the efforts of medical skill, his complaint daily became more alarming. Symptoms of dropsy rapidly succeeded, and yielded only for a brief space to the usual remedies. On the 7th September he sank into a profound state of weakness, and on the 13th of the same month breathed his last, having entertained almost to the end of life confident hopes of recovery.[1] Thus departed from the scene of his greatness, within a few months after his illustrious rival, Charles Fox. Few men during life have led a more brilliant career, and none were ever the object of more affectionate love and admiration from a numerous and enthusiastic body of friends. Their attachment approached to idolatry. All his failings, and he had many, were forgotten in the generous warmth of his feelings, and the enthusiastic temper of bis beart. " The simplicity," says Mackintosh, " of his character communicated confidence; the ardour of his

Sept. 13.

[1] Ann. Reg. 1806,258.

*** This memorable final coincidence of opinion between Pitt and Fox, on the necessity of continuing the war, is not the only instance of a similar approximation equally honourable to both parties. Ten years before, the champions of the constitution and of revolution, Mr Burke and Sir James Mackintosh, the well-known author of the *Vindicice Gatticce,* had in like manner come to view the origin of the convulsion in the same light. " The enthusiasm," said Mackintosh in a letter to Burke, " with which I once embraced the instruction conveyed in your writings, is now ripened into solid conviction by the experience and conviction of more mature age. For a time, seduced by the love of what I thought liberty, I ventured to oppose, without ever ceasing to venerate, that writer who had nourished my understanding with the most wholesome principles of political wisdom. I speak to state facts, not to flatter: you are above flattery. I am too proud to flatter even you. Since that time a melancholy experience has undeceived me on many subjects, in which I was then the dupe of my own enthusiasm. I cannot say I even now assent to all your opinions on the present politics of Europe. But I can with truth affirm that I subscribe to your general principles, and am prepared to shed my blood in defence of the laws and constitution of my country." Burke answered from the bed of death:—"You have begun your opposition by obtaining a great victory over yourself; and it shows how much your own sagacity, operating on**

eloquence roused enthusiasm ; the gentleness of his manners inspired friendship."—" I admired," says Gibbon, " the powers of a superior man, as they were blended in his attractive character with the simplicity of a child. No human being was ever more free from any taint of malignity, vanity, or falsehood/' Nothing can more strongly mark the deep impression made by this part of Mr Fox's character than the words of Burke, pronounced six months after all intercourse between them ceased :— " To be sure, he is a man made to be loved I " [1] *

[1] Mackintosh's Mem. i. 324.

86. His vices and failings.

A man of pleasure in every sense of the word ; dissipated and irregular in private life; having ruined his private fortune at the gaming-table, and often emerging from such haunts of vice to make his greatest appearances in parliament, yet he never rose without, by the elevation of his sentiments, and the energy of his language, exciting the admiration, not only of his partisans, but of his opponents. The station which he occupied in the British parliament was not that merely of the leader of a powerful and able party. He was at the head of the friends of freedom in the human race. To his words the ardent and enthusiastic everywhere turned as to those of the gifted spirit intrusted with their cause. To his sup-

your own experience, is capable of adding to your own extraordinary talents and to your early erudition. It was the show of virtue, and the semblance of public happiness, which could alone mislead a mind like yours. A better knowledge of their substance alone has put you on the way that leads the most securely and certainly to your end." What words between such men !—See MACKINTOSH'S ***Memoirs,*** **i. 87, 88.**

*** The convivial talents of Fox were great, as may well be believed from his so long being the idol of the brilliant circle of wits and beauties who in his early days did homage to the rising sun of the Prince of Wales. With men his conversation often partook of the licentious character of the fashionable and unscrupulous society in which he lived; but in the company of elegant women no man was more scrupulously well-bred, or often more felicitous in the delicate expression of flattery. On one occasion, when he was at a supper at the house of the young and beautiful Duchess of Devonshire, a sort of game went round, in which each gentleman presented the lady next him with fruit of some kind, accompanied by an impromptu line or verse: " Come, Mr Fox," said the Duchess, "you have given me nothing as yet: what are you thinking of?" He immediately took a bunch of grapes, and presented it to the Duchess with the words, " Je plais jusqu'a l'ivresse."**

CHAP. XLII. 1806.

port the oppressed and destitute universally looked as their last and best refuge in periods of disaster. "When he pleaded," says Chateaubriand, "the cause of humanity, he reigned—he triumphed. Ever on the side of suffering, his eloquence acquired additional power from his gratuitous exertions in behalf of the unfortunate. He crept even to the coldest heart. A sensible alteration in the tone of the orator discovered the man. In vain the stranger tried to resist the impression made upon him; he turned aside and wept."

87. His extraordinary talents in debate.

Mr Fox was the greatest debater that the English parliament ever produced: he has been styled by a most competent judge, "the most Demosthenian orator who has appeared since the days of Demosthenes."* Without the admirable arrangement and lucid order which enabled Mr Pitt to trace, through all the details of a complicated question, the ruling principle which he wished to impress upon his audience, he possessed a greater power of turning to his own advantage the incidents of a debate or admissions of an antagonist, and was unrivalled in the power and eloquence of his reply. In the outset of his speech he often laboured under hesitation of expression, and was ungainly or awkward in manner; but as he warmed with the subject, his oratory became more rapid, his delivery impassioned, and, before it closed, the enraptured senate often hung in breathless suspense on his words. He was an accomplished classical scholar, and was master of an extraordinary power of turning to the best advantage the information which he possessed, or had gained during the debate. But his habits were too desultory—his indolence too great—his love of pleasure too powerful, to permit him to acquire extensive knowledge.† Respectable as a historian, the fragment on the annals of the English Revolution which he composed is justly

*** Sir James Mackintosh.**

+ No man more frequently referred to Adam Smith; yet he had never read the "Wealth of Nations."

admired for the purity of its style and the manliness of its sentiments; but the pen was too cold an instrument to convey the fervid bursts of his eloquence, and the reader will look in vain for the impassioned flow of the parliamentary orator. * It is in the debates of the House of Commons that his real greatness is to be seen ; and a vigorous intellect will seldom receive higher gratification than from studying the vehement declamation—the powerful and fervent reasoning—by which his great speeches there are distinguished.

88. His fame is on the decline as a just thinker.

But, notwithstanding all this, the fame of Mr Fox is on the decline, not from a diminished sense of his genius, but an altered view, among the thinking few at least, of his principles. With the extinction of the generation which witnessed his parliamentary efforts—with the death of the friends who were captivated by his social qualities, his vast reputation is sensibly diminishing. Time, the mighty agent which separates truth from falsehood—experience, which dispels the most general illusions—suffering, which extinguishes the warmest anticipations when unfounded in human nature, have separated the wheat from the chaff in his principles. In so far as he sought to uphold the principles of general freedom, and defend the cause of the unfortunate and oppressed, in whatever country—in so far as he protected in legislation the freedom of the press, and opposed the infamous traffic in human flesh, his efforts will ever command the respect and sympathy of mankind. But in so far as he sought to advance this cause by advocating the principles of democracy—in so far as he supported the wild projects of the French revolutionists, and palliated when he could not defend their atrocious excesses—in so far as he did his utmost to transfer to this country the same

*** This is the more remarkable, as he had so elevated a conception of the proper character of history that he classed the chief works of thought thus:—1. Poetry. 2. History. 3. Oratory. This was no slight homage to the historical muse, when coming from the first orator of his own, or perhaps any age. —Sec Fox's *History*, Introd. p. vii.**

CHAP. XLII.

1806.

destructive doctrines, and, under the name of Reform, sought to give an entrance here to Jacobin fanaticism and infidel zeal—in so far as he counselled peace and recommended concession, when peace would have been the commencement of civil warfare, and concession a crouching to revolutionary ambition—he supported principles calculated to destroy all the objects which he himself had in view, and induce the very tyranny against which the thunders of his eloquence were directed.

89. Reasons of this.

The doctrines, that all abuses are owing to power being confined to a few hands—that the extension of political influence to the lower classes is the only antidote to the evil—that virtue, wisdom, and intelligence will be brought to bear on public affairs when those classes are intrusted with their direction—and that the growth of democratic ascendency is the commencement of social regeneration,—are sometimes amiable, from the philanthropy of those who support them, and always will be popular, from the agreeable flattery they convey to the multitude. They are liable to only one objection—that they are altogether visionary and chimerical, founded on a total misconception of human nature, and a fatal forgetfulness of the character of the vast majority of men who in every rank are swayed by selfishness or stimulated by passion. They invariably lead, when put in practice, to results diametrically the reverse of what were held forth or expected by their supporters. Abuses, by the introduction of a democratic regime, it is soon found, instead of being diminished, are multiplied tenfold; tyranny, instead of being eradicated, is enormously increased; personal and social security, instead of being established, is kept in perpetual jeopardy; the weight of public opinion, instead of an antidote to evil, becomes its greatest promoter, by being exerted in favour of those by whom its enormities are perpetrated. It is by the opposing influence of these powers that the blessings of general freedom are secured under a constitutional

monarchy; no hope remains of its outliving the spring-flood which drowns the institutions of a state, when these antagonist forces are brought for any length of time to draw in the same direction.*

90. His errors as a political philosopher.

The liberties of England long survived the firm resistance which Mr Pitt opposed to revolutionary principles; but those of France perished at once, and perhaps for ever, under the triumph in which Mr Fox so eloquently exulted on the other side of the Channel. Taught by this great example, posterity will not search the speeches of Mr Fox for historic truth, or pronounce him gifted with any extraordinary political penetration. On the contrary, it must record with regret, that the light which broke upon Mr Burke at the outset of the Revolution, and on Mr Pitt before its principal atrocities began, only shone on his fervent mind when descending to the grave. It can only award to him, during the greater part of his career, the praise of an eloquent debater, a brilliant sophist, but not that of a profound thinker or a philosophic observer. But recollecting the mixture of weakness in the nature of all, and the strong tendency of political contention to dim

* "In the contests of the Greek commonwealth," says Thucydides, "those who were esteemed the most depraved, and had the least foresight, invariably prevailed; for, being conscious of this weakness, and dreading to be over-reached by those of greater penetration, they went to work hastily with the sword and poniard, and thereby got the better of their antagonists, who were occupied with more refined schemes."—"In turbis atque seditionibus, "says the Roman annalist, "pessimo cuique plurima vis; pax et quies bonis artibus alun-tur."—" Enfin je vois," said the French demagogue when going to the scaffold, " que dans les revolutions l'autorite toujours reste aux plus scelSrats."—" A democratic republic," said the British statesman, "is not the government of the few by the many, but of the many by the few; with this difference, that the few who are thus elevated to power are the most worthless and profligate of the community." "Democracy," says the author of the *Vindicim Gallicce,* "is the most monstrous of all governments, because it is impossible at once to act and to control; and consequently the sovereign power is there left without any restraint whatever. That form of government is the best which *places the efficient direction in the hands of the aristocracy', subjecting them in its exercise to the control of the people at large"* What a surprising coincidence between the opinions of such men in such distant ages ! He is a bold speculator who, on such a subject, differs from the concurring authority of Thucydides, Sallust, Danton, Mr Pitt, and Sir James Mackintosh.—THUCYDIDES, 1. iii. c. 89; SAL-LUST, *de Bello Cat;* RIOUFFE, 67; *Parl, Hist.* xxx. 902; MACKINTOSH'S *Memoirs,* i. 92.

the clearest intellect and warp the strongest judgment, it will, while it condemns a great part of his principles, do justice to his motives and venerate his heart,—it will indulge the pleasing hope, that a longer life would have weaned him from all, as he honourably admits it had done from many, of his earlier delusions; and admire the magnanimous firmness with which, on the bed of death, he atoned for his past errors, by bequeathing, in a moment of extraordinary gloom, the flag of England unlowered to his successors.

CHAPTER XLIIL

CAMPAIGN OF JENA—FALL OF PRUSSIA.

CHAP. XLIII.

1806.

1. Natural disadvantages of Prussia.

No monarchy in Europe is less indebted than the Prussian, for its political power and importance, to the advantages of nature. Its territory, flat, sandy, and in great part comparatively sterile, can only be brought to a high state of cultivation by long-continued efforts, and the unsparing application of human industry. Its sea-coast has few advantageous harbours; its rivers, though numerous, and in general navigable, descend for the greater part of their course through the territories of separate or rival states. Without the natural fertility of the Sarmatian plains, or the mineral wealth of the Bohemian mountains; destitute alike of the flocks of Hungary and the herds of Switzerland; enjoying neither the forests of Norway nor the vines of France — it depends entirely on grain crops and pastures, and for them the bounty of nature has afforded no peculiar advantages. Vast tracts of gloomy heath or blowing sand, hardly less unproductive, form a large part of its surface; in other places, cheerless, desolate plains, thickly strewn with rushes or stunted firs, convey a monotonous, mournful impression to the mind of the traveller. Yet have the industry and perseverance of man conquered all these disadvantages: the arid sands have been covered with waving crops, the rushy fields with rich pastures;[1] and in no country in Europe is agriculture now advancing with more vigor-

2. Political situation and inhabitants of Prussia.

ous strides, or population increasing with such steady rapidity.*

If Prussia owes little to her natural advantages, she is indebted still less to the political facilities of her situation, or the homogeneity in character of her inhabitants. Her territory, which has gradually been enlarged by the talents or good fortune of her rulers, is widely scattered from the Rhine to the Vistula, with other states in some places intervening, and in general in such long shreds as equally to expose her to attack and to deprive her of the advantages of a compact formation of defence. Her population is composed of different races, speaking in some places different languages, and but recently actuated in any by a common bond of national attachment. The old electorate of Brandenburg originally formed part of the vast monarchy of Poland, and broke off from that unwieldy commonwealth during the weakness of its unbridled democracy; Silesia, conquered by the Great Frederick in the middle of the eighteenth century, is a province of Bohemia, and is chiefly inhabited by Slavonian tribes; while Prussian Poland was the fruit of the iniquitous spoliation of that unhappy state in 1772 and 1794, and its inhabitants retain all the mournful recollections and national traditions by which the Sarmatian race is characterised in every part of the world. Yet does the Prussian monarchy now form a united and prosperous whole : its rise during the last century has been rapid beyond example; it singly defeated, under

or nearly 111,000 square English geographical miles. Twenty-one thousand four hundred and ninety arpents make a square German geographical mile.—See TCHOBORSKI, i. 115; and FORSTER and WEBER, *Statutiques de la Prusse,* 17, 21.

the Great Frederick, a coalition of the three most powerful monarchies in Europe; and it yields to no country in the world in patriotic spirit, and the glorious efforts which it has since made to maintain its independence.

3. Population and extent of Prussia.

Augmented as it has been by the acquisitions made at the treaty of Paris in 1814, the Prussian monarchy now contains upwards of fifteen millions of inhabitants, who are diffused over a territory embracing one hundred and eleven thousand four hundred and eighty-eight square English miles—a surface little less than that of Great Britain and Ireland, which contain one hundred and twenty-two thousand. At the commencement of the war of 1806, however, both were much less considerable; the former only amounting to nine million five hundred thousand souls, the latter to seventy-two thousand square miles of territory. If this considerable population was placed on a compact and defensible territory, it would form a great and powerful monarchy, having nearly the resources, in population and territory, of the British empire in Europe at the commencement of the Revolutionary war ; but both population and territory are so scattered over a long and narrow extent of level surface, that they seem at first sight to be a source rather of weakness than strength. They extend from the banks of the Niemen to those of the Sarre, over a space three hundred leagues, or nine hundred miles, in length; while the greatest breadth does not exceed a hundred and thirty leagues, and their average is not above forty. These straggling territories are in many places interrupted by the possessions of foreign princes, enclosed within those of Prussia, which, on the other hand, has no inconsiderable portion of its dependencies imbedded in the dominions of other states. Thus the Prussian dominions present an irregular strip stretching along the whole north of Germany, having its back to the Baltic Sea and German Ocean, the harbours of which

CHAP. XLIII. 1806.

are liable to be blockaded by the superior fleets of Britain; while its long front is exposed to the incursions of Austria, and its two extremities lie open, with no natural frontier capable of defence, and but few artificial strongholds, to the incursions of the great monarchies of France and Russia—the former possessing above twice, the latter nearly four times, its military resources.[1]

1 Malte Brun, v. 294, 295.

Towns and manufacturing industry of Prussia.

The urban population of Prussia bears a remarkably large proportion to the rural, for the former amounts to a fourth of the whole inhabitants. The number of towns and burghs is ten hundred and twelve, of which thirty-seven contain above ten thousand inhabitants.^ This great number and size of towns indicates either extraordinary riches in the adjacent territory, as in Lombardy and Flanders, or considerable manufacturing advantages, such as those which have raised the cities to such a stupendous magnitude in the north of England and the west of Scotland. Such, accordingly, is the case; and the manufacturing industry of Prussia, in spite of the prohibitory system adopted generally by the Continental states, is very considerable. Inferior of course, by more than a half, in proportion to the square league of terri-

tory to that of Britain, it is considerably superior to that of France.* The iron-works and manufactories of zinc and copper, as well as the salt-works, in its dominions, are very extensive ; and the cotton manufactures, though recently established, are making, under the shelter of the heavy protective duties established against those of England, rapid progress. The total amount of its exports in 1828 was 24,102,000 thalers, or nearly £4,000,000, and four thousand merchant vessels bore the flag of Frederick-William.[1]

[1] Malte Brun, v. 291, 292.

5. **Rapid agricultural progress of Prussia.**

The main strength of Prussia, however, lies in its agriculture; and it is in the patriotic spirit and undaunted courage of the class engaged in it, that the monarchy in every age has found the surest bulwark against foreign aggression. So rapid has been the increase of sheep of late years in Prussia, that their number, which in 1816 amounted only to 8,261,400, had risen in 1825 to 14,156,000—that is, nearly doubled ; and the most decisive proof of the general increase of rural produce is to be found in the fact, that though population in Prussia is now advancing more rapidly than in any country of Europe, so as to double, if the present progress should continue, in twenty-six years, yet no importation of foreign grain is required.[2†] Subsistence, under the influence of increased production, so far from becoming scarce, is constantly declining in price, and the augmented comforts and wants of a prosperous people are amply provided

1806.

for by the labours of the agricultural portion of the community.

6. Slow progress of Prussia at first, and her rapid subsequent growth.

It was by slow degrees, however, and by the successive efforts of more than one generation of great men, that Prussia was raised to its present prosperous condition. The monarchy, in reality, dates from the accession of Frederick the Great; but during the short period which has since elapsed, it has made unexampled progress. The treasure, indeed, amassed by that great warrior and able prince, had been wholly dissipated during the succeeding reign; but, both under his sway and that of his successor Frederick-William, the monarchy had made important advances in territory, wealth, and population. By withdrawing from the alliance against France in 1794, the cabinet of Berlin succeeded in appropriating to itself a large portion of the spoils of Poland; while the open preference to French interests which they evinced for the ten years which followed the treaty of B&le, was rewarded by a considerable share of the indemnities—in other words, of the spoils of the ecclesiastical princes of the empire; and a most important increase of influence, by the place assigned to Prussia as the protector of the neutral leagues situated beyond a fixed line in the north of Germany. During this long period of peace, the industry and population of the country rapidly advanced; a large portion of the commerce of Germany had fallen into its hanjls, and the whirl and expenditure of war, so desolating to other states, was felt only as increasing the demand for agricultural produce, or augmenting the profits of neutral navigation.[1]

[1] Hard. v. and vi. 379, 247, 249. Bign. ii. 291, 292.

7. Statistical details.

At the death of the Great Frederick in 1786, the population of the monarchy was 7,000,000 of souls, and its revenue 31,000,000 thalers, or about £4,600,000 sterling. By the shares obtained of Poland on occasion of its successive dismemberments, and the acquisition of Anspach, Baireuth, and other districts, its population was raised to 9,000,000; and although the treasure of 70,000,000

thalers (£10,500,000) left by the Great Frederick had disappeared, and given place to a debt of 28,000,000 of thalers, or £4,200,000, yet this was compensated by the increase of the revenue, which had risen to 36,000,000 thalers, or £5,400,000. Various establishments had been set on foot at Berlin, eminently calculated to promote the interests both of commerce and agriculture. In particular, a bank and society of commerce were established in that capital, and institutions formed in the provinces to lend money to the landed proprietors on reasonable terms. By the aid of these establishments, and the effect of long-continued peace and prosperity, the finances of the state were in the most flourishing condition in 1804; all the branches of the public service were provided for by the current revenue, and some progress was even made in the reduction of the debt. The large share of the German indemnities, obtained through French and Russian influence by this aspiring power, made a considerable addition to the public resources : the acquisition of 526,000 souls raised the population to 9,500,000 souls, and the increase of 2,375,000 thalers yearly revenue swelled the income of the public treasury to 38,375,000 thalers, or £5,750,000 sterling—a sum equivalent, from the difference in the value of money, to at least ten millions sterling in Great Britain. This revenue, as in Austria, was the net receipt of the exchequer, and independent, not merely of the expenses of collection, but of various local charges in the different provinces. The regular army was nearly 200,000 strong, brave, and highly disciplined, but not to be compared to the French, either in the experience and skill of the officers, or in the moral energy which had been developed by the events of the Revolution.[1]

Bign. ii. 193, 297.

8. State of religion in Prussia.

Unlimited toleration prevails in Prussia. The Protestant is the religion of the sovereign and of the state, but persons professing all creeds are equally eligible to all offices under government, and, practically speaking, no difference is made between them. On the whole, two-

CHAP. XLIII. 1806.

thirds of the inhabitants are Protestants, one-third Catholics; but the proportions between these two great divisions of Christians vary considerably in the different provinces.[4]* Each religion has its separate ministers and bishops. Berlin is every five years the seat of a general synod; that capital has a Protestant bishop, and Konigsberg another; but the Catholics have two archbishops and six bishops in the Prussian dominions. Like the Austrian government, however, the Prussians are careful not to admit the slightest interference in matters not purely spiritual by the court of Rome, and Catholic ministers of vacant livings are appointed by a variety of lay patrons, as in Great Britain, without any serious collision with the Holy See.[1]

[1] Malte Brun, v, 282.

9. Revenue and expenditure of Prussia.

The revenue of Prussia, like that of all other countries in Europe, is derived partly from direct, partly from indirect taxation.† The total revenue is 79,810,000 florins, or nearly £8,000,000 sterling—a sum at least equal to

£14,000,000 sterling in Great Britain, if the difference in the value of money is taken into consideration. The expenditure is somewhat less, amounting only to 75,238,571 florins, or £7,523,857 sterling, leaving a balance of above 5,000,000 florins, or £500,000 yearly to go to the discharge of the principal of the public debt.* The public debt of Prussia in 1833 amounted to 723,450,000 francs, or £29,000,000 sterling. In 1823 the debt was 908,950,000 francs, or £36,350,000; so that in ten years they havereduced the debt by £7,000,000, at which rate it will be entirely extinguished in 1872. It would appear, therefore, that the finances of Prussia are in a more prosperous state than those of Austria, France, or Great Britain, in all of which, although their national resources are incomparably greater, the expenditure generally exceeds the income by a very considerable sum, and all thoughts of a sinking-fund, or of a permanent system for the reduction of the debt, have been practically abandoned. This fact speaks volumes as to the patriotic spirit of the Prussian people, and the economy and far-seeing policy of its government, especially when the large military establishment they are obliged to keep up to secure their independence is taken into consideration.[1]

10. Military establishment.

The military establishment of Prussia is greater, in proportion to its population, than that of any other country in Europe. It consists, in time of peace, of one hundred and twenty-two thousand men : but so admirable are the arrangements for the augmentation of this force in time of war, and such the ardent and patriotic spirit of

1806.

the people, that the state could then without difficulty call forth an army of five hundred thousand combatants. The regular army is composed of three classes. 1st, Of voluntary recruits, who are received from seventeen to forty years of age. 2d, Of young men who are balloted for: a burden to which all the inhabitants of the kingdom, without exception, are subject. 3d, Of veteran soldiers who prolong the period of their service voluntarily beyond the period required by law. Every Prussian, without exception, from the royal family downwards, between the ages of twenty and fifty, is liable to be drawn for the military service in some department or other; but he is only bound to serve in the regular army five years; and of these he is only three years actually with his colours, the other two being allowed to be spent at home. Thus the military duty is so short that it is never considered as a burden, but rather as an agreeable mode of spending the first three years of manhood; and there are very few who either can or wish to avoid it. The *cadres* of the regiments, or permanent staff, and a certain proportion of the privates, are fixed, and hold to arms voluntarily as a profession for life; and this gives to the troops, notwithstanding the frequent change of the privates, the consistence and steadiness of old soldiers, while, at the same time, it spreads through a large part of the people a practical acquaintance with military duties. It is to this system, introduced by the Great Frederick, but matured and brought to perfection by those able statesmen, Stein and Scharnhorst, after the treaty of Tilsit, that the stability and continual progress of the Prussian monarchy is, beyond all doubt, to be ascribed.[1]

[1] Malte Bran, v. 286, 287.

11. The Land-wehr and Landsturm.

Besides the regular army, the military establishment of Prussia embraces also the *landwehr* and *landsturm*, which, in time of need, can quadruple its effective strength. The former is divided into two *bam:* the first comprehending all the young men from twenty to thirty-two who have not gone through the five years' service in

the regular army; the second formed of persons, whether they have served or not, from thirty-two to fifty years of age. After that period all obligation of military service entirely ceases. During peace, the landwehr, which consists of infantry, cavalry, and artillery, are never called into active service, or removed from home; but they are not on that account the less carefully and regularly instructed during a certain number of days in the year in their military duties. In case of war or invasion, the first ban are called out, and united to the regular forces, to whom they are soon scarcely inferior in discipline and prowess: the second ban form the garrisons of strong places, and perform the service of the interior. In addition to this immense force, which numbers fully two hundred thousand combatants, there is organised in Prussia a second reserve, called the landsturm, which embraces every man, without exception, not already enrolled in one of the other services, between the ages of seventeen and fifty years. Such a force in many countries would be little more than a tumultuary rabble, more likely to be burdensome than available in real service; but in Prussia, where almost all the citizens have at one period or another served in the ranks, it forms a much more efficient body, and actually performed good service on many occasions during the glorious struggle of 1813.[1]

[1] Malte Bran, v. 285, 286.

12. Great diffusion of education in Prussia.

Education is more generally diffused in Prussia than in any other country of equal extent in Europe. Over the whole of its dominions, one in seven of the whole population is at school; while in France the proportion is one in twenty-three; in England one in fifteen; and in Scotland one in eleven. There can be no doubt that this is the greatest proportion of persons undergoing instruction which obtains in the world. Instruction is there compulsory: the laws compel the sending of children to school by their parents, and, when necessary, that duty is enforced by the magistrates. In general, however, it is unnecessary, so great is the desire of parents and relations

CHAP. XLIII. 1806.

to give their children the blessings of education. Schools are established in every parish, and the costs of instruction are very trifling, so as to be within the reach of the humblest of the people; and to the destitute it is given gratuitously. The tree of knowledge, however, has in Prussia, as elsewhere, brought forth its accustomed fruits of good and evil. In Prussia there are, according to the most recent returns, no less than *twelve times* as many crimes committed, in proportion to the population, as in France, where education is not diffused to a third of the extent it is in Prussia—a fact which demonstrates, equally with the experience of every other country, the sedulous care which it is indispensable to take before that great instrument of *power* is put into the hands of the people.[1]*

[1] Malte Bran, v. 277, 278.

13. Manners and court of Berlin.

The Prussian capital had long been one of the most agreeable and least expensive in Europe. No rigid etiquette, no impassable line of demarcation, separated the court from the people : the royal family lived on terms of friendly equality, not only with the nobility, but with the leading inhabitants of Berlin. An easy demeanour, a total absence of aristocratic pride, and of extravagance or parade, distinguished all the parties given at court, at which the king and queen mingled on terms of perfect equality with their subjects. Many ladies of rank, both at Paris and London, spent larger sums annually on their dress than the Queen of Prussia; none equalled her in dignity and grace of manner, and the elevated sentiments with which she was inspired. Admiration of her beauty, and attachment to her person, formed one of the strongest feelings of the Prussian monarchy; and nothing contributed more to produce that profound

irritation at France, which, in the latter years of the war, pervaded all classes of its inhabitants, than the harshness and injustice with which Napoleon, to whom chivalrous feelings were unknown, treated, in the days of her misfortune, that captivating and high-spirited princess.[1]

[1] Bign. ii. 297, 299.

14. Its state policy and diplomacy.

A spirit of economy, order, and wisdom, pervaded all the internal arrangements of the state. The cabinet, led at that period by Haugwitz, but in which the great abilities of Hardenberg and Stein soon obtained an ascendency, was one of the ablest in Europe. Its diplomatists, inferior to none in information, penetration, and address, had long given to Prussia a degree of influence at foreign- courts beyond what could have been expected from the resources and weight of the monarchy. The established principles of the Prussian cabinet, under the direction of Haugwitz, ever since the peace of B&le in 1795, had been to keep aloof from the dangers of war, and take advantage, as far as possible, of the distresses of their neighbours to augment the territory and resources of the monarchy. From a mistaken idea of present interest, not less than the influence of former rivalry with Austria, they inclined to the alliance with France, and derived great temporary benefits from the union, both in the accessions of territory which they received out of the ecclesiastical estates of the empire, and the increase of importance which they acquired as the head of the defensive league of the north of Germany. Little did they imagine, however, in what a terrible catastrophe that policy was to terminate, or anticipate, as the reward of their long friendship, a severity of treatment to which Austria and England were strangers, even after years of inveterate and perilous hostility. The interview at Memel in 1802, and the open support given by Russia to the Prussian claims in the matter of the indemnities, had already laid the foundation of an intimate personal friendship between Frederick-William and the Emperor Alexander.[2] But it was at first an alliance of policy

[1] Bign. ii. 300, 301. Hard. vi. 401-7,411.

CHAP. XLXII.

1806.

rather than affection, and acquired the warmth of impassioned attachment at the tomb of the Great Frederick and on the field of Leipsic.

15. Efforts of Prussia to obtain the aid of Russia and England.

Notwithstanding the inconsiderate haste with which Prussia had taken up arms, the cabinet of Berlin made some attempts to induce the other powers of Europe to share with them the dangers of the conflict. With England it was no difficult matter to effect a reconciliation. At the first authentic accounts of the change in the policy of Frederick-William, an order in council was issued, raising the blockade of the Prussian harbours. M. Jacobi, the Prussian minister in London, returned to that capital

Sept. 25.

immediately after he had left it; and the British ministry had the generosity to resume its amicable relations with the cabinet of Berlin before an explanation had been

Aug. 17.

given on the subject of Hanover. With Sweden an accommodation was also without difficulty effected, on the footing of the troops of that power taking possession of Lauenberg, which they did in the name of the King of Great Britain. It was not so easy a matter to convince the cabinet of St Petersburg of this unlooked-for change in the Prussian councils; and, taught by the long vacillation of its policy, they were for some time unwilling to yield to the general joy which was diffused through the Russian capital, on the intelligence that war was resolved on. But no sooner was Alexander informed, by confidential letters brought by General Krusemark from the King of Prussia, that he had embarked seriously in the contest,

Sept. 18.

than he instantly wrote promising an immediate succour of seventy thousand men, and announcing his intention of himself marching at the head of a chosen army to aid in the support of his ally.[1]

[1] Hard. ix. 272, 275. Bign.v.413, 415. Dum. xr.285,287.

16. And of Austria.

Important as the announcement of the intentions of Russia was, the accession of Austria would have been of still more value to the common cause, from its closer proximity to the scene of action, and the strong positions which the Bohemian mountains afforded on the flank of

the probable theatre of war. The Prussian ambassador accordingly was indefatigable in his endeavours to rouse the cabinet of Vienna to a sense of the vital importance of joining heart and hand in the approaching conflict for the liberties of Europe. He represented to Count Stadion, then prime minister at Vienna, "that the losses inflicted on Austria by the treaty of Pressburg were so immense, that the emperor, of necessity, must at some future period look out for the means of repairing them. The province of the Tyrol is of such irreparable importance to Austria, that no doubt can be entertained that she will take advantage of the first opportunity to resume it from Bavaria, by rousing the patriotic attachment of the inhabitants of that important province to their ancient masters. Napoleon has justly conceived the most serious apprehensions for the faithful observance of that treaty which he himself has been the first to violate. Does he not, in defiance of his engagements, still hold the fortress of Braunau and the line of the Inn, six months after he was bouud by a solemn treaty to have evacuated Germany with all his forces? The recent establishment of the Confederation of the Rhine, and dissolution of the Germanic empire, too clearly demonstrate with what ulterior views the French government is actuated in regard to the countries beyond the Rhine. Honour, necessity, the existence of his people, have forced the King of Prussia to take up arms alone; but a powerful Russian army, and the well-known generosity of England, diminish the perilous chances of the conflict. Now, therefore, is the time for Austria and Prussia to lay aside their jealousies springing from the conquest of Silesia, and unite their forces against the common enemy, who is about to make the Confederation of the Rhine an outwork from whence to enslave all the other states of Germanic origin."[1]

[1] Hard. ix. 277, 281.

Forcible as these considerations were, and strongly as the cabinet of Vienna felt their justice, there were yet many circumstances which forbade them to yield on this

CHAP. XLIII.

1806.

17. Bat the cabinet of Vienna resolves to remain neutral.

occasion to their inclinations. The conduct of Prussia for ten years had been so dubious and vacillating; her hostility to Austria, especially on the division of the indemnities, so evident; her partiality for the French alliance so conspicuous: her changes of policy during the last year so extraordinary, that no reliance could be placed on her maintaining a decided line of conduct for any length of time together, and, least of all, on her continuing steadfast in that sudden and perilous hostility in which she had now engaged, and the vehemence of which was the worst possible guarantee for its endurance. Who could insure that she would not desert this alliance as she had done the first coalition against France, or abandon her policy as suddenly as she had done her recent hostility against England, and leave to Austria, irrevocably embarked, the whole weight and dangers of the contest? The Archduke Charles, on being consulted as to the state of the army, reported that the infantry, which had not yet been rejoined by the prisoners taken during the campaign, was hardly a half of its full complement; the cavalry but recently remounted, and for the most part unskilled in military exercises; the artillery numerous, but the majority of the gunners without any experience. The treasury was empty; some of the most valuable provinces of the monarchy had been torn away, and those which remained were exhausted by enormous war contributions, wrung from them by the enemy. Influenced by these considerations, the cabinet of Vienna resolved to preserve a strict neutrality, and issued a proclamation to that effect. However much the historian may lament that determination, from a knowledge of the boundless calamities which an opposite course might have saved to both monarchies, it is impossible to deny that, situated as Austria was at that time, it was the most prudent resolution which its government could have adopted;[1] and that, if Prussia was left single-handed to maintain the cause of European independence,

Oct. 6.

it was no more than she was bound to expect from the selfish and temporising policy which she had so long followed. *

18. Spain long obsequious to France under the Prince of Peace.

Hopes were not wanting to the cabinet of Berlin of efficacious aid in another quarter where it was least expected, and of a kind to paralyse a considerable part of the French forces. Spain, bereft of her navy by the battle of Trafalgar, blockaded in her harbours, destitute of commerce, cut off from all intercourse with her colonies, had felt all the burdens of war without any of its glories. The public indignation was hourly accumulating against the Prince of the Peace, whose ignoble birth, exorbitant power, and immense wealth, rendered him as much an object of jealousy to the Castilian noblesse, as the uniform disasters which had attended his administration made him detested by the people. Still, however, that ruling favourite persevered, against the almost unanimous wishes of the kingdom, in the French alliance, till his pride was offended at the haughty conduct of Napoleon, who excluded the Spanish ambassador from any share in the negotiations for a general peace at Paris, and it was revealed to him, that in those conferences the French Emperor had seriously proposed to take the Balearic islands from the Spanish crown, and confer them as an indemnity for Sicily, together with a revenue drawn from Spain, on the King of Naples.[1] At the same time the assembling of a powerful army at Bayonne, ostensibly

[1] Lucches. ii. 99, 100. Hard. ix. 285, 286.

* The instructions of Mr Adair, the British ambassador at Vienna at that period, were, not to stimulate the Austrian government to hurry into a war, of which the consequences, if unsuccessful, might be fatal to that country, but to offer its government, if they deemed the opportunity favourable for engaging in hostilities, or if the necessities of their situation compelled them .to such a course, the whole pecuniary aid which Great Britain was capable of affording. Of the wisdom of this course of proceeding, no one who considers the precarious situation of Austria at that crisis can entertain a doubt; and it affords another proof of the clear insight which Mr Fox at that period had obtained as to the insatiable ambition of Napoleon, and of the magnanimity with which that upright statesman instantly acted upon his conviction. " A man," says the Marquis Lucchesini, " unjustly styled by Napoleon and his adherents, the last prop of the pacific dispositions of the cabinet of St James's."— *Vide* LUCCHESINI, ii. 96, 97, *note;* and BIGNON, V. 417.

Instructions bo Mr Adair cm the subject.

CHAP. XLIII. 1806.

frontier, and twelve thousand were in observation in Westphalia, for the approaching campaign; the remainder being dispersed in garrisoned depots, or not yet put in a state for active operations. Such was the general enthusiasm, and so little did they anticipate the terrible reverses which awaited them, that the Prussian guards marched out of Berlin, singing triumphant airs, amidst the shouts of the inhabitants, almost in a state of sedition from the tumultuous joy they experienced on at length being about to measure their strength with the enemy. Napoleon's forces were much more considerable. They amounted in Germany alone to one hundred and ninety thousand men; of whom twenty-eight thousand were the terrible reserve cavalry under Murat, and they were directed by the ablest and most experienced marshals in the French army.[1] *

[1] Lucches. ii. 117,118. Dum. xv. 289. Jom. ii. 275,276. Hard. ix. 299, 300. Thiers, vii. 42, 43.

22. Her grievous want of foresight and defensive measures.

The memorable military operations of the year 1813, and the tenacious hold which Napoleon then kept of the fortresses on the Elbe, when assailed by the greatly superior forces of the coalition, have demonstrated that no position in Europe is more susceptible of defence than the course of that river; and that supported by the ramparts of Magdeburg, Wittenberg, Torgau, and Dresden, an inferior force may there for a considerable time prolong its defence against an enemy possessing an overwhelming superiority in the field. Had these fortresses been pro-

* Napoleon's army was divided into nine corps, and stationed as follows, on the 3d October, when he arrived at Wurtzburg,—

Imperial Guard — Bessieres and Lefebvre, after Lannes got the 5th corps—Wurtzburg,	20,000
	186,000

The bulk of the army was grouped round Coburg and Bamberg. The whole

perly armed and provisioned, and the Prussians been commanded by a general capable of turning to the best advantage the means of defence which they afforded, it is probable that as protracted a contest might have been maintained as Napoleon supported in 1796 on the Adige, or Kray in 1800 around the bastions of Ulm, and time gained for the arrival of the Russians before a decisive blow was struck in the centre of Germany. But not only had no preparations for such a defensive system been made, but the nation, as well as its rulers, were in such a state of exultation as to despise them. None of these important bulwarks were provisioned; hardly were guns mounted on their ramparts. The interior fortified towns on the Oder and in Silesia were for the most part in the most deplorable state. No depots were formed; no provision was made for recruiting the army in case of disaster. They had not even a rallying point assigned in the event of defeat, though the strong fortresses of Magdeburg, Wittenberg, and Torgau lay immediately in the rear of the theatre of war, and the Elbe spread its ample stream to arrest the victor. Careless of the future, chanting songs of victory, and enjoying its triumphant march through the villages, the army bent its steps towards Erfurth; strong in the recollection of the Great Frederick, stronger still in the anticipation of the overthrow of Napoleon,[1]

[1] Hard. ix. 297, 300. Lucches. ii. 117, 120.

force bearing on the Prussians, exclusive of Marmont in Illyria, was 186,000 men.

The Prussians, when the campaign opened, were divided into three armies: the right wing, under General Ruchel, of 30,000 men, was stationed on the frontiers of the Hessian territories; the centre, 55,000 strong, commanded by the King in person, with his lieutenant-general, the Duke of Brunswick, under his orders, was in front of the Elbe around Magdeburg, with its advanced guard on the Saale; the left wing, composed of 40,000 men, including the Saxons, was commanded by Prince Hohenlohe, with Prince Louis, the King's brother, under him. In all 125,000—a noble force, but as much inferior to that at the command of Napoleon, as was the capacity of their leader compared to his. It was assembled in Saxony: its extreme left rested on the Bohemian mountains, and its advanced posts were pushed as far as Hof and the Kirchberg. A detached corps of 12,000 men, in Westphalia, was under the orders of a general destined to future celebrity—BLUCHER.—See DUMAS, XV. 290, 514; JOM. ii. 275, 276; *Official Report of the Prussian strength to the Duke of Brunswick,* HABD. ix. 484, App. G.; and THIEBS, *Consulat et l'Empire,* vii. 42.

CHAP. XLIII. 1806.

and dreaming rather of the banks of the Rhine or the plains of Champagne, than of the shores of the Vistula and the fields of Poland.

23. Imprudent conduct of the Prussian generals.

But if the infatuation of the army was great, greater still was the delusion of its commanders. The Duke of Brunswick, though an able man of the last century, and enjoying a great reputation, was altogether behind the age, and ignorant of the perilous chances of a war with the veteran legions and numerous columns of Napoleon. The disasters of the late campaigns were by him ascribed entirely to timidity or want of skill in the Austrians ; the true way to combat the French, he constantly maintained, was to assume a vigorous offensive, and paralyse their military enthusiasm by compelling them to defend their own positions. That there was some truth in this opinion, no one acquainted with the character and history of the French army could deny; but unfortunately, it required, for its successful application, both a general and an army very different from the Prussian at this period. The former did not possess the energy and rapidity, the latter the strength or experience, requisite for so perilous a system. Bold even to rashness in the original conception of the campaign, the Duke of Brunswick was vacillating and irresolute when he came to carry it into execution ; and, while his opponent was counting hours and minutes in the march of his indefatigable legions, he frequently lost whole days in deliberation or councils of war, or changed the destination of the forces when their movements were half completed. The troops, indeed, were numerous and perfectly disciplined : the artillery admirable ; the cavalry magnificent; the staff skilful and highly educated, but in matters of theory and detail, rather than the practical disposal of large masses in presence of a powerful and enterprising enemy. But what the whole army, from the general to the lowest drummer, were alike ignorant of, was the terrible vehemence and rapidity which Napoleon had introduced into modern war, by the

union of consummate skill at headquarters with enormous masses and a vast application of physical force ; combining thus the talent of Caesar or Turenne with the fierceness of the sweep of Scythian warfare. Applying then to the present the experience of the past age, the usual error of second-rate men, they calculated their measures upon the supposition of a war of manoeuvres, when one of annihilation awaited them ; and advanced as against the columns of Daun or Laudohn, when they were in presence of Napoleon and a hundred and fifty thousand effective men.[1]

Hard. ix. 301, 303. Jom. ii. 279.

As usual in such cases, the contending parties prefaced the war of arms by mutual manifestoes calculated to rouse the spirit of their respective forces, or vindicate their hostility in the eyes of Europe. That of Napoleon, which bore intrinsic evidence of his composition, was, as usual, admirably calculated to dazzle and stimulate his followers. " Soldiers! the order for your return to France was already issued : you had already approached it by several marches : triumphal fetes awaited you ; preparations for your reception were already made in the capital: but whilst we were surrendering ourselves to a too confident security, new conspiracies were formed under the mask of friendship and alliance. Cries of war have been heard from Berlin: for two months provocations have daily been offered to us; the same insane spirit which, taking the advantage of our dissensions fourteen years ago, conducted the Prussians into the plains of Champagne, still prevails in their councils. If it is no longer Paris which they propose to raze to its foundation, it is now their standards which they announce their intention of planting in the capitals of our allies; it is Saxony which they wish to compel to renounce, by a shameful transaction, its independence, and range itself by their side ; it is your laurels which they wish to tear from your brows: they insist upon our evacuating Germany at the mere sight of their army! The fools! Let them learn that it is a thousand times easier to destroy the great capital than to wither

24. Proclamation of Napoleon to his soldiers. 7th Oct.

CHAP. XLIII. 1806.

the honours of a great people and its allies. Their projects were then confounded: they found in the plains of Champagne defeat, shame, and death: but the lessons of experience are forgotten; and there are men in whom the feelings of hatred and jealousy are never extinguished. Soldiers! there is not one among you who would return to France by any other path but that of honour. We should never re-enter there except under triumphal arches. What then! shall we have braved the seasons, the seas, the deserts—vanquished Europe, repeatedly coalesced against us—extended our glory from the east to the west—to return at last to our country like deserters, after having abandoned our allies, and to hear it said that the French eagle fled at the mere sight of the Prussian standards? But they have already arrived at our advanced posts. Let us then march, since moderation has not been able to awaken them from this astonishing trance: let the Prussian army experience the same fate which it did fourteen years ago: let them learn that if it is easy, by means of the friendship of a great people, to acquire power and dominions, its enmity, though capable of being roused only by an abandonment of every principle of wisdom and reason, is more terrible than the tempests of the ocean/'[1]

[1] Dum. xiv.

25, Manifesto of Prussia,

Less fitted to rouse the military passions and warlike enthusiasm of its subjects, than this masterpiece of Napoleon, the Prussian manifesto, drawn by Gentz, was yet a model of dignified reason, and concluded with a sentiment as to the ultimate issue of the contest, which subsequent events have rendered prophetic. "All our efforts, and those of our allies, to preserve peace have proved unsuccessful; and if we are not willing to abandon to the despotism of an implacable enemy, and to deliver over to his devouring armies, the whole north of Germany, and perhaps of Europe, a war is inevitable. His majesty has resolved upon it, because the honour and security of the state are in danger: he would have deemed himself happy

could he have attained the same end by pacific means; but it is with the firmest confidence that he takes the command of the army which is about to combat for its country and national honour, because the cause in which it is engaged is just. His majesty is well aware that for long the army desired war; and even when circumstances prevented him from yielding to its wishes, these wishes commanded his respect, because they took their origin in those feelings of honour and patriotism which have ever distinguished the Prussian forces. The nation, in a body, has manifested the warm interest which it takes in this conflict; and that strong expression of enthusiasm has confirmed his majesty in the opinion, that now it is not only unavoidable, but in unison with the wishes of all the people. His majesty is convinced that the desire to preserve unchanged the national honour, and the glory which the Great Frederick has shed over our arms, will suffice to excite the army to combat with its accustomed valour, and to support with constancy all its fatigues.

26. The true character of the war as asserted in it.

"But this war possesses even a more general interest. We have to deal with an enemy who all around us has beaten the most numerous armies, humbled their most powerful states, annihilated their most venerable constitutions; ravished from several nations their honour, from others their independence. A similar fate awaited the Prussian monarchy: numerous armies menaced your frontiers; they were daily augmenting; it had become your turn to fall into the gulf, to bow beneath a stranger yoke; and already his pride and rapacity coveted the spoils of the north of Germany. Thus we combat for our independence, for our hearths, for all that is dear to us; and if God gives victory to the just side, to our arms, to the courage which burns in the heart of every Prussian, we shall be the liberators of oppressed millions. Every warrior who shall fall on the field of battle will have sacrificed his life in the cause of humanity; every one who survives will acquire, besides immortal glory, a just

CHAP. XLIII.

1806.

title to the gratitude, the triumph, the tears of joy of a liberated country. Who amongst us could endure the thoughts of becoming the prey of a stranger? While we combat for our own safety, to avert for us the deepest humiliation to which a nation can be subjected, *we are the saviours of all our German brethren;* the eyes of all nations are fixed on us as the last bulwark of liberty, security, or social order in Europe."[1]

[1] Dum. xvi. 8,10.

27. Reflections on these proclamations.

The opposite style of these two eloquent proclamations is very remarkable. Both are addressed to the strongest passions of the human breast; both are masterpieces of manly oratory; but the language which they severally employ is strikingly characteristic of the different situations in which their authors respectively stood. Napoleon speaks to his soldiers only of an insult offered to their arms—of glory and triumphs, and victories to be won; Frederick-William, equally firm, but less sanguine as to the result, disguises not the dangers and chances of the struggle, but reminds them of the duty they owe to themselves, their country, the cause of the human race. The former invokes the eagles of France, and calls on the soldiers to follow their glorious career: the latter appeals to the God of battles, and anticipates from his aid a final triumph to the arms of freedom. The battle of Jena and chains of Tilsit seemed for long to have announced an abandonment of this cause by the care of Providence; but let these words be borne in mind, and compared with the final issue of the contest.

28. Napoleon's insult to the Queen of Prussia.

Napoleon had no gallantry or chivalrous feeling in his breast. The Prussian minister had, with the ultimatum of the cabinet of Berlin, given a pressing request for an answer to the Prussian headquarters by the 8th October. " Marshal," said he to Berthier, " they have given us a rendezvous for the 8th; never did a Frenchman refuse such an appeal. We are told that a beautiful queen is to be a spectator of the combat; let us then be courteous,

and march without resting for Saxony." Francis I. might have used the same language; but what followed in the first bulletin of the campaign, dictated by Napoleon himself ? " The Emperor was right when he spoke thus: for the Queen of Prussia is with the army, dressed as an Amazon, wearing the uniform of her regiment of dragoons, writing twenty letters a-day to spread the conflagration in all directions. We seem to behold Armida in her madness setting fire to her own palace. After her follows Prince Louis of Prussia, a young prince full of bravery and courage, hurried on by the spirit of party, who flatters himself he shall find a great renown in the vicissitudes of war. Following the example of these illustrious persons, all the court cries to ' To arms!' but *when war shall have reached them with all its horrors, all will seek to exculpate themselves from having been instrumental in bringing its thunder to the peaceful plains of the North."* Such was the language in which Napoleon spoke of the most beautiful princess in Europe, rousing her subjects to patriotic resistance ! How singularly prophetic is the concluding part of the sentence of what he himself experienced, just six years afterwards, in the frozen fields of Russia.[1]

[1] Nap. Bulletin, ii. 11, 12.

29

Preparatory movements of the Prussians.

Animated by those heart-stirring addresses, the forces on both sides rapidly approached each other; and their advanced outposts were in presence on the 8th October. Then began the terrible contest of the north with the south of Europe; never destined to be extinguished till the domes of the Kremlin were reddened with flames, and the towers of Notre Dame were shaken by the discharges of the Russian batteries. The first plan discussed at Berlin was for the whole army to debouche in separate columns by the two great roads, those of Adorf and Saalfeld, and Eisenach and Gotha, and commence the offensive towards the valley of the Maine, on the east and west of the Thuringian Forest, the intermediate passes of which were to be occupied by a central corps;

Atlas, Plate 39.

CHAP. XLIII. 1806. Sept. 27.

but this plan was soon abandoned, as exposing the army to a perilous division of force in presence of so powerful and enterprising an enemy. The design ultimately adopted was to advance with the right under Ruchel in front, which was pushed on to Eisenach; next in echelon followed the centre, commanded by the King in person, which, united with the corps of Hohenlohe, was to advance upon Saalfeld and Jena, while each wing was covered by a detached corps of observation, the right by Blucher on the confines of Hesse, the left by Tauenzein, on the side of Baireuth. The object of this movement was to determine the hesitation of the Elector of Hesse-Cassel, and effect the junction of his contingent to the Prussian army, and at the same time pierce the centre of the valley of the Maine, which was the base of the enemy's operations, and cut them off from their communications with France. Both objects were important, and the design was well conceived, had the Duke of Brunswick possessed a force adequate to its execution. But it necessarily involved his army in great hazard in presence of a numerous and skilful enemy; and by leaving open to his advance the great roads to Dresden and Leipsic, exposed the Prussians to the very danger of being themselves turned and cut off from their communications and magazines, when endeavouring to inflict that injury on their opponents.[1]

[1] Dum. xvi. 19. Jom. ii. 279, 280.

30. Counter movement of Napoleon. His system of providing for his troops.

Napoleon was not a man to let slip the opportunity which this hazardous attempt of the Prussians to pass his position afforded, of not merely defeating, but destroying their army. Confident in the numbers and experience of his troops, which rendered a situation comparatively safe to them, which was to the last degree perilous to their opponents, he instantly resolved to retort upon the enemy the measure they were preparing to play off upon him; and by throwing forward his army with the right in front, turn the Prussian left, and cut them off from their magazines on the Elbe, and the heart of the monarchy.

On the 8th October, the French army was concentrated round Bamberg; at three o'clock on the morning of the 9 th, Napoleon put himself in motion, and his columns marched towards Saxony, on three great roads, by echelon, the right in front. On the right, Soult and Ney with a Bavarian division moved from Baireuth by Hof, on Plauen; in the centre, Murat with the cavalry, as also Bernadotte and Davoust, marched from Bamberg by Kronach, on Saalburg; on the left, Lannes and Augereau, breaking up from Schweinfurt, advanced by Coburg and Graffenthal upon Saalfeld. The effect of these movements was to bring the centre and right of the French directly upon the Prussian magazines and reserves, while they were stretching forward on the left, to interpose between their antagonists and the Rhine. In commencing these movements, the French Emperor put in practice his usual system for providing for his army. This was to make his troops subsist daily, in general, on the resources of the country which they occupied,—to extend themselves sufficiently to obtain supplies, but not so as to be beyond concentration in case of attack,—and to have in reserve in waggons bread adequate for several days, to meet any sudden emergency. This reserve store, carefully husbanded and duly replenished when drawn upon, served for all cases of concentration before or after battles. To convey it, Napoleon allowed two caissons for a battalion, and one for a squadron. Adding to that the carriages provided for the sick and wounded, he calculated that four or five hundred waggons should suffice for the largest army. The most peremptory orders were issued against any general or officer applying any part of these public conveyances to his private purposes ; and in one instance, having discovered that one of his marshals made such use of them in the outset of the campaign, he manifested the utmost displeasure, and declared Berthier responsible for all such evasions of his orders in future.[1]

[1] Jom. ii. 280, 281. Dum. xvi. 19,26. Bign, v. 465,466. Norv.ii.456, 457. Thiers, vii.38.

The Prussians were in the midst of their perilous

CHAP. XLIII.

1806.

31. The Duke of Brunswick renounces the offensive. Description of the theatre of war.

advance to the French left, when intelligence of this rapid accumulation of forces against their own centre and left reached the Duke of Brunswick's headquarters. It was indispensable to renounce forthwith the hazardous enterprise ; and orders were instantly despatched to countermand the advance, and direct the concentration of the army in the neighbourhood of Weimar: the principal column, commanded by the King, at Erfurth ; Ruchel at Gotha; Hohenlohe at Hochdorf; the reserve, under the Duke of Wiirtemberg, at Halle. Thus the Prussians, in presence of the greatest general and most powerful army of modern times, were thrown into a change of position, and a complicated series of cross movements, with their flank exposed to the enemy—the situation of all others the most perilous in war, and which, not a year before, had proved fatal to the combined army, when attempting a similar movement in front of Austerlitz. To complete their danger, the concentration, from the orders which they received, took place on the centre and right; whereas it was on the left, towards Hof, that it should have been made, to resist the rapid march of the invaders upon their magazines and resources. The Thuringian Forest, which those movements promised to render the first theatre of approaching hostilities, is a range of broken hills, for the most part covered with wood, which, branching off from the central chain that encircles Bohemia, stretches to the northwards until it subsides into the plains of Westphalia, where it terminates. This range separates the valley of the Rhine from that of the Elbe, the waters from the western slope flowing into the former, those from the eastern into the latter. It thus runs directly athwart the line of communication between France and Prussia, and requires to be traversed in one quarter or another in going from the one country to the other. Three great roads cross this broken woody region, and conduct the traveller from the banks of the Rhine to the sands of Prussia. The first, starting from Mayence, follows the windings of the Maine, as far

as Coburg, where it approaches the summit of the Thuringian ridge, from which the Maine flows in one direction, the Saale in another. Three defiles penetrate the summit level: that of Baireuth to Hof, that of Coburg to Saalfeld, that of Kronach to Schleitz. The second route, which is the one usually followed by travellers going from Mayence to Saxony or Berlin, passes the wooded summits of the Thuringian Forest to the left of their highest elevation. It branches off from the valley of the Maine at Hanau, ascends the lateral valley of the Fulda, and, after surmounting the ridge, descends by Eisenach, Gotha, and Weimar into the Saxon plains and the banks of the Elbe. The third, by striking far to the north, avoids entirely the Thuringian range, and, leaving the Rhine at Wesel, makes straight for the Westphalian plains between the northern extremity of the hills and the sea. Of these routes Napoleon chose the first, which brought him by Wiirtzburg to the sources of the Saale; and it was there that he came in contact with the Prussian army, in the very act of making their perilous movement from left to right.[1]

[1] Jom. ii. 280. Dum. xyi. 26,31. Bign.v.466, 467. Hard. ix. 303. Thiers, vii. 59,60. Perjonal observation.

But before the junction of the Prussian forces, even in this false direction, could be effected, the formidable legions of Napoleon were already upon them. As might have been expected, when surprised in this manner in the middle of a lateral movement, they were attacked at the same time in different quarters, and in all by greatly superior columns of the enemy. The French masses, dense and strong, marching on the great chauss&s, fell perpendicularly upon the flank of their opponents when endeavouring, by cross and often deplorable roads, to reach the points of rendezvous assigned to them. The consequences might easily have been anticipated. They were defeated in every quarter, and lost, in the very outset of the campaign, the moral influence of an advance. On the 9th, Tauenzein, who was at the moment in front of Schleitz with six thousand Prussians and three thousand Saxons, was attacked by Bernadotte, at the head of greatly supe-

32. Commencement of hostilities, and defeat of detached bodies of Prussians.

rior forces, and after a gallant resistance dislodged from his position with the loss of several hundred men. The day following, Murat marched on Gera, and on the road fell in with and captured a convoy of five hundred carriages and a pontoon train—an extraordinary proof of the advantage the French had already gained, when, on the third day after hostilities had commenced, they had fallen in with and captured a large part of the reserve trains and heavy baggage of the enemy.[1]

Oct. 11. [1] Bign. v. 468, 470. Dum. xvi. 51,58.

33. Success of the French left against Prince Louis.

Nor was the French left, under Lannes and Augereau, less successful. On the 10th, the former of these generals arrived on the heights of Saalfeld, and animated his troops to the highest degree by reading to them the proclamation of Napoleon on the opening of hostilities ; and on the same day, in continuing his advance upon Saalfeld, he fell in with Prince Louis, who commanded the rear-guard of the Prussian left, and had been stationed at Rudolstadt and Blankenburg by Prince Hohenlohe to cover the cross-march of his columns, who were then endeavouring to reach the points of rendezvous assigned them by their commander-in-chief. This gallant prince, in common with his immediate superior Prince Hohenlohe, had long expressed the opinion, which they had in vain endeavoured to impress upon the Duke of Brunswick, that Napoleon meditated an attack on the Prussian left, and that a concentration of their troops in that direction should have been made some days before.* Unable to prevent the disastrous resolution to assemble on the right, he now set himself with heroic bravery to mitigate its effects. The forces under his command were only eleven batta-

* In the great council of war, held on the 5th October at Erfurth, when the Duke of Brunswick's project of continuing the march across the Thuringian Forest was discussed, Prince Hohenlohe, Prince Louis, and Colonel Massenbach, his chief of the staff, strongly represented that, by continuing the march in that direction, the army would be exposed to certain ruin; that they would soon arrive at a country where the ground was entirely favourable to the operations of the enemy, and adverse to their own method of fighting ,* and that if the French were inclined, as seemed more than probable, to turn either of the wings of the army, nothing could favour this design so much as the

lions and eighteen squadrons of hussars, with eighteen pieces of cannon; and with these he had to withstand the shock of Lannes, with twenty-five thousand men. Notwithstanding this fearful preponderance of force, he resolved to hold firm during the remainder of the day, to gain time for the evacuation of the considerable magazines which were collected close in his rear at Saalfeld.[1]

Oct. 9. [1] Lucches. ii. 137, 139. Dum. xvi. 55, 57.

34. Death of that prince.

In this gallant but unhappy determination he was confirmed from an opinion that it was only by resuming the old Prussian system of a vigorous offensive, that the spirits of the soldiers, which had been much sunk by the general order to retreat on the preceding day, could be revived. The sensible increase of the enemy all around him on the following day—even the turning of his right flank by Suchet with a powerful body of light troops, which rendered his position no longer tenable, could not induce him to abandon his ground ; and, when the attack commenced, the Prussians were surrounded on all sides. Notwithstanding this, they made a gallant resistance, and enabled the artillery and chariots to leave Saalfeld in safety. Returning from the town to his gallant comrades, who still made good their ground in its front, Prince Louis found them dropping fast under the murderous fire of the French tirailleurs. Soon their retreat was converted into a rout by the ravages of the hostile artillery ; and the prince himself, while combating bravely with the rearguard, and striving to restore order among the fugitives, was surrounded by the enemy's hussars—"Surrender, colonel," said their chief, not knowing the rank of his opponent, " or you are a dead man." Louis answered only by a blow with his sabre, which wounded

plunging the Prussian host by columns into the forest. These sage observations made no sort of impression on the Duke of Brunswick; and all the modification of his plan which these generals could effect, was that the troops should halt for a day on the 8th October, and on the following morning throw out strong reconnoitring parties, and receive bread for eight days before entering the denies of Thuringia. It may safely be affirmed that that council, *by* continuing this fatal advance, determined the result of the campaign.—See DUMAS, xvi. 25, 26; and *Saalfeld, Algemeine Gewhichte,* iii. 299.

CHAP. XLIII.

1806.

without disabling his adversary, who replied with a mortal stroke, which laid the heroic prince dead at his feet

85. Discouragement of the Prussians, who are completely turned by the French.

In this disastrous encounter the Prussians lost twelve hundred prisoners, besides eight hundred killed and wounded, and thirty pieces of cannon. But this was the least part of their misfortunes : the heroic Prince Louis was no more. He had fallen, it is true, while bravely combating on the field of honour; but his body had remained the trophy of the victors, and the continued advance of the enemy too surely indicated that defeat had attended the first serious encounter of the Prussian arms."* Their army was now broken in upon in several points; its magazines in part seized; its concentration interrupted; and the dejected columns, without any fixed rallying points, were wandering about in every direction, while the terrible French legions, in dense masses, were falling perpendicularly on their flank. These disasters rapidly communicated their depressing effect to the minds of the soldiers. The death of Prince Louis, above all, equally dear to the officers and private men, diffused a universal gloom. So grievous a calamity in the outset of the campaign was regarded as the worst augury of its future fortunes; and, as is usual with great bodies in a violent state of excitement, the transition was immediate from the preceding exultation to an extraordinary degree of depression.[1]

[1] Lucches. ii. 137, 140. Bign.v. 468, 470. Dum. xvi. 51, 58.

Meanwhile the movements preparatory to a decisive battle continued, though in a very different spirit, on both sides. In deep dejection, and with infinite difficulty, the Prussians at length concentrated their forces in two

*** No sooner was the rank of the prince known, than Marshal Lannes, with deserved courtesy, showed his corpse all the honours due to so illustrious a character. It was interred with military honours in the cemetery of the princes of Coburg, at Saalfeld; and Berthier wrote on the 12th to the chief of the Prussian staff, announcing that the Emperor had ordered it to be restored, if it was desired that his remains should rest in the tomb of his ancestors—an offer which the disasters immediately ensuing rendered it impossible for the royal family at that time to accept.—BIONON, V. 469.**

36. Movements on both sides preparatory to a general action.

great masses under the King in the neighbourhood of Weimar, and under Hohenlohe near Jena. It was in the highest exultation, on the other hand, and in the full anticipation of victory, that the French made a sweep which brought them completely round the Prussian army. The early triumphs with which the campaign had opened had given Napoleon hopes of rapid and decisive success. He no longer feared, as he admitted he had done at first, that he would be obliged to have recourse to the mattock.* The confusion of the enemy's columns had dissipated the prestige of the Great Frederick. Encouraged by these events, he now hesitated not to follow out the brilliant career which had opened to his arms. A complete conversion, turning on the pivot of the left, took place in the direction of his columns, who wheeled round so as to face the Northern Ocean. Davoust, Bernadotte, and Murat marched upon Naumburg, where, on the next day, they made themselves masters of considerable magazines; Soult was advancing on Jena, where Lannes was already established; while Ney and Augereau were at Roda and Kahla, in its immediate neighbourhood. Such was the confusion of the Prussian movements, and the bad understanding which already prevailed between them and the Saxons, that, when the French took up the ground which the Allies had just quitted in the environs of Jena, they found the fields and roads covered with arms, cuirasses, and chariots, like the scene of a defeat. The Saxons had pillaged the Prussians, and the Prussians the Saxons. Baggage and ammunition waggons had been abandoned by their drivers, and lay scattered in confusion, while some guns had even been spiked to prevent their being of service to the enemy.[1]

Oct. 12.

Oct. 13.

[1] Dum. xvi. 58,64. Jom. ii. 282, 283, Lucches. ii. 140, 141.

* In setting out for the Prussian campaign, Napoleon expected to experience a more formidable resistance than he had yet met with in Europe, The exploits of the Seven Years' War had filled him with the highest idea of the troops trained in the school of its illustrious hero, and he said to his assembled officers at Mayence, " We shall have earth to move in this war."—See JOMINI, ii. 282.

CHAP. XLIII.

1806.

37. Result of these manoeuvres.

The result of these different marches was in the highest degree favourable to the French arms. By the advance on Naumburg they had cut the enemy off from the line of retreat to Leipsic, and thrown their left back in such a manner that the French on the banks of the Saale had their back to the Elbe, and faced the Rhine; while the Prussians had their back to the Rhine, and could only hope to regain their country by cutting their way through the enemy. Finding affairs in a situation so much more favourable than he could possibly have anticipated, Napoleon, to gain additional time to complete the encircling of his antagonists, despatched, on the 12th, an officer of his household with proposals of peace to Frederick-William, taking care meanwhile not to suspend for one instant the march of his columns; but the letter did not reach that monarch till the battle was over. In the evening of the 12th the army of Hohenlohe, which, with all the additions it had received from Ruchel, did not exceed forty thousand men, was grouped in dense masses on a ridge of heights to the north on the road from Jena to Weimar, between the Um and the Saale. Its advanced posts were on the Landgrafenberg, a steep hill between its position and the town of Jena, from the summit of which the whole lines of the Prussians could be descried, and over which the only road to the attack of their position in front lay.[1]

Oct. 12.

[1] Dum. xvi. 72,76. Jom. ii.284. Lucches. ii. 141.

Concentration of the Prussian forces near Weimar.

The army of the King of Prussia, on the other hand, under the immediate command of the Duke of Brunswick, sixty-five thousand strong, was concentrated at the distance of somewhat more than a league in the rear of Hohenlohe, near Weimar. Thus the whole Prussian army, consisting of above a hundred thousand men, of which eighteen thousand were superb cavalry, with three hundred pieces of cannon, was at length assembled in a field of battle, where their far-famed tactics had a fair theatre for development; and notwithstanding the early disasters of the campaign, an opportunity was afforded

them of reinstating affairs at the sword's point. Each army had passed its opponent, and mutually intercepted the other's communications. But there was this extreme difference between the two, that the army of the Duke of Brunswick, cut off from all its magazines, had no resource but in victory ; whereas that of Napoleon, though severed from the Rhine, had a clear line of retreat, in case of disaster, to the Maine and the Danube.[1]

[1] Dum. xvi. 72,79. Jom. ii. 284, 285. Bign.v.471, 478. Luc ches. ii. 151. 151.

39. The Prussian army is again divided. The King marches to Auerstadt.

It would have been well for the Prussians had they continued and given battle in this concentrated position ; but the intelligence of the advance of Davoust and Murat upon Naumburg, which arrived at headquarters on the night of the 12th, led to a renewed separation, attended in the end with the most frightful disasters. Conceiving that the French Emperor had no intention of immediate combat, and being anxious for the safety of that town where the principal magazines of the army were placed, the Duke of Brunswick came to the ruinous resolution of again dividing his forces ; and while Hohenlohe was left in position near Jena, as a rear-guard to cover the retreat of the army, the principal body, with the King at its head, moved at daylight for Suiza, and at night arrived on the heights of AUERSTADT. Thus at the very moment when Napoleon, with above a hundred thousand men, was making his dispositions for a general battle on the day following, and surmounting the difficulties of the approach to the enemy's position on the heights in his vicinity, the Prussian general dislocated the imposing mass of his soldiers, and diverging to the left with two-thirds of his forces, engaged in a hazardous flank-march of ten leagues in presence of his antagonists, leaving a comparatively inconsiderable rearguard to be crushed by more than double its force in its position at Jena. Such was the dearth of provisions which already prevailed in the Allied camp from the capture of their magazines by the enemy, that no regular supply of bread was dealt out to the men after the long and fatiguing march;[2]

Oct. 13.

CHAP. XLIII.

1806.

but great numbers lay down, wearied and supperless, to sleep on the ground which was to cover their graves on the morrow.

40. Napoleon's dispositions for the battle.

Meanwhile Napoleon, never suspecting this division of the enemy's force, and supposing they were to follow the principles of the Great Frederick, which were to combat in concentrated masses and on as confined a field of battle as possible, was endeavouring, with his wonted energy, to overcome the all but insurmountable difficulties of the passage of the Landgrafenberg, by which access was to be afforded to his columns for the attack of the Prussian position. No sooner had the French light troops dislodged the enemy's patrols from these important heights, than the Emperor repaired to them in person, from whence he distinctly beheld the portion left of the Prussian army still reposing at leisure on its formidable position on the opposite ridge. Not doubting that he would have to deal with their whole force on the following day, he pressed without intermission the march of his columns ; and soon arranged the forces of Lannes, who with his infantry first reached its summit by the steep and rugged ascent, in such formidable masses around its declivities on the other side, that the enemy, who were now sensible of their error in abandoning so important a point, and were making preparations to retake it, were obliged to desist from the attempt. This valuable height, therefore, from which the whole of the Prussian position and all the movements of their troops were distinctly visible, remained in the hands of the French; and its elevation not only gave them that advantage, but entirely concealed from the observation of the Prussians the rapid concentration of troops on the Jena side of the mountain, which would at once have revealed the intention of a decisive attack on the following day. Still the difficulty of surmounting the ascent was very great, and for artillery and waggons it was as yet totally impassable.[1]

[1] Jom. ii. 285, 286. Saalf. iii. 301, 805. Camp. de Saxe, i, 260.

Nothing, however, could long withstand the vigour of

41. And vigorous efforts to surmount the Landgrafenberg.

Napoleon and his followers* He stood on the spot till the most rugged parts of the ascent were widened by blasting the solid rock, or smoothed by pioneers; and when the men were exhausted, revived their spirits by himself working with the tools, and exhibiting his old experience as a gunner, in surmounting the difficulty of dragging the cannon up the pass. Animated by such an example, and the vigorous exertions of the successive multitudes who engaged in the task, the difficulties which the Prussian generals deemed altogether insurmountable were rapidly overcome; before eight in the evening the ascent was passable for cavalry and artillery ; and at midnight the whole corps of Lannes, with all its guns and equipage, reposed in crowded array on the ridges and flanks of the mountain. The Imperial Guard, under Lefebvre, lay on its summit; Augereau on its left; Soult and Ney received orders to march early in the morning before daybreak to the right, in order to turn the enemy by his left, after the combat was begun; Murat bivouacked during the night near Dornburg, but he was ordered up to Jena, and was in reserve before the action was far advanced; while Davoust and Bernadotte were directed to advance from Naumburg, the first upon Apolda, in order to threaten the enemy's rear, the second upon Dornburg, to cut off his retreat to the Prussian dominions. The two armies now lay so near that their fires were within cannon-shot, and the lines of sentinels in communication : the lights of the Prussians, dispersed over a space of six leagues, threw a prodigious glow over the whole heavens to the northwest; those of the French, concentrated in a small space, illuminated the heights in the middle of their position. Surrounded by his faithful Guards, the Emperor, after having despatched his last orders to his marshals, wrapped himself in his cloak, and shared the frigid bivouac of the soldiers on the summit of the Landgrafenberg.[1]

[1] Jom. ii. 285, 286. Bign.v.473, 474. Dum. xvi. 83,94. Saalf. iiu 301, 807. Camp, de Saxe, i. 260.

At four in the morning of the 14th he was already on

CHAP. XLIII.

1806.

42. Situation of the armies on both sides, on the morning of the 14th.

horseback, and, surrounded by his generals, rode along the front of the line of Suchet's and Gazan's divisions, which were first to be engaged, and were already under arms. "Soldiers!" said he, "the Prussian army is turned, as the Austrian was a year ago at Ulm; it now only combats to secure the means of retreat The corps which should permit itself to be broken would be dishonoured. Fear not its renowned cavalry; oppose to their charges firm squares and the bayonet." Loud acclamations rent the air at these words : but the morning was still dark; the first streaks of dawn were only beginning to appear, and a thick cold fog obscured every object around. Burning with impatience, the soldiers awaited the signal of attack, but for two long hours they were kept shivering in their lines. At length at six, when the day, though still misty, was light, and the Emperor judged that his marching columns would be so far advanced on their respective routs as to justify the commencement of the action in front, he gave the signal for the attack. Meanwhile the Prussians, little suspecting the tempest which was about to burst on them, were securely reposing in their position, and, anticipating a day of complete rest on the 14th, had made no provision either for marching or battle. This fatal security had been increased by the opinion generally entertained at Hohenlohe's headquarters, that the bearer of the flag of truce who had appeared at their advanced posts on the preceding day, and had been forwarded with his despatches to the king, brought proposals of peace, and that nothing serious would be attempted till his answer was received. Their position was strong and admirably chosen : secure from attack on either flank, and approachable in front only by narrow and steep defiles, in which, if the heads of the enemy's columns were vigorously resisted and hindered from deploying, horse, foot, and cannon would be jammed up together, and the disaster of Hohenlinden might have been repaid with interest to the French army.

CHAP. XLIII.

1806.

But the departure of the king with nearly two-thirds of the army, and the total absence of any preparations for an attack on the part of those who remained, deprived them of the advantages which they might otherwise have gained from this position, and relieved Napoleon from a risk in the outset of the campaign, greater, perhaps, than he underwent even during the perilous changes which signalised its later stages.[1]

43. Battle of Jena, 14th October.

Atlas, Plate 40.

Great was the astonishment of the Prussian outposts, when, through the gray mist of the morning, they beheld the French battalions close upon them, and advancing swiftly in the finest order to the attack. They made, however, a gallant resistance, and did their utmost to prevent the French, led by Suchet, from debouching from the defiles at the mouth of which they were stationed; but being altogether unprepared for the attack, and completely surprised, they were not long able to make good their post, and fell back, with the loss of twenty pieces of cannon, to the main body of the army. The ground thus gained by Suchet was of the utmost importance, for it enabled the heads of the French columns, after emerging from the defiles, to extend themselves to the right and left, and gain room for the successive corps as they came up to deploy. Roused by the first discharge of firearms in front, Prince Hohenlohe rode through the mist from his headquarters in the rear at Capellendorf towards the front; but, still confident that it would only prove a skirmish, he said to General Muffing, "that his troops should remain quiet in their camp till the fog had risen; and that, if circumstances demanded it, he would move forward the division of Grawert, as he did not wish the Saxons to combat at all that day." Soon, however, messengers arrived in breathless haste from the outposts with urgent demands for assistance, and Grawert was rapidly advanced towards Vierzehn-Heiligen to support Tauenzein, who there with difficulty held his ground against the impetuous attacks of Suchet. Meanwhile the

1806.

whole army of the Prussians, alarmed by the sharp and incessant fire of musketry in their front, stood to their arms, and reinforcements were sent to the points in advance which were menaced: but in spite of all their exertions the enemy gained ground; the villages of Closwitz and Kospoda, at the foot of the eminence on which the lines of Hohenlohe were posted, were successively carried; and all the low grounds in front of his position were filled with troops. Still the mist was so thick as to be almost impenetrable; the contending bodies could not see each other till they were within a few yards' distance; and under cover of this veil, and in the midst of the confusion arising from an unexpected attack, the movements of the assailants were completed, the defiles passed, and the precious moments, when the heads of their columns might have been driven back into the gorges by a vigorous attack, as those of the Imperialists had been at Hohenlinden, for ever lost.[1]

[1] Lucches. ii. 154,156. Jom. ii. 286, 287. Dum. xvi. 94, 97.

44. Defensive measures of the Prussians.

At length at nine o'clock, the increasing rays of the sun dispersed the fog, and his light shone forth in unclouded brilliancy. Then, and not till then, the Prussians perceived the full magnitude of the danger. On every side they were beset by assailants, no longer struggling through steep and narrow gorges, but deployed, with all their cavalry and artillery, on the open expanse to which these led. Directly in their front, the whole corps of Lannes, having made itself master of the villages at the foot of the Prussian position, was preparing to ascend the slope on which the latter stood: immediately to the right, Ney, and beyond him Soult, had already cleared the defiles, and were drawn up in line or column on the open ground; while Augereau on the left was pressing forward to turn their flank; and the Imperial Guard, with Murat's cavalry, were stationed in reserve on the slopes of the Landgrafenberg. Above ninety thousand men had outflanked on either side, and were preparing to crush forty thousand, in a strong position,

indeed, but totally inadequate to so desperate an encounter. Surprised, but not panic-struck, the Prussians drew up their lines in admirable order in the form of an obtuse triangle, with the apex in front, to avoid the danger of being turned on their flanks ; and instructions were despatched to Ruchel, who, with the reserve, twenty thousand strong, was at a short distance on their right, to hasten his march to the scence of action. Before he could arrive, however, the battle had commenced : the preparatory movements were made on either side in the finest style — the French columns advancing, and the Prussian retiring to their chosen ground with all the precision of a field-day.[1]

[1] Dum. xvi. 97, 105. Jom. ii. 286. Saalf. iii. 306.

45. Commencement of the battle.

But though they stood their ground bravely, and received their assailants with a close and well-directed fire, the odds were too great to give any hopes of success. Ney, indeed, whose impetuous courage led him to begin the attack before his columns were properly supported, and who had, by a charge of cuirassiers, carried a battery of thirteen pieces on an eminence, which severely galled his soldiers, was for a few minutes in imminent danger. The Prussian cavalry broke the French horse, and enveloped the infantry in such numbers as would inevitably have proved fatal to less resolute troops; but the brave marshal instantly formed his men into squares, threw himself into one of them, and there maintained the combat by a rolling fire on all sides, till Napoleon, who saw his danger, sent several regiments of horse, under Bertrand, who disengaged him from his perilous situation. But on all other points the French obtained early and decisive success. Ney, extricated from his difficulties, with an intrepid step ascended the hill, and after a sharp conflict carried the important village of Vierzehn-Heiligen, in the centre of the Prussian position. In vain Hohenlohe formed the flower of his troops to regain the post; in vain these brave men advanced in parade order, and with unshrinking firmness, through a storm of musketry

CHAP. XLIII.

1806.

and grape; the troops of Lannes came up to Ney's support, and the French established themselves in such strength in the village as to render all subsequent attempts for its recapture abortive. Emboldened by this success, Ney next attacked the right of the Prussian line towards Isserstadt, which Augereau with the French left had already carried. A devouring fire ran along the whole right wing, and the French were for some time arrested by the intrepid resistance of their adversaries; but the odds were too great, and, despite of all their efforts, the Prussians were compelled to give ground in that quarter. But on the left of Vierzehn-Heiligen, they obtained some advantage: their numerous and magnificent cavalry made several successful charges on the French infantry, when advancing on the open ground beyond its enclosures; several cannon were taken, and Hohenlohe for a short time flattered himself with the hope of obtaining decisive success.[1]

[1] Dum. xvi. 97, 115. Jom. ii. 286, 287. Bign. v. 475,476. Saaif. iii. 306. Lucches. ii. 156.

46. The Prussians are defeated.

Matters were in this state when the approach of Ruchel with his corps, twenty thousand strong, to the field of battle from the right, confirmed the Prussian general in these flattering anticipations; and he despatched a pressing request to him to direct the bulk of his forces to the village of Vierzehn-Heiligen, already the theatre of such desperate strife.* Thither, accordingly, the brave Prussian directed his steps; but before he could arrive at the decisive point, matters had essentially changed for the worse, and he came up only in time to share and augment the general ruin. The lapse of time had now enabled the French to bring their immense superiority of force to bear upon the enemy at all points : Soult, by a heavy and well-directed fire, had driven the cavalry from

* At this crisis, Hohenlohe wrote to Ruchel—" It is highly gratifying to me bo hear at this moment that your Excellency has arrived to my support. Send all the force you can to the village of Vierzehn-Heiligen, the chief point of attack. You are a brave man and sincere friend. At this moment we beat the enemy at all points; my cavalry has captured some of his cannon."—DUM. XVi. 114.

the field on their left; while Lannes and Augereau, pressing them at once in front and flank on their right, had forced back the infantry above half a mile. Emerging from the tillages which had been the theatre of such obstinate conflict, the French forces advanced with loud shouts and in irresistible strength towards the Prussians, who, weakened and dispirited, and in some places almost mown down by the terrible fire of their adversaries, were now yielding on all sides. Up to this time, however, their retreat was conducted in the most orderly manner. Napoleon saw that the decisive moment had arrived, and from his station on the heights in the rear, sent orders to Murat with the whole cavalry to advance and complete the victory. This terrible mass was irresistible. Fifteen thousand horse, fresh, unwearied, in the finest array, animated by the shouts of triumph which they heard on all sides, bore down with loud cheers on the retiring lines of the Prussians. In an instant the change was visible. In vain their cavalry, so brilliant and effective in the early part of the day, strove to make head against the assailants, and cover the retreat of the infantry and cannon: their horses, wearied by eight hours of fighting or fatigue, were unable to withstand the fresh squadrons and ponderous cuirassiers of Murat, and by their overthrow contributed to the disorder of the foot-soldiers. After a gallant resistance, the lines were broken: horse, foot, and cannon pressed tumultuously together to the rear, closely followed by the bloody sabres of Murat. In the general confusion all order was lost: the infantry and cavalry were blent together, the guns and caissons abandoned to the victors.[1]

[1] Dum. xvi, 97, 120. **Bign.y.476.** Jom. ii. 287. Saalf. iii. 307, 308. Camp. de Saxe, i. 262,263.

In the midst of this appalling scene, the columns of Ruchel, still in battle array, emerged through the cloud of fugitives to stem the torrent.* It was a movement

* The rapid change for the worse in the prospects of the Prussians since **he first** approached the field, may be discerned in the altered tone of the next letter despatched to him by Prince Hohenlohe—"Lose not a moment in advancing with your as yet unbroken troops. Arrange your columns so that through your open*-

1806.

47. Arrival of Ruchei, who is *over*--whelmed.

extremely similar to the arrival of Desaix on the field of Marengo: but he had to meet Napoleon, not Melas. The fresh troops, though advancing in good order, and with an undaunted countenance, were speedily assailed on all sides: an ephemeral advantage gained by their cavalry was rapidly, in the disorder of success, turned into disaster: in front they were charged with the bayonet by the French grenadiers, in flank assailed by an endless succession of Murat's dragoons; the villages of Romstedt and Capellendorf were strewed with their dead; and Ruchei himself, while bravely animating his men, was wounded in the breast by a musket-ball, and carried off the field. After a terrible combat of an hour's duration, this powerful reserve, which in any other circumstances would have changed the fortune of the day, was broken, dispersed, and almost totally annihilated. It was no longer a battle, but a massacre. In frightful disorder the whole army rushed like an impetuous torrent from the field: but nearly the whole right wing was cut off by the rapidity of Soult's advance, and made prisoners. Almost all the artillery of the Prussians was taken, and the victors entered Weimar pell-mell with the fugitives, at the distance of six leagues from the field of battle. Behind that town, on the road to Auerstadt, Hohenlobe, at six o'clock, collected twenty squadrons, whose firm countenance till nightfall gave some respite to the wearied foot-soldiers, now dispersed through the fields in every direction; while Napoleon, according to his usual custom, rode over the bloody theatre of death, distributing prizes to those who had most distinguished themselves, and giving directions for the care and consolation of the wounded.[1]

[1] Dum. xvi. 120, 133. Bum. v. 475, 476. Lucches. ii. 157, 158. Hard. *ix.* 305, 306. Saalf. *Hi*, 307, 308.

While this terrible disaster was befalling the united sorps of Hohenlohe and Ruchei, the King of Prussia was combating under very different circumstances, but with

ngs there may pass the broken bands of the battle: be ready to receive the charges of the enemy's cavalry, which in the most furious manner rides on, presses and sabres the fugitives, and has driven into one confused mass the nfantry, cavalry, and artillery."—LUCCHESINI, ii. 157.

48. Preparatory movements which led to the battle of the King's army.

little better success, on the plateau of AUEBSTADT. Little expecting any engagement on the morrow, this fine army, commanded by the Duke of Brunswick in person, had bivouacked in close array around the village of that name: the Queen was only prevailed on by the most pressing entreaties to retire late in the evening, with a slender guard, to Weimar. Informed of the occupation of Naumburg by a considerable force, the Duke directed the division of Schmettau to occupy the heights of Koessen, and present themselves in battle array before the enemy, whom he supposed to be at the utmost a few thousand strong, while under their cover the remainder of the army leisurely continued its march towards the Elbe. These orders were obeyed; but Schmettau's division, contenting themselves with occupying the heights in the neighbourhood, neglected to send forward detachments to seize the defile of Koessen—an omission which was speedily taken advantage of by Davoust on the morning of the 14th, who, Oct. 14. advancing from Naumburg according to his directions, early seized upon this important pass. At six on that morning, the French marshal had received an order from Napoleon, dated three o'clock A.M., from his bivouac on the Landgrafenberg, in which he announced his intention to attack in a few hours the Prussian army, which he imagined to be concentrated in his front, and ordered Davoust to march without loss of time upon Apolda, in order to fall upon their rear, leaving him the choice of his route, provided he took a part in the action. The despatch added: "If the Prince of Pontecorvo (Bernadotte) is with you, you may march together; but the Emperor hopes that he will be already in the position assigned to him at Doraburg." Davoust instantly repaired to the headquarters of Bernadotte, who at that moment was in communication with his corps in the neighbourhood of Naumburg, and showed him this order, proposing that they should march together to Apolda;[1] but that officer, relying on the ambiguous expression in the

CHAP. XLIII. 1806.

despatch—which indicated that the Emperor "hoped he would be in the position assigned to him at Dornburg"—did not conceive himself entitled to deviate from his previous instructions, and set out with his whole corps in the direction of that town.

49. Battle of Auerstadt. Atlas, Plat© 41.

Left thus to his own resources, Marshal Davoust notwithstanding began his march in the direction which Napoleon had assigned. His forces were considerable, amounting to twenty-six thousand infantry and four thousand horse—a body perfectly adequate to its destined task of falling on the rear of the Prussian army, when defeated in front by Napoleon, but little calculated to withstand the shock of fifty thousand infantry and ten thousand cavalry, whom the King was leading in person to the encounter. The Prussians, on their side, were as little prepared for an action; and, deeming their march sufficiently secured by Schmettau's division on the heights of Koessen, were in open column and straggling, advancing on their march towards the Elbe, when suddenly, at eight o'clock, they were met on the plateau by the vanguard of Davoust, which had emerged from the long and steep ascent so well known to travellers who visit that memorable field, and was already drawn up in battle array on its summit. The thick mist which here, as at Jena, concealed the movements of the opposing armies, prevented the troops seeing each other till they were only a few yards distant; and both parties deeming their adversaries only an inconsiderable detachment, fell back to collect forces to clear their advance,—the Prussians, to drive the enemy back again down the defile, and secure the flank of the army from insult; the French, to clear their front, and pursue their route to Apolda.[1]

[1] Jom. ii. 290,291. Dam. xvi. 139, 147. Bign.v.480, 481. Saalf. iii. 306. Personal observation.

50. Additional forces come up on both sides.

Speedily reinforced, both sides returned to the charge. Davoust supported the advanced guard by the whole division of Gudin, with instructions to maintain themselves to the last extremity on the level space at the upper end

of the defile, in order to gain time for the remainder of the corps to debouch; while the King of Prussia, impatient at the check given to the march of his army, ordered Blucher, with two thousand five hundred hussars, to ride over the Sonnenberg and clear the plateau of the enemy. Little anticipating the formidable resistance which awaited them, the Prussian cavalry were thrown into disorder by the close and steady fire of the French infantry, which speedily formed themselves into squares. Their cavalry were, indeed, overthrown by the overwhelming numbers of the Prussian horse; but all the efforts of that gallant body, even when guided by the impetuosity of Blucher, were shattered against the compact mass of Gudin's infantry, and the terrible discharges of grape which issued from his artillery. Surprised at the obstinacy of the resistance, the King, adopting the opinion of Marshal Moellendorf, who insisted that it was only a detached column which occasioned the delay, and disregarding the advice of the Duke of Brunswick, who strongly counselled a general halt, and formation of the army in order of battle, till the mist cleared away and the enemy's force could be ascertained, continued the attack by means merely of successive divisions as they came up to the ground. The divisions of Wartensleben and the Prince of Orange were ordered to pass the defile of Auerstadt, where the road runs through a winding hollow skirted with copse-wood or rough slopes, and advance to the support of the discomfited cavalry. The former, who first emerged from the defile, was directed to assail the flank of Gudin's division, which had advanced on the plateau beyond the village of Hassenhausen. At this moment the mist was dissipated, and the sun shone in full brilliancy on the splendid squadrons and regular lines of the Prussians.[1]

[1] Jom. ii. 292, 293. Saalf. iii. 306. Dum. xvi. 139. 150.

The Duke of Brunswick put himself at the head of the infantry, and led them gallantly to the attack, while Schmettau and Blucher pressed them with their respec-

CHAP. XLIII. 1806.

tive divisions of foot and horse on the opposite flanks. But the brave troops of Gudin, forming themselves into squares, resisted all the charges with unconquerable resolution; and the nature of the ground, which permitted the successive divisions to come up to the support of either side only by degrees, the one by the long and winding defile of Auerstadt, the other up the steep ascent of Koessen, rendered it impossible for the Prussians to bring all their overwhelming force to bear at once upon the enemy. The conflict, therefore, was more equal than might have been imagined, and most severe. The French troops, stationed behind the hedges, enclosures, and garden-walls of Hassenhausen, kept up an uninterrupted and murderous fire upon the enemy. The Duke of Brunswick was mortally wounded by a ball in the breast while leading on a charge. Schmettau experienced the same fate. Wartensleben had his horse shot under him; and the Prussians, discouraged by the loss of their leaders, wavered in the attack, which, being made in line, and not in column, was not pressed with the requisite vigour. Still the terrible discharge of artillery and fire-arms continued. Gudin's division had lost nearly half its numbers, and it was evident they could not long maintain their ground against their redoubtable and hourly increasing adversaries.[1]

51. Desperate conflict which ensued at the summit.

[1] Jom. ii. 292, 293. Dum. xvi. 139,156. Bign.v.482. Saalf. iii. 306.

From this peril, however, they were at length relieved by the arrival of the other divisions of Davoust's army, Morand was the first who got up the defile. His troops, as they successively arrived on the summit, drew up on the left of Gudin, towards the Sonnenberg; and shortly after Friant, with his division, debouched upon the right, and extended to the foot of the Speilberg. The combat was now equal, or rather the advantage was on the side of the French, for their three divisions were superior in strength to those of Schmettau, the Prince of Orange, and Wartensleben, to which they were opposed. Prince William of Prussia, at the head of a powerful body of

52. Arrival of other divisions on the field. Progress of the battle.

cavalry, which had surmounted the Sonnenberg and arrived on the French left, furiously assailed Morand's division immediately after it formed; but these veteran troops, with admirable coolness, threw themselves into squares, and with rapid discharges received the repeated and impetuous attacks of the Prussian horse. In vain these gallant cavaliers, with headlong fury, drove their steeds up to the very muzzles of the French muskets. In vain they rode round and enveloped their squares : ceaseless was the rolling fire which issued from those flaming walls; impenetrable the hedge of bayonets which the front rank, kneeling, presented to their advances. The heroic devotion of Prince William in vain led them again and again to the charge; still the fire continued, still the bayonets remained firm. At length he himself was wounded, half his followers were stretched on the field, and the remainder sought refuge in disorder, partly on the heights of the Sonnenberg, partly in the enclosures of Neu Zulza.[1]

[1] .Tom. ii. 192, 193. Dum. xvi. 156, 161. Bign.v.483. Saalf. iii. 506.

53. Desperate struggle around the Sonnenberg on the Prussian right.

While this desperate conflict was going on on the left of Hassenhausen, the division of Friant had debouched from the defile, extended itself on the ground to its right, and chased the enemy who assailed it back to the village and heights of Speilberg, which were speedily carried. The left of the Prussians was thus threatened; but it was not there that the principal danger lay. The progress of Morand on their right was much more alarming. On that side, not content with repulsing the furious attacks directed against them, the French had now assumed the offensive, and were rapidly pressing forward to the heights of Sonnenberg, from whence their guns would command the whole field of battle, and render untenable the position of the Prussian reserves, which had hitherto taken no part in the action. Sensible that the battle was irrecoverably lost if these important heights fell into the hands of the enemy, the King put himself at the head of a chosen body of troops, and bravely led them to the

CHAP. XLIII. 1806.

charge. But if the attack was gallant, the defence was not less obstinate: Morand himself was to be seen at the head of his regiments, and for some minutes the balance quivered. Insensibly, however, the French gained ground, and at length their artillery, dragged up to the summit of the heights, was placed in battery, and opened such a tremendous fire of grape and cannister upon the enemy's columns, as completed their discomfiture in that quarter; and with the blood-stained Sonnenberg and the village of Rehausen, the whole left of the field of battle fell into the hands of the invaders.[1]

[1] Dum. xvi 161, 164. Bigu.v. 483, 484. Jom. ii. 294. Lucches. ii. 146,147.

The experienced eye of Marshal Davoust now told him that the moment for striking the decisive blow had arrived. The heights at Eckartsberg commanded the line of the enemy's retreat, as those of Sonnenberg did the field of battle : by moving forward his centre and seizing that important point, their defeat would be rendered complete, and all possibility of their rallying prevented. Thither, accordingly, Gudin's division advanced, driving before them the broken remains of Schmettau's and Wartensleben's divisions, which had lost nearly half their numbers during the sanguinary strife in which they had been engaged. But the Prussians made one effort more to regain the day. Their broken battalions, which had retired from the field, were rallied under cover of the powerful reserve commanded by Kalkreuth, who assumed the direction upon Moellendorf being wounded: this consisted of two divisions which had hitherto taken no part in the action, and were placed in front; while the whole cavalry, re-formed under Blucher's orders, was posted in a second line immediately behind the infantry, to take advantage of any hesitation which might appear in the enemy's columns. Wearied by a morning's march and four hours[1] hard fighting, the French soldiers had now to withstand the shock of fifteen thousand fresh troops, to whom they had no corresponding reserve to oppose. Had the quality of the troops on the opposite sides been equal, this power-

ful addition to the enemy's forces, at snch a moment, must have proved decisive : but nevertheless they were totally defeated; and this last success put the keystone to the arch of Marshal Davoust's fame. Though strongly posted on an eminence, and protected by the fire of a powerful battery, they were charged with such intrepidity by Gudin's division, supported by a part of Friant's, that they were driven from their position with the loss of twenty pieces of cannon. At the same time, Morand repulsed an attack against the troops which he had stationed on the heights of Sonnenberg : the artillery, from that commanding position, carried death through all the ranks of the enemy; and at length his gallant forces descended from the eminence, and, carrying all before them, drove the reserves opposed to their advance through the defile of Auerstadt. Thither Blucher's cavalry followed the retreating columns : the Guards still kept their ranks, and retired in good order in open square, and by their firm countenance enabled the broken infantry to rally at a distance from the field of battle, where Davoust reposed amidst his heroic followers.[1]

[1] Dum. xvi. 164, 171. Jom.ii.294. Lucches. ii. 146,148. Bign. v. 485, 486.

55. **Disastrous retreat of the Prussians during the night fiom both fields of battle.**

The King of Prussia, who, during this disastrous day, had manifested the most signal coolness and intrepidity, and, during the repeated charges which he made at the head of his troops, had lost two horses killed under him, gave directions for the army to retreat in the direction of Weimar, intending to fall back on the corps of Prince Hohenlohe, of whose disaster he was still ignorant. But as the troops, in extreme dejection, and with little order, were following the great road which leads to that place, they were suddenly startled in the twilight by the sight of an extensive line of bivouac fires on the heights of Apolda. These lights were made by the corps of Bernadotte, who, adhering to his original instructions to march to Dornburg, had arrived in this position, after passing that town, late in the evening, and, ignorant of the com

CHAP. XLIII.

1806.

bats which had taken place, was preparing to fall on the rear of the Prussian army on the following day. His too strict adherence to the letter of the orders he had received deprived him of the glory of sharing in either battle, endangered Daroust's corps, and had wellnigh cost him his own life, from the indignation of the Emperor: but, nevertheless, this sudden apparition of a fresh corps of unknown strength upon the flank of their line of retreat at that untimely hour, compelled the Prussians to change their direction and abandon the great road.[1] *

[1] Dum. xvi. 171,177. Jom.ii.295, 297. Hard, ix. 306,307. Saalf. iii. 307.

56. **Meeting of the two discomfited armies in their flight.**

About the same time, obscure rumours began to circulate through the rauks of a disaster experienced on the same day at Jena; and soon the appearance of fugitives from Hohenlohe's and Ruchel's corps, flying in the utmost haste across the line which the troops retiring with the King were following, announced but too certainly the magnitude of the defeat sustained in that quarter. A general consternation now seized the men—despair took possession of the firmest hearts, as the cross-tide of the battalions flying from Jena mingled in increasing numbers with the wreck which had survived the fight of Auerstadt The confusion became inextricable, the panic universal. Infantry, cavalry, and artillery disbanded, and, leaving their guns, horses, and ammunition waggons, fled in mingled disorder across the fields, without either direction, command, or rallying point.[2] The King himself

[2] Dum. xvi. 171, 178. Jom. ii. 295, 298. Bign. v. 486, 487. Hard. ix. 307. Lucches. ii 148.

* Napoleon's anger at Bernadotte, on account of his not supporting Pavoust, and taking a share in the battle of Auerstadt, knew no bounds. " If I should send him to a council of war," said he, " nothing could save him from being shot. I will not speak to him on the subject; but I will let him see what I think of his conduct. He has too much honour not to be aware himself that he has committed a disgraceful action." In truth, however, Napoleon had no sufficient grounds for this ebullition. If Bernadotte did not take a part in the action, it was because his own latest instructions expressed a hope that he should go to Dornbuig rather than march toward Auerstadt with Davoust. Had he violated these instructions, and, in consequence, the Prussian army had escaped by Dornburg, its natural and most probable line of retreat, what defence could Bernadotte have offered for his conduct] "I was piqued," said that marshal, "to be addressed in the language of authority by Davoust; but I did my duty. Let the Emperor accuse me if he pleases, I will answer him. I am a Gascon, but he is still more so."—BOTJRRIENNE, Vii. 161, 162.

narrowly escaped being made prisoner during the tumult and horrors of the night; and it was not till five in the morning that, by a long circuit, he arrived at Sommerda, where he received the official news of the melancholy disaster at Jena, accompanied by the letter, offering an accommodation, so insidiously despatched by Napoleon the day before that great victory.

57. Loss on both sides in these actions.

Such were the astonishing battles of Jena and Auerstadt, which, in a single day, prostrated the strength of the Prussian monarchy; and did that in a few hours which the combined might of Austria, Russia, and France, in the Seven Years' War, had been unable to effect. The subsequent disasters of the campaign were but the completion of this great calamity—the decisive strokes were given on the banks of the Saale. The loss of the Prussians was prodigious: in the two fields there fell nearly twenty thousand killed and wounded, besides nearly as many prisoners; and two hundred pieces of cannon, with twenty-five standards, were taken. Ten thousand of the killed and wounded fell at Auerstadt—an honourable proof that, if infatuation led them into the field, valour inspired them when there. Nor was that victory bloodless to the conquerors: their total loss was fourteen thousand men; of whom seven thousand five hundred belonged to Davoust's corps—a striking indication of the dauntless intrepidity with which they had fought.[1] Napoleon,* with

[1] Dum. xvi. 177. Camp, de Saxe, i. 265. Dum. xvi. 180.

*** Napoleon's official account of the battle of Jena, in the fourth bulletin of the campaign, is characterised by that extraordinary intermixture of truth and falsehood, and that unfailing jealousy of any general who appeared to interfere with his reputation, which in one who could so well afford to be generous in that particular, is a meanness in an especial manner reprehensible. Davoust was the real hero of the day, since, with thirty thousand men, he had defeated the King of Prussia in person, at the head of sixty thousand. His own achievement in overthrowing forty thousand, or, including Ruchel, sixty thousand, with ninety thousand veteran troops, including the whole cavalry of Murat, is nothing in comparison. Nevertheless, he represents the action as all fought in one field; speaks of the enemy, eighty thousand strong, as being commanded by the King and the Duke of Brunswick in person, and after dilating fully on his own achievements, dismisses the wonderful exploits of Davoust in the following words :–" On our right, the corps of Marshal Davoust performed prodigies. Not only did he keep in check, but maintained a running fight for three leagues, with the bulk of the enemy's troops, who were seeking**

CHAP. XLIII. 1806.

his usual disregard of truth, called his whole loss in both battles four thousand, little more than a fourth part of its real amount.*

58. Unparalleled disasters of the retreat.

Great as were these results, however, they were but a part of the effects which ultimately flowed from these memorable battles. The disasters consequent on the retreat of the Prussians exceeded anything hitherto recorded in modern history, and were* equalled only by the still greater calamities which followed the flight from Waterloo. No provision had been made for such a contingency ; no rallying point assigned, no line of march prescribed, no magazines collected. The extraordinary circumstance of the four principal generals of the army —the Duke of Brunswick, Marshal Moellendorf, General Schmettau, and General Ruchel—being killed or disabled by wounds, left the confused mass of fugitives without a head. The unparalleled calamity of the survivors from two different defeats, experienced on the same day, crossing each other, and becoming intermingled during the horrors of a nocturnal retreat, rendered it impossible for them to know whose orders were to be obeyed. Thus, when morning dawned on the scene of ruin, the soldiers from the three armies of Ruchel, Hohenlohe, and the Duke of Brunswick, collected, as chance threw them together, in disorderly groups, and inspired only with a common panic, fled in different directions, as accident or intelligence guided their steps. Vast numbers of stragglers wandered at large through the fields, or hurried with so little knowledge of the country, from the scene of

to debouch on the side of Koessen. That marshal has displayed alike the distinguished bravery and firmness of character which are the first qualities of a warrior. He was seconded by Generals Gudin, Friant, Morand, Daultanne, chief of the staff, and by the rare intrepidity of his brave corps." Who could imagine that it was the glorious battle of Auerstadt which was here narrated1 The injustice to Davoust is so manifest that it is admitted even by the eulogists of Napoleon.—See BIGNON, V. **487, 488; and *Fourth Bulletin,* 1806, in *Camp, de la Saxe, i.* 265.**

*** Davoust's loss at Auerstadt was 270 officers and 7200 privates, killed and wounded. Of these 134 officers and 3500 privates belonged to Gudin's division of 7000 men: in other words, more than a half of that band of heroes had**

danger, that, instead of avoiding, they rushed headlong into the jaws of the enemy. It is in the extraordinary confusion arising from this disastrous retreat, and the terror which seized the minds of both officers and men at finding themselves thus huddled together with soldiers to whom they were perfect strangers, that the true cause of the unparalleled disasters which followed the battle of Jena is to be found.[1]

59. Capture of Erfurth with 14,000 men. Oct. 15.

Atlas. Plate 39.

The effect of the general consternation which prevailed speedily appeared in the fate which befell the fragments of the mighty army. Six thousand fugitives, almost without leaders, had taken refuge, the day after the battle, in Erfurth, whose embattled walls and almost inaccessible citadels promised the means of at least a temporary defence. It contained also the grand park and reserve artillery stores of the army, with the greater part of its camp equipage. Thither also the Prince of Orange, Marshal Moellendorf, and a great number of the wounded of distinction, besides seven thousand private soldiers, also wounded, had been conveyed. Such, however, was the terror of the governor at finding himself thus suddenly overwhelmed by a mass of wounded and stragglers, incapable of aiding in the defence, but who would speedily consume his slender stock of provisions, that he thought the best thing he could do was to negotiate a capitulation, on condition that the officers should retire on their parole into Prussia, and the private men remain prisoners of war.[2] On these terms the place surrendered, and with it fourteen thousand men, including

[2] Dura. xvi. 200,202. Jom. ii. 298. Lucches. ii. 159.

fallen. This was the bravest action fought by the French troops during the whole contest: but the valour both of the corps and the division was inferior to that displayed by the English in more than one action of the Peninsular war, if the number of killed and wounded, a fair test with armies both of which have been victorious, is taken as a criterion. At Talavera, out of 19,500 English soldiers, 5000 were killed and wounded; nearly the same proportion as fell of the victors at Auerstadt: but at Albuera, out of 7000 English troops, only 1500 were unwounded at the close of the fight; and 8481 red-coats fell at Waterloo, out of a force of native English not exceeding 29,000 men.—See DUMAS, **xvi. 177;** NAPIER'S ***Peninsular War,*** **iii. 541; and** WELLINGTON'S ***Official Account of the Battle of Waterloo, Ann. Reg.*** **1815, *App. to Chron.***

CHAP. XLIII. 1806.

the *dying* Marshal Moellendorf and the Prince of Orange; a hundred and twenty pieces of cannon, and immense military stores, fell into the hands of the enemy.

60. The King of Prussia gives the command to Hohenlohe, and retires to Magdeburg.

Hohenlohe, who had retired, covering the retreat of the fugitives beyond Weimar with a considerable body of cavalry, in good order, at nightfall on the 14th found himself so completely overwhelmed by the crowd of stragglers who attached themselves during the night to his squadrons, that by degrees his array melted away; and it was only by making frequent circuits, and repeatedly crossing the fields, that he was enabled to reach Dernstedt at seven on the following morning, at the head of sixty horsemen. On the day following, the King, who had arrived at Sondershausen, accompanied only by his aides-de-camp, conferred the command of all the troops which had combated at Jena and Auerstadt upon Prince Hohenlohe, with the exception of the two divisions under the orders of Kalkreuth, the reserve at the latter battle, which it was thought would still be in some sort of order; but in the general confusion this corps had dispersed like the rest, and there remained only eight battalions around his standard. Magdeburg was assigned as the rallying point to the army, within the almost impregnable walls of which fortress it was hoped the wreck of its once mighty array could be reorganised, and a defensive struggle maintained till the arrival of the Russians from the Vistula, and of the reinforcements which were collecting in the interior of the kingdom. Thither accordingly the King repaired, attended only by a few horsemen, to make preparations for the reception of the army; and there he was quitted by the British envoy, Lord Morpeth, who, seeing no chance of diplomatic concerns being attended to amidst the general confusion, returned to London to render an account to his bewildered cabinet of the extraordinary events which he had witnessed in the outset of his mission.[1]

Oct. 16.

[1] Dum. xvi. 184,192. Bign. vi 7, 8. Hard. ix. 307.

But if there was any one thing more than another in

61. Measures of Napoleon to follow up the victory.

which the genius of Napoleon shone prominent, it was in the vigour and ability with which he followed up a beaten enemy. The present was not an opportunity to be lost of displaying this essential quality of a great general. Without an instant's delay, therefore, he prepared to pursue the extraordinary advantages he had gained. From all parts of Germany his forces had been assembled to one point, in order to strike the decisive blow. That done, the next object was to disperse them like a fan over the conquered territory, to carry everywhere the impression of their victory, and the terrors of their arms. On the night after the battle, Napoleon, instead of retiring to rest, sat up dictating orders to all the corps of his army for the directions they were to follow in pursuing the enemy. On the extreme right, Bernadotte, whose numerous corps was still untouched, received orders to advance from Apolda to Neustadt, to cut off the line of retreat from Weimar to Naumburg, and so shut out the army from the great road to Magdeburg. Davoust was to return to Naumburg to hold that important post, and keep himself in readiness to debouch on the Elbe before the enemy could arrive there; Soult was to move on Buttelstadt, the point in rear of the fields of battle, where the greatest number of fugitives had assembled; Murat and Ney to march direct upon Erfurth, and reduce that important place: while Lannes and Augereau were directed to take a position in advance of Weimar; and the Imperial Guard and Napoleon's headquarters were transferred to that town. The general object of Napoleon in these movements was, that while the corps of Soult, Murat, and Ney, pursued the broken remains of the Prussian army to Magdeburg, those of Bernadotte, Lannes, Davoust, Augereau, and the Guard, under his immediate orders, should cross the Elbe at Barby, Dessau, and Wittenberg, and, moving upon Berlin and Spandau, intercept the line of retreat of the Prussians to Stettin and the Oder.[1] This was the more easy, as

[1] See the orden in Dum. xvi. 192,193.

CHAP. XLIII.

1806.

62. Soult defeat Kalkreuih.

the French held the chord of the arc along which the Prussians had to move.

Soult was the first who came up with the enemy. At Greussen his cavalry reached the retiring squadrons of Kalkreuth's division, which alone preserved any semblance of an army. That general proposed a suspension of arms, in order to gain time, declaring that he knew an armistice had been concluded, and for the purpose of arranging its conditions repaired to the advanced posts in order to a conference with the French general. The terms, as might be expected, could not be agreed ou. The statement was made in perfect good faith, under the impression founded on the letter from Napoleon offering an accommodation, written the day before, but not received till the night after the battle ; and it gave the Prussian commander leisure to cause a considerable part of his forces

Oct. 15. to defile in safety to the rear. Enraged at finding himself thus overreached, Soult, the moment the conferences were broken off, attacked the Prussian rearguard posted in front of Greussen, which, after a short resistance, was cut to pieces, and the victors entered that town pell-mell with the vanquished. Following up his success, the French marshal, early the following morning, resumed the pur-

Oct 16. suit, and came up with the enemy at Nordhausen, where they were again defeated with the loss of twenty pieces of cannon, and three thousand men. Unable, from want of provisions, to keep his men together, and having no other means of escape to any part of his forces, the Prussian general divided his troops into two bodies, with instructions to follow different routes to Magdeburg. An almost total dispersion immediately followed this order. The stragglers came into that fortress by companies, squadrons, and groups of single men in hardly any array ; and thus was the disorganisation of the only divisions of the array which still preserved their ranks rendered complete within three days after the battle.[1] Collecting prisoners at every step, Soult continued rapidly to advance, and on the 21st

[1] Dum. xvi. 191,200. Jom.ii.299. Norv.ii.465, 466. Lucche8.ii. 161. Oct. 21.

his vanguard reached the Elbe, and planted their victorious standards around the walls of Magdeburg.

A more important action awaited the arms of Bernadotte. This able chief, whose too literal adherence to the letter of his instructions had deprived him of his share of the laurels of Auerstadt, was burning with anxiety to achieve some exploit worthy of the deeds of his comrades and his own renown, when fortune threw the wished-for opportunity in his way. Prince Eugene of Wiirtemberg, who commanded the Prussian reserve, fourteen thousand strong, stunned by the intelligence of the disasters of the army at Jena, was preparing to make the best of his way back to Magdeburg and the Elbe, when he was beset on all sides at Halle by the corps of Bernadotte. The Prussians who were brought into action had not shared in the preceding defeats: notwithstanding the great superiority of force on the part of the French, they made a brave resistance ; and there might be seen what elements of success existed in their army had they been opposed by less, or guided by greater ability. Assailed with the utmost impetuosity by the vanguard of the French, under Dupont, at Passendorf, they were driven in haste back to the islands in the Saale, over which the road passes : but in that defile they stood firm, and, supported by a cloud of light troops who lined the dikes on either hand along the margin of the stream, long withstood their assailants, and debarred all access to the gates. After an obstinate resistance, however, a column of grenadiers, headed by Dupont himself, rushed across the bridges, carried the guns which enfiladed them ; and, rapidly pursuing their success, pushed on and made themselves masters of the town.[1]

63. **Prince** Eugene **of** Wiirtemberg is defeated by Bernadotte **at** Halle. Oct. 17.

[1] Saalf. iii. 307, 308. Jom. ii. 300, 301. Dum. xvi. 214, 223.

The Prussians had now no alternative to gain time for the retreat of their main body to Magdeburg, but to prevent as long as possible the French troops from debouching from the gates on its opposite side: and the gallant efforts of the Duke of Wiirtemberg long delayed them at that

64. **Desperate action which ensued on his retreat,**

CHAP. XLIII. 1806.

important point; but at length the increasing numbers of the French, and the murderous fire of the artillery which they brought up and planted on the ramparts, drove the Prussians from their strongholds in the gardens and walls of the suburbs, and enabled the columns to issue from the gates. Charged while retreating in open square along the level plain, the Prussians, during a running fight of four leagues, sustained severe loss from the enemy, and lost nearly their whole artillery. Still they combated with heroic resolution, and yet kept their ranks, when the pursuit ceased on the approach of night. Then the combat terminated on the right bank of the river; but on the left bank a greater disaster awaited the Allied arms. Three thousand Prussians had broken up from their quarters near Magdeburg, in order to join the main body of the reserve at Halle, and, ignorant of the occupation of that town by the French, fell into the midst of such superior forces that they were almost all either killed or made prisoners. Honourable as this affair was to the Prussians, it augmented in an alarming degree the dangers of the army by dissipating its last regular corps : four thousand prisoners and thirty pieces of cannon remained in the hands of the victors, whose loss did not exceed twelve hundred men; while the broken remains of the vanquished crossed the Elbe at Dessau in such haste, that they were unable completely to burn the bridge behind them, which was speedily restored by the French, who established themselves in force on the right bank, and drew their posts round Magdeburg.[1]

65. Saxony is overrun by the French. Oct. 18.

Meanwhile the other corps of the army continued their triumphant progress, with hardly any opposition, through Saxony. Four days after the battle of Auerstadt, Marshal Davoust took possession of Leipsic : strange coincidence, that the French army should for the first time enter that city on the very day on which, seven years afterwards, they were there to experience so terrible an overthrow ![2] Napoleon gave testimony of the rigorous warfare which he

[2] On Oct. 18, 1813.

CHAP. XLIII.

1806.

was about to commence against English commerce, by there issuing an edict of extraordinary severity against British merchandise. * Rapidly following up his success, Davoust, two days afterwards, reached Wittenberg, at the very time that the retiring Prussians were preparing to blow up its great bridge over the Elbe ; the French grenadiers rushed so rapidly over it, that the enemy had not time to set fire to the train, and thus that important passage was secured. On the same day, Lannes made himself master of the passage at Dessau. Thither Napoleon followed with his Guards three days afterwards; and, regarding the capture of Berlin as certain and a secondary object, he already began to give directions for the march of his troops from the Elbe to the Oder. Davoust's corps was pushed on towards that capital—Napoleon having permitted, as a reward for his transcendant heroism at Auerstadt, that his corps should be the first to enter the capital of the fallen monarch.[1]†

66. Investment of Magdeburg, which is abandoned by Hohenlohe. Oct. 22.

Such was the rapidity of the French advance, that they arrived round Magdeburg before a large portion of the broken Prussians had taken refuge within its walls. Napoleon saw clearly the importance of accumulating as large a number as possible of the enemy in a situation where it was evident they would ere long become his prisoners, and therefore he gave orders to leave the entrance to the place open, and dispersed his cavalry in

* " Your city," said Napoleon, " is known throughout Europe as the principal depot of English merchandise, and on that account the enemy most dangerous to France. The Emperor and King commands—1. Within four-and-twenty hours immediately following this notification, every banker, merchant or manufacturer, having in his possession any funds *the produce of English manufactures,* whether they belong to a British subject *or the foreign consignee,* shall declare their amount in a register appointed for that special purpose. 2. As soon as these returns are authentically received, domiciliary visits shall be made to all, whether they have declared or not, to compare the registers with the stock in hand to ascertain its exactness, and punish by military execution any attempt at fraud or concealment." Well may the honest Genera] Mathieu Dumas exclaim, " What a deplorable abuse of victory 1"—DUMAS, xvi 225.

† Bernadotte was unavoidably detained a day longer than he was ordered in marching to the Elbe, and in consequence did not cross that river till the 23d

CHAP. XLIII. 1806.

all directions to drive the stragglers into that devoted fortress.* Murat's horsemen, in consequence, inundated the adjacent plains; and the garrison of the town, ill provided with subsistence, already began to feel the pangs of hunger from the multitude of useless soldiers who were driven to its shelter. Summoned to surrender by Marshal Soult, the governor replied, that he hoped to gain the esteem of the besiegers by an honourable defence; but the confusion of the garrison, and the evident discouragement of the multitudes of insulated men who thronged round the gates, rendered it more than probable that his resistance could not be prolonged for a very long period. Hohenlohe, despairing of preventing the investment of the place with so disorganised a wreck as was collected within its walls, and aware that the want of provisions would soon compel its surrender, resolved to depart with all the forces which still maintained the appearance of order, and make for the great line of fortresses on the Oder; but such was the universal confusion which prevailed, that he could only collect fifty battalions and a hundred and sixty squadrons in a state to keep the field. With these he departed on the day following, leaving fifty skeleton battalions, hardly containing, in all twelve thousand combatants, within the walls.[1]

[1] Bign. vi. 10,11. Dum. 223,237. Jom. ii. 304, 308.

Upon leaving Magdeburg, Hohenlohe, abandoning Berlin to its fate, made for Stettin, situated near the mouth of

and 24th, instead of the 21st and 22d, before which time the corps of the Duke of Wurtemberg had defiled through Magdeburg, and was in full march for the Oder. This escape of a considerable part of the best organised corps of the Prussians excited to the highest degree the indignation of Napoleon, who took occasion bitterly to reproach him with this delay, as well as with his conduct in not marching with Davoust to Auerstadt. Already were to be seen the germs of that mutual discontent which, seven years afterwards, on those very plains, brought Bernadotte in arms against the French Emperor on the field of Leipsic. —BIGNON, vi. 9; DUMAS, xvi. 230.

*** " Magdeburg," said Napoleon, " is a net where all the isolated men who have wandered about since the battle may be taken. We must, therefore, invert our manoeuvres, and beat all the country for fifteen leagues around: we shall thus collect numbers of prisoners, and also gain accounts of the direction taken by the strong columns of the enemy, of whose route we have as yet no certain intelligence."—DUMAS, xvi. 232.**

CHAP. XLIII.

1806.

the Oder, by the route of Spandau. But when he drew near to the latter place, he received intelligence that on that very day it had capitulated to the first summons of the advanced posts of the cavalry under Murat, and that Davoust on the same day was to make his entrance into the capital. Driven thus to a circuit to avoid the captured towns, he moved by Gransee and Zeydenick, in order to reach before the enemy, if possible, the defile of Locknitz, near Stettin, which would have secured his retreat to that important fortress. Aware of the importance of anticipating the Prussian general in these movements, Napoleon sent Murat forward with the cavalry, to get before him to the defile, while Lannes advanced as rapidly as possible in pursuit of his steps with his indefatigable infantry. By forced marches, Murat got the start even of the horsemen who formed the advanced-guard of Hohenlohe's corps; and on leaving Zeydenick, the point where the road from Spandau and Berlin falls in with that from Magdeburg to Stettin, they were assailed by that active officer himself, at the head of Lasalle's dragoons. Confounded at being thus anticipated in a quarter where they expected a leisurely retreat, the Prussian horse made but a feeble resistance. Even the renowned regiment of the Queen's dragoons was repulsed after a short effort, surrounded, and almost cut to pieces; and the Prussian cavalry were compelled to fall back on Templin, while their main body had to renounce all hope of pursuing the direct road to Stettin. Driven thus from his line of retreat, and his right flank being exposed to the attack of Marshal Lannes, Hohenlohe, after waiting at Gransee three hours in the vain hope of being joined by Blucher, who had retreated to the same quarter, changed his direction, and moved upon Boitzenberg, where he arrived on the 27th, hoping to reach Stettin by this circuitous route of Prentzlow; but in attempting to do so, the unhappy prince found himself again beset by his indefatigable pursuers.[1]

67. Who is pursued and assailed.

CHAP. XLIII.

1806.

68. Is utterly-defeated at Prentzlow. Oct. 28.

No sooner was Murat informed of his change of direction, than he marched across the country all night, from the one road to the other, again got before him, and assailed the Prussian horse at once in front and flank with his terrible dragoons, on the following morning, as they were continuing their march two leagues beyond Prentzlow. To troops wearied by incessant marching for a fortnight together, and discouraged by such a succession of disasters, the shock of his victorious squadrons was irresistible: the Prussian cavalry were speedily broken, and fell back in disorder to the suburbs of Prentzlow, already encumbered with infantry and artillery. To complete their misfortunes, Marshal Lannes appeared at this critical moment on their right flank, having, with indefatigable perseverance, marched all night from Templin on the direct road. Murat now summoned Hohenlohe to surrender, which the latter refused, and brought up a powerful battery of cannon to answer the fire of the French artillery, which was severely galling his troops as they attempted to debouch from the town. This battery was immediately attacked and carried, and a regiment of infantry and cavalry which advanced to support it broken and made prisoners. Prince Augustus of Prussia, at the head of his regiment, which was still two leagues in the rear of Prentzlow, was surrounded, and after heroically resisting the repeated charges of the French cuirassiers, during a march in hollow square of four miles, was at length made prisoner, with almost all his men, while bravely resisting to the last.[1]

[1] Dum. xvi. 285, 290. Jom.ii.308, 310. Hard. ix. 312.

69. And compelled to surrender. Profound grief of the Prussian troops.

Overwhelmed by such a multitude of calamities, and seeing no chance of escape, while every hour increased the forces against him by permitting the formidable battalions of Lannes to arrive on his rear and flank, Prince Hohenlohe, after several unsuccessful attempts to obtain a capitulation, was obliged to lay down his arms, on condition that the officers should be dismissed on their parole. With him were taken fourteen thousand

men, including the flower of the Prussian army; the Guards, six chosen regiments of cavalry, forty standards, and fifty pieces of field-artillery. Notwithstanding the many defeats and disastrous circumstances which had occurred, this grievous surrender did not take place without the most profound grief on the part of the Prussian troops. The officers retired from the circle where it had been agreed to in stern silence, or shedding tears ; many of them fiercely and indignantly accused their commanders of treachery, and invited their comrades to cut their way through the enemy, sword in hand. The private soldiers, by loud sobs and lamentations, gave vent to their grief, and, flinging their muskets on the ground, slowly and mournfully pursued their way into the town ; while a loud flourish of trumpets, the quick rattle of drums, and the triumphant shouts of the soldiers, announced the successive arrival of the French regiments at the scene of their triumph.[1]

[1] Dum. xvi. 275, 299. Jom.ii. 308, 312. Bign. vi. *19*, 21. Saalf. iii. 309, 310. Hard. ix. 313.

70. March and escape of he Duke of Saxe-Weimar.

Meanwhile another Prussian column—consisting of six regiments of cavalry, four of infantry, and eight pieces of artillery, which, avoiding Prentzlow, was moving upon Passewalck—was overtaken by Milhaud's light cavalry, and surrendered. Of the army, lately so splendid and numerous, there remained only in the field the corps of the Duke of Weimar and General Blucher. The former of these, which formed the advanced-guard of the host that advanced to the Saale, and had been pushed on through the Thuringian Forest to Verra, with the view of threatening the rear of the French army, had become entirely detached by subsequent events from the principal body, and thus escaped the catastrophes of both defeats. Almost forgotten in the rapid succession of succeeding triumphs, the duke was left to his own discretion; and he no sooner received accounts of the ruin of the main army, than he took steps for making the best of his way back to the Elbe. He had much difficulty in steering his course through the numerous corps of enemies which traversed

CHAP. XLIII.

1806.

the intervening country in every direction ; but by great exertions he contrived to escape, and, rallying to his standard a considerable detachment of RucheFs corps, which had been separated from the remainder, reached the Elbe in safety at Stendal, by Seesen, Lutter, and Schladen, with fourteen thousand men. He was there superseded in the command by the King of Prussia, and his corps passed into the hands of General Winning, who gave it a day's rest at Kyritz. As the approach of the French corps rendered those quarters dangerous, ho broke up and retired towards the Oder, and by good fortune, and no small share of skill, he succeeded in reaching Kratzemberg, near the lake of Muritz, in the first week of October, where he joined Blucher with the cavalry which had escaped from Aucrstadt. Their united forces now amounted to twenty-four thousand men.[1]

Oct. 26.

71. Disgraceful surrender of Stettin and Ciistrin

Meanwhile the fortresses on the Oder fell in the most disgraceful manner. The day after the capitulation of Hohenlohe, a brigade which had escaped from the wreck of his corps, presented itself at the gates of Stettin ; the governor sternly refused them admittance, upon the pretence that his provisions were only adequate to the support of his own garrison. Next day, however, he capitulated, on the first summons, to the advanced-guard of Marshal Lannes; and the French, without firing a shot, became masters of a fortress of the first order, armed with a hundred and fifty pieces of cannon, and garrisoned by six thousand men. The brigade of Prussians, shut out from its walls, was soon after surrounded at Anclam and made prisoners. Encouraged by these repeated successes, the French soldiers deemed nothing beyond the reach of their arms ; and the advanced-guard of Davoust's corps, which had traversed the district between the Elbe and the Oder without meeting with any enemies, presented itself before Custrin, and threatened the garrison with a severe bombardment if they did not

Oct. 29.

instantly capitulate. This menacing outpost consisted merely of a regiment of foot, and had only two pieces of artillery at its command. On the other hand, the governor of the town had ninety pieces of cannon mounted on the ramparts, and four hundred in the arsenal; four thousand brave men for a garrison, and every requisite for a prolonged defence. Nevertheless, such was the terror produced by Napoleon's arms, and such the skill with which the French officer, General Gauthier, concealed the real amount and description of his force, that the Prussians capitulated almost on the first summons; and one of the strongest places in the kingdom, amply garrisoned, situated in an island of the Oder, and invested only on one side, had the disgrace of surrendering to a regiment of foot with only two pieces of cannon. The besiegers could not approach it to take possession till the garrison furnished them with boats.[1]

Oct. 31.

[1] Dum. xvii. 11, 17. Bign. vi. 23. Jom. ii. 314. Thiers, vii. 168, 169.

72. Reflections on these events. Depots at Erlurth and Wittenberg formed by Napoleon.

These disgraceful capitulations, at which the brave troops involved in them were so much exasperated that it was with difficulty they could be induced to yield obedience to their officers in carrying them into execution, demonstrated that the Prussian generals were so overwhelmed by the magnitude of their misfortunes, that they deemed the monarchy irrevocably ruined, and that *sauve qui peut* had become the only remaining principle of their conduct. Astonished at his good fortune in effecting the reduction of such a fortress without firing a shot, Marshal Davoust inspected the fortifications on the day following, which he found in the best condition; and, deeming his base on the Oder now sufficiently secured, pushed on his light troops to Posen, in Prussian Poland; while six thousand Bavarians formed the investment of Glogau, the only remaining stronghold on its banks which was still in the hands of the enemy; and Augereau established himself at Frankfort. Meanwhile Napoleon, after resting a day at Wittenberg, which he ordered to be put in a respectable posture of defence, in order to give him the com-

CHAP. XLIII. 1806.

mand of the bridge over the Elbe, and where he established one of his chief depots, was busied with preparations for securing his rear during the perilous advance, so far from the base of the operations, in which he was about to engage. The grand park of artillery was established at Wittenberg, where immense depots of ammunition and provisions were ordered to be formed; while, at Erfurth, a grand depot was by his provident care formed for the collecting of horses from all parts of Germany. All the cavalry regiments were directed through that town, while those on foot were mounted, and those indifferently provided with horses soon found themselves in possession of hardy and powerful steeds.[1]

Nov. 3. [1] Dum. xvii. 13,20. Bign, vi. 23. Jom. ii. 314. Thiers, vii. 168, 169.

73. Blucher's corps is pursued to Lubeck.

The only corps of the Prussian army which had hitherto escaped destruction was that formed by the union of Blucher's cavalry with the Duke of Saxe-Weimar's infantry, and commanded by the former of these generals. Before this junction was effected, Blucher's cavalry had been hard pressed by a brigade of horse under the French general, Klein, and escaped in consequence of his affirming that an armistice had been concluded on the propositions for an accommodation sent to Napoleon after the battle by the King of Prussia. Whether the Prussian general really believed the report to that effect, which unquestionably prevailed through the whole army at that time,[2] or whether he made use of this very questionable military stratagem as a device to extricate his troops from present danger, does not appear; and therefore neither praise nor blame can in this uncertainty be awarded on the subject. But this much is clear, that if he knowingly affirmed a falsehood, as the French assert, no necessity, how pressing soever, no advantage, how great soever, can suffice as any apology.* Though the

[2] Hard. ix. 320.

*** But when the French historians inveigh with such severity against Blucher's conduct on this occasion, and affirm, "In the campaigns of the Revolution, the Austrian generals have frequently had recourse to that strange *ruse de guerre—the French never*"[3] they forget or wilfully conceal immediately preceding events, on which they bestow no sort of censure. What is to be**

[3] See Bign. vi 7, and Norv. ii. 466.

resistance of this corps, however, was more honourable, its ultimate fate was not less calamitous. No sooner was Napoleon informed of the junction of these two corps in the north of Prussia, than he ordered their pursuit by forces so considerable, that escape became impossible. Bernadotte was instructed to follow closely on their footsteps ; while Murat was despatched by a circuit to cut them off, on the right, from Stralsund and Rostock, under the cannon of which they might have found shelter; and Soult threw himself on the left, to bar the communication with the lower Elbe. Blucher arrived at Boitzenburg the day after the ill-fated Hohenlohe had left that town ; and having there learned the catastrophe which had befallen that brilliant portion of the army, he renounced all hope of retiring before the enemy, and retraced his steps in order to unite with General Winning and the Duke of Saxe-Weimar's corps, which he effected at Kratzemberg on the day following, Finding himself now at the head of eighteen thousand infantry, six thousand cavalry, and sixty pieces of cannon, he resolved to move to the right, recross the Elbe, raise the siege of Magdeburg, and, supported by that fortress and Hameln, maintain himself as long as possible in the rear of the Emperor's army.[1]

[1] Dum. xvi. 308, 318. Saalf. iii. 311, 312. Jom.ii.217.

The project was boldly conceived and intrepidly followed out; but the three corps now directed against him, numbering nearly sixty thousand combatants, rendered

said to General Lecourbe, who, in November 1799, escaped destruction at the hands of the Austrian general Starray, solely by falsely affirming that a negotiation for peace was commenced ? to Lannes and Murat, in the campaign of Austerlitz, who won the bridge of Vienna by the fallacious declaration that an armistice had been concluded, which they well knew was not the case * or to the latter of these marshals, who a few days afterwards tried a similar piece of deceit with Kutusoff, and was only foiled by the superior finesse of that astute commander ? All the French historians, Bignon, Norvins, and Thiers, mention these unworthy stratagems not only without censure, but with the highest admiration.[2] It would be well, if, in making such random assertions, they would calculate less confidently on the want of information or recollection in their readers; and if, in the survey of the conduct of their own officers, they would display a little of that warm anxiety for the great principles of public morality, to which they so loudly appeal when any violation of it occurs to their disadvantage on the part of their enemies.

74. Where he is shut up.

its execution impossible. A sharp conflict took place with his rearguard at Nossentin, in which five hundred prisoners fell into the hands of the French; and the next day the junction of Bernadotte with Soult rendered it necessary for the gallant Prussian to be more circumspect. An opportunity, however, soon occurred of taking his revenge. Next day the French hussars were charged and put to the rout by the Prussian light dragoons, at the entrance of a defile. Colonel Gerard and three hundred horsemen were made prisoners: but the cavalry having fallen back on the support of their infantry, headed by Bernadotte in person, the Prussians were in their turn repulsed with severe loss. Finding the enemy's forces so considerable, that all chance of making good his way to the lower Elbe was out of the question, Blucher resolved to fall back by Gadebusch on Liibeck, where he hoped to find resources to recruit his wearied troops, and the decayed bastions of which he flattered himself he would soon be able to put in a respectable state of defence. Before arriving at that city, he was summoned by Bernadotte to surrender, and informed that he was beset by forces triple his own. "I will never capitulate," was the brief and characteristic reply of the Prussian general; and, continuing his march, he entered Liibeck on the evening of the 5th, closely followed by his indefatigable pursuers. In the course of the pursuit, a detachment of twelve hundred Swedes fell into the hands of Bernadotte, who treated them with unusual courtesy and kindness. From the gratitude of the Swedes for this treatment, arose the interchange of good deeds which terminated in his elevation to the throne of Gustavus Adolphus. At that period, events, in appearance the most trivial, were big with the fate of nations.[1]

[1] Dum. xvi. 308, 321. Bign. vi. 23, 24. Jom. ii. 317. Saalf. iii. 311,312.

Unfortunately for Lubeck, it was still surrounded by a ruined wall and deep ditches filled with water; and this gave Blucher an excuse for representing it as a

military post, and disregarding all the remonstrances of the magistrates, who loudly protested against this violation of their neutrality. Hastily planting the few heavy cannon which he still retained to defend the principal gates, Blucher caused the greater part of his forces to defile through the town, and take post on the low marshy ground on the opposite side, on the confines of the Danish territory. At daybreak on the following morning the French columns were at the gates, and every preparation was made for an instant assault. In spite of a heavy fire of grape and musketry from the old walls, the French approached with their accustomed gallantry to the assault. The corps of Bernadotte advanced against the Burg-Thor, the gate which looked to the north; that of Soult approached the Huxtor-Thor and Muhien-Thor, the gates of Hanover. After sustaining a terrible discharge from the bastions, which were armed with the Prussian field-pieces, the French advanced-guard, under Generals Merle and Fr&re, succeeded in breaking through with their hatchets the exterior palli-sades of the Burg-Thor, and, rapidly following the Prus-sian regiments which held that outwork, entered the gate pell-mell with the fugitives, and made themselves masters of the adjoining bastions. At the same moment Soult's divisions threatened the gates opposed to their attack; but so murderous was the fire which the Prus-sians kept up from the walls flanking their approaches, that the assailants were unable to make any progress, till Bernadotte's divisions, having penetrated into the town, threatened to take the defenders in rear.[1]

75. And is there defeated after a des-perate con-flict.

[1] Dum. xvi. 322, 328. Jom. ii.317, 318. Hard. ix. 322. Bign. vi. 24.

Even then, nevertheless, the brave Prussians at this gate, to the number of two thousand, faced both ways, and, besieged in their turn, sustained the double attack from within and without. Posted on the roofs of houses, and on the summits of the ramparts, they kept up an incessant fire till their cartridges were exhausted, when they were all either killed or made prisoners. So rapid,

76. Desperate defence of the town.

CHAP. XLIII.

1806.

however, was the advance of the French through the Burg-Thor, that Blucher, who had retired to his lodgings, after having made his dispositions, to dictate orders, had barely time to mount his horse with his son and a single aide-de-camp, and ride off: all the rest of his staff were made prisoners. Having joined the remaining troops in the town, that brave general, with his gallant followers, prolonged the defence. He himself repeatedly charged along the Konig-Strasse at the head of a body of cavalry, but was unable to clear it of the French soldiers, who had now broken into the houses near the gate, and from thence kept up a fire of such severity upon the street as rendered it impossible for the dragoons to advance to its further extremity. Presently the besiegers brought up their field-pieces, the guns on the ramparts were turned upon the town, and repeated discharges of grape from both sides swept the pavement, and occasioned a terrific slaughter. With invincible resolution, however, the Prussians maintained the combat. From street to street, from church to church, from house to house, the conflict continued. Blood flowed on all sides. The incessant rattle of the musketry was almost drowned in some quarters by the cries of the wounded and the shrieks of the inhabitants, who in that day of woe underwent all the horrors consequent on a town being carried by assault. By degrees, however, the superior numbers of the French, who were soon reinforced by part of Murat's corps, prevailed over the heroic resolution of the Prussians. With difficulty Blucher succeeded, towards evening, in collecting five thousand men, with whom he forced his way through by the gate of Holstein, and rejoined his cavalry, which lay at Schwertau on the opposite side of the town, near the Danish frontier; while the remainder of his corps in the town, consisting of eight thousand men, were slain before nightfall in that fearful fight, or fell into the hands of the enemy.[1]*

[1] Dum. xvi. 332, 333. Jom. ii. 317, 318. Bign. vi. 24, 25. Saalf. iii. 313. Hard. ix. 322.

* The French writers made it a just reproach to the English army that its

CHAP. XLIII.

1806.

The situation of Blucher, with his cavalry and this slender body of infantry, was now altogether desperate. He was driven up to Ratkau, in the extremity of Germany, on the very edge of the Danish territory, where a powerful body of troops was collected to prevent his entrance. In the night he received intelligence that Travemunde, a fortified town on the sea-coast, to which he proposed to have retired, had been taken by Murat, along with a battalion which he had sent forward to garrison that important post, where he hoped to have embarked; and to complete his misfortunes, information arrived in the morning that the salt-marshes between Schwertau and that town were not passable by the army. At the same time a flag of truce arrived from Murat, while his numerous squadrons had already driven the Prussian infantry out of Schwertau, and were closing in, in all directions, on his last position. Overcome by stern necessity, the hardy veteran, with tears in his eyes, agreed to a capitulation, in virtue of which all his troops laid down their arms. On this occasion were taken ten battalions and fifty-three squadrons, amounting to four thousand foot-soldiers, and three thousand seven hundred cavalry, with forty pieces of cannon, the remainder of his fine train of artillery having been left on the ramparts of Lubeck.[1]

77. He retires to Ratkau, and is there made prisoner.

[1] Dum. xvi. 333, 339. Jom. ii. 317, 319. Hard, ix. 321, 322. Saalf. iii. 313.

To complete the disasters of the Prussian monarchy, nothing was wanting but the surrender of Magdeburg; and that important bulwark was not long of falling into

78. Fall of Magdeburg.

soldiers committed such disgraceful excesses at San Sebastian, Ciudad Rodrigo, and Badajos, when these fortresses fell by assault. It is the duty of the historian to condemn equally such outrages, by whomsoever committed; and certainly in this work no veil shall be thrown over those atrocities when they come to be recounted. But it would be well if they would reserve a little of their humane indignation for the sufferers under their own soldiery on similar catastrophes. On this occasion, though they pass it lightly over, the cruelties and devastation committed by Bernadotte's and Soult's corps for two days after the town was taken, notwithstanding all the efforts of these marshals, were equal to the very worst deeds that ever stained the British arms.—See the frightful details, drawn with a graphic hand, in *Lettre de Villers a la Comtesse Fanny Beauharnais,* Amst. 1808.

CHAP. XLIII.

1806.

the hands of Marshal Ney. Although its garrison was in great part composed of fugitives of all regiments, who had made their escape into that asylum from the disastrous fields of Jena and Auerstadt, yet such was the strength of its works, and the ample store of provisions and magazines of all sorts which existed within its walls, that a prolonged defence might confidently have been anticipated. Nevertheless, if its fall was not quite so disgraceful as that of Stettin and Custrin, it was such as to affix a lasting stigma on the Prussian arms. After fifteen days of a blockade, Marshal Ney commenced operations in form ; but before having recourse to the tedious method of regular approaches, he resolved to try the effect of a bombardment. Furnaces for this purpose were heated, and arrangements made to throw four-and-twenty pound shot, red-hot, into every part of the town, while a copious array of bombs was prepared to bring terror and conflagration upon the inhabitants. It was not necessary, however, to proceed to these extremities. The citizens of Magdeburg preserved a vivid traditional recollection of the horrors which their forefathers underwent after the memorable storm by Count Tilly in 1631, when the whole town was reduced to ashes. No sooner, therefore, did the first flaming projectiles begin to descend upon their houses than they besieged General Kleist, the governor, with entreaties for a surrender. That officer, deeming the Prussian monarchy destroyed, and seeing no use in singly prolonging a contest now become hopeless,

Nov. 8.

agreed to a capitulation on the same terms as Stettin, in virtue of which this important frontier town, the bulwark of the monarchy, with its redoubtable ramparts still untouched, and not even an outwork lost, containing twelve thousand troops in arms, and four thousand in hospital, six hundred pieces of cannon, eight hundred thousand pounds of powder, a pontoon train complete, and immense magazines of all sorts, fell into the hands of the enemy, who hardly mustered a greater force without its walls.[1]

[1] Dum. xvi. 343, 347. Jom.ii.319. Bign.vi.26. Saalf. iii. 313.

After these stunning calamities, it was not to be expected that the fortresses on the Weser, which were now left far in the rear of the storm of war, should long continue to hold out. A host of fugitives from Jena and Auerstadt had taken refuge in these strongholds, particularly Hameln and Nienburg; into the former of which General Lecocq, who had been separated in the confusion of the disastrous night which followed these battles, had thrown himself with four thousand men who still preserved a military array. There he speedily found himself blockaded by the forces of the King of Holland, who had advanced by Wurtzburg and Paderborn to the banks of the Weser. The disastrous state of the monarchy gave him too plausible a ground for assailing the fidelity of the besieged. "You are insulated," said he, "without hope of succour. Abandoned, and more than a hundred leagues in the rear of the victorious invaders, what can your efforts do to avert the fall of the Prussian monarchy %" These arguments, supported by the official intelligence of the fall of Magdeburg and the surrender of almost all the fragments of the army, produced the desired impression; and it was speedily agreed that the fortress should be evacuated, the private soldiers made prisoners, and the officers return on their parole to Prussia. A mutiny broke out among the soldiers upon learning the terms of this disgraceful capitulation; but it was speedily suppressed by Savary's dragoons, the men disarmed, and the fortress, in admirable condition, delivered over, with five thousand prisoners, to the French. Nienburg speedily followed the same example, and, with its untouched fortifications and garrison of three thousand men, capitulated to the victors; and with it all the elements of resistance expired between the Weser and the .Oder.[1]

1806.

diplomatic objects, was preparing the means of further triumphs, and a more complete consolidation of the power which fortune and genius had thus combined to place at his disposal. His first care was to detach Saxony from the coalition ; and after the defeat of its army in those disastrous days, and occupation of its territory by the conquerors, this was easily accomplished. The Saxons have a hereditary jealousy of the Prussians, by whom they have a presentiment they are one day to be swallowed up. Necessity, not inclination, had brought them into the field with their ambitious neighbours; and they gladly availed themselves of the first opportunity to range their forces on the side to which their secret inclinations had long pointed, and which seemed to be recommended alike by prudence and necessity. Early in the campaign, Napoleon had addressed to them a proclamation, in which he called on them to assert their national independence, and throw off that withering alliance with Prussia from which nothing but ultimate ruin was to be anticipated.* This address had already produced a great impression on the Saxon troops, when the victory of Jena seemed to dissolve at once the bonds which held the two nations together. Improving on these dispositions, Napoleon assembled the Saxon officers, three hundred in number, who had been made prisoners at Weimar, strongly represented to them the impolicy of any longer uniting their arms to those of their natural enemies the Prussians ; and offered, upon their subscribing the oath tendered to them of fidelity to its fortunes, to admit them into the Confederation of the Rhine. Gladly the

Oct. 17.

*** "Saxons! the Prussians have invaded your territory. I have come to deliver you. They have violently dissolved the bond which united your troops, and incorporated them with their own ranks. You must, forsooth, shed your blood, for interests not merely foreign but adverse to those of your country I Saxons ! your fate is now in your own hands. Will you float in uncertainty between those who impose and those who seek to liberate you from the *yok* ? My success will secure the independence of your country and your prince. The triumph of the Prussians would rivet on you eternal chains. To-morrow they will demand Lusatia; the day after, the right bank of the Elbe. But what do I say] Have they not already done so? Have they not long endeavoured to force**

officers, for themselves and the troops under their command, subscribed the conditions ; and immediately they were all, with the private soldiers, six thousand in number, sent back to Dresden. The Elector shortly after recalled the remainder of his forces from the Prussian standard; he accepted first neutrality, then an alliance with the conqueror ; and before the war in Poland was concluded, his troops were to be seen actively engaged under the French eagles. Such was the origin of that intimate union which, down to the close of the war, subsisted between Napoleon and the Saxon government, and which, though in the end fraught with numberless calamities to that electorate, must ever command respect, from the fidelity with which its engagements were adhered to under adverse fortune.[1]

CHAP. XLIII.

1806.

[1] Dum. xvi. 204, 207. Bign. vi. 3, 4.

It was shortly after having detached Saxony from the Prussian, and united it to his own alliance, that Napoleon received an answer from the King of Prussia to the elusory proposals of accommodation made by him before the battle of Jena, and which that unhappy monarch eagerly caught at after that disaster, as the only light that seemed to break upon his sinking fortunes. The times, however, were not now the same: there was no longer any need of dissembling; the Prussian army was routed, and he was not the man to let slip the opportunity of completing its destruction. He therefore coldly replied, that it was premature to speak of peace when the campaign could hardly be said to have commenced; and that, having resolved to try the fate of arms, the king must abide by its issue. At the same time, he made amends to

81. Refuses to treat with Prussia.

Oct. 18.

your sovereign to recognise a feudal supremacy which would soon sweep you from the rank of independent nations' Your independence, your constitution, your liberty, would exist only in recollection; and the spirits of your ancestors, of the brave Saxons, would feel indignant at seeing you reduced, without resist* ance, by your rivals, to a slavery long prepared by their councils, and your country reduced to the rank of a Prussian province." None could descant more fluently than Napoleon on the withering effect to inconsiderable states of an alliance with a greater power; for none put it in force so invariably towards his own tributary states.—DUMAS, xvi. 205.

CHAP. XLIII.

1806.

the infantry of Lannes' corps, which, in consequence of their not having been mentioned by Murat in his report of the successes at Prentzlow, in which they had borne so glorious a part, had not been mentioned in the bulletin regarding that event, by replying to a letter of remonstrance from Lannes on the subject. "You and your soldiers are children. Do you suppose I do not know all you have done to second the cavalry? There is glory enough for all. Another day it will be your turn to fill the bulletins of the Grand Army." When Lannes read these words to his soldiers, they were so transported with joy that they raised the cry "Vive l'Empereur d'Occident!" Nothing could have more completely answered the secret wishes of the Emperor than both the title with which he was saluted by these brave men, and the circumstances so closely resembling those of the Roman legions under which it arose.[1]

82. Napoleon visits Potsdam and the tomb of Frederick. Oct. 25.

Following the march of his victorious armies, Napoleon continued his progress, by Weimar, Naumburg, Wittenberg, and Potsdam, towards Berlin. On the march he passed the field of Rosbach, the well-known theatre of the Prussian victory over the French, and ordered the column erected in commemoration of that triumph, which had been thrown down by the soldiers of his army, to be preserved from further injury, and transported as a trophy to Paris. At Potsdam he visited, with eager haste, the palace of Sans-Souci and the tomb of the Great Frederick. Everything in the apartments of the illustrious monarch had been preserved as when he breathed-his last: the book which he read shortly before his death remained on the table; the furniture was untouched; the writing materials still there: the simplicity of all surprised the conqueror, who was accustomed to the magnificence of St Cloud. By a singular coincidence, but one of the many with which the history of Napoleon is full, he visited the sepulchre on the anniversary of the day on which Alexander, just a year before, on the same spot, had sworn

fidelity to Frederick-William. Such had been the confusion of the Prussian flight, that on the tomb there still remained the cordon of the black eagle, the scarf and sword of the hero, which he had worn in the Seven Years' War, as well as the standards of his guard. With deep emotion Napoleon approached the awful monument; but even at that solemn moment unworthy feelings gained the ascendency. He himself seized the venerable relics, and sent them with indecent haste off to Paris. "I will make a present of them," said he, "to the Hotel des Invalides: the old veterans of the Hanoverian war will receive with religious respect all that once belonged to one of the greatest captains of whom history has made mention/' Such an act could not injure the dead; his glory was enshrined in imperishable lustre in the page of history: but it lowered the living, and sullied the triumph of Jena by an unbecoming act of rapacity. Little did Napoleon at that moment anticipate the advent of times when the Prussians, now so humbled, were to have the mastery of his proudest trophies, and naught was to remain but veneration for the remains of the dead to protect his own ashes in a foreign and far distant land from the rude hand of the spoiler.[1] *

[1] Bign. vI. 11,12. Jom. ii. 302, 303. Dum. xvi. 249, 250.

This interesting episode did not interrupt for a moment the military movements of the corps immediately around the person of the Emperor. The same weakness and infatuation appeared there, as elsewhere, to have seized the

* How much more honourable as well as magnanimous was the conduct of the Russian officer who, instead of destroying the monument erected at Coblentz to commemorate the campaign of 1812, simply engraved below the inscription the words, "Seen and approved by the Russian governor of Cologne, January 1,1814." It is for the interest of all nations to preserve the trophies of their enemy's victory and the remains of the dead from insult; for it is impossible to foresee how soon they may themselves suffer from an opposite system. Nor is such forbearance without its reward. It obliterates the disgrace of defeat in the magnanimity of subsequent victory. The Pillar of Austerlitz, in the Place Venddme, is now a monument not less to German generosity than to French valour. It would be well for the memory of Napoleon if more instances of moderation in victory, and regard for the vanquished, were mingled with his military triumphs.

CHAP. XLIII.

1806.

83. Berlin, Spandau, and Charlottenburg occupied by the French. Oct. 25.

Prussian authorities. On the same day Marshal Dayoust, agreeably to the promise of Napoleon, headed the splendid vanguard which, with all the pomp of war, entered Berlin. No words can describe the mingled feelings of rage, astonishment, and despair, which animated the inhabitants at this heart-rending spectacle, occurring in less than a fortnight after hostilities had commenced. With speechless grief they gazed on the proud array which defiled through their gates, and drank deep, in the agony of that dreadful moment, of the punishment for the political sins of their government during the last ten years. On the same day the strong fortress of Spandau, with its strong citadel and a garrison of twelve hundred men, surrendered, without firing a shot, to Marshal Lannes;* and Napoleon, after inspecting that stronghold, on the day following made his triumphal entry into the capital. He had not the same delicacy towards the feelings of its inhabitants which he had previously evinced towards those of Vienna: the palace of Charlottenburg would have answered his purpose of a residence as well as that of Schoenbrun had done; but he seemed as anxious to lacerate the feelings of the Prussians as he had been to spare those of the Austrians, and determined to punish ten years of subservience and ten days of warfare more than he had done the inveterate hostility of twelve campaigns. Surrounded, therefore, by all the splendour of the empire, in the midst of a brilliant staff, preceded by his splendid Guards on horseback in their richest attire, and environed by

Oct. 26.

Oct. 27.

*** Napoleon spoke thus of this fortress:—"The citadel of Spandau, situated on the Spree, fully victualled for two months, is an inestimable acquisition. In our hands it could sustain two months of open trenches. But such was the general confusion that the batteries were not even armed."—19th *Bulletin*. It is evident that treachery, or selfishness equivalent to treachery, occasioned the sudden fall of so many of the Prussian fortresses at this period; and Bignon tells us that he became convinced of that when, on being sent by the Emperor to superintend the capitulation of Spandau, he found the governor, Benckendorf, occupied with no other consideration but disputes with the French commander as to some wretched culinary articles which he alleged the capitulation authorised him to remove! —BIGNON, vi. 13.**

Berthier, Duroc, Davoust, and Augereau, Napoleon, in his usual simple costume, made his triumphal entry under the arch erected to the honour of the Great Frederick. The "observed of all observers," the object of eager gaze to the speechless assembled multitude, the mighty conqueror traversed the long street which leads from the gate Charlottenburg, and advancing through an innumerable crowd, in whom passion, admiration, and wonder were mingled in some cases with joy, alighted at the gates of the old palace.[1]

[1] Thiers, vii. 175. Dum. xvi. 250, 252. Bign. vi. 13. Hard. ix. 313.

84. Affair of Prince Hatzfeld.

Prince Hatzfeld, one of the leaders of the war party, in the total absence of any authority emanating from the King, had been besought by the principal inhabitants to take an interim direction of affairs, and assume the command of the burgher guard. In doing so he had issued a proclamation, in which he said, "Nothing remains for us now but to assume a pacific attitude: our cares should not extend beyond what is within our own walls: that constitutes our sole interest, and as it is of the highest importance, we should bestow our exclusive attention upon it." This prince, as the chief of the pacific authorities, presented himself at the head of the magistrates before Napoleon at Potsdam, and was well received. He again waited on him when he arrived at the palace; but the conqueror received him with a severe air, and averting his head said, "Do not present yourself before me; I have no need of your services; retire to your estates." Shortly after the astonished nobleman withdrew, he was arrested by orders of Napoleon, who had commanded him to be seized *and executed* before six o'clock that evening. In fact he had transmitted to Prince Hohenlohe a letter, containing military details in regard to what he had seen at Potsdam when waiting on Napoleon, which had been intercepted by Davoust and brought to the Emperor. The imperious commands of the conqueror left his subordinate authorities no alternative but submission; although Berthier, shocked at the deed of violence

CHAP. XLIII.

1806.

which was in contemplation, did his utmost to avert the storm, and even refused to write out the warrant, which Rapp was called in to do. He could not, however, prevent Napoleon from ordering another murder as atrocious as that of the Due d'Enghien, and the death-warrant was signed, and Rapp was directed to send it to Davoust for immediate execution.[1]

[1] Rapp, 109, 110. Hard. ix. 315.

85. His pardon by Napoleon.

The former brave and generous man, at his own imminent hazard, took upon himself to delay its transmission; and in the mean time the Princess of Hatzfeld, having arrived in the antechamber of the palace, was informed of the danger of her husband, and sank in a swoon on the floor. Rapp advised her, after she recovered, to endeavour to throw herself in Napoleon's way at the hotel of Prince Ferdinand, where he was going in a short time; she did so, and fell at his feet in the extremity of despair. Her grief and beauty touched Napoleon, who, though subject to violent fits of passion, was not insensible to generous emotions. Rapp warmly seconded the return to feelings of humanity, and orders were despatched to Davoust to suspend the execution till further directions. Meanwhile the princess was enjoined to repair to the palace, whither Napoleon soon after returned. He ordered her to be brought into the room which he occupied. "Your husband," said he with a benign air, "has brought himself into a distressing situation; according to our laws, he has incurred the penalty of death. General Rapp, give me the letter: take it; read, madam. Is it your husband's writing?" She did so trembling. "I cannot deny his subscription," she replied, almost fainting with emotion. Napoleon then took it from her, tore it, and threw it into the fire. "I have no longer any proof; your husband is pardoned." He then desired Rapp to bring him back immediately from Davoust's headquarters; that officer ventured to admit that he had not even sent him there:[2] the Emperor manifested no displeasure, but on the contrary seemed gratified at the

[2] Rapp, 109, 110. Bign. vi. 14. Hard. ix. 315.

delay which had taken place in the execution of the order. *

Shortly after his arrival at Berlin, Napoleon paid a visit of condolence to Prince Ferdinand, brother of the great King of Prussia, and father of Prince Louis who fell at Saalfeld, and manifested the most delicate attentions to the widow of Prince Henry, as well as the Princess Electoral of Hesse-Cassel. At the same time he addressed an animated proclamation to his troops, in which he recounted with just pride their astonishing exploits, and promised to lead them against the Russians, who, he foretold, would find another Austerlitz in the

86. Napoleon's proclamation and addresses to his soldiers. Oct. 30.

* It is always pleasing to record a generous action, and doubly so when it occurs in an enemy; but justice compels the admission that, by delaying the transmission of this order, Rapp conferred a greater favour on Napoleon than on the intended victim of his passion ; for the one he saved only from death, the other from the guilt of murder. Rapp informs us that the Prince of Hatzfeld had come to Potsdam on the 25th, and it was for the account transmitted to Hohenlohe on that day of what he there saw that he was about to be condemned. The 25th was the day on which Davoust entered Berlin. The information objected to was collected, and the letter written, therefore, before the prince had come under the military government of the French Emperor. There is no law against a private citizen, or a civic authority of one nation, transmitting to its military officers details which have come to his knowledge regarding an enemy, when not yet subject to their authority—Napoleon himself called on the French prefects and magistrates to do so a hundred times. If the circumstance of Hatzfeld having collected and transmitted this information, while on a civil mission to the Emperor at Potsdam, exposed him to the penalty of death, what is to be said to Savary the year before, who, by orders of Napoleon, when conferring with the Emperor Alexander on the proposed terms of accommodation, obtained and brought to him military details of inestimable importance in regard to the temper and strength of the Allied army on the eve of the battle of Austerlitz;[1] or to Napoleon himself, who in 1797 transmitted orders to his brother Joseph, when holding the sacred office of ambassador at Rome, to do all in his power to revolutionise the Eternal City, and overturn the papal authority.[2] What the Prince of Hatzfeld did was no more than all ambassadors do, or than Napoleon invariably required from all his diplomatic agents. The character of the intended transaction may be judged of by what Berthier, with generous warmth, said on the occasion —" Your majesty will surely not shoot a man connected with the first families in Berlin for so trifling a thing; the supposition is impossible—you will not do so;" and from his positive refusal to write out the order, as well as from Rapp's delaying its transmission. Had the prince been shot, it would have been, like the death of the Due d'Enghien and the bookseller Palm, an act of deliberate murder. History, therefore, cannot award to Napoleon the praise of having pardoned, on this occasion, a criminal who had forfeited his life either by the laws of war or the principles of justice; but it must not refuse **the** meed due to a conqueror who returns to generous feelings, alter **having**

CHAP. XLIII. 1806.

heart of Prussia.* Next day he reviewed the corps of Marshal Davoust on the road to Frankfort, and, assembling the officers in a circle, assured them of the admiration which he felt for their achievements, and the grief which he had experienced at the numerous losses which had thinned their ranks. " Sire," answered the marshal, " the soldiers of the third corps will ever be to you what the tenth legion was to Caesar." Already, in the emulation of the different corps, the mutual knowledge and attachment of the officers and men, were to be found the happy effects of that permanent organisation into separate armies and divisions, which, first of the moderns, Napoleon had adopted from the ancient conquerors of the world.[1]

[1] Dum. xvi. 259, 261.

87. Unpardonable severity of Napoleon to the Duke of Brunswick.

While Napoleon and his followers were thus indulging in an excusable pride at the retrospect of their wonderful achievements, the Prussian officers who had traversed the country, or reached the capital in virtue of the several capitulations which had been granted, were exposed to the most grievous humiliation. The officers of the Guard, especially, who had escaped from the wreck of Hohenlohe's corps, were ostentatiously marched by the Emperor through Berlin to Spandau. Words cannot describe the mortification of those high-spirited young men, at the unparalleled calamities in which their inconsiderate

been led, in a moment of irritation, to command an atrocious deed; and joyfully seizes on this incident as illustrative of that ascendency which, in his cooler moments, humane feelings obtained over ruthless passion in the mind of this extraordinary man.—RAPP, 108.

* " Soldiers ! you are worthy defenders of my crown, and of the great people. As long as you are animated with your present spirit nothing can resist you. Behold the result of your labours ! One of the first powers in Europe, which recently had the audacity to propose to us a shameful capitulation, is annihilated. The forests and defiles of Franconia, the Saale, the Elbe, which our fathers would not have traversed in seven years, we have surmounted in seven days, besides, during the same period, fighting four combats and a great battle. We have arrived at Potsdam and Berlin sooner than the renown of our victories ! We have made sixty thousand prisoners, taken sixty-five standards, including those of the royal guards, six hundred pieces of cannon, three fortresses, twenty generals, while half the army regret their not having had an opportunity of firing a shot. All the Prussian provinces, from the Elbe to the Oder, are in our hands. Soldiers ! the Russians boast that they are advancing

CHAP. XLIII.

1806.

passions had involved their country; wherever they went crowds beset their steps, some lamenting their sufferings, others reproaching them as the authors of all the public misfortunes. Napoleon made a severe and ungenerous use of his victory. The old Duke of Brunswick, respectable from his age, his achievements under the Great Frederick, and the honourable wounds he had recently received on the field of battle, and who had written a letter to Napoleon, after the battle of Jena, recommending his subjects to his generosity, was in an especial manner the object of invective. His states were overrun, and the official bulletins disgraced by a puerile tirade against a general who had done nothing but discharge his duty to his sovereign. For this he was punished by the total confiscation of his dominions. So virulent was the language employed, and such the apprehensions in consequence inspired, that the wounded general was compelled, with great personal suffering, to take refuge in Altona, where he soon after died.[1]*

[1] Bign. vi. 15, 33, 34. Camp. de Saxe, ii. 155, 295.

88. And to the Queen of Prussia, and the Elector of Hesse-Cassel.

The Queen, whose spirit in prosperous and constancy in adverse fortune had justly endeared her to her subjects, and rendered her the admiration of all Europe, was pursued in successive bulletins with unmanly sarcasms; and a heroic princess, whose only fault, if fault it was, had been an excess of patriotic ardour, was compared te Helen, whose faithless vices had involved her country *in*

to meet us: let us march to encounter them; we will spare them the half oi their journey; they will find an Austerlitz in the heart of Prussia. A nation which has so speedily forgot the generosity which we manifested towards it after the battle when its Emperor, its court, the wreck of its army, owed its safety entirely to the capitulation which we granted to it, is a nation that will never be able to contend with us."—DUMAS, xvi. 259, 260.

*** " If the Duke of Brunswick," said the bulletin, " has richly deserved the animadversions of the French people, he has also incurred that of the Prussian army and people: of the latter, who reproach him as one of the authors of the war; of the former, who complain of his manoeuvres and military conduct The false calculations of the young may be pardoned, but the conduct of that old prince, aged seventy-two, is an excess of insanity, and his catastrophe car excite no regret. What can there be respectable in gray hairs, when to the faults of age are united the inconsideration and folly of youth) For these extravagancies he has justly incurred the forfeiture of all his dominions."–23 and 27th *Bulletins, Camp. de Saxe,* ii 216, 293.**

CHAP. XLIII. 1806.

the calamities consequent on the siege of Troy.* The whole dominions of the Elector of Hesse-Cassel were next seized; and that prince, who had not even combated at Jena, but merely permitted, when he could not prevent, the entry of the Prussians into his dominions, was dethroned and deprived of all his possessions. Animosity to England was the secret motive for all those acts of robbery. So strongly was Napoleon influenced by these feelings that he made no attempt to disguise that it was the ruling principle which governed all his measures towards the vanquished, † The Prince of Orange, brother-in-law to the King of Prussia, in favour of whom the Prussian plenipotentiaries then at Berlin made the strongest representations, shared the same fate; while to the nobles of Berlin he used publicly the cruel expression, more withering to his own reputation than theirs[1]—"I *will render that noblesse so poor that they shall be obliged to*

[1] Bign. vi. 15,33,34, 23d and 27th Bulletins. Camp de Saxe, ii. 155,195, 214.

* "All the world accuses the Queen as the author of all the calamities which have befallen the Prussian nation. The public indignation is at its height against the authors of the war, especially Gentz, a miserable scribbler, who sells himself for money. After her ridiculous journey to Erfurth and Weimar, the Queen entered Berlin a fugitive and alone. Among the standards we have taken are those embroidered by the hands of this princess, whose beauty has been as fatal to her people as that of Helen was to the citizens of Troy."—27th and 23d *Bulletins, Camp, de Saxe,* ii. 215. It is worthy of observation, that M. Gentz, who is here stigmatised as a miserable hireling sold to England, was one of the most distinguished writers of the age, and one with whom Sir James Mackintosh, the eloquent apologist of the French Revolution, maintained a constant and valued correspondence down to the time of his death. That distinguished author, in reply to a letter from Gentz, which he received at Bombay, where he then was holding a high judicial appointment, thus speaks of the pamphlet to which Napoleon alluded :—"I received by the mail your two precious fragments. I assent to all you say, sympathise with all you feel, and admire equally your reason and your eloquence throughout your masterly fragment. I have read your letter fifty times since I received it, with the same sentiment which a Roman in the extremity of Mauritania would have felt, if he had received an account of the ruin of his country after the battle of Pharsalia, written the morning after that calamity, with the unconquerable spirit of Cato, and the terrible energy of Tacitus. He would have exulted that there was something which Caesar could not subdue, *and from which a deliverer and avenger might yet spring."*—MACKINTOSH'S *Memoirs,* i. 304. Certainly of all the unaccountable peculiarities in the mind of Napoleon, the most extraordinary is his total insensibility to the ultimate ascendant of truth over falsehood, and the extent to which he calculated on palming off falsehood and misrepresentation on the credulity or ignorance of mankind.

† M. Bignon, who was present on the occasion, gives the following curious

beg their bread" When a conqueror, in the midst of his greatest triumphs, uses such insulting language to the vanquished, and makes such an atrocious use of his victory, it is impossible to sympathise with his fall, and Waterloo and St Helena are felt to be a just measure of moral retribution.

Enormous contributions levied on Prussia and the north of Germany.

Meanwhile the French armies, without any further resistance, took possession of the whole country between the Rhine and the Oder; and in the rear of the victorious bands appeared, in severity unprecedented even in the armies of the Republic, the dismal scourge of contributions. Resolved to maintain the war exclusively on the provinces which were to be its theatre, Napoleon had taken only twenty-four thousand francs in specie across the Rhine in the military chest of the army. It soon appeared from whom the deficiency was to be supplied. On the day after the battle of Jena appeared a proclamation, directing the levy of an extraordinary war contribution of one hundred and fifty-nine million francs (£6,360,000) on the countries at war with France, of

account of the conversation which led to the dethronement of the Elector of Hesse-Cassel; — " Duroc and I said everything we could, during breakfast, in favour of the Elector. He only petitioned to be allowed to resume possession of his estates; his fortresses were all to be ceded to the French arms; his troops, twelve thousand strong, were to be joined to their forces, and a heavy contribution paid. These offers appeared to make a considerable impression on the Emperor, especially the offer of so many troops; but after musing a while, he said abruptly, 'Bah! Brunswick, Nassau, Cassel: all these princes are essentially English; they will never be our friends,'—and instantly set out for a review. Two days afterwards appeared the 27th bulletin, containing the announcement of their dethronement."—See BIGNON, **vi. 35.**

which one hundred million was to be borne by the Prussian states to the west of the Vistula, twenty-five million by the Elector of Saxony, and the remainder by the lesser states in the Prussian confederacy. This enormous burden, equivalent to at least £12,000,000 sterling, if the difference between the value of money in England and Germany is taken into account, was levied with unrelenting severity; and the rapacity and exactions of the French agents employed in its collection aggravated to a very great degree the weight and odious nature of the imposition. Saxony, in the scourging contributions with which she was overwhelmed, had soon abundant cause to regret the French alliance; while Berlin, as well as the Hanoverian and Prussian states which had been occupied, experienced, in the rapacity of General Clarke and his subordinate agents, all the bitterness as well as the humiliation of conquest.[1]

[1] Hard. ix. 317. Bign. vi. 51, 53. Bour. vii. 219.

90. Cruelties exercised towards the conquered districts.

Nor was this all. The whole civil authorities who remained in the abandoned provinces were compelled to take an oath of fidelity to the French Emperor,*—an unprecedented step, which clearly indicated the intention of annexing the Prussian dominions to the great nation; while General Clarke, governor of Berlin, acting towards the magistrates as if they were already his subjects, barbarously shot a burgomaster of the town of Kyritz,† whose only fault was that he had, when destitute of any armed force, been unable to resist the abstraction of the arms of the burgher guard and local militia by Colonel Schill, who commanded a flying detachment, that still, in

* The oath was in these terms: — "*I* swear to exercise with fidelity the authority which is committed to me by the Emperor of the French, and to act only for the maintenance of the public tranquillity, and to concur with all my power in the execution of all the measures which may be ordered for the service of the French army, and to maintain no correspondence with its enemies." —BIGNON, vi. 51.

† At a dinner given by Louis XVIII. in 1815, to the King of Prussia, this murder became the subject of conversation. " Sire," said Clarke, then Duke of Feltre, " it was an unhappy error."—" Say, rather, an unworthy crime I" replied the indignant monarch.—HARD. ix. 318.

the open country, maintained its fidelity to the colours of the monarchy. Even the highest authorities gave way to the indiscriminate passion for pillage : " the name of General Clarke," says Bourrienne, " became justly odious from every species of exaction, and a servile execution of all the orders of Napoleon;" while the great reputation of the conqueror of Auerstadt was disgraced by the pillage of the noble library at Tempelberg, the country-seat of Baron Hardenberg, minister of state, which took place by his authority, while he was in person occupying the edifice.[1]

[1] Hard. ix. 317. Bign. vi. 51, 53. Dum. xvii. 40,49. Bour. vii.219.

91. Military organisation of the country from the Rhine to the Vistula.

These evils great as they were, and disgraceful to the arms and generals of France, were however, in the ordinary case, only transitory; but it soon became evident that in the case of Prussia and the adjoining states they were to be permanent, and that the iron grasp of the conqueror was to be not only laid, but retained, on the north of Germany. Early in November there appeared an elaborate ordinance, which provided for the complete civil organisation and military occupation of the whole country from the Rhine to the Vistula. By this decree the conquered states were divided into four departments; those of Berlin, of Magdeburg, of Stettin, and of Custrin; the military and civil government of the whole conquered territory was intrusted to a governor-general at Berlin, having under him eight commanders of provinces into which it was divided. Receivers-general were appointed in each province, charged with collecting its whole revenue and all the war contributions imposed on it, and their transmission to the French governors. Magistrates, police, gendarmes, all were nominated by the authority of Napoleon; the whole civil and military government of the country was concentrated in his hands. Clarke was governor-general, aided in the details of government by Count Daru, whose great capacity soon appeared in the admirable order which he introduced into every branch of the administration, and which would have

Nov. 3.

CHAP. XLIII. 1806.

been worthy of the highest admiration if it had not been rendered instrumental to the most cruel and universal system of public extortion. The same system of government was extended to the duchy of Brunswick, the states of Hesse and Hanover, the duchy of Mecklenburg, and the Hanse Towns, including Hamburg, which was speedily oppressed by grievous contributions, in exacting which the Dutch generals and troops were peculiarly conspicuous. The Emperor openly announced his determination to retain possession of all these states till England consented to his demands on the subject of the liberty of the seas. Careful, at the same time, to mingle with these important civil changes such deeds as might captivate the imaginations of his subjects, he paraded before the deputation which came to Berlin from the senate of Paris, to congratulate him on his victories, three hundred and forty grenadiers of his Imperial Guard, each bearing a standard taken from the enemy in this short campaign—the most splendid display of military trophies seen in Europe since the triumphs of the Roman generals.[1]

[1] Dum. xvii. 54,61. Bign. vi. 72. Bour. vii.217,219.

92. Negotiations with Prussia, and the first demands of Napoleon acceded to.

Meanwhile the negotiations for the conclusion of a separate peace between France and Prussia were resumed. The misfortunes of the King rendered it almost indispensable that a respite should be obtained on any terms, while it was not less advantageous for Napoleon to reap at once the fruits of his triumphs, without undergoing the fatigues and dangers of a winter campaign in the frozen plains of Poland. Plenipotentiaries, accordingly, were appointed on both sides: on that of France, Duroc; on that of Prussia MM. Lucchesini and Rastrow. There was no need of lengthened conferences; the situation of the parties gave to the one the power of demanding whatever he pleased, and deprived the other of that of withholding anything which was required. Napoleon insisted that Prussia should renounce all the provinces she possessed between the Rhine and the Elbe, pay a contribution of a hundred millions of francs for the

expenses of the war, cease to take any concern in the affairs of Germany, and recognise in the princes of the Confederation of the Rhine whatever titles the conqueror chose to confer upon them. Not daring to refuse these conditions, and yet unwilling to take upon themselves the responsibility of making so great a sacrifice, the Prussian envoys referred the matter to the King and his cabinet. They returned an answer agreeing to all the exactions which were required; but in the interval matters had essentially changed for the worse, the wreck of the Prussian armies had been almost totally destroyed, and the demands of Napoleon rose in proportion.[1]

Oct. 27.

[1] Bign. vi. 48, 49. Lucches. ii. 182, 186. Martens, viii. 537.

93. Convention signed by the plenipotentiaries.

Perpetually haunted by the idea that it was the influence of England which he required to combat, and that the northern powers were brought into the field only to maintain her cause, he next insisted that the Prussian troops should retire entirely to Konigsberg and the small portion of the monarchy which lies to the east of the Vistula; that Colberg, Dantzic, Graudentz, Thorn, Glogau, Breslau, Hameln, and Nienburg, shoidd be placed in the hands of the French; and that no foreign troops should be suffered to enter any part of the Prussian territory."* In agreeing to terms so ruinous to the monarchy, the Prussian plenipotentiaries could hardly expect that the King would ratify them; but so desperate had its affairs now become, that it was of importance to obtain a delay even of a few days, in the departure of Napoleon for Posen, in order to gain time for the arrival of the Russian troops on the Vistula. They signed the

* " He was persuaded," says the Marquis Lucchesini, " that it was the intrigues of England which had arrayed the northern courts against France, which had brought about the refusal of the Emperor Alexander to ratify the treaty of Paris, and pushed forward Prussia into the field of battle. It was England, therefore, which it had become necessary to strike in Prussia; and it was on the conduct of the cabinet of London, in regard to the restitution of conquests, that the Emperor announced he would measure his own .steps for the future fate of the Prussian monarchy."—LUCCHESINI, ii. 176,177 ; BIQNON, vi. 44.

CHAP. XLIH.

1806. Nov. 16.

convention at Charlottenburg accordingly, stipulating only for its ratification by the King of Prussia. In fact, however, no hope remained to either side that it would lead to a permanent accommodation; for, a few days before the truce was concluded, Talleyrand openly announced to the Prussian plenipotentiaries that they must look for no restitution of his conquests by the Emperor Napoleon, and that the vast territory from the Rhine to the Vistula would be retained until a general peace, as a means of compelling England to surrender its maritime acquisitions, and forcing Russia to evacuate the principalities of Wailachia and Moldavia, which had recently been invaded by its arms. Thus the unhappy Prussian monarchy was made responsible for the ambition or successes of other powers, over whose measures it had no sort of control; and the negotiations at Berlin, diverging from their original object, were degenerating into a mere manifesto of implacable hostility against the cabinets of London and St Petersburg.*

[1] Dum. xvii. 66,67.Bign. vi. 48, 49. Lucches. ii. 182,185. 186. Martens, viii. 537.

94. Which the King of Prussia refuses to ratify.

The severity of the terms demanded, as well as their express assurances that no concessions, how great soever, could lead to a separate accommodation, as Napoleon was resolved to retain all his conquests until a general peace, led, as might have been expected, to the rupture of the negotiations. Desperate as the fortunes of Prussia were, what was to be gained by the cession of three-fourths of its dominions, and its fortresses still unsubdued on the Vistula, to the French? Reft as he was of his kingdom and his army, the King still preserved his honour, and nobly resolved to continue faithful to his engagements. He declined, therefore, to ratify the armistice, which was presented to him for signature at Osterode, by Duroc, on the part of France, and at the same time published a melancholy but noble proclamation, in which, without attempting to disguise his hopes, or conceal the deplorable state of his affairs, he rose superior to the storms of fortune,[2] and declared his

[2] Lucches. ii. 223,225. Bign. vi. 48, 49. Dum. xvii.69,71.

resolution to stand or fall with the Emperor of Russia.* This refusal was anticipated by Napoleon. It reached him at Posen, whither he had advanced on his road to the Vistula; and nothing remained but to enter rigorously on the prosecution of the war in Poland.

95. Famous Berlin decree against English commerce.

To this period of the war belongs the famous Berlin decree of the 21st November, against the commerce of Great Britain. But this subject is too vast to be adequately touched on in the close of a chapter embracing such a variety of objects as the present; and it will be fully enlarged on in a subsequent one, which will include also the Milan decree which followed in 1807, the Continental System, and the Orders of Council adopted as a measure of retaliation by the British government.

96. Affairs of Poland. Napoleon's language to the Polish deputies.

Napoleon set out from Berlin for the Vistula soon after he had fulminated this anathema against English commerce, and at Posen, in Prussian Poland, gave audience to the deputies of that unhappy kingdom, who came to implore his support to the remains of its once mighty dominion. His words were calculated to excite hope which his subsequent conduct never realised: "France," said he, "has never recognised the partitions of Poland; but, neyertheless, I cannot proclaim your independence until you are resolved to defend your rights as a nation at every sacrifice, even that of life itself. The world reproaches you with having, in your continual civil dissen- Nov. 29. sions, lost sight of the true interests and safety of your country. Taught by your misfortunes, now unite, and prove to the world that the same spirit animates the whole

*** "Matters," said the proclamation, "had arrived at that pass, that Prussia could no longer hope to obtain peace, even at the price of the greatest sacrifices. It was not in his power to make the Russian forces retrograde, since already their own frontiers were menaced. The Emperor of France has shown a determination, even when he acceded to the basis of a negotiation, not to suspend for one moment his military operations; and he has protracted the conferences till his successes enabled him to declare that the conquest of Prussia should afford him the means of dictating peace to England and Russia. Compelled thus to resume hostilities, the King is not without hopes of yet bringing them to a successful issue. He hopes that the governors of the fortresses on the Vistula will not imitate the weakness of those on the Oder**

CHAP. XLIII.

1806.

Polish nation." Universal acclamations attended his arrival at Posen; all the population advanced to meet his carriage; four magnificent triumphal arches were erected to the victor of Rivoli, Marengo, Austerlitz, and Jena. Count Palatine Radzerminski, at the head of the deputation from Great Poland, addressed him in terms of Eastern adulation, mingled with strange expressions, which proved prophetic: "The universe knows your exploits and your triumphs; the west beheld the first development of your genius; the south was the recompense of your labours; the east became to you an object of admiration; *the north will be the term of your victories.* The Polish race, yet groaning under the yoke of the Germanic nations, humbly implores your august highness to raise up its remnant from the dust."—Napoleon replied, —"That which has been destroyed by force cannot be restored except by force. I would with pleasure behold the independence of Poland restored, and a barrier formed by its strength against the unbounded ambition of Russia; but petitions and discourses will not achieve this work; and unless the whole nation, including nobles, priests, and burghers, unites and embraces the firm resolution to conquer or die, success is hopeless. With such a determination it is certain; and you may always rely on my powerful protection."[1]

[1] Dam. xvii. 60, 64.

While the main body of the French army was advancing by rapid strides from the Oder to the Vistula, Napoleon, ever anxious to secure his communications, and clear his rear of hostile bodies, caused two different armies to

and Elbe, and all the disposable forces of the monarchy will hasten to unite their colours on the Vistula and the Wartha to the brave Russian battalions. Such a proof of courage and constancy is not new to the Prussian nation. In the Seven Years' War the capital and provinces were also occupied by the enemy; but the firmness and intrepidity of the nation brought it safe through all its perils, and excited alike the admiration and astonishment of posterity. Then Prussia combated alone the greatest powers of Europe: now the powerful and magnanimous Alexander is about to take his place by her side, with all the forces of his vast empire. Their cause is the same; they will stand or fall together."—DUMAS, xvii. 70, 71.

1806.

advance to support the flanks of the invading force. To Jerome Buonaparte, who commanded the ninth corps, consisting of twenty-five thousand Bavarians and Wiirtembergers, and who had Vandamme for his adviser, was intrusted the difficult task of reducing the six fortresses of Silesia—Glogau, Breslau, Brieg, Neisse, Schweidnitz, and Glatz—containing in all a force nearly equal to his own. Glogau, however, with its garrison of three thousand men, made but a show of resistance, and, early in December, fell into the hands of the French. The other bulwarks of the province exhibited more determination, and operations in form were commenced against them. Mortier, on the extreme left, was intrusted with the subjugation of Hanover and the Hanse Towns, and the occupation of Hamburg, which was accomplished with hardly any resistance. Having done this, he advanced to observe Stralsund and the Swedes; while a fresh reserve was collecting on the Elbe, under the command of Louis, King of Holland. Thus, though the Grand Army was advancing by rapid strides to the shores of the Vistula, its flanks on either side were protected by subordinate corps ; and fresh forces, stationed in echelon in the rear, overawed the intermediate states, and kept up the communication with the Rhine. The whole of the north of Germany was overrun by French troops, while a hundred thousand were assembling to meet the formidable legions of Russia in the heart of Poland.[1]

Advance of Jerome into Silesia, of the French army to the Vistula, and Mortier to Hamburg.

Dec. 8.

[1] **Bign. vi. 69,71.Dum. xvii. 50,53.**

Vast as the forces of Napoleon were, such prodigious efforts over so great an extent of surface rendered fresh supplies indispensable. The senate at Paris was ready to furnish them ; and on the requisition of the Emperor, eighty thousand were voted from the youth who were to arrive at the military age in 1807. " In what more triumphant circumstances," said the Emperor, "can we call on the youth of France to flock to our standards ? They will have to traverse, in joining their comrades, the capital of their enemies, and fields of battle made illustrious by immortal

98. Levy of a lew conscription in Prance. Dec. 5.

CHAP. XLIII. 1806.

victories," It may easily be conceived with what transports this appeal was received by a nation so passionately attached to military glory as the French, and the Emperor resolved to turn it to the best account. Not content with this great addition to his prospective resources, he instituted corps of volunteers to receive the numerous and enthusiastic youth, whom even the conscription could not drain off in sufficient numbers ; additional battalions were added to the Imperial Guard, the troops of Hesse taken in a body into French pay, and the most energetic measures adopted to augment as much as possible the military resources of the Confederation of the Rhine. Detailed instructions were at the same time transmitted to Marmont in Illyria, and the Viceroy Eugene Beauharnais, to have their forces disposed on the Austrian frontiers in the most advantageous position ; and the King of Bavaria was informed by the Emperor himself of all that he should do for the defence of his dominions. The activity displayed in the fortresses on the Adige, the Isonzo, and the Inn, looked as if he was making preparations rather for a defensive struggle in the plains of Bavaria, or the fields of Italy, than for a decisive stroke at Russia on the shores of the Vistula.[1]

[1] Bign. vi. 69,71. Dum. xvii. 50,55. See the orders in Dum. Xvii. Pieces Just.

99. Treaty between France and Saxony.

A treaty, offensive and defensive, between Saxony and France, was the natural result of these successes. This convention, arranged by Talleyrand, was signed at Posen on the 12th December. It stipulated that the Elector of Saxony should be elated to the dignity of king; he was admitted into the Confederation of the Rhine, and his contingent fixed at twenty thousand men. By a separate article, it was provided that the passage of foreign troops across the kingdom of Saxony should take place without the consent of the sovereign—a provision which sufficiently pointed it out as a military outpost of the great nation —while, by a subsidiary treaty, signed at Posen three days afterwards, the whole minor princes of the house of Saxony were also admitted into the Confederacy.[2]

[2] Dec. 15. Dum. xvii. 88,89. Martens, viii. 552, and 555.

100. Immense results of the campaign.

Such was the astonishing campaign of Jena, the most marvellous of all the achievements of Napoleon, that in which success the most unheard-of attended his steps, and his force appeared most irresistible to the bewildered nations. Europe had hardly recovered the shock arising from the fall of Austria in three months, during the campaign of Austerlitz, when she beheld Prussia overthrown in as many weeks by the shock of Jena. Without halting one day before the forces of the enemy, without ever once pausing in the career of conquest, the French troops had marched from the Rhine to the Vistula ; the fabric reared with so much care by the wisdom and valour of Frederick the Great had fallen by a single blow; and one of the chief powers of Christendom had disappeared at once from the theatre of Europe. Three hundred and fifty standards, four thousand pieces of cannon, six first-rate fortresses, eighty thousand prisoners, had been taken in less than seven weeks. Of a noble array of a hundred and twenty thousand men, who had so lately crowded on the banks of the Saale, not more than fifteen thousand now followed the standards of the King to the shores of the Vistula.[1] Results so astonishing were altogether unprecedented in modem Europe : they recalled rather the classic exploits of Caesar or Alexander, or the fierce inroads of Timour or Genghis Khan, than anything yet experienced in Christendom. But they possessed this superiority over the achievements of antiquity or the sanguinary conquests of modern barbarism, that it was not over inexperienced tribes or enervated nations that the triumphs had been won, but the most warlike nation of the civilised world that had been overthrown, and the army which had not long before withstood the banded strength of Europe which had been dissolved.

[1] Jom. ii. 325.

The talents displayed by Napoleon in this campaign, though of a very high order, were not equal to the transcendant abilities evinced at Ulm and Austerlitz. Doubtless the celerity with which the hazardous advance of the

CHAP. XLIII.

1806.

101. Talent and rashness displayed by Napoleon during the campaign.

Duke of Brunswick across the Thuringian Forest to turn the French left and interpose between the Rhine and their army, was turned to the best account, and the Prussians cut off from their magazines and communications at the very moment they were endeavouring to inflict that injury on the enemy : the vigour of the fight at Jena, and the incomparable energy with which the mighty host which there conquered was dispersed in pursuit of the broken remains of the enemy, and incessantly pressed on till they were totally destroyed, were worthy of the highest admiration. But in the very outset of the campaign, he exposed himself to unnecessary hazard, and but for a change of position on the part of the bulk of the Prussian army, of which he was ignorant, might have been involved in as great a catastophe as the rout on the banks of the Isar had been to the Imperialists. To advance and attack the Prussian army, strongly posted at Jena, through the narrow and rugged defiles of the Landgrafenberg, was a greater piece of rashness in military conduct than it was in the Archduke John to advance against Moreau through the pines of Hohenlinden. Napoleon has told us this himself,—" The first principle of the military art," says he, " is never to fight with a defile in your rear ; for if defeated in such a station, total ruin is hardly avoidable."[1] Had the whole Prussian army, a hundred thousand strong, continued posted at the opening of the defiles as it was only the day before, instead of a rearguard of forty thousand only, the French would probably have never been able to debouch, and a disastrous defeat have been experienced. There was little of the usual calculation of means to end in this great commander, when he himself, with eighty thousand men, was opposed only to Hohenlohe with forty thousand, while Davoust, with thirty thousand, was left to struggle with the King in person, at the head of sixty-five thousand. No man knew better than Napoleon that such combinations were against the

[1] Nap. Mem. Book ix. 124, 125, on Waterloo.

first principles, not merely of the military art, but of common sense applied to such subjects. But the truth is, that the campaign of Austerlitz had given him an undue confidence in his destiny ; he deemed himself invincible^ because he had always hitherto proved so; and already were to be seen the symptoms of that fatal rashness which was to lead him to the Moscow retreat and the disasters of Leipsic.

102. **Reflections on the sudden fall of Prussia.**

After making every allowance for the magnitude of the defeat sustained by the Prussians at Jena and Auerstadt, and the extraordinary circumstance of the fugitives from these two fields getting intermingled during their nocturnal flight, there is something extraordinary and almost unaccountable in the sudden prostration of the monarchy. Had the people been lukewarm or disaffected in the cause, this result would have admitted of easy solution ; but this was very far indeed from being the case: public spirit ran high, patriotic ardour was universal, and unanimity unprecedented against Gallic aggression existed among all classes. Yet in the midst of this ardent and enthusiastic feeling, pusillanimity the most disgraceful was generally evinced, and fortresses all but impregnable surrendered at the first summons of a contemptible enemy! Where were the soldiers of the Great Frederick, where the constancy of the Seven Years' War, when Magdeburg, Stettin, Clistrin, and Glogau lowered their colours without firing a shot, and the weakness of these garrisons permitted the array on the Vistula to be reinforced at the decisive moment by forty thousand men, who otherwise would have been chained round their walls? These unprecedented capitulations demonstrate that, however high was the spirit of part of the nation, the same feelings were not universal, and that the kingdom of Prussia, newly cemented by the genius of Frederick, had not yet acquired that general patriotic spirit which can withstand the severer shocks of adversity, and constitutes the only secure basis of national independence. And the English

CHAP. XLIII. 1806.

historian who recollects how the energies of his own country were prostrated in a similar manner after the battle of Hastings, will probably be inclined to judge charitably of an infant nation placed in such trying circumstances ; and feel a deeper thankfulness for that long career of national independence, that unbroken line of national glory, which has formed the indomitable public spirit of his own country, and constitutes the unseen chain which has so long held together the immense fabric of the British dominions.

103. General ency which it occasions in Europe.

In proportion to the unbounded enthusiasm which these wondrous events excited in France, was the despondency which they diffused through the other states of Europe. Alarm now seized the most sanguine, despair took possession of the most resolute. The power which had risen up in Europe to vanquish and destroy seemed beyond the reach of attack. Every effort made against it, every coalition formed for its overthrow, had led only to fresh triumphs, and a more complete consolidation of its strength. The utmost efforts of Austria, supported by all the wealth of England and all the military strength of Russia, had sunk in the conflict; and now a few weeks had sufficed to dissipate that admirable army which the Great Frederick had bequeathed as the phalanx of independence to his country. The thoughtful and philanthropic, more even than the multitude, were penetrated with apprehensions at these portentous events."* They looked back to ancient times, and read in the long degradation of Greece and the Byzantine empire, the conse-

*** See, in particular, Sir James Mackintosh's letter on this subject, *Memoirs*, i. 304. " I do not," says he, " despair of the fortunes of the human race. But the moral days and nights of these mighty revolutions have not yet been measured by human intellect. Who can tell how long that fearful night may be before the dawn of a brighter to-morrow 1 Experience may, and I hope does, justify us in expecting that the whole course of human affairs is towards a better state; but it does not signify to us, supposing that many steps of this progress may be to the worse. The race of man may reach the promised land; but there is no assurance that the present generation will not perish in the wilderness. The prospect of the nearest part of futurity of all that we can discover, except with the eyes of**

quences of their subjugation by the military force of Rome, and could anticipate no brighter prospect for futurity than the ultimate resurrection of Europe after many ages of slavery and decline. So little can the greatest intellects anticipate the future course of events in a society so perpetually influenced by new moving powers as that of modern Europe; and so necessary is it, in forming a judgment on the ultimate consequences of existing changes, not merely to look back to the lessons of history, but to take into account also the hitherto unexperienced influence of fresh causes rising into action in the ever-varying scene of human affairs.

104. Blucher'g opinion of the probable resurrection of Germany,

That bright dawn, however, which philanthropy looked for in vain, and philosophy was unable to anticipate in the dark gloom of the political horizon, the ardent mind of a hero had already begun to descry; and, what is very remarkable, he fixed on the precise circumstances in the temper of the times which were destined to make it ultimately expand to all the lustre of day. "I reckon much," said Blucher to Bourrienne at Hamburg, whither he had retired on his parole from Liibeck, "on the public spirit of Germany, on the enthusiasm which reigns in our universities. Success in war is ephemeral; but defeat itself contributes to nourish in a people the principles of honour and a passion for national glory. Be assured, when a whole people are resolved to emancipate themselves from foreign domination, they will never fail to succeed, I have no fears for the result. We shall end by having a landwehr such as

speculation, seems very dismal. The mere establishment of absolute power in France seems the least part of the evil: an evil greater than despotism, or rather the worst form of despotism, approaches; a monarchy literally universal seems about to be established.—*Sir J. Mackintosh to M. Ogilvie*, Feb. 24,1808.—MACKINTOSH'S *Memoirs*, i. 383.—It is curious, but not unnatural, to observe the earliest and warmest advocates of the French Revolution most gloomy in their anticipations of its ultimate effects. Ardour of imagination, the habit of looking before the multitude into the ultimate consequences of passing events, a sincere desire for the good of mankind, naturally produced in the same minds, in 1790 and 1806, these opposite results.

CHAP. XLIII. 1806.

the slavish spirit of the French could never produce. England will yield us its subsidies ; we shall renew our alliances with Russia and Austria. I know well the principles of the coalition. The sole object which the Allied sovereigns have in view is to put a limit to the system of aggression which Napoleon has adopted, and which he pursues with the most alarming rapidity. In our first wars against France, at the commencement of its Revolution, we fought for the rights of kings, in which, for my part, I felt very little interest: but now the case is totally changed; the population of Prussia makes common cause with its government; the safety of our hearths is at stake; and reverses, when such a spirit is abroad, destroy armies without breaking the spirit of a nation. I look forward without anxiety to the future, because I foresee that fortune will not always favour your Emperor. The time may come when *Europe in a body, humiliated by his exactions, exhausted by his depredations, will rise up in arms against him.* The more he enchains different nations, the more terrible will be the explosion when they burst their fetters. Who can now dispute the insatiable passion for aggrandisement with which he is animated % No sooner is Austria subjugated than Prussia is destroyed; and though we have fallen, Russia remains to continue the strife. I cannot foresee the issue of this struggle ; but supposing it to be favourable to France, it will come to an end. You will speedily see new wars arise, and if we hold firm, France, worn out with conquests, will at length succumb."[1]

[1] Bour. vii. 205, 206.

Blucher was right in these anticipations. It is not in the suffering but the prosperity of nations that the seeds of ruin are in general to be found; the anguish and humiliation which are the consequences of weakness, disunion, or corruption, are often the severe school of ultimate improvement. If we would discern the true cause of the fall of Prussia, we must go back to the vacillation

Salutary ultimate result of this suffering to Prussia.

and selfishness which characterised its national councils during the ten prosperous years which succeeded the treaty of Bale in 1795: which caused it to temporise when the moment for action had arrived, and brought it in heedless security to the very edge of perdition; which lowered the national feeling by sacrificing the national honour, and paralysed the arms of its allies by inspiring distrust in the good faith of its government. In the misery and degradation consequent on the battle of Jena, is to be found the commencement of the causes destined to produce the glorious resurrection of 1813. Periods of adversity are seldom lost in the end to nations any more than individuals; it is the flow of unbroken prosperity, which, by promoting the growth of the selfish passions, is the real source, in most cases, of irremediable ruin. Those twin curses of humanity, despotism and democracy, act in precisely the same way on the sources of public welfare, by poisoning the fountains of individual exertion, and inducing in the active members of society a slavish submission to the authority of the irresistible executive, or a selfish prosecution of their own interest, instead of a generous devotion to the public good. Till this last stage of national degradation has arrived, there is always a hope of revival to its fortunes. No misfortunes are irremediable as long as the spirit of the people is unbroken; no calamities irreparable but those which undermine their virtue.

CHAPTER XLIV.

CAMPAIGN OF EYLAU. DEC. 1806—MARCH 1807.

CHAP. XLIV.

1806.

1. Advance of the French and Russians to the Vistula.

THE campaign of Jena had destroyed the power of Prussia; inconsiderate valour had yielded to overwhelming force and skilful combination; with more justice the King than the people could say with Francis I. at Pavia, *Tout est perdu hors l'honneur.* But Russia was still untouched; and while her formidable legions remained unsubdued, the war, so far from being completed, could hardly be said to have seriously commenced. Napoleon felt this. On the Trebbia, at Novi, at Diirrenstein, and Austerlitz, the French had experienced the stern valour of these northern warriors; and he counted the hours, as the mortal conflict approached, which was to bring either universal empire or irreparable ruin in its train. Nor were the Russians less desirous to commence the struggle. Confident in the prowess of their arms — proud of the steady growth of an empire, the frontiers of which have never yet receded, and which its meanest peasant believes is one day to subdue the world — they anticipated a glorious result from their exertions, and, without underrating the forces of their opponents, indulged a sanguine hope that the north would prove the limits of their power, and that, while they repelled them from their own frontiers, they would afford the means of liberation to oppressed Europe. The severity of a Polish winter could not deter these undaunted combatants. Eager

for the conflict, both the mighty hosts approached the Vistula; and, at a period of the year when some respite is usually given in ordinary war to suffering humanity, they commenced a new campaign, and advanced through a snowy wilderness to the bloody field of Eylau.

2. Military preparations of Russia.

Alexander had displayed the greatest activity in repairing the losses which his army had sustained in the campaign of Austerlitz. Thirty fresh squadrons and fifty-one battalions had been added to its amount, all the chasms occasioned by the casualties of war supplied, and the new French organisation into divisions universally adopted."* Nor was this all:—Anxious to rouse the religious enthusiasm of his subjects, and deeply impressed with the magnitude of the struggle which was approaching, he had called out a defensive militia of six hundred thousand men, and excited their devout loyalty to the highest degree by a proclamation, in which Napoleon was repre-

* The Russian army was organised into eighteen divisions, each of which was composed of six regiments of infantry, ten squadrons of heavy cavalry, ten of light, two batteries of heavy cannon, three of light or horse artillery, and a company of pioneers; in all for each, eighteen battalions, twenty squadrons, and seventy-two pieces of cannon; about 12,000 men. The army was thus divided:—

	Battalions.	Squadrons.	Cannons.
1. Guard, under Grand-duke Constantine,	83	35	84
2. Polish army—Eight divisions, under Ostermann, Sacken, Gallitzin, Touchkoff, Barclay de Tolly, Doctoroff, Essen, Gortchakoff, afterwards Kamenskoi, ...	147	170	504
3. Army of Moldavia—Five divisions under Michelson as general-in-chief, commanded by Wolkonsky, Zacomilsky, Milarado witch, Meindorf, and the Duke of Richelieu, . . .	90	100	306
4. Intermediate corps under the Count Apraxin, consisting of the divisions of General Ritchoff, Prince Labanoff, and Gortchakoff, . . .	5 4	8 0	144
Total,	824	885	1038

besides the local corps in Georgia, Finland, and garrison battalions. The whole regular force was about 380,000 men ; but in no country is the difference between the numbers on paper and in the field so great as in Russia, and the troops engaged in the campaign of Poland never exceeded 80,000 men.—See JOMINI, ii. 335; and WILSON, 4.

CHAP. XLIV. 1806.

sented as the relentless enemy of the Christian religion, and they were called on to shed their best blood in defence of the faith of their fathers.* This proclamation excited the ridicule of a large part of Europe, still tainted by infidel fanaticism, and not then awakened to the impossibility of combating revolutionary energy with any other weapons but those of religious fervour. But it was admirably calculated for the simple-minded people to whom it was addressed, and excited such an enthusiasm, that not only was this immense armament without difficulty raised, but, contrary to usual custom, the peasants drawn for the regular army joyfully left their homes, and marched with songs of triumph, amidst the blessings of their countrymen, towards the frontier, the anticipated scene of their glory or their martyrdom.[1]

[1] Jom. ii. 335. Hard, ix. 375,376 Dum. xvii. 99. Wilson Polish War 10, 11.

3. Composition and character of her armies.

The troops who were now pressing forward to defend the western frontiers of the empire were very different from those with whom the French had hitherto, for the most part, contended in the fields of Germany or the Italian plains. The forces of civilisation, the resources of art, were exhausted; the legions of Napoleon had reached the old frontier of Europe ; the energy of the desert, the hosts of Asia were before them; passions hitherto, save in la Vendue, unexperienced in the contest, were now brought into action. Religious enthusiasm, patriotic ardour, the fervour of youthful civilisation, were arrayed against the power of knowledge, the discipline of art, the resources of ancient opulence. There was to be seen the

* "Buonaparte," said this proclamation, which was read in all the Russian churches, "after having, by open force or secret intrigue, extended his power over the countries which he oppresses, menaces Russia, which Heaven protects. It is for you to prevent the destroyer of peace, of the faith, and of the happiness of mankind, from seducing the orthodox Christians. He has trampled under foot every principle of truth; in Egypt he preached the Koran of Mahomet, in France manifested his contempt for the religion of Jesus Christ by convoking Jewish synagogues. Do you love your fellow-creatures] Fly the persecutor of Christians. Do you desire to be saved1 Oppose an invincible barrier to his advances. He has dared to the combat God and Russia; prove that you are the defenders of the Most High and of your country. Chase far from your frontiers that monster; punish his barbarity to so many innocent persons,

serf but recently emancipated from the servitude of his fathers, whose mother and sisters had checked the lamentations of nature when he assumed the military habit, and bade him go forth, the champion of Christendom, to present glory and future paradise; there the peasant, inured from infancy to hardy exercise, ignorant alike of the enjoyments and the corruptions of urban society, long accustomed to rural labour, and habituated equally to the glow of a Russian bath or the severity of a Scythian winter; there the Cossack, whose steed, nourished on the steppes of the Don, had never yet felt the curb, while his master, following his beloved Hetman to the theatre of action, bore his formidable lance in his hand, his pistols and sword by his side, and his whole effects, the fruit of years of warfare, in the folds of his saddle. Careless of the future, the children of the desert joyfully took their way to the animating fields of plunder and triumph; mounted on small but swift and indefatigable horses, they were peculiarly adapted for a country where provisions were scanty, forage exhausted, and hardships universal. The heat of summer, the frost of winter, were alike unable to check the vigour of their desultory operations; and when the hosts on either side were arrayed in battle, and the charge of regular forces was requisite, they often appeared with decisive effect at the critical moment. Urging their horses to full speed, they bore down, by the length of their spears and the vehemence of their onset, the most powerful cavalry of Western Europe.[1] *

[1] Wilson, viii.28.Personal observation.

whose blood cries aloud to Heaven for vengeance. God will hear the prayer of the faithful; he will shield you with his power; he will cover you with his grace. Your exploits will be celebrated by the church and by your country; immortal crowns or abodes of eternal felicity await you."—HARDENBERG, ix. 376.

* "Mounted," says Wilson, "on a little, ill-conditioned, but well-bred horse, which can walk with ease at the rate of five miles an hour, or dispute in his speed the race with the swiftest, with a short whip on his wrist, as he wears no spur, armed with the lance, a pistol in his girdle, and a sword, the Cossack never fears a competitor in single combat; but in the Polish war he irresistibly attacked every opposing squadron in the field. Terror preceded his charge; and in vain discipline endeavoured to present an impediment to

CHAP. XLIV.

1806.

4. Imprudent division of her forces by the invasion of Moldavia.

If the whole disposable Russian forces had been united upon the Vistula, they would have presented an imposing mass of a hundred and fifty thousand warriors, against which all the efforts of Napoleon would, in all probability, have been exerted in vain. But by a strange and unaccountable infatuation, at the very moment when this formidable contest awaited them on the Polish plains, a large portion of their disposable force was drawn off to the shores of the Danube, and a Turkish superadded to the already overwhelming weight of the French war. Of the causes which led to this unhappy diversion, and the grounds which the cabinet of St Petersburg set forth in vindication of their aggression on the Ottoman dominions, a full account will be given in the sequel of this work;* but, in the mean time, its effect in causing a most calamitous division of the Russian force is too obvious to require illustration. At Eylau the hostile forces on either side were nearly equal, and both retired without any decisive advantage from that scene of blood; ten thousand additional troops would there have overthrown Napoleon, and driven him to a disastrous retreat, while fifty thousand of the best troops of the Muscovite empire were uselessly employed on the banks of the Danube. At the same time it must be remembered that the war in Moldavia was resolved on, and the necessary orders transmitted, before the disasters in Prussia were known, or the pressing necessity for succour on the Vistula could have been anticipated; the battle of Jena was fought on the 14th October, and on

the protruding pikes. The cuirassiers alone preserved some confidence, and appeared to baffle the arms and skill of the Cossack; but in the battle of Preuss-Eylau, when the cuirassiers made their desperate charge on the Russian centre, and passed through an interval, the Cossacks instantly bore down on them, speared them, unhorsed them, and, in a few moments, five hundred and thirty Cossacks reappeared in the field, equipped with the spoils of the slain. But they did not permanently wear them; the steel trophies were conveyed by subscription to the Don and the Volga, where they are inspected as trophies of their prowess, and respected as the pride of their kindred and glory of their nation."—WILSON, 27, 28. When the author saw the Cossacks of the Don and the Guard at Paris in May 1814, this description was still precisely applicable.

* See *infra*, Chap. LXIX. on the Turkish War.

CHAP. XLIV.

1806. Nov. 23.

the 23d November, General Miclielson entered Moldavia, and commenced the Turkish campaign. But though the Russian cabinet is thus not answerable for having given orders to commence an additional war unnecessarily in the midst of the desperate struggle in the north of Germany, yet it cannot be relieved of the responsibility of having, without any adequate cause, provoked hostilities in the southern provinces of its empire, at a time when the contest in Saxony, if not commenced, might at least have been easily foreseen, when the resolution to annul the treaty, signed by d'Oubril at Paris, had been already taken, and all the strength of Europe was required to meet the encounter with the conqueror of Austerlitz on the banks of the Elbe.[1] *

Jom. ii. 336, 337. A.nn. Reg. 1806, 209. Bign. vi. 57.

5. Embarrassment of Napoleon on the Polish question.

While Russia, distracted by the varied interests of her mighty dominions, was thus running the hazard of destruction by the imprudent division of her forces in presence of the enemy, Napoleon was extremely perplexed at Posen by the consideration of the Polish question. The destiny of the Sarmatian people, which enters so deeply into the solution of every political combination of the nineteenth century, here stood in the very foremost rank, and called for immediate decision. The advance of the French armies through Prussian Poland towards Warsaw, the ambiguous, but still encouraging words of the Emperor to the numerous deputations which approached him, had awakened to the highest degree the hopes and expectations of that unfortunate, but impassioned race. A solemn deputation from Great Poland, headed by Count Dzadiniki, waited upon Napoleon, and announced an approaching insurrection of the Polish nation, headed by their nobles, palatines, and chiefs: a great excitement

* The determination to refuse the ratification of the treaty, signed at Paris by d'Oubril, was taken at St Petersburg on the 25th August—the Dniester was passed on the 23d November. The resolution to provoke a Turkish war, therefore, was taken after it was known that a continued struggle with the enemy, whose strength they had felt at Austerlitz, had become inevitable,—*Ante,* Chap. XLII. § 72.

CHAP. XLIV.

1806.

prevailed in Lithuania, and symptoms of alarming effervescence were visible even in Galicia. The crisis was of the most violent kind; an immediate decision was called for by imperious necessity; Napoleon was much at a loss how to act, and the question was warmly debated by the council assembled at his headquarters.[1]

[1] Jom. i. 328, Oginski, ii. 335, 336, 338.

6. Arguments in favour of the restoration of Poland.

On the one hand, it was urged by the friends of Poland, "that the only ally in the east of Europe, on whom France could really and permanently depend, was now preparing to range itself by her side, and enter into a contest of life or death in her support. The alliances of cabinets may be dissolved, the friendships of kings may be extinguished, but the union of nations, founded on identity of interest and community of feeling, may be calculated upon as of more lasting endurance. But what people was ever impelled towards another by such powerful motives, or animated in the alliance by such vehement passions, as Poland now is towards France? Alone of all great nations, in ancient or modern times, she has been partitioned by her powerful and ambitious neighbours, struck down to the earth by hostile armies, and swept, by repeated spoliations, from the book of existence. Her nationality is destroyed, her people scattered, her glories at an end. Is it possible that these injuries can be forgotten, that such unparalleled calamities should leave no traces behind them, in the breasts of the descendants of the Sarmatian race? Is it not certain, on the contrary, that they have left there profound impressions, ineradicable passions, which are ready, on the first favourable opportunity, to raise throughout the whole scattered provinces of the old republic an inextinguishable flame? Where has the Emperor found such faithful followers, such devoted fidelity, as in the Polish legions of the Italian army, whom Muscovite barbarity drove to seek an asylum in foreign lands? Is it expedient to refuse the proffered aid of a hundred thousand such warriors, who are ready

to fly to his standards from the whole wide-spread fields of Sarmatia ?

7. Security for the permanence of her alliance with France.

" True, they are undisciplined—without arms, fortresses, magazines, or resources—but what does all that signify ? Napoleon is in the midst of them; his invincible legions will precede them in the fight; from his enemies and their spoilers his victorious sword will wrest the implements of war; in the example of his followers, they will see the model of military discipline. The Poles are by nature warriors; little training or organisation is requisite to bring them into the field. When the regular forces of Germany had sunk in the conflict, their tumultuary array chased the infidels from the heart of Austria, and delivered Vienna from Mussulman bondage. Nor is it merely a temporary succour which may be anticipated from their exertions; lasting aid, a durable alliance, may with confidence be expected from their necessities. Surrounded by the partitioning powers, they have no chance of independence but in the French alliance; the moment they desert it, they will be again crushed by their ambition. Not only the nationality of Poland, but the individual safety of its whole inhabitants, must for ever bind them to their deliverers; they well know what cruel punishments and confiscations would await them should they again fall under the Muscovite yoke. In restoring the oldest of European commonwealths, therefore, not only will a memorable act of justice be done, a memorable punishment of iniquity inflicted, but a durable alliance on the frontier of civilisation will be formed, and a barrier erected against the inroads of barbarism in the people who, in every age, have devoted their blood to combating its advances."[1]

[1] Jom. ii. 328. Oginski, ii.

8. Arguments on the other side, against interfering on behalf of the Poles,

Specious as these arguments were, and powerfully as they appealed to the generous feelings of our nature, it may be doubted whether they were not opposed by others of greater solidity. " It is in vain," it was urged in reply, " to dwell on the misfortunes of Poland, or repre-

CHAP. XLIV. 1806.

sent her partition as an unavoidable calamity for which her inhabitants are noways answerable. Such a misfortune may doubtless sometimes occur to a small state surrounded by larger ones; but was that the case in the present instance ? On the contrary, Poland was originally the most powerful nation in the north: her dominions extended from the Euxine to the Baltic, and from Suabia to Smolensko. All Prussia, great part of the Austrian dominions, and a large portion of Russia, have at different times been carved out of her wide-spread territories.' So far from being weaker than Russia, she was originally much stronger; and the standards of the Jagellons and the Piasts have more than once been planted in triumph on the walls of the Kremlin. Nevertheless, her history for the last five hundred years has been nothing but a succession of disasters, illuminated at intervals by transient gleams of heroic achievement; and, notwithstanding the valour of her inhabitants, her frontiers have, from the earliest times, been constantly receding, until at length she became the prey of potentates who had risen to importance by acquisitions reft from herself. So uniform and undeviating a course of misfortune, in a kingdom so brave, so enthusiastic, and so populous, as even at the moment of its partition to contain sixteen millions of inhabitants, argues some incurable vice in its domestic institutions. It is not difficult to see what this vice was, when we contemplate the uniform and fatal weakness of the Executive, the disorders consequent on an elective monarchy, the inveterate and deadly animosity of faction, and the insane democratic spirit of a plebeian noblesse, which made John Sobieski, a century before its final destruction, prophesy the approaching ruin of the commonwealth.

"Such being the character of Polish institutions, as they have been ascertained by experience, and proved by the ruin of the commonwealth, it becomes a most serious question whether it is for the interest of France, for the

9. Certainty of the restoration of Poland inducing the inveterate hostility of theNorthern powers.

aid of such an ally, to incur the certain and inveterate hostility of the three northern powers. That Russia, Prussia, and Austria will thenceforth be combined in an indissoluble alliance against France, if Poland is restored, and the rich provinces now enjoyed by them from its partition wrested from their vast dominions, is evident; and, whatever may be thought of the strength of the Sarmatian levies, there can be but one opinion as to the military resources which they enjoy. What aid can Polish enthusiasm bring to the French standards, to counterbalance this strong combination of the greatest military powers of Europe % A hundred thousand horsemen, brave, doubtless, and enthusiastic, but destitute of fortresses, magazines, and resources, and inhabiting a level plain, unprotected by mountains, rivers, or any natural frontier, and open on all sides to the incursions of their well-organised opponents. Supposing that, by the aid of the vast army and still vaster reputation of Napoleon, they shall succeed at this time in beating back the Russian hosts, and wresting Lithuania from their grasp, what may not be apprehended from the appearance of Austria on the theatre of conflict, and the debouching of a hundred and fifty thousand men in the rear of the Grand Army, when far advanced in the deserts of Muscovy ? That the cabinet of Vienna is preparing for the conflict is evident; that she is arming is well known; fear and uncertainty as to the future alone restrain her forces. But the stroke which by restoring Poland severs Galicia from her empire, will at once determine her policy, and bring the Imperial legions in formidable strength to the banks of the Elbe. Even supposing that, by an unprecedented series of victories, these dangers are averted for the moment, and the French battalions, loaded with honours, regain the Rhine, how is Poland, still torn by intestine faction, and destitute of any solid institutions, without fortresses, or the defence of mountain ranges, to withstand her formidable military neighbours 1 How is

CHAP. XLIV. 1806.

France, at the distance of four hundred leagues, to protect a power whose internal weakness has always been such that it has never been able to protect itself against its own provinces? If a barrier is to be erected against Russian ambition, and a state formed dependent on the French alliance for its existence, far better to look for it in Prussia, whose history exhibits as remarkable a rise as that of Poland does a decline, and the solidity of whose institutions, not less than the firmness of her national character, has been decisively exhibited in her contest with all the military forces of Europe during the Seven Years' War."[1]

[1] Jom. ii. 329.

10. Napoleon adopts a middle course, and rouses only Prussian Poland.

Pressed by so many difficulties, and struck in an especial manner by the danger of bringing the forces of Austria upon his rear, while engaged in the hardships of a winter campaign in Poland, Napoleon resolved upon a middle course.* Irrevocably fixed upon humbling Prussia to the dust, and entirely indifferent to the irritation which he might excite among its people, he resolved to rouse to the uttermost the inhabitants of Prussian Poland; but at the same time sedulously to abstain from any invitations to Galicia to revolt, and even to hold out no encouragement to the Russian provinces of Lithuania to join the standard of Polish independence. Kosciusko, who, since his heroic achievements in 1794, had lived in retirement near Fontainebleau, was invited by Napoleon to join his countrymen; and a proclamation, drawn up in his name, was even published in the French papers, in which he promised speedily to put himself at their head; but the course of time soon dispelled the illusion, and it became

*** "I love the Poles," said he to Rapp, after having received one of their deputations; "their ardour pleases me. I could wish to render them an independent people, but it is no easy undertaking. Too many nations are interested in their spoils—Austria, Russia, Prussia. If the match is once lighted, there is no saying where it would stop. My first duty is towards France, and it is no part of it to sacrifice its interests to Poland—that would lead us too far. We must leave its destinies in the hands of the supreme disposer of all things—to Time. It will possibly teach us hereafter what course we ought to pursue."—BOUR. vii. 250.**

painfully evident to the Poles that their illustrious hero, despairing of success, or haying no confidence in their pretended allies, was resolved to bear the responsibility of no future insurrections under such auspices. * In fact, he had been profoundly affected by the indifference manifested by all the European powers to the fate of Poland on occasion of the final partition, and thoroughly impressed with the idea that no efficacious co-operation could be expected from any of them. While, therefore, he rendered full justice to the military talents of Napoleon, he did not the less despair of seeing the deliverance of Sarmatia in good faith attempted by his despotic arms. The task of rousing the Poles in the Prussian dominions was therefore committed to Dombrowski and Wybicki; the former of whom had acquired a deserved celebrity at the head of the Polish Legion in Italy, while the latter possessed such influence with his countrymen as to promise great advantage to the cause of Napoleon.[1]

[1] Oginski, ii. 337.

11. Forged proclamations issued in Kosciusko's name, and great excitement in Poland.

At the same time, every care was taken to excite the feelings and diminish the apprehensions of the Poles of Prussia; heart-stirring proclamations in Kosciusko's name were addressed to them by the generals of their nation in the Italian army; but that brave man himself, faithful to the oath he had taken to the Emperor of Russia, and aware of the delusive nature of Napoleon's support, refused to take any part in these proceedings; resisted all the brilliant offers which he made to induce him to engage in his service, and even had the boldness, in foreign journals, to disavow the letter which the French government had published in his name. Notwithstanding this reserve, however, the advance of the French armies to Warsaw,

*** " Kosciusko," said this fabricated epistle, dated 1st November, " is about to place himself in the midst of you. He sees in your deliverers no ambitious conquerors; the great nation is before you; Napoleon expects you; Kosciusko calls you. I fly to your succour, never more to leave your side. Worthy of the great man whose arm is stretched forth for your deliverance, I attach myself to your cause never again to abandon it. The bright days of Poland have returned; we are under the ægis of a monarch accustomed to overcome difficulties by miracles."—HARDENBERG, ix. 329.**

CHAP. XLIV.

1806.

and the sedulous care which they took to save the inhabitants from every species of insult or contribution, produced an extraordinary excitement in the Polish provinces. Universally they were hailed as deliverers—the substantial benefits, the real protection, the fostering tranquillity of the Prussian administration, were forgotten in the recollection of ancient achievements, and, incited by the heart-stirring prospect of coming independence, the nation was fast running into its ancient and ruinous anarchy. The public exultation was at its height when Napoleon arrived at Posen : several regiments were already formed in Prussian Poland; and. the arrival of the French troops in Warsaw, which the Russians evacuated at their approach, was universally hailed as the first day of Polish restoration.[1]

[1] Oginski, ii. 337, 348. Hard. ix. 344, 347. Bign.vi.79, 81.

12. Napoleon's ambiguous bulletin on the subject. Dec. 1.

Napoleon was not insensible to the important effects of this national enthusiasm, both in augmenting the resources of his own army, and intercepting those of his opponents; but at the same time he felt the necessity of not rousing all Poland in a similar manner, or incurring the immediate hostility of Austria, by threatening the tenure by which she held her Polish acquisitions. He resolved, therefore, to moderate the general fervour, and confine it to the provinces of Prussia, where it was intended to excite a conflagration; and this was done by the bulletin which appeared on the 1st December :—" The love which the Poles entertain for their country, and the sentiment of nationality, is not only preserved entire in the heart of the people, but it has become more profound from misfortune. Their first passion, the universal wish, is to become again a nation. The rich issue from their chateaus to demand with loud cries the re-establishment of the nation, and to offer their children, their fortune, their influence, in the cause. That spectacle is truly touching, Already they have everywhere resumed their ancient costumes, their ancient customs. Is, then, the throne of Poland about to be restored, and is the nation destined to resume

its existence and independence ? From the depth of the tomb is it destined to start into life ? God alone, who holds in his hands the combination of great events, is the arbiter of that great political problem, but certainly never was an event more memorable or worthy of interest." Situated as Napoleon was, the reserve of this language was an act of humanity as well as justice to the unhappy race whose destiny it still held in suspense ; but it contributed powerfully to allay the rising enthusiasm of the Russian and Austrian provinces of the ancient commonwealth ; and the prudent, despairing of any national resurrection from such an ally, began to ask, " i f the restoration of the republic of Poland could in good faith be expected from the man who had extinguished the liberty of his own country *V'*[1]

[1] Oginski, ii.339. Bign. vi. 80, 81. Lucches. ii. 226'.

13. Napoleon proposes to Austria to exchange Galicia for Silesia, which is refused.

One chance, and only one, remained to Napoleon of smoothing away the difficulties which surrounded the restoration of Poland, and that consisted in the proposal, which at this time he made to Austria, to exchange its share of Poland for its old province of Silesia. During the negotiation with Prussia for a separate peace, he only held out the prospect of this exchange in a doubtful manner to the cabinet of Vienna; but no sooner had the King of Prussia refused to ratify the armistice of Charlottenburg, than General Andreossi was authorised to propose it formally to that power. Count Stadion replied, that the good faith of the Imperial government would not permit them to accept a possession whose surrender was not assented to by Prussia; and it would indeed have been an extraordinary fault in policy, as well as breach of morality, to have thus despoiled a friendly power and reopened an ancient wound, at the very moment when a concentration of all energies was required to resist the enemy who threatened to destroy all the European states. In consequence of this refusal, the conduct of Napoleon, in regard to Poland, became still more guarded; and, although a provisional government and local administra-

Dec. 15.

1806.

tion were formed at Warsaw, yet none but natives of Prussian Poland were admitted to any share in the direction of affairs. Meanwhile the conduct of Austria was so dubious as to inspire no small disquietude for the rear of the Grand Army. Already sixty thousand men were assembled in Bohemia; new troops were daily directed towards Galicia, and the greatest activity was displayed in forming magazines in both these provinces. When questioned concerning these armaments, the cabinet of Vienna returned only evasive answers, alleging the necessity of making their frontiers respected by the numerous armies by which they were surrounded. Napoleon saw well that the Austrians were dissembling, but he concealed his resentment, and merely sent General Andr^ossi to Vienna to keep a more vigilant eye on the warlike preparations which were going forward.[x]

[1] Bign. vi. 90, 91. Hard. ix. 349, 350. Thiers, vii. 227.

14. Napoleon's strong declaration in favour of Turkey.

During his stay at Posen, the French Emperor made, on repeated occasions, the strongest professions of his resolution to support the Turks against the invasion of the Russians. To the Prussian plenipotentiaries at Charlottenburg he declared, " That the greatest of all the evils which Prussia has occasioned to France by the late war, is the shock they have given to the independence of the Ottoman Porte; as the imperious commands of the Emperor of Russia have brought back to the govern* ment of Wallachia and Moldavia the hospodars, justly banished from their administration ; which, in effect, reduces their principalities to the rank of Russian provinces. But the full and complete independence of the Ottoman empire will *ever be the object most at heart with the Emperor,* as it is indispensable for the security of France and Italy. He would esteem the successes of the present war of little value, if they did not give him the means of reinstating the Sublime Porte in complete independence. In conformity with these principles, the Emperor is determined that, until the Sultan shall have recovered the full and entire command both of Moldavia

and Wallachia, and is completely *secured in his own independence,* the French troops will not evacuate any part of the countries they have conquered, or which may hereafter fall into their power."[1] The same resolution was publicly announced in the bulletins, when intelligence of the ill-judged invasion of the principalities arrived; and yet, within six months afterwards, though Turkey had faithfully and gallantly stood to the French alliance under circumstances of extreme peril, Napoleon, as will shortly appear, signed a treaty at Tilsit, by which not only were Wallachia and Moldavia ceded to Russia, but provision was made for the partition of the whole Turkish dominions in Europe!

[1] Lucches. i. 186,187. [Triers, vii. 267.

15. His proclamation to lis soldiers on the anniversary of A.usterlitz.

While this great political question was under discussion, during the fortnight that the Emperor's stay continued at Posen, the army in great force approached the Vistula; but the severity of the weather, and the incessant fatigue of the troops, in the long and dreary marches through that monotonous country at so inclement a season, produced a general feeling of despondency among the soldiers, and gave rise to a fermentation which even Napoleon deemed alarming. To the intoxication consequent on the victory of Jena had succeeded a mortal disquietude, when, immediately after such glorious successes, instead of the cantonments and repose which they expected, they found themselves dragged on in the depth of winter to begin a new campaign, amidst pathless snows and gloomy forests. Even the heroic Lannes was so impressed with these difficulties, that he wrote to Napoleon in the strongest terms, advising the cessation of hostilities, and describing the anarchy and confusion which prevailed in Poland, from which no efficient aid could be expected.* In order to dispel these sinister presenti-

*** " Apres le succes de la guerre de Prusse, Lannes aurait voulu qu'on s'arretat sur l'Oder, et ne s'6tait pas impose la moindre contrainte dans l'expression de cette opinion. Parvenu a Bromberg a la suite d'une marche penible, il ecrivit a Napoleon qu'il venait de parcourir un pays**

CHAP. XLIV.

1806. Dec. %

ments, Napoleon took advantage of the anniversary of the battle of Austerlitz to address an animating proclamation to his army. " Soldiers! this day year, at this very hour, you were on the memorable field of Austerlitz. The Russian battalions fled in terror before you, or, surrounded on all sides, laid down their arms to their conquerors. On the day following they read the words of peace, but they were deceitful. Hardly had they escaped, by the effects of a generosity perhaps blamable, from the disasters of the third coalition, than they set on foot a fourth; but the new ally on whose skilful tactics they placed all their hopes is already destroyed. His strongholds, his capital, his magazines, two hundred and eighty standards, seven hundred field-pieces, five first-rate fortresses, are in our power. The Oder, the Wartha, the deserts of Poland, have been alike unable to restrain your steps. Even the storms of winter have not arrested you an instant; you have braved all, surmounted all. Everything has flown at your approach. In vain have the Russians endeavoured to defend the capital of the ancient and illustrious Poland. The French eagle hovers over the Vistula: the brave and unfortunate Poles, when they behold you, imagine that they see the soldiers of Sobieski returning from his memorable expedition! Soldiers! we shall not again lay down our arms till a general peace has secured the power of our allies, and restored to our commerce liberty and its colonies. On the Elbe and the Oder we have conquered Pondicherry, our establishments in the Eastern Seas, the Cape of Good Hope,

sablonneux, sterile, sans habitants, comparable, sauf le oiel, au desert qu'ou traverse pour aller d'Egypte en Syrie; que le soldat etait triste, atteint de la fievre, ce qui etait du a l'hmmidite" du sol et de la saison; que lea Polonaia etaient peu disposes a s'insurger, et tremblants sous le joug de leurs maitres; qu'il ne fallait pas juger de leurs dispositions d'aprds Tenthousiasme factice de quelques nobles attires a Posen par l'amour du bruit et de la nouveaute; qu'au fond ils etaient ton jours l*egers, divises, anarchiques,* et, qu'en voulant les reconstiteur en corps de nation, on epuiserait inutilement le sang de la France pour une ceuvre **sans** solidite et sans duree."—THIERS, *Consulat et l'Empire,* vii. 207.

and the Spanish colonies. Who has given the Russians right to hope that they can balance the weight of destiny? Who has authorised them to overturn such great designs? Are not they and we the soldiers of Austerlitz?" Even in the forests of Poland, and amidst ice and snow, the thoughts of Napoleon were incessantly fixed on England and the East; and it was to overthrow her power on the banks of the Ganges that a campaign was undertaken in the depth of winter on the shores of the Vistula.[1]

[1] Bign, vi. 75,76.Bour. vii. 261,252.

16. Its great effect. Formation of the Temple of Glory at Paris.

This proclamation, dictated by a profound knowledge of the French character, produced an extraordinary effect upon the soldiers. It was distributed with profusion over all Germany, and none but an eyewitness could credit the influence which it had in restoring the spirit of the men. The veterans in the front line forgot their fatigues and privations, and thought only of soon terminating the war by a second Austerlitz on the banks of the Vistula; those who were approaching by forced marches in the rear, redoubled their exertions to join their comrades in the more forward stations, and counted the days till they gained sight of the eagles which appeared to be advancing to immortal renown. The better to improve upon these dispositions, and at the same time establish a durable record of the glorious achievements of his troops, Napoleon, by a decree published on the same day, gave orders for the erection of a splendid edifice on the site of the convent of the Madeleine, at the end of the Boulevards Italiens at Paris, with the inscription —" The Emperor Napoleon to the soldiers of the Grand Army." In the interior were to be inscribed, on tablets of marble, the names of all those who had been present in the battles of Marengo, Austerlitz, and Jena; on tablets of gold, the names of all those who had fallen in these memorable conflicts. There also were to be deposited the arms, statues, standards, colours, and monuments of every description, taken during the two campaigns by the Grand Army. Every year a great solemnity was te

CHAP. XLIV.

commemorate, on the 2d December, the glory of these memorable days; but, in the discourses or odes made on the occasion, no mention was ever to be made of the Emperor : like the statues of Brutus and Cassius at the funeral of Junia, his exploits, it was well known, would only be the more present to the mind from being withdrawn from the sight.[1]

17. Napoleon's plans for its construction.

This project took a strong hold of the imagination of Napoleon : he gave immediate orders for the formation of plans for the edifice, and the purchase of all the buildings in the vicinity, in order to form a vast circular *place* of uniform buildings around it; and, as a previous decree had directed the construction of the Bourse or public exchange on that situation, he shortly after directed the minister of the interior to look out for another isolated situation for that structure, "worthy of the grandeur of the capital, and the greatness of the business which will one day be transacted within its walls." The Place which it fronted was to retain its title "de la Concorde," "for that it is," said Napoleon, "which renders France invincible." He was desirous that the monument should be an imitation of the Pantheon, or some other Grecian temple, and constructed entirely of the most durable and costly materials. The interior, in the form of an amphitheatre, was to be arranged with seats of solid marble; iron, bronze, and granite, intermingled with letters of gold, were alone to be employed in the inside. Among the designs presented, he at once fixed on that which has 3ince been adopted for that exquisite structure.* Such

Letter, 7th March 1807.

*** " Je ne veux nen en bois. Les spectateurs doivent etre plac6s, comme je Tai lit, sur des gradins de marbre formant les amphitheatres destines au public.—Elien, dans ce temple, ne doit toe mobile et changeant; tout, au contraire, doit y stre fixe a sa place.—II ne faut pas de bois dans la construction de ce temple.—Du granit et du fer, tels doivent etre les mat6riaux de ce monument.—Il faut shercher du granit pour d'autres monuments que j'ordonnerai, et qui, par leur nature, peuvent permettre de donner trente, quarante, ou cinquante ans a leur construction.—J'ai entendu un monument tel qu'il y en avait a Athenes, et qu'il a'y en a pas a Paris. was the origin of those beautiful edifices, the Church of the Madeleine and the Exchange at Paris; and which, carried on through other reigns, and completed under another dynasty, with that grandeur of conception and perseverance in execution by which the public edifices in Paris are distinguished, will for centuries attract the educated from all countries to Paris, as the centre of modern architectural beauty. To the world, at that time, Napoleon revealed no other design in the structure of the Madeleine than that of a monument to the Grand Army; but, penetrated with the magnitude of the mission with which he was persuaded he was intrusted—that of closing the wounds of the Revolution—he in his secret heart destined for it another and a greater object. He intended to have made it an expiatory monument to Louis XVI., Marie Antoinette, and the other victims of the Revolution—a design which he did not propose to declare for ten years, when the fever of revolutionary ideas was in a great measure exhausted ;[1] and therefore it was, that he directed its front to face the centre of the Place Louis XV., where those august martyrs had perished, and constructed it on the site of the Madeleine, near which

manger des femmes des banquiers a Paris. Tout ce qui est futile n'est pas simple et noble; tout ce qui n'est pas de longue duree ne doit pas etre employe dans ce monument. Je repdte qu'il n'y faut aucune espece de meubles, pas meme des rideaux."—NAPOLEON *au Ministre de l'Interieure, Finkemtein,* 30 May 1807; THIERS' *Consulat et l' Empire.*—Napoleon was endowed with the real soul of an artist; like Michael Angelo, he would have placed another Pantheon in the air. Had fortune not made him the first general, he was qualified to have become the greatest artist of modern times—another proof among the many which history affords of the truth of Johnson's observation, that " genius is nothing but strong natural parts accidentally turned in one direction." Yet, strange mixture of the great and the little in that extraordinary mind, even when engaged with those lofty designs destined to perpetuate glorious deeds to remote ages, ho could not forget the senseless jealousies of the moment. His observation as to the sculptures in the salons of the bankers' wives at Paris was a hit at Madame Recamier, the object of his extreme jealousy on account of her beauty, which almost balanced his colossal fame, and whose suite of rooms had been richly ornamented in that style,—another proof of the truth of the same great moralist's observation, " that no one ever raised himself from a private station to great eminence among men, who did not unite commanding qualities to meannesses which would be inconceivable in ordinary men."

CHAP. XLIV.

1806.

their uncoffined remains still lay in an undistinguished grave.*

18. Vast efforts of Napoleon to recruit his army, and secure his flanks and rear.

The commencement of a winter campaign, which would obviously be attended with no ordinary bloodshed, required unusual precautions for the protection of the long line of communication of the Grand Army, and the efforts of Napoleon 'were incessant to effect this object The march of troops through Germany was urged forward with all possible rapidity ; some attempts at insurrection in Hesse were crushed with great severity ; the conscripts, as they arrived from the Rhine or Italy at the different stations in the Prussian states, were organised and sent into the field almost before they had acquired the rudiments of the military art; and the subsidiary contingents of Saxony, Hesse-Cassel, and the states of the Rhenish confederacy, raised to double their fixed amount. By these means not only were the rear and communications of the Grand Army preserved from danger, but successive additions to its active force were constantly obtained; while at the same time Austria, whose formidable armaments on the Bohemian frontier already excited the attention of the Emperor, and had given rise to pointed and acrimo-

Napoleon's secret design in this edifice.

*** " No one but myself," said he,* could restore the memory of Louis XVI., and wash from the nation the crimes with which a few galley-slaves and an unhappy fatality had stained it. The Bourbons being of his family, and resting on external succour, in striving to do so, would have been considered as only avenging their own cause, and have increased the public animosity. I, on the contrary, sprung from the people, would have purified their glory, by expelling from their ranks those who had disgraced them, and such was my intention; but it was necessary to proceed with caution : the three expiatory altars at St Denis were only the commencement; the Temple of Glory on the foundation of the Madeleine was destined to be consecrated to this purpose with a far greater eclat. It was there that, near their tomb, above their very bones, the monuments of men, and the ceremonies of religion, would have raised a memorial to the memory of the political victims of the Revolution. This was a secret which was not communicated to above ten persons; but it was necessary to allow it to transpire in some degree to those who were intrusted with the preparation of designs for the edifice. I would not have revealed the design for ten years, and even then I would have employed every imaginable precaution, and taken care to avoid every possibility of offence. All would have applauded it; and no one could have suffered from its effects. Everything, in such cases, depends on the mode and time of execution. Carnot**

19. Enormous contributions levied on all the conquered states.

nious remonstrances from his military envoy, General Andreossi, to the cabinet of Vienna, was overawed.*

How to maintain these vast and hourly increasing armaments was a more difficult question; but here, too, the indefatigable activity of the Emperor, and his grinding system of making war support war, contrived to find resources. Requisitions of enormous magnitude were made from all the cities in his rear, especially those which had been enriched by the commerce of England: Napoleon seemed resolved that their ill-gotten wealth should, in the first instance, be devoted to the necessities of his troops. The decrees against English commerce were everywhere made a pretext for subjecting the mercantile cities to contributions of astounding amount. Fifty millions of francs (£2,000,000) were, immediately upon its occupation, demanded from Hamburg as a ransom for its English merchandise, seized in virtue of the decree of 21st November; and it only escaped by the immediate payment of sixteen millions, (£640,000.) In addition to this, that unhappy city, which had taken no part in hostilities against France, was ordered to furnish at once fifty thousand greatcoats for the use of the troops; while Liibeck, which had been successively pillaged by the

would never have ventured under my government to write an apology for the death of the King, but he did so under the Bourbons. The difference lay here; that I would have marched with public opinion to punish it, whilst public opinion marched with him, so as to render him unassailable."—LAS CASES, i. 370, 371.

*** In an audience of the Emperor of Austria, which that general obtained, he said with more of military frankness than diplomatic ambiguity—"The Emperor Napoleon fears neither his avowed nor his secret enemies. Judging of intentions by public acts, he is too clear-sighted not to dive into hidden dispositions; and in this view, he would infinitely regret if we were compelled to arrive at the conclusion, that the considerable armaments which your Majesty has had on foot since the commencement of hostilities were intended to be directed, in certain events, against himself. Your Majesty appears to have assembled on the flank of the French army all your disposable forces, with magazines beyond all proportion to their amount. The Emperor asks what is the intention of this army while he is engaged with Russia on the banks of the Vistula? Ostensibly intended for the preservation of neutrality, how can such an object be its real destination, when there is not the slightest chance of its being threatened."—BIGNON, vi. 88.**

CHAP. XLIV. 1806.

troops of Blucher and Bernadotte, was compelled to yield up four hundred thousand lasts of corn,* and wood to the value of sixty thousand pounds; Leipsic redeemed its English merchandise for ten million of francs, (£400,000,) while all the other Hanse Towns were subjected to equally severe requisitions; and the great impost of one hundred and sixty-nine millions of francs (£6,800,000,) imposed after the battle of Jena, was everywhere collected from the Prussian territories with a rigour which greatly added to its nominal amount. Under pretext of executing the decree against English commerce, pillage was exercised in so undisguised a manner by the French inferior agents, that it attracted in many places the severe animadversion of the chiefs of the army. Thus, while the decrees of the Emperor professed to be grounded on the great principle of compelling the English government, by the pressure of mercantile embarrassment, to accede to the liberty of the seas, in their execution he had already departed from their ostensible object; and, while the merchandise seized was allowed to remain in the emporiums of British commerce, its confiscation was made a pretext for subjecting neutral states or towns to inordinate requisitions for the support of the Grand Army.[1†]

20. Positions and force of the French on the Vistula.

By these different means Napoleon was enabled, before the middle of December, not only to bring a very great force to bear upon the Vistula, but to have the magazines and equipments necessary for enabling it to keep the field, during the rigours of a Polish winter, in a

*** Each last weighs 2000 kilogrammes, or about half a ton.—BOUR. vii. 249.**

+ As an example at once of the enormous magnitude of these contributions, and the provident care of the Emperor for the health and comfort of his troops, reference may be made to his letter to the French governor of Stettin, from which contributions to the amount of twenty million francs (£800,000) were demanded, though the city only contained thirty-two thousand inhabitants. "You must seize goods to the amount of twenty millions, but do it by rule, and give receipts. Take payment as much as possible in kind; the great stores of wine which its cellars contain would be of inestimable importance. It is wine which in winter can alone give the victory."—BIGNON, vi. 99.

CHAP. XLIV.

1806.

complete state of preparation. He was particularly solicitous for the increase and remounting of his cavalry, which had suffered extremely during the fatiguing marches of the preceding campaign. Four splendid regiments of cuirassiers, and five of light horse, formed by the sedulous care of Murat, were ordered up from Naples; and an immense establishment for cavalry was organised at Spandau, where all the horses taken from the enemy, and all that could be purchased, were collected, and distributed among the different corps which required them. The army in Italy was put on the war footing, to overawe Austria, and raised to 52,000 men. Fifty thousand more were on their march from the interior for the Grand Army. In all 300,000 men, in Germany, Italy, and Poland, were assembled round the standards of Napoleon, which, after making all deductions, promised to afford 150,000 ready for active service in the field. To make room for this immense force, the front was advanced towards the enemy. Davoust and Murat had entered Warsaw at the end of November, which was abandoned by the Prussians at their approach ; and two days afterwards they crossed the Vistula, and occupied the important *tSte-de-pont* of Praga on its right bank, which was in like maimer evacuated without a struggle. On the right Lannes supported them, and spread himself as far as the Bug; while on the left, Ney had already made himself master of Thorn, and marched out of that fortress, supported by the cavalry of Bessieres and followed by the corps of Bernadotte. In the centre, Soult and Augereau were preparing with the utmost activity to surmount the difficulties of the passage of the Vistula at Plock and Modlin. Thus eight corps were assembled, ready for active service, on that river, which, even after taking into view all the losses of the campaign, and the numerous detachments requisite to keep up the communications in the rear, could in all bring a hundred thousand men into the field ;[1] while the powerful reinforcements

1806.

on their march, through Prussia and Poland, promised to enable the Emperor to keep up the active force in front at that great numerical amount.

21. And of the Russians.

The Emperor Alexander was far from having an equal force at his disposal. The first army, under Benningsen, consisting of sixty-eight battalions and one hundred and twenty-five squadrons, could muster forty-five thousand men, organised into four divisions, under Ostermann Tolstoy, Sacken, Prince Gallitzin, and Sidmaratski. It arrived on the Vistula in the middle of November. The second, consisting also of sixty-eight battalions and one hundred squadrons, arranged in the divisions of TouchkofF, Doctoroff, Essen, and Aurepp, was about thirty thousand strong, its regiments having not yet filled up the chasms made by the rout of Austerlitz. The wreck of the Prussian forces, re-organised and directed under the able management of General Lestocq, did not number more than fifteen thousand men, when the requisite garrisons for Dantzic and Graudenz were completed from its shattered ranks. Thus the total Allied forces were not above ninety thousand strong, and, for the actual shock of war in the field, not more than seventy-five thousand men could be relied on. This imposing array was under the command of Field-marshal Kamenskoi, a veteran of the school of Suwarroff, nearly eighty years of age, and little qualified to measure swords with the conqueror of Western Europe, But the known abilities of Benningsen and Buxhowden, the two next in command, would, it was hoped, compensate for his want of experience in the novel art of warfare which Napoleon had introduced.[1]

[1] Dum. xvii. 99, 105. Jom. ii. 338. Bign.vi.109.

22. Positions of the troops, and their evacuation of Warsaw: Alexander's proclamation to his soldiers.

Headquarters had been established at Pultusk since the 12th November : Warsaw, all the bridges of the Vistula, were in the hands of the Allies; and the firmness of their countenance gave rise to a belief that they were disposed to dispute the passage of that river with the invaders. Until the arrival of the second army under Buxhowden, however, which was advancing by forced marches from

the Niemen, they were in no condition to keep their ground against the French ; and it was deemed better to give them the moral advantage arising from the occupation of the Polish capital, than to hazard a general engagement with so decided an inferiority of force. After some inconsiderable skirmishes, therefore, the Russians fell back at all points, their advanced posts were all withdrawn across the Vistula, and Warsaw, evacuated on the 28th, was occupied by Davoust on the 30th November. Previous to the opening of the winter campaign, Alexander addressed the following proclamation to his soldiers :— " Prussia formerly was the barrier between France and Russia, when Napoleon's tyranny extended over all Germany. But now the flame of war has burst out also in the Prussian states, and after great misfortunes, that monarchy has been struck down, and the conflagration now menaces the frontiers of our territory. It would be useless to prove to the Russians, who love the glory of their country, and are ready to undergo every sacrifice to maintain it, how such events have contributed to render our present efforts inevitable. If honour alone compelled us to draw our sword for the protection of our allies, how much more are we now called upon to combat for our own safety ? We have in consequence taken all the measures which the national security requires — our army has received orders to advance beyond the frontier—Field-marshal Kamenskoi has been appointed to the command, with instructions to march vigorously against the enemy— all our faithful subjects will unite their prayers with ours to the Most High, who disposes of the fate of empires and battles, that he will protect our just cause, and that his victorious arm and blessing may direct the Russian army, employed in the defence of European freedom."[1]

Sensible of the inferiority of its forces to those which Napoleon had assembled on the Vistula from all the states of Western Europe, the Russian cabinet made an application to the British government for a portion of those

CHAP. XLIV.

1806.

23. **Application for assistance in money to England. Its impolitic refusal.**

subsidies which she had so liberally granted on all former occasions to the powers who combated the common enemy of European independence; and, considering that the whole weight of the contest had now fallen on Russia, and the danger had now approached her own frontiers, they demanded, not without reason, a loan of six millions sterling, of which one was to be paid down immediately for the indispensable expenses connected with the opening of the campaign. It was easy to see, however, from the answer to this demand now, that the spirit of Pitt no longer directed the British councils. The request was refused by the ministry on the part of government; but it was proposed that a loan should be contracted for in England for the service of Russia, and that, for the security of the lenders, the duties on English merchandise, at present levied in the Russian harbours, should be repealed, and in lieu thereof, the same duties should be levied at once in the British harbours, and applied to the payment of the interest of the loan to the British capitalists. This strange proposition, which amounted to a declaration of want of confidence, both in the integrity of the Russian government and the solvency of the Russian finances, was of course rejected, and the result was, that *no assistance, either in men or money, was afforded by England to her gallant ally in this vital struggle.* An instance of parsimony and blindness beyond all example calamitous and discreditable, when it is considered that Russia was at that moment bearing the whole weight of France on the Vistula, and that England had at her disposal twenty millions in subsidies, and a hundred thousand of the best soldiers in Europe.[1]

24. **The Russians assume the offensive.**

Dec. 11.

No sooner had the advanced guards of Buxhowden's army begun to arrive in the neighbourhood of Pultusk, than Kamenskoi, whose great age had by no means extinguished the vigour by which he was formerly distinguished, made a forward movement. Headquarters were advanced to Nasielsk, and the four divisions of Benningsen's army

cantoned between the Ultra, the Narew, and the Bug; while Buxhowden's divisions, as they successively arrived, were stationed between Golymin and Makow ; and Lestocq, on the extreme right of the Allies, encamped on the banks of the Drewentz, on the great road leading to Thorn, was advanced almost up to the walls of that fortress. The object of this general advance was to circumscribe the French quarters on the right bank of the Vistula ; and as it was known that Napoleon with his Guards was still at Posen, hopes were entertained that his troops would be entirely driven from the right bank before his arrival, and the river interposed between the "winter quarters of the two armies.[1]

[1] Dum. xvii. 121, 125. Jom. ii. 339. Bign. vi. 110.

25. Napoleon advances to Warsaw. General enthusiasm there.

No sooner did Napoleon hear of this forward movement of the Russians, than he broke up from his quarters at Posen on 16th December, and arrived at Warsaw two days afterwards. No words can do justice to the warlike and patriotic enthusiasm which burst forth in that capital when they beheld the hero whom they hailed as their deliverer actually within their walls, and saw the ancient arms of Poland affixed to the door of the hotel where the provisional government of Prussian Poland was established. The nobility flocked into the capital from all quarters; the peasantry everywhere assembled in the cities, demanding arms; the national dress was generally resumed; national airs were universally heard; several regiments of horse were speedily raised, and before the conclusion of the campaign, thirty thousand men were enrolled in disciplined regiments, from the Prussian provinces alone of the ancient monarchy. To secure for themselves the powerful support of the French Emperor, the Polish leaders were desirous not only that the entire Sarmatian nation should be restored, but that a prince of his own family should be placed on its throne. With this view they suggested Murat, the Emperor's brother-in-law, whose great reputation, especially as a cavalry officer, and his chivalrous character, seemed to point him out as pecu-

liarly adapted for a nation whose nobles had boasted, in the days of their glory, that if the heaven itself were to fall, they would support it on the points of their lances. But Napoleon knew both the Poles and Murat too well to go into any such proposal. "I have not here," said he, "to beg a throne for my family — I have thrones enough to bestow without asking. Tell the Poles it is not by means of precautions, and personal calculations, that nations are delivered from a foreign yoke. I have come here for the general interest of Europe, to engage in one of the most difficult of enterprises, from which the Poles have more to gain than any other people. Their national existence is at stake, and not merely the general interests of Europe. If by unbounded devotion they second me sufficiently to secure success, I will award to them their independence. If not, I will do nothing, and leave them to the Russians and Prussians." The general enthusiasm did not make Napoleon forget his policy: the provisional government was established by a decree of the Emperor, only "until the fate of *Prussian Poland* was determined by a general peace;" and the prudent began to entertain melancholy presages in regard to the future destiny of a realm thus agitated by the passion of independence, and the generous sentiments of patriotic ardour, with only a quarter of its former inhabitants to maintain the struggle against its numerous and formidable enemies.[1]

26. And resumes the offensive against the Russians.

Having taken the precaution to establish strong *t3tes-de-pont* at Praga the outwork of Warsaw, Modlin, Thorn, and all the bridges which he held over the Vistula, Napoleon lost not an instant in resuming the offensive in order to repel this dangerous incursion of the enemy. Davoust, who formed the advanced guard of the army, was pushed forward from Praga on the road towards Pultusk, and soon arrived on the Bug; and, after having reconnoitred the whole left bank of that river, from its confluence with the Narew to its junction with the Vistula, madeprepara-

tions for effecting the passage at Okernin, a little below the junction with the Ukra. The Cossacks and the Russian outposts lined the opposite bank, and the difficulties of the passage were considerable; but they were not in sufficient force to dispute it in a serious manner; and after some sharp skirmishing, the experienced talents of General Gauthier, who was intrusted with the enterprise, established the French on the right bank, where they soon after sustained a severe action with the Russian advanced guard at Pomichowo. The Muscovites, however, returned in greater force; and the result was, that the French advanced guards were cut off, and the detachment to which they belonged fell back to the *tete-de-pont* established at the river. Meanwhile Soult and Augereau in the centre advanced to Plonsk, and Ney and Bernadotte, with Bessieres' cavalry, moved forward on the left from Thorn to Soldau and Biezun, in such a manner as to threaten to interpose between the detached corps under Lestocq and Benningsen's main body, which was concentrated in the neighbourhood of Nasielsk.[1]

1806. Dec. 11. Dec. 12. Dec. 21. Dec. 22.

27. Forcing of the passage of the Ukra by the French.

This partisan warfare continued for ten days without any decisive result on either side; but the arrival of Napoleon at Warsaw was the signal for the commencement of more important operations. On the 23d December, at daybreak, he set out from that capital for the army, with the Guards and Lannes' corps, and no sooner arrived at the advanced posts of Davoust, than he dictated on the spot directions for forcing the passage of the Ukra, which had hitherto bounded all their incursions."[*] The opera-

* " Napoleon," says Rapp, " no sooner arrived in sight of Okernin, than he reconnoitred the position of the Russians, and the plain which it was necessary to pass before arriving at the river. Covered with woods, intersected by marshes, it was almost as difficult to traverse as the fieldworks, which were bristling with Cossacks, were to carry on the opposite bank. The Emperor surveyed them long and with close attention; but as the thickets of wood in some places intercepted his view, he caused a ladder to be brought, and ascended to the roof of a cottage where he completed his observations. He then said, ' It will do—send an officer,' and when he arrived, dictated on the spot the minute directions for the movement of all the corps during the operation, which are preserved in Dumas, xvii. 137."—RAPP, 125.

CHAP. XLIV. 1806.

tion was carried into effect with the happiest success at Czarnovo, and with that ardour with which the presence of the Emperor never failed to animate the troops. After a severe action of fourteen hours, the passage was forced, and Count Ostermann, who commanded the Russian rear-guard, retreated upon Nasielsk. In this well-contested affair each party had to lament the loss of about a thousand men. Kamenskoi, finding the barrier which covered the front of his position forced, gave orders for concentrating his forces towards Pultusk on the Narew, and the Allies accordingly fell back at all points. They were vigorously pursued by the French, and another desperate conflict took place next day in front of Nasielsk, between General Rapp and the Russians under Count Ostermann Tolstoy, in which the latter were worsted, but not without a severe loss to the assailants. In this warm conflict the opposite bodies had become so intermingled that Colonel Ouvaroff, an aide-de-camp of Alexander, was made prisoner by the French; while Count Philippe de S^gur, destined for future celebrity as the historian of the still more memorable campaign of 1812, and attached to Napoleon's household, fell into the hands of the Russians. On the same day Augereau fought from daybreak till sunset at Lochoczyn on the Ukra, with the divisions opposed to him, which at length began to retire. Thus the Russians, pierced in the centre by the passage of the Ukra at Czarnovo and Lochoczyn, and the combat at Nasielsk, were everywhere in full retreat. No decisive advantage had been gained; but the initiative had been taken from the enemy, and his divisions, separated from each other, were thrown into eccentric lines of retreat, which promised every moment to separate them more widely from each other.[1]

Dec. '24.

28. Kamenskoi loses his presence of mind, and orders the sacrifice of the artillery.

Pultusk, was traversing a continual forest, through roads almost impassable from the mud occasioned by a long-continued thaw, and the passage of innumerable carriages, which had broken it up in all parts. Overwhelmed by these difficulties, he issued orders to sacrifice the artillery, which impeded the retreat—gave directions to arrest the supplies destined for the army at Grodno, and himself took the road of Lomza. Deeming such an order wholly unnecessary, and the result of that approaching insanity which soon after entirely overset the mind of the veteran marshal, Benningsen took the bold step of disobeying it; and, in order to gain time for the artillery and equipages to defile in his rear, he resolved to hold fast in the position of PULTUSK, with all the troops which he had at his disposal. Nothing could be more acceptable to the Russians, to whom the fatigues and privations of a retreat, at a season when sixteen hours out of the twenty-four were involved in total darkness, and the roads, bad at all times, were in many places several feet deep of mud, had been the severest trial of discipline and courage. No sooner, however, was it known that they were marching towards a chosen field of battle, than their hardships and difficulties were all forgotten, and the troops which, from mid-day on the 25th, successively arrived at Pultusk, took up their ground in parade order, full of enthusiasm for the battle on the morrow. Before it was dark, sixty battalions and fifty-five squadrons, with one hundred and twenty pieces of cannon, in all about forty thousand men, were here assembled; while the division of Doctoroff, with part of those of Sacken and Gallitzin, were opposed at GOLYMIN to Augereau's corps, one division of Davoust's, and one of Murat's cavalry. Three Russian divisions, viz. those of Essen, Aurepp, and Touchkoff, were at such a distance in the rear, both of Pultusk and Golymin, that they could not be expected to take any part in the actions which were approaching.[1]

1 Wilson, 77,80. Jom. ii. 341. Dum. xvii. 159,162.

The object of Napoleon in these complicated operations

CHAP. XLIV.

1806.

29. Object of Napoleon in these movements.

was in the highest degree important; and the vigour of Benningsen and Prince Gallitzin, joined to the extreme shortness of the days and the horrible state of the roads, alone saved the Allies from a repetition of the disasters of Auerstadt and Jena. His right wing, under Lannes, was intended to cut Benningsen's army off from the great road through Pultusk; his centre, under Davoust, Augereau, Soult, and Murat, was destined to penetrate by Golymin and Makow to Ostrolenka, directly in the rear of that town, and two marches between Benningsen and the Russian frontier; while the left wing, under Ney, Bernadotte, and Bessikres, was to interpose between Lestocq and the Russian centre, and throw him back into Eastern Prussia, where, driven up to the sea, he would soon, if the Russians were disposed of, be compelled, like Blucher, to surrender. A more masterly project never was conceived; it was almost a repetition of the semicircular march of the Grand Army round Mack at Ulm; and the hesitation of Kamenskoi between an advance and a retrograde movement, served to offer every facility for the success of the enterprise. The celerity of the Russian retreat, the sacrifice of seventy pieces of their heavy artillery, the dreadful state of the roads, which impeded the French advance, and the impervious intervening country, which separated their numerous corps from each other, alone defeated this profound combination, and prevented the arrival at Pultusk and Golymin, before the enemy, the corps which were there destined to fall upon their retreating columns, or bar the road to the frontiers of Russia.[1]

[1] Jom. ii. 340,341. Dum. xvii. 162,164.

30. Description of the field at Pultusk, And of the positions of the two hostile armies.

The position of Pultusk is the only one in that country where the ground is so far cleared of wood as to permit of any considerable armies combating each other in a proper field of battle. An open and cultivated plain on this side of the river Narew, there stretches out to the south and east of that town, which lies on the banks of

its meandering stream. A succession of thickets surround this open space in all directions, excepting that on which the town lies; and on the inside of them the ground rises to a semicircular ridge, from whence it gradually slopes down towards the town on one side, and the forest on the other; so that it is impossible, till this barrier is surmounted, to get a glimpse even of the buildings. There the Russians were drawn up in admirable order in two lines—their left resting on the town of Pultusk, their right on the wood of Moszjn, which skirted the little plain, the artillery in advance; but a cloud of Cossacks swarmed in front of the array, and prevented either the force or composition of the enemy from being seen by the French as they advanced to the attack. Sacken had the command of the left; Count Ostermann Tolstoy of the right; Barclay de Tolly, with twelve battalions and ten squadrons, occupied a copsewood in front of the right; while Bagavout, with twenty battalions and ten squadrons, was placed in front of the left, covering the town of Pultusk: Benningsen was stationed in the centre;—names destined to immortal celebrity in future wars, and which, even at this distant period, the historian can hardly enumerate without a feeling of exultation and the thrilling interest of former days.[1]

[1] Wilson, 77,78. Jom. ii. 341. Dum. xvii. 162, 165.

31. Battle of Pultusk. Dec. 26.

Atlas. Plate 42,

Lannes, with his own corps, and the division Gudin from that of Davoust—in all about thirty-five thousand men—resolved to force the enemy in this position, and for this purpose he, early on the morning of the 26th, advanced to the attack. The woods which skirted the little plain, occupied by the Russian light troops, in front of their position, were forced by the French voltigeurs after an obstinate resistance, and a battery which galled their advance, and which could not be withdrawn, was carried by assault. No sooner, however, had the French general, encouraged by this success, surmounted the crest of the ridge, and advanced into the open plain, than the cloud of Cossacks dispersed to the right and left, and

CHAP. XLIV. 1806.

exposed to view the Russian army drawn up in two lines, in admirable order, with a hundred and twenty guns disposed along its front. Astonished, but not panic-struck by so formidable an apparition, Lannes still continued to press forward, and as his divisions successively cleared the thickets, and advanced to the crest of the hill, they deployed into line. This operation, performed under the fire of all the Russian cannon, to which the French had as yet none of equal weight to oppose, was executed with admirable discipline, but attended with a very heavy loss, and the ground was already strewed with dead bodies when the line was so far formed as to enable a general charge to take place. It was attended, however, with very little success. The soil, cut up by the passage of so many horses and carriages, was in many places knee-deep of mud; heavy snow-showers at intervals obscured the heavens, and deprived the French gunners of the sight of the enemy ; while the Russian batteries, in position and served with admirable skill, alike in light and darkness sent their fatal storm of grape and round-shot through the ranks of the assailants. Notwithstanding these obstacles, however, the French advanced with their wonted intrepidity to the attack, and gradually the arrival of their successive batteries rendered the fire of cannon on the opposite sides more equal. Suchet, who commanded the first line, insensibly gained ground, especially on the French right, where the division of Bagavout was stationed; but Benningsen, seeing the danger, reinforced that gallant officer with fresh troops: a battalion of the French infantry was broken and cut to pieces by the Russian horse, and the rout in that quarter became so serious that Lannes was compelled to advance in person, with his reserve, to repair the disorder. By his efforts the forward movement of the Russians in that direction was arrested, and their victorious columns, charged in flank, while disordered by the rapidity of their advance, were forced to give ground, and resume their former position in front of Pultusk.[1]

[1] Dum. xvii. 164, 168. Jom.ii.342. Wilson, 79, 80 Rapp, 127.

Meanwhile another of Suchet's columns, on the left of the French, had commenced a furious attack on the advanced post in the wood on the right of the Russians, occupied by Barclay de Tolly. After a violent struggle the Russians were driven back; reinforced from the town, they again regained their ground, and drove the French out of the wood in disorder. Lannes, at the head of the 34th regiment, flew to the menaced point, and again in some degree restored the combat: but Barclay had regained his lost position and menaced the French extreme left. At this time, Gudin's.division of Davoust's corps, coming up, began an unexpected attack on the Russian right; Ostermann Tolstoy upon this brought up the Russian reserve, and after a murderous conflict, which lasted till long after it was dark, a frightful storm separated the combatants. Neither party could boast of decisive success; but the Russians remained masters of the field of battle till midnight, when they crossed the Narew by the bridge of Pultusk, and resumed their retreat in the most orderly manner; while the French also retreated to such a distance that next day the Cossacks, who patrolled eight miles from the field of battle towards Warsaw, could discover no traces of the enemy. The losses were severe on both sides : on that of the French they amounted to six thousand men; on that of the Russians to nearly five thousand; and the twelve guns which they lost in the morning were never regained.[1]

32. Which turns out to the disadvantage of the French.

[1] Wilson, 79,80. Jom. ii. 341, 342. Dum. xvii. 168, 174.

On the same day on which this bloody battle took place at Pultusk, a serious conflict also occurred at Golymin, about thirty miles from the former field of battle. Davoust and Augereau, supported by a large party of Murat's cavalry, there attacked Prince Gallitzin, who, with fifteen battalions and twenty squadrons, had taken post at the entrance of the town, to gain time for his artillery and carriages to defile through the forest in his rear. His force was successively augmented, however, in the course of the day, by the arrival of other troops from

33. Combat of Golymin,

CHAP. XLIV.

1806.

Dec. 24.

Sacken's and Doctoroff's corps, and before nightfall twenty-eight battalions and forty squadrons were assembled in line. Operations in that quarter had begun at daylight on the 24th, which in that inclement season was at eight in the morning; the bridge of Kollosump, over the Ukra, was carried by a brilliant charge by Colonel Savary; but that of Lochoczyn resisted all the efforts of the French, and it was only when it became no longer tenable, from the number who had crossed at Kollosump, that orders for the evacuation of the post were given. Continuing his march all the succeeding day, Augereau found himself, on the morning of the 26th, in presence of Prince Gallitzin, who was advantageously posted on the right of Golymin. As the French battalions and squadrons successively arrived on the ground, and deployed to the right and left, they were severely galled by the Russian artillery stationed in front of their positions; but they bravely formed line, and advanced with their accustomed gallantry to the attack, though few of their guns could as yet be brought up to reply to the enemy. The resistance, however, was as obstinate as the assault was impetuous, and, despite all their efforts, the French, after several hours' hard fighting, had not gained any ground from the enemy. But while this severe conflict was going on in front, a division of Murat's cavalry, advancing on the road from Czarnovo, * was discerned driving before it a body of Cossacks who had been stationed in that village; while a powerful mass of Davoust's infantry, which had broken up that morning from Stretzegoczin, joined the horse in front of Czarnovo, and their united mass, above fifteen thousand strong, bore down upon the troops of Gallitzin, already wearied by a severe combat of several hours' duration.[1]

[1] Dum. xvii. 176,182. Wilson, 82. Jom. ii. 342. Rapp, 127.

This great addition to the attacking force must have proved altogether fatal to the Russian troops, had they not shortly after received considerable reinforcements

*** A village on the road from Lochoczyn to Golymin, about a league distant from the latter town.**

34. Its doubtful issue.

from the corps of DoctorofF and Touchkoff, which in some degree restored the equality of the combat. Davoust, with the divisions Morand and Friant, so well known from their heroic conduct on the plateau of Auerstadt, charged vehemently through the woods which skirted the open space in front of Golymin; throwing off their haversacks, the Russian infantry met them with the bayonet; but after repulsing the French advance, they were themselves arrested by the murderous fire of the tirailleurs in the wood. Nearly encircled, however, by hourly increasing enemies, Prince Gallitzin withdrew his troops towards evening into the village, but there maintained himself with heroic constancy till nightfall, vigorously repulsing the repeated attacks of the conquerors of Jena and Auerstadt. Davoust, after occupying all the woods around the town, detached a brigade of horse to cut off the communication by the great road with Pultusk ; and they succeeded in clearing the causeway of the Cossacks and light horse who were posted on it. But the French dragoons, following up their success, were assailed by so murderous a fire from the Russian voltigeurs, standing up to the middle in the marshes on either side of the road, that half their number were slain; General Rapp, while bravely heading the column, had his left arm broken, and the discomfited remnant sought refuge behind the ranks of their infantry. When night closed on this scene of blood, neither party had gained any decisive advantage; for if the French had taken twenty-six pieces of cannon, and a large train of carriages which had stuck fast in the mud, the Russians still held the town of Golymin, and had inflicted upon them a loss of above four thousand men,[1]* while they had not to lament the destruction of more than half the number, in consequence chiefly of their great

[1] Rapp, 127, 128. Dura, xvii. 183, 185.

* The 47th Bulletin admits a loss of 800 killed and 2000 wounded on the part of the French at Golymin and Pultusk; and as their usual practice was to allow only a loss of a third to a fourth of its real amount, this would seem to imply that they lost on these occasions at least 10,000 or 12,000 men.—See 47th Bulletin in *Camp. en Prusse*, i i i 222.

CHAP. XLIV. 1806.

superiority in artillery to their assailants. As the order for retreat still held good, Prince Gallitzin, at midnight, resumed his march for Ostrolenka.

35. Napoleon stops his advance, and puts his army into winter quarters. Dec. 19 and 24.

Notwithstanding the obstinate resistance thus experienced by his lieutenants on both the roads on which his corps were advancing, and the unsatisfactory issue of the combats in which they had been engaged, Napoleon was still not without hopes of effecting the grand object of his designs—the isolating and surrounding the enemy's centre or left wing. On the extreme left of the French, Bernadotte and Ney had succeeded, after several severe actions, particularly one at Soldau, which was taken and retaken several times, and where the Prussians behaved with the most heroic resolution, in interposing between Lestocq and the Russian forces on the Ukra, and throwing the Prussian general back towards Konigsberg. If Soult could have effected the movement on Makow which was prescribed to him, he would have been directly in the rear of the troops who had combated at Pultusk and Golymin, who must have been reduced to the necessity of laying down their arms, or cutting their way through against great odds. But the frightful state of the roads, which in many places were three feet deep of mud, and the rudeness of the season, which alternately deluged the marching columns with drenching rain, driving sleet, and melting snow, rendered it totally impossible for that enterprising officer to effect the forced marches necessary to outstrip and get into the rear of the enemy; and the Russians, retiring to Ostrolenka and Hohenstein, still found the line of their retreat open. On the 28th, Napoleon advanced his headquarters to Golymin; but having there received certain intelligence that the Russians must anive at Makow before Soult could possibly get thither, he saw the object of the campaign was frustrated, and resolved to put his men into winter quarters. On that day, accordingly, he issued orders to stop the advance of the troops at all points; [1] they were put into cantonments

Dec. 28.

[1] Dum. xvii. 185,191. Jom. ii. 342, 343. Wilson, 82, 83.

between the Narew and the Ukra, and the Emperor himself returned with the Guards to Warsaw.

1806.

On the side of the Russians, repose had become nearly as necessary; the weather was as unfavourable to them as to the French. Their infantry, equally with the enemy'gf had shivered up to the knees in mud at Pultusk; their cavalry, equally with his, sank in the marshes of Golymin: the breaking up of the roads was more fatal to them than their opponents, as the guns or chariots, which were abandoned, necessarily fell into hostile hands; and experience had already begun to evince, what more extended observation has since abundantly confirmed,[1] that exposure to an inclement season was more fatal to the troops of the north than those of the south of Europe. In these circumstances it was with the most lively satisfaction that they perceived that Napoleon was disposed to discontinue the contest during the remainder of the rigorous season; and their troops, retiring from the theatre of this bloody strife, were put into cantonments on the left bank of the Narew, after having evacuated the town and burned the bridge of Ostrolenka.[2]

30. The Russians also go into winter quarters.

[1] Larrey's Surgical Campaign. Infra, c. lxxiii. § 78.

[1] Dum. xvii, 191, 194. Jom. ii. 344.

This desperate struggle in the forests of Poland in the depth of winter made the most lively impression in Europe. Independent of the interest excited by the extraordinary spectacle of two vast armies, numbering between them a hundred and fifty thousand combatants, prolonging their hostility in the most inclement season, and engaging in desperate conflicts amidst storms of snow, and when the soldiers on both sides were often sunk up to the middle in morasses, bivouacking for sixteen hours together without covering on the cold damp ground, or plunging fearlessly into streams swollen by the rains and charged with the ice of a Polish winter, there was something singularly calculated to awaken the passions in the result of this fearful contest. Both parties loudly claimed the victory : Te Deum was sung at St Petersburg ; the cannon of the Invalides roared at Paris; and

37. Results of this winter campaign, and impression which it produces in Europe.

CHAP. XLIV.

Benningsen, imitating in his official despatches the exaggerated accounts of the French bulletins, asserted a complete victory at Pultusk, under circumstances where a more faithful chronicler would only have laid claim to the feonour of a divided combat. The French indignantly repelled the aspersion on their arms, and pointed with decisive effect to the cantonments of their troops, for evidence that the general result of the struggle had been favourable to their arms. But though there was no denying this, when the Russian troops, instead of having their advanced posts between the Ukra and the Vistula, had now retired behind the Narew at Ostrolenka, still enough was apparent on the face of the campaign to excite the most vivid hopes on the one side, and serious apprehensions on the other, throughout Europe. It was not to win merely eighty miles of forest, interspersed with the wretched hamlets or squalid towns of Poland, that the Emperor had left Warsaw at the dead of winter, and put so vast an army in motion over a line thirty leagues in length. There was no claiming of the victory on both sides at Austerlitz or Jena; the divided trophies of the late engagements indicated a struggle of a very different character from those which had preceded them; it was evident that the torrent of French conquest, if not permanently Stemmed, had at least been checked. The interest excited by these events, accordingly, was intense over all the Continent, and still more so in England; and hopes began to be entertained that the obstinate valour of the north would at length arrest the calamities which had so long desolated Europa. Happy would it have been if the cabinets of Vienna and St James's had improved on these dispositions, and taken advantage of the pause in the career of universal conquest, to render effectual aid to the powers who now threw the last die for the independence of Europe on the shores of the Vistula* But recent calamities had prostrated the strength of the Austrian monarchy, and shaken the nerves of its rulers ; and

the administration of affairs in Great Britain had fallen into the hands of a party whose minds had been so perverted by long and impassioned opposition to Mr Pitt's policy, that they could not see that the time had now arrived when it was loudly called for, and might be followed out with a certainty of success. Hence the opportunity of decisive interposition was allowed to pass over without anything being done by either power; and to Austria was bequeathed, in consequence, the overthrow of Wagram—to England, the costly and bloody efforts of the Peninsular campaigns.[1]

[1] Wilson, 82, 83. Dum. 206.

38. Positions of the French army in winter quarters.

The French army, which was now put into winter quarters, amounted to one hundred and sixty thousand men, including forty thousand horse : so wonderfully had the levies in France and the allied states compensated the consumption of human life during the bloody battles and wasteful marches which had occurred since they arrived on the banks of the Saale. The cantonments, from the extreme right to left, extended over a space of fifty leagues, forming beyond the Vistula the chord of the arc which that river describes in its course from Warsaw to Dantzic. The left wing, under Bernadotte, was, from its position, most exposed to the incursions of the enemy; but no apprehensions were entertained of its being disquieted, as that marshal, whose rallying point was Osterode, could speedily receive succour, in case of need, from Marshal Ney, who lay next to his right, and would thus have fifty-five thousand men under his command. The centre and right wing, nearly a hundred thousand strong, were almost detached from the left wing, and lay more closely together on either side of Warsaw. To provide subsistence for so great a multitude amidst the forests and marshes of Poland was no easy matter; for its fertile plains, though the granary of Western Europe,[2] raise their admirable wheat crops only for exportation, and present, in proportion to their extent of level surface, fewer resources for an army than

[1] Dum. xvii. 198,208. Jom. ii 344.

CHAP. XLIV. 1806.

any country in Europe. But it was in such subordinate though necessary cares, that the admirable organisation and indefatigable activity of the Emperor shone most conspicuous.

39. Napoleon's measures to provide supplies and secure his cantonments.

Innumerable orders, which for a long time back had periodically issued from headquarters, had brought all the resources of Germany to the supply of the army in Poland. Convoys from all quarters were incessantly converging towards the Vistula, and supplies of every sort, not only for the maintenance of the soldiers, but for the sick and wounded, as well as the munitions of war, transported in many thousand carriages, were brought up from the Rhine and the Danube in abundance. So great was the activity in the rear of the army, that the roads through Prussia bore rather the appearance of a country enriched by the extended commerce of a profound peace, than of a district lately ravaged by the scourge of war. Great hospitals were established at Thorn, Posen, and Warsaw; thirty thousand tents, taken from the Prussians, were cut down into bandages for the use of the wounded; immense magazines formed all along the Vistula, and formidable intrenchments erected to protect the *tetes-de-pont* of Praga, Thorn, and Modlin on the Vistula, and Sierock on the Narew. Though the blockade of Dantzic was not yet formally commenced, yet it was necessary to neutralise the advantages which the enemy derived from the possession. of so important a fortress on the right of their line; and for this purpose a French division, united to the contingent of Baden and the Polish levies, was formed into the tenth corps, and placed under the command of Marshal Lefebvre. It soon amounted to twenty-seven thousand men, and began to observe the fortresses of Dantzic and Colberg; while Napoleon evinced his sense of the dubious nature of the struggle in which he was engaged, by sending for his experienced lieutenant, Massena, from the scene of his easy triumphs amidst the sunny hills of Calabria, to a sterner conflict on the frozen fields of Poland.[1]

[1] Jom. ii. 345. Dum. xvii. 205, 208. Ann. *Reg.* 1807, 3.

The repose of the army at Warsaw was no period of rest to the Emperor. Great care was taken to keep alive the spirits of the Poles, and conceal from them the dubious issue of the late conflict; and for this purpose it was announced that almost all the prisoners taken from the Russians had either been marched off for France, or already entered the ranks of the Grand Army ; while the eighty pieces of cannon, which they had been forced to leave behind them in their retreat, were ostentatiously placed before the palace of the republic. Orders were at the same time sent to Jerome to press the siege of the fortresses in Silesia which still remained in the hands of the Prussians. The pusillanimous and unaccountable surrenders of Stettin and Ciistrin have already been mentioned ;* and in the consequences which immediately flowed from those disgraceful derelictions of duty, was soon made manifest of what vast importance it is that all officers, even in commands apparently not very considerable, should, under all circumstances, adhere to the simple line of duty, instead of entering into capitulations from the supposed pressure of political considerations. The transport of artillery and a siege equipage from the Rhine or the Elbe to the Oder would have taken a very long period, and prolonged the reduction of the interior line of the Prussian fortresses ; but the surrender of Ciistrin to the summons of a regiment of infantry and two pieces of cannon, enabled Vandamme speedily to surround Glogau with a formidable battering-train, which, before the first parallel was completed, induced its feeble governor to lower his colours.[1]

40. Reduction of the fortresses in Silesia.

Atlas. Plate 34.

Dec. 2.

[1] **Dura. xrii. 217, 220. Jom. ii. 220. Ann. Reg. 1807, 22.**

From the vast military stores captured in that town, a battering-train for the reduction of Breslau was immediately obtained, and forwarded along the Oder with such rapidity that, on the 15th December, the trenches before that place, the capital of Silesia, a *cheval* on the Oder, and a fortress of the first order, were opened, and a heavy

CHAPTER XLI.

THE BRITISH FINANCES, AND MR PITT'S SYSTEM OF FINANCIAL POLICY.

Page

1. Importance of the subject, 1
2. Astonishing financial efforts of England during the war, 2
3. Historical details.—Public income before the Commonwealth. Large increase consequent on the Great Rebellion, 3
4. Permanent addition to them on the accession of William III., 4
5. Reasons which led to the introduction of the national debt, . 5
   Corresponding increase of the expenditure of France on the accession of Louis Philippe, ... • *note,* 6
6. Progressive growth of the public debt during the succeeding century, 7
   Table illustrating its increase, ... *note,* 8
7. Alarming financial aspect of the country on Mr Pitt's accession to power in 1784, ... 9
8. Principle on which he proposed to remedy the existing evils, *ib.*
9. His strong expressions on the importance of the subject in parliament, 11
10. And his simultaneous adoption of measures for national defence, 12
11. Establishment of the sinking-fund, and Mr Pitt's speech on introducing it, 13
12. Mr Fox gives this plan his cordial support, ... 15
13. It is passed by the legislature, and made applicable to all future loans, 16
14. Modification introduced upon the system in 1802, 18
15. Immense results of the sinking-fund, ... 19
    Table showing the progressive growth of the sinking-fund, . . *note,* 20
16. Obloquy to which it became exposed, ... 20
17. General diffusion of this delusion, ... 21
18. Which is the more dangerous, as it involves much abstract truth mixed with error, ... 22
19. Comparison of the arguments for and against the sinking-fund, 23
    Pitt clearly saw the objection since urged against the system, . *note,* 24
20. Value of the system in time of peace, ... 24
21. Distinctive merit of Mr Pitt's system for the sinking-fund, 26
22. Proof of these principles afforded by the result during the last twenty years, ... 27
23. It is clearly the only way of effecting a reduction of the debt, ib.
    Durable and far-seeing system which he had established, . . *note,* 28
24. Had it been adhered to, the whole debt would have been discharged in 1845, ... 29
    Tables showing the progressive growth of a sinking-fund of fifteen or ten millions, from 1816 to 1836, ... *note, ib.*

Page

25. Uauses wnicn nave lea to trie aecay of tms system, **30**
26. It was the desire for present popularity in the government, . **31**
Table showing the amount of direct and indirect taxes repealed from 1816 t o 1834, ... *note* 32
27. Great error in not repealing at once all the direct taxes on the peace, 33
28. Imprudent remission of indirect taxes since 1816, 34
29. Little good has been derived from this repeal of indirect taxes, 35
30. Immense burdens under which the nation prospered during the war, . 36
31. Argument o n this subject, ... 37
32. Great immediate as well as ultimate advantages which would have attended keeping u p the sinking-fund, ... **38**
33. Beneficial result which would have arisen from keeping up the price of the funds, ... *ib.*
34. Public errors which led to its abandonment, and their distressing effects, 39
35. Lord Castlereagh's error regarding the income-tax, 40
36. The nation was mainly responsible for this change of system, 41
37. Advantages o f the funding system, ... 42
38. Its dangers, ... 43
39. M r Pitt's views o n this subject, ... 44
40. Modification which they received after the first Continental peace in 1797, 45
41. Mr Pitt's speech on the change then introduced, *ib.*
42. He proposes to augment the supplies raised within the year, . 47
43. Trebling o f the assessed taxes, ... *48*
44. In Mr Pitt's view, these heavy burdens were to be temporary only, . *ib.*
45. Great change o f system thus introduced, ... 49
46. First introduction o f the income-tax, ... 50
47. Mr Pitt's speech introducing this impost, and his plan, 51
48. Objections urged against it, ... 52
49. I t i s adopted b y parliament, ... 53
50. Change subsequently induced o n the system, ... 54
51. Advantages o f the new system, ... *55*
52. Mr Pitt's permanent taxes were all in the indirect form: their advantages, *56*
53. Arguments for indirect taxation, ... 57
54. Keply t o the objections against it, ... 58
55. Beasons of the superior lightness of indirect taxation, 59
56. Cases in which indirect taxes, by being excessive, become direct burdens o n production, ... 60
57. Important difference between indirect taxes on rural and manufactured produce, ... 61
58. General character of Mr Pitt's financial measures. Their grandeur and foresight, ... 62
59. Their errors. Undue extent of the funding system, . 63
60. Niggardly use of the military forces of England, 34
61. This was his great defect, , 55
62. Injudicious system of borrowing in the three per cents, 56
63. Its effects in preventing the reduction of interest on peace, . . 57
64. The temporary diminution of interest was no adequate compensation for these evils, ... 58
65. In Mr Pitt's view, the sinking-fund was to remedy all these evils, . *70*
Table of the whole expenses of every year, in every department, during the war, ... *note,* 1 1

§ PAGE
66. Vast effects of the suspension of cash payments in 1797, 72
67. Causes which produced the suspension of cash payments in 1797. Its powerful operation in increasing the present resources of the state, *ib.*
68. It was the mainspring of the financial strength of the nation during the war, ... 74
Table showing the paper and coin issued, with the exports, imports, and revenue of every year during the war, ... *note*, 75
69. Great temporary advantages of the funding system, 75
70. The undue ascendency of popular power led to the undoing of Mr Pitt's durable system for reduction of the debt, 77
71. And it must ultimately ruin the British empire, 78
72. The contraction of the currency by the bill of 1819 was the cause of this, 79
73. Which was itself owing to the ascendency of the moneyed interest produced by the war, ... 80
74. These causes will impel the British race to the New World, . 81

CHAPTER XLII.

FROM THE PEACE OF PRESSBURG TO THE RENEWAL OF THE CONTINENTAL WAR. JANUARY—OCTOBER 1806.

1. Immense results of the campaign of Austerlitz, 83
2. The premiership offered to Lord Hawkesbury, and declined, 84
3. Public opinion on the necessity of a coalition of parties, 85
4. Mr Fox is sent for, ... 86
5. State of parties in the country, and their principles, 87
6. Composition of the cabinet, 88
7. First measures of the new ministry. The budget, 89
8. Return of Napoleon to Paris. Financial crisis there, 91
9. Its ostensible causes, ... *ib.*
10. Vast speculations of M. Ouvrard, 93
11. The immediate cause of the explosion was the absorption of gold for the German war, ... 94
12. Measures of Napoleon in consequence, 96
13. Real cause of the catastrophe, . *ib.*
14. Means by which the crisis had hitherto been avoided, 97
15. The root of the evil was the extravagant expenditure of government, 98
16. Financial changes in consequence introduced in France, 99
17. And imposition of the French armies as a burden on foreign states, 100
18. French budget for 1805, and exposition by the minister of the interior, 101
19. Exposition of the triumphs of France: silence as to Trafalgar, 102
20. Erection of the column in the Place Venddme, 103
21. Advance of the French against Naples, . . . 104
22. Successful invasion of Calabria, . 105
23. Joseph Buonaparte created King of the two Sicilies, 106
24. Naples is threatened by Sir Sidney Smith. General Stuart lands in the Bay of St Euphemia, ... 107
25. Reynier resolves to attack him, ... 108
26. Battle of Maida, ... 109

Page

27. Great moral effect of this victory, 110
28. Its immediate results are less considerable, 111
29. Surrender of Gaeta, ... 112
30. Retreat of the English. Suppression of the insurrection, 113
31. Domestic reforms of Joseph in Naples, . 114
32. Miserable state of Holland since its conquest by France, 115
33. Napoleon's measures to place his brother Louis on the throne of that country, ... 116
34. Creation of military fiefs in the kingdom of Italy, *ib.*
35. Napoleon's secret views in these measures, 117
36. Audience given to the Turkish ambassador, 118
37. Naval operations; sailing and division of the Brest fleet, 119
38. Defeat of the first squadron at St Domingo, 120
39. Disasters of Willaumez's squadron, *ib.*
40. Capture of Linois, and other naval operations, . 122
41. Reflections on these last naval disasters of France, 123
42. Greatness of the French navy under Louis XVI., 124
43. Napoleon's change of system in regard to the naval war, *ib.*
44. Reflections on the growth of the English maritime power, 125
45. Character of the French navy, ... 126
46. Probable future influence of the British navy on the world, 127
47. Reduction of the Cape of Good Hope, . 128
48. Sir Home Popham resolves to attack Buenos Ayres, 129
49. Which falls, ... 130
50. Embarrassment of government on this success, *ib.*
51. Buenos Ayres is retaken by the South Americans, 131
52. Differences with America in regard to neutral rights, 132
53. Grounds of conduct of England, as explained by Sir W. Scott, 134
64. Violent measures of Congress, . 135
55. The commissioners on both sides adjust the differences, *ib.*
56. Continental affairs. Coldness between France and Prussia, 136
67. Increasing jealousies between the two cabinets. Prussia on Hanover, ... 138
58. Measures of retaliation by Great Britain, *ib.*
59. Mr Fox's speech on the subject, 140
60. Napoleon's opinion of Prussia in this transaction, 141
61. His further measures of aggression on Germany, *ib.*
62. Universal indignation in the north of Germany, 142
Gentz's pamphlet on the subject, *note,* 143
63. Formation of the Confederacy of the Rhine, 143
64. Powers admitted to the confederacy, 145
65, The Emperor renounces the crown of Germany, 146
Addresses of Napoleon and the Emperor Francis to the German States, ... *note,* 148
66. Great sensation which these events produce at Berlin, 148
67. Fresh umbrage of Prussia at the treaty of France with Russia. Warlike preparations of Prussia, ... 150
Renewed causes of discord between France and Russia, . . 151
69. Differences about Cattaro, which is occupied by the Russians, . . 152

83.	Unwise refusal of military succour by England,	369
84.	Universal consternation at Paris on the news being received of Eylau,	370
85.	Napoleon demands a third conscription since the beginning of the war,	*ib.*
86.	Immense activity of Napoleon to repair his losses,	372
87.	Extreme danger of Napoleon's situation at this juncture,	373
88.	Ruinous effect of the surrender of the Prussian fortresses,	374
89.	Observations on the movements of both parties,	375

CHAPTER XLV.

DOMESTIC AND FOREIGN MEASURES OF MR FOX'S ADMINISTRATION. FEBRUARY 1806—MARCH 1807.

1. Important civil changes which originated during the war, 377

2. Effects of the accession of the Whigs to power, 378

§ Page
3. Their plan for a new system for the recruiting of the army, 379
4. Great change in the composition of the army. Arguments in support of it by Mr Windham, ... 380
5. Impracticability of forced conscription, ... 381
6. Inefficiency of voluntary enlistment, ... 382
7. Means by which he proposes to render it more efficient, 383
8. Advantages of short periods of enlistment, as securing a better class of soldiers, ... 384
9. Proposed limitation of that period, ... 385
10. Reply of the former ministers on the subject, ... 386
11. The limited enlistment already partially in operation, . 387
12. The circumstances of Great Britain peculiar, and without precedent in those of any foreign state, ... 388
13. Arguments against the reduction of the volunteer force, 389
14. And in favour of raising the additional force required by ballot, 390
15. The bill passes, ... 391
16. Reflections on the measure, ... *ib.*
17. Error of the ministerial plan so far as regards the volunteers, 393
18. Temporary service now in a great degree abandoned, . . 394
19. Abolition of the slave trade, ... 395
20. Arguments against the change by the West India interest, *ib.*
21. Alleged evil effects of abolition of the trade, ... 396
22. The slave trade asserted not to be the cause of the degraded state of Africa, 397
23. Arguments of Mr Wilberforce and others for the abolition, 398
24. Their answer to the assertion of the necessity of the trade to maintain the supply of negroes, ... 399
25. Alleged gradual improvement of the race should the trade be abolished, 400
26. Its demoralising effect on Africa, ... 401
27. Abolition tends to promote the gradual abrogation of slavery itself, . 402
28. The abolition is carried, ... 403
29. Deplorable effects of the change hitherto on the negro race, . 404
30. But they are not chargeable on its authors, but subsequent changes, . 405
Enormous present extent and horrors of the slave trade, . *note ib.*
Immense increase of produce in the slave colonies of late years. Comparatively stationary condition of the British islands, . *note,* 406
Enormous fiscal injustice to which they have been exposed, . *note, ib,*
31. Ruinous effects of emancipation of negroes, ... 408
Rapid decline of West India produce since emancipation, . *note, ib.*
32. Which are to be ascribed to the emancipation of the negroes, not to the abolition of the slave trade, ... **409**
33. Lord Henry Petty's plan of finance, ... **411**
34. Argument in favour of it. Advantages of the sinking-fund, . **412**
35. Proposed measures for the redemption of the successive loans, **413**
36. And for providing the charges on them, . **414**
37. Advantages of the proposed system, ... ***ib.***
38. Argument against it by Lord Castlereagh and Mr Perceval, . . **416**
39. Counter-plan proposed by them, ... ***ib.***
40. The ministerial scheme as threatening to break up the sinking-fund, . **418**
41. Budget for 1807, ... **419**
42. Reflections on this subject, ... ***ib.***
43. Prejudicial effect in the end of these discussions, . . *4***421**

§
44. Lord Henry Petty's plan was the preferable of the two, 421
45. General character of the Whig measures of domestic administration at this period, ... 422
46. Foreign transactions. Fresh expedition to South America, and capture of Monte Video, ... 423
47. A second expedition against Buenos Ayres is resolved on, 425
48. Preparations for its defence, ... 426
49. Failure of the attack, ... 427
50. Court-martial on General Whitelocke, who is cashiered, 428
51. Reflections on this event, ... *ib.*
52. Capture of Curacoa, and establishment of the republic of Hayti, 429
53. State of affairs in Turkey, ... 430
54. Cause of rupture between Turkey and Russia, ... 431
55. Dismissal of the Waiwodes of Wallachia and Moldavia by Sultaun Selim, *ib.*
56. Violent remonstrances of Russia and England, which produce a repeal of the measure, ... 433
57. Meanwhile the Russian armies invade the principalities, 434
58. And war is declared, ... 435
59. Rapid progress of the Russians in the principalities, 436
60. The Russians require the aid of a naval attack by England on Constantinople, which is agreed to, *ib.*
61. Description of the Dardanelles, ... 437
62. Ultimatum of Great Britain, and declaration of war by Turkey, . 438
63. Sir John Duckworth resolves to pass the Dardanelles, 439
64. The Straits are forced after much resistance, ... 440
65. The Divan resolves on submission, as Constantinople was defenceless, 441
66. Intrepid conduct of Sebastiani, ... *ib.*
67. The Turks negotiate to gain time, and complete their preparations, . 442
68. Vast energy displayed by the Mussulmans in their defence, . 443
69. The English renounce the enterprise, ... 444
70. The British fleet repass the Straits, ... 445
71. Blockade of the Dardanelles, ... 446
72. Naval actions off Tenedos, ... 447
73. Descent by the British on the coasts of Egypt. Macleod defeated at El Hammed, ... 448
74. Evacuation of Alexandria, ... *ib.*
75. Great discontent at these repeated defeats throughout Great Britain, 449
76. Measures for introducing the Catholics into the army and navy brought in by Lord Howick, ... *ib.*
77. Arguments in favour of it by Lord Howick, ... 450
78. Arguments against it by Mr Perceval, ... 451
79. The alleged tendency of the measure, ... 452
80. Repugnance of the King to the bill, which is withdrawn, 453
81. The King requires a written pledge that no further concessions should be made to the Catholics. Change of ministry, 454
Composition of the new cabinet, ... *note,* 456
82. Arguments in parliament against the Kong's conduct, . 456
83. And in support of it by Mr Perceval and Mr Canning, . 457
84. The sovereign had been left in the dark as to the extent of the measure, 458
85. Defence of his conduct in requiring the pledge from ministers, 459
86. Dissolution of parliament, and great majority for the new ministers, . 460

§ Pago
87. Biography of Lord Eldon, ... 461
88. His rise at the bar to the office of chancellor, ... 462
89. His character as a lawyer and statesman, ... 463
90. Character of the "Whig ministry, and effects of their fall, 464
91. Eeflections on their foreign measures, ... 465
92. And their glaring neglect of the Russian war, ... 467
Repeated and ineffectual applications which Alexander had made for aid from England during the Polish war, . . . *note,* 468
93. The Dardanelles expedition is an exception to the general inexpedience of their foreign policy, ... 468
94. These defeats were ultimately beneficial, ... 470

CHAPTER XLVI.

CAMPAIGN OF FRIEDLAND, AND PEACE OF TILSIT.

1. Negotiations and treaties between the Allies for the vigorous prosecution of the war, ... 471
2. Austria strives to mediate between the contending powers. Treaty between Prussia and Russia at Bartenstein, 472
3. To which England and Sweden accede, ... 473
4. But too late to prevent the irritation of Russia, ***ib.***
5. Negotiations of Napoleon during the same period. Auxiliary forces obtained under Romana from Spain, ... 475
6. Operations in Pomerania, and views of Napoleon regarding Sweden, . 477
7. Armistice between the Swedes and French, ... 478
8. Sweden again reverts to the alliance, ... 480
9. Formation of an army of reserve on the Elbe, ... ***ib.***
10. Negotiations with Turkey and Persia by Napoleon, 481
11. Preparations for aiding them by land, ... 482
12. Jealousy excited in the Divan by the summoning of Parga, 483
13. Measures to organise the military strength of Poland, 484
14. Winter-quarters of the French army, ... 485
15. Winter-quarters of the Russians. Combat of Guttstadt, 487
16. Great designs of Napoleon at this time for the interior of his empire, 489
17. And for political improvements, . 491
Napoleon fixes on a design for the Madeleine at Paris, . *note,* 492
18. Finances of France during this year, ... 492
Receipts and expenditure of the year, ... *note,* 494
19. Statutes of the Grand Sanhedrim of the Jews at Paris, 494
20. Reflections on this event, ... 496
21. Napoleon's efforts to feed his troops. Sieges in Silesia during the interval of hostilities, ... ***ib.***
22. Fall of Schweidnitz, ... 498
23. Of Neisse, ... ***ib.***
24. And of Glatz, ... 499
25. Siege of Dantzic. Description of that fortress, . . . 500
26. State of its fortifications, ... i501
27. First operations of the besieging force, . . . i502
28. Capture of the Isle of Nehrung, ... ***ib.***

§ Page
29. Progress of the siege, ... 503
30. Attempt of the Allies to raise the siege, ... 505
81. Which proves unsuccessful, ... 506
32. Growing difficulties of the besieged, and fall of the place, 507
33. Reinforcements which arrived to the Russian army. Its strength and positions, ... 509
84. Strength and position of the French army, ... 510
35. Defensive measures of the Russians, ... 512
36. Designs of the Russians on Ney's corps, ... 513
37. Feigned attacks on the bridges of the Passarge, and real attack on Marshal Ney, ... 514
38. Its success at first, and final failure, ... 515
39. Napoleon concentrates his army, and the Russians fall back, . 516
40. The Russians, pursued by the French, fall back to Heilsberg, . 518
41. Different plans of operation which presented themselves to Napoleon, 519
42. Advance upon Heilsberg, ... 520
43. Description of the position and intrenched camp of Heilsberg, 521
44. Battle of Heilsberg, ... 522
45. Fresh attack by Lannes, which also proves unsuccessful, 524
Violent explosion of Lannes, Murat, and Napoleon in consequence, *note*, 524
46. Frightful appearance of the slain after the battle, 525
47. Napoleon turns their flank, and compels them to evacuate Heilsberg, 526
48. Movements of the two armies before the battle of Friedland, . 527
49. Description of the field of Friedland, ... 528
50. Benningsen resolves to attack Lannes' corps. Situation of that corps, 529
51. He crosses the Alle, and attacks the French marshal, . 531
52. Disposition and arrangement of the Russian army, *ib.*
53. No decisive success is gained on either side before the arrival of the other French corps, ... 532
54. Preparatory dispositions and forces of Napoleon, 533
55. Order of battle taken up by the French, ... 535
56. Battle of Friedland. Splendid attack by Ney's corps, . 536
57. Gallant charge of the Russian Guard, ... 537
58. Progress of the action on the centre and right of the Russians, 538
59. Benningsen's measures to secure a retreat, ... 540
60. Immense results of the battle, ... 541
61. The Russians retreat without molestation to Allenburg and Wehlau, 542
62. Capture of Konigsberg, ... 544
63. Measures of Napoleon, and retreat of the Russians to the Niemen, 545
64. The Emperor Alexander proposes an armistice, 547
65. Reasons which made Napoleon rejoice at this step, 548
66. Considerations which rendered the Russians also desirous of an accommodation, ... 549
67. Conclusion of an armistice, ... 550
Napoleon's proclamation thereon to his troops, . . *note*, 551
68. Interview on the raft at Tilsit, ... 551
69. First words of Napoleon and Alexander, ... 552
70. Commencement of the negotiations at Tilsit, ... 553
71. Napoleon's interview with the Queen of Prussia, 554
72. Napoleon's character of the Queen of Prussia, . . 556
78. Convivialities between the Russian and French officers, *ib.*

Page

74. Napoleon's admiration of the Russian Imperial Guard, 558
75. Treaty of Tilsit. Its leading provisions. Creation of the grand-duchy of Warsaw, and kingdom of Westphalia, ... *ib.*
76. Treaty with Prussia, ... 559
77. Immenses losses of Prussia by this treaty, ... 560
78. Secret treaty for the partition of Turkey, ... 562
79. Secret articles regarding England and all neutral fleets, 564
80. Secret agreement between the Emperors regarding Spain and Italy, . 565
Decisive evidence of these projects of spoliation which exists both on the testimony of the French and Russian Emperors, . *note.*, 566
81. Measures of Napoleon to secure his anticipated Turkish acquisitions, 567
82. Convention regarding the payment of the French contribution on Prussia, 569
83. Noble proclamation by the King of Prussia to his lost provinces, 570
84. Enormous losses sustained by the French during the campaign, 571
85. Memorable retribution for the partition of Poland on the partitioning powers, ... 573
And of Russia, ... *ib.*
87. Terrible retribution that was approaching to France, . 574
88. Evil consequences of the treaty of Tilsit in the end to Napoleon, 575
89. Useless allies which Napoleon made to himself by this treaty, 576
90. Disgraceful perfidy of Napoleon towards the Turks, 577
91. Whom he surrenders to the spoliation of Russia, 578
92. No defence can be made for it in consequence of the revolution at Constantinople, ... *ib.*
93. Mutual projects of the Emperors for the spoliation of the other European powers, ... 579
94. Napoleon's leading object in the treaty was the humbling of Great Britain, 581
95. England could not complain of its conditions, ... 582
96. It was ultimately fortunate for Europe that the war was prolonged, 583

CHAPTER XLVII.

GENERAL SKETCH OP THE BRITISH EMPIRE IN INDIA.

1. Comparison of the Roman empire and British India, . 584
2. Wonderful circumstances attending the British dominion in India, 585
3. Its extent, population, revenue, and military strength, *ib.*
4. Dreadful dangers it has surmounted, ... 587
5. Physical description of the Indian peninsula, . 588
6. Its vegetable and animal productions, ... 590
7. Extraordinary diplomatic ability with which India has been governed, 592
8. Immense advantages of the British government to the Indian people, 593
9. Great diminution of crime under the British rule, 594
10. Great change effected in the aspect of the country in the central and western provinces, ... 595
11. Rapid progress of wealth, population, and comfort, over all India, 596
12. Increased taste for British manufactures over India, . 597
13. Vast police force established throughout Bengal, and its admirable 598
14. Principles of Indian taxation, ... 599
15. Management of land. The Zemindar system, . 600

Page
16. Its practical operation, ... 601
17. The Ryotwar system, ... 602
18. The Village system, ... 603
19. Admirable effect of the Village system in all ages, 604
20. Effects of this large land revenue on the general system of taxation, . 606
21. Complete system of toleration established in India, 607
22. Vast varieties of religious belief found in India, 608
23. Effect of this religious division in facilitating the government of the country, ... *ib.*
24. Vast variety of national character in India, ... 610
25. And various military qualities of the inhabitants, 611
26. Difference of character owing to physical causes, 612
27. Origin and composition of the sepoy force, ... *ib.*
28. Causes of the facility with which it has been raised, 613
29. Elevated rank and situation of the sepoy troops, 614
SO. General character of the Indian army, ... 615
31. Touching anecdotes of the fidelity of sepoy troops, 617
32. Their fidelity to the English under every trial, 618
33. And admirable courage, ... 619
34. Which is owing to the fidelity of the English government to its engagements, ... 620
35. Contrast of the Company's rule to the devastating Mahommedan sway which preceded it, ... 621
36. Unbounded devastations of their former wars, ... 622
37. Wonderful nature of this empire, won by so small a force, and amidst so many difficulties at home, ... 624
38. Wars in which the empire was involved, during the growth of the Indian power, ... 625
39. What were the causes of this success] Conquest was forced upon the British by necessity, not adopted from inclination, 626
40. Difference between Rome, and France, and England, in this particular, 627
41. Conquest was forced on the British in the East by necessity, . 628

CHAPTER XLIII.

RISE OF INDIA UNDER OLIVE AND HASTINGS.—1760-1798.

1. Sketch of the principal Indian powers when the British empire arose, 630
2. The Mahratta confederacy, ... 631
3. Origin and early history of the East India Company. Capture of Calcutta by Surajee Dowlah, ... 632
4. Calcutta retaken. Rise and great exploits of Clive, 633
5. Dethronement of Surajee Dowlah by Clive, ... 634
6. Acquisition of territory by the Company, and defeat of the Mogul Emperor, 636
7. Cession of all Bengal and Bahar to the English, ***ib.***
8. Origin and progress of the Madras Presidency, 637
9. Sieges of Madras and Pondicherry by the French and English, 638
10. Early history of Clive, ... 639
11. His first introduction into active life, ... 640
12. His character as a hero and a statesman, ... 641

§ Page
18. Rise and character of Hyder Ali, ... 643
14. Hostilities with Hyder are resolved on by the local authorities, but disapproved by the Company, ... 644
15. First campaigns against him, and early disasters, 645
16. Transactions in the Carnatic, down to the renewal of the war with Hyder in 1780, ... 647
17. Mr Burke's description of Hyder's irruption, ... 648
18. Great successes of Hyder in the Carnatic, ... 649
19. The firm conduct of Warren Hastings and Sir Eyre Coote re-establishes affairs, ... 650
20. Early history of Hastings, ... 651
21. His progress as a statesman, ... 652
22. His character and errors, ... 653
23. Further disasters stemmed by the energy of Hastings. Death of Hyder, *ib,*
24. War with Tippoo, and invasion of Mysore from Bombay. Its early success, 655
25. Final disasters of the expedition, ... 656
26. British invasion of Mysore, which leads to a peace, 657
27. Change introduced by Tippoo in the Indian armies, 658
28. Its ruinous effects on the independence of the native powers, . 659
29. Mr Hastings' long-protracted prosecution, 660
30. Proceedings in parliament on the subject, 661
31. Proceedings and charges against Mr Hastings before the Commons, 662
32. His trial before the House of Lords, ... 664
33. And his acquittal, ... 665
34. Ultimate change of public opinion on this subject, *ib.*
35. Reflections on the cruel injustice of this prosecution, . 667
36. Mr Fox's India Bill. Its premature fate, 668
37. Objections to which the bill was liable, ... 669
38. Mr Pitt's India Bill, which becomes law, 671
39. Reflections on this constitution for India, 672
40. Arrangements with the British government for the increase of the British force in India, ... 673
41. Fresh war with Tippoo Saib, ... 674
42. Lord Cornwallis's first campaign against Tippoo, 675
43. Vast preparations for the siege of Seringapatam, 677
44. Preparations for a decisive battle under the walls of Seringapatam, 678
45. Commencement of the action, ... *ib.*
46. Danger of Cornwallis, and his ultimate success, 679
47. Concluding operations of the war, ... 680
48. Treaty with Tippoo, ... 681
49. Experienced necessity of further conquests in India, . 682
50. Pacific administration and principles of Sir John Shore, *ib.*
51. Its disastrous effects, ... 683
52. Intriguing of Tippoo to form a confederacy against the English, 684
53. Tippoo's overt acts of hostility, ... 685
APPENDIX, ... 687

HISTORY OF EUROPE.

PORTRAIT IN VOLUME VII.

Fox, ... *Frontispiece.*

manent support. When surrounded by the wreck of other states, when surviving alone the fall of so many confederacies, it was in their inexhaustible resources that England found the means of resolutely maintaining the contest, and waiting calmly, in her citadel amidst the waves, the return of a right spirit in the neighbouring nations. Vain would have been the prowess of her seamen, vain the valour of her soldiers, if her national finances had given way under the strain. Even the conquerors of Trafalgar and Alexandria must have succumbed in the contest they had so heroically maintained, if they had not found in the resources of government the means of permanently continuing it. Vain would have been the reaction produced by suffering against the French Revolution, vain the charnel-house of Spain and the snows of Russia, if

CHAP. XLI. 1805.

Britain had not been in a situation to take advantage of the crisis. If she had been unable to aliment the war in the Peninsula when its native powers were prostrated in the dust, the sword of Wellington would have been drawn in vain ; and the energies of awakened Europe must have been lost in fruitless efforts if the wealth of England had not at last arrayed them in dense and disciplined battalions on the banks of the Rhine.

2. Astonishing financial efforts of England during the war.

How, then, did it happen, that this inconsiderable island, so small a part of the Roman empire, was enabled to expend wealth greater than ever had been amassed by the ancient mistress of the world; to maintain a contest of unexampled magnitude for twenty years ; to uphold a fleet which conquered the united navies of Europe, and an army which carried victory into every corner of the globe ; to acquire a colonial empire that encircled the earth, and subdue the vast continent of Hindostan, at the very time that it struggled in Spain with the land forces of Napoleon, and equipped all the armies of the north, on the Elbe and the Rhine, for the liberation of Germany ? The solution of the phenomenon, unexampled in the history of the world, is without doubt to be in part found in the persevering industry of the British people, and the extent of the commerce which they maintained in every quarter of the globe. But the resources thus afforded would have been inadequate to so vast an expenditure, and must have been exhausted early in the struggle, if they had not been organised and sustained by an admirable system of finance, which seemed to rise superior to every difficulty with which it had to contend. It is there that the true secret of the prodigy is to be found ; it is there that the noblest monument to Mr Pitt's wisdom has been erected.

The national income of England at an early period was very inconsiderable, and totally incommensurate to the important station which she occupied in the scale of nations. In the time of Elizabeth it amounted only to £400,000

3. Historical details. Public income before the Commonwealth. Large increase consequent on the Great Rebellion.

a-year; and in that of James I. to£450,000, and, even including all the subsidies received from parliament during his reign, only to£480,000 a-year—sums certainly not equivalent to more than £800,000 or £1,000,000 of our money.[1] That enjoyed by Charles I. amounted on an average to £895,000 annually—a sum perhaps equal to £1,500,000 in these times.[2] It was the Long Parliament which first gave the example of a prodigious levy of money from the people of England—affording thus a striking instance of the eternal truth, that no government is so despotic as that of the popular leaders, when they are relieved from all control by the other powers in the state. The sums raised in England during the Commonwealth—that is, from 3d November 1640, to 5th November 1659—amounted to the enormous, and, if not proved by authentic documents, incredible sum of £83,000,000,—being at the rate of nearly £5,000,000 a-year ;* or more than five times that which had been so much the subject of com plaint in the times of the unhappy monarch who had

[1] Hume, v. 412; vi. 112.

[2] Ibid. vii. 341.

* " It is seldom," says Hume, " that the people gain anything by revolu tions in government; because the new settlement, jealous and insecure, must commonly be supported with more expense and severity than the old: but on no occasion was the truth of this maxim more sensibly felt than in England after the overthrow of the royal authority. Complaints against the oppression of ship-money and the tyranny of the Star Chamber had roused the people to arms, and, having gamed a complete victory over the Crown, they found them selves loaded with a multiplicity of taxes formerly unknown, while scarce an appearance of law and liberty remained in any part of the administration."[3]

[3] Hume, vii. 115.

The following are some of the items in this enormous aggregate of £83,000,000 raised from the nation during the Commonwealth,—a striking proof of the despotic character of the executive dunne: that period:—

Land-tax, ...	£32,000,000
Excise, ...	8,000,000
Tonnage and poundage,	7,600,000
Sale of Church lands,	10,035,000
Sequestration of bishops, deans, and inferior clergy, for four years,	3,528,000
Sequestration of private estates in England,	4,564,000
Fee-farm rents for five years,	2,963,000
Composition with delinquents in Ireland,	1,000,000
Sales of estates in Ireland,	3,567;000
Other lesser,	10,074,000
Total, . .	£83,331,000

—PEBRER, 139,140.

CHAP. XLI.

1642-1688.

preceded it. The permanent revenue of Cromwell from the three kingdoms was raised to £1,868,000 : or considerably more than double that enjoyed by Charles I.* The total public income at the death of Charles IL was £1,800,000, under James II. £2,000,000 ; sums incredibly small, when it is recollected that the price of wheat was not then materially different from what it is at the present moment.[1†]

[1] Pebrer, 129, 143.

4. Permanent addition to them on the accession of William III.

These inconsiderable taxes, however, were destined to be exchanged for others of a very different character, upon the accession of the house of Orange to the throne. The intimate connexion of the princes of that family with Continental politics, and the long wars in which in consequence the nation was involved, soon led to a more burdensome system of taxation, and the raising of sums annually from the people which in former times would have been deemed incredible. The Prince of Orange brought from the republic of Holland, where it had been already practised and Mas thoroughly understood, the important secret of governing popular assemblies, and extracting heavy taxes from popular communities. Like the Roman emperors, he did not discard the senate, but he contrived to render it the instrument of his will. He did not, like the Stuarts, engage the throne in a contest with parliament : on the contrary, he did everything by its votes, and concealed the exactions of the crown under the shadow of the authority of the house of Commons. His

Total. £1,868,716

—PEBRER, 140.

† The quarter of wheat, from 1636 to 1701, was on an average 51s. 11½d..
from 1700 to 1765, . . 40s. 6d.
from 1764 to 1794, . . 44s. 7d.

In 1835 the average of the quarter in Great Britain was 39s. 8d., and the average of the five years preceding 1836 was only 48s. The price was much higher during the next five years, but that was the result of uncommonly rainy seasons coming in succession during that whole period.—SMITH'S *Wealth of Nations,* i. 358 ; and *Corn Average,* 1835.

whole efforts were directed to gain the majority of the constituencies in the country by corruption, and of votes in parliament by patronage. A vast government expenditure, incurred in a cause at first highly popular, and the profuse contracting of loans on the security of the revenue of future years, afforded the means of doing both. This system proved entirely successful, and it is to its success that the subsequent greatness of the empire is mainly to be ascribed. But for it, the means of raising taxes adequate to the protection, and necessary for the defence, of the empire, would never have been discovered; and England, like Poland, would have fallen a prey to the ambition of the adjoining nations, the resources of which had been drawn forth by the force of despotic power, while no means of developing its own had been discovered. Great as have been the obligations which England owes in many different views to the Revolution, it is beyond all question the greatest that it brought in a sovereign instructed in the art of overcoming the ignorant impatience of taxation which is the invariable characteristic of free communities, and thus gave it a government capable of turning to the best account the activity and energy of its inhabitants, at the same time that it had the means given it of maintaining their independence.

5. Reahonh which led to the introduction of the national debt.

So great was the increase of the public burdens during the reign of William, that the national income, in the thirteen years that he sat on the throne, was nearly doubled : being raised from £2,000,000 a-year to £3,895,000. But the addition made to the public revenue was the least important part of the changes effected during this important period. It was then that the NATIONAL DEBT began ; and government was taught the dangerous secret of providing for the necessities, and maintaining the influence of present times, by borrowing money and laying its payment on posterity. Various motives combined to induce the government, immediately after the Revolution, to adopt the system of borrowing on

CHAP. XLI.

1688-1700.

the credit of the state. Notwithstanding the temporary unanimity with which the Revolution had been brought about, various heart-burnings and divisions soon succeeded that event, and the exiled dynasty still numbered a large and resolute body, especially in the rural districts, among their adherents. Extensive patronage and no small share of corruption were necessary to secure the influence of government over a nation thus divided : foreign wars were rightly deemed requisite to maintain the ascendant of the Protestant principles to which the king owed his accession to the throne; and the Continental connexions of the house of Orange imperiously required the intervention of Great Britain in those desperate struggles by which the very existence of the commonwealth of Holland was endangered. The same cause which led to nearly the duplication of the public burdens of France by Louis Philippe,* after the revolution of 1830, produced a similar increase in the taxes of Great Britain after the change of dynasty in 1688, and originated the dangerous system of borrowing on the security of the assessment of future years. It was justly thought, that the present influence of government could in this way be increased to an extent altogether impracticable if the expenditure of each year were to be limited to the supplies raised within itself; and that, by the distribution of the debt

Corresponding increase of the expenditure of France on the accession of Louis Philippe.

* The following is a statement of the budgets of France before and after the Revolution of July. It is a curious and instructive object of contemplation to observe a similar convulsion leading, in countries so widely different in their character, customs, and institutions, as France and England were at the accessions of the dynasties of Orange and Orleans to their respective thrones, to a result so precisely similar .—

among a great number of public creditors, an extensive and influential body might be formed, attached by the strong tie of individual interest to the fortunes of the ruling dynasty; because they were aware that their claims would be disregarded by the legitimate monarchs if restored to the throne. The expedient, therefore, was fallen upon of contracting a debt transferable by a simple power of attorney, in the smallest shares, from hand to hand ; and capable of being used almost like the highest and most valuable species of bank-notes, in the transactions of the nation. To the steady prosecution of this system, and the formation of a secure deposit by its means for the savings of the nation, much of the subsequent prosperity and grandeur of England is to be ascribed. But, like all other human things, it has its evils as well as its advantages: and in the perilous facility of borrowing, which the magnitude of the national resources and the fidelity with which the public engagements were fulfilled produced, is to be found the remote but certain cause of financial embarrassments, now to all appearance irremediable.[1]

[1] Pebrer, 59, 60. Alison's Marlborough, 246, 249.

6. Progressive growth of the public debt during the succeeding century.

It is unnecessary to follow the successive steps by which both the public revenue and the national debt of Great Britain were increased after this period. Suffice it to say, that both were largely augmented during the glorious war of the Succession; that the long and pacific administration which followed, effected no sensible reduction in their amount; that the checkered contest of 1739, and the more triumphant campaigns of the Seven Years' war, contributed equally to their increase; and that the disasters of the American struggle were attended by so great an augmentation of the national burdens, that at its termination in 1783, in the opinion both of Mr Hume and Adam Smith, they must inevitably prove fatal in the end to the independence of the nation. At the close of the last contest the public revenue was £12,000,000, and the debt £240,000,000, the interest of which absorbed so large

CHAP. XLI.

1784.

a proportion as £9,319,000 of the annual income of the state; the loans contracted during its disastrous continuance having been no less than one hundred millions.[1]*

[1] Pebrer, 245.

It was at this period that Mr Pitt came into office, on the resignation of Mr Fox and the coalition ministry. His ardent and sagacious mind was immediately turned to the consideration of the finances, and the means of

Table illustrating its increase.

* The following table exhibits, in a clear and condensed form, the increase of the public revenue, and progressive growth of the debt, from the Revolution in 1688 to the present times.

Debt on the 5th January 1832,	£782,667,234	£28,341,463	£50,990,000

—MOREAU and PEBRER'S *Tables*, 70, 89,153, 245; and PORTER'S *Pari Tables*, i. 1.

extricating the nation from the embarrassments, to ordinary observers inextricable, in which it had been involved by the improvident expenditure of preceding years. It was evident, from a retrospect of history, that no sensible impression had been made on the debt by any efforts of preceding times; that though a sinking-fund had long existed in name, yet its operations had been very inconsiderable; and that all the economy of the long periods of peace which had intervened since the Revolution, had done little more than discharge a tenth of the burdens contracted in the preceding years of hostility. The interest of the debt absorbed now more than two-thirds of the public revenue. It was impossible to conceal that such a state of things was in the highest degree alarming; not only as affording no reasonable prospect that the existing engagements could ever be liquidated, but as threatening at no distant period to render it impossible for the nation to make those efforts which its honour or independence might require. Little foresight was required to show, that, in the course of events, wars and changes must arise, which would render it indispensable for the government to assume a menacing attitude, and possibly engage in a long course of hostilities. But how could any administration venture to assume the one, or the people bear the other, if an immense load of debt hung about their necks, absorbing alike by its interest their present revenues, and paralysing by its magnitude the credit by which their resources might be increased on any unforeseen emergency?

7. **Alarming financial aspect of the country on Mr Pitt's accession to power in 17B4.**

These dangers took strong possession of the mind of Mr Pitt; but instead of sinking in despair under the difficulties of the subject, he applied the energies of his understanding with the utmost vigour to overcome them. Nor was it long before he perceived by what means this great object could with ease and certainty be effected, The public attention at this period had been strongly directed to the prodigious powers of accumulation of

8. **Principle ou** which he **proposed to remedy the existing evils.**

CHAP. XLI.

1784.

money at compound interest; and Dr Price had demonstrated, with mathematical certainty, that any sum, however small, increasing at that ratio, would in a given time extinguish any debt, however great. * Mr Pitt, with the instinctive sagacity of genius, laid hold of this simple law to establish a machine by which the vast debt of England might, without difficulty, be discharged. All former sinking funds had failed in producing great effects, because they were directed to the *annual* discharge of a certain portion of debt; not the formation, by compound interest, of a fund destined to its future and progressive liquidation ; they advanced, therefore, by addition, not multiplication—in an arithmetical, not a geometrical ratio. Mr Pitt saw the evil, and not merely applied a remedy, but more than a remedy : he not only seized the battery, but turned it against the enemy. The wonderful powers of compound interest, the vast lever of geometrical progression, so long and sorely felt by debtors, were now to be applied to creditors; and, inverting the process hitherto experienced among mankind, the swift growth of the gangrene was to be turned from the corruption of the sound to the eradication of the diseased part of the system. Another addition, like the discovery of gravitation, the press, and the steam-engine, to the many illustrations which history affords of the lasting truth, that the greatest changes both in the social and material world are governed by the same laws as the smallest; and that it is by the felicitous application of familiar principles to new and important objects, that the greatest and most salutary discoveries in human affairs are effected.

Mr Pitt's mind was strongly impressed with the incalculable importance of this subject of the finances,—one before which all wars or subjects of present interest, excepting only the preservation of the constitution, sank into insig-

*** A penny laid out at compound interest at the birth of our Saviour, would, in the year 1775, have amounted to a solid mass of gold eighteen hundred times the whole weight of the globe.**

9. His strong expressions on the importance of the subject in parliament.

nificance. From the time of his accession to office in 1784, his attention had been constantly riveted upon it, and he repeatedly expressed, in the most energetic language, his sense of its overwhelming magnitude. "Upon the deliberation of this day," said he, in bringing forward his resolutions on the subject on 29th March 1786, "the people of England place all their hopes of a full return of prosperity, and a revival of that public security which will give vigour and confidence to those commercial exertions upon which the flourishing state of the country depends. Yet not only the public and this House, but other nations are intent upon it; for upon its deliberations, by the success or failure of what is now proposed, our rank will be decided among the powers of Europe. To behold this country, when just emerging from a most unfortunate war, which had added such an accumulation to sums before immense, that it was the belief of surrounding nations, and of many among ourselves, that we must sink under it—to behold this nation, instead of despairing at its alarming condition, looking boldly its situation in the face, and establishing upon a spirited and permanent plan the means of relieving itself from all its encumbrances, must give such an idea of our resources as will astonish the nations around us, and enable us to regain that pre-eminence to which on many accounts we are so justly entitled. The propriety and even necessity of adopting a plan for this purpose is now universally allowed, and it is also admitted that immediate steps ought to be taken on the subject. It is well known how strongly my feelings have been engaged, not only by the duties of my situation, but by the consideration of my own personal reputation, which is deeply committed in the question, to exert every nerve, to arm every vigilance, to concentrate all my efforts towards that great object, by which alone we can have a prospect of transmitting to posterity that which we ourselves have felt the want of,— an efficient sinking-fund for the national debt[1] To

[1] Parl. Hist, xxvi. 1295, 1313, 1109.

CHAP. XLI.

1786.

accomplish this is the first wish of my heart; and it would be my proudest hope to have *my* name inscribed on a pillar to be erected in honour of the man who did his country the essential service of reducing the national debt."

10. And his simultaneous adoption of measures for national defence.

It is worthy of especial notice, however, that though thus deeply impressed with the paramount importance of raising up an effective sinking-fund for the reduction of the public debt, Mr Pitt was equally resolute not to attempt it by any measure by which the public security might be impaired; and, on the contrary, he at the very same time strongly advocated and carried a bill for the fortification of Portsmouth and Plymouth, which required several hundred thousand pounds. " He would not be seduced," he said, " by the plausible and popular name of economy—he would not call it only plausible and popular, he would rather say the sacred name of economy—to forego the reality; and for the sake of adding a few hundred thousand pounds at the outset to the sinking-fund, perhaps render for ever abortive the sinking-fund itself. Every saving, consistently with national safety, he would pledge himself to make; but he would never consent to starve the public service, and to withhold those supplies without which the nation must be endangered."[1] Every measure of this great man was directed to great and *lasting* national objects. He was content to impose present burdens, to forego present advantages, and incur present unpopularity, for the sake of ultimate public advantage ; the only principle which ever yet led to greatness and honour, either in nations or individuals, as the opposite system, gilded by present popularity or enjoyment, is the certain forerunner of ultimate ruin.

[1] Pari. Hist, xx vi. 1109.

In pursuance of these designs, Mr Pitt proposed that a million yearly—composed partly of savings effected in various branches of the public service, to the amount of £900,000, and partly of new taxes, to the amount of £100,000—should be granted to his Majesty, to be vested

in commissioners chosen from the highest functionaries in the realm ; that the payments to them should be made quarterly; and that the whole sums thus drawn should be by them invested in the purchase of stock, to stand in the name of the commissioners, the dividends on which were to be periodically applied to the further purchase of stock, to stand and have its dividends invested in the same manner. In this way, by setting apart a million annually, and religiously applying its interest to the purchase of stock, the success of the plan would be secured; because the future accumulations would spring, not from any additional burdens imposed on the people, but from the *dividends on the stock thus bought up from individuals, and vested in the public trustees.* The powers of compound interest were thus brought round from the *side of the creditor to that of the debtor*—from the fundholders to the nation ; and the national debt was eaten in upon by an accumulating fund, which, increasing in a geometrical progression, would, to a certainty, at no distant period, effect its total extinction* " If this million," said

* The following table will exemplify the growth of capital when its interest, at the rate of five per cent, is steadily applied to the increase of the principal. Suppose that £20,000,000 is borrowed; and that, instead of providing by taxes for the interest merely of this large sum, provision is made for £1,200,000 yearly, leaving the surplus of £200,000 to be annually applied to the purchase of a certain portion of the stock, by commissioners, for the reduction of the principal, the dividends on the stock so purchased being annually and progressively employed in the same manner. The progressive growth in ten years will stand as follows:—

First year's surplus, . . .	£200,000	
Second,	210,000	
Third,	220,500	
Fourth,	231,250	
Fifth,	242,562	
Sixth,	253,078	
Seventh,	*265,654:*	
Eighth,	278,286	
Ninth,	292,114	
Tenth,	306,661	
		£2,500,105

The wonderful rate at which this fund increases must be obvious to every observer, and it is worthy of especial notice, that this rapid advance is gained without imposing one farthing additional upon the country, by the mere force of an annual fund, steadily applied year after year, with all its fruits, to the xeduction of the principal debt.

CHAP. XLI.

1786.

Mr Pitt, "to be so applied, is to be laid out, with its growing interest, it will amount to a very great sum in a period that is not very long in the life of an individual, and but an hour in the existence of a great nation; and this will diminish the debt of this country so much, as to prevent the exigencies of war from raising it to the enormous height it has hitherto done. In the period of twenty-eight years, the sum of a million, annually improved, would amount to four millions per annum. But care must be taken that this sum be not broken in upon. This has hitherto been the bane of this country; for if the original sinking-fund had been properly preserved, it can easily be proved, that our debts at this moment would not have been very burdensome; but this, as yet, has been found impracticable, because the minister has uniformly, when it suited his conveniency, gotten hold of this sum, which ought to have been regarded as most sacred. To prevent this, I propose that this sum be vested in certain dignified commissioners, to be by them applied quarterly to buy up stock; by which means no considerable sum will ever be open to spoliation, and the fund will go on without interruption. Long, very long, has the country struggled under its heavy load, without any prospect of being relieved; but it may now look forward to the object upon which the existence of the country depends. A minister could never have the confidence to come down to the House, and propose the repeal of so beneficial a law—of one so directly tending to relieve the people from their burdens. The essence of the plan consists in the fund being invariably applied in diminution of the debt; *it must for ever be kept sacred, and especially so in time of war.* To suffer the fund at any time, or on any pretence, to be diverted from its proper object, would be to ruin, defeat, and overturn the whole plan."[1]*

[1] Parl. Hist. xxvi. 1309, 13*22.

*** The speech delivered by Mr Pitt on this occasion, which went over the whole details of our financial system, is one of the most luminous of his whole parliamentary career. An intimate friend of his has recorded, " That having passed the morning of this most important day in providing and examining the**

CHAP. XLI.

1786. 12.

Mr Fox gives this plan his cordial support.

Nor was Mr Fox behind Lis great rival in the same statesmanlike and heroic sentiments; but he pointed out with too prophetic a spirit the dangers to which the reserved fund might be exposed, amidst the necessities or weaknesses of future administrations. " No man," said he, " in existence, was, or ever had been, a greater friend to the principle of a sinking-fund than I have been, from the very first moment of my political life. I agree perfectly with the right honourable gentleman in his ideas of the necessity of establishing an effective sinking-fund, for the purpose of applying it to the diminution of the national debt, however widely I may differ from him as to the subordinate parts of the plan. Formerly, the payment of the national debt was effected by a subscription of individuals, to whom the faith of parliament had been pledged to pay off certain specified portions at stated periods. Under that system, when the nation, or when parliament, stood bound to individuals, the pledge was held as sacred as to pay the interest of the national debt at present; whereas, under the new system, when no individual interests were concerned, nothing would prevent a future minister, in any future war, from coming down to the House and proposing the repeal of the sinking-fund, or enabling government to apply the whole money or stock in the hands of the commissioners to the public service. What would prevent the House from agreeing to the proposition ? or was it at all likely that, under the exigency

calculations and resolutions for the evening, he said he would take a walk to arrange in his mind what was to be said in the House in the evening. His walk did not last above a quarter of an hour, and when he came back he said he believed he was prepared. He then dressed, and desired his dinner to be sent up; but hearing that his sister, and another lady residing with her in the family, were going to dine at the same early hour, he desired that they might dine together. Having passed nearly an hour with those ladies, and several friends who called on their way to the House, talking with his usual liveliness and gaiety, as if he had nothing on his mind, he then went immediately to the House of Commons, and made that elaborate and far-extended speech, as Mr Fox called it, without one omission or error.—See WILLIAM PITT—No. V.; ***Black wood's Magazine,*** **xxxvi. 852; a series of papers on the character of this illustrious man, by Dr Croly, one of the ablest writers of the age, containing by far the best account of his policy and character extant in any language.**

CHAP. XLI.

1786.

of the moment, they would not immediately agree to it, when so much money could so easily be got at, and when they could so readily save themselves from the odious and unpleasant task of imposing new taxes on themselves and their constituents ?"[1] Memorable words from both these great men! when it is recollected how exactly the one predicted the wonderful effects which experience has now proved his system was calculated to have produced, in reducing, in a period of time smaller than the most ardent imagination could have supposed, a debt double the amount of that which he estimated as so great an evil; and with how much accuracy the other pointed out the vulnerable point in the composition of his scheme, and predicted the cause, springing from the necessities or weakness of future administrations, which would ultimately prove its ruin!

[1] Parl. Hist. xxvi. 1318.

The bill passed both Houses without a dissentient voice; and on the 26th May, the King gave it the royal assent in person, to mark his strong sense of the public importance of the measure.

13. It is passed by the legislature, and afterwards made applicable to all future loans.

The sinking-fund thus provided was amply sufficient to have discharged all the existing debt within a moderate period; and so well aware was its author of its vast productive powers, that he observed, that when it rose to four millions, it should be submitted to parliament whether it should thenceforth be suffered to increase at compound interest. But the events which followed soon not only rendered illusory all danger of the debt being too rapidly reduced, but made an addition to the system unavoidable to meet the new and overwhelming obligations contracted during the war. Some expedient, therefore, was necessary to provide for the liquidation of these vast additional debts; and it was in the means taken to do so that the extensive foresight and unshaken constancy of Mr Pitt is to be discerned. He laid it down as a principle, which was never on any pretence whatever to be departed from, that, when any additional loan was contracted, provi-

sion should be made for its gradual liquidation. "We ought," said Mr Pitt, "not to confine our views to the sinking-fund, compared with the debt now existing. If our system stops there, the country will remain exposed to the possibility of being again involved in those embarrassments which we have in our own time so severely experienced, and which apparently brought us to the verge of bankruptcy and ruin. To guard against such dangers hereafter, we should enact that, whenever any loan shall take place in future, unless it be raised on annuities, which will terminate in a moderate number of years, there should of course be issued out of the consolidated fund,* to the commissioners for the reduction of the national debt, *an additional sum sufficient to discharge the capital of such loan in the same period as the sinking-fund, after reaching its largest amount, will discharge what will then remain of the present debt.* To do this, one hundredth part of the capital borrowed would be sufficient to be raised from the country on such emergencies; for instance, supposing it were necessary to raise by loan ten millions, £100,000 should be raised in addition to the existing funds appropriated to the redemption of the debt, in order to relieve the country within a given time of this additional burden. In addition to this, I propose that £200,000 a-year additional should, from this time forward, be regularly granted out of the ordinary revenue of the country to the sinking-fund." Mr Fox stated, "That he had ever maintained the necessity of establishing a fund for reducing the national debt, and that as strongly when on the Ministerial as when on the Opposition benches. He had not the power to promote it as effectually as Mr Pitt, but he wished it as warmly."[1] In conformity with the united opinion of these great men,

[1] Parl. Hist. xxix. 1050, 1058.

* The consolidated fund was a certain portion of the ordinary taxes, which were amassed together and devoted to certain fixed objects of national expenditure. The surplus of this fund, as it was called, or the excess of those branches of revenue above the charges fixed on them, was annually appropriated during war among the ways and means to the current war expenditure.

CHAP. XLI.

1792-1802.

it was enacted by the statute passed on the occasion, " That whenever in future any sums should be raised by loans on perpetual redeemable annuities, a sum equal to one per cent on the stock created by such loan should be issued out of the produce of the consolidated fund quarterly, to be placed to the account of the commissioners."[1] Every additional loan was thus compelled to draw after itself, as a necessary consequence, a fresh burden, by the annual payment of which the extinction of the principal might to a certainty be expected in little more than forty years.

[1] 32 Geo. III. c. 69.

14. Modification of the system introduced in 1802.

Under this system the whole loans were contracted, and the sinking-fund was managed, till 1802; and as immense sums were borrowed during that period, the growth of the sinking-fund was far more rapid than had been originally contemplated. In that year an alteration of some importance was made, not indeed by Mr Pitt, but by Mr Addington, then Chancellor of the Exchequer, with his consent and approbation. " The capital of the debt," said he, "is now £488,000,000; its interest, including the charges of the sinking-fund, £23,000,000. It is impossible to contemplate either the one or the other without the utmost anxiety. What 1 now propose is, that the limitation which was formerly provided against the accumulation of the original sinking-fund should be removed ; and that both that original fund and the subsequent one, created by the act of 1792, should be allowed to accumulate till they have discharged the whole debt." This proposition was unanimously agreed to : it being enacted, " that this fund should accumulate till the whole existing redeemable annuities should be paid off." By this act, the original sinking-fund of £1,000,000, with the £200,000 subsequently granted, and the one per cent on all the subsequent loans, were combined into one consolidated fund to be applied continually, at compound interest, till the whole debt then existing was paid off, which it was calculated would be in forty-five years.[2]

April 14.

[2] **Parl.** Hist *xxxv*. 890, 892.

Under these three acts of 1786, 1792, and 1802, the sinking-fund continued to be administered with exemplary fidelity, not only during Mr Pitt's life, but after his death, till 1813, when a total change in the system took place, which eventually led to its ruin, and has, to all appearance, rendered the financial state of the country almost desperate. To obtain a clear view of the practical effects of Mr Pitt's system, it is necessary to anticipate somewhat the march of events, and give a summary of the operation of the sinking-fund which he established, down to the period when it was abandoned by his more embarrassed and less provident successors.

15. Immense results of the sinking-fund.

From the accounts laid before parliament, it appears that the sinking-fund of a million which Mr Pitt established in 1786, had increased, by accumulation at compound interest, and the great additions drawn from the one per cent on the vast loans from 1792 to 1812, to the enormous sum of *fifteen millions and a half yearly* in 1813, while the debt which it had discharged during that period amounted to no less than £238,231,000 sterling. This great increase had taken place in twenty-seven years; whereas Mr Pitt had calculated correctly that his original million would be only four millions in twenty-eight years; the well-known period of the quadruplication of the sum at compound interest of five per cent. The subsequent £200,000 a-year granted, undoubtedly accelerated in a certain degree the rate of its advance ; but the true cause of the extraordinary and unexpected rapidity of its increase is to be found in the prodigious accumulation which the one per cent on subsequent loans produced. This distinctly appears from the table on next page, showing the sums paid off by the sinking-fund in every year from 1786 to 1813—the loans contracted during that period—the stock redeemed by the commissioners, and the proportion of each loan paid to them for behoof of the public debt. It thence appears how rapidly and suddenly the sinking-fund rose, with the immense sums

CHAP. XLI. 1802.

borrowed at different periods during the war; and when it is recollected that the loans contracted from 1792 to 1815 were £585,000,000, it will not appear surprising, that even the small sum of one per cent on each, regularly issued to the national debt commissioners, should have led to this extraordinary and unlooked-for accumulation.*

16. **Obloquy to which it became exposed.**

It is this subsequent addition of one per cent on all loans contracted since the institution of the sinking-fund, which has been the cause at once of its extraordinary increase and subsequent ruin. While the nation in general were entirely satisfied with Mr Pitt's financial statements, and, delighted with the rapid growth of the sinking-fund, never examined whether the funds for its prodigious extension were provided by the fictitious supply

Table showing the progressive growth of the sinking-fund.

* Table showing the sums paid to the commissioners for the reduction of the national debt in every year from 1792 to 1816; the stock redeemed by them in each year; the loans contracted, and proportion of those loans paid to those commisbioners in every year for that period ; with the public revenue of the state for the same time.—MOREAU'S *Tables ;* PEBRER'S *Tables,* 153, 154, 246; *Parl Papers,* 1822, &c. 145; PORTER'S *Pari Tables, i.* 1, COLQUHOUN, 292, 294 ; PORTER'S *Progress of the Nation,* il. 296.

of loans, or the solid growth of the revenue above the expenditure, a few more sagacious observers began to inquire into the solidity of the whole system, and, mistaking its past operation, which had been almost entirely *during war*, for its *permanent* character, which was to appear chiefly on the return of peace, loudly proclaimed that the whole was founded on an entire delusion : that a great proportion of the sums which it paid off had been raised by loans; that at all events, a much larger sum than the amount of the debt annually redeemed, had been actually borrowed since the commencement of the war; that it was impossible that a nation, any more than an individual, could discharge its debts by mere financial operations; and that the only way of really getting quit of encumbrances was by bringing the expenditure permanently under the income.[1]

[1] **Hamilton on the sinking-fund, and others.**

17. **General diffusion of this delu-**

These doctrines soon spread among a considerable part of the thinking portion of the nation; but they made little general impression till the return of peace had diverted into other channels the attention of the people, formerly concentrated on the career of Napoleon; and democratic ambition, taking advantage of national distress, had begun to denounce all that had formerly been done by the patriots who had triumphed over its principles. Then they speedily became universal. Attacks on the sinking-fund were eagerly diffused and generally credited —the delusion of Mr Pitt's system, the juggle so long practised on the nation, were in every mouth. The meanest political quacks, the most despicable popular demagogues, ventured to discharge their javelins at the giants of former days. The heedlessness of future consequences, which ever distinguishes the masses of mankind, came to infect general opinion: the aversion to taxation, so general among the many, made them lend a ready ear to any proposed reduction of taxation, without the slightest regard to its influence on the future fortunes of the empire ; and a system on which the greatest and best of

CHAP. XLI.

1802.

men in the last age had been united—in commendation of which Fox had vied with Pitt, and Sheridan with Burke—was universally denounced as the most complete and ruinous deception that ever had been palmed off by official fraud on the credulity of mankind.

18. Which is the more dangerous, as it involves much abstract truth mixed with error.

Had these doctrines been confined to the declamations of the hustings, or the abuse of newspapers, they would have furnished the subject only of curious speculation on the way in which principles, just to a certain extent, and truths, undeniable as they were originally stated, became perverted, when they were employed, beyond what their authors intended, as an engine for the purposes of faction or ambition. But unhappily the evil soon assumed a much more serious complexion. The prevailing ideas spread to the legislature; and the statesmen who succeeded to the government, imbued partly with the declamation of the period, influenced partly by the desire of gaining a temporary popularity by the reduction of the public burdens, without any regard to the interests of future times, went on borrowing or abstracting from the sinking-fund till it was totally extinguished. During the great convulsion of 1832, the commissioners for the reduction of the national debt issued an official intimation that their purchases for the public service had altogether ceased. The same mournful notice has since repeatedly been sent forth from the same office, accompanied, in some cases, with the still more alarming intelligence, that during a profound peace a considerable addition had been made annually to the total amount of the national debt. The principle acted upon since 1823, when it was first announced in parliament, has been to apply to the reduction of debt no more than the annual surplus of the national income above its expenditure; and as that surplus, under the jealousy of expenditure incident to a democratic system, can never be expected to be considerable, Mr Pitt's sinking-fund may now, to all practical purposes, be considered as destroyed."*

*** The following table exhibits the progression and decline of the sinking-**

19. Comparison of the arguments for and against the sinking-fund.

In the preceding observations, the march of events has been anticipated by nearly thirty years, and changes alluded to which will form an important subject of analysis in the subsequent volumes of this, or some other history. But it is only by attending to the abandonment of Mr Pitt's system, and the effects by which that change has been, and must be attended, that the incalculable importance of his financial measures can be appreciated, or the wisdom discerned which, so far as human wisdom could, had guarded against the evils which must, to all appearance, in their ultimate consequences, dissolve the British empire. It is perfectly true, as Mr Hamilton and

fund from the time of its being first instituted in 1786, till it was broken upon by Mr Vansittart in 1813, and till its virtual extinction in 1838 :—

—PORTER'S *Parl. Tables*, i. and ii. 6, 8; PEBRER'S *Tables,247;* MOREAU'S *Tables;* PORTER'S *Progress of the Nation*, ii. 260 ; and for 1833,1834,1835,1836, pp. 3, 4, each year.

N.B.—This table exhibits the progress of the sinking-fund and stock redeemed in Great Britain and Ireland, which explains its difference from the preceding table, applicable to Great Britain alone.

Since 1838 to 1843, no money has been applied to the reduction of the national debt; on the contrary, fresh debt, to the amount of £10,000,000, **has** been contracted, being at the average of £1,650,000 a-year. About as much has been paid off since 1843, but wholly by the operation of the war income-tax.—PORTER'S *Parl. Tables*, vii. 4, and viii. 4.

CHAP. XLI.

1802.

the opponents of the sinking-fund have argued, that neither national nor individual fortunes can be mended by mere financial operations—by borrowing with one hand, while you pay off with another ; and unquestionably Mr Pitt never imagined that if the nation was paying off ten millions a-year, and borrowing twenty, it was making any progress in the discharge of its debt. In this view, it is of no moment to inquire what proportion of the debt annually contracted was applied to the sinking-fund; because, as long as larger sums than that fund was able to discharge were yearly borrowed by the nation, it is evi dent that the operation of the system was attended with no *present* benefit to the state ; nay, that the cost of its machinery was, for the time at least, an addition to its burdens. But, all that notwithstanding, Mr Pitt's plan for the redemption of the debt was founded not only on consummate wisdom, but on a thorough knowledge of human nature. To be convinced of this we have only to look to the causes which have led to the abandonment of the sinking-fund since the war, and the state in which that abandonment has left the finances of the empire.

20. Value of the system in time of peace.

Mr Pitt never looked to the sinking-fund as the means of paying off the debt while loans to a larger amount than it redeemed were contracted every year : he regarded it as a fund which would speedily and certainly effect the reduction of the debt *in time of peace** It was then that its real effect was to be seen : it was then that the debt contracted during war was to be really

Pitt clearly saw the ob jections since urged against the system.

" Mr Pitt's speech on the budget in 1798, affords decisive evidence that he laboured under no delusion on the subject of the operation of the sinking-fund during war; but always looked forward to its effects when loans had ceased, in consequence of the return of peace, as exemplifying its true character, and alone effecting a real reduction of the debt. " By means of the sinking-fund," said he, " we had advanced far in the reduction of the debt previous to the loans necessarily made in the present war, and every year was attended with such accelerated salutary effects as outran the most sanguine calculation. But having done so, we have yet far to go, as things are circumstanced. If the reduction of the debt be confined to the operations of that fund, and the expenses of the war continue to impede our plans of economy,—we shall have to go far *before the operation of that fund, even during peace, can be expected to counteract the effects of the war.* Yet there are means by which I am confident

discharged. And the admirable nature of the institution consisted in this, that it provided a system, with all the machinery requisite for its complete and effective operation, which, although overshadowed and subdued by the vast contraction of debt during war, came instantly into powerful operation the moment its expenditure was terminated. This was a point of vital importance; indeed, without it, as experience has since proved, all attempts to reduce the debt would have proved utterly nugatory. Mr Pitt was perfectly aware of the natural impatience of taxation felt by mankind in general, and the especial desire always experienced, when the excitement of war ceases, that its expenditure should draw to a termination. He foresaw, therefore, that it would be impossible to get the popular representatives, at the conclusion of a contest, to lay on *new* taxes, and provide for a sinking-fund to pay off the debt which had been contracted during its continuance. The only way, therefore, to secure that inestimable object, was to have the whole machinery constructed and in full activity during war, so that it might be at once brought forward in entire and efficient operation, upon the conclusion of hostilities, without any legislative act or fresh imposition whatever, by the mere termination of the contraction of loans.

From what has now been stated, it will readily be discerned in what the grand merit of Mr Pitt's financial system consisted. It was the imposition, by law, of sufficient *indirect* taxes to meet not only the interest of

it would be possible, in not many years, to restore our resources, and put the country in a state equal to all exigencies. Not only do I conceive that the principle is wise and the attempt practicable to procure large supplies out of the direct taxes from the year, but I conceive that it is equally wise, and not less practicable, to make provision for the amount of the debt incurred and funded in the same year: and if the necessity of carrying on the war shall entail upon us the necessity of contracting another debt, this principle, if duly carried into practice, with the assistance of the sinking-fund to co-operate, will enable us not to owe more than we did at its commencement. I *cannot indeed take it upon me to say that the war will not stop the progress of liquidation;* but if the means I have pointed out are adopted, and resolutely adhered to, it will leave us at least stationary."—*Pari Hist* xxxiii. 1053,1054.

1802.

22. Proof of these principles afforded by the result during tho last twenty

The result has completely proved the wisdom of these views. Crippled and mangled as the sinking-fund has been by the enormous encroachments made upon it by the administrations of later times, it has yet done much during the peace to pay off the debt—amply sufficient to demonstrate the solidity of the principles on which it was founded. In the sixteen years from 1816 to 1832, even after these copious reductions, it has discharged more than eighty-two millions of the debt, besides the addition of seven millions made by the bonus of five per cent granted to the holders of the five per cents, which were reduced to four: that is, it has paid off in that time nearly ninety millions.* It is not a juggle which, in a time so short in the lifetime of a nation, and during the greater part of which Great Britain was labouring under severe distress in almost all the branches of its industry, was able, even on a reduced scale, to effect a reduction so considerable.

23. It is clearly the only way of effecting a reduction of the debt.

Nor has the experience of the last twenty years been less decisive as to the absolute necessity of making the provision for the liquidation of the debt part of a permanent system, to which the national faith is absolutely and unequivocally bound, and which depends for no part of its efficiency upon the votes or financial measures of the year. Since this ruinous modification of Mr Pitt's unbending self-poised system was introduced; since the fatal precedent was established of allowing the minister to determine, by annual votes, how much of the sinking-fund was to be applied to the current services of the year,

1802.

and how much reserved for its original and proper destination, the encroachment on the fund has gone on continually increasing, till at length it has, to all practical purposes, swallowed it entirely up. The sinking-fund, when thus broken upon, has proved the subject of continual subsequent violation, till the shadow even of respect for it is gone. If such has been the fate of this noble and truly patriotic establishment, even when no increased burden was required to keep it in activity, and the temptation which proved fatal to its existence was merely the desire to effect a reduction of taxes long borne by the nation, it is easy to see how utterly hopeless would have been any attempt to make considerable additions to the annual burdens upon the conclusion of hostilities, with a view to effect a diminution of the public debt; and how completely dependent, therefore, the sinking-fund was for its very existence upon Mr Pitt's system of having all its machinery put in motion at the time the loans were contracted during war, and its vast powers brought into full view, *without any application to the legislature,* by the mere cessation of borrowing, on the return of peace."[5]

Durable and far-seeing system which he had established.

* In Mr Pitt's Financial Resolutions, in the year 1799, which embrace a vast variety of important financial details, there is the clearest indication of the lasting and permanent system to which he looked forward with perfect justice for the entire liquidation of the public debt. One of these resolutions was,— " That supposing the price of 3 per cent stock to be on an average, after the year 1800, £90 in time of peace, and £75 in time of war, and the proportion of peace and war to be the same as for the last hundred years, the average price of peace and war will be about £85 ; that the whole debt created in each year of the present war will be redeemed in about forty years from such year respectively, and the whole of the capital debt existing previous to 1793 will be redeemed in about forty-seven years from the present time; that from 1808 to 1833 (at which time the capital debt created in the first year of the present war would be redeemed, and the taxes applicable to the charges thereof would become disposable,) taxes would be set free in each year of peace to the amount of £133,000, and of war to that of £168,000; that the amount of the sum annually applicable to the reduction of the debt would, in the course of the same period, gradually rise from £5,000,000 to £10,400,000; and that, on the suppositions before stated, taxes equal to the amount of the charges created during each year of the present war will be successively set free, from 1833 to 1840, to the amount in the whole of £10,500,000, and about 1846, further taxes to the amount of £4,200,000, being the sum applicable from 1808 to the

24. Had it been adhered to, the whole debt would **have been discharged in 1845.**

Not a shadow of a doubt can now remain that Mr Pitt's and Mr Addington's anticipations were well founded, and that if their system had been adhered to since the peace, the whole national debt would have been discharged by the year 1845. The payment of eighty millions, under the mutilated system, since 1815, affords a sample of what might have been expected had its efficiency not been impaired. Even supposing that, for the extraordinary efforts of 1813, 1814, and 1815, it had been necessary to borrow from the commissioners the whole sinking-fund during each of these years, still, if the nation and its government had possessed sufficient resolution to have resumed the system with the termination of hostilities, and steadily adhered to it since that time, the debt discharged by the year 1836 would, at five per cent, have been above five hundred millions, and the sinking-fund would now (1835) have been paying off above forty millions a-year.* Or, if the national engagements would only have permitted the sinking-fund to have been kept up at ten millions yearly from the produce of taxes, and if the accumulation were to be calculated at four per cent, which, on an average, is probably not far

reduction of the debt existing previous to 1793; making in all, when the whole debt is extinguished in 1846, a reduction of £19,000,000 yearly." Such was the far-seeing and durable system of this great statesman; and experience has now proved that, if his principles had been adhered to, and the taxes applicable to the charges of the debt had not been imprudently repealed, these anticipations would have been more than realised, notwithstanding the vast increase of the debt since that time.[1]

[1] **Pari. Hist. xxxiv. 1135.**

* Table I., showing what the sinking-fund, accumulating at five per cent, if maintained at £15,000,000 a-year, would have paid off from 1816 to 1836 :— **Tables showing the progressive growth of a sinking-fund of fifteen and one of ten millions, from 1816 to 1836.**

1816	£15,000,000	Brought forward,	£212,660,625

CHAP. XLI. 1802.

from the truth, the fund applicable to the reduction of the debt would now have been above twenty millions annually, and the debt already discharged would have exceeded three hundred and thirty millions! A more rapid reduction of funded property would not probably have been consistent, either with a proper regard to the employment of capital, or the due creation of safe channels of investment, to receive so vast an annual discharge from the public treasury.

25. Causes which have led to the decay *of* this system.

Everything, therefore, conspires to demonstrate that Mr Pitt's system for the reduction of the national debt was not only founded on just principles and profound foresight, but on an accurate knowledge of human nature, a correct appreciation of the principles by which such a salutary scheme was likely to be defeated, and the means by which alone its permanent efficiency could be secured. And no doubt can now remain in any impartial mind, that, if that system had been resolutely adhered to, the whole debt contracted during the wars of the French Revolution might have been discharged in little more than the time which was occupied in its contraction.

Table I I., showing what the sinking-fund, if maintained from the taxes at £10,000,000 sterling, and if accumulating at four per cent only, would have paid off from 1816 to 1836 •—

1816 . . .	£10,000.000	Brought forward,	£138,243,700
1817	10,400,000	1827	16,032,580

Carry forward,	£138,243,700	Total in 20 years,	£331,005,428

Supposing the stock, in the first case, purchased on an average at 90 by the commissioners, the £533,708,430 sterling money would have redeemed a tenth more of the stock, or £587,000,000. Supposing it bought, in the second case, at an average of 85, which would probably have been about the mark, the £342,000,000 sterling money would have purchased nearly a seventh more of stock, or £385,357,000, being just about a half of the debt existing at this moment, (1835.)

What is it, then, which has occasioned the subsequent ruin of a system constructed with so much wisdom, and so long adhered to under the severest trials with unshaken fidelity ? The answer is to be found in the temporary views and yielding policy of succeeding statesmen: in the substitution of ideas of present expedience for those of permanent advantage; in the fatal contraction of the currency in 1819, which rendered the continuance of the indirect taxes which formed the basis of the sinking-fund difficult, and in the end impossible; in the advent of times when government looked from year to year, not from century to century ; in the mistaking the present applause of the unreflecting many for that sober approbation of the thoughtful few, which it should ever be the chief object of an enlightened statesman to obtain.

26. It was the desire for present popularity in the government.

When a Greek orator was applauded by the multitude for his speech, the philosopher chid him ; " for," said he, " if you had spoken wisely, these men would have given no signs of approbation." The observation is not founded on any peculiar fickleness or levity in the Athenian people, but on the permanent principles of human nature, and that general prevalence of the desire for temporary ease over considerations of permanent advantage, which it is the great object of the moralist to combat, and to the influence of which the greatest disasters of private life are owing. And, without relieving subsequent statesmen of their full share of responsibility for an evil which will now in the end probably consign the British empire to destruction, it may safely be affirmed that the British people, and every individual amongst them, must bear their full share of the burden. A general delusion seized the public mind. The populace loudly clamoured for a reduction of taxation, without any regard to the consequences, not merely on future times, but their own present advantage. The learned fiercely assailed the sinking-fund, and, with hardly a single exception, branded the work of Pitt and Fox as a vile impos-

CHAP. XLI.

1802.

ture, incapable of standing the examination of reason or experience. The Opposition vehemently demanded the remission of taxes; the government weakly granted the request. Year after year passed away under this miserable delusion; tax after tax was repealed amidst the applause of the whole nation;* the general concurrence in the work of destruction for a time almost obliterated the deep lines of party distinction, and, amidst mutual compliments from the Opposition to the Ministerial benches, the broad foundations of British greatness were loosened; the provident system of former times was abandoned; revenue, to the amount of forty millions a-year, surrendered without any equivalent; and the nation, when it awakened from its trance, found itself saddled for ever with eight-and-twenty millions as the

interest of debt, without any means of redemption, and with a democratic constitution which rendered the construction of any such in time to come utterly hopeless.

27. Great error in not repealing at once all the direct taxes on the peace.

The people were entitled to demand an instant relaxation from taxation upon the termination of hostilities; the pressure of the war taxes would have been insupportable when the excitement and expenditure of war were over. The income tax could no longer be endured; the assessed taxes and all the direct imposts should at once have been repealed; no man, excepting the dealers in articles liable to indirect taxation, should have paid anything to government. This was a part, and a most important part, of Mr Pitt's system. He was aware of the extreme and well-founded discontent which the payment of direct taxes to government occasions; he knew that nothing but the excitement and understood necessities of war can render them bearable. His system was, therefore, to provide for the extra expenses of war entirely by loans or direct taxes, and to devote the indirect taxes to the interest of the public debt and the permanent charges of government — those lasting burdens which could not be reduced without injury to the national credit or security, on the termination of hostilities. In this way a triple object was gained. The nation, during the continuance of war, was made to feel its pressure by the payment of heavy annual duties, while upon its conclusion the people experienced an instant relief in the cessation of those direct payments to government, which are always felt as most burdensome; and at the same time the permanent charges of the state were provided for in those indirect duties which, although by far the most productive, are seldom complained of, from their being mixed up with the price of commodities, and so not perceived by those who ultimately bear their weight. Mr Pitt's system of taxation, in short, combined the important objects of heavy taxation during war, instant relief on peace, **and** a permanent provision for the lasting expenses of the state,

CHAP. XLI.

1816-1832.

in the way least burdensome to the people. The influence of these admirable principles is to be seen in the custom so long adhered to, and only departed from amidst the improvidence of later times, of separating, in the annual accounts of the nation, the war charges from the permanent expenses, and providing for the former by loans and temporary taxes, for the most part in the direct form, while the latter were met by lasting imposts, which were not to be diminished till the burdens to which they were applicable were discharged.

28. Imprudent remission of indirect taxes since 1816.

Following out these principles, the income tax, the assessed taxes, the war malt-tax, and in general all the war taxes, should have been repealed on the conclusion of hostilities, or as soon as the floating debt contracted during their continuance was liquidated: but on the other hand, the indirect taxes should have been regarded as a sacred fund set apart for the permanent expenses of the nation, the interest of the debt, and the sinking-fund, and none of them repealed till, from the growth of a surplus, after meeting those necessary charges, it had become apparent that such relief could be afforded without trenching on the financial resources of the state. That the growth of population, and the constant efforts of general industry, would progressively have enabled government, without injuring these objects, to afford such relief, at least by the repeal of the most burdensome of the indirect taxes, as the salt tax, the soap and candle tax, and part of the malt tax, is evident, from the consideration that the taxes given up since the peace amount to £42,000,000, while £5,000,000, only have been imposed during the same period; and consequently, after the repeal of the income tax, assessed taxes, and these oppressive indirect taxes, an ample fund for the maintenance of the sinking-fund, even at the elevated rate of fifteen millions a-year, would have remained. Thus Mr Pitt's system involved within itself the important and invaluable qualities of providing amply for the necessities

of the moment, affording instant relief on the termination of hostilities, and yet reserving an adequate fund for the liquidation of all the national engagements in as short a time as they were contracted.*

29. **Little good has been derived from this repeal of indirect taxes.**

If, indeed, the nation had been positively unable to bear the burden of the sinking-fund of fifteen millions drawn from the indirect taxes, it might have been justly argued that the evil consequences of its abandonment, however much to be deplored, were unavoidable; and therefore that the present hopeless situation of the debt may be the subject of regret, but cannot be reproached as a fault to any administration whatever. But unfortunately this was by no means the case. To all appearance, the nation has derived no material benefit from a great part of the taxes thus improvidently abandoned, but has, on the contrary, suffered in all its present interests, as well as its future prospects, from the change. In proof of this, it is only necessary to recollect, that during the war the nation not only existed, but throve under burdens infinitely greater than have been imposed since its termination, and that, too, although the exports and imports at that period were little more than *half* of what they have since become. During the four last years of the war, the sum annually raised by taxes was from sixty-five to seventy-five millions, while twenty years after it was from forty-five to fifty; although, during the first period, the exports ranged from forty-five to sixty millions, and the imports from

twenty-five to thirty; while, during the latter, the exports had risen to seventy-five millions, and the imports to forty-five; and in the last year the former had swelled to the enormous amount of one hundred and five millions, and the latter to sixty.[45]

30. Immense burdens under which the nation prospered during the war.

Without doubt, the prosperity of the later years of the war was in a great degree fictitious: most certainly it depended to a certain extent on the feverish excitement of an extravagant issue of paper, and was also much to be ascribed to a large portion of the capital of the nation being at that period annually borrowed and spent in an unproductive form, to its great present benefit and certain ultimate embarrassment. It is equally clear, that if this had gone on for some years longer, irreparable ruin must have been the result. But there is a medium in all things. As much as the public expenditure before 1816 exceeded what a healthful state of the body politic could bear, so much has the expenditure since that time fallen short of it. Violent transitions are as injurious in political as in private life. To pass at once from a state of vast and unprecedented expenditure to one of rigid and jealous economy, is in the highest degree injurious to a nation; it is like reducing a patient suddenly from an inflammatory diet to the fare of an anchorite. It may sometimes be unavoidable, but unquestionably the change would be much less perilous if gradually effected.

CHAP. XLI.

18164832. 31. Argument on this subject.

It was unquestionably right, at the conclusion of the war, to have made as large a reduction as was consistent with the public security in the army and navy, and to stop at once the perilous system of borrowing money. Such a reduction at once permitted the repeal of the whole direct war taxes. But having done this, the question is, Was it expedient to go a step further, and make such reductions in the indirect taxes, of which no serious complaint was made, as amounted to a practical repeal of the sinking-fund? That was the ruinous measure. The maintenance of that fund at twelve or fifteen millions a-year, raised from taxes, with its growing increase, would to all appearance have been a happy medium, which, without adding to, but, on the contrary, in the long run diminishing, the national burdens, would at the same time have prevented that violent transition from a state of expenditure to one of retrenchment, under the disastrous effects of which, for twenty years after the peace, all branches of industry, with only a few intervals, continued to labour. No one branch of the government expenditure would have gone further to uphold, during this trying time, the industry and credit of the country, and diffuse an active demand for labour through all classes, than that which was devoted to the sinking-fund. Such a fund, beginning at twelve or fifteen millions a-year derived from taxes, and progressively rising to twenty, thirty, and forty millions annually, applied to the redemption of stock, must have had a prodigious effect, both in upholding credit and spreading commercial enterprise through the country. It would have produced an effect precisely opposite to that which the annual absorption of the same sum in loans, during the war, occasioned.

The public funds, under the influence of the prodigious and growing purchases of the commissioners, must have been maintained at a very high level; it is probably not going too far to say, that, since 1820, they would have been constantly kept at from ninety to one hundred. The

CHAP XLI. 1816483

effect of such a state of things in vivifying and sustaining commercial enterprise, and counteracting the depression consequent upon the great diminution of the government expenditure in other departments, must have been immense. The money given for the stock purchased by the commissioners would have been let loose upon the country; their operations must have continually poured out upon the nation a stream of wealth, constantly increasing in amount, which, in the search for profitable investment, could not have avoided giving a most important stimulus to every branch of national industry. The sinking-fund would have operated like a great forcing-pump, which drew a large portion of the capital of the country annually out of its unproductive investment in the public funds, and directed it to the various beneficial channels of private employment. Doubtless the funds necessary for the accomplishment of this great work could only have been drawn from the nation, as the proceeds of the stock purchased by the commissioners, just as the produce of the taxes is all extracted from the national industry. But experience has abundantly proved that such a forcible direction of a considerable part of the national income, to such a productive investment, is often more conducive to immediate prosperity, as well as ultimate advantage, than if, from an undue regard to popular clamour, it is allowed to remain at the disposal of individuals. It is like compelling a spendthrift and embarrassed landowner, not only to provide annually for the interest of his debts, but to pay off a stated portion of the principal, which, when assigned to his creditors, is immediately devoted to the fertilising of his fields and the draining of his morasses.

32. Great immediate as well as ultimate advantages which would have attended keeping up the sinking fund.

Nor is this all The high price of the funds consequent upon the vast and increasing purchases of the commissioners, would have gone far not only to keep up that prosperous state of credit which is essential to the well-being of a commercial country, but have induced numbers of private individuals to sell out, in order to realise the

33. Beneficial result which would have arisen from keeping up the price of the funds.

great addition to their capitals which the rise of the public securities had occasioned. To assert that this forced application yearly of a considerable portion of the national capital to the redemption of the debt, would hare altogether counteracted the decline in the demand for labour consequent on the transition from a state of war to one of peace, would be going further than either reason or experience will justify. But this much may confidently be asserted, that the general prosperity consequent on this state of things could not have failed to have rendered the taxation requisite to produce it comparatively an endurable burden—that the nation would, to all appearance, have been much more prosperous than it has been under the opposite system, and, at the same time, would have obtained the incalculable advantage of having paid off, during these prosperous years, above two-thirds of the national debt. This prosperity, doubtless, would have been partly owing to a forced direction of capital; but, whatever danger there may be in such a state of things while debt is annually contracted, there is comparatively little when it is continued only for its discharge—and when an artificial system has contributed to the formation of a burden, it is well that it should not be entirely removed till that burden is reduced to a reasonable amount.

34. Public errors which led to its abandonment, and their distressing effects.

Every one, when this vast reduction of indirect taxes was going on, to the entire destruction of the sinking-fund and Mr Pitt's provident system of financial policy, looked only, even with reference to present advantage, to one side of the account. They forgot that if the demands of government on the industry of the nation were rapidly reduced, its demands on government must instantly undergo a similar diminution ; that if the exchequer ceased to collect seventy millions a-year, it must cease also to expend it. Every reduction of taxation, even in those branches where it was not complained of, was held forth as an alleviation of the burdens of the nation, and a reasonable ground for popularity to its rulers; whereas,

CHAP. XLI.

1816-1832.

in truth, the relief even at the moment was more nominal than real Though a diminution of those burdens was effected, it took place frequently in quarters where they were imperceptible, and drew after it an instantaneous and most sensible reduction in the demand for labour and the employment of the industrious classes, at a time when such demand could ill be spared, from the same effect having simultaneously ensued from other causes. Great part of the distress which has been felt by all classes since the peace was the result of the general diminution of expenditure, which the too rapid reduction of so many indirect taxes and consequent abandonment of the sinking-fund necessarily occasioned, and which the maintenance of its machinery, till it had fulfilled its destined purpose, would to a very great degree have alleviated. It augments our regret, therefore, at the abandonment of Mr Pitt's financial system, that the change had not even the excuse of present necessity or obvious expedience for its recommendation, but was the result of undue subservience to particular interests, or desire for popularity on the part of our rulers, unattended even by the temporary advantages for the sake of which its incalculable ultimate benefits were relinquished.

35. Lord Castlereagh's error regarding the income tax.

Lord Castlereagh made a most manly endeavour, in 1816, to induce the people to submit for a few years to that elevated rate of taxation by which alone permanent relief from the national embarrassments could be expected; but he committed a signal error in the tax which he selected for the struggle, and deviated as much from Mr Pitt's principles in the effort to maintain that heavy impost, as subsequent administrations did in their abandonment of others of a lighter character. The income tax, being a direct war impost of the most oppressive and invidious description, was always intended by that great statesman to come to a close with the termination of hostilities; and its weight was so excessive, that it was impossible and unreasonable to expect the people to submit any longer

to its continuance. Nothing could be more impolitic, therefore, than to commit government to a contest with the nation on so untenable a ground. It was the subsequent repeal of indirect taxes to the amount of above thirty millions a-year, when they were not complained of, and when the fall in the price of the taxed articles, from the change in the value of money, had rendered their weight imperceptible, which was the fatal deviation from Mr Pitt's principles.

The nation was mainly responsible for this change of

The administrations by whom this prodigious repeal was effected are not exclusively responsible for the result. It is not unlikely that, from the growing preponderance of the popular branch of the constitution, it had become impossible to carry on the government without the annual exhibition of some such fallacious benefit, to gain the applause of the multitude ; and it is more than probable that, from the excessive influence which in later years it acquired, the maintenance of any fixed provident system of finance had become impossible. But they are to blame, and history cannot acquit them of the fault, for not having constantly and strenuously combated this natural, though ruinous, popular weakness ; and if they could not prevail on the House of Commons to adhere to Mr Pitt's financial system, they should at least have laid on them the responsibility of all the consequences of its abandonment. And as the repeal of indirect taxes during peace was the fatal error, so the return to an income-tax during the burdens of the Chinese, and the disasters of the Affghanistaun wars, in 1842, was a wise and manly measure, as much in accordance with the spirit of Mr Pitt's financial policy as the previous calamitous reductions of indirect taxes had been against it.

It was impossible to explain Mr Pitt's system for the reduction of the debt, without anticipating the course of events, and unfolding the ruinous results which have followed the departure from its principles. The paramount importance of the subject must plead the author's

CHAP. XLI. 1816.1832.

apology for the anachronism; and it remains now to advert, with a different measure of encomium, to the funding system on which that statesman so largely acted, and the general principles on which his taxation was founded.

37. Advantage! of the fund-ing system.

It is evident that, in some cases, the funding system, or the plan of providing for extraordinary public expenses by loans, the interest of which is alone laid as a burden on future years, is not only just, but attended with very great public advantage. When a war is destined apparently to be of short endurance, and a great lasting advantage may be expected from its results, it is often impossible, and if possible would be unjust, to lay its expenses exclusively upon the years of its continuance. In ordinary contests, indeed, it is frequently practicable, and when so it is always advisable, to make the expenses of the year fall entirely upon its income; so that, at the conclusion of hostilities, no lasting burden may descend upon posterity. But in other cases this cannot be done. When, in consequence of the fierce attack of a desperate and reckless enemy, it has become necessary to make extraordinary efforts, it is often altogether out of the question to raise supplies in the year adequate to its expenditure; nor is it reasonable, in such cases, to lay upon those who, for the sake of their children as well as themselves, have engaged in the struggle, the whole charges of a contest of which the more lasting benefits are probably to accrue to those who are to succeed them. In such cases, necessity in nations, not less than individuals, calls for the equalisation of the burden over all those who are to obtain the benefit; and the obvious mode of effecting this is by the funding system, which, providing at once by loan the supplies necessary for carrying on the contest, lays its interest as a lasting charge on those for whose behoof the debt had been contracted. Nor is it possible to deny, amidst all the evils which the abuse of this system has occasioned, its astonishing effect in suddenly augmenting the resources of a nation; or to resist the conclusion

deducible from the fact, that it was to its vigorous and happy application, at the close of the war, that the extraordinary successes by which it was distinguished are in a great degree to be ascribed. *

But this system, like everything good in human affairs, has its limits; and if extraordinary benefits may sometimes arise from its adoption, extraordinary evils may still more frequently originate in its abuse. Many individuals have been elevated, by means of loans contributed at a fortunate moment, to wealth and greatness; but many more have been involved, by the fatal command of money which it confers for a short period, in irretrievable embarrassments. Unless suggested by necessity and conducted with prudence—unless administered with frugality and followed by parsimony, borrowing is to nations, not less than individuals, the general road to ruin. It is the ease of contracting compared with the difficulty of discharging; the natural disposition to get a present command of money, and leaving the task of paying it off to posterity, which is the temptation that, to communities not less than single men, so often proves irresistible. Opulent nations, whose credit is high, become involved in debt from the same cause which has overwhelmed almost all the great estates in Europe with mortgages. The existence of the means of relieving present difficulties by merely contracting debt, is more than the firmness either of the heads of families or the rulers of empires can resist. And there is this extraordinary and peculiar danger in the lavish contraction of debt by government, that, by the great present expenditure with which it is attended, a

Its dangers.

*** Loans contracted by the British government in the latter years of the war:—**

1812,	**£24,000,000**	**1814,**	**£58,763,000**
1813,	**27,871,000**	**1815,**	**18,600,000**

Of these great loans upwards of £12,000,000 was, in 1813, 1814, and 1815, applied annually to the subsidising of foreign powers, in consequence of which the whole armies of Europe came to be arrayed in British pay on the banks of the Rhine; while, at the same time, the Duke of Wellington, at the head of 80,000 men, was maintained on the southern frontier of France.—MOBEAU'S *Tables;* PEBRBB, 246.

CHAP. XLI. 1816-1832.

very great impulse is communicated at the time to every branch of industry, and thus immediate prosperity is generated out of the source of ultimate ruin.

Mr Pitt's viewsonthis subject.

Mr Pitt was fully aware both of the immediate advantages and of the ultimate dangers of the funding system. His measures, accordingly, varied with the aspect which the war assumed, and the chances of bringing it to an immediate issue which present appearances seemed to afford. During its earlier years, when the Continental campaigns were going on, and a rapid termination of the strife was constantly expected, as was the case with the Spanish revolution in 1823, or the Polish in 1831, large loans were annually contracted, and the greater part of the war supplies of the year were raised by that means; provision being made for the permanent raising of the interest, and of the sinking-fund for the extinction of these loans, in the indirect taxes which were simultaneously laid on, and to the maintenance of which the national faith was pledged, till the whole debt thus contracted, principal and interest, was discharged."* It is no impeachment of the wisdom of this system, so far as finance goes, that the expectations of a speedy termination of the contest were constantly disappointed, and that debt to the amount of a hundred and sixteen million pounds was contracted before the Continental peace of Campo Formio in 1797, without any other result than a constant addition to the power of France. The question is not, whether the resources obtained from these loans were beneficially expended, but whether the debts were contracted yearly under a belief, founded on rational grounds, that by a vigorous prosecution of the contest it might

speedily be brought to a successful issue ? That this view, so far as mere finance considerations are concerned, was well founded, is obvious from the narrow escapes which the French Republic repeatedly made during that period, and the many occasions on which the jealousies of the Allies, or the niggardly exertion of its military resources by Great Britain, let slip the means of triumph when within their grasp.

40. Modification which they received after the first Continental peace in

The financial measures of the British minister, therefore, during this period, were justifiable and prudent : the real error consisted in the misapplication or undue husbanding of the land forces of the country, for which it is not so easy to find an apology. But after the peace of Campo Formio, in 1797, this system of lavish annual borrowing, in expectation of an immediate and decisive result, necessarily required a modification. Great Britain was then left alone in the struggle. Her Continental allies had ail disappeared from the field of battle; and the utmost that she could now expect was, to continue a defensive warfare till time or a different series of events had again brought their vast armies to her side. To have continued the system of borrowing for the war expenses of the year, in such a state of the contest, would have been to go on with measures which were likely to lead to perdition. The war having now assumed a defensive and lasting complexion, the moment had arrived when it became necessary to bring the taxes within the year nearer to a level with the expenditure. This change, and the reasons for it, are thus detailed in Mr Pitt's speech on the budget for the year 1798 :—

" Nineteen millions is the sum which is required for extraordinary expenses in the present year. According to the received system of financial operations, the natural and ordinary mode of providing for this would be by a loan. I admit that the funding system, which has so long been the established mode of supplying the public wants, is not yet exhausted, though I cannot but regret

CHAP. XIX

1798.

the extent to which it has been carried. If we look, however, at the general diffusion of wealth, and the great accumulation of capital; above all, if we consider the hopes which the enemy has of wearing us out by the embarrassments of the funding system, we must admit that the true mode of preparing ourselves to maintain the contest with effect and ultimate success, is to reduce the advantages which the funding system is calculated to afford within due limits, and to prevent the depreciation of our national securities. We ought to consider how far the efforts we shall exert to preserve the blessings we enjoy, will enable us to transmit the inheritance to posterity unencumbered with those burdens which would cripple their vigour, and prevent them from asserting that rank in the scale of nations which their ancestors so long and gloriously maintained. It is in this point of view that the subject ought to be considered. Whatever objections might have been fairly urged against the funding system in its origin, no man can suppose that, after the form and shape which it has given to our financial affairs, after the heavy burdens which it has left behind it, we can now recur to the notion of making the supplies raised within the year, on such a scale of war expense as we are now placed in, equal the expenditure. If such a plan, how desirable soever, is evidently impracticable, some medium, however, may be found to draw as much advantage from the funding system as it is fit, consistently with a due regard to posterity, to afford, and at the same time to obviate the evils with which its excess would be attended. We may still devise some expedient by which we may contribute to the defence of our own cause, and to the supply of our own exigencies; by which we may reduce within equitable limits the accommodation of the funding system, and lay the foundation of that quick redemption which will prevent the dangerous consequences of an overgrown accumulation of our public debt.

" To guard against the undue accumulation of the pub-

lie debt, and to contribute that share to the struggle in which we are engaged which our abilities will enable us, without inconvenience to those who are called upon to contribute, to afford, appears essentially necessary. I propose, with this view, to reduce the loan for this year (1798) to twelve millions, and to raise seven millions by additional taxation within the year. I am aware that this sum does far exceed anything which has been raised at any former period at one time; but I trust that, whatever temporary sacrifices it may be necessary to make, the House will see that they will best provide for the ultimate success of the struggle, by showing that they are determined to be guided by no personal considerations; and that, while they defend the present blessings they enjoy, they are not regardless of posterity. If the sacrifices required be considered in this view—if they be taken in reference to the objects for which we contend, and the evils we are labouring to avert—great as they may be compared with former exertions, they will appear light in the balance. The objects to be attained in the selection of the tax to meet this great increase are threefold. One great point is, that the plan should be diffused as extensively as possible, without the necessity of such an investigation of property as the customs, the manners, and the pursuits of the people would render odious. The next is, that it should exclude those who are least able to contribute or furnish means of relief. The third, that it should admit of those abatements which, in particular instances, it might be prudent to make in the proportion of those who might be liable under its general principles. No scheme, indeed, can be practically carried into execution in any financial arrangement, much more in one embraced in such difficult circumstances as the present, with such perfect dispositions as to guard against hardship in every individual instance ;[1] but these appear to me to be the principles which should be kept in view in the discussion of the proper method to be adopted for meeting

He proposes to augment the supplies raised within the year.

1 Parl. Hist xxxiii. 1042. 1045.

CHAP. XLI. 1798.

the large deficiency which, from the contraction of the loan, it will become necessary to make good by taxation within the present year."

43. Tiebling of the assessed taxes.

In pursuance of these admirable principles, Mr Pitt proposed to treble the assessed taxes, which fell chiefly on the rich, such as servants, horses, carriages; and that the house and window taxes, which in a great measure are borne by the middle ranks, should only be doubled; both under various restrictions, to restrain their severity in affecting the humbler class of citizens. This was agreed to by the committee of the House of Commons; and thus the first step was made in the new system of contracting the loan within narrower limits, and making the supplies raised within the year more nearly approach to its expenditure. But the produce of the tax fell greatly short of the expectations of government, as they had calculated on its reaching seven millions, whereas it never exceeded four millions and a half—a deficiency which demonstrated that the limits of indirect taxation on these objects had been passed, and rendered a recurrence to borrowing necessary in that very year. The trebled assessed taxes thus imposed, however, were, according to Mr Pitt's plan, to be continued only for a limited time, and kept up only as a war burden.[1]

[1] Parl. Hist xxxiii.1076.

44. In Mr Pitt's view, these heavy burdens were to be temporary only.

"I propose," said he, "that the increased assessment now voted shall be continued till the principal and interest of the loan contracted this year shall be discharged: so that after the seven millions shall have been raised within this year, the same sums continued next year, with the additional aid of the sinking-fund, will pay off all that principal and intermediate interest. If you feel yourselves equal to this exertion, its effects will not be confined to the benefits I have stated in the way of general policy; it will go to the exoneration of the nation from increased burdens. Unless you feel that you have a right to expect that, by less exertion, you will be equally secure, and indulge in the hope that, by stopping short of this effort, you

will produce a successful termination of the war, you must put aside all apprehensions of the present pressure, and, by vigorous exertion, endeavour to secure your future stability; the happy effects of which will soon be seen and acknowledged. I am aware it will be said that it would have been fortunate if the system of funding had never been introduced, and that it is much to be lamented that it is not terminated; but if we are arrived at a moment which requires a change of system, it is some encouragement for us to look forward to benefits which, on all former occasions, have been unknown, because the means of obtaining them were neglected. Raise the present sum by taxation in two years, and you and your posterity are completely exonerated from it; but if, on the other hand, you fund its amount, it will entail an annual tribute for its interest, which, in forty years, will amount to no less than forty millions. These are the principles, this is the conduct, this is the language, fit for men legislating for a country that, from its situation, character, and institutions, bears the fairest chance of any in Europe for perpetuity. You should look to distant benefits, and not work in the narrow circumscribed sphere of shortsighted selfish politicians. You should put to yourselves this question, the only one now to be considered, ' Shall we sacrifice, or shall we save to our posterity, a sum of between forty and fifty millions sterling *V* And above all, you should consider the effect which such a firm and dignified conduct would have on the progress and termination of the present contest, which may, without exaggeration, involve everything dear to yourselves, and decide the fate of your posterity."[1]

[1] Parl. Hist. xxxiii.1054, 1055.

45. Great change of system thus introduced.

Here was a great change of system, and a remarkable approximation to a more statesmanlike and manly mode of raising the supplies required for the existing contest. Instead of providing taxes adequate to the interest merely of the sums borrowed, direct burdens were now to be imposed, which in two or three years would discharge

CHAP. XLI. 1799.

the whole principal sums themselves. Au admirable plan and the nearest approximation which was probably then practicable to the only safe system of finance—that of making the supplies raised within the year equal, or nearly equal, to the expenditure. It was soon, however, departed from amidst the necessities or profusion of future years; and from the heavy burdens which it imposes at the moment, and its withdrawing as much capital from the private employment of labour as it adds to the public, it was necessarily attended both with greatly more present suffering, and far less counteracting prosperity, than the more encouraging and delusive system of providing for all emergencies by lavish borrowing, which had previously, and for so long a period, been adopted.

46. First introduction of the income-tax.

The new system, thus commenced, was continued with more or less resolution during all the remainder of Mr Pitt's administration. But, in spite of the clear perception which all statesmen had now attained of the ultimate dangers of the funding system, it was found to be impossible to continue the new plan to the full extent originally contemplated by its author. In the next year, the war again broke out under circumstances the most favourable to the European powers, and sound policy forbade a niggardly system of finance, when, by a great combined effort, it appeared possible to obtain, during the absence of Napoleon on the sands of Egypt, all the objects of the war in a single campaign. Impressed with these considerations, Mr Pitt proposed the income-tax in 1799; a great step in financial improvement, and, if considered as a *war* impost, and regulated according to a just scale, the most productive, and, for such circumstances, the most expedient, that could be adopted. The grounds on which this addition to the national burdens was proposed, were thus stated by Mr Pitt:—

Feb. 1799.

" The principles of finance which the house adopted last year, were, first, to reduce the total amount to be at

47. **Mr Pitt's speech introducing this impost, and his plan.**

present raised by loan; and next, to provide for the deficiency by a temporary tax, which should extinguish the loan within a limited time. The modifications, however, which it became necessary to introduce into the increase of the assessed taxes last year, considerably reduced its amount; and it is now necessary to look for some more general and productive impost, which may enable us to continue the same system of restraining the annual loan within reasonable limits. With this view, it is my intention that the presumption on which the assessed taxes is founded shall be laid aside, and that a general tax shall be imposed on all the leading branches of income. No scale, indeed, can be adopted which shall not be attended with occasional hardship, or withdraw from the fraudulent the means of evasion: but I trust that all who value the national safety will co-operate in the desirable purpose of obtaining, by an efficient and comprehensive tax upon real ability, every advantage which flourishing and invigorated resources can confer upon national efforts." In pursuance of these principles, he proposed that no income under £60 a-year should pay anything: that, from that up to £200 a-year, it should be on a graduated scale; and that for £200 a-year and upwards, it should be ten per cent. No one was to be called on to make disclosure to the commissioners; but if he declined, he was to be liable to be assessed at the sum which they should fix: if he gave in a statement of his receipts, he was, if required, to confirm it on oath. Funded property was to be assessed as well as other sources of income, and the profits of tenants were to be estimated at three-fourths of the rack-rent of their lands. The total taxable income of Great Britain he estimated at £102,000,000 a-year, and calculated the produce of the tax at ten millions sterling. In consideration of this great supply, he proposed to reduce the trebled assessed taxes to their former level, and to restrict the loan to £9,500,000,[1] for which the income-tax was to be mort-

Parl. Hist. txxiv. 5, 6, 18,22.

CHAP. XLI.

1799.

48. Objections urged against it.

gaged, after the mortgage imposed for the loan of the former year had been discharged.

In opposition to this bill, it was argued by Sir William Pulteney and a considerable body of respectable members, " That the general and wise policy of the country, from the Revolution downwards, had been to lay taxes on consumption, and consumption only; and to this there was no exception but the land-tax, which was of inconsiderable amount; for even the window-tax was a burden on a luxury which might be diminished at pleasure. Now, however, the dangerous precedent is introduced of levying a heavy impost, not on expenditure or consumption, but on income: that is, of imposing a burden which, by no possibility, can be avoided. If this principle be once introduced, it is impossible to say where the evil may stop; for what is to hinder the government to increase the tax to a fifth, a third, or even a half: that is, to introduce the confiscations which have always distinguished arbitrary governments, and have been in an especial manner the disgrace of the French Revolution \ The great danger of this tax, therefore, is, that it not only sanctions a most odious and dangerous inquisition into every man's affairs, but it is so calculated as to weigh with excessive severity on the middle orders of society, while it would bear but slightly in comparison upon the highest, and totally exempt the lowest. It would destroy the middle class, and do it soon: it would totally prevent the accumulation of small capitals, the great source of general prosperity; and then we should have only two classes in the community—and a miserable community it would be—of noblemen and peasants. The principle that every man should contribute according to his means, is doubtless just: but is this a contribution according to means? Quite the contrary—it is a tax which falls with undue severity upon some classes, and improper lightness on Others. A person possessing permanent and independent income may spend what portion of it he chooses,

without injury to his heirs: but income resulting from personal industry, or from profession, stands in a very different situation; for it is necessary that a part of the income of these descriptions should be laid by as a provision for old age or helpless families. Expenditure, therefore, is the only sure criterion of taxation, because it alone is accommodated to the circumstances or necessities of each individual taxed: and if a few misers, under such a system, may avoid contributing their proper share, they are only postponing the day of payment to their heirs, who, in all probability, will be the more extravagant: and far better that such insulated individuals should escape, than the far-spread injustice be inflicted which would result from the adoption of the proposed alteration."[1]

[1] Parl. Hist. xxxiv. 134, 147.

4.9. [t is adopted by parliament.

The income-tax, notwithstanding these objections, was adopted by the House of Commons in the year 1799; the loan of that year being, for Great Britain and Ireland, £18,500,000, besides £3,000,000 of exchequer bills. But in comparing the amount of the loans which would have been necessary, if this system of increasing the supplies raised within the year had not been adopted, with that actually contracted under the new system, it was satisfactorily shown by Mr Pitt that no less than £120,000,000 would ultimately be saved to the nation by the more manly policy, when the interest which was avoided was taken into account—a striking proof of the extraordinary difference to the ultimate resources of a country, which arises from raising the supplies within the year, and providing them in great part by the funding system. The system of Mr Pitt, however, in regard to these direct taxes, was, in one important particular, a deviation from his general financial policy; and the embarrassing consequences of this deviation speedily became conspicuous. At the first imposition of the treble assessment it was intended as an extraordinary resource, which there was no likelihood would be required

CHAP. XLI. 1799-1806.

beyond one or two years; and, in consequence, it was mortgaged for a considerable proportion of the loans contracted in the years when it was in operation; and the same principle was continued when it was commuted for the income-tax. But when this system continued for several years in succession, it came to violate the principle that these direct taxes, being a burdensome impost, should be continued only while the war lasted; for in the years from 1798 to 1801, the amount thus fixed as a preferable burden on the direct war taxes was no less than fifty-six millions.

50. Change subsequently introduced on the system.

The magnitude of this mortgage obliged Mr Pitt, in 1801, to return to his old mode of contracting loans, by providing, in the increase of indirect taxes, for their interest and the sinking-fund required for their redemption; and, in 1802, when Mr Addington came to arrange the finances for a peace establishment, he got quit altogether of this embarrassing load on the direct taxes, which would have required them, contrary to all principle, to be continued for nine years after the war had ceased, and boldly funded at once the whole of this £56,000,000, as well as £40,000,000 of unfunded debt which existed at the end of the war. For the whole of this immense sum of £96,000,000 he contrived to find sufficient taxes, even when adhering to Mr Pitt's system of making provision in the funding of loans, not only for its annual interest, but for the sinking-fund destined for its redemption. There can be no doubt that this was a very great improvement, and that it restored this branch of our finances to their true principle—which is, that the whole sums required for the interest and redemption of the debt should be raised by indirect taxes, and that direct burdens should be reserved only for the extraordinary efforts made during the continuance of the war—to make the supplies raised within the year as nearly as possible equal its expenditure.[1]

[1] Pari. Deb. viii. 573, 576.

The changes which have now been mentioned embraced

51. Advantages of the new system.

all the leading principles of Mr manciai *system*. In subsequent years the same policy was adopted which had been introduced with so much success in later times, of augmenting as much as possible the supplies raised within the year, and diminishing as much as might be the loan which it was still necessary annually to contract. And of the success with which this system was attended, and the rapid growth of the machinery erected for the extinction of the debt, the best evidence is preserved in the honest testimony of his Whig successor in the important office of chancellor of the exchequer :—" In the year 1803/' said Lord Henry Petty, afterwards Lord Lansdowne, " the proportion of the sinking-fund to the unredeemed debt was as one to eighty-two ; the former being £5,835,000, and the latter £480,572,000. But in the year ending 1st February 1806, the sinking-fund amounted to £7,566,000, and the unredeemed debt was then £517,280,000; making the proportion one in sixty-eight. After this, it is unnecessary for me to enter into any eulogium on the sinking-fund, or to detain the house with any panegyric on its past effects or future prospects. Its advantages are now fully felt in the price of stock and contracting of loans; and independent of all considerations of good faith, which would induce the house to cling to it as their sheet-anchor for the future, they were called to support it, from having had positive experience of its utility. And of the vast importance of raising a great part of the supplies within the year, no better proof can be desired than is furnished by the fact that, during the first ten years of the war, the increase of the debt was £253,000,000—being at the rate, on an average, of twenty-five millions a-year ; whereas, during the three years of the present war, from 1803 downwards, the total sum borrowed has been £36,000,000, being at the rate of twelve millions a-year only."[1]

[1] Ann. Reg. 1806, 70. Parl. Deb. Parl.567,570.

With the exception, however, of the war taxes thus imposed for a special purpose, and which were pledged

CHAP. XLI. 1805-1810.

52. Mr Pitt's permanent taxes were all in the indirect form. Their advantages.

to be temporary burdens, enduring only for the year in which they were raised, or at most for a year or two after it, all the other taxes imposed by Mr Pitt were in the indirect form. And in particular, the interest of the loans annually contracted, when laid as a permanent burden on the nation, and the amounts requisite for the immediate redemption of the principals of which the war taxes were not mortgaged, as was done in 1799, were all proyided for in this mitigated form. The wisdom of this arrangement cannot be better stated than in the words of Mr Hume :—" The best taxes are such as are levied upon consumption, especially those of luxury, because such taxes are least felt by the people. They seem in some measure voluntary, since a man may choose how far he will use the commodity which is taxed. They are paid gradually and insensibly; they naturally produce sobriety and frugality, if judiciously imposed; and being confounded with the natural price of the commodity, they are scarcely perceived by the consumers. Their only disadvantage is, that they are expensive in the levying. Taxes, again, upon possessions are levied without expense, but have every other disadvantage. Most statesmen are obliged to have recourse, however, to them, in order to supply the deficiencies of the others. Historians inform us that one of the chief causes of the destruction of the Roman state was the alterations which Constantine introduced into the finances, by substituting a *universal direct tax in lieu of almost all the tithes, customs, and excise which formerly composed the revenues of the empire.* The people in all the provinces were so grinded by this imposition, that they were glad to take refuge under the conquering arms of the barbarians, whose dominion, as they had fewer necessities and less art, was found to be preferable to the refined tyranny of the Romans."[1] It is to be regarded, therefore, as a capital excellence in Mr Pitt's financial measures, that he not only provided, in permanent imposts, for the interest of the whole public debt and the sinking-

[1] Hume's Essays, i. 365, 366.

fund necessary for its redemption, but made that provision exclusively in taxes in the indirect form, the burden of which is imperceptible, and is never the subject of any general complaint; whereas the direct taxes, which are always felt as so oppressive, were reserved, as a last resource, for the unavoidable exigencies of war, and specially restricted to those years only during which the excitement and necessities of the actual contest were experienced.

53. Arguments for indirect taxation.

In addition to these forcible reasons for always, except in cases of obvious necessity, and when national resources are exhausted, preferring indirect to direct taxation, there is another of perhaps still greater importance which has never yet met with the attention it deserves. It has often been observed with surprise by travellers, that though the sums which are extracted from the people in a direct form by the Turkish Pashas or the Indian Rajahs, have frequently the effect of totally ruining industry, yet they are inconsiderable when compared to the immense revenue derived from the customs and excise in the European states, without any sensible impediment to its exertions. The reason, though not apparent at first sight, when stated appears entirely satisfactory. It consists in a difference to the resources of the state similar to that experienced in agriculture upon the meadows beneath, between drawing off water from the fountain-head and drawing it off at a vast distance below, after it has fertilised numerous plains in its course. If you abstract money in a direct form from the cultivator or the artisan, the revenue taken goes at once from the producer to the public treasury ; but if you withdraw it from the person who ultimately sells the manufactured article to the consumer, it has, *before it is withdrawn,* put the industry of a dozen different classes of persons in motion* The sum received by the government may be the same in both cases : but how immense the difference between the effect upon general industry when it is seized upon by the

CHAP. XLI. 1806-1810.

tax-collector early in its course, and only withdrawn after it has given all the encouragement to different branches of employment it is capable of effecting! Fifty different individuals are often put to their shifts to meet the burden of an indirect tax, and, by their united efforts and increased economy in production, discharge it without difficulty ; a direct one falls in undivided severity on one alone, and if he attempts to throw it upon another, he is immediately met by a diminished sale for his produce. So important is this distinction, that it may safely be affirmed that no nation ever yet was ruined by indirect taxation ; nor can it be so, for before it becomes oppressive it must cease to be productive. Many, however, have been exterminated by much smaller sums levied in the direct form; that method of raising the supplies being attended with this most dangerous quality, that it is often most productive when it is trenching most deeply on the sources of future subsistence.

54. Reply to the objections against them.

Nor is there any foundation for the obvious reply to this argument, based on the observation, that if the productions of industry are taxed in the person of the consumer, he must diminish the quantity which he can purchase, and thus industry will be as effectually paralysed as if the impost were laid directly upon the producer. Plausible as this argument undoubtedly is, the common sense and experience of mankind have everywhere rejected its authority. No complaint was made during the war of fifty-five millions levied annually, by means of indirect taxes, on the people of Great Britain ; but so burdensome was the income-tax, producing only fourteen millions a-year, felt to be, that all the efforts of government could not keep it on for one year after its termination. When the voice of the people was directly admitted, through the portals opened by the Reform Bill, upon the legislature, it was not the forty-two millions levied annually in the indirect form, but the four millions and a half extracted directly by the assessed taxes,

which were made the subject of such loud complaint, that a great reduction in those burdens became indispensable. The people, however unfit to judge of most matters in legislation, may be referred to as good authority in the estimation of the burdens which are felt as most oppressive by them at the moment.

55. Reasons of the superior lightness of indirect taxation.

Nor is it difficult to perceive the reason of this universal opinion among all practical men, how adverse soever it may be to the theoretical opinions of philosophers. Indirect taxes, if judiciously laid on, and not carried to such an excess as to render them unproductive, often do not in reality fall on any one individual with overwhelming severity; they are defrayed by the economy, skill, or improved machinery of all the many persons who are employed in the manufacture of the taxed article. The burden is so divided as to be imperceptible. Portioned out among fifteen or twenty different hands, the share falling on each is easily compensated. A slight increase in the economy of the manufacturer, a trifling improvement in the machinery for production of the article taxed, in the many hands engaged in its preparation, more than extinguishes the burden. The proof of this is decisive: the manufactures of England not only existed, but prospered immensely, under the combined pressure of the heavy indirect taxation and the enormous rise of prices occasioned by the suspension of cash payments during the war: many of them, though the value of money had fallen to a half during that period, were sold at half the price at its termination which they brought at its commencement. Of all the parts of Mr Pitt's financial system, none was more worthy of admiration than that which provided for all the *permanent* expenses of the nation by the indirect taxes'; of all the errors committed by his successors, none has been more prejudicial than the obstinate retention during peace of direct, and the lavish relinquishment of indirect taxes,

It results from these principles, that when an indirect

CHAP. XLI.

1806-1810.

56. **Cases in which indirect taxes, by being excessive, become direct burdens on production.**

tax is very heavy, and laid on a raw material, or one subjected to but a slight manufacturing process, it is frequently impossible for the producer either to compensate the tax by increased skill or economy of the article, or te lay it upon the consumer. In such cases the tax ceases to be an indirect impost on consumption; it becomes a direct burden on production, and, if unduly heavy, may terminate in the total ruin of the class on whom it was imposed. A signal instance of this occurred in Great Britain in regard to the heavy import duties on sugar. The burden formerly of thirty shillings, then of twenty-seven shillings, and afterwards of twenty-four shillings the hundredweight on West India sugar, was little felt during the war, when that article sold for forty or forty-five pounds the hogshead (from £6 to £6, 10s. the cwt.:) but when, on the return of peace, prices fell to twelve or fifteen pounds the hogshead (from 50s. to 60s. the cwt.,) including duty, it became intolerably severe. It then became nearly a hundred per cent on the rude material—the same as if a duty of fifty shillings a-quarter had been laid on wheat raised in England for the home consumption. Nor had either the planter or the refiner the means of eluding this tax to any considerable degree, by either raising the price of the article to the consumer, or diminishing by economy or machinery the cost of its production. The cost of raising rude agricultural produce can hardly ever be diminished to any considerable extent by the application of machinery; and the stoppage of the slave trade necessarily, in the first instance at least, increased the cost of production, while the only way in which it seemed possible to render the burden tolerable was by augmenting the quantity raised, which necessarily depressed to an undue extent the price which it bore in the market. Being unable to diminish the cost of production from these causes, all the efforts of the planters to make head against their difficulties, and defray the interest of their mortgages, by raising more extensive

crops of sugar, only tended to lower prices, and throw the taxes as an exclusive burden on themselves. The proof of this is decisive: the price of sugar in America is generally higher than in England, if the duty be deducted, sometimes by fully a third. In 1831, the price per hundredweight was, in Great Britain, twenty-three shillings and eightpence, excluding duty; while in America it was thirty-six shillings per hundredweight in the same year. Taking into view the greater expense of freight to Britain than to America from these islands, there can be no doubt that almost the whole tax has been paid in many years by the producers, amounting though it now does to a hundred per cent. Nothing more is requisite to explain the almost total ruin which had fallen on these splendid colonies, even before the last fatal measure of emancipating the slaves was carried into effect.[1]

[1] Commons' Rep. on West Indies, 1832, p. 7.

57. Important difference between indirect taxes on rural and manufactured produce.

In all fiscal measures on this subject, there is one principle to be constantly kept in view, to the neglect or oversight of which, more than anything else, the ruin of the West Indies is to be ascribed. This is, that while many branches of manufacturing industry possess the means, by improvements in machinery or the division of labour, of compensating very heavy fiscal burdens, *the raisers of rude produce can hardly ever do the same;* so that, unless they can succeed in laying the tax upon the consumer, which is very often altogether beyond their power, they are forced to pay it entirely themselves, and it becomes a ruinous direct burden on industry. No doubt can exist on this head, when it is recollected not merely how slight is the improvement which agriculture has ever received from the aid of machinery, but that, while in the most highly civilised states, such as England, the cost of raising manufactures is always, notwithstanding heavy taxes and a plentiful currency, less than in ruder states, that of producing agricultural produce is always much greater. Great Britain can undersell the world in manu-

CHAP. XLI.

1806-1810.

factures, but her farmers would be ruined without a corn-law—a fact strikingly illustrative of this vital distinction, and pointing to a very different rate of indirect taxation when applied to rude produce and manufactured articles, which has never yet met with adequate attention.

58. General character of Mr Pitt's financial measures. Their grandeur and foresight.

Such were the general features of Mr Pitt's financial policy. Decried by the spirit of party during his own lifetime, and that of the generation which immediately followed; stigmatised by the age which found itself oppressed by the weight of the burdens he had imposed, and which had forgotten the evils he had averted; obliterated almost, amidst the temporary expedients and conceding weakness of the governments by which he was succeeded, it is yet calculated to stand the test of ages, and appears now in imperishable lustre from the bitter and experienced, though now irrevocable, consequences of it3 abandonment. Grandeur of conception, durability of design, far-seeing sagacity, were its great characteristics. It was truly conceived in a heroic spirit. Burdening, perhaps oppressing, the present generation, it was calculated for the relief of future ages; inflicting on its authors a load of present odium, it was fitted to secure the blessings of posterity when they were mouldering in their graves. Founded on that sacrifice of the present to the future which is at once the greatest violence to ordinary inclinations, the invariable mark of elevated understandings, and the necessary antecedent of great achievements, it required for its successful development, patience, self-denial, and magnanimity in subsequent statesmen equal to his own. It fell, because such virtues could not be found in the age by which he was succeeded. It was abandoned, because the Revolution of 1832 placed a single class of society, that of the moneyed men and traders, in the chief possession of political power. In contemplating his profound plans for the ultimate and speedy liberation of England, even from the enormous burdens entailed on its finances by the Revolutionary war, we feel that we are

conversing with one who lived for distant ages, and who voluntarily underwent, not the fatigues which are forgotten in the glory of the conqueror, but the obloquy consequent on the firmness of the statesman, in the prosecution of what he felt to be for the ultimate good of the nation. In comparing his durable designs with the temporary expedients of the statesmen who preceded and followed him, we experience the same painful transition as in passing from the contemplation of the stately monuments of ancient Egypt, wrought in granite, and constructed for eternal duration, to that of the gaudy but ephemeral palaces of the Arabs who dwell amidst their ruins, and whose brilliancy cannot conceal the perishable nature of the materials of which they are composed.

59. Their errors. Undue extent of the funding system.

While doing justice, however, to the great qualities of this illustrious financier, it is indispensable that we should not draw a veil over his faults; and the application of his own principles to the measures which he sometimes adopted will best explain the particulars in which he was led astray. I. The first great defect which history must impute to the financial measures of Mr Pitt, is having carried too far, and continued too long, the funding system, and not earlier adopted that more manly policy of raising as large a portion as possible of the supplies within the year, the benefits of which he himself afterwards so fully explained. During the years 1793 and 1794, indeed, when formidable armies menaced France on every side, and the iron barrier of the Netherlands was broken through to an extent never achieved by Marlborough or Eugene, a speedy termination of the war might reasonably be expected, and it was just, therefore, to lay the vast expenses of those years in a great degree on the shoulders of posterity. But after that crisis was past—after Flanders and Holland had yielded to the victorious arms of Pichegru—after Spain and Prussia had retired from the struggle, and when the Republic, instead of contending for its existence on the Rhine, was pursuing, under Napo-

CHAP. XLI.

1790-1806.

leon, the career of conquest in Italy, it became evident that a protracted contest was to be expected, and measures of finance suitable to such a state of things should have been adopted. The resolute system of raising a considerable portion of the supplies within the year should have been embraced, at latest, in 1796, and the enormous loans of that and the two following years reduced to one-half. These loans amounted to seventy-five millions; if forty millions had been raised in the time by taxation, in addition to the imposts actually paid, the difference in the sum since paid by the nation down to this time, on account of the loans of these years, would have been above £120,000,000 ! So prodigious is the difference, as regards the ultimate accumulation of burdens, between the energetic and intrepid system of raising a large portion of the supplies within the year, and the more acceptable but delusive policy of providing at the moment only for the interest, and leaving to posterity the charge of providing for the liquidation of the principal.

60. Niggardly use of the military-forces of England.

IL But if the insidious advantages of the funding, were to be preferred to the ultimate benefits of the taxing system, it was indispensable that the warlike resources of the state should have been put forth on a scale, and in a way, calculated to reap sudden advantages commensurate to the immense burdens thus imposed on posterity; that the contest, if gigantic and expensive, was at least to be short and decisive. That the military power of England was capable, if properly directed and called forth, of making such an effort, is now established by experience. The more the histories of the campaigns from 1793 to 1800 are studied, the more clearly will it appear that the armies of France and the coalition were very equally poised; that the scale sometimes preponderated to one side and sometimes to the other, but without any decisive advantage to either party. After three years of protracted strife, the Republican armies, in the close of 1795, were still combating for existence on the Rhme, and gladly

accepted a temporary respite from the victorious arms of Clairfait: after three additional years of desperate warfare, they were struggling for the frontiers of the Var and the Jura against the terrible energy of Suwarroff, and the scientific ability of the Archduke Charles. No doubt can remain, therefore, that the forces on the opposite sides of that great contest were, at these periods at least, extremely nearly matched. With what effect, then, might not the arms of England have been thrown in upon the scene of warfare ; and how would the balance, so long quivering in equilibrium, have been brought down by the addition of fifty thousand British soldiers, then reposing inactive in the British islands, on the theatre of Blenheim or Ramilies !

61. **This was his great defect.**

Herein, therefore, lay the capital error of Mr Pitt's financial system, considered with reference to the warlike operations it was intended to promote. While the former was calculated for a temporary effort only, and based on the principle of great results being obtained in a short time by an extravagant system of expenditure, the latter was arranged on the plan of the most niggardly exertion of the national strength, and the husbanding of its resources for future efforts, totally inconsistent with the lavish present dissipation of its funds. No one would have regretted the great loans from 1793 to 1799, amounting though they did to a hundred and fifty millions sterling, if proportionate efforts in the field had at the same time been made, and if it was evident that nothing had been omitted which could have conduced to the earlier termination of the war. But our feelings are very different when we recollect that during these six years, big with the fate of England and the world, only two hundred and eight thousand men were raised for the regular army, and that a nation reposing securely in a sea-girt and inaccessible citadel, never had above twenty thousand soldiers in the field, out of a disposable force of above a hundred thousand, and that only in the two first years of the war. Mr Pitt's plans for military operations

CHAP. XLI. 1790-1806.

were all based on the action of Continental armies, while the troops of his own country were chiefly employed in distant colonial expeditions; picking off pawns in this manner at the extremity of the board, when by concentrated moves he might have given checkmate to his adversary at the commencement of the game. His military successes, in consequence, amounted to nothing, while his financial measures were daily increasing the debt in a geometrical progression : and thence, in a great measure, the long duration and heavy burdens of the war.

62. **Injudicious system of borrowing in the three per cents.**

III. But the greatest of all Mr Pitt's errors, and the one which was the most inexcusable, because it was most at variance with the admirable foresight and enduring fortitude of his other financial measures, was the extent to which he carried the ruinous system of borrowing in the three per cents—in other words, inscribing the public creditor for £100 in the books of the bank of England, in consideration of only £60 advanced to the nation. That this policy had the effect of lowering the interest of the loans contracted, and thereby diminishing the burdens of the nation at the moment, may be perfectly true; though even that advantage, as will immediately appear, was very trifling. But what was the advantage thus gained, compared to the enormous burden of saddling the nation with the payment of forty pounds additional to every sixty which it had received 1 The benefit was temporary and inconsiderable; the evil permanent and most material. Of the seven hundred and eighty millions which now compose the national debt, about six hundred millions have been contracted in the three per cents; and if this whole debt were to be paid off at par, the nation would have to pay in all two hundred and fifty millions more than it ever received. Supposing it to be redeemed by a sinking-fund at 80, on an average —which, taking a course of years together, of peace and war, is probably not far from the mark, and which coincides with Mr Pitt's estimate in 1799—the surplus to be

paid above what was received, would still be one hundred and fifty millions.

Nor have the evils of this improvident system of borrowing been limited to the great addition thus unnecessarily made to the capital of the national debt. Its effect upon the burden of the interest has been equally unfortunate. Doubtless the loans were, in the first instance, contracted during the war on somewhat more favourable terms, as to interest, than could have been obtained if the money had been borrowed in the 5 per cents—that is, if a bond for £100 had been given for each £100 only paid into the treasury. But as a set-off against this temporary and inconsiderable advantage, what is to be said to the experienced impossibility, with great part of the funds so contracted, of reducing the interest in time of peace? It is impossible to lower the interest of the three per cents till interest generally falls below three per cent; because if it were attempted when the rate was higher, all the stockholders would immediately demand their money, and government, being unable to borrow below the market rate, would become bankrupt. Nevertheless, it may safely be affirmed that interest, on an average, since 1815, has not exceeded, if it has reached, four per cent. Had the national debt all been contracted in the five per cents, it might all have been subjected to the operation which in 1824 proved so successful with the five per cents, and which, on £157,000,000 only of the debt, the amount of that stock, saved the nation at that time £1,700,000 a-year, to which is to be added the half of that sum since gained by the reduction of the same stock to three and a half; the two together, after taking into view the dissentients, having saved the nation, *for ever,* £2,400,000 yearly. Calculating the interest of the £600,000,000 in the three per cents (£360,000,000 sterling) at £18,000,000 a-year, the proportion of this annual burden, which would have been saved by the first reduction of one per cent, would have been £3,600,000, and by the second of one-

63. Its effect in preventing the reduction of interest on peace.

CHAP. XLI.

1790-1806.

half per cent, £1,800,000 more; in all £5,400,000 for ever. The sum already saved to the nation, on interest alone, paid since 1824, would have been above fifty millions sterling. Every twenty years in future the sum saved, with interest, would exceed a hundred and fifty millions.

64. The temporary diminution of interest was no adequate compensation for these evils.

The temporary reduction of interest obtained by contracting the debt in this ruinous manner will bear no sort of comparison with these serious losses, with which the system was ultimately attended. It appears, from the curious table of loans contracted during the war, compiled by Moreau, that the difference in the interest of the loans in the 3 per cents and the 5 per cents was seldom above a half per cent, generally not more than a quarter.'* What

* Take, for example, the following loans contracted in the 3 and 5 per cents, at different periods during the war .—

	Amounts actually paid into Treasury.	Interest	Rate per cent.
	£	£	
1794. Loan in 5 per cents, .	1,907,451	96,326	5 per cent.
Do. in 3 per cents, .	10,806,000	502,791	4⅝ per cent.
1795. Loan in 5 per cents, .	1,490,646	80,494	5⅜ per cent.
Do. in 3 per cents, .	17,777,163	841,374	4¾ per cent.
1796. Loan in 5 per cents, .	2,034,389	101,744	5 per cent.
Do. in 3 per cents, .	8,500,000	493,145	5⅛ per cent.
1797. Loan in 5 per cents, .	17,815,978	1,006,242	5⅛ per cent.
Do. in 3 per cents, .	13,000,000	825,500	5⅜ per cent.
1801. Loan in 5 per cents, .	2,227,012	111,380	5⅛ per cent.
1806. Loan in 3 per cents, .	27,519,544	1,344,487	5⅛ per cent.
1807. Loan in 5 per cents, .	1,293,200	64,660	5⅛ per cent.
Do. in 3 per cents,	10,800,000	512,400	4½ per cent, but £140 stock created for each £60 paid.
1809. Loan in 5 per cents, .	7,932,100	408,678	5⅛ per cent.
Do. in 3 and 4 per cents,	11,600,000	536,433	4⅝ per cent.
1811. Loan in 5 per cents, .	4,909,350	258,315	5⅛ per cent.
Do. in 3 and 4 per cents,	11,925,243	569,500	4½ per cent.
1814. Loan in 5 per cents, .	5,549,400	277,470	5⅛ per cent.
Do. in 3 per cents, .	12,345,076	574,362	4¾ per cent.
1815. Loan in 5 per cents, .	10,313,000	603,310	5⅞ per cent.
Do. in 3 and 4 per cents,	27,000,000	1,517,400	5½ per cent.

—See PEBRER'S *Tables*, 246, from MOREAU.

It clearly appears, from this remarkable table, that the difference between the interest paid on loans in the 3 and the 5 per cents, from the beginning to the end of the war, varied only from a half to an eighth per cent. And the real difference was even less than here appears; for the public creditors were frequently, in the three per cents, inscribed for much more than £100 in consideration of £60 advanced. In particular, in 1807, they received no less than £140 of stock for each £60 paid.

is the additional burden thus undertaken during the contest, to the permanent reduction which the opposite system would have enabled government to have effected on the return of peace ? Even supposing the difference of interest on the loans while the war lasted had been on an average one per cent, what was this burden, during its continuance, to the reduction of the interest *for ever* to four or three-and-a-half per cent % This thing is so clear that it will not admit of an argument. And if the public necessities had rendered it impossible to have raised the additional interest during the year, it would have been better to have contracted an additional loan every year while the inability lasted, to defray the additional interest, than, by contracting the debt on such disadvantageous terms, to have disabled posterity for ever from taking advantage of the return of peace to effect a permanent reduction of the public debts. * So strongly, indeed, has the impolicy of this mode of contracting debt now impressed itself upon the minds of our statesmen, that, by a solemn resolution in 1824, parliament pledged itself never again, under any pressure, to borrow money in any other way than in the 5 per cents : a resolution worthy of the British legislature, and which it is devoutly to be hoped no British statesman will ever forget, but which is too likely to be overlooked, like so many other praise-

* The author was early in life impressed with the disastrous effects of this borrowing in the three per cents, but it was long before he found any converts to an opinion now generally received. In the year 1813, when a student at college, he maintained the doctrines stated in the text on this subject in a company consisting of the most eminent and intelligent bankers in Scotland; and, in particular, contended, that if Mr Pitt could not have afforded to pay annually from the taxes a larger interest for his loans than he actually undertook, he should have "borrowed a *little loan* to pay the interest of the great loan, rather than have contracted debt in the three per cents." They all, however, disputed the justice of the opinion, maintaining that the money could not have been obtained on other terms; and the "little" loan became a standing joke against the author for many years after. Should these lines meet the eye of Mr Anderson of Moredun, one of the oldest and most valued of the author's friends, and now one of the leading partners of the highly respectable firm of Sir William Forbes and Co. of Edinburgh, he will recur, perhaps, not without interest, to this incident.

CHAP. XLI.

1790-1806.

worthy determinations, amidst the warlike profusion or democratic pressure of subsequent times.

65.

In Mr Pitt's view, the sinking-fund was to remedy all these evils.

It is true, as Mr Pitt contemplated the extinction of the whole public debt before the year 1846 by the operation of the sinking-fund, and had provided means which, if steadily adhered to, would *unquestionably have produced that result* even at an earlier period, the disastrous effects which have actually occurred from this mode of contracting so large a portion of the debt are not to be charged so strongly as an error in his financial system. In the contracting of loans, present relief was, in his estimation, the great object to be considered, because the means of certainly redeeming them within a moderate period, on the return of peace, were simultaneously provided. It was of comparatively little importance that the interest of the 3 per cents could not be reduced during peace, when the speedy liquidation of the principal itself might be anticipated; and the addition of nearly double the stock to the sum borrowed appeared of trifling moment, when the only mode of redeeming the debt which any one contemplated, was the purchase of stock by the sinking-fund commissioners at the current market rates. Still, though these considerations go far to excuse, they by no means exculpate Mr Pitt as regards these measures. Admitting that the reduced rate of interest during the war might be considered as a fair set-off against the enhanced rate for the pacific period of nearly the same amount which elapsed before the debt was discharged, still what is to be said in favour of a system which redeems at 85 or 90 a debt contracted at 58 or 60 ? In looking forward to this method of liquidating the debt, as calculated to obviate all the evils of inscribing the public creditor for a larger amount of stock than he had advanced of money, Mr Pitt forgot the certain enhancement of the price of stock by the admirable sinking-fund which he himself had established; and the more strongly and justly he elucidated the salutary tendency of its machinery to

uphold the public credit, the more clearly did he demonstrate the ruinous effects of a method of borrowing which turned all that advance to the disadvantage of the nation in discharging its engagements.*

To Mr Pitt's financial system there belongs a subject more vital in its ultimate effects than any which has been considered, and the whole results of which are even

* It is a common opinion that the great expenses of Mr Pitt's administration were owing to the subsidies so imprudently and needlessly advanced to foreign powers, to induce or enable them to carry on the contest. This, however, is a mistake. The loans and subsidies to foreign powers during the whole war only amounted to £52,528,470; of which no less than £33,000,000 were advanced during the three last years. At Mr Pitt's death the sum was only £6,370,000. The subsidies granted, with the years when they were received, and the other items of the expenditure of the war, were as follows :—(MOREAU,) (PORTER.)

Table of the whole expenses of every year, in every department, during the war.

This most instructive table proves at a glance how little share either the foreign subsidies or civil expenditure had in the vast outlay of fifteen hundred millions during the war. The first was only a thirtieth, the latter hardly a forty-eighth of the total expenditure. The vastness of the sums absorbed by the debt is a striking feature, amounting to more than a third of the whole; but it was in a certain degree unavoidable. The cost of the navy, amounting to about a fifth, is not to be regretted; for it gave England the naval dominion of the globe. It was the prodigious expenditure for the army, amounting to a fourth of the whole, which is the real subject of regret, attended as it was with no exploits worthy of being recorded till the last eight years of the war; coinciding thus with what every other consideration indicates, that it was the niggardly use of that arm, and the ignorance which prevailed as to its efficiency, which was the real reproach of Mr Pitt's administration.

1797.

66. Vast effects of the suspension of cash payments in 1797.

yet far from being exhausted. The SUSPENSION OF CASH PAYMENTS in 1797, already noticed in the transactions of that year, was a measure of incomparably more importance than any financial step of the past or the present century. When taken in conjunction with the almost total destruction of the productiveness of the Spanish mines in America, in consequence of the revolution which broke out in that country in 1808, and the subsequent and unavoidable resumption of cash payments, by the bill of 1819, in Great Britain, it led the way to a series of changes in prices, and, of consequence, in the relative situation, power, and influence of the different classes of society, more material than any which had occurred since the discovery of the mines of Potosi and Mexico, and which has already subverted the former balance of power in the interior of Great Britain. To it the future historian will perhaps point as the principal cause of the great revolution of England in 1832, and the ultimate decline of the British empire. This important and vital subject, however, so momentous in its consequences, so interesting in its details, requires a separate chapter for its elucidation, and will more appropriately come to be considered in a future volume, when the effects of the monetary changes during the whole war are brought into view, and the commencement of another set of causes, having an opposite tendency, from the rapid decay of the South American mines at its close, is at the same time made the subject of discussion.

67. Causes which produced the suspension of cash payments in 1797. Its powerful operation in increasing the present resources of the state.

At present, it only requires to be observed, that the effects of the suspension of cash payments, whether good or evil, are not fairly to be ascribed to Mr Pitt. They were not, like the consequences of the issue of assignats in France, the result of a barbarous and inhuman confiscation, nor, like the subsequent changes of a similar kind in this country, of moneyed selfishness and theoretical opinions. They were forced on the British statesman by stern necessity. Bankruptcy—irretrievable national

bankruptcy, stared him in the face, if the momentous step was any longer delayed. Once taken, the fatal measure could not be recalled; a resumption of cash payments during the continual pressure and vast expenditure of the war was out of the question. The nation has had ample experience of the shock it occasioned, and the protracted misery it produced, at subsequent periods, even in the midst of profound peace. To hare attempted it during the whirl and agitation of the contest, would at once have prostrated all the resources of the kingdom. No doubt, however, can remain that the suspension of cash payments contributed essentially to increase the available resources of Great Britain for carrying on the war, and is to be regarded as the principal cause of its successful termination. An extension of the circulating medium, especially if accompanied by a great and increasing present expenditure, never fails to have this effect. It is when, from over-issue, it becomes depreciated, or, from distrust of government, discredited, or when the subsequent stoppage or contraction takes place, that the perilous nature of the experiment becomes manifest. Great immediate prosperity to all around him is often produced by the prodigality of the spendthrift; but if he trenches deep, amidst this beneficent profusion, on the resources of future years, the day of accounting will inevitably come alike to himself and his dependants. In seeking for the causes of the vast and continued warlike exertions of England during the war, and of the apparently boundless financial resources which appeared to multiply, as if by magic, with every new demand upon them, just as in investigating the causes of the difficulties under which all classes have laboured since the peace, a prominent place must be assigned to the expansion of the currency, as productive of present strength, as the opposite system of contracting it, after the contest was over, was conducive to future weakness. No financial embarrassments of any moment were experienced while the war lasted, subse-

CHAP. XLI.

1797.

quent to 1797. In vain Napoleon waited for the failure of the funding system, and the giving way of England's financial resources. Year after year the enormous expenditure continued; loan after loan, with incredible facility, was obtained; and at the close of the war, when the revenues of France and all the Continental states were fairly exhausted, the treasures of Great Britain were poured forth with a profusion unexampled during any former period of the struggle.

68. It was the mainspring of the financial strength of the nation during the war.

No existing wealth, how great soever, could account for so prodigious an expenditure. Its magnitude points to an *annual creation* of funds even greater than those which were dissipated. It is in the vast impulse given to the circulation by the suspension of cash payments, and subsequent extension of paper credit of every description, that the great cause is to be found of the never-failing resources of Great Britain during so long a period. Her fleets commanded the seas; her commerce extended into every quarter of the globe; her colonies embraced the finest and richest of the tropical regions; and in the centre of this magnificent dominion was the parent state, the quickened and extended circulation of which spread life and energy through every part of the immense fabric. Great as was the increase of paper in circulation after the obligation to pay in specie was removed, it was scarcely equal to the simultaneous increase in exports, imports, and domestic industry ; and almost boundless as was the activity of British enterprise during those animating years, it must have languished from want of commensurate credit, if it had not been sustained by the vivifying influence of the extended currency. It is evident, also, that the funding system, with all its dangers and ultimate evils, of which the nation since the peace has had such ample experience, was eminently calculated to increase this feverish action of the body politic, and produce a temporary flow of prosperity, commensurate, indeed, to the ultimate embarrassments with which it was to be attended,

but still exciting a degree of transient vigour, which could never have arisen under a more cautious and economical system of management.*

69. Great temporary advantages of the funding system.

The contracting and immediately spending of loans, to the amount of thirty or forty millions a-year, in addition to a revenue of equal amount, raised by taxation, had an extraordinary effect in encouraging every branch of industry, and enabling the nation to prosper under burdens which at first sight would have appeared altogether overwhelming. Government is proverbially a good paymaster, and never so much so as during the whirl and excitement of war. The capital thus sunk in loans was indeed withdrawn from the private encouragement of industry; but it was so only in consequence of being directed into a channel where its influence in that respect was still more

*** Table showing the amount of bank-notes in circulation from 1792 to 1815, with the commercial paper under discount at the Bank during the same period, and the gold and silver annually coined at the Bank, with the exports, imports, and revenue for the same period.**

Thus, in the twenty-four years from 1792 to 1816, the circulation of England, including the large and small notes and commercial paper discounted at the Bank, was more than tripled; the revenue tripled, the exports more than doubled, and the imports increased a half. The increase of commercial paper, from 1792 to 1810, was *sevenfold*—indicating, perhaps, the greatest and most rapid rise in mercantile transactions in the whole history of the world.

CHAP. XLI. 1797-1816.

powerful and immediate than it ever would have been in the hands of individuals. It was in great part dissipated, indeed, in a form which did not reproduce itself, and afforded no means of providing for its charges hereafter; but still that circumstance, how prejudicial soever to the resources of the state in future times, did not diminish the temporary excitement produced by its expenditure. Under the combined influence of this vast contraction of loans and extended paper circulation, the resources of the nation were increased in a rapid and unparalleled progression : exports and imports doubled, the produce of taxes was continually rising, prices of every sort quickly rose, interest was high, profits still higher, and all who made their livelihood by productive industry, or by buying and selling, found themselves in a state of extraordinary and increasing prosperity. That these favourable appearances were to a certain extent delusive ; that the flood of prosperity thus let in upon the state was occasioned by exhausting, in a great degree, the reservoirs of wealth for future emergencies; and that a long period of languor and depression was to follow this feverish and unnatural period of excitement, is indeed certain. But still the effect at the moment was the same; and in the activity, enterprise, and opulence thus created, were to be found the most powerful resources for carrying on the contest. How beneficial soever to the finances of the state in future times it might have been, to have raised the whole supplies by taxation within the year, it was impossible that from such a prudent and parsimonious system there could have arisen the extraordinary vigour and progressive creation of wealth which resulted from the lavish expenditure of the national capital in maintaining the conflict; and but for the profuse outlay, which has been felt as so burdensome in subsequent times, the nation might have sunk beneath its enemies, and England, with all its glories, been swept for ever from the book of existence.

Had Mr Pitt's system, attended as it was, however, with

70. The undue ascendency of popular power led to the undoing of Mr Pitt's durable system for reduction of the debt.

this vast expenditure of capital instead of income on the current expenses, made no provision for the ultimate redemption of the debt thus contracted, it would, notwithstanding the prodigious and triumphant results with which it was attended, have been liable to very severe reprehension. But every view of his financial policy must be imperfect and erroneous, if the sinking-fund, which constituted so essential a part of the system, is not taken into consideration. Its great results have now been completely demonstrated by experience : and there can be no question that, if it had been adhered to, the whole debt might have been extinguished with ease before the year 1845 ; that is, in nearly as short a time as it was created. Great as were the burdens of the war, therefore, he had established the means of rendering them only temporary; durable as the results of its successes have proved, the price at which they were purchased admitted, according to his plan, of a rapid liquidation. It is the subsequent abandonment of the sinking-fund, in consequence of the unnecessary and imprudent remission of so large a proportion of the indirect taxes on which it depended, which is the real evil that has undone the mighty structure of former wisdom ; and for a slight and questionable present advantage, rendered the debt, when undergoing a rapid and successful process of liquidation, a lasting and hopeless burden on the state. The magnitude of this change is too great to be accounted for by the weakness or errors of individuals; the misfortune thus inflicted upon the country too irreparable to be ascribed alone to the improvidence or shortsighted policy of subsequent governments. Without exculpating the members of the administrations who did not manfully resist, and, if they could not prevent, at least denounce the growing delusion, it may safely be affirmed, that the great weight of the responsibility must be borne by the nation itself. If the people of Great Britain have now a debt of seven hundred and seventy millions, with hardly any fund for

CHAP. XLI. 1797-1816.

its redemption, they have to blame, not Mr Pitt, who was compelled to contract it in the course of a desperate struggle for the national independence, and left them the means of its rapid and certain liquidation, but the blind democratic spirit which first, from its excesses in a neighbouring state, made its expenditure unavoidable, and then, from its impatience of present sacrifice at home, destroyed the means of its discharge.

71. And it must ultimately ruin the British empire.

"All nations," says M. Tocqueville, in his profound work on American democracy, "which have made a great and lasting impression on human affairs, from the Romans to the English, have been governed by aristocratic bodies: the instability and impatience of the democratic spirit render the states in which it is the ruling power incapable of durable achievements."[1] The abandonment of a system fraught with such incalculable future advantages as the sinking-fund, but requiring a present sacrifice for its maintenance, affords decisive evidence that the balance of the constitution had become overloaded in reality, before it was so in form, on the popular side, and that the period had arrived when an "ignorant impatience of taxation" was to bring about that disregard of everything but present objects, which is the invariable characteristic of the majority of mankind. During nearly thirty years of aristocratic rule in England, that noble monument of national foresight and resolution progressively prospered : with its decline, the efficiency of the great engine of redemption was continually impaired under the increasing influence of the unthinking multitude; and at length, upon the subversion of that aristocratic predominance by the great change of 1832, it was finally to all practical purposes destroyed. Irretrievable ultimate ruin has thus been brought upon the state ; for not only is the burden now fixed upon its resources inconsistent with the permanent maintenance of the national independence, but the steady rule has been terminated, under which alone its liquidation could have been expected.

[1] Tocqueville, ii. 237.

72. **The contraction of the currency by the bill of 1819 was the cause of this.**

In truth, the abandonment of the sinking-fund, in consequence of the weak and vacillating conduct of the successive administrations in yielding to partial clamours, raised by interested parties for a reduction of taxation affecting themselves, was so enormous an error, and is fraught with such evidently disastrous effects to the future independence and existence of the country, that it would be wholly unaccountable, in an age of intelligence and political activity, were it not explained by the dreadful effects of the sudden and prodigious contraction of the currency which took place in consequence of the act compelling the Bank of England to resume cash payments in 1819. Whoever will cast his eye over the instructive table given in the Appendix to the last volume of this work, will at once perceive that this fatal measure, which, at the very time that the annual supply of the precious metals for the globe had been reduced a half by the effects of the South American revolutions, curtailed the paper circulation of the British islands by *another half*, had the effect of lowering prices for the next thirty years by fully fifty per cent.[45]" The remuneration of industry in every department being so greatly reduced, while money engagements of all sorts, public and private, underwent no diminution, the payment of most of the indirect taxes became impossible. It was an easy matter for the masters engaged in the principal branches of manufacture in the kingdom to prove to the Chancellor of the Exchequer that, under the forcible reduction of prices which the contraction of the currency had produced, they could not carry on their operations without a great reduction or entire liberation from taxation. Such relief had become to them, in many cases, the price of existence. Hundreds of thousands would be thrown out of employment if it was not given. This explains, and can alone explain, the otherwise inexplicable infatuation of so many different administrations in

* See Appendix, Chap. xcv.

CHAP. XLI. 1797-1816.

abandoning to so great an extent the indirect taxes, the sheet-anchor of the British finances. Disastrous as it was, that abandonment was an effect, not a cause. It was the direct and unavoidable effect of a violent and uncalled-for contraction of the currency to the extent of a half, at the very time when the failure in the wonted supplies of the precious metals for the use of the globe, and the prodigious increase of population and transactions in the British islands, most loudly called for its increase.

73. Which was itself owing to the ascendency of the moneyed interest produced by the

But this only removes the difficulty a step further back. How did it happen that government could ever have been induced to give their consent to a measure fraught with such ruinous consequences as this contraction of the currency has proved to be ? It affected the exchequer at least as much as the general industry of the country; it at once stopped the liquidation of the public debt, starved down the military and naval establishments of the empire to a scale inconsistent with its lasting defence, and has kept the treasury ever since in almost ceaseless embarrassments. The solution of this enigma is to be found in the weight acquired in the country by a body previously little regarded, but which has now become paramount to all others, in consequence of the success of the war,—the *moneyed interest.* So vast had been the accumulation of capital during the contest, so immense the numbers, and powerful the influence, of the trading and commercial classes who had risen to affluence while it continued, that they had now come to overshadow all the other classes of the state put together. The classes had become all-powerful whose interest was bo buy cheap and sell dear. The consumers were enabled so set the producers at defiance. The Reform Act, proluced by the wide-spread and universal suffering occasioned by this important change, gave the moneyed interest a permanent sway in the state; for it bestowed two-thirds of the seats in the House of Commons on the

members for burghs, and two-thirds of the votes in every burgh on the trading or moneyed classes, or the persons whom they could influence. Thence the entire deviation of British legislation since that time from all the principles which formerly regulated it. Thence the abandonment of the sinking-fund to cheapen government, of the corn-laws to cheapen labour, of colonial protection to cheapen sugar and wood, of the navigation laws to cheapen freights. England, like imperial Rome, had fallen under the rule of a body of moneyed patricians, whose interests were adverse to that of all the industrious classes in the state, but whose influence outweighed them all put together. They desired to cheapen everything except money, and that they sought to make as dear as possible. Ultimate ruin will be brought upon the British as it was on the Roman empire, from the same cause, and in the same way. And thus the entire success of the measures of protection and a sufficient currency, which formed the leading features of Mr Pitt's domestic policy, was the immediate cause of their abandonment by the next generation, because they reared up a wealthy moneyed class whose interests were at variance with those of industry, but whose influence was beyond its control.

74. These causes will impel the British race to the New World.

But if the sun of British greatness is from these causes setting in the Old, it is from the same cause rising in renovated lustre in the New World. The impatience of the democratic spirit, both in the British isles and on the shores of the Atlantic—the energy it develops, the desires it creates, the burdens which it perpetuates, the convulsions which it induces, all conspire to impel the ceaseless wave of emigration to the west; and the very distresses consequent on an advanced stage of existence force the power and vigour of civilisation into the primeval recesses of the forest. Two hundred thousand of the Anglo-Saxons or Celtic race are now annually impelled, by necessity, ambition, or restlessness,

CHAP. XLI. 1797-1816.

from the British islands to the shores of the New World. * In two centuries the name of England may be extinct, or survive only under the shadow of ancient renown; but a hundred and fifty millions of men in North America will be speaking its language, reading its authors, glorying in its descent. Nations, like individuals, were not destined for immortality; in their virtues equally as their vices, their grandeur as their weakness, they bear in their bosoms the seeds of mortality. But in the passions which elevate them to greatness, equally as in those which hasten their decay, is to be discerned the unceasing operation of those principles at once of corruption and regeneration which are combined in humanity; and which, universal in communities as in single men, compensate the necessary decline of nations by the vital fire which has given an undecaying youth to the human race.

* **In** the year 1848, 258,000 emigrants sailed from the British islands, of whom 244,000 were destined for the United States or Canada, and in 1849 the number was still greater.

*

CHAPTER XLII.

FROM THE PEACE OF PRESSBURG TO THE RENEWAL OF THE CONTINENTAL WAR. JANUARY—OCTOBER, 1806.

CHAP. XLII.

1806.

I. Immense results of the campaign of Austerhtz.

THE peace of Pressburg seemed to have finally subjected the Continent to the empire of France. The greatest and most formidable coalition which had ever been arrayed against its fortunes was dissolved. The military strength of Austria had received, to all appearance, an irreparable wound; Prussia, though irritated, was overawed, and had let the favourable moment for striking a decisive blow elapse without venturing to draw the sword; and even the might of Russia, hitherto held in undefined dread by the states of southern Europe, had succumbed in the conflict, and the northern autocrat was indebted to the generosity of the victor for the means of escaping from the theatre of his overthrow. When such results had been gained with the great military monarchies, it was of little moment what was the disposition of the lesser powers; but they, too, had been terrified into submission, or retired from a contest in which success could no longer be hoped for. Sweden, in indignant silence, had withdrawn to the shores of Gothland; Naples was overrun; Switzerland was mute; and Spain consented to yield its fleets and its treasures to the conqueror of northern Europe. England, it is true, with unconquerable resolution and unconquered arms, still continued the contest; but after the prostration of the Continental

CHAP. XLII.

1806.

armies, and the destruction of the French marine, it appeared no longer to have an intelligible object; while the death of the great statesman who had ever been the uncompromising foe of the Revolution, and the soul of all the confederacies against it, led to a well-founded expectation that a more pacific system of government might be anticipated on the part of his successors.

2. The premiership offered to Lord Hawkesbury, and declined.

The hopes entertained by Napoleon of such a temporary accommodation with England as might leave him at liberty, by fostering his naval power, to prepare the means of its final subjugation, were soon to all appearance likely to be realised. The death of Mr Pitt dissolved the administration of which he was the head. His towering genius could ill bear a partner in power or rival in renown. Equals he had none — friends few ; and with the exception of Lord Melville, whom the pending accusation had compelled to retire from government, perhaps no statesman had ever possessed his unreserved confidence. There were many men of ability and resolution in his cabinet, but none of weight sufficient to take the helm when it dropped from his hands; and when he sank into the grave, the ministry, which was supported by his single arm, fell to the earth. The King, indeed, who was aware of the danger of introducing a change of policy in the midst of a desperate conflict, and still retained a keen recollection of the humiliation to which he had been subjected in consequence of the India bill introduced by the Whigs in 1784, made an attempt to continue the government in the hands of the same party, and immediately after Mr Pitt's death commissioned Lord Hawkesbury to form a new administration on the same basis. But that experienced and cautious statesman soon perceived that the attempt, at that period at least, was impossible, and the only use he made of his shortlived power was the dubious one of accepting the wardenship of the Cinque Ports,[1] which had been held by Mr Pitt, and was the most lucrative sinecure in the gift

[1] Ann. Reg. 1806,18,21. Parl. Deb. iv. 67, 75. Pellew's Sidmouth, ii. 414.

of the crown. This office was pressed upon him by the King, and had undoubtedly been well deserved by his faithful services, for which he had hitherto declined any remuneration; but, being the sole act of a shortlived power, it was much commented on, and gave rise to keen and acrimonious discussions in both houses of parliament under the succeeding administration.

3. **Public opinion on the necessity of a coalition of parties.**

Independently of the acknowledged weakness of the ministry after Mr Pitt ceased to sustain its fortunes, the state of public opinion rendered it extremely doubtful whether any new administration could command general support which was not founded on a coalition of parties, and a union of all the principal statesmen of the time, to uphold the fortunes of the state. The defeat of Austerlitz, and the consequent exposure of Great Britain to the necessity of maintaining the war single-handed against the forces of combined Europe, had made a deep impression on the public mind. Many believed some change of system to be necessary; and the opinion was sensibly gaining ground, that, having unsuccessfully made so many attempts to overthrow the power of revolutionary France by hostility, the time had now arrived when it was not only expedient, but necessary, to try whether its forces might not be more effectually disarmed by pacific relations. Complaints against the abuses of government—some real, some imaginary — during the conduct of so long and costly a war, had multiplied to a great degree. The Opposition journals had increased in number and vehemence of declamation; and the vote against Lord Melville in the House of Commons had shaken the opinion of numbers in the integrity of government, in that point where Mr Pitt's administration had hitherto been regarded as most pure. The Tories, it was said, are exhausted by perpetual service for twenty years ; the hopes of the state are to be found in the ranks of the Whigs; or, at all events,,the time has now arrived when those absurd party distinctions should cease, and all true

CHAP. XLII. 1806.

friends to their country, on whichever side of politics, must unite for the formation of a liberal and extended administration, on so broad a basis as to bring its whole capacity to bear on the fortunes of the state during the perilous times which are evidently approaching. A general wish, accordingly, was felt for the formation of a government which should unite "all the talents" of the nation, without regard to party distinction — a natural wish at all times, and frequently indulged by the British people, but which has never led to any good result in the history of England. It never can do so, except in such a crisis of national danger as would have led the Romans to appoint a dictator, and as calls for the suspension of all difference in foreign or domestic policy for the warding off immediate danger, by which all are equally threatened.[1]

[1] Ann. Reg. 1806,17,25.

4. Mr Fox is sent for.

Yielding, at length, though unwillingly, and with sinister presentiments, to the inclinations of the people and the necessity of his situation, the King, on the 26th January, sent a message to Lord Grenville, so long the firm supporter of Mr Pitt's foreign administration, requesting his attendance at Buckingham House, to confer with his Majesty on the formation of a government. Lord Grenville suggested Mr Fox as the person he should consult on the subject. The King, though personally averse to that statesman, instantly saw the necessity of making his private feelings give way to the public good. "I thought so, and I meant it so," replied the King: and immediately the formation of an administration was intrusted to these two illustrious men. No time was lost in sending for Mr Addington, recently before created Lord Sidmouth, who agreed to form part of the administration. The anxious wish expressed both by the sovereign and the nation that the government should be formed on the broadest possible basis, so as to include all the leading men of the country, led to a coalition of parties,[2] which, although it gave great apparent stability

[2] Ann. Reg. 1806, 21. Pellew's Sidmouth, ii. 414.

at the outset, was little calculated in the end to insure the permanence of the administration.

5. State of parties in the country, and their principles.

Three distinct and well-defined parties, independent of the partisans of Mr Pitt's cabinet, then divided the legislature and the nation. The ardent Whigs, who had adhered through all the horrors of the French Revolution to democratic principles, were represented by Mr Fox and Mr Erskine, and embraced all the zealous adherents of highly popular institutions throughout the country. Parliamentary reform, Catholic emancipation, the repeal of the test acts, the abolition of slavery, peace with France, were inscribed on their banners. Another section of the Whig party existed, who had recently been arrayed in fierce hostility against their former allies. They were composed of the old Whig families which had seceded with Mr Burke, at the commencement of the French Revolution, from the popular side, and acted with Mr Pitt till his resignation in 1800, but never coalesced with his government after his resumption of power. This party, led in parliament by Lord Grenville, Earl Spencer, and Mr Windham, embraced many powerful aristocratic families, and a large portion of private worth and ability, but their hold on the affections of the populace was not so considerable as that of their stancher brethren. In hostility to France, and fierce opposition to revolutionary principles, they yielded not to the warmest partisans of Mr Pitt; but in domestic questions they inclined to the popular side, although they might be expected to form a salutary check on the innovating ardour of the more democratic portion of the government. Less considerable from general support or parliamentary eloquence than either of these great parties, though highly respectable from the weight of private character, the adherents of Mr Addington's administration, who had remained in Opposition ever since they were displaced from power, were still of importance from their business talents and the intimate acquaintance they had

CHAP. XLII. 1806.

with the machinery of government. Lord Sidmouth (formerly Mr Addington) was the leader of this portion of the old Tory administration, whom exclusion from office had led to coalesce, not in the most creditable manner, with their ancient antagonists; and, from the known pacific inclinations of their chief, no serious difference of opinion in the cabinet was anticipated, at least so far as foreign affairs were concerned.

6. Composition of the cabinet.

The leaders of these three parties were combined in the new cabinet; but the preponderance of Mr Fox's adherents was so great as to render the ministry, to all intents and purposes, a Whig administration, which speedily appeared in the universal removal of all Tory functionaries from every office, even the most inconsiderable, under government. Mr Fox, though entitled, from his talents and influence, to the highest appointment under the crown, contented himself with the important office of Secretary for Foreign Affairs, deeming that the situation in which most embarrassment was to be expected, and where his own principles were likely soonest to lead to important results. Lord Grenviile was made First Lord of the Treasury; Mr Erskine, Lord Chancellor; Lord Howick, (formerly Mr Grey,) First "Lord of the Admiralty; Mr Windham, Secretary at War; Earl Spencer, Secretary of State for the Home Department. * The cabinet exhibited a splendid array of ability, and was anxiously looked to by the country, with the undefined hope which naturally arises upon admitting

*** The Cabinet was composed of the following members:—**
Lord Erskine—Lord Chancellor.
Earl Fitzwilliam—President of the Council.
Viscount Sidmouth—Lord Privy Seal.
Lord Grenviile—First Lord of the Treasury.
Lord Howick—First Lord of the Admiralty.
Earl Moira—Master General of the Ordnance.
Earl Spencer—Secretary of State for Home Affairs.
Mr Fox—Foreign Affairs.
Mr Windham—Secretary at War.
Lord Henry Petty—Chancellor of the Exchequer.
Lord Ellenborough—Chief Justice, with a seat in the Cabinet.
—*Ann. Meg.* 1806, 26.

a party whose leaders had been so long celebrated by their eloquence and genius, for the first time, after so long an exclusion, to the administration of public affairs. But, amidst the general satisfaction, there were many who observed with regret that all the members of the recent government were excluded from office, and anticipated no long tenure of power to a coalition which departed thus widely from the path of its predecessors, and voluntarily rejected the aid of all who had grown versant in public affairs. By a stili greater number, the admission of the Lord Chief-Justice into the cabinet was justly regarded as a most dangerous innovation, fraught with obvious peril to that calm and dispassionate administration of judicial duties, which had so long been the glory of English jurisprudence.[1]

7. **First measures of the new ministry. The budget.**

Notwithstanding the essential and total change which the ministry had undergone, and the accession of a party to power who had so long denounced the measures of their rivals as fraught with irreparable injury to the best interests of the state, no immediate change in the policy of government took place; and Europe beheld with surprise the men who had invariably characterised the war as unjust and impolitic, preparing to carry it on with a patience and foresight in no degree inferior to that of their predecessors—a striking circumstance, characteristic alike of the justice of the reasons which Mr Pitt had assigned for its continuance, and the candour of the party who had now succeeded to power. The budget of Lord Henry Petty was but a continuation of the financial system of his great predecessor, modified by the altered situation of affairs, and the necessity which had obviously arisen of making provision for a protracted maritime struggle. The system of raising as large as possible a proportion of the taxes within the year, so happily acted upon since 1798 by the late government, was continued and extended; and, in pursuance thereof, it was proposed to carry the war taxes from fourteen to nineteen millions

CHAP. XLII. 1806.

and a half—an increase which was effected by raising the income-tax from six and a half to ten per cent, and by an addition of 3s. a hundredweight to the duty on sugar. The loan, notwithstanding this great addition, was still £18,000,000, to provide for the interest of which, and for a sinking-fund to redeem the principal, the war wine-duty was declared permanent, producing £500,000 a-year, and an additional duty laid on pig-iron, calculated to produce as much more, besides lesser duties, to the amount in all of £1,136,000.* The great addition to the income-tax was loudly complained of as a grievous burden, and a total departure from all the professions of economy so often made by ministers; but there is reason to believe that indirect taxes could not have been relied on to produce so great an increase as was required in the public revenue ;[1] and there can be no doubt that, in adopting the manly course of making so great a demand on present income

rather than increase the debt, they acted a truly patriotic and statesmanlike part.

a

Return of Napoleon to Paris. Financial crisis there.

The return of Napoleon to Paris, where he arrived on the night of the 26th January, to the great disappointment of the municipality and people, who had made the most magnificent preparations for his triumphal reception, had become necessary, from the financial crisis which had there occurred, and which threatened to involve the government in the most serious embarrassments. This catastrophe, partly arising from political, partly from commercial causes, had long been approaching, and the public consternation was at its height when the Emperor re-entered the Tuileries. Matters had arrived at such a pass, that the public service could no longer be carried on, and nothing but the Emperor's unparalleled victories and speedy return could have averted a national bankruptcy. He had often, during the preceding years, declared his resolution not to issue treasury bills; but he forgot to follow the only rule by which that resource could be averted, that of keeping his expenditure within his income. As it was, he instantly applied his mind, with its wonted vigour, to the consideration of the tremendous crisis which had arisen. Without undressing or going to bed, he sent for the minister of finances at midnight, and spent the whole remainder of the night in a minute and rigid examination of that functionary, and all the persons connected with his establishment. At eleven next day, the council of finance was assembled : it sat nine hours; and when it broke up, M. Mollien was appointed minister of finances, and M. de Marbois, the former minister, dismissed.[1]

[1] Bign. v. 96. Bour. vii. 111. Thiers, \i. 25,187,188.

9. Its ostensible causes.

This panic, which at the time excited such consternation at Paris, and which, if the issue of the campaign had been doubtful, might have been attended with the most disastrous effects, arose from very simple causes. During the whole of 1805, the Bank of France, yielding to the flood of prosperity which on all sides flowed into the empire,

CHAP. XLII. 1806.

and urged on by the constant demand for accommodation on the part of all the contractors and others engaged in the public service, rendered necessary by the expenditure of government constantly keeping in advance of the receipts of the treasury, had been progressively enlarging its discounts. Before the Emperor set out for the army, they had risen from thirty to sixty millions, double the usual amount. In the midst of the apparent prosperity produced by that excessive increase, the sagacious mind of Napoleon perceived the seeds of future evil; and amidst all the turmoil of his military preparations at Boulogne, he repeatedly wrote to the minister of finances on the subject, and warned him of the danger of the Bank of France trusting too far the delusive credit of individuals engaged in extensive transactions, or pushing to an undue length, in the form of a paper circulation, the royal privilege of coining money. * The immense discounts which occasioned the peril were almost entirely granted to the functionaries engaged in the public service, and who, being obliged to make good their payments to government by a certain day, and embarrassed by the remote period to which all payments from the public treasury were postponed, were unavoidably driven to this resource to supply the deficiencies arising from the backward payments of individuals, and the peremptory demands of the treasury, and their credit was in some sort interwoven with that of the general administration.[1] The Bank of France was the quarter to which they in general applied for accommoda-

[1] Bign. v. 85,88. Bour vii. 92, 96. Thiers, vi. 188, *189*, 191.

*** His words are, in a letter to the minister of finances[2]—" The evil originates in the bank having transgressed the law. What has the law done? It has given the privilege of coining money in the form of paper to a particular company; but what did it intend by so doing? Assuredly, that the circulation thus created should be based on solid credit. The bank appears to have adopted a most erroneous principle, which is to discount to individuals, not in proportion to their real capital, but to the number of shares of its capital stock which they possess. That, however, is no real test of solvency. How many persons may be possessed of fifty or a hundred such shares, and yet be so embarrassed that no one would lend them a single farthing ? The paper of the bank is thus issued in many, perhaps a majority of cases, not on real credit, but on a delusive supposition of wealth. In one word, in discounting after this**

[2] From Boulogne, Sept. 24,1805.

tion; but the pressure thus occasioned upon that establishment was so severe that, even after the successes at Ulm, they had announced to the Emperor that they could not continue their advances, and that the drain of specie was such that they themselves stood in the most imminent danger.

1806."

10. Vast speculations of M. Ouvrard.

To relieve the pressure on the bank, attempts had been made to obtain a supply of the precious metals from every quarter whence they could be drawn. For this purpose, recourse was had to certain great mercantile companies, who were engaged in most extensive speculations in all parts of the world, and so deeply implicated in the furnishing of the precious metals to that establishment, that their support on its part was almost a matter of self-preservation. The greatest of these was that of which Ouvrard was the leading partner; and its engagements with the Bank of France were to an enormous amount. This great capitalist had for several years been engaged in vast contracts for the service of the Spanish fleet; and so extensive were his transactions, that almost all the treasures of Mexico found their way into his coffers. Gradually he had introduced himself into the principal departments of the French service ; and before the middle of 1805, nearly seventy millions of francs (£2,800,000) was owing chiefly to the company of which he was a member by the public treasury of that country. The long delays thrown in the way of the liquidation of this debt by the government occasioned an excessive multiplication of paper securities, which soon fell considerably in value in the money market; but so implicated was the

manner, the bank *is coining false money.* So clearly do I see the dangers of such a course, that, if necessary, I would stop the pay of my soldiers rather than persevere in it. I am distressed beyond measure at the necessities of my situation, which, by compelling me to live in camps, and engaging me in distant expeditions, withdraw my attention from what would otherwise be the chief object of my anxiety, the first wish of my heart—a good and solid organisation of all that concerns the interest of banks, manufactures, and commerce." What admirable wisdom in these remarks, written at the camp of Boulogne, in the midst of the boundless arrangements which the march of the army to Ulm, already commenced, must have required, and of which his correspondence furnishes such ample proof!—See BIGNON, V. 85, 86.

CHAP. XL1I. 1806.

treasury in these transactions, that it was compelled to go on in the same perilous course, and thus increase the depreciation, which had already become sufficiently alarming. M. Desprez, a great capitalist, engaged also in the collection of specie, and who had long supported the bank, became embarrassed, and himself solicited aid from that establishment. The consequence was, that the bills of the public contractors sank so much in value that they would no longer pass current in the market; at length they fell so low as 10 instead of 100. A universal disquietude prevailed, and the demands upon the public treasury had already become very heavy, at the moment when it had little else than paper securities in its coffers.[1]

[1] Bign. v. 85,93. Hour. vii. 92,100. Thiers, vi. 197, 201.

11. The immediate cause of the explosion was the absorption of gold for the German war.

Matters were in this critical state when the breaking out of the German war, and departure of the army for the Rhine, occasioned an immense and immediate demand for metallic currency, which alone would pass in foreign states, both on the part of government and individuals. Napoleon, for the different branches of the public service, took fifty millions of francs (£2,000,000) from the Bank of France, without the slightest regard to its necessary effect upon the credit of that establishment. Unable, after this great abstraction, to meet his other engagements, the minister of finances had recourse to Ouvrard, Vanlerbergh, and Seguire, who advanced 102,000,000 francs (£4,080,000) to the public treasury, and received in return long-dated bills for 150,000,000 francs. To meet this advance Ouvrard hastened to Madrid, to obtain a supply of piastres from the Spanish government; and such was the ascendency which he had acquired at that capital, that he shortly after concluded a treaty with the King of Spain, in virtue of which his company, during the whole remainder of the war, acquired "an *exclusive* right to carry on the whole trade to the Spanish colonies, and to import the *whole treasures* and merchandise brought from thence to the European shores." Never before had such a power been vested in any company :

nearly the whole treasures of the world were to pass through their hands. But though this treaty gave Ouvrard the prospect of obtaining from America, before a year expired, 272,000,000 francs (£11,400,000) in hard dollars, yet this would not furnish a supply for present necessities; and the efforts of all the capitalists of the Continent, which were put in requisition for the occasion, were unable to meet the crisis or avert a catastrophe. Desprez—who had demanded a loan of 100,000,000 francs (£4,000,000) from the Bank, which they could not give him—and several other of the greatest capitalists,—including M. Recamier, the splendour of whose living, as well as the beauty of his wife, had long riveted public attention—failed. This immediately occasioned a terrific run upon all the other public functionaries, as well as the bank and the treasury. Paper would no longer pass; credit was at an end ; and M. Vanlerbergh, one of the greatest of the national contractors, was prevented from failing solely by an advance to a great amount from the public funds. The consequences would have been fatal to the empire had a disaster at the same time occurred in Germany, for the government were absolutely without the means of replenishing any branch of the public service. But the battle of Austerlitz and the treaty of Pressburg operated like a charm in dispelling the panic: with the cessation of Continental war the demand for the precious metals immediately ceased ; and the crisis was in fact over, when the return of the Emperor to the Tuileries entirely restored the public confidence. The danger, however, had been so pressing, that nothing but the instantaneous termination of the war could have averted it: and, by merely protracting the contest in Moravia for a few weeks, the Allies would infallibly have brought the French government to a national bankruptcy.[1]

[1] Bign. v. 89,94. Bour. vii.100,111. Sav. ii. 157, 162. Thiers, vi. 197,201.

Napoleon was highly indignant at these embarrassments, and fully appreciated the magnitude of the peril from which he had been extricated by the fortunate

12. Measures of Napoleon in consequence.

rictory of Austerlitz.* Public opinion, as usual, followed the impulse set by its leaders ; the imprudent facility of M. de Marbois, the minister of finances, became the general object of reprobation, and the greatest wits of the capital exerted their talents in decrying his administration.† The Emperor minutely scrutinised the embarrassments of the bank and the treasury: it was found that the total deficit of the public contractors to the government amounted to 141,000,000 francs, (£5,600,000,) of which Ouvrard and Vanlerbergh owed nearly two-thirds, and prosecutions were immediately ordered against all the defaulters, including M. Desprez, who were thrown into prison without distinction. Measures of the last severity were threatened against Ouvrard and his partners, who were offered their choice between standing the chances of a criminal prosecution, and the immediate cession of all they possessed. They preferred the latter, and in consequence that gigantic company was reduced to bankruptcy: but in the end nearly the whole deficit was recovered for the nation. The system of providing for the public service by means of contractors was shortly after abandoned : but a few years after, the government was under the necessity of resuming it: and Napoleon ultimately made the most ample amends to the injured M. de Marbois, by appointing him president of the Chamber of Accounts.[1]

[1] Bour. vii. 111. Bign. v. 96, 97. Thiers, vi. 377.

13. Real cause of the catastrophe.

In fact, though it suited the interests of the Emperor to represent this alarming catastrophe as exclusively the result of the imprudent facility of the minister of finances, and the inordinate profusion of discounts by the bank, yet the evil in reality lay a great deal deeper, and the crisis was, in fact, occasioned by the vicious system to

* "Beaten," says Savary, "in the depths of Moravia, deprived by inconceivable imprudence of all the resources on which he was entitled to calculate, he would have been wholly unable to repair his losses, and his ruin from that moment was inevitable."—SAVART, il 161.

† The unbending firmness of M. de Marbois being mentioned in laudatory terms in presence of Madame de Stael, "He," said she, "is nothing but a willow painted to look like bronze."—BOUR. vii. 111.

which the extravagant expenditure of the imperial government had driven the finance ministers. Although the budgets annually presented since Napoleon seized the government had exhibited the most flattering aspect, yet in reality they were in a great degree fictitious, and intended to conceal the distressed condition of the finances. The actual receipts of the treasury for the last five years had been a hundred millions of francs below the annual expenses. In addition to this, the payments of the finance minister required to be almost all made in the course of each year; while the period of his receipts for the same time, according to the established mode of collecting the revenue, extended to eighteen months. Hence arose an indispensable necessity for recourse to money-lenders, who advanced cash to the treasury, and received in return bills payable when the tardy receipts of the revenue might be expected to be realised. In this way, while the receipts and expenditure, as exhibited in the budget annually presented to the Chambers, were nearly equal, there was in reality a most alarming deficit, which was daily increasing; and it was only by largely anticipating, by the discount of bills accepted by the treasury, the revenue of succeeding terms or years, that funds could be provided for the liquidation of the daily demands upon it.[1]

Bign. 88, 103. Thiers, viii. 86, 97.

14. Means by which the crisis had hitherto been avoided.

Recourse was at first had to the receivers-general of the departments to make these advances : and this system succeeded, though with some difficulty, during the comparatively economical years of 1803 and 1804. But the vast expenditure of 1805, occasioned partly by the equipment of the expedition at Boulogne, partly by the cost of the Austrian war, rendered these resources totally insufficient ; and it became necessary to apply to greater capitalists, who, in anticipation of future payments, could afford to make the great advances required by government. M. de Marbois was thus driven by necessity to M. Ouvrard and the company of the Indies, who were already the contractors for the supplies to almost all the forces, both

CHAP. XLII. 1806.

by land and sea; and thus became invested with the double character of creditor of the state for advances made on exchequer bills, and also for payment of the supplies furnished to the different branches of the public service. Thence the deep implication of this company with the transactions of government, and the necessity of the Bank of France supporting, by extraordinary and lavish discounts, the credit of individuals or associations, from whom alone government derived the funds requisite for its immense engagements. The monetary embarrassments of 1805, therefore, like almost all others, were occasioned by an extravagant expenditure : but they arose not on the part of individuals, but of government; the crisis was not commercial but political.[1]

[1] Bign. v. 87, 88.

15. The root of the evil was the extravagant expenditure of government.

Thence the singular and instructive fact, that the whole inordinate discounts, of which Napoleon so loudly complained, were made not to individuals engaged in private undertakings, but to the contractors for the public service. The root of the evil lay in the extravagant expenditure of the Emperor himself, which rendered the anticipation of future revenues indispensable, to a perilous extent, in every branch of government. He often boasted that he never had, and never would, issue government paper. This was quite true; but it was equally true, what he passed over, that his expenditure of a hundred millions of francs annually, beyond his income, drove all the government contractors to that perilous expedient. Considered in this view, this financial crisis was not a mere domestic embarrassment, but an important event in the progress of the contest : it indicated the arrival of the period when France, almost destitute of capital from the confiscations of the Convention, and severely weakened in its national credit by the injustice committed during its rule, was unable from its own resources to obtain the funds requisite for carrying on the gigantic undertakings to which its ruler was driven in defence of its fortunes; and when foreign conquest and extraneous spoliation had become

indispensable, not merely to give vent to the vehement passions, but to maintain the costly government and repair the financial breaches occasioned by the Revolution. Napoleon, however much he was disposed to lay the fault, according to his usual system, on others, was in secret perfectly aware of the perilous pass to which his financial affairs had now been brought, and, like Alexander, he trusted to his sword to cut the Gordian knot. Marbois had long before represented to him the danger of "having for the bankers of the state those to whom its ministers were indebted;" and Napoleon was so sensible of this, that he had expressed his resolution, in military fashion, to have M. Ouvrard arrested, and made to disgorge some of what he called his ill-gotten wealth, but he had never been able to emancipate himself from his influence.[1] *

[1] Bign. v. 87, 88. Thiers, viii. 97, 99.

16. **Financial changes in consequence introduced in France.**

The crisis of 1805, however, made decisive measures necessary. "I will have no alliance," said he, "between the bank and the treasury. If such existed, a simple movement of the funds might reveal the most important state secrets. We cannot too soon sign a decree for the emancipation of the treasury." The difficulty was, that the treasury had to pay every twelve months a hundred and twenty millions of francs (£4,800,000) more than it received, in consequence of the backwardness of all payments to the exchequer. To liquidate part of this debt, sixty millions (£2,400,000) were funded in the five per cents; the capital of the Bank of France was doubled; and deposit banks, under the name of "caisses de service," where the receivers-general of the revenue were invited to

* "Bourrienne," said he, in 1800, "my part is taken: I will cause M. Ouvrard to be arrested."—"General," replied the secretary, "have you any proofs against him?"—"Proofs? What are required? He is a contractor, a scoundrel. He must be made to disgorge. All of his tribe are villains. How do they make their fortunes? At the public expense. They have millions, and display an insolent extravagance when the soldiers are without shoes or bread. I will have no more of this." He was accordingly arrested and thrown into prison; but as there was no evidence whatever against him, he was speedily liberated, and soon, from his great capital, regained all his former influence with the government.—BOUR. vii. 94, 95.

CHAP. XLII.

1806.

deposit the sums they had drawn as soon as they were received, and encouraged to do so by being offered interest for all sums so deposited prior to the time when they were bound to make them forthcoming. By this means, the necessity of having recourse to paper credit to raise funds upon anticipated revenues was in a great measure avoided, and the collection of the taxes conducted with much greater regularity than formerly.[1]

[1] Bign. v. 89, 189, and 195.

17. And imposition of the French armies as a burden on foreign states. Nov. 18.

But these financial improvements, great as they were, did not strike at the root of the evil, which was a permanent expenditure by government greatly beyond its income. To cure this by means of loans, the well-known practice in Great Britain, was impossible in a country so ruined in its commercial relations and interests as France then was. The victories of Ulm and Austerlitz provided the means of solving the difficulty. From the moment the Grand Army crossed the Rhine, it was fed, clothed, lodged, and paid at the expense of Germany.* On the 18th November, an edict of the Emperor directed the transmission of all funds to the army of the north to cease; and on the 18th of December a similar order was given in regard to the army of Italy. Thus the three principal armies of the empire ceased to be any longer a charge upon its finances, and the tributary or conquered states bore the burden of the greater part of that enormous military force by which they were overawed or retained in subjection. This system continued without intermission during the whole remainder of the reign of Napoleon; and the budgets annually presented to the Chambers were in consequence, as the Duke de Gaeta,[2] their principal compiler, himself confesses, no true statement of the imperial expenses.[3] They were delusive even in what concerned the domestic

[2] Gaeta, 1. 272, 434.

[3] Bign. v. 99, 100.

*** From the castle of Louisberg in Wurtemberg, Napoleon wrote, so early as 4th October 1805, to the minister of finances at Paris—" The army maintains the most exact discipline: the country hardly feels the presence of the troops. We live here on *Bom : I have no need of money from you"* These *Bons* were treasury bills, which were discharged by the French government out of the contributions levied on the inhabitants, or the sums extracted from the conquered countries.—BIGNON, V. 100.**

finances of France, by always exaggerating the income and diminishing the expenditure; and, as concealing the greater part of the enormous contributions levied by the army in the conquered states, totally fallacious.

18. French budjet for 1805, and exposition by the minister of the interior.

The budget of France for 1805, presented to the Chambers in February 1806, accordingly exhibited a most deceptive picture of the national finances; but even as it was, it showed an expenditure of 666,000,000 francs (£26,600,000,) and an income of only 589,000,000 francs (£23,600,000,) the balance being made out by contributions levied from foreign states.* But although Napoleon knew as well as any one the perilous nature of the crisis which the government had recently experienced, it was no part of his policy to permit his subjects to share his disquietude, and he resolved to dazzle the world by a

CHAP. XLII. 1806.

splendid exposition of the state of the empire. The report drawn up by Champagny, minister of the interior, contained a picture of the imperial dominions, which, from the magnitude of the victories it recounted, and the splendour of the undertakings it commemorated, might well bear a comparison with Pliny's panegyric of Trajan. It represented the navigation of the Seine and the Saone as essentially improved; Alessandria as surrounded with impregnable fortifications; Genoa furnishing its sailors and naval resources to France ; Italy delivered from the presence of the English ; the sciences, the arts encouraged; the capital about to be adorned by the most splendid monuments; the Alps and the Appenines yielding to the force of scientific enterprise, and the noble routes of the Simplon, Mont Cenis, the Corniche, and the Mont Genevre, opening to loaded chariots a path amidst heretofore impassable snows; numberless bridges established over the Rhine, the Meuse, the Loire, the Saone, and the Rhone; harbours and wet-docks in a state of rapid construction in five-and-thirty maritime cities ; the works of Antwerp and Cherbourg promising soon to rival the greatest naval establishments of England.[1]

[1] Bign. v. 104,108.

19. Exposition of *we* triumphs of France: silence as to Trafalgar.

The exposition concluded with a rapid view of the advantages which France had derived from the successive coalitions which had been formed against its existence. " The first coalition, concluded by the treaty of Campo Formio, gave the Republic the frontier of the Rhine, and the states which now form the kingdom of Italy; the second invested it with Piedmont; the third united to its federal system Venice and Naples. Let England be now convinced of its impotence, and not attempt a fourth coalition, even if subsequent events should render such a measure practicable. The house of Naples has irrevocably lost its dominions; Russia owes the escape of its army solely to the capitulation which our generosity awarded: the Italian peninsula, as a whole, forms a part of the great empire; the Emperor has guaranteed, as

chief supreme, the sovereigns and constitutions which compose its several parts/' In the midst of these just subjects for exultation, Napoleon had not the moral courage to admit the terrible disaster of Trafalgar. That decisive event was only alluded to in the following passage of his opening speech to the Chambers:—" The tempests have made us lose some vessels after a combat imprudently engaged in. I desire peace with England ; I shall not on my side retard its conclusion by an hour. I shall always be ready to terminate our differences on the footing of the treaty of Amiens." Thus, while the Neapolitan dynasty, for merely making preparations for war, was declared to have ceased to reign, England, which had struck so decisive a blow at his maritime strength, was invited to a pacification on terms of comparative equality —a striking instance of that resolution to crush the weak, and temporise, till the proper time arrived, with the powerful, which formed so remarkable a feature of Napoleon's policy.[1]

Bign. v. 104, 110. Hard. ix. 91.

The return of Napoleon to Paris was the signal for the commencement of magnificent public structures in that capital. The municipality voted a monument to the Emperor and the Grand Army, which, after much hesitation as to the design, it was at length resolved to make a triumphal column, composed of the cannon taken in the Austrian campaign, surmounted by a statue in bronze of the Emperor. The design was speedily carried into effect; five hundred Imperial guns, melted down and cast anew, assumed the mould of the principal actions of the campaign, which wound, like the basso-relievo on Trajan's pillar at Rome, to the summit of the structure, one hundred and twenty feet from the ground, where the statue of Napoleon, afterwards carried off by the Emperor Alexander as a trophy of victory to St Petersburg, was placed. Since the accession of Louis Philippe, it has been replaced by an admirable bronze representation of the great conqueror in his gray riding-coat, the dress which has become

20. Erection of he Column n the Place fendome.

CHAP. XLII. 1806.

canonised in the minds of the French by the feelings of admiration, almost amounting to devotion, with which his memory is regarded. The standards taken from the enemy during the campaign—one hundred and twenty in number—were brought with great pomp through the streets of Paris on the 1st of January, and divided between the senate, the tribunate, the city of Paris, and the cathedral of Notre Dame. "These standards/' said the Archbishop of Paris, when they were placed beneath the sacred roof, "will attest to our latest posterity the efforts made by Europe against us; the glorious deeds of our soldiers; the protection vouchsafed by heaven to France; the prodigious success of our invincible Emperor, and the homage which he has rendered to God for his victories." The senate decreed that his birth-day should be one of the national fetes. Magnificent rejoicings were projected by the Emperor to signalise the return of the Grand Army to the capital; but they were adjourned, first on the account of the sojourning of the troops on the Austrian frontier, next from the menacing aspect of Prussia, and finally abandoned after the gloom and bloodshed of the Polish campaign.[1]

[1] Bign. v. 112, 113. Thiers, vi. 372, 374.

21. Advance of the French against Naples.

The ominous announcement, made from the depths of Moravia, that the dynasty of Naples had ceased to reign, was not long allowed to remain a dead letter. Massena was busily employed, in January, in collecting his forces in the centre of Italy, and before the end of that month fifty thousand men, under the command of Joseph Buonaparte, had crossed the Pontifical States and entered the Neapolitan territory in three columns, which marched on Gaeta, Capua, and Itri. Resistance was impossible; the feeble Russian and English forces which had disembarked to support the Italian levies, finding the whole weight of the war likely to be directed against them, withdrew to Sicily; the court, thunderstruck by the menacing proclamation of 27th December, speedily followed their example; the governors of the cities first exposed to invasion hast-

ened to appease the conqueror by submission ; a futile attempt at negotiation by means of Prince St Theodore did not suspend for an instant the march of the victorious troops. In vain the intrepid Queen Caroline, who still remained at Naples, armed the lazzaroni, and sought to infuse into the troops a portion of her own indomitable courage ; she was seconded by none. Capua opened its gates ; Gaeta was invested ; the Campagna filled with the invaders ; she, vanquished but not subdued, compelled to yield to necessity, followed her timid consort to Sicily; and, on the 15th February, Naples beheld its future sovereign, Joseph Buonaparte, enter its walls.[1]

[1] Dum. xv. 95,99. Bign. v. 114, lib'. Hard. ix. 56, 58.

22. Successful invasion of Calabria.

But although the capital was thus occupied by the invaders, and the reigning family had taken refuge in the sea-girt shores of Sicily, the elements of resistance still existed in the Neapolitan dominions. The Prince of Hesse-Philipsthal had the command of Gaeta, and he had inspired the garrison of eight thousand men which he commanded with a share of his own heroic resolution. When summoned to capitulate, this gallant officer replied, that his honour would not permit him to lower his colours till the last extremity; and the long resistance which he made, coupled with the natural strength of the place, which could be approached, like Gibraltar, only by a neck of land strongly fortified, inspired the Sicilian cabinet with the hope that something might yet be done for the deliverance of its Continental dominions. During the first tumult of invasion, the peasantry of Calabria, in despair at the universal desertion of the kingdom, both by their government and its allies, submitted to the enemy; and General Reynier, with a considerable corps, in the outset experienced little resistance in his occupation of the principal strongholds of the country. But the protraction of the siege of Gaeta, which occupied Massena with the principal army of the French, gave them time to recover from their consternation; and the cruelty of the invaders, who put to death without mercy all the

CHAP. XLII.

peasants who were found with arms in their hands, on the pretence that they were brigands, drove them to despair. A general insurrection took place in the beginning of March, and the peasants stood firm in more than one position. But they were unable to withstand the shock of the veterans of France, and in a decisive action in the plain of Campo-Tenese their tumultuary levies, though fifteen thousand strong, were entirely dispersed. The victorious Reynier penetrated even to Reggio, and the standards of Napoleon waved on its towers, in sight of the English videttes on the shores of Sicily.[1]

[1] Bot. iv. Hard. ix. 88, 90. Dum. xv. 107, 116.

23. Joseph Buonaparte createdKing of the Two Sicilies. March 30.

When hostilities had subsided, Joseph repaired in person to the theatre of war, and sought, by deeds of charity, to alleviate its distresses, while his beneficent mind contemplated great and important public works to ameliorate that savage and neglected district. He visited the towers of Reggio, admired the magnificent harbour of Tarentum, and had already formed the design of canals and roads to open up the sequestered mountains of Calabria. In the midst of these truly princely projects he received at Savigliano, the principal town of the province, the decree by which Napoleon created him king of the Two Sicilies. By so doing, however, he was declared not to lose his contingent right of succession to the throne of France ; but the two crowns were never to be united. At the same time the states of Venice were definitively annexed to the kingdom of Italy, and that capital was to give his title to the eldest son of its sovereign. The beautiful Pauline, now married to Prince Borghese, received the duchy of Guastalla, subsequently united to the same dominions; the Princess Eliza was created Princess of Lucca Piombino; Murat was made Grand-duke of Berg, with a considerable territory: and the Emperor reserved to himself twelve duchies in Italy, of which six were in the Neapolitan dominions, which were bestowed on the principal officers of his army.[2] Thus, while he was elevating the members of his family to the neighbouring thrones, the

April 4.

[2] Bign. v. 131. Hard. ix. 93, 94. Colletta, ii. 14,15.

military hero of the Revolution gave abundant indications of his design, by reconstructing the titles of honour which it had cost so much bloodshed to destroy, utterly to overturn its principles.*

24. Naples is threatened by Sir Sidney Smith. General Stuart lands in the Bay of St Euphemia.

Events, however, soon occurred which showed the infant sovereign what an insecure tenure he had of his dominions. Hardly had he returned to Naples to receive the congratulations of his new subjects on his elevation, when the island of Capri, the celebrated retreat of the Emperor Tiberius, whose romantic cliffs bound the horizon to the south of the bay of Naples, was wrested from his power by an English detachment. Nothing but the generous forbearance of the commander of the squadron, Sir Sidney Smith, saved his capital and palace from a bombardment amidst the festive light of an illumination. Shortly after, a still more serious disaster occurred in the southern provinces of his dominions, attended in the end with important effects on the fortune of the war. Encouraged by the prolonged resistance of Gaeta, and the accounts which were brought from all quarters of the disaffection which prevailed in Calabria, the English commanders in Sicily resolved upon an effort by land and sea, with the double view of exciting an insurrection on the one side of the capital, and relieving the fortress which so gallantly held out on the other. In the beginning of July an **Jul) 1.** expedition set sail from Palermo, consisting of somewhat less than five thousand men, which landed in the Gulf of St Euphemia: and the commander, Sir John Stuart,

*** " The interest of our crown," said Napoleon, " and the tranquillity of the continent of Europe, require that we should secure in a stable and definitive manner the fate of the people of Naples and Sicily, fallen into our power by the right of conquest, and *forming part of the great empire*—we therefore declare our well-beloved brother Joseph King of the two Sicilies." By the same decree* Berthier was created Prince of Neufchatel, which had been ceded by Prussia; Talleyrand obtained, with the title of Prince of Benevento, the principality of the same name, which belonged to the Pontifical States , Bernadotte became Prince of Pontecorvo; Cambaceres and Lebrun, Dukes of Parma and Piacental. Substantial reservations in favour of the crown of France accompanied the creation of these inferior feudatories: a million yearly was reserved from the Neapolitan revenues to be distributed among the French soldiers.—HARD, ix. 94,95; BIGN. V. 131.**

CHAP. XLII.

1806.

issued a proclamation calling on the Calabrians to repair to his standard and unite their efforts to expel the intruding sovereign. Few or none, however, of the peasantry appeared in arms; no intelligence of more distant armaments was received; and the English general was beginning to hesitate whether he should not re-embark his troops, when advices were received that Reynier, with a French force not greatly exceeding his own, was encamped at MAIDA, about ten miles distant. With equal judgment and resolution, Sir John Stuart immediately resolved to advance against his opponent; and if he could not expel the enemy from the Neapolitan territories, at least give the troops of the rival nations an opportunity, so much longed for, of measuring their strength on a footing of comparative equality. He moved forward his forces, accordingly, in quest of the enemy. On the 5th July the outposts of the two armies were within sight of each other, and both sides prepared for a decisive conflict on the following morning: the French never doubting that they would speedily drive the presumptuous islanders into the sea; the English anxious, but not apprehensive, that it would be found, in the hour of trial, that they had not degenerated from their ancestors of Blenheim or Poictiers.[1]

[1] Bot. iv. 210,211. Colletta, ii. 19. Ann. Reg. 1806, 142. Dum. xv. 142,145.

25. Reynier resolves to attack him.

When the English army arrived in sight, the corps of Reynier, consisting of five thousand infantry, six hundred cavalry, and a battery of horse-artillery, was strongly posted on a range of wooded heights which skirted the little plain stretching from their feet toward the sea; while the British, bivouacking in that marshy and unhealthy expanse on the banks of the Amato, were in a situation of all others the most exposed to the pestilential influences of the malaria, at that sultry season in full activity. But Reynier was inspired with a supercilious contempt for his opponents, with whom he had combated in Egypt, and the defeats from whom, there received, he bad entirely ascribed, in his subsequent publication, to the

CHAP. XLII.

1806.

errors of General Menou. He was encouraged, besides, by the arrival of reinforcements in the night, which raised his forces to seven thousand five hundred men, and, resolving to leave nothing to the diseases of the climate, he marched at once to the encounter. Hastily, therefore, he descended from the heights, crossed the sluggish stream, and advanced against the enemy.[1]

[1] Bot. iv. 211. Bum. xv. 144. Ann. Reg. 1806, 142.

26. Battle of Maida. July 6.

Surprised, but nothing dismayed, at the unexpected appearance of forces so much more considerable than they had anticipated, the British troops awaited, with undiminished resolution, the attack. Their right rested on the Amato, at the point where its lazy current falls into the sea; the thickets and underwood which enveloped its mouth were filled with light troops, who kept up a destructive fire on the assailants as they approached. Notwithstanding the heavy loss which they sustained in consequence, the French bravely advanced, and, impatient of victory, after a few volleys had been exchanged, rushed forward with the bayonet. But they little knew the enemy with which they had now to deal. No sooner did the English right, consisting of the light companies of the 26th, 27th, 35th, 58th,61st, 81st, and 85th regiments, perceive the levelled steel of their opponents, than they too advanced with loud cheers to the charge; the 1st light infantry, a famed French regiment, as gallantly pressed forward; and the rival nations approached each other till their bayonets literally crossed. At that appalling moment French enthusiasm sank before British intrepidity; their battalions broke and fled, but were instantly overtaken amidst deafening shouts, and assailed with such fury, that in a few minutes seven hundred lay dead on the spot, and a thousand, including General Compere, were made prisoners. Taking advantage of this overthrow, the brigade under General Auckland, which was immediately to the left of the victorious right, also pressed forward, and drove the enemy in that quarter from the field of battle. Defeated thus in the centre and right, Reynier

CHAP. XLII.

1806.

made an attempt with his cavalry, in which arm the British were totally deficient, to overwhelm the other flank. A rolling fire of musketry repelled them from the front of the line; but their squadrons, rapidly wheeling round the immovable infantry, succeeded in turning its left. This movement might have yet retrieved the day, had not the French cavalry, in the midst of their advance, been assailed by a close and well-directed fire in flank from the 20th regiment, which had that morning landed, and came up most opportunely at the decisive moment to take a part in the action. This unexpected discharge totally disconcerted the horse, which fled in disorder from the field of battle; and the enemy, routed at all points, withdrew his shattered battalions across the Amato, weakened by the loss of half their numbers.[1] *

[1] Sir J. Stuart's Despatch, Ann. Reg. 1806, 591, 593. Bot.iv.211, 212. Colletta, ii. 20. Dum. xv. 146, 148.

27. Great moral effect of this victory.

The battle of Maida, though hardly noticed by the French nation amidst the blaze of Ulm and Austerlitz, had a most important effect upon the progress of the war. It is often by the feelings which it excites, and the moral impression with which it is attended, more than by its immediate results, or the numbers engaged on either side, that the importance of a victory is to be estimated. In this point of view, seldom was success more important than that thus achieved. True, the forces engaged were inconsiderable, the scene remote, the probable immediate advantages trifling: but what mattered all that? it was a duel between France and England, and France had succumbed in the conflict. At last the rival states had come into collision, on terms approaching to equality, and free from the paralysing influence of lukewarm or dubious allies. The result had been decisive: the veterans of Napoleon had fled before the British steel. Indescribable was the national exultation at this glorious result. The disasters of the early years of the war were forgotten, or

*** The total loss of the British was only 44 killed and 284 wounded. The Duchess of Abrantes states the entire loss of the French at 6000 men.—D'ABRANTES, ix. 136; and Sir J. STUART'S *Despatch, Ann. Beg.* 1806, 594.**

ascribed to their true cause, —general inexperience in the military art; confidence, the surest presage of victory, when guided by prudence, was transferred from the naval to the land service; and, reposing securely on the fights of Alexandria and Maida, all classes openly expressed their ardent desire for an early opportunity of measuring the national strength on a greater scale with the conquerors of continental Europe. Publications began to issue from the press which strongly urged the adoption of a more manly system of military policy,[45]* and the descent of the British in large bodies on the shores of Germany or Italy: the people no longer hesitated to speak of Cressy and Azincour. The British historian need entertain no fears of exaggerating the moral influence of this success, even with so inconsiderable a force. He will have occasion to portray a similar result to the enemies of his country, from the successes of the Americans with detached ships at the close of the war. Napoleon was well aware of its importance : he received the accounts of the defeat at Maida with a degree of anguish which all his matchless powers of dissimulation could not conceal.[1] " Sive tanta, sive minor, victoria fuit, ingens eo die res, ac nescio an maxima illo bello, gesta sit; non vinci enim ab Hannibale, vincentibus tunc difficilius fuit, quam postea vincere."[2]†

[1] D'Abr. ix. 136.

[2] Liv. xxiii. 16.

28. Its immediate results are less considerable.

But, though productive in the end of the most important consequences from the moral feelings which it inspired, the victory of Maida was not attended at the moment with any durable results. In the first instance, indeed, considerable advantages were gained. Every town and fort along the coast of Calabria fell into the hands of the victors. The whole artillery, stores, and

1806.

ammunition collected for the invasion of Sicily, were taken or destroyed. The French forces made a precipitate retreat on all sides, and the insurrection spread like wild-fire through the whole southern provinces of the Neapolitan dominions. A few days after, the town of Crotona, containing a thousand men, chiefly wounded, surrendered to the insurgents. The detachments of the French were cut off on all sides, and massacred with savage cruelty by the peasantry, whose ferocity General Stuart in vain endeavoured to appease, by a proclamation earnestly imploring them not to disgrace their cause by a deviation from the usages of civilised warfare. So general were the losses, that Reynier was unable to stop his retreat till he reached the intrenched camp of Cassano, where the junction of Verdier's division enabled his shattered army, weakened by the loss of eight thousand men, at length to make head against the enemy.[1]

[1] Dum. xv. 148, 155. Ann. Reg. 1806, 595. Bot.iv.213 Jom.ii.238 Bign.v.126

29. Surrender of Gaeta.

These disasters might have been attended with important results upon the whole campaign in the Peninsula, could Gaeta have held out till the combined English and Neapolitan forces approached its walls. But the progress of the siege, and the vigour of Massena, who commanded the attacking army, rendered this impossible. After a gallant resistance, and the display of great skill on both sides, which rendered this siege one of the most memorable of the whole war, a practicable breach was effected in front of the citadel, while a second, of smaller dimensions, was formed on its flank. Already a column of three

July 18.

thousand grenadiers was prepared for the assault. Prince Hesse Philipsthal had some days before been mortally wounded by the bursting of a shell, and removed on board an English vessel to Sicily : his successor was not animated with his dauntless spirit; proposals of capitulation were made; and Massena, glad on any terms to render his force disposable for still more pressing exigencies, granted them the most honourable conditions.[2*] The

* The physical difficulties experienced by the assailants in this memorable

garrison, still seven thousand strong, marched out with the honours of war ; and on the 18 th July the French flag waved on its classic and almost impregnable battlements.

30. Retreat of the English. Suppression of the insurrection.

The surrender of Gaeta, by rendering disposable the whole besieging force of Massena eighteen thousand strong, made the insurrection in Calabria hopeless, and the ulterior stay of the English army on the Neapolitan shores impossible. Sir John Stuart, therefore, slowly bent his steps towards the straits of Messina; and at length, on the 5th September, after a residence of two months, the last detachments of the English embarked for Palermo, leaving of necessity, though on this occasion for the last time, the stain too often thrown on their arms, of exciting a people to resistance whom they subsequently abandoned to their invaders. Meanwhile the advance of Massena, though stubbornly resisted and attended with great bloodshed, was a succession of triumphs. The insurgents stood their ground bravely at the romantic defile of Lauria, so well known to travellers in Calabria, but were at length turned by the Monte Galdo, and defeated with great slaughter. A guerilla warfare ensued, attended with savage cruelty on both sides. The stream of the Calore, which flowed through the theatre of the contest, descended to the sea charged with the bodies of the slain. But after several months of carnage, the French troops regained all the ground they had occupied prior to the descent of the English;[1]

[1] Dum. xv. 171, 179. Jom.ii.239, 246. Bot.iv. 214, 217. Ann. Reg. 1806, 143, 148.

siege were of the most formidable description; its details, which are fully given by General Mathieu Dumas, are highly interesting to the military reader. No less than 120,000 cannon-shot and 22,000 bombs were fired by the garrison upon the besiegers before they returned a single gun; but when their batteries were opened on the 10th July, the superiority of their fire became soon apparent.—Gaeta, named after the nurse of *Æneas*,* underwent a desperate siege from the Austrians in 1707, when it surrendered only after a murderous assault by Marshal Daun. Thirty years afterwards it was besieged and taken when defended only by an insufficient garrison.—See DUMAS, XV. 155, 170.

and an amnesty, judiciously published by King Joseph, at length put a period to this sanguinary and hopeless contest, in which they lost by sickness and the sword little short of fifteen thousand men.

31. Domestic reforms of Joseph in Naples.

No monarchy in Europe stood more in need of reformation than that of Naples when Joseph took possession of its throne. The administration of justice, the regulation of the finances, the general police of the country, stood equally in need of improvement. Hence the remarkable fact, so common on the Continent, so rare in England, that the most democratically inclined of the whole community were those of the higher ranks who had travelled, or received the advantages of a liberal education; while the supporters of the arbitrary government, and all the abuses following in its train, were to be found among the rabble of the cities and the peasantry of the country. A state of things which, however at variance with what is generally prevalent in a constitutional monarchy, arises naturally from the feelings brought into action in such circumstances as here occurred, and has been since abundantly verified by the experience of the southern monarchies of Europe, when exposed to revolutionary convulsions. Joseph Buonaparte, who was endowed by nature with an inquisitive and beneficent spirit, found ample room for, and soon effected, the most extensive ameliorations. Without conceding in an undue degree to the democratic spirit, he boldly introduced reforms into every department. The estates held by the nobles by a military tenure were deprived of their unjust exemption from taxation; their castles, villages, and vassals subjected to the common law of the realm; the number of convents was restricted; part of their estates appropriated to the discharge of the public debt, part devoted to the establishment of schools in every province for the youth of both sexes. Academies for instruction in the military art, in naval science, in drawing, a national institute, and various other useful institu-

tions, were established in the capital. Roads, bridges, harbours, and canals, were undertaken or projected; and a general spirit of activity was diffused by the energy of the government. Great part of these improvements have survived the ephemeral dynasty with which they originated, and constitute part of the lasting benefits induced in other countries by the disastrous wars of the French Revolution.[1]

[1] Colletta, ii. 1, 15. Bign. v. 135, 139.

32. Miserable state of Holland since its conquest by France,

The conquest of Naples and ascent of the throne of the Two Sicilies by the brother of Napoleon was not the only usurpation which followed the peace of Pressburg. The old commonwealth of Holland was destined to receive a master from the victorious Emperor; while the republic of Venice, incorporated by the decree of 30th March with the kingdom of Italy, furnished a noblesse to surround and support his throne. Since their conquest by the French, under the victorious arras of Pichegru, the Dutch had uniformly shared in all the revolutionary convulsions of the parent republic; and the authority latterly conferred on the grand pensionary in 1805, had almost established among them a monarchical government. Meanwhile the misfortunes of the state were unparalleled. Its most valuable colonies had been conquered by the English, and were to all appearance indefeasibly united to that absorbing power. The Cape of Good Hope had become a half-way house to their vast dominions in Bengal; the island of Ceylon had recently been added to their possessions in the Indian Archipeligo; and Surinam itself, the entrepot of the commercial riches of Holland in the eastern seas, had fallen into their hands. Their harbours were blockaded, their commerce ruined, their flag had disappeared from the ocean; and the state, as usual at the close of revolutionary convulsions, had fallen under the despotic rule of ignoble men, whose tyranny over others was equalled, only by their base adulation to the foreign rulers of the commonwealth.[2] The people, despairing of relief, and worn out by the exactions of obscure tyrants, in the

Hard. *ix.* 99, 100. Bign. v. 11.

CHAP. XLII. 1806.

election of whom the respectable classes had taken no share, were desirous of any change which promised a more stable and creditable order of things.

33. Napoleon's measures to place his brother Louis on the throne of that country. May 26.

Encouraged by these dispositions, Napoleon resolved to place his brother Louis on the throne of Holland. With this view, a Dutch deputation, composed of persons entirely in his interest, was instructed to repair to Paris and demand his appointment. A treaty was soon concluded, which, on the preamble " that it had been found by experience that the annual election of a chief magistrate was the source of continual discord, and that in the existing state of Europe a hereditary government could alone guarantee the independence and furnish securities to the civil and religious liberties of the state," declared Louis king of Holland. A few days after, the new monarch was proclaimed, and issued a decree, in which he promised to maintain the liberties of his people, whose independence was guaranteed by the Emperor. But the elusory nature of that independence was made painfully evident by the characteristic speech which Napoleon made to his brother on the occasion:—" Never cease to regard yourself as a Frenchman. The dignity of constable of the empire shall be reserved to you and your descendants. It will recall to your recollection the duties you have to discharge *towards me*, and the importance which I attach to the guardianship of the strong places which I intrust to you, and which compose the northern frontier of my states."[1]

June 5.

[1] Hard. ix. 99, 100. Bign. v. 141, 142.

34. Creation of military fiefs in the kingdom of Italy.

At the same time, the incorporation of the Venetian states with the kingdom of Italy afforded the Emperor an opportunity of laying the foundation of that territorial noblesse by which he hoped to add stability and lustre to his throne. Twelve military fiefs were created out of the ceded districts, which Napoleon reserved for the most distinguished of his marshals and ministers; while a fifteenth of the revenue which these states yielded to the treasury at Milan was set apart to form appanages suitable to

those dignities. A revenue of one million two hundred thousand francs (£48,000) was on this occasion set apart from the taxes of the kingdom of Italy, to form a fund out of which he was to recompense his soldiers, and which was soon divided among a great variety of claimants. Thus Napoleon was rendering the conquests of his arms not only the source of power to himself, but of emolument to his followers in every degree.[1]

[1] Bign. v. 139,140.

35. Napoleon's secret views in these measures.

The system upon which Napoleon now openly entered, of placing his relations and family on the thrones of the adjoining kingdoms, and surrounding France with a girdle, not of affiliated republics, but of dependent dynasties, was not, as has been sometimes imagined, a mere ebullition of personal vanity or imperial pride. It had its origin in profound principles of state policy, and a correct appreciation of the circumstances which had elevated him to the throne, and continued to surround him when there. He clearly perceived that it was revolutionary passion, converted by his genius into the spirit for military conquest, which had placed him on his present pinnacle of power, and that he was regarded with a jealous eye by the old European dynasties, who both dreaded, from dear-bought experience, the fervour which had elevated him to the throne, and were averse to the principles which had overturned the ancient family. He felt that, of necessity, however disguised under the semblance of friendship, his hand was against every man, and every man's hand against him. This being the case, the only permanent bond of alliance to which he could trust was that which united him to his own family, and identified with his own the interests of inferior royalties, dependent on the preservation of his great parent diadem. " I felt my isolated position," says he, " and threw out on all sides anchors of safety into the ocean by which I was surrounded; where could I so reasonably look for support as in my own relations'? could I expect as much from strangers ?" Such were the views of Napoleon; and that, *situated as he was,* they were founded

CHAP. XL1I. 1806.

on reason, is perfectly obvious. That the measures to which they led him, of displacing the adjoining monarchs, and seating on their thrones the members of his own family, were calculated to excite in the highest degree the jealousy and hostility of the other Continental powers, and thus had a powerful influence in producing his ultimate overthrow, is indeed equally certain. But these considerations afford no ground for impeaching the soundness of the principles by which his conduct was regulated. They show only that he was placed in circumstances which required a hazardous game to be played; and add another to the many illustrations which the history of this eventful period exhibits of the eternal truth, that those who owe their elevation to revolutionary passion, whatever form it may have assumed, are driven on before a devouring flame, more fatal in the end to those who are impelled by, than to those who resist its fury.[1]*

[1] Bign. v. 132,143. Las Cas vii. 127.

36. Audience given to the Turkish ambassador.

On the same day on which a king was given by the French Emperor to the United Provinces, an ambassador arrived from the Grand Signior, who came to congratulate him on his accession to the imperial dignity. He was received with the utmost condescension; and the words used by Napoleon on the occasion are well worthy of being recorded, when taken in conjunction with his subsequent conduct to that power by the treaty of Tilsit. "Everything," said he, "that can happen, either of good or bad fortune, to the Ottomans, will be considered in the same light by France. Have the goodness, M. Ambassador, to transmit these words to Sultan Selim. Let him ever recollect that my enemies, who are also his own, may one day penetrate to his capital. He never can have any cause of apprehension from me: united to my throne, he need fear nothing from his enemies,"[2] Within a year after these words were spoken, Napoleon signed on the Niemen

[2] Bign. 145.

* "The truth is," said Napoleon, "that I was never master of my own movements—I was never altogether my own. I was always governed by circumstances."—LAS GAS. vii. 124,125.

a treaty with Russia for the partition of the whole Turkish territories in Europe.

1806.

37. Naval operations. Sailing and division of the Brest fleet.

But while fortune seemed thus lavishing her choicest gifts on Napoleon by land, and the dynasties of Europe were melting away before his breath, disaster, with equally unvarying course, was attending all his maritime operations, and the sceptre of the ocean had irrevocably passed into the hands of his enemies. The victory of Trafalgar, with the subsequent achievement of Sir Richard Strachan, had almost entirely destroyed the great combined fleet which under Villeneuve had issued from Cadiz : but the squadrons of Rochefort and Brest, upon the co-operation of which Napoleon had so fondly calculated, still existed; and he was not yet sufficiently humbled by disaster to renounce altogether the hope of deriving some advantage from their services. He resolved to employ the remainder of his naval forces, not in regular battles with the English fleet, but in detached operations in smaller armaments, against their remote colonies or merchant vessels. Half the Brest squadron, consisting of eleven line-of-battle ships, was victualled for six months ; and in the middle of December, when the Channel fleet was blown off the station by violent winds, they stood out to sea, and shortly after divided into two squadrons. The first, under Admiral Leissegues, consisting of five ships of the line and two frigates, was destined to carry out succours to St Domingo ; while the second, under Willaumez, embracing six ships of the line and two frigates, received orders to make for the Cape of Good Hope, and do as much injury as possible to the English homeward-bound merchant fleets. But a cruel destiny awaited both squadrons, which nearly annihilated the enemy's remaining naval force, and almost closed the long series of British maritime triumphs during the war.[1]

Dec. 13, 1805.

[1] Dum. xv. 84,86. Ann. Reg. 1806,

Admiral Leissegues arrived without any accident at St Domingo, and disembarked his troops and stores ; but the damage he had experienced from the wintry stoma

CHAP. XLII.

1806.

during the passage of the Atlantic rendered some repairs necessary, which were undertaken in the open roadstead of that harbour. The imprudent security which had dictated that resolution was soon severely punished. On the 6th February Admiral Duckworth, who had been detached from the blockading squadron before Cadiz in pursuit of the enemy, hove in sight with seven ships of the line and four frigates. Four of the English ships engaged each a single adversary, while the three others united against the Imperial, a splendid vessel of a hundred and thirty guns, which bore the Admiral's flag, and was equal to the encounter of any two of its opponents. So unequal a contest as that with three, however, could not be of long endurance. Notwithstanding all their efforts to escape, the French squadron were overtaken and brought to close action : a desperate conflict of two hours ensued, which terminated in the whole of their line-of-battle ships being taken or destroyed ; three having struck their colours, and two, including the superb Imperial, being driven ashore and burned. The frigates stood out to sea during the confusion of this murderous engagement, and escaped. Nothing could exceed the gallantry with which the French in all their ships stood to their guns : on board the three taken alone, the killed and wounded were no less than *760 ;* while the total loss of the British was only 64 killed, and 294 wounded. The Imperial, before it ran ashore, had seen 500 of its bravest sailors mowed down by the irresistible fire of the English vessels.[1]

Defeat of the first squadron at St Domingo.

[1] Duni. xv. 86,89. Ann. Reg. 1806, 229. Bign. v. 156.

39. Though not overtaken by so overwhelming a disaster, the cruize of Admiral Willaumez, with the remainder of the Brest fleet, was in the end nearly as calamitous. Having received intelligence, when he approached the Cape, of the capture of that settlement by the British, he stood over for Brazil, where he watered and revictualled at Bahia, and moved northward towards the West Indies, in hopes of falling in with the homeward-bound Jamaica

Disasters of Willaumez's squadron.

fleet. Thither he was tracked by Sir Alexander Cochrane, with four sail of the line, who, though not in sufficient strength to risk an engagement, followed him at a distance, and, by means of his look-out frigates, observed all his movements. On the 12th July, Sir John Borlase Warren arrived from England at Barbadoes. His squadron had been fitted out and performed the voyage with unexampled rapidity, having left Spithead only on the 4th June : Sir Richard Strachan soon after made his appearance with a second fleet in the same latitude; while a third, under Admiral Louis, put to sea in the end of August, to intercept the return of the French. As it was now evident that the attention of the English government was fully fixed on this squadron, the last which the enemy had at sea, the most serious apprehensions began to pervade the French that they would share the fate of their comrades on the coast of St Domingo ; and under the influence of these feelings the Veteran, of seventy-four guns, commanded by Jerome Buonaparte, separated from the rest of the squadron, and without any orders stood away in the night of the 30th July for France. Discouraged by this defection, and perceiving no possibility of maintaining his position, Willaumez saw no resource but to make sail for the first friendly harbour in Europe. In doing so, however, he was assailed by a furious tempest, which totally dispersed his fleet. The Foudroyant, severely disabled, with difficulty reached the Havannah, pursued by the English frigate Anson under the very guns of the Moro Castle; the Impetueux was standing in for the Chesapeake, when she was descried by Sir Richard Strachan's squadron, driven ashore and burned, her crew being made prisoners; two other seventy-fours were destroyed by the English in the same bay; the Cassard alone, which was supposed to have foundered at sea, regained Brest about the middle of October in the most deplorable condition. Jerome Buonaparte, in the Veteran, made a rich prize in returning to Europe; but, chased by

some English vessels when he reached the bay of Biscay, he was obliged to let go his booty, and after a hard run only reached the coast of France by steering his vessel ashore under the batteries of the little harbour of Concarneau, where she was abandoned, but the crew and guns got into safety.[1]

[1] Ann. Reg. 1806, 230, 231. Bign. v. 157, 158. Dum. xv. 90, 94.

40. Capture of Linois, and other naval operations. Sept. 18, 1805.

The squadron under Admiral Linois, which had so long wandered almost unmolested in the Indian Ocean, and done very great damage to our commerce in the East, after its inglorious repulse by the China mercantile fleet, of which an account has already been given,* made an attack on the Centurion, fifty guns, and two English merchantmen, in the bay of Vizigapatam. But though they took one of the merchantmen, and drove the other on shore, they could make no impression on the line-of-battle ship, which, with undaunted resolution, bore up against triple odds, and at length succeeded in repulsing the enemy. Finding that the Cape of Good Hope had been conquered by the British, Linois reluctantly bent his steps homeward, and had reached the European latitudes, when he fell in the night into the middle of Sir John Borlase Warren's

March 13, 1806.

squadron, and after a short action was taken, with the Marengo of eighty, and the Belle Poule of forty guns.

March 14.

Next day, five large frigates, with troops on board bound for the West Indies, were met at sea by a British squadron under Sir Samuel Hood, and, after a running fight of several hours, four out of the five were captured. The only division of the enemy at sea at that period which escaped destruction was the Rochefort squadron, under Admiral Lallemand, which had the good fortune not to fall in with any of the British fleets, and at length, after a cruise of six months, regained its harbour, having made eight hundred prisoners from merchant vessels in the course of its voyage. From its singular good fortune in eluding the pursuit of all the fleets sent in search of it by the British government, Lallemand's was called by the

* *Ante,* **Chap.** XXXVII. **§ 27.**

English sailors the Invisible Squadron. He had the fortune to meet and capture the Calcutta of fifty guns, which, while convoying some merchantmen, fell into the middle of his fleet of four line-of-battle ships, and surrendered after a gallant resistance; and his safe return was celebrated as a real triumph by the French, who in those disastrous days accounted an escape from the enemy at sea as equivalent to a victory.[1]

1806. Dec. 15, 1805.

[1] Ann. Reg. 1806, 220. Bign. v. 153, 154.

41. Reflections on these last naval disasters of France.

These maritime transactions conduct us to an important epoch in the war—that in which the French and Spanish navies were TOTALLY DESTROYED, and the English fleet, by general consent, had attained to UNIVERSAL DOMINION. There is something solemn, and apparently providential, in this extraordinary ascendency acquired on that element by a single power. Nothing approaching to it had occurred since the fall of the Roman empire. Napoleon afterwards acquired important additions of maritime strength. The fleets of Russia, the galleys of Turkey, the important harbours of Denmark, were put at his disposal: but he never again ventured on naval enterprises; and, with the exception of an unhappy sortie of the Brest fleet, which was soon terminated by the flames of Basque Roads, no sea-fight of any moment occurred to the conclusion of the war. Fearless and unresisted, the English fleets thenceforward navigated the ocean in every part of the globe, transporting troops, convoying merchantmen, blockading ports, with as much security as if they had been traversing an inland sea of the British dominions. Banded Europe did not venture to leave its harbours. All apprehensions of invasion disappeared; and England, relieved alike from danger of domestic warfare and of colonial embarrassment, was enabled to direct her undivided attention to land operations, and launch forth her legions in that career of glory which has immortalised the name of Wellington.

It was not thus at the commencement of the struggle, nor had it been thus in the preceding war. The mild

CHAP. XLII. 1806.

and pacific Louis X V I . had nursed up the French marine to an unprecedented pitch of power. The French and Spanish fleets had ridden triumphant in the Channel. Gibraltar had been revictualled in presence of superior forces only by the admirable skill of Admiral Howe; and more than once it had seemed for a moment doubtful whether the ancient naval greatness of England was not about to yield to the rising star of the Bourbons. When the war broke out, Louis bequeathed to the Convention a gallant fleet of eighty ships of the line, and a splendid colony in St Domingo, which equalled all the other sugar islands of the world put together. But revolutionary convulsions, however formidable in the creation of a military, can never produce a naval power. The insanity of Brissot and the society of Les Amis des Noirs cut off the right arm of the maritime strength of France by the destruction of St Domingo; the confiscations of the Convention utterly ruined her commercial wealth; the blockade of her harbours deprived her of the only means of acquiring naval experience. One disaster followed another, till not only her own fleets were destroyed, but the navies of all Europe were so utterly paralysed, that the English flag alone appeared on the ocean, and the monarch whose will was obeyed from Gibraltar to the North Cape, and from the Ural Mountains to the Atlantic Ocean, did not venture to combat the sloops which daily insulted him in his harbours.

42. Greatness of the French navy under Louis XVI.

43. Napoleon's change of system in regard to the naval war.

This astonishing result led to a total change in the weapons by which Napoleon thereafter combated Great Britain, and impelled him into that insatiable career of conquest which ultimately occasioned his ruin. He at once perceived that it was in vain, at least for a very considerable time, to make any attempt to withstand the English at sea, and that the prospect of ultimately rivalling their power on that element could only be entertained after a costly construction of ships of war, during a long course of years, in all the harbours of Europe.

Abandoning, therefore, all idea of renewing any maritime contest, till his preparations, everywhere set on foot, for the formation of a navy were completed, he turned his mind to the conversion of his power at land to such a course of policy as might strike at the root of the commercial greatness of England. Thence the CONTINENTAL SYSTEM, based on the project of totally excluding British goods and manufactures from all the European monarchies, which required for its completion the concurrence of all the Continental powers, which could everywhere be enforced only by the most rigid police, and could succeed only through the intervention of universal dominion. From the moment that this ruling principle obtained possession of his mind, the conquest of Europe, or at least the subjection of all its governments to his control, became a matter of necessity; for if any considerable state were left out, the barrier would be incomplete, and through the chasm thus left in the defences, the enemy would speedily find an entrance. The termination of the maritime war, therefore, is not only an era of the highest importance, with reference to the separate interests of England, but it is the commencement of that important change in the system of Continental warfare which necessarily brought Napoleon to the alternative of universal dominion or total ruin.

44. Reflections on the growth of the English maritime power.

Doubtless the highest praise is due to the long line of brave and illustrious men, who, during a series of ages, reared up the astonishing maritime power of England. It was not, like the empires of Napoleon or Alexander, constructed in a single lifetime; nor did it fall with the fortunes of the heroes who gave it birth. It grew, on the contrary, like the Roman power, through a long succession of ages, and survived the death of the most renowned chiefs who had contributed to its splendour. So early as the time of Edward I I I . the English navy had inflicted a dreadful wound on that of France; thirty thousand of the vanquished had fallen in a single engagement; and the

CHAP. XLII. 1806.

victory of Sluys equalled in magnitude and importance, though, from the frequency of subsequent naval triumphs, it has not attained equal celebrity with, those of Cressy and Azincour. The freeborn intrepidity of Blake, the fire of Essex, the dauntless valour of Hawke, contributed to cement the mighty fabric. It grew and hardened with every effort made for its overthrow. The power of Louis XIV., the genius of Napoleon, were alike shattered against its strength ; the victories of La Hogue and Trafalgar equally bridled, at the distance of a century from each other, the two most powerful monarchs of Europe ; and the genius of Nelson only put the keystone in the arch which already spanned the globe. The world had never seen such a body of seamen as those of England during the revolutionary war. Dauntless to their enemies, yet submissive to their chiefs—brave in action, yet cool in danger—impetuous in assault, yet patient in defence—capable of the utmost efforts of patriotic devotion, yet attentive to the most minute points of naval discipline—submissive to orders equally when facing the muzzles of an enemy's broadside, or braving the storms of the northern ocean—capable of enduring alike the vertical rays of the torrid zone, or the frozen severity of an arctic winter—cherishing, amidst the irregularities of naval life, the warmth of domestic affection; and nursing, amidst the solitude of the waves, the ennobling sentiments of religious duty. By such virtues, not a transient, but an enduring fabric is formed. It is by such fortitude that a lasting impression on human affairs is produced.

45. Character of the French navy.

But amidst all our admiration of the character of the British navy, destined to rival in the annals of the world the celebrity of the Roman legions, we must not omit to pay a just tribute to the memory of their gallant and unfortunate, but not on that account less estimable antagonists. In the long and arduous struggle which for three centuries the French navy maintained with the English, they were called to the exercise of qualities not

CHAP. XLII.

1806.

less worthy of admiration. Theirs was the courage which can resolutely advance, not to victory, but defeat: the heroism which knows how to encounter not only danger but obloquy; which can long and bravely maintain a sinking cause, uncheered by one ray of public sympathy ; which, under a sense of duty, can return to a combat in which disaster only can be anticipated; and sacrifice not only life, but reputation, in the cause of a country which bestowed on success alone the smiles of general favour. Napoleon constantly lamented that his admirals, though personally brave, wanted the skilful combination, the daring energy, which distinguished the leaders of his land forces, and gave the English admirals such astonishing triumphs. But had he possessed more candour, or been more tolerant of misfortune, he would have seen that such daring can be acquired only in the school of victory ; that, as self-confidence is its soul, so despondence is its ruin ; that the vehement bursts of anger with which he visited the leaders under whom disasters at sea had been incurred, was the chief cause of this nervous dread of responsibility; and that, in reality, the admirals who encountered not only danger but disgrace in combating the arms of Nelson, were often more worthy of admiration than those who led his land forces to certain victory at Austerlitz or Jena.

46. Probable future influence of the British navy on the world.

As the English navy has thus risen by slow degrees to universal dominion, so the analogy of history leads to the conclusion, that great and durable results are to be produced by its agency. And without presuming to scan too minutely the designs of Providence, in which we are merely blind though free agents, it may not be going too far to assert, that the ultimate object for which this vast power was created, is already conspicuous. The Roman legions bequeathed to the world the legacy of modern Europe; its empires and monarchies are but provinces of their dominion, regenerated by the fierce energy of northern valour. The English navy will transmit to mankind

CHAP. XLII. 1806.

the still more glorious inheritance of Transatlantic and Australian greatness. A new world has been peopled by its descendants, and imbued with its spirit: freedom, tempered by power, will follow in its footsteps: more closely than it did the march of the Roman legions will the career of civilisation follow the British flag. The era is fast approaching in this narrative, when another power, equally slow in its growth, equally permanent in its progress, will come before us, arising to greatness in the east of Europe. The Cross is inscribed on its banners : Wo to the Crescent! is the watch-cry of its people; and while the brilliant meteor of Napoleon, rising on the fleeting ascendant of passion and crime, is extinguished in blood, these two colossal empires, irresistible, the one by sea and the other by land, will each lay the foundations of the spread of Christianity through half the globe.

47. Reduction of the Cape of Good Hope. Jan. 8.

These defeats of the French naval squadrons were not the only maritime operations of this year. Before Mr Pitt's death, he had prepared an expedition, under Sir David Baird, consisting of five thousand men, for the reduction of the Cape of Good Hope, the naval armament being under the direction of Sir Home Popham. On the 4th January 1806, the whole reached Table Bay; but the violence of the surf precluding the possibility of disembarking in that quarter, they were obliged to land in Leopard Bay, from whence they moved immediately towards the capital. On the 8th they came up with the Dutch forces, five thousand strong, chiefly cavalry, in battle array, upon an elevated plateau which the road crossed on the summit of the Blue Mountains. The Hollanders stood several discharges without flinching; but no sooner were preparations made for charging with the bayonet, than they broke and fled, leaving seven hundred killed and wounded on the field of battle; while the loss of the victors was only two hundred and twelve. This action decided the fate of the colony : Cape Town surrendered ; General Jansens, who had retired with three thou-

sand men towards the Hottentot country, was induced by an honourable capitulation, which provided for his safe return to Europe with all his forces, to abandon a hopeless contest; and within eight days from the time when the troops were first landed, the British flag waved on all the forts, and this valuable colony was permanently annexed to the British dominions.[1]

[1] Ann. Reg, 1806, 233, 234. Dum. *xv. 69,* 73.

48. Sir Home Popham resolves to attack Buenos Ayres.

This well-concerted enterprise added an important settlement to the British colonial girdle, which already almost encircled the earth : but the facility with which it was achieved, inspired the commanders with an overweening confidence, which ultimately led to serious disasters. Sir Home Popham had at a former period been privy to certain designs of Mr Pitt for operations in concert with General Miranda in South America, and had even been appointed, in December 1804, to the Diadem of sixty-four guns, " for the purpose of co-operating with General Miranda, to the extent of taking advantage of any of his proceedings which might tend towards our attaining a position on the continent of South America favourable to the trade of this country."[2] This intention, however, had been afterwards abandoned, or at least suspended, in consequence of the urgent remonstrances of Russia against any such remote employment of the British forces; and when he arrived at the Cape, Sir Home had no authority, express or implied, to employ any part of the forces under his command on any other expedition. But his ardent imagination had been strongly impressed by the brilliant results, both to the nation and the officers engaged in the service, which might arise from such a destination of part of the force which had effected the reduction of the Cape of Good Hope ; and having persuaded Sir David Baird, the governor of that settlement, to a certain extent to enter into his views, he set sail in the beginning of April from Table Bay, taking with him the whole naval force under his command, and fifteen hundred land troops.[3] With these, and two companies which he had the address

[2] Lord Melville's evidence in Sir H. Popham's trial. March 9, 1807.

CHAP. XLII.

1806, 49.

to procure from St Helena, he steered straight for the mouth of the Rio de la Plata.

Which falls. 28th June.

The expedition reached the neighbourhood of Buenos Ayres on the 24th June, and the troops were immediately disembarked. General Beresford, who commanded the land forces, at once proceeded against that town, while the naval forces distracted the attention of the enemy, by threatening Monte Video, where the principal regular forces were collected. Buenos Ayres, chiefly defended by militia, was unable to withstand the energetic attack of the invaders; and a capitulation was soon concluded, which guaranteed private property—a stipulation which the English commanders religiously observed, though cargoes of great value were lying afloat on the river, and might, by the established usages of war, have been declared good prize. But public stores to a great amount fell into the hands of the victors; of which 1,200,000 dollars were forthwith forwarded to government, while quicksilver to double the amount was seized for the benefit of the captors.[1]

[1] Ann. Reg. 1006, 235, 236. Dum. xv. 74, 75.

50. Embarrassment of government on this success.

Government were extremely embarrassed how to act when intelligence of this unlooked-for success reached the British islands. Not that they felt any doubt as to the inexpedience and unhappy tendency of the enterprise; for on the first information that the expedition was in contemplation, they had despatched orders to countermand its sailing; which unhappily arrived too late to put a stop to its progress. But they were unable to stem or moderate the delirium of joy which pervaded the minds of the mercantile classes on receipt of the despatches. The English, subject beyond any other people, perhaps, of whom history makes mention, to periodical, though fortunately not very lasting, fits of insanity, were suddenly seized with the most immoderate transports. Boundless fields of wealth, it was thought, were opened, endless markets for the produce of manufacturing industry discovered; and those fabled regions which formed the Eldorado of Sir Walter Raleigh, appeared about to pour

their inexhaustible treasures into the British islands. Under the influence of these highly excited feelings, every principle of reason, every suggestion of sense, every consideration of policy, every lesson of experience, was swept away: speculations the most extravagant were entered into, projects the most insensate formed, expectations the most ridiculous entertained; and government, unable to withstand the torrent, were obliged to dissemble their real feelings, and give a certain countenance to ideas which could be fraught only with ruin to all who acted upon them.[1]

[1] Ann. Reg. 1806, 237, 238.

51. Buenos Ayres is retaken by the South Americans. Aug. 4.

But long before the cabinet of St James's were either required to come to a resolution in what manner they were to act in regard to their new acquisition, or the boundless consignments which were in preparation could have crossed the Atlantic, the conquest itself had returned to the government of its former masters. Ashamed of their defeat by a handful of foreigners, and recovered from the consternation which the unwonted occurrence of an invasion had at first produced, the Spaniards began to entertain serious thoughts of expelling the intruders. An insurrection was secretly organised in the city of Buenos Ayres, almost under the eyes of the English commanders, without their being aware of what was going forward. The militia of the surrounding districts were assembled; Colonel Linieres, a French officer in the Spanish service, favoured by a thick fog, succeeded in crossing over from Monte Video at the head of a thousand regular troops; and on the 4th August the small English garrison, assailed by several thousand men from without, found itself menaced with insurrection within the city. The state of the weather rendered embarkation impossible; a desperate conflict ensued in the town; and the English troops, after sustaining for several hours an unequal conflict with the enemy, in greatly superior force in the streets, and a still more deadly because unseen foe in the windows and on the roofs of houses, were obliged to capitulate. The terms of the surrender

CHAP. XLII. 1806.

were afterwards violated by the Spaniards, and the whole remaining troops, thirteen hundred in number, made prisoners of war, after having lost nearly two hundred in killed and wounded. Sir Home Popbam, the author of these calamities, succeeded in making his escape with the squadron, and cast anchor off the mouth of the river, where he maintained a blockade till reinforcements enabled the British to resume the offensive, attended, in the end, with still more unfortunate circumstances in the succeeding year. General Miranda, whose projects against South America had been the remote cause of all these disasters, disappointed in his expectations of assistance both from the British and American governments, set sail from New York at the head of a most inadequate force of one sloop and two schooners; and after undergoing many hardships, and landing on the Spanish main, was obliged to re-embark and make the best of his way back to Trinidad.[1]

[1] Ann. Reg. 1806, 240, 241.

52. Differences with America in regard to neutral rights.

Differences at this period arose, which threatened to involve the British government in a far more serious contest with the United States of North America. They originated in grievances which unquestionably gave the Americans much ground for complaint, although no fault could be imputed to the English maritime policy; and they were the necessary result of their having engrossed a large portion of the lucrative carrying trade between the belligerent powers. The first subject of complaint was the impressment of seamen said to be British in the American service: the next, the alleged violation of neutral rights, by the seizure and condemnation of vessels engaged in the carrying trade between France and her own or allied colonies. The first, though a practice of all others the most likely to produce feelings of irritation among those upon whom it was exercised, arose unavoidably from the similarity of habits and identity of language in the two states, which of course rendered desertion frequent from the one service to the other; and was a

necessary consequence from the right of search which the American government, by a solemn treaty in 1794, had recognised, and which constituted the basis of the whole maritime laws of Europe. It was impossible to expect that when British officers, in the course of searching neutral vessels for contraband articles, came upon English sailors who had deserted to the service of these neutrals, and whom they recognised, they should not reclaim them for their own country. If abuses were committed in the exercise of this delicate right, that was a good reason for making regulations to check them as far as possible, and provide for a due investigation of the matter, but none for abrogating the privilege altogether.[1]* The second arose from the decisions of the English admiralty courts, which now declared good prize neutral vessels carrying colonial produce from the enemy's colonies to the mother state, though they had landed and paid duties in the neutral country, contrary to the former usage, which admitted that step as a break in the continuity of the voyage, and protected the cargo.[2]

[1] The Essex, May 1805, per Sir W. Scott. Robinson's Rep. ii. 184.

[2] Case of Polly, July 5, 1800. Rob. ii. 368.

The ground of the distinction, as explained by Sir William Scott, was, that to bring the neutral within the

* On the part of the Americans it was contended, " that the practice of searching for and impressing seamen on board their vessels was not only derogatory to the honour of their flag as an independent nation, but led to such outrages and abuses, that, while it continued, no lasting peace or amity could be expected with Great Britain. It continually happened that native Americans were impressed, and obliged to serve in the English navy on pretence of their being British-born subjects; and such was the similarity of language and external appearance between the two nations, that even with the fairest intentions such mistakes must frequently happen. A practice which leads to such abuses cannot be tolerated by an independent state. It is in vain to appeal to abstract right, or the practice of other states; the close similarity of the Americans and English renders the exercise of it infinitively more grievous in their case, than it could be in any other. The American government are willing to concur in any reasonable measures to prevent British deserters from finding refuge on board the American ships; but they can no longer permit the liberty of their citizens to depend on the interested or capricious sentence of an English oflacer."

To this it was replied on the part of Great Britain, " That no power but her own could release a British subject from the allegiance which he owed to the government of his nativity; and that, provided she infringed not the jurisdiction of other independent states, she had a right to enforce their services wherever she found them: that no state could, by the maritime law, prevent its merchant

CHAP. XLII.

53. Grounds of the conduct of England as explained by Sir W. Scott.

exception, it was necessary that there should be a *bona fide* landing and payment of duties; and so it had been expressly stated in Lord Hawkesbury's declaration on the subject, issued in 1802; whereas, under the system of revenue laws established in the United States, this was not done. On the contrary, the payment of the duties was only secured by bonds, which were cancelled by debentures for the same sums the moment the goods were re-exported, which was usually done, without unlading, next day, so that the whole was a mere evasion, and cost only 3½ per cent on the amount of the sums nominally paid. It was strictly conformable to legal principle to refuse to recognise such an elusory proceeding as sufficient to break the continuity of the voyage, and permit the goods to set out on their travels anew, as from a neutral state; but it was equally natural that the sufferers under this distinction should exclaim loudly against its severity, and ascribe to the British courts inconsistent conduct, in first recognising as legal a trade from the enemy's colony to the mother state, interrupted by payment of duties at a neutral harbour, and then,[1] after extensive capital had, on the faith of that recogni-

[1] Robinson's Reports,, iii. 241, '249. Ann. Keg. 1806, 246, 248.

vessels being searched for contraband articles; and if in the course of that search her subjects were discovered, who had withdrawn from their lawful allegiance, on what principle could the neutral refuse to give them up *1* It is impossible to maintain that a belligerent may search neutral vessels for articles of a certain sort, held contraband and belonging to that neutral, and not at the same time reclaim its own subjects, if simultaneously discovered. The right of impressment is a necessary corollary from the right of search; it is in truth the exercise of a still clearer privilege. The difficulty of distinguishing an Englishman from an American is no reason for abandoning the right of searching for subjects of the former state, whatever reason it may afford for discrimination and forbearance in the exercise of it. If the right is abused, the officer guilty of the wrong will meet with exemplary punishment; if the Americans can show that a native of the United States has by mistake been seized for a Briton, he will be immediately released; but it is impossible for Great Britain to relinquish for an instant a right essential to the existence of her navy, and the knowledge of which alone prevents her ships of war being deserted for the higher wages whioh the lucrative commerce of neutrals enables them to offer, as a bribe to the principal defenders of her independence. If such a change is ever to be made, it can only be on the neutrals providing some substitute for the present practice equally efficacious, and not more liable to abuse, which has never yet been done."—See *Ann. Meg,* 1806, 244, 245,

mtionj been sunk in the traffic, declaring the vessels engaged in it good prize.

54. **Violent measures of Congress.**

To these serious and lasting subjects of discord, was added the irritation produced by an unfortunate shot from the British ship Leander, on the coast of America, which killed a native of that country, and produced so vehement a commotion, that Mr Jefferson issued an intemperate proclamation, forbidding the crew of that and some other English vessels from entering the harbours of the United States. Meetings took place in all the principal cities of the Union, at which violent resolutions on all the subjects of complaint were passed by acclamation. Congress caught the flame, and after some preliminary angry decrees, passed a non-importation act against the manufactures of Great Britain, to take effect on the 15th November following. The English people were equally loud in the assertion of their maritime rights, and everything announced the commencement of a Transatlantic war by a state already engaged with more than half of Europe.[1]

April 18.

[1] Ann. Reg, 1806, 247, 249.

55. **The commissioners on both sides adjust the differences.**

But, fortunately for both countries, whose real interests are not more closely united than their popular passions are at variance, the adjustment of the matters in dispute was placed in wiser and cooler heads than the excited populace of either. Commissioners were sent from America to negotiate with Great Britain, and endeavour to obtain some clear and precise rule for regulating their trade with the enemy's colonies, not liable to be changed by orders of council or decisions of courts as to the intentions of parties. These commissioners were Mr Munroe and Mr Pinckney on the part of the United States, and Lords Holland and Auckland on that of Great Britain. The instructions of their respective governments were of the most conciliatory kind, and the gentlemen on both sides entered upon their important duties in a corresponding spirit. Under such auspices the negotiation, how difficult and embarrassing soever,

CHAP. XLII. 1806.

could hardly fail of being brought to a successful issue. With respect to the impressment of seamen, the subject was found to be surrounded with such difficulties, that the American commissioners, in opposition to the letter of their instructions, found themselves constrained to be satisfied, in the mean time, with a pledge by the British government, that they would issue directions for the exercise of this right with the greatest delicacy and forbearance, and would afford immediate redress upon any representation of injury sustained by America, reserving the final discussion of the matter to a future opportunity. But on the other points in controversy a satisfactory adjustment was effected. A clear and precise rule was laid down for the regulation of the circuitous trade between the colonies and parent states of the enemy, which defined the difference between a continuous and interrupted voyage, and stipulated that, besides the goods being landed and the duties paid, there should remain, after the drawback, a duty of one per cent on European, and two per cent on colonial produce; and an extension of the maritime jurisdiction of the United States was agreed to, five miles from the shore of their territory. Thus, by good sense and moderation on both sides, were these difficult questions satisfactorily adjusted, and the British nation honourably extricated from an embarrassment which threatened, under far more perilous circumstances, to renew the dangers of the armed neutrality or the northern coalition.[1]

[1] Ann. Reg. 1806, 248, 250. Art. 11 and 12, Treaty.

56. Continental affairs. Coldness between France and Prussia.

While England was thus extending her naval dominion into every part of the globe, and asserting with equal forbearance and spirit the maritime rights essential to the preservation of the vast fabric, Napoleon was rapidly advancing in his career of terrestrial empire. Prussia was the first power which felt the humiliation to which these incessant advances led in all the adjoining states. The singular treaty has already been mentioned

which was concluded by Count Haugwitz on the 15th December, whereby he substituted for the intended war-like defiance an alliance purchased by the cession of Hanover from the unconscious and neutral, if not allied, England. Great was the embarrassment of the cabinet of Berlin when the intelligence of this unexpected arrangement arrived. On the one hand, the object of their ambition for the last ten years seemed now about to be obtained, and the state to be rounded by an adjoining territory which would bring it an addition of nearly a million of souls. On the other, some remains of conscience made them feel ashamed of thus partitioning a friendly power, and they were not without dread of offending Alexander by openly sharing in the spoils of his faithful ally. At length, however, the magnitude of the temptation and the terror of Napoleon prevailed over the king's better principles, and it was determined not to ratify the treaty unconditionally, but to send it back to Paris with certain modifications. As a colour to the transaction, and also, perhaps, as a salve to their own consciences, it was agreed to " accept the proposed exchange of Hanover for the Margravates, on condition that the completion of it should be deferred till a general peace, and the consent of the King of Great Britain in the mean time be obtained *f* while it was represented to the English minister at Berlin that arrangements had been concluded with France for insuring the tranquillity of Hanover, which " stipulated expressly the committing of that country to the exclusive guard of the Prussian troops, and to the administration of the king, until the conclusion of a general peace." But not a word was said of any ulterior designs of definitely annexing Hanover to the Prussian dominions; and in the mean time the French troops were replaced by the Prussian in that electorate, a large part of the army was disbanded, and a proclamation to the same effect issued by the king on taking possession of that territory.[1]

Jan. 26.

57. Increasing jealousies between the two cabinets. Prussia seizes on Hanover.

of Napoleon to admit any modifications, how trifling soever, in the treaties which he had concluded with the ministers of inferior powers. The utmost indignation, therefore, was expressed at St Cloud at the modifications proposed to be inserted in the treaty. "From that moment," says Bignon, "on the part of Napoleon the question was decided; all sincere alliance was become impossible between Prussia and him; it was regarded only as a suspected power, whose hollow friendship had ceased to have any value in his eyes." On the 4th February it was officially announced to Haugwitz, that "as the treaty of Vienna had not been ratified within the prescribed time by the Prussian government, the Emperor regarded it as no longer binding." This rigour had the desired effect; Prussia had not resolution enough to resist; and on the 15th February a new and still more disgraceful treaty was signed by Haugwitz at Paris, which openly stipulated not only the annexation of Hanover to the Prussian dominions, but the exclusion of the British flag from the ports of that electorate. It was ratified on the 26th, and immediately carried into execution. Count Schulenberg took possession of Hanover on the part of the Prussian monarchy, and immediately issued a proclamation, closing its harbours against English vessels. Finally, on the 1st April a patent appeared, formally annexing the electorate to the Prussian dominions, on pretence that, when belonging to Napoleon by the right of conquest, it had been transferred to Prussia, in consideration of three of her provinces ceded to France.[1]

58. Measures of retaliation by Great Britain,

This system of seizing possession of the territories of neutral or friendly states, in order to meet the wishes or suit the inclinations of greater potentates, when bounding their dominions, to which Napoleon, through his whole administration, was so much inclined, had succeeded perfectly when the objects of spoliation were powers, like Venice or Naples, too weak to manifest their resentment. But Prussia was egregiously mistaken when she applied

1806.

it to Great Britain. So early as the 3d February, Count Munster, the Regent of Hanover, had protested against the occupation of that electorate by the Prussian forces, from having observed in the conduct of their generals various indications of an intention to do more than take possession of it for a temporary purpose. At the same time the mildest remonstrance, accompanied by a request of explanation, had been made by Mr Fox, when the intentions of the cabinet of Berlin became still more suspicious. But no sooner did intelligence arrive of the exclusion of the English flag from the harbours of the Elbe, and the Prussian proclamation appear announcing that they took possession of the country in virtue of the French right of conquest, than that spirited minister took the most decisive measures to show that perfidious government the dispositions of the power they had thought fit to provoke. The British ambassador was immediately recalled from Berlin; the Prussian harbours were declared in a state of blockade; an embargo was laid on all vessels of that nation in the British harbours ; while a message from the King to both houses of parliament announced his resolution "to assert the dignity of his crown, and his anxious expectation for the arrival of that moment when a more liberal and enlightened policy on the part of Prussia should remove every impediment to the renewal of peace and friendship with a power with whom his majesty had no other cause of difference than that now created by these hostile acts." An order in council was soon after issued, authorising the seizure of all vessels navigating under Prussian colours ; and such was the effect of these measures, that the Prussian flag was soon almost swept from the ocean; and before many weeks had elapsed, four hundred of its merchant vessels had found their way into the harbours of Great Britain.[1]

CHAP. XLII.

1806.

59. Mr Fox's speech on the subject.

disgraceful part which Prussia had taken in this transaction. " The Emperor of Russia," said he, " after he left Austerlitz, abandoned the whole direction of his troops that remained in Germany to the King of Prussia, and this country had promised him powerful assistance in pecuniary supplies. These were the means which he possessed of giving weight to his negotiations ; and what use did he make of them ? Why, to seize a part of the territories of those powers who had been supporting him in the rank and situation that had enabled him to negotiate on fair terms with the French Emperor. At first he pretended only to take interim possession of the electorate of Hanover, till the consent of its lawful sovereign could be obtained to its cession at a general peace; but latterly this thin disguise was laid aside, and he openly avowed that he accepted it in full sovereignty from France, to which it belonged by right of conquest. Such a proceeding rests upon no other conceivable foundation, but that worst emanation of the disorders and calamities of Europe in recent times—the principle of transferring the people of other states from one power to another, like so many cattle, upon the footing of mutual ambition or convenience. We may not at present be able to prevent the transfer ; but let us protest solemnly against its injustice, and vigorously make use of the forces which Providence has given us to make the guilty league feel the consequences of our just indignation. The pretext that Prussia received this territory from Napoleon, to whom it belonged by right of conquest, is as hollow as it is discreditable. It was merely occupied in a temporary way by the French troops ; it formed no part of the French empire ; above all, its cession had never been agreed to by this country —and where is there to be found an instance in history of such a cession of military acquisition pending the contest % The conduct of Prussia in this transaction is a compound of everything that is contemptible in servility, with everything that is odious in rapacity.[1] Other nations

1 Parl. Deb. vi. 890,892. 892. Ann. Reg. 1806, 161.

have yielded to the ascendant of military power—Austria was forced, by the fortune of war, to cede many of her provinces; Prussia alone, without any external disaster, has descended at once to the lowest point of degradation—that of becoming the minister of the injustice and rapacity of a master."

60. Napoleon's opinion of Prussia in this transaction.

In consenting to this infamous transaction, the cabinet of Berlin were doubtless actuated by the desire to deprecate the wrath and conciliate the favour of the French Emperor. It is worth while to examine, therefore, whether that object was gained, and in what light their conduct was viewed by that dreaded conqueror. " From the moment," says Bignon, " that the treaty of 15th February was signed, Napoleon did more than hate Prussia—he conceived for that power the most profound contempt. All his views from that day were based on considerations foreign to its alliance : he conceived new projects—he formed new plans, as if that alliance no longer existed. In the mean time, he pressed the execution of all the stipulations it contained favourable to France : he would not permit the delay of a single day."[1] Hardenberg had the good fortune to escape the disgrace of being privy to these proceedings : he had, from his known hostility to Napoleon, been obliged to withdraw from the Prussian cabinet before they were finally consummated.[2]

[1] Bign. 232.

[2] Hard. ix. 107.

61. His further measures of aggression on Germany.

The effects of this unmeasured contempt of Prussia soon appeared in a series of measures which overturned the whole constitution of theGermanic empire, and ultimately brought the former power into hasty and ill-fated collision with the French empire. On 15th March, Murat, without any previous concert with the cabinet of Berlin, was invested with the duchies of Berg and Cleves, ceded to France, by the treaty of 15th February, by Bavaria, in exchange for the Prussian provinces of Anspach and Baireuth in Franconia. The establishment of a soldier of fortune, the brother-in-law of Napoleon, in the very heart of the Westphalian provinces, was not calculated to allay the now

CHAP. XLII. 1806.

awakened jealousy of the Prussian government; and this feeling was strongly increased when the French troops, towards the end of April, took possession of the abbacies of Warden, Essen, and Elten, on pretence that they belonged to the duchy of Cleves, without any regard to the claims of Prussia to these territories, founded on a prior right. This irritation was augmented by the imperious conduct of the French generals in the north of Germany, who openly demanded a contribution of four million francs (£160,000) from the city of Frankfort; and, in terms equally menacing, required a loan from the city of Hamburg to a still larger amount; while, in Bremen, every kind of merchandise suspected to be English, was seized without distinction, and committed to the flames. Six millions of francs (£240,000) was the price at which the imperial robber condescended, in a time of profound Continental peace, to tender to the city of Hamburg and the Hanse Towns his protection. The veil which had so long hung before the eyes of the Prussian government now began to fall; they perceived, with indescribable pain, that their long course of obsequiousness to France had procured for them only the contempt of that power, and the hostility of its enemies.[1]

[1] Bign. v. 247, 270. Ann. Reg. 1806, 164. Hard. ix. 136, 224, 225. Bour. vii. 137,158.

62. Universal indignation in the north of Germany.

No words can paint the mingled feelings of shame, patriotism, and indignation, which animated all ranks in Prussia, when the rapid course of events left no longer any doubt, not only that their rights and interests were totally disregarded by France, in favour of whom they they had made so many sacrifices; but that they had sunk to this depth of degradation without any attempt to assert their dignity as an independent power. The Queen and Prince Louis, who had so long mourned in vain the temporising policy and degraded position of their country, now gave open vent to their indignation; nor did they appeal in vain to the patriotic spirit of the people. The inhabitants of that monarchy, clear-sighted and intelligent beyond almost any other, as well as

enthusiastic and brave, perceived distinctly the gulf into which their country was about to fall. One universal cry of indignation burst forth from all ranks. It was not mere warlike enthusiasm, but the profoundest feeling of national shame and humiliation which animated the people. The young officers loudly demanded to be led to the combat; the elder spoke of the glories of Frederick and Rosbach: an irresistible current swept away the whole nation. Publications, burning with indignant eloquence, issued from all the free cities in the north of Germany where a shadow even of independence was still preserved ; * and that universal fervour ensued which is the invariable forerunner, for good or for evil, of great events. Guided by wisdom and prudence, it might have led to the most splendid results ; impelled by passion and directed by imbecility, it induced unheard-of disasters.[1]

[1] Ann. Reg. 1806, 165. Hard. ix. 117,119. Thiers, vi. 416, 420.

63. Formation of the Confederacy of the Rhine.

While these generous feelings were gaining strength in the north of Germany, unbounded discontent arose in the south, from the exactions of the French army, which retired from Austria after the peace of Pressburg. According to Napoleon's usual policy, the whole of these immense bodies of men were fed, clothed, and lodged, at the expense of the territories in which they were quartered, or through which they passed; and a large part of their pay was also laid on the unhappy Germans, under pretence of retaining it, as a gratuity for the men, in the imperial exchequer, when they returned home. Unbounded was the exaspe-

* One of the most remarkable of these was a pamphlet published by the celebrated Gentz, which at the time produced a very great sensation. "The war hitherto conducted against France," said he, "was just and necessary in its origin, and certainly it has not become less so during its progress. If it has hitherto failed from false measures, are we to regard everything as lost *1* Is Germany destined to become what Holland, Switzerland, Spain, and Italy now are? But how is our salvation to be effected? By assembling what is dispersed, raising what is fallen, resuscitating what is dead. *We* have had enough of the leagues of princes; they have proved as futile as they are precarious. There remains to us but one resource—that the brave and the good should unite; that they should form a holy league for our deliverance: that is the only alliance that can defy the force of arms, and restore liberty to nations, and peace to the world. You, then, who amidst the universal shipwreck have yet preserved the freedom of your souls, the honesty of your hearts; who have

Gentz's pamphlet on the subject.

CHAP. *XUL* 1896.

ration which this iniquitous system excited in the countries in which it was enforced. But strong as were the feelings of patriotism and indignation which the conquests and rapacity of the French had awakened in a large portion of the German people, they were not as yet universal: the hour of the resurrection of the Fatherland had not arrived. By appealing to the blind ambition of some of their princes, and flattering the inconsiderate feelings of many of their people, Napoleon had contrived to animate one portion of its inhabitants against the other; and on this division of opinion he had formed the project of reducing the whole to servitude. The first design of the CONFEDERATION OF THE RHINE had been formed, as already noticed, the year before, during the residence of the Emperor at Mayence ; but it was brought to maturity, from his witnessing the enthusiasm excited among the lesser states of Germany by the victories in which they had shared, gained under the standards of France over Austria, and the regal dignity to which these had elevated their sovereigns. France, on this occasion, played off with fatal effect the policy so uniformly follpwed by its chiefs since the Revolution—that of rousing one portion of the population in the adjoining states against the other, and raising itself, by their mutual divisions, to supreme dominion over both. As his differences with Russia assumed a more envenomed character, and the hostility of Prussia became more apparent, Napoleon felt daily

hearts capable of sacrificing your all for the good of your fellow-citizens, turn your eyes upon your country; behold it mutilated, bleeding, weighed down, but not destroyed: in all but the grave there is hope. It is neither to England nor Eussia that we must look for our deliverance, how desirable soever the co-operation of these powers may be; it is *for Germany alone that the honour of our deliverance is reserved.* It is Germany which must raise itself from its ruins, and accomplish the general emancipation. We shall do more: *we shall deliver France itself, and restore to that power a free and pacific existence,* consistent with the independence of Europe." GENTZ, *Europe en* 1806; and HARD. ix. 122, 123. On the eve of the battle of Jena, what could appear more misplaced than this prophecy ! yet how exactly it was accomplished at a future time !—a remarkable instance of the manner in which genius, piercing through the clouds of present events, can discern the ultimate changes in which they are to terminate.

CHAP. XLII. 1806.

more strongly the necessity of uniting the states in alliance with him into a durable confederacy, which should enable him at all times to direct their military resources to his own purposes. It was no small matter to have such an outwork beyond the great frontier rampart of the Rhine ; their contingents of troops would place nearly a fourth of the military force of Germany at his disposal; and, what was to him perhaps of still greater importance, under the pretence of stationing the vast contingent of France in such a situation as to protect its allies, he might lay the whole expenses of two hundred thousand men on their resources.[x]

[1] Hard. ix. 153,155. Bign.v.300, 305. Luc-ches. i. 124, 131.

64. Powers admitted to the confederacy.

Influenced by such desires on both sides, the negotiations for the conclusion of the treaty were not long of being brought to a termination. The plenipotentiaries of all the powers who were to be admitted into the confederacy assembled at Paris in the beginning of July ; and on the 12th of that month, the act of the confederation was signed. The members of it were—the Emperor of the French, the Kings of Bavaria and Wiirtemberg, the Archbishop of Ratisbon, the Elector of Baden, the Grand-duke of Berg, the Landgrave of Hesse-Darmstadt, the Princes of Nassau-Weilburg, Nassau-Usingen, Hohenzollern-Hechingen, Hohenzollern-Sigmaringen, Salm-Salm, Salm-Kirburg, Isemburg-Birchstein, Aremberg, Lichtenstein-Darmberg, and the Count de la Leyen. The Archduke Ferdinand, Grand-duke of Wurtzburg, acceded to the confederacy a short time afterwards. By the act of confederation, the states in alliance were declared to be *severed for ever from the Germanic empire*, rendered independent of any power foreign to the confederacy, and placed under the protection of the Emperor of the French. Any hostility committed against any of them was to be considered as a declaration of war against the whole.[2] Several of the allies received accessions of territory or dignity : the free towns of Frankfort and Nuremberg were handed over, the first to the Prince Primate of

CHAP. XLII.

1806.

Ratisbon, the second to the King of Bavaria: all the members of the confederacy were invested with the fall sovereignty of their respective states, and received a gift of the foreign territories enclosed within their dominions,[1] Lastly, a separate article provided the military contingent which each of the confederates was to furnish for their common protection; which were, for France, two hundred thousand, and for the German states, fifty-eight thousand men. But subsequent experience soon proved that Napoleon exacted and received military aid to double that number from them.[2]*

65. The Emperor renounces the crown of Germany.

This confederacy was by far the most important blow which Napoleon had yet levelled at the independence of the European states. It was no longer an inconsiderable power, such as Switzerland, Venice, or Holland, which received a master from the conqueror: the venerable fabric of the Germanic empire had been pierced to the heart, and some of her fairest provinces had been reft from the empire of the Caesars. The impression produced in Europe by this aggression was proportionally great. Sixteen millions of men were by a single stroke transferred from the empire to a foreign alliance ; and profound pity was felt for the Emperor, the first sovereign of Christendom, who was thus despoiled of a large portion of the dominions which, for above a thousand years, had been enjoyed by his predecessors. Charlemagne had been crowned emperor in 800; Napoleon dissolved the empire in 1806. Immense was the sensation which this violent aggression produced in Europe. Nor was this feeling of commiseration lessened

The contingents were settled as follows :—

France,	**200,000**
Bavaria,	**80,000**
Wiirtemberg, .	**12,000**
Baden,	**8,000**
Berg,	**5,000**
Darmstadt,	**4,000**
Nassau, Hohenzollern, and others,	**4,000**
	258,000

1806. Aug.l.

by what immediately followed. On the 1st August notification was sent to the Diet of Ratisbon of the formation of the confederacy, both on the part of the Emperor of France and the coalesced princes. The former deemed it unnecessary to assign any reasons for his conduct ; but the latter pleaded, as their excuse for violating their engagements to the empire, the inconsistency between their present situation and their ancient bonds, and the necessity, amidst the weakness of their former chief, of looking out for a new protector, who might possess power adequate to secure them from insult. Under such flimsy devices did these selfish princes conceal a dereliction of loyalty and desertion of their country, calculated to produce unbounded calamities to Germany, and which they themselves were destined afterwards to expiate with tears of blood. But how keenly soever the Emperor Francis might feel the open blow thus levelled at his dignity, and the formation of a separate and hostile state in the heart of his dominions, he was not in a situation to give vent to his resentment. Soult still held the battlements of Braunau ; on one pretext or another the evacuation of the German states, which by the treaty of Pressburg was to be effected at latest in three months, had been delayed; the French battalions were in great strength on the Inn; the prisoners made during the campaign had not been restored; while the dispirited Austrian troops had not yet recovered the rude shocks of Ulm and Austerlitz. Wisely yielding, therefore, to a storm which they could not prevent, the Imperial cabinet dissembled their feelings; and, justly considering this stroke as entirely subversive of the empire, the Emperor Francis, by a solemn deed, renounced the throne of the Caesars, and declared himself the first of a new series of Emperors of Austria.[1]*

*** Napoleon set forth, in his communication to the Diet of Ratisbon, announcing the Confederation of the Rhine :—" The German constitution is no longer but a shadow; the Diet has ceased to have any will of its own. His majesty the Emperor and king can, therefore, no longer recognise its existence. He has accepted, in consequence, the title of Protector of the Confederation**

CHAP. XLII.

1806.

Though in appearance levelled at the Emperor Francis as chief of the empire, this violent dislocation of the Germanic body was in reality still more formidable to Prussia, from the close proximity of its frontier to the coalesced states. The sensation, accordingly, which it produced at Berlin was unbounded. All classes, from the cabinet of the King to the privates in the army, perceived the gulf which was yawning beneath their feet; they saw clearly that they were disregarded and despised, and reserved only for the melancholy privilege of being last devoured. The increasing aggressions of Napoleon or his vassals speedily made them aware that this was their destiny. The senseless declamations of Murat, in particular, contributed not a little to open the eyes of all persons in the north of Germany to the dangers which awaited them. His companions said at table, " Yours is a pretty principality, indeed, for the brother-in-law of so great an emperor. Doubtless you will soon be King of Westphalia, and get a noble kingdom carved out of that despicable Prussia, which has betrayed all the world." Bernadotte, who was established at Anspach, indulged in still more extravagant chimeras; and Augereau's officers at Wiirtzburg drank toasts openly, to success in the approaching war with Prussia. Nor were these vain and senseless words only. Murat advanced claims seriously to the principality of Embden, and the three abbacies which formed part of the indemnity awarded to Prussia for its cessions in Franconia, as

66. Great sensation which these events produce at Jierlin.

of the Rhine. In his pacific views, he declares that he will never carry his views beyond that river. He has hitherto been faithful to all his promises." The confederate princes declared,—" The results of the three last wars having proved that the Germanic body was really dissolved, the princes of the West and South have deemed it expedient to renounce all connexion with a power which has ceased to exist, and to range themselves under the banners of the Emperor of the French, who is bound alike by the interests of his glory and those of his empire to secure to them the enjoyment of external and internal tranquillity." With more truth and dignity the Emperor Francis said, in his act renouncing the throne of the empire :—" Being convinced of the impossibility of discharging any longer the duties which the Imperial throne imposed upon us, we owe it to our principles to abdicate a crown which could have no

Addresses of Napoleon and the Emperor Francis to the German States.

well as to the free cities of Hamburg and Bremen, The twenty-fourth article of the Confederation of the Rhine conferred on that military chief the sovereignty of all the German principalities of the House of Orange, and rendered its head, brother-in-law to the King of Prussia, tributary to the vassal of Napoleon; while the injurious treatment to which the Prince of Latour and Taxis, brother-in-law of the Queen of Prussia, was exposed, was a fresh outrage to that monarch in the most sensitive part. To avoid, however, if possible, an immediate rupture with the court of Berlin, Prussia was given to understand by the French Emperor, that if she was desirous to form a league of the states who were attached more or less to her in the north of Germany, France would not oppose its formation.'* But that power was informed shortly after, that the Hanse Towns, which Napoleon reserved for his own immediate protection, could not be permitted to join that northern confederacy; that Saxony could not be allowed to form a part of it against its will; while the Elector of Hesse was invited to join the Confederacy of the Rhine, and on his refusing to comply, was struck at by a resolution which cut off his access to part of his own dominions.[1]

But all these grievances, serious as they were, sank into insignificance compared to that which arose, when it was discovered by M. Lucchesini, the Prussian ambassador at Paris, that France had entered into negotiations with England on the footing of the restitution of

value in our eyes, when we were unable to discharge its duties and deserve the confidence of the Princes Electors of the empire. Therefore it is that, considering the bonds which unite us to the empire as dissolved by the Confederation of the Rhine, we renounce the Imperial crown, and by these presents absolve the electors, princes, and states, members of the supreme tribunal, and other magistrates, from the duties which unite them to us as their legal chief." See HARD. ix. 159,162.

67. Fresh umbrage of Prussia at the treaty of France with Russia. Warlike preparations of Prussia,

Hanover to its lawful sovereign; that while continually urging the cabinet of Berlin to look for indemnities for such a loss on the side of Pomerania, Napoleon had engaged to Russia, in the treaty signed with d'Oubril, its ambassador at Paris, to prevent them from depriving the King of Sweden of any part of his German dominions ; and that while still professing sentiments of amity and friendship to Frederick-William, he had offered to throw no obstacles in the way of the re-establishment of the kingdom of Poland, including the whole of Polish Prussia, in favour of the Grand-duke Constantine. Irritated beyond endurance by such a succession of insults, and anxious to regain the place which he was conscious he had lost in the estimation of Europe, the

Aug. 9.

King of Prussia put his armies on the war-footing, despatched M. Krusemark to St Petersburg, and M. Jacobi to London, to endeavour to effect a reconciliation with these powers; opened the navigation of the Elbe; concluded his differences with Sweden; assembled his generals, and caused his troops to defile in the direction of Leipsic. The torrent of public indignation at Berlin became irresistible: the war party overwhelmed all opposition; in the general tumult the still small voice of reason, which counselled caution and preparation in the outset of so great an enterprise, was overborne. Prince Louis and his confederates openly boasted that Prussia, strong in the recollection of the Great Frederick, and the discipline he had bequeathed to his followers, was able, single-handed, to strike down the conqueror of Europe ; the young officers repaired at night to sharpen their sabres on the window-sills of the French ambassador ; warlike and patriotic songs resounded, amidst thunders of applause, at the theatres; and the Queen roused the general enthusiasm to the highest pitch, by displaying her beautiful figure on horseback in the streets of Berlin, at the head of her regiment of hussars, in the uniform of the corps.[1]

68. Renewed causes of discord between France and Russia.

While Prussia, suddenly and violently awakening from the trance of ten years, was thus taking up arms and rushing headlong into a contest, single-handed, with the conqueror of southern Europe, negotiations of an important character, terminating in a resolution equally warlike, had taken place with Russia and England. The retreat of the Emperor Alexander and his army from the disastrous field of Austerlitz, had apparently extinguished all causes of discord between the vast empires of Russia and France. Their territories nowhere were in contact. The vast barrier of Germany, with its two thousand walled cities, and forty millions of warlike inhabitants, severed them from each other. They had parted with mutual expressions of esteem, and the interchange of courteous deeds between the victor and the vanquished. The conclusion of the peace of Pressburg, by releasing the Czar from all obligations towards his unfortunate ally, seemed to have still further removed the possibility of a rupture ; while the withdrawing of Austria from the Continental alliance left no rational ground for renewing the contest on account of any danger, how imminent soever, to the balance of power from the aggressions of Napoleon. "Napoleon," said Prince Czartorinski to Alexander, "is at present victorious, but he may not be always so. Austria is beat down, but she detests her conqueror. Prussia is divided between the war and peace pursuit, but she will end by ranging herself on the side of German independence. Await your time : protract affairs till one or other of these powers is ready to act. Meanwhile remain united to England, and ready to resume your arms on the first favourable opportunity. You will in the end compel Napoleon to give you what is your due."—"When we contend/' replied Alexander, " with that man, we are children contending with a giant. Without Prussia we can do nothing. She is the only power that has not been conquered by France." There appeared, therefore, no chance of an immediate collision between the powers. But not-

CHAP. XLII.

1806.

withstanding these favourable circumstances, the secret ambition of these potentates again brought them into collision; and the quarter where the difference arose, indicated that it was the glittering prize of Constantinople which brought them to the fields of Eylau and Friedland.[1]

[1] Thiers, vi. 425, 426.

69. **Differences about Cattaro, which is occupied by the Russians.**

Cattaro, a small barren province situated to the south of Ragusa, on the eastern coast of the Adriatic, derives its value from the excellence of its harbour, which is the largest and safest in that sea, and the skill of its seamen, which has always secured them an honourable place in its naval transactions. By the treaty of Pressburg, it had been provided that this province should be ceded by the Imperialists to the French within two months after its final ratification. When this period had expired, the French commissioners authorised to take possession had not arrived; and the Russian agent there, taking advantage of that circumstance, succeeded in persuading the inhabitants, who were almost all of Greek extraction, that their intended transference to France had fallen to the ground, and that they were at liberty to tender their allegiance to whom they chose. In pursuance of these instigations, the people, who are styled Montenegrins, and ardently desired the establishment of a power professing the Greek faith within their bounds, rose in a tumultuous manner, shut up the Austrian commander, who had only a slender garrison at his disposal, within the fortress, and commenced a strict investment, in which they were soon supported by a Russian man-of-war, which arrived from Corfu. After a short blockade, he surrendered the place to the insurgents, who immediately transferred it to the Russians, by whom it was occupied in force. But the circumstances attending the transaction were so suspicious, that the Austrian subaltern officers in the fortress protested against its conditions, and the governor was afterwards brought to a court-martial at Vienna for his conduct on this occasion, and sentenced to confinement in a Transylvanian fortress for life,[2]

March 4.

[2] Ann. Reg. 1806,140, 150. Bign. v. 258,262. Hard. ix. 195,196.

Nothing that has since transpired authorises the belief that Austria was privy to this transaction; nor does any motive appear which could induce her, for so trifling an object, to run the risk of offending the Emperor Napoleon, whose terrible legions were still upon the Inn. But no sooner did he receive intelligence of it, than Napoleon ordered Marshal Berthier to delay the evacuation of the fortress of Braunau, on the Austrian frontier, and the march of all the French troops towards the Rhine was countermanded. In this way the important object was gained of keeping a hundred and fifty thousand men still at free quarters on the German states. He made no effort to dispossess the Russians and Montenegrins from Cattaro; but, on the pretext that because the Austrians had failed in performing their obligations to him, he was at liberty to look for an indemnity wherever he could find it, seized upon the neighbouring city of Ragusa, a neutral power with which he had no cause whatever of hostility. There Lauriston, who commanded the French garrison, was shortly after besieged by the Russians both by land and sea; but before anything of moment could be transacted in that quarter, the Austrians, exhausted by the prolonged stay of such an immense body of men on their territory, made such energetic remonstrances to the cabinet of St Petersburg on the subject, that they agreed to the evacuation of Cattaro; and M. d'Oubril, who was despatched from the Russian cabinet to Paris, ostensibly to negotiate the exchange of prisoners, but really to conclude a treaty between the two powers, brought authority for its surrender to the French. In consequence, however, of that ambassador having exceeded his instructions, the treaty which he concluded was not ratified by the Emperor Alexander; and as hostilities for that reason still continued, Lauriston was reduced to the last extremity in Ragusa, and saved from destruction only by the opportune arrival of Molitor, who advanced at the head of reinforcements from Dalmatia. The territory of Ragusa was now

70. **The French in return seize Ragusa. Actions in its neighbourhood.**

fully occupied by the French, and continued in their hands till the end of September, when it was invaded by a powerful body of Russians and Montenegrins. But these troops, having been drawn out of their intrenchments by a skilful stratagem on the part of Marmont, were attacked and defeated with great loss, and even experienced some difficulty in regaining the fortresses of Castel Nuovo and Cattaro, from whence they had issued.[1]

[1] Ann. Reg 1806,150, 151. Bign. v. 258, 265. Hard. ix. 219, 221.

71. D'Oubril concludes a treaty at Paris between France and Russia.

M. d'Oubril came to Paris by Vienna; but, notwithstanding his conferences with the English and Austrian ministers at that capital, he appears, when he arrived at Paris, to have acted in a way not agreeable to the cabinet of St Petersburg or his instructions. Talleyrand and the French ministers made such skilful use of the dependence of the negotiations with England, which Lord Yarmouth was at that moment conducting at Paris, and of the threat totally to destroy Austria if hostilities were resumed, that they induced in the Russian ambassador a belief that a separate peace with these powers was on the eve of signature, and that nothing but an instant compliance with the demands of the Emperor could save Europe from dismemberment, and the Czar from all the consequences of a single-handed contest with Napoleon. Under the influence of these fears and misrepresentations, he suddenly signed a treaty as disgraceful to Russia as it was contrary to the good faith which she owed to Great Britain. Not content with surrendering the mouths of the Cattaro, the subject of so much discord, to France, without any other equivalent than an illusory promise that the French troops should evacuate Germany in three months, he stipulated also, in the secret articles, " that if, in the course of events, Ferdinand IV. should cease to possess Sicily, the Emperor of Russia should unite with the Emperor of France in all measures calculated to induce the court of Madrid to cede to the Prince-Royal of Naples the Balearic Isles, to be enjoyed by him and his successors with the title of king —the harbours of those islands being shut against the

British flag during the continuance of the present war; that the entry to these isles should be closed against Ferdinand himself and his queen; and that the contracting parties should concur in effecting a peace between Prussia and Sweden, without the latter power being deprived of Pomerania." Ragusa also was to be evacuated, and the integrity of the Ottoman dominions guaranteed by both the contracting parties—a provision which forms a striking contrast to the agreement for the partition of that power concurred in within a year afterwards at Tilsit. Thus did Napoleon and d'Oubril concur in despoiling the King of Naples of the dominions which were still under his command, without any other indemnity than a nominal throne of trifling islands to his son; gift away Sicily, garrisoned by English troops, without consulting either the court of Palermo or the cabinet of London; dispose of the Balearic Islands, without the knowledge or consent of the King of Spain; and stipulate the retention of Pomerania by Sweden, at the very moment that France held out the acquisition of that duchy as an equivalent which should reconcile Prussia to the loss of Hanover.[1]

[1] Martens, viii. 309, 472. Hard, ix.119,120. Bign.v.325, 329.

72. Which is disavowed by the cabinet of Petersburg.

M. d'Oubril seemed to be aware, at the time he signed this extraordinary treaty, that he had exceeded or deviated from his instructions ; for no sooner was it concluded, than he set off in person to render an account of it at St Petersburg, observing, at the same time—"I go to lay the treaty and my head at the feet of my imperial master." In effect, before he reached the Russian capital, intelligence of the formation of the Confederation of the Rhine had arrived, which unexpected event greatly strengthened the influence of the party hostile to France. A change of ministry had ensued: Prince Adam Czartorinski, and the chiefs inclined for a separate accommodation, were displaced, and succeeded by the Baron Budberg, and the nobles who supported the English in opposition to the French alliance. The treaty was, in consequence of these events, formally disavowed by the

CHAP. XLII.

1806.

Aug. 25.

Imperial government, as "entirely in opposition to the instructions which d'Oubril had received," though they professed their willingness to resume the negotiations on a basis which had been communicated to the cabinet of the Tuileries. By this disavowal, indeed, the Russian government was saved the dishonour which must for ever have attached to it had so disgraceful a treaty been unconditionally ratified ; but upon comparing the powers conferred on the ambassador by one ministry, with the refusal to ratify the treaty by its successor, it was difficult to avoid the inference, that the difference in reality arose from a change of policy in the Imperial cabinet, between the time of issuing the instructions and signing the treaty, not any deviation from those instructions on the part of its ambassador. And all reflecting men began to conceive the most serious apprehensions as to the consequences which might ensue to the liberties of Europe from the alliance of two colossal powers, which thus took upon themselves, without any authority, to dispose of inferior thrones, and partition the territories of weaker states.[1] *

[1] Bign. v. 330, 344. Hard. ix. 221, 222.

73. Opening of negotiations between France and England.

The rapid succession of more important events left no time for the advance of the fresh negotiations thus pointed at by the cabinet of St Petersburg. All eyes in Europe were turned to the conferences between France and England, which had been long in dependence at Paris; and the turn which they were now taking left little hope that hostilities, in every quarter, could be brought to a termination. This celebrated negotiation took its rise from a fortuitous circumstance equally creditable to the government of both powers. An abandoned exile, in a private

*** The powers conferred on M. d'Oubril bore:—"We authorise, by these presents, M. d'Oubril to enter into negotiations with a view to the 'establishment of peace, with whoever shall be sufficiently authorised on the part of the French government, and to conclude and sign with them an act or convention on bases proper to consolidate peace between Russia and France, and to prepare it between the other belligerent powers; and we promise on our imperial word to hold good and execute faithfully whatever shall be agreed to and signed by our said plenipotentiary, and to adhibit to it our imperial ratification in the terms that shall be specified." On the other hand, the act of disavowal bore—" The pretended act of pacification concluded by M. d'Oubril has been**

audience with Mr Fox, in February, had proposed to that minister to assassinate Napoleon. Either penetrating the design of this wretch, who had once been an agent of the police in Paris, or inspired by a generous desire to prevent the perpetration of so atrocious an offence, the English minister, after having at first dismissed him from his presence, had the assassin apprehended, and sent information to M. Talleyrand of the proposal. This upright proceeding led to a courteous reply from that minister, in which, after expressing his satisfaction at the new turn which the war had taken, which he regarded as a presage of what he might expect from a cabinet of which he fondly measured the sentiments according to those of Mr Fox, "one of the men who seem expressly made to feel the really grand and beautiful in all things," he repeated that passage, in the exposition of the state of the empire by the Minister of the Interior, wherein Napoleon declared that he would always be ready to renew conferences with England on the basis of the treaty of Amiens. Mr Fox replied that he was inspired with the same sentiments; and thus commenced a negotiation under the most favourable of all auspices—mutual esteem on the part of the powers engaged in it.[1]

74. England insists on Russia being a party to the negotiation. April 1.

The basis proposed by Mr Fox was, that the "two parties should assume it as a principle, that the peace was to be honourable to themselves and their respective allies." —"Our interests," said Talleyrand, "are easily reconciled, from this alone, that they are distinct. You are the masters of the sea. Your maritime forces equal those of all the kingdoms of the earth put together. We are a great

submitted to a council specially summoned to that effect, and compared with the instructions which he had received here, and the instructions transmitted to him at Vienna before his departure from that town; and they found that M. d'Oubril, in signing that treaty, has not only deviated from the instructions he had received, but acted in a manner directly contrary to the sense and spirit of the orders themselves." The penalty inflicted on the ambassador, however—that of mere banishment to his estates—did not look as if there had been any very serious deviation from instructions.—See MARTENS' *Sup.* iv. 308, 312; and HARD. ix, 222.

CHAP. XLII. 1806.

Continental power; but other nations have as great armies on foot as ourselves. If, in addition to being omnipotent on the ocean from your own strength, you desire to acquire a preponderance on the Continent by means of alliances, peace is not possible." Talleyrand strongly urged the English minister to lay all the allies on either side out of view, and conclude a separate accommodation; but in this design he was unsuccessful. Mr Fox insisted, with honourable firmness, that Russia should be made a party to the treaty. " Do you wish us to treat," said he, "conjointly with Russia ? We answer, Yes. Do you wish us to enter into a separate treaty, independent of that power ? No." Finding the English minister immovable on this point, M. Talleyrand had recourse to equivocation ; and it was agreed that the accession of the Continental powers to the treaty should be obtained.[1]

Despatch, April 20.

[1] Parl. Deb. viii. 103, **108.** Bign. v. 267,274.

75. Basis of *uti possidetis* fixed.

The next step in the negotiation was to fix the basis on which the interests and honour of England and France themselves were to be adjusted. To ascertain this important point in a manner more satisfactory than could be done by the slow interchange of written communications, M. Talleyrand sent for Lord Yarmouth, one of the English travellers whom Napoleon had detained a prisoner ever since the rupture of the peace of Amiens, and proposed to him the basis on which France was willing to enter into an accommodation. These were the restitution of Hanover, which, after great difficulty, Napoleon was brought to agree to—although he had only a few months before ceded it to Prussia—and the retention of Sicily by England or its allies ;* the recognition of the Emperor of France by England, and the guaranteeing of the integrity of the Ottoman dominions by France.[2] These

[2] Lord Yarmouth's Commun. Parl. Deb. **viii.** 110.

* "I inquired," said Lord Yarmouth, "whether the possession of Sicily would be demanded, it having been so said. 'Vous l'avez,' he replied—'*now ne vow la demandons pas;* si vous ne la possediez pas, elle pourrait augmenter de beaucoup les difficultes.' Considering this to be very positive, both from the words and the manner of delivering them, I conceived it would be improper to make further questions. We ask nothing of you (nous ne vous demandons rien,) amounting to an admission of *uti possidetis,* as applicable to

terms Lord Yarmouth justly considered as equivalent to the establishment of the principle of *uti possidetis*, and stated them as such in his communication made the same day to Mr Fox on the subject.

76. Which France departs from. June 13.

At the time when the proposals were made by the French government, no accommodation had been effected with Russia ; and it was an object of the highest importance to induce Great Britain, on any terms, to accede to the basis of a negotiation. But when the next communication from Talleyrand was made, circumstances had entirely changed. D'Oubril had expressed his willingness to sign a separate peace in behalf of Russia, and Napoleon was resolved to take advantage of this circumstance to exact more favourable conditions than he had at first agreed to from the British government. When pressed, therefore, by Lord Yarmouth to adhere to the principle of *uti possidetis*, and in particular to agree *to the King* June *16.* of Naples retaining Sicily, he replied, that though the sentiments of the Emperor in favour of peace had undergone no alteration, "yet that *some changes had taken place*, the possibility of which he had hinted at when I last saw him," alluding to the readiness of Russia to treat separately; and further mentioned that the Emperor had received reports from his brother, and the general officers under his command, stating that *Naples could not be held without Sicily*, and the probability they saw of gaining possession of that island ; that the restitution of Hanover for the honour of the British crown, the retention of Malta for the honour of the navy, and of the Cape of Good Hope for the interests of commerce, should be sufficient inducements to the cabinet of St James's to enter into the negotiation; that if a confidential com-

his Majesty's conquests." Talleyrand concluded with these words:—'Les sentiments de la France sont enticement changes : l'aigreur qui characterisait le commencement de cette guerre n'existe plus. Et ce que nous desirous le plus, c'est de pouvoir vivre en bonne intelligence avec une aussi grande puissance que la Grande Bretagne.'"—LOBD YABMOUTH'S *Communication*, No. 12; *Parl. Deb.* viii. 110.

CHAP. XLII. 1806.

munication had been made three months before, the questions both of Holland and Naples might have been arranged in the manner most satisfactory to Great Britain; but that now, when their dominions had been settled on the Emperor's brothers, any abandonment of any portion of them would be "considered by the Emperor as a retrograde measure, equivalent to an abdication." Lord Yarmouth continued to insist, in terms of Mr Fox's instructions, for the basis of *uti possidetis* as the one originally proposed by France, and to which Great Britain was resolved to adhere; that it was alone on the faith of this basis, more especially as applied to Sicily, that the conferences were continued; that any tergiversation or cavil, therefore, on that capital article would be considered as a breach of the principle of the negotiation in its most essential part; that full powers were now communicated to him to conduct it; but that the possession of Sicily was a *sine qud non,* without which it was useless to continue the conferences. Talleyrand upon this offered the *Hanse Towns* as an equivalent to the King of Naples for the loss of that island: and when this was refused, to give Dalmatia, Albania, and Ragusa as an indemnity to his Sicilian majesty: looking out thus, according to the usual system of Napoleon, in every direction for indemnities at the expense of minor neutral states, rather than surrender one foot of his own acquisitions.[1]

77. Continuation of the negotiations, and gradual estrangement of the parties.

This clear departure on the side of France from the basis of the negotiation originally laid down by its own minister, and open avowal of the principle that neutral and weaker powers were to be despoiled in order to reconcile the pretensions of the greater belligerents, augured but ill for its ultimate success; and the notes which were interchanged gradually assumed a more angry character; but the conferences were still continued for a considerable time. Mr Fox, with the firmness which became a British minister, invariably insisted that Sicily

1806.

should be retained by the King of England, and enjoined on Lord Yarmouth to demand his passports if this was not acceded to. The changes in Germany consequent on the Confederation of the Rhine were admitted by Talleyrand, but offered to be modified, if peace with Great Britain was concluded. Mr Fox refused to be any party to the project of despoiling Turkey and Ragusa, independent and neutral states, to provide an equivalent for the abandonment of Sicily; but threw out a hope that by the cession of part of the Venetian States, with the city of Venice, from the kingdom of Italy to the King of Naples, an accommodation might be listened to. To this, as making the proposed equivalent come from his own allies, Napoleon would by no means consent. Advices were received at Paris that an army of thirty thousand men had been assembled at Bayonne. All the officers in that capital belonging to corps in Germany received orders instantly to join their respective regiments, and the approaching signature of a separate treaty between France and Russia, in which the cession of Sicily in exchange for the Balearic Isles, taken from Spain, was a principal article, came to the knowledge of the British plenipotentiary.[1]

78. Progress of the negotiation.

The conclusion of the separate peace between Russia and France on the day following these communications, did not, of course, lessen the expectations of the latter power, though it removed all difficulty arising from the condition to which Great Britain had uniformly adhered, of making the cabinet of St Petersburg a party, either directly or in substance, to the pacification. But the demands of France did not rise in the manner that might have been expected after so great an advantage: she was still willing to allow Great Britain to retain Malta, the Cape, and her acquisitions in India, and to restore Hanover: full powers were given to Lord Yarmouth, which were exchanged with those of General Clark. Specific retention of Sicily by the King of Naples was

July 21.

CHAP. XLII. 1806.

no longer insisted for, it being agreed by Great Britain that an adequate equivalent, if provided by lawful means, should be accepted. Napoleon continued to urge the acquisition of the Hanse Towns, either by Prussia, as a compensation for Hanover, or by his Sicilian majesty: and held out the menace that, by not acceding to such an arrangement, the invasion of Portugal would be rendered inevitable, for which an army was already assembled at Bayonne. Nay, he even hinted at ulterior views in regard to the Spanish peninsula, which the resistance of England would cause to be developed, as similar ones had been in Holland and Naples. But, regardless of these threats, Mr Fox firmly insisted for the original basis of *uti possidetis,* as the only one which could be admitted ; and as matters appeared as far as ever from an adjustment, Lord Lauderdale was sent to Paris with full powers to treat from the British government.[1]

July 30.

[1] Lord Yarmouth's and Mr Fox's Despatches, July 28. August 3, 1806. Pari, Deb. Viii. 125,138.

79. The negotiation is broken off.

Under the auspices of this able nobleman, the negotiation was protracted two months longer without leading to any satisfactory result. The English minister continued incessantly to demand a return to the principle of *uti possidetis* as the foundation of the negotiation ; and the French cabinet as uniformly eluded or refused the demand, and insisted for the evacuation of Sicily by the English troops, and its surrender to Joseph, and the abandonment of all the maritime conquests of the war, with the exception of the Cape of Good Hope, by Great Britain. Lord Lauderdale in consequence repeatedly demanded his passports, and the negotiation appeared on the point of terminating, when intelligence was received in London of the refusal of the Emperor of Russia to ratify the treaty signed by M. d'Oubril. This important event made no alteration in the proposals of Great Britain, further than an announcement that any treaty now concluded must be with the concurrence of Russia; but it considerably lowered those of Napoleon, and Talleyrand announced that France " would make great con-

Sept. 3.

Sept. 18.

cessions for the purpose of obtaining peace," These were afterwards explained to be the restoration of Hanover to Great Britain; the confirmation of its possession of Malta; the cession of the Cape, Tobago, and Pondicherry to its empire; and the grant of the Balearic Isles, with an annuity *from Spain,* in lieu of Sicily, as a compensation to the King of Naples. To these terms the English cabinet would by no means accede ; and as there was no longer any appearance of an accommodation, Lord Lauderdale demanded and obtained his passports, nine days after Napoleon had set out from Paris to take the command of the army destined to act against Prussia.[1]

1806. Sept. 26.

October 6.

80. Real views of the parties in this negotiation.

Thus this negotiation, begun under such favourable auspices, both with England and Russia, broke off with both powers on the subject of the possession of Sicily and of the mouths of the Cattaro. Apparently these were very inconsiderable objects to revive so dreadful a contest, and bring the armies of the south and north of Europe to Eylau and Friedland; but in reality the secret ends which the hostile powers had in view, in contending for these distant possessions, were more considerable than might be at first imagined. It was not merely as an appanage of the crown of Naples that Napoleon so obstinately insisted on Sicily for his brother; it was as the greatest island in the Mediterranean, as opening the way to the command of that inland sea, and clearing the route to Egypt and the Indies, that it became a paramount object of desire. It was not an obscure harbour on the coast of the Adriatic which brought the colossal empires of France and Russia into collision; it was a settlement on the skirts of Turkey, it was the establishment of a French military station within sight of the Crescent, which was the secret matter of ambition to the one party, and jealousy to the other. Thus, while Sicily and Cattaro were the ostensible causes of difference, India and Constantinople were the real objects in the view of the parties;[2] and the negotiation

[1] **Bign. v. 163, 365.**

CHAP. XLII.

1806.

broke off upon those eternal subjects of contention between England, Russia, and France—the empire of the seas, and the dominion of continental Europe.

81. State of affairs at Berlin. Prussia's ultimatum, and preparations for war on both sides.

The intelligence of the refusal of Alexander to ratify d'Oubril's treaty with France excited an extraordinary transport at Berlin, which was mucli heightened when shortly after it became evident that the negotiations at Paris for an accommodation with Great Britain were not likely to prove successful. The war party became irresistible ; a sense of national degradation had reached every heart; the Queen was daily to be seen on horseback at the head of her regiment in the streets of Berlin.[1] The enthusiasm was universal; but in the guards and officers of that distinguished corps it rose to a pitch approaching to frenzy. In proportion to the force with which the bow had long been bent one way, was the violence with which it now rebounded to the other. Wiser heads, however, saw little ground for rational confidence in this uncontrolled ebullition of popular effervescence ; and even the heroic Prince Louis let fall some expressions indicating that he hoped for more efficient support in the field than the declaimers of the capital.*

[1] Bign. v. 403.

Aug. 26. Lucchesini, who had so long conducted the Prussian diplomacy at the French capital, sent despatches to his government full of acrimonious complaints of the cabinet of the Tuileries, which either by accident or design fell into the hands of the French police, and were laid before Napoleon. He instantly demanded the recall of the

Sept. 3. obnoxious minister, who left Paris early in September, and was succeeded by Knobelsdorf, whose mission was mainly to protract matters, that the cabinet of Berlin

Sept. 7. might complete its preparations, and if possible gain time

*** He repeated with emphasis the lines of the poet Gleims, in allusion to the warlike bards of Berlin:—**

" Sie singen laut im hohen chor
Vom Tod, furs Vaterland uns vor :
Doch kommt ein einziger Husar,
So lauft die ganze Barden Schar."

for the distant succours of Russia to arrive on the Elbe. But as the troops on both sides were hastening to the scene of action, and it was evident of how much importance it was that the strength of Russia should be thrown into the scale before a decisive conflict took place, Napoleon easily penetrated their design, and resolved himself to commence hostilities. His forces were so great that they might well inspire confidence in the issue of the contest. He had four hundred and fifty thousand men on foot, of whom a hundred and fifty thousand were in the interior, and a hundred and seventy thousand with the Grand Army in the centre of Germany, besides fifty thousand in Lombardy. Thirty thousand horse, and ten thousand artillerymen, formed part of the force with which he would first commence operations. His troops for some weeks past had been rapidly defiling from Braun au, the Inn, and the Necker, towards the banks of the Elbe, and one hundred thousand men were approaching the Thuringian Forest. He set out, therefore, from Paris to put himself at their head on the night of the 26 th September, conveyed the Guard by post to Mayence, and was already far advanced on his journey to the theatre of war, when the Prussian ultimatum was delivered at Paris by M. Knobelsdorf. Its conditions were—1st, That the French troops should forthwith evacuate Germany, commencing their retreat from the day when the King of Prussia might receive the answer of the Emperor, and continuing it without interruption. 2d, That the districts on the Wesel should be detached from the French empire. 3d, That no obstacles should be thrown in the way of the formation of a counter-league in the north of Germany. No stronger proof of the infatuation which had seized the cabinet of Berlin can be desired than the fact of their having, in the presence of Napoleon and the Grand Army, and without any present aid either from Russia, Austria, or England, proposed terms suitable rather to the day after the rout of Rosbach than the eve of the battle of Jena.[1]

82. Murder of Palm. Great sensation which it occasioned.

The public mind was at this period violently excited in Germany against the French, not merely by their prolonged stay beyond the Rhine, and the enormous expenses with which it was attended, but by a cruel and illegal murder committed by orders of Napoleon on a citizen of one of the free cities of the empire, who had sold a work hostile to his interests. Palm, a tradesman in Nuremberg, had been instrumental with many other booksellers in circulating the celebrated pamphlet by Gentz, already mentioned, in which the principle of resistance to French aggression was strongly inculcated, and another by Arndt, entitled " The Spirit of the Age," of a similar tendency, but in neither of which was any recommendation of assassination or illegal measures held forth. The others were fortunate enough to make their escape; but Palm was

Aug. 12. seized by the French soldiers, dragged before a military commission of French officers assembled by the Emperor's orders at Braunau, and there sentenced to be shot, which inhuman decree was immediately carried into execution, without his being so much as allowed to enter on his

Aug. 25. defence.* This atrocious proceeding, for which there is not a shadow of excuse, either in the nature of the publication charged, or in the law of nations, excited the most profound indignation in Germany. Men compared the

Proceedings of the military commission by which he was condemned.

*** The judgment of the military commission convicting Palm, and sentencing him to death, bore in its preamble :—" Considering that wherever there is an army, the first and most pressing duty of its chief is to watch over its preservation ; that the circulation of writings tending to revolt and assassination menaces not only the safety of the army, but that of nations; that nothing is more urgent than to arrest the progress of such doctrines, subversive alike of the law of nations and the *respect due to crowned heads;* injurious to the people committed to their government; in a word, subversive of all order and subordination—declares unanimously, That the authors, printers, publishers, and distributors of libels bearing such a character, should be considered as guilty of high treason, and punished with death." Such were the doctrines in which the frenzy of the French Bevolution, which began by prodaiming war to the palace and peace to the cottage, the contest which opened by an invitation to the people of all countries to throw off the yoke of crowned heads, terminated ! It is hard to say whether the barefaced falsehood, delusive sophistry, or cold-blooded cruelty of this infamous conviction are most conspicuous. The pamphlets which Palm had sold contained no doctrines whatever recommending assassination, or any private crime. If they had,**

loud declamations of the republican partisans in favour of the liberty of the press with this savage violation of it by their military chief; and concluded, that the only freedom which they really had at heart was license for their own enormities, and the only system of government which was to be expected from their ascendency, that of military violence. A dignified proclamation, issued about the same time by the senate of Frankfort, after recounting the enormous contributions which they had paid to the French armies in 1796, 1799, 1800, and 1806, concluded with declaring their inability to preserve the independence of their country, which had been transferred to the Elector of Mayence, and recommending submission to the arms of France. Augereau replied to this proclamation by a stern requisition to have the authors of it delivered up to him in twenty-four hours: the fate of Palm was universally anticipated for the magistrates of the state: but after they had been arrested, Napoleon, alarmed at the universal horror which that tragic event had excited, deemed it prudent to drop further proceedings.[1]

Aug. 19.

Aug. 27.

[1] Hard. ix. 246, 250. Bign,v.337,

The death of this unfortunate victim did not pass unrevenged, either upon Napoleon or the French people. It fell deeply and profoundly on the generous heart of Mr Fox, whose enthusiastic hopes of the extension of general

they were published, not in the dominions of France, or by any person who owed allegiance to its Emperor, but in the free city of Nuremburg, in the heart of the German empire; and they were addressed, not to the subjects of Napoleon, but to Germans, aliens to his authority, and enemies of his government. The French armies, contrary to the express terms of the peace of Pressburg, were remaining in and devouring the resources of that country, upon the hollow pretext that *Russia,* a separate power at war with France, had in the usual course of hostility conquered a town ceded by Austria to the French empire. The pamphlets published were nothing but appeals to the Germans to unite against this foreign oppression, and certainly never had men a more justifiable cause of hostility. Applying Napoleon's principles to himself, what punishment would they fix on the head of him who published proclamations calling on the Venetians, the Irish, and Swiss, to throw off the yoke of their respective governments, and avowed his intention, when he landed in England, to call on the whole subjects of the British empire to throw off the rule of their sovereign and parliament, and to establish annua] parliaments and universal suffrage ?—See BIGNON, V. 337,338.

CHAP. XLII.

1806.

freedom by the spread of republican principles were thus cruelly belied by the deeds perpetrated by its leaders in the name of the French people, and contributed, perhaps more than any other circumstance, to produce that firm resolution to adhere to the basis originally laid down by Napoleon for the negotiations which ultimately led to their abandonment. The carnage of Spain, the catastrophe of Moscow, the conquest of France, the exile to St Helena, are thus directly associated with this deed of blood. The brave and the free thenceforward saw clearly, in every part of Europe, that no hope for public or private liberty remained but in a determined resistance to the aggressions of France : that slavery and chains followed in the rear of the tricolor flag. Napoleon has frequently said, that if Mr Fox had lived, peace would have been concluded, and all the subsequent misfortunes of his reign averted; but the truth of history must dispel the illusion, and the English annalist cannot permit the insidious praises of an enemy to tear from one of the brightest ornaments of his country the honour of having at last been awakened to a sense of the nature of revolutionary ambition, and of having possessed the magnanimity, in opposition to his former long-continued delusion, instantly to act upon the conviction.

83. Influence which it has on the rupture of the negotiation with England.

84. Mr Fox's eyes are at last opened to the real nature of the war.

In his last instructions, dictated a few weeks before his death, to Lord Yarmouth, there is to be found the firmest resolution to insist on the original basis of the negotiation, and never to consent to any other: Earl Spencer, who succeeded him, had merely to follow out the path thus clearly chalked out. * In several of the speeches which

Last instructions of Mr Fox to Lord Lauderdale.

*** " In the instructions," says Mr Fox in his last important official despatch, " given to Lord Lauderdale, the repeated tergiversations of France during the negotiation are detailed. It is from thence alone that any delay has arisen. The offers made through Lord Yarmouth were so clearly and unequivocally expressed, that the intention of the French government could not be doubted. But they were no sooner made than departed from. In the first conferences after his Lordship's return to France, Sicily was demanded; in the former, it had been distinctly disclaimed. This produced a delay attributable solely to France: our answer was immediate and distinct: the new demand was declared to be a breach of the principle of the proposed negotiation in its most essential**

he had delivered, after he had obtained the direction of foreign affairs, is to be found a candid admission that his opinion as to the necessity and justice of the war had undergone a total alteration.* Thus the discord of earlier years was at length by this great man forgotten in the discharge of patriotic duty : the two lights of the age came finally to concur in the same policy. If Mr Pitt struggled for fifteen years, amidst difficulty and disaster, to carry on the war, it was Mr Fox who bequeathed the flood of glory in which it terminated to his successors ; and who, after having spent the best part of his life in recommending less honourable and enlightened measures of

parts. To obviate the cavil on the want of powers, full powers were sent to you, but with an express injunction not to use them till the French government should return to its former ground with respect to Sicily. M. Talleyrand, upon being informed of this determination, proposed to give the Hanse Towns in lieu of Sicily to the King of Naples. The moment this proposal was received here it was rejected; and the same despatch which conveyed that rejection carried out his Majesty's commands, if the demand for Sicily should still be persisted in, to demand his passports and return to England. M. Talleyrand upon this made fresh proposals, supported by Russia, as affording the means of preventing the meditated changes in Germany; and stated, ' that these changes were determined upon, but should not be published if peace took place.' That despatch was received here on the 12th, and on the 17th, in direct violation of these assurances, the German confederation treaties were both signed and published. Such are the unfounded pretences by which the French government seeks to attribute to delays on our part the results of its own injustice and repeated breach of promise." Such was Mr Fox's dying view of the negotiation up to the beginning of August; and it surely contains no confirmation of Napoleon's assertion, that, if he had lived, peace would have been concluded. Its last stages, down to his death on 17th September, were conducted in strict conformity to the instructions he had given to Lord Lauderdale.—See Mr Fox's *Despatches, August Sd and 14th,* 1806; *Parl. Deb.* viii. 138, 164.

*** In the debate on Mr Windham's military system, on April 3,1806, Mr Fox said, with admirable candour :—" Indeed, by the circumstances of Europe, I am ready to confess that I *have been weaned from the opinions which I formerly held* with respect to the force which might suffice in time of peace: nor do I consider this as any inconsistency, because I see no rational prospect of any peace which would exempt us from the necessity of watchful preparation and powerful establishments. If we cannot obtain a safe and honourable peace, of which it is impossible in the actual state of affairs to be sanguine, and if we are not successful in carrying on the war, we must be reduced to that state which I for one cannot contemplate without apprehension,—'toto divisos orbe Britannos,'—and be left to our own resources and colonial possessions. In such an arduous and difficult struggle, demanding every effort and every exertion, or indeed under any system which we may act upon, a large army is indispensable."—*Part Deb.* vi. 715, 716.**

CHAP. XLII.

1806.

85. Death of Mr Fox. His character.

concession to his country, in his last moments " nailed her colours to the mast," *

The health of this illustrious man had for some weeks past been declining; and in the middle of July he was compelled to discontinue his attendance in parliament, though he was still assiduous in his duties at the Foreign Office. Notwithstanding all the efforts of medical skill, his complaint daily became more alarming. Symptoms of dropsy rapidly succeeded, and yielded only for a brief space to the usual remedies. On the 7th September he sank into a profound state of weakness, and on the 13th of the same month breathed his last, having entertained almost to the end of life confident hopes of recovery.[1] Thus departed from the scene of his greatness, within a few months after his illustrious rival, Charles Fox. Few men during life have led a more brilliant career, and none were ever the object of more affectionate love and admiration from a numerous and enthusiastic body of friends. Their attachment approached to idolatry. All his failings, and he had many, were forgotten in the generous warmth of his feelings, and the enthusiastic temper of bis beart. " The simplicity," says Mackintosh, " of his character communicated confidence; the ardour of his

Sept. 13.

[1] Ann. Reg. 1806,258.

*** This memorable final coincidence of opinion between Pitt and Fox, on the necessity of continuing the war, is not the only instance of a similar approximation equally honourable to both parties. Ten years before, the champions of the constitution and of revolution, Mr Burke and Sir James Mackintosh, the well-known author of the *Vindicice Gatticce,* had in like manner come to view the origin of the convulsion in the same light. " The enthusiasm," said Mackintosh in a letter to Burke, " with which I once embraced the instruction conveyed in your writings, is now ripened into solid conviction by the experience and conviction of more mature age. For a time, seduced by the love of what I thought liberty, I ventured to oppose, without ever ceasing to venerate, that writer who had nourished my understanding with the most wholesome principles of political wisdom. I speak to state facts, not to flatter: you are above flattery. I am too proud to flatter even you. Since that time a melancholy experience has undeceived me on many subjects, in which I was then the dupe of my own enthusiasm. I cannot say I even now assent to all your opinions on the present politics of Europe. But I can with truth affirm that I subscribe to your general principles, and am prepared to shed my blood in defence of the laws and constitution of my country." Burke answered from the bed of death:—"You have begun your opposition by obtaining a great victory over yourself; and it shows how much your own sagacity, operating on**

eloquence roused enthusiasm ; the gentleness of his manners inspired friendship."—" I admired," says Gibbon, " the powers of a superior man, as they were blended in his attractive character with the simplicity of a child. No human being was ever more free from any taint of malignity, vanity, or falsehood/' Nothing can more strongly mark the deep impression made by this part of Mr Fox's character than the words of Burke, pronounced six months after all intercourse between them ceased :— " To be sure, he is a man made to be loved I " [1] *

[1] Mackintosh's Mem. i. 324.

86. His vices and failings.

A man of pleasure in every sense of the word ; dissipated and irregular in private life; having ruined his private fortune at the gaming-table, and often emerging from such haunts of vice to make his greatest appearances in parliament, yet he never rose without, by the elevation of his sentiments, and the energy of his language, exciting the admiration, not only of his partisans, but of his opponents. The station which he occupied in the British parliament was not that merely of the leader of a powerful and able party. He was at the head of the friends of freedom in the human race. To his words the ardent and enthusiastic everywhere turned as to those of the gifted spirit intrusted with their cause. To his sup-

your own experience, is capable of adding to your own extraordinary talents and to your early erudition. It was the show of virtue, and the semblance of public happiness, which could alone mislead a mind like yours. A better knowledge of their substance alone has put you on the way that leads the most securely and certainly to your end." What words between such men !—See MACKINTOSH'S ***Memoirs,*** **i. 87, 88.**

*** The convivial talents of Fox were great, as may well be believed from his so long being the idol of the brilliant circle of wits and beauties who in his early days did homage to the rising sun of the Prince of Wales. With men his conversation often partook of the licentious character of the fashionable and unscrupulous society in which he lived; but in the company of elegant women no man was more scrupulously well-bred, or often more felicitous in the delicate expression of flattery. On one occasion, when he was at a supper at the house of the young and beautiful Duchess of Devonshire, a sort of game went round, in which each gentleman presented the lady next him with fruit of some kind, accompanied by an impromptu line or verse: " Come, Mr Fox," said the Duchess, "you have given me nothing as yet: what are you thinking of?" He immediately took a bunch of grapes, and presented it to the Duchess with the words, " Je plais jusqu'a l'ivresse."**

CHAP. XLII. 1806.

port the oppressed and destitute universally looked as their last and best refuge in periods of disaster. "When he pleaded," says Chateaubriand, "the cause of humanity, he reigned—he triumphed. Ever on the side of suffering, his eloquence acquired additional power from his gratuitous exertions in behalf of the unfortunate. He crept even to the coldest heart. A sensible alteration in the tone of the orator discovered the man. In vain the stranger tried to resist the impression made upon him; he turned aside and wept."

87. His extraordinary talents in debate.

Mr Fox was the greatest debater that the English parliament ever produced: he has been styled by a most competent judge, "the most Demosthenian orator who has appeared since the days of Demosthenes."* Without the admirable arrangement and lucid order which enabled Mr Pitt to trace, through all the details of a complicated question, the ruling principle which he wished to impress upon his audience, he possessed a greater power of turning to his own advantage the incidents of a debate or admissions of an antagonist, and was unrivalled in the power and eloquence of his reply. In the outset of his speech he often laboured under hesitation of expression, and was ungainly or awkward in manner; but as he warmed with the subject, his oratory became more rapid, his delivery impassioned, and, before it closed, the enraptured senate often hung in breathless suspense on his words. He was an accomplished classical scholar, and was master of an extraordinary power of turning to the best advantage the information which he possessed, or had gained during the debate. But his habits were too desultory—his indolence too great—his love of pleasure too powerful, to permit him to acquire extensive knowledge.† Respectable as a historian, the fragment on the annals of the English Revolution which he composed is justly

*** Sir James Mackintosh.**

+ No man more frequently referred to Adam Smith; yet he had never read the "Wealth of Nations."

admired for the purity of its style and the manliness of its sentiments; but the pen was too cold an instrument to convey the fervid bursts of his eloquence, and the reader will look in vain for the impassioned flow of the parliamentary orator. * It is in the debates of the House of Commons that his real greatness is to be seen ; and a vigorous intellect will seldom receive higher gratification than from studying the vehement declamation—the powerful and fervent reasoning—by which his great speeches there are distinguished.

88. His fame is on the decline as a just thinker.

But, notwithstanding all this, the fame of Mr Fox is on the decline, not from a diminished sense of his genius, but an altered view, among the thinking few at least, of his principles. With the extinction of the generation which witnessed his parliamentary efforts—with the death of the friends who were captivated by his social qualities, his vast reputation is sensibly diminishing. Time, the mighty agent which separates truth from falsehood—experience, which dispels the most general illusions—suffering, which extinguishes the warmest anticipations when unfounded in human nature, have separated the wheat from the chaff in his principles. In so far as he sought to uphold the principles of general freedom, and defend the cause of the unfortunate and oppressed, in whatever country—in so far as he protected in legislation the freedom of the press, and opposed the infamous traffic in human flesh, his efforts will ever command the respect and sympathy of mankind. But in so far as he sought to advance this cause by advocating the principles of democracy—in so far as he supported the wild projects of the French revolutionists, and palliated when he could not defend their atrocious excesses—in so far as he did his utmost to transfer to this country the same

*** This is the more remarkable, as he had so elevated a conception of the proper character of history that he classed the chief works of thought thus:—1. Poetry. 2. History. 3. Oratory. This was no slight homage to the historical muse, when coming from the first orator of his own, or perhaps any age. —Sec Fox's *History*, Introd. p. vii.**

CHAP. XLII.

1806.

destructive doctrines, and, under the name of Reform, sought to give an entrance here to Jacobin fanaticism and infidel zeal—in so far as he counselled peace and recommended concession, when peace would have been the commencement of civil warfare, and concession a crouching to revolutionary ambition—he supported principles calculated to destroy all the objects which he himself had in view, and induce the very tyranny against which the thunders of his eloquence were directed.

89. Reasons of this.

The doctrines, that all abuses are owing to power being confined to a few hands—that the extension of political influence to the lower classes is the only antidote to the evil—that virtue, wisdom, and intelligence will be brought to bear on public affairs when those classes are intrusted with their direction—and that the growth of democratic ascendency is the commencement of social regeneration,—are sometimes amiable, from the philanthropy of those who support them, and always will be popular, from the agreeable flattery they convey to the multitude. They are liable to only one objection—that they are altogether visionary and chimerical, founded on a total misconception of human nature, and a fatal forgetfulness of the character of the vast majority of men who in every rank are swayed by selfishness or stimulated by passion. They invariably lead, when put in practice, to results diametrically the reverse of what were held forth or expected by their supporters. Abuses, by the introduction of a democratic regime, it is soon found, instead of being diminished, are multiplied tenfold; tyranny, instead of being eradicated, is enormously increased; personal and social security, instead of being established, is kept in perpetual jeopardy; the weight of public opinion, instead of an antidote to evil, becomes its greatest promoter, by being exerted in favour of those by whom its enormities are perpetrated. It is by the opposing influence of these powers that the blessings of general freedom are secured under a constitutional

monarchy; no hope remains of its outliving the spring-flood which drowns the institutions of a state, when these antagonist forces are brought for any length of time to draw in the same direction.*

90. His errors as a political philosopher.

The liberties of England long survived the firm resistance which Mr Pitt opposed to revolutionary principles; but those of France perished at once, and perhaps for ever, under the triumph in which Mr Fox so eloquently exulted on the other side of the Channel. Taught by this great example, posterity will not search the speeches of Mr Fox for historic truth, or pronounce him gifted with any extraordinary political penetration. On the contrary, it must record with regret, that the light which broke upon Mr Burke at the outset of the Revolution, and on Mr Pitt before its principal atrocities began, only shone on his fervent mind when descending to the grave. It can only award to him, during the greater part of his career, the praise of an eloquent debater, a brilliant sophist, but not that of a profound thinker or a philosophic observer. But recollecting the mixture of weakness in the nature of all, and the strong tendency of political contention to dim

* "In the contests of the Greek commonwealth," says Thucydides, "those who were esteemed the most depraved, and had the least foresight, invariably prevailed; for, being conscious of this weakness, and dreading to be over-reached by those of greater penetration, they went to work hastily with the sword and poniard, and thereby got the better of their antagonists, who were occupied with more refined schemes."—"In turbis atque seditionibus, "says the Roman annalist, "pessimo cuique plurima vis; pax et quies bonis artibus alun-tur."—" Enfin je vois," said the French demagogue when going to the scaffold, " que dans les revolutions l'autorite toujours reste aux plus scelSrats."—" A democratic republic," said the British statesman, "is not the government of the few by the many, but of the many by the few; with this difference, that the few who are thus elevated to power are the most worthless and profligate of the community." "Democracy," says the author of the *Vindicim Gallicce,* "is the most monstrous of all governments, because it is impossible at once to act and to control; and consequently the sovereign power is there left without any restraint whatever. That form of government is the best which *places the efficient direction in the hands of the aristocracy', subjecting them in its exercise to the control of the people at large"* What a surprising coincidence between the opinions of such men in such distant ages ! He is a bold speculator who, on such a subject, differs from the concurring authority of Thucydides, Sallust, Danton, Mr Pitt, and Sir James Mackintosh.—THUCYDIDES, 1. iii. c. 89; SAL-LUST, *de Bello Cat;* RIOUFFE, 67; *Parl, Hist.* xxx. 902; MACKINTOSH'S *Memoirs,* i. 92.

the clearest intellect and warp the strongest judgment, it will, while it condemns a great part of his principles, do justice to his motives and venerate his heart,—it will indulge the pleasing hope, that a longer life would have weaned him from all, as he honourably admits it had done from many, of his earlier delusions; and admire the magnanimous firmness with which, on the bed of death, he atoned for his past errors, by bequeathing, in a moment of extraordinary gloom, the flag of England unlowered to his successors.

CHAPTER XLIIL

CAMPAIGN OF JENA—FALL OF PRUSSIA.

CHAP. XLIII.

1806.

1. Natural disadvantages of Prussia.

No monarchy in Europe is less indebted than the Prussian, for its political power and importance, to the advantages of nature. Its territory, flat, sandy, and in great part comparatively sterile, can only be brought to a high state of cultivation by long-continued efforts, and the unsparing application of human industry. Its sea-coast has few advantageous harbours; its rivers, though numerous, and in general navigable, descend for the greater part of their course through the territories of separate or rival states. Without the natural fertility of the Sarmatian plains, or the mineral wealth of the Bohemian mountains; destitute alike of the flocks of Hungary and the herds of Switzerland; enjoying neither the forests of Norway nor the vines of France — it depends entirely on grain crops and pastures, and for them the bounty of nature has afforded no peculiar advantages. Vast tracts of gloomy heath or blowing sand, hardly less unproductive, form a large part of its surface; in other places, cheerless, desolate plains, thickly strewn with rushes or stunted firs, convey a monotonous, mournful impression to the mind of the traveller. Yet have the industry and perseverance of man conquered all these disadvantages: the arid sands have been covered with waving crops, the rushy fields with rich pastures;[1] and in no country in Europe is agriculture now advancing with more vigor-

2. Political situation and inhabitants of Prussia.

ous strides, or population increasing with such steady rapidity.*

If Prussia owes little to her natural advantages, she is indebted still less to the political facilities of her situation, or the homogeneity in character of her inhabitants. Her territory, which has gradually been enlarged by the talents or good fortune of her rulers, is widely scattered from the Rhine to the Vistula, with other states in some places intervening, and in general in such long shreds as equally to expose her to attack and to deprive her of the advantages of a compact formation of defence. Her population is composed of different races, speaking in some places different languages, and but recently actuated in any by a common bond of national attachment. The old electorate of Brandenburg originally formed part of the vast monarchy of Poland, and broke off from that unwieldy commonwealth during the weakness of its unbridled democracy; Silesia, conquered by the Great Frederick in the middle of the eighteenth century, is a province of Bohemia, and is chiefly inhabited by Slavonian tribes; while Prussian Poland was the fruit of the iniquitous spoliation of that unhappy state in 1772 and 1794, and its inhabitants retain all the mournful recollections and national traditions by which the Sarmatian race is characterised in every part of the world. Yet does the Prussian monarchy now form a united and prosperous whole : its rise during the last century has been rapid beyond example; it singly defeated, under

or nearly 111,000 square English geographical miles. Twenty-one thousand four hundred and ninety arpents make a square German geographical mile.—See TCHOBORSKI, i. 115; and FORSTER and WEBER, *Statutiques de la Prusse,* 17, 21.

the Great Frederick, a coalition of the three most powerful monarchies in Europe; and it yields to no country in the world in patriotic spirit, and the glorious efforts which it has since made to maintain its independence.

3. Population and extent of Prussia.

Augmented as it has been by the acquisitions made at the treaty of Paris in 1814, the Prussian monarchy now contains upwards of fifteen millions of inhabitants, who are diffused over a territory embracing one hundred and eleven thousand four hundred and eighty-eight square English miles—a surface little less than that of Great Britain and Ireland, which contain one hundred and twenty-two thousand. At the commencement of the war of 1806, however, both were much less considerable; the former only amounting to nine million five hundred thousand souls, the latter to seventy-two thousand square miles of territory. If this considerable population was placed on a compact and defensible territory, it would form a great and powerful monarchy, having nearly the resources, in population and territory, of the British empire in Europe at the commencement of the Revolutionary war ; but both population and territory are so scattered over a long and narrow extent of level surface, that they seem at first sight to be a source rather of weakness than strength. They extend from the banks of the Niemen to those of the Sarre, over a space three hundred leagues, or nine hundred miles, in length; while the greatest breadth does not exceed a hundred and thirty leagues, and their average is not above forty. These straggling territories are in many places interrupted by the possessions of foreign princes, enclosed within those of Prussia, which, on the other hand, has no inconsiderable portion of its dependencies imbedded in the dominions of other states. Thus the Prussian dominions present an irregular strip stretching along the whole north of Germany, having its back to the Baltic Sea and German Ocean, the harbours of which

CHAP. XLIII. 1806.

are liable to be blockaded by the superior fleets of Britain; while its long front is exposed to the incursions of Austria, and its two extremities lie open, with no natural frontier capable of defence, and but few artificial strongholds, to the incursions of the great monarchies of France and Russia—the former possessing above twice, the latter nearly four times, its military resources.[1]

1 Malte Brun, v. 294, 295.

Towns and manufacturing industry of Prussia.

The urban population of Prussia bears a remarkably large proportion to the rural, for the former amounts to a fourth of the whole inhabitants. The number of towns and burghs is ten hundred and twelve, of which thirty-seven contain above ten thousand inhabitants.^ This great number and size of towns indicates either extraordinary riches in the adjacent territory, as in Lombardy and Flanders, or considerable manufacturing advantages, such as those which have raised the cities to such a stupendous magnitude in the north of England and the west of Scotland. Such, accordingly, is the case; and the manufacturing industry of Prussia, in spite of the prohibitory system adopted generally by the Continental states, is very considerable. Inferior of course, by more than a half, in proportion to the square league of terri-

tory to that of Britain, it is considerably superior to that of France.* The iron-works and manufactories of zinc and copper, as well as the salt-works, in its dominions, are very extensive ; and the cotton manufactures, though recently established, are making, under the shelter of the heavy protective duties established against those of England, rapid progress. The total amount of its exports in 1828 was 24,102,000 thalers, or nearly £4,000,000, and four thousand merchant vessels bore the flag of Frederick-William.[1]

[1] Malte Brun, v. 291, 292.

5. **Rapid agricultural progress of Prussia.**

The main strength of Prussia, however, lies in its agriculture; and it is in the patriotic spirit and undaunted courage of the class engaged in it, that the monarchy in every age has found the surest bulwark against foreign aggression. So rapid has been the increase of sheep of late years in Prussia, that their number, which in 1816 amounted only to 8,261,400, had risen in 1825 to 14,156,000—that is, nearly doubled ; and the most decisive proof of the general increase of rural produce is to be found in the fact, that though population in Prussia is now advancing more rapidly than in any country of Europe, so as to double, if the present progress should continue, in twenty-six years, yet no importation of foreign grain is required.[2†] Subsistence, under the influence of increased production, so far from becoming scarce, is constantly declining in price, and the augmented comforts and wants of a prosperous people are amply provided

In France,	. . .	178 —

In proportion to her extent of surface, Prussia has fewer steam-engines **than** France, but more hydraulic machines; and, on the whole, a greater amount of mechanical power.—See EGEN, *Untersuchungen uber den Effekt*, &c.—• Berlin, 1831; and MALTE BRUN, V. 291.

+ In 1828, the total population of the Prussian provinces, exclusive of the Canton of Neuchatel, was 12,672,000 inhabitants. In 1832, it was 13,843,000; **and** it is **now** (1843) upwards of 15,000,000. The proportion per square league in the first period, was 892; in the second, 993—a prodigious difference to have taken place in so short a period as four years.—MALTE BRUN, V. 276.

CHAP. XLIII.

1806.

for by the labours of the agricultural portion of the community.

6. Slow progress of Prussia at first, and her rapid subsequent growth.

It was by slow degrees, however, and by the successive efforts of more than one generation of great men, that Prussia was raised to its present prosperous condition. The monarchy, in reality, dates from the accession of Frederick the Great; but during the short period which has since elapsed, it has made unexampled progress. The treasure, indeed, amassed by that great warrior and able prince, had been wholly dissipated during the succeeding reign; but, both under his sway and that of his successor Frederick-William, the monarchy had made important advances in territory, wealth, and population. By withdrawing from the alliance against France in 1794, the cabinet of Berlin succeeded in appropriating to itself a large portion of the spoils of Poland; while the open preference to French interests which they evinced for the ten years which followed the treaty of B&le, was rewarded by a considerable share of the indemnities—in other words, of the spoils of the ecclesiastical princes of the empire; and a most important increase of influence, by the place assigned to Prussia as the protector of the neutral leagues situated beyond a fixed line in the north of Germany. During this long period of peace, the industry and population of the country rapidly advanced; a large portion of the commerce of Germany had fallen into its hanjls, and the whirl and expenditure of war, so desolating to other states, was felt only as increasing the demand for agricultural produce, or augmenting the profits of neutral navigation.[1]

[1] Hard. v. and vi. 379, 247, 249. Bign. ii. 291, 292.

7. Statistical details.

At the death of the Great Frederick in 1786, the population of the monarchy was 7,000,000 of souls, and its revenue 31,000,000 thalers, or about £4,600,000 sterling. By the shares obtained of Poland on occasion of its successive dismemberments, and the acquisition of Anspach, Baireuth, and other districts, its population was raised to 9,000,000; and although the treasure of 70,000,000

thalers (£10,500,000) left by the Great Frederick had disappeared, and given place to a debt of 28,000,000 of thalers, or £4,200,000, yet this was compensated by the increase of the revenue, which had risen to 36,000,000 thalers, or £5,400,000. Various establishments had been set on foot at Berlin, eminently calculated to promote the interests both of commerce and agriculture. In particular, a bank and society of commerce were established in that capital, and institutions formed in the provinces to lend money to the landed proprietors on reasonable terms. By the aid of these establishments, and the effect of long-continued peace and prosperity, the finances of the state were in the most flourishing condition in 1804; all the branches of the public service were provided for by the current revenue, and some progress was even made in the reduction of the debt. The large share of the German indemnities, obtained through French and Russian influence by this aspiring power, made a considerable addition to the public resources : the acquisition of 526,000 souls raised the population to 9,500,000 souls, and the increase of 2,375,000 thalers yearly revenue swelled the income of the public treasury to 38,375,000 thalers, or £5,750,000 sterling—a sum equivalent, from the difference in the value of money, to at least ten millions sterling in Great Britain. This revenue, as in Austria, was the net receipt of the exchequer, and independent, not merely of the expenses of collection, but of various local charges in the different provinces. The regular army was nearly 200,000 strong, brave, and highly disciplined, but not to be compared to the French, either in the experience and skill of the officers, or in the moral energy which had been developed by the events of the Revolution.[1]

Bign. ii. 193, 297.

8. State of religion in Prussia.

Unlimited toleration prevails in Prussia. The Protestant is the religion of the sovereign and of the state, but persons professing all creeds are equally eligible to all offices under government, and, practically speaking, no difference is made between them. On the whole, two-

CHAP. XLIII. 1806.

thirds of the inhabitants are Protestants, one-third Catholics; but the proportions between these two great divisions of Christians vary considerably in the different provinces.[4]* Each religion has its separate ministers and bishops. Berlin is every five years the seat of a general synod; that capital has a Protestant bishop, and Konigsberg another; but the Catholics have two archbishops and six bishops in the Prussian dominions. Like the Austrian government, however, the Prussians are careful not to admit the slightest interference in matters not purely spiritual by the court of Rome, and Catholic ministers of vacant livings are appointed by a variety of lay patrons, as in Great Britain, without any serious collision with the Holy See.[1]

[1] Malte Brun, v, 282.

9. Revenue and expenditure of Prussia.

The revenue of Prussia, like that of all other countries in Europe, is derived partly from direct, partly from indirect taxation.† The total revenue is 79,810,000 florins, or nearly £8,000,000 sterling—a sum at least equal to

£14,000,000 sterling in Great Britain, if the difference in the value of money is taken into consideration. The expenditure is somewhat less, amounting only to 75,238,571 florins, or £7,523,857 sterling, leaving a balance of above 5,000,000 florins, or £500,000 yearly to go to the discharge of the principal of the public debt.* The public debt of Prussia in 1833 amounted to 723,450,000 francs, or £29,000,000 sterling. In 1823 the debt was 908,950,000 francs, or £36,350,000; so that in ten years they havereduced the debt by £7,000,000, at which rate it will be entirely extinguished in 1872. It would appear, therefore, that the finances of Prussia are in a more prosperous state than those of Austria, France, or Great Britain, in all of which, although their national resources are incomparably greater, the expenditure generally exceeds the income by a very considerable sum, and all thoughts of a sinking-fund, or of a permanent system for the reduction of the debt, have been practically abandoned. This fact speaks volumes as to the patriotic spirit of the Prussian people, and the economy and far-seeing policy of its government, especially when the large military establishment they are obliged to keep up to secure their independence is taken into consideration.[1]

[1] Tchoborski, Finalisæs de TAiiiriche et de la Prusse, i. 1, 10. Maite Bran, v. 285, 310.

10. Military establishment.

The military establishment of Prussia is greater, in proportion to its population, than that of any other country in Europe. It consists, in time of peace, of one hundred and twenty-two thousand men : but so admirable are the arrangements for the augmentation of this force in time of war, and such the ardent and patriotic spirit of

CHAP. XLIII.

1806.

the people, that the state could then without difficulty call forth an army of five hundred thousand combatants. The regular army is composed of three classes. 1st, Of voluntary recruits, who are received from seventeen to forty years of age. 2d, Of young men who are balloted for: a burden to which all the inhabitants of the kingdom, without exception, are subject. 3d, Of veteran soldiers who prolong the period of their service voluntarily beyond the period required by law. Every Prussian, without exception, from the royal family downwards, between the ages of twenty and fifty, is liable to be drawn for the military service in some department or other; but he is only bound to serve in the regular army five years; and of these he is only three years actually with his colours, the other two being allowed to be spent at home. Thus the military duty is so short that it is never considered as a burden, but rather as an agreeable mode of spending the first three years of manhood; and there are very few who either can or wish to avoid it. The *cadres* of the regiments, or permanent staff, and a certain proportion of the privates, are fixed, and hold to arms voluntarily as a profession for life; and this gives to the troops, notwithstanding the frequent change of the privates, the consistence and steadiness of old soldiers, while, at the same time, it spreads through a large part of the people a practical acquaintance with military duties. It is to this system, introduced by the Great Frederick, but matured and brought to perfection by those able statesmen, Stein and Scharnhorst, after the treaty of Tilsit, that the stability and continual progress of the Prussian monarchy is, beyond all doubt, to be ascribed.[1]

[1] Malte Bran, v. 286, 287.

11. The Land-wehr and Landsturm.

Besides the regular army, the military establishment of Prussia embraces also the *landwehr* and *landsturm*, which, in time of need, can quadruple its effective strength. The former is divided into two *bam:* the first comprehending all the young men from twenty to thirty-two who have not gone through the five years' service in

the regular army; the second formed of persons, whether they have served or not, from thirty-two to fifty years of age. After that period all obligation of military service entirely ceases. During peace, the landwehr, which consists of infantry, cavalry, and artillery, are never called into active service, or removed from home; but they are not on that account the less carefully and regularly instructed during a certain number of days in the year in their military duties. In case of war or invasion, the first ban are called out, and united to the regular forces, to whom they are soon scarcely inferior in discipline and prowess: the second ban form the garrisons of strong places, and perform the service of the interior. In addition to this immense force, which numbers fully two hundred thousand combatants, there is organised in Prussia a second reserve, called the landsturm, which embraces every man, without exception, not already enrolled in one of the other services, between the ages of seventeen and fifty years. Such a force in many countries would be little more than a tumultuary rabble, more likely to be burdensome than available in real service; but in Prussia, where almost all the citizens have at one period or another served in the ranks, it forms a much more efficient body, and actually performed good service on many occasions during the glorious struggle of 1813.[1]

[1] Malte Bran, v. 285, 286.

12. Great diffusion of education in Prussia.

Education is more generally diffused in Prussia than in any other country of equal extent in Europe. Over the whole of its dominions, one in seven of the whole population is at school; while in France the proportion is one in twenty-three; in England one in fifteen; and in Scotland one in eleven. There can be no doubt that this is the greatest proportion of persons undergoing instruction which obtains in the world. Instruction is there compulsory: the laws compel the sending of children to school by their parents, and, when necessary, that duty is enforced by the magistrates. In general, however, it is unnecessary, so great is the desire of parents and relations

CHAP. XLIII. 1806.

to give their children the blessings of education. Schools are established in every parish, and the costs of instruction are very trifling, so as to be within the reach of the humblest of the people; and to the destitute it is given gratuitously. The tree of knowledge, however, has in Prussia, as elsewhere, brought forth its accustomed fruits of good and evil. In Prussia there are, according to the most recent returns, no less than *twelve times* as many crimes committed, in proportion to the population, as in France, where education is not diffused to a third of the extent it is in Prussia—a fact which demonstrates, equally with the experience of every other country, the sedulous care which it is indispensable to take before that great instrument of *power* is put into the hands of the people.[1]*

[1] Malte Bran, v. 277, 278.

13. Manners and court of Berlin.

The Prussian capital had long been one of the most agreeable and least expensive in Europe. No rigid etiquette, no impassable line of demarcation, separated the court from the people : the royal family lived on terms of friendly equality, not only with the nobility, but with the leading inhabitants of Berlin. An easy demeanour, a total absence of aristocratic pride, and of extravagance or parade, distinguished all the parties given at court, at which the king and queen mingled on terms of perfect equality with their subjects. Many ladies of rank, both at Paris and London, spent larger sums annually on their dress than the Queen of Prussia; none equalled her in dignity and grace of manner, and the elevated sentiments with which she was inspired. Admiration of her beauty, and attachment to her person, formed one of the strongest feelings of the Prussian monarchy; and nothing contributed more to produce that profound

irritation at France, which, in the latter years of the war, pervaded all classes of its inhabitants, than the harshness and injustice with which Napoleon, to whom chivalrous feelings were unknown, treated, in the days of her misfortune, that captivating and high-spirited princess.[1]

[1] Bign. ii. 297, 299.

14. Its state policy and diplomacy.

A spirit of economy, order, and wisdom, pervaded all the internal arrangements of the state. The cabinet, led at that period by Haugwitz, but in which the great abilities of Hardenberg and Stein soon obtained an ascendency, was one of the ablest in Europe. Its diplomatists, inferior to none in information, penetration, and address, had long given to Prussia a degree of influence at foreign- courts beyond what could have been expected from the resources and weight of the monarchy. The established principles of the Prussian cabinet, under the direction of Haugwitz, ever since the peace of B&le in 1795, had been to keep aloof from the dangers of war, and take advantage, as far as possible, of the distresses of their neighbours to augment the territory and resources of the monarchy. From a mistaken idea of present interest, not less than the influence of former rivalry with Austria, they inclined to the alliance with France, and derived great temporary benefits from the union, both in the accessions of territory which they received out of the ecclesiastical estates of the empire, and the increase of importance which they acquired as the head of the defensive league of the north of Germany. Little did they imagine, however, in what a terrible catastrophe that policy was to terminate, or anticipate, as the reward of their long friendship, a severity of treatment to which Austria and England were strangers, even after years of inveterate and perilous hostility. The interview at Memel in 1802, and the open support given by Russia to the Prussian claims in the matter of the indemnities, had already laid the foundation of an intimate personal friendship between Frederick-William and the Emperor Alexander.[2] But it was at first an alliance of policy

CHAP. XLXII.

1806.

rather than affection, and acquired the warmth of impassioned attachment at the tomb of the Great Frederick and on the field of Leipsic.

15. Efforts of Prussia to obtain the aid of Russia and England.

Notwithstanding the inconsiderate haste with which Prussia had taken up arms, the cabinet of Berlin made some attempts to induce the other powers of Europe to share with them the dangers of the conflict. With England it was no difficult matter to effect a reconciliation. At the first authentic accounts of the change in the policy of Frederick-William, an order in council was issued, raising the blockade of the Prussian harbours. M. Jacobi, the Prussian minister in London, returned to that capital

Sept. 25.

immediately after he had left it; and the British ministry had the generosity to resume its amicable relations with the cabinet of Berlin before an explanation had been

Aug. 17.

given on the subject of Hanover. With Sweden an accommodation was also without difficulty effected, on the footing of the troops of that power taking possession of Lauenberg, which they did in the name of the King of Great Britain. It was not so easy a matter to convince the cabinet of St Petersburg of this unlooked-for change in the Prussian councils; and, taught by the long vacillation of its policy, they were for some time unwilling to yield to the general joy which was diffused through the Russian capital, on the intelligence that war was resolved on. But no sooner was Alexander informed, by confidential letters brought by General Krusemark from the King of Prussia, that he had embarked seriously in the contest,

Sept. 18.

than he instantly wrote promising an immediate succour of seventy thousand men, and announcing his intention of himself marching at the head of a chosen army to aid in the support of his ally.[1]

[1] Hard. ix. 272, 275. Bign.v.413, 415. Dum. xr.285,287.

16. And of Austria.

Important as the announcement of the intentions of Russia was, the accession of Austria would have been of still more value to the common cause, from its closer proximity to the scene of action, and the strong positions which the Bohemian mountains afforded on the flank of

the probable theatre of war. The Prussian ambassador accordingly was indefatigable in his endeavours to rouse the cabinet of Vienna to a sense of the vital importance of joining heart and hand in the approaching conflict for the liberties of Europe. He represented to Count Stadion, then prime minister at Vienna, "that the losses inflicted on Austria by the treaty of Pressburg were so immense, that the emperor, of necessity, must at some future period look out for the means of repairing them. The province of the Tyrol is of such irreparable importance to Austria, that no doubt can be entertained that she will take advantage of the first opportunity to resume it from Bavaria, by rousing the patriotic attachment of the inhabitants of that important province to their ancient masters. Napoleon has justly conceived the most serious apprehensions for the faithful observance of that treaty which he himself has been the first to violate. Does he not, in defiance of his engagements, still hold the fortress of Braunau and the line of the Inn, six months after he was bouud by a solemn treaty to have evacuated Germany with all his forces? The recent establishment of the Confederation of the Rhine, and dissolution of the Germanic empire, too clearly demonstrate with what ulterior views the French government is actuated in regard to the countries beyond the Rhine. Honour, necessity, the existence of his people, have forced the King of Prussia to take up arms alone; but a powerful Russian army, and the well-known generosity of England, diminish the perilous chances of the conflict. Now, therefore, is the time for Austria and Prussia to lay aside their jealousies springing from the conquest of Silesia, and unite their forces against the common enemy, who is about to make the Confederation of the Rhine an outwork from whence to enslave all the other states of Germanic origin."[1]

[1] Hard. ix. 277, 281.

Forcible as these considerations were, and strongly as the cabinet of Vienna felt their justice, there were yet many circumstances which forbade them to yield on this

CHAP. XLIII.

1806.

17. Bat the cabinet of Vienna resolves to remain neutral.

occasion to their inclinations. The conduct of Prussia for ten years had been so dubious and vacillating; her hostility to Austria, especially on the division of the indemnities, so evident; her partiality for the French alliance so conspicuous: her changes of policy during the last year so extraordinary, that no reliance could be placed on her maintaining a decided line of conduct for any length of time together, and, least of all, on her continuing steadfast in that sudden and perilous hostility in which she had now engaged, and the vehemence of which was the worst possible guarantee for its endurance. Who could insure that she would not desert this alliance as she had done the first coalition against France, or abandon her policy as suddenly as she had done her recent hostility against England, and leave to Austria, irrevocably embarked, the whole weight and dangers of the contest? The Archduke Charles, on being consulted as to the state of the army, reported that the infantry, which had not yet been rejoined by the prisoners taken during the campaign, was hardly a half of its full complement; the cavalry but recently remounted, and for the most part unskilled in military exercises; the artillery numerous, but the majority of the gunners without any experience. The treasury was empty; some of the most valuable provinces of the monarchy had been torn away, and those which remained were exhausted by enormous war contributions, wrung from them by the enemy. Influenced by these considerations, the cabinet of Vienna resolved to preserve a strict neutrality, and issued a proclamation to that effect. However much the historian may lament that determination, from a knowledge of the boundless calamities which an opposite course might have saved to both monarchies, it is impossible to deny that, situated as Austria was at that time, it was the most prudent resolution which its government could have adopted;[1] and that, if Prussia was left single-handed to maintain the cause of European independence,

Oct. 6.

it was no more than she was bound to expect from the selfish and temporising policy which she had so long followed. *

18. Spain long obsequious to France under the Prince of Peace.

Hopes were not wanting to the cabinet of Berlin of efficacious aid in another quarter where it was least expected, and of a kind to paralyse a considerable part of the French forces. Spain, bereft of her navy by the battle of Trafalgar, blockaded in her harbours, destitute of commerce, cut off from all intercourse with her colonies, had felt all the burdens of war without any of its glories. The public indignation was hourly accumulating against the Prince of the Peace, whose ignoble birth, exorbitant power, and immense wealth, rendered him as much an object of jealousy to the Castilian noblesse, as the uniform disasters which had attended his administration made him detested by the people. Still, however, that ruling favourite persevered, against the almost unanimous wishes of the kingdom, in the French alliance, till his pride was offended at the haughty conduct of Napoleon, who excluded the Spanish ambassador from any share in the negotiations for a general peace at Paris, and it was revealed to him, that in those conferences the French Emperor had seriously proposed to take the Balearic islands from the Spanish crown, and confer them as an indemnity for Sicily, together with a revenue drawn from Spain, on the King of Naples.[1] At the same time the assembling of a powerful army at Bayonne, ostensibly

[1] Lucches. ii. 99, 100. Hard. ix. 285, 286.

* The instructions of Mr Adair, the British ambassador at Vienna at that period, were, not to stimulate the Austrian government to hurry into a war, of which the consequences, if unsuccessful, might be fatal to that country, but to offer its government, if they deemed the opportunity favourable for engaging in hostilities, or if the necessities of their situation compelled them .to such a course, the whole pecuniary aid which Great Britain was capable of affording. Of the wisdom of this course of proceeding, no one who considers the precarious situation of Austria at that crisis can entertain a doubt; and it affords another proof of the clear insight which Mr Fox at that period had obtained as to the insatiable ambition of Napoleon, and of the magnanimity with which that upright statesman instantly acted upon his conviction. " A man," says the Marquis Lucchesini, " unjustly styled by Napoleon and his adherents, the last prop of the pacific dispositions of the cabinet of St James's."— *Vide* LUCCHESINI, ii. 96, 97, *note;* and BIGNON, V. 417.

Instructions bo Mr Adair cm the subject.

CHAP. XLIII. 1806.

frontier, and twelve thousand were in observation in Westphalia, for the approaching campaign; the remainder being dispersed in garrisoned depots, or not yet put in a state for active operations. Such was the general enthusiasm, and so little did they anticipate the terrible reverses which awaited them, that the Prussian guards marched out of Berlin, singing triumphant airs, amidst the shouts of the inhabitants, almost in a state of sedition from the tumultuous joy they experienced on at length being about to measure their strength with the enemy. Napoleon's forces were much more considerable. They amounted in Germany alone to one hundred and ninety thousand men; of whom twenty-eight thousand were the terrible reserve cavalry under Murat, and they were directed by the ablest and most experienced marshals in the French army.[1] *

[1] Lucches. ii. 117,118. Dum. xv. 289. Jom. ii. 275,276. Hard. ix. 299, 300. Thiers, vii. 42, 43.

22. Her grievous want of foresight and defensive measures.

The memorable military operations of the year 1813, and the tenacious hold which Napoleon then kept of the fortresses on the Elbe, when assailed by the greatly superior forces of the coalition, have demonstrated that no position in Europe is more susceptible of defence than the course of that river; and that supported by the ramparts of Magdeburg, Wittenberg, Torgau, and Dresden, an inferior force may there for a considerable time prolong its defence against an enemy possessing an overwhelming superiority in the field. Had these fortresses been pro-

* Napoleon's army was divided into nine corps, and stationed as follows, on the 3d October, when he arrived at Wurtzburg,—

The bulk of the army was grouped round Coburg and Bamberg. The whole

perly armed and provisioned, and the Prussians been commanded by a general capable of turning to the best advantage the means of defence which they afforded, it is probable that as protracted a contest might have been maintained as Napoleon supported in 1796 on the Adige, or Kray in 1800 around the bastions of Ulm, and time gained for the arrival of the Russians before a decisive blow was struck in the centre of Germany. But not only had no preparations for such a defensive system been made, but the nation, as well as its rulers, were in such a state of exultation as to despise them. None of these important bulwarks were provisioned; hardly were guns mounted on their ramparts. The interior fortified towns on the Oder and in Silesia were for the most part in the most deplorable state. No depots were formed; no provision was made for recruiting the army in case of disaster. They had not even a rallying point assigned in the event of defeat, though the strong fortresses of Magdeburg, Wittenberg, and Torgau lay immediately in the rear of the theatre of war, and the Elbe spread its ample stream to arrest the victor. Careless of the future, chanting songs of victory, and enjoying its triumphant march through the villages, the army bent its steps towards Erfurth; strong in the recollection of the Great Frederick, stronger still in the anticipation of the overthrow of Napoleon,[1]

[1] Hard. ix. 297, 300. Lucches. ii. 117, 120.

force bearing on the Prussians, exclusive of Marmont in Illyria, was 186,000 men.

The Prussians, when the campaign opened, were divided into three armies: the right wing, under General Ruchel, of 30,000 men, was stationed on the frontiers of the Hessian territories; the centre, 55,000 strong, commanded by the King in person, with his lieutenant-general, the Duke of Brunswick, under his orders, was in front of the Elbe around Magdeburg, with its advanced guard on the Saale; the left wing, composed of 40,000 men, including the Saxons, was commanded by Prince Hohenlohe, with Prince Louis, the King's brother, under him. In all 125,000—a noble force, but as much inferior to that at the command of Napoleon, as was the capacity of their leader compared to his. It was assembled in Saxony: its extreme left rested on the Bohemian mountains, and its advanced posts were pushed as far as Hof and the Kirchberg. A detached corps of 12,000 men, in Westphalia, was under the orders of a general destined to future celebrity—BLUCHER.—See DUMAS, XV. 290, 514; JOM. ii. 275, 276; *Official Report of the Prussian strength to the Duke of Brunswick,* HABD. ix. 484, App. G.; and THIEBS, *Consulat et l'Empire,* vii. 42.

CHAP. XLIII. 1806.

and dreaming rather of the banks of the Rhine or the plains of Champagne, than of the shores of the Vistula and the fields of Poland.

23. Imprudent conduct of the Prussian generals.

But if the infatuation of the army was great, greater still was the delusion of its commanders. The Duke of Brunswick, though an able man of the last century, and enjoying a great reputation, was altogether behind the age, and ignorant of the perilous chances of a war with the veteran legions and numerous columns of Napoleon. The disasters of the late campaigns were by him ascribed entirely to timidity or want of skill in the Austrians ; the true way to combat the French, he constantly maintained, was to assume a vigorous offensive, and paralyse their military enthusiasm by compelling them to defend their own positions. That there was some truth in this opinion, no one acquainted with the character and history of the French army could deny; but unfortunately, it required, for its successful application, both a general and an army very different from the Prussian at this period. The former did not possess the energy and rapidity, the latter the strength or experience, requisite for so perilous a system. Bold even to rashness in the original conception of the campaign, the Duke of Brunswick was vacillating and irresolute when he came to carry it into execution ; and, while his opponent was counting hours and minutes in the march of his indefatigable legions, he frequently lost whole days in deliberation or councils of war, or changed the destination of the forces when their movements were half completed. The troops, indeed, were numerous and perfectly disciplined : the artillery admirable ; the cavalry magnificent; the staff skilful and highly educated, but in matters of theory and detail, rather than the practical disposal of large masses in presence of a powerful and enterprising enemy. But what the whole army, from the general to the lowest drummer, were alike ignorant of, was the terrible vehemence and rapidity which Napoleon had introduced into modern war, by the

union of consummate skill at headquarters with enormous masses and a vast application of physical force ; combining thus the talent of Caesar or Turenne with the fierceness of the sweep of Scythian warfare. Applying then to the present the experience of the past age, the usual error of second-rate men, they calculated their measures upon the supposition of a war of manoeuvres, when one of annihilation awaited them ; and advanced as against the columns of Daun or Laudohn, when they were in presence of Napoleon and a hundred and fifty thousand effective men.[1]

Hard. ix. 301, 303. Jom. ii. 279.

As usual in such cases, the contending parties prefaced the war of arms by mutual manifestoes calculated to rouse the spirit of their respective forces, or vindicate their hostility in the eyes of Europe. That of Napoleon, which bore intrinsic evidence of his composition, was, as usual, admirably calculated to dazzle and stimulate his followers. " Soldiers! the order for your return to France was already issued : you had already approached it by several marches : triumphal fetes awaited you ; preparations for your reception were already made in the capital: but whilst we were surrendering ourselves to a too confident security, new conspiracies were formed under the mask of friendship and alliance. Cries of war have been heard from Berlin: for two months provocations have daily been offered to us; the same insane spirit which, taking the advantage of our dissensions fourteen years ago, conducted the Prussians into the plains of Champagne, still prevails in their councils. If it is no longer Paris which they propose to raze to its foundation, it is now their standards which they announce their intention of planting in the capitals of our allies; it is Saxony which they wish to compel to renounce, by a shameful transaction, its independence, and range itself by their side ; it is your laurels which they wish to tear from your brows: they insist upon our evacuating Germany at the mere sight of their army! The fools! Let them learn that it is a thousand times easier to destroy the great capital than to wither

24. Proclamation of Napoleon to his soldiers. 7th Oct.

CHAP. XLIII. 1806.

the honours of a great people and its allies. Their projects were then confounded: they found in the plains of Champagne defeat, shame, and death: but the lessons of experience are forgotten; and there are men in whom the feelings of hatred and jealousy are never extinguished. Soldiers! there is not one among you who would return to France by any other path but that of honour. We should never re-enter there except under triumphal arches. What then! shall we have braved the seasons, the seas, the deserts—vanquished Europe, repeatedly coalesced against us—extended our glory from the east to the west—to return at last to our country like deserters, after having abandoned our allies, and to hear it said that the French eagle fled at the mere sight of the Prussian standards? But they have already arrived at our advanced posts. Let us then march, since moderation has not been able to awaken them from this astonishing trance: let the Prussian army experience the same fate which it did fourteen years ago: let them learn that if it is easy, by means of the friendship of a great people, to acquire power and dominions, its enmity, though capable of being roused only by an abandonment of every principle of wisdom and reason, is more terrible than the tempests of the ocean/'[1]

[1] Dum. xiv.

25, Manifesto of Prussia,

Less fitted to rouse the military passions and warlike enthusiasm of its subjects, than this masterpiece of Napoleon, the Prussian manifesto, drawn by Gentz, was yet a model of dignified reason, and concluded with a sentiment as to the ultimate issue of the contest, which subsequent events have rendered prophetic. "All our efforts, and those of our allies, to preserve peace have proved unsuccessful; and if we are not willing to abandon to the despotism of an implacable enemy, and to deliver over to his devouring armies, the whole north of Germany, and perhaps of Europe, a war is inevitable. His majesty has resolved upon it, because the honour and security of the state are in danger: he would have deemed himself happy

could he have attained the same end by pacific means; but it is with the firmest confidence that he takes the command of the army which is about to combat for its country and national honour, because the cause in which it is engaged is just. His majesty is well aware that for long the army desired war; and even when circumstances prevented him from yielding to its wishes, these wishes commanded his respect, because they took their origin in those feelings of honour and patriotism which have ever distinguished the Prussian forces. The nation, in a body, has manifested the warm interest which it takes in this conflict; and that strong expression of enthusiasm has confirmed his majesty in the opinion, that now it is not only unavoidable, but in unison with the wishes of all the people. His majesty is convinced that the desire to preserve unchanged the national honour, and the glory which the Great Frederick has shed over our arms, will suffice to excite the army to combat with its accustomed valour, and to support with constancy all its fatigues.

26. The true character of the war as asserted in it.

"But this war possesses even a more general interest. We have to deal with an enemy who all around us has beaten the most numerous armies, humbled their most powerful states, annihilated their most venerable constitutions; ravished from several nations their honour, from others their independence. A similar fate awaited the Prussian monarchy: numerous armies menaced your frontiers; they were daily augmenting; it had become your turn to fall into the gulf, to bow beneath a stranger yoke; and already his pride and rapacity coveted the spoils of the north of Germany. Thus we combat for our independence, for our hearths, for all that is dear to us; and if God gives victory to the just side, to our arms, to the courage which burns in the heart of every Prussian, we shall be the liberators of oppressed millions. Every warrior who shall fall on the field of battle will have sacrificed his life in the cause of humanity; every one who survives will acquire, besides immortal glory, a just

CHAP. XLIII.

1806.

title to the gratitude, the triumph, the tears of joy of a liberated country. Who amongst us could endure the thoughts of becoming the prey of a stranger? While we combat for our own safety, to avert for us the deepest humiliation to which a nation can be subjected, *we are the saviours of all our German brethren;* the eyes of all nations are fixed on us as the last bulwark of liberty, security, or social order in Europe."[1]

[1] Dum. xvi. 8,10.

27. Reflections on these proclamations.

The opposite style of these two eloquent proclamations is very remarkable. Both are addressed to the strongest passions of the human breast; both are masterpieces of manly oratory; but the language which they severally employ is strikingly characteristic of the different situations in which their authors respectively stood. Napoleon speaks to his soldiers only of an insult offered to their arms—of glory and triumphs, and victories to be won; Frederick-William, equally firm, but less sanguine as to the result, disguises not the dangers and chances of the struggle, but reminds them of the duty they owe to themselves, their country, the cause of the human race. The former invokes the eagles of France, and calls on the soldiers to follow their glorious career: the latter appeals to the God of battles, and anticipates from his aid a final triumph to the arms of freedom. The battle of Jena and chains of Tilsit seemed for long to have announced an abandonment of this cause by the care of Providence; but let these words be borne in mind, and compared with the final issue of the contest.

28. Napoleon's insult to the Queen of Prussia.

Napoleon had no gallantry or chivalrous feeling in his breast. The Prussian minister had, with the ultimatum of the cabinet of Berlin, given a pressing request for an answer to the Prussian headquarters by the 8th October. " Marshal," said he to Berthier, " they have given us a rendezvous for the 8th; never did a Frenchman refuse such an appeal. We are told that a beautiful queen is to be a spectator of the combat; let us then be courteous,

and march without resting for Saxony." Francis I. might have used the same language; but what followed in the first bulletin of the campaign, dictated by Napoleon himself ? " The Emperor was right when he spoke thus: for the Queen of Prussia is with the army, dressed as an Amazon, wearing the uniform of her regiment of dragoons, writing twenty letters a-day to spread the conflagration in all directions. We seem to behold Armida in her madness setting fire to her own palace. After her follows Prince Louis of Prussia, a young prince full of bravery and courage, hurried on by the spirit of party, who flatters himself he shall find a great renown in the vicissitudes of war. Following the example of these illustrious persons, all the court cries to ' To arms!' but *when war shall have reached them with all its horrors, all will seek to exculpate themselves from having been instrumental in bringing its thunder to the peaceful plains of the North."* Such was the language in which Napoleon spoke of the most beautiful princess in Europe, rousing her subjects to patriotic resistance ! How singularly prophetic is the concluding part of the sentence of what he himself experienced, just six years afterwards, in the frozen fields of Russia.[1]

[1] Nap. Bulletin, ii. 11, 12.

29

Preparatory movements of the Prussians.

Animated by those heart-stirring addresses, the forces on both sides rapidly approached each other; and their advanced outposts were in presence on the 8th October. Then began the terrible contest of the north with the south of Europe; never destined to be extinguished till the domes of the Kremlin were reddened with flames, and the towers of Notre Dame were shaken by the discharges of the Russian batteries. The first plan discussed at Berlin was for the whole army to debouche in separate columns by the two great roads, those of Adorf and Saalfeld, and Eisenach and Gotha, and commence the offensive towards the valley of the Maine, on the east and west of the Thuringian Forest, the intermediate passes of which were to be occupied by a central corps;

Atlas, Plate 39.

CHAP. XLIII. 1806. Sept. 27.

but this plan was soon abandoned, as exposing the army to a perilous division of force in presence of so powerful and enterprising an enemy. The design ultimately adopted was to advance with the right under Ruchel in front, which was pushed on to Eisenach; next in echelon followed the centre, commanded by the King in person, which, united with the corps of Hohenlohe, was to advance upon Saalfeld and Jena, while each wing was covered by a detached corps of observation, the right by Blucher on the confines of Hesse, the left by Tauenzein, on the side of Baireuth. The object of this movement was to determine the hesitation of the Elector of Hesse-Cassel, and effect the junction of his contingent to the Prussian army, and at the same time pierce the centre of the valley of the Maine, which was the base of the enemy's operations, and cut them off from their communications with France. Both objects were important, and the design was well conceived, had the Duke of Brunswick possessed a force adequate to its execution. But it necessarily involved his army in great hazard in presence of a numerous and skilful enemy; and by leaving open to his advance the great roads to Dresden and Leipsic, exposed the Prussians to the very danger of being themselves turned and cut off from their communications and magazines, when endeavouring to inflict that injury on their opponents.[1]

[1] Dum. xvi. 19. Jom. ii. 279, 280.

30. Counter movement of Napoleon. His system of providing for his troops.

Napoleon was not a man to let slip the opportunity which this hazardous attempt of the Prussians to pass his position afforded, of not merely defeating, but destroying their army. Confident in the numbers and experience of his troops, which rendered a situation comparatively safe to them, which was to the last degree perilous to their opponents, he instantly resolved to retort upon the enemy the measure they were preparing to play off upon him; and by throwing forward his army with the right in front, turn the Prussian left, and cut them off from their magazines on the Elbe, and the heart of the monarchy.

On the 8th October, the French army was concentrated round Bamberg; at three o'clock on the morning of the 9 th, Napoleon put himself in motion, and his columns marched towards Saxony, on three great roads, by echelon, the right in front. On the right, Soult and Ney with a Bavarian division moved from Baireuth by Hof, on Plauen; in the centre, Murat with the cavalry, as also Bernadotte and Davoust, marched from Bamberg by Kronach, on Saalburg; on the left, Lannes and Augereau, breaking up from Schweinfurt, advanced by Coburg and Graffenthal upon Saalfeld. The effect of these movements was to bring the centre and right of the French directly upon the Prussian magazines and reserves, while they were stretching forward on the left, to interpose between their antagonists and the Rhine. In commencing these movements, the French Emperor put in practice his usual system for providing for his army. This was to make his troops subsist daily, in general, on the resources of the country which they occupied,—to extend themselves sufficiently to obtain supplies, but not so as to be beyond concentration in case of attack,—and to have in reserve in waggons bread adequate for several days, to meet any sudden emergency. This reserve store, carefully husbanded and duly replenished when drawn upon, served for all cases of concentration before or after battles. To convey it, Napoleon allowed two caissons for a battalion, and one for a squadron. Adding to that the carriages provided for the sick and wounded, he calculated that four or five hundred waggons should suffice for the largest army. The most peremptory orders were issued against any general or officer applying any part of these public conveyances to his private purposes ; and in one instance, having discovered that one of his marshals made such use of them in the outset of the campaign, he manifested the utmost displeasure, and declared Berthier responsible for all such evasions of his orders in future.[1]

31. The Duke of Brunswick renounces the offensive. Description of the theatre of war.

advance to the French left, when intelligence of this rapid accumulation of forces against their own centre and left reached the Duke of Brunswick's headquarters. It was indispensable to renounce forthwith the hazardous enterprise ; and orders were instantly despatched to countermand the advance, and direct the concentration of the army in the neighbourhood of Weimar: the principal column, commanded by the King, at Erfurth ; Ruchel at Gotha; Hohenlohe at Hochdorf; the reserve, under the Duke of Wiirtemberg, at Halle. Thus the Prussians, in presence of the greatest general and most powerful army of modern times, were thrown into a change of position, and a complicated series of cross movements, with their flank exposed to the enemy—the situation of all others the most perilous in war, and which, not a year before, had proved fatal to the combined army, when attempting a similar movement in front of Austerlitz. To complete their danger, the concentration, from the orders which they received, took place on the centre and right; whereas it was on the left, towards Hof, that it should have been made, to resist the rapid march of the invaders upon their magazines and resources. The Thuringian Forest, which those movements promised to render the first theatre of approaching hostilities, is a range of broken hills, for the most part covered with wood, which, branching off from the central chain that encircles Bohemia, stretches to the northwards until it subsides into the plains of Westphalia, where it terminates. This range separates the valley of the Rhine from that of the Elbe, the waters from the western slope flowing into the former, those from the eastern into the latter. It thus runs directly athwart the line of communication between France and Prussia, and requires to be traversed in one quarter or another in going from the one country to the other. Three great roads cross this broken woody region, and conduct the traveller from the banks of the Rhine to the sands of Prussia. The first, starting from Mayence, follows the windings of the Maine, as far

as Coburg, where it approaches the summit of the Thuringian ridge, from which the Maine flows in one direction, the Saale in another. Three defiles penetrate the summit level: that of Baireuth to Hof, that of Coburg to Saalfeld, that of Kronach to Schleitz. The second route, which is the one usually followed by travellers going from Mayence to Saxony or Berlin, passes the wooded summits of the Thuringian Forest to the left of their highest elevation. It branches off from the valley of the Maine at Hanau, ascends the lateral valley of the Fulda, and, after surmounting the ridge, descends by Eisenach, Gotha, and Weimar into the Saxon plains and the banks of the Elbe. The third, by striking far to the north, avoids entirely the Thuringian range, and, leaving the Rhine at Wesel, makes straight for the Westphalian plains between the northern extremity of the hills and the sea. Of these routes Napoleon chose the first, which brought him by Wiirtzburg to the sources of the Saale; and it was there that he came in contact with the Prussian army, in the very act of making their perilous movement from left to right.[1]

[1] Jom. ii. 280. Dum. xyi. 26,31. Bign.v.466, 467. Hard. ix. 303. Thiers, vii. 59,60. Perjonal observation.

But before the junction of the Prussian forces, even in this false direction, could be effected, the formidable legions of Napoleon were already upon them. As might have been expected, when surprised in this manner in the middle of a lateral movement, they were attacked at the same time in different quarters, and in all by greatly superior columns of the enemy. The French masses, dense and strong, marching on the great chauss&s, fell perpendicularly upon the flank of their opponents when endeavouring, by cross and often deplorable roads, to reach the points of rendezvous assigned to them. The consequences might easily have been anticipated. They were defeated in every quarter, and lost, in the very outset of the campaign, the moral influence of an advance. On the 9th, Tauenzein, who was at the moment in front of Schleitz with six thousand Prussians and three thousand Saxons, was attacked by Bernadotte, at the head of greatly supe-

32. Commencement of hostilities, and defeat of detached bodies of Prussians.

1809. Oct. 10.

rior forces, and after a gallant resistance dislodged from his position with the loss of several hundred men. The day following, Murat marched on Gera, and on the road fell in with and captured a convoy of five hundred carriages and a pontoon train—an extraordinary proof of the advantage the French had already gained, when, on the third day after hostilities had commenced, they had fallen in with and captured a large part of the reserve trains and heavy baggage of the enemy.[1]

Oct. 11. [1] Bign. v. 468, 470. Dum. xvi. 51,58.

33. Success of the French left against Prince Louis.

Nor was the French left, under Lannes and Augereau, less successful. On the 10th, the former of these generals arrived on the heights of Saalfeld, and animated his troops to the highest degree by reading to them the proclamation of Napoleon on the opening of hostilities ; and on the same day, in continuing his advance upon Saalfeld, he fell in with Prince Louis, who commanded the rear-guard of the Prussian left, and had been stationed at Rudolstadt and Blankenburg by Prince Hohenlohe to cover the cross-march of his columns, who were then endeavouring to reach the points of rendezvous assigned them by their commander-in-chief. This gallant prince, in common with his immediate superior Prince Hohenlohe, had long expressed the opinion, which they had in vain endeavoured to impress upon the Duke of Brunswick, that Napoleon meditated an attack on the Prussian left, and that a concentration of their troops in that direction should have been made some days before.* Unable to prevent the disastrous resolution to assemble on the right, he now set himself with heroic bravery to mitigate its effects. The forces under his command were only eleven batta-

* In the great council of war, held on the 5th October at Erfurth, when the Duke of Brunswick's project of continuing the march across the Thuringian Forest was discussed, Prince Hohenlohe, Prince Louis, and Colonel Massenbach, his chief of the staff, strongly represented that, by continuing the march in that direction, the army would be exposed to certain ruin; that they would soon arrive at a country where the ground was entirely favourable to the operations of the enemy, and adverse to their own method of fighting ,* and that if the French were inclined, as seemed more than probable, to turn either of the wings of the army, nothing could favour this design so much as the

lions and eighteen squadrons of hussars, with eighteen pieces of cannon; and with these he had to withstand the shock of Lannes, with twenty-five thousand men. Notwithstanding this fearful preponderance of force, he resolved to hold firm during the remainder of the day, to gain time for the evacuation of the considerable magazines which were collected close in his rear at Saalfeld.[1]

Oct. 9. [1] Lucches. ii. 137, 139. Dum. xvi. 55, 57.

34. Death of that prince.

In this gallant but unhappy determination he was confirmed from an opinion that it was only by resuming the old Prussian system of a vigorous offensive, that the spirits of the soldiers, which had been much sunk by the general order to retreat on the preceding day, could be revived. The sensible increase of the enemy all around him on the following day—even the turning of his right flank by Suchet with a powerful body of light troops, which rendered his position no longer tenable, could not induce him to abandon his ground ; and, when the attack commenced, the Prussians were surrounded on all sides. Notwithstanding this, they made a gallant resistance, and enabled the artillery and chariots to leave Saalfeld in safety. Returning from the town to his gallant comrades, who still made good their ground in its front, Prince Louis found them dropping fast under the murderous fire of the French tirailleurs. Soon their retreat was converted into a rout by the ravages of the hostile artillery ; and the prince himself, while combating bravely with the rearguard, and striving to restore order among the fugitives, was surrounded by the enemy's hussars—"Surrender, colonel," said their chief, not knowing the rank of his opponent, " or you are a dead man." Louis answered only by a blow with his sabre, which wounded

plunging the Prussian host by columns into the forest. These sage observations made no sort of impression on the Duke of Brunswick; and all the modification of his plan which these generals could effect, was that the troops should halt for a day on the 8th October, and on the following morning throw out strong reconnoitring parties, and receive bread for eight days before entering the denies of Thuringia. It may safely be affirmed that that council, *by* continuing this fatal advance, determined the result of the campaign.—See DUMAS, xvi. 25, 26; and *Saalfeld, Algemeine Gewhichte,* iii. 299.

CHAP. XLIII.

1806.

without disabling his adversary, who replied with a mortal stroke, which laid the heroic prince dead at his feet

85. Discouragement of the Prussians, who are completely turned by the French.

In this disastrous encounter the Prussians lost twelve hundred prisoners, besides eight hundred killed and wounded, and thirty pieces of cannon. But this was the least part of their misfortunes : the heroic Prince Louis was no more. He had fallen, it is true, while bravely combating on the field of honour; but his body had remained the trophy of the victors, and the continued advance of the enemy too surely indicated that defeat had attended the first serious encounter of the Prussian arms."* Their army was now broken in upon in several points; its magazines in part seized; its concentration interrupted; and the dejected columns, without any fixed rallying points, were wandering about in every direction, while the terrible French legions, in dense masses, were falling perpendicularly on their flank. These disasters rapidly communicated their depressing effect to the minds of the soldiers. The death of Prince Louis, above all, equally dear to the officers and private men, diffused a universal gloom. So grievous a calamity in the outset of the campaign was regarded as the worst augury of its future fortunes; and, as is usual with great bodies in a violent state of excitement, the transition was immediate from the preceding exultation to an extraordinary degree of depression.[1]

[1] Lucches. ii. 137, 140. Bign.v. 468, 470. Dum. xvi. 51, 58.

Meanwhile the movements preparatory to a decisive battle continued, though in a very different spirit, on both sides. In deep dejection, and with infinite difficulty, the Prussians at length concentrated their forces in two

*** No sooner was the rank of the prince known, than Marshal Lannes, with deserved courtesy, showed his corpse all the honours due to so illustrious a character. It was interred with military honours in the cemetery of the princes of Coburg, at Saalfeld; and Berthier wrote on the 12th to the chief of the Prussian staff, announcing that the Emperor had ordered it to be restored, if it was desired that his remains should rest in the tomb of his ancestors—an offer which the disasters immediately ensuing rendered it impossible for the royal family at that time to accept.—BIONON, V. 469.**

36. Movements on both sides preparatory to a general action.

great masses under the King in the neighbourhood of Weimar, and under Hohenlohe near Jena. It was in the highest exultation, on the other hand, and in the full anticipation of victory, that the French made a sweep which brought them completely round the Prussian army. The early triumphs with which the campaign had opened had given Napoleon hopes of rapid and decisive success. He no longer feared, as he admitted he had done at first, that he would be obliged to have recourse to the mattock.* The confusion of the enemy's columns had dissipated the prestige of the Great Frederick. Encouraged by these events, he now hesitated not to follow out the brilliant career which had opened to his arms. A complete conversion, turning on the pivot of the left, took place in the direction of his columns, who wheeled round so as to face the Northern Ocean. Davoust, Bernadotte, and Murat marched upon Naumburg, where, on the next day, they made themselves masters of considerable magazines; Soult was advancing on Jena, where Lannes was already established; while Ney and Augereau were at Roda and Kahla, in its immediate neighbourhood. Such was the confusion of the Prussian movements, and the bad understanding which already prevailed between them and the Saxons, that, when the French took up the ground which the Allies had just quitted in the environs of Jena, they found the fields and roads covered with arms, cuirasses, and chariots, like the scene of a defeat. The Saxons had pillaged the Prussians, and the Prussians the Saxons. Baggage and ammunition waggons had been abandoned by their drivers, and lay scattered in confusion, while some guns had even been spiked to prevent their being of service to the enemy.[1]

* In setting out for the Prussian campaign, Napoleon expected to experience a more formidable resistance than he had yet met with in Europe, The exploits of the Seven Years' War had filled him with the highest idea of the troops trained in the school of its illustrious hero, and he said to his assembled officers at Mayence, " We shall have earth to move in this war."—See JOMINI, ii. 282.

CHAP. XLIII.

1806.

37. Result of these manoeuvres.

The result of these different marches was in the highest degree favourable to the French arms. By the advance on Naumburg they had cut the enemy off from the line of retreat to Leipsic, and thrown their left back in such a manner that the French on the banks of the Saale had their back to the Elbe, and faced the Rhine; while the Prussians had their back to the Rhine, and could only hope to regain their country by cutting their way through the enemy. Finding affairs in a situation so much more favourable than he could possibly have anticipated, Napoleon, to gain additional time to complete the encircling of his antagonists, despatched, on the 12th, an officer of his household with proposals of peace to Frederick-William, taking care meanwhile not to suspend for one instant the march of his columns; but the letter did not reach that monarch till the battle was over. In the evening of the 12th the army of Hohenlohe, which, with all the additions it had received from Ruchel, did not exceed forty thousand men, was grouped in dense masses on a ridge of heights to the north on the road from Jena to Weimar, between the Um and the Saale. Its advanced posts were on the Landgrafenberg, a steep hill between its position and the town of Jena, from the summit of which the whole lines of the Prussians could be descried, and over which the only road to the attack of their position in front lay.[1]

Oct. 12.

[1] Dum. xvi. 72,76. Jom. ii.284. Lucches. ii. 141.

Concentration of the Prussian forces near Weimar.

The army of the King of Prussia, on the other hand, under the immediate command of the Duke of Brunswick, sixty-five thousand strong, was concentrated at the distance of somewhat more than a league in the rear of Hohenlohe, near Weimar. Thus the whole Prussian army, consisting of above a hundred thousand men, of which eighteen thousand were superb cavalry, with three hundred pieces of cannon, was at length assembled in a field of battle, where their far-famed tactics had a fair theatre for development; and notwithstanding the early disasters of the campaign, an opportunity was afforded

them of reinstating affairs at the sword's point. Each army had passed its opponent, and mutually intercepted the other's communications. But there was this extreme difference between the two, that the army of the Duke of Brunswick, cut off from all its magazines, had no resource but in victory ; whereas that of Napoleon, though severed from the Rhine, had a clear line of retreat, in case of disaster, to the Maine and the Danube.[1]

[1] Dum. xvi. 72,79. Jom. ii. 284, 285. Bign.v.471, 478. Luc ches. ii. 151. 151.

39. The Prussian army is again divided. The King marches to Auerstadt.

It would have been well for the Prussians had they continued and given battle in this concentrated position ; but the intelligence of the advance of Davoust and Murat upon Naumburg, which arrived at headquarters on the night of the 12th, led to a renewed separation, attended in the end with the most frightful disasters. Conceiving that the French Emperor had no intention of immediate combat, and being anxious for the safety of that town where the principal magazines of the army were placed, the Duke of Brunswick came to the ruinous resolution of again dividing his forces ; and while Hohenlohe was left in position near Jena, as a rear-guard to cover the retreat of the army, the principal body, with the King at its head, moved at daylight for Suiza, and at night arrived on the heights of AUERSTADT. Thus at the very moment when Napoleon, with above a hundred thousand men, was making his dispositions for a general battle on the day following, and surmounting the difficulties of the approach to the enemy's position on the heights in his vicinity, the Prussian general dislocated the imposing mass of his soldiers, and diverging to the left with two-thirds of his forces, engaged in a hazardous flank-march of ten leagues in presence of his antagonists, leaving a comparatively inconsiderable rearguard to be crushed by more than double its force in its position at Jena. Such was the dearth of provisions which already prevailed in the Allied camp from the capture of their magazines by the enemy, that no regular supply of bread was dealt out to the men after the long and fatiguing march;[2]

Oct. 13.

CHAP. XLIII.

1806.

but great numbers lay down, wearied and supperless, to sleep on the ground which was to cover their graves on the morrow.

40. Napoleon's dispositions for the battle.

Meanwhile Napoleon, never suspecting this division of the enemy's force, and supposing they were to follow the principles of the Great Frederick, which were to combat in concentrated masses and on as confined a field of battle as possible, was endeavouring, with his wonted energy, to overcome the all but insurmountable difficulties of the passage of the Landgrafenberg, by which access was to be afforded to his columns for the attack of the Prussian position. No sooner had the French light troops dislodged the enemy's patrols from these important heights, than the Emperor repaired to them in person, from whence he distinctly beheld the portion left of the Prussian army still reposing at leisure on its formidable position on the opposite ridge. Not doubting that he would have to deal with their whole force on the following day, he pressed without intermission the march of his columns ; and soon arranged the forces of Lannes, who with his infantry first reached its summit by the steep and rugged ascent, in such formidable masses around its declivities on the other side, that the enemy, who were now sensible of their error in abandoning so important a point, and were making preparations to retake it, were obliged to desist from the attempt. This valuable height, therefore, from which the whole of the Prussian position and all the movements of their troops were distinctly visible, remained in the hands of the French; and its elevation not only gave them that advantage, but entirely concealed from the observation of the Prussians the rapid concentration of troops on the Jena side of the mountain, which would at once have revealed the intention of a decisive attack on the following day. Still the difficulty of surmounting the ascent was very great, and for artillery and waggons it was as yet totally impassable.[1]

[1] Jom. ii. 285, 286. Saalf. iii. 301, 805. Camp. de Saxe, i, 260.

Nothing, however, could long withstand the vigour of

41. And vigorous efforts to surmount the Landgrafenberg.

Napoleon and his followers* He stood on the spot till the most rugged parts of the ascent were widened by blasting the solid rock, or smoothed by pioneers; and when the men were exhausted, revived their spirits by himself working with the tools, and exhibiting his old experience as a gunner, in surmounting the difficulty of dragging the cannon up the pass. Animated by such an example, and the vigorous exertions of the successive multitudes who engaged in the task, the difficulties which the Prussian generals deemed altogether insurmountable were rapidly overcome; before eight in the evening the ascent was passable for cavalry and artillery ; and at midnight the whole corps of Lannes, with all its guns and equipage, reposed in crowded array on the ridges and flanks of the mountain. The Imperial Guard, under Lefebvre, lay on its summit; Augereau on its left; Soult and Ney received orders to march early in the morning before daybreak to the right, in order to turn the enemy by his left, after the combat was begun; Murat bivouacked during the night near Dornburg, but he was ordered up to Jena, and was in reserve before the action was far advanced; while Davoust and Bernadotte were directed to advance from Naumburg, the first upon Apolda, in order to threaten the enemy's rear, the second upon Dornburg, to cut off his retreat to the Prussian dominions. The two armies now lay so near that their fires were within cannon-shot, and the lines of sentinels in communication : the lights of the Prussians, dispersed over a space of six leagues, threw a prodigious glow over the whole heavens to the northwest; those of the French, concentrated in a small space, illuminated the heights in the middle of their position. Surrounded by his faithful Guards, the Emperor, after having despatched his last orders to his marshals, wrapped himself in his cloak, and shared the frigid bivouac of the soldiers on the summit of the Landgrafenberg.[1]

[1] Jom. ii. 285, 286. Bign.v.473, 474. Dum. xvi. 83,94. Saalf. iiu 301, 807. Camp, de Saxe, i. 260.

At four in the morning of the 14th he was already on

CHAP. XLIII.

1806.

42. Situation of the armies on both sides, on the morning of the 14th.

horseback, and, surrounded by his generals, rode along the front of the line of Suchet's and Gazan's divisions, which were first to be engaged, and were already under arms. "Soldiers!" said he, "the Prussian army is turned, as the Austrian was a year ago at Ulm; it now only combats to secure the means of retreat The corps which should permit itself to be broken would be dishonoured. Fear not its renowned cavalry; oppose to their charges firm squares and the bayonet." Loud acclamations rent the air at these words : but the morning was still dark; the first streaks of dawn were only beginning to appear, and a thick cold fog obscured every object around. Burning with impatience, the soldiers awaited the signal of attack, but for two long hours they were kept shivering in their lines. At length at six, when the day, though still misty, was light, and the Emperor judged that his marching columns would be so far advanced on their respective routs as to justify the commencement of the action in front, he gave the signal for the attack. Meanwhile the Prussians, little suspecting the tempest which was about to burst on them, were securely reposing in their position, and, anticipating a day of complete rest on the 14th, had made no provision either for marching or battle. This fatal security had been increased by the opinion generally entertained at Hohenlohe's headquarters, that the bearer of the flag of truce who had appeared at their advanced posts on the preceding day, and had been forwarded with his despatches to the king, brought proposals of peace, and that nothing serious would be attempted till his answer was received. Their position was strong and admirably chosen : secure from attack on either flank, and approachable in front only by narrow and steep defiles, in which, if the heads of the enemy's columns were vigorously resisted and hindered from deploying, horse, foot, and cannon would be jammed up together, and the disaster of Hohenlinden might have been repaid with interest to the French army.

CHAP. XLIII.

1806.

But the departure of the king with nearly two-thirds of the army, and the total absence of any preparations for an attack on the part of those who remained, deprived them of the advantages which they might otherwise have gained from this position, and relieved Napoleon from a risk in the outset of the campaign, greater, perhaps, than he underwent even during the perilous changes which signalised its later stages.[1]

[1] Lucches. ii 154, 155. Saalf. iii. 305, 307. Personal observation.

43. Battle of Jena, 14th October.

Atlas, Plate 40.

Great was the astonishment of the Prussian outposts, when, through the gray mist of the morning, they beheld the French battalions close upon them, and advancing swiftly in the finest order to the attack. They made, however, a gallant resistance, and did their utmost to prevent the French, led by Suchet, from debouching from the defiles at the mouth of which they were stationed; but being altogether unprepared for the attack, and completely surprised, they were not long able to make good their post, and fell back, with the loss of twenty pieces of cannon, to the main body of the army. The ground thus gained by Suchet was of the utmost importance, for it enabled the heads of the French columns, after emerging from the defiles, to extend themselves to the right and left, and gain room for the successive corps as they came up to deploy. Roused by the first discharge of firearms in front, Prince Hohenlohe rode through the mist from his headquarters in the rear at Capellendorf towards the front; but, still confident that it would only prove a skirmish, he said to General Muffing, "that his troops should remain quiet in their camp till the fog had risen; and that, if circumstances demanded it, he would move forward the division of Grawert, as he did not wish the Saxons to combat at all that day." Soon, however, messengers arrived in breathless haste from the outposts with urgent demands for assistance, and Grawert was rapidly advanced towards Vierzehn-Heiligen to support Tauenzein, who there with difficulty held his ground against the impetuous attacks of Suchet. Meanwhile the

CHAP. XLIII.

1806.

whole army of the Prussians, alarmed by the sharp and incessant fire of musketry in their front, stood to their arms, and reinforcements were sent to the points in advance which were menaced: but in spite of all their exertions the enemy gained ground; the villages of Closwitz and Kospoda, at the foot of the eminence on which the lines of Hohenlohe were posted, were successively carried; and all the low grounds in front of his position were filled with troops. Still the mist was so thick as to be almost impenetrable; the contending bodies could not see each other till they were within a few yards' distance; and under cover of this veil, and in the midst of the confusion arising from an unexpected attack, the movements of the assailants were completed, the defiles passed, and the precious moments, when the heads of their columns might have been driven back into the gorges by a vigorous attack, as those of the Imperialists had been at Hohenlinden, for ever lost.[1]

[1] Lucches. ii. 154,156. Jom. ii. 286, 287. Dum. xvi. 94, 97.

44. Defensive measures of the Prussians.

At length at nine o'clock, the increasing rays of the sun dispersed the fog, and his light shone forth in unclouded brilliancy. Then, and not till then, the Prussians perceived the full magnitude of the danger. On every side they were beset by assailants, no longer struggling through steep and narrow gorges, but deployed, with all their cavalry and artillery, on the open expanse to which these led. Directly in their front, the whole corps of Lannes, having made itself master of the villages at the foot of the Prussian position, was preparing to ascend the slope on which the latter stood: immediately to the right, Ney, and beyond him Soult, had already cleared the defiles, and were drawn up in line or column on the open ground; while Augereau on the left was pressing forward to turn their flank; and the Imperial Guard, with Murat's cavalry, were stationed in reserve on the slopes of the Landgrafenberg. Above ninety thousand men had outflanked on either side, and were preparing to crush forty thousand, in a strong position,

indeed, but totally inadequate to so desperate an encounter. Surprised, but not panic-struck, the Prussians drew up their lines in admirable order in the form of an obtuse triangle, with the apex in front, to avoid the danger of being turned on their flanks ; and instructions were despatched to Ruchel, who, with the reserve, twenty thousand strong, was at a short distance on their right, to hasten his march to the scence of action. Before he could arrive, however, the battle had commenced : the preparatory movements were made on either side in the finest style — the French columns advancing, and the Prussian retiring to their chosen ground with all the precision of a field-day.[1]

[1] Dum. xvi. 97, 105. Jom. ii. 286. Saalf. iii. 306.

45. Commencement of the battle.

But though they stood their ground bravely, and received their assailants with a close and well-directed fire, the odds were too great to give any hopes of success. Ney, indeed, whose impetuous courage led him to begin the attack before his columns were properly supported, and who had, by a charge of cuirassiers, carried a battery of thirteen pieces on an eminence, which severely galled his soldiers, was for a few minutes in imminent danger. The Prussian cavalry broke the French horse, and enveloped the infantry in such numbers as would inevitably have proved fatal to less resolute troops; but the brave marshal instantly formed his men into squares, threw himself into one of them, and there maintained the combat by a rolling fire on all sides, till Napoleon, who saw his danger, sent several regiments of horse, under Bertrand, who disengaged him from his perilous situation. But on all other points the French obtained early and decisive success. Ney, extricated from his difficulties, with an intrepid step ascended the hill, and after a sharp conflict carried the important village of Vierzehn-Heiligen, in the centre of the Prussian position. In vain Hohenlohe formed the flower of his troops to regain the post; in vain these brave men advanced in parade order, and with unshrinking firmness, through a storm of musketry

CHAP. XLIII.

1806.

and grape; the troops of Lannes came up to Ney's support, and the French established themselves in such strength in the village as to render all subsequent attempts for its recapture abortive. Emboldened by this success, Ney next attacked the right of the Prussian line towards Isserstadt, which Augereau with the French left had already carried. A devouring fire ran along the whole right wing, and the French were for some time arrested by the intrepid resistance of their adversaries; but the odds were too great, and, despite of all their efforts, the Prussians were compelled to give ground in that quarter. But on the left of Vierzehn-Heiligen, they obtained some advantage: their numerous and magnificent cavalry made several successful charges on the French infantry, when advancing on the open ground beyond its enclosures; several cannon were taken, and Hohenlohe for a short time flattered himself with the hope of obtaining decisive success.[1]

[1] Dum. xvi. 97, 115. Jom. ii. 286, 287. Bign. v. 475,476. Saaif. iii. 306. Lucches. ii. 156.

46. The Prussians are defeated.

Matters were in this state when the approach of Ruchel with his corps, twenty thousand strong, to the field of battle from the right, confirmed the Prussian general in these flattering anticipations; and he despatched a pressing request to him to direct the bulk of his forces to the village of Vierzehn-Heiligen, already the theatre of such desperate strife.* Thither, accordingly, the brave Prussian directed his steps; but before he could arrive at the decisive point, matters had essentially changed for the worse, and he came up only in time to share and augment the general ruin. The lapse of time had now enabled the French to bring their immense superiority of force to bear upon the enemy at all points : Soult, by a heavy and well-directed fire, had driven the cavalry from

* At this crisis, Hohenlohe wrote to Ruchel—" It is highly gratifying to me bo hear at this moment that your Excellency has arrived to my support. Send all the force you can to the village of Vierzehn-Heiligen, the chief point of attack. You are a brave man and sincere friend. At this moment we beat the enemy at all points; my cavalry has captured some of his cannon."—DUM. XVi. 114.

the field on their left; while Lannes and Augereau, pressing them at once in front and flank on their right, had forced back the infantry above half a mile. Emerging from the tillages which had been the theatre of such obstinate conflict, the French forces advanced with loud shouts and in irresistible strength towards the Prussians, who, weakened and dispirited, and in some places almost mown down by the terrible fire of their adversaries, were now yielding on all sides. Up to this time, however, their retreat was conducted in the most orderly manner. Napoleon saw that the decisive moment had arrived, and from his station on the heights in the rear, sent orders to Murat with the whole cavalry to advance and complete the victory. This terrible mass was irresistible. Fifteen thousand horse, fresh, unwearied, in the finest array, animated by the shouts of triumph which they heard on all sides, bore down with loud cheers on the retiring lines of the Prussians. In an instant the change was visible. In vain their cavalry, so brilliant and effective in the early part of the day, strove to make head against the assailants, and cover the retreat of the infantry and cannon: their horses, wearied by eight hours of fighting or fatigue, were unable to withstand the fresh squadrons and ponderous cuirassiers of Murat, and by their overthrow contributed to the disorder of the foot-soldiers. After a gallant resistance, the lines were broken: horse, foot, and cannon pressed tumultuously together to the rear, closely followed by the bloody sabres of Murat. In the general confusion all order was lost: the infantry and cavalry were blent together, the guns and caissons abandoned to the victors.[1]

[1] Dum. xvi, 97, 120. **Bign.y.476.** Jom. ii. 287. Saalf. iii. 307, 308. Camp. de Saxe, i. 262,263.

In the midst of this appalling scene, the columns of Ruchel, still in battle array, emerged through the cloud of fugitives to stem the torrent.* It was a movement

* The rapid change for the worse in the prospects of the Prussians since **he first** approached the field, may be discerned in the altered tone of the next letter despatched to him by Prince Hohenlohe—"Lose not a moment in advancing with your as yet unbroken troops. 47. Arrival of Ruchei, who is *over*--whelmed.

extremely similar to the arrival of Desaix on the field of Marengo: but he had to meet Napoleon, not Melas. The fresh troops, though advancing in good order, and with an undaunted countenance, were speedily assailed on all sides: an ephemeral advantage gained by their cavalry was rapidly, in the disorder of success, turned into disaster: in front they were charged with the bayonet by the French grenadiers, in flank assailed by an endless succession of Murat's dragoons; the villages of Romstedt and Capellendorf were strewed with their dead; and Ruchei himself, while bravely animating his men, was wounded in the breast by a musket-ball, and carried off the field. After a terrible combat of an hour's duration, this powerful reserve, which in any other circumstances would have changed the fortune of the day, was broken, dispersed, and almost totally annihilated. It was no longer a battle, but a massacre. In frightful disorder the whole army rushed like an impetuous torrent from the field: but nearly the whole right wing was cut off by the rapidity of Soult's advance, and made prisoners. Almost all the artillery of the Prussians was taken, and the victors entered Weimar pell-mell with the fugitives, at the distance of six leagues from the field of battle. Behind that town, on the road to Auerstadt, Hohenlobe, at six o'clock, collected twenty squadrons, whose firm countenance till nightfall gave some respite to the wearied foot-soldiers, now dispersed through the fields in every direction; while Napoleon, according to his usual custom, rode over the bloody theatre of death, distributing prizes to those who had most distinguished themselves, and giving directions for the care and consolation of the wounded.[1]

[1] Dum. xvi. 120, 133. Bum. v. 475, 476. Lucches. ii. 157, 158. Hard. *ix.* 305, 306. Saalf. *Hi*, 307, 308.

While this terrible disaster was befalling the united sorps of Hohenlohe and Ruchei, the King of Prussia was combating under very different circumstances, but with

ngs there may pass the broken bands of the battle: be ready to receive the charges of the enemy's cavalry, which in the most furious manner rides on, presses and sabres the fugitives, and has driven into one confused mass the nfantry, cavalry, and artillery."—LUCCHESINI, ii. 157.

48. Preparatory movements which led to the battle of the King's army.

little better success, on the plateau of AUEBSTADT. Little expecting any engagement on the morrow, this fine army, commanded by the Duke of Brunswick in person, had bivouacked in close array around the village of that name: the Queen was only prevailed on by the most pressing entreaties to retire late in the evening, with a slender guard, to Weimar. Informed of the occupation of Naumburg by a considerable force, the Duke directed the division of Schmettau to occupy the heights of Koessen, and present themselves in battle array before the enemy, whom he supposed to be at the utmost a few thousand strong, while under their cover the remainder of the army leisurely continued its march towards the Elbe. These orders were obeyed; but Schmettau's division, contenting themselves with occupying the heights in the neighbourhood, neglected to send forward detachments to seize the defile of Koessen—an omission which was speedily taken advantage of by Davoust on the morning of the 14th, who, Oct. 14. advancing from Naumburg according to his directions, early seized upon this important pass. At six on that morning, the French marshal had received an order from Napoleon, dated three o'clock A.M., from his bivouac on the Landgrafenberg, in which he announced his intention to attack in a few hours the Prussian army, which he imagined to be concentrated in his front, and ordered Davoust to march without loss of time upon Apolda, in order to fall upon their rear, leaving him the choice of his route, provided he took a part in the action. The despatch added: "If the Prince of Pontecorvo (Bernadotte) is with you, you may march together; but the Emperor hopes that he will be already in the position assigned to him at Doraburg." Davoust instantly repaired to the headquarters of Bernadotte, who at that moment was in communication with his corps in the neighbourhood of Naumburg, and showed him this order, proposing that they should march together to Apolda;[1] but that officer, relying on the ambiguous expression in the

CHAP. XLIII. 1806.

despatch—which indicated that the Emperor "hoped he would be in the position assigned to him at Dornburg"—did not conceive himself entitled to deviate from his previous instructions, and set out with his whole corps in the direction of that town.

49. Battle of Auerstadt. Atlas, Plat© 41.

Left thus to his own resources, Marshal Davoust notwithstanding began his march in the direction which Napoleon had assigned. His forces were considerable, amounting to twenty-six thousand infantry and four thousand horse—a body perfectly adequate to its destined task of falling on the rear of the Prussian army, when defeated in front by Napoleon, but little calculated to withstand the shock of fifty thousand infantry and ten thousand cavalry, whom the King was leading in person to the encounter. The Prussians, on their side, were as little prepared for an action; and, deeming their march sufficiently secured by Schmettau's division on the heights of Koessen, were in open column and straggling, advancing on their march towards the Elbe, when suddenly, at eight o'clock, they were met on the plateau by the vanguard of Davoust, which had emerged from the long and steep ascent so well known to travellers who visit that memorable field, and was already drawn up in battle array on its summit. The thick mist which here, as at Jena, concealed the movements of the opposing armies, prevented the troops seeing each other till they were only a few yards distant; and both parties deeming their adversaries only an inconsiderable detachment, fell back to collect forces to clear their advance,—the Prussians, to drive the enemy back again down the defile, and secure the flank of the army from insult; the French, to clear their front, and pursue their route to Apolda.[1]

[1] Jom. ii. 290,291. Dam. xvi. 139, 147. Bign.v.480, 481. Saalf. iii. 306. Personal observation.

50. Additional forces come up on both sides.

Speedily reinforced, both sides returned to the charge. Davoust supported the advanced guard by the whole division of Gudin, with instructions to maintain themselves to the last extremity on the level space at the upper end

of the defile, in order to gain time for the remainder of the corps to debouch; while the King of Prussia, impatient at the check given to the march of his army, ordered Blucher, with two thousand five hundred hussars, to ride over the Sonnenberg and clear the plateau of the enemy. Little anticipating the formidable resistance which awaited them, the Prussian cavalry were thrown into disorder by the close and steady fire of the French infantry, which speedily formed themselves into squares. Their cavalry were, indeed, overthrown by the overwhelming numbers of the Prussian horse; but all the efforts of that gallant body, even when guided by the impetuosity of Blucher, were shattered against the compact mass of Gudin's infantry, and the terrible discharges of grape which issued from his artillery. Surprised at the obstinacy of the resistance, the King, adopting the opinion of Marshal Moellendorf, who insisted that it was only a detached column which occasioned the delay, and disregarding the advice of the Duke of Brunswick, who strongly counselled a general halt, and formation of the army in order of battle, till the mist cleared away and the enemy's force could be ascertained, continued the attack by means merely of successive divisions as they came up to the ground. The divisions of Wartensleben and the Prince of Orange were ordered to pass the defile of Auerstadt, where the road runs through a winding hollow skirted with copse-wood or rough slopes, and advance to the support of the discomfited cavalry. The former, who first emerged from the defile, was directed to assail the flank of Gudin's division, which had advanced on the plateau beyond the village of Hassenhausen. At this moment the mist was dissipated, and the sun shone in full brilliancy on the splendid squadrons and regular lines of the Prussians.[1]

[1] Jom. ii. 292, 293. Saalf. iii. 306. Dum. xvi. 139. 150.

The Duke of Brunswick put himself at the head of the infantry, and led them gallantly to the attack, while Schmettau and Blucher pressed them with their respec-

CHAP. XLIII. 1806.

tive divisions of foot and horse on the opposite flanks. But the brave troops of Gudin, forming themselves into squares, resisted all the charges with unconquerable resolution; and the nature of the ground, which permitted the successive divisions to come up to the support of either side only by degrees, the one by the long and winding defile of Auerstadt, the other up the steep ascent of Koessen, rendered it impossible for the Prussians to bring all their overwhelming force to bear at once upon the enemy. The conflict, therefore, was more equal than might have been imagined, and most severe. The French troops, stationed behind the hedges, enclosures, and garden-walls of Hassenhausen, kept up an uninterrupted and murderous fire upon the enemy. The Duke of Brunswick was mortally wounded by a ball in the breast while leading on a charge. Schmettau experienced the same fate. Wartensleben had his horse shot under him; and the Prussians, discouraged by the loss of their leaders, wavered in the attack, which, being made in line, and not in column, was not pressed with the requisite vigour. Still the terrible discharge of artillery and fire-arms continued. Gudin's division had lost nearly half its numbers, and it was evident they could not long maintain their ground against their redoubtable and hourly increasing adversaries.[1]

51. Desperate conflict which ensued at the summit.

[1] Jom. ii. 292, 293. Dum. xvi. 139,156. Bign.v.482. Saalf. iii. 306.

From this peril, however, they were at length relieved by the arrival of the other divisions of Davoust's army, Morand was the first who got up the defile. His troops, as they successively arrived on the summit, drew up on the left of Gudin, towards the Sonnenberg; and shortly after Friant, with his division, debouched upon the right, and extended to the foot of the Speilberg. The combat was now equal, or rather the advantage was on the side of the French, for their three divisions were superior in strength to those of Schmettau, the Prince of Orange, and Wartensleben, to which they were opposed. Prince William of Prussia, at the head of a powerful body of

52. Arrival of other divisions on the field. Progress of the battle.

cavalry, which had surmounted the Sonnenberg and arrived on the French left, furiously assailed Morand's division immediately after it formed; but these veteran troops, with admirable coolness, threw themselves into squares, and with rapid discharges received the repeated and impetuous attacks of the Prussian horse. In vain these gallant cavaliers, with headlong fury, drove their steeds up to the very muzzles of the French muskets. In vain they rode round and enveloped their squares : ceaseless was the rolling fire which issued from those flaming walls; impenetrable the hedge of bayonets which the front rank, kneeling, presented to their advances. The heroic devotion of Prince William in vain led them again and again to the charge; still the fire continued, still the bayonets remained firm. At length he himself was wounded, half his followers were stretched on the field, and the remainder sought refuge in disorder, partly on the heights of the Sonnenberg, partly in the enclosures of Neu Zulza.[1]

[1] .Tom. ii. 192, 193. Dum. xvi. 156, 161. Bign.v.483. Saalf. iii. 506.

53. Desperate struggle around the Sonnenberg on the Prussian right.

While this desperate conflict was going on on the left of Hassenhausen, the division of Friant had debouched from the defile, extended itself on the ground to its right, and chased the enemy who assailed it back to the village and heights of Speilberg, which were speedily carried. The left of the Prussians was thus threatened; but it was not there that the principal danger lay. The progress of Morand on their right was much more alarming. On that side, not content with repulsing the furious attacks directed against them, the French had now assumed the offensive, and were rapidly pressing forward to the heights of Sonnenberg, from whence their guns would command the whole field of battle, and render untenable the position of the Prussian reserves, which had hitherto taken no part in the action. Sensible that the battle was irrecoverably lost if these important heights fell into the hands of the enemy, the King put himself at the head of a chosen body of troops, and bravely led them to the

CHAP. XLIII. 1806.

charge. But if the attack was gallant, the defence was not less obstinate: Morand himself was to be seen at the head of his regiments, and for some minutes the balance quivered. Insensibly, however, the French gained ground, and at length their artillery, dragged up to the summit of the heights, was placed in battery, and opened such a tremendous fire of grape and cannister upon the enemy's columns, as completed their discomfiture in that quarter; and with the blood-stained Sonnenberg and the village of Rehausen, the whole left of the field of battle fell into the hands of the invaders.[1]

[1] Dum. xvi 161, 164. Bigu.v. 483, 484. Jom. ii. 294. Lucches. ii. 146,147.

The experienced eye of Marshal Davoust now told him that the moment for striking the decisive blow had arrived. The heights at Eckartsberg commanded the line of the enemy's retreat, as those of Sonnenberg did the field of battle : by moving forward his centre and seizing that important point, their defeat would be rendered complete, and all possibility of their rallying prevented. Thither, accordingly, Gudin's division advanced, driving before them the broken remains of Schmettau's and Wartensleben's divisions, which had lost nearly half their numbers during the sanguinary strife in which they had been engaged. But the Prussians made one effort more to regain the day. Their broken battalions, which had retired from the field, were rallied under cover of the powerful reserve commanded by Kalkreuth, who assumed the direction upon Moellendorf being wounded: this consisted of two divisions which had hitherto taken no part in the action, and were placed in front; while the whole cavalry, re-formed under Blucher's orders, was posted in a second line immediately behind the infantry, to take advantage of any hesitation which might appear in the enemy's columns. Wearied by a morning's march and four hours[1] hard fighting, the French soldiers had now to withstand the shock of fifteen thousand fresh troops, to whom they had no corresponding reserve to oppose. Had the quality of the troops on the opposite sides been equal, this power-

ful addition to the enemy's forces, at snch a moment, must have proved decisive : but nevertheless they were totally defeated; and this last success put the keystone to the arch of Marshal Davoust's fame. Though strongly posted on an eminence, and protected by the fire of a powerful battery, they were charged with such intrepidity by Gudin's division, supported by a part of Friant's, that they were driven from their position with the loss of twenty pieces of cannon. At the same time, Morand repulsed an attack against the troops which he had stationed on the heights of Sonnenberg : the artillery, from that commanding position, carried death through all the ranks of the enemy; and at length his gallant forces descended from the eminence, and, carrying all before them, drove the reserves opposed to their advance through the defile of Auerstadt. Thither Blucher's cavalry followed the retreating columns : the Guards still kept their ranks, and retired in good order in open square, and by their firm countenance enabled the broken infantry to rally at a distance from the field of battle, where Davoust reposed amidst his heroic followers.[1]

[1] Dum. xvi. 164, 171. Jom.ii.294. Lucches. ii. 146,148. Bign. v. 485, 486.

55. **Disastrous retreat of the Prussians during the night fiom both fields of battle.**

The King of Prussia, who, during this disastrous day, had manifested the most signal coolness and intrepidity, and, during the repeated charges which he made at the head of his troops, had lost two horses killed under him, gave directions for the army to retreat in the direction of Weimar, intending to fall back on the corps of Prince Hohenlohe, of whose disaster he was still ignorant. But as the troops, in extreme dejection, and with little order, were following the great road which leads to that place, they were suddenly startled in the twilight by the sight of an extensive line of bivouac fires on the heights of Apolda. These lights were made by the corps of Bernadotte, who, adhering to his original instructions to march to Dornburg, had arrived in this position, after passing that town, late in the evening, and, ignorant of the com

CHAP. XLIII.

1806.

bats which had taken place, was preparing to fall on the rear of the Prussian army on the following day. His too strict adherence to the letter of the orders he had received deprived him of the glory of sharing in either battle, endangered Daroust's corps, and had wellnigh cost him his own life, from the indignation of the Emperor: but, nevertheless, this sudden apparition of a fresh corps of unknown strength upon the flank of their line of retreat at that untimely hour, compelled the Prussians to change their direction and abandon the great road.[1] *

[1] Dum. xvi. 171,177. Jom.ii.295, 297. Hard, ix. 306,307. Saalf. iii. 307.

56. **Meeting of the two discomfited armies in their flight.**

About the same time, obscure rumours began to circulate through the rauks of a disaster experienced on the same day at Jena; and soon the appearance of fugitives from Hohenlohe's and Ruchel's corps, flying in the utmost haste across the line which the troops retiring with the King were following, announced but too certainly the magnitude of the defeat sustained in that quarter. A general consternation now seized the men—despair took possession of the firmest hearts, as the cross-tide of the battalions flying from Jena mingled in increasing numbers with the wreck which had survived the fight of Auerstadt The confusion became inextricable, the panic universal. Infantry, cavalry, and artillery disbanded, and, leaving their guns, horses, and ammunition waggons, fled in mingled disorder across the fields, without either direction, command, or rallying point.[2] The King himself

[2] Dum. xvi. 171, 178. Jom. ii. 295, 298. Bign. v. 486, 487. Hard. ix. 307. Lucches. ii 148.

* Napoleon's anger at Bernadotte, on account of his not supporting Pavoust, and taking a share in the battle of Auerstadt, knew no bounds. " If I should send him to a council of war," said he, " nothing could save him from being shot. I will not speak to him on the subject; but I will let him see what I think of his conduct. He has too much honour not to be aware himself that he has committed a disgraceful action." In truth, however, Napoleon had no sufficient grounds for this ebullition. If Bernadotte did not take a part in the action, it was because his own latest instructions expressed a hope that he should go to Dornbuig rather than march toward Auerstadt with Davoust. Had he violated these instructions, and, in consequence, the Prussian army had escaped by Dornburg, its natural and most probable line of retreat, what defence could Bernadotte have offered for his conduct] "I was piqued," said that marshal, "to be addressed in the language of authority by Davoust; but I did my duty. Let the Emperor accuse me if he pleases, I will answer him. I am a Gascon, but he is still more so."—BOTJRRIENNE, Vii. 161, 162.

narrowly escaped being made prisoner during the tumult and horrors of the night; and it was not till five in the morning that, by a long circuit, he arrived at Sommerda, where he received the official news of the melancholy disaster at Jena, accompanied by the letter, offering an accommodation, so insidiously despatched by Napoleon the day before that great victory.

57. Loss on both sides in these actions.

Such were the astonishing battles of Jena and Auerstadt, which, in a single day, prostrated the strength of the Prussian monarchy; and did that in a few hours which the combined might of Austria, Russia, and France, in the Seven Years' War, had been unable to effect. The subsequent disasters of the campaign were but the completion of this great calamity—the decisive strokes were given on the banks of the Saale. The loss of the Prussians was prodigious: in the two fields there fell nearly twenty thousand killed and wounded, besides nearly as many prisoners; and two hundred pieces of cannon, with twenty-five standards, were taken. Ten thousand of the killed and wounded fell at Auerstadt—an honourable proof that, if infatuation led them into the field, valour inspired them when there. Nor was that victory bloodless to the conquerors: their total loss was fourteen thousand men; of whom seven thousand five hundred belonged to Davoust's corps—a striking indication of the dauntless intrepidity with which they had fought.[1] Napoleon,* with

[1] Dum. xvi. 177. Camp, de Saxe, i. 265. Dum. xvi. 180.

*** Napoleon's official account of the battle of Jena, in the fourth bulletin of the campaign, is characterised by that extraordinary intermixture of truth and falsehood, and that unfailing jealousy of any general who appeared to interfere with his reputation, which in one who could so well afford to be generous in that particular, is a meanness in an especial manner reprehensible. Davoust was the real hero of the day, since, with thirty thousand men, he had defeated the King of Prussia in person, at the head of sixty thousand. His own achievement in overthrowing forty thousand, or, including Ruchel, sixty thousand, with ninety thousand veteran troops, including the whole cavalry of Murat, is nothing in comparison. Nevertheless, he represents the action as all fought in one field; speaks of the enemy, eighty thousand strong, as being commanded by the King and the Duke of Brunswick in person, and after dilating fully on his own achievements, dismisses the wonderful exploits of Davoust in the following words :–" On our right, the corps of Marshal Davoust performed prodigies. Not only did he keep in check, but maintained a running fight for three leagues, with the bulk of the enemy's troops, who were seeking**

CHAP. XLIII. 1806.

his usual disregard of truth, called his whole loss in both battles four thousand, little more than a fourth part of its real amount.*

58. Unparalleled disasters of the retreat.

Great as were these results, however, they were but a part of the effects which ultimately flowed from these memorable battles. The disasters consequent on the retreat of the Prussians exceeded anything hitherto recorded in modern history, and were* equalled only by the still greater calamities which followed the flight from Waterloo. No provision had been made for such a contingency ; no rallying point assigned, no line of march prescribed, no magazines collected. The extraordinary circumstance of the four principal generals of the army —the Duke of Brunswick, Marshal Moellendorf, General Schmettau, and General Ruchel—being killed or disabled by wounds, left the confused mass of fugitives without a head. The unparalleled calamity of the survivors from two different defeats, experienced on the same day, crossing each other, and becoming intermingled during the horrors of a nocturnal retreat, rendered it impossible for them to know whose orders were to be obeyed. Thus, when morning dawned on the scene of ruin, the soldiers from the three armies of Ruchel, Hohenlohe, and the Duke of Brunswick, collected, as chance threw them together, in disorderly groups, and inspired only with a common panic, fled in different directions, as accident or intelligence guided their steps. Vast numbers of stragglers wandered at large through the fields, or hurried with so little knowledge of the country, from the scene of

to debouch on the side of Koessen. That marshal has displayed alike the distinguished bravery and firmness of character which are the first qualities of a warrior. He was seconded by Generals Gudin, Friant, Morand, Daultanne, chief of the staff, and by the rare intrepidity of his brave corps." Who could imagine that it was the glorious battle of Auerstadt which was here narrated1 The injustice to Davoust is so manifest that it is admitted even by the eulogists of Napoleon.—See BIGNON, V. **487, 488; and *Fourth Bulletin,* 1806, in *Camp, de la Saxe, i.* 265.**

*** Davoust's loss at Auerstadt was 270 officers and 7200 privates, killed and wounded. Of these 134 officers and 3500 privates belonged to Gudin's division of 7000 men: in other words, more than a half of that band of heroes had**

danger, that, instead of avoiding, they rushed headlong into the jaws of the enemy. It is in the extraordinary confusion arising from this disastrous retreat, and the terror which seized the minds of both officers and men at finding themselves thus huddled together with soldiers to whom they were perfect strangers, that the true cause of the unparalleled disasters which followed the battle of Jena is to be found.[1]

[1] Dum. 178, 182. Bign. vi. 3, 5. Jom. ii. 297. Hard. is. 307.

59. Capture of Erfurth with 14,000 men. Oct. 15.

Atlas. Plate 39.

The effect of the general consternation which prevailed speedily appeared in the fate which befell the fragments of the mighty army. Six thousand fugitives, almost without leaders, had taken refuge, the day after the battle, in Erfurth, whose embattled walls and almost inaccessible citadels promised the means of at least a temporary defence. It contained also the grand park and reserve artillery stores of the army, with the greater part of its camp equipage. Thither also the Prince of Orange, Marshal Moellendorf, and a great number of the wounded of distinction, besides seven thousand private soldiers, also wounded, had been conveyed. Such, however, was the terror of the governor at finding himself thus suddenly overwhelmed by a mass of wounded and stragglers, incapable of aiding in the defence, but who would speedily consume his slender stock of provisions, that he thought the best thing he could do was to negotiate a capitulation, on condition that the officers should retire on their parole into Prussia, and the private men remain prisoners of war.[2] On these terms the place surrendered, and with it fourteen thousand men, including

[2] Dura. xvi. 200,202. Jom. ii. 298. Lucches. ii. 159.

fallen. This was the bravest action fought by the French troops during the whole contest: but the valour both of the corps and the division was inferior to that displayed by the English in more than one action of the Peninsular war, if the number of killed and wounded, a fair test with armies both of which have been victorious, is taken as a criterion. At Talavera, out of 19,500 English soldiers, 5000 were killed and wounded; nearly the same proportion as fell of the victors at Auerstadt: but at Albuera, out of 7000 English troops, only 1500 were unwounded at the close of the fight; and 8481 red-coats fell at Waterloo, out of a force of native English not exceeding 29,000 men.—See DUMAS, **xvi. 177;** NAPIER'S ***Peninsular War,*** **iii. 541; and** WELLINGTON'S ***Official Account of the Battle of Waterloo, Ann. Reg.*** **1815, *App. to Chron.***

CHAP. XLIII. 1806.

the *dying* Marshal Moellendorf and the Prince of Orange; a hundred and twenty pieces of cannon, and immense military stores, fell into the hands of the enemy.

60. The King of Prussia gives the command to Hohenlohe, and retires to Magdeburg.

Hohenlohe, who had retired, covering the retreat of the fugitives beyond Weimar with a considerable body of cavalry, in good order, at nightfall on the 14th found himself so completely overwhelmed by the crowd of stragglers who attached themselves during the night to his squadrons, that by degrees his array melted away; and it was only by making frequent circuits, and repeatedly crossing the fields, that he was enabled to reach Dernstedt at seven on the following morning, at the head of sixty horsemen. On the day following, the King, who had arrived at Sondershausen, accompanied only by his aides-de-camp, conferred the command of all the troops which had combated at Jena and Auerstadt upon Prince Hohenlohe, with the exception of the two divisions under the orders of Kalkreuth, the reserve at the latter battle, which it was thought would still be in some sort of order; but in the general confusion this corps had dispersed like the rest, and there remained only eight battalions around his standard. Magdeburg was assigned as the rallying point to the army, within the almost impregnable walls of which fortress it was hoped the wreck of its once mighty array could be reorganised, and a defensive struggle maintained till the arrival of the Russians from the Vistula, and of the reinforcements which were collecting in the interior of the kingdom. Thither accordingly the King repaired, attended only by a few horsemen, to make preparations for the reception of the army; and there he was quitted by the British envoy, Lord Morpeth, who, seeing no chance of diplomatic concerns being attended to amidst the general confusion, returned to London to render an account to his bewildered cabinet of the extraordinary events which he had witnessed in the outset of his mission.[1]

Oct. 16.

[1] Dum. xvi. 184,192. Bign. vi 7, 8. Hard. ix. 307.

But if there was any one thing more than another in

61. Measures of Napoleon to follow up the victory.

which the genius of Napoleon shone prominent, it was in the vigour and ability with which he followed up a beaten enemy. The present was not an opportunity to be lost of displaying this essential quality of a great general. Without an instant's delay, therefore, he prepared to pursue the extraordinary advantages he had gained. From all parts of Germany his forces had been assembled to one point, in order to strike the decisive blow. That done, the next object was to disperse them like a fan over the conquered territory, to carry everywhere the impression of their victory, and the terrors of their arms. On the night after the battle, Napoleon, instead of retiring to rest, sat up dictating orders to all the corps of his army for the directions they were to follow in pursuing the enemy. On the extreme right, Bernadotte, whose numerous corps was still untouched, received orders to advance from Apolda to Neustadt, to cut off the line of retreat from Weimar to Naumburg, and so shut out the army from the great road to Magdeburg. Davoust was to return to Naumburg to hold that important post, and keep himself in readiness to debouch on the Elbe before the enemy could arrive there; Soult was to move on Buttelstadt, the point in rear of the fields of battle, where the greatest number of fugitives had assembled; Murat and Ney to march direct upon Erfurth, and reduce that important place: while Lannes and Augereau were directed to take a position in advance of Weimar; and the Imperial Guard and Napoleon's headquarters were transferred to that town. The general object of Napoleon in these movements was, that while the corps of Soult, Murat, and Ney, pursued the broken remains of the Prussian army to Magdeburg, those of Bernadotte, Lannes, Davoust, Augereau, and the Guard, under his immediate orders, should cross the Elbe at Barby, Dessau, and Wittenberg, and, moving upon Berlin and Spandau, intercept the line of retreat of the Prussians to Stettin and the Oder.[1] This was the more easy, as

[1] See the orden in Dum. xvi. 192,193.

CHAP. XLIII.

1806.

62. Soult defeat Kalkreuih.

the French held the chord of the arc along which the Prussians had to move.

Soult was the first who came up with the enemy. At Greussen his cavalry reached the retiring squadrons of Kalkreuth's division, which alone preserved any semblance of an army. That general proposed a suspension of arms, in order to gain time, declaring that he knew an armistice had been concluded, and for the purpose of arranging its conditions repaired to the advanced posts in order to a conference with the French general. The terms, as might be expected, could not be agreed ou. The statement was made in perfect good faith, under the impression founded on the letter from Napoleon offering an accommodation, written the day before, but not received till the night after the battle ; and it gave the Prussian commander leisure to cause a considerable part of his forces

Oct. 15. to defile in safety to the rear. Enraged at finding himself thus overreached, Soult, the moment the conferences were broken off, attacked the Prussian rearguard posted in front of Greussen, which, after a short resistance, was cut to pieces, and the victors entered that town pell-mell with the vanquished. Following up his success, the French marshal, early the following morning, resumed the pur-

Oct 16. suit, and came up with the enemy at Nordhausen, where they were again defeated with the loss of twenty pieces of cannon, and three thousand men. Unable, from want of provisions, to keep his men together, and having no other means of escape to any part of his forces, the Prussian general divided his troops into two bodies, with instructions to follow different routes to Magdeburg. An almost total dispersion immediately followed this order. The stragglers came into that fortress by companies, squadrons, and groups of single men in hardly any array ; and thus was the disorganisation of the only divisions of the array which still preserved their ranks rendered complete within three days after the battle.[1] Collecting prisoners at every step, Soult continued rapidly to advance, and on the 21st

[1] Dum. xvi. 191,200. Jom.ii.299. Norv.ii.465, 466. Lucche8.ii. 161. Oct. 21.

his vanguard reached the Elbe, and planted their victorious standards around the walls of Magdeburg.

A more important action awaited the arms of Bernadotte. This able chief, whose too literal adherence to the letter of his instructions had deprived him of his share of the laurels of Auerstadt, was burning with anxiety to achieve some exploit worthy of the deeds of his comrades and his own renown, when fortune threw the wished-for opportunity in his way. Prince Eugene of Wiirtemberg, who commanded the Prussian reserve, fourteen thousand strong, stunned by the intelligence of the disasters of the army at Jena, was preparing to make the best of his way back to Magdeburg and the Elbe, when he was beset on all sides at Halle by the corps of Bernadotte. The Prussians who were brought into action had not shared in the preceding defeats: notwithstanding the great superiority of force on the part of the French, they made a brave resistance ; and there might be seen what elements of success existed in their army had they been opposed by less, or guided by greater ability. Assailed with the utmost impetuosity by the vanguard of the French, under Dupont, at Passendorf, they were driven in haste back to the islands in the Saale, over which the road passes : but in that defile they stood firm, and, supported by a cloud of light troops who lined the dikes on either hand along the margin of the stream, long withstood their assailants, and debarred all access to the gates. After an obstinate resistance, however, a column of grenadiers, headed by Dupont himself, rushed across the bridges, carried the guns which enfiladed them ; and, rapidly pursuing their success, pushed on and made themselves masters of the town.[1]

63. **Prince** Eugene **of** Wiirtemberg is defeated by Bernadotte **at** Halle. Oct. 17.

[1] Saalf. iii. 307, 308. Jom. ii. 300, 301. Dum. xvi. 214, 223.

The Prussians had now no alternative to gain time for the retreat of their main body to Magdeburg, but to prevent as long as possible the French troops from debouching from the gates on its opposite side: and the gallant efforts of the Duke of Wiirtemberg long delayed them at that

64. **Desperate action which ensued on his retreat,**

CHAP. XLIII. 1806.

important point; but at length the increasing numbers of the French, and the murderous fire of the artillery which they brought up and planted on the ramparts, drove the Prussians from their strongholds in the gardens and walls of the suburbs, and enabled the columns to issue from the gates. Charged while retreating in open square along the level plain, the Prussians, during a running fight of four leagues, sustained severe loss from the enemy, and lost nearly their whole artillery. Still they combated with heroic resolution, and yet kept their ranks, when the pursuit ceased on the approach of night. Then the combat terminated on the right bank of the river; but on the left bank a greater disaster awaited the Allied arms. Three thousand Prussians had broken up from their quarters near Magdeburg, in order to join the main body of the reserve at Halle, and, ignorant of the occupation of that town by the French, fell into the midst of such superior forces that they were almost all either killed or made prisoners. Honourable as this affair was to the Prussians, it augmented in an alarming degree the dangers of the army by dissipating its last regular corps : four thousand prisoners and thirty pieces of cannon remained in the hands of the victors, whose loss did not exceed twelve hundred men; while the broken remains of the vanquished crossed the Elbe at Dessau in such haste, that they were unable completely to burn the bridge behind them, which was speedily restored by the French, who established themselves in force on the right bank, and drew their posts round Magdeburg.[1]

65. Saxony is overrun by the French. Oct. 18.

Meanwhile the other corps of the army continued their triumphant progress, with hardly any opposition, through Saxony. Four days after the battle of Auerstadt, Marshal Davoust took possession of Leipsic : strange coincidence, that the French army should for the first time enter that city on the very day on which, seven years afterwards, they were there to experience so terrible an overthrow ![2] Napoleon gave testimony of the rigorous warfare which he

[2] On Oct. 18, 1813.

CHAP. XLIII.

1806.

was about to commence against English commerce, by there issuing an edict of extraordinary severity against British merchandise. * Rapidly following up his success, Davoust, two days afterwards, reached Wittenberg, at the very time that the retiring Prussians were preparing to blow up its great bridge over the Elbe ; the French grenadiers rushed so rapidly over it, that the enemy had not time to set fire to the train, and thus that important passage was secured. On the same day, Lannes made himself master of the passage at Dessau. Thither Napoleon followed with his Guards three days afterwards; and, regarding the capture of Berlin as certain and a secondary object, he already began to give directions for the march of his troops from the Elbe to the Oder. Davoust's corps was pushed on towards that capital—Napoleon having permitted, as a reward for his transcendant heroism at Auerstadt, that his corps should be the first to enter the capital of the fallen monarch.[1]†

66. Investment of Magdeburg, which is abandoned by Hohenlohe. Oct. 22.

Such was the rapidity of the French advance, that they arrived round Magdeburg before a large portion of the broken Prussians had taken refuge within its walls. Napoleon saw clearly the importance of accumulating as large a number as possible of the enemy in a situation where it was evident they would ere long become his prisoners, and therefore he gave orders to leave the entrance to the place open, and dispersed his cavalry in

* " Your city," said Napoleon, " is known throughout Europe as the principal depot of English merchandise, and on that account the enemy most dangerous to France. The Emperor and King commands—1. Within four-and-twenty hours immediately following this notification, every banker, merchant or manufacturer, having in his possession any funds *the produce of English manufactures,* whether they belong to a British subject *or the foreign consignee,* shall declare their amount in a register appointed for that special purpose. 2. As soon as these returns are authentically received, domiciliary visits shall be made to all, whether they have declared or not, to compare the registers with the stock in hand to ascertain its exactness, and punish by military execution any attempt at fraud or concealment." Well may the honest Genera] Mathieu Dumas exclaim, " What a deplorable abuse of victory 1"—DUMAS, xvi 225.

† Bernadotte was unavoidably detained a day longer than he was ordered in marching to the Elbe, and in consequence did not cross that river till the 23d

CHAP. XLIII. 1806.

all directions to drive the stragglers into that devoted fortress.* Murat's horsemen, in consequence, inundated the adjacent plains; and the garrison of the town, ill provided with subsistence, already began to feel the pangs of hunger from the multitude of useless soldiers who were driven to its shelter. Summoned to surrender by Marshal Soult, the governor replied, that he hoped to gain the esteem of the besiegers by an honourable defence; but the confusion of the garrison, and the evident discouragement of the multitudes of insulated men who thronged round the gates, rendered it more than probable that his resistance could not be prolonged for a very long period. Hohenlohe, despairing of preventing the investment of the place with so disorganised a wreck as was collected within its walls, and aware that the want of provisions would soon compel its surrender, resolved to depart with all the forces which still maintained the appearance of order, and make for the great line of fortresses on the Oder; but such was the universal confusion which prevailed, that he could only collect fifty battalions and a hundred and sixty squadrons in a state to keep the field. With these he departed on the day following, leaving fifty skeleton battalions, hardly containing, in all twelve thousand combatants, within the walls.[1]

[1] Bign. vi. 10,11. Dum. 223,237. Jom. ii. 304, 308.

Upon leaving Magdeburg, Hohenlohe, abandoning Berlin to its fate, made for Stettin, situated near the mouth of

and 24th, instead of the 21st and 22d, before which time the corps of the Duke of Wurtemberg had defiled through Magdeburg, and was in full march for the Oder. This escape of a considerable part of the best organised corps of the Prussians excited to the highest degree the indignation of Napoleon, who took occasion bitterly to reproach him with this delay, as well as with his conduct in not marching with Davoust to Auerstadt. Already were to be seen the germs of that mutual discontent which, seven years afterwards, on those very plains, brought Bernadotte in arms against the French Emperor on the field of Leipsic. —BIGNON, vi. 9; DUMAS, xvi. 230.

*** " Magdeburg," said Napoleon, " is a net where all the isolated men who have wandered about since the battle may be taken. We must, therefore, invert our manoeuvres, and beat all the country for fifteen leagues around: we shall thus collect numbers of prisoners, and also gain accounts of the direction taken by the strong columns of the enemy, of whose route we have as yet no certain intelligence."—DUMAS, xvi. 232.**

CHAP. XLIII.

1806.

the Oder, by the route of Spandau. But when he drew near to the latter place, he received intelligence that on that very day it had capitulated to the first summons of the advanced posts of the cavalry under Murat, and that Davoust on the same day was to make his entrance into the capital. Driven thus to a circuit to avoid the captured towns, he moved by Gransee and Zeydenick, in order to reach before the enemy, if possible, the defile of Locknitz, near Stettin, which would have secured his retreat to that important fortress. Aware of the importance of anticipating the Prussian general in these movements, Napoleon sent Murat forward with the cavalry, to get before him to the defile, while Lannes advanced as rapidly as possible in pursuit of his steps with his indefatigable infantry. By forced marches, Murat got the start even of the horsemen who formed the advanced-guard of Hohenlohe's corps; and on leaving Zeydenick, the point where the road from Spandau and Berlin falls in with that from Magdeburg to Stettin, they were assailed by that active officer himself, at the head of Lasalle's dragoons. Confounded at being thus anticipated in a quarter where they expected a leisurely retreat, the Prussian horse made but a feeble resistance. Even the renowned regiment of the Queen's dragoons was repulsed after a short effort, surrounded, and almost cut to pieces; and the Prussian cavalry were compelled to fall back on Templin, while their main body had to renounce all hope of pursuing the direct road to Stettin. Driven thus from his line of retreat, and his right flank being exposed to the attack of Marshal Lannes, Hohenlohe, after waiting at Gransee three hours in the vain hope of being joined by Blucher, who had retreated to the same quarter, changed his direction, and moved upon Boitzenberg, where he arrived on the 27th, hoping to reach Stettin by this circuitous route of Prentzlow; but in attempting to do so, the unhappy prince found himself again beset by his indefatigable pursuers.[1]

67. Who is pursued and assailed.

CHAP. XLIII.

1806.

68. Is utterly-defeated at Prentzlow. Oct. 28.

No sooner was Murat informed of his change of direction, than he marched across the country all night, from the one road to the other, again got before him, and assailed the Prussian horse at once in front and flank with his terrible dragoons, on the following morning, as they were continuing their march two leagues beyond Prentzlow. To troops wearied by incessant marching for a fortnight together, and discouraged by such a succession of disasters, the shock of his victorious squadrons was irresistible: the Prussian cavalry were speedily broken, and fell back in disorder to the suburbs of Prentzlow, already encumbered with infantry and artillery. To complete their misfortunes, Marshal Lannes appeared at this critical moment on their right flank, having, with indefatigable perseverance, marched all night from Templin on the direct road. Murat now summoned Hohenlohe to surrender, which the latter refused, and brought up a powerful battery of cannon to answer the fire of the French artillery, which was severely galling his troops as they attempted to debouch from the town. This battery was immediately attacked and carried, and a regiment of infantry and cavalry which advanced to support it broken and made prisoners. Prince Augustus of Prussia, at the head of his regiment, which was still two leagues in the rear of Prentzlow, was surrounded, and after heroically resisting the repeated charges of the French cuirassiers, during a march in hollow square of four miles, was at length made prisoner, with almost all his men, while bravely resisting to the last.[1]

[1] Dum. xvi. 285, 290. Jom.ii.308, 310. Hard. ix. 312.

69. And compelled to surrender. Profound grief of the Prussian troops.

Overwhelmed by such a multitude of calamities, and seeing no chance of escape, while every hour increased the forces against him by permitting the formidable battalions of Lannes to arrive on his rear and flank, Prince Hohenlohe, after several unsuccessful attempts to obtain a capitulation, was obliged to lay down his arms, on condition that the officers should be dismissed on their parole. With him were taken fourteen thousand

men, including the flower of the Prussian army; the Guards, six chosen regiments of cavalry, forty standards, and fifty pieces of field-artillery. Notwithstanding the many defeats and disastrous circumstances which had occurred, this grievous surrender did not take place without the most profound grief on the part of the Prussian troops. The officers retired from the circle where it had been agreed to in stern silence, or shedding tears ; many of them fiercely and indignantly accused their commanders of treachery, and invited their comrades to cut their way through the enemy, sword in hand. The private soldiers, by loud sobs and lamentations, gave vent to their grief, and, flinging their muskets on the ground, slowly and mournfully pursued their way into the town ; while a loud flourish of trumpets, the quick rattle of drums, and the triumphant shouts of the soldiers, announced the successive arrival of the French regiments at the scene of their triumph.[1]

[1] Dum. xvi. 275, 299. Jom.ii. 308, 312. Bign. vi. *19*, 21. Saalf. iii. 309, 310. Hard. ix. 313.

70. March and escape of he Duke of Saxe-Weimar.

Meanwhile another Prussian column—consisting of six regiments of cavalry, four of infantry, and eight pieces of artillery, which, avoiding Prentzlow, was moving upon Passewalck—was overtaken by Milhaud's light cavalry, and surrendered. Of the army, lately so splendid and numerous, there remained only in the field the corps of the Duke of Weimar and General Blucher. The former of these, which formed the advanced-guard of the host that advanced to the Saale, and had been pushed on through the Thuringian Forest to Verra, with the view of threatening the rear of the French army, had become entirely detached by subsequent events from the principal body, and thus escaped the catastrophes of both defeats. Almost forgotten in the rapid succession of succeeding triumphs, the duke was left to his own discretion; and he no sooner received accounts of the ruin of the main army, than he took steps for making the best of his way back to the Elbe. He had much difficulty in steering his course through the numerous corps of enemies which traversed

CHAP. XLIII.

1806.

the intervening country in every direction ; but by great exertions he contrived to escape, and, rallying to his standard a considerable detachment of RucheFs corps, which had been separated from the remainder, reached the Elbe in safety at Stendal, by Seesen, Lutter, and Schladen, with fourteen thousand men. He was there superseded in the command by the King of Prussia, and his corps passed into the hands of General Winning, who gave it a day's rest at Kyritz. As the approach of the French corps rendered those quarters dangerous, ho broke up and retired towards the Oder, and by good fortune, and no small share of skill, he succeeded in reaching Kratzemberg, near the lake of Muritz, in the first week of October, where he joined Blucher with the cavalry which had escaped from Aucrstadt. Their united forces now amounted to twenty-four thousand men.[1]

Oct. 26.

71. Disgraceful surrender of Stettin and Ciistrin

Meanwhile the fortresses on the Oder fell in the most disgraceful manner. The day after the capitulation of Hohenlohe, a brigade which had escaped from the wreck of his corps, presented itself at the gates of Stettin ; the governor sternly refused them admittance, upon the pretence that his provisions were only adequate to the support of his own garrison. Next day, however, he capitulated, on the first summons, to the advanced-guard of Marshal Lannes; and the French, without firing a shot, became masters of a fortress of the first order, armed with a hundred and fifty pieces of cannon, and garrisoned by six thousand men. The brigade of Prussians, shut out from its walls, was soon after surrounded at Anclam and made prisoners. Encouraged by these repeated successes, the French soldiers deemed nothing beyond the reach of their arms ; and the advanced-guard of Davoust's corps, which had traversed the district between the Elbe and the Oder without meeting with any enemies, presented itself before Custrin, and threatened the garrison with a severe bombardment if they did not

Oct. 29.

instantly capitulate. This menacing outpost consisted merely of a regiment of foot, and had only two pieces of artillery at its command. On the other hand, the governor of the town had ninety pieces of cannon mounted on the ramparts, and four hundred in the arsenal; four thousand brave men for a garrison, and every requisite for a prolonged defence. Nevertheless, such was the terror produced by Napoleon's arms, and such the skill with which the French officer, General Gauthier, concealed the real amount and description of his force, that the Prussians capitulated almost on the first summons; and one of the strongest places in the kingdom, amply garrisoned, situated in an island of the Oder, and invested only on one side, had the disgrace of surrendering to a regiment of foot with only two pieces of cannon. The besiegers could not approach it to take possession till the garrison furnished them with boats.[1]

Oct. 31.

[1] Dum. xvii. 11, 17. Bign. vi. 23. Jom. ii. 314. Thiers, vii. 168, 169.

72. Reflections on these events. Depots at Erlurth and Wittenberg formed by Napoleon.

These disgraceful capitulations, at which the brave troops involved in them were so much exasperated that it was with difficulty they could be induced to yield obedience to their officers in carrying them into execution, demonstrated that the Prussian generals were so overwhelmed by the magnitude of their misfortunes, that they deemed the monarchy irrevocably ruined, and that *sauve qui peut* had become the only remaining principle of their conduct. Astonished at his good fortune in effecting the reduction of such a fortress without firing a shot, Marshal Davoust inspected the fortifications on the day following, which he found in the best condition; and, deeming his base on the Oder now sufficiently secured, pushed on his light troops to Posen, in Prussian Poland; while six thousand Bavarians formed the investment of Glogau, the only remaining stronghold on its banks which was still in the hands of the enemy; and Augereau established himself at Frankfort. Meanwhile Napoleon, after resting a day at Wittenberg, which he ordered to be put in a respectable posture of defence, in order to give him the com-

CHAP. XLIII. 1806.

mand of the bridge over the Elbe, and where he established one of his chief depots, was busied with preparations for securing his rear during the perilous advance, so far from the base of the operations, in which he was about to engage. The grand park of artillery was established at Wittenberg, where immense depots of ammunition and provisions were ordered to be formed; while, at Erfurth, a grand depot was by his provident care formed for the collecting of horses from all parts of Germany. All the cavalry regiments were directed through that town, while those on foot were mounted, and those indifferently provided with horses soon found themselves in possession of hardy and powerful steeds.[1]

Nov. 3. [1] Dum. xvii. 13,20. Bign, vi. 23. Jom. ii. 314. Thiers, vii. 168, 169.

73. Blucher's corps is pursued to Lubeck.

The only corps of the Prussian army which had hitherto escaped destruction was that formed by the union of Blucher's cavalry with the Duke of Saxe-Weimar's infantry, and commanded by the former of these generals. Before this junction was effected, Blucher's cavalry had been hard pressed by a brigade of horse under the French general, Klein, and escaped in consequence of his affirming that an armistice had been concluded on the propositions for an accommodation sent to Napoleon after the battle by the King of Prussia. Whether the Prussian general really believed the report to that effect, which unquestionably prevailed through the whole army at that time,[2] or whether he made use of this very questionable military stratagem as a device to extricate his troops from present danger, does not appear; and therefore neither praise nor blame can in this uncertainty be awarded on the subject. But this much is clear, that if he knowingly affirmed a falsehood, as the French assert, no necessity, how pressing soever, no advantage, how great soever, can suffice as any apology.* Though the

[2] Hard. ix. 320.

*** But when the French historians inveigh with such severity against Blucher's conduct on this occasion, and affirm, "In the campaigns of the Revolution, the Austrian generals have frequently had recourse to that strange *ruse de guerre—the French never*"[3] they forget or wilfully conceal immediately preceding events, on which they bestow no sort of censure. What is to be**

[3] See Bign. vi 7, and Norv. ii. 466.

resistance of this corps, however, was more honourable, its ultimate fate was not less calamitous. No sooner was Napoleon informed of the junction of these two corps in the north of Prussia, than he ordered their pursuit by forces so considerable, that escape became impossible. Bernadotte was instructed to follow closely on their footsteps ; while Murat was despatched by a circuit to cut them off, on the right, from Stralsund and Rostock, under the cannon of which they might have found shelter; and Soult threw himself on the left, to bar the communication with the lower Elbe. Blucher arrived at Boitzenburg the day after the ill-fated Hohenlohe had left that town ; and having there learned the catastrophe which had befallen that brilliant portion of the army, he renounced all hope of retiring before the enemy, and retraced his steps in order to unite with General Winning and the Duke of Saxe-Weimar's corps, which he effected at Kratzemberg on the day following, Finding himself now at the head of eighteen thousand infantry, six thousand cavalry, and sixty pieces of cannon, he resolved to move to the right, recross the Elbe, raise the siege of Magdeburg, and, supported by that fortress and Hameln, maintain himself as long as possible in the rear of the Emperor's army.[1]

Oct. 28.

Oct. 29.

[1] Dum. xvi. 308, 318. Saalf. iii. 311, 312. Jom.ii.217.

The project was boldly conceived and intrepidly followed out; but the three corps now directed against him, numbering nearly sixty thousand combatants, rendered

said to General Lecourbe, who, in November 1799, escaped destruction at the hands of the Austrian general Starray, solely by falsely affirming that a negotiation for peace was commenced ? to Lannes and Murat, in the campaign of Austerlitz, who won the bridge of Vienna by the fallacious declaration that an armistice had been concluded, which they well knew was not the case * or to the latter of these marshals, who a few days afterwards tried a similar piece of deceit with Kutusoff, and was only foiled by the superior finesse of that astute commander ? All the French historians, Bignon, Norvins, and Thiers, mention these unworthy stratagems not only without censure, but with the highest admiration.[2] It would be well, if, in making such random assertions, they would calculate less confidently on the want of information or recollection in their readers; and if, in the survey of the conduct of their own officers, they would display a little of that warm anxiety for the great principles of public morality, to which they so loudly appeal when any violation of it occurs to their disadvantage on the part of their enemies.

74. Where he is shut up.

its execution impossible. A sharp conflict took place with his rearguard at Nossentin, in which five hundred prisoners fell into the hands of the French; and the next day the junction of Bernadotte with Soult rendered it necessary for the gallant Prussian to be more circumspect. An opportunity, however, soon occurred of taking his revenge. Next day the French hussars were charged and put to the rout by the Prussian light dragoons, at the entrance of a defile. Colonel Gerard and three hundred horsemen were made prisoners: but the cavalry having fallen back on the support of their infantry, headed by Bernadotte in person, the Prussians were in their turn repulsed with severe loss. Finding the enemy's forces so considerable, that all chance of making good his way to the lower Elbe was out of the question, Blucher resolved to fall back by Gadebusch on Liibeck, where he hoped to find resources to recruit his wearied troops, and the decayed bastions of which he flattered himself he would soon be able to put in a respectable state of defence. Before arriving at that city, he was summoned by Bernadotte to surrender, and informed that he was beset by forces triple his own. "I will never capitulate," was the brief and characteristic reply of the Prussian general; and, continuing his march, he entered Liibeck on the evening of the 5th, closely followed by his indefatigable pursuers. In the course of the pursuit, a detachment of twelve hundred Swedes fell into the hands of Bernadotte, who treated them with unusual courtesy and kindness. From the gratitude of the Swedes for this treatment, arose the interchange of good deeds which terminated in his elevation to the throne of Gustavus Adolphus. At that period, events, in appearance the most trivial, were big with the fate of nations.[1]

Nov. 1.

Nov. 2.

Nov. 3.

Nov. 4.

Nov. 5.

[1] Dum. xvi. 308, 321. Bign. vi. 23, 24. Jom. ii. 317. Saalf. iii. 311,312.

Unfortunately for Lubeck, it was still surrounded by a ruined wall and deep ditches filled with water; and this gave Blucher an excuse for representing it as a

military post, and disregarding all the remonstrances of the magistrates, who loudly protested against this violation of their neutrality. Hastily planting the few heavy cannon which he still retained to defend the principal gates, Blucher caused the greater part of his forces to defile through the town, and take post on the low marshy ground on the opposite side, on the confines of the Danish territory. At daybreak on the following morning the French columns were at the gates, and every preparation was made for an instant assault. In spite of a heavy fire of grape and musketry from the old walls, the French approached with their accustomed gallantry to the assault. The corps of Bernadotte advanced against the Burg-Thor, the gate which looked to the north; that of Soult approached the Huxtor-Thor and Muhien-Thor, the gates of Hanover. After sustaining a terrible discharge from the bastions, which were armed with the Prussian field-pieces, the French advanced-guard, under Generals Merle and Fr&re, succeeded in breaking through with their hatchets the exterior palli-sades of the Burg-Thor, and, rapidly following the Prus-sian regiments which held that outwork, entered the gate pell-mell with the fugitives, and made themselves masters of the adjoining bastions. At the same moment Soult's divisions threatened the gates opposed to their attack; but so murderous was the fire which the Prus-sians kept up from the walls flanking their approaches, that the assailants were unable to make any progress, till Bernadotte's divisions, having penetrated into the town, threatened to take the defenders in rear.[1]

75. And is there defeated after a des-perate con-flict.

[1] Dum. xvi. 322, 328. Jom. ii.317, 318. Hard. ix. 322. Bign. vi. 24.

Even then, nevertheless, the brave Prussians at this gate, to the number of two thousand, faced both ways, and, besieged in their turn, sustained the double attack from within and without. Posted on the roofs of houses, and on the summits of the ramparts, they kept up an incessant fire till their cartridges were exhausted, when they were all either killed or made prisoners. So rapid,

76. Desperate defence of the town.

CHAP. XLIII.

1806.

however, was the advance of the French through the Burg-Thor, that Blucher, who had retired to his lodgings, after having made his dispositions, to dictate orders, had barely time to mount his horse with his son and a single aide-de-camp, and ride off: all the rest of his staff were made prisoners. Having joined the remaining troops in the town, that brave general, with his gallant followers, prolonged the defence. He himself repeatedly charged along the Konig-Strasse at the head of a body of cavalry, but was unable to clear it of the French soldiers, who had now broken into the houses near the gate, and from thence kept up a fire of such severity upon the street as rendered it impossible for the dragoons to advance to its further extremity. Presently the besiegers brought up their field-pieces, the guns on the ramparts were turned upon the town, and repeated discharges of grape from both sides swept the pavement, and occasioned a terrific slaughter. With invincible resolution, however, the Prussians maintained the combat. From street to street, from church to church, from house to house, the conflict continued. Blood flowed on all sides. The incessant rattle of the musketry was almost drowned in some quarters by the cries of the wounded and the shrieks of the inhabitants, who in that day of woe underwent all the horrors consequent on a town being carried by assault. By degrees, however, the superior numbers of the French, who were soon reinforced by part of Murat's corps, prevailed over the heroic resolution of the Prussians. With difficulty Blucher succeeded, towards evening, in collecting five thousand men, with whom he forced his way through by the gate of Holstein, and rejoined his cavalry, which lay at Schwertau on the opposite side of the town, near the Danish frontier; while the remainder of his corps in the town, consisting of eight thousand men, were slain before nightfall in that fearful fight, or fell into the hands of the enemy.[1]*

* The French writers made it a just reproach to the English army that its

CHAP. XLIII.

1806.

The situation of Blucher, with his cavalry and this slender body of infantry, was now altogether desperate. He was driven up to Ratkau, in the extremity of Germany, on the very edge of the Danish territory, where a powerful body of troops was collected to prevent his entrance. In the night he received intelligence that Travemunde, a fortified town on the sea-coast, to which he proposed to have retired, had been taken by Murat, along with a battalion which he had sent forward to garrison that important post, where he hoped to have embarked; and to complete his misfortunes, information arrived in the morning that the salt-marshes between Schwertau and that town were not passable by the army. At the same time a flag of truce arrived from Murat, while his numerous squadrons had already driven the Prussian infantry out of Schwertau, and were closing in, in all directions, on his last position. Overcome by stern necessity, the hardy veteran, with tears in his eyes, agreed to a capitulation, in virtue of which all his troops laid down their arms. On this occasion were taken ten battalions and fifty-three squadrons, amounting to four thousand foot-soldiers, and three thousand seven hundred cavalry, with forty pieces of cannon, the remainder of his fine train of artillery having been left on the ramparts of Lubeck.[1]

77. He retires to Ratkau, and is there made prisoner.

To complete the disasters of the Prussian monarchy, nothing was wanting but the surrender of Magdeburg; and that important bulwark was not long of falling into

78. Fall of Magdeburg.

soldiers committed such disgraceful excesses at San Sebastian, Ciudad Rodrigo, and Badajos, when these fortresses fell by assault. It is the duty of the historian to condemn equally such outrages, by whomsoever committed; and certainly in this work no veil shall be thrown over those atrocities when they come to be recounted. But it would be well if they would reserve a little of their humane indignation for the sufferers under their own soldiery on similar catastrophes. On this occasion, though they pass it lightly over, the cruelties and devastation committed by Bernadotte's and Soult's corps for two days after the town was taken, notwithstanding all the efforts of these marshals, were equal to the very worst deeds that ever stained the British arms.—See the frightful details, drawn with a graphic hand, in *Lettre de Villers a la Comtesse Fanny Beauharnais,* Amst. 1808.

CHAP. XLIII.

1806.

the hands of Marshal Ney. Although its garrison was in great part composed of fugitives of all regiments, who had made their escape into that asylum from the disastrous fields of Jena and Auerstadt, yet such was the strength of its works, and the ample store of provisions and magazines of all sorts which existed within its walls, that a prolonged defence might confidently have been anticipated. Nevertheless, if its fall was not quite so disgraceful as that of Stettin and Custrin, it was such as to affix a lasting stigma on the Prussian arms. After fifteen days of a blockade, Marshal Ney commenced operations in form ; but before having recourse to the tedious method of regular approaches, he resolved to try the effect of a bombardment. Furnaces for this purpose were heated, and arrangements made to throw four-and-twenty pound shot, red-hot, into every part of the town, while a copious array of bombs was prepared to bring terror and conflagration upon the inhabitants. It was not necessary, however, to proceed to these extremities. The citizens of Magdeburg preserved a vivid traditional recollection of the horrors which their forefathers underwent after the memorable storm by Count Tilly in 1631, when the whole town was reduced to ashes. No sooner, therefore, did the first flaming projectiles begin to descend upon their houses than they besieged General Kleist, the governor, with entreaties for a surrender. That officer, deeming the Prussian monarchy destroyed, and seeing no use in singly prolonging a contest now become hopeless,

Nov. 8.

agreed to a capitulation on the same terms as Stettin, in virtue of which this important frontier town, the bulwark of the monarchy, with its redoubtable ramparts still untouched, and not even an outwork lost, containing twelve thousand troops in arms, and four thousand in hospital, six hundred pieces of cannon, eight hundred thousand pounds of powder, a pontoon train complete, and immense magazines of all sorts, fell into the hands of the enemy, who hardly mustered a greater force without its walls.[1]

[1] Dum. xvi. 343, 347. Jom.ii.319. Bign.vi.26. Saalf. iii. 313.

After these stunning calamities, it was not to be expected that the fortresses on the Weser, which were now left far in the rear of the storm of war, should long continue to hold out. A host of fugitives from Jena and Auerstadt had taken refuge in these strongholds, particularly Hameln and Nienburg; into the former of which General Lecocq, who had been separated in the confusion of the disastrous night which followed these battles, had thrown himself with four thousand men who still preserved a military array. There he speedily found himself blockaded by the forces of the King of Holland, who had advanced by Wurtzburg and Paderborn to the banks of the Weser. The disastrous state of the monarchy gave him too plausible a ground for assailing the fidelity of the besieged. "You are insulated," said he, "without hope of succour. Abandoned, and more than a hundred leagues in the rear of the victorious invaders, what can your efforts do to avert the fall of the Prussian monarchy %" These arguments, supported by the official intelligence of the fall of Magdeburg and the surrender of almost all the fragments of the army, produced the desired impression; and it was speedily agreed that the fortress should be evacuated, the private soldiers made prisoners, and the officers return on their parole to Prussia. A mutiny broke out among the soldiers upon learning the terms of this disgraceful capitulation; but it was speedily suppressed by Savary's dragoons, the men disarmed, and the fortress, in admirable condition, delivered over, with five thousand prisoners, to the French. Nienburg speedily followed the same example, and, with its untouched fortifications and garrison of three thousand men, capitulated to the victors; and with it all the elements of resistance expired between the Weser and the .Oder.[1]

Fall of Hameln and Nienburg on the Weser.

1806.

diplomatic objects, was preparing the means of further triumphs, and a more complete consolidation of the power which fortune and genius had thus combined to place at his disposal. His first care was to detach Saxony from the coalition ; and after the defeat of its army in those disastrous days, and occupation of its territory by the conquerors, this was easily accomplished. The Saxons have a hereditary jealousy of the Prussians, by whom they have a presentiment they are one day to be swallowed up. Necessity, not inclination, had brought them into the field with their ambitious neighbours; and they gladly availed themselves of the first opportunity to range their forces on the side to which their secret inclinations had long pointed, and which seemed to be recommended alike by prudence and necessity. Early in the campaign, Napoleon had addressed to them a proclamation, in which he called on them to assert their national independence, and throw off that withering alliance with Prussia from which nothing but ultimate ruin was to be anticipated.* This address had already produced a great impression on the Saxon troops, when the victory of Jena seemed to dissolve at once the bonds which held the two nations together. Improving on these dispositions, Napoleon assembled the Saxon officers, three hundred in number, who had been made prisoners at Weimar, strongly represented to them the impolicy of any longer uniting their arms to those of their natural enemies the Prussians ; and offered, upon their subscribing the oath tendered to them of fidelity to its fortunes, to admit them into the Confederation of the Rhine. Gladly the

Oct. 17.

*** "Saxons! the Prussians have invaded your territory. I have come to deliver you. They have violently dissolved the bond which united your troops, and incorporated them with their own ranks. You must, forsooth, shed your blood, for interests not merely foreign but adverse to those of your country I Saxons ! your fate is now in your own hands. Will you float in uncertainty between those who impose and those who seek to liberate you from the *yok* ? My success will secure the independence of your country and your prince. The triumph of the Prussians would rivet on you eternal chains. To-morrow they will demand Lusatia; the day after, the right bank of the Elbe. But what do I say] Have they not already done so? Have they not long endeavoured to force**

officers, for themselves and the troops under their command, subscribed the conditions ; and immediately they were all, with the private soldiers, six thousand in number, sent back to Dresden. The Elector shortly after recalled the remainder of his forces from the Prussian standard; he accepted first neutrality, then an alliance with the conqueror ; and before the war in Poland was concluded, his troops were to be seen actively engaged under the French eagles. Such was the origin of that intimate union which, down to the close of the war, subsisted between Napoleon and the Saxon government, and which, though in the end fraught with numberless calamities to that electorate, must ever command respect, from the fidelity with which its engagements were adhered to under adverse fortune.[1]

CHAP. XLIII.

1806.

[1] Dum. xvi. 204, 207. Bign. vi. 3, 4.

It was shortly after having detached Saxony from the Prussian, and united it to his own alliance, that Napoleon received an answer from the King of Prussia to the elusory proposals of accommodation made by him before the battle of Jena, and which that unhappy monarch eagerly caught at after that disaster, as the only light that seemed to break upon his sinking fortunes. The times, however, were not now the same: there was no longer any need of dissembling; the Prussian army was routed, and he was not the man to let slip the opportunity of completing its destruction. He therefore coldly replied, that it was premature to speak of peace when the campaign could hardly be said to have commenced; and that, having resolved to try the fate of arms, the king must abide by its issue. At the same time, he made amends to

81. Refuses to treat with Prussia.

1806.

the infantry of Lannes' corps, which, in consequence of their not having been mentioned by Murat in his report of the successes at Prentzlow, in which they had borne so glorious a part, had not been mentioned in the bulletin regarding that event, by replying to a letter of remonstrance from Lannes on the subject. "You and your soldiers are children. Do you suppose I do not know all you have done to second the cavalry? There is glory enough for all. Another day it will be your turn to fill the bulletins of the Grand Army." When Lannes read these words to his soldiers, they were so transported with joy that they raised the cry "Vive l'Empereur d'Occident!" Nothing could have more completely answered the secret wishes of the Emperor than both the title with which he was saluted by these brave men, and the circumstances so closely resembling those of the Roman legions under which it arose.[1]

82. Napoleon visits Potsdam and the tomb of Frederick. Oct. 25.

Following the march of his victorious armies, Napoleon continued his progress, by Weimar, Naumburg, Wittenberg, and Potsdam, towards Berlin. On the march he passed the field of Rosbach, the well-known theatre of the Prussian victory over the French, and ordered the column erected in commemoration of that triumph, which had been thrown down by the soldiers of his army, to be preserved from further injury, and transported as a trophy to Paris. At Potsdam he visited, with eager haste, the palace of Sans-Souci and the tomb of the Great Frederick. Everything in the apartments of the illustrious monarch had been preserved as when he breathed-his last: the book which he read shortly before his death remained on the table; the furniture was untouched; the writing materials still there: the simplicity of all surprised the conqueror, who was accustomed to the magnificence of St Cloud. By a singular coincidence, but one of the many with which the history of Napoleon is full, he visited the sepulchre on the anniversary of the day on which Alexander, just a year before, on the same spot, had sworn

fidelity to Frederick-William. Such had been the confusion of the Prussian flight, that on the tomb there still remained the cordon of the black eagle, the scarf and sword of the hero, which he had worn in the Seven Years' War, as well as the standards of his guard. With deep emotion Napoleon approached the awful monument; but even at that solemn moment unworthy feelings gained the ascendency. He himself seized the venerable relics, and sent them with indecent haste off to Paris. "I will make a present of them," said he, "to the Hotel des Invalides: the old veterans of the Hanoverian war will receive with religious respect all that once belonged to one of the greatest captains of whom history has made mention/' Such an act could not injure the dead; his glory was enshrined in imperishable lustre in the page of history: but it lowered the living, and sullied the triumph of Jena by an unbecoming act of rapacity. Little did Napoleon at that moment anticipate the advent of times when the Prussians, now so humbled, were to have the mastery of his proudest trophies, and naught was to remain but veneration for the remains of the dead to protect his own ashes in a foreign and far distant land from the rude hand of the spoiler.[1] *

[1] Bign. vI. 11,12. Jom. ii. 302, 303. Dum. xvi. 249, 250.

This interesting episode did not interrupt for a moment the military movements of the corps immediately around the person of the Emperor. The same weakness and infatuation appeared there, as elsewhere, to have seized the

* How much more honourable as well as magnanimous was the conduct of the Russian officer who, instead of destroying the monument erected at Coblentz to commemorate the campaign of 1812, simply engraved below the inscription the words, "Seen and approved by the Russian governor of Cologne, January 1,1814." It is for the interest of all nations to preserve the trophies of their enemy's victory and the remains of the dead from insult; for it is impossible to foresee how soon they may themselves suffer from an opposite system. Nor is such forbearance without its reward. It obliterates the disgrace of defeat in the magnanimity of subsequent victory. The Pillar of Austerlitz, in the Place Venddme, is now a monument not less to German generosity than to French valour. It would be well for the memory of Napoleon if more instances of moderation in victory, and regard for the vanquished, were mingled with his military triumphs.

1806.

83. Berlin, Spandau, and Charlottenburg occupied by the French. Oct. 25.

Prussian authorities. On the same day Marshal Dayoust, agreeably to the promise of Napoleon, headed the splendid vanguard which, with all the pomp of war, entered Berlin. No words can describe the mingled feelings of rage, astonishment, and despair, which animated the inhabitants at this heart-rending spectacle, occurring in less than a fortnight after hostilities had commenced. With speechless grief they gazed on the proud array which defiled through their gates, and drank deep, in the agony of that dreadful moment, of the punishment for the political sins of their government during the last ten years. On the same day the strong fortress of Spandau, with its strong citadel and a garrison of twelve hundred men, surrendered, without firing a shot, to Marshal Lannes;* and Napoleon, after inspecting that stronghold, on the day following made his triumphal entry into the capital. He had not the same delicacy towards the feelings of its inhabitants which he had previously evinced towards those of Vienna: the palace of Charlottenburg would have answered his purpose of a residence as well as that of Schoenbrun had done; but he seemed as anxious to lacerate the feelings of the Prussians as he had been to spare those of the Austrians, and determined to punish ten years of subservience and ten days of warfare more than he had done the inveterate hostility of twelve campaigns. Surrounded, therefore, by all the splendour of the empire, in the midst of a brilliant staff, preceded by his splendid Guards on horseback in their richest attire, and environed by

Oct. 26.

Oct. 27.

*** Napoleon spoke thus of this fortress:—"The citadel of Spandau, situated on the Spree, fully victualled for two months, is an inestimable acquisition. In our hands it could sustain two months of open trenches. But such was the general confusion that the batteries were not even armed."—19th *Bulletin*. It is evident that treachery, or selfishness equivalent to treachery, occasioned the sudden fall of so many of the Prussian fortresses at this period; and Bignon tells us that he became convinced of that when, on being sent by the Emperor to superintend the capitulation of Spandau, he found the governor, Benckendorf, occupied with no other consideration but disputes with the French commander as to some wretched culinary articles which he alleged the capitulation authorised him to remove! —BIGNON, vi. 13.**

Berthier, Duroc, Davoust, and Augereau, Napoleon, in his usual simple costume, made his triumphal entry under the arch erected to the honour of the Great Frederick. The "observed of all observers," the object of eager gaze to the speechless assembled multitude, the mighty conqueror traversed the long street which leads from the gate Charlottenburg, and advancing through an innumerable crowd, in whom passion, admiration, and wonder were mingled in some cases with joy, alighted at the gates of the old palace.[1]

[1] Thiers, vii. 175. Dum. xvi. 250, 252. Bign. vi. 13. Hard. ix. 313.

84. Affair of Prince Hatzfeld.

Prince Hatzfeld, one of the leaders of the war party, in the total absence of any authority emanating from the King, had been besought by the principal inhabitants to take an interim direction of affairs, and assume the command of the burgher guard. In doing so he had issued a proclamation, in which he said, "Nothing remains for us now but to assume a pacific attitude: our cares should not extend beyond what is within our own walls: that constitutes our sole interest, and as it is of the highest importance, we should bestow our exclusive attention upon it." This prince, as the chief of the pacific authorities, presented himself at the head of the magistrates before Napoleon at Potsdam, and was well received. He again waited on him when he arrived at the palace; but the conqueror received him with a severe air, and averting his head said, "Do not present yourself before me; I have no need of your services; retire to your estates." Shortly after the astonished nobleman withdrew, he was arrested by orders of Napoleon, who had commanded him to be seized *and executed* before six o'clock that evening. In fact he had transmitted to Prince Hohenlohe a letter, containing military details in regard to what he had seen at Potsdam when waiting on Napoleon, which had been intercepted by Davoust and brought to the Emperor. The imperious commands of the conqueror left his subordinate authorities no alternative but submission; although Berthier, shocked at the deed of violence

CHAP. XLIII.

1806.

which was in contemplation, did his utmost to avert the storm, and even refused to write out the warrant, which Rapp was called in to do. He could not, however, prevent Napoleon from ordering another murder as atrocious as that of the Due d'Enghien, and the death-warrant was signed, and Rapp was directed to send it to Davoust for immediate execution.[1]

[1] Rapp, 109, 110. Hard. ix. 315.

85. His pardon by Napoleon.

The former brave and generous man, at his own imminent hazard, took upon himself to delay its transmission; and in the mean time the Princess of Hatzfeld, having arrived in the antechamber of the palace, was informed of the danger of her husband, and sank in a swoon on the floor. Rapp advised her, after she recovered, to endeavour to throw herself in Napoleon's way at the hotel of Prince Ferdinand, where he was going in a short time; she did so, and fell at his feet in the extremity of despair. Her grief and beauty touched Napoleon, who, though subject to violent fits of passion, was not insensible to generous emotions. Rapp warmly seconded the return to feelings of humanity, and orders were despatched to Davoust to suspend the execution till further directions. Meanwhile the princess was enjoined to repair to the palace, whither Napoleon soon after returned. He ordered her to be brought into the room which he occupied. "Your husband," said he with a benign air, "has brought himself into a distressing situation; according to our laws, he has incurred the penalty of death. General Rapp, give me the letter: take it; read, madam. Is it your husband's writing?" She did so trembling. "I cannot deny his subscription," she replied, almost fainting with emotion. Napoleon then took it from her, tore it, and threw it into the fire. "I have no longer any proof; your husband is pardoned." He then desired Rapp to bring him back immediately from Davoust's headquarters; that officer ventured to admit that he had not even sent him there:[2] the Emperor manifested no displeasure, but on the contrary seemed gratified at the

[2] Rapp, 109, 110. Bign. vi. 14. Hard. ix. 315.

delay which had taken place in the execution of the order. *

Shortly after his arrival at Berlin, Napoleon paid a visit of condolence to Prince Ferdinand, brother of the great King of Prussia, and father of Prince Louis who fell at Saalfeld, and manifested the most delicate attentions to the widow of Prince Henry, as well as the Princess Electoral of Hesse-Cassel. At the same time he addressed an animated proclamation to his troops, in which he recounted with just pride their astonishing exploits, and promised to lead them against the Russians, who, he foretold, would find another Austerlitz in the

86. Napoleon's proclamation and addresses to his soldiers. Oct. 30.

* It is always pleasing to record a generous action, and doubly so when it occurs in an enemy; but justice compels the admission that, by delaying the transmission of this order, Rapp conferred a greater favour on Napoleon than on the intended victim of his passion ; for the one he saved only from death, the other from the guilt of murder. Rapp informs us that the Prince of Hatzfeld had come to Potsdam on the 25th, and it was for the account transmitted to Hohenlohe on that day of what he there saw that he was about to be condemned. The 25th was the day on which Davoust entered Berlin. The information objected to was collected, and the letter written, therefore, before the prince had come under the military government of the French Emperor. There is no law against a private citizen, or a civic authority of one nation, transmitting to its military officers details which have come to his knowledge regarding an enemy, when not yet subject to their authority—Napoleon himself called on the French prefects and magistrates to do so a hundred times. If the circumstance of Hatzfeld having collected and transmitted this information, while on a civil mission to the Emperor at Potsdam, exposed him to the penalty of death, what is to be said to Savary the year before, who, by orders of Napoleon, when conferring with the Emperor Alexander on the proposed terms of accommodation, obtained and brought to him military details of inestimable importance in regard to the temper and strength of the Allied army on the eve of the battle of Austerlitz;[1] or to Napoleon himself, who in 1797 transmitted orders to his brother Joseph, when holding the sacred office of ambassador at Rome, to do all in his power to revolutionise the Eternal City, and overturn the papal authority.[2] What the Prince of Hatzfeld did was no more than all ambassadors do, or than Napoleon invariably required from all his diplomatic agents. The character of the intended transaction may be judged of by what Berthier, with generous warmth, said on the occasion —" Your majesty will surely not shoot a man connected with the first families in Berlin for so trifling a thing; the supposition is impossible—you will not do so;" and from his positive refusal to write out the order, as well as from Rapp's delaying its transmission. Had the prince been shot, it would have been, like the death of the Due d'Enghien and the bookseller Palm, an act of deliberate murder. History, therefore, cannot award to Napoleon the praise of having pardoned, on this occasion, a criminal who had forfeited his life either by the laws of war or the principles of justice; but it must not refuse **the** meed due to a conqueror who returns to generous feelings, alter **having**

[1] Sav. il 112, 113. Ante, chap. xl. §116.

heart of Prussia.* Next day he reviewed the corps of Marshal Davoust on the road to Frankfort, and, assembling the officers in a circle, assured them of the admiration which he felt for their achievements, and the grief which he had experienced at the numerous losses which had thinned their ranks. " Sire," answered the marshal, " the soldiers of the third corps will ever be to you what the tenth legion was to Caesar." Already, in the emulation of the different corps, the mutual knowledge and attachment of the officers and men, were to be found the happy effects of that permanent organisation into separate armies and divisions, which, first of the moderns, Napoleon had adopted from the ancient conquerors of the world.[1]

[1] Dum. xvi. 259, 261.

87. Unpardonable severity of Napoleon to the Duke of Brunswick.

While Napoleon and his followers were thus indulging in an excusable pride at the retrospect of their wonderful achievements, the Prussian officers who had traversed the country, or reached the capital in virtue of the several capitulations which had been granted, were exposed to the most grievous humiliation. The officers of the Guard, especially, who had escaped from the wreck of Hohenlohe's corps, were ostentatiously marched by the Emperor through Berlin to Spandau. Words cannot describe the mortification of those high-spirited young men, at the unparalleled calamities in which their inconsiderate

been led, in a moment of irritation, to command an atrocious deed; and joyfully seizes on this incident as illustrative of that ascendency which, in his cooler moments, humane feelings obtained over ruthless passion in the mind of this extraordinary man.—RAPP, 108.

* " Soldiers ! you are worthy defenders of my crown, and of the great people. As long as you are animated with your present spirit nothing can resist you. Behold the result of your labours ! One of the first powers in Europe, which recently had the audacity to propose to us a shameful capitulation, is annihilated. The forests and defiles of Franconia, the Saale, the Elbe, which our fathers would not have traversed in seven years, we have surmounted in seven days, besides, during the same period, fighting four combats and a great battle. We have arrived at Potsdam and Berlin sooner than the renown of our victories ! We have made sixty thousand prisoners, taken sixty-five standards, including those of the royal guards, six hundred pieces of cannon, three fortresses, twenty generals, while half the army regret their not having had an opportunity of firing a shot. All the Prussian provinces, from the Elbe to the Oder, are in our hands. Soldiers ! the Russians boast that they are advancing

CHAP. XLIII.

1806.

passions had involved their country; wherever they went crowds beset their steps, some lamenting their sufferings, others reproaching them as the authors of all the public misfortunes. Napoleon made a severe and ungenerous use of his victory. The old Duke of Brunswick, respectable from his age, his achievements under the Great Frederick, and the honourable wounds he had recently received on the field of battle, and who had written a letter to Napoleon, after the battle of Jena, recommending his subjects to his generosity, was in an especial manner the object of invective. His states were overrun, and the official bulletins disgraced by a puerile tirade against a general who had done nothing but discharge his duty to his sovereign. For this he was punished by the total confiscation of his dominions. So virulent was the language employed, and such the apprehensions in consequence inspired, that the wounded general was compelled, with great personal suffering, to take refuge in Altona, where he soon after died.[1]*

[1] Bign. vi. 15, 33, 34. Camp. de Saxe, ii. 155, 295.

88. And to the Queen of Prussia, and the Elector of Hesse-Cassel.

The Queen, whose spirit in prosperous and constancy in adverse fortune had justly endeared her to her subjects, and rendered her the admiration of all Europe, was pursued in successive bulletins with unmanly sarcasms; and a heroic princess, whose only fault, if fault it was, had been an excess of patriotic ardour, was compared te Helen, whose faithless vices had involved her country *in*

to meet us: let us march to encounter them; we will spare them the half oi their journey; they will find an Austerlitz in the heart of Prussia. A nation which has so speedily forgot the generosity which we manifested towards it after the battle when its Emperor, its court, the wreck of its army, owed its safety entirely to the capitulation which we granted to it, is a nation that will never be able to contend with us."—DUMAS, xvi. 259, 260.

*** " If the Duke of Brunswick," said the bulletin, " has richly deserved the animadversions of the French people, he has also incurred that of the Prussian army and people: of the latter, who reproach him as one of the authors of the war; of the former, who complain of his manoeuvres and military conduct The false calculations of the young may be pardoned, but the conduct of that old prince, aged seventy-two, is an excess of insanity, and his catastrophe car excite no regret. What can there be respectable in gray hairs, when to the faults of age are united the inconsideration and folly of youth) For these extravagancies he has justly incurred the forfeiture of all his dominions."–23 and 27th *Bulletins, Camp. de Saxe,* ii 216, 293.**

CHAP. XLIII. 1806.

the calamities consequent on the siege of Troy.* The whole dominions of the Elector of Hesse-Cassel were next seized; and that prince, who had not even combated at Jena, but merely permitted, when he could not prevent, the entry of the Prussians into his dominions, was dethroned and deprived of all his possessions. Animosity to England was the secret motive for all those acts of robbery. So strongly was Napoleon influenced by these feelings that he made no attempt to disguise that it was the ruling principle which governed all his measures towards the vanquished, † The Prince of Orange, brother-in-law to the King of Prussia, in favour of whom the Prussian plenipotentiaries then at Berlin made the strongest representations, shared the same fate; while to the nobles of Berlin he used publicly the cruel expression, more withering to his own reputation than theirs[1]—"I *will render that noblesse so poor that they shall be obliged to*

[1] Bign. vi. 15,33,34, 23d and 27th Bulletins. Camp de Saxe, ii. 155,195, 214.

* "All the world accuses the Queen as the author of all the calamities which have befallen the Prussian nation. The public indignation is at its height against the authors of the war, especially Gentz, a miserable scribbler, who sells himself for money. After her ridiculous journey to Erfurth and Weimar, the Queen entered Berlin a fugitive and alone. Among the standards we have taken are those embroidered by the hands of this princess, whose beauty has been as fatal to her people as that of Helen was to the citizens of Troy."—27th and 23d *Bulletins, Camp, de Saxe,* ii. 215. It is worthy of observation, that M. Gentz, who is here stigmatised as a miserable hireling sold to England, was one of the most distinguished writers of the age, and one with whom Sir James Mackintosh, the eloquent apologist of the French Revolution, maintained a constant and valued correspondence down to the time of his death. That distinguished author, in reply to a letter from Gentz, which he received at Bombay, where he then was holding a high judicial appointment, thus speaks of the pamphlet to which Napoleon alluded :—"I received by the mail your two precious fragments. I assent to all you say, sympathise with all you feel, and admire equally your reason and your eloquence throughout your masterly fragment. I have read your letter fifty times since I received it, with the same sentiment which a Roman in the extremity of Mauritania would have felt, if he had received an account of the ruin of his country after the battle of Pharsalia, written the morning after that calamity, with the unconquerable spirit of Cato, and the terrible energy of Tacitus. He would have exulted that there was something which Caesar could not subdue, *and from which a deliverer and avenger might yet spring."*—MACKINTOSH'S *Memoirs,* i. 304. Certainly of all the unaccountable peculiarities in the mind of Napoleon, the most extraordinary is his total insensibility to the ultimate ascendant of truth over falsehood, and the extent to which he calculated on palming off falsehood and misrepresentation on the credulity or ignorance of mankind.

† M. Bignon, who was present on the occasion, gives the following curious

beg their bread" When a conqueror, in the midst of his greatest triumphs, uses such insulting language to the vanquished, and makes such an atrocious use of his victory, it is impossible to sympathise with his fall, and Waterloo and St Helena are felt to be a just measure of moral retribution.

Enormous contributions levied on Prussia and the north of Germany.

Meanwhile the French armies, without any further resistance, took possession of the whole country between the Rhine and the Oder; and in the rear of the victorious bands appeared, in severity unprecedented even in the armies of the Republic, the dismal scourge of contributions. Resolved to maintain the war exclusively on the provinces which were to be its theatre, Napoleon had taken only twenty-four thousand francs in specie across the Rhine in the military chest of the army. It soon appeared from whom the deficiency was to be supplied. On the day after the battle of Jena appeared a proclamation, directing the levy of an extraordinary war contribution of one hundred and fifty-nine million francs (£6,360,000) on the countries at war with France, of

account of the conversation which led to the dethronement of the Elector of Hesse-Cassel; — " Duroc and I said everything we could, during breakfast, in favour of the Elector. He only petitioned to be allowed to resume possession of his estates; his fortresses were all to be ceded to the French arms; his troops, twelve thousand strong, were to be joined to their forces, and a heavy contribution paid. These offers appeared to make a considerable impression on the Emperor, especially the offer of so many troops; but after musing a while, he said abruptly, 'Bah! Brunswick, Nassau, Cassel: all these princes are essentially English; they will never be our friends,'—and instantly set out for a review. Two days afterwards appeared the 27th bulletin, containing the announcement of their dethronement."—See BIGNON, **vi. 35.**

which one hundred million was to be borne by the Prussian states to the west of the Vistula, twenty-five million by the Elector of Saxony, and the remainder by the lesser states in the Prussian confederacy. This enormous burden, equivalent to at least £12,000,000 sterling, if the difference between the value of money in England and Germany is taken into account, was levied with unrelenting severity; and the rapacity and exactions of the French agents employed in its collection aggravated to a very great degree the weight and odious nature of the imposition. Saxony, in the scourging contributions with which she was overwhelmed, had soon abundant cause to regret the French alliance; while Berlin, as well as the Hanoverian and Prussian states which had been occupied, experienced, in the rapacity of General Clarke and his subordinate agents, all the bitterness as well as the humiliation of conquest.[1]

[1] Hard. ix. 317. Bign. vi. 51, 53. Bour. vii. 219.

90. Cruelties exercised towards the conquered districts.

Nor was this all. The whole civil authorities who remained in the abandoned provinces were compelled to take an oath of fidelity to the French Emperor,*—an unprecedented step, which clearly indicated the intention of annexing the Prussian dominions to the great nation; while General Clarke, governor of Berlin, acting towards the magistrates as if they were already his subjects, barbarously shot a burgomaster of the town of Kyritz,† whose only fault was that he had, when destitute of any armed force, been unable to resist the abstraction of the arms of the burgher guard and local militia by Colonel Schill, who commanded a flying detachment, that still, in

* The oath was in these terms: — "*I* swear to exercise with fidelity the authority which is committed to me by the Emperor of the French, and to act only for the maintenance of the public tranquillity, and to concur with all my power in the execution of all the measures which may be ordered for the service of the French army, and to maintain no correspondence with its enemies." —BIGNON, vi. 51.

† At a dinner given by Louis XVIII. in 1815, to the King of Prussia, this murder became the subject of conversation. " Sire," said Clarke, then Duke of Feltre, " it was an unhappy error."—" Say, rather, an unworthy crime I" replied the indignant monarch.—HARD. ix. 318.

the open country, maintained its fidelity to the colours of the monarchy. Even the highest authorities gave way to the indiscriminate passion for pillage : " the name of General Clarke," says Bourrienne, " became justly odious from every species of exaction, and a servile execution of all the orders of Napoleon;" while the great reputation of the conqueror of Auerstadt was disgraced by the pillage of the noble library at Tempelberg, the country-seat of Baron Hardenberg, minister of state, which took place by his authority, while he was in person occupying the edifice.[1]

[1] Hard. ix. 317. Bign. vi. 51, 53. Dum. xvii. 40,49. Bour. vii.219.

91. Military organisation of the country from the Rhine to the Vistula.

These evils great as they were, and disgraceful to the arms and generals of France, were however, in the ordinary case, only transitory; but it soon became evident that in the case of Prussia and the adjoining states they were to be permanent, and that the iron grasp of the conqueror was to be not only laid, but retained, on the north of Germany. Early in November there appeared an elaborate ordinance, which provided for the complete civil organisation and military occupation of the whole country from the Rhine to the Vistula. By this decree the conquered states were divided into four departments; those of Berlin, of Magdeburg, of Stettin, and of Custrin; the military and civil government of the whole conquered territory was intrusted to a governor-general at Berlin, having under him eight commanders of provinces into which it was divided. Receivers-general were appointed in each province, charged with collecting its whole revenue and all the war contributions imposed on it, and their transmission to the French governors. Magistrates, police, gendarmes, all were nominated by the authority of Napoleon; the whole civil and military government of the country was concentrated in his hands. Clarke was governor-general, aided in the details of government by Count Daru, whose great capacity soon appeared in the admirable order which he introduced into every branch of the administration, and which would have

Nov. 3.

CHAP. XLIII. 1806.

been worthy of the highest admiration if it had not been rendered instrumental to the most cruel and universal system of public extortion. The same system of government was extended to the duchy of Brunswick, the states of Hesse and Hanover, the duchy of Mecklenburg, and the Hanse Towns, including Hamburg, which was speedily oppressed by grievous contributions, in exacting which the Dutch generals and troops were peculiarly conspicuous. The Emperor openly announced his determination to retain possession of all these states till England consented to his demands on the subject of the liberty of the seas. Careful, at the same time, to mingle with these important civil changes such deeds as might captivate the imaginations of his subjects, he paraded before the deputation which came to Berlin from the senate of Paris, to congratulate him on his victories, three hundred and forty grenadiers of his Imperial Guard, each bearing a standard taken from the enemy in this short campaign—the most splendid display of military trophies seen in Europe since the triumphs of the Roman generals.[1]

[1] Dum. xvii. 54,61. Bign. vi. 72. Bour. vii.217,219.

92. Negotiations with Prussia, and the first demands of Napoleon acceded to.

Meanwhile the negotiations for the conclusion of a separate peace between France and Prussia were resumed. The misfortunes of the King rendered it almost indispensable that a respite should be obtained on any terms, while it was not less advantageous for Napoleon to reap at once the fruits of his triumphs, without undergoing the fatigues and dangers of a winter campaign in the frozen plains of Poland. Plenipotentiaries, accordingly, were appointed on both sides: on that of France, Duroc; on that of Prussia MM. Lucchesini and Rastrow. There was no need of lengthened conferences; the situation of the parties gave to the one the power of demanding whatever he pleased, and deprived the other of that of withholding anything which was required. Napoleon insisted that Prussia should renounce all the provinces she possessed between the Rhine and the Elbe, pay a contribution of a hundred millions of francs for the

expenses of the war, cease to take any concern in the affairs of Germany, and recognise in the princes of the Confederation of the Rhine whatever titles the conqueror chose to confer upon them. Not daring to refuse these conditions, and yet unwilling to take upon themselves the responsibility of making so great a sacrifice, the Prussian envoys referred the matter to the King and his cabinet. They returned an answer agreeing to all the exactions which were required; but in the interval matters had essentially changed for the worse, the wreck of the Prussian armies had been almost totally destroyed, and the demands of Napoleon rose in proportion.[1]

Oct. 27.

[1] Bign. vi. 48, 49. Lucches. ii. 182, 186. Martens, viii. 537.

93. Convention signed by the plenipotentiaries.

Perpetually haunted by the idea that it was the influence of England which he required to combat, and that the northern powers were brought into the field only to maintain her cause, he next insisted that the Prussian troops should retire entirely to Konigsberg and the small portion of the monarchy which lies to the east of the Vistula; that Colberg, Dantzic, Graudentz, Thorn, Glogau, Breslau, Hameln, and Nienburg, shoidd be placed in the hands of the French; and that no foreign troops should be suffered to enter any part of the Prussian territory."* In agreeing to terms so ruinous to the monarchy, the Prussian plenipotentiaries could hardly expect that the King would ratify them; but so desperate had its affairs now become, that it was of importance to obtain a delay even of a few days, in the departure of Napoleon for Posen, in order to gain time for the arrival of the Russian troops on the Vistula. They signed the

* " He was persuaded," says the Marquis Lucchesini, " that it was the intrigues of England which had arrayed the northern courts against France, which had brought about the refusal of the Emperor Alexander to ratify the treaty of Paris, and pushed forward Prussia into the field of battle. It was England, therefore, which it had become necessary to strike in Prussia; and it was on the conduct of the cabinet of London, in regard to the restitution of conquests, that the Emperor announced he would measure his own .steps for the future fate of the Prussian monarchy."—LUCCHESINI, ii. 176,177 ; BIQNON, vi. 44.

CHAP. XLIH.

1806. Nov. 16.

convention at Charlottenburg accordingly, stipulating only for its ratification by the King of Prussia. In fact, however, no hope remained to either side that it would lead to a permanent accommodation; for, a few days before the truce was concluded, Talleyrand openly announced to the Prussian plenipotentiaries that they must look for no restitution of his conquests by the Emperor Napoleon, and that the vast territory from the Rhine to the Vistula would be retained until a general peace, as a means of compelling England to surrender its maritime acquisitions, and forcing Russia to evacuate the principalities of Wailachia and Moldavia, which had recently been invaded by its arms. Thus the unhappy Prussian monarchy was made responsible for the ambition or successes of other powers, over whose measures it had no sort of control; and the negotiations at Berlin, diverging from their original object, were degenerating into a mere manifesto of implacable hostility against the cabinets of London and St Petersburg.*

[1] Dum. xvii. 66,67.Bign. vi. 48, 49. Lucches. ii. 182,185. 186. Martens, viii. 537.

94. Which the King of Prussia refuses to ratify.

The severity of the terms demanded, as well as their express assurances that no concessions, how great soever, could lead to a separate accommodation, as Napoleon was resolved to retain all his conquests until a general peace, led, as might have been expected, to the rupture of the negotiations. Desperate as the fortunes of Prussia were, what was to be gained by the cession of three-fourths of its dominions, and its fortresses still unsubdued on the Vistula, to the French? Reft as he was of his kingdom and his army, the King still preserved his honour, and nobly resolved to continue faithful to his engagements. He declined, therefore, to ratify the armistice, which was presented to him for signature at Osterode, by Duroc, on the part of France, and at the same time published a melancholy but noble proclamation, in which, without attempting to disguise his hopes, or conceal the deplorable state of his affairs, he rose superior to the storms of fortune,[2] and declared his

[2] Lucches. ii. 223,225. Bign. vi. 48, 49. Dum. xvii.69,71.

resolution to stand or fall with the Emperor of Russia.* This refusal was anticipated by Napoleon. It reached him at Posen, whither he had advanced on his road to the Vistula; and nothing remained but to enter rigorously on the prosecution of the war in Poland.

95. Famous Berlin decree against English commerce.

To this period of the war belongs the famous Berlin decree of the 21st November, against the commerce of Great Britain. But this subject is too vast to be adequately touched on in the close of a chapter embracing such a variety of objects as the present; and it will be fully enlarged on in a subsequent one, which will include also the Milan decree which followed in 1807, the Continental System, and the Orders of Council adopted as a measure of retaliation by the British government.

96. Affairs of Poland. Napoleon's language to the Polish deputies.

Napoleon set out from Berlin for the Vistula soon after he had fulminated this anathema against English commerce, and at Posen, in Prussian Poland, gave audience to the deputies of that unhappy kingdom, who came to implore his support to the remains of its once mighty dominion. His words were calculated to excite hope which his subsequent conduct never realised: "France," said he, "has never recognised the partitions of Poland; but, neyertheless, I cannot proclaim your independence until you are resolved to defend your rights as a nation at every sacrifice, even that of life itself. The world reproaches you with having, in your continual civil dissen- Nov. 29. sions, lost sight of the true interests and safety of your country. Taught by your misfortunes, now unite, and prove to the world that the same spirit animates the whole

*** "Matters," said the proclamation, "had arrived at that pass, that Prussia could no longer hope to obtain peace, even at the price of the greatest sacrifices. It was not in his power to make the Russian forces retrograde, since already their own frontiers were menaced. The Emperor of France has shown a determination, even when he acceded to the basis of a negotiation, not to suspend for one moment his military operations; and he has protracted the conferences till his successes enabled him to declare that the conquest of Prussia should afford him the means of dictating peace to England and Russia. Compelled thus to resume hostilities, the King is not without hopes of yet bringing them to a successful issue. He hopes that the governors of the fortresses on the Vistula will not imitate the weakness of those on the Oder**

CHAP. XLIII.

1806.

Polish nation." Universal acclamations attended his arrival at Posen; all the population advanced to meet his carriage; four magnificent triumphal arches were erected to the victor of Rivoli, Marengo, Austerlitz, and Jena. Count Palatine Radzerminski, at the head of the deputation from Great Poland, addressed him in terms of Eastern adulation, mingled with strange expressions, which proved prophetic: "The universe knows your exploits and your triumphs; the west beheld the first development of your genius; the south was the recompense of your labours; the east became to you an object of admiration; *the north will be the term of your victories.* The Polish race, yet groaning under the yoke of the Germanic nations, humbly implores your august highness to raise up its remnant from the dust."—Napoleon replied, —"That which has been destroyed by force cannot be restored except by force. I would with pleasure behold the independence of Poland restored, and a barrier formed by its strength against the unbounded ambition of Russia; but petitions and discourses will not achieve this work; and unless the whole nation, including nobles, priests, and burghers, unites and embraces the firm resolution to conquer or die, success is hopeless. With such a determination it is certain; and you may always rely on my powerful protection."[1]

[1] Dam. xvii. 60, 64.

While the main body of the French army was advancing by rapid strides from the Oder to the Vistula, Napoleon, ever anxious to secure his communications, and clear his rear of hostile bodies, caused two different armies to

and Elbe, and all the disposable forces of the monarchy will hasten to unite their colours on the Vistula and the Wartha to the brave Russian battalions. Such a proof of courage and constancy is not new to the Prussian nation. In the Seven Years' War the capital and provinces were also occupied by the enemy; but the firmness and intrepidity of the nation brought it safe through all its perils, and excited alike the admiration and astonishment of posterity. Then Prussia combated alone the greatest powers of Europe: now the powerful and magnanimous Alexander is about to take his place by her side, with all the forces of his vast empire. Their cause is the same; they will stand or fall together."—DUMAS, xvii. 70, 71.

1806.

advance to support the flanks of the invading force. To Jerome Buonaparte, who commanded the ninth corps, consisting of twenty-five thousand Bavarians and Wiirtembergers, and who had Vandamme for his adviser, was intrusted the difficult task of reducing the six fortresses of Silesia—Glogau, Breslau, Brieg, Neisse, Schweidnitz, and Glatz—containing in all a force nearly equal to his own. Glogau, however, with its garrison of three thousand men, made but a show of resistance, and, early in December, fell into the hands of the French. The other bulwarks of the province exhibited more determination, and operations in form were commenced against them. Mortier, on the extreme left, was intrusted with the subjugation of Hanover and the Hanse Towns, and the occupation of Hamburg, which was accomplished with hardly any resistance. Having done this, he advanced to observe Stralsund and the Swedes; while a fresh reserve was collecting on the Elbe, under the command of Louis, King of Holland. Thus, though the Grand Army was advancing by rapid strides to the shores of the Vistula, its flanks on either side were protected by subordinate corps ; and fresh forces, stationed in echelon in the rear, overawed the intermediate states, and kept up the communication with the Rhine. The whole of the north of Germany was overrun by French troops, while a hundred thousand were assembling to meet the formidable legions of Russia in the heart of Poland.[1]

Advance of Jerome into Silesia, of the French army to the Vistula, and Mortier to Hamburg.

Dec. 8.

[1] **Bign. vi. 69,71.Dum. xvii. 50,53.**

Vast as the forces of Napoleon were, such prodigious efforts over so great an extent of surface rendered fresh supplies indispensable. The senate at Paris was ready to furnish them ; and on the requisition of the Emperor, eighty thousand were voted from the youth who were to arrive at the military age in 1807. " In what more triumphant circumstances," said the Emperor, "can we call on the youth of France to flock to our standards ? They will have to traverse, in joining their comrades, the capital of their enemies, and fields of battle made illustrious by immortal

98. Levy of a lew conscription in Prance. Dec. 5.

CHAP. XLIII. 1806.

victories," It may easily be conceived with what transports this appeal was received by a nation so passionately attached to military glory as the French, and the Emperor resolved to turn it to the best account. Not content with this great addition to his prospective resources, he instituted corps of volunteers to receive the numerous and enthusiastic youth, whom even the conscription could not drain off in sufficient numbers ; additional battalions were added to the Imperial Guard, the troops of Hesse taken in a body into French pay, and the most energetic measures adopted to augment as much as possible the military resources of the Confederation of the Rhine. Detailed instructions were at the same time transmitted to Marmont in Illyria, and the Viceroy Eugene Beauharnais, to have their forces disposed on the Austrian frontiers in the most advantageous position ; and the King of Bavaria was informed by the Emperor himself of all that he should do for the defence of his dominions. The activity displayed in the fortresses on the Adige, the Isonzo, and the Inn, looked as if he was making preparations rather for a defensive struggle in the plains of Bavaria, or the fields of Italy, than for a decisive stroke at Russia on the shores of the Vistula.[1]

[1] Bign. vi. 69,71. Dum. xvii. 50,55. See the orders in Dum. Xvii. Pieces Just.

99. Treaty between France and Saxony.

A treaty, offensive and defensive, between Saxony and France, was the natural result of these successes. This convention, arranged by Talleyrand, was signed at Posen on the 12th December. It stipulated that the Elector of Saxony should be elated to the dignity of king; he was admitted into the Confederation of the Rhine, and his contingent fixed at twenty thousand men. By a separate article, it was provided that the passage of foreign troops across the kingdom of Saxony should take place without the consent of the sovereign—a provision which sufficiently pointed it out as a military outpost of the great nation —while, by a subsidiary treaty, signed at Posen three days afterwards, the whole minor princes of the house of Saxony were also admitted into the Confederacy.[2]

[2] Dec. 15. Dum. xvii. 88,89. Martens, viii. 552, and 555.

100. Immense results of the campaign.

Such was the astonishing campaign of Jena, the most marvellous of all the achievements of Napoleon, that in which success the most unheard-of attended his steps, and his force appeared most irresistible to the bewildered nations. Europe had hardly recovered the shock arising from the fall of Austria in three months, during the campaign of Austerlitz, when she beheld Prussia overthrown in as many weeks by the shock of Jena. Without halting one day before the forces of the enemy, without ever once pausing in the career of conquest, the French troops had marched from the Rhine to the Vistula ; the fabric reared with so much care by the wisdom and valour of Frederick the Great had fallen by a single blow; and one of the chief powers of Christendom had disappeared at once from the theatre of Europe. Three hundred and fifty standards, four thousand pieces of cannon, six first-rate fortresses, eighty thousand prisoners, had been taken in less than seven weeks. Of a noble array of a hundred and twenty thousand men, who had so lately crowded on the banks of the Saale, not more than fifteen thousand now followed the standards of the King to the shores of the Vistula.[1] Results so astonishing were altogether unprecedented in modem Europe : they recalled rather the classic exploits of Caesar or Alexander, or the fierce inroads of Timour or Genghis Khan, than anything yet experienced in Christendom. But they possessed this superiority over the achievements of antiquity or the sanguinary conquests of modern barbarism, that it was not over inexperienced tribes or enervated nations that the triumphs had been won, but the most warlike nation of the civilised world that had been overthrown, and the army which had not long before withstood the banded strength of Europe which had been dissolved.

[1] Jom. ii. 325.

The talents displayed by Napoleon in this campaign, though of a very high order, were not equal to the transcendant abilities evinced at Ulm and Austerlitz. Doubtless the celerity with which the hazardous advance of the

CHAP. XLIII.

1806.

101. Talent and rashness displayed by Napoleon during the campaign.

Duke of Brunswick across the Thuringian Forest to turn the French left and interpose between the Rhine and their army, was turned to the best account, and the Prussians cut off from their magazines and communications at the very moment they were endeavouring to inflict that injury on the enemy : the vigour of the fight at Jena, and the incomparable energy with which the mighty host which there conquered was dispersed in pursuit of the broken remains of the enemy, and incessantly pressed on till they were totally destroyed, were worthy of the highest admiration. But in the very outset of the campaign, he exposed himself to unnecessary hazard, and but for a change of position on the part of the bulk of the Prussian army, of which he was ignorant, might have been involved in as great a catastophe as the rout on the banks of the Isar had been to the Imperialists. To advance and attack the Prussian army, strongly posted at Jena, through the narrow and rugged defiles of the Landgrafenberg, was a greater piece of rashness in military conduct than it was in the Archduke John to advance against Moreau through the pines of Hohenlinden. Napoleon has told us this himself,—" The first principle of the military art," says he, " is never to fight with a defile in your rear ; for if defeated in such a station, total ruin is hardly avoidable."[1] Had the whole Prussian army, a hundred thousand strong, continued posted at the opening of the defiles as it was only the day before, instead of a rearguard of forty thousand only, the French would probably have never been able to debouch, and a disastrous defeat have been experienced. There was little of the usual calculation of means to end in this great commander, when he himself, with eighty thousand men, was opposed only to Hohenlohe with forty thousand, while Davoust, with thirty thousand, was left to struggle with the King in person, at the head of sixty-five thousand. No man knew better than Napoleon that such combinations were against the

[1] Nap. Mem. Book ix. 124, 125, on Waterloo.

first principles, not merely of the military art, but of common sense applied to such subjects. But the truth is, that the campaign of Austerlitz had given him an undue confidence in his destiny ; he deemed himself invincible^ because he had always hitherto proved so; and already were to be seen the symptoms of that fatal rashness which was to lead him to the Moscow retreat and the disasters of Leipsic.

102. **Reflections on the sudden fall of Prussia.**

After making every allowance for the magnitude of the defeat sustained by the Prussians at Jena and Auerstadt, and the extraordinary circumstance of the fugitives from these two fields getting intermingled during their nocturnal flight, there is something extraordinary and almost unaccountable in the sudden prostration of the monarchy. Had the people been lukewarm or disaffected in the cause, this result would have admitted of easy solution ; but this was very far indeed from being the case: public spirit ran high, patriotic ardour was universal, and unanimity unprecedented against Gallic aggression existed among all classes. Yet in the midst of this ardent and enthusiastic feeling, pusillanimity the most disgraceful was generally evinced, and fortresses all but impregnable surrendered at the first summons of a contemptible enemy! Where were the soldiers of the Great Frederick, where the constancy of the Seven Years' War, when Magdeburg, Stettin, Clistrin, and Glogau lowered their colours without firing a shot, and the weakness of these garrisons permitted the array on the Vistula to be reinforced at the decisive moment by forty thousand men, who otherwise would have been chained round their walls? These unprecedented capitulations demonstrate that, however high was the spirit of part of the nation, the same feelings were not universal, and that the kingdom of Prussia, newly cemented by the genius of Frederick, had not yet acquired that general patriotic spirit which can withstand the severer shocks of adversity, and constitutes the only secure basis of national independence. And the English

CHAP. XLIII. 1806.

historian who recollects how the energies of his own country were prostrated in a similar manner after the battle of Hastings, will probably be inclined to judge charitably of an infant nation placed in such trying circumstances ; and feel a deeper thankfulness for that long career of national independence, that unbroken line of national glory, which has formed the indomitable public spirit of his own country, and constitutes the unseen chain which has so long held together the immense fabric of the British dominions.

103. General ency which it occasions in Europe.

In proportion to the unbounded enthusiasm which these wondrous events excited in France, was the despondency which they diffused through the other states of Europe. Alarm now seized the most sanguine, despair took possession of the most resolute. The power which had risen up in Europe to vanquish and destroy seemed beyond the reach of attack. Every effort made against it, every coalition formed for its overthrow, had led only to fresh triumphs, and a more complete consolidation of its strength. The utmost efforts of Austria, supported by all the wealth of England and all the military strength of Russia, had sunk in the conflict; and now a few weeks had sufficed to dissipate that admirable army which the Great Frederick had bequeathed as the phalanx of independence to his country. The thoughtful and philanthropic, more even than the multitude, were penetrated with apprehensions at these portentous events."* They looked back to ancient times, and read in the long degradation of Greece and the Byzantine empire, the conse-

*** See, in particular, Sir James Mackintosh's letter on this subject, *Memoirs*, i. 304. " I do not," says he, " despair of the fortunes of the human race. But the moral days and nights of these mighty revolutions have not yet been measured by human intellect. Who can tell how long that fearful night may be before the dawn of a brighter to-morrow 1 Experience may, and I hope does, justify us in expecting that the whole course of human affairs is towards a better state; but it does not signify to us, supposing that many steps of this progress may be to the worse. The race of man may reach the promised land; but there is no assurance that the present generation will not perish in the wilderness. The prospect of the nearest part of futurity of all that we can discover, except with the eyes of**

quences of their subjugation by the military force of Rome, and could anticipate no brighter prospect for futurity than the ultimate resurrection of Europe after many ages of slavery and decline. So little can the greatest intellects anticipate the future course of events in a society so perpetually influenced by new moving powers as that of modern Europe; and so necessary is it, in forming a judgment on the ultimate consequences of existing changes, not merely to look back to the lessons of history, but to take into account also the hitherto unexperienced influence of fresh causes rising into action in the ever-varying scene of human affairs.

104. Blucher'g opinion of the probable resurrection of Germany,

That bright dawn, however, which philanthropy looked for in vain, and philosophy was unable to anticipate in the dark gloom of the political horizon, the ardent mind of a hero had already begun to descry; and, what is very remarkable, he fixed on the precise circumstances in the temper of the times which were destined to make it ultimately expand to all the lustre of day. "I reckon much," said Blucher to Bourrienne at Hamburg, whither he had retired on his parole from Liibeck, "on the public spirit of Germany, on the enthusiasm which reigns in our universities. Success in war is ephemeral; but defeat itself contributes to nourish in a people the principles of honour and a passion for national glory. Be assured, when a whole people are resolved to emancipate themselves from foreign domination, they will never fail to succeed, I have no fears for the result. We shall end by having a landwehr such as

speculation, seems very dismal. The mere establishment of absolute power in France seems the least part of the evil: an evil greater than despotism, or rather the worst form of despotism, approaches; a monarchy literally universal seems about to be established.—*Sir J. Mackintosh to M. Ogilvie*, Feb. 24,1808.—MACKINTOSH'S *Memoirs*, i. 383.—It is curious, but not unnatural, to observe the earliest and warmest advocates of the French Revolution most gloomy in their anticipations of its ultimate effects. Ardour of imagination, the habit of looking before the multitude into the ultimate consequences of passing events, a sincere desire for the good of mankind, naturally produced in the same minds, in 1790 and 1806, these opposite results.

CHAP. XLIII. 1806.

the slavish spirit of the French could never produce. England will yield us its subsidies ; we shall renew our alliances with Russia and Austria. I know well the principles of the coalition. The sole object which the Allied sovereigns have in view is to put a limit to the system of aggression which Napoleon has adopted, and which he pursues with the most alarming rapidity. In our first wars against France, at the commencement of its Revolution, we fought for the rights of kings, in which, for my part, I felt very little interest: but now the case is totally changed; the population of Prussia makes common cause with its government; the safety of our hearths is at stake; and reverses, when such a spirit is abroad, destroy armies without breaking the spirit of a nation. I look forward without anxiety to the future, because I foresee that fortune will not always favour your Emperor. The time may come when *Europe in a body, humiliated by his exactions, exhausted by his depredations, will rise up in arms against him.* The more he enchains different nations, the more terrible will be the explosion when they burst their fetters. Who can now dispute the insatiable passion for aggrandisement with which he is animated % No sooner is Austria subjugated than Prussia is destroyed; and though we have fallen, Russia remains to continue the strife. I cannot foresee the issue of this struggle ; but supposing it to be favourable to France, it will come to an end. You will speedily see new wars arise, and if we hold firm, France, worn out with conquests, will at length succumb."[1]

[1] Bour. vii. 205, 206.

Blucher was right in these anticipations. It is not in the suffering but the prosperity of nations that the seeds of ruin are in general to be found; the anguish and humiliation which are the consequences of weakness, disunion, or corruption, are often the severe school of ultimate improvement. If we would discern the true cause of the fall of Prussia, we must go back to the vacillation

Salutary ultimate result of this suffering to Prussia.

and selfishness which characterised its national councils during the ten prosperous years which succeeded the treaty of Bale in 1795: which caused it to temporise when the moment for action had arrived, and brought it in heedless security to the very edge of perdition; which lowered the national feeling by sacrificing the national honour, and paralysed the arms of its allies by inspiring distrust in the good faith of its government. In the misery and degradation consequent on the battle of Jena, is to be found the commencement of the causes destined to produce the glorious resurrection of 1813. Periods of adversity are seldom lost in the end to nations any more than individuals; it is the flow of unbroken prosperity, which, by promoting the growth of the selfish passions, is the real source, in most cases, of irremediable ruin. Those twin curses of humanity, despotism and democracy, act in precisely the same way on the sources of public welfare, by poisoning the fountains of individual exertion, and inducing in the active members of society a slavish submission to the authority of the irresistible executive, or a selfish prosecution of their own interest, instead of a generous devotion to the public good. Till this last stage of national degradation has arrived, there is always a hope of revival to its fortunes. No misfortunes are irremediable as long as the spirit of the people is unbroken; no calamities irreparable but those which undermine their virtue.

CHAPTER XLIV.

CAMPAIGN OF EYLAU. DEC. 1806—MARCH 1807.

CHAP. XLIV.

1806.

1. Advance of the French and Russians to the Vistula.

THE campaign of Jena had destroyed the power of Prussia; inconsiderate valour had yielded to overwhelming force and skilful combination; with more justice the King than the people could say with Francis I. at Pavia, *Tout est perdu hors l'honneur.* But Russia was still untouched; and while her formidable legions remained unsubdued, the war, so far from being completed, could hardly be said to have seriously commenced. Napoleon felt this. On the Trebbia, at Novi, at Diirrenstein, and Austerlitz, the French had experienced the stern valour of these northern warriors; and he counted the hours, as the mortal conflict approached, which was to bring either universal empire or irreparable ruin in its train. Nor were the Russians less desirous to commence the struggle. Confident in the prowess of their arms — proud of the steady growth of an empire, the frontiers of which have never yet receded, and which its meanest peasant believes is one day to subdue the world — they anticipated a glorious result from their exertions, and, without underrating the forces of their opponents, indulged a sanguine hope that the north would prove the limits of their power, and that, while they repelled them from their own frontiers, they would afford the means of liberation to oppressed Europe. The severity of a Polish winter could not deter these undaunted combatants. Eager

for the conflict, both the mighty hosts approached the Vistula; and, at a period of the year when some respite is usually given in ordinary war to suffering humanity, they commenced a new campaign, and advanced through a snowy wilderness to the bloody field of Eylau.

2. Military preparations of Russia.

Alexander had displayed the greatest activity in repairing the losses which his army had sustained in the campaign of Austerlitz. Thirty fresh squadrons and fifty-one battalions had been added to its amount, all the chasms occasioned by the casualties of war supplied, and the new French organisation into divisions universally adopted."* Nor was this all:—Anxious to rouse the religious enthusiasm of his subjects, and deeply impressed with the magnitude of the struggle which was approaching, he had called out a defensive militia of six hundred thousand men, and excited their devout loyalty to the highest degree by a proclamation, in which Napoleon was repre-

* The Russian army was organised into eighteen divisions, each of which was composed of six regiments of infantry, ten squadrons of heavy cavalry, ten of light, two batteries of heavy cannon, three of light or horse artillery, and a company of pioneers; in all for each, eighteen battalions, twenty squadrons, and seventy-two pieces of cannon; about 12,000 men. The army was thus divided:—

	Battalions.	Squadrons.	Cannons.
1. Guard, under Grand-duke Constantine,	83	35	84
2. Polish army—Eight divisions, under Ostermann, Sacken, Gallitzin, Touchkoff, Barclay de Tolly, Doctoroff, Essen, Gortchakoff, afterwards Kamenskoi, ...	147	170	504
3. Army of Moldavia—Five divisions under Michelson as general-in-chief, commanded by Wolkonsky, Zacomilsky, Milarado witch, Meindorf, and the Duke of Richelieu, . . .	90	100	306
4. Intermediate corps under the Count Apraxin, consisting of the divisions of General Ritchoff, Prince Labanoff, and Gortchakoff, . . .	5 4	8 0	144
Total,	824	885	1038

besides the local corps in Georgia, Finland, and garrison battalions. The whole regular force was about 380,000 men ; but in no country is the difference between the numbers on paper and in the field so great as in Russia, and the troops engaged in the campaign of Poland never exceeded 80,000 men.—See JOMINI, ii. 335; and WILSON, 4.

CHAP. XLIV. 1806.

sented as the relentless enemy of the Christian religion, and they were called on to shed their best blood in defence of the faith of their fathers.* This proclamation excited the ridicule of a large part of Europe, still tainted by infidel fanaticism, and not then awakened to the impossibility of combating revolutionary energy with any other weapons but those of religious fervour. But it was admirably calculated for the simple-minded people to whom it was addressed, and excited such an enthusiasm, that not only was this immense armament without difficulty raised, but, contrary to usual custom, the peasants drawn for the regular army joyfully left their homes, and marched with songs of triumph, amidst the blessings of their countrymen, towards the frontier, the anticipated scene of their glory or their martyrdom.[1]

[1] Jom. ii. 335. Hard, ix. 375,376 Dum. xvii. 99. Wilson Polish War 10, 11.

3. Composition and character of her armies.

The troops who were now pressing forward to defend the western frontiers of the empire were very different from those with whom the French had hitherto, for the most part, contended in the fields of Germany or the Italian plains. The forces of civilisation, the resources of art, were exhausted; the legions of Napoleon had reached the old frontier of Europe ; the energy of the desert, the hosts of Asia were before them; passions hitherto, save in la Vendue, unexperienced in the contest, were now brought into action. Religious enthusiasm, patriotic ardour, the fervour of youthful civilisation, were arrayed against the power of knowledge, the discipline of art, the resources of ancient opulence. There was to be seen the

* "Buonaparte," said this proclamation, which was read in all the Russian churches, "after having, by open force or secret intrigue, extended his power over the countries which he oppresses, menaces Russia, which Heaven protects. It is for you to prevent the destroyer of peace, of the faith, and of the happiness of mankind, from seducing the orthodox Christians. He has trampled under foot every principle of truth; in Egypt he preached the Koran of Mahomet, in France manifested his contempt for the religion of Jesus Christ by convoking Jewish synagogues. Do you love your fellow-creatures] Fly the persecutor of Christians. Do you desire to be saved1 Oppose an invincible barrier to his advances. He has dared to the combat God and Russia; prove that you are the defenders of the Most High and of your country. Chase far from your frontiers that monster; punish his barbarity to so many innocent persons,

serf but recently emancipated from the servitude of his fathers, whose mother and sisters had checked the lamentations of nature when he assumed the military habit, and bade him go forth, the champion of Christendom, to present glory and future paradise; there the peasant, inured from infancy to hardy exercise, ignorant alike of the enjoyments and the corruptions of urban society, long accustomed to rural labour, and habituated equally to the glow of a Russian bath or the severity of a Scythian winter; there the Cossack, whose steed, nourished on the steppes of the Don, had never yet felt the curb, while his master, following his beloved Hetman to the theatre of action, bore his formidable lance in his hand, his pistols and sword by his side, and his whole effects, the fruit of years of warfare, in the folds of his saddle. Careless of the future, the children of the desert joyfully took their way to the animating fields of plunder and triumph; mounted on small but swift and indefatigable horses, they were peculiarly adapted for a country where provisions were scanty, forage exhausted, and hardships universal. The heat of summer, the frost of winter, were alike unable to check the vigour of their desultory operations; and when the hosts on either side were arrayed in battle, and the charge of regular forces was requisite, they often appeared with decisive effect at the critical moment. Urging their horses to full speed, they bore down, by the length of their spears and the vehemence of their onset, the most powerful cavalry of Western Europe.[1] *

[1] Wilson, viii.28.Personal observation.

whose blood cries aloud to Heaven for vengeance. God will hear the prayer of the faithful; he will shield you with his power; he will cover you with his grace. Your exploits will be celebrated by the church and by your country; immortal crowns or abodes of eternal felicity await you."—HARDENBERG, ix. 376.

* "Mounted," says Wilson, "on a little, ill-conditioned, but well-bred horse, which can walk with ease at the rate of five miles an hour, or dispute in his speed the race with the swiftest, with a short whip on his wrist, as he wears no spur, armed with the lance, a pistol in his girdle, and a sword, the Cossack never fears a competitor in single combat; but in the Polish war he irresistibly attacked every opposing squadron in the field. Terror preceded his charge; and in vain discipline endeavoured to present an impediment to

CHAP. XLIV.

1806.

4. Imprudent division of her forces by the invasion of Moldavia.

If the whole disposable Russian forces had been united upon the Vistula, they would have presented an imposing mass of a hundred and fifty thousand warriors, against which all the efforts of Napoleon would, in all probability, have been exerted in vain. But by a strange and unaccountable infatuation, at the very moment when this formidable contest awaited them on the Polish plains, a large portion of their disposable force was drawn off to the shores of the Danube, and a Turkish superadded to the already overwhelming weight of the French war. Of the causes which led to this unhappy diversion, and the grounds which the cabinet of St Petersburg set forth in vindication of their aggression on the Ottoman dominions, a full account will be given in the sequel of this work;* but, in the mean time, its effect in causing a most calamitous division of the Russian force is too obvious to require illustration. At Eylau the hostile forces on either side were nearly equal, and both retired without any decisive advantage from that scene of blood; ten thousand additional troops would there have overthrown Napoleon, and driven him to a disastrous retreat, while fifty thousand of the best troops of the Muscovite empire were uselessly employed on the banks of the Danube. At the same time it must be remembered that the war in Moldavia was resolved on, and the necessary orders transmitted, before the disasters in Prussia were known, or the pressing necessity for succour on the Vistula could have been anticipated; the battle of Jena was fought on the 14th October, and on

the protruding pikes. The cuirassiers alone preserved some confidence, and appeared to baffle the arms and skill of the Cossack; but in the battle of Preuss-Eylau, when the cuirassiers made their desperate charge on the Russian centre, and passed through an interval, the Cossacks instantly bore down on them, speared them, unhorsed them, and, in a few moments, five hundred and thirty Cossacks reappeared in the field, equipped with the spoils of the slain. But they did not permanently wear them; the steel trophies were conveyed by subscription to the Don and the Volga, where they are inspected as trophies of their prowess, and respected as the pride of their kindred and glory of their nation."—WILSON, 27, 28. When the author saw the Cossacks of the Don and the Guard at Paris in May 1814, this description was still precisely applicable.

* See *infra*, Chap. LXIX. on the Turkish War.

CHAP. XLIV.

1806. Nov. 23.

the 23d November, General Miclielson entered Moldavia, and commenced the Turkish campaign. But though the Russian cabinet is thus not answerable for having given orders to commence an additional war unnecessarily in the midst of the desperate struggle in the north of Germany, yet it cannot be relieved of the responsibility of having, without any adequate cause, provoked hostilities in the southern provinces of its empire, at a time when the contest in Saxony, if not commenced, might at least have been easily foreseen, when the resolution to annul the treaty, signed by d'Oubril at Paris, had been already taken, and all the strength of Europe was required to meet the encounter with the conqueror of Austerlitz on the banks of the Elbe.[1] *

Jom. ii. 336, 337. A.nn. Reg. 1806, 209. Bign. vi. 57.

5. Embarrassment of Napoleon on the Polish question.

While Russia, distracted by the varied interests of her mighty dominions, was thus running the hazard of destruction by the imprudent division of her forces in presence of the enemy, Napoleon was extremely perplexed at Posen by the consideration of the Polish question. The destiny of the Sarmatian people, which enters so deeply into the solution of every political combination of the nineteenth century, here stood in the very foremost rank, and called for immediate decision. The advance of the French armies through Prussian Poland towards Warsaw, the ambiguous, but still encouraging words of the Emperor to the numerous deputations which approached him, had awakened to the highest degree the hopes and expectations of that unfortunate, but impassioned race. A solemn deputation from Great Poland, headed by Count Dzadiniki, waited upon Napoleon, and announced an approaching insurrection of the Polish nation, headed by their nobles, palatines, and chiefs: a great excitement

* The determination to refuse the ratification of the treaty, signed at Paris by d'Oubril, was taken at St Petersburg on the 25th August—the Dniester was passed on the 23d November. The resolution to provoke a Turkish war, therefore, was taken after it was known that a continued struggle with the enemy, whose strength they had felt at Austerlitz, had become inevitable,—*Ante,* Chap. XLII. § 72.

CHAP. XLIV.

1806.

prevailed in Lithuania, and symptoms of alarming effervescence were visible even in Galicia. The crisis was of the most violent kind; an immediate decision was called for by imperious necessity; Napoleon was much at a loss how to act, and the question was warmly debated by the council assembled at his headquarters.[1]

[1] Jom. i. 328, Oginski, ii. 335, 336, 338.

6. Arguments in favour of the restoration of Poland.

On the one hand, it was urged by the friends of Poland, "that the only ally in the east of Europe, on whom France could really and permanently depend, was now preparing to range itself by her side, and enter into a contest of life or death in her support. The alliances of cabinets may be dissolved, the friendships of kings may be extinguished, but the union of nations, founded on identity of interest and community of feeling, may be calculated upon as of more lasting endurance. But what people was ever impelled towards another by such powerful motives, or animated in the alliance by such vehement passions, as Poland now is towards France? Alone of all great nations, in ancient or modern times, she has been partitioned by her powerful and ambitious neighbours, struck down to the earth by hostile armies, and swept, by repeated spoliations, from the book of existence. Her nationality is destroyed, her people scattered, her glories at an end. Is it possible that these injuries can be forgotten, that such unparalleled calamities should leave no traces behind them, in the breasts of the descendants of the Sarmatian race? Is it not certain, on the contrary, that they have left there profound impressions, ineradicable passions, which are ready, on the first favourable opportunity, to raise throughout the whole scattered provinces of the old republic an inextinguishable flame? Where has the Emperor found such faithful followers, such devoted fidelity, as in the Polish legions of the Italian army, whom Muscovite barbarity drove to seek an asylum in foreign lands? Is it expedient to refuse the proffered aid of a hundred thousand such warriors, who are ready

to fly to his standards from the whole wide-spread fields of Sarmatia ?

7. Security for the permanence of her alliance with France.

" True, they are undisciplined—without arms, fortresses, magazines, or resources—but what does all that signify ? Napoleon is in the midst of them; his invincible legions will precede them in the fight; from his enemies and their spoilers his victorious sword will wrest the implements of war; in the example of his followers, they will see the model of military discipline. The Poles are by nature warriors; little training or organisation is requisite to bring them into the field. When the regular forces of Germany had sunk in the conflict, their tumultuary array chased the infidels from the heart of Austria, and delivered Vienna from Mussulman bondage. Nor is it merely a temporary succour which may be anticipated from their exertions; lasting aid, a durable alliance, may with confidence be expected from their necessities. Surrounded by the partitioning powers, they have no chance of independence but in the French alliance; the moment they desert it, they will be again crushed by their ambition. Not only the nationality of Poland, but the individual safety of its whole inhabitants, must for ever bind them to their deliverers; they well know what cruel punishments and confiscations would await them should they again fall under the Muscovite yoke. In restoring the oldest of European commonwealths, therefore, not only will a memorable act of justice be done, a memorable punishment of iniquity inflicted, but a durable alliance on the frontier of civilisation will be formed, and a barrier erected against the inroads of barbarism in the people who, in every age, have devoted their blood to combating its advances."[1]

[1] Jom. ii. 328. Oginski, ii.

8. Arguments on the other side, against interfering on behalf of the Poles,

Specious as these arguments were, and powerfully as they appealed to the generous feelings of our nature, it may be doubted whether they were not opposed by others of greater solidity. " It is in vain," it was urged in reply, " to dwell on the misfortunes of Poland, or repre-

CHAP. XLIV. 1806.

sent her partition as an unavoidable calamity for which her inhabitants are noways answerable. Such a misfortune may doubtless sometimes occur to a small state surrounded by larger ones; but was that the case in the present instance ? On the contrary, Poland was originally the most powerful nation in the north: her dominions extended from the Euxine to the Baltic, and from Suabia to Smolensko. All Prussia, great part of the Austrian dominions, and a large portion of Russia, have at different times been carved out of her wide-spread territories.' So far from being weaker than Russia, she was originally much stronger; and the standards of the Jagellons and the Piasts have more than once been planted in triumph on the walls of the Kremlin. Nevertheless, her history for the last five hundred years has been nothing but a succession of disasters, illuminated at intervals by transient gleams of heroic achievement; and, notwithstanding the valour of her inhabitants, her frontiers have, from the earliest times, been constantly receding, until at length she became the prey of potentates who had risen to importance by acquisitions reft from herself. So uniform and undeviating a course of misfortune, in a kingdom so brave, so enthusiastic, and so populous, as even at the moment of its partition to contain sixteen millions of inhabitants, argues some incurable vice in its domestic institutions. It is not difficult to see what this vice was, when we contemplate the uniform and fatal weakness of the Executive, the disorders consequent on an elective monarchy, the inveterate and deadly animosity of faction, and the insane democratic spirit of a plebeian noblesse, which made John Sobieski, a century before its final destruction, prophesy the approaching ruin of the commonwealth.

"Such being the character of Polish institutions, as they have been ascertained by experience, and proved by the ruin of the commonwealth, it becomes a most serious question whether it is for the interest of France, for the

9. Certainty of the restoration of Poland inducing the inveterate hostility of theNorthern powers.

aid of such an ally, to incur the certain and inveterate hostility of the three northern powers. That Russia, Prussia, and Austria will thenceforth be combined in an indissoluble alliance against France, if Poland is restored, and the rich provinces now enjoyed by them from its partition wrested from their vast dominions, is evident; and, whatever may be thought of the strength of the Sarmatian levies, there can be but one opinion as to the military resources which they enjoy. What aid can Polish enthusiasm bring to the French standards, to counterbalance this strong combination of the greatest military powers of Europe % A hundred thousand horsemen, brave, doubtless, and enthusiastic, but destitute of fortresses, magazines, and resources, and inhabiting a level plain, unprotected by mountains, rivers, or any natural frontier, and open on all sides to the incursions of their well-organised opponents. Supposing that, by the aid of the vast army and still vaster reputation of Napoleon, they shall succeed at this time in beating back the Russian hosts, and wresting Lithuania from their grasp, what may not be apprehended from the appearance of Austria on the theatre of conflict, and the debouching of a hundred and fifty thousand men in the rear of the Grand Army, when far advanced in the deserts of Muscovy ? That the cabinet of Vienna is preparing for the conflict is evident; that she is arming is well known; fear and uncertainty as to the future alone restrain her forces. But the stroke which by restoring Poland severs Galicia from her empire, will at once determine her policy, and bring the Imperial legions in formidable strength to the banks of the Elbe. Even supposing that, by an unprecedented series of victories, these dangers are averted for the moment, and the French battalions, loaded with honours, regain the Rhine, how is Poland, still torn by intestine faction, and destitute of any solid institutions, without fortresses, or the defence of mountain ranges, to withstand her formidable military neighbours 1 How is

CHAP. XLIV. 1806.

France, at the distance of four hundred leagues, to protect a power whose internal weakness has always been such that it has never been able to protect itself against its own provinces? If a barrier is to be erected against Russian ambition, and a state formed dependent on the French alliance for its existence, far better to look for it in Prussia, whose history exhibits as remarkable a rise as that of Poland does a decline, and the solidity of whose institutions, not less than the firmness of her national character, has been decisively exhibited in her contest with all the military forces of Europe during the Seven Years' War."[1]

[1] Jom. ii. 329.

10. Napoleon adopts a middle course, and rouses only Prussian Poland.

Pressed by so many difficulties, and struck in an especial manner by the danger of bringing the forces of Austria upon his rear, while engaged in the hardships of a winter campaign in Poland, Napoleon resolved upon a middle course.* Irrevocably fixed upon humbling Prussia to the dust, and entirely indifferent to the irritation which he might excite among its people, he resolved to rouse to the uttermost the inhabitants of Prussian Poland; but at the same time sedulously to abstain from any invitations to Galicia to revolt, and even to hold out no encouragement to the Russian provinces of Lithuania to join the standard of Polish independence. Kosciusko, who, since his heroic achievements in 1794, had lived in retirement near Fontainebleau, was invited by Napoleon to join his countrymen; and a proclamation, drawn up in his name, was even published in the French papers, in which he promised speedily to put himself at their head; but the course of time soon dispelled the illusion, and it became

*** "I love the Poles," said he to Rapp, after having received one of their deputations; "their ardour pleases me. I could wish to render them an independent people, but it is no easy undertaking. Too many nations are interested in their spoils—Austria, Russia, Prussia. If the match is once lighted, there is no saying where it would stop. My first duty is towards France, and it is no part of it to sacrifice its interests to Poland—that would lead us too far. We must leave its destinies in the hands of the supreme disposer of all things—to Time. It will possibly teach us hereafter what course we ought to pursue."—BOUR. vii. 250.**

painfully evident to the Poles that their illustrious hero, despairing of success, or haying no confidence in their pretended allies, was resolved to bear the responsibility of no future insurrections under such auspices. * In fact, he had been profoundly affected by the indifference manifested by all the European powers to the fate of Poland on occasion of the final partition, and thoroughly impressed with the idea that no efficacious co-operation could be expected from any of them. While, therefore, he rendered full justice to the military talents of Napoleon, he did not the less despair of seeing the deliverance of Sarmatia in good faith attempted by his despotic arms. The task of rousing the Poles in the Prussian dominions was therefore committed to Dombrowski and Wybicki; the former of whom had acquired a deserved celebrity at the head of the Polish Legion in Italy, while the latter possessed such influence with his countrymen as to promise great advantage to the cause of Napoleon.[1]

[1] Oginski, ii. 337.

11. Forged proclamations issued in Kosciusko's name, and great excitement in Poland.

At the same time, every care was taken to excite the feelings and diminish the apprehensions of the Poles of Prussia; heart-stirring proclamations in Kosciusko's name were addressed to them by the generals of their nation in the Italian army; but that brave man himself, faithful to the oath he had taken to the Emperor of Russia, and aware of the delusive nature of Napoleon's support, refused to take any part in these proceedings; resisted all the brilliant offers which he made to induce him to engage in his service, and even had the boldness, in foreign journals, to disavow the letter which the French government had published in his name. Notwithstanding this reserve, however, the advance of the French armies to Warsaw,

*** " Kosciusko," said this fabricated epistle, dated 1st November, " is about to place himself in the midst of you. He sees in your deliverers no ambitious conquerors; the great nation is before you; Napoleon expects you; Kosciusko calls you. I fly to your succour, never more to leave your side. Worthy of the great man whose arm is stretched forth for your deliverance, I attach myself to your cause never again to abandon it. The bright days of Poland have returned; we are under the ægis of a monarch accustomed to overcome difficulties by miracles."—HARDENBERG, ix. 329.**

CHAP. XLIV.

1806.

and the sedulous care which they took to save the inhabitants from every species of insult or contribution, produced an extraordinary excitement in the Polish provinces. Universally they were hailed as deliverers—the substantial benefits, the real protection, the fostering tranquillity of the Prussian administration, were forgotten in the recollection of ancient achievements, and, incited by the heart-stirring prospect of coming independence, the nation was fast running into its ancient and ruinous anarchy. The public exultation was at its height when Napoleon arrived at Posen : several regiments were already formed in Prussian Poland; and. the arrival of the French troops in Warsaw, which the Russians evacuated at their approach, was universally hailed as the first day of Polish restoration.[1]

[1] Oginski, ii. 337, 348. Hard. ix. 344, 347. Bign.vi.79, 81.

12. Napoleon's ambiguous bulletin on the subject. Dec. 1.

Napoleon was not insensible to the important effects of this national enthusiasm, both in augmenting the resources of his own army, and intercepting those of his opponents; but at the same time he felt the necessity of not rousing all Poland in a similar manner, or incurring the immediate hostility of Austria, by threatening the tenure by which she held her Polish acquisitions. He resolved, therefore, to moderate the general fervour, and confine it to the provinces of Prussia, where it was intended to excite a conflagration; and this was done by the bulletin which appeared on the 1st December :—" The love which the Poles entertain for their country, and the sentiment of nationality, is not only preserved entire in the heart of the people, but it has become more profound from misfortune. Their first passion, the universal wish, is to become again a nation. The rich issue from their chateaus to demand with loud cries the re-establishment of the nation, and to offer their children, their fortune, their influence, in the cause. That spectacle is truly touching, Already they have everywhere resumed their ancient costumes, their ancient customs. Is, then, the throne of Poland about to be restored, and is the nation destined to resume

its existence and independence ? From the depth of the tomb is it destined to start into life ? God alone, who holds in his hands the combination of great events, is the arbiter of that great political problem, but certainly never was an event more memorable or worthy of interest." Situated as Napoleon was, the reserve of this language was an act of humanity as well as justice to the unhappy race whose destiny it still held in suspense ; but it contributed powerfully to allay the rising enthusiasm of the Russian and Austrian provinces of the ancient commonwealth ; and the prudent, despairing of any national resurrection from such an ally, began to ask, " i f the restoration of the republic of Poland could in good faith be expected from the man who had extinguished the liberty of his own country *V'*[1]

[1] Oginski, ii.339. Bign. vi. 80, 81. Lucches. ii. 226'.

13. Napoleon proposes to Austria to exchange Galicia for Silesia, which is refused.

One chance, and only one, remained to Napoleon of smoothing away the difficulties which surrounded the restoration of Poland, and that consisted in the proposal, which at this time he made to Austria, to exchange its share of Poland for its old province of Silesia. During the negotiation with Prussia for a separate peace, he only held out the prospect of this exchange in a doubtful manner to the cabinet of Vienna; but no sooner had the King of Prussia refused to ratify the armistice of Charlottenburg, than General Andreossi was authorised to propose it formally to that power. Count Stadion replied, that the good faith of the Imperial government would not permit them to accept a possession whose surrender was not assented to by Prussia; and it would indeed have been an extraordinary fault in policy, as well as breach of morality, to have thus despoiled a friendly power and reopened an ancient wound, at the very moment when a concentration of all energies was required to resist the enemy who threatened to destroy all the European states. In consequence of this refusal, the conduct of Napoleon, in regard to Poland, became still more guarded; and, although a provisional government and local administra-

Dec. 15.

1806.

tion were formed at Warsaw, yet none but natives of Prussian Poland were admitted to any share in the direction of affairs. Meanwhile the conduct of Austria was so dubious as to inspire no small disquietude for the rear of the Grand Army. Already sixty thousand men were assembled in Bohemia; new troops were daily directed towards Galicia, and the greatest activity was displayed in forming magazines in both these provinces. When questioned concerning these armaments, the cabinet of Vienna returned only evasive answers, alleging the necessity of making their frontiers respected by the numerous armies by which they were surrounded. Napoleon saw well that the Austrians were dissembling, but he concealed his resentment, and merely sent General Andr^ossi to Vienna to keep a more vigilant eye on the warlike preparations which were going forward.[x]

[1] Bign. vi. 90, 91. Hard. ix. 349, 350. Thiers, vii. 227.

14. Napoleon's strong declaration in favour of Turkey.

During his stay at Posen, the French Emperor made, on repeated occasions, the strongest professions of his resolution to support the Turks against the invasion of the Russians. To the Prussian plenipotentiaries at Charlottenburg he declared, " That the greatest of all the evils which Prussia has occasioned to France by the late war, is the shock they have given to the independence of the Ottoman Porte; as the imperious commands of the Emperor of Russia have brought back to the govern* ment of Wallachia and Moldavia the hospodars, justly banished from their administration ; which, in effect, reduces their principalities to the rank of Russian provinces. But the full and complete independence of the Ottoman empire will *ever be the object most at heart with the Emperor,* as it is indispensable for the security of France and Italy. He would esteem the successes of the present war of little value, if they did not give him the means of reinstating the Sublime Porte in complete independence. In conformity with these principles, the Emperor is determined that, until the Sultan shall have recovered the full and entire command both of Moldavia

and Wallachia, and is completely *secured in his own independence,* the French troops will not evacuate any part of the countries they have conquered, or which may hereafter fall into their power."[1] The same resolution was publicly announced in the bulletins, when intelligence of the ill-judged invasion of the principalities arrived; and yet, within six months afterwards, though Turkey had faithfully and gallantly stood to the French alliance under circumstances of extreme peril, Napoleon, as will shortly appear, signed a treaty at Tilsit, by which not only were Wallachia and Moldavia ceded to Russia, but provision was made for the partition of the whole Turkish dominions in Europe!

[1] Lucches. i. 186,187. [Triers, vii. 267.

15. His proclamation to lis soldiers on the anniversary of A.usterlitz.

While this great political question was under discussion, during the fortnight that the Emperor's stay continued at Posen, the army in great force approached the Vistula; but the severity of the weather, and the incessant fatigue of the troops, in the long and dreary marches through that monotonous country at so inclement a season, produced a general feeling of despondency among the soldiers, and gave rise to a fermentation which even Napoleon deemed alarming. To the intoxication consequent on the victory of Jena had succeeded a mortal disquietude, when, immediately after such glorious successes, instead of the cantonments and repose which they expected, they found themselves dragged on in the depth of winter to begin a new campaign, amidst pathless snows and gloomy forests. Even the heroic Lannes was so impressed with these difficulties, that he wrote to Napoleon in the strongest terms, advising the cessation of hostilities, and describing the anarchy and confusion which prevailed in Poland, from which no efficient aid could be expected.* In order to dispel these sinister presenti-

*** " Apres le succes de la guerre de Prusse, Lannes aurait voulu qu'on s'arretat sur l'Oder, et ne s'6tait pas impose la moindre contrainte dans l'expression de cette opinion. Parvenu a Bromberg a la suite d'une marche penible, il ecrivit a Napoleon qu'il venait de parcourir un pays**

ments, Napoleon took advantage of the anniversary of the battle of Austerlitz to address an animating proclamation to his army. " Soldiers! this day year, at this very hour, you were on the memorable field of Austerlitz. The Russian battalions fled in terror before you, or, surrounded on all sides, laid down their arms to their conquerors. On the day following they read the words of peace, but they were deceitful. Hardly had they escaped, by the effects of a generosity perhaps blamable, from the disasters of the third coalition, than they set on foot a fourth; but the new ally on whose skilful tactics they placed all their hopes is already destroyed. His strongholds, his capital, his magazines, two hundred and eighty standards, seven hundred field-pieces, five first-rate fortresses, are in our power. The Oder, the Wartha, the deserts of Poland, have been alike unable to restrain your steps. Even the storms of winter have not arrested you an instant; you have braved all, surmounted all. Everything has flown at your approach. In vain have the Russians endeavoured to defend the capital of the ancient and illustrious Poland. The French eagle hovers over the Vistula: the brave and unfortunate Poles, when they behold you, imagine that they see the soldiers of Sobieski returning from his memorable expedition! Soldiers! we shall not again lay down our arms till a general peace has secured the power of our allies, and restored to our commerce liberty and its colonies. On the Elbe and the Oder we have conquered Pondicherry, our establishments in the Eastern Seas, the Cape of Good Hope,

sablonneux, sterile, sans habitants, comparable, sauf le oiel, au desert qu'ou traverse pour aller d'Egypte en Syrie; que le soldat etait triste, atteint de la fievre, ce qui etait du a l'hmmidite" du sol et de la saison; que lea Polonaia etaient peu disposes a s'insurger, et tremblants sous le joug de leurs maitres; qu'il ne fallait pas juger de leurs dispositions d'aprds Tenthousiasme factice de quelques nobles attires a Posen par l'amour du bruit et de la nouveaute; qu'au fond ils etaient ton jours l*egers, divises, anarchiques,* et, qu'en voulant les reconstiteur en corps de nation, on epuiserait inutilement le sang de la France pour une ceuvre **sans** solidite et sans duree."—THIERS, *Consulat et l'Empire,* vii. 207.

and the Spanish colonies. Who has given the Russians right to hope that they can balance the weight of destiny? Who has authorised them to overturn such great designs? Are not they and we the soldiers of Austerlitz?" Even in the forests of Poland, and amidst ice and snow, the thoughts of Napoleon were incessantly fixed on England and the East; and it was to overthrow her power on the banks of the Ganges that a campaign was undertaken in the depth of winter on the shores of the Vistula.[1]

[1] Bign, vi. 75,76.Bour. vii. 261,252.

16. Its great effect. Formation of the Temple of Glory at Paris.

This proclamation, dictated by a profound knowledge of the French character, produced an extraordinary effect upon the soldiers. It was distributed with profusion over all Germany, and none but an eyewitness could credit the influence which it had in restoring the spirit of the men. The veterans in the front line forgot their fatigues and privations, and thought only of soon terminating the war by a second Austerlitz on the banks of the Vistula; those who were approaching by forced marches in the rear, redoubled their exertions to join their comrades in the more forward stations, and counted the days till they gained sight of the eagles which appeared to be advancing to immortal renown. The better to improve upon these dispositions, and at the same time establish a durable record of the glorious achievements of his troops, Napoleon, by a decree published on the same day, gave orders for the erection of a splendid edifice on the site of the convent of the Madeleine, at the end of the Boulevards Italiens at Paris, with the inscription —" The Emperor Napoleon to the soldiers of the Grand Army." In the interior were to be inscribed, on tablets of marble, the names of all those who had been present in the battles of Marengo, Austerlitz, and Jena; on tablets of gold, the names of all those who had fallen in these memorable conflicts. There also were to be deposited the arms, statues, standards, colours, and monuments of every description, taken during the two campaigns by the Grand Army. Every year a great solemnity was te

CHAP. XLIV.

commemorate, on the 2d December, the glory of these memorable days; but, in the discourses or odes made on the occasion, no mention was ever to be made of the Emperor : like the statues of Brutus and Cassius at the funeral of Junia, his exploits, it was well known, would only be the more present to the mind from being withdrawn from the sight.[1]

1806.

17. Napoleon's plans for its construction.

This project took a strong hold of the imagination of Napoleon : he gave immediate orders for the formation of plans for the edifice, and the purchase of all the buildings in the vicinity, in order to form a vast circular *place* of uniform buildings around it; and, as a previous decree had directed the construction of the Bourse or public exchange on that situation, he shortly after directed the minister of the interior to look out for another isolated situation for that structure, "worthy of the grandeur of the capital, and the greatness of the business which will one day be transacted within its walls." The Place which it fronted was to retain its title "de la Concorde," "for that it is," said Napoleon, "which renders France invincible." He was desirous that the monument should be an imitation of the Pantheon, or some other Grecian temple, and constructed entirely of the most durable and costly materials. The interior, in the form of an amphitheatre, was to be arranged with seats of solid marble; iron, bronze, and granite, intermingled with letters of gold, were alone to be employed in the inside. Among the designs presented, he at once fixed on that which has 3ince been adopted for that exquisite structure.* Such

Letter, 7th March 1807.

*** " Je ne veux nen en bois. Les spectateurs doivent etre plac6s, comme je Tai lit, sur des gradins de marbre formant les amphitheatres destines au public.—Elien, dans ce temple, ne doit toe mobile et changeant; tout, au contraire, doit y stre fixe a sa place.—II ne faut pas de bois dans la construction de ce temple.—Du granit et du fer, tels doivent etre les mat6riaux de ce monument.—Il faut shercher du granit pour d'autres monuments que j'ordonnerai, et qui, par leur nature, peuvent permettre de donner trente, quarante, ou cinquante ans a leur construction.—J'ai entendu un monument tel qu'il y en avait a Athenes, et qu'il a'y en a pas a Paris. was the origin of those beautiful edifices, the Church of the Madeleine and the Exchange at Paris; and which, carried on through other reigns, and completed under another dynasty, with that grandeur of conception and perseverance in execution by which the public edifices in Paris are distinguished, will for centuries attract the educated from all countries to Paris, as the centre of modern architectural beauty. To the world, at that time, Napoleon revealed no other design in the structure of the Madeleine than that of a monument to the Grand Army; but, penetrated with the magnitude of the mission with which he was persuaded he was intrusted—that of closing the wounds of the Revolution—he in his secret heart destined for it another and a greater object. He intended to have made it an expiatory monument to Louis XVI., Marie Antoinette, and the other victims of the Revolution—a design which he did not propose to declare for ten years, when the fever of revolutionary ideas was in a great measure exhausted ;[1] and therefore it was, that he directed its front to face the centre of the Place Louis XV., where those august martyrs had perished, and constructed it on the site of the Madeleine, near which

[1] Thiers, vii. 213,215. Bour. vii. 254, 255. Bign. vi. 77, 78. Las (Jus. i. 370, 371.

manger des femmes des banquiers a Paris. Tout ce qui est futile n'est pas simple et noble; tout ce qui n'est pas de longue duree ne doit pas etre employe dans ce monument. Je repdte qu'il n'y faut aucune espece de meubles, pas meme des rideaux."—NAPOLEON *au Ministre de l'Interieure, Finkemtein,* 30 May 1807; THIERS' *Consulat et l' Empire.*—Napoleon was endowed with the real soul of an artist; like Michael Angelo, he would have placed another Pantheon in the air. Had fortune not made him the first general, he was qualified to have become the greatest artist of modern times—another proof among the many which history affords of the truth of Johnson's observation, that " genius is nothing but strong natural parts accidentally turned in one direction." Yet, strange mixture of the great and the little in that extraordinary mind, even when engaged with those lofty designs destined to perpetuate glorious deeds to remote ages, ho could not forget the senseless jealousies of the moment. His observation as to the sculptures in the salons of the bankers' wives at Paris was a hit at Madame Recamier, the object of his extreme jealousy on account of her beauty, which almost balanced his colossal fame, and whose suite of rooms had been richly ornamented in that style,—another proof of the truth of the same great moralist's observation, " that no one ever raised himself from a private station to great eminence among men, who did not unite commanding qualities to meannesses which would be inconceivable in ordinary men."

CHAP. XLIV.

1806.

their uncoffined remains still lay in an undistinguished grave.*

18. Vast efforts of Napoleon to recruit his army, and secure his flanks and rear.

The commencement of a winter campaign, which would obviously be attended with no ordinary bloodshed, required unusual precautions for the protection of the long line of communication of the Grand Army, and the efforts of Napoleon 'were incessant to effect this object The march of troops through Germany was urged forward with all possible rapidity ; some attempts at insurrection in Hesse were crushed with great severity ; the conscripts, as they arrived from the Rhine or Italy at the different stations in the Prussian states, were organised and sent into the field almost before they had acquired the rudiments of the military art; and the subsidiary contingents of Saxony, Hesse-Cassel, and the states of the Rhenish confederacy, raised to double their fixed amount. By these means not only were the rear and communications of the Grand Army preserved from danger, but successive additions to its active force were constantly obtained; while at the same time Austria, whose formidable armaments on the Bohemian frontier already excited the attention of the Emperor, and had given rise to pointed and acrimo-

Napoleon's secret design in this edifice.

*** " No one but myself," said he,* could restore the memory of Louis XVI., and wash from the nation the crimes with which a few galley-slaves and an unhappy fatality had stained it. The Bourbons being of his family, and resting on external succour, in striving to do so, would have been considered as only avenging their own cause, and have increased the public animosity. I, on the contrary, sprung from the people, would have purified their glory, by expelling from their ranks those who had disgraced them, and such was my intention; but it was necessary to proceed with caution : the three expiatory altars at St Denis were only the commencement; the Temple of Glory on the foundation of the Madeleine was destined to be consecrated to this purpose with a far greater eclat. It was there that, near their tomb, above their very bones, the monuments of men, and the ceremonies of religion, would have raised a memorial to the memory of the political victims of the Revolution. This was a secret which was not communicated to above ten persons; but it was necessary to allow it to transpire in some degree to those who were intrusted with the preparation of designs for the edifice. I would not have revealed the design for ten years, and even then I would have employed every imaginable precaution, and taken care to avoid every possibility of offence. All would have applauded it; and no one could have suffered from its effects. Everything, in such cases, depends on the mode and time of execution. Carnot**

19. Enormous contributions levied on all the conquered states.

nious remonstrances from his military envoy, General Andreossi, to the cabinet of Vienna, was overawed.*

How to maintain these vast and hourly increasing armaments was a more difficult question; but here, too, the indefatigable activity of the Emperor, and his grinding system of making war support war, contrived to find resources. Requisitions of enormous magnitude were made from all the cities in his rear, especially those which had been enriched by the commerce of England: Napoleon seemed resolved that their ill-gotten wealth should, in the first instance, be devoted to the necessities of his troops. The decrees against English commerce were everywhere made a pretext for subjecting the mercantile cities to contributions of astounding amount. Fifty millions of francs (£2,000,000) were, immediately upon its occupation, demanded from Hamburg as a ransom for its English merchandise, seized in virtue of the decree of 21st November; and it only escaped by the immediate payment of sixteen millions, (£640,000.) In addition to this, that unhappy city, which had taken no part in hostilities against France, was ordered to furnish at once fifty thousand greatcoats for the use of the troops; while Liibeck, which had been successively pillaged by the

would never have ventured under my government to write an apology for the death of the King, but he did so under the Bourbons. The difference lay here; that I would have marched with public opinion to punish it, whilst public opinion marched with him, so as to render him unassailable."—LAS CASES, i. 370, 371.

*** In an audience of the Emperor of Austria, which that general obtained, he said with more of military frankness than diplomatic ambiguity—"The Emperor Napoleon fears neither his avowed nor his secret enemies. Judging of intentions by public acts, he is too clear-sighted not to dive into hidden dispositions; and in this view, he would infinitely regret if we were compelled to arrive at the conclusion, that the considerable armaments which your Majesty has had on foot since the commencement of hostilities were intended to be directed, in certain events, against himself. Your Majesty appears to have assembled on the flank of the French army all your disposable forces, with magazines beyond all proportion to their amount. The Emperor asks what is the intention of this army while he is engaged with Russia on the banks of the Vistula? Ostensibly intended for the preservation of neutrality, how can such an object be its real destination, when there is not the slightest chance of its being threatened."—BIGNON, vi. 88.**

CHAP. XLIV. 1806.

troops of Blucher and Bernadotte, was compelled to yield up four hundred thousand lasts of corn,* and wood to the value of sixty thousand pounds; Leipsic redeemed its English merchandise for ten million of francs, (£400,000,) while all the other Hanse Towns were subjected to equally severe requisitions; and the great impost of one hundred and sixty-nine millions of francs (£6,800,000,) imposed after the battle of Jena, was everywhere collected from the Prussian territories with a rigour which greatly added to its nominal amount. Under pretext of executing the decree against English commerce, pillage was exercised in so undisguised a manner by the French inferior agents, that it attracted in many places the severe animadversion of the chiefs of the army. Thus, while the decrees of the Emperor professed to be grounded on the great principle of compelling the English government, by the pressure of mercantile embarrassment, to accede to the liberty of the seas, in their execution he had already departed from their ostensible object; and, while the merchandise seized was allowed to remain in the emporiums of British commerce, its confiscation was made a pretext for subjecting neutral states or towns to inordinate requisitions for the support of the Grand Army.[1†]

20. Positions and force of the French on the Vistula.

By these different means Napoleon was enabled, before the middle of December, not only to bring a very great force to bear upon the Vistula, but to have the magazines and equipments necessary for enabling it to keep the field, during the rigours of a Polish winter, in a

*** Each last weighs 2000 kilogrammes, or about half a ton.—BOUR. vii. 249.**

+ As an example at once of the enormous magnitude of these contributions, and the provident care of the Emperor for the health and comfort of his troops, reference may be made to his letter to the French governor of Stettin, from which contributions to the amount of twenty million francs (£800,000) were demanded, though the city only contained thirty-two thousand inhabitants. "You must seize goods to the amount of twenty millions, but do it by rule, and give receipts. Take payment as much as possible in kind; the great stores of wine which its cellars contain would be of inestimable importance. It is wine which in winter can alone give the victory."—BIGNON, vi. 99.

CHAP. XLIV.

1806.

complete state of preparation. He was particularly solicitous for the increase and remounting of his cavalry, which had suffered extremely during the fatiguing marches of the preceding campaign. Four splendid regiments of cuirassiers, and five of light horse, formed by the sedulous care of Murat, were ordered up from Naples; and an immense establishment for cavalry was organised at Spandau, where all the horses taken from the enemy, and all that could be purchased, were collected, and distributed among the different corps which required them. The army in Italy was put on the war footing, to overawe Austria, and raised to 52,000 men. Fifty thousand more were on their march from the interior for the Grand Army. In all 300,000 men, in Germany, Italy, and Poland, were assembled round the standards of Napoleon, which, after making all deductions, promised to afford 150,000 ready for active service in the field. To make room for this immense force, the front was advanced towards the enemy. Davoust and Murat had entered Warsaw at the end of November, which was abandoned by the Prussians at their approach ; and two days afterwards they crossed the Vistula, and occupied the important *tSte-de-pont* of Praga on its right bank, which was in like maimer evacuated without a struggle. On the right Lannes supported them, and spread himself as far as the Bug; while on the left, Ney had already made himself master of Thorn, and marched out of that fortress, supported by the cavalry of Bessieres and followed by the corps of Bernadotte. In the centre, Soult and Augereau were preparing with the utmost activity to surmount the difficulties of the passage of the Vistula at Plock and Modlin. Thus eight corps were assembled, ready for active service, on that river, which, even after taking into view all the losses of the campaign, and the numerous detachments requisite to keep up the communications in the rear, could in all bring a hundred thousand men into the field ;[1] while the powerful reinforcements

1806.

on their march, through Prussia and Poland, promised to enable the Emperor to keep up the active force in front at that great numerical amount.

21. And of the Russians.

The Emperor Alexander was far from having an equal force at his disposal. The first army, under Benningsen, consisting of sixty-eight battalions and one hundred and twenty-five squadrons, could muster forty-five thousand men, organised into four divisions, under Ostermann Tolstoy, Sacken, Prince Gallitzin, and Sidmaratski. It arrived on the Vistula in the middle of November. The second, consisting also of sixty-eight battalions and one hundred squadrons, arranged in the divisions of TouchkofF, Doctoroff, Essen, and Aurepp, was about thirty thousand strong, its regiments having not yet filled up the chasms made by the rout of Austerlitz. The wreck of the Prussian forces, re-organised and directed under the able management of General Lestocq, did not number more than fifteen thousand men, when the requisite garrisons for Dantzic and Graudenz were completed from its shattered ranks. Thus the total Allied forces were not above ninety thousand strong, and, for the actual shock of war in the field, not more than seventy-five thousand men could be relied on. This imposing array was under the command of Field-marshal Kamenskoi, a veteran of the school of Suwarroff, nearly eighty years of age, and little qualified to measure swords with the conqueror of Western Europe, But the known abilities of Benningsen and Buxhowden, the two next in command, would, it was hoped, compensate for his want of experience in the novel art of warfare which Napoleon had introduced.[1]

[1] Dum. xvii. 99, 105. Jom. ii. 338. Bign.vi.109.

22. Positions of the troops, and their evacuation of Warsaw: Alexander's proclamation to his soldiers.

Headquarters had been established at Pultusk since the 12th November : Warsaw, all the bridges of the Vistula, were in the hands of the Allies; and the firmness of their countenance gave rise to a belief that they were disposed to dispute the passage of that river with the invaders. Until the arrival of the second army under Buxhowden, however, which was advancing by forced marches from

the Niemen, they were in no condition to keep their ground against the French ; and it was deemed better to give them the moral advantage arising from the occupation of the Polish capital, than to hazard a general engagement with so decided an inferiority of force. After some inconsiderable skirmishes, therefore, the Russians fell back at all points, their advanced posts were all withdrawn across the Vistula, and Warsaw, evacuated on the 28th, was occupied by Davoust on the 30th November. Previous to the opening of the winter campaign, Alexander addressed the following proclamation to his soldiers :— " Prussia formerly was the barrier between France and Russia, when Napoleon's tyranny extended over all Germany. But now the flame of war has burst out also in the Prussian states, and after great misfortunes, that monarchy has been struck down, and the conflagration now menaces the frontiers of our territory. It would be useless to prove to the Russians, who love the glory of their country, and are ready to undergo every sacrifice to maintain it, how such events have contributed to render our present efforts inevitable. If honour alone compelled us to draw our sword for the protection of our allies, how much more are we now called upon to combat for our own safety ? We have in consequence taken all the measures which the national security requires — our army has received orders to advance beyond the frontier—Field-marshal Kamenskoi has been appointed to the command, with instructions to march vigorously against the enemy— all our faithful subjects will unite their prayers with ours to the Most High, who disposes of the fate of empires and battles, that he will protect our just cause, and that his victorious arm and blessing may direct the Russian army, employed in the defence of European freedom."[1]

Nov. 30.

Sensible of the inferiority of its forces to those which Napoleon had assembled on the Vistula from all the states of Western Europe, the Russian cabinet made an application to the British government for a portion of those

CHAP. XLIV.

1806.

23. **Application for assistance in money to England. Its impolitic refusal.**

subsidies which she had so liberally granted on all former occasions to the powers who combated the common enemy of European independence; and, considering that the whole weight of the contest had now fallen on Russia, and the danger had now approached her own frontiers, they demanded, not without reason, a loan of six millions sterling, of which one was to be paid down immediately for the indispensable expenses connected with the opening of the campaign. It was easy to see, however, from the answer to this demand now, that the spirit of Pitt no longer directed the British councils. The request was refused by the ministry on the part of government; but it was proposed that a loan should be contracted for in England for the service of Russia, and that, for the security of the lenders, the duties on English merchandise, at present levied in the Russian harbours, should be repealed, and in lieu thereof, the same duties should be levied at once in the British harbours, and applied to the payment of the interest of the loan to the British capitalists. This strange proposition, which amounted to a declaration of want of confidence, both in the integrity of the Russian government and the solvency of the Russian finances, was of course rejected, and the result was, that *no assistance, either in men or money, was afforded by England to her gallant ally in this vital struggle.* An instance of parsimony and blindness beyond all example calamitous and discreditable, when it is considered that Russia was at that moment bearing the whole weight of France on the Vistula, and that England had at her disposal twenty millions in subsidies, and a hundred thousand of the best soldiers in Europe.[1]

[1] **Hard. ix. 3.99, 400. Bign. vi. 107,108. Letter to Marquis Douglas. Jan. 13, 1807.**

24. **The Russians assume the offensive.**

Dec. 11.

No sooner had the advanced guards of Buxhowden's army begun to arrive in the neighbourhood of Pultusk, than Kamenskoi, whose great age had by no means extinguished the vigour by which he was formerly distinguished, made a forward movement. Headquarters were advanced to Nasielsk, and the four divisions of Benningsen's army

cantoned between the Ultra, the Narew, and the Bug; while Buxhowden's divisions, as they successively arrived, were stationed between Golymin and Makow ; and Lestocq, on the extreme right of the Allies, encamped on the banks of the Drewentz, on the great road leading to Thorn, was advanced almost up to the walls of that fortress. The object of this general advance was to circumscribe the French quarters on the right bank of the Vistula ; and as it was known that Napoleon with his Guards was still at Posen, hopes were entertained that his troops would be entirely driven from the right bank before his arrival, and the river interposed between the "winter quarters of the two armies.[1]

[1] Dum. xvii. 121, 125. Jom. ii. 339. Bign. vi. 110.

25. Napoleon advances to Warsaw. General enthusiasm there.

No sooner did Napoleon hear of this forward movement of the Russians, than he broke up from his quarters at Posen on 16th December, and arrived at Warsaw two days afterwards. No words can do justice to the warlike and patriotic enthusiasm which burst forth in that capital when they beheld the hero whom they hailed as their deliverer actually within their walls, and saw the ancient arms of Poland affixed to the door of the hotel where the provisional government of Prussian Poland was established. The nobility flocked into the capital from all quarters; the peasantry everywhere assembled in the cities, demanding arms; the national dress was generally resumed; national airs were universally heard; several regiments of horse were speedily raised, and before the conclusion of the campaign, thirty thousand men were enrolled in disciplined regiments, from the Prussian provinces alone of the ancient monarchy. To secure for themselves the powerful support of the French Emperor, the Polish leaders were desirous not only that the entire Sarmatian nation should be restored, but that a prince of his own family should be placed on its throne. With this view they suggested Murat, the Emperor's brother-in-law, whose great reputation, especially as a cavalry officer, and his chivalrous character, seemed to point him out as pecu-

liarly adapted for a nation whose nobles had boasted, in the days of their glory, that if the heaven itself were to fall, they would support it on the points of their lances. But Napoleon knew both the Poles and Murat too well to go into any such proposal. "I have not here," said he, "to beg a throne for my family — I have thrones enough to bestow without asking. Tell the Poles it is not by means of precautions, and personal calculations, that nations are delivered from a foreign yoke. I have come here for the general interest of Europe, to engage in one of the most difficult of enterprises, from which the Poles have more to gain than any other people. Their national existence is at stake, and not merely the general interests of Europe. If by unbounded devotion they second me sufficiently to secure success, I will award to them their independence. If not, I will do nothing, and leave them to the Russians and Prussians." The general enthusiasm did not make Napoleon forget his policy: the provisional government was established by a decree of the Emperor, only "until the fate of *Prussian Poland* was determined by a general peace;" and the prudent began to entertain melancholy presages in regard to the future destiny of a realm thus agitated by the passion of independence, and the generous sentiments of patriotic ardour, with only a quarter of its former inhabitants to maintain the struggle against its numerous and formidable enemies.[1]

Jan. 1, 1807.

26. And resumes the offensive against the Russians.

Having taken the precaution to establish strong *t3tes-de-pont* at Praga the outwork of Warsaw, Modlin, Thorn, and all the bridges which he held over the Vistula, Napoleon lost not an instant in resuming the offensive in order to repel this dangerous incursion of the enemy. Davoust, who formed the advanced guard of the army, was pushed forward from Praga on the road towards Pultusk, and soon arrived on the Bug; and, after having reconnoitred the whole left bank of that river, from its confluence with the Narew to its junction with the Vistula, madeprepara-

tions for effecting the passage at Okernin, a little below the junction with the Ukra. The Cossacks and the Russian outposts lined the opposite bank, and the difficulties of the passage were considerable; but they were not in sufficient force to dispute it in a serious manner; and after some sharp skirmishing, the experienced talents of General Gauthier, who was intrusted with the enterprise, established the French on the right bank, where they soon after sustained a severe action with the Russian advanced guard at Pomichowo. The Muscovites, however, returned in greater force; and the result was, that the French advanced guards were cut off, and the detachment to which they belonged fell back to the *tete-de-pont* established at the river. Meanwhile Soult and Augereau in the centre advanced to Plonsk, and Ney and Bernadotte, with Bessieres' cavalry, moved forward on the left from Thorn to Soldau and Biezun, in such a manner as to threaten to interpose between the detached corps under Lestocq and Benningsen's main body, which was concentrated in the neighbourhood of Nasielsk.[1]

1806. Dec. 11. Dec. 12. Dec. 21. Dec. 22.

27. Forcing of the passage of the Ukra by the French.

This partisan warfare continued for ten days without any decisive result on either side; but the arrival of Napoleon at Warsaw was the signal for the commencement of more important operations. On the 23d December, at daybreak, he set out from that capital for the army, with the Guards and Lannes' corps, and no sooner arrived at the advanced posts of Davoust, than he dictated on the spot directions for forcing the passage of the Ukra, which had hitherto bounded all their incursions."[*] The opera-

* " Napoleon," says Rapp, " no sooner arrived in sight of Okernin, than he reconnoitred the position of the Russians, and the plain which it was necessary to pass before arriving at the river. Covered with woods, intersected by marshes, it was almost as difficult to traverse as the fieldworks, which were bristling with Cossacks, were to carry on the opposite bank. The Emperor surveyed them long and with close attention; but as the thickets of wood in some places intercepted his view, he caused a ladder to be brought, and ascended to the roof of a cottage where he completed his observations. He then said, ' It will do—send an officer,' and when he arrived, dictated on the spot the minute directions for the movement of all the corps during the operation, which are preserved in Dumas, xvii. 137."—RAPP, 125.

CHAP. XLIV. 1806.

tion was carried into effect with the happiest success at Czarnovo, and with that ardour with which the presence of the Emperor never failed to animate the troops. After a severe action of fourteen hours, the passage was forced, and Count Ostermann, who commanded the Russian rear-guard, retreated upon Nasielsk. In this well-contested affair each party had to lament the loss of about a thousand men. Kamenskoi, finding the barrier which covered the front of his position forced, gave orders for concentrating his forces towards Pultusk on the Narew, and the Allies accordingly fell back at all points. They were vigorously pursued by the French, and another desperate conflict took place next day in front of Nasielsk, between General Rapp and the Russians under Count Ostermann Tolstoy, in which the latter were worsted, but not without a severe loss to the assailants. In this warm conflict the opposite bodies had become so intermingled that Colonel Ouvaroff, an aide-de-camp of Alexander, was made prisoner by the French; while Count Philippe de S^gur, destined for future celebrity as the historian of the still more memorable campaign of 1812, and attached to Napoleon's household, fell into the hands of the Russians. On the same day Augereau fought from daybreak till sunset at Lochoczyn on the Ukra, with the divisions opposed to him, which at length began to retire. Thus the Russians, pierced in the centre by the passage of the Ukra at Czarnovo and Lochoczyn, and the combat at Nasielsk, were everywhere in full retreat. No decisive advantage had been gained; but the initiative had been taken from the enemy, and his divisions, separated from each other, were thrown into eccentric lines of retreat, which promised every moment to separate them more widely from each other.[1]

28. Kamenskoi loses his presence of mind, and orders the sacrifice of the artillery.

Pultusk, was traversing a continual forest, through roads almost impassable from the mud occasioned by a long-continued thaw, and the passage of innumerable carriages, which had broken it up in all parts. Overwhelmed by these difficulties, he issued orders to sacrifice the artillery, which impeded the retreat—gave directions to arrest the supplies destined for the army at Grodno, and himself took the road of Lomza. Deeming such an order wholly unnecessary, and the result of that approaching insanity which soon after entirely overset the mind of the veteran marshal, Benningsen took the bold step of disobeying it; and, in order to gain time for the artillery and equipages to defile in his rear, he resolved to hold fast in the position of PULTUSK, with all the troops which he had at his disposal. Nothing could be more acceptable to the Russians, to whom the fatigues and privations of a retreat, at a season when sixteen hours out of the twenty-four were involved in total darkness, and the roads, bad at all times, were in many places several feet deep of mud, had been the severest trial of discipline and courage. No sooner, however, was it known that they were marching towards a chosen field of battle, than their hardships and difficulties were all forgotten, and the troops which, from mid-day on the 25th, successively arrived at Pultusk, took up their ground in parade order, full of enthusiasm for the battle on the morrow. Before it was dark, sixty battalions and fifty-five squadrons, with one hundred and twenty pieces of cannon, in all about forty thousand men, were here assembled; while the division of Doctoroff, with part of those of Sacken and Gallitzin, were opposed at GOLYMIN to Augereau's corps, one division of Davoust's, and one of Murat's cavalry. Three Russian divisions, viz. those of Essen, Aurepp, and Touchkoff, were at such a distance in the rear, both of Pultusk and Golymin, that they could not be expected to take any part in the actions which were approaching.[1]

1 Wilson, 77,80. Jom. ii. 341. Dum. xvii. 159,162.

The object of Napoleon in these complicated operations

CHAP. XLIV.

1806.

29. Object of Napoleon in these movements.

was in the highest degree important; and the vigour of Benningsen and Prince Gallitzin, joined to the extreme shortness of the days and the horrible state of the roads, alone saved the Allies from a repetition of the disasters of Auerstadt and Jena. His right wing, under Lannes, was intended to cut Benningsen's army off from the great road through Pultusk; his centre, under Davoust, Augereau, Soult, and Murat, was destined to penetrate by Golymin and Makow to Ostrolenka, directly in the rear of that town, and two marches between Benningsen and the Russian frontier; while the left wing, under Ney, Bernadotte, and Bessikres, was to interpose between Lestocq and the Russian centre, and throw him back into Eastern Prussia, where, driven up to the sea, he would soon, if the Russians were disposed of, be compelled, like Blucher, to surrender. A more masterly project never was conceived; it was almost a repetition of the semicircular march of the Grand Army round Mack at Ulm; and the hesitation of Kamenskoi between an advance and a retrograde movement, served to offer every facility for the success of the enterprise. The celerity of the Russian retreat, the sacrifice of seventy pieces of their heavy artillery, the dreadful state of the roads, which impeded the French advance, and the impervious intervening country, which separated their numerous corps from each other, alone defeated this profound combination, and prevented the arrival at Pultusk and Golymin, before the enemy, the corps which were there destined to fall upon their retreating columns, or bar the road to the frontiers of Russia.[1]

[1] Jom. ii. 340,341. Dum. xvii. 162,164.

30. Description of the field at Pultusk, And of the positions of the two hostile armies.

The position of Pultusk is the only one in that country where the ground is so far cleared of wood as to permit of any considerable armies combating each other in a proper field of battle. An open and cultivated plain on this side of the river Narew, there stretches out to the south and east of that town, which lies on the banks of

its meandering stream. A succession of thickets surround this open space in all directions, excepting that on which the town lies; and on the inside of them the ground rises to a semicircular ridge, from whence it gradually slopes down towards the town on one side, and the forest on the other; so that it is impossible, till this barrier is surmounted, to get a glimpse even of the buildings. There the Russians were drawn up in admirable order in two lines—their left resting on the town of Pultusk, their right on the wood of Moszjn, which skirted the little plain, the artillery in advance; but a cloud of Cossacks swarmed in front of the array, and prevented either the force or composition of the enemy from being seen by the French as they advanced to the attack. Sacken had the command of the left; Count Ostermann Tolstoy of the right; Barclay de Tolly, with twelve battalions and ten squadrons, occupied a copsewood in front of the right; while Bagavout, with twenty battalions and ten squadrons, was placed in front of the left, covering the town of Pultusk: Benningsen was stationed in the centre;—names destined to immortal celebrity in future wars, and which, even at this distant period, the historian can hardly enumerate without a feeling of exultation and the thrilling interest of former days.[1]

[1] Wilson, 77,78. Jom. ii. 341. Dum. xvii. 162, 165.

31. Battle of Pultusk. Dec. 26.

Atlas. Plate 42,

Lannes, with his own corps, and the division Gudin from that of Davoust—in all about thirty-five thousand men—resolved to force the enemy in this position, and for this purpose he, early on the morning of the 26th, advanced to the attack. The woods which skirted the little plain, occupied by the Russian light troops, in front of their position, were forced by the French voltigeurs after an obstinate resistance, and a battery which galled their advance, and which could not be withdrawn, was carried by assault. No sooner, however, had the French general, encouraged by this success, surmounted the crest of the ridge, and advanced into the open plain, than the cloud of Cossacks dispersed to the right and left, and

CHAP. XLIV. 1806.

exposed to view the Russian army drawn up in two lines, in admirable order, with a hundred and twenty guns disposed along its front. Astonished, but not panic-struck by so formidable an apparition, Lannes still continued to press forward, and as his divisions successively cleared the thickets, and advanced to the crest of the hill, they deployed into line. This operation, performed under the fire of all the Russian cannon, to which the French had as yet none of equal weight to oppose, was executed with admirable discipline, but attended with a very heavy loss, and the ground was already strewed with dead bodies when the line was so far formed as to enable a general charge to take place. It was attended, however, with very little success. The soil, cut up by the passage of so many horses and carriages, was in many places knee-deep of mud; heavy snow-showers at intervals obscured the heavens, and deprived the French gunners of the sight of the enemy ; while the Russian batteries, in position and served with admirable skill, alike in light and darkness sent their fatal storm of grape and round-shot through the ranks of the assailants. Notwithstanding these obstacles, however, the French advanced with their wonted intrepidity to the attack, and gradually the arrival of their successive batteries rendered the fire of cannon on the opposite sides more equal. Suchet, who commanded the first line, insensibly gained ground, especially on the French right, where the division of Bagavout was stationed; but Benningsen, seeing the danger, reinforced that gallant officer with fresh troops: a battalion of the French infantry was broken and cut to pieces by the Russian horse, and the rout in that quarter became so serious that Lannes was compelled to advance in person, with his reserve, to repair the disorder. By his efforts the forward movement of the Russians in that direction was arrested, and their victorious columns, charged in flank, while disordered by the rapidity of their advance, were forced to give ground, and resume their former position in front of Pultusk.[1]

[1] Dum. xvii. 164, 168. Jom.ii.342. Wilson, 79, 80 Rapp, 127.

Meanwhile another of Suchet's columns, on the left of the French, had commenced a furious attack on the advanced post in the wood on the right of the Russians, occupied by Barclay de Tolly. After a violent struggle the Russians were driven back; reinforced from the town, they again regained their ground, and drove the French out of the wood in disorder. Lannes, at the head of the 34th regiment, flew to the menaced point, and again in some degree restored the combat: but Barclay had regained his lost position and menaced the French extreme left. At this time, Gudin's.division of Davoust's corps, coming up, began an unexpected attack on the Russian right; Ostermann Tolstoy upon this brought up the Russian reserve, and after a murderous conflict, which lasted till long after it was dark, a frightful storm separated the combatants. Neither party could boast of decisive success; but the Russians remained masters of the field of battle till midnight, when they crossed the Narew by the bridge of Pultusk, and resumed their retreat in the most orderly manner; while the French also retreated to such a distance that next day the Cossacks, who patrolled eight miles from the field of battle towards Warsaw, could discover no traces of the enemy. The losses were severe on both sides : on that of the French they amounted to six thousand men; on that of the Russians to nearly five thousand; and the twelve guns which they lost in the morning were never regained.[1]

32. Which turns out to the disadvantage of the French.

[1] Wilson, 79,80. Jom. ii. 341, 342. Dum. xvii. 168, 174.

On the same day on which this bloody battle took place at Pultusk, a serious conflict also occurred at Golymin, about thirty miles from the former field of battle. Davoust and Augereau, supported by a large party of Murat's cavalry, there attacked Prince Gallitzin, who, with fifteen battalions and twenty squadrons, had taken post at the entrance of the town, to gain time for his artillery and carriages to defile through the forest in his rear. His force was successively augmented, however, in the course of the day, by the arrival of other troops from

33. Combat of Golymin,

CHAP. XLIV.

1806.

Dec. 24.

Sacken's and Doctoroff's corps, and before nightfall twenty-eight battalions and forty squadrons were assembled in line. Operations in that quarter had begun at daylight on the 24th, which in that inclement season was at eight in the morning; the bridge of Kollosump, over the Ukra, was carried by a brilliant charge by Colonel Savary; but that of Lochoczyn resisted all the efforts of the French, and it was only when it became no longer tenable, from the number who had crossed at Kollosump, that orders for the evacuation of the post were given. Continuing his march all the succeeding day, Augereau found himself, on the morning of the 26th, in presence of Prince Gallitzin, who was advantageously posted on the right of Golymin. As the French battalions and squadrons successively arrived on the ground, and deployed to the right and left, they were severely galled by the Russian artillery stationed in front of their positions; but they bravely formed line, and advanced with their accustomed gallantry to the attack, though few of their guns could as yet be brought up to reply to the enemy. The resistance, however, was as obstinate as the assault was impetuous, and, despite all their efforts, the French, after several hours' hard fighting, had not gained any ground from the enemy. But while this severe conflict was going on in front, a division of Murat's cavalry, advancing on the road from Czarnovo, * was discerned driving before it a body of Cossacks who had been stationed in that village; while a powerful mass of Davoust's infantry, which had broken up that morning from Stretzegoczin, joined the horse in front of Czarnovo, and their united mass, above fifteen thousand strong, bore down upon the troops of Gallitzin, already wearied by a severe combat of several hours' duration.[1]

[1] Dum. xvii. 176,182. Wilson, 82. Jom. ii. 342. Rapp, 127.

This great addition to the attacking force must have proved altogether fatal to the Russian troops, had they not shortly after received considerable reinforcements

*** A village on the road from Lochoczyn to Golymin, about a league distant from the latter town.**

34. Its doubtful issue.

from the corps of DoctorofF and Touchkoff, which in some degree restored the equality of the combat. Davoust, with the divisions Morand and Friant, so well known from their heroic conduct on the plateau of Auerstadt, charged vehemently through the woods which skirted the open space in front of Golymin; throwing off their haversacks, the Russian infantry met them with the bayonet; but after repulsing the French advance, they were themselves arrested by the murderous fire of the tirailleurs in the wood. Nearly encircled, however, by hourly increasing enemies, Prince Gallitzin withdrew his troops towards evening into the village, but there maintained himself with heroic constancy till nightfall, vigorously repulsing the repeated attacks of the conquerors of Jena and Auerstadt. Davoust, after occupying all the woods around the town, detached a brigade of horse to cut off the communication by the great road with Pultusk ; and they succeeded in clearing the causeway of the Cossacks and light horse who were posted on it. But the French dragoons, following up their success, were assailed by so murderous a fire from the Russian voltigeurs, standing up to the middle in the marshes on either side of the road, that half their number were slain; General Rapp, while bravely heading the column, had his left arm broken, and the discomfited remnant sought refuge behind the ranks of their infantry. When night closed on this scene of blood, neither party had gained any decisive advantage; for if the French had taken twenty-six pieces of cannon, and a large train of carriages which had stuck fast in the mud, the Russians still held the town of Golymin, and had inflicted upon them a loss of above four thousand men,[1]* while they had not to lament the destruction of more than half the number, in consequence chiefly of their great

[1] Rapp, 127, 128. Dura, xvii. 183, 185.

* The 47th Bulletin admits a loss of 800 killed and 2000 wounded on the part of the French at Golymin and Pultusk; and as their usual practice was to allow only a loss of a third to a fourth of its real amount, this would seem to imply that they lost on these occasions at least 10,000 or 12,000 men.—See 47th Bulletin in *Camp. en Prusse*, i i i 222.

CHAP. XLIV. 1806.

superiority in artillery to their assailants. As the order for retreat still held good, Prince Gallitzin, at midnight, resumed his march for Ostrolenka.

35. Napoleon stops his advance, and puts his army into winter quarters. Dec. 19 and 24.

Notwithstanding the obstinate resistance thus experienced by his lieutenants on both the roads on which his corps were advancing, and the unsatisfactory issue of the combats in which they had been engaged, Napoleon was still not without hopes of effecting the grand object of his designs—the isolating and surrounding the enemy's centre or left wing. On the extreme left of the French, Bernadotte and Ney had succeeded, after several severe actions, particularly one at Soldau, which was taken and retaken several times, and where the Prussians behaved with the most heroic resolution, in interposing between Lestocq and the Russian forces on the Ukra, and throwing the Prussian general back towards Konigsberg. If Soult could have effected the movement on Makow which was prescribed to him, he would have been directly in the rear of the troops who had combated at Pultusk and Golymin, who must have been reduced to the necessity of laying down their arms, or cutting their way through against great odds. But the frightful state of the roads, which in many places were three feet deep of mud, and the rudeness of the season, which alternately deluged the marching columns with drenching rain, driving sleet, and melting snow, rendered it totally impossible for that enterprising officer to effect the forced marches necessary to outstrip and get into the rear of the enemy; and the Russians, retiring to Ostrolenka and Hohenstein, still found the line of their retreat open. On the 28th, Napoleon advanced his headquarters to Golymin; but having there received certain intelligence that the Russians must anive at Makow before Soult could possibly get thither, he saw the object of the campaign was frustrated, and resolved to put his men into winter quarters. On that day, accordingly, he issued orders to stop the advance of the troops at all points; [1] they were put into cantonments

Dec. 28.

[1] Dum. xvii. 185,191. Jom. ii. 342, 343. Wilson, 82, 83.

between the Narew and the Ukra, and the Emperor himself returned with the Guards to Warsaw.

1806.

On the side of the Russians, repose had become nearly as necessary; the weather was as unfavourable to them as to the French. Their infantry, equally with the enemy'gf had shivered up to the knees in mud at Pultusk; their cavalry, equally with his, sank in the marshes of Golymin: the breaking up of the roads was more fatal to them than their opponents, as the guns or chariots, which were abandoned, necessarily fell into hostile hands; and experience had already begun to evince, what more extended observation has since abundantly confirmed,[1] that exposure to an inclement season was more fatal to the troops of the north than those of the south of Europe. In these circumstances it was with the most lively satisfaction that they perceived that Napoleon was disposed to discontinue the contest during the remainder of the rigorous season; and their troops, retiring from the theatre of this bloody strife, were put into cantonments on the left bank of the Narew, after having evacuated the town and burned the bridge of Ostrolenka.[2]

30. The Russians also go into winter quarters.

[1] Larrey's Surgical Campaign. Infra, c. lxxiii. § 78.

[1] Dum. xvii, 191, 194. Jom. ii. 344.

This desperate struggle in the forests of Poland in the depth of winter made the most lively impression in Europe. Independent of the interest excited by the extraordinary spectacle of two vast armies, numbering between them a hundred and fifty thousand combatants, prolonging their hostility in the most inclement season, and engaging in desperate conflicts amidst storms of snow, and when the soldiers on both sides were often sunk up to the middle in morasses, bivouacking for sixteen hours together without covering on the cold damp ground, or plunging fearlessly into streams swollen by the rains and charged with the ice of a Polish winter, there was something singularly calculated to awaken the passions in the result of this fearful contest. Both parties loudly claimed the victory : Te Deum was sung at St Petersburg ; the cannon of the Invalides roared at Paris; and

37. Results of this winter campaign, and impression which it produces in Europe.

CHAP. XLIV.

Benningsen, imitating in his official despatches the exaggerated accounts of the French bulletins, asserted a complete victory at Pultusk, under circumstances where a more faithful chronicler would only have laid claim to the feonour of a divided combat. The French indignantly repelled the aspersion on their arms, and pointed with decisive effect to the cantonments of their troops, for evidence that the general result of the struggle had been favourable to their arms. But though there was no denying this, when the Russian troops, instead of having their advanced posts between the Ukra and the Vistula, had now retired behind the Narew at Ostrolenka, still enough was apparent on the face of the campaign to excite the most vivid hopes on the one side, and serious apprehensions on the other, throughout Europe. It was not to win merely eighty miles of forest, interspersed with the wretched hamlets or squalid towns of Poland, that the Emperor had left Warsaw at the dead of winter, and put so vast an army in motion over a line thirty leagues in length. There was no claiming of the victory on both sides at Austerlitz or Jena; the divided trophies of the late engagements indicated a struggle of a very different character from those which had preceded them; it was evident that the torrent of French conquest, if not permanently Stemmed, had at least been checked. The interest excited by these events, accordingly, was intense over all the Continent, and still more so in England; and hopes began to be entertained that the obstinate valour of the north would at length arrest the calamities which had so long desolated Europa. Happy would it have been if the cabinets of Vienna and St James's had improved on these dispositions, and taken advantage of the pause in the career of universal conquest, to render effectual aid to the powers who now threw the last die for the independence of Europe on the shores of the Vistula* But recent calamities had prostrated the strength of the Austrian monarchy, and shaken the nerves of its rulers ; and

the administration of affairs in Great Britain had fallen into the hands of a party whose minds had been so perverted by long and impassioned opposition to Mr Pitt's policy, that they could not see that the time had now arrived when it was loudly called for, and might be followed out with a certainty of success. Hence the opportunity of decisive interposition was allowed to pass over without anything being done by either power; and to Austria was bequeathed, in consequence, the overthrow of Wagram—to England, the costly and bloody efforts of the Peninsular campaigns.[1]

[1] Wilson, 82, 83. Dum. 206.

38. Positions of the French army in winter quarters.

The French army, which was now put into winter quarters, amounted to one hundred and sixty thousand men, including forty thousand horse : so wonderfully had the levies in France and the allied states compensated the consumption of human life during the bloody battles and wasteful marches which had occurred since they arrived on the banks of the Saale. The cantonments, from the extreme right to left, extended over a space of fifty leagues, forming beyond the Vistula the chord of the arc which that river describes in its course from Warsaw to Dantzic. The left wing, under Bernadotte, was, from its position, most exposed to the incursions of the enemy; but no apprehensions were entertained of its being disquieted, as that marshal, whose rallying point was Osterode, could speedily receive succour, in case of need, from Marshal Ney, who lay next to his right, and would thus have fifty-five thousand men under his command. The centre and right wing, nearly a hundred thousand strong, were almost detached from the left wing, and lay more closely together on either side of Warsaw. To provide subsistence for so great a multitude amidst the forests and marshes of Poland was no easy matter; for its fertile plains, though the granary of Western Europe,[2] raise their admirable wheat crops only for exportation, and present, in proportion to their extent of level surface, fewer resources for an army than

[1] Dum. xvii. 198,208. Jom. ii 344.

CHAP. XLIV. 1806.

any country in Europe. But it was in such subordinate though necessary cares, that the admirable organisation and indefatigable activity of the Emperor shone most conspicuous.

39. Napoleon's measures to provide supplies and secure his cantonments.

Innumerable orders, which for a long time back had periodically issued from headquarters, had brought all the resources of Germany to the supply of the army in Poland. Convoys from all quarters were incessantly converging towards the Vistula, and supplies of every sort, not only for the maintenance of the soldiers, but for the sick and wounded, as well as the munitions of war, transported in many thousand carriages, were brought up from the Rhine and the Danube in abundance. So great was the activity in the rear of the army, that the roads through Prussia bore rather the appearance of a country enriched by the extended commerce of a profound peace, than of a district lately ravaged by the scourge of war. Great hospitals were established at Thorn, Posen, and Warsaw; thirty thousand tents, taken from the Prussians, were cut down into bandages for the use of the wounded; immense magazines formed all along the Vistula, and formidable intrenchments erected to protect the *tetes-de-pont* of Praga, Thorn, and Modlin on the Vistula, and Sierock on the Narew. Though the blockade of Dantzic was not yet formally commenced, yet it was necessary to neutralise the advantages which the enemy derived from the possession. of so important a fortress on the right of their line; and for this purpose a French division, united to the contingent of Baden and the Polish levies, was formed into the tenth corps, and placed under the command of Marshal Lefebvre. It soon amounted to twenty-seven thousand men, and began to observe the fortresses of Dantzic and Colberg; while Napoleon evinced his sense of the dubious nature of the struggle in which he was engaged, by sending for his experienced lieutenant, Massena, from the scene of his easy triumphs amidst the sunny hills of Calabria, to a sterner conflict on the frozen fields of Poland.[1]

[1] Jom. ii. 345. Dum. xvii. 205, 208. Ann. *Reg.* 1807, 3.

The repose of the army at Warsaw was no period of rest to the Emperor. Great care was taken to keep alive the spirits of the Poles, and conceal from them the dubious issue of the late conflict; and for this purpose it was announced that almost all the prisoners taken from the Russians had either been marched off for France, or already entered the ranks of the Grand Army ; while the eighty pieces of cannon, which they had been forced to leave behind them in their retreat, were ostentatiously placed before the palace of the republic. Orders were at the same time sent to Jerome to press the siege of the fortresses in Silesia which still remained in the hands of the Prussians. The pusillanimous and unaccountable surrenders of Stettin and Ciistrin have already been mentioned ;* and in the consequences which immediately flowed from those disgraceful derelictions of duty, was soon made manifest of what vast importance it is that all officers, even in commands apparently not very considerable, should, under all circumstances, adhere to the simple line of duty, instead of entering into capitulations from the supposed pressure of political considerations. The transport of artillery and a siege equipage from the Rhine or the Elbe to the Oder would have taken a very long period, and prolonged the reduction of the interior line of the Prussian fortresses ; but the surrender of Ciistrin to the summons of a regiment of infantry and two pieces of cannon, enabled Vandamme speedily to surround Glogau with a formidable battering-train, which, before the first parallel was completed, induced its feeble governor to lower his colours.[1]

40. Reduction of the fortresses in Silesia.

Atlas. Plate 34.

Dec. 2.

[1] **Dura. xrii. 217, 220. Jom. ii. 220. Ann. Reg. 1807, 22.**

From the vast military stores captured in that town, a battering-train for the reduction of Breslau was immediately obtained, and forwarded along the Oder with such rapidity that, on the 15th December, the trenches before that place, the capital of Silesia, a *cheval* on the Oder, and a fortress of the first order, were opened, and a heavy

41. Siege and fall of Breslau. Dec. 15.

* ***Ante,* Chap.** XLIII. **§ 71.**

CHAR XLIV. 1806.

bombardment kept up upon the town. The defence, however, was somewhat more creditable to the Prussian character, and proved of what inestimable importance it would have been to the monarchy had the French arms been in like manner delayed before the walls of the other fortresses. Twice during its continuance Prince Anhalt, who with a few battalions and a levy of peasants still maintained himself in Upper Silesia, approached the besiegers' lines, and endeavoured to throw succours into the town; but on the first occasion his efforts were frustrated by the vigilance of the French and Bavarians, who formed the covering force; and in the last attack he was totally defeated, with the loss of two thousand men. Soon after, a severe frost deprived Breslau of the protection of the wet ditches, and the governor, despairing of being relieved, and seeing the besiegers' succours rapidly and hourly augmenting by the arrival of military stores from Glogau, surrendered with the garrison of six thousand men; the private men being prisoners of war, the officers dismissed on their parole not to serve against France till exchanged. By this acquisition, three hundred pieces of cannon, and immense military stores of all sorts fell into the hands of the conquerors.[1]

Dec. 31.

[1] **Dum.** xvii. 214, 223. Jom. ii 250. Ann. Reg. 1807, 22.

42. Capture of Brieg and Schweidnitz, and total conquest of Silesia.

This great achievement made the reduction of the other fortresses in Silesia a matter of comparative ease, by furnishing, close at hand, all the resources necessary for their reduction. They were almost forgotten, accordingly, and fell without being observed into the hands of the invaders. Brieg surrendered almost as soon as it was invested. Kosel was taken in silence, after a siege of a few days. Napoleon, delighted with these acquisitions, which entirely secured the right flank of his army, and were of the greater importance from the menacing aspect of the force which Austria was collecting on the Bohemian frontier, named Jerome Buonaparte governor of the province of Silesia: and after having drawn all the resources out of its rich cities and powerful fortresses

Jan. 17.

which they were capable of yielding, for the prosecution of operations against Dantzic and the strongholds om the Lower Vistula, despatched Vandamme, with twelre thousand men, to besiege Schweidnitz, Neisse, and Glatz, the only remaining towns in the upper province which still hoisted the Prussian colours.* The reduction of these strong fortresses, which had been the object of several campaigns to the Great Frederick, did not take place for some months afterwards, and was hardly noticed by Europe amidst the whirl of more important events on the Lower Vistula.[1]

[1] Dum. xvii. 95, 101. Jom. ii. 251.

43. Operations on the left towards Pomerania and Dantzic.

The task of reducing the fortified towns on the Lower Oder, and between that and the Vistula, was allotted to Marshal Mortier. He took a position, in the middle of December, at Anclam; and, upon his approach, the Swedish forces retired to Stralsund. While in this station he drew his posts round Colberg, and several skirmishes occurred with the Prussian garrison of that place. Matters remained in that situation till the end of January, when the blockade of that fortress was more closely established, which continued till the conclusion of the campaign. More important operations took place at Dantzic and Graudenz, the siege of both which places was much facilitated by the great military stores taken in the towns of Silesia. They were brought down the Oder to near its mouth, and thence transported by land to the neighbourhood of these fortresses ;[2] and with such vigour did Marshal Lefebvre push forward the operations,

[2] Dum. xvii. 223, 237. Jom. ii. 387.

*** As fast as these fortresses in Silesia fell into the hands of Napoleon, they were by his orders totally dismantled, and their fortifioatioas razed to the ground. Their inhabitants were seized with consternation when they beheld these rigorous orders carried into full execution, and anticipated a total separation from the Prussian monarchy, to which they were much attached, from so complete a destruction of the barrier raised with so much care, koti against Austria and Kussia. Nothing could more clearly demonstrate the determination of the French Emperor to reduce Prussia to the rank of a third-rata power; but the policy, with reference to the future interests both of Trance -and Germany, of destroying the chief barrier of both against Muscovite aggression, was extremely doubtful.—See MONTVERAN, *Hut Const, de la Situat. de l'Angleterre en,* 1816,147; and DUMAS, xvii. 99,100.**

CHAP. XLIV. 1806.

especially against the former of these towns, that before the end of January considerable progress had been made in the works.

44. Operations of Marmont in Illyria.

On the return of Napoleon to Warsaw, he received detailed accounts of the operations of Marmont in Illyria since the commencement of hostilities in October. For a long period, and during the time when it was understood that a negotiation was on foot between the two governments, a sort of tacit suspension of arms existed between the French marshal and the Russians; but when it was distinctly ascertained that hostilities had been resumed, the flames of war extended to the smiling shores of the Adriatic sea. The Muscovites, strengthened by the arrival of Admiral Siniavin with a powerful squadron, resumed the offensive, and compelled Marmont to abandon the point of Ostro, and fall back on Old Ragusa, where he fortified himself in a strong position in front of the town, and resolved to await the arrival of his flotilla and reinforcements. Encouraged by this retrograde movement, the Russians, six thousand strong, supported by some thousand Montenegrins, advanced to the attack; but they were anticipated by the French general; and after a sharp action, the new levies were dispersed, and the regular troops compelled to take refuge within the walls of Castel Nuovo, after sustaining a loss of six hundred men.[1]

Sept. 29.

Sept. 30.

[1] Bum. xvii. 240, 256.

45. Napoleon's efforts to stimulate the Turks to vigorous resistance.

At the same period, a courier from Constantinople brought intelligence of the declaration of war by the Porte against Russia. This was an event of the very highest importance, promising, as it did, to effect so powerful a diversion in the Russian forces ; and Napoleon therefore resolved to improve to the uttermost so auspicious a change by contracting the closest alliance with the Turkish government. Though General Michelson had early gained considerable advantage, and was advancing towards Belgrade, which had fallen into the hands of Czerny George and the insurgent Servians, yet the disasters of the Prus-

sian war had opened the eyes of the cabinet of St Petersburg, when it was too late, to the imprudence of which they had been guilty in engaging at once in two such formidable contests. Accordingly thirty-six battalions and forty squadrons (about twenty-five thousand men) were ordered to advance with all possible rapidity from the plains of Moldavia to the banks of the Bug. Anxious to derive every possible advantage from this great diversion, Napoleon sent instructions to his ambassador at Constantinople, General Sebastiani, to use the greatest efforts to induce the Turkish government to enter vigorously into the contest; while to Marshal Marmont he gave orders to send French officers into all the Ottoman provinces, with orders to do their utmost everywhere to rouse the Mussulman population against the Muscovite invaders.* At the same time, the relations of France with Persia and Turkey were considered of such paramount importance, that they were made the subject of a special message to the senate, which declared — " The Emperor of Persia, tormented, as Poland was for sixty years, by the intrigues of Russia, is animated by the same sentiments as the Turks. He has resolved to march upon the Caucasus to defend his dominions. Who could number the duration of the wars, the number of campaigns,

*** These instructions to Marmont are well worthy of attention, both as evincing the views which Napoleon already entertained in regard to the Ottoman empire, and setting in a clear light his subsequent perfidious conduct in abandoning that power to the ambition of Russia, by the treaty of Tilsit. " A courier, just arrived from Constantinople, has announced that war against Russia is declared: great enthusiasm prevails at that capital; twenty regiments of Janissaries have just set out from its walls for the Danube, and twenty more will speedily follow from Asia. Sixty thousand men are at Hirsova; Pasha Oglou has assembled twenty thousand at Widdin. Send immediately five engineer officers and as many of artillery to Constantinople—aid the pashas in every possible way with counsel, provision, and ammunition. It is not unlikely that I may send you with 25,000 men to Widdin, and there you will enter into connexion with the Grand Army, of which you would form the extreme right. Twenty-five thousand French, supported by sixty thousand Turks, would soon force the Russians not to leave 30,000 men on the Danube, as they have done, but to forward twice that number to defend their own frontiers in that quarter. Send twenty or thirty officers to the pashas, if they demand so many; but the period for the employment of troops is not yet**

Jan. 2,1807.

CHAP. XLIV. 1807.

which would be required one day to repair the calamities consequent upon the Russians obtaining possession of Constantinople? Were the tiara of the Greek faith raised again, and extended from the Baltic to the Mediterranean, we should see in our own days our provinces attacked by clouds of barbarians; and if, in that tardy struggle, ciyilised Europe should happen to fall, our culpable indifference would justly excite the reproaches of posterity, and would become a subject of opprobrium in history." Memorable words! when the events which subsequent times have brought about, and the objects of political apprehension in our own time, are taken into view.[1]

[1] Jom. ii. 345, 349. Bign. vi. 121.

46. Delightful residence of the French at Warsaw.

The residence of the French generals and officers at Warsaw appeared a perfect Elysium after the fatigues and privations to which they had been exposed. The society of that capital is well known to be one of the most agreeable in Europe, from the extraordinary talents and accomplishments of the ladies of rank of which it is composed. No person can have mingled in those delightful circles without perceiving that the Polish women are the most fascinating in Europe. Endowed by nature with an ardent temperament, an affectionate disposition, and an exalted imagination, they have, at the same time, all the grace and coquetry which constitute the charm of

arrived. The Turks may be relied on as faithful allies, because they hate the Eussians; therefore be not sparing in your supplies of all sorts to them. An ambassador from Persia as well as Turkey has just been at Warsaw; the court of Ispahan also, as the sworn enemy of Russia, may be relied on as our friend. Our relations with the Eastern powers are now such that we may look forward *shortly to transporting* 40,000 *men to the gates of Ispahan, and from thence to the shores of the Indus:*—projects which formerly appeared chimerical are now no longer so, when I receive ambassadors from the Sultan, testifying a serious alarm at the progress of Russia, and the strongest confidence in the protection of France. In these circumstances, send your officers over all the Turkish provinces; they will make known my disposition towards the Grand Seignor, and that will exalt the general enthusiasm, while at the same time you will be able to acquire for me information which may prova in the highest degree useful. In a word, general, *I am the sincere friend of Turkey, and wish to do it all the good in my power ;* let that principle regulate all your actions. I consider the Turkish declaration of war against Russia as the most fortunate ciroumstance that could possibly have occurred in my present situation."—JOMINI, ii. 847-349.

Parisian beauty, and yet retain, at least in rural situations, the domestic virtues and simplicity of manner which nurse in infancy the national character of the English people,* Speaking almost every language in Europe with incomparable facility—conversing alternately in French, German, Italian, Russian, and sometimes English, with the accent of a native—versed in the literature and history of all these countries, and yet preferring to them all the ruins of their own wasted land—enthusiastic in their patriotism, and yet extended in their views—with hearts formed in the simplicity of domestic life, minds cultivated during the solitude of rural habitation, and manners polished by the elegance of metropolitan society—they approach as near as imagination can figure to that imaginary standard of perfection which constitutes the object of chivalrous devotion. Melancholy reflection [1] that the greatest charms of society should be co-existent with the most vicious and destructive national institutions; and that its principal excellencies should have been called forth by the miserable and distracted customs which had brought the Polish nation to a premature dissolution![1]†

[1] Personal observation. Savary, in. 17.

If such are the attractions of Warsaw, even to a passing traveller, it may easily be believed what it appeared to the French officers after the rude encounters of Pultusk and

*** This observation applies to the character of the female part of the Polish rural nobility. Those who have made Warsaw or other great capitals their habitual residence, have too often contracted the vices incident to a polished and corrupted society.**

† "It may with truth be said," says Savary, "that the Polish women are fitted to inspire jealousy to the most accomplished ladies in the civilised world; they unite, for the most part, to the manners of the great world a depth of information which is rarely to be seen even among the French women, and which is infinitely superior to what is usually to be met with in the most accomplished urban society. It would appear that, being obliged to pass more than half the year on their estates, they devote themselves to reading and mental cultivation; and hence in the capitals, where they go to pass the winter, they so frequently appear superior to .all their rivals.''—SAVARY, iii. 17.

" I did not require to learn," says Duroc, " that the Polish women are the matt agreeable in Europe ; but it was not till I arrived in Poland that I became acquainted with the full extent of their charms, The attractions of Warsaw are indescribable. It contains several agreeable circles—one charming."—*Letter of Duroc to Junot, Dec.* 17,1806; D'ABRNIES, ix. 350.

CHAP. XLIV.

1807.

47. Enthusiast] reception o the French bythePolis women.

Golymin. From all parts of Prussian Poland the great families flocked to her capital, and soon formed a society, in the midst of the horrors of war, which rivalled any in Europe in splendour and attractions. Abandoning themselves without reserve to the delightful prospects which seemed to be opening on their country, the Polish women saw in the French officers the deliverers of Sarmatia, the invincible allies who were to restore their long-lost country, to renew the glories of the Piasts and the Jagellons. A universal enthusiasm prevailed ; fetes and theatrical amusements succeeded each other in diversified magnificence; and, following the general bent, even the intellectual breast of Napoleon caught the flame, and did homage to charms which, attractive at all times, were, in that moment of exultation, irresistible. A transient but very vehement amour entranced his senses without touching his heart. But these fairy scenes were of short duration ; his pleasures never for a moment interfered with his duties; he was indefatigable in preparation during the short interval of repose ; and war, in its most terrible form, was destined soon to arouse all from this transient period of enchantment.[1]

[1] Sav. iii. 17.

48. Kamenskoi goes mad, and Benningsen assumes the command. He advances against Bernadotte.

When the French were put into cantonments on the right bank of the Vistula, the situation of the Russian army was such, that it could hardly be said to have a commander. Kamenskoi retired far to the rear to Grodno, where he went out in his shirt to the streets, and gave unequivocal proofs of mental derangement. Buxhowden commanded his own corps, while Benningsen did the same with his ; and the mutual jealousy of these officers for a time prevented the one from obeying the commands of the other; but at length the appointment of the latter to the supreme command restored unity to the operations of the army. Fortunately for the Russians, the suspension of hostilities, and the interval of fifteen leagues which separated their cantonments from those of the enemy, prevented them from suffering under this division of

council; and when Benningsen assumed the command, he resolved to carry out the design of Buxhowden, and, instead of allowing the army to repose in its cantonments, commence an offensive movement with the whole army against the French left under Bernadotte and Ney, which had extended itself so far as to menace Konigsberg, the second city of the Prussian dominions, and the capital of the old part of the monarchy. Many reasons recommended this course. It was evident that Napoleon would turn to the best account the breathing-time afforded him in winter quarters. His army would be recruited and strengthened, his cavalry remounted, his magazines replenished on the Vistula: the fortresses at its mouth were already observed; and when the mild season returned in May, there was every reason to fear that he would be as solidly established on the line of that river by the capture of Colberg, Graudenz, and Dantzic, as he was now on the Oder and in Silesia by the reduction of the fortresses of that province. In addition to this, the situation of Bernadotte and Ney, who had extended their cantonments beyond what was either necessary or prudent, and in such a way as almost to indicate an offensive intention, suggested a hope, that by a rapid movement their corps might be isolated and destroyed before the bulk of the Grand Army, grouped round Warsaw, could advance to their relief.[1]

[1] Wilson, 83, 84. Dum. xvii, 295, 297. Jom. ii. 351. Sav. iii. 26, 27.

Impressed with these ideas, the Russian army, seventy-five thousand strong, with five hundred pieces of cannon, was everywhere put in motion, crossed the Narew, and marched upon the Bobr. The corps of Benningsen and Buxhowden, so long separated, effected a junction at Bialla on the 14th January: and on the 15th headquarters were established at that place. Essen was left with two divisions on the Narew to mask this forward movement; and there he was soon after joined by the divisions from Moldavia. This great assemblage of force was the more formidable, that it was entirely unknown to the enemy,

49. Rapid advance of Benningsen towards Konigsberg.

Atlas. Plates 39, 44.

CHAP. XLIV. 1807.

being completely concealed by the great forest of Johansberg and the numerous chain of lakes, intersected by woods, which lie between Arys in East Prussia, and the banks of the Vistula. Rapidly advancing, after its columns were united, the Russian army moved forward between the lakes of Spirding and Lowentin; and on the 17th headquarters were established at Rhein in East Prussia. Meanwhile the cavalry, consisting of forty squadrons under Prince Gallitzin, pushed on for the Alle, on the roads leading to Konigsberg and Bischofstein: and on the other side of that river surprised and defeated the light horse of Marshal Ney, which had advanced in pursuit of Lestocq to Schippenbeil, within ten leagues of Konigsberg. Thus on the 20th January, the Russian army, perfectly concentrated, and in admirable order, was grouped in the middle of East Prussia, and was within six marches of the Lower Vistula, where it might either raise the blockade of Dantzic and Graudenz, or fall with a vast superiority of force upon Bernadotte or Ney, still slumbering in undisturbed security in their cantonments.[1]

Jan. 20.

[1] Wilson, 83, 85. Dum. xvii, 295, 302. Jom. ii. 352.

50. He surprises Ney"s corps.

Had Benningsen been aware of the scattered condition of Marshal Ney's corps, he might, by the admission of the French military historians, have destroyed the whole before it could by possibility have been united and put in a condition to give battle. As it was, great numbers of his detached parties were made prisoners, and the conduct of the marshal in first, by his senseless incursions attracting the enemy, and then, by his undue dispersion, exposing himself to their attacks, drew down a severe reproof from Napoleon.* But a glance at the map must be sufficient to show that great and decisive

*** He severely blamed the marshal " for having, by an inconsiderate movement, attracted the enemy, and even endeavoured to engage Marshal Soult, Who declined to follow him, in the same expedition. You will immediately resume the winter quarters prescribed for your corps, and take advantage of them to give rest to your cavalry, and repair, the best way you can, the fault you have committed."— DUMAS, xvii. 303.**

success was at this moment within the grasp of the Russian general; and that if, instead of making a long circuit to reach the head of Marshal Ney's corps, scattered over a space of eighteen leagues, and drive it back upon its line of retreat towards Warsaw, he had boldly thrown himself, three days earlier, upon its flank, he would have separated it from the centre of the army, and driven both it and Bernadotte to a disastrous retreat into the angle formed by the Vistula and the Baltic Sea. The movement of Benningsen to the head of Ney's column, however, having prevented this, he turned his attention to Bernadotte, who had received intelligence of his approach, and had rapidly concentrated his corps from the neighbourhood of Elbing at Mohrungen. Meanwhile the Russian army continued its advance; on the 22d, headquarters were established at Bischofstein, and the Cossacks pushed on to Heilsberg ; and on the same day, a severe action took place at Seeberg, from whence the French cavalry, under Colbert, were driven in the direction of Allenstein. Ney, now seriously alarmed, despatched couriers in all directions to collect his scattered divisions, and on the 23d resumed his headquarters at Neidenburg, extending his troops by the left towards Gilgenburg to lend assistance to Bernadotte.[1]

Jan. 22.

[1] Dum. xvii. 297, 307. Jom. ii. 353. Wilson, 84, 85.

51. Bernadotte, attacked near Mohrungen, escapes with difficulty.

Bernadotte, informed by despatches from all quarters of this formidable irruption into his cantonments, was rapidly concentrating his troops at Mohrungen, when Benningsen, with greatly superior forces, fell upon him. The Russian troops, fifteen thousand strong, were posted in rugged ground at Georgenthal, two miles in front of that town. General Makow, with the advanced guard of the Russians, there engaged with the French before sufficient forces had come up; and after a sanguinary conflict, in which the eagle of the 9th French regiment was taken and retaken several times, and finally remained in the hands of the Russians, suffered the penalty of his rashness by being repulsed towards Liebstadt In this

CHAP. XLIV. 1807.

bloody affair both parties had to lament the loss of two thousand men, and the Russian general, Aurepp, was killed. It was the more to be regretted that this premature attack had been made, as Lestocq was at the moment at Wormditt, or five leagues distant on the right; Gallitzin, with five thousand horse, at Reichau, at the same distance on the left; Ostermann Tolstoy at Heiligenbeil, and Sacken at Elditten, all in the immediate neighbourhood ; so that, by a concentration of these forces, the whole French corps might with ease have been made prisoners. As it was, Prince Michael Dolgorucki, who had been detached by Prince Gallitzin towards Mohrungen in consequence of the violent fire heard in that direction, fell upon the rear of Bernadotte's corps, penetrated into the town, made several hundred prisoners, and captured all his private baggage, among which, to his eternal disgrace, were found, as in the den of a common freebooter, silver plate, bearing the arms of almost all the states in Germany, ten thousand ducats recently levied for his own private use, and two thousand five hundred for that of his staff, from the town of Elbing.[1]

[1] Bign. vi. 115. Wilson, 85. Bum. xvii. 307,319. Jom. ii. 353.

52. Graudenz is relieved, and the French left wing driven back by the Russians.

The narrow escape, both of Ney and Bernadotte, from total destruction in consequence of this bold and vigorous enterprise, excited the utmost alarm in the French army. Bernadotte fell back rapidly to Osterode, where he entered into communication with Ney, and from thence towards Thorn on the Lower Vistula, by Strassburg, severely pressed by the Cossacks, who almost totally destroyed his rearguard, and made many thousand prisoners. Headquarters were advanced by Benningsen on the 26th to Mohrungen, where they remained, from the exhaustion of the troops, till the 2d February. Taking advantage of the aid thus obtained, the brave and active Lestocq succeeded in raising the blockade of Graudenz, the key to the Lower Vistula; and throwing in supplies of ammunition and provisions, which enabled that important

CHAP. XLIV.

1807.

fortress to hold out through all the succeeding campaign. The whole French left wing raised their cantonments, and fell back in haste, and with great loss, towards the Lower Vistula ; and the alarm, spread as far as Warsaw, gave the most effectual refutation to the false accounts published in the bulletins of the successive defeats of the Russian army.* At the same time intelligence was received of the arrival of the Russian divisions from the army of Moldavia, on the Narew and the Bug, where they effected their junction with General Essen, and raised the enemy's force in that quarter to thirty thousand men.[1]

[1] Wilson, 86, 87. Dum. xvii. 307, 322. Bign. xi. 115,116.

53. Dangerous situation of Napoleon.

These untoward events made a great impression on the mind of Napoleon, who had never contemplated a renewal of active operations till his reinforcements from the Rhine had arrived at headquarters, and the return of the mild season had enabled him to resume hostilities without the excessive hardships to which his troops during the later stages of the campaign had been exposed. The cold was still extreme: the Vistula and the Narew were charged with enormous blocks of floating ice, which daily threatened to break down the bridges over them; the earth was covered with snow; the heavens exhibited that serene deep-blue aspect which indicated a long continuance of intense frost; magazines there were none in the country which was likely to become the theatre of war; and though the highly cultivated territory of Old Prussia offered as great resources as any of its extent in Europe t for an invading army, yet it was impossible to expect that it could maintain,

* " In Bernadotte's baggage, taken at Mohrungen, were found curious proofs of the arrangement for stage effect and false intelligence, made by all the officers of the French army, from the Emperor downwards. An order was there found, giving the most minute directions for the reception of Napoleon at Warsaw, with all the stations and crossings where ' Vive l'Empereur !' was to be shouted; and official despatches of all the actions of the campaign in which Bernadotte had been engaged, for publication, and private despatches giving the facts as they really occurred, for the Emperor's secret perusal. These papers are still in the possession of General Benningsen's family."—WILSON'S *Polish Campaign,* 86—*Note.*

t The territory of Old Prussia is not naturally more fertile than the adjoin-

CHAP. XLIV. 1807.

for any length of time, the enormous masses who would speedily be assembled on its surface. But there was no time for deliberation; matters were pressing; the right of Benningsen was now approaching the Lower Vistula, and in a few days the Russian army would raise the blockade of Dantzic, and, resting on that fortress as a base from whence inexhaustible supplies of all sorts might be obtained by sea, would bid defiance, to all his efforts.[1]

[1] Dum. xvii. 322, 324. Jom. ii. 354.

54. Vigour of Napoleon in assembling his army.

It was in such a crisis that the extraordinary activity and indefatigable perseverance of Napoleon appeared most conspicuous. Instantly perceiving that active operations must be resumed even at that rude season, he despatched orders from the 23d to the 27th January, for the assembling of all his army; and as, with the exception of Bernadotte and Ney, they all lay in contonments not extending over more than twenty leagues, this was neither a tedious nor a difficult operation. Bernadotte was enjoined to assemble around Osterode, Lefebvre at Thorn to observe Dantzic, Soult at Prasnycz, Davoust at Pultusk, Ney at Neidenburg, Bessieres and Murat at Warsaw with the Imperial Guard and cavalry. Though breathing only victory in his proclamations to his troops, he was in reality making every preparation for defeat; Lefebvre received orders to collect all the forces at his disposal, without any regard to the blockade at Dantzic, in order to secure the fortress and bridge of Thorn, the direct line of retreat across the Vistula from the theatre of war, while Lannes was disposed as a reserve on the right, and Augereau on the left bank of that river. On the 27th, orders were given to all the columns to march,

Jan. 23.

ing provinces of Poland, but nevertheless it is as rich and cultivated as they are sterile and neglected. On one side of the frontier line are to be seen numerous and opulent cities, smiling well-cultivated fields, comfortable hamlets, and an industrious and contented population; on the other, endless forests of pine, wretched villages, a deplorable agriculture; squalid huts beside a few gorgeous palaces. Nothing can more clearly demonstrate the vicious and ruinous political institutions which have prevailed amidst the mingled anarchy, tyranny, and democracy of Old Poland, This difference, so well known to

and early on the morning of the 30th the Emperor set out from Warsaw.* Soult was directed to march by Willenberg and Passenheim on Allenstein: thither also Ney was to move, by Hohenstein, and Dayoust from Pultusk by Ortelsburg; Augereau, who had been brought over from the left to the right bank of the Vistula, was to advance to it from Plonsk, by Neidenburg and Hohenstein; Murat was to hasten up with his cavalry, so as to form the advanced guard of Soult; while Bessieres, with the Imperial Guard, was to follow in reserve. On the left Bernadotte was to retreat in the direction of Thorn; while, on the extreme right, the corps of Lannes (under the command of Savary) was to take post at Sierock, between the Bug and the Narew, to observe Essen; and Oudinot with his grenadiers was to push on through Warsaw to Ostrolenka, where he would be in a position either to assist Savary or the Grand Army. The object of Napoleon in these movements was, that while, by the retreat of his left wing under Bernadotte, he drew on the Russians towards Thorn and the lower Vistula, he should, by rapidly throwing forward his own right, consisting of four corps and the reserve cavalry, to Allenstein, turn their left flank, and cut off their retreat to the Niemen.[1]

[1] Dum. xvii. 322, 325. Jom. ii. 354, 355.

55. Napoleon marches for the rear of Benning-

Following thus his usual plan of marching with the bulk of his forces, so as to get in the rear of the enemy during his advance, Napoleon moved towards Allenstein, where he arrived on the 2d February with the corps of Soult, Augereau, and Ney; while Davoust was at a short distance still further on his right, at Wartenburg. Already he had interposed between Benningsen and Russia; the

travellers, repeatedly attracted the attention even of the military followers of the French army. See SEGUR, *Camp, de Rmsie,* i. 127; and JOMINI, i i 354.

* The orders given by Napoleon to all the marshals and chief officers of his army on this trying emergency, may be considered as a masterpiece of military skill and foresight, and deserve especial attention from all who desire to make themselves acquainted either with his extraordinary activity and resources, or with the multiplied cares which, on such an occasion, devolve on a commander-in-chief.—See the whole in DUMAS, xvii. 330-374; *Pieces Just.*

CHAP. XLIV. 1807.

only line of retreat which lay open to that officer was to the north-east, in the direction of Konigsberg and the Niemen. The Russian army was stationed between the Passarge and the Alle, from Guttstadt and Heilsberg on the latter river, to Liebstadt and Wormditt in the neighbourhood of the former; but these movements of Napoleon induced Benningsen to concentrate his divisions and move them to the eastward, in the direction of Spiegel-

Feb.land2.

berg and the Alle, on the 1st and 2d of February, in order to preserve his communications with the Russian frontier. The whole troops assembled in order of

Feb. 3.

battle on the following day, in a strong position on the heights of Jonkowo, covering the great road from Allenstein to Liebstadt, its left resting on the village of Mondtken. Napoleon instantly directed Davoust to march from Wartenburg to Spiegelberg with his whole corps, in order to get round the left flank of the Russians; while Soult received orders to force the bridge of Bergfried, over the Alle, in rear of their left flank, by which he would be enabled to debouch upon their line of retreat and communications; and this attack was of such importance, that Davoust was to support him with two of his divisions.[1]

[1] Wilson, 89, *90.* Jom. ii. 355. Dum, xvii. 330, 340.

56. Who discovers his design, and falls back.

It would have been all over with the Russians if these orders had been carried into full execution without their being aware how completely they were in course of being encircled. But by a fortunate accident the despatches to Bernadotte, announcing the design, and"enjoining him to draw Benningsen on towards the Lower Vistula, had previously fallen into the hands of the Cossacks, and made that general aware of his danger. He immediately despatched orders to the officer at Bergfried to hold the bridge to the last extremity, which was so gallantly obeyed, that though Soult assailed it with all his corps, and it was taken and retaken several times, yet it finally remained in the hands of the Russians. The situation of Benningsen, however, was still very critical; he was compelled to

fall back to avoid being turned in presence of very superior forces, and by his lateral movement from Mohrungen he had become entirely separated from Lestocq, who was in the most imminent danger of being cut off and destroyed by the superior forces of Bernadotte. Fortunately, however, from the despatches being intercepted, that marshal remained entirely ignorant, both of what was expected from him, and of the great advantages which remained in his power; and Lestocq, without being disquieted, was enabled to check his advance and make preparations for a retreat, which lay open to him from Freistadt, where he had been covering the revictualling of Graudenz, by Deutsch-Eylau, Osterode, and Mohrungen to Liebstadt; while Benningsen himself, on the night of the 3d, broke up from Jonkowo, and retired in the same direction.[1]

[1] Wilson, 89, 92. Jom. ii.355, 356. Dum. xvii 330, 349.

57. The French pursue the Russians, who resolve to give battle.

By daybreak the French army, headed by Murat with his numerous and terrible dragoons, was in motion to pursue the enemy; and as the Russians had been much retarded during the night by the passage of so many pieces of cannon and waggons through the narrow streets of Jonkowo, the enemy soon came up with their rearguard. By overwhelming numbers the latter were at length forced from the bridge of Bergfried by Soult; but they rallied in the villages behind it, and, forming barricades with tumbrils, waggons, and chariots, effectually checked the advance of the enemy until the carriages in the rear had got clear through. They then retired, obstinately contesting every inch of ground, which they did with such effect, that the French lost fifteen hundred men in the pursuit, without inflicting a greater loss on their adversaries. Nor were any cannon or chariots taken—a striking proof of the orderly nature of the retreat, and the heroism with which the rearguard performed its duty, when it is recollected that Napoleon, with eighty thousand men, thundered in close pursuit; and that, from the state of the roads, the march, which

CHAP. XLIV.

1807.

had been ordered upon three lines, could take place on two only. Soult and Davoust continued to manoeuvre, in order to turn the Russian left, while Murat and Ney pressed their rearguard. On the night of the 4th, the Russians retired to Wolfsdorf, where they stood firm next day. But this continued retreat in presence of the enemy was now beginning to be attended with bad effects, both upon the health and spirits of the soldiers. The commissariat in their army was then wretched; magazines there were none in the country which was now the theatre of war; and the soldiers, when worn out with a night-march over frozen snow, had no means of obtaining subsistence but by prowling about to discover and dig up the little stores which the peasants had buried for the use of their families. The men everywhere lay on the bare ground in intense frost, with no other bed but the snow, and no covering but their great-coats, which were now little better than rags. They were not as yet inured to retire before the enemy; and the murmur against any further retreat was so loud, that Benningsen resolved to fall back only to a chosen field of battle; and, upon examining the map, that of PREUSSISCH-EYLAU was selected for this purpose. No sooner was this announced to the troops than their discontents were appeased; the hardships of the night-marches were forgotten; and from the joyful looks of the men, it would rather have been supposed they were marching to tranquil winter quarters, than to the most desperate struggle which had occurred in modern times.[1]

Feb. 4.

[1] Wilson, 92, 94. Jom. ii. 356. Dum. xvii. 349, 352.

58. Combat of Landsberg. Feb. 6.

Severe actions, however, awaited these brave men ere they reached the theatre of final conflict. On the night of the fifth the army moved to Landsberg, where the troops from Heilsberg joined them, notwithstanding a bloody combat with Marshal Davoust. On the following day, the rearguard, under Bagrathion, posted between Hoff and that town, was assailed with the utmost vehemence by Murat, at the head of the reserve cavalry ten

thousand strong, and the principal part of the corps of Soult and Augereau. The approach of these formidable masses, and the imposing appearance of their dragoons, as well as the balls which began to fall from the French batteries, occasioned great confusion among the cannon and carriages in the streets of the town. But with such resolution did the rearguard maintain their position, that, though they sustained a heavy loss, the enemy were kept at bay till night closed the carnage, and relieved the Russian general from the anxieties consequent on so critical a situation in presence of such enormous forces of the enemy. Two battalions of Russians were trampled under foot in the course of the day or cut down, chiefly by one of their own regiments of horse dashing over them, when broken and flying from Murat's dragoons. Benningsen upon this supported the rearguard by several brigades of fresh troops, and the combat continued with various success till night, when both armies bivouacked in presence of each other; that of the French on the heights of Hoff, that of the Russians on those which lie in front of Landsberg, and the little stream of the Stein separating their outposts from each other. In this untoward affair the Russians sustained a loss of two thousand five hundred men, among whom was Prince Gallitzin, whose chivalrous courage had already endeared him to the army; but the French were weakened by nearly as great a number. During the night the whole army again broke up, and without further molestation reached Eylau at seven the next morning, when it passed through the town, and moved quietly to the appointed ground for the battle on the other side, where it arrived by noonday.[1]

Feb. 7. [1] Dum. xvii. 354, 355. Wilson, 94, 95. Jom. ii. 356.

59. **Combat of Liebstadt, and retreat of Lestocq.**

This rapid concentration and retreat of the Russians isolated the Prussian corps of Lestocq, and gave too much reason to fear that it might be cut off by the superior forces of Bernadotte and Ney, who were now pressing on it on all sides. But the skilful movements of the Prussian general extricated him from a most perilous situation.

CHAP. XLIV.

1807* Feb. 5.

On the 5th, he set out from Mohrungen, and his horse encountered the cavalry of Murat near Deppen, while the head of the column of infantry was at the same time charged by Ney, who had crossed the Passarge to intercept his progress near Waltersdorf. The heroic resistance of the advanced guard, only three thousand strong, gave time for the main body to change the line of its march, and escape in the direction of Schloditten; but it proved fatal to itself, as almost the whole were slain or made prisoners, with twelve pieces of cannon. The firm countenance of the cavalry, however, defeated all the efforts of Murat, who in vain charged them repeatedly with six thousand horse; and after baffling all his attacks, they retired leisurely, and in the best order, covering the march of the infantry all the way; crossed the Passarge at Spanden, and arrived on the 7th in safety at Hussehnen in the neighbourhood of Eylau.[1]

Feb. 7. [1] Jom. ii. 356, 357. Dum. xvii. 352, 353.

60. Relative forces on both sides.

Thus, after sustaining incredible hardships, and undergoing serious dangers, the whole Russian army was at length concentrated on one field of battle, and about to measure its strength with the enemy. It was reduced, by the fatigues and losses of this winter campaign, to sixty-five thousand men, assembled around Eylau, to which, if ten thousand be added as Lestocq's division, which might be expected to co-operate in the approaching action, the whole amount that could be relied on for the shock was seventy-five thousand, with four hundred and sixty pieces of cannon. The French, after deducting the losses of this dreadful warfare, exclusive of Bernadotte, who did not arrive on the ground for two days after, could still bring eighty thousand men into the field, including nearly sixteen thousand horse; but they had not above three hundred and fifty pieces of artillery. Thus the two armies were nearly equal—the French superiority in numbers, and especially in cavalry, being counterbalanced by the advantage which the Russians had in that important arm, the artillery. Their spirit and courage were at the

CHAP. XLIV.

1807.

same level; for if the French could recall with deserved pride the glorious achievements of the campaign, and a long course of almost unbroken victories, the Russians, on their side, had the triumphs of Suwarroff in Turkey, Poland, and the Italian plains, to recall: and if the former were impelled by the ardour of a revolution, converted by consummate genius into that of military conquest, the latter were buoyant with the rising energy of an empire whose frontiers had never yet receded before the standards of an enemy.[1] *

61. Bloody combats round Eylau the day before the battle.

The Russian rearguard, ten thousand strong, under Bagrathion, was leisurely retiring towards Eylau, and at the distance of about two miles from that village, when it was attacked by the French infantry. The Russians were at first compelled to give way, but the St Petersburg dragoons, whose rout had occasioned such loss to their own comrades on the preceding day, emulous to wipe away their disgrace, assailed the enemy so opportunely in

* The following is the account given by Dumas of the troops present in arms, in January 1807, under Napoleon on the Vistula:—

	Infantry and Artillery.	Cavalry.
Imperial Guard under Bessi£res,	5,109	5,829
——————Oudinot,	6,046

Total,	187,434	28,876

If from this mass of 113,000 infantry and 24,000 cavalry, there be deducted 19,000 absent, under Bernadotte, 18,000 under Lannes, 6,000 under Oudinot, and 14,000 lost or left behind during the march from Warsaw, there will remain, on their own showing, 90,000 in line at Eylau, and that agrees nearly with Sir Eobert Wilson's estimate.—DUMAS, vol. xviii. 592; WILSON, 99. Thiers makes the effective French force at Eylau 74,000 men—*ConavXat et l'Empire*, vii 361. The medium of 80,000 is probably very near the mark.

CHAP. XLIV. 1807.

flank, when emerging from the tumult of the charge, that they instantly cut to pieces two battalions, and made prize of their eagles. Disconcerted by this check, the French gave no further molestation to the Russian

Feb. 7.

rearguard, which retired into Eylau. By a mistake, however, the division destined to occupy that important station evacuated it, along with the rest of the army; and though Benningsen instantly ordered it to be reoccupied by fresh troops, the French had, meanwhile, entered in great numbers, and the assailing division, under Barclay de Tolly, had a rude contest to encounter in endeavouring to regain the lost ground. By vast exertions, however, they at length succeeded in expelling the enemy. The French again returned in greater force; the combat continued with the utmost fury till long after sunset. Fresh reinforcements came up to the Russians: twice Barclay carried the village after dark, by the light of the burning houses, and he was as often expelled by the enthusiastic valour of the French. At length they were driven out of the town, which, from lying in a hollow, and being commanded on the French side, was no longer tenable after the enemy had brought up their heavy artillery. But that gallant commander, with this heroic rearguard, intrenched himself in the church and churchyard, which stands on an eminence by the road on issuing from the town on the other side, and there maintained a sanguinary resistance till past ten at night, when he was severely wounded. Then the object of the strife having been gained by the heavy artillery having all arrived by the road of Schloditten, and taken up its position on the field of battle behind the village, the unconquered Russians were withdrawn from the churchyard, which, with its blood-stained graves and corpse-covered slopes, remained in the hands of Napoleon.[1]

[1] Wilson, 97,98,100. Jom. ii. 357, 358. Dum. xviii. 6, 8. Bign. vi. 126.

Never in the history of war did two armies pass a night under more awful and impressive circumstances than the rival hosts that now lay, without tent or cover-

ing, on the snowy expanse of the field of Eylau. The close vicinity of the two armies; the vast multitude assembled in so narrow a space, intent only on mutual destruction; the vital interests to the lives and fortunes of all which were at stake; the wintry wildness of the scene, cheered only by the watch-fires, which threw a partial glow on the snow-clad fields around; the shivering groups who in either army lay round the blazing fires, chilled by girdles of impenetrable ice; the stern resolution of the soldiers in the one array, and the enthusiastic ardour of those in the other; the liberty of Europe now brought to the issue of one dread combat; the glory of Russia and France dependent on the efforts of the mightiest armament that either had yet sent forth, all contributed to impress a feeling of extraordinary solemnity, which reached the most inconsiderate breast, oppressed the mind with a feeling of anxious thought, and kept unclosed many a wearied eyelid in both camps, notwithstanding the extraordinary fatigues of the preceding days. But no sooner did the dawn break, and the quick rattle of musketry from the outposts commence, than these gloomy feelings were dispelled, and all arose from their icy beds with no other feelings but those of joyous confidence and military ardour.[1]

62. Anxious situation of both armies in their night bivouac.

[1] Wilson, 101. Jom. ii. 358.

The evacuation of Eylau on the preceding night, had led Napoleon to suppose that the enemy were not to give battle on the succeeding day; and, overwhelmed with the extraordinary fatigues he had undergone since leaving Warsaw, during Vhich time he had been daily occupied in business or marching twenty hours out of the twenty-four, he retired to a house in the town, and there, amidst all the horrors of a place carried by assault, fell into a profound sleep. The two armies were within half cannon-shot of each other, and their immense masses disposed in close array on a space not exceeding a league in breadth. The field of battle consisted of an open expanse of unenclosed ground, rising into swells, or small

63. Description of the field of battle, and the positions of either army.

Atlas, Plate 43.

CHAP. XLIV.

1807.

hills, interspersed with many lakes : but as the whole surface was covered with snow, and the water so thoroughly frozen as to bear any weight either of cavalry or artillery, it was everywhere accessible to military operations. The little town of Eylau, situated on a slight eminence and surmounted by a Gothic steeple, was the only salient point of the field. On the slope to its right, looking from the French position, was the churchyard, the scene of so desperate a strife on the preceding day. The ground rose gently in its front and was interspersed with some small hills, amidst which the dense masses of the Russians were barely visible through the twilight of a wintry day obscured by mist and driving snow. The Russian right, under TouchkofF, lay on either side of Schloditten ; the centre, under Sacken, occupied a cluster of little open hills, intercepted by lakes, in front of Kutschitten; the left, under Ostermann Tolstoy, rested on Klein-Sausgarten and Serpalten; the advanced-guard, ten thousand strong, with its outposts extending almost to the houses of Eylau, was under the command of Bagrathion ; the reserve, in two divisions, was led by Doctoroff. The whole army in front was drawn up in two lines with admirable precision : the reserve, in two close columns behind the centre; the foot artillery, consisting of four hundred pieces, was disposed along the front of the lines; the horse artillery, embracing sixty guns, cavalry and Cossacks, under Platoff, in reserve behind the centre and wings, in order to support any point which might appear to require assistance. Lestocq, with his division, had not yet come up ; but he had lain at Hussehnen, the preceding night, which was only three leagues off, and might be expected to join before the battle was far advanced.[1]

[1] Dum. xviii. 12,13. Jom. ii. 359, 360. Wilson, 101. Thiers, vii. 376\

The French position, generally speaking, was more elevated than that of the Russians, with the exception of the right, where it was commanded by the heights of Klein-Sausgarten. The town of Eylau, however, occu-

64. Distribution of the French forces.

pied in force by their troops, was situated in a hollow, so low that the roofs of the houses were below the range of cannon-shot from the Russian position, and the summit of the church steeple, which stands on an eminence, alone was exposed to the destructive storm. Davoust was in rear on the right, and received orders, as soon as he came up, to attack the villages of Klein-Sausgarten and Serpalten, occupied by the enemy. The division St Hilaire of Soult's corps was at Rothenen ; between that village and Eylau, Augereau was established, and was destined to advance against the Russian main body and the strong batteries placed opposite : Soult, with his remaining two divisions, occupied Eylau on the left, and was to aid him when he moved forward ; the Imperial Guard and cavalry of Murat were in reserve behind the centre, ready to support any attack which might appear likely to prove unsuccessful. Orders had been despatched to Ney to attack the Russian right as soon as the action was warmly engaged ; and it was hoped he would arrive on the field at least as soon as Lestocq on the other side, upon whose traces he had so long been following. Lannes had been detained by sickness at Pultusk, and his corps, placed under the orders of Savary, afterwards Duke of Rovigo, was observing the Russian forces left on the Bug and the Narew. Napoleon's design, when he saw that the Russians stood firm, and were resolved to give battle, was to turn their left by the corps of Marshal Davoust, and throw it back on the middle of the army ; but, the better to conceal this object, he commenced the action soon after daylight by a violent attack on their right and centre. The Russian cannon played heavily, but rather at hazard, on the hostile masses in front of Eylau; while the French guns replied with fatal effect from their elevated position down upon the enemy, whose lines were exposed from head to foot to the range of their shot.[1]

Wilson, 101. Jom. ii. 560,361. Dum. xviii. 915.

Presently the centre, under Augereau, advanced in massy columns, while St Hilaire's division of Soult's corps,

CHAP. XLIV. 1807. 65. Battle of Eylau. Defeat of Augereau. Feb. 8.

the whole preceded by a hundred and fifty pieces of artillery, marched with an intrepid step against the Russian left-centre, so as to unite Augereau's with Davoust's attack, and forty guns of the Imperial Guard, posted on an eminence near the church of Eylau, to cover their attack, opened a heavy fire on the great central Russian battery. These troops had not advanced above three hundred yards, driving the Russian tirailleurs before them, when the Russian cannon-shot, from two hundred pieces, admirably directed, ploughed through the mass, and so shattered it, that the whole body of Augereau's corps inclined to the left towards Schloditten, to get under the shelter of a detached house which stood in the way. A snow-storm at the same time set in and darkened the atmosphere, so that neither army could see its opponent; but nevertheless, the deadly storm of bullets continued to tear the massy columns of the French, and the cannonade was so violent as to prevent Soult from rendering them any effectual support. A masked battery of seventy-two pieces opened on their front with a tremendous fire of grape. In a quarter of an hour, half of the corps were struck down. Augereau's divisions were already severely shaken by this murderous fire, when they were suddenly assailed on one side by the right wing of the Russians, under Touchkoff, and on the other by their reserve and a powerful body of cavalry, under Doctoroff. So thick was the snow-storm, so unexpected the onset, that the assailants were only a few yards distant, and the long lances of the Cossacks almost touching the French infantry, when they were first discerned. The combat was not of more than a few minutes' duration : the corps, charged at once by foot and horse with the utmost vigour, broke and fled in the wildest disorder back into Eylau, closely pursued by the Russian cavalry and Cossacks, who made such havoc, that the whole, above sixteen thousand strong, were, with the exception of fifteen hundred men, taken or destroyed;[1] and Augereau himself, with his two

[1] Wilson, 101, 102. Jom. ii. 361, Dum. xviii. 17,18. Bign. vi. 129,130. Thiers, vii. 383.

generals of divisions, Desgardens and Heudelet, was desperately wounded.

Napoleon was apprised of this disaster by the fugitives who rushed into Eylau; and the snow-storm clearing away at the same time, showed him the Russian right and centre far advanced, with their light troops almost at the edge of the town. He himself was stationed at the churchyard on its eastern side, which had been the scene of such a sanguinary conflict on the preceding night; and already the crash of the enemy's balls on the steeple and walls of the church showed how near danger was approaching. The serried masses of the Old Guard stood firm in and around the cemetery, while the branches of the trees above their heads were constantly rent or falling from the enemy's cannon-balls. Presently one of the Russian divisions, following rapidly after the fugitives, entered Eylau by the eastern street, and charged, with loud hurrahs, to the foot of the mount where the Emperor was placed with a battery of the Imperial Guard and his personal escort of a hundred men. Had a regiment of horse been at hand to support the attack, Napoleon must have been made prisoner ; for though the last reserve, consisting of six battalions of the Old Guard, was at a short distance, he might have been enveloped before they could come up to his rescue. The fate of Europe then hung by a thread, but in that terrible moment the Emperor's presence of mind did not forsake him;* he instantly ordered his little body-guard, hardly more than a company, to form line, in order to check the enemy's advance, and despatched orders to the Old Guard to attack the column on one flank, while a brigade of Murat's horse charged it on the other.[1] The Russians, disordered by success, and ignorant of the inestimable prize which was almost within their grasp,

were arrested by the firm countenance of the little band of heroes who formed Napoleon's last resource; and before they could re-form their ranks for a regular conflict, the enemy were upon them on either flank, and almost the whole division was cut to pieces on the spot.*

67. Grand charge by the cavalry and Imperial Guard on the Russian centre.

The disorder produced by the repulse of St Hilaire's division, and the almost total destruction of Augereau's corps, however, was such, that the French Emperor was compelled to strain every nerve to repair it. For this purpose he prepared a grand charge by the whole cavalry and Imperial Guard, supported in rear by the divisions of Soult, which occupied Eylau and its vicinity, now stripped of any other defenders. The onset of this enormous mass, mustering fourteen thousand cavalry and twenty-five thousand foot-soldiers, supported by two hundred pieces of cannon, was the more formidable, that the thick storm of snow, as favourable now to them as it had before been to the enemy, prevented them from being perceived till they were close upon the first line of the enemy. The shock was irresistible : the front line of the Russians was forced to give ground, and in some places thrown into disorder; their cavalry crushed by the enormous weight of the seventy squadrons which followed the white plume of Murat; and a desperate melee ensued, in which prodigious losses were sustained on both sides. The Russian battalions, though broken, did not lay down their arms or fly, but, falling back on such as yet stood firm, or

* "I never was so much struck with anything in my life," said General Bertrand at St Helena, "as by the Emperor at Eylau at the moment when, alone with some officers of his staff, he was almost trodden under foot by a column of four or five thousand Russians. The Emperor was on foot, and Berthier gave orders instantly for the horses to be brought forward; the Emperor gave him a reproachful look, and instead ordered a battalion of his Guard, which was at a little distance, to advance. He himself kept his ground as the Russians approached, repeating frequently the words,' What boldness ! what boldness !' At the sight of the grenadiers of his Guard the Russians made a dead pause; the Emperor did not stir, but all around him trembled." —LAS CASES, ii. 151. See also *Relation de la Bataille d' Eylau, par un Temoin Oculaire. Camp. en Prusse et Pologne,* iv. 45.

uniting in little knots together, still maintained the combat with the most dogged resolution. Instantly perceiving the extent of the danger, Benningsen, with his whole staff, galloped forward from his station in the rear to the front, and at the same time despatched orders to the whole infantry of the reserve to close their ranks, and advance to the support of their comrades engaged. These brave men, inclining inwards, pressed eagerly on, regardless of the shower of grape and musketry which fell on their advancing ranks, and, uniting with the first line, charged home with loud hurrahs upon the enemy. But the onset of the French was at first irresistible. In the shock, the Russian division of Essen was broken, and Murat's horse, pursuing their advantage, swept through several openings, and got as far as the reserve cavalry of Benningsen. Already the last reserve batteries of the centre were discharging grape with the utmost vehemence on the terrible assailants ; but no sooner did Platoff, who was in the rear of all, see them approaching with loud cries, and all the tumult of victory, than he gave orders to the Cossacks of the Don to advance. Regardless of danger, the children of the desert joyfully galloped forward to the charge, their long lances in rest, their blood-horses at speed : in an instant the French cuirassiers were broken, pierced through, and scattered. Retreat was impossible through the again closed ranks of the enemy, and eighteen only of the whole body regained their own lines by a long circuit; while five hundred and thirty Cossacks returned, each cased in the shining armour which he had stripped from the dead body of an opponent. At all other points the enemy were, after a desperate struggle, driven back, and several eagles, with fourteen pieces of cannon, remained in the hands of the victors.[1]

1 Thiers, vii. 385, 386. Dum. xviii. 19,30. **Join.** ii.362. Wilson, **103, 104.**

The battle appeared gained: the French left and centre had been defeated with extraordinary loss ; their last reserves, with the exception of part of the Guard, had

CHAP. XLIV.

1807.

68. Great success of Davoust on the French right.

been engaged, without success; to the cries of *Vive l'Empereur!* and the shouts of enthusiasm with which they commenced the combat, had succeeded a sullen silence along the whole line in front of Eylau ; the Russians were several hundred paces in advance of the ground which they occupied in the morning; and a distant cannonade on both sides evinced the exhaustion and fatigue which was mutually felt. Lestocq had not yet * arrived, but he was hourly and anxiously expected, and the addition of his fresh and gallant corps would, it was hoped, enable Benningsen to complete the victory. But while all eyes were eagerly turned to their right, where it was expected his standards would first appear, a terrible disaster, wellnigh attended with fatal consequences, took place on the left. Davoust, who was intrusted with the attack which was intended to be the decisive one in that quarter, had long been arrested by the firm countenance of Bagavout and Ostermann Tolstoy; but at length the increasing numbers and vigorous attacks of the French prevailed. Friant, whose division headed the attack, carried Serpalten, and, pushing on beyond it, the village of Klein-Sausgarten fell into his hands. It was again reconquered by the Russians, but finally remained in the possession of their antagonists.[1]

[1] Wilson, 104. Dum. xvii. 20,25. Jom. ii. 363.

***69.* Bagavout is defeated on the Russian left.**

Nor was the action less warmly contested at Serpalten, Supported by a battery of thirty pieces of artillery and part of the reserve, Bagavout returned to the charge, and there for long made head against the superior forces of St Hilaire and Morand at the head of one of Soult's and one of Davoust's best- divisions. At length the two lines advanced to within pistol-shot, when the Russians gave way ; the cannoneers, bravely resisting, were bayoneted at their guns, and the pieces were taken. They were now reinforced by two regiments which Benningsen sent to their support, and the French, in their turn, were charged in flank by cavalry, broken, and driven back upwards of three hundred yards. But notwithstanding this success

at Serpalten, the progress of the enemy at Klein-Sausgarten was so alarming, that the Russians were unablf to maintain themselves on the ground they had so gallantly regained. Friant debouched from it in their rear in great strength; and, rapidly continuing his advance from left to right of the Russian position, he had soon passed, driving everything before him, the whole ground occupied by their left wing; the guns so fiercely contested were abandoned by the Russians; and, continuing his triumphant course in their rear, he carried by assault the hamlet of Auklappen, and was making dispositions for the attack of Kutschitten, which had been the headquarters of Benningsen during the preceding night, and lay directly behind the Russian centre. Never was change more sudden; the victorious centre, turned and attacked both in flank and rear, seemed on the point of being driven off the field of battle ; already the shouts of victory were heard from Davoust's divisions, and vast volumes of black smoke, blown along the whole Russian centre and right from the flames of Serpalten, evinced in frightful colours the progress of the enemy on their left.[1]

[1] Wilson, 104,105. Dum. xviii. 21,29. Jom. ii. 363,364.

70. Benningsen throws back his left to arrest the evil.

Atlas, Plate 44.

The firmness of Benningsen, however, was equal to the emergency. Orders were despatched to the whole left wing to fall back, so as to come nearly at right angles to the centre and right; and although this retrograde movement, performed in presence of a victorious enemy, was necessarily attended with some disorder, yet it was successfully accomplished; and after sustaining considerable loss, the Russian left wing was drawn up, facing outwards, nearly at right angles to the centre, which still retained its advanced position, midway between the ground occupied by the two armies where the fight began in the morning. As the Russian left drew back to the neighbourhood of the centre, it received the support of the reserves, which Benningsen wheeled about to the assistance of the discomfited wing ;[2] and although Friant

[2] Wilson, 104,105. Jom. ii. 363, 364. Dum. xviii. 21, 29.

CHAP. XLIV. 1807.

carried Kutschitten, this was the last advantage he gained il that quarter, and the victorious columns of Davoust were at length arrested.

71. Lestocq at length appears on the Russian right, and restores the battle.

The battle was in this critical state, with the French victorious on one wing and the Russians on the centre and the other, but without any decisive advantage to either side, when the corps of Lestocq, so long expected, at length appeared on the extreme Russian right, driving before him the French battalions which were stationed near the village of Altholf. Orders were immediately despatched to him to defile as quickly as possible in the rear of the Russian right, so as to assist in the recapture of Kutschitten behind their centre, where St-Hilaire had established himself in so threatening a manner. These directions were rapidly and ably performed. Moving swiftly over the open ground in the rear of the Russian right in three columns, he arrived in the neighbourhood of Kutschitten an hour before it was dark, with seven thousand men, having left two thousand to occupy Altholf, and lost nearly a thousand in the course of the march that morning, which had been a 'constant fight with Marshal Ney's corps. Dispositions for attacking the village and cutting off the retreat of the enemy were instantly made. A terrible cannonade was kept up on its houses, and the Prussians, under cover of the guns, charging in three columns, carried it with irresistible force, destroying or making prisoners the 51st and one battalion of the 108th regiments stationed there, with an eagle, and recovering the Russian guns which had been abandoned on the retreat from Serpalten. Not content with this great success, Lestocq immediately re-formed his divisions in line, with the cavalry and Cossacks in rear, and advanced against the hamlet of Auklappen and the wood adjoining. The division of Friant, wearied by eight hours' fighting, was little in a condition to withstand these fresh troops, flushed by so important an advantage. The combat, however, was

terrible: Davoust was there; his troops, though exhausted, were more than double the numbers of the enemy; and he made the utmost effort to maintain his ground—"Here," said the marshal, "is the place where the brave should find a glorious death; the cowards will perish in the deserts of Siberia." Notwithstanding all his exertions, however, Friant was driven out of the wood, after an hour's combat, with the loss of three thousand men; the Russians, by a bold attack of cavalry, regained the smoking walls of Auklappen, and the whole Allied line was pressing on in proud array, driving the enemy before them over the open ground between that ruin and Sausgarten, when night drew her sable mantle over this scene of blood.[1]

[1] Dum. xviii. 30, 35. Wilson, 105, 106. Jom. ii. 364, 365.

72. Schloditten is carried by Ney, and retaken by Benning-

The battle was over on the centre and left, and already the French lines were illuminated by the fire of innumerable bivouacks, when both armies were startled by a sharp fire, succeeded by loud shouts, on the extreme right of the Russians, towards Schloditten. It was occasioned by Marshal Ney's corps, which, following fast on the traces of Lestocq, had at nightfall entered Altholf, driving the Prussian detachments which occupied it before him, and had now carried Schloditten, and even pushed on to Schmoditten, so as to interrupt the Russian communications with Konigsberg. Benningsen immediately ordered the Russian division of Kamenskoi, which had suffered least in the battle, to storm the village, which was executed at ten at night in the most gallant style. The loud cheers of their victorious troops were heard at Eylau; and Napoleon, supposing that a general attack was commencing, for which he was little prepared, gave orders for his heavy artillery and baggage to defile towards Landsberg, and ordered Davoust to draw back to the position which he had occupied in front of the wood when the action commenced in the morning, and this terminated the changes of this eventful day.[2]

[2] Wilson, 106,107. Dum. xviii. 35,37. Jom. ii.365. Bign. vi. 133,134.

CHAP. XLIV.

1807.

73. Benning-Ben, contrary to the wishes of his officers, resolves to retreat.

From the mortification, however, of retiring before an enemy in an open field, Napoleon was relieved by the measures adopted by the Russian general. At eleven at night a council of war was held by the generals on horseback, as to the course which the army should pursue. It was strongly represented by Ostermann Tolstoy, the second in command, and Generals Knoring and Lestocq, that at last Buonaparte had been defeated in a pitched battle, and that it would be to the last degree impolitic to destroy the moral effect of such an advantage by retreating before him, and thus giving him a fair pretext for representing it as a victory; that they were ready instantly or next day to follow up their success, and attack the enemy wherever they could find him; and that, at all events, they would pledge their heads that, if the general-in-chief would only stand firm, Napoleon would be driven to a disastrous retreat. Strong as these considerations were, they were overbalanced, in Benningsen's estimation, by still stronger. He knew that his own loss was not less than twenty thousand men, and though he had every reason to believe that the enemy's was still heavier, yet the means of repairing the chasm existed to a greater degree in the hands of Napoleon than his own ; Ney, whose corps had suffered comparatively little, had just joined him; Bernadotte, it was to be presumed, would instantly be summoned to headquarters; and these fresh troops might give the enemy the means of cutting him off from Konigsberg, in which case, in the total destitution for provisions which prevailed, the most dreadful calamities might be apprehended. Influenced by these considerations, Benningsen, who was ignorant of the enormous magnitude of the losses which the French had sustained, and who, though a gallant veteran, had lost somewhat of the vigour of youth, and had been thirty-six hours on horseback with hardly any nourishment, persevered in his opinion.[1] He accordingly directed the

[1] Wilson, 108,109. J om. ii. 365, 366. Dum. xviii.37,39.

order of march, which began, at midnight, by Mtihlhausen towards Konigsberg, without any molestation from the enemy. They took post at Wottemberg, three leagues in front of that town, where the wearied soldiers, after a struggle of unexampled severity, were at length enabled to taste a few hours of repose.

74. Results of the battle, and losses on both

Such was the terrible battle of Eylau, fought in the depth of winter, amidst ice and snow, under circumstances of unexampled horror; the most bloody and obstinately contested that had yet occurred during the war; and in which, if Napoleon did not sustain a positive defeat, he underwent a disaster which had wellnigh proved his ruin. The loss on both sides was immense, and never in modern times had a field of battle been strewed with such a multitude of slain. On the side of the Russians twenty-five thousand had fallen, of whom above seven thousand were already no more : on that of the French upwards of thirty thousand were killed or wounded, and nearly ten thousaud had left their colours, under pretence of attending to the wounded, and did not make their appearance for several days afterwards. The other trophies of victory were nearly equally balanced: the Russians had to boast of the unusual spectacle of twelve eagles taken from their antagonists; while the French had captured sixteen of the Russian guns, and fourteen standards. Hardly any prisoners were made on either side during the action; but six thousand of the wounded, most of them in a hopeless state, were left on the field of battle, and fell into the hands of the French.[1] *

Jom. ii. 365. Dura. xviii.39,40. Wilson, 108, 109, 111.

*** The official accounts of this great battle on both sides are so much interwoven with falsehood as to furnish no clue whatever to the truth. That of Napoleon is distinguished by more than his usual misrepresentation. He states his loss at 1900 killed and 5700 wounded, in all 7600.[2] Judging by his usual practice, which was to avow a loss about a fourth of its real amount, this Would imply a loss of 80,000 men. At St Helena he admitted that he lost 18,000;[8] and considering that the Russians acknowledge a loss of above 20,000, that their artillery throughout the day was greatly superior to that of the French, and that they sustained no loss in any quarter comparable to that of Augereau's corps, which was so completely destroyed that its remains were immediately incorporated with the other corps, and itself disappeared**

75. Aspect of the field of battle on the following day.

Never was spectacle so dreadful as that field presented on the following morning. Above fifty thousand men lay in the space of two leagues, weltering in blood. The wounds were, for the most part, of the severest kind, from the extraordinary quantity of cannon-balls which had been discharged during the action, and the close proximity of the contending masses to the deadly batteries, which spread grape at half musket-shot through their ranks. Though stretched on the cold snow, and exposed to the severity of an Arctic winter, the sufferers were burning with thirst, and piteous cries were heard on all sides for water, or assistance to extricate the wounded men from beneath the heaps of slain, or load of horses by which they were crushed. Six thousand of these noble animals encumbered the field, or, maddened with pain, were shrieking aloud amidst the stifled groans of the wounded. Broken gun-carriages, dismounted cannon, fragments of blown-up caissons, scattered balls, lay in wild confusion amidst casques, cuirassiers, and burning hamlets, casting a livid light over a field of snow. Subdued by loss of blood, tamed by cold, exhausted by hunger, the foemen lay side by side amidst the general wreck. The Cossack was to be seen beside the Italian ; the gay vine-dresser from the banks of the Garonne lay athwart the stern peasant from the plains of the Ukraine. The extremity of suffering had extinguished alike the fiercest and the most generous passions. According to his usual custom, Napoleon in the afternoon rode over this dreadful field, accompanied by his generals and staff, while the still burning piles of Serpalten and Sausgarten sent volumes of black smoke over the scene of death. But the men exhibited none of

entirely from the Grand Army, it may safely be concluded that this estimate is not exaggerated. " Our loss," says the Duchess of Abrantes, " at Eylau was enormous—Why conceal the truth ? The Emperor avowing the truth at Eylau would have appeared to me more truly great than putting forth an official falsehood which no child could believe, more especially if he was nephew or son of Col. Semele of the 24th regiment of the line, one of the finest in the army, and itself equal almost to a brigade, which was to a man destroyed."— D'ABRANTES, **ix. 367. Thiers makes the French loss 10,000 men, a number**

CHAP. XLIV.

1807.

their wonted enthusiasm ; no cries of *Vive l'Empereur!* were heard; the bloody surface echoed only with the cries of suffering or the groans of woe. " The spectacle," said Napoleon in his bulletin, "was fitted to inspire princes with the love of peace, and a horror of war." It is this moment which the genius of Le Gros has selected for the finest and most inspired painting that exists of the Emperor, in that noble work which, amidst the false taste and artificial sentiment of Parisian society, has revived the severe simplicity and chastened feeling of ancient art.[1] *

76. Inactivity and losses of the French after the battle.

Atlas, Plate 44.

For nine days after the battle, the French remained at Eylau, unable to advance, unwilling to retreat, and apparently awaiting some pacific overture from the enemy. The only movement of any consequence which was attempted was by Murat, with twelve regiments of cuirassiers, who approached the Russian position in front of Konigsberg; but he was defeated by the Allied horse, with the loss of four hundred killed and three hundred prisoners. Elated with this success, the Cossacks became daily more enterprising in their incursions. Night and day they gave the enemy no rest in their position; the French foraging parties were cut off; and to such a length was this partisan warfare carried, and so completely did the superiority of the Cossacks in its conduct appear, that during the ten days the Emperor remained at Eylau, upwards of fifteen hundred of his cavalry were made prisoners, and brought into Konigsberg. Meanwhile the relative situation of the two armies was rapidly changing: the Russians, with the great seaport of Konigsberg in their rear, were amply supplied with every-

Feb. 14.

ridiculously small; the more especially as he admits that the reports of the different corps engaged presented a total of 13,000 or 14,000 wounded more or less severely.—THIERS, *Conmlat et l'Empire,* vii. 394, *note,*

*** This admirable painting, the masterpiece of modern French art, is to be seen in the Luxembourg at Paris, standing forth in dark simplicity amidst its meretricious compeers : it is worthy to be placed beside the finest battle-pieces of Le Brun or Tempesta, and in grandeur of thought and effect far excels any British work of art since the days of Reynolds.**

CHAP. XLIV. 1807.

thing, and their wounded carefully nursed in the great hospitals of that city; while the French, still starving on the snows of Eylau, and unable, from the superiority of the Russian horse, to levy requisitions in the surrounding country, were daily reduced to greater straits from want of provisions, and totally destitute of all the accommodations requisite to withstand the rigour of the season.[1]

1 Wiis. 109, 111. Dura. xviii.49,51.

77. Napoleon calls in all his reinforcements, and proposes peace.

Meanwhile Napoleon, however, was not idle. The day after the battle he issued orders for all the troops in his rear to advance by forced marches to the scene of action. The cuirassiers of Nansouty, which had not been engaged, arrived in consequence two days after. Lefebvre received orders to suspend the blockade of Dantzic, and concentrate his corps at Osterode, in order to form a reserve to the army, and co-operate with Savary, who had the command of Lannes' corps on the Narew. All the bridges on the Lower Vistula were put in a posture of defence, and Bernadotte was brought up to Eylau. Such, however, had been the havoc in the army, that the Emperor, notwithstanding these great reinforcements, did not venture to renew hostilities, or advance against Konigsberg, the prize of victory, where he would have found the best possible winter-quarters, and the steeples of which were visible from the heights occupied by his army.* Even the critical position of the Russian army, with its back to the sea and the river Pregel, where defeat would necessarily prove ruin, could not induce Napoleon to hazard another encounter; and finding that the Russians were not disposed to propose an armistice, he determined hinb-

Feb. 15.

self to take that step. For this purpose, General Bertram was sent to Benningsen's outposts with proposals of peace

* When Napoleon began the battle of Eylau, he never doubted he would be in Konigsberg next day. In his proclamation to his soldiers, before the action Bommenced, he said, "In two days the enemy will cease to exist, and your fatigues will be compensated by a luxurious and honourable repose." And on the same day Berthier wrote to Josephine—" The Russians have fled to Gumbinnen on the road to Russia; to-morrow Konigsberg will receive **the** Emperor."—WILSON, 113.

CHAP. XLIV.

1807.

to the King of Prussia. The Russian general sent him on to Memel, where the latter was, with a letter strongly advising him not to treat, and representing that the fact of Napoleon proposing an armistice after so doubtful a battle, was the best evidence that it was not for the interest of the Allies to grant it. The terms proposed were very different from those offered after the triumph of Jena; there were no more declarations that the house of Brandenburg must resign half its dominions, or that he would make the Prussian nobles so poor that they should be reduced to beg their bread.[1]*

Feb. 17. [1] Hard, ix. 395, 399. Lucches. Bign. vi. 154, 155.

78. Which is refused by Prussia.

Frederick-William, however, was not led to swerve from the path of honour even by this tempting offer. Widely as the language of the French Emperor differed from that which he had formerly employed, and clearly as his present moderation evinced the extent of the losses he had sustained at Eylau, still the existing situation and recent engagements of the Prussian monarch precluded his entering, consistently with national faith, into a separate negotiation. The Emperor of Russia had just given the clearest indication of the heroic firmness with which he was disposed to maintain the contest, by the vigorous campaign which he had commenced in the depth of winter, and the resolution with which he had sustained a sanguiuary battle of unexampled severity. The conduct of England, it is true, had been very different from what it had hitherto been during the Revolutionary war, and hardly any assistance had been received either from its arms or its treasures by the Allies, engaged in a contest of life and death on the shores of the Vistula.

*** Napoleon's letter to the King of Prussia was in these terms—" I desire to put a period to the misfortunes of your family, and organise as speedily as possible the Prussian monarchy, whose intermediate power is necessary for the tranquillity of Europe. I desire peace with Russia—and, provided the cabinet of St Petersburg has no designs on the Turkish Empire, I see no difficulty in obtaining it. Peace with England is not less essential to all nations; and I shall have no hesitation in sending a minister to Memel to take part in a con***

CHAP. XLIV.

1807.

But this disgraceful and parsimonious disposition had recently relented, and some trifling succours had just been obtained from the British government, which, although unworthy for England to offer, were yet gratefully received, as indicating a disposition on the part of its cabinet to take a more active part in the future stages of the struggle.* Under the influence of these feelings and expectations, the Prussian government, notwithstanding the almost desperate situation of their affairs, and the occupation of nine-tenths of their territories by the enemy's forces, refused to engage in any separate negotiation,—an instance of magnanimous firmness in the extremity of danger which is worthy of the highest admiration, and which went far to wipe away the stain that their former vacillating conduct towards Napoleon had affixed on the Prussian ministers.[1]

[1] Bign. vi. 158. Pari. Deb. ix. 987. Hard. ix. 398. Lucches. i. 290, 291.

79. Napoleon retreats and goes into cantonments on the Passarge.

Foiled in his endeavours to seduce Prussia into a separate accommodation, Napoleon was driven to the painful alternative of a retreat. Orders were given on the 17th for all the corps to fall back, the advanced posts being strengthened, in order to prevent the enemy from becoming aware of what was going forward, or commencing a pursuit. Eylau was evacuated; six hundred wounded were abandoned to the humanity of the enemy; and the army, retiring by the great road through Landsberg, spread itself into cantonments on the banks of the Passarge, from Hohenstein, where it takes its rise, to

gress of France, Sweden, England, Russia, Prussia, and Turkey. But as such a congress may last many years, which would not suit the present condition of Prussia, your Majesty therefore will, I am persuaded, be of opinion that I have taken the simplest method, and the one which is most likely to secure the prosperity of your subjects. At all events, I entreat your Majesty to believe in my sincere desire to re-establish amicable relations with so friendly a power as Prussia, and that I wish to do the same with Russia and England/' —HARD. ix. 396; SCHOELL, viii. 37-405.

*** They consisted only of £80,000 in money. A further subsidy of £100,000, and £200,000 worth of arms and ammunition, with the promise of future succours, was furnished by the British government in May following, in return for a solemn renunciation, on the part of the cabinet of Berlin, of all claim to the Electorate of Hanover.—HARD. ix. 397 ; *Ann. Reg.* 1807, 23 : *Parl. Deb.* ix. 987.**

Braunsberg, where it falls into the Baltic sea. Bernadotte was on the left on the Passarge, between Braunsberg and Spanden ; Soult in the centre, from Zeildorst to Mohrungen; Davoust on the right, between Allenstein and Hohenstein, at the point where the Alle and the Passarge approach most nearly to each other : Ney formed the advanced-guard at Guttstadt between the Passarge and the Alle. Headquarters were established at Osterode in the centre of the line, along with the guard and the grenadiers of Oudinot, who had been brought up ; the bulk of the army being thus quartered between that place and Wormditt. Lefebvre received orders to return to Thorn, unite with the Polish and Saxon contingents, and resume the siege of Dantzic, the preparations for which had been entirely suspended since the general consternation which followed the battle of Eylau.[1]

[1] Wilson, 115, 116. Dum. xviii. 56, 64.

80. The Russians advance, and also go into cantonments. Both parties claim the victory at Eylau.

Benningsen hastened to occupy the country which the enemy had evacuated, and on the 25th February his headquarters were advanced to Landsberg. As the Russian army passed over the bloody fields of Eylau and Hoff, still encumbered with dead, and strewed with the remains of the desperate contest of which they had recently been the theatre, they felt that they had some reason to claim the advantage in those well-fought fields; and Benningsen issued a proclamation to his troops, in which he now openly claimed the victory.* Napoleon also addressed his soldiers ; but though it was with his usual confidence, yet it was impos-

* Benningsen Baid—"Soldiers ! As the enemy was manoeuvring to cut us off from our frontiers, I made my army change its position in order to defeat his projects. The French, deceived by that movement, have fallen into the snare laid for them. The roads by which they followed us are strewed with their dead. They have been led on to the field of Eylau, where your incomparable valour has shown of what Russian heroism is capable. In that battle more than thirty thousand French have found their graves. They have been forced to retire at all points, and to abandon to us their wounded, their standards, **and** their baggage. Warriors ! you have now reposed from your fatigues; forward ! let us pursue the enemy, put the finishing-stroke to our glorious deeds, **and** after having, by fresh victories, given peace to the world, we will re-enter our beloved country."—DUMAS, xviii. 67.

CHAP. XLIV. 1807.

sible to conceal from the men, or from Europe, that the Grand Army had now for the first time retreated, and that the remains of their comrades on the field of battle had to trust to the humanity of an enemy for their sepulture.* In truth, however, not only the battle, but the objects of the winter campaign, had been equally divided. It was not to draw the French army from the Vistula to the Passarge, a distance of above a hundred miles, that Benningsen had concentrated his troops, and resumed offensive operations in the depth of winter; and it was not to retire from within sight of the steeples of Konigsberg to the wretched villages on the latter stream, that Napoleon had fought so desperate a battle at Eylau. The one struck for Dantzic, the other for Konigsberg, and both were foiled in their respective objects : fifty thousand men had perished without giving a decisive advantage to either of the combatants.[1]

[1] Dum. xviii. 64,67. Wilson. 116.

81. Operations of Essen against Savary. Combat of Ostrolenka.

Atlas, Plate 39.

To this period of the Polish war belong the operations of Essen and Savary on the Narew and the neighbourhood of Ostrolenka. Savary had occupied that town with a large part of Lannes' corps, who, as already mentioned, was sick ; and Essen having received considerable accessions of force from the army of Moldavia, which raised his disposable numbers to twenty thousand men, received orders, early in February, to attack the French in that quarter. The object was to engage their attention, in order to prevent any reinforcements being drawn from that corps to the main army, then advancing to the decisive battle of Eylau. Essen advanced with his corps on each side of the river Narew. That commanded by the Russian general in person on the right bank encountered Savary, who was supported by Suchet with his brilliant

*** Napoleon's address was as follows:—" Soldiers! we were beginning to taste the sweets of repose in our winter quarters, when the enemy attacked the first corps on the Lower Vistula: we flew to meet him; pursued him, sword in hand, for eighty leagues; he was driven for shelter beneath the cannons of his fortresses, and beyond the Pregel. In the combats of Bergfried, Deppen, Hoff, and the battle of Eylau, we have taken sixty pieces of cannon, sixteen standards; killed, wounded, or taken more than 40,000 Russians; the brave who have**

division; a rude conflict ensued, in which the Russians were finally worsted. Greater success, however, attended their efforts on the left bank: supported by the fire of fifty pieces of artillery, they drove back the French to the wails of Ostrolenka, and, entering pell-mell with the fugitives, penetrated into the principal square, and were on the point of obtaining decisive success. At this critical moment, Oudinot, who was marching from Warsaw with his division of grenadiers, six thousand strong, to join the Grand Army, arrived with his division of fresh troops, and, uniting with Suchet, who halted in the midst of his pursuit on the right bank to fly to the scene of danger, succeeded, after a bloody encounter in the streets, in driving them into the sand-hills behind the town, where a destructive cannonade was kept up till nightfall. In this affair the Russians lost seven guns and fifteen hundred men, and the French as many ; but having succeeded in their object in defending the town, and keeping the communication of the Grand Army open with Warsaw, the latter with reason claimed the victory,[1]

[1] Sav. iii. 36,39. Wilson, 119. Tom. ii. 367, 368. Dum. xviii. 69, 75.

82. Immense sensation excited by the battle of Eylau in Europe.

The battle of Eylau excited a prodigious sensation in Europe, and brought Napoleon to the very verge of destruction. Had a ministry of more capacity in military combination been then at the head of affairs in England, there cannot be the smallest doubt that the triumphs of 1813 might have been anticipated by seven years, and the calamities of Europe at once arrested. The first accounts of the battle received through the French bulletins rendered it evident that some disaster had been incurred, and the anxious expectation everywhere excited by this unsatisfactory communication was increased by the long interval which ensued before the

fallen on our side have fallen nobly, like true soldiers. Their families shall receive our protection. Having thus defeated the whole projects of the enemy, we will draw near to the Vistula, and re-enter our winter quarters: whoever ventures to disturb our repose shall repent of it—for beyond the Vistula, as beyond the Danube, in the depth of winter as in the heat of summer, we shall always be the soldiers of the Grand Army."—DUMAS, xviii. 63.

CHAP. XLIV.

1807.

Russian accounts arrived. At length, when, from Benningsen's report, it appeared that he claimed the victory, and, from the stationary condition of the Russian army in front of Konigsberg, and the ultimate retreat of the French to the banks of the Passarge, that these pretensions were not devoid of foundation, the public transport rose to the highest pitch. It was confidently expected that, now that Napoleon had for once been decisively foiled, the Austrians would instantly declare themselves, and their sixty thousand men in observation in Bohemia, be converted into a hundred thousand in activity on the Elbe.* To stimulate and support such a combination, the public voice in England loudly demanded the immediate despatch of a powerful British force to the mouth of the Elbe; and, recollecting the universal exasperation which prevailed in the north of Germany at the French in consequence of the enormous requisitions which they had everywhere levied from the inhabitants, whether warlike or neutral, there cannot be a doubt that the appearance of fifty thousand English soldiers would have been attended with decisive effects both upon the conduct of Austria and the future issue of the war. Nothing, however, was done; the English ministry, under the direction of Lord Howick, notwithstanding the most urgent entreaties from Russia and Prussia, sent no succours in men or money. The decisive period was allowed to pass by without anything being attempted in support of the common cause, and the British nation, in consequence, had the Peninsular war to go through to

*** " I trembled," says Jomini, speaking in the person of Napoleon, * lest 150,000 of those mediators had appeared on the Elbe, which would have plunged me into the greatest difficulties. I there saw that I had placed myself at the mercy of my enemies. More than once I then regretted having suffered myself to be drawn on into those remote and inhospitable countries, and having received with so much asperity all who sought to portray its danger. The cabinet of Vienna had then a safer and more honourable opportunity of re-establishing its preponderance than that which it chose in 1813, but it had not resolution enough to profit by it, and my firm countenance proved my salvation."—** JOMINI, ii. 869.

regain the vantage-ground which was then within their grasp.*

1807.

83. Unwise refusal of military succour by England.

It is the most signal proof of the obstinacy with which the British government, under the direction of Lord Howick, afterwards Earl Grey, adhered to their ill-timed system of withdrawing altogether from Continental affairs, that they clung to it even after the account of the battle of Eylau had arrived in London, and it was universally seen over Europe that a crisis in Napoleon's fate was at hand. In the end of February 1807, earnest applications were made by the cabinets of St Petersburg and Berlin for the aid of a British auxiliary force to menace the coasts of France and Holland, and land on the shores of Pomerania. The advantage was pointed out of " despatching, without a moment's delay, on board the swiftest ships of Great Britain, a strong British auxiliary land force to co-operate with the army of Gustavus Adolphus, and thereby compel the French to retreat. They were engaged in the siege of Stralsund, and in laying waste that province; and if the British force did not arrive in sufficient time to dislodge them, they might steer for some harbour in the Baltic, from whence their junction with the Allied armies could certainly be effected." Lord Howick replied on the 10th March—"The approach of spring is doubtless the most favourable period of military operations; but in the present juncture the Allies *mvst not look for any considerable aid from the land force of Great Britain."*[1]

[1] Lucches. ii. 295, 296. Desp. between Kngland and Russia in 1806 and 1807, p. 130.

In proportion to the sanguine hopes which this bloody contest excited in Germany and England, was the gloom and depression which it diffused through all ranks in France. The Parisians were engaged in a vortex of

* " Repeated and urgent applications were made in February and March 1807 for an English army, consisting of cavalry, infantry, and artillery, to co-operate with the Swedish forces in Pomerania, but in vain. Some subsidies were granted in April, but no troops sailed from England till July, when they consisted only of 8000 men, who were sent to the island of Rugen."—*Arm. 1807.

84. Universal consternation at Paris on the news being received of Eylau.

unusual gaiety; balls, theatres, and parties succeeded one another in endless succession, when the news of the battle of Eylau fell at once on their festivities like a thunderbolt. They had learned to distrust the bulletins; they saw clearly that Augereau's divergence had been occasioned by something more than the snow-storm. The funds rapidly fell, and private letters soon circulated, and were eagerly sought after, which gave a true and even exaggerated account of the calamity. Hardly a family in Paris but had to lament the loss of some near relation or intimate friend: the multitude of mourners cast a gloom over the streets; the general consternation suspended all the amusements of the capital. The most exaggerated reports were spread, and found a ready reception by the excited population. One day it was generally credited that Napoleon had fallen back behind the Vistula; the next that a dreadful engagement had taken place, in which he himself, with half his army, had fallen. So far did the universal consternation proceed, that the members of the government began to look after their own interests in the approaching shipwreck; and even the imperial family itself was divided into factions, Josephine openly supporting the pretensions of her son, Eugene, to succeed to the throne, and the Princess Caroline employing all the influence of her charms to secure Junot, governor of Paris, whom she held in silken chains, in the interest of her husband Murat.[1]

[1] Sav. iii. 42, 43. D'Abr. ix. 356, 364.

85. Napoleon demands a third conscription since the beginning of the war.

The general gloom was sensibly increased when the message of Napoleon, dated March 26, to the conservative senate, announced that a fresh conscription was to be raised of eighty thousand men, in March 1807, for September 1808. This was the *third* levy which had been called for since the Prussian war began; the first when the contest commenced, the second during the triumph and exultation which followed the victory of Jena, the third amidst the gloom and despondency which succeeded the carnage of Eylau, No words can do justice to

the consternation which this third requisition excited amongst all classes, especially those whose children were likely to be reached by the destructive scourge. In vain the bulletins announced that victories were gained with hardly any loss. The terrific demand of three different conscriptions, amounting to no less than *two hundred and forty thousand men, in seven months,* too clearly demonstrated the fearful chasms which sickness and the sword of the enemy had made in their ranks. The number of young men who annually attained the age of eighteen in France, which was the period selected for the conscription, was about two hundred thousand. Thus, in half a year, more than a whole annual generation had been required for a service which experience had now proved to be almost certain destruction. So great was the general apprehension, that the government did not venture to promulgate the order until, by emissaries and articles in the public journals, the public mind had been in some degree prepared for the shock. When it was announced, Regnault St Jean d'Angely, the orator intrusted with the task, shed tears; and even the obsequious senate could not express their acquiescence by any of the acclamations with which they usually received the imperial mandates. So powerful was the public feeling, so visible and universal the expression of terror in the capital, that it was found necessary to assuage the general grief by a clause, declaring that the new levy was at first to be merely organised as an army of reserve for the defence of the frontier, under veteran generals, members of the conservative senate. These promises, however, proved entirely elusory. The victory of Friedland saved the new conscripts from the slaughter of the Russian bayonets, only to reserve them for the Caudine forks, or the murder of the guerillas in the fields of Spain.[1]

[1] Ann. Reg. 1806,167, 169. Bign. vi. 239.

Meanwhile the prodigious activity of the Emperor was employed, during the cessation of hostilities in Poland, in the most active measures to repair his losses, organise

CHAP. XLIV.

1807.

86. Immense activity of Napoleon to repair his losses.

the new levies, wring the sinews of war out of the conquered provinces, and hasten forward the conscripts as fast as they joined their depots on all the roads leading to the theatre of war. All the highways converging from France and Italy to the Vistula were covered with troops, artillery, ammunition, and stores of all sorts, for the use of the army. Extensive purchases of horses in Holstein, Flanders, and Saxony, provided for the remounting of the cavalry and the artillery-drivers; while enormous requisitions everywhere in Germany,* furnished the means of subsistence to the unwieldy multitude who were now assembled on the shores of the Vistula. Nay, so far did the provident care of the Emperor go, and so strongly did he feel the imminent danger of his present situation, that, while his proclamations breathed only the language of confidence, and spoke of carrying the French standards across the Niemen, he was in fact making the most extensive preparations for a defensive warfare, and anticipating a struggle for life or death on the banks of the Rhine. By indefatigable exertions, and forcing up every sabre and bayonet from the rear, he was ere long enabled to calculate on eighty thousand combatants ready for action on every point which might be threatened on the Passarge : but this was all he could rely on out of three hundred and thirty thousand French and their allies, who formed, or were marching to reinforce, the Grand Army. No less than sixty thousand were in hospital, or had become marauders, and had never rejoined their colours since the desperate shock at Eylau. All the fortresses

* The requisitions from the city of Hamburg and the Hanse Towns will give an idea of the almost incredible extent to which these exactions were carried by Napoleon at this time; and of the blind violence with which he pursued the English commerce at the very time that it had become, from his own acts, indispensable for the equipment of his troops. By an imperial decree, in March 1807, Hamburg was orderod to furnish—

200,000 pairs of shoes;
50,000 great-coats;
16,000 coats;
37,000 waistcoats.

M. Bourrienne, the resident at Hamburg, who was charged with the execu-

on the Rhine and on the Flemish frontier were armed, and put in a posture of defence. The new levy was directed to be placed in fiyc camps, to cover the most unprotected points of the territory of the empire ; while the whole veterans in the interior were called out and organised into battalions with the coast-guard, to protect the coasts of Flanders and the Channel, and overawe the discontented in Brittany and la Vendue. " It is necessary," said he, " that at the sight of the triple barrier of camps which surround our territory, as at the aspect of the triple line of fortresses which cover our frontier, the enemy should be undeceived in their extravagant expectations, and see the necessity of returning, from the impossibility of success, to sentiments of moderation."[1]

[1] Bign. vi. 238, 239. Ann. Reg. 1807, 3.

87. Extreme danger of Napoleon's situation at this juncture.

Neither Napoleon nor his enemies were mistaken in the estimate which they formed of the perilous nature of the crisis which succeeded the battle of Eylau. Nothing can be more certain than that a second dubious encounter on the Vistula would have been immediately followed by a disastrous retreat beyond the llhine. Metternich afterwards said to the ministers of the French Emperor, " We can afford to lose many battles, but a single defeat will destroy your master;" and such, in truth, was the situation of France during the whole reign of Napoleon. It is the precarious tenure by which power is held by all those who rest for their support upon the *prestige* of opinion or the fervour of passion, whether democratic or military, which is the secret cause of their ultimate fall. Constant success, fresh victories, an un-

tion of this order, had no alternative but to contract with *English houses* for these enormous supplies, which all the industry of the north of Germany could not furnish within the prescribed time; and as the same necessity was felt universally, the result was, that when the Grand Army took the field in June, it was almost all equipped in the cloth of Leeds and Halifax, and that too at a time when the penalty of death was affixed to the importation of English manufactures of any sort! A full enumeration of all the contributions levied on Germany during the war of 1807 will be given in a succeeding chapter, drawn from official sources: the magnitude of them almost exceeds belief—See BOURRIENNE, vii. 293, 294.

CHAP. XLIV.

1807.

broken series of triumphs, are indispensable to the existence of such an authority. It has no middle ground to retire to, no durable interests to rouse for its support; it has perilled all upon a single throw; the alternative is always universal empire or total ruin. This was not the case in a greater degree with Napoleon than any other conqueror in similar circumstances. It obtained equally with Csesar, Alexander, and Tamerlane; it is to be seen in the British empire in India; it is the invariable attendant of power in all ages, founded on the triumphs of passion over the durable and persevering exertions of reason and interest.* It is a constant sense of this truth which is the true key to the character of Napoleon, which explains alike what the world erroneously called his insatiable ambition and his obstinate retention of the vantage-ground which he had gained; which was at once the secret reason of his advance to the Kremlin, and of his otherwise inexplicable stay at Moscow and Dresden. He knew that, throughout his whole career, he could not retain except by constantly advancing, and that the first step in retreat was the commencement of ruin.

88. Ruinous effect of the surrender of the Prussian fortresses.

The Polish winter campaign demonstrates, in the most striking manner, the ruinous effects to the common cause, and in an especial manner to the interests of their own monarchy, which resulted from the disgraceful capitulations of the Prussian fortresses in the preceding autumn. When the balance quivered at Eylau, the arrival of Lestocq would have given the Russians a decisive victory, had it not been for the great successes of Davoust on the left, and the tardy appearance of Ney on the right. Whereas, if the governors of the Prussian fortresses on the Elbe and the Oder had done their duty, these two corps would have been engaged far in the rear—Ney around the walls of Magdeburg, Davoust before Stettin,

*** When Lord Ellenborough gave bis consent to the second advance of the British to Cabul, in 1841, under Generals Nott and Pollock, he said in his despatches to these generals, " Recollect, a second disaster like that of the Coord-Cabul Pass will lose us our Indian Empire."**

Custrin, and Glogau. Saragossa, with no defence but an old wall and the heroism of its inhabitants, held out after fifty days of open trenches against two French corps; Tarragona fell after as many. If the French marshals had, in like manner, been detained two months, or even six weeks, before each of the great fortresses of Prussia, time would have been gained to organise the resources of the eastern provinces of the monarchy, and Russia would have gained a decisive victory at Eylau, or driven Napoleon to a disastrous retreat from the Vistula—a striking proof of the danger of military men mingling political with warlike considerations, or adopting any other line, when charged with the interests of their country, than the simple course of military duty.

89. Observations on the movements of both parties.

Benningsen's assembling of his army in silence behind the dark screen of the Johansberg forest; the hardihood and resolution of his winter march across Poland; and his bold stroke at the left wing of the French army when reposing in its cantonments, were entitled to the very highest praise, and, if executed with more vigour at the moment of attack, would have led to the most important results. His subsequent retreat in presence of the Grand Army, without any serious loss, and the desperate stand he made at Eylau, as well as the skill with which the attacks of Napoleon were baffled on that memorable field, deservedly place him in a very high rank among the commanders of that age of glory. Napoleon's advance to Pultusk and Golymin, and subsequently his march from Warsaw towards Konigsberg, in the depth of winter, were distinguished by all his usual skill in combination and vigour in execution; but the results were very different from what had attended the turning of the Austrian and Prussian armies at Ulm and Jena. Columns were here cut off, communications threatened, corps planted in the rear, but no tremendous disasters such as had previously been experienced were sustained; the Russians fronted quickly and fought desperately on

CHAPTER XLI.

THE BRITISH FINANCES, AND MR PITT'S SYSTEM OF FINANCIAL POLICY.

Page

1. Importance of the subject, 1
2. Astonishing financial efforts of England during the war, 2
3. Historical details.—Public income before the Commonwealth. Large increase consequent on the Great Rebellion, 3
4. Permanent addition to them on the accession of William III., 4
5. Reasons which led to the introduction of the national debt, . 5
   Corresponding increase of the expenditure of France on the accession of Louis Philippe, ... • *note,* 6
6. Progressive growth of the public debt during the succeeding century, 7
   Table illustrating its increase, ... *note,* 8
7. Alarming financial aspect of the country on Mr Pitt's accession to power in 1784, ... 9
8. Principle on which he proposed to remedy the existing evils, *ib.*
9. His strong expressions on the importance of the subject in parliament, 11
10. And his simultaneous adoption of measures for national defence, 12
11. Establishment of the sinking-fund, and Mr Pitt's speech on introducing it, 13
12. Mr Fox gives this plan his cordial support, ... 15
13. It is passed by the legislature, and made applicable to all future loans, 16
14. Modification introduced upon the system in 1802, 18
15. Immense results of the sinking-fund, ... 19
    Table showing the progressive growth of the sinking-fund, . . *note,* 20
16. Obloquy to which it became exposed, ... 20
17. General diffusion of this delusion, ... 21
18. Which is the more dangerous, as it involves much abstract truth mixed with error, ... 22
19. Comparison of the arguments for and against the sinking-fund, 23
    Pitt clearly saw the objection since urged against the system, . *note,* 24
20. Value of the system in time of peace, ... 24
21. Distinctive merit of Mr Pitt's system for the sinking-fund, 26
22. Proof of these principles afforded by the result during the last twenty years, ... 27
23. It is clearly the only way of effecting a reduction of the debt, ib.
    Durable and far-seeing system which he had established, . . *note,* 28
24. Had it been adhered to, the whole debt would have been discharged in 1845, ... 29
    Tables showing the progressive growth of a sinking-fund of fifteen or ten millions, from 1816 to 1836, ... *note, ib.*

Page

25. Uauses wnicn nave lea to trie aecay of tms system, **30**
26. It was the desire for present popularity in the government, . **31**
Table showing the amount of direct and indirect taxes repealed from 1816 t o 1834, ... *note* 32
27. Great error in not repealing at once all the direct taxes on the peace, 33
28. Imprudent remission of indirect taxes since 1816, 34
29. Little good has been derived from this repeal of indirect taxes, 35
30. Immense burdens under which the nation prospered during the war, . 36
31. Argument o n this subject, ... 37
32. Great immediate as well as ultimate advantages which would have attended keeping u p the sinking-fund, ... **38**
33. Beneficial result which would have arisen from keeping up the price of the funds, ... *ib.*
34. Public errors which led to its abandonment, and their distressing effects, 39
35. Lord Castlereagh's error regarding the income-tax, 40
36. The nation was mainly responsible for this change of system, 41
37. Advantages o f the funding system, ... 42
38. Its dangers, ... 43
39. M r Pitt's views o n this subject, ... 44
40. Modification which they received after the first Continental peace in 1797, 45
41. Mr Pitt's speech on the change then introduced, *ib.*
42. He proposes to augment the supplies raised within the year, . 47
43. Trebling o f the assessed taxes, ... *48*
44. In Mr Pitt's view, these heavy burdens were to be temporary only, . *ib.*
45. Great change o f system thus introduced, ... 49
46. First introduction o f the income-tax, ... 50
47. Mr Pitt's speech introducing this impost, and his plan, 51
48. Objections urged against it, ... 52
49. I t i s adopted b y parliament, ... 53
50. Change subsequently induced o n the system, ... 54
51. Advantages o f the new system, ... *55*
52. Mr Pitt's permanent taxes were all in the indirect form: their advantages, *56*
53. Arguments for indirect taxation, ... 57
54. Keply t o the objections against it, ... 58
55. Beasons of the superior lightness of indirect taxation, 59
56. Cases in which indirect taxes, by being excessive, become direct burdens o n production, ... 60
57. Important difference between indirect taxes on rural and manufactured produce, ... 61
58. General character of Mr Pitt's financial measures. Their grandeur and foresight, ... 62
59. Their errors. Undue extent of the funding system, . 63
60. Niggardly use of the military forces of England, 34
61. This was his great defect, , 55
62. Injudicious system of borrowing in the three per cents, 56
63. Its effects in preventing the reduction of interest on peace, . . 57
64. The temporary diminution of interest was no adequate compensation for these evils, ... 58
65. In Mr Pitt's view, the sinking-fund was to remedy all these evils, . *70*
Table of the whole expenses of every year, in every department, during the war, ... *note,* 1 1

§ PAGE
66. Vast effects of the suspension of cash payments in 1797, 72
67. Causes which produced the suspension of cash payments in 1797. Its powerful operation in increasing the present resources of the state, *ib.*
68. It was the mainspring of the financial strength of the nation during the war, ... 74
Table showing the paper and coin issued, with the exports, imports, and revenue of every year during the war, ... *note*, 75
69. Great temporary advantages of the funding system, 75
70. The undue ascendency of popular power led to the undoing of Mr Pitt's durable system for reduction of the debt, 77
71. And it must ultimately ruin the British empire, 78
72. The contraction of the currency by the bill of 1819 was the cause of this, 79
73. Which was itself owing to the ascendency of the moneyed interest produced by the war, ... 80
74. These causes will impel the British race to the New World, . 81

CHAPTER XLII.

FROM THE PEACE OF PRESSBURG TO THE RENEWAL OF THE CONTINENTAL WAR. JANUARY—OCTOBER 1806.

1. Immense results of the campaign of Austerlitz, 83
2. The premiership offered to Lord Hawkesbury, and declined, 84
3. Public opinion on the necessity of a coalition of parties, 85
4. Mr Fox is sent for, ... 86
5. State of parties in the country, and their principles, 87
6. Composition of the cabinet, 88
7. First measures of the new ministry. The budget, 89
8. Return of Napoleon to Paris. Financial crisis there, 91
9. Its ostensible causes, ... *ib.*
10. Vast speculations of M. Ouvrard, 93
11. The immediate cause of the explosion was the absorption of gold for the German war, ... 94
12. Measures of Napoleon in consequence, 96
13. Real cause of the catastrophe, . *ib.*
14. Means by which the crisis had hitherto been avoided, 97
15. The root of the evil was the extravagant expenditure of government, 98
16. Financial changes in consequence introduced in France, 99
17. And imposition of the French armies as a burden on foreign states, 100
18. French budget for 1805, and exposition by the minister of the interior, 101
19. Exposition of the triumphs of France: silence as to Trafalgar, 102
20. Erection of the column in the Place Venddme, 103
21. Advance of the French against Naples, . . . 104
22. Successful invasion of Calabria, . 105
23. Joseph Buonaparte created King of the two Sicilies, 106
24. Naples is threatened by Sir Sidney Smith. General Stuart lands in the Bay of St Euphemia, ... 107
25. Reynier resolves to attack him, ... 108
26. Battle of Maida, ... 109

Page

27. Great moral effect of this victory, 110
28. Its immediate results are less considerable, 111
29. Surrender of Gaeta, ... 112
30. Retreat of the English. Suppression of the insurrection, 113
31. Domestic reforms of Joseph in Naples, . 114
32. Miserable state of Holland since its conquest by France, 115
33. Napoleon's measures to place his brother Louis on the throne of that country, ... 116
34. Creation of military fiefs in the kingdom of Italy, *ib.*
35. Napoleon's secret views in these measures, 117
36. Audience given to the Turkish ambassador, 118
37. Naval operations; sailing and division of the Brest fleet, 119
38. Defeat of the first squadron at St Domingo, 120
39. Disasters of Willaumez's squadron, *ib.*
40. Capture of Linois, and other naval operations, . 122
41. Reflections on these last naval disasters of France, 123
42. Greatness of the French navy under Louis XVI., 124
43. Napoleon's change of system in regard to the naval war, *ib.*
44. Reflections on the growth of the English maritime power, 125
45. Character of the French navy, ... 126
46. Probable future influence of the British navy on the world, 127
47. Reduction of the Cape of Good Hope, . 128
48. Sir Home Popham resolves to attack Buenos Ayres, 129
49. Which falls, ... 130
50. Embarrassment of government on this success, *ib.*
51. Buenos Ayres is retaken by the South Americans, 131
52. Differences with America in regard to neutral rights, 132
53. Grounds of conduct of England, as explained by Sir W. Scott, 134
64. Violent measures of Congress, . 135
55. The commissioners on both sides adjust the differences, *ib.*
56. Continental affairs. Coldness between France and Prussia, 136
67. Increasing jealousies between the two cabinets. Prussia on Hanover, ... 138
58. Measures of retaliation by Great Britain, *ib.*
59. Mr Fox's speech on the subject, 140
60. Napoleon's opinion of Prussia in this transaction, 141
61. His further measures of aggression on Germany, *ib.*
62. Universal indignation in the north of Germany, 142
Gentz's pamphlet on the subject, *note,* 143
63. Formation of the Confederacy of the Rhine, 143
64. Powers admitted to the confederacy, 145
65, The Emperor renounces the crown of Germany, 146
Addresses of Napoleon and the Emperor Francis to the German States, ... *note,* 148
66. Great sensation which these events produce at Berlin, 148
67. Fresh umbrage of Prussia at the treaty of France with Russia. Warlike preparations of Prussia, ... 150
Renewed causes of discord between France and Russia, . . 151
69. Differences about Cattaro, which is occupied by the Russians, . . 152
70. The French in return seize Ragusa: actions in its neighbourhood, . 153
71. D'Oubril concludes a treaty at Paris between France and Russia, . 154

Page

72. Which is disavowed by the cabinet of St Petersburg, . 155
73. Opening of the negotiations between France and England, 156
74. England insists on Russia being a party to the negotiation, 157
75. Basis of *uti possidetis* fixed, ... 158
76. Which France departs from, 159
77. Continuation of the negotiations, and gradual estrangement of the parties, 160
78. Progress of the negotiation, ... 161
79. The demands of France become more extravagant, and the negotiation is broken off, ... 162
80. Real views of the parties in this negotiation, ... 163
81. State of affairs at Berlin: Prussia's ultimatum, and preparations for war on both sides, ... 164
82. Murder of Palm. Great sensation which it occasioned, 166
Proceedings of the military commission by which he was condemned, *note* 5, *ib.*
83. Influence which it had on the rupture of the negotiation, 168
84. Mr Fox's eyes are at last opened to the real nature of the war, *ib.*
Last instructions of Mr Fox to Lord Lauderdale, . . . *note ib.*
85. Death of Mr Fox. His character, ... 170
86. His vices and failings, ... in
87. His extraordinary talents in debate, ... 172
88. His fame is on the decline as a just thinker, ... 173
89. Reasons of this, ... 174
90. His errors as a political philosopher, 175

CHAPTER XLIII.

CAMPAIGN OF JENA. FALL OF PRUSSIA.

1. Natural disadvantages of Prussia, 177
2. Political situation and inhabitants of Prussia, . 178
3. Population and extent of Prussia, 179
4. Towns and manufacturing industry of Prussia, 180
5. Rapid agricultural progress of Prussia, . 181
6. Slow progress of Prussia at first, and rapid subsequent growth, 182
7. Statistical details, ... *ib.*
8. State of religion in Prussia, ... 183
9. Revenue and expenditure of Prussia, 184
10. Military establishment, ... 185

99. Treaty between France and Saxony, ... 274
100. Immense results of the campaign, ... 275
101. Talents and rashness displayed by Napoleon during the campaign, 276
102. Reflections on the sudden fall of Prussia, ... 277
103. General despondency which it occasions in Europe, . • 278
104. Blucher's opinion of the probable resurrection of Germany, 279
105. Salutary ultimate result of this suffering to Prussia, 281

CHAPTER XLIV.

CAMPAIGN OF EYLAU. DECEMBER 1806—MARCH 1807.

1. Advance of the French and Kussians to the Vistula, . 282
2. Military preparations of Russia, . 283
3. Composition and character of her armies, 284
4. Imprudent division of their force by the invasion of Moldavia, 286
5. Embarrassment of Napoleon on the Polish question, . 287
6. Arguments in favour of the restoration of Poland, 288
7. Security for the permanence of her alliance with France, 289

i Pago
8. Arguments on the other side against interfering on behalf of the Poles, 289
9. Certainty of the restoration of Poland inducing the inveterate hostility of the Northern powers, ... 291
10. Napoleon adopts a middle course, and rouses only Prussian Poland, . 292
11. Forged proclamations issued in Kosciusko's name, and great excitement in Poland, ... 293
12. Napoleon's ambiguous bulletin on the subject, 294
13. Napoleon proposes to Austria to exchange Gallicia for Silesia, which is refused, ... 295
14. Napoleon's strong declaration in favour of Turkey, 296
15. His proclamation to his soldiers on the anniversary of Austerlitz, 297
16. Its great effect. Formation of the Temple of Glory at Paris, . 299
17. Napoleon's plans for its construction, ... 300
Napoleon's secret design in this edifice, . . . *note,* 302
18. Vast efforts of Napoleon to recruit his army, and secure his flanks and rear, 302
19. Enormous contributions levied on all the conquered states, 303
20. Positions and force of the French on the Vistula, 304
21. And of the Russians, ... 306
22. Positions of the troops, and their evacuation of Warsaw; and Alexander's proclamation to his soldiers, ... *ib.*
23. Application for assistance in men and money to England. Its impolitic refusal, ... 308
24. The Russians resume the offensive, ... *ib.*
25. Napoleon advances to Warsaw. General enthusiasm there, . 309
26. And resumes the offensive against the Russians, 310
27. Forcing of the passage of the Ukra by the French, 311
26. Kamenskoi loses his presence of mind, and orders the sacrifice of the artillery, ... 313
29. Object of Napoleon in these movements, ... 314
30. Description of the field at Pultusk, and of the positions of the two hostile armies, ... *ib.*
81. Battle of Pultusk, ... 315
82. Which turns out to the disadvantage of the French, . 317
83. Combat of Golymin, ... *ib.*
34. Its doubtful issue, ... 319
35. Napoleon stops his advance, and puts his army into winter-quarters, . 320
36. The Russians also go into winter-quarters, ... 321
87. Results of this winter campaign, and impression which it produces in Europe, *ib.*
38. Positions of the French army in winter-quarters, 323
89. Napoleon's measures to provide food and secure his cantonments, 324
40. Reduction of the fortresses in Silesia, ... 325
41. Siege and fall of Breslau, ... *ib.*
42. Capture of Brieg and Schweidnitz, and total conquest of Silesia, 326
43. Operations on the left towards Pomerania and Dantzic, 327
44. Operations of Marmont in Illyria, ... 328
45. Napoleon's efforts to stimulate the Turks to vigorous resistance, *ib.*
46. Delightful residence of the French at Warsaw, 330
47. Enthusiastic reception of the French by the Polish women, . 332
48. Kamenskoi goes mad, and Benningsen assumes the command. He advances against Bernadotte, ... *ib.*
49. Rapid advance of Benningsen towards Konigsberg, 333

88.	Ruinous effect of the surrender of the Prussian fortresses,	374
89.	Observations on the movements of both parties,	375

CHAPTER XLV.

DOMESTIC AND FOREIGN MEASURES OF MR FOX'S ADMINISTRATION. FEBRUARY 1806—MARCH 1807.

1. Important civil changes which originated during the war, 377

2. Effects of the accession of the Whigs to power, 378

§ Page
3. Their plan for a new system for the recruiting of the army, 379
4. Great change in the composition of the army. Arguments in support of it by Mr Windham, ... 380
5. Impracticability of forced conscription, ... 381
6. Inefficiency of voluntary enlistment, ... 382
7. Means by which he proposes to render it more efficient, 383
8. Advantages of short periods of enlistment, as securing a better class of soldiers, ... 384
9. Proposed limitation of that period, ... 385
10. Reply of the former ministers on the subject, ... 386
11. The limited enlistment already partially in operation, . 387
12. The circumstances of Great Britain peculiar, and without precedent in those of any foreign state, ... 388
13. Arguments against the reduction of the volunteer force, 389
14. And in favour of raising the additional force required by ballot, 390
15. The bill passes, ... 391
16. Reflections on the measure, ... *ib.*
17. Error of the ministerial plan so far as regards the volunteers, 393
18. Temporary service now in a great degree abandoned, . . 394
19. Abolition of the slave trade, ... 395
20. Arguments against the change by the West India interest, *ib.*
21. Alleged evil effects of abolition of the trade, ... 396
22. The slave trade asserted not to be the cause of the degraded state of Africa, 397
23. Arguments of Mr Wilberforce and others for the abolition, 398
24. Their answer to the assertion of the necessity of the trade to maintain the supply of negroes, ... 399
25. Alleged gradual improvement of the race should the trade be abolished, 400
26. Its demoralising effect on Africa, ... 401
27. Abolition tends to promote the gradual abrogation of slavery itself, . 402
28. The abolition is carried, ... 403
29. Deplorable effects of the change hitherto on the negro race, . 404
30. But they are not chargeable on its authors, but subsequent changes, . 405
Enormous present extent and horrors of the slave trade, . *note ib.*
Immense increase of produce in the slave colonies of late years. Comparatively stationary condition of the British islands, . *note,* 406
Enormous fiscal injustice to which they have been exposed, . *note, ib,*
31. Ruinous effects of emancipation of negroes, ... 408
Rapid decline of West India produce since emancipation, . *note, ib.*
32. Which are to be ascribed to the emancipation of the negroes, not to the abolition of the slave trade, ... **409**
33. Lord Henry Petty's plan of finance, ... **411**
34. Argument in favour of it. Advantages of the sinking-fund, . **412**
35. Proposed measures for the redemption of the successive loans, **413**
36. And for providing the charges on them, . **414**
37. Advantages of the proposed system, ... ***ib.***
38. Argument against it by Lord Castlereagh and Mr Perceval, . . **416**
39. Counter-plan proposed by them, ... ***ib.***
40. The ministerial scheme as threatening to break up the sinking-fund, . **418**
41. Budget for 1807, ... **419**
42. Reflections on this subject, ... ***ib.***
43. Prejudicial effect in the end of these discussions, . . *4***421**

§
44. Lord Henry Petty's plan was the preferable of the two, 421
45. General character of the Whig measures of domestic administration at this period, ... 422
46. Foreign transactions. Fresh expedition to South America, and capture of Monte Video, ... 423
47. A second expedition against Buenos Ayres is resolved on, 425
48. Preparations for its defence, ... 426
49. Failure of the attack, ... 427
50. Court-martial on General Whitelocke, who is cashiered, 428
51. Reflections on this event, ... *ib.*
52. Capture of Curacoa, and establishment of the republic of Hayti, 429
53. State of affairs in Turkey, ... 430
54. Cause of rupture between Turkey and Russia, ... 431
55. Dismissal of the Waiwodes of Wallachia and Moldavia by Sultaun Selim, *ib.*
56. Violent remonstrances of Russia and England, which produce a repeal of the measure, ... 433
57. Meanwhile the Russian armies invade the principalities, 434
58. And war is declared, ... 435
59. Rapid progress of the Russians in the principalities, 436
60. The Russians require the aid of a naval attack by England on Constantinople, which is agreed to, *ib.*
61. Description of the Dardanelles, ... 437
62. Ultimatum of Great Britain, and declaration of war by Turkey, . 438
63. Sir John Duckworth resolves to pass the Dardanelles, 439
64. The Straits are forced after much resistance, ... 440
65. The Divan resolves on submission, as Constantinople was defenceless, 441
66. Intrepid conduct of Sebastiani, ... *ib.*
67. The Turks negotiate to gain time, and complete their preparations, . 442
68. Vast energy displayed by the Mussulmans in their defence, . 443
69. The English renounce the enterprise, ... 444
70. The British fleet repass the Straits, ... 445
71. Blockade of the Dardanelles, ... 446
72. Naval actions off Tenedos, ... 447
73. Descent by the British on the coasts of Egypt. Macleod defeated at El Hammed, ... 448
74. Evacuation of Alexandria, ... *ib.*
75. Great discontent at these repeated defeats throughout Great Britain, 449
76. Measures for introducing the Catholics into the army and navy brought in by Lord Howick, ... *ib.*
77. Arguments in favour of it by Lord Howick, ... 450
78. Arguments against it by Mr Perceval, ... 451
79. The alleged tendency of the measure, ... 452
80. Repugnance of the King to the bill, which is withdrawn, 453
81. The King requires a written pledge that no further concessions should be made to the Catholics. Change of ministry, 454
Composition of the new cabinet, ... *note,* 456
82. Arguments in parliament against the Kong's conduct, . 456
83. And in support of it by Mr Perceval and Mr Canning, . 457
84. The sovereign had been left in the dark as to the extent of the measure, 458
85. Defence of his conduct in requiring the pledge from ministers, 459
86. Dissolution of parliament, and great majority for the new ministers, . 460

§ Pago
87. Biography of Lord Eldon, ... 461
88. His rise at the bar to the office of chancellor, ... 462
89. His character as a lawyer and statesman, ... 463
90. Character of the "Whig ministry, and effects of their fall, 464
91. Eeflections on their foreign measures, ... 465
92. And their glaring neglect of the Russian war, ... 467
Repeated and ineffectual applications which Alexander had made for aid from England during the Polish war, . . . *note,* 468
93. The Dardanelles expedition is an exception to the general inexpedience of their foreign policy, ... 468
94. These defeats were ultimately beneficial, ... 470

CHAPTER XLVI.

CAMPAIGN OF FRIEDLAND, AND PEACE OF TILSIT.

1. Negotiations and treaties between the Allies for the vigorous prosecution of the war, ... 471
2. Austria strives to mediate between the contending powers. Treaty between Prussia and Russia at Bartenstein, 472
3. To which England and Sweden accede, ... 473
4. But too late to prevent the irritation of Russia, ***ib.***
5. Negotiations of Napoleon during the same period. Auxiliary forces obtained under Romana from Spain, ... 475
6. Operations in Pomerania, and views of Napoleon regarding Sweden, . 477
7. Armistice between the Swedes and French, ... 478
8. Sweden again reverts to the alliance, ... 480
9. Formation of an army of reserve on the Elbe, ... ***ib.***
10. Negotiations with Turkey and Persia by Napoleon, 481
11. Preparations for aiding them by land, ... 482
12. Jealousy excited in the Divan by the summoning of Parga, 483
13. Measures to organise the military strength of Poland, 484
14. Winter-quarters of the French army, ... 485
15. Winter-quarters of the Russians. Combat of Guttstadt, 487
16. Great designs of Napoleon at this time for the interior of his empire, 489
17. And for political improvements, . 491
Napoleon fixes on a design for the Madeleine at Paris, . *note,* 492
18. Finances of France during this year, ... 492
Receipts and expenditure of the year, ... *note,* 494
19. Statutes of the Grand Sanhedrim of the Jews at Paris, 494
20. Reflections on this event, ... 496
21. Napoleon's efforts to feed his troops. Sieges in Silesia during the interval of hostilities, ... ***ib.***
22. Fall of Schweidnitz, ... 498
23. Of Neisse, ... ***ib.***
24. And of Glatz, ... 499
25. Siege of Dantzic. Description of that fortress, . . . 500
26. State of its fortifications, ... i501
27. First operations of the besieging force, . . . i502
28. Capture of the Isle of Nehrung, ... ***ib.***

§ Page
29. Progress of the siege, ... 503
30. Attempt of the Allies to raise the siege, ... 505
81. Which proves unsuccessful, ... 506
32. Growing difficulties of the besieged, and fall of the place, 507
33. Reinforcements which arrived to the Russian army. Its strength and positions, ... 509
84. Strength and position of the French army, ... 510
35. Defensive measures of the Russians, ... 512
36. Designs of the Russians on Ney's corps, ... 513
37. Feigned attacks on the bridges of the Passarge, and real attack on Marshal Ney, ... 514
38. Its success at first, and final failure, ... 515
39. Napoleon concentrates his army, and the Russians fall back, . 516
40. The Russians, pursued by the French, fall back to Heilsberg, . 518
41. Different plans of operation which presented themselves to Napoleon, 519
42. Advance upon Heilsberg, ... 520
43. Description of the position and intrenched camp of Heilsberg, 521
44. Battle of Heilsberg, ... 522
45. Fresh attack by Lannes, which also proves unsuccessful, 524
Violent explosion of Lannes, Murat, and Napoleon in consequence, *note*, 524
46. Frightful appearance of the slain after the battle, 525
47. Napoleon turns their flank, and compels them to evacuate Heilsberg, 526
48. Movements of the two armies before the battle of Friedland, . 527
49. Description of the field of Friedland, ... 528
50. Benningsen resolves to attack Lannes' corps. Situation of that corps, 529
51. He crosses the Alle, and attacks the French marshal, . 531
52. Disposition and arrangement of the Russian army, *ib.*
53. No decisive success is gained on either side before the arrival of the other French corps, ... 532
54. Preparatory dispositions and forces of Napoleon, 533
55. Order of battle taken up by the French, ... 535
56. Battle of Friedland. Splendid attack by Ney's corps, . 536
57. Gallant charge of the Russian Guard, ... 537
58. Progress of the action on the centre and right of the Russians, 538
59. Benningsen's measures to secure a retreat, ... 540
60. Immense results of the battle, ... 541
61. The Russians retreat without molestation to Allenburg and Wehlau, 542
62. Capture of Konigsberg, ... 544
63. Measures of Napoleon, and retreat of the Russians to the Niemen, 545
64. The Emperor Alexander proposes an armistice, 547
65. Reasons which made Napoleon rejoice at this step, 548
66. Considerations which rendered the Russians also desirous of an accommodation, ... 549
67. Conclusion of an armistice, ... 550
Napoleon's proclamation thereon to his troops, . . *note*, 551
68. Interview on the raft at Tilsit, ... 551
69. First words of Napoleon and Alexander, ... 552
70. Commencement of the negotiations at Tilsit, ... 553
71. Napoleon's interview with the Queen of Prussia, 554
72. Napoleon's character of the Queen of Prussia, . . 556
78. Convivialities between the Russian and French officers, *ib.*

Page

74. Napoleon's admiration of the Russian Imperial Guard, 558
75. Treaty of Tilsit. Its leading provisions. Creation of the grand-duchy of Warsaw, and kingdom of Westphalia, ... *ib.*
76. Treaty with Prussia, ... 559
77. Immenses losses of Prussia by this treaty, ... 560
78. Secret treaty for the partition of Turkey, ... 562
79. Secret articles regarding England and all neutral fleets, 564
80. Secret agreement between the Emperors regarding Spain and Italy, . 565
Decisive evidence of these projects of spoliation which exists both on the testimony of the French and Russian Emperors, . *note.*, 566
81. Measures of Napoleon to secure his anticipated Turkish acquisitions, 567
82. Convention regarding the payment of the French contribution on Prussia, 569
83. Noble proclamation by the King of Prussia to his lost provinces, 570
84. Enormous losses sustained by the French during the campaign, 571
85. Memorable retribution for the partition of Poland on the partitioning powers, ... 573
And of Russia, ... *ib.*
87. Terrible retribution that was approaching to France, . 574
88. Evil consequences of the treaty of Tilsit in the end to Napoleon, 575
89. Useless allies which Napoleon made to himself by this treaty, 576
90. Disgraceful perfidy of Napoleon towards the Turks, 577
91. Whom he surrenders to the spoliation of Russia, 578
92. No defence can be made for it in consequence of the revolution at Constantinople, ... *ib.*
93. Mutual projects of the Emperors for the spoliation of the other European powers, ... 579
94. Napoleon's leading object in the treaty was the humbling of Great Britain, 581
95. England could not complain of its conditions, ... 582
96. It was ultimately fortunate for Europe that the war was prolonged, 583

CHAPTER XLVII.

GENERAL SKETCH OP THE BRITISH EMPIRE IN INDIA.

1. Comparison of the Roman empire and British India, . 584
2. Wonderful circumstances attending the British dominion in India, 585
3. Its extent, population, revenue, and military strength, *ib.*
4. Dreadful dangers it has surmounted, ... 587
5. Physical description of the Indian peninsula, . 588
6. Its vegetable and animal productions, ... 590
7. Extraordinary diplomatic ability with which India has been governed, 592
8. Immense advantages of the British government to the Indian people, 593
9. Great diminution of crime under the British rule, 594
10. Great change effected in the aspect of the country in the central and western provinces, ... 595
11. Rapid progress of wealth, population, and comfort, over all India, 596
12. Increased taste for British manufactures over India, . 597
13. Vast police force established throughout Bengal, and its admirable 598
14. Principles of Indian taxation, ... 599
15. Management of land. The Zemindar system, . 600

Page
16. Its practical operation, ... 601
17. The Ryotwar system, ... 602
18. The Village system, ... 603
19. Admirable effect of the Village system in all ages, 604
20. Effects of this large land revenue on the general system of taxation, . 606
21. Complete system of toleration established in India, 607
22. Vast varieties of religious belief found in India, 608
23. Effect of this religious division in facilitating the government of the country, ... *ib.*
24. Vast variety of national character in India, ... 610
25. And various military qualities of the inhabitants, 611
26. Difference of character owing to physical causes, 612
27. Origin and composition of the sepoy force, ... *ib.*
28. Causes of the facility with which it has been raised, 613
29. Elevated rank and situation of the sepoy troops, 614
SO. General character of the Indian army, ... 615
31. Touching anecdotes of the fidelity of sepoy troops, 617
32. Their fidelity to the English under every trial, 618
33. And admirable courage, ... 619
34. Which is owing to the fidelity of the English government to its engagements, ... 620
35. Contrast of the Company's rule to the devastating Mahommedan sway which preceded it, ... 621
36. Unbounded devastations of their former wars, ... 622
37. Wonderful nature of this empire, won by so small a force, and amidst so many difficulties at home, ... 624
38. Wars in which the empire was involved, during the growth of the Indian power, ... 625
39. What were the causes of this success] Conquest was forced upon the British by necessity, not adopted from inclination, 626
40. Difference between Rome, and France, and England, in this particular, 627
41. Conquest was forced on the British in the East by necessity, . 628

CHAPTER XLIII.

RISE OF INDIA UNDER OLIVE AND HASTINGS.—1760-1798.

1. Sketch of the principal Indian powers when the British empire arose, 630
2. The Mahratta confederacy, ... 631
3. Origin and early history of the East India Company. Capture of Calcutta by Surajee Dowlah, ... 632
4. Calcutta retaken. Rise and great exploits of Clive, 633
5. Dethronement of Surajee Dowlah by Clive, ... 634
6. Acquisition of territory by the Company, and defeat of the Mogul Emperor, 636
7. Cession of all Bengal and Bahar to the English, ***ib.***
8. Origin and progress of the Madras Presidency, 637
9. Sieges of Madras and Pondicherry by the French and English, 638
10. Early history of Clive, ... 639
11. His first introduction into active life, ... 640
12. His character as a hero and a statesman, ... 641

§ Page
18. Rise and character of Hyder Ali, ... 643
14. Hostilities with Hyder are resolved on by the local authorities, but disapproved by the Company, ... 644
15. First campaigns against him, and early disasters, 645
16. Transactions in the Carnatic, down to the renewal of the war with Hyder in 1780, ... 647
17. Mr Burke's description of Hyder's irruption, ... 648
18. Great successes of Hyder in the Carnatic, ... 649
19. The firm conduct of Warren Hastings and Sir Eyre Coote re-establishes affairs, ... 650
20. Early history of Hastings, ... 651
21. His progress as a statesman, ... 652
22. His character and errors, ... 653
23. Further disasters stemmed by the energy of Hastings. Death of Hyder, *ib,*
24. War with Tippoo, and invasion of Mysore from Bombay. Its early success, 655
25. Final disasters of the expedition, ... 656
26. British invasion of Mysore, which leads to a peace, 657
27. Change introduced by Tippoo in the Indian armies, 658
28. Its ruinous effects on the independence of the native powers, . 659
29. Mr Hastings' long-protracted prosecution, 660
30. Proceedings in parliament on the subject, 661
31. Proceedings and charges against Mr Hastings before the Commons, 662
32. His trial before the House of Lords, ... 664
33. And his acquittal, ... 665
34. Ultimate change of public opinion on this subject, *ib.*
35. Reflections on the cruel injustice of this prosecution, . 667
36. Mr Fox's India Bill. Its premature fate, 668
37. Objections to which the bill was liable, ... 669
38. Mr Pitt's India Bill, which becomes law, 671
39. Reflections on this constitution for India, 672
40. Arrangements with the British government for the increase of the British force in India, ... 673
41. Fresh war with Tippoo Saib, ... 674
42. Lord Cornwallis's first campaign against Tippoo, 675
43. Vast preparations for the siege of Seringapatam, 677
44. Preparations for a decisive battle under the walls of Seringapatam, 678
45. Commencement of the action, ... *ib.*
46. Danger of Cornwallis, and his ultimate success, 679
47. Concluding operations of the war, ... 680
48. Treaty with Tippoo, ... 681
49. Experienced necessity of further conquests in India, . 682
50. Pacific administration and principles of Sir John Shore, *ib.*
51. Its disastrous effects, ... 683
52. Intriguing of Tippoo to form a confederacy against the English, 684
53. Tippoo's overt acts of hostility, ... 685
APPENDIX, ... 687

HISTORY OF EUROPE.

PORTRAIT IN VOLUME VII.

Fox, ... *Frontispiece.*

manent support. When surrounded by the wreck of other states, when surviving alone the fall of so many confederacies, it was in their inexhaustible resources that England found the means of resolutely maintaining the contest, and waiting calmly, in her citadel amidst the waves, the return of a right spirit in the neighbouring nations. Vain would have been the prowess of her seamen, vain the valour of her soldiers, if her national finances had given way under the strain. Even the conquerors of Trafalgar and Alexandria must have succumbed in the contest they had so heroically maintained, if they had not found in the resources of government the means of permanently continuing it. Vain would have been the reaction produced by suffering against the French Revolution, vain the charnel-house of Spain and the snows of Russia, if

CHAP. XLI. 1805.

Britain had not been in a situation to take advantage of the crisis. If she had been unable to aliment the war in the Peninsula when its native powers were prostrated in the dust, the sword of Wellington would have been drawn in vain ; and the energies of awakened Europe must have been lost in fruitless efforts if the wealth of England had not at last arrayed them in dense and disciplined battalions on the banks of the Rhine.

2. Astonishing financial efforts of England during the war.

How, then, did it happen, that this inconsiderable island, so small a part of the Roman empire, was enabled to expend wealth greater than ever had been amassed by the ancient mistress of the world; to maintain a contest of unexampled magnitude for twenty years ; to uphold a fleet which conquered the united navies of Europe, and an army which carried victory into every corner of the globe ; to acquire a colonial empire that encircled the earth, and subdue the vast continent of Hindostan, at the very time that it struggled in Spain with the land forces of Napoleon, and equipped all the armies of the north, on the Elbe and the Rhine, for the liberation of Germany ? The solution of the phenomenon, unexampled in the history of the world, is without doubt to be in part found in the persevering industry of the British people, and the extent of the commerce which they maintained in every quarter of the globe. But the resources thus afforded would have been inadequate to so vast an expenditure, and must have been exhausted early in the struggle, if they had not been organised and sustained by an admirable system of finance, which seemed to rise superior to every difficulty with which it had to contend. It is there that the true secret of the prodigy is to be found ; it is there that the noblest monument to Mr Pitt's wisdom has been erected.

The national income of England at an early period was very inconsiderable, and totally incommensurate to the important station which she occupied in the scale of nations. In the time of Elizabeth it amounted only to £400,000

3. Historical details. Public income before the Commonwealth. Large increase consequent on the Great Rebellion.

a-year; and in that of James I. to£450,000, and, even including all the subsidies received from parliament during his reign, only to£480,000 a-year—sums certainly not equivalent to more than £800,000 or £1,000,000 of our money.[1] That enjoyed by Charles I. amounted on an average to £895,000 annually—a sum perhaps equal to £1,500,000 in these times.[2] It was the Long Parliament which first gave the example of a prodigious levy of money from the people of England—affording thus a striking instance of the eternal truth, that no government is so despotic as that of the popular leaders, when they are relieved from all control by the other powers in the state. The sums raised in England during the Commonwealth—that is, from 3d November 1640, to 5th November 1659—amounted to the enormous, and, if not proved by authentic documents, incredible sum of £83,000,000,—being at the rate of nearly £5,000,000 a-year ;* or more than five times that which had been so much the subject of com plaint in the times of the unhappy monarch who had

[1] Hume, v. 412; vi. 112.

[2] Ibid. vii. 341.

* " It is seldom," says Hume, " that the people gain anything by revolu tions in government; because the new settlement, jealous and insecure, must commonly be supported with more expense and severity than the old: but on no occasion was the truth of this maxim more sensibly felt than in England after the overthrow of the royal authority. Complaints against the oppression of ship-money and the tyranny of the Star Chamber had roused the people to arms, and, having gamed a complete victory over the Crown, they found them selves loaded with a multiplicity of taxes formerly unknown, while scarce an appearance of law and liberty remained in any part of the administration."[3]

[3] Hume, vii. 115.

The following are some of the items in this enormous aggregate of £83,000,000 raised from the nation during the Commonwealth,—a striking proof of the despotic character of the executive dunne: that period:—

Land-tax, ...	£32,000,000
Excise, ...	8,000,000
Tonnage and poundage,	7,600,000
Sale of Church lands,	10,035,000
Sequestration of bishops, deans, and inferior clergy, for four years,	3,528,000
Sequestration of private estates in England,	4,564,000
Fee-farm rents for five years,	2,963,000
Composition with delinquents in Ireland,	1,000,000
Sales of estates in Ireland,	3,567;000
Other lesser,	10,074,000
Total, . .	£83,331,000

—PEBRER, 139,140.

CHAP. XLI.

1642-1688.

preceded it. The permanent revenue of Cromwell from the three kingdoms was raised to £1,868,000 : or considerably more than double that enjoyed by Charles I.* The total public income at the death of Charles IL was £1,800,000, under James II. £2,000,000 ; sums incredibly small, when it is recollected that the price of wheat was not then materially different from what it is at the present moment.[1†]

[1] Pebrer, 129, 143.

4. Permanent addition to them on the accession of William III.

These inconsiderable taxes, however, were destined to be exchanged for others of a very different character, upon the accession of the house of Orange to the throne. The intimate connexion of the princes of that family with Continental politics, and the long wars in which in consequence the nation was involved, soon led to a more burdensome system of taxation, and the raising of sums annually from the people which in former times would have been deemed incredible. The Prince of Orange brought from the republic of Holland, where it had been already practised and Mas thoroughly understood, the important secret of governing popular assemblies, and extracting heavy taxes from popular communities. Like the Roman emperors, he did not discard the senate, but he contrived to render it the instrument of his will. He did not, like the Stuarts, engage the throne in a contest with parliament : on the contrary, he did everything by its votes, and concealed the exactions of the crown under the shadow of the authority of the house of Commons. His

† The quarter of wheat, from 1636 to 1701, was on an average 51s. 11½d..
from 1700 to 1765, . . 40s. 6d.
from 1764 to 1794, . . 44s. 7d.

In 1835 the average of the quarter in Great Britain was 39s. 8d., and the average of the five years preceding 1836 was only 48s. The price was much higher during the next five years, but that was the result of uncommonly rainy seasons coming in succession during that whole period.—SMITH'S *Wealth of Nations,* i. 358 ; and *Corn Average,* 1835.

whole efforts were directed to gain the majority of the constituencies in the country by corruption, and of votes in parliament by patronage. A vast government expenditure, incurred in a cause at first highly popular, and the profuse contracting of loans on the security of the revenue of future years, afforded the means of doing both. This system proved entirely successful, and it is to its success that the subsequent greatness of the empire is mainly to be ascribed. But for it, the means of raising taxes adequate to the protection, and necessary for the defence, of the empire, would never have been discovered; and England, like Poland, would have fallen a prey to the ambition of the adjoining nations, the resources of which had been drawn forth by the force of despotic power, while no means of developing its own had been discovered. Great as have been the obligations which England owes in many different views to the Revolution, it is beyond all question the greatest that it brought in a sovereign instructed in the art of overcoming the ignorant impatience of taxation which is the invariable characteristic of free communities, and thus gave it a government capable of turning to the best account the activity and energy of its inhabitants, at the same time that it had the means given it of maintaining their independence.

5. Reahonh which led to the introduction of the national debt.

So great was the increase of the public burdens during the reign of William, that the national income, in the thirteen years that he sat on the throne, was nearly doubled : being raised from £2,000,000 a-year to £3,895,000. But the addition made to the public revenue was the least important part of the changes effected during this important period. It was then that the NATIONAL DEBT began ; and government was taught the dangerous secret of providing for the necessities, and maintaining the influence of present times, by borrowing money and laying its payment on posterity. Various motives combined to induce the government, immediately after the Revolution, to adopt the system of borrowing on

CHAP. XLI.

1688-1700.

the credit of the state. Notwithstanding the temporary unanimity with which the Revolution had been brought about, various heart-burnings and divisions soon succeeded that event, and the exiled dynasty still numbered a large and resolute body, especially in the rural districts, among their adherents. Extensive patronage and no small share of corruption were necessary to secure the influence of government over a nation thus divided : foreign wars were rightly deemed requisite to maintain the ascendant of the Protestant principles to which the king owed his accession to the throne; and the Continental connexions of the house of Orange imperiously required the intervention of Great Britain in those desperate struggles by which the very existence of the commonwealth of Holland was endangered. The same cause which led to nearly the duplication of the public burdens of France by Louis Philippe,* after the revolution of 1830, produced a similar increase in the taxes of Great Britain after the change of dynasty in 1688, and originated the dangerous system of borrowing on the security of the assessment of future years. It was justly thought, that the present influence of government could in this way be increased to an extent altogether impracticable if the expenditure of each year were to be limited to the supplies raised within itself; and that, by the distribution of the debt

Corresponding increase of the expenditure of France on the accession of Louis Philippe.

* The following is a statement of the budgets of France before and after the Revolution of July. It is a curious and instructive object of contemplation to observe a similar convulsion leading, in countries so widely different in their character, customs, and institutions, as France and England were at the accessions of the dynasties of Orange and Orleans to their respective thrones, to a result so precisely similar .—

among a great number of public creditors, an extensive and influential body might be formed, attached by the strong tie of individual interest to the fortunes of the ruling dynasty; because they were aware that their claims would be disregarded by the legitimate monarchs if restored to the throne. The expedient, therefore, was fallen upon of contracting a debt transferable by a simple power of attorney, in the smallest shares, from hand to hand ; and capable of being used almost like the highest and most valuable species of bank-notes, in the transactions of the nation. To the steady prosecution of this system, and the formation of a secure deposit by its means for the savings of the nation, much of the subsequent prosperity and grandeur of England is to be ascribed. But, like all other human things, it has its evils as well as its advantages: and in the perilous facility of borrowing, which the magnitude of the national resources and the fidelity with which the public engagements were fulfilled produced, is to be found the remote but certain cause of financial embarrassments, now to all appearance irremediable.[1]

[1] Pebrer, 59, 60. Alison's Marlborough, 246, 249.

6. Progressive growth of the public debt during the succeeding century.

It is unnecessary to follow the successive steps by which both the public revenue and the national debt of Great Britain were increased after this period. Suffice it to say, that both were largely augmented during the glorious war of the Succession; that the long and pacific administration which followed, effected no sensible reduction in their amount; that the checkered contest of 1739, and the more triumphant campaigns of the Seven Years' war, contributed equally to their increase; and that the disasters of the American struggle were attended by so great an augmentation of the national burdens, that at its termination in 1783, in the opinion both of Mr Hume and Adam Smith, they must inevitably prove fatal in the end to the independence of the nation. At the close of the last contest the public revenue was £12,000,000, and the debt £240,000,000, the interest of which absorbed so large

CHAP. XLI.

1784.

a proportion as £9,319,000 of the annual income of the state; the loans contracted during its disastrous continuance having been no less than one hundred millions.[1]*

[1] Pebrer, 245.

It was at this period that Mr Pitt came into office, on the resignation of Mr Fox and the coalition ministry. His ardent and sagacious mind was immediately turned to the consideration of the finances, and the means of

Table illustrating its increase.

* The following table exhibits, in a clear and condensed form, the increase of the public revenue, and progressive growth of the debt, from the Revolution in 1688 to the present times.

	Debt.	Interest.	Public Revenue.
National Debt at the Revolution,	£664,263	£39,865	£2,001,885
Increase during the reign of William,	15,730,439	1,271,087

Decrease since the peace, . .	82,155,207	3,883,841	
Debt on the 5th January 1832,	£782,667,234	£28,341,463	£50,990,000

—MOREAU and PEBRER'S *Tables*, 70, 89,153, 245; and PORTER'S *Pari Tables*, i. 1.

extricating the nation from the embarrassments, to ordinary observers inextricable, in which it had been involved by the improvident expenditure of preceding years. It was evident, from a retrospect of history, that no sensible impression had been made on the debt by any efforts of preceding times; that though a sinking-fund had long existed in name, yet its operations had been very inconsiderable; and that all the economy of the long periods of peace which had intervened since the Revolution, had done little more than discharge a tenth of the burdens contracted in the preceding years of hostility. The interest of the debt absorbed now more than two-thirds of the public revenue. It was impossible to conceal that such a state of things was in the highest degree alarming; not only as affording no reasonable prospect that the existing engagements could ever be liquidated, but as threatening at no distant period to render it impossible for the nation to make those efforts which its honour or independence might require. Little foresight was required to show, that, in the course of events, wars and changes must arise, which would render it indispensable for the government to assume a menacing attitude, and possibly engage in a long course of hostilities. But how could any administration venture to assume the one, or the people bear the other, if an immense load of debt hung about their necks, absorbing alike by its interest their present revenues, and paralysing by its magnitude the credit by which their resources might be increased on any unforeseen emergency?

7. **Alarming financial aspect of the country on Mr Pitt's accession to power in 17B4.**

These dangers took strong possession of the mind of Mr Pitt; but instead of sinking in despair under the difficulties of the subject, he applied the energies of his understanding with the utmost vigour to overcome them. Nor was it long before he perceived by what means this great object could with ease and certainty be effected, The public attention at this period had been strongly directed to the prodigious powers of accumulation of

8. **Principle ou** which he **proposed to remedy the existing evils.**

CHAP. XLI.

1784.

money at compound interest; and Dr Price had demonstrated, with mathematical certainty, that any sum, however small, increasing at that ratio, would in a given time extinguish any debt, however great. * Mr Pitt, with the instinctive sagacity of genius, laid hold of this simple law to establish a machine by which the vast debt of England might, without difficulty, be discharged. All former sinking funds had failed in producing great effects, because they were directed to the *annual* discharge of a certain portion of debt; not the formation, by compound interest, of a fund destined to its future and progressive liquidation ; they advanced, therefore, by addition, not multiplication—in an arithmetical, not a geometrical ratio. Mr Pitt saw the evil, and not merely applied a remedy, but more than a remedy : he not only seized the battery, but turned it against the enemy. The wonderful powers of compound interest, the vast lever of geometrical progression, so long and sorely felt by debtors, were now to be applied to creditors; and, inverting the process hitherto experienced among mankind, the swift growth of the gangrene was to be turned from the corruption of the sound to the eradication of the diseased part of the system. Another addition, like the discovery of gravitation, the press, and the steam-engine, to the many illustrations which history affords of the lasting truth, that the greatest changes both in the social and material world are governed by the same laws as the smallest; and that it is by the felicitous application of familiar principles to new and important objects, that the greatest and most salutary discoveries in human affairs are effected.

Mr Pitt's mind was strongly impressed with the incalculable importance of this subject of the finances,—one before which all wars or subjects of present interest, excepting only the preservation of the constitution, sank into insig-

*** A penny laid out at compound interest at the birth of our Saviour, would, in the year 1775, have amounted to a solid mass of gold eighteen hundred times the whole weight of the globe.**

9. His strong expressions on the importance of the subject in parliament.

nificance. From the time of his accession to office in 1784, his attention had been constantly riveted upon it, and he repeatedly expressed, in the most energetic language, his sense of its overwhelming magnitude. "Upon the deliberation of this day," said he, in bringing forward his resolutions on the subject on 29th March 1786, "the people of England place all their hopes of a full return of prosperity, and a revival of that public security which will give vigour and confidence to those commercial exertions upon which the flourishing state of the country depends. Yet not only the public and this House, but other nations are intent upon it; for upon its deliberations, by the success or failure of what is now proposed, our rank will be decided among the powers of Europe. To behold this country, when just emerging from a most unfortunate war, which had added such an accumulation to sums before immense, that it was the belief of surrounding nations, and of many among ourselves, that we must sink under it—to behold this nation, instead of despairing at its alarming condition, looking boldly its situation in the face, and establishing upon a spirited and permanent plan the means of relieving itself from all its encumbrances, must give such an idea of our resources as will astonish the nations around us, and enable us to regain that pre-eminence to which on many accounts we are so justly entitled. The propriety and even necessity of adopting a plan for this purpose is now universally allowed, and it is also admitted that immediate steps ought to be taken on the subject. It is well known how strongly my feelings have been engaged, not only by the duties of my situation, but by the consideration of my own personal reputation, which is deeply committed in the question, to exert every nerve, to arm every vigilance, to concentrate all my efforts towards that great object, by which alone we can have a prospect of transmitting to posterity that which we ourselves have felt the want of,— an efficient sinking-fund for the national debt[1] To

[1] Parl. Hist, xxvi. 1295, 1313, 1109.

CHAP. XLI.

1786.

accomplish this is the first wish of my heart; and it would be my proudest hope to have *my* name inscribed on a pillar to be erected in honour of the man who did his country the essential service of reducing the national debt."

10. And his simultaneous adoption of measures for national defence.

It is worthy of especial notice, however, that though thus deeply impressed with the paramount importance of raising up an effective sinking-fund for the reduction of the public debt, Mr Pitt was equally resolute not to attempt it by any measure by which the public security might be impaired; and, on the contrary, he at the very same time strongly advocated and carried a bill for the fortification of Portsmouth and Plymouth, which required several hundred thousand pounds. " He would not be seduced," he said, " by the plausible and popular name of economy—he would not call it only plausible and popular, he would rather say the sacred name of economy—to forego the reality; and for the sake of adding a few hundred thousand pounds at the outset to the sinking-fund, perhaps render for ever abortive the sinking-fund itself. Every saving, consistently with national safety, he would pledge himself to make; but he would never consent to starve the public service, and to withhold those supplies without which the nation must be endangered."[1] Every measure of this great man was directed to great and *lasting* national objects. He was content to impose present burdens, to forego present advantages, and incur present unpopularity, for the sake of ultimate public advantage ; the only principle which ever yet led to greatness and honour, either in nations or individuals, as the opposite system, gilded by present popularity or enjoyment, is the certain forerunner of ultimate ruin.

[1] Pari. Hist, xx vi. 1109.

In pursuance of these designs, Mr Pitt proposed that a million yearly—composed partly of savings effected in various branches of the public service, to the amount of £900,000, and partly of new taxes, to the amount of £100,000—should be granted to his Majesty, to be vested

in commissioners chosen from the highest functionaries in the realm ; that the payments to them should be made quarterly; and that the whole sums thus drawn should be by them invested in the purchase of stock, to stand in the name of the commissioners, the dividends on which were to be periodically applied to the further purchase of stock, to stand and have its dividends invested in the same manner. In this way, by setting apart a million annually, and religiously applying its interest to the purchase of stock, the success of the plan would be secured; because the future accumulations would spring, not from any additional burdens imposed on the people, but from the *dividends on the stock thus bought up from individuals, and vested in the public trustees.* The powers of compound interest were thus brought round from the *side of the creditor to that of the debtor*—from the fundholders to the nation ; and the national debt was eaten in upon by an accumulating fund, which, increasing in a geometrical progression, would, to a certainty, at no distant period, effect its total extinction* " If this million," said

* The following table will exemplify the growth of capital when its interest, at the rate of five per cent, is steadily applied to the increase of the principal. Suppose that £20,000,000 is borrowed; and that, instead of providing by taxes for the interest merely of this large sum, provision is made for £1,200,000 yearly, leaving the surplus of £200,000 to be annually applied to the purchase of a certain portion of the stock, by commissioners, for the reduction of the principal, the dividends on the stock so purchased being annually and progressively employed in the same manner. The progressive growth in ten years will stand as follows:—

First year's surplus, . . .	£200,000	
Second,	210,000	
Third,	220,500	
Fourth,	231,250	
Fifth,	242,562	
Sixth,	253,078	
Seventh,	*265,654:*	
Eighth,	278,286	
Ninth,	292,114	
Tenth,	306,661	
		£2,500,105

The wonderful rate at which this fund increases must be obvious to every observer, and it is worthy of especial notice, that this rapid advance is gained without imposing one farthing additional upon the country, by the mere force of an annual fund, steadily applied year after year, with all its fruits, to the xeduction of the principal debt.

CHAP. XLI.

1786.

Mr Pitt, "to be so applied, is to be laid out, with its growing interest, it will amount to a very great sum in a period that is not very long in the life of an individual, and but an hour in the existence of a great nation; and this will diminish the debt of this country so much, as to prevent the exigencies of war from raising it to the enormous height it has hitherto done. In the period of twenty-eight years, the sum of a million, annually improved, would amount to four millions per annum. But care must be taken that this sum be not broken in upon. This has hitherto been the bane of this country; for if the original sinking-fund had been properly preserved, it can easily be proved, that our debts at this moment would not have been very burdensome; but this, as yet, has been found impracticable, because the minister has uniformly, when it suited his conveniency, gotten hold of this sum, which ought to have been regarded as most sacred. To prevent this, I propose that this sum be vested in certain dignified commissioners, to be by them applied quarterly to buy up stock; by which means no considerable sum will ever be open to spoliation, and the fund will go on without interruption. Long, very long, has the country struggled under its heavy load, without any prospect of being relieved; but it may now look forward to the object upon which the existence of the country depends. A minister could never have the confidence to come down to the House, and propose the repeal of so beneficial a law—of one so directly tending to relieve the people from their burdens. The essence of the plan consists in the fund being invariably applied in diminution of the debt; *it must for ever be kept sacred, and especially so in time of war.* To suffer the fund at any time, or on any pretence, to be diverted from its proper object, would be to ruin, defeat, and overturn the whole plan."[1]*

[1] Parl. Hist. xxvi. 1309, 13*22.

*** The speech delivered by Mr Pitt on this occasion, which went over the whole details of our financial system, is one of the most luminous of his whole parliamentary career. An intimate friend of his has recorded, " That having passed the morning of this most important day in providing and examining the**

CHAP. XLI.

1786. 12.

Mr Fox gives this plan his cordial support.

Nor was Mr Fox behind Lis great rival in the same statesmanlike and heroic sentiments; but he pointed out with too prophetic a spirit the dangers to which the reserved fund might be exposed, amidst the necessities or weaknesses of future administrations. " No man," said he, " in existence, was, or ever had been, a greater friend to the principle of a sinking-fund than I have been, from the very first moment of my political life. I agree perfectly with the right honourable gentleman in his ideas of the necessity of establishing an effective sinking-fund, for the purpose of applying it to the diminution of the national debt, however widely I may differ from him as to the subordinate parts of the plan. Formerly, the payment of the national debt was effected by a subscription of individuals, to whom the faith of parliament had been pledged to pay off certain specified portions at stated periods. Under that system, when the nation, or when parliament, stood bound to individuals, the pledge was held as sacred as to pay the interest of the national debt at present; whereas, under the new system, when no individual interests were concerned, nothing would prevent a future minister, in any future war, from coming down to the House and proposing the repeal of the sinking-fund, or enabling government to apply the whole money or stock in the hands of the commissioners to the public service. What would prevent the House from agreeing to the proposition ? or was it at all likely that, under the exigency

calculations and resolutions for the evening, he said he would take a walk to arrange in his mind what was to be said in the House in the evening. His walk did not last above a quarter of an hour, and when he came back he said he believed he was prepared. He then dressed, and desired his dinner to be sent up; but hearing that his sister, and another lady residing with her in the family, were going to dine at the same early hour, he desired that they might dine together. Having passed nearly an hour with those ladies, and several friends who called on their way to the House, talking with his usual liveliness and gaiety, as if he had nothing on his mind, he then went immediately to the House of Commons, and made that elaborate and far-extended speech, as Mr Fox called it, without one omission or error.—See WILLIAM PITT—No. V.; ***Black wood's Magazine,*** **xxxvi. 852; a series of papers on the character of this illustrious man, by Dr Croly, one of the ablest writers of the age, containing by far the best account of his policy and character extant in any language.**

CHAP. XLI.

1786.

of the moment, they would not immediately agree to it, when so much money could so easily be got at, and when they could so readily save themselves from the odious and unpleasant task of imposing new taxes on themselves and their constituents ?"[1] Memorable words from both these great men! when it is recollected how exactly the one predicted the wonderful effects which experience has now proved his system was calculated to have produced, in reducing, in a period of time smaller than the most ardent imagination could have supposed, a debt double the amount of that which he estimated as so great an evil; and with how much accuracy the other pointed out the vulnerable point in the composition of his scheme, and predicted the cause, springing from the necessities or weakness of future administrations, which would ultimately prove its ruin!

[1] Parl. Hist. xxvi. 1318.

The bill passed both Houses without a dissentient voice; and on the 26th May, the King gave it the royal assent in person, to mark his strong sense of the public importance of the measure.

13. It is passed by the legislature, and afterwards made applicable to all future loans.

The sinking-fund thus provided was amply sufficient to have discharged all the existing debt within a moderate period; and so well aware was its author of its vast productive powers, that he observed, that when it rose to four millions, it should be submitted to parliament whether it should thenceforth be suffered to increase at compound interest. But the events which followed soon not only rendered illusory all danger of the debt being too rapidly reduced, but made an addition to the system unavoidable to meet the new and overwhelming obligations contracted during the war. Some expedient, therefore, was necessary to provide for the liquidation of these vast additional debts; and it was in the means taken to do so that the extensive foresight and unshaken constancy of Mr Pitt is to be discerned. He laid it down as a principle, which was never on any pretence whatever to be departed from, that, when any additional loan was contracted, provi-

sion should be made for its gradual liquidation. "We ought," said Mr Pitt, "not to confine our views to the sinking-fund, compared with the debt now existing. If our system stops there, the country will remain exposed to the possibility of being again involved in those embarrassments which we have in our own time so severely experienced, and which apparently brought us to the verge of bankruptcy and ruin. To guard against such dangers hereafter, we should enact that, whenever any loan shall take place in future, unless it be raised on annuities, which will terminate in a moderate number of years, there should of course be issued out of the consolidated fund,* to the commissioners for the reduction of the national debt, *an additional sum sufficient to discharge the capital of such loan in the same period as the sinking-fund, after reaching its largest amount, will discharge what will then remain of the present debt.* To do this, one hundredth part of the capital borrowed would be sufficient to be raised from the country on such emergencies; for instance, supposing it were necessary to raise by loan ten millions, £100,000 should be raised in addition to the existing funds appropriated to the redemption of the debt, in order to relieve the country within a given time of this additional burden. In addition to this, I propose that £200,000 a-year additional should, from this time forward, be regularly granted out of the ordinary revenue of the country to the sinking-fund." Mr Fox stated, "That he had ever maintained the necessity of establishing a fund for reducing the national debt, and that as strongly when on the Ministerial as when on the Opposition benches. He had not the power to promote it as effectually as Mr Pitt, but he wished it as warmly."[1] In conformity with the united opinion of these great men,

[1] Parl. Hist. xxix. 1050, 1058.

* The consolidated fund was a certain portion of the ordinary taxes, which were amassed together and devoted to certain fixed objects of national expenditure. The surplus of this fund, as it was called, or the excess of those branches of revenue above the charges fixed on them, was annually appropriated during war among the ways and means to the current war expenditure.

CHAP. XLI.

1792-1802.

it was enacted by the statute passed on the occasion, " That whenever in future any sums should be raised by loans on perpetual redeemable annuities, a sum equal to one per cent on the stock created by such loan should be issued out of the produce of the consolidated fund quarterly, to be placed to the account of the commissioners."[1] Every additional loan was thus compelled to draw after itself, as a necessary consequence, a fresh burden, by the annual payment of which the extinction of the principal might to a certainty be expected in little more than forty years.

[1] 32 Geo. III. c. 69.

14. Modification of the system introduced in 1802.

Under this system the whole loans were contracted, and the sinking-fund was managed, till 1802; and as immense sums were borrowed during that period, the growth of the sinking-fund was far more rapid than had been originally contemplated. In that year an alteration of some importance was made, not indeed by Mr Pitt, but by Mr Addington, then Chancellor of the Exchequer, with his consent and approbation. " The capital of the debt," said he, "is now £488,000,000; its interest, including the charges of the sinking-fund, £23,000,000. It is impossible to contemplate either the one or the other without the utmost anxiety. What 1 now propose is, that the limitation which was formerly provided against the accumulation of the original sinking-fund should be removed ; and that both that original fund and the subsequent one, created by the act of 1792, should be allowed to accumulate till they have discharged the whole debt." This proposition was unanimously agreed to : it being enacted, " that this fund should accumulate till the whole existing redeemable annuities should be paid off." By this act, the original sinking-fund of £1,000,000, with the £200,000 subsequently granted, and the one per cent on all the subsequent loans, were combined into one consolidated fund to be applied continually, at compound interest, till the whole debt then existing was paid off, which it was calculated would be in forty-five years.[2]

April 14.

[2] **Parl.** Hist *xxxv*. 890, 892.

Under these three acts of 1786, 1792, and 1802, the sinking-fund continued to be administered with exemplary fidelity, not only during Mr Pitt's life, but after his death, till 1813, when a total change in the system took place, which eventually led to its ruin, and has, to all appearance, rendered the financial state of the country almost desperate. To obtain a clear view of the practical effects of Mr Pitt's system, it is necessary to anticipate somewhat the march of events, and give a summary of the operation of the sinking-fund which he established, down to the period when it was abandoned by his more embarrassed and less provident successors.

15. Immense results of the sinking-fund.

From the accounts laid before parliament, it appears that the sinking-fund of a million which Mr Pitt established in 1786, had increased, by accumulation at compound interest, and the great additions drawn from the one per cent on the vast loans from 1792 to 1812, to the enormous sum of *fifteen millions and a half yearly* in 1813, while the debt which it had discharged during that period amounted to no less than £238,231,000 sterling. This great increase had taken place in twenty-seven years; whereas Mr Pitt had calculated correctly that his original million would be only four millions in twenty-eight years; the well-known period of the quadruplication of the sum at compound interest of five per cent. The subsequent £200,000 a-year granted, undoubtedly accelerated in a certain degree the rate of its advance ; but the true cause of the extraordinary and unexpected rapidity of its increase is to be found in the prodigious accumulation which the one per cent on subsequent loans produced. This distinctly appears from the table on next page, showing the sums paid off by the sinking-fund in every year from 1786 to 1813—the loans contracted during that period—the stock redeemed by the commissioners, and the proportion of each loan paid to them for behoof of the public debt. It thence appears how rapidly and suddenly the sinking-fund rose, with the immense sums

CHAP. XLI. 1802.

borrowed at different periods during the war; and when it is recollected that the loans contracted from 1792 to 1815 were £585,000,000, it will not appear surprising, that even the small sum of one per cent on each, regularly issued to the national debt commissioners, should have led to this extraordinary and unlooked-for accumulation.*

16. **Obloquy to which it became exposed.**

It is this subsequent addition of one per cent on all loans contracted since the institution of the sinking-fund, which has been the cause at once of its extraordinary increase and subsequent ruin. While the nation in general were entirely satisfied with Mr Pitt's financial statements, and, delighted with the rapid growth of the sinking-fund, never examined whether the funds for its prodigious extension were provided by the fictitious supply

Table showing the progressive growth of the sinking-fund.

* Table showing the sums paid to the commissioners for the reduction of the national debt in every year from 1792 to 1816; the stock redeemed by them in each year; the loans contracted, and proportion of those loans paid to those commisbioners in every year for that period ; with the public revenue of the state for the same time.—MOREAU'S *Tables ;* PEBRER'S *Tables,* 153, 154, 246; *Parl Papers,* 1822, &c. 145; PORTER'S *Pari Tables, i.* 1, COLQUHOUN, 292, 294 ; PORTER'S *Progress of the Nation,* il. 296.
