PREFACE

IT IS fifteen years since *The Columbia Encyclopedia* was first offered to the reader. In that time it has established itself as a standard reference work, and in that time work has gone steadily forward on revising, expanding, and bringing up to date the vast amount of information that has changed with the changing world The second edition of *The Columbia Encyclopedia* now incorporates the fruits of those long labors as well as the advice and counsel of thousands of persons who in print, in letters, or by word of mouth have suggested improvements and emendations for enriching the book This new edition is a complete revision, not merely an expansion Every article has been inspected, and wherever new information has become available, it has been incorporated into a rewritten article Errors have been corrected wherever found, and a few modest innovations have been made In purpose and in form, however, the book remains the same as the one-volume encyclopedia published in 1935 and found serviceable by many readers since then

The credit for that purpose and that form, for the very conception of this one-volume encyclopedia, belongs to the late Clarke Fisher Ansley, Editor in Chief of the first edition. He survived the herculean task of supervising its growth from an idea to a substantial volume by only a few years Out of the large staff who aided him in the preparation of that edition has come the nucleus of the editorial staff of this second edition His high ideals and his rigorous training in craftsmanship have lived on This second edition has also had the advantage of the encouragement and counsel of two men who were important in bringing *The Columbia Encyclopedia* to birth Charles G. Proffitt, now Director of Columbia University Press, and Frederick Coykendall, Chairman of the Board of Trustees of Columbia University and President of Columbia University Press To them gratitude is due for this second edition of the book as for the first The title of the work remains the one suggested by the late Nicholas Murray Butler, then President of Columbia University The following remarks on the general character and the lasting ideal of *The Columbia Encyclopedia* are largely expressed in the words of Clarke Fisher Ansley himself

One who makes good use of the art of reading needs to have three reference works at hand a dictionary, an atlas, and an encyclopedia The dictionary and the atlas for workaday purposes are each in one volume On the continent of Europe one-volume encyclopedias have long been in general use *The Columbia Encyclopedia* serves readers of English in a like way, as the companion of the dictionary and the atlas Since it is prepared primarily for Americans, it is constructed mindfully to fill the needs of American readers and therefore takes a distinctive form.

To make this encyclopedia as convenient and satisfactory in its field as the good one-volume dictionary and atlas are in their fields various means have been employed In typography and other physical details the book is compact In the articles much space for encyclopedia material has been gained by avoiding the duplication of material that belongs to the dictionary and the atlas Maps are left to the atlas Definitions have been left to the dictionary, if space that could be given to an item in the encyclopedia would allow no more than the sort of definition that appears in a good dictionary, that item is omitted from the encyclopedia. The cross-reference system used is an integral part of the encyclopedia Since space is at a premium, information given under one heading is generally not repeated under another. Instead the reader is directed to the item containing the information by printing the reference to that article in SMALL CAPITALS. The reader may benefit greatly by mastering this simple system at once

Before the development of specialization in knowledge, an encyclopedia could attempt to comprise substantially the sum of human knowledge It could hold, with much else, substantially all the book learning of the minister, the physician, the lawyer, the teacher, the businessman, and the historian Such compass is no longer possible A general encyclopedia cannot hope to take the place of the many books (including specialized reference works) that the professional or the businessman now needs, and these are commonly in technical language, unintelligible to those who have not had his training. The most that others may have in a specialist's field is first aid, and in the specialties of others the specialist's need of such first aid is not less than that of other men The human mind has its limitations, and progress in knowledge makes it less and less possible for one person to know all that is known The need for first aid increases

Since first aid and essential facts are all that a general encyclopedia can now give successfully, they are all that *The Columbia Encyclopedia* attempts to give It contains no technical treatises. It does not try to instruct a specialist in his specialty The specialist who expects to find technical information should not, in any case, be consulting a general encyclopedia, but rather technical works and reference works in his field In *The Columbia Encyclopedia* he may find only ready reference, reminders of dates, titles, and the like The substance of the articles is essential information in language intelligible to the ordinary reader—which the specialist becomes in every field but his own

The bibliographical suggestions are of the same first-aid nature as the rest of the book The ideal has been to name good books for reasonably elementary information Books which have good bibliographies have been preferred Because the ordinary American reader cannot be expected to know all the various foreign languages, the bibliographical items are normally limited to works in English The books listed may lead the reader ultimately to all that books hold on a subject in which he is interested.

The exclusion of material of interest only to specialists in a subject, the elimination of illustrations (which also helps to keep the price of the book modest), and various economies of space have permitted *The Columbia Encyclopedia* to be comprehensive in ways that seem likely to be helpful. Geographic names and biblical proper names will illustrate. An encyclopedia primarily for American use should include many American place names This book therefore includes all incorporated places in the United States with a population of 1,000 or more, many unincorporated and smaller places are also included because of historic or other reasons A similar policy has been followed with regard to Canada The King James Bible is a treasured possession of English-speaking people, accessible everywhere and basic in general education Its importance is freely recognized even by those who prefer other versions *The Columbia Encyclopedia* gives in its alphabetical position every proper name in this Bible with references to passages where information about the person, people, or place named is given In these and the many other fields covered by the book's 6,000,000 words, one may seek not unhopefully in-

formation not given in more voluminous reference works. The separate entries in *The Columbia Encyclopedia* number about 70,000, a generous amount.

Facts and figures for the articles have been taken from the most authoritative sources. Population figures, for instance, are derived from the latest official census, wherever possible. If later official estimates have been issued, they have been utilized. Bitter experience has demonstrated the unwisdom of using unofficial estimates, and they have therefore been avoided. The materials used for writing articles on the places, history, and literature of foreign nations have been largely those in the respective languages as well as standard works in English on the subjects.

In debated matters, as in politics, economics, and religion, *The Columbia Encyclopedia* endeavors to present facts and not opinions. In religion, for example, articles have generally been inspected by Roman Catholic, Protestant, and Jewish experts. The statements do not represent the views of an individual or a single group, they have been reviewed by experts and editors differing in faith.

This is one of the reasons why articles are unsigned. Every article in this encyclopedia has had the careful inspection of more than one person and is a product of cooperation. In order to present unbiased articles written in the briefest possible form and in language intelligible to the ordinary reader, special writing techniques are necessary. The expert in a particular field is not usually a master of such technical skills, although there are rare and happy exceptions. Generally, then, the articles have been written by persons specially trained for this particular type of writing in special fields, the items have later been reviewed by specialists. *The Columbia Encyclopedia* is a highly cooperative effort. It is intended to be, like a good dictionary or an atlas, a coordinated and reliable reference work.

In the second edition, as in the first, the aim has been to serve the English-speaking reader. Therefore the effort has been to record the forms that are current in educated English usage, not forms that would be unintelligible to those who are not masters of a foreign language. In the European languages more commonly known in the United States and Canada, the diacritical marks and special characters are given at least once in the article. Such forms, if they do not coincide with the usual English written forms, are given in italics after the entry under the English spelling. This device should be of some value to those who know the languages. In names that occur in languages written in alphabets other than the Roman, forms that have been established as standard in English are employed. Where no standard forms exist, efforts have been made to transliterate names simply and consistently. Unfortunately attempts to regularize Arabic and certain other non-Roman forms proved more or less futile, because of the conflict of competing but equally acceptable systems of transliteration. Established common forms are used. A few of the languages written in Roman contain such unusual special letters that it proved impossible, because of expense, to reproduce them even in italics after the headings. These are few.

Similarly the pronunciations given are forms which are used in English-speaking circles. Certain foreign pronunciations are also indicated. Serious efforts have also been made to discover and reproduce the accepted pronunciations of American and English places and persons, it has been a difficult undertaking. The key to pronunciation faces the first page of text.

This book is in no sense an official or an unofficial publication of Columbia University. Yet it is deeply indebted to Columbia University and to members of its teaching staff. In many cases articles have been read by members of the faculty, who approved or suggested changes in articles in their special fields. The Columbia experts have, indeed, been most generous in giving of their time and their knowledge. Some of those who were especially kind in writing or revising articles or in making suggestions for including or excluding headings are listed elsewhere as advisers and contributors. It is, however, impossible to thank by name all of the many persons at Columbia who have rendered valuable service to *The Columbia Encyclopedia*. This simple statement must serve as a warrant of gratitude.

A special word must be said of the Libraries of Columbia University. The members of their staffs have borne patiently with the many and various demands made upon them by the research workers of *The Columbia Encyclopedia*. The librarians have been most generous in valuable counsel and aid. Particular mention must be made of Constance M. Winchell and Jean F. McAllister, but all of the staff of the Libraries without exception have been most helpful.

The unusually complete and up-to-date collection of technical works assembled by the Mount Vernon Public Library has been invaluable in the writing of scientific articles. The librarians of the New York Public Library have graciously answered numerous telephone queries, and their magnificent collection of books has been of prime value.

A reference work is tested by its readers. If it serves their purposes, it is a good work. The response of the readers is of the utmost importance to the editors. The editorial staff of *The Columbia Encyclopedia* is, therefore, grateful to all those many readers of the first edition who have taken the trouble to write words of praise and suggestions for additions or improvements. The letters received have been read with great care. Their substance has been weighed. The suggestions made have all been considered. Not all of these were feasible, but in general they proved of the utmost worth in guiding revision. Most of the letters have been answered personally, but here the importance of their contribution must be acknowledged. Similarly the points raised by reviewers have all been considered and taken into account as the labor of the second edition progressed. The remarks made were almost universally favorable. A few of the objections proved groundless, in certain instances "errors" were pointed out solely on the basis of comparison with other reference works, when the research workers of *The Columbia Encyclopedia* had established correct statements, superseding errors in the other works. The workers on the second edition have read and taken note of all reviews that came to hand, they have derived immense profit from them.

The new edition is now, like the first edition, offered to the reader with the hope that he will find it comprehensive and accurate. It is reassuring to know that the revised work is not being laid entirely before strangers but before a host of warm and much-appreciated friends.

- hyphen, to prevent ambiguity Erlangen (ûr′lăng-un), dishearten (dĭs-har′tun)

NOTES

The purpose of the pronunciation symbols is to give at least one serviceable way in which the word in question may be pronounced when used by careful speakers of English.

In this work a pronunciation is ordinarily indicated for words printed in boldface when this pronunciation is not obvious to the English-speaking reader Of two or more words or names in succession spelled and pronounced alike, a pronunciation is frequently indicated for the first occurrence only

For names of localities in English-speaking areas the local pronunciation is preferred, provided it is acceptable to careful speakers

For foreign words and names the speaker of English desires to use a pronunciation that will be acceptable to other speakers of English (unless he is speaking in a foreign language) In many cases (e g , Paris) there is a traditional pronunciation that resembles little the current native pronunciation, and attempts to introduce into English conversation an approximation of the native form (something like parē′) are regarded as an affectation It is customary with foreign names that have no conventional English form to pronounce them with English sounds approximating the foreign ones Such an approximation is indicated in this work, whenever there is no established usage to follow

Actual good foreign-language pronunciations can be acquired only through imitation and study Nevertheless, Englishmen and Americans have for many years made a practice of imitating roughly five French sounds ä, ē, ō, ũ, and u A speaker of English can attain ä by saying ang without the closure at the back of the mouth necessary to make ng, breathing through nose and mouth as well, ē is similarly like the beginning of ăng, ō like that of ōng, and ũ like that of ŭng To approximate u say ōō with vigor, then, keeping the lips rounded, change the sound quickly to ē

For Latin words the venerable English tradition is followed [e.g , Caesar (sē′zur)], except where some other pronunciation is well established, as in ecclesiastical names [e g , Salve Regina (sal′vā rājē′nu)] The so-called classical pronunciation, which approximates the pronunciation Caesar used [e g , Caesar (kī′sar)], is not given, as being not usual in English conversation.

A

A, first letter of the ALPHABET Its Greek correspondent is named alpha, as in the expression "Alpha and Omega" ("first and last", see Ω), symbolizing God It is a usual symbol for a low central vowel as in *father*, English ä is a diphthong of ĕ and y In MUSICAL NOTATION it is the symbol of a note in the scale In chemistry A is the symbol of the element ARGON

Aa (ä) [from a word for "water" of the same Indo-European root as Latin *aqua*], name of many small streams of N Europe and Switzerland Aa, or a derivative of it is a component part of hundreds of European place names

Aachen (ä'khun) or **Aix-la-Chapelle** (āks'-lä-shupĕl'), city (1939 pop 162,164; 1946 pop 110 462), in the former Rhine Prov of Prussia, W Germany, after 1945 in North Rhine-Westphalia, near the Belgian and Dutch borders One of the great historic cities of Europe, it is now chiefly important as an industrial center It is located in a brown-coal district and manufactures machinery, rubber goods, and textiles Its hot mineral baths, frequented since Roman times, are still in use CHARLEMAGNE, who was probably born here, made Aachen his northern capital He built a splendid palace and founded the great cathedral, which contains his tomb From its waters and from Charlemagne's shrine Aachen derived its French name, Aix-la-Chapelle, which is also often used in English The cathedral, which was rebuilt in the 10th cent after a Norman invasion, retains part of the original structure, an imitation of the Byzantine Church of San Vitale in Ravenna, there are later Gothic additions It was relatively little damaged in the Second World War, which devastated almost all other historic buildings, notably the Church of St Nicholas (14th cent), the Church of St Foilan (12th cent), and the 14th-century city hall, built on the site of Charlemagne's palace The old fortifications also were partially damaged Until 1531 the German kings were crowned "kings of the Romans" at Aachen (see HOLY ROMAN EMPIRE) Though it declined in importance, Aachen remained a free imperial city until its annexation (1801) to France It passed to Prussia in 1814 From 1918 to 1930 it was occupied by the Allies, and in the Second World War it was the first important German city to fall into Allied hands, it surrendered, after bitter resistance, to American troops on Oct 21, 1944 Several important treaties were signed at Aachen (see AIX-LA-CHAPELLE, TREATY OF), and in 1818 a conference was held here, important to the development of the Holy Alliance

Aagesen, Svend (svĕn' ô'gusun), fl 1185, Danish historian He was a cleric in the service of Absalon, archbishop of Lund, who encouraged him to write a history of the early Danish kings His brief account, written in rough Latin, is overshadowed by that of his contemporary, Saxo Grammaticus Aagesen was probably also the editor of a Latin translation of the military laws of Canute the Great and may have been the translator

Aakjaer, Jeppe (yĕp'ü ôk'yär), 1866–1930, Danish poet and novelist Most of his works deal with life in his native Jutland His novels *The Peasant's Son* (1919) and *Children of Wrath* (1904) reflect his passionate interest in the poor His most memorable work is his poetry, such as *Songs of the Rye* (1906) and *Heimdal's Wanderings* (1924)

Aaland Islands see ÅLAND ISLANDS

Aalborg, Dan *Ålborg* or *Aalborg* (all ôl'bôrg, ôl'bôr), city (pop 60,880), Denmark, in N Jutland, on the south side of Lim Fjord It is a commercial port and the seat of a naval school Dating from the early 11th cent, it has a 14th-century church and is the see of a Lutheran bishop

Aalesund, Norway see ÅLESUND

Aalst, Belgium see ALOST

Aalto, Alvar (ôl'var ál'tô), 1899–, Finnish architect and furniture designer He has designed both public buildings (notably a library at Viipuri) and private dwellings and pioneered in evolving functional plywood furniture, especially chairs He has sought to use mass production to bring his modern designs into ordinary homes His wife, Aino Aalto, has collaborated with him in both fields

Aanrud, Hans (hänś' ôn'rōōd), 1863–, Norwegian writer of stories, plays, and books for children He was especially successful in his portrayal of life in his home valley, Gudbrandsdal His works include *Sidsel Sidsaerk* (1903) and *Solve Solfeng* (1910), both translated in *Sidsel Longskirt and Solve Suntrap: Two Children of Norway* (1935)

Aar (är), river, c 183 mi long, rising in Switzerland, in the Bernese Alps It traverses the Lake of Briens and the Lake of Thun (whence it is navigable), passes Bern, Solothurn, and Aarau, and joins the Rhine opposite Waldshut, Germany

Aarau (ä'rou), town (pop 12,900), capital of Aargau canton, Switzerland, at the foot of the Jura and on the Aar river Scientific instruments and shoes are manufactured, and there is a printing industry

aardvark (ard'värk) [Dutch, =ground pig], nocturnal mammal of the order Tubulidentata There are two species of the genus *Orycteropus*, one in central Africa and one in the southern part The aardvark, about 6 ft long has a long snout, large erect ears, an almost naked or sparsely haired body, and a long tail Its forefeet are adapted for making burrows in the ground and for clawing open the nests of ants and termites in order to capture the insects with its long sticky tongue Its cylindrical teeth are without enamel and roots It is also called ant bear and earth pig

Aargau (är'gou), canton (542 sq mi, pop 270,463), Switzerland The capital is Aarau The canton is traversed by the Aar river, and there are wooded hills and fertile valleys The territory was taken (1415) by the Swiss cantons from the Hapsburg and governed by them until 1798 In 1803 it was admitted as a canton to the Swiss Confederation The population is mainly German-speaking and Protestant

Aarhus, Dan *Århus* or *Aarhus* (all ôr'hōōs), city (pop 107,393), Denmark, in E Jutland, on Aarhus Bay, which opens on the Kattegat It is second in size to Copenhagen and is a seaport and a commercial and industrial center with machine shops, oil refineries, tobacco and other factories, and breweries An episcopal see (now Lutheran) since the 13th cent, it has a medieval cathedral and many fine Renaissance houses Its university was opened in 1928 Some damage was inflicted on Aarhus in the Second World War

Aaron (ă'rŭ), in the Bible, first high priest, the brother of Moses and his spokesman in Egypt His descendants were high priests and priests The prestige of descent from him was emphasized especially after the Exile He was the instrument of Jehovah in miracles, as in turning his rod into a serpent and in causing the rod to bud, blossom, and bear almonds He made the golden calf and took part in the worship of it Ex 4 14–16, 6 20, 7 1–12, 28–32, Num 12, 17, 18, 20, 33 38, 39, Deut 10 6

Aaron's-beard, name sometimes applied to several plants usually characterized by some beardlike aspect, as the St -John's-wort because of its many stamens and the Kenilworth ivy because of its threadlike runners Aaron's-beard cactus is *Opuntia leucotricha*, a true cactus

Aaron's-rod, popular name for several tall-flowering, infrequently branching plants, such as goldenrod and mullein The name is an allusion to the rod which Aaron placed before the ark and which miraculously blossomed and bore almonds (Num 17 8)

Aartsen, Pieter see AERTSEN, PIETER

Aasen, Ivar Andreas (ē'var ändrā'as ô'sŭn), 1813–96, Norwegian lexicographer He enjoys the distinction of being perhaps the only man who, by standardizing the dialects of a people, created a speech (i e, the Landsmaal) which became the national language For this he was responsible largely through the publication of a grammar (1848) and a dictionary (1850)

abacá see MANILA HEMP

Abaco and Cays (ă'bukō, kēz', kāz'), island group, most northerly of the BAHAMA ISLANDS It includes Great Abaco, Little Abaco, and the surrounding islets

abacus (ăb'ukus) [Latin, from Gr], in architecture, a flat slab forming the top member of a capital In classic orders it varies, a square form having unmolded sides in the Greek Doric, thinner proportions and ovolo molding in the Greek Ionic, and sides incurving and corners cut in Roman Ionic and Corinthian examples In Romanesque work the abacus is heavier in proportion, projects less, and is generally molded and decorated In Gothic work the form varies, appearing in square, circular, and octagonal forms with molded members

abacus, in mathematics, simple calculating device The type of abacus now best known is represented by the frames used for scoring in billiards, for teaching children the elements of arithmetic, and by Chinese in computation An apparatus of pebbles or other movable counters was known in antiquity to Egyptians, Greeks, Romans, and Chinese An especial merit of the abacus is that it simplifies the addition and subtraction of numbers written in Roman numerals Other types of abacus include a board covered with sand or wax to facilitate making and erasing marks See D E Smith, *History of Mathematics* (1923–25)

Abadan (ăbudăn', ăbădan'), city (1949 estimated pop 39,739), E Iran, on Abadan island, in the delta of the Shatt el-Arab at the head of the Persian Gulf Abadan is dominated by its huge oil refinery, it became the terminus of a pipe line in 1909 The modern section of the town houses the employees of the oil company, while the old section is native The climate is hot and humid, and food and other necessities must be imported

Abaddon (ubăd'un) [Heb, =destruction], Hebrew name of APOLLYON Rev 9 11 In ancient Jewish tradition it was used for part of Sheol

Abadeh (ăbudē'), town (1949 estimated pop 7,448), S Iran, between Isfahan and Shiraz Its cool climate encourages growing of poppies and fruits, and the region produces grain

Abagtha (ubāg'), one of Ahasuerus' seven chamberlains Esther 1 10

Abakan (ăbukan'), city (pop 36,135), capital of the Khakass Autonomous Oblast, RSFSR, in S central Siberia, on the Yenisei river It is on the South Siberian RR and has sawmills, meat plants, and metalworking plants Founded (1707) as a fortress it was known as Ust-Abakanskove until 1931 Bronze Age tumuli and Turkic inscriptions have been found here

abalone (ăbulō'nē) [Span], popular name in America for a univalve mollusk of the genus *Haliotis*, members of which are also called ear shells or sea ears On the California coast it is taken in vast numbers for food The iridescent pearly shell is made into buttons and other articles Before protective legislation was enacted quantities of the dried flesh and some shells were exported to the Orient

Abana (ubā'nu), river of Damascus 2 Kings 5 12 It is probably the Barada, flowing near Damascus See also PHARPAR

abandonment, in law, relinquishment of rights in property without conveying them to any other person In extended usage, the term means surrender of property rights to another person, e g, when the beneficiary of an insurance policy surrenders his rights to the proceeds to another Abandonment also means willfully leaving one's spouse or children, intending not to return (see DESERTION)

Abano, Pietro d' (pyā'trō dă'bänō), 1250?–1316?, Italian physician and philosopher, a professor of medicine in Padua His famous work, *Conciliator differentiarum*, an interpretation of the views of Arabists and Greeians, marks the rise of the Paduan school as a center of medical dialectics He was tried by the Inquisition on charges of heresy and practicing magic Acquitted in the first trial he died in the second trial He was found guilty, and his body was ordered burned The body was missing, but was burned in effigy

Abarbanel, Isaac see ABRAVANEL, ISAAC

Abarim (ăb'urim) [Heb, =districts beyond], general term for the country E of the Jordan Num 27 12, 33 47, Deut 32 49 The same original term is translated in Jer 22 20

Abascal, José Fernando de (hōsā' fĕrnän'dō dā abäskäl'), 1743–1827, Spanish viceroy of Peru (1806–16) He displayed great skill in reconciling the Spanish and the creoles He reorganized the army, stamped out local rebellions, and opposed the revolutionists of Buenos Aires and Chile

Abati, Niccolò dell' see ABBATE, NICCOLÒ DELL'

A battery see BATTERY, ELECTRIC

abattoir (ăb'utwar') [Fr], a building for butchering The abattoir houses the work of killing animals for food, dressing, cutting, and inspection of meats, and in some instances refrigeration, curing, and the manufacture of by-products The largest abattoirs are those of the MEAT PACKING industry, highly developed especially in the United States Plant construction, drainage, water supply, disposal of refuse, and all operations are under government regulation Abattoirs are also called slaughterhouses

Abbadides (ă'budīdz), Arabian dynasty in Spain It ruled SEVILLE from 1023 to 1091 Taking advantage of the disintegration of the caliphate of CÓRDOBA, the cadi (governor) of Seville seized power and made himself king (1023–42) of the newly founded state as Abbad I His son and successor, Abbad II, made Seville the most powerful kingdom in S Spain He was noted for his cruelty He was succeeded (1068) by his son, Abbad III (Abbad al-Mutamid), a great patron of the arts and a poet, but an inept ruler In a dispute with Alfonso VI of Castile he called in the ALMORAVIDES from Morocco for help They defeated Alfonso in 1086, but they also deposed (1091) Abbad, who died in exile

Abbadie, Antoine Thomson d' (ătwăn', dăbădē'), 1810–97, French traveler, b Dublin With his brother **Arnaud Michel d'Abbadie** (arnō' mēshĕl'), 1815–93, he explored Ethiopia (1837–48), where he collected valuable material on ethnography, linguistics, geography and geology

Abbas (ă'bus, ă'băs", -bas"), d 652, uncle of Mohammed the Prophet and of Ali the caliph He was a wealthy merchant of Mecca and was the ancestor of the Abbasid caliphs

Abbas I (Abbas the Great), 1557–1628, shah of Persia (1587–1628), of the Safavid dynasty In 1597 he ended the raids of the Uzbeks, and subsequently (1603–23) he conquered extensive territories from the Turks His reign was prosperous, and, holding a royal silk monopoly, he was interested in trade With English aid he took (1622) Ormuz from the Portuguese and founded what is now the port of BANDAR ABBAS He broke the power of the tribal chiefs and established a new tribe, the Shahsavan [friends of the Shah] He erected the monumental buildings of ISFAHAN and had an impressive palace and gardens at Babol He left Persia strong and orderly

Abbas II (Abbas Hilmi), 1874–1944, khedive of Egypt (1892-1914) Nominally he ruled in subordination to the Ottoman Empire, but in fact Egypt was controlled by the British resident—at first Lord Cromer, and later Kitchener The British deposed Abbas after Turkey joined the Central Powers in the First World War He wrote *The Anglo-Egyptian Settlement* (1930) Lord Cromer wrote *Abbas II* (1915), a defense of British policy

Abbasid (ăbă'sĭd, ă'busĭd) or **Abbaside** (-sīd, -sĭd), Arabic family descended from ABBAS, the uncle of Mohammed They held the caliphate from 749 to 1258 Under the Omayyad caliphs the Abbasids lived quietly until trouble began to gather early in the 8th cent The family then joined with the Shiite faction in opposing the Omayyads, and in 747 the gifted ABU MUSLIM united most of the empire in revolt The head of the Abbasid family became caliph as ABU-L-ABBAS AS-SAFFAH late in 749 The last Omayyad caliph, Marwan II, was defeated and killed Under the second Abbasid caliph, called MANSUR (d 775), the capital was removed to Baghdad, and Persian influence grew strong in the empire The early years of Abbasid rule were brilliant, rising to true splendor under HARUN AL-RASHID, the fifth caliph, and to intellectual brilliance under his son MAMUN, the seventh caliph After less than a hundred years of rule, however, the slow decline of the Abbasids began There were long periods of disorder, control by Turkish soldiers, assassinations, depositions, and other trouble, and from the beginning there were rival caliphs (see CALIPHATE) Under lax Abbasid rule, the power of the caliphs became chiefly spiritual, many independent kingdoms sprang up, and the empire split into autonomous units The Seljuk Turks came to hold the real unifying power The conquests of Jenghiz Khan shook the empire, and in 1258 his grandson Hulagu Khan overthrew the Abbasid caliphate The 37th caliph died in the disaster, but a member of the family escaped to Cairo, where he and his descendants were called caliphs for several centuries See Sir William Muir, *The Caliphate* (rev ed , 1915), G LeStrange, *Baghdad during the Abbasid Caliphate* (1925), Reuben Levy, *A Baghdad Chronicle* (1929)

Abbate or **Abati, Niccolò dell'** (nēk-kōlō' dĕl-lă-bba'tā, -bă'tē), 1512?–1571 Italian painter He assisted Primaticcio in the decorations at Fontainebleau He was also known as Messer Niccolino (mĕs'sĕr nēk-kōlē'nō)

Abbe, Cleveland (ăb'ē), 1838–1916, American meteorologist, b New York city, brother of Robert Abbe He studied astronomy at the Univ of Michigan and under B A Gould at Cambridge, Mass As director of the Cincinnati Observatory, he inaugurated daily weather forecasting based on telegraphic reports and thus influenced the establishment of a government weather service He served from 1871 in the national weather service established (1870) under the Signal Corps and from 1891 to 1916 in the U S Weather Bureau, which was organized under the Dept of Agriculture to take over the meteorological work

Abbe, Ernst (ĕrnst' a'bu), 1840–1905, German physicist From 1870 to 1896 he was professor at the Univ of Jena Associated from 1866 with the Zeiss optical works at Jena, he became sole owner in 1888 and reorganized it on a cooperative basis His own experimental work was largely responsible for the high standard of Zeiss optical instruments He invented the Abbe refractometer, for determining the refractive index of substances, and improved photographic and microscopic lenses

Abbe, Robert (ăb'ē), 1851–1928, American surgeon, b New York city, M D Columbia, 1874, brother of Cleveland Abbe He was noted as a skillful and resourceful surgeon, especially successful in plastic operations A friend of the Curies and interested in their work, Abbe was one of the first in the United States to use radium in treating cancer

Abbeville (ăb'vĭl, ă'bēvĭl, Fr ăbvēl'), city (pop. 16,098), Somme dept , N France, in Picardy, on the Somme river and 12 mi. from the English Channel It has linen and other textile manufactures It was chartered in 1184 The late Gothic Church of St Wolfram was badly damaged in the Second World War, as was much of the rest of the town Here in 1259 Henry III of England concluded a treaty with Louis IX of France by which he relinquished his claims to Normandy, Anjou, Maine, Poitou, and Touraine and undertook to do homage to the French king for his other possessions in France

Abbeville (ăb'ĕvĭl) **1** City (pop 2,080), co seat of Henry co , SE Ala , near the Chattahoochee, in a cotton and timber area An agricultural experiment station is here **2** City (pop 1,010), co seat of Wilcox co , S central Ga , on the Ocmulgee river and SSE of Macon, in a farm area, inc 1883 **3** Town (pop 6,672), parish seat of Vermilion parish, S La , N of Vermilion Bay, in a rice-growing district It grew around a Roman Catholic chapel built in 1845 by the French and preserves in its old buildings much of the early atmosphere **4** City (pop 4,930), co seat of Abbeville co , NW S C , near the Savannah WNW of Columbia, in a cotton-growing area It has textile mills

Abbey, Edwin Austin, 1852–1911, American illustrator and painter, b Philadelphia, studied with a wood engraver and later in the Pennsylvania Academy of the Fine Arts Employed by Harper & Brothers, he was sent to England, where he gathered materials for his illustration of Herrick's poems and other works His illustration of Shakspere is usually considered his best work His first oil painting was exhibited in 1890 in the Royal Academy, London *The Quest of the Holy Grail* (a series of wall panels in the Boston Public Library) is perhaps his most famous painting He was official painter of the coronation of Edward VII See biography by E V Lucas (1921)

abbey, monastic house, especially among BENEDICTINES and CISTERCIANS It is conceived as being autonomous and, primitively, as economically self-supporting The priory is a house dependent on an abbey The head of an abbey is an abbot or abbess In the Benedictine expansion from the 8th cent , abbeys were often centers of peaceful arts in a still disordered Europe The buildings were centered around the church, there were refectory, dormitory guest house, and other buildings, all surrounded by a wall Cluniac abbeys (see CLUNIAC ORDER) and Cistercian abbeys developed their own styles on the same basic plans Cluniac buildings were florid, Cistercian ones notably bare They naturally worked in the architectural pattern of the period, hence the earlier abbeys were Romanesque, but that style gave way in the 12th cent to Gothic The CARTHUSIANS, with their different polity, developed a special type of house, called rather charterhouse than abbey A basic feature of the abbey was the courtyard, derived from the Roman ATRIUM The CLOISTER surrounding the court is so characteristic of Western monasticism that the word has come to be synonymous with monastic seclusion See D H Cranage, *The Home of the Monk* (1926), R L Palmer, *English Monasteries in the Middle Ages* (1930), F H Crossley, *The English Abbey* (1936)

Abbey Theatre Experiments (1899 1902) with an Irish theatre by W B Yeats and others led to the founding of the Irish National Theatre Society in 1902 Yeats, A E (George Russell), Lady Gregory, and J M Synge were directors and playwrights and William and Frank Fay the leading actors In 1904 Miss A E F Horniman gave them a subsidy and the free use of the Abbey Theatre in Dublin In 1910 the theater was bought for them by public subscription Among playwrights whose works they first gave are Lennox Robinson, Sean O Casey, and Paul Vincent Carroll The company, generally known as the Irish Players, toured the United States in 1911 12, 1932–33, and 1937 38 See Lady Gregory, *Our Irish Theatre* (1913), and her journals (ed by Lennox Robinson, 1946), Andrew Malone, *The Irish Drama, 1896–1928* (1929), W G Fay and Catherine Carswell, *The Fays of the Abbey Theatre* (1935)

Abbo of Fleury (ăbō', flûrē'), Fr *Abbon de Fleury* (abō' du), Latin *Abbo Floriacensis*, 945?–1004, French monk at the abbey of Fleury (at present Saint-Benoît-sur-Loire, near Orléans, France) He was head of the monastery school, later taught at the abbey in Ramsey, England, and in 988 became abbot at Fleury Famous for his learning, he wrote on grammar, astronomy, mathematics, and philosophy He served King Robert II of France on diplomatic missions

Abbot, Charles Greeley, 1872–, American astrophysicist, b Wilton, N H He became acting director of the astrophysical observatory of the Smithsonian Institution in 1896 and director in 1907 Many of his research studies were initiated by S P Langley, his predecessor He completed the mapping of the infrared solar spectrum and over a long period of years carried out, from stations at various altitudes in North and South America and in Africa, systematic studies of variation in solar radiation, its relation to the sunspot cycle, and its effect upon weather variation He also studied intensively the nature of atmospheric transmission and absorption Abbot perfected various standardized instruments, now widely used, for measuring the sun's heat and invented devices utilizing solar energy Besides scientific papers and reports he wrote *The Sun* (1911), *The Earth and the Stars* (1925; rev ed , 1946), *The Sun and the Welfare of Man* (1929), and, with S A Mitchell, a standard textbook on astronomy (1927) In 1928 he became secretary (chief executive officer) of the Smithsonian Institution He resigned from the executive office in 1944 to become research associate

Abbot, Francis Ellingwood, 1836 1903, American philosopher, b Boston, grad Harvard, 1859 He founded the Free Religious Association in 1867 but became estranged from it in 1894 His works, exemplified by *Scientific Theism* (1885), were severely criticized by Josiah Royce and the proponents of idealism

Abbot, George, 1562–1633, British clergyman, archbishop of Canterbury He was one of the collaborators (in the Oxford group) on the Authorized Version of the Bible and was an authority on geography Known as the Puritan archbishop (appointed 1611), he was unpopular, and his accidental killing of a gamekeeper while hunting (1622) was used against him His steady opposition to William Laud, together with his refusal (1627) to elevate the king's prerogative over law and Parliament, led Charles to force him from active control

Abbotsford (ăb'utsfurd), estate of Sir Walter Scott from 1811 to 1832, Roxburghshire, Scotland, on the Tweed and W of Melrose The baronial mansion, built over a period of about 10 years, contains many relics of Scott See Washington Irving, *Abbotsford and Newstead Abbey* (1835)

Abbott, Edwin Abbott, 1838–1926, English clergyman and author He wrote several theological works and a biography (1885) of Francis Bacon, but he is best known for his standard *Shakespearian Grammar* (1870)

Abbott, Emma, 1850–91, American operatic soprano, b Chicago She became a church singer in New York c 1870 and later studied in Milan and Paris, making her debut in Covent Garden in 1876 She returned to the United States and formed her own opera company, which toured the country under the management of Eugene Wetherell, whom she married in 1878

Abbott, Grace, 1878–1939, American social worker, b Grand Island, Nebr She did notable work as director (1921–34) of the Child Labor Division of the U S Children's Bureau *The Child and the State* (2 vols , 1938) is her most important publication Her sister, **Edith Abbott,** 1876–, was made dean of the School of Social Service Administration, Univ of Chicago, in 1924 Her publications include *Women in Industry* (1910) and *The Tenements of Chicago* (1936)

Abbott, Jacob, 1803–79, American teacher, pastor, and writer of boys' books, b Hallowell, Maine, grad Bowdoin, 1820, and studied at Andover Theological Seminary In 1828 he founded Mt Vernon School for girls in Boston, and later, in New York he started Mt Vernon School for boys and the Abbott Institute for girls The *Rollo* series of 28 volumes and *The Young Christian* (1832) are perhaps the most famous of his 180 books, many designed to teach history, science, and ethics through stories

Abbott, Sir John Joseph Caldwell, 1821–93, Canadian lawyer and statesman, b St Andrews, Que , educated at McGill Univ He was dean of the law faculty at McGill for 10 years After serving in the legislative assembly, he was elected (1867) as a Conservative to the House of Commons, but he was defeated in 1874 after the Pacific scandal (1873) in which, as adviser to Sir Hugh Allan, Abbott was implicated He was returned (1880) to Parliament and was appointed in 1887 to the Senate On the death of Sir John A Macdonald in 1891, Abbott succeeded him as premier but resigned the following year because of ill-health

Abbott, Lyman, 1835–1922, American clergyman and editor, b Roxbury, Mass , grad New York Univ , 1853, son of Jacob Abbott He was admitted to the bar in 1856 and ordained a minister in 1860 He held various pastorates before succeeding Henry Ward Beecher at the Plymouth Church (Congregational), Brooklyn, in 1888 With Beecher he had begun in 1876 to edit the *Christian Union*, the name of which he changed in 1893 to the *Outlook* He resigned his church in 1899 for his editorial duties Abbott was a leader in developing the "social gospel" emphasis in modern American Christianity Besides periodical articles he wrote *The Theology of an Evolutionist* (1897), *Henry Ward Beecher* (1903), and *The Spirit of Democracy* (1910) See his *Reminiscences* (new ed , 1923)

Abbott, Wilbur Cortez, 1869–, American historian, b Kokomo, Ind He was educated at Wabash College, Cornell Univ , and Oxford and on the Continent He taught history at various places and was a professor at the Univ of Kansas (1902–8), Yale Univ (1908–20), and Harvard Univ (1920–37) and a research associate at Yale (1938–46) Probably his best-known work is *The Expansion of Europe* (2 vols , 1917), a world-scale view of the founding of empires in the Renaissance. He edited the writings and speeches of Oliver Cromwell (4 vols , 1937–47).

abbreviation, in writing, arbitrary shortening of a word, usually by cutting off letters from the end, e.g., U S A, Geo (George) Contraction serves the same purpose but is understood strictly to be the shortening of a word by cutting out letters in the middle, the omission sometimes being indicated by an apostrophe Many writers hold that a contraction (in which the last letter of the word appears) should not be followed by a period, though an abbreviation should Usage, however, differs widely A period is never used when apostrophes appear The forms in the following select list of abbreviations are those which are widely used in authoritative sources and are preferred by Columbia University Press

LIST OF ABBREVIATIONS

a =are [100 sq. meters]
a =acre, acres
AAA =Agricultural Adjustment Administration
A A A =American Automobile Association
A B =Able-bodied Seaman, *Artium Baccalaureus* [Bachelor of Arts]

A.B.C. Powers, term formerly applied to Argentina, Brazil, and Chile After 1910 cordial relations developed among them in a kind of entente, for which a treaty was signed but not ratified Their chief objective was to secure hegemony and maintain peace in Latin America Offering to mediate in the dispute which arose between the United States and Mexico (1914) because of American occupation of Veracruz, they were invited to attend a conference at Niagara Falls Fundamental differences of opinion caused the gradual dissolution of the entente

Abda [Heb ,=servant] **1** Father of Solomon's officer Adoniram 1 Kings 4 6 **2** Levite Neh 11 17 Obadiah 1 Chron 9 16

Abd al-Rahman. For Moslem rulers thus named, see ABDU-R-RAHMAN

Abdeel (ăb'dē-ĕl) [Heb ,=servant of God], father of the Shelemiah sent to arrest Baruch and Jeremiah Jer 36 26

Abd-el-Krim (ăb"dĕl-krĭm', Arabic ăb"dōōl-kurēm), 1882?–, leader of the Riffian tribes of Morocco, called in full Mohammed ben Abd-el-Krim He was an important figure in the administration of the Spanish Zone until 1920, when he took up arms against Spanish rule In 1921 his small force wiped out a disorganized and ill-equipped Spanish army He used the next three years to strengthen his position, and in 1924 he drove the Spanish back to Tetuán After capturing his only rival, Raisuli, he advanced into the French Zone in 1925 Defeated by combined Franco-Spanish forces, he surrendered in 1926 and was deported to the island of Réunion While traveling to a new place of internment in France in 1947, he escaped into Egypt, where he became a leader of the North African independence movement

Abdera (ăbdēr'ŭ), Gr *Avdera* (avdē'rĭă), town (pop 2,821), Greece, in SW Thrace It is an agricultural market Founded (c 650 B C) by Clazomenae, it was soon destroyed by the Thracians, but was rebuilt (c 500 B C) by colonists from Teos It lost its independence to Macedon in 352 B C, and in 198 B C became a free city under Roman rule The Abderites were considered by the ancient Greeks as proverbially stupid, however, Protagoras and Democritus both lived at Abdera

Abdera. see ADRA, Spain

Abderhalden, Emil (ä'mĕl ap'dürhäl" dun), 1877–, Swiss physiologist and biochemist, pupil of Emil Fischer From 1911 he was professor at Halle He carried forward Fischer's work on enzymes, devised (1912) the Abderhalden pregnancy test, and investigated the metabolism of foods, especially of certain proteins He wrote a textbook of physiological chemistry (1908) and edited a handbook of biochemic technique (9 vols, 1910–19) and a handbook of biological technique (106 vols to 1939)

Abdi (ăb'dī) [Heb ,=my servant] **1, 2** Merarite Levites 1 Chron 6 44, 2 Chron 29 12 **3** Israelite married to a foreign wife Ezra 10 26

Abdias (ăbdī'ŭs), Vulgate form of OBADIAH

abdication, in a political sense, renunciation of high public office, usually by a monarch Degrees of free will enter into the decision to abdicate, some abdications have reflected solely a personal desire and have been followed by undiminished prestige or even, as in the case of Philip V of Spain, by resumption of the throne However, most abdications amount to a confession of failure of policy and loss of power, that of Emperor CHARLES V is unusual in that it was prompted by apparently sincere religious motives, and the emperor retained much prestige and actual power until his death. In China, forced abdication was frequent, the empire ending with the abdication of the boy ruler Hsüan T'ung in 1912 (see PU YI, HENRY) In Japan, however, voluntary abdication occurred more often, the retired ruler assumed a special title and led a life of religious contemplation, receiving many honors Almost unique in political and constitutional history was the abdication of EDWARD VIII of England in 1936. Since 1688, when the English Parliament declared James II to have abdicated by reason of flight and subversion of the constitution, abdication by a British ruler without parliamentary consent has been forbidden, but few written constitutions refer to abdication, and there are no uniform rules or legal principles dealing with it Defeat and political chaos following the First and Second World Wars forced the abdication of many European rulers

Abdiel (ăb'dĭĕl) [Heb ,=servant of God], in the Bible, a Gadite 1 Chron 5 15

abdomen, region of the body which lies below the diaphragm On the anterior wall is a scar, the navel or umbilicus (ŭmbĭl'ĭkŭs, ŭm"bĭl'kŭs), resulting from closure of the umbilical orifice of the fetus The abdomen is covered by a wall of skin, fascia, and muscles and is lined with a membrane, the peritoneum, the ribs and vertebrae protect only a small portion The abdominal cavity proper contains the stomach, intestines, liver pancreas, spleen, and kidneys The lower part of the abdominal cavity lying between the hip bones is called the pelvic cavity, in it are found the bladder, the rectum, and some of the genital organs

Abdon [Heb ,=servile] **1** Judge of Israel Judges 12 13–15 **2** Officer under Josiah 2 Chron 34 20 Achbor 2 Kings 22 12, Jer 26 22, 36 12 **3, 4** Benjamites 1 Chron 8 23,30, 9 36 **5** Unidentified boundary town, NW Palestine Joshua 21 30, 1 Chron 6 74 Hebron AV and Ebron RV Joshua 19 28

abduction, in law, the unlawful taking away or detention of a person, usually a woman under a given age (AGE OF CONSENT), for the purpose of carnal knowledge While the consent of a woman under age does not avoid criminal prosecution, subsequent marriage to her abductor may be a defense unless she was taken away by some sinister means (e g, KIDNAPING) The woman's lack of chastity is not ordinarily a defense See FALSE IMPRISONMENT and RAPE

Abdu-l-Aziz IV (ăb"dōōl-ăzēz'), 1881?–1943, sultan of Morocco (1894–1908), son of Mulai-el-Hasan His weak control was evident after the death (1900) of the regent Si Ahmed His submissiveness to foreign influence, his indulgence in European novelties (which Moslems considered unbefitting his position as religious leader), and the higher taxes which he imposed to reorganize the army and to support his extravagances led to widespread unrest A loan from France (1904) furnished a pretext for French demands which led in 1906 to the Conference of Algeciras Moroccan disapproval of the settlement resulted in further revolts, and Abdu-l-Aziz was deposed (1908) by his brother Abdu-l-Hafid

Abdu-l-Aziz, 1830–76, Ottoman sultan (1861–76), brother and successor of Abdu-l-Mejid Under his rule, the decline of Turkey made great progress In 1875 his bankrupt government repudiated the interest on the huge loans raised in Western Europe, this act led to foreign control over part of the Ottoman revenues RUMANIA, SERBIA, and EGYPT gained virtual independence, and revolts broke out in Bosnia and Hercegovina and Bulgaria Political decay was paralleled, however, by cultural rebirth Many important schools were founded, and newspapers helped to educate the Turks politically In 1876 MIDHAT PASHA, foremost among the liberals (the Young Turks), overthrew Abdu-l-Aziz, who died a few days later, probably murdered He was succeeded by his nephew, Murad V

Abdu-l-Aziz. see IBN SAUD

Abdu-l-Hafid (ab"dōōl-hafēd'), 1875?–, sultan of Morocco (1908–12) Placed on the throne by the revolution which deposed his brother Abdu-l-Aziz IV, he was soon confronted with uprisings and the demands of European creditors Besieged at Fez by rebels (1911), he was relieved by a French army On March 30, 1912, he accepted a French protectorate and on Aug 12 he abdicated

Abdu-l-Hamid I (ăb"dōōl-hămēd'), 1725–89, Ottoman sultan (1774–89), brother and successor of Mustafa III His reign, one of decline, saw the end of the war of 1768–74 and the beginning of the war of 1787–91 with CATHERINE II of Russia (see RUSSO-TURKISH WARS) By the Treaty of Kuchuk Kamarji (1774) Turkey lost Azov and the Crimea and granted Russia the position of protector of Moldavia and Walachia and of the Christians in general throughout the Ottoman Empire The treaty, which established Russia as the foremost power in the Near East, had incalculable effects. In 1775 Austria, jealous of Russian expansion, forced the Porte to cede Bukovina Abdu-l-Hamid was succeeded by his nephew, Selim III

Abdu-l-Hamid II, 1842–1918, Ottoman sultan (1876–1909) His uncle, ABDU-L-AZIZ, was deposed by the Young Turks in 1876 Abdu-l-Hamid's brother, Murad V, succeeded, but was shortly declared insane, and Abdu-l-Hamid became sultan He at first accepted the constitution of MIDHAT PASHA, but soon suspended it, got rid of Midhat, and eventually had him strangled The war with Russia (see RUSSO-TURKISH WARS) led to the Treaty of SAN STEFANO, subsequently modified by the Congress of BERLIN To save what remained of his empire, the sultan now pursued a policy of friendship with Germany German officers reorganized the Turkish army, and German business interests obtained concessions, especially in the matter of the BAGHDAD RAILWAY For his part in the Armenian massacres of 1894–96, he was called the Great Assassin and the Red Sultan Ruling as an absolute monarch, he lived in virtual seclusion In 1908 the Young Turks, who had penetrated the armed services, revolted and forced the sultan to accept a constitution He was deposed (1909) when he tried to plot a counterrevolution and was succeeded by his brother, Mohammed V

Abdu-l-Kadir (ăb"dōōl-kădēr'), 1808–83, Algerian leader, of Arab descent Succeeding his father as leader of an anti-Turkish faction, he was made emir of Mascara From 1832 to 1839 he extended his power over much of N Algeria at the expense of both French and Turks, subduing hostile tribes and organizing the hinterland A learned Moslem, as gifted in eloquence as in arms, he declared (1839) a holy war against the French In four years of fighting, General Bugeaud drove him into Morocco, where he gained the sultan's support Their combined forces were overwhelmed (1844) at Isly, and Abdu-l-Kadir surrendered in 1847 and was imprisoned in France until 1852 In 1860 he was awarded the Grand Cross of the Legion of Honor for assisting Christian victims of a riot in Damascus See Wilfred Blunt, *Desert Hawk* (1947).

Abdullah (ăbdŭ'lŭ, ăbdōōla'), d c 570, father of Mohammed

Abdullah (Abdullah ibn Husein) (ăbdŭ'lŭ, ăbdōōla' ĭ'bun hōōsān'), 1862–, king of Jordan (1946–) He was born in Mecca, the son of HUSEIN In the First World War, Abdullah led revolts in Arabia to aid the British war effort After the war he unsuccessfully fought against IBN SAUD for the control of the Hejaz In 1919 Great Britain created Abdullah emir of Trans-Jordan, a province of the former Ottoman Empire Trans-Jordan became an independent country in 1923 In the Second World War, Abdullah strongly opposed the AXIS Following the partition of Palestine (May, 1948) he led the troops of his British-trained forces, the Arab Legion, against Israel Abdullah annexed the portions of Palestine not assigned to Israel His foreign policy was directed toward creation of an Arab federation, preferably under the rule of a member of his family Abdullah assumed the title king of Jordan in 1946

Abdullah ibn Yasin (ĭ'bun yäsēn'), d 1059?, Mohammedan leader, founder of the ALMORAVIDES A Berber leader in Morocco, he held sway by fiery and strict observance of the Moslem law He and his followers were marked by fanatic and puritanical intolerance

Abdu-l-Malik (ăb"dōōl-mulk'), c 646–705, 5th OMAYYAD caliph (685–705), son of Marwan I At his accession, Islam was torn by dissension and hard pressed by the Byzantine Empire With the help of his able general Hajjaj, Abdu-l-Malik overthrew the rival caliphs and united Islam His battles with Byzantine forces were without final result An able administrator, he introduced Arabic coins, improved postal facilities, made Arabic the official language, and reorganized government

Abdu-l-Mejid (ăb"dōōl-mĕjēd'), 1823–61, Ottoman sultan (1839–61), son and successor of Mahmud II The rebellion of MOHAMMED ALI was checked by the intervention (1840–41) of England, Russia, and Austria Abdu-l-Mejid was influenced by the British ambassador, STRATFORD DE REDCLIFFE, who helped to bring on the CRIMEAN WAR (1853–56)

The Congress of Paris (1856, see PARIS, CONGRESS OF) brought Turkey no advantage Abdu-l-Mejid's attempts at internal reform (1839, 1856) had no permanent effect He was succeeded by his brother, Abdu-l-Aziz

Abdu-l-Mumin (abʺdo͝ol-mo͞oʹmĭn), 1094–1163, founder of the ALMOHADES He was the favorite companion and successor (1130) of Ibn Tumart He earned early fame by defeating an Almoravide army in 1114 After 1140 he conquered Morocco in a campaign of six or seven years, and in 1151 he took advantage of a general revolt against the Almoravides in Spain to establish his authority there In a rapid campaign (1158–59) he took over all the conquests made by Roger II of Sicily in Africa clear to Tripoli Abdu-l-Mumin founded and restored many towns and fitted up several ports—especially Rabat – for his fleet

Abdu-r-Rahman (abʺdo͝or-rəʹmən, -ränʹ), 1778–1859, sultan of Morocco (1822–59) He sought, unsuccessfully, to take advantage of the overthrow of Turkish rule in Algeria in order to extend his territory Later he allied himself with Abdu-l-Kadir, but after then defeat at Isly (1844) made peace with France and refused the emir further asylum in Morocco Abdu-r-Rahman was at various times involved in difficulties with Austria, Spain, and England

Abdu-r-Rahman I or **Abd al-Rahman I** (abʺdo͝ol-), d 788, first OMAYYAD emir of Córdoba (756–88) The only survivor when the Abbasids massacred his family, he fled from Damascus to Spain There he defeated the emir of Córdoba at Alameda and seized power In spite of the jealousy of the Arabian aristocracy and the turbulence of the Berbers, he reorganized and consolidated the state and tried to unite the various Moslem races Though successful against the Franks, he did not recover all the territories CHARLEMAGNE had taken He started the great mosque at Córdoba, continued by his son and successor, Hisham I

Abdu-r-Rahman III or **Abd al-Rahman III**, 891–961, OMAYYAD emir (912–29) and caliph (929–61) of Córdoba Under him Moslem Spain reached the height of its glory He gave his state internal peace and prosperity, consolidated the central government, and built up a strong army and navy For a time he held sway over the Moslem northern part of Africa (939–47), and he successfully fought against the Christian kings He made CORDOBA one of the greatest cities in the West

Abdu-r-Rahman or **Abd al-Rahman** d 732, Moslem governor in Spain He invaded France and won a victory at Toulouse, but was defeated in the battle of Tours or Poitiers (732) by CHARLES MARTEL

Abdu-r-Rahman Khan (kän', khänʹ), 1844?–1901, emir of Afghanistan (1880–1901), grandson of Dost Mohammed He opposed his uncle, SHERE ALI, and had to go into exile in 1869 He was, however, recognized by the British as emir in 1880, and he supported British interests as against the Russians

à Becket, Thomas see THOMAS À BECKET, SAINT

à Beckett, Gilbert Abbott (ubĕkʹĭt), 1811–56, English humorous writer The author of many plays and of books illustrated by John Leech and George Cruikshank, he had a lively style, he was long associated with *Punch*, the predecessor of which, *Figaro in London*, he had founded (1813) *Punch* published much of the work of his eldest son, **Gilbert Arthur à Beckett**, 1837 91, playwright and co-author with W S Gilbert of *The Happy Land* (1873) See A W à Beckett, *The à Becketts of Punch* (1903)

Abed-nego (ubĕdʹnēgō), one of the THREE HOLY CHILDREN

Abel, son of Adam and Eve, a shepherd, killed by his older brother, Cain Gen 4 1–8 Mentioned as the first martyr Mat 23 35

Abel, Sir Frederick Augustus, 1826 1902, English chemist, an authority on explosives He was professor of chemistry at the Royal Military Academy (1851–55) and chemist to the War Dept and government referee (1854 88) Among his achievements are improvements in the manufacture of guncotton, the invention, with Sir James Dewar, of cordite, a study, in collaboration with Sir Andrew Noble, of the behavior of black powder when fired, and the invention of an instrument to determine the flash point of petroleum, known as the Abel test He wrote widely on explosives

Abel, John Jacob, 1857–1938, American pharmacologist, b Cleveland, grad Univ of Michigan (Ph B , 1883) and Univ of Strasbourg (M D , 1888) Professor of pharmacology (1893-1932) and director of the laboratory for endocrine research (from 1932) at Johns Hopkins, he is known for the isolation of epinephrine (adrenaline) in 1898 and later of insulin in crystalline form His other contributions include the isolation of amino acids from the blood He was a founder and editor (1909–32) of the *Journal of Pharmacology and Experimental Therapeutics*

Abel, Niels Henrik (nēlsʹ hĕnʹrĭkʺ äʹbul), 1802–29, Norwegian mathematician He is noted for proving the impossibility of solving by radicals the general equation of the quintic and for his work in elliptic functions

Abel, Thomas: see ABELL, THOMAS

Abel. 1 Ostensibly a place name. 1 Sam. 6 18. The RV text does not give the name. 2 See ABEL-BETH-MAACHAH

Abelard, Peter (äʹbulard), Fr *Pierre Abélard* (pyĕr' ābālärʹ), 1079–1142, French philosopher and teacher, b Le Pallet, near Nantes He went to Paris to study under WILLIAM OF CHAMPEAUX at the school of Notre Dame (1100) and soon attacked the ultrarealist position of his master with such success that William was forced to modify his teaching Abelard became master at Notre Dame but, when deprived of his place, set himself up at a school on Mont Ste Geneviève, just outside the city walls (1112) Abelard's fame as a dialectician attracted great numbers of students to Paris, because of this fact Abelard is usually regarded as the founder of the later Univ of Paris This part of his career was cut short by his romance with Heloise (d c 1164), the learned and beautiful niece of Fulbert, canon of Notre Dame, who had hired Abelard as her tutor After the birth of a son, a secret marriage was held to appease her uncle Fulbert's ill-treatment of Heloise led Abelard to remove her secretly to the convent at Argenteuil Fulbert, who thought that Abelard planned to abandon her, had ruffians attack and emasculate him Abelard sought refuge at Saint-Denis, where he became a monk In 1120 he left Saint-Denis to teach St BERNARD OF CLAIRVAUX thought Abelard's influence dangerous, and at the Council of Soissons certain of Abelard's teachings were pronounced heretical (1121) After a short imprisonment, he returned to Saint-Denis but fell out with the monks and built a hermitage near Troyes Students sought him out, and to house them he built a monastery, the Paraclete When he became abbot at Saint-Gildas-en-Rhuys, Brittany, he gave the Paraclete to Heloise, who became an abbess of a sisterhood there About to be condemned by the Council of Sens (1141), Abelard appealed to the pope, who upheld the council Abelard submitted and retired to Cluny He was buried at the Paraclete, as was Heloise, their bodies were later moved to Père-Lachaise in Paris A Platonist in theology, Abelard emphasized the method of Aristotle's dialectic His belief that the methods of logic could be applied to the truths of faith was in opposition to the mysticism of St Bernard He also opposed the extreme views of William of Champeaux and ROSCELIN on the problems of universals, his own solution, in which universals are considered as entities existent only in thought but with a basis in particulars, is called moderate realism and to some extent anticipates the conceptualism of St Thomas Aquinas His most influential work, the *Sic et non*, a collection of contradictory writings of the Fathers of the Church, formed the basis for the widely read *Sentences* of Abelard's pupil, PETER LOMBARD Abelard was perhaps most important as a teacher, among his pupils were some of the celebrated men of the 12th cent , including John of Salisbury and Arnold of Brescia Of Abelard's poetry only Latin hymns survive He is chiefly remembered for the events of his life as chronicled in his autobiographical *Historia calamitatum* and revealed in the poignant letters of Heloise and Abelard (Eng tr by C K Scott Moncrieff, 1926) See Joseph McCabe, *Life of Peter Abelard* (1901), J G Sikes, *Peter Abailard* (1932)

Abel-beth-maachah (ābʹəl-bĕthʹ-māʹə-kə) [Heb , = meadow of the house of Maachah, perhaps the Syrian Maachah], ancient town, Palestine, probably c 25 mi E of Tyre It was attacked by Ben-hadad and taken by Tiglath-pileser 1 Kings 15 20, 2 Kings 15 29 Abel and Beth-maachah 2 Sam 20 14 Abel of Beth-maachah 2 Sam 20 15 Abel-maim 2 Chron 16 4

Abell, Arunah Shepherdson (äʹ-), 1806–88, American journalist With two partners he founded in 1836 the Philadelphia *Public Ledger*, a penny paper In 1837 they founded the Baltimore *Sun* on a similar plan, and Abell managed it until his death

Abell, Kjeld (kyĕlʹ, äʹbĕl), 1901-, Danish dramatist His first play, *Melody That Got Lost* (1935, Eng tr , 1939), was an immediate success Abell trained as a stage designer, is an innovator in stage technique Later plays, such as *Anna Sophie Hedvig* (1939) and *The Queen Walks Again* (1943), are problem plays, with political, social, or ethical implications

Abell or **Abel, Thomas** (both äʹbul), d 1540, English Roman Catholic priest, chaplain to Katharine of Aragon He vigorously opposed Henry VIII's divorce from Katharine both in his sermons and in a book, *Invicta veritas* [truth unconquered] (1532?) He was imprisoned, accused of aiding Elizabeth Barton, the Maid of Kent, and after six years in the Tower he was executed for treason He was beatified in 1886

Abel-maim (-māʹĭm) [Heb , = meadow of the waters], the same as ABEL-BETH-MAACHAH

Abel-meholah (-mĕhōʹlə) [Heb , = meadow of dancing], name of towns or districts mentioned in the Bible, probably not all different 1 Near the Jordan, limit of the Midianites' flight Judges 7 22 2 In N central Palestine. 1 Kings 4 12 3 Home of Adriel 1 Sam 18 19 4 Elisha's home 1 Kings 19 16 See MEHOLATHITE.

Abel-mizraim' (-rāʹĭm) [Heb , = meadow of the Egyptians], place "beyond Jordan" where Jacob was mourned Gen 50 11

Abel-shittim. see SHITTIM.

Abenaki Indians: see ABNAKI INDIANS

Aben Ezra, Abraham ben Meir see IBN EZRA

Abeokuta (äʺbēōkōōʹtə, äʺ-), town (pop 45,763), SW Nigeria, founded c.1825 It was built at the foot of a hill and was fortified for protection against slave raiders Cotton cloth is dyed here

Aberavon, Wales see PORT TALBOT

Aberbrothock or **Aberbrothwick**, Angus, Scotland see ARBROATH

Abercarn (ăbûrʹkärnʹ), urban district (pop 20,551), Monmouthshire, England It is in a coal-mining district and has tin-plate works

Aberconway, Caernarvonshire, Wales see CONWAY

Abercorn, James Albert Edward Hamilton, 3d duke of (ăʹburkôrn), 1869–, British statesman. He served as a Unionist member of Parliament until he succeeded his father in the dukedom in 1913 He was (1922–45) governor of Northern Ireland.

Abercrombie, Lascelles (lăsʹəlz ăbʹurkrŏmbĭ), 1881–1938, English poet and critic His long poems, many of them in blank-verse dialogue, are brilliant in colorful imagery They are frequently based on scriptural themes, but his metaphysical interpretations are not those of the Bible Among his works are *Interludes and Poems* (1908), *Deborah* (1912), *Thomas Hardy a Critical Study* (1912), *Emblems of Love* (1912), *The Theory of Poetry* (1924), *Romanticism* (1927), and *Poems* (1930)

Abercrombie, Sir Patrick, 1879–, British architect and town planner Professor of civil design at the Univ of Liverpool from 1915 to 1935 and of town planning at the Univ of London after 1935, he has acted as consultant in the rebuilding and planning of London, Edinburgh, Bath, and other British cities He was knighted in 1945

Abercrombie, Fort, US army post on the west bank of the Red River some miles above the present Wahpeton, N Dak Founded in 1858 at the head of navigation on the Red, it had steamboat connection with Fort Garry (now Winnipeg), was a stopping point on the route from St Paul to the Western gold fields, and played a role in opening the Dakota country to settlement It was twice unsuccessfully attacked by the SIOUX in 1862 A treaty between the Ojibwa and the Sioux was concluded here in 1870 Fear of Indian attack declined and the post was abandoned in 1877 Part of the military reservation is now a state park at Abercrombie, N Dak

Abercrombie, James, 1706–81, British general in the French and Indian War, b Scotland He arrived in America in 1756 and in 1758 replaced the earl of Loudoun as supreme British commander After failing to take Ticonderoga from General Montcalm, Abercromby was (1758) replaced by Jeffrey AMHERST

Abercrombie, Sir Ralph, 1734–1801, British general In his first period in the army (1756–83) he served on the continent and retired chiefly because he had sympathized with the American colonists Returning in 1793 for service against France, he won a major military reputation by his command of a brilliant retreat in Flanders in the winter of 1794–95 He was (1795–97) commander-in-chief in the West Indies, where he captured Grenada, St Lucia, St Vincent, and Trinidad He next had commands in Ireland, Scotland, and Holland In 1800 Abercromby was sent to expel the French from Egypt and made a forced landing at Aboukir In the first engagement, which was successful, he was mortally wounded

Aberdare (ăbûrdârʹ), urban district (1931 pop 48,746, 1947 estimated pop 40,100), Glamorganshire, Wales, NW of Cardiff It is in an anthracite and iron-ore region Cables are made

Aberdeen, George Gordon, 1st **earl of** (ăburdēnʹ), 1637–1720, Scottish statesman He exerted much influence on politics between 1680 and 1707 As lord chancellor of Scotland (1682–84), he enforced religious conformity, though not strictly enough to prevent his dismissal by the English commission He refused to swear allegiance to the English revolutionary government that enthroned William III, was in retirement until 1703, and opposed the union of England and Scotland (1707) until he was assured that the Scots would not be treated as aliens

Aberdeen, George Hamilton-Gordon, 4th **earl of,** 1784–1860, British statesman Aberdeen negotiated, as ambassador to Austria, the Treaty of Toplitz (1813), which cemented Austria to the anti-Napoleonic coalition, and he helped arrange (1814) the peace terms at Paris He was foreign secretary (1828–30) in Wellington's cabinet and colonial secretary (1834–35) under Sir Robert Peel As foreign secretary (1841–46) in Peel's second government, he settled with the United States the Northeast Boundary Dispute by the Webster-Ashburton Treaty (1842) and ended the very threatening Oregon controversy by the treaty of 1846 He also improved relations with France. He supported Peel in abolishing the CORN LAWS (1846) and resigned with him. As prime minister (1852–55), Aberdeen headed a brilliant coalition

ministry, quite successful in home affairs He was, however, unable to prevent those in his cabinet who wanted war from involving England on the side of Turkey in the Crimean War The bad management of the campaigns and the unpopularity of the war forced his resignation in 1855 See *The Correspondence of Lord Aberdeen and Princess Lieven*, 1832–1854 (ed by E J Parry, 1938), biography by Lady Frances Balfour (1922)

Aberdeen (ăbŭrdēn′) [Scottish, =mouth of the Don], independent burgh or county of a city (1931 pop 167,258; 1948 estimated pop 188,853), partly in Aberdeenshire, partly in Kincardine, Scotland, on the North Sea at the mouth of the Dee and near the mouth of the Don With a good harbor, it is the chief port and largest city of NE Scotland Aberdeen is called the Granite City Granite quarries are near, many buildings are of the native stone, and the Cathedral of St Machar (c 1136) is of granite There are tanneries and an acetylene plant Aberdeen was chartered as a royal burgh in 1179 A second charter was granted (1319) by Robert the Bruce The Univ of Aberdeen includes King's College (founded 1494 by Bishop Elphinstone) and Marischal College (founded 1593 by George Keith, 5th earl marischal of Scotland).

Aberdeen. **1** Village (pop 1,016), SE Idaho, near American Falls, in the region irrigated by the American Falls Reservoir **2** Town (pop 1,525), N Md, NE of Baltimore, inc 1892 It is supported by the near-by Aberdeen Proving Grounds and by several canning factories **3** Cotton city (pop 4,746), co seat of Monroe co, NE Miss, on the Tombigbee and N of Columbus, inc 1837 A number of fine ante-bellum houses remain **4** Town (pop 1,076), central N C, SW of Raleigh, inc 1893 It is a trade and shipping center for a tobacco and fruit area **5** City (pop 17,015), co seat of Brown co, NE S Dak, NW of Watertown, platted 1881, inc 1882 It is the commercial, distribution, and railroad center for a productive agricultural area A state teachers college is here **6** City (pop 18,846), W Wash, a port of entry on Grays Harbor, at the confluence of the Chehalis and Wishkah rivers, settled c 1865, platted 1884 Built and developed by lumbermen, Aberdeen and its sister city, Hoquiam, are noted for lumber, plywood, and other forest products Fishing and canning are growing industries, and there is a great volume of shipping from both cities through the Port of Grays Harbor Aberdeen has a junior college

Aberdeen and Temair, John Campbell Gordon, 1st marquess of (tumâr′), 1847–1934, British statesman, grandson of the 4th earl of Aberdeen As lord lieutenant of Ireland in 1886 and again from 1905 to 1915, he achieved some popularity with the people He was governor general of Canada from 1893 to 1898 His wife, **Ishbel Maria, marchioness of Aberdeen and Temair,** 1857-1939, daughter of the 1st Baron Tweedmouth, was active in the improvement of working conditions and organizations for women She and her husband wrote a joint autobiography, "*We Two*" (1925) and *More Cracks with "We Two"* (1929), and she wrote *Musings of a Scottish Granny* (1936)

Aberdeenshire (ăbŭrdēn′shĭr), county (1,971 sq mi, 1931 pop 300,436, 1948 estimated pop 335,117), NE Scotland The capital is Aberdeen The land is level and fertile near the coast, rising to the stern Grampians in the southwest Agriculture and fishing (salmon, herring, whitefish) are the leading industries, cattle breeding is important The county was anciently inhabited by the Picts, among whom St Columba evangelized in the 6th cent There are numerous remains of feudal castles and, at Braemar, the modern British royal residence, Balmoral Castle

Aberhart, William (ā′bərhärt), 1878–1943, premier of Alberta, b near Seaforth, Ont, grad Queen's Univ, 1906 He was a schoolteacher and a founder and dean of the Calgary Prophetic Bible Institute (opened 1927) About 1932 he became interested in SOCIAL CREDIT He was an organizer of the Social Credit party of Alberta and was elected (1935) to the provincial legislature with enough supporters to control it Thus Aberhart became premier (1935–43) of the first Social Credit government in the world However, many of the legislative attempts to enact his principles were declared invalid by the courts

aberration, in optics, a condition which causes a blurring and loss of clearness in the images produced by lenses or mirrors Spherical aberration is caused by the failure of a lens or mirror to bring the rays of light from a point to a single focus The effect results from the operation of the laws of optics, not from defects in construction When there is a blurring of the image and fringes of color appear at its edges, the condition is called chromatic aberration This results from the fact that some colors of light are bent more than others after passing through a lens. For example, violet is bent more than red, and violet light is brought to a focus nearer the lens than is red

Abersychan (ăbərsĭk′ən, –sŭkh′ən), former urban district (1931 pop 25,748), since 1935 part of Pontypool, Monmouthshire, England It has ironworks and tinworks

Abertawe, Glamorganshire, Wales see SWANSEA

Abertillery (ăbərtĭlăr′ē), urban district (1931 pop 31,803, 1947 estimated pop 28,250), Monmouthshire, England It is in an area of coal and iron mines and produces tin plate

Aberystwyth (–ĭst′wĭth), municipal borough (1931 pop 9,473, 1943 estimated pop 10,712), Cardiganshire, Wales, on Cardigan Bay A castle begun in 1277, destroyed by the Welsh in 1282, and rebuilt by Edward I in 1284 was a stronghold of Owen Glendower It was destroyed by parliamentarians in the 17th cent The town is a summer resort and a cultural center, the seat of a constituent college of the Univ of Wales and of the National Library of Wales Tanning is the chief industry

Abital (ăb′ĭtăl) [Heb, =my father is dew], mother of David's son Shephatiah 2 Sam 3 4, 1 Chron 3 2

Abitibi, Fort (ăbŭtĭb′ē), Canadian fur-trading post, on Abitibi Lake, at the mouth of the Abitibi river, built in 1686 For 77 years it played an important role in the French fur trade From 1774 to 1914 the post was operated by the Hudson's Bay Company, who rebuilt (1794–96) the original fort, after 1783 it was a valuable outpost of the company's Moose Factory on James Bay

Abitibi Lake (ăbŭtĭb′ē), c 60 mi long, on the Quebec–Ontario boundary E of Cochrane, Ont Irregular and islanded, it is drained by the Abitibi river, which

flows c 200 mi W and N to the Moose river near James Bay Gold is mined in the region

Abitub (ăb'ĭtŭb) [Heb ,=my father is good], Benjamite 1 Chron 8 11

Abiud (ăb'ĭŭd) [Gr for ABIHUD], son of Zerubbabel in Matthew's genealogy. Mat 1 13

Abkhaz Autonomous Soviet Socialist Republic (ăbkăz', Rus ŭpkhäz') or **Abkhasia** (ăbkā'zhŭ, Rus ŭpkhä'sēŭ), autonomous state (3,360 sq mi, pop c 300,000), NW GEORGIAN SSR, between the Black Sea and the Greater Caucasus Sukhumi is the capital The population, which is concentrated along the agricultural coastal strip, is 35 percent Georgian, 30 percent Abkhasian, and 13 percent Armenian The Abkhasians are a largely Mohammedan people of the North Caucasian linguistic family The region, annexed by Russia from Turkey in 1810, became an autonomous republic in 1921

ablative (ă'blŭtĭv") [Latin,=for carrying off], in Latin grammar, CASE used in a number of circumstances, particularly with certain prepositions and in locating place or time The term is also used in the grammar of some languages (e g , Sanskrit, Finnish) for a case of separation (e g , translating "from the house") In Russian the INSTRUMENTAL case often translates a Latin ablative

ablaut (ap'lout) [Ger ,=off-sound], in INFLECTION, variation between vowels of the type of English *ring, rang, rung* In this verb the variation is the only meaningful difference between the words, hence one may speak of the change of ĭ to ă as equaling the addition of *ed* to *talk* This was not always true, for at an unknown period the corresponding forms of the language (known through scientific reconstruction) had differences in accent, not differences in vowel A variation of vowel associated with variation of accent is seen in ă'tŭm versus ŭtō'mĭk, where ă- alternates with u'- and -ō- with -u- Such variation is often called gradation For the variation shown in *man, men*, see UMLAUT

Abnaki Indians or **Abenaki Indians** (both ăbnä'kē), North American Indians of ALGONQUIAN stock The name is a vague one, applied by some of the Indians to all Atlantic seaboard tribes and used by early white visitors—notably Sébastien RASLES—to mean a more or less related group of tribes in present S New Brunswick and Maine, including the Malecite, the Passamaquoddy, and the Penobscot After most of these Indians had removed to Canada, leaving only small remnants on the coast, the name referred more especially to the Penobscot The Abnaki—under any definition of the term—were in settled villages, often stockaded, and lived by growing corn, fishing, and hunting Their own name for their conical huts covered with bark or mats, *wigwam*, came to be generally used in English See F G Speck, *Penobscot Men* (1940)

Abner [Heb ,=my father is Ner], relative of Saul and commander in chief of his army Jealousy and revenge probably caused his death at Joab's hands 1 Sam 9 1, 14 50,51, 17 55, 2 Sam 2, 3

Abney, Sir William de Wiveleslie (wĭ'vŭlslē), 1843–1920, British chemist and physicist He was known especially for his pioneer work in establishing and standardizing science laboratories in the school system and for his experimental work in photography He was the first to make plates which were sensitive to the red and infrared of the solar spectrum He was knighted in 1900

Abo, Finland see TURKU

abolitionists. For the wider relations of the anti-slavery movement, see SLAVERY In U S history, particularly in the three decades before the Civil War, abolitionists were those who agitated for the compulsory emancipation of Negro slaves They are to be distinguished from those who opposed the further extension of slavery (the free-soilers), but both groups came to act together politically and otherwise in the antislavery cause Although anti-slavery sentiment had existed since colonial days and Benjamin LUNDY began his work early in the 19th cent , the abolition movement did not reach crusading proportions until the 1830s One of its mainsprings was a strong religious revival which, beginning in W New York in 1824, swept much of the North by 1830 The moving spirit in the revival was Charles G FINNEY, who created among his converts a powerful impulse towards *social reform*—emancipation of the slaves, temperance, foreign missions, and woman's rights Outstanding among Finney's converts were Theodore D WELD and the brothers Arthur and Lewis TAPPAN The Tappans and William Lloyd GARRISON, recently returned from Great Britain (which had just abolished slavery in the West Indies), were the principal organizers in Dec , 1833, at Philadelphia, of the American Anti-Slavery Society The primary concern of the society was the denunciation of slavery as a moral evil It flooded the slave states with literature until Southern Congressmen were provoked into seeking exclusion of abolitionist journals, pamphlets, and tracts from the mails. The society's agents, especially Weld and his disciples, journeyed throughout the North preaching, usually in churches, the ambiguous doctrine of "immediate abolition, gradually accomplished," which confirmed most Northerners in their opinion that abolitionists were impractical visionaries, dangerous to the security of society However, many local branches of the society were founded, these, with women especially active, sent thousands of antislavery petitions to the House of Representatives The congressional attempt to set aside these petitions (see GAG RULES) and the killing of the abolitionist editor Elijah P LOVEJOY were ably exploited by abolitionists as flagrant violations of the constitutional guarantees of the right of petition and freedom of the press and won them increasing sympathy in the North Abolitionists united in denouncing the African venture of the AMERICAN COLONIZATION SOCIETY, but disagreed among themselves as to how their goal might be best effected Garrison believed moral suasion was the only weapon, he and his followers also tied other reforms, notably woman's rights, to their abolitionism, thus disturbing the less radical element Direct political action was advocated by James G BIRNEY, presidential candidate of the LIBERTY PARTY in 1840 and 1844 These fraternal differences and the localizing tendency of the petition campaign led to a decline in the society's activities in the early 1840s But by persuading Northerners to denounce slavery, it partially achieved its end, and the antislavery movement expanded Eminent writers like John G WHITTIER and orators like Wendell PHILLIPS gave their services to the cause, while Frederick DOUGLASS and other freed or escaped slaves also took to the lecture platform A powerful antislavery lobby in Washington, directed by the able Weld, labored the point that slavery could not exist without the support of the industrial North. Increasing sectional bitterness resulted in the withdrawal (1844) of Southern Methodists and Baptists from association with their Northern brethren, while extremists like Garrison openly advocated the breakup of the Union After the demise of the Liberty party, which, in its brief existence, had hastened the extinction of the WHIG PARTY, the political abolitionists supported the FREE-SOIL PARTY in 1848 and 1852, and in 1856 they voted with the REPUBLICAN PARTY The passage of more stringent FUGITIVE SLAVE LAWS in 1850 increased abolitionist activity on the UNDERGROUND RAILROAD *Uncle Tom's Cabin*, by Harriet Beecher STOWE, a most effective piece of abolitionist propaganda, and the KANSAS question further aroused both North and South, and the culminating act of extreme abolitionism occurred in the raid of John BROWN on Harpers Ferry After the opening of the Civil War insistent abolitionist demands for immediate freeing of the slaves greatly embarrassed Lincoln in his struggle to keep the border states loyal (see EMANCIPATION PROCLAMATION) The whole movement was one of high moral purpose and courage, and its uncompromising temper helped to prevent any other solution of the slavery question than that of war See A B Hart, *Slavery and Abolition, 1831 1841* (1906), Jesse Macy, *The Anti-Slavery Crusade* (1919), L D Turner, *Anti-Slavery Sentiment in American Literature Prior to 1865* (1929), G H Barnes, *The Antislavery Impulse, 1830–1844* (1933), A C Cole, *The Irrepressible Conflict, 1850–1865* (1934), D L Dumond, *Anti-slavery Origins of the Civil War in the United States* (1939), A Y Lloyd, *The Slavery Controversy, 1831–1860* (1939), H H Simms, *A Decade of Sectional Controversy, 1851-1861* (1942)

abortion, expulsion of the product of conception before the fetus is viable Any interruption of pregnancy prior to the 28th week is known as abortion Some authorities restrict the use of this term to the first 12 weeks and refer to the premature termination of pregnancy after the placenta is formed as a miscarriage Popularly, miscarriage is used to signify accidental premature birth at any period, as opposed to purposely induced abortion Spontaneous abortion may occur after the death of the fetus and hemorrhage in the uterus Spontaneous expulsion during the last two thirds of pregnancy may be due to many causes, among them infectious disease (e g , syphilis and toxemia), endocrine dysfunction (as in hypothyroidism and diabetes), and trauma In certain cases, in order to save the life of the mother, the fetus is delivered during the first two thirds of pregnancy when it cannot survive However, in any other case, to produce or to attempt to produce abortion in a pregnant woman is a legal offense in all states of the United States Abortion in animals is commonly caused by UNDULANT FEVER

abortion, contagious see CONTAGIOUS ABORTION

Aboukir or **Abukir** (both ă"bōōkēr', ŭbōō'kŭr), village, Egypt, on Aboukir Bay, SW of the Rosetta mouth of the Nile and 13 mi NE of Alexandria The village is on a promontory where lay ancient CANOPUS Horatio Nelson's victory here over the French fleet commanded by Admiral de Villeneuve (sometimes called the battle of the Nile) on Aug 1, 1798, restored British prestige in the Mediterranean and, with the land victory (1801) under Sir Ralph Abercromby, cut short Napoleon's venture

About, Edmond (ĕdmō' ăbōō'), 1828–85, French journalist and novelist His amusing novels were very popular; perhaps the best known is *Le Roman d'un brave homme* (1880; Eng tr , *The Story of an Honest Man*, 1880).

abracadabra (ăb'rŭkŭdăb'rŭ), magical formula used by the Gnostics of the 2d cent to invoke the aid of benevolent spirits to ward off disease and affliction It is supposed to be derived from, or similar in origin to, the abraxas, a word highly significant of the Supreme Power, which was engraved on gems and amulets or was variously worn as a protective charm Handed down through the Middle Ages, the abracadabra gradually lost its occult significance, and its meaning was extended to cover any hocus-pocus. The charm was set down:

A B R A C A D A B R A
A B R A C A D A B R

Abraham [according to Gen 17 5=father of many] or **Abram** [Heb ,=the father is high], progenitor of the Hebrews He is the example of a man devoted to God, as in his journey to Canaan, his treatment of Lot, or his willingness to sacrifice his son He is principally important as the founder of Judaism, the religion of a covenant In this function he instituted circumcision and received the promise of Canaan for his people, who are descended from Isaac, the son of his old age Gen 11–25 Because of this dual role as founder of a race and its religion, the expression "Abraham's bosom," meaning the bliss awaiting his children, was current among later Jews and has become, for Christians, a synonym for heaven Luke 16 19–31 His titles, Father of the Faithful and Friend of God (2 Chron 20 7, Rom 4 11), are used by Mohammedans, who deem him ancestor, through Ishmael, of the Arabs The frequent use of his name among Christians and the numerous paintings depicting the story of the sacrifice of Isaac (e g , by Andrea del Sarto) testify to the universal reverence in which worshipers of God have held this founder of their faith See Sir C L Woolley, *Abraham Recent Discoveries and Hebrew Origins* (1936)

Abraham, Plains of, comparatively level field adjoining the upper part of the city of Quebec Here was fought in 1759 the famous battle between the English under Gen James WOLFE and the French under MONTCALM which decided the outcome of the last of the FRENCH AND INDIAN WARS and the fate of Canada Part of the battle site is now occupied by suburban buildings, but a part is preserved as a national park

Abraham ben Meir ibn Ezra see IBN EZRA

Abraham Lincoln National Historical Park see NATIONAL PARKS AND MONUMENTS (table)

Abram see ABRAHAM

Abramovich, Sholem (or **Solomon**) **Yakob** see MEN DELE MOCHER SFORIM

Abrams, LeRoy, 1874–, American botanist b Sheffield, Iowa He was professor in Leland Stanford Univ from 1920 until 1940, when he became professor emeritus He wrote several works on the flora of the Pacific coast, including *Illustrated Flora of the Pacific States* (1923)

Abrantès, Laure (Permon) Junot, duchesse d' (lōr' pĕrmō' zhünō' düshĕs' dăbrätĕs'), 1784–1838, French memoirist, wife of Gen Andoche JUNOT She was noted for her extravagance and frivolity After her husband's death, she joined in legitimist conspiracies, and under the Restoration her salon was a social and literary center Her memoirs (1831–38), in many volumes, describe the scandals and personalities she had known

Abrantes (ŭbrän'tĭsh), town (pop 4,170, commune pop 7,216), Santarém dist , central Portugal, in Estremadura, on the Tagus river Early fortified, it was a strategic point through the centuries Alfonso I took it from the Moors in 1148 John I gathered his army here before the battle of Aljubarrota (1385) In the Napoleonic Wars, the French under Junot won the battle of Abrantes in 1807, but Masséna was in 1810 unable to take the town by siege

abrasive, material used for grinding, smoothing, cutting, or polishing another substance Among the important natural abrasives are DIAMOND (in the form of dust and small inferior stones), CORUNDUM, emery, SAND, ground quartz, PUMICE, kieselguhr, chalk, and TRIPOLI. Important artificial abrasives are alundum (see ALUMINA), carborundum (see SILICON CARBIDE), and boron carbide, all of which are very hard Tripoli, chalk, and aluminum hydroxide, suspended in water, are efficient polishing agents Silicon carbide, emery, and corundum are frequently mixed with cement and molded into wheels, blocks, and sticks. The finer powders are dusted on glue paper to produce emery paper, glass paper, and sandpaper Pumice, finely powdered, is used to remove tartar from teeth. Sand is used to great advantage in sandblast machines Automobile cylinders and valves are ground with

emery or carborundum powder, mixed with oil, and tools are sharpened on emery wheels Diamonds are cut by a thin disc of copper revolving at high speed and dipping into a small container of oil and diamond dust Materials with abrasive qualities can do much damage to machinery, especially to bearings and sliding parts See Johnson Heywood, *Abrasive Grains and Their Uses* (1943).

Abravanel or **Abarbanel, Isaac** (ubrä'vunĕl, -barbū-), 1437–1508, Jewish theologian, biblical commentator, and financier, b Lisbon He served as treasurer to Alfonso V of Portugal until Alfonso's death and subsequently was employed by Ferdinand and Isabella and by the governments of Naples and Venice His biblical commentaries are notable for their interpretation of the books of the Bible in terms of their various historical and social backgrounds and for their liberal quotations from Christian commentaries Other sections of his work are devoted to the defense of miracles against the rationalistic explanations of Maimonides and to analyses of the Messianic prophecies

Abruzzi, Luigi Amedeo, duca degli (lwē'jē ämädā'ō dōōkä dā'lyē ābrōōt'tsē), 1873–1933, Italian naval officer, mountain climber, and arctic explorer, b Madrid, cousin of Victor Emmanuel III He achieved the notable first ascent of Mt St Elias in Alaska (1897) Abruzzi led a polar expedition (1899–1900) in which Captain Cagni in a sledging journey reached 86° 34′ N, slightly above Nansen's record In 1906 Abruzzi explored the Ruwenzori range in Africa and in an attempt on K2 (Mt Godwin-Austen) in the Himalayas (1909) set a world record for altitude (24,600 ft) In the Tripolitan War he commanded a naval squadron and from 1915 to 1917 commanded Italian naval forces in the Adriatic Between 1919 and 1929 he explored and colonized in East Africa along the Shebeli river His own account of his polar expedition has been translated in *On the "Polar Star" in the Arctic Sea* (1903) For an account of his Himalaya expedition, see Filippo de Filippi, *The Italian Expedition to the Himalaya, Karakoram, and Eastern Turkestan* (Eng tr, 1932)

Abruzzi e Molise (ubrōōt'tsē ā mōlē'zā), region (5,883 sq mi, pop 1,589,804), central Italy, along the Adriatic Sea and in the most rugged part of the Apennines, which culminate here in the GRAN SASSO D'ITALIA The region is divided into five provinces, named after their chief towns Aquila, Chieti, Pescara, and Teramo, in the north, constitute the Abruzzi, Campobasso proper, in the south, is coextensive with Molise Aquila is the regional capital Sheep are raised on the extensive pastures, vineyards and olive groves cover the lower mountain slopes, and cereals are produced along the coast and in the fertile area of reclaimed Lake Fucino Industries are very poor The region was conquered by the Romans in the 4th cent B C It was part of the Lombard duchy of Spoleto (6th–11th cent A D), the Norman kingdom of Sicily (12th–13th cent), and the kingdom of Naples (13th–19th cent).

Absalom (ăb'sŭlŏm) [Heb, =father of peace], son of David He murdered his brother Amnon for the rape of their sister Tamar and fled After a time he returned, but no sooner was he reconciled with his father than he stirred up a rebellion ultimately fatal to himself 2 Sam 3 3, 13–19, 2 Chron 11 20,21 The form Abishalom in 1 Kings 15 2,10 is probably a substitution from taboo

Absalon (ap'sälōn) or **Axel** (ak'sŭl), c 1128–1201, Danish churchman, archbishop of Lund (1178–1201) He had great influence on political affairs under Waldemar I and Canute VI, warred against the pagan Wends, and in 1184 won a naval victory over Bogislav, duke of Pomerania He attempted monastic reforms, introduced canon law into Denmark, and was the patron of Svend Aagesen and of Saxo Grammaticus Absalon also first fortified Copenhagen

Absaroka Indians, see CROW INDIANS

Absaroka Range (ăbsŭrō'ku), part of the Rocky Mts, c 150 mi long, NW Wyo and S Mont, partly in Yellowstone National Park and W of the Bighorns

abscess, the result of infection, characterized by inflammation and the formation of pus in disintegrated tissue Abscesses are hot, red, and painful. They may occur in the skin, at the root of a tooth, in the middle ear, in the mammary gland, in bone, in the recto-anal region, and elsewhere in the body Unless they discharge spontaneously, they require surgical incision Tubercular abscess may occur in nodes of the lymphatic system An infected sinus (see FISTULA) resulting from this condition responds to rest treatment in the early stages In chronic cases, heliotherapy (sun baths) may be of assistance

Absecon (ăbsē'kŭn), city (pop, 2,084), SE N J., NW of ATLANTIC CITY, settled c 1780, inc 1902

absenteeism. In its original usage the term refers to a system under which a person controls, and derives income from, land or capital in a region or country in which he does not live Absenteeism was an abuse in pre-Revolutionary France, in Ireland during the 18th and 19th cent, and in countries of E and S Europe before the First World War. Under the Irish land settlement of 1885 large holdings of absentee English owners were divided and sold to residents Revolutions and reforms after the First World War abolished or reduced absentee ownership of land in a number of countries of E and SE Europe More recently, the term has been applied to the concentrated control of wealth through various corporate devices Many corporations limit voting power to certain classes of stocks, and large percentages of investors have no directing power Holding companies further remove the average investor from the actual conduct of the business Chain stores and branch banking are also aspects of absentee ownership See Thorstein Veblen, *Absentee Ownership and Business Enterprise in Recent Times* (1923), Elton Mayo, *Human Problems of an Industrial Civilization* (1933).

absinthe (ăb'sĭnth), an emerald-green, toxic LIQUEUR distilled from wormwood and other aromatics, including angelica root, sweet-flag root, star anise, and dittany, which have been macerated and steeped in alcohol Genuine absinthe is 70 to 80 percent alcohol Excessive consumption of absinthe affects the digestive organs and nerve centers and may produce delirium and idiocy Its manufacture and sale were prohibited by Switzerland (1908) and France (1915), formerly the chief producers In 1912 the United States forbade the importation of absinthe

absolute, in philosophy, the opposite of relative The term has acquired numerous widely variant connotations in different philosophical systems It means unlimited, unconditioned, or free of any relation, perfect, complete, or total, permanent, inherent, or ultimate, independent, or valid without reference to a perceiving subject In logic, absolute means certain or indubitable as opposed to probable or hypothetical As a substantive, the absolute is the ultimate basis of reality, the principle underlying the universe Theologically, it is synonymous with, or characteristic of, God Philosophically, it may be considered as the unknowable, the thing-in-itself, as that ultimate nonrelative which is the basis of all relation, as the ultimate, all-comprehensive principle in which all differences and distinctions are merged The concept of the absolute was present in Greek philosophy In modern days, both realists and idealists have used the term, but it is, perhaps, most intimately connected with Hegel's absolute idealism For HEGEL and his followers, the absolute is the all-comprehensive mind

absolute music, term used for abstract musical composition in antithesis to PROGRAM MUSIC It is not associated with ideas or with a pictorial or narrative scheme of emotions, nor does it attempt to reproduce sounds in nature It endeavors to be wholly self-sufficient

absolute pitch, the position of a tone in the musical scale determined according to the number of vibrations per second, irrespective of other tones The term is used for denoting the capacity to identify any given tone upon hearing it sounded alone or to sing any specified tone Experiments have shown that this ability can be acquired through practice, but it is inborn in certain individuals

absolute zero see TEMPERATURE

absolution [Latin, =loosing], in theology, the act of cleansing and the effective decree which at once cleanses the sinner and makes him capable of accepting the free grace of God The absolved person is said to be in a state of grace Protestants have virtually rejected the decree of absolution, placing their emphasis on God's act (see GRACE) In the Roman Catholic Church absolution is the chief end of PENANCE, a sacrament ministered by the priest as the voice of the Church, which has her authority from God There are two formal types of absolution—indicative, e g, "I absolve thee" (*ego absolvo te*), and deprecatory, e g, "May the Lord absolve thee" (*Dominus absolvat te*) The first is a decree, the second at best an assurance Both are customary in penance, the first is prescribed, the second may be always valid

absolutism, system of government in which SOVEREIGNTY is most highly concentrated and without theoretical checks by portions of the body politic or by the people as a whole In practice the absolute government tends to be limited by existing law and political custom, by the danger of war and overthrow by states on whom its claims may impinge, and by the possibility of internal revolt against it, which Hobbes called the effectual limit to tyranny The sway of the tyrants over the political life of the Greek cities, resulting from their control over the labor force and the new coinage, furnishes the first instance of Western absolutism Plato and Aristotle, influenced by the example of DIONYSIUS THE ELDER, contemporary tyrant of Syracuse, stressed the role of the democracy and of military power in the composition of the absolutist state In the Hellenic and Roman periods, deification added religious status to the political claims of the absolutist ruler and insured the legality of his edicts after death In the period of the Renaissance, absolutism, represented by the monarchies of Europe (see DIVINE RIGHT), triumphed over the rival powers of feudalism, the Church, and the empire Its greatest exponent was Louis XIV of France The recrudescence of absolutism in the 20th cent, after the victories of popular government in the English, American, and French revolutions, followed the crisis of capitalist economy and the rise of Marxian and Fascist economic and political philosophies The modern absolutist state centers around the person of the DICTATOR, who tends to assume permanent status instead of acting as temporary trustee as in classical practice

absorption: see GAS, OSMOSIS, SPECTRUM

abstinence: see FASTING, TEMPERANCE MOVEMENTS

abstract art, 20th-century tendency in the plastic arts to suppress everything in a work save its basic formalized structure Some critics credit Cézanne with the initial step in this direction Among a host of related movements CUBISM in France and EXPRESSIONISM in Germany survived long enough to produce lasting results English vorticism and Italian futurism were shorter lived The term is applied to works ranging from the purely geometric improvisations of Kandinsky to the still lifes of Braque, in which the subject is clearly indicated Abstract art has played a vital role in the envisaging and decorating of the new forms necessitated by modern techniques and invention Among those who continue the tradition of pure abstractionism in painting are Piet Mondrian and Alexander Calder Most important modern galleries contain examples of abstract painting and sculpture The Museum of Modern Art and the Museum of Non-Objective Paintings in New York city have notable collections See F B Blanshard, *Retreat from Likeness in the Theory of Painting* (1945)

abstract of title, summary of all documents and facts which concern the ownership of a piece of land A brief account is given of court proceedings, wills, mortgages, taxes, previous sales, and all other factors which at any time affected the ownership of the property The old rule in England required that an abstract of title should cover the 60 years before the proposed sale In 1874 this was changed to 40 years No such rule exists in the United States, where the procedure is to trace the title, if possible, back to the original grant from the government See Robert Kratovil, *Real Estate Law* (1946)

Absyrtus see MEDEA

Abt, Franz (frants' äpt'), 1819–85, German conductor, prolific composer of piano pieces, choruses, and songs His songs include *When the Swallows Homeward Fly*

Abu, Mount (ä'bōō), plateau, c 4,000 ft high, in the Aravalli Hills in Rajputana, India, now in Bombay prov It rises to a peak 5,650 ft high and has a hot-weather resort notable for many temples and especially for two, of white marble, which are outstanding examples of Jain architecture

Abu Bakr (ä'bōō bä'kur), 573–634, 1st caliph, friend, father-in-law, and successor of Mohammed. He was probably Mohammed's first convert outside the Prophet's family and certainly his most zealous believer He alone accompanied Mohammed on the Hegira The marriage of his daughter Ayesha to Mohammed made the ties even stronger On the Prophet's death in 632, Omar secured Abu Bakr's election over the tribal chiefs and Ali The two years of his caliphate were critical for Islam Though he was himself fervent rather than warlike, his party crushed opposition in Arabia and began the remarkable extension of Islam as a world religion

Ababus (-bū'-), father of the Ptolemy who murdered Simon the Maccabee 1 Mac 16 11

Abu Hanifa (ä'bōō hänē'fa), 699–767, Moslem jurist He founded the Hanafite system of Islamic jurisprudence This gives the judge considerable discretion when the Koran and the Sunna (traditions) are inapplicable (see ISLAM).

Abu Khasim. see ABULCASIS

Abukir, Egypt see ABOUKIR

Abu-l-Abbas as-Saffah (ä'bōōl-äbäs' äs-säfä'), d. 754, 1st ABBASID caliph (749–54) Raised to the caliphate by the armed might of ABU MUSLIM, he took the reign name as-Saffah [shedder of blood] Most of the Omayyad family were exterminated, and the reign was one of massacre and force

Abu-l-Ala al-Maarri (ä'bōōlä'la al-mä-är-rē'), 973–1057, Arabic freethinking poet He was born and lived most of his life in Maarrah, S of Aleppo He was blind from childhood Brilliantly original, he became one of the literary reformers who discarded classicism for a modern intellectual urbanity After 35 he lived a life of seclusion, and with his advocacy of an utterly ascetic purity, his poetry became more stereotyped He replaced all religion with a fatalistic monotheism

Abu-l-Atahiya (ä'bōōlätä'hēyä), 748–828, Arabic poet He lived in Kufa and Baghdad and was patronized by the caliphs Mahdi and Harun-al-Rashid

Abulcasis (ä'bōōlka'sĭs) or **Abu Khasim** (ä'bōō kä'sĭm), fl. 11th cent, Arabian physician His chief work, a detailed account of medicine and surgery, was long a valued text Known as the *Tasrif* [the collection], it consisted of three parts dealing with cautery, with surgery, and with fractures and dislocations It was translated many times into Latin and into other languages. His name also appears as Albucasis (ăl'bōōkā'sĭs).

Abu-l-Faraj or **Abulfaragius** · see BAR-HEBRAEUS

Abu-l-Faraj Ali of Isfahan (ä'bo͞olfä'räj à'lē, ĕsfähän'), 897–967, Arabic scholar The invaluable *Book of Songs*, the result of his study of Arabian history at Baghdad, is a compilation of Arabic poems set to music, with notes on the authors and composers

Abulfazl (ä'bo͞olfä'zul, u'bo͞olfŭz'ul), 1551–1602, minister of state and adviser to Akbar, Mogul emperor of India His *Book of Akbar*, in Persian, recounts a history of the reign, describing the political and religious organisation of the empire

Abu-l-Fida (ä'bo͞ol-fē'dĭa, -fīda'), 1273–1331, Arab writer, b Damascus He fought against the Christians in the last period of the Crusades and later was governor of Hama in Syria He was a patron of learning and wrote a universal history, a superior source for Arabic history from 700 to 1200

Abu-l-Walid Merwan ibn Janah, see JONAH, RABBI

Abu Muslim (ä'bo͞o mo͞oslēm'), c 728–755, Persian revolutionist By political and religious agitation and by force of arms he started (747) a revolution against the Omayyads before he was 21, and in 749 he established the head of the Abbasid family in the caliphate as ABU-L-ABBAS AS-SAFFAH Abu Muslim retired to Khurasan as governor, but the Abbasid caliphs feared him and Mansur treacherously murdered him

Abu Nuwas (no͞owäs'), d c 810, Arabic poet Born in Ahwaz, Persia, he spent most of his life in Baghdad High in favor with the caliphs Harun-al-Rashid and Amin, he lived a courtier's life, the extravagance of which his highly talented poetry echoes with no reserve

Abury, Wiltshire, England see AVEBURY

Abu Said ibn Abi-l-Khair (ä'bo͞o sa'ĭd ĭb'n ä'bēlkhīr'), 967–1049, Persian poet, a Sufi and a dervish He was the first to write rubaiyat in the Sufistic strain that Omar Khayyam made famous

Abu-Simbel (ä'bo͞o-sĭm'bul) or **Ipsambul** (ĭp"sambo͞ol'), village, S Egypt, on the Nile and 36 mi N of Wadi Halfa It is the site of two rock-hewn temples constructed (c 1250 B C) in the reign of Ramses II The façade of the principal temple bears three sitting statues (c 65 ft high) of the king, a fourth has fallen

Abu Tammam Habib ibn Aus (tăm-măm' hä-bēb' ĭb'n ous'), c 805–c 845, Arabic poet, compiler of the HAMASA

abutilon (ubū'tĭlŏn), any species of the genus *Abutilon*, chiefly tropical herbs or shrubs cultivated in the Temperate Zone as house or bedding plants Those having maplelike leaves are known as flowering maple The bell-shaped flowers, mostly in colors varying from red to yellow and white and often striped, may be almost continuous blooming Propagation is by seed or cutting The VELVETWEED is a species of *Abutilon*

Abydos (ubī'dus), ancient city of Egypt, c 50 mi NW of Thebes Associated in religion with Osiris, it became the most venerated place in Egypt Its temples, of the I to the XXX dynasty, include one by Seti I, which is perhaps the finest surviving in Egypt, and another by Ramses II

Abydos, ancient town of Phrygia, Asia Minor, on the Asiatic side of the Hellespont opposite Sestos, in present Turkey Near here Xerxes built his bridge of boats, and in 411 B C the Athenian fleet defeated the Spartans It was the scene of the story of Hero and Leander and of Byron's *Bride of Abydos*

Abyssinia see ETHIOPIA

Ac, chemical symbol of the element ACTINIUM

acacia (ukā'shu), any of the trees or shrubs of the genus *Acacia*, legumes, chiefly of the tropics and subtropics of both hemispheres, where they are cultivated for decorative and economic purposes, farther north they are greenhouse plants The foliage often appears feathery because of many small leaflets, but in some species leaflike flattened stems take the place of the leaves The small yellow or white flowers grow in fluffy ball-like or elongated clusters Various species yield GUM arabic, dyes, tanning materials, fiber, perfume, medicine, soap, CATECHU, furniture wood, and fragrant timbers The Ark of the Covenant and furniture of the Tabernacle were made of SHITTIM WOOD, thought to be an acacia Among species considered acacias are the kangaroo thorn, WATTLE, blackwood, and the bull-horn acacias, which have large hollow thorns inhabited by ants said to feed upon a sweet secretion of the plant and in turn to guard it against leaf-eating insects Some acacias grow wild in the W United States Various species of LOCUST are sometimes called acacia, and acacias may be called MIMOSA, which they often closely resemble

academic costume, dress required on stated occasions by educational institutions for students, faculty, candidates for degrees, and degree holders It is a medieval form of clothing retained by clerics and adopted in the early universities to distinguish members from the lay community In the United States a system prescribing styles and colors was adopted in 1895 and revised in 1932 It has been accepted by over 700 colleges and universities The gown shows the academic rank (see DEGREE, ACADEMIC) of the wearer The undergraduate's is a plain gown of black stuff, the bachelor's is similar but with long, pointed sleeves; the master's, often of silk, has sleeves closed at the end and slit to pass the arm, the doctor's, of silk faced with velvet, bears on the bell sleeves three velvet bars of a color indicating the department of learning in which the degree was conferred (e g , theology, scarlet, law, purple, philosophy, dark blue, science, golden yellow, medicine, green) A hood lined with the official color of the institution conferring the degree and in the shape and length prescribed for the academic rank may be worn over the gown The mortarboard is a skull cap supporting a stiffened square top with a tassel suspended from the center

academic freedom, right of scholars to pursue their research, to teach, and to publish without control or restraint from the institutions which employ them This is a civil right that is enjoyed, at least in statute, by the citizens of democratic countries In the case of scholars whose occupation is involved with that right, the concept of academic freedom generally includes the property right of tenure of office An essential to the acceptance of the concept is the notion that truth is best discovered through the open investigation of all data A less clearly developed corollary of academic freedom is the obligation of all those who enjoy it to pursue the line of open and thorough inquiry regardless of personal considerations Historically, academic freedom developed in the period of Enlightenment Early cultures, where education was viewed as a system of absorbing a well-defined content of subject matter, offered little opportunity for speculation The medieval universities also operated within a field of definite scope, primarily theological, and every teacher and scholar was in danger of the charge of heresy if he extended his inquiry beyond the approved limits The Enlightenment initiated the scientific method of analysing data and establishing hypotheses, much of the groundwork being laid by scholars outside university life, such as Thomas Hobbes, John Locke, and Voltaire Germany was the first country to apply the new freedom within the university, and the tolerance of Frederick the Great aided this development In England it was laymen like Jeremy Bentham, Ricardo, Herbert Spencer, Darwin, and Thomas Huxley who demonstrated the value of free investigation The schools had to be secularized before there was general acceptance of this right within university walls Not until 1828 was the first nonsectarian university established in London In the United States the early colleges were religiously controlled, and there are still some denominational schools which define the areas of speculation Another danger to academic freedom has been the control exerted by financial contributors whose endowments definitely stipulate the direction and extent of inquiry The American ASSOCIATION OF UNIVERSITY PROFESSORS has been active in establishing standards of academic freedom and obligation and has investigated and passed judgment upon cases in question See *Freedom Its Meaning* (ed by R N Anshen, 1940), C L Becker, *Freedom and Responsibility* (1946)

Académie française see FRENCH ACADEMY

Academus (ăkudē'mus), in Greek legend, eponym of the ACADEMY He informed Castor and Pollux where Theseus had concealed their sister Helen and thenceforth was honored by the Spartans

Academy, garden near Athens (named for the hero ACADEMUS) which was frequented by PLATO In this garden (c 387 B C) Plato taught and conferred, and here his followers met for nine centuries until, along with other pagan schools, it was closed by Justinian in A D 529 The Academy has come to mean the entire school of Platonic philosophy, covering the period from Plato through Cicero During this period Platonic philosophy was modified in various ways, and these phases have been noted in two, three, or five main sections The frequently used division into three phases is the Old Academy (until c 250 B C) of Plato, SPEUSIPPUS, and XENOCRATES, the Middle Academy (until c 175 B C) of ARCESILAUS, and the New Academy of CARNEADES Various learned and literary societies and art associations have called themselves academies, e g , the Accademia della Crusca, the French Academy, the National Academy of Design, and the Royal Academy of Art

Acadia (ukā'dēu), region and former French colony, E Canada, centered on Nova Scotia but including also Prince Edward Island and the mainland coast from the Gulf of St Lawrence S into Maine The first and chief town, Port Royal (now ANNAPOLIS ROYAL, N S), was founded by the sieur de Monts in 1605 (see SAINT CROIX 1) and was soon involved in the imperial struggle that was to end in America with the FRENCH AND INDIAN WARS Destroyed by the British under Samuel ARGALL in 1614, the town was later rebuilt, and as British claims temporarily lapsed (see NOVA SCOTIA), the colony grew to be fairly prosperous with farmers on their dike-protected fields, fishermen on the shore, and fur traders in the forests British attacks on Port Royal were resumed later, and the capture of 1710 was confirmed as permanent in the Peace of Utrecht (1713). The British feared and distrusted their French-speaking, Roman Catholic neighbors, who were friendly with the Indians and, wishing only to remain neutral, refused to swear allegiance to Great Britain In 1755 the British fell upon the peaceful Acadian farms and, seizing most of the Acadians (sometimes said to be 7,000 of 10,000), deported them to the more southerly British colonies, scattering them along the Atlantic coast from Maine to Georgia and sending some to the West Indies and Europe The men were sent first, families were riven, farmhouses burned, and some lands abandoned to waste In 1762 a new mass deportation was thwarted, the war ended in 1763, and hysteria subsided The remaining Acadians and exiles who returned took the British oath, and after 1767 they rapidly became Nova Scotians Today in Canada, Acadian (French *Acadien*) means a French-speaking inhabitant of the Maritime Provinces Many exiles who did not return found havens elsewhere, the most celebrated being the region around St Martinville in S Louisiana, where even yet the Cajuns—as they are popularly called—maintain a separate folk culture The sufferings of the expulsion are pictured in Longfellow's *Evangeline* See A G Doughty, *The Acadian Exiles* (1916), J Bart Brebner, *New England's Outpost* (1927) and *The Neutral Yankees of Nova Scotia* (1937)

Acadia National Park · see MOUNT DESERT ISLAND

Acadia University · see WOLFVILLE, N S

Acajutla (äkähōōt'lä), town (1946 estimated pop 1,501), SW Salvador, a Pacific port It is the terminus of the railroad, and Acajutla exports coffee

acanthus (ukăn'-) or **bear's-breech,** any species of the genus *Acanthus*, perennial, semihardy decorative plants, native to the Mediterranean region The leaves, deeply cut and sometimes prickly, probably have been more often used in decoration (as in the capital of the Corinthian column, see CORINTHIAN ORDER) than any other plant In Greek decoration, a narrow, spiny-leaved acanthus was used, in Roman decoration, the form was usually broad leaved and spineless In Christian painting and sculpture, the acanthus symbolizes heaven

Acapulco (äkäpōōl'kō), city (pop 9,993), Guerrero, SW Mexico, a port on the Pacific A fine natural harbor formed by mountainous promontories made Acapulco the starting point of many Spanish colonial voyages of exploration and the chief port in the development of the Philippines A long period of decline followed the winning of Mexican independence, but the city has recently become a popular winter resort Local products are hides, sesame seed, and tropical fruits Earthquakes have partially destroyed it several times, and in 1932 a hurricane caused severe damage

Acarnania (ăkurnā'nēu), region of ancient Greece, between the Achelous river and the Ionian Sea The inhabitants maintained their isolation, contributing little to Greek civilization The chief city was Stratos The Acarnanians generally sided with Athens, and Athens helped Acarnania to uphold its independence against Corinth and Sparta in the 5th cent B C Later (390-375) the Spartans controlled the region Acarnania then allied itself with Macedon The persistent struggle with the Aetolians cost Acarnania national existence for a time, but it was restored and the Acarnanians kept some autonomy under the Roman Empire until the Christian era

Acarya see BHASCARA

Acastus (ukā'stus), in Greek legend, an Argonaut, son of PELIAS and father of LAODAMIA He dethroned JASON in revenge for Pelias' death Later, his wife, rebuffed by Peleus, accused the latter of dishonoring her Acastus abandoned Peleus in the wilderness, but he was saved by Chiron and returned to kill Acastus and his wife

Accad see AKKAD

Acca Larentia (-rĕn'shu) or **Acca Larentina** (-tī'nu), in Roman religion, wife of FAUSTULUS and nurse of ROMULUS and Remus Her 12 sons founded the priesthood of the ARVAL BROTHERS At the feast of Larentalia, Dec 23, she was honored as a goddess of fields and a protector of the city.

Accaron see EKRON

Accault, Michel see ACO

accent, in language, emphasis given a particular sound In English each independently spoken form has an accented vowel, often it is the first vowel The English accent is phonemic (or significant), for there are words different from each other only in their accent, e g , *contract*, verb and noun In French the accent is entirely different, but the signs called accents have nothing to do with it These so-called accents, acute (´), grave (`), and circumflex (^), are borrowed from Greek writing, where they probably showed differences in pitch Some languages have significant variations of both pitch and loudness (or stress) Thus in English every utterance is marked as complete by having one of certain established pitch patterns (or intonations), meaning, for example, "complete definite declaration" in *He's a good boy*, "question" in *Is he there?* or "tentative statement" in *She'll probably come* See ABLAUT and PHONETICS

acceptance, in law, term having several meanings. In the law of contracts it signifies assent to an offered

CONTRACT In the law of negotiable instruments it is the signification by the drawee of a BILL OF EXCHANGE that he assents to the order of the drawer. A trade acceptance is a bill of exchange which the seller of goods has drawn on the purchaser and which the purchaser has accepted A banker's acceptance is a special kind of bill of exchange by which a bank grants credit See FEDERAL RESERVE SYSTEM

accessory (ăk-sĕ'sŭrĭ, ŭk-), in law, a person who, though not a principal (actual perpetrator) of a crime, is in some way connected with its commission. An accessory before the fact is one whose counsel or instigation leads another to commit a crime An accessory after the fact is one who, having knowledge that a crime has been committed, aids, or attempts to aid, the criminal to escape apprehension In misdemeanors and in treason (at least in England) there is no distinction between principals and accessories In certain felonies besides treason (e g , murder) many American statutes treat the accessory before the fact as a principal or as one engaged in a CONSPIRACY The penalties for being accessory after the fact are usually much less severe than those meted out to the principal See STOLEN GOODS

Accho (ăk'ō), OT variant of ACRE

accident, in law, an unusual or unexpected event producing physical injury or loss of property The term includes events which happen without human agency (see ACT OR GOD) and those which are produced through human agency though without design When not an act of God, an accident ordinarily involves NEGLIGENCE on the part of the perpetrator Such terms as "mere accident" or "pure accident," however, connote absence of negligence An inevitable accident is an act of God or an event produced through human agency which could not be foreseen or prevented, hence, there can be no damages for its commission In equity, relief may be given from the effects of an accident which benefits a party, thus, if by accident the boundaries of property are confused, the party injured may seek a judicial determination of the true boundaries In INSURANCE and in WORKMEN'S COMPENSATION statutes, accident has special meanings Recently some psychiatrists have discounted accident (in the lay sense) as an explanation of events in a person's life They maintain that many so-called accidents are unconsciously motivated and that in many persons a proneness to physical injury through apparent accidents indicates psychological maladjustment See EXTRAHAZARDOUS OCCUPATIONS, FIRST AID, SAFETY MOVEMENT, SHOCK

acclimatization (ŭklī"mĭtŭzā'shŭn), ability of plants and animals to become adapted to conditions of environment to which they have not been accustomed These conditions relate to food, temperature, moisture, and altitude Acclimatization does not necessarily imply naturalization The canary is not acclimatized, although it is established in many regions The English sparrow is naturalized in the United States Ability to become acclimatized is important in the struggle for existence (see SELECTION)

Accolti, Benedetto (bānādĕt'to ăk-kōl'tō), c 1415–1466?, Italian humanist, lawyer, and historian He succeeded (1459) Poggio as chancellor of the republic of Florence His most notable work was a history of the First Crusade, from which Tasso supposedly drew the idea for *Jerusalem Delivered* His son, **Bernardo Accolti** (bĕrnar'dō), 1465?–1535, called Unico Aretino, achieved great renown in his day as an extemporaneous poet His works are forgotten today Another son of Benedetto, **Pietro Accolti** (pyā'trō), 1455–1532, became a cardinal He was abbreviator under Leo X and drew up the papal bull against Luther in 1520

accompaniment, in music, a background part, such as the chords supporting the melody in a piano piece or the orchestral or instrumental support given a soloist or choral group In the lieder of Schubert, Brahms, and Schumann, the intrinsic musical interest of the piano accompaniment is usually as great as that of the voice part, while at other periods and in other types of music, accompaniments consist only of the barest musical background for the solo part

accordion, small portable musical instrument, consisting of rectangular bellows expanded and contracted between the hands Buttons or keys operated by the player control valves through which air is admitted, setting in motion metallic tongues or free reeds, whose length and thickness determine the pitch of the tone The first accordions were those made by Friedrich Buschmann (Berlin, 1822), Buffet (1827), and Damian (Vienna, 1829) The keyboard was added by Bouton (Paris, 1852), hence the term "piano accordion " The instrument is generally associated with folk music and is also very popular with musical amateurs Instruments related to it in principle are the CONCERTINA and the REED ORGAN

accounting, classification, analysis, and interpretation of the BOOKKEEPING records of an enterprise The accountant evaluates records drawn up by the bookkeeper and shows the results of his investigation as losses and gains, leakages, economies, or changes in value, so as to reveal the progress or failures of the business and also its limitations and possibilities An accountant must also be able to draw up a set of books and prescribe the system of accounts which will most easily give the desired information, he must be capable of arriving at a comprehensive view of the economic and the legal aspects of a business, envisaging the effect of every sort of transaction both on the profit and loss statement and on the balance sheet, and he must recognize and classify all other factors which enter into the determination of the true condition of the business, e g , statistics or memoranda relating to production and properties and financial records representing investment, expenditures, receipts, fiscal changes, and standing Cost accounting shows the actual cost from time to time of each service rendered or of each article produced, by this system unprofitable ventures, services, departments, and methods may be discovered AUDITING is an important branch of accounting While there were stewards, auditors, or bookkeepers in ancient times, the professional accountant who, instead of serving one employer, offers his services, for a fee, wherever they are needed is a 19th-century development The profession was first recognized in Britain in 1854, when the Society of Accountants in Edinburgh was given a royal charter Similar societies were later established in Glasgow, Aberdeen, and London In the United States the first such professional society was the American Association of Public Accountants duly chartered by the state of New York in 1887 All the states and also Alaska, Hawaii, Puerto Rico, and the District of Columbia now have laws under which the public accountant who complies with certain educational and experience requirements and passes the required examination may be granted the title Certified Public Accountant (C P A) The holders of these certificates have organized into societies in most of the states There is only one body representing the accounting profession as a whole in this country, the American Institute of Accountants, which succeeded the American Association of Public Accountants in 1916 Many colleges now teach the subject, which has increased in importance with the growth of corporate activity and the increasing necessity for governmental regulation of such activity See W L Green, *History and Survey of Accountancy* (1930), R B Kester, *Principles of Accounting* (4th ed , 1939), J L Dohr and H A Ingham, *Cost Accounting Principles and Practice* (3d ed , 1946)

Accra (ukra', ă'kru), city (pop 135,456), capital of the Gold Coast, a port on the Gulf of Guinea It grew around Danish, British, and Dutch forts built in the 17th cent and developed rapidly after the completion (1923) of a railroad to the agricultural and mining hinterland There is a college near by Accra has an international airport

Accrington, municipal borough (1931 pop 42,991, 1947 estimated pop 39,440), Lancashire, England, N of Manchester There are coal mines and large factories for the spinning, printing, and dyeing of cotton and the manufacture of textile machinery and dyestuffs

Accursius, Franciscus (frănsĭ'skŭs ukûr'shŭs), c 1185–c 1260, Italian jurist He was a professor of Roman law at the Univ of Bologna His great work on the Corpus Juris Civilis sums up the contributions of earlier Bolognese writers

accusative (ukū'zutĭv") [Latin,=for accusing], in Latin grammar, CASE typically meaning that the noun refers to the entity directly affected by an action The term is used for similar, but often not identical, features in the grammar of other languages Thus English *him*, usually called objective, is also called accusative

Aceldama (usĕl'dŭmŭ) [according to Acts 1 18,19= field of blood], potter's field bought with Judas' 30 pieces of silver, it is apparently the place where Judas died The purchase of this field to bury strangers in is the origin of the term "potter's field" for the paupers' burying ground Mat 27 3–10, Acts 1 16–19

acetaldehyde see ALDEHYDE

acetic acid (usē'tĭk), weak organic acid, a colorless liquid with a characteristic pungent odor, boiling at 118 5° C It is miscible with water in all proportions, heat is evolved Glacial acetic acid is the concentrated acid of 99 5 percent purity which solidifies at 17° C Acetic acid is the essential constituent of VINEGAR Concentrated acetic acid for industrial uses is prepared either from acetylene by a reaction yielding acetaldehyde (see ALDEHYDE), which is oxidized to produce acetic acid, or from the distillate of hardwood which contains pyroligneous acid Acetic acid reacts with other chemicals to form numerous compounds of commercial importance Among them are cellulose acetate, used in making acetate rayon, noninflammable moving-picture film, lacquers, and plastics, lead acetate (see SUGAR OF LEAD) and potassium acetate, both of which are used in medicine, copper acetate (see VERDIGRIS), and amyl acetate (often called banana oil), butyl, and ethyl acetate, all of which are used as solvents, chiefly in certain quick-drying lacquers Aluminum, chromium, and iron salts of acetic acid are used as mordants in dyeing textiles Acetic acid is employed in the production of acetone and in organic syntheses

acetone (ăs'ĭtōn) [from *acetic*], colorless, inflammable liquid compound of carbon, hydrogen, and oxygen, with a characteristic minty taste and odor, boiling at 56 1°C and solidifying at −94 6°C Acetone is used widely in industry as a solvent for numerous organic substances, in paint and varnish removers, and for dissolving and storing acetylene It is used in the manufacture of celluloid, of smokeless powders (as cordite), and of such substances as chloroform, iodoform, and sulphonal It is prepared by the distillation of wood and of certain acetates (as calcium acetate), by the oxidation of isopropyl alcohol, and by the fermentation of starch A liquid, oil of acetone, used in denaturing alcohol, is obtained when acetone is distilled

acetylcholine (ăs'ĭtĭlkō'lēn), organic compound of carbon, hydrogen, oxygen, and nitrogen and an active principle in ERGOT. By those who adhere to the chemical hypothesis as the explanation for the method of transmission of nerve impulses to muscles it is held that acetylcholine liberated at the terminations of the nerves causes the stimulation of the muscle fibers Acetylcholine is sometimes used, usually in the form of a chloride, in the the treatment of high blood pressure

acetylene (usĕt'lēn) [from *acetyl*, from *acetic*], colorless gas, boiling at −84°C , with an ethereal odor when pure The offensive odor often noted in the commercial product is caused by impurities With air it forms an explosive mixture It is soluble in acetone, alcohol, and water When dissolved in acetone it is nonexplosive and is stored under pressure in cylinders for commercial use It can be liquefied, but is explosive in this condition and is stored only in the smallest quantities. Acetylene is used as an illuminant, burning with a very luminous flame in special burners which admit air, and for cutting and welding metals (see OXYACETYLENE FLAME) Acetylene gas when subjected to high temperature undergoes polymerization and benzene is produced Commercially the gas is usually prepared by the action of water on calcium carbide Acetylene is the first member of a series of hydrocarbons, the **acetylene series** The acetylene molecule consists of two hydrogen atoms and two carbon, the carbon atoms joined together by a triple bond and each holding one of the hydrogen atoms In the acetylene series a definite relation exists between the number of hydrogen and carbon atoms, each member has a number of hydrogen atoms two less than twice the number of carbon atoms Thus, the second member of the series, allylene, has three carbon and four hydrogen

Achaea (ukē'u), region of ancient Greece, principally in the northern part of the Peloponnesus on the Gulf of Corinth It lay between Sicyon and Elis Here the Achaeans supposedly remained when driven from other parts of Greece by the Dorian invasion There were small Achaean cities banded together in a confederation The Achaeans colonized part of S Italy but were at first of little significance in the general picture of Greek politics Later, however, the Achaean League became an important factor After the downfall of the confederation, the name Achaea or Achaia (ŭkā'u, ŭkī'u) was given to a Roman province in the Peloponnesus

Achaean League (ukē'ŭn), confederation of Achaean cities on the Gulf of Corinth The so-called First Achaean League was formed apparently before the 5th cent B C for mutual protection against pirates The Achaeans remained aloof from the wars in Greece until they joined in the opposition to Philip II of Macedon in 338 B C The confederation was dissolved not long after that time The Second Achaean League was formed somewhat later In 251 B C Sicyon was freed from the rule of its tyrant, and it soon joined the confederation under the leadership of ARATUS Other cities outside Achaea also joined, and in 247 B C the Macedonians were driven from Corinth There was some promise of liberating all Greece, but unfortunately the interference of CLEOMENES III of Sparta threatened the Achaean League, and in 227 B C he commenced warfare The Achaean League then asked (224 B C) Macedonian aid against Sparta and the Aetolian League The result was the eclipse of the confederation until the wars between Macedon and Rome In 198 B C the Achaeans went over to Rome and with Roman aid won practically the whole Peloponnesus, forcing Sparta and Messene to join Later suspecting the Achaeans of again looking toward Macedon, the Romans deported (168 B C) many of them (including Polybius) to Italy Anti-Roman feeling grew, and in 146 B.C the Achaeans waged a suicidal war Rome easily triumphed at Corinth, dissolved the confederation, and ended Greek liberty A smaller Achaean League was formed, but was powerless

Achaeans, people of ancient Greece. Their origins are unknown, the theory that they were invaders

from the north is countered by the theory that they were autochthonous in the Peloponnesus. They had power in Greece by 1300 B C., and they were about that time in possession of Mycenae, but their relation to Mycenaean civilization is not entirely clear. The invasions of the Dorians supposedly forced some of them out to Asia Minor, others were concentrated in the region known in classical times as Achaea.

Achaemenidae (ăkĭmĕ'nĭdē) or **Achaemenids** (ăkĭmĕ'nĭdz), dynasty of ancient Persia. They were descended presumably from one Achaemenes, who was a minor ruler in a mountainous district of SW Iran. His successors, when Elam declined, spread their power westward. CYRUS THE GREAT was the real founder of the Persian rule by his conquest of ASTYAGES of MEDIA. The dates of the Achaemenid rule may be given as c 550–330 B C. It embraces all of the period of ancient Persian greatness, with the flourishing of PERSIAN ART AND ARCHITECTURE, the vast development of governmental administration, the appearance of literature written in CUNEIFORM, and the spread of ZOROASTRIANISM. The Achaemenid rulers after Cyrus were CAMBYSES, the impostor SMERDIS, DARIUS I, XERXES I, ARTAXERXES I, XERXES II, Sogdianus, DARIUS II, ARTAXERXES II (opposed by CYRUS THE YOUNGER), ARTAXERXES III, Arses, and DARIUS III. The dynasty came to an end when Darius III died in his flight before Alexander the Great.

Achaeus (ŭkē'ŭs), in Greek mythology, son of Xuthus and Creusa and ancestor of the Achaeans.

Achaicus (ukā'ĭkus) [Gr., =Achaean], Christian. 1 Cor. 16 17,18

Achai of Shabcha: see AHA OF SHABCHA.

Achan (ā'kăn) or **Achar** (ā'kär), Judahite who kept some of the spoil from the city of Jericho. For this he was stoned. Joshua 7; 1 Chron 2 7

Achard, Franz Karl (fränts' kärl' äkh'ärt), 1753–1821, German chemist. He made pioneer use of Marggraf's discovery of sugar in beetroots. The government granted him an estate in Silesia where, in 1806, he succeeded in producing beet sugar. Among his other contributions is the discovery of a method for working platinum.

Acharius, Erik (ĕr'ĕk akā'rēŏos), 1757–1819, Swedish physician and botanist, pupil of LINNAEUS. He was long an authority on lichens and wrote *Lichenographia universalis* (1810).

Achaz (ā'kăz), variant of AHAZ. Mat 1 9.

Achbor (ăk'bôr) [Heb., =mouse], same as **ABDON 2**.

Achen, Caran d': see CARAN D'ACHE.

Achelous (ăkĭlō'ŭs), in Greek religion, river-god. He was the son of OCEANUS and TETHYS and father of the Sirens and other nymphs. Several Greek rivers were named after him.

Achelous, Gr *Akheloos* (akhĕlō'ŏs), river, NW Greece, formerly also known as Aspropotamos. Rising in the Pindus mts., it flows generally south for 137 mi., traversing many mountain gorges, and empties into the Ionian Sea opposite Cephalonia. It is used for floating logs and supplies a hydroelectric power plant.

Achenbach, Andreas (ändrā'äs ä'khŋbäkh), 1815–1910, German marine painter, one of the founders of the modern German school of landscape painting. His brother **Oswald Achenbach,** 1827–1905, was also a landscape painter.

Achenwall, Gottfried, (gŏt'frēt akh'ŭnval), 1719–72, German statistician and political scientist. He used the term *Statistik* for the first time in his *Staatsverfassung der heutigen vornehmsten europäischen Reiche und Völker im Grundrisse* [the political constitution of the present principal European countries and peoples] (1749). By the term he meant a comprehensive description of the social, political, and economic features of a state.

Acheron (ă'kŭrŏn), in Greek religion, river of Hades.

Acheson, Dean Gooderham (ăch'ŭsun), 1893–, U S Secretary of State (1949–), b Middletown, Conn., grad Yale, 1915, and Harvard Law School, 1918. A student and friend of Felix Frankfurter, he was (1919–21) private secretary to Louis D. Brandeis, was a successful lawyer, and served (1933) as Undersecretary of the Treasury until disagreement with President Roosevelt's fiscal policy caused his resignation. As Assistant Secretary of State (1941–45) and Undersecretary of State (1945–47), he in the Second World War favored extensive aid to the Allies and in the post-war period strongly supported international organization (the United Nations), international relief (the UNRRA and the ERP), and the Truman doctrine (see TRUMAN, HARRY S.). He also systematized the method of the Dept. of State in dealings with other countries. In 1947 he was made vice chairman of the Hoover commission to recommend government reorganization. Acheson was appointed (Jan., 1949) to succeed George C. MARSHALL as Secretary of State. He faced difficulties in settling U.S. relations with the USSR, notably in the settlement of the Berlin crisis at the Paris conference in May, 1949 (see FOREIGN MINISTERS, COUNCIL OF).

Acheson, Edward Goodrich, 1856–1931, American inventor, b Washington, Pa. He became an electric-furnace expert and specialized in carbon and silicon research. In 1891 he discovered carborundum (see SILICON CARBIDE). He developed several lubricating media and originated processes in the production of silicon and aluminum. He invented a process important to industry for producing synthetic graphite of high purity.

Acheulian (ŭshōō'lēŭn), division of the PALEOLITHIC PERIOD which takes its name from Saint-Acheul in France, the site where its typical implements were first discovered.

Achill (ăk'ĭl) [Irish, =eagle], island, 14 mi. long and 11 mi. wide, off W Ireland, in Co. Mayo. It is connected with the mainland by a bridge over Achill Sound. The land is generally barren, and the inhabitants subsist with great difficulty by fishing and farming. It is known for its magnificent cliff scenery. Slieve Mor at the north end rises to 2,204 ft.

Achilles (ukĭl'lēz), in Greek legend, hero of the *Iliad*, one of the foremost of the Greek warriors who fought in the TROJAN WAR. He was the son of PELEUS and THETIS and was educated by the centaur CHIRON. Thetis, hearing a prophecy that her son would die at Troy, attempted to make him invulnerable by bathing him in the river Styx, but the water did not touch the heel by which she held him. She disguised him as a girl and hid him among the daughters of King Lycomedes of Skyros. One of the princesses, Deidamia, became the mother of his son Neoptolemus. Odysseus found Achilles and persuaded him to join the expedition to Troy. In the last year of the siege, he quarreled with Agamemnon over the possession of the slave girl BRISEÏS and refused to take further part in the war until his best friend, PATROCLUS, was killed by HECTOR. Then Achilles forgot his quarrel, went to battle once more, and killed Hector. Soon he himself was killed by PARIS (according to one story when arrangements were being made for the marriage of Achilles and Polyxena). He was wounded in the heel, his one vulnerable spot.

Achilles Tatius (tā'shŭs), fl. 3d or 4th cent. ?, Greek novelist of Alexandria, author of the stilted, pornographic *Leucippe and Clitophon*.

Achillini, Alessandro (ä"lĕs-sän'drō ä"kēl-lē'nē), 1463–1512, Italian scientist. He taught medicine and philosophy at Bologna and Padua, but owes his reputation chiefly to his writings on anatomy.

Achim (ā'kĭm), name in the genealogy of Mat. 1 14.

Achish (ā'kĭsh). **1** King of Gath with whom David took refuge. 1 Sam. 27 2. Called Abimelech in the title of Ps. 34. **2** King of Gath in the time of Solomon. 1 Kings 2 39. Possibly a title, possibly only one person.

Achitophel (ăkĭt'ŭfĕl), variant of AHITHOPHEL.

Achmet. For sultans named thus, see AHMED.

Achor (ā'kôr) [Heb., =trouble], valley where Achan was stoned. Joshua 7 25,26, 1 Chron 2 7.

Achsa or **Achsah** (both ăk'sŭ) [Heb., =anklet], Caleb's daughter, given as wife to Othniel. Judges 1 12–15, 1 Chron 2 49.

Achshaph (ăk'shăf), town, N Palestine, taken by Joshua. Joshua 11 1, 12 20, 19 25.

Achurch, Janet (ŭchûrch'), 1864–1916, English actress and producer, whose real name was Janet Achurch Sharp. She introduced both Ibsen and G. B. Shaw to the English stage. Her first appearance was in 1883, and she joined Beerbohm Tree's company in 1887. As manager of the Novelty Theatre, London, she produced (1889) Ibsen's *Doll House*, playing Nora. She was first to play Shaw's Candida.

Achzib (āk'zĭb) [Heb., =a lie]. **1** Seacoast Palestinian town, c 15 mi. S of Tyre. Joshua 19 29, Judges 1 31. **2** Unidentified city of Judah. Joshua 15 44, Micah 1 14. Chezib in Gen. 38 5 and Chozeba in 1 Chron. 4 22 may be the same.

acid, a compound which, according to the theory of the ION, yields hydrogen ions when dissolved in water. Certain properties are characteristic of acids and result from the presence in solution of the hydrogen ion. Acids in aqueous solution have a sour taste, turn blue litmus red, and react with bases and basic oxides (see NEUTRALIZATION) to form salts and water. They can conduct a current of electricity and are decomposed by it, hydrogen being liberated. Acids are prepared in several ways, two of the more common methods are by the reaction between an acid anhydride and water and by the action of an acid, such as sulphuric acid, on a SALT of the acid which is to be prepared. Under ordinary conditions and when pure, the majority of the more common acids are solids. A much smaller number are liquids, and a few are gasses. Such acids as hydrochloric, sulphuric, and especially nitric, which are largely ionized in solution, yielding many hydrogen ions, are called strong acids, those which are little ionized, e.g., acetic, boric, and carbonic, are called weak acids. An acid may be prepared in concentrated or dilute solution, depending upon the amount of acid dissolved. Acids are classified also according to the number of replaceable hydrogen atoms present in one molecule. For example, nitric acid is a monobasic acid since there is but one replaceable hydrogen atom in each molecule, sulphuric acid is dibasic, the molecule containing two atoms of replaceable hydrogen, phosphoric acid is tribasic. Acids which, like hydrochloric, are composed of two elements, hydrogen and some other, are binary acids. Organic acids are characterized in general by the presence in their molecule of a group of atoms (the carboxyl group or carboxyl radical) which consists of one atom of carbon, two of oxygen, and one of hydrogen, the radical being written in chemical symbols as —COOH. They are formed naturally in plants and animals in connection with the performance of life functions. Some of the more common organic acids are acetic, citric, formic, lactic, oxalic, and tartaric. Acids as a whole are widely used in many industrial chemical processes and also in the arts, in medicine, and in agriculture.

acidophilus milk: see FERMENTED MILK.

acidosis. Acids (e.g., carbonic acid and lactic acid) are continually being formed in the body in the processes of METABOLISM. Certain alkalis such as sodium bicarbonate neutralize the acids and those which remain after neutralization form an alkali reserve. This alkali reserve becomes reduced in such conditions as nephritis, diabetes, starvation, and infectious diseases. This decrease of the alkali reserve is called acidosis. This does not mean that acidosis creates a real acidity of the blood, for such a condition is incompatible with life. Alkalosis is a condition in which there is an abnormal increase in the alkali reserve.

Acireale (ä"chĕrāä'lā), city (pop. 19,440), E Sicily, Italy, NE of Catania. Beautifully situated on a height near the Ionian Sea, it has been frequented since Roman times for its warm sulphur springs. Acireale was largely rebuilt after the earthquake of 1693.

Acis (ā'sĭs), in Greek mythology, lover of Galatea. His rival, Polyphemus, killed him, and his blood formed the river Acis.

Ackerman, lumber-milling town (pop. 1,528), co. seat of Choctaw co., N central Miss., WSW of Columbus.

Ackia Battleground National Monument: see TUPELO, Miss.

Ackley, town (pop. 1,586), N central Iowa, W of Waterloo, inc. 1858. It is a farm trade center.

Acklins Island. see BAHAMA ISLANDS.

acknowledgment, in law, a formal declaration or admission that one executed an instrument (e.g., a will or a deed) which purports to be his. The acknowledgment is made before a court or a notary public or other authorized person. By extension, the term applies to the writing which attests the acknowledgment.

Acmeists (ăk'mēĭsts), school of Russian poets started in 1912 by Gorodetsky and Gumilev as a reaction against the symbolists. They aspired to concreteness of image and clarity of expression. The leading Acmeists were Gumilev, Akhmatova, and Osip Mandelstam. See Alexander Kaun, *Soviet Poets and Poetry* (1943), Gleb Struve, *Twenty-five Years of Soviet Russian Literature* (1946).

acne (ăk'nē), inflammatory disease of the sebaceous glands commonly occurring in adolescence. The bacterium *Staphylococcus aureus* is frequently the offending agent. A pink papule forming on the skin surrounds a comedo (blackhead), the papules occur most frequently on the face, back, and chest. Common acne (acne vulgaris) may become chronic. In severe cases, scarring of the face results. Local applications of salves and ointments are commonly used in treatment, but it is important to maintain proper elimination and a diet free from concentrated carbohydrates and to administer large doses of vitamin A. Some cases respond well to endocrine therapy.

Aco or **Accault, Michel** (mēshĕl' ăkō'), fl. 1680–1702, French explorer. He became La Salle's lieutenant, being favored by that explorer because of his courage, prudence, and wide acquaintance with Indian languages. When LA SALLE reached the mouth of the Illinois river on his famous voyage down the Mississippi, he sent Aco with two companions to explore the upper reaches of the Mississippi. One of the companions was Father Louis HENNEPIN, who in his *Nouvelle Découverte* made himself the hero of the expedition. Near the Falls of St. Anthony, which they were the first to see, the three were captured by Sioux Indians and were released only through the energy and influence of Daniel Greysolon DULUTH. Little is known of Aco's subsequent life except that he was long a trader on the Illinois and that in 1693 he married the daughter of a Kaskaskia chief.

Acoma or **Ácoma** (both: ă'kumŭ), Indian pueblo, W central N Mex., c 70 mi. W of Albuquerque. This "sky city" is on top of a steep-sided sandstone mesa more than 350 ft. high and difficult of access. Below in the reservation are two villages, Santa María de Ácoma and Acomita (ăkūmē'tu), near the cultivated fields that support the inhabitants (c 1,200) of the pueblo. There is also some grazing. The Acoma Indians are skilled pottery makers. They speak a Western Keresan language (see PUEBLO INDIANS). The location of the pueblo has astonished white visitors from Coronado's men in 1540 to the tourists of today. Juan de Oñate was allowed to enter in 1598, but the Indians revolted fiercely in 1599 and were subdued only after severe fighting. The missionary Fray Juan Ramírez arrived in 1629. The Acoma people joined in the

great revolt of the Pueblo Indians in 1680, had to submit to Diego de Vargas in 1692, joined in the later rising of 1696, and were subdued again in 1699. They became thoroughly Christianized, and their chief festival is Sept. 2, which they celebrate as the feast of their patron saint, Stephen. See Mrs. W. T Sedgwick, *Acoma, the Sky City* (1926); Ruth Bunzel, *The Pueblo Potter* (1929).

Acominatus, Michael (ukŏmĭnā'tŭs), or **Michael Choniates** (kōnē'ātēs), c 1140–1220, Byzantine writer and metropolitan of Athens His speeches, poems, and letters give much information about medieval Athens, which he, an enthusiastic classicist, found barbarous and degenerate. After the capture (1204) of Athens by the army of the Fourth Crusade, he retired to the island of Keos, where he died

Acominatus, Nicetas (nĭsē'tŭs) or **Nicetas Choniates** d 1216, Byzantine historian, younger brother of Michael Acominatus He held high offices until the fall (1204) of Constantinople to the army of the Fourth Crusade, when he accompanied Theodore I to Nicaea. His history, in 21 books, covers the period from 1118 to 1206 Largely based on personal observation and eyewitness accounts, it is marked by the patriotic assertion of the superiority of Byzantine to Western civilization.

Aconcagua (äkŏnkä'gwä), peak, 22,835 ft high, Mendoza prov, Argentina, in the Andes N of USPALLATA PASS, generally considered the highest peak of the Western Hemisphere Aconcagua was first scaled by the Fitzgerald expedition (1897) See Sir William Martin Conway, *Aconcagua and Tierra del Fuego* (1902)

aconite (ăk'-) [Gr], **monkshood,** or **wolfsbane,** any of several species of the genus *Aconitum*, hardy perennial plants of the North Temperate Zone, growing wild or cultivated for ornamental or medicinal purposes They contain violent poisons (for antidote, see POISONING, table), recognized from early times and mentioned by Shakspere (2 *King Henry IV*, IV 4), more recently used medicinally in a liniment, tincture, and drug and in India on spears and arrows, for hunting As range plants, aconites have not been found particularly dangerous for cattle The drug aconite, the active principle of which is the alkaloid aconitine, is used as a sedative and is obtained from *Aconitum napellus* Aconites are erect or trailing, with deeply cut leaves and, late in the summer and fall, hooded showy flowers of blue, yellow, purple, or white Winter aconite is a name for plants of the genus *Eranthis*, wild or garden perennials that bloom early in the spring

Acontius (ukŏn'shŭs), in Greek legend, a young man who loved Cydippe He met her at a festival of Artemis and threw before her an apple inscribed, "I swear by the temple of Artemis to marry Acontius " She read the inscription aloud The goddess accepted her words as an oath and brought about the marriage of the lovers Ovid tells the story.

Açores see AZORES

acorn see OAK

Acosta, Joaquín (hwäkēn' äkō'stä), 1799?–1852, Colombian scientist He served under Bolívar in the revolution His scientific knowledge was broad, and he wrote about the geography, history, geology, and meteorology of Colombia, constituting himself a sort of intellectual publicity agent for his country

Acosta, José de (hōsä' dā), 1539?–1600, Spanish Jesuit missionary to Peru, author of books on history, archaeology and theology His best-known work is *The Natural and Moral History of the Indies* (1590, Eng trs , 1604, 1880)

Acosta, Uriel (ōōr'yĕl), or **Uriel da Costa**, c 1590–1647, Jewish rationalist, b Oporto, Portugal His original name was Gabriel da Costa, and his family had been converted to Catholicism When he reached manhood, he was restive in the Christian faith and persuaded his family to move to Amsterdam, where all of them returned to Judaism In a work in 1624, he expressed rationalistic doctrines and criticized the Jews He was tried, imprisoned, and excommunicated In 1633 he recanted, but soon he offended again and was again excommunicated After seven years, he once more recanted and was subjected to public humiliation Rather than endure further trouble he committed suicide He left an autobiographical sketch, *Exemplar humanae vitae* (1687, Eng tr , *Specimen of Human Life*, 1695). Gutzkow wrote a tragedy about him, *Uriel Acosta*.

acoustics (ŭkōō'stĭks, ŭkou-) [Gr =the facts about hearing], the science of SOUND, including its production, transmission, and effects Successful practical application of the science in the construction, for example, of auditoriums depends upon knowledge of the characteristics and behavior of sound waves The most important factors to be considered are reverberation (the persistence of sound which is responsible for the slowness with which sounds die away) and INTERFERENCE In an enclosed space reverberation results from the repeated reflection of sound waves by smooth surfaces. Reflection of sounds sometimes causes an echo. Some reverberation is desirable, especially in halls where music is performed, to avoid too much deadening of the sounds. Reflection of sound waves of different frequencies produces varying degrees of interference resulting either in reinforcement or in destruction of the sound Reflection can be reduced by the use of sound-absorbent materials, such as draperies, upholstery, and carpets. Porous or acoustic plasters and other sound-absorbing materials can be used on walls and ceilings Reflection is reduced when the windows are open and when people are present in the room Acoustical defects can be avoided by care in the designing of structures and can often be corrected in those already built See G W Stewart, *Introductory Acoustics* (1933), F R Watson, *Acoustics of Buildings* (1941), E G Richardson, *Acoustics for Architects* (1947), W. T. Bartholomew, *Acoustics of Music* (1942)

acquired characters refers generally to modifications produced in an individual plant or animal as a result of such factors as mutilation, disease, and use and disuse or resulting from some other distinctly environmental influence There is much evidence to show that such bodily changes are not transmitted to the offspring of the affected individual Lamarck believed that offspring could inherit characters acquired during the lifetime of the parent which make possible a better adjustment of the individual to its environment The evolutionary theories of Darwin and Buffon also embraced the belief in the inheritance of acquired characters Evidence against such inheritance was presented in the theory of August Weismann, who maintained that the germ plasm (cells through which inheritable characters are transmitted) is unaffected by changes in the soma (the protoplasm of which the rest of the body is made up) He performed experiments demonstrating that the descendants of mice whose tails have been cut off are all born with normal tails Modern scientists do not believe in the inheritance of acquired characters but they are aware of the importance of environment in both physical and mental development of the individual Many characters in a developed organism cannot be attributed entirely to either its inheritance or its environment

acquittal, in law, discharge of a person indicted for a crime Acquittal is the judgment of the court that the accused did not commit the acts charged An acquittal-in-fact is rendered subsequent to a verdict of not guilty, and the prosecution cannot appeal the judgment An acquittal-in-law results from the operation of the rules of law, as when one accused as accessory is acquitted because of the acquittal of another who was accused as principal. See JEOPARDY

Acre (ä'kur, a'kur), Arabic *Acca*, Fr *Saint Jean d'Acre*, Heb *Acco*, city (pop 8,000), N Palestine, a port on the Bay of Acre (part of the Mediterranean Sea) opposite Haifa It is called Accho in the Old Testament (Judges I 31) and Ptolemais in the New Testament (an early Christian center Acts 21 7). Its port made it a frequent military objective Acre was taken by the Arabs in 638 In 1104 it was captured by the Christians in the First Crusade and was held until 1187 In the Third Crusade it was won back in 1191 by Guy of Lusignan, Richard I (England), and Philip II (France), who gave it to the Knights Hospitalers (the Knights of St John, whence its French name). Its surrender (1291) to the Saracens after a century of prosperity marked the decline of the Latin Kingdom of Jerusalem and the Crusades Acre was taken by Turkey in 1517 Turkish forces with the aid of Great Britain successfully withstood a 61-day siege by Napoleon in 1799 The city was taken in 1832 by Ibrahim Pasha for Mohammed Ali of Egypt, but European and Turkish forces won it back for Turkey in 1840 In the First World War, British soldiers took it in 1918 The partition of Palestine (1948) assigned Acre to the Arabs, but in the course of military operations it was captured by Israeli forces, and its disposition remained undecided early in 1950 The name is also spelled Akka

Acre (ä'krĕ) river rising at the border of Peru and Brazil and flowing northeast to join the Purús It was formerly also called the Aquiry The ownership of the surrounding wild jungle territory was unsettled, but it was generally supposed to belong to Bolivia when in the late 1890s Brazilian wild-rubber traders took over the region They declared an independent republic in 1899 Subsequent disorders, aggravated by an arrangement between Bolivia and a U S syndicate, led Bolivia and Brazil close to war A settlement was reached in the Treaty of Petrópolis (1903) Brazil received most of the area, but paid Bolivia a large indemnity and constructed a railroad on the Madeira river The Brazilian territory has an area of 59,139 sq mi and a population estimated in 1949 as 96,295

acre [Indo-European, =field], measure of land used by the English-speaking peoples The acre was originally the area a yoke of oxen could plow in a day and therefore differed in size from one locality to another It is now fixed by statute as 160 square rods i e , 4,840 sq yd , 43,560 sq ft , or 1/640 sq mi It is equal to about 4047 of a hectare Local customary acres survive in Scotland, Ireland, and several counties of England.

Acrisius: see DANAË and PERSEUS.

Acrocerauna (ăk"krōsĕrō'nēu) or **Kep i Gjuhezes** (kĕp' ē gyōōhū'zŭs), promontory, S Albania, on the Adriatic coast The CERAUNIAN MOUNTAINS, which extend further inland, are sometimes called the Acroceraunian range.

Acrocorinthus (ăk"krōkurĭn'thŭs), Gr *Akrokorinthos* (ăk"krōkō'rĕnthŏs), rock, 1,886 ft high, central Greece, overlooking Old CORINTH The site of the Acropolis of Corinth (of which ruins remain), it was also strongly fortified in the Middle Ages and in modern times On its summit stood a temple of Aphrodite Below gushed the fountain of Pirene, from which, in legend, PEGASUS drank when captured by Bellerophon

Acropolis (ukrŏp'ulĭs) [Gr , =high point of the city], elevated, fortified section of various ancient Greek cities The Acropolis of Athens, a hill c 260 ft high, with a flat oval top c 500 ft wide and 1,150 ft long, was walled before the 6th cent B C. by the Pelasgians and chiefly during the time of Cimon and Pericles was adorned with some of the world's greatest architectural and sculptural monuments The top was anciently reached by a winding processional path at the west end, where stood the impressive PROPYLAEA The Sacred Way led thence past a colossal bronze statue of Athena and the site of the old temple of Athena to the PARTHENON To the north was the Erechtheum and to the southwest the temple of Nike Apteros (Wingless Victory) On the southern slope were the Odeum of Herodes Atticus and the theater of Dionysus Many treasures from the Acropolis are in the national museum of Greece, in Athens, the ELGIN MARBLES are in the British Museum. See W J. Anderson, R P Spiers, and W B Dinsmoor, *Architecture of Ancient Greece* (1927).

Acropolita, George (ukrŏp"ulĭ'tu), 1217–82, Byzantine historian and statesman He served as chancellor and general under John III and Theodore II of Nicaea, and after the Byzantine Empire was restored he represented (1274) Emperor Michael VIII at the Council of Lyons (see LYONS, SECOND COUNCIL OF) His chief work, a history of the period from 1203 to 1261 (i e , the period of the Latin Empire of Constantinople) is valuable

acrostic (ukrŏ'stĭk, ukrō'-), arrangement of words or lines wherein a series of initial, final, or other corresponding letters, when taken together, stand in a set order to form a word, a phrase, the alphabet, or the like A famous acrostic was made on the Greek for Jesus Christ, God's Son, Savior *Iesous Christos, Theou Uios, Soter* (*ch* and *th* being each one letter in Greek) The initials spell *ichthus*, Greek for fish, hence the frequent use of the fish by early Christians as a symbol for Jesus There are several alphabetic acrostics in the Bible, e g , in Ps 119 and LAMENTATIONS Acrostic verses are common, and very elaborate puzzles have been devised combining several schemes

act, in law, something done by an individual in an official position or by an official body (e g , a judge or a legislature) The term includes decrees, judgments, and awards It is often synonymous with STATUTE, meaning a bill which has been enacted into law by the legislature A legislative act may be changed by AMENDMENT or abolished by REPEAL.

acta (ăk'tu), term for Roman official texts, whether written or carved on stone or metal Usually acts were texts made public, although publication was sometimes restricted Acta were first posted or carved for general reading c 131 B C These were accounts of general interest and were later called *Acta diurna*, they have been likened to modern newspapers There were special acts of municipal, legal, or military content The *Acta senatus*, according to a Roman administrative tradition, had long been kept secret, so that the public should have no knowledge of senatorial debate In 59 B C , Julius Caesar, being consul, ordered their publication equally with the established one of the *Acta diurna*, but later the publication was censored Acta was also the term used for laws enacted, primarily those promulgated by the emperors

Actaeon (ăk-tē'ŭn), in Greek legend, son of Aristaeus and Autonoë While hunting in the forest, he saw the goddess Artemis bathing She changed him into a stag, and his own dogs killed him

acting see THEATER

actinic ray see RAY, SPECTRUM, SUNLIGHT

actinium (ăktĭn'ēŭm) [Gr , =like a ray], radioactive element of the actinide series (symbol=Ac, for physical constants, see ELEMENT, table) Actinium was first recognized in 1899 by André Debierne while he was working with uranium residues from pitchblende It was found to be identical with an element discovered in 1902 by F. O Giesel and called by him *emanium* Actinium occurs in radioactive minerals containing uranium, and the ratio of actinium to uranium is always the same. Actinium is a disintegration product of protoactinium, which emits alpha rays Actinium emits beta rays to form radioactinium.

action, in law see PROCEDURE

Actium (ăk'tēŭm, ăk'shēŭm), Gr *Aktion*, promontory with vestiges of several temples and an ancient town, NW Acarnania, Greece It is famous for the victory of the forces of Octavian (later AUGUSTUS)

over the fleet and land forces of Antony and Cleopatra (31 B C) and for the commemorative Actian games, held every four years The battle established Octavian as ruler of Rome

active see VOICE

act of God, in law, an ACCIDENT caused by the operation of extraordinary natural force (equivalent to *force majeure* or *vis major*) The effect of ordinary natural causes (e g , that rain will leak through a defective roof) may be foreseen and avoided by the exercise of human care, failure to take the necessary precautions constitutes NEGLIGENCE, and the party injured in the accident may be entitled to damages An act of God, however, is so extraordinary that reasonable care would not avoid the consequences, hence, the injured party has no right to damages Accidents caused by failure to take precautions against lightning, tornadoes, extraordinary floods, and severe ice storms are usually considered acts of God, but fires are not so considered unless they are caused by lightning

Acton, John Emerich Edward Dalberg Acton, 1st **Baron,** 1834-1902, English historian, b Naples, grandson of Sir John Francis Edward Acton and of Emmerich Joseph, duc de Dalberg He became (1859) a Liberal member of Parliament and editor of the *Rambler*, a Roman Catholic monthly Gladstone, his close friend, nominated him to the peerage (1869), and in 1892 Acton was made lord in waiting Acton's genuine and ardent liberalism gave frequent offense to some Catholic authorities Though he opposed the Syllabus of Errors issued by PIUS IX and the promulgation of the dogma of papal infallibility, Lord Acton as a sincere Catholic accepted them after their pronouncement In 1895 he was appointed professor of modern history at Cambridge and in the following years planned the cooperative *Cambridge Modern History*, of which only the first volume appeared before his death Admittedly one of the most brilliant and influential scholars of his age, Acton never completed a book Many articles, essays, and lectures were brought together after his death in *History of Freedom* (1907), *Historical Essays and Studies* (1907), and *Lectures on Modern History* (1906) Some of these were reprinted in *Essays on Freedom and Power* (1948) See F A Gasquet, ed , *Lord Acton and His Circle* (1906)

Acton, Sir John Francis Edward, 1736?-1811, Neapolitan statesman of British origin, b Besançon, France He was minister of Ferdinand IV of Naples (later FERDINAND I of the Two Sicilies) from 1779 to 1804 The favorite of Queen MARIE CAROLINE, he directed the policy of Naples toward Great Britain and Austria rather than toward Spain, he was assisted by Lady Emma HAMILTON After the fall of the PARTHENOPEAN REPUBLIC (1799) he played a major role in the bloody reprisals, and he consolidated absolutism, but Napoleon I requested his dismissal and Acton retired to Sicily He was the grandfather of the 1st Baron Acton

Acton, village (pop 2,063), S Ont , W of Toronto It was first settled in 1820

Acton, municipal borough (1931 pop 70,510, 1947 estimated pop 68,980), Middlesex, England, W of London, of which it is a residential suburb Henry III once lived here Acton was a center of Puritanism at the time of the Commonwealth

Acton, town (pop 2,701), E Mass , NW of Boston, settled c 1680, inc 1735 It has a chemical plant

Acton Vale, town (pop 2,366), S Que , E of St Hyacinthe It has varied manufactures

Acts of the Apostles, book in the Bible between Gospels and Epistles, the only contemporary historical account of the expansion of Christianity in its earliest period It was written in Greek between A D 60 and A D 80 as a sequel to the Gospel of St Luke, and Luke is its traditional author It falls into two divisions the first 12 chapters, on the Palestinian church from Pentecost until Herod's death, having chiefly to do with St Peter, the rest of the book, on the missionary work of St Paul among the Gentiles (13-21 14) and his arrest, trial, and trip as prisoner to Rome (21 15-28) St Luke was sometimes a companion of St Paul, and the narrative is then in the first person (16 10-17, 20 5-21 18, 27 1-28 16) Three critical events are noteworthy —the descent of the Holy Ghost (Acts 2), the martyrdom of St Stephen (Acts 6 and 7), and the conversion of St Paul (Acts 9) The author of the work has written the whole with a consuming interest, as if his native talent were intensified by his inspiration See E F Scott, *The Literature of the New Testament* (1932)

actualism, any metaphysical system of which the central doctrine is that existence lies in activity, development, or process Heraclitus was the first to expound the doctrine It has been often repeated in variant forms, as in the teachings of Fichte, Hegel, and Schopenhauer Actualism in psychology is based on the theory that the elements of consciousness are not states but constituents of the self This opposes the theory of substantiality —that the self is the core or substratum in which the states of consciousness occur In actualism the self is merely the sum total of consciousness, an active, volatile being

actuary, originally, in England, a clerk or registrar, appointed either to record court acts and proceedings or to manage a joint stock company Later the term came to be applied exclusively to managers of insurance companies and especially to those who calculate the probabilities involved in any contingency for which INSURANCE is desired and the necessary premium rates to cover such contingency As loss of life is the most important of these contingencies, actuaries are particularly concerned with life tables based on age, health, and probable longevity However, there are other contingencies which must be calculated such as loss by fire, sickness, and accident An actuary also calculates the probabilities upon which annuities are based and the amount of money, at compound interest, necessary to provide for such probabilities

Acuña, Cristóbal de (krĕstō'bnl dā äkōō'nyä), 1597-1676?, Spanish Jesuit missionary and explorer in South America, rector of the Jesuit college at Cuenca, Ecuador In 1638 he was sent by the viceroy to accompany TEIXEIRA on his return journey down the Amazon Acuña's *New Discovery of the Great River of the Amazons* (1639, modern Eng tr in C R Markham, *Expedition into the Valley of the Amazons*, 1859) was the earliest firsthand description of the Amazon to be printed

Acuña, Juan de (hwän' dā äkōō'nya), 1658?-1734, Spanish-American administrator, viceroy of New Spain (1722-34), marqués de Casa Fuerte, b Lima, Peru After a distinguished career in Spain he was sent to Mexico, where his creole origin and his wise government made him popular He extinguished favoritism and corruption, extended and consolidated Spanish territorial claims, and ordered the construction of many public works In his term the *Gaceta de México* and the *Mercurio de México* first appeared

Acushnet (ŭkōō'shnĭt), town (pop 4,145), SE Mass , N of New Bedford, settled c 1660, inc 1860 Druggists' rubber goods are made here

Adai-Kokh (ŭdī"-kôkh'), peak, 15,240 ft high, USSR, in the central Greater Caucasus

Adair, James (udâr'), 18th cent , Indian trader in the Carolinas and Georgia He wrote *The History of the American Indians* (1775), based on over 30 years of experience with various tribes Although his work advanced the unlikely thesis that the Indians were descendants of the ancient Jews, it is valuable as a source for frontier history and for Indian life and customs See 1930 edition by S C Williams

Adair, John, 1757-1840, American pioneer in Kentucky, b North Carolina He went into the Kentucky country in 1786 and gained note as an Indian fighter and as a political leader In the War of 1812 he was a commander of Kentucky volunteers in the battle of New Orleans As governor of the state (1820-24) he adopted a vigorous program of internal improvement to fight hard times

Adak (ă'dăk, a'dak), off W Alaska, one of the ALEUTIAN ISLANDS In the Second World War the U S armed forces established (1942) a base on Adak, which was important in the Aleutian campaign

Adalbert, Saint (ă'dulbûrt), d 997, bishop of Prague He was a missionary in Russia, Prussia, and Poland and was martyred in Danzig He is patron of Bohemia and Poland Feast April 23

Adalbert, d 1072, archbishop of Hamburg-Bremen, a diocese which included Scandinavia He was a favorite of Emperor Henry III, who even wanted to install him as pope (1046), and was a guardian of Henry IV, but his relentless ambition to become ecclesiastical ruler of all N Europe defeated itself The nobles envied his importance at court, the abbots hated him for his efforts to subordinate the abbeys, and the bishops feared his increasing ecclesiastical power They accomplished his dismissal in 1066, but Henry IV recalled him in 1069 One of the ablest statesmen of his time, Adalbert, though working mainly for his own selfish aims, helped to consolidate the imperial authority. **Adam** of Bremen was his biographer.

Adalia (ădālī'ŭ), one of Haman's sons. Esther 9 8.

Adalia, Turkey: see ANTALYA.

Adam [Heb ,=mankind], in the Bible, the first man For the account of his creation, of that of his wife EVE, of their life in the Garden of Eden (see EDEN, GARDEN OF), of their first disobedience, and of their expulsion, see Gen 1 26-5 5 The opening chapters of Genesis are very interesting to believers of the three principal monotheistic religions, for conceptions derived therefrom, see SIN and GRACE, for examples of the mass of legends that Judaism and Islam have collected about the biblical account, see LILITH and PSEUDEPIGRAPHA To St Paul, Adam represented the earthy side of man, as in 1 Cor 15 20-22,42-58 The higher criticism has seen in Adam's story an attempt to harmonize Hebrew cosmogonic myths They compare Babylonian myths of creation, which are similar to the biblical account in many features

Adam, Adolphe Charles (ädôlf' shärl' adă'), 1803-56, French composer of the popular *Cantique de Noël* He composed over 50 stage works Outstanding are his comic operas, including *Le Postillon de Longjumeau* (1836), and his ballet *Giselle* (1841)

Adam, Alexander, 1741-1809, Scottish educator and antiquary As head of Edinburgh High School from 1768, he reformed the methods of teaching Greek and Latin His *Principles of Latin and English Grammar* (1772) is written in English Sir Walter Scott, Brougham, and Jeffrey were among his pupils His *Roman Antiquities* (1791) made him famous

Adam, Juliette Lamber (zhülyĕt' läbā' ädă'), 1836-1936, French author and editor She married as her second husband (1868) Edmond Adam, prefect of the police and a senator Their home was a center for the Gambetta group of republicans, in whose support she founded and edited (1879-99) the *Nouvelle Revue* Her works include *Le Siège de Paris journal d'une Parisienne* (1873) and a novel, *Paienne* (1884)

Adam, Lambert Sigisbert (läbĕr' sēzhēsbĕr' adă'), 1700-1759, French sculptor, known as Adam the Elder He won the Prix de Rome at 23 In Rome he was employed by Cardinal de Polignac to restore statues excavated from the Villa Marius In 1737 he was admitted to the Académie royale de Peinture et de Sculpture for his *Neptune and Amphitrite*, executed for the basin of Neptune at Versailles From then on he enjoyed constant royal commissions His colossal *La Seine et la Marne*, for the cascade of Saint-Cloud, and his *Neptune Calming the Waves* (Louvre) are well known His brother, **Nicolas Sébastien Adam** (nēkôlä' sābastyĕ'), 1705-78, known as Adam the Younger, had the same training and enjoyed the same favor as Lambert He is famous for his *Prometheus Chained* (Louvre), his bas-relief *The Martyrdom of St Victoire* (chapel, Versailles), his tomb of Catherine Opalinska (Nancy), and the mausoleum of Cardinal de Fleury A third brother, **François Balthasar Gaspard Adam** (fräswa' bältäzar' gäspar'), 1710-61, became sculptor to Frederick the Great His work is to be seen in Potsdam and at Sans Souci

Adam, Paul (pôl), 1862-1920, French novelist His series of novels treating the life of a French family from the fall of the old regime through the July Monarchy are brilliant rather than profound

Adam, Robert (ăd'ŭm), 1728-92, and **James Adam,** 1730-94, Scottish architects, brothers They designed important public and private buildings in England and Scotland and numberless interiors, pieces of furniture, and decorative objects Robert possessed the great creative talents, his brother James serving chiefly as his assistant Robert Adam drew his inspiration from Greek and Roman architecture In 1764 he published the study *Ruins of the Palace of Diocletian in Dalmatia* Utilizing the columns and decorative motives of classic architecture, he molded them into a greater lightness of proportion and an almost extreme elegance This graceful style, which gained great favor in his day, has been imitated constantly since his death Designs imitative of his work are said to be in the Adam style Robert Adam designed his buildings to achieve the most harmonious relation between the exterior, the interior, and the furniture His designs took account of every detail, practically every object being executed under his direction Among the artists whom Robert employed to paint decorations for walls, ceilings, and furniture were Angelica Kauffmann and Antonio Zucchi The brothers were among the first to group a row of London houses into a single imposing unit, as in Portland Place, and to create a real-estate development, Adelphi Terrace, consisting of streets and houses supported on brick catacombs They made plans for the city of Bath and designed the stone screen at the admiralty in London and buildings for the Univ of Edinburgh They wrote *Works in Architecture of Robert and James Adam* (3 vols , 1778-1822). Robert was architect to the king from 1762 until 1768, when he was succeeded by James Robert Adam was buried in Westminster Abbey See James Lees-Milne, *The Age of Adam* (1948).

Adam, town, on the upper Jordan Joshua 3 16
Adamah (ăd'ŭmŭ), Naphtalite city Joshua 19 36
Adam de la Halle (ădȧ' dŭ lȧ ȧl') or **Adam le Bossu** (lŭ bōsŭ'), b 1237?, d between Jan , 1285, and 1288, French dramatist and poet, b Arras He is the author of the first important French comic pieces, *Le Jeu de Robin et de Marion*, a witty little pastoral sometimes called the earliest comic opera, and *Le Jeu de la feuillée*, a composite work, fantastic and satirical, diverting rather than dramatic His name appears in antique form as Adan de le Hale
Adami (ăd'ŭmĭ) or **Adami-nekeb** (-nĕb'-), border town of Naphtali Adami-nekeb RV Two towns, Adami and Nekeb, in AV Joshua 19 33
Adamic, Louis (ăd'umĭk), 1899–, American author, b Blato, Slovenia, now in Yugoslavia He came to the United States in 1913 and worked as a laborer in many sections of the country, educating himself by wide reading His first book, *Dynamite* (1931), is a history of the labor movement in the United States Adamic has been chiefly concerned with the immigrant's problems in America, and his *Laughing in the Jungle* (1932) and *My America* (1938) record his personal experiences in this field, *The Native's Return* (1934), made possible by a Guggenheim fellowship, describes an expatriate's visit to Yugoslavia Pleading the cause of racial tolerance and unity and discussing the immigrant's cultural contribution to the United States, Adamic has also written *From Many Lands* (1940) and *A Nation of Nations* (1945)
Adam le Bossu see ADAM DE LA HALLE
Adamnan, Saint (ă'dumnăn), 624?–704, Irish abbot of Iona He was instrumental in effecting the adoption by the Celts of the Roman paschal rule He is the author of a life of St Columba
Adams, Abigail (Smith), 1744–1818, wife of President John ADAMS and mother of President John Quincy ADAMS, b Weymouth, Mass A lively, intelligent woman, she was the chief figure in the social life of her husband's administration and one of the most distinguished and influential of the first ladies in the history of the United States Her detailed letters are a vivid source of social history The correspondence with her husband was edited in a number of volumes by Charles Francis Adams, letters to her sister, Mary Smith Cranch, are in *New Letters of Abigail Adams, 1788–1801* (1947) See biographies by Laura E Richards (1917), Dorothie Bobbé (1929), and Janet Whitney (1947)
Adams, Brooks, 1848–1927, American historian, b Quincy, Mass , grad Harvard, 1870, son of Charles Francis ADAMS (1807–86) His theory that civilization rose and fell according to the growth and decline of commerce was first developed in *The Law of Civilization and Decay* (1895) Adams applied it to his own capitalistic age, of which he was a militant critic, but failed to find the universal law which he persistently sought His ideas greatly influenced his brother Henry ADAMS, whose essays he edited in *The Degradation of the Democratic Dogma* (1919) In *America's Economic Supremacy* (1900, reissued 1947), Brooks said that Western Europe had already begun to decline and that Russia and the United States were the only potential great powers left His other chief works were *The Emancipation of Massachusetts* (1887), *The New Empire* (1902), and *Theory of Social Revolutions* (1913) See J T Adams, *The Adams Family* (1930)
Adams, Charles Francis, 1807–86, American statesman, minister to Great Britain (1861–68), b Boston, son of John Quincy ADAMS After a boyhood spent in various European capitals, he was graduated (1825) from Harvard and studied law under Daniel Webster He practiced in Boston, looked after his father's business affairs, and wrote articles on American history for the *North American Review* Adams served (1840–45) in both branches of the state legislature, founded and edited the Boston *Whig*, and became a leader of the Conscience Whigs In 1848 he was the FREE-SOIL PARTY candidate for the vice presidency He represented (1858–61) his father's old district in Congress and assumed prominence as a Republican leader Upon Seward's advice, Lincoln appointed him minister to Great Britain In the face of English sympathy for the Confederacy, he maintained the Northern cause with wisdom and a bold dignity that won British respect, particularly in the serious *Trent* and *Alabama* incidents He later represented the United States in the settlement of the ALABAMA CLAIMS He published many political pamphlets and addresses and was an editor of the works (10 vols , 1850–56) of his grandfather, John Adams and of the diary (12 vols , 1874–77) of his father See biography by his son, Charles Francis Adams (1900), W C Ford, ed , *A Cycle of Adams Letters, 1861–1865* (1920), J T Adams, *The Adams Family* (1930)
Adams, Charles Francis, 1835–1915, American economist and historian, b Boston, grad Harvard, 1856, son of Charles Francis ADAMS (1807–86) In the Civil War he fought at Antietam and Gettysburg and was brevetted brigadier general of volunteers Adams became a railroad expert after the war, writing *Chapters of Erie* (1871), which exposed the corrupt financing of the Erie RR, and *Railroads Their Origin and Problems* (1878) In 1869 he became a member, and from 1872 to 1879 was chairman, of the Massachusetts Board of Railroad Commissioners, the first of its kind in the nation Adams was made chairman of the government directors of the Union Pacific in 1878 and became president in 1884, but was ousted by the forces of Jay GOULD in 1890 His reform of the public schools in the home town of the Adamses, Quincy, Mass , was described in *The New Departure in the Common Schools of Quincy* (1879), and the Quincy system was widely adopted Adams served 24 years on the Harvard Board of Overseers and was president (1895–1915) of the Massachusetts Historical Society He wrote *Three Episodes of Massachusetts History* (1892), *Studies Military and Diplomatic, 1775–1865* (1911), *Trans-Atlantic Historical Solidarity* (1913), which was a collection of lectures he had given at Oxford, and biographies of his father (1900) and Richard Henry Dana (1890) See his autobiography (1916), W C Ford, ed , *A Cycle of Adams Letters, 1861–1865* (1920), J T Adams, *The Adams Family* (1930)
Adams, Charles Francis, 1866–, U S Secretary of the Navy (1929–33), b Quincy, Mass , grandson of Charles Francis Adams (1807–86) He was educated at Harvard (B A , 1888, LL B , 1892) and from 1898 to 1929 was treasurer of the Corporation of Harvard College He practiced law for a brief period in Boston but for most of his life has been connected with a wide variety of business enterprises in that city and elsewhere Adams served in the cabinet of Herbert Hoover An expert yachtsman, he captained the *Resolute* in defeating Sir Thomas Lipton's *Shamrock IV* in 1920
Adams, Charles Kendall, 1835–1902, American historian and educator, b Derby, Vt , grad Univ of Michigan, 1861 He was assistant professor (1863–67) and professor (1867–85) of history at Michigan, president of Cornell Univ (1885–92), and president of the Univ of Wisconsin (1892–1901) Adams pioneered in introducing the seminar method into the United States and wrote several historical works, but was better known for his administrative ability Cornell and, especially, Wisconsin expanded tremendously under his leadership See biography by C F Smith (1924)
Adams, Frank Dawson, 1859–1942, Canadian geologist, b Montreal, educated at McGill Univ , Yale, Johns Hopkins, and Heidelberg (Ph D , 1892) He was long associated with McGill Univ —as Logan professor of geology, dean of the faculty of applied science, vice principal, and, for a time, acting principal He was a fellow of the Royal Society of London as well as of Canada, a fellow of the Geological Society of London (by whom he was awarded the Wollaston gold medal), and a member of many noted scientific bodies His *Birth and Development of the Geological Sciences* (1938) is authoritative, as are his many pamphlets and papers on various aspects of geology
Adams, Franklin Pierce, pseud **F. P. A ,** 1881–, American columnist and author, b Chicago, studied at Armour Scientific Academy and the Univ of Michigan He began (1903) work as a columnist on the Chicago *Journal* and continued it on the New York *Evening Mail*, the *Tribune*, the *World*, the *Herald Tribune*, and the *Post* His column, "The Conning Tower," consisted of verse and humorous comment, about equally divided between F P A and his contributors His Saturday column, an account of his weekly activities, imitated the style and language of Samuel Pepys and was republished as *The Diary of Our Own Samuel Pepys 1911–1934* (2 vols , 1935) In 1938 he became a member of the cast of the radio program "Information Please"
Adams, George Burton, 1851–1925, American historian, b Fairfield, Vt , grad Beloit College (B A , 1873, M A , 1876), Yale (B D , 1877), and Leipzig (Ph D , 1886) Professor of history at Yale (1888–1925) and editor of the *American Historical Review* (1895–1913), he wrote *Civilization during the Middle Ages* (1894), *The Growth of the French Nation* (1896), and *The History of England from the Norman Conquest to the Death of John (1066–1216)* (1905, Vol II in William Hunt and R L Poole, ed , *The Political History of England*) His studies in English constitutional history, notably *The Origin of the English Constitution* (1912, 2d ed , enlarged, 1920) and *Constitutional History of England* (1921, revised by R L Schuyler, 1934), were his greatest contributions to historical knowledge
Adams, Hannah, 1755–1831, American writer, b Medfield, Mass She was perhaps the first woman in the United States to make writing pay as a profession Most of her books were compilations showing industry and great care *An Alphabetical Compendium of the Various Sects* (1784), which went through four editions, was the most successful Her *Summary History of New England* (1799) was a pioneer history of the region and in an abridged form won favor as a school text
Adams, Henry (Henry Brooks Adams), 1838–1918, American historian, b Boston, grad Harvard, 1858; son of Charles Francis ADAMS (1807–86). He was secretary (1861–68) to his father, then U S. minister at the Court of St James's Upon his return to the United States, having already abandoned the law and seeing no opportunity in the traditional Adams calling, politics, he briefly tried journalism He reluctantly accepted (1870) an offer to teach medieval history at Harvard, but stayed on seven years and also edited (1870–76) the *North American Review* In 1877 Adams moved to Washington, D C , his home thereafter He wrote a good biography of Albert Gallatin (1879), a less satisfactory one of John Randolph (1882), and two novels (the first anonymously and the second under a pseudonym)—*Democracy* (1880), a cutting satire on politics, and *Esther* (1884) His exhaustive study of the administrations of Jefferson and Madison, *History of the United States of America* (9 vols , 1889–91, reprinted in 3 vols , 1929, condensed and ed by Herbert Agar as *The Formative Years*, 2 vols , 1947), is one of the major achievements of American historical writing Famous for its style, it is deficient, perhaps, in understanding the basic economic forces at work, but the first six chapters constitute one of the best social surveys of any period in U S history. Never of a sanguine temperament, Adams became even more pessimistic after the suicide (1885) of his adored wife He abandoned American history and began a series of restless journeyings, physical and mental, in an effort to achieve a basic philosophy of history Drawing upon the physical sciences for guidance and influenced by his brother, Brooks ADAMS, he found a satisfactory unifying principle in force or energy He selected for intensive treatment two periods—1050–1250, presented in *Mont-Saint-Michel and Chartres* (privately printed 1904, pub 1913), and his own era, presented in *The Education of Henry Adams* (privately printed 1906, pub 1918) The first is a brilliant idealization of the Middle Ages, specifically of the 13th-century unity brought about by the force of the Virgin, then dominant The second, although written in the third person and reticent about much of his life, was classified by his publishers as an autobiography Another *tour de force*, it describes his unsuccessful efforts to achieve intellectual peace in an age when the force of the dynamo is dominant These two books, containing some of the most beautiful English ever written, rather than his monumental *History*, won Adams his lasting place as a major American writer *The Degradation of the Democratic Dogma* (1919), edited and prefaced by a memoir of Henry Adams by his brother Brooks, contains three brilliant essays on his philosophy of history—"The Tendency of History," "A Letter to American Teachers of History" (pub separately in 1910), and "The Rule of Phase Applied to History" Friendships, especially those with John HAY and Clarence KING, played a large part in Adams's life, and his personal letters reveal a warmer man, for an Adams, than one might suspect See his letters (ed by W C Ford, 2 vols , 1930–38), J T Adams, *Henry Adams* (1933), Ward Thoron, ed , *The Letters of Mrs Henry Adams, 1865–1883* (1936), H D Cater, ed , *Henry Adams and His Friends a Collection of His Unpublished Letters* (1947), Ernest Samuels, *The Young Henry Adams* (1948)
Adams, Henry Cullen, 1850–1906, American legislator and dairyman, b Oneida co , N Y , attended the Univ of Wisconsin A farmer near Madison, Wis , he was state dairy and food commissioner (1895–1902) and, as Congressman after 1902, he championed the Pure Food and Drugs Act and the Adams Act (for the support of state agricultural experiment stations)
Adams, Herbert, 1858–1945, American sculptor, b West Concord, Vt He is known especially for his portrait busts, some of which are tinted The McMillan Fountain in Washington, D C , and the statue of William Cullen Bryant in Bryant Park, New York city, are among his finest works Adams was a founder of the National Sculpture Society
Adams, Herbert Baxter, 1850–1901, American historian, b Shutesbury, near Amherst, Mass , grad Amherst, 1872 In 1876, the year he received his doctorate at Heidelberg, he became one of the original faculty of Johns Hopkins Univ There, in 1880, he began his famous seminar in history, in which a large proportion of the next generation of American historians received their training Adams founded the "Johns Hopkins Studies in Historical and Political Science," the first of such series, and brought about the organization in 1884 of the American Historical Association of which he was secretary until 1900 He wrote *The Germanic Origin of New England Towns* (1882), *Life and Writings of Jared Sparks* (1893), and many articles and reports on the study of the social sciences which were very influential in their day See W S Holt, ed , *Historical Scholarship in the United States, 1876–1901, as Revealed in the Correspondence of Herbert B Adams* (1938)
Adams, Isaac, 1802–83, American inventor, b Rochester, N H He invented(1827) the Adams power press, which supplanted the hand press and was for many decades a superior aid in producing artistic printing
Adams, James Truslow (trŭ'slō), 1878–1949, American historian, b. Brooklyn, N Y , grad Polytechnic

Institute of Brooklyn (B A , 1898) and Yale (M A., 1900) In the First World War he was a captain in military intelligence and later was detailed to the Paris Peace Conference *The Founding of New England* (1921), which brought him the Pulitzer Prize in history for 1922, was followed by *Revolutionary New England, 1691–1776* (1923) and *New England in the Republic, 1776–1850* (1926) Among the best of his many books are *Provincial Society, 1690–1763* (Vol III in the "History of American Life" series, 1927) and *The Epic of America* (1931), which was widely translated *The March of Democracy* (2 vols , 1932–33) and *America's Tragedy* (1934) were also popular *The Adams Family* (1930) and *Henry Adams* (1933) were books on the famous Massachusetts clan by an unrelated descendant of the Virginia Adamses Adams, who spent much of his time in London as representative of his publishers, Charles Scribner's Sons, wrote *Building the British Empire: to the End of the First Empire* (1938) and *Empire on the Seven Seas the British Empire, 1784–1939* (1940) He was also editor in chief of *Dictionary of American History* (6 vols , 1940, rev ed , 1942), *Atlas of American History* (1943), and *Album of American History* (4 vols , 1944–48), three valuable reference works Some of his later writings reflect his obvious distaste for the New Deal, of which he was a vigorous critic (he had retired from Wall St. in 1912 to devote himself to history).

Adams, John, 1735–1826, 2d President of the United States (1797–1801), b Quincy (then in Braintree), Mass , grad. Harvard, 1755 A lawyer, he emerged into politics as an opponent of the Stamp Act and, after moving to Boston, was a leader in the patriot group opposing the British measures that were leading to the American Revolution Sent (1774) to the First Continental Congress, Adams distinguished himself, and in the Second Continental Congress he was a moderate but forceful revolutionary He proposed George Washington as commander in chief of the Continental troops to bind Virginia more tightly to the patriot cause He favored the DECLARATION OF INDEPENDENCE, was a member of the drafting committee, and argued eloquently for it As a diplomat seeking foreign aid for the just-born nation, he had a thorny career Appointed (1777) to succeed Silas Deane as a commissioner to France, he accomplished little before returning home (1779) to be a major figure in the Massachusetts constitutional convention Back he went (1779) to France, where he quarreled with Vergennes and was able to lend little assistance to Benjamin Franklin in his peace efforts His attempts to negotiate a loan from the Netherlands were long fruitless, but in 1782 he did secure a loan Adams was one of the negotiators who drew up the momentous Treaty of Paris (1783) to end the American Revolution After this service he obtained another Dutch loan and then was envoy (1785–88) to Great Britain, where he met with British coldness and unwillingness to discuss the problems growing out of the treaty He asked for his own recall and ended a significant but discouraging diplomatic career In America once more, he was chosen VICE President and served throughout George Washington's administration (1789–97) Though he inclined to conservative policies, he acted somewhat as a balance wheel in the partisan contest between Alexander HAMILTON and Thomas JEFFERSON In the 1796 election Adams was chosen to succeed Washington as President despite the reluctance of Hamilton The Adams administration was one of crisis and conflict, in which the President showed an honest and stubborn integrity, and though allied with Hamilton and the conservative property-respecting Federalists, he was not dominated by them in their struggle against the vigorously rising, more broadly democratic forces led by Jefferson Though the Federalists were pro-British and strongly opposed to post-Revolutionary France, Adams by conciliation prevented the near war of 1798 (see XYZ AFFAIR) from developing into a real war between France and the United States Nor did the President wholeheartedly endorse the ALIEN AND SEDITION ACTS (1798), aimed at the Anti-Federalists He was, however, detested by his Jeffersonian enemies, and in the election of 1801 he and Hamilton were both submerged in the tide of Jeffersonian democracy After 1801 Adams lived in retirement at Quincy (in a mansion given in 1946 to the nation as a historic site), issuing sober and highly respected political statements and writing many letters, notably those to Jefferson By remarkable coincidence he and Jefferson died on the same day, Independence Day, July 4, 1826 John Adams and his wife, Abigail ADAMS, founded one of the most distinguished families of the United States, their son, John Quincy ADAMS, was also President. See works of John Adams (10 vols , ed by J Q Adams and C F Adams, 1851–66, Vol I is a biography by C F Adams), *The Selected Writings of John Adams and John Quincy Adams* (ed by Adrienne Koch and William Peden, 1946), biographies by John T Morse (1884) and Gilbert Chinard (1933); James Truslow Adams, *The Adams Family* (1930).

Adams, John Couch, 1819–92, English astronomer, grad St John's College, Cambridge, 1843 By mathematical calculation based on irregularities in the motion of Uranus, he predicted the position of the then unknown planet NEPTUNE Because of delay in making in England a telescopic search for the planet, the credit for the discovery went to a Frenchman, LEVERRIER In 1858 Adams became professor of mathematics at St Andrews Univ., but he soon returned to Cambridge, to occupy the Lowndean chair of astronomy and geometry until his death From 1861 he was also director of the university observatory, preferring this post to that of astronomer royal, which was offered to him in 1881 He made valuable studies of the moon's motions, of the Leonids in the great meteor shower of 1866, and of terrestrial magnetism His collected papers, edited by his brother, were published at Cambridge in 1896 and 1901.

Adams, John Quincy, 1767–1848, 6th President of the United States (1825–29), b Quincy (then in Braintree), Mass , son of John and Abigail Adams and father of Charles Francis Adams (1807–86). He accompanied his father on missions to Europe and gained broad knowledge from study and travel —he even accompanied (1781–83) Francis Dana to Russia—before returning home to graduate (1788) from Harvard and to study law Washington appointed (1794) him minister to the Netherlands, and in his father's administration he was minister to Prussia (1797–1801). In 1803 he became a U S. Senator as a Federalist, but his independence of mind led him to approve Jeffersonian policies in the Louisiana Purchase and in the Embargo Act of 1807, the Federalists were outraged, and he resigned (1808) Sent as minister to Russia in 1809, he was well received at the tsarist court, but the wars of Napoleon eclipsed Russian-American relations He then helped to draw up the Treaty of Ghent (1814), and his diplomatic training was completed as minister to Great Britain As Secretary of State (1817–25) under President James Monroe, Adams gained an enduring fame His best-known achievement was the MONROE DOCTRINE (1823), but in other ways also he gave the United States a firmer position as a power dealing with equals In 1824 Adams was a candidate for the U S presidency The Democrats under Andrew JACKSON and the Whigs under Henry CLAY were closely matched, and the election was decided in the House of Representatives There Clay supported Adams and made him President Adams then appointed Clay Secretary of State, but the Democrats' cry that the appointment fulfilled a corrupt bargain was unfounded in fact With little popular support and without a party, Adams had an unhappy, ineffective administration After Jackson won the 1828 election, Adams retired to Quincy but emerged (1829) and won a new renown as U S Representative (1831–48), he was eloquent in attacking slavery, the GAG RULES, and all measures that would expand slavery His coldness and rather gloomy introspection still kept him from general popularity, but he was respected for his high-mindedness and his great knowledge. His interest in science led him to promote the Smithsonian Institution His diary (selections ed by C F Adams, 12 vols , 1874–77, abridged by Allan Nevins, 1928) is a truly valuable historic document Most of his writings were edited by W C Ford (7 vols , 1913–17) and some appear in *The Selected Writings of John and John Quincy Adams* (ed by Adrienne Koch and William Peden, 1946) See biographies by John T Morse (1883) and Bennett Champ Clark (1932); Dorothie Bobbé, *Mr and Mrs John Quincy Adams* (1930), James Truslow Adams, *The Adams Family* (1930), Samuel Flagg Bemis, *John Quincy Adams and the Foundations of American Foreign Policy* (1949)

Adams, Maude, 1872–, American actress, b Salt Lake City, Utah Her name was Kiskadden, but she used her mother's maiden name At 16 she left school to play an ingénue role in the E H Sothern company When John Drew came under Charles Frohman's management, Miss Adams was selected as Drew's supporting lady in the Empire Stock Company, opening with Clyde Fitch's *Masked Ball* (1892) She supported Drew for five years and finally made her first stellar appearance in Barrie's *Little Minister* (1897), the first of his plays in which she became famous Others include *Quality Street* (1901), *What Every Woman Knows* (1908), and the play for which she was most loved, *Peter Pan* (1905) She also played in Rostand's *L'Aiglon* (1900) and *Chantecler* (1911) In retirement after 1918, Miss Adams made contributions to the development of stage lighting, in 1937 she became professor of drama at Stephens College

Adams, Roger, 1889–, American chemist, b Boston, grad Harvard (B A , 1909, Ph D , 1912) and studied in Berlin. After 1916 he taught at the Univ of Illinois He served in the First World War with the Chemical Warfare Service and in the Second World War on the Scientific Advisory Board and the National Defense Research Committee and as scientific adviser in the American-occupied zone in Germany. Among his contributions to chemistry are the development of methods of identifying and preparing substances and of new methods of synthesis. He was among the first to synthesize the local anesthetics butyn and procaine He has long been connected in various capacities with the annual publication of *Organic Syntheses* (editor in chief of Vols I and VIII, 1921, 1927), with J. R. Johnson he wrote *Elementary Laboratory Experiments in Organic Chemistry* (1928).

Adams, Samuel, 1722–1803, American Revolutionary patriot, signer of the Declaration of Independence, b Boston, Mass , grad Harvard, 1740, second cousin of John Adams. A brewer, he undertook a political career and was a member (1764–74) and clerk (1766–74) of the lower house of the Massachusetts legislature As colonial resistance to British laws stiffened, Adams spoke for the discontented and replaced James Otis as leader of the extremists. He drafted a protest against the Stamp Act in 1765 and, as clerk, composed documents of historic significance More important, he used his able pen in pamphleteering against the British and for the NATURAL RIGHTS of man With the help of such men as John Hancock he organized the revolutionary Sons of Liberty and helped to foment revolt through the Committees of Correspondence. He was the moving spirit in the BOSTON TEA PARTY. Thomas GAGE issued a warrant for the arrest of Adams and Hancock, but they escaped punishment and continued to stir up lethargic patriots. Samuel Adams was a member (1774–81) of the Continental Congress, but after independence was declared his influence declined, the "radical" was replaced by more conservative leaders, who tended to look upon Adams as an irresponsible agitator. He later (1794–97) served as governor of Massachusetts See selection of his writings ed by Elizabeth Lawson (1946), biographies by J K Hosmer (1885), R V. Harlow (1923), and J C Miller (1936)

Adams, Sarah Flower, 1805–48, English poet She began early to contribute to the *Monthly Repository* In 1841 *Vivia Perpetua*, a dramatic poem, was published Her best work was in hymns, the most widely known is *Nearer, My God, to Thee*

Adams, Walter Sydney, 1876–, American astronomer, b. Antioch, Syria, grad Dartmouth, 1898, and studied at the universities of Chicago and Munich He has written extensively on the motions of the stars and on the spectroscopy of the sun and stars In 1901 he became assistant in the Yerkes Observatory on Lake Geneva, Wis , going to Mt Wilson Observatory in California as astronomer in 1909, he became director in 1923 In 1946 he retired as director to become research associate of the Carnegie Institution

Adams, Wayman, 1883–, American portrait painter, b Muncie, Ind , son of a farmer He worked at a lunch counter and later as manager of a restaurant in Indianapolis while he studied art at the John Herron Art Institute From 1910 to 1912 he studied abroad with William Chase and Robert Henri In 1914 he established his reputation as a brilliant portraitist His painting is spontaneous and his characterization dramatic and penetrating His portrait of Joseph Pennell (Art Inst , Chicago) is a well-known example of his work

Adams, William (Will Adams), 1564?–1620, first Englishman to visit Japan As pilot of a Dutch ship, he reached there in 1600 He soon became a favorite of IEYASU Adams's knowledge of shipbuilding, navigation, mathematics, and Western affairs proved valuable Many of the longer voyages which the Japanese made were in vessels constructed under his direction Adams attempted to foster trade relations with England, and he himself made trading trips to the Ryukyu Islands, Siam, and Cochin China He married a Japanese woman, acquired a Japanese name, and was given an estate at Yokosuka He remained in Japan until his death See his letters (ed. by Thomas Rundall, 1850) and his log-book (ed by C J. Purnell, 1916), F R Dulles, *Eastward Ho! the First English Adventurers to the Orient* (1931)

Adams, William, 1807–80, American clergyman, b Colchester, Conn , grad Yale, 1827, and Andover Theological Seminary, 1830 After serving for 40 years as a Presbyterian minister in New York city, he became in 1874 president of Union Theological Seminary, which he had helped found

Adams, William Taylor, pseud **Oliver Optic,** 1822–97, American writer of juvenile stories, b Medway, Mass He edited *Oliver Optic's Magazine*, 1867–75, and wrote 116 books, many of them related, such as the "Great Western" series, and many newspaper stories All combined exciting tales with wholesome, if elementary, instruction

Adams. 1 Town (pop 12,608), NW Mass , in the Berkshires and on the Hoosic river; inc 1778. It has textile and paper mills and calcium quarries Susan B Anthony was born here There is an 18th-century Friends' meetinghouse 2 Village (pop 1,594), N N Y , SW of Watertown, in a dairy region, inc. 1851 Paint and patent medicines are made here 3 City (pop 1,310), central Wis., S of Wisconsin Rapids, founded before 1860 as Lower Friendship, inc 1926

Adam's Bridge or **Rama's Bridge**, chain of shoals, c 20 mi long, between Rameswaram island and a peninsula of Ceylon A sort of natural bridge between India and Ceylon, it is said by legend to be the site of a causeway built by Rama, hero of the Ramayana

Adam's-needle · see YUCCA

Adana (ä'dänä), city (pop 100,780), S Turkey, on the Seyhan river Colonized by the Romans, it prospered and declined, it was revived (c 782) by Harun al-Rashid Today it is a commercial center

Adanson, Michel (mēshĕl' ädäsôN'), 1727–1806, French botanist of Scottish descent His *Familles des plantes* (1763) places him with the early systematists The BAOBAB is named *Adansonia* for him

Adapazari (ädäpäzär'ē) or **Adabazar** (ädäbäzär'), town (pop 29,386), NW Turkey It is a commercial center, with trade in rugs, textiles, and tobacco

adaptation, in biology, the adjustment of living matter to environmental conditions and to other living things This ability is a fundamental property of protoplasm and constitutes a basic difference between living and nonliving matter Most living things require free oxygen from the air or from water, but yeasts, many bacteria, and some other simple forms obtain the oxygen required for oxidation from molecules of substances which contain the element Various animals and plants are adapted for securing their food and for surviving the extremes of temperature and of water supply in desert, tropical, and polar regions For most organisms the optimum temperature is between about 20° C (68° F) and 40° C (104° F) Some algae and protozoa live in hot springs, and some bacteria can survive freezing The CACTUS can survive heat and drought Certain fish and other aquatic animals live in deep water and are so specialized to withstand the great pressure that they burst if lifted to sea level Animals show anatomical adaptations—e g , the body of the fish is suited to life in the water, the body of the BIRD is adapted for flight, the land mammals show wide variation in the structure of limbs and body which enable some to run swiftly, some to climb, some to swing from tree to tree, some to glide through the air, and others to jump The whale, an aquatic mammal, can adjust to great pressure changes at different levels in the water The beaks of birds which feed on different kinds of food, e g , on seeds, on insects, on aquatic animals, and on small mammals, differ in shape and size The feet and legs of birds also show modifications which fit them for perching, for wading, and for paddling through the water Adaptive coloration is observed in many animals (see PROTECTIVE COLORATION) Among communal insects, such as ants and honeybees, the individuals are highly adapted to perform their functions in the community It is believed by many scientists that life originated in the sea and that through gradual evolutionary changes some forms became adapted to life on land Variations may arise as mutations or as a result of recombinations of the genes in the germ cells Such variations are inherited Those which aid the individual in his competition with other living things help him to survive, and thus the changes tend to be passed on from one generation to another Forms which retain their adaptability and which do not become too specialized are the most likely to survive See also ECOLOGY

Adar (ä), in the Bible see HAZAR-ADDAR

Adare, Cape (ədâr'), northeastern projection of Victoria Land, Antarctica Here C E Borchgrevink made (1895) the first landing in Antarctica

Adasa (ăd'əsä), town, near Beth-horon, place of encampment of Judas Maccabaeus 1 Mac 7 40

Adbeel (ăd'bēēl), son of Ishmael Gen 25 13, 1 Chron 1 29

Adda (ăd'dä), river, c 195 mi long, rising in the Alps of Lombardy, N Italy It flows through Lake Como into the Po There are many hydroelectric plants along its upper course It has been a strategic line in many wars

Addams, Jane, 1860–1935, American social worker, b Cedarville, Ill , grad Rockford College, 1881 In 1889, with Ellen Gates Starr, she founded the famous Hull House in Chicago, one of the first social settlements in the United States Based on the university settlements begun in England by Samuel Barnett, Hull House has had influence throughout the nation in the settlement movement It has also been important in Chicago civic affairs, especially in its relations with foreign-born citizens Jane Addams was a leader in the woman-suffrage and peace movements She was the recipient (jointly with Nicholas Murray Butler) of the 1931 Nobel Peace Prize Her books on social questions include *The Spirit of Youth and the City Streets* (1909), *A New Conscience and an Ancient Evil* (1912), and *Peace and Bread in Time of War* (1922) See her autobiographical *Twenty Years at Hull-House* (1910) and *The Second Twenty Years at Hull House* (1930); biography by her nephew, J W Linn (1935).

Addis Ababa (ä'dĭs ä'bŭbŭ), city (pop 120,000), capital of Ethiopia It was founded in 1887 by Menelik II, who established the capital here in 1889 It was captured by Italy in 1936 and was the capital of Italian East Africa until 1941, when the Italians were driven from the country Addis Ababa is spread wide over a hilly plateau which is partly enclosed by mountains There are only a few modern, substantial buildings among its thatched huts Near the city are the imperial palace and the parliament building Addis Ababa is the terminus of Ethiopia's only railroad, which extends to Jibuti in French Somaliland, and it is a road center

Addison, Joseph, 1672–1719, English essayist, poet, and statesman He was educated at Charterhouse (Richard Steele was there at the same time) and at Oxford, where he became a distinguished Latinist His travels on the Continent from 1699 to 1703 were recorded in *Remarks on Italy* (1705), essays modeled after Bacon Addison first achieved prominence, however, in 1704 with *The Campaign*, an epic celebrating the victory of Blenheim The poem was commissioned by Lord Halifax, and its great success resulted in Addison's appointment in 1706 as undersecretary of state to Lord Sunderland and in 1709 as secretary to the lord lieutenant of Ireland Addison also held a seat in Parliament from 1708 until his death, and he was kept from want for the rest of his placid life His authorship extended to an opera *Rosamund* (1707), a tragedy, *Cato* (1713), which was immensely popular because of its contemporary political appropriateness, and a comedy, *The Drummer* (1716) But Addison's most enduring fame was achieved as an essayist In 1710 he began his contributions to the *Tatler*, which Steele had founded in 1709 Upon the demise of the *Tatler* in 1711, Addison continued his efforts in its successor, the *Spectator*, and it was for this paper that he developed Steele's creation of Sir Roger de Coverley and his coterie Addison also published there a series of critical papers on *Paradise Lost*, he judged the poem by the tenets of classical criticism and concluded that Milton was the peer of Homer and Vergil Addison's contributions to the *Spectator* were witty, polished, and urbane With these papers he not only began a reaction in literary tastes, but also gave to the English essay a new body and personality Addison's training in the classics is reflected in the form, clarity, and precision of his essays, while their gently ironic tone mirrors neatly the personality of the author Near the end of his life he married (1716) the wealthy dowager countess of Warwick Addison is buried in Westminster Abbey See *Selections* (ed by Barrett Wendell and C N Greenough, 1905), his letters (ed by Walter Graham, 1941), biography by W J Courthope (1903)

Addison, Thomas, 1793–1860, English physician He received (1815) his medical degree at the Univ of Edinburgh and lectured on pathology at Guy's Hospital, London, where Richard Bright was one of his associates Among his important clinical contributions was his description of disorders of the suprarenal or adrenal glands, including the disease later known as **Addison's disease** This rather rare malady is a result of the destruction of the cortex of the adrenal glands, usually by tubercular infection It is commonest in persons of middle age and starts with fatigue and weakness, low blood pressure, low temperature, digestive and nervous disturbances, and a gradual brownish pigmentation of the skin Rest, a nutritive diet, and tonic measures are needed Injections of cortical hormones from the adrenal glands may overcome some of the symptoms, but the disease is fatal It was first described in Addison's *On the Constitutional and Local Effects of Disease of the Suprarenal Capsules* (1855)

Addison. 1 Village (pop 1,617), S N Y , on the Canisteo and W of Elmira, in a dairy region, inc 1873 Woodwork products are made here. 2 Town, W Va see WEBSTER SPRINGS

Addison's disease · see ADDISON, THOMAS.

addition, one of the four fundamental operations of arithmetic The symbol for this operation is + The result of adding two or more numbers is called the sum, the numbers to be added are the addends When numerical quantities are to be added, their denominations must be the same one foot must not be added to one meter or one yard without first converting the meter or yard to the equivalent number of feet One foot cannot be added to one hour The addition of columns of numbers can be checked by adding upwards as well as downwards Some of the properties of the operation are associativity, which means that in adding three numbers any two may first be added and their sum added to the third without affecting the final sum, commutivity, which means that the sum of two numbers is the same whether the second is added to the first or the first to the second, and distributivity, which means that the result of adding two numbers and multiplying their sum by a third is the same as the result of multiplying each of the first two numbers by the third and then adding these products These properties are important in higher algebra See also ALGEBRA, DECIMAL SYSTEM, FRACTION

Addon, variant of ADDAN

address, forms of Both spoken and written salutations differ widely even in English-speaking countries Monarchical traditions and hereditary titles give rise to great complexity, England has a multiplicity of forms and a strict code of address The United States has fewer and simpler forms, which have grown out of custom and convenience rather than inheritance and are indicative, not of a man's birth or family, but of his professional or political position However, in all official and diplomatic correspondence and in formal social intercourse, modes of addressing letters and invitations, as well as the manner of personal address, are of great importance The President of the United States is addressed in speech as *Mr President*, in writing as *The President, The White House, Washington* The formal opening of a letter may be *Sir*, the informal opening *My Dear Mr President* Ambassadors, in speech, are *Your Excellency*, in writing *His Excellency the Ambassador of Great Britain* A governor of a state is spoken of formally as *His Excellency the Governor of Ohio* An invitation would read *The Honorable the Governor of New York* The Vice President, heads of executive departments (cabinet members), justices of the higher courts, mayors of cities, American ministers, Senators and Representatives, and ex-Presidents are addressed as *The Honorable*, e g , *The Honorable the Vice President of the United States, The Honorable the Secretary of State* The secretary to the President, heads of independent boards and commissions, assistant secretaries of executive departments, are also addressed as *Honorable Esquire* is used after the names of chief clerks and chiefs of the bureaus of executive departments, diplomatic officers below the rank of minister, consular officers, clerk of the Supreme Court and officers of other courts *Reverend* or *Honorable* should be preceded by the word *the* and should not be abbreviated, letters after the heading should begin (this is known as the salutation) *Dear Mr* ——— Professional titles precede the name, and professional abbreviations follow Church dignitaries are addressed in writing thus the pope, *His Holiness Pope Pius XII*, in the salutation *Your Holiness* or *Most Holy Father*, cardinals, *His Eminence the Cardinal Archbishop of New York* or (when not an archbishop) *His Eminence Cardinal* ———, salutation *Your Eminence;* archbishops, *His Grace the Archbishop of* ———, salutation *My Lord Archbishop* or *Your Grace*, bishops, *The Right Reverend Bishop* ——— or *The Right Reverend Bishop of* ———, salutation *Dear Sir* or *My Lord;* Methodist Episcopal bishops, *The Reverend Bishop* ———, salutation *Dear Sir*, deans, *The Very Reverend* ———, salutation *Very Reverend Sir* English titles are numerous and complex The king and the queen, in speech with intimates, are *Sir* and *Ma'am* Addressed by letter, the king is *His Most Gracious Majesty the King*, the salutation of the letter is *Sire* or *Your Majesty* The queen in writing is *Her Most Gracious Majesty the Queen*, salutation *Madame* or *Your Majesty* A prince is in writing *His Royal Highness the Prince of* ———, a princess *Her Royal Highness the Princess Margaret Rose* A duke is in writing *His Grace the Duke of* ———, salutation *My Lord Duke* or *Your Grace* A countess is in writing *The Right Honourable the Countess of* ———, salutation *Madame* or *Your Ladyship* An earl is in writing *The Right Honourable the Earl of* ———, salutation *My Lord* or *Your Lordship* Members of Parliament add the letters M P to their address A privy councilor is *The Right Honourable* ——— ——— In addressing invitations the full title is used except in the case of barons The title *Right Honourable* belongs to all peers and is the right of members of the privy

council and of cabinet ministers. Professional titles precede titles of rank as *Captain the Honourable John Blank*. The use of *Esquire*, formerly limited to lawyers, country gentlemen, and eldest sons of knights, is now more general. The title *Honourable* is ignored in conversation and is never used on visiting cards

Addyston, village (pop 1,610), extreme SW Ohio, on the Ohio and W of Cincinnati Iron pipe and castings are made here The William Henry Harrison memorial park is near

Ade, George, 1866–1944, American humorist and dramatist, b Kentland, Ind, grad Purdue Univ, 1887 He was a reporter in Lafayette, Ind, until 1890, when he went to work for the Chicago *News* at the insistence of his friend J T McCutcheon His "Stories of the Streets and of the Town," in the *Record* (the morning edition of the *News*), attracted attention for their racy and idiomatic humor and for the shrewdness with which they sketched people of the Midwestern scene he knew so well The title of his best-known book, *Fables in Slang* (1900), describes his successful formula—short, satirical, wittily vernacular sketches Many similar volumes followed, including *People You Knew* (1903) and *Hand-made Fables* (1920) He also wrote several comedies and comic operas, among them *The Sultan of Sulu* (1902), *The County Chairman* (1903), *The College Widow* (1904), *The Fair Co-ed* (1908), *The Old Town* (1909), and a number of musical comedy librettos and film scenarios See biography by Fred C Kelly (1947)

Adel. 1 (ā″dĕl′) City (pop 2,134), co seat of Cook co, S Ga, NE of Thomasville, inc 1889 Settled near by in 1860 as Puddleville, it was moved to its present site in 1888 to be on the railroad Adel is a tobacco market and trade center for a farm area **2** (ûdĕl′) Town (pop 1,740), co seat of Dallas co, S central Iowa, on the Raccoon river just W of Des Moines, in a farm area, settled 1846 as Penoach, named Adel 1849, inc 1887

Adelaide or **Adelheid** (a′dulhīt), c 931–999, empress consort of Otto I, daughter of King Rudolf II of Arles After the death of her first husband, King Hugh of Italy, she was about to be forced into a marriage with the son of BERENGAR II when she appealed to OTTO I, who rescued and married her in 951 She was sole regent for her grandson, Otto III, from 991 to 995 She was a great benefactress of religious houses

Adelaide, city (pop 35,032, metropolitan pop 382,604), capital of South Australia, near Gulf St Vincent SE of Port Adelaide and on the Torrens river Named for the queen of William IV, it was founded in 1836 and is the oldest city in the state Here are the Univ of Adelaide (1874), a natural history museum (1895), the Waite Institute of Agricultural Research (1924), and Anglican and Catholic cathedrals There are knitting mills and state-owned munitions plants GLENELG is one of the principal suburbs

Adelard of Bath (ă′dulard), fl 12th cent, English scholastic philosopher, celebrated for his study of Arabian learning He traveled widely in the East and around the Mediterranean and probably spent some time in Spain He translated Euclid from Arabic into Latin One of his works, published in the 15th cent under the title *Perdifficiles quaestiones naturales* [difficult problems], is a kind of compendium of Arabian learning His principal philosophical work, *De eodem et diverso* [on identity and difference], attempts a solution to the problems of NOMINALISM and REALISM

Adélie Land (ă′dulē, ădālē′), region, Antarctica, in the Australian quadrant, W of King George V Land and E of Wilkes Land It was discovered (1840) by DUMONT D'URVILLE and explored by Sir Douglas MAWSON It is a heavily glaciated area and has stronger winds than any other part of the globe

Adelphi, the (udĕl′fē), area in central London England, near the Thames and just S of the Strand It was developed by the Adam brothers from designs mainly by Robert Adam Among its famous residents have been David Garrick, John Galsworthy, James M Barrie, G B Shaw, W B Yeats, and H G Wells Most of the buildings have been demolished since 1937 to make way for blocks of modern offices and apartments

Adelphi College. see GARDEN CITY, N Y.

Adelsberg, Yugoslavia see POSTOJNA

Adelung, Johann Christoph (yō′hän krĭs′tōf ä′dulōōng), 1732–1806, German grammarian, principally known for his study of German grammar, vocabulary, and idiom His dictionary of High German establishes him in his field as the ablest predecessor of Jakob GRIMM, and his incomplete survey of the languages of the world was a famous, if inaccurate, work

Ademar or **Adhemar** (both ăd′ûmär), Fr *Adhémar de Monteil* (ädāmär′ du mōtāy′), d 1098, French prelate, bishop of Le Puy, a leading member of the First Crusade (see CRUSADES) He was designated at the Council of Clermont (1095) as papal legate on that expedition He distinguished himself at the sieges of Nicaea and Antioch and carried the Holy Lance (with which Christ's side had been pierced by a Roman soldier) after its discovery, though he at first doubted its authenticity After his death at Antioch, he was believed to appear to his companions in visions

Aden (ā′dun, a′–), British crown colony (80 sq mi; pop 81,236, including PERIM), SW Arabia, on the Gulf of Aden The colony mostly comprises two extinct volcanic craters joined by a flat sandy foreshore A gap in the rock wall gives the town of Aden (the major part of the colony) access to the well-protected harbor The colony was captured by Moslems in 632 Turkey occupied it almost continuously from 1538 to 1630 against Portuguese opposition In 1839 it fell to Great Britain and was administered as part of India until 1937 Aden is a free port which attracts much shipping on the trade route served by the Suez Canal In the Second World War it was an important air base The British protectorate of Aden (c 112,000 sq mi, pop c 630,000) is bordered by Yemen and Saudi Arabia It occupies a coast line c 740 mi long For the most part mountainous or desert, it has fertile valleys where corn, millet, and wheat are grown The inhabitants, all Moslem, are directly ruled by sultans or tribal chiefs The boundaries of the protectorate were established in 1945 See Hugh Scott, *In the High Yemen* (1942)

Aden, Gulf of, western arm of the Arabian Sea, lying between Aden protectorate and Somaliland It is connected with the Red Sea by the Bab el Mandeb The gulf is on the great trade route from the Mediterranean Sea to the Indian Ocean via the Suez Canal After the 16th cent Portugal, Turkey, and Great Britain were the chief contenders for control of the gulf, and by the 19th cent British power was dominant

Adena (udē′nu), village (pop 1,703), E Ohio, SW of Steubenville, in a coal-mining area

adenoids, common name of the pharyngeal tonsils, masses of lymphoid tissue in the nasopharynx (the upper part of the throat cavity) In children these growths may interfere with normal breathing and become a factor in malformation of face and jaws and in malocclusion of teeth Infected adenoids may result in frequent colds, sore throats, and impairment of hearing

Ader (ā′–), Benjamite 1 Chron 8 15

Adernò, Italy see ADRANO

Adeste Fideles (ädĕs′tā fēdā′lēs) [Latin,=come, ye faithful], Christmas hymn of irregular meter It was written in Latin, probably by a 17th- or 18th-century German or French author, whose name remains unknown There are many English translations, the most popular is perhaps that of Frederick Oakeley (1802–80), beginning, "O come, all ye faithful" The usual tune, *Portuguese Hymn*, appears in a manuscript called *Cantus Diversi* (1751), a collection of hymn tunes copied by J F Wade The composition of the tune has been variously ascribed to Marcos Antonio Portogallo (1762–1830) and to the late 17th-century English composer John Reading, but without certainty

Adhémar de Monteil see ADEMAR

adhesive, substance capable of adhering to, and bonding, surfaces Animal glue, a gelatin made from hides, hoofs, or bones, was probably known in prehistoric times and remained the leading adhesive until the 20th cent Used now especially in cabinetmaking, it is sold as a solid—either ground or in sheets to be melted in a water-jacketed gluepot and applied while hot—or as liquid glue (an acid solution) In the 19th cent, adhesives from vegetable sources became commercially important, these include natural gums and resins, mucilage, and starch (used in flour and water pastes or in the form of dextrins and other derivatives) These vegetable substances are used as extenders and modifiers for synthetic adhesives, for sizing paper and textiles, and for labeling, sealing, and manufacturing paper goods Other adhesives derived from animal and vegetable sources include protein glues such as casein, blood albumin, and soybean glues, rubber adhesives, and cellulose derivatives Synthetic adhesives are resistant to extremes of temperature and humidity, are unaffected by bacteria, and are useful in bonding ceramics, glass, plastics, metals, rubber, and wood They are widely used in construction materials, airplanes, and automobiles and in some uses have replaced screws, rivets, and welding See also CEMENT See John Delmonte, *The Technology of Adhesives* (1947)

Adiel (ā′dĭl) [Heb,=ornament of God] **1** Father of David's treasurer 1 Chron 27 25 **2** Simeonite 1 Chron 4 36 **3** Priest 1 Chron 9 12

Adige (ä′dējā), Ger *Etsch* (ĕ′ch), river, 255 mi long, rising in N Italy, in the Tyrolean Alps It flows S through the Alto Adige and Trentino past Verona, then turns east to empty into the Adriatic north of the mouth of the Po

Adighe. see ADYGE AUTONOMOUS OBLAST

Adin (ā′–) [Heb,=tender], family which returned from exile Ezra 2 15, 8 6, Neh 7 20, 10 16

Adina (ădī′–, ûdī′–) [Heb,=pliant], Reubenite captain 1 Chron 11 42

Adino (ădī′–, ûdī′–), the EZNITE, one of David's men. 2 Sam 23 8.

Adirondack Mountains (ădĭrŏn′dăk), NE N Y, sometimes mistakenly included in the Appalachian system The group is bounded on the east by the west shore of Lake Champlain and the Lake George region and extends from foothills near the St Lawrence on the north to the Mohawk valley on the south Geologically the Adirondack region resembles the LAURENTIAN PLATEAU Its pre-Cambrian metamorphic rock with intruded igneous rock (largely masses of granite) has been uplifted and eroded through countless years Faulting caused the eastern portion to be the most rugged. Layers of sedimentary rock (sandstone and limestone) containing marine fossils of Cambrian and Ordovician times are tilted against the mountains Some of the oldest sedimentary rocks have metamorphosed to form marble, mica schist, and quartzite A sheet of glacial till over the area and lakes formed from streams backed up by moraines are characteristic The main range rises to 5,344 ft. in Mt MARCY, highest peak in the state, among the other summits are WHITEFACE, MacIntyre, Haystack, and Skylight Wild, rugged scenery, beautiful forests, and numerous lakes characterize the area, where 2,177,701 acres have been set aside in the Adirondack Forest Preserve Lake Placid and Lake George, Indian, Schroon, Long, Cranberry, Big and Little Tupper, Upper and Lower Saranac, and Raquette lakes, and the Fulton Chain have winter and summer resorts on their shores The Hudson, the Ausable, the Black, and several tributaries of the St Lawrence have their sources in the Adirondacks The mining of iron ore in the region was not considered profitable, in competition with Western ore, until c 1938 During the Second World War millions of tons were mined Highways and railroads give access to the region, where there are popular trails and canoe routes See W C O'Kane, *Trails and Summits of the Adirondacks* (1928), Adirondack Mountain Club, *Guide to Adirondack Trails* (2d ed, 1945)

Aditham (ădī′thăm), town of Judah, probably c 10 mi from the coast Joshua 15 36

adjective, English PART OF SPEECH, one of the two which refer typically to attributes The other is the adverb These two classes overlap with the form class marked by *–er* and *–est* (or *more* and *most*) They are functionally distinct in that adjectives never occur far from nouns, while adverbs are associated primarily with verbs There is a small class of words (e g, *very* and *too*) which typically precede adjectives and adverbs, these are usually called adverbs Many adverbs belong to a form class of words ending *–ly* Adjective and adverb are typically Indo-European form classes, and probably most languages lack specialized classes with analogous functions See Leonard Bloomfield, *Language* (1933)

Adlai (ăd′lī), father of SHAPHAT 4 1 Chron 27 29

Adler, Alfred (ad′lur), 1870–1937, Austrian psychiatrist, founder of the school of individual psychology Although one of Freud's earlier associates, he soon rejected the Freudian emphasis upon sex He maintained that all personality difficulties have their roots in a feeling of inferiority (see INFERIORITY COMPLEX) derived from physical handicaps or from conflict with the environment which restricts an individual's need for power and self-assertion Thus he saw behavior disorders as overcompensation for deficiencies In later life he lectured and practiced in the United States Besides *The Practice and Theory of Individual Psychology* (1923), he wrote *The Neurotic Constitution* (1909) and *Understanding Human Nature* (1927) See biography by Phyllis Bottome (1939)

Adler, Cyrus, 1863–1940, American Jewish educator, b Van Buren, Ark, grad Univ of Pennsylvania, 1883, Ph D Johns Hopkins, 1887 He taught (1884–93) Semitic languages at Johns Hopkins He was long librarian and then secretary of the Smithsonian Institution, was the founder of the American Jewish Historical Society, was one of the editors of the *Jewish Encyclopedia*, and edited the *American-Jewish Year-Book* after 1899 He was president of Dropsie College from 1908 to 1940 and of the Jewish Theological Seminary after 1924 His writings include a number of articles on comparative religion, Assyriology, and Semitic philology, *The Shofar Its Use and Origin* (1893), *Jews in the Diplomatic Correspondence of the United States* (1906), *Jacob Henry Schiff* (1921), and, with Allan Ramsay, *Told in the Coffee House* (1898) See biography by A A Neuman (1942)

Adler, Denkmar, 1844–1900, American architect, b Germany He came to the United States in 1854, settling in Detroit After serving in the Civil War, he became a draughtsman in Chicago The firm in which he was partner had a large share in the reconstruction of Chicago subsequent to the fire of 1871 In 1880 the firm of Adler and Sullivan was formed by the admission of Louis SULLIVAN, who had been Adler's chief draughtsman Into works such as the Wainwright Building in St. Louis (1891) and the Meyer Building in Chicago (1893) were put some of the earliest efforts at SKYSCRAPER design

Adler, Felix, 1851–1933, American educator and leader in social welfare, founder of the ETHICAL

CULTURE MOVEMENT, b. Germany. He was brought to the United States as a small child, was graduated from Columbia in 1870, and afterward studied in Germany In 1876 he established the New York Society for Ethical Culture and, in connection with the Ethical Culture School, the first free kindergarten in New York city Adler organized the Workingmen's Lyceum, helped to establish the Workingmen's School and the Manhattan Trade School for Girls, and founded (1883) the first child study society in the United States He was a member (1885) of New York state's first tenement house commission and served for many years as chairman of the National Child Labor Committee He became professor of political and social ethics at Columbia Univ in 1902 and was Roosevelt professor (1008–9) at the Univ of Berlin and Hibbert lecturer (1923) at Oxford Univ Among his books are *Creed and Deed* (1877), *An Ethical Philosophy of Life* (1918), and *The Reconstruction of the Spiritual Ideal* (1923)

Adler, Friedrich (frē'drĭkh), 1879–, Austrian Socialist leader, son of Viktor Adler He shot and killed (1916) the Austrian premier, Count STÜRGKH His death sentence was commuted to imprisonment, and he was amnestied on Nov 1, 1918 In 1923 he became secretary of the Second International He went into exile in 1934

Adler, Viktor (vĭk'tôr), 1852–1918, Austrian politician and journalist, founder and leader of the Austrian Social Democratic party A prominent figure in the Second International, he entered parliament in 1905 When the Austro-Hungarian empire was collapsing, he was made foreign secretary of German Austria, but he died on Nov 11, one day before Austria proclaimed itself a republic

Adlum, John, 1759–1836, American horticulturist He originated the Catawba grape from a native variety and wrote several books on viticulture and wine making The *Adlumia*, a climbing fumitory, is named for him

Admah (ăd'mu), city destroyed with SODOM

Admatha (ăd'-), counselor of Ahasuerus Esther 1 14

Admetus (ădmē'tus), in Greek legend, Thessalian king whom Apollo, banished from Olympus for killing the CYCLOPES, served as a shepherd When Admetus was dying, Apollo persuaded the gods to spare him if someone consented to die in his place His wife ALCESTIS willingly gave her life, but HERCULES rescued her from Hades

administration, public see PUBLIC ADMINISTRATION

Admirable Crichton see CRICHTON, JAMES

admiralty (ăd'mĭrulte), in British government, department in charge of the navy and the royal marine It is headed by a board of six lords commissioners The first lord of the admiralty is a member of the cabinet, he has charge of political matters, finances, and appointments The operating staff has charge of supply and maintenance of the fighting forces Admiralty jurisdiction, formerly under the high court of the admiralty, is now assigned to the high court of justice

Admiralty Island, off SE Alaska, in the ALEXANDER ARCHIPELAGO and SW of Juneau The large island (1,164 sq mi) is separated from the mainland by Stephens Passage It is mountainous and heavily forested Wildlife abounds There is a fish cannery, and the island has several native villages

Admiralty Islands, small volcanic group, area 800 sq mi, SW Pacific, W of New Ireland, in the BISMARCK ARCHIPELAGO and part of the Territory of New Guinea Manus is the chief island, surrounded by several islets and coral reefs Copra and pearls are the principal products The group was discovered in 1616 by Willem Schouten In the Second World War it was the site of a Japanese air base taken in 1944 by Allied forces, who first landed on Los Negros Island off the east coast of Manus

admiralty law see MARITIME LAW

Admiralty Range, northern part of the great mountain range in Victoria Land W of the Ross Sea, Antarctica It has peaks reaching 10,000 ft, and its heavy cover of snow gives it austere beauty

Adna [Heb, =pleasure], name of two Israelites of the returned community Ezra 10 30, Neh 12 15

Adnah (-nu) [Heb, =pleasure] **1** Deserter from Saul 1 Chron 12 20 **2** Officer under Jehoshaphat 2 Chron 17 14

adobe (udō'bē) [Span], a kind of sun-dried brick, a building with walls of such bricks, or a clay suitable for making them When used for low buildings with a roof overhang, adobe walls do not deteriorate in regions of limited rainfall, examples of Indian structures in the SW United States date from the 16th cent Sun-dried bricks of clay mixed with straw were used in ancient Egypt and Babylonia They are believed to have been introduced from Africa into Spain and thence to arid regions of the New World An adobe house is warm in winter and cool in summer, its walls are fireproof, and it is inexpensive to build, since the material usually costs nothing in areas with a suitable clay soil See also RAMMED EARTH

adolescence (ă"dulĕ'suns) [from Latin, =youth], in the physical development of the individual, the stage between puberty and maturity. The exact period of adolescence has been variously estimated; most authorities, however, are agreed on the ages between 12 and 21 Adolescence is marked by physiological changes which appear to reinforce strivings for independence as well as for heterosexual drives The emotional conflict common in this period is believed by some to be the result of an inability to express newly developed needs in a socially acceptable manner Others, however, emphasize the view that emotional instability is the inevitable result of conflict induced by biological changes within the personality See K C Garrison, *Psychology of Adolescence* (1940)

Adolf of Nassau, d 1298, German king (1292–98) He owed his election to the unpopularity of Albert of Austria (later King ALBERT I) and to his own willingness to purchase votes by promising to alienate imperial lands Adolf tried to establish a territorial power by seizing Meissen and Thuringia In order to replenish his treasury he allied himself, for a considerable subsidy, with Edward I of England against Philip IV of France His independence of action antagonized the princes, who proclaimed his deposition (1298) Soon afterward he was defeated and killed by an army commanded by Albert

Adonai see GOD

Adonis (udō'nēu), in Greek religion, festival celebrated by women in honor of the death and resurrection of ADONIS The Gardens of Adonis, used in this ceremony, were small pots of herbs which grew and died quickly, as all vegetation is born and dies every year

Adoni-bezek (ădō'nī-bē'zĕk, ăd'-) [Heb, =lord of Bezek], king of Bezek captured and mutilated by the Judahites Judges 1 5–7

Adonijah (ăd"ŋī'ju, udŏn'uju) [Heb, =God is my lord] **1** Son of David He wanted the throne which David gave to the younger son, Solomon 2 Sam 3 4, 1 Kings 1, 2 1–25 **2** Teacher of the law 2 Chron 17 7–9 **3** Sealer of the covenant after the return from the Exile Neh 10 16 Perhaps the same as **Adonikam** (-ĭ'kăm, -dŏn'-) [Heb, =my lord has risen], a name in the lists of families Ezra 2 13, 8 13, Neh 7 18

Adoniram (ăd"ŋī'-) [Heb, =my lord is on high], tax overseer 1 Kings 4 6 Adoram 2 Sam 20 24, 1 Kings 12 18 Hadoram 2 Chron 10 18

Adonis (udŏ'nĭs), in Greek religion, young man loved by APHRODITE When he was killed by a wild boar, Aphrodite persuaded the gods to allow him to leave the underworld for six months of every year His death and resurrection were celebrated in the midsummer festival ADONIA The worship of Adonis, an symbolic of the yearly growth and decay of vegetation, apparently came to Greece from Asia Minor and corresponded to the cults of the Phrygian ATTIS and the Babylonian TAMMUZ (see FERTILITY RITES) Sir J G Frazer, in *The Golden Bough*, describes the history and significance of the worship of Adonis and similar deities The story of the goddess and her mortal lover is told in Shakspere's poem *Venus and Adonis*

Adoni-zedec (ădō'nī-zē'dĕk, ăd'-) [Heb, =lord of justice], chief at Jerusalem, leader of the allies routed at Gibeon Joshua 10 1–27

adoption, act by which the legal relation of PARENT AND CHILD is created between persons not naturally so related Since adoption is not known to the common law, its practice in the United States is regulated by statute, and most states now allow it Louisiana and Texas follow the Roman law with respect to adoption, though with some changes Adoption statutes usually provide that the consent of the parents or guardian of the child—and that of the child, if above a certain age—must be obtained An adopted child generally assumes the rights and duties of a natural legitimate child The natural parents have no right to control an adopted child, nor have they any duties toward it, but in some states (e g, New York) the child does not lose the right to inherit from them In England legal adoption was not authorized until 1926

adoptionism, heresy promulgated in Spain after 783 by Felix, bishop of Urgel, and, after c 785, by Elipandus, archbishop of Toledo They held that Christ was born a man and became Son of God by adoption when he was baptized in the Jordan This doctrine had been advanced at various times by others, e g, the Theodotians, Paul of Samosata, and Nestorius It reappeared as a belief of sects like the Paulicians Felix and Elipandus were repeatedly condemned, especially at Frankfurt (794) The vigorous refutations of ALCUIN had much to do with the sect's disappearance from Spain in the early 9th cent

Adoraim (ăd"ŏrā'ĭm), town, near Hebron to the west 2 Chron 11 9 Adora 1 Mac 13 20.

Adoram (ŭdō'-), the same as ADONIRAM

Adour (adōōr'), river, 210 mi long, rising in SW France, in the Pyrenees of GASCONY Describing a wide arc, it enters the Bay of Biscay near Bayonne.

Adowa, Ethiopia see ADUWA

Adra (ă'dhrā), Mediterranean port (pop. 6,907), Almería prov, S Spain, in Andalusia At the foot of a hill below the present town stood Abdera, founded by Phoenician traders. Adra was the last stronghold of the Moors in Spain under Boabdil There are lead mines near by.

Adrammelech (ŭdrăm'ŭlĕk) **1** God of a Samaritan cult 2 Kings 17 31 **2** One of the two men named as murderers of their father, Sennacherib, Sharezer was the other Babylonian sources mention one son. 2 Kings 19 37 (=Isa 37 38)

Adramyttium (ăd"rŭmĭt'ēum), place, the modern Edremid, NW Turkey Here Paul's ship was built Acts 27 2

Adrano (adrā'nō), rural city (pop 24,307), E Sicily, Italy, at the foot of Mt Etna It was formerly named Adernò Founded c 400 B C near a temple of the god Hadranus, it has ruins of ancient walls and an imposing Norman castle Fierce fighting between Germans and Allies took place here in 1943

Adrastus (udrăs'-), in Greek legend, king of Argos, the only survivor of the SEVEN AGAINST THEBES Ten years later he led the sons of the Seven, the EPIGONI, in a war to avenge their fathers They were successful and took the city of Thebes

adrenal gland (ădrē'nul) [Latin, =at the kidney] or **suprarenal gland** (sōōprurē'nul) [Latin, =over the kidney], one of a pair of glands about 2 in long, of yellowish color, resting on the upper part of each kidney near the vertebral column These glands are ductless, pouring their secretion directly into the blood stream A hormone, cortin, is secreted by the outer layer of yellowish tissue (the cortex) Cortin is concerned with carbohydrate metabolism and sex function The inner red portion (the medulla) of the gland secretes another hormone, adrenaline Emotional disturbances such as fear and anger stimulate the secretion of adrenaline, causing acceleration of the heart beat, increased blood pressure, and an increased output of glucose from the liver Adrenaline is injected hypodermically in the treatment of shock, asthma, and hemorrhage The adrenal glands are subject to injury, infection (e g, tuberculosis), the growth of tumors, and atrophy

adrenaline (ŭdrĕn'ulĭn) or **epinephrine** (ĕpĭnĕf'rĭn), the active agent in the secretion of the medulla of the adrenal gland, a HORMONE which helps to maintain normal pressure in the circulation of the blood Chemically, it is a colorless crystalline substance composed of carbon, hydrogen, and nitrogen in molecules of complex atomic arrangement It is soluble in alkalies and acids (with which it forms compounds) and glycerin, but is only slightly so in water Obtained in the pure state by Takamine in 1901, it was synthesized independently by F Stolz (1904) and by Dakin (1905) It is used in medicine to cause contraction of the capillaries and smaller blood vessels so that bleeding may be prevented or stopped Such action causes an increase in blood pressure Mixed with local anesthetics, e g, cocaine or novocaine, it prevents bleeding during an operation and reduces the toxic action of the cocaine drugs It is used as an antispasmodic in the treatment of bronchial asthma Adrenaline is extracted from the glands of slaughtered animals and is also produced synthetically

Adria (ă'drēu), ancient name of the Adriatic, extended to mean the central Mediterranean in Acts 27 27

Adrian I, d 795, pope (772–95), a Roman, successor of Stephen IV (also called Stephen III, see ZACHARIAS) and predecessor of St LEO III When he came to the throne, Adrian called on CHARLEMAGNE to help repulse an invasion of the papal domains by the Lombard king, Desiderius Charlemagne successfully aided the pope, confirmed his father's concessions, and subsequently added to the papal lands with the so-called Donation of Charlemagne Adrian supported Empress IRENE in her struggle against ICONOCLASM and sent legates to Nicaea (see NICAEA, SECOND COUNCIL OF)

Adrian IV, d 1159, pope (1154–59), an Englishman (b Langley, near St Albans) named Nicholas Breakspear, successor of Anastasius IV and predecessor of ALEXANDER III He was an Austin canon He was made cardinal-bishop of Albano (1149?) by Pope Eugene III, became one of the pope's close advisers, and was sent on several diplomatic missions As papal legate he organized (c 1152–1154) the diocese of Norway After his election to the papacy Adrian was opposed by the Roman commune (led by ARNOLD OF BRESCIA) which had plagued his predecessors and was forced to go to Viterbo Adrian laid Rome under the interdict (an extraordinary step) and was able to return by 1155 Adrian's relations with the Normans of Sicily were strained from the start William I of Sicily invaded the Papal States, but in 1157 he withdrew and made an agreement with the pope, he did homage for Apulia and Sicily, with which Adrian invested him So long as the pope was at war with Sicily, FREDERICK I and Adrian were at peace, Adrian crowned Frederick (1155) and Frederick put down the Roman disorders When Adrian and William came to agreement, the emperor and the pope fell out, for Frederick considered the investiture of William a usurpation by the pope of imperial prerogative A meeting of the diet at Besançon (1157) turned into a riot when Cardinal Bandinelli (later Pope Alexander III) spoke of the empire as a benefice from the pope A papal letter to Frederick explaining that *benefice*

in this case meant "benefit," not "feudal grant," composed this misunderstanding, but Frederick's campaign in Lombardy (1158–59) worsened relations with Adrian, who was on the point of excommunicating Frederick when he died Alexander continued the struggle One of the most disputed matters in the history of the Holy See arose with the donation of Ireland, as a papal fief, to Henry II of England by Adrian Scholars tend to hold that the investiture and the bull *Laudabiliter* confirming it are genuine See E M Almedingen, *The English Pope* (1925)

Adrian VI, 1459–1523, pope (1522–23), a Netherlander (b Utrecht) named Adrian Florensz, successor of LEO X and predecessor of CLEMENT VII He was the most recent non-Italian pope He taught at Louvain and was tutor of the young prince, later Emperor CHARLES V This was a time when Roman life was most extravagant, papal expenditures on worldly objects were at their height, and the Curia most needed drastic reform Adrian, an ascetic and a pious man, did his best to curb the abuses he found, but he died after 20 months The Italians rejoiced at his death

Adrian, Roman emperor see HADRIAN

Adrian, Edgar Douglas, 1889–, English physiologist, M.D Trinity College, Cambridge, 1915 He was research professor of the Royal Society from 1929 to 1937 and professor of physiology at Cambridge from 1937 His research was chiefly on the physiology of the nervous system He wrote *The Basis of Sensation* (1928), *The Mechanism of Nervous Action* (1932), and, with others, *Factors Determining Human Behavior* (1937) With Sir Charles S Sherrington he shared the 1932 Nobel Prize in Physiology and Medicine for their work on the function of the neuron

Adrian, 1 City (pop 14,230), co seat of Lenawee co , S Mich , SW of Detroit, settled 1825, inc as a village 1836, as a city 1853 It is a farm trade center, is known for its chrysanthemums, and manufactures locks, metal and paper products, and wire fences Adrian College (Methodist, coeducational, 1845) and Siena Heights College (Catholic, for women) are here Indian trails crossed here, and there are several Indian village sites in the vicinity 2 Village (pop 1,066), SW Minn , near the Iowa line between Worthington and Luverne It is a farm trade center

Adrianople (ā"drēənō'pul) or **Edirne** (ĕdĭr'nĕ), city (pop. 29,439), European Turkey, in Thrace It is a commercial center with silk and cotton manufactures It was named after Emperor Hadrian, who founded (A D c 125) it on the site of the older Uscudama, Byzantine writers also called it Orestias Of great strategic importance and strongly fortified, the city had a turbulent history The defeat (378) of Emperor VALENS by the Visigoths at Adrianople laid Greece open to the barbarians Later conquered by the Avars, the Bulgarians, and the Crusaders, the city passed to the Turks in 1361 and was the residence of the sultans until the conquest of Constantinople in 1453 In the 19th cent the Russians captured Adrianople twice in the Russo-Turkish Wars In 1913 it fell to Bulgaria in the First Balkan War and was restored to Turkey after the Second Balkan War It passed to Greece by the Treaty of Sèvres (1920), but was again restored to Turkey by the Treaty of Lausanne (1923) Among the landmarks of Adrianople are the great mosque of Selim I and ruins of the palace of the sultans

Adrianople, Treaty of, 1829, peace treaty between Russia and the Ottoman Empire (see RUSSO-TURKISH WARS) Turkey gave Russia additional territory on the Black Sea, allowed Russia to occupy Moldavia and Walachia, granted Russia exclusive protective rights over the Palestinian holy places and over the Christian subjects of the sultan, opened the Dardanelles to all commercial vessels, granted autonomy to Serbia, and promised autonomy for Greece

Adriatic Sea (ādrēă'tĭk), arm of the Mediterranean, between Italy and the Balkan Peninsula It is 500 mi long and 58 to 140 mi wide, with a maximum depth of 4,100 ft , it extends from the Gulf of Venice, at its head, SE to the Strait of Otranto, which leads to the Ionian Sea The Italian coast (west and north) is low, Venice, Ancona, Bari, and Brindisi are the chief ports Trieste, in the northeast, once the chief Adriatic port, forms a free territory with part of ISTRIA The eastern shore line belongs to Yugoslavia (north) and to Albania (south) The Yugoslav coast (see DALMATIA) is rugged, Fiume, Susak, and Dubrovnik are among its ports

Adriel (ā'-), husband of MERAB 1 Sam 18 17–20.

adsorption [Latin,=sucking towards], phenomenon in which the molecules of one substance are attracted and adhere to the surfaces of some other substance and in which no chemical change takes place Certain solids have the power to adsorb great quantities of gases The molecules of the gas gather (condense) upon the exposed surfaces of the solid Charcoal, for example, having a great extent of surface because of its porous nature, adsorbs large volumes of gases, including most of the poisonous ones. Because of this property it is used in gas masks. Certain finely divided solids have great adsorptive properties Minute particles of platinum attract multitudes of hydrogen molecules to their surfaces and hold them Platinum adsorbs other gases as well as hydrogen, and this property is made use of in the production of sulphuric acid by the contact process and in the preparation of ammonia Adsorption also occurs in solutions In a colloidal solution, the colloidal particles may adsorb much of the solvent (see COLLOID) Bone black and charcoal are used in industry to remove colors from solutions, since they adsorb many coloring materials and carry these with them when separated from the solution On the other hand, liquid dye is held to the surface of cloth and permeates the fibers so that when the liquid has evaporated the dye still remains Adsorption is made use of in photography, in the hydrogenation of oils, and in gas analysis

Adua, Ethiopia see ADUWA

Adullam (udŭl'-), border town of Judah, SW of Jerusalem Joshua 15 35, 2 Chron 11 7, Neh 11 30 David hid in the Cave of Adullam when he fled from Saul From here three of his men went to get him water from the well at Bethlehem 1 Sam. 22, 2 Sam 23 13–17, 1 Chron 11 15–19

adult education, extension of educational opportunities to those adults, beyond the age of general public education, who feel a need for further training of any sort Its relatively recent development results from various social trends—the general spread of public education, the intensification of economic competition with its premiums for skills, the complexities of national and international politics demanding constant study, the stimulating effects of the urbanization of populations, and increased leisure time The commonest form of adult education activities is the reading and discussion group, in which people meet informally to study and discuss a topic of common interest Formalized adult education in the modern period probably started in Europe in political groups and advanced technical education Continuation schools for workers in Germany and Switzerland were typical The FOLK SCHOOL in Denmark founded by Bishop Grundtvig stressed the cultural aspect, and the Adult Schools of the Society of Friends in England (1845) fostered the education of unfortunates Distinct from the incidentally educational activities of such groups as the New England town meeting are two notable early organized activities—development of the public lecture systems of the LYCEUM (c 1826) and the Lowell Institute of Boston endowed by John Lowell (1836) In 1873 the CHAUTAUQUA MOVEMENT introduced the discussion group and modified lecture system Free public lectures under the department of education of New York city were inaugurated in 1904 Since that time public schools have been active in furnishing facilities and assistance to private adult education groups in many communities Colleges have instituted extension work, courses without credit, and correspondence courses In 1926 the Carnegie Corp of New York founded the American Association for Adult Education This group, through its quarterly journal and in research, has worked to systematize the methods and philosophy of the field Organizations designed to relieve ILLITERACY are instruments in adult education, as are the schools established for the education of the foreign-born in the English language and in the customs of the country A large amount of adult education is carried on in the field of worker education by labor unions and in VOCATIONAL TRAINING Since 1930 economic and world affairs have further stimulated a demand for adult education Organized forums, community centers, PARENT EDUCATION groups, political and economic action associations, dramatic, musical, and artistic groups—all can be regarded as adult education activities, as can the modern developments in public library group organization The "great books" groups, which read and discuss with trained leaders a specified list of about 70 books, began meeting in 1947, the movement grew out of great books seminars in Chicago and Columbia universities and St John's College In many places the public library sponsors the group The Federal government in its Agricultural Extension Service and in the Works Progress Administration has been active in promoting adult education See publications of the U S Office of Education, *The Program Planner*, a periodical published by the Program Information Exchange, *Handbook of Adult Education* and *Studies in the Social Significance of Adult Education* published by the American Association for Adult Education; William Sharlip and A A Owens, *Adult Immigrant Education* (1925), Lyman Bryson, *Adult Education* (1936), J T. Adams, *Frontiers of American Culture* (1944)

adulteration of food: see FOOD ADULTERATION.

Adummim (udŭm'-) [Heb ,=red], ascent in the Jericho road Joshua 15 7, 18 17

Aduwa or **Adowa** (both ä'dŭwä), Ital. *Adua*, town (pop 6,000), N Ethiopia It was the scene in 1896 of the victory of the Ethiopian emperor, Menelik II, over Italian forces invading from Eritrea. The defeat forced Italy to abandon the invasion.

Advent [Latin,=coming, i.e., of Jesus], season of the Christian ecclesiastical year, lasting, in the West, from the Sunday nearest Nov. 30 (St Andrew's) until Christmas. It is a season of penitence, to prepare for the holy day, and its liturgical color is purple. The first Sunday of Advent is the first day of the church calendar. The third Sunday, called Gaudete Sunday, is a break in the penitential season, like LAETARE in Lent

Advent Christian Church: see ADVENTISTS.

Adventists (ăd'vĕn"tĭsts) [advent, Latin,=coming], members of a group of related religious denominations whose distinctive doctrine centers in their belief concerning the second coming of Christ (see JUDGMENT DAY). The name Adventism is specifically applied to the teachings of William MILLER (1782–1849), who predicted the end of the world for 1843, then for 1844 When it did not occur, the Millerites or Second Adventists, at a meeting at Albany in 1845 adopted a statement declaring their belief in the visible return of Christ at an indefinite time, when the resurrection of the dead would take place and the millennium would have its beginning. Later this body took the name Evangelical Adventists. The Seventh-Day Adventists adopted in 1844 the observance of Saturday as the Sabbath. They include in their doctrine the belief that the wicked will have no resurrection, and they accept Mrs Ellen Gould White as an inspired prophetess. The Seventh-Day Adventists carry on world-wide missionary work The Church of God was organized (c 1866) as a result of division among Seventh-Day Adventists over the question of the prophesies of Mrs White, in 1888 this body formed an association known as the Churches of God in Jesus Christ The observance of the seventh day is retained by this group The Advent Christian Church, a branch of the first Adventist organization, dates from 1861, their members believe in the complete extinction of the unrighteous, as do the members of the Life and Advent Union, which was formed c 1862

adverb see PART OF SPEECH and ADJECTIVE

advertising. In 1932 the periodical *Advertising Age* conducted a contest for the purpose of defining the word *advertising* The definition recommended by the judges was, "the printed, written, spoken, or pictured representation of a person, product, service or movement, openly sponsored by the advertiser and at his expense for the purpose of influencing sales, use, votes or endorsement " Advertising may be classified according to sponsor (retailer, manufacturer, or association), according to the audience addressed (national or local, consumer or dealer), and according to various other aspects Perhaps the most generally used classification is according to media The major media in the United States are magazines, newspapers, radio, and outdoor advertising (posters, billboards, painted bulletins, and the like) Compilations made by *Advertising Age* give the total spent in the United States in 1948 in these four media as $1,100,000,000, this figure does not include expenditures for local and regional advertising, which probably total about twice the costs of national advertising The expenditures of national advertisers were divided among the four media (approximately) as 42 percent in national magazines, 39 percent in daily newspapers, 12 percent in national-network radio, and 7 percent in outdoor advertising The radio figures do not include television, 1948 expenditures in this new field were, not including program costs, $2,500,000 In that year television was broadened with completion of coaxial cables from New York to Chicago and St Louis, cables had earlier been completed from New York to Boston and to Richmond Besides these major advertising media, there are many minor means such as car cards, direct mail (form letters, circulars, folders, and the like), counter and display signs, novelties (ashtrays, pencils, matches, and the like), moving pictures, skywriting, and "sandwich men " The history of advertising dates back to the modest public notice Newspaper classified advertising still closely resembles its ancestor, but other forms of advertising have changed greatly Modern advertising for the most part no longer merely "offers for sale " Early in the 19th cent the influence of salesmanship began to insert itself into the public notice, and the present elaborate form of advertising began to evolve The advertising agency has perhaps been more responsible for this change than any other factor The advertising agent, who first came into prominence in the United States in the 1860s, began simply as an agent selling space for advertisements Capitalising on his special knowledge of the circulation and the reader interest of various publications (about which there was no generally known accurate information in those days), he bought space, frequently in quantity and at lower rates; he resold this space to advertisers, taking a commission of about 15 percent. With stricter postal regulations and the establishment of associations and bureaus for auditing the circulation figures of publications, circulation claims became more honest and dependable and the rates were more nearly standardized. To help the advertiser make more effective and profitable use of the space, the agent began to place

more emphasis on planning, preparing, and writing the advertisements for clients; such work has come to be his chief function, although payment of commissions by the advertising media is still the agency's accepted method of compensation—generally 15 percent of the cost of space and time For the year 1948 some 44 U S advertising agencies each reported placing $10,000,000 or more in advertising expenditures With the increase in the number of advertising media and the scientific and technical improvements in them, advertising has become a highly specialized business New York, Chicago, and Detroit are the leading U S advertising centers. The chief advertising trade publications are *Printer's Ink*, *Advertising Age*, *Advertising Agency* (formerly *Advertising and Selling*), and *Tide* Authentic figures on circulation and advertising rates for magazines, newspapers, and the like and coverage and rates for radio stations are supplied in *Standard Rate and Data Service* (issued monthly with interim changes) See Frank Allen Bart, *American Advertising Agencies* (1940), Neil H Borden, *Economic Effects of Advertising* (1942), Harry Walker Hepner, *Effective Advertising* (2d ed , 1949).

advocate: see BAR, THE

Ady, Andrew (ŏ'dē), Hung *Ady Endre* (ĕn'drĕ), 1877–1919, Hungarian poet, studied law at Budapest and Debrecen Abandoning a career of scholarship for journalism and literature, he spent much of his time in Paris, where he came under modernist influence and became the leader of the radical group in Hungarian literature. He is one of the finest of Hungarian poets, his writings expound the national, religious, and ethical contrasts of the society of his time Of his works, 12 volumes of verses were published and 7 of prose See René Bonnerjea, *Endre Ady Poems* (1941)

Adyge Autonomous Oblast (ŭdĭgyĕ'), administrative division (1,700 sq mi , pop c 300,000), KRASNODAR TERRITORY, RSFSR, in Circassia, at the foot of the northwestern part of the Greater Caucasus and S of the Kuban river Maikop is the capital. The population is largely Adyge (see CIRCASSIA) Subdued by Russia in 1864, the region became an autonomous oblast in 1922 The name also appears as Adyghe and Adighe

adz or **adze.** The adz is related to the HOE, but is adapted to shaping wood The work formerly done by the adz is now usually done by the saw and the plane Before iron and steel were available for making tools, the adz of stone, copper, or bronze was often assisted by charring the wood to be removed The dugout canoes of the American Indians were shaped in this way See Thomas Hibben, *The Carpenter's Tool Chest* (1933)

Adzhar Autonomous Soviet Socialist Republic (ŭjär', a'jär, Rus ŭjär') or **Adzharistan** (ŭja'rĭstän", Rus ŭja"rĕstan'), autonomous state (1,080 sq mi , pop c 200,000), SW GEORGIAN, SSR, on the Black Sea at the western end of the Lesser Caucasus, bordering (south) on Turkey BATUM is the capital The Adzhars, a largely Mohammedan people of the South Caucasian linguistic family, form 53 percent of the population, the rest are Georgians (27 percent), Armenians, Russians, and Greeks The region was annexed by Russia from Turkey partly in 1829, partly in 1878, it became an autonomous republic in 1921

A. E. see RUSSELL, GEORGE WILLIAM

Aeacus (ē'kŭs), in Greek mythology, son of Zeus by the nymph Aegina He was the father of PELEUS and TELAMON His followers were the MYRMIDONS, a swarm of ants which Zeus changed into men His descendants included Achilles, Neoptolemus, and Telamonian Ajax

aedile or **edile** (both ē'dĭl) [Latin,=belonging to the temples], in the Roman republic, a city magistrate who had general charge of the temples, controlled the public markets, arranged for the public games, regulated the grain supply, and looked after the public order In the 5th cent. B C there were plebeian aediles appointed as assistants to the tribunes, but their office and duties were largely taken over by the curule aediles, first set up at the time of the Licinian Rogations (see LICINIUS) There were two curule aediles, elected annually, alternately patricians and plebeians The importance of the office shrank in the 1st cent B C , and Augustus transferred most of the remaining important duties to other officials

Aëdon (ā'dŏn), in Greek legend, the wife of Zethus, king of Thebes She had only one son, while her sister-in-law, NIOBE, had many Her jealousy increased until, in trying to murder Niobe's oldest son, she killed her own child She was changed to a nightingale, and her song was a mournful call for her son, Itys or Itylus

Aedui (ē'dŭī) or **Haedui** (hē'dŭī), Gallic people, occupying in the 1st cent. B C. a part of later Burgundy. Defeated by ARIOVISTUS and at odds with their Gallic neighbors, they were allies of the Romans They at first aided Julius CAESAR and later were not wholehearted in their support of Vercingetorix Their early capital was BIBRACTE.

Aëtes: see JASON and MEDEA.

Aegadian Isles (ĕgā'dēŭn), Ital. *Egadi* (ā'gädē), Latin *Aegates*, archipelago (c 15 sq mi , pop 6,196), in the Mediterranean off W Sicily, Italy. The largest islands are Favignana, Marèttimo, and Levanzo. Here are the most important tuna fisheries of Sicily A Roman naval victory over the Carthaginians near here in 241 B.C. ended the First Punic War.

Aegaeon: see BRIAREUS.

Aegates: see AEGADIAN ISLES.

Aegean civilization (ĭjē'ŭn), general term for the cultures of pre-Hellenic Greece. The richness of these early civilizations was not suspected before the excavations of archaeologists in the late 19th cent The most remarkable of the cultures was perhaps that of Crete which was flourishing by the end of the 4th millennium B C , this was the MINOAN CIVILIZATION On the mainland of Greece excavations have showed the remains of MYCENAEAN CIVILIZATION The exploration of the ruins of Troy gave knowledge of another culture, and runs in the Cyclades have demonstrated remarkable early development there The exact relationships of these different centers have not yet been worked out, and there are many subjects of conjecture such as the role of the Achaeans and the causes of the decline of Crete before 1100 B C New knowledge is, however, broadening the picture of these highly developed Aegean civilizations

Aegean Sea, arm of the Mediterranean, c 400 mi long and c 200 mi wide, between Greece and Asia Minor Very irregular in outline, it is dotted with islands Its ancient name, ARCHIPELAGO, now applies to its islands, which include EUBOEA, the Northern and Southern SPORADES, the CYCLADES, and the DODECANESE The strait of the Dardanelles connects the Aegean with the Sea of Marmara The name Aegean has been variously derived from Aegae, a city of Euboea, from Aegeus, father of Theseus, and from Aegea, an Amazon queen, who drowned in it

Aegeus (ē'jēŭs, ē'jōōs), in Greek legend, king of Athens, father of Medus, by MEDEA, and of THESEUS, by Aethra. Believing that Theseus had been killed by the MINOTAUR, he drowned himself in the sea, called, therefore, the Aegean

Aegina (ĭjī'nŭ), in Greek mythology, river nymph, daughter of ASOPUS She bore Zeus a son, Aeacus

Aegina, Gr *Aegina* (ā'yēnä), island (32 sq mi , pop 10,052), off SE Greece, in the Gulf of Aegina or Saronic Gulf, an arm of the Aegean Sea, 17 mi SW of Athens It produces figs, almonds, peanuts, and vegetables and has several sulphur springs The chief town is Aegina (pop 5,820), on the northwest shore The island, inhabited from late Neolithic times, was influenced in its culture by Minoan Crete Conquered (c 1000 B C) by Dorian Greeks, it struck the first Greek coins and rose to great commercial importance In 431 B C the Athenians, against whom Aegina sided in the Peloponnesian War, expelled the population of the island, and Aegina sank into insignificance Aegina was settled by Albanians in the 16th cent In 1828–29 the town of Aegina was the temporary capital of Greece The AEGINETAN MARBLES were discovered in 1811 5 mi east of the town

Aegineta, Paulus see PAUL OF AEGINA

Aeginetan marbles (ē"jĭnē'tŭn), archaic Greek sculptures, probably of the 5th cent B C , discovered in the island of Aegina in 1811 and restored (erroneously) by Thorvaldsen Originally they formed the decorations of the pediments of a temple They represent episodes in the story of Troy The figures were painted, the color, though nearly effaced, remained visible

aegis (ē'jĭs), in Greek legend, weapon borne by Zeus, Athena, and Apollo Its use was terrifying to the enemy, and it was thrown over the shoulder, hence it is thought that the aegis was a pelt which was shaken at the enemy to dazzle or stupefy him. Athena's aegis bore the head of MEDUSA The Romans took over the legend, which was, by the 4th cent B C , already quite changed by the Greeks Thus, it was supposed to be a shield or breastplate, hence its synonymy with "protection", a false etymology made it a goatskin, made from the skin of AMALTHAEA

Aegisthus (ĭjĭs'thŭs), in Greek legend, son of THYESTES and (according to one legend) his daughter Pelopia He survived the murder of his brothers and killed his uncle ATREUS Then he became the lover of Clytemnestra and helped her to kill her husband, Agamemnon In revenge for this deed, Agamemnon's son, ORESTES, killed him

Aegospotamos (ē"gŭspŏ'tumŏs), river of ancient Thrace flowing into the Hellespont. At its mouth in 405 B C occurred the culminating battle of the PELOPONNESIAN WAR. Lysander and his Spartan fleet had come north to cut the grain supply of Athens The Athenian fleet under CONON came to Aegospotamos and at first vainly tried to induce the Spartans to fight Despite the warnings of ALCIBIADES, Conon and his men did not take proper precautions Lysander fell upon them and completely destroyed the Athenian fleet.

Aegyptus: see DANAÜS.

Aehrenthal, Alois Lexa, Graf von (ā'lōēs lāk'sä grāf' fŭn ârŭntāl), 1854–1912, Austro-Hungarian foreign minister (1906–12). The chief event of his ministry was the Austrian annexation (1908) of BOSNIA AND HERCEGOVINA. The Russian foreign minister, IZVOLSKY, had given his formal agreement to the annexation in a secret meeting at Buchlau, Moravia, in return, Aehrenthal promised Austrian support for the opening of the Dardanelles to Russian warships The annexation followed promptly, whereas Izvolsky was frustrated in his Dardanelles plan by English opposition Serbian indignation at the annexation as well as belated Russian opposition almost led to a European war in 1909 Aehrenthal with difficulty restrained the Austrian war party led by Conrad von Hötzendorf At last the Bosnian crisis was ended by German mediation, the signatory powers of the Congress of Berlin (1878), including Russia, ratified the annexation

Aeken, Jerom van. see BOSCH, HIERONYMUS.

Ælfric (ăl'frĭk), c 955–1020, English churchman and writer, educated at Winchester He was abbot successively of Cernel in Dorsetshire and of Eynsham in Oxfordshire His grammar, glossary, and colloquy were long the standard texts for Latin study in the English monasteries, but his principal literary works are two series of homilies and one of saints' lives in the vernacular They were written for the use of priests in instructing the people in church doctrine and patristic literature Among his other writings are the *Heptateuch*, a free English version of the first seven books of the Bible His lucid, fluent prose is generally esteemed the best in Anglo-Saxon literature. See C. L. White, *Ælfric* (1898)

Aemilian Way see ROMAN ROADS.

Aeneas (ĭnē'ŭs; ēnē'ä–), palsied man whom Peter cured Acts 9 32–35

Aeneas (ĭnē'ŭs), in classical legend, a Trojan, son of ANCHISES and Venus After the fall of Troy he escaped, bearing his aged father on his back He tarried at Carthage with Queen Dido, then went to Italy, where his descendants founded Rome. The deeds of the "pious" Aeneas are the substance of the great Roman epic, the *Aeneid* of VERGIL.

Aeneas Sylvius Piccolomini see PIUS II

Aeneid (ĭnē'ĭd), epic written by VERGIL to glorify the origins of Rome He developed the later legends about the Trojan hero Aeneas, who is mentioned in the *Iliad* Out of rather disconnected stories of the wanderings of Aeneas after the fall of Troy, Vergil created a true epic Of Aeneas he made the paragon of the most revered Roman virtues, stern rectitude, devotion to family, care for the state, and the piety assigned to him in Homer In 12 books, he tells how Aeneas escaped from Troy to Carthage, where he met Dido and told her of his adventures He then left Dido, went to Sicily, visited Hades, and landed in Italy There he established the beginnings of the Roman state and waged successful war against the natives The work ends with the death of Turnus at the hands of Aeneas The verse in dactylic hexameters is strikingly regular, though Vergil's death left the epic incomplete and some of the lines unfinished Other writers were forbidden by Augustus to complete or "improve" the work The sonority of the words and the nobility of purpose make the *Aeneid* one of the greatest of long poems in any literature

Aenon (ē'-) [Gr ,=spring], unidentified place, where John the Baptist baptized John 3 21

Aeolia see AEOLIS

aeolian harp (ēō'lēŭn) [fr AEOLUS], musical instrument, sometimes called an aeolian lyre It consists of a rectangular box over which silk or catgut strings are stretched, all tuned to the same pitch but varying in thickness, thus producing different harmonics as the wind passes over them St Dunstan of Canterbury is said to have experimented with strings blown by the wind, but Athanasius Kircher, in the 17th cent , seems to have made the first true aeolian harp

Aeolian Islands. see LIPARI ISLANDS.

Aeolians see GREECE

Aeolis (ē'ŭlĭs) or **Aeolia** (ēō'lēŭ), ancient region of the west coast of Asia Minor Aeolis was not a geographic term but a collective term for the cities planted there by the Aeolians, a branch of the Hellenic peoples The 12 southern cities were grouped in the Aeolian League, these were Temnos, Smyrna, Ptane, Neonteichos, Aegirusa, Notium, Cilla or Killa, Cyme, Gryneum, Larissa, Myrina, and Aegae

Aeolus (ē'ŭlŭs), in Greek mythology **1** The wind-god He lived on the island of Aeolia, where he kept the winds in a cave **2** Son of HELLEN and ancestor of the Aeolian branch of the Hellenic race

aerial see ANTENNA

aerial photography, the art and science of taking still or moving-picture photographs from an aircraft in the air Aerial photography was tried before the advent of the airplane by using kites and balloons It was used in the First World War to a small extent when its tremendous military value became apparent During the ensuing peacetime years methods were so perfected for taking still pictures from airplanes that photogrammetry, the science of measurement from photographs, became an important tool of agencies making any type of surface maps During the Second World War, aerial photographs were the most important source of military intelligence The use of aerial photog-

raphy is still expanding. See H T. Smith, *Aerial Photographs and Their Applications* (1943).

aerodrome see AIRPORT

aerodynamics, the physics of air (and other gases) in motion, including especially the science of FLIGHT It involves, for example, a study of the force exerted by the air against the wings and fuselage of the flying machine or, inversely, the resistance offered to the air by a body moving through it The sciences of streamline and of aerial propulsion are results of research in this field Experiments to determine the flow of air around an airplane or other body have been performed by means of the WIND TUNNEL

aeroembolism see AIRSICKNESS

aeronautical engineering see ENGINEERING

aeronautics, the science and art of flight For history and mechanics, see AERODYNAMICS, AIRPLANE, AIRSHIP, AIRWAY, AUTOGIRO, BALLOON, FLIGHT, GLIDER, HANGAR, HELICOPTER, JET PROPULSION, PARACHUTE, PILOT, SEAPLANE For notable flights, see AVIATION For military and naval aeronautics, see AIRCRAFT CARRIER, AIR FORCES, AIR POWER See also AIR, LAW OF THE, AIRSICKNESS, and articles on leading aviators and air pioneers See H E Baughman, *Aviation and Reference Guide* (2d ed , 1942), A P De Seversky, *Victory through Air Power* (1942), H L Williams, *Casey Jones Cyclopedia of Aviation Terms* (1946) and *Fundamentals of Aviation* (1946), A W Judge, *Aircraft Engines* (2 vols , rev ed , 1945–47)

aeroplane see AIRPLANE

Aertsen or **Aartsen, Pieter** (pē'tur ärt'sən), c 1508–c 1575, Dutch painter of religious pictures and scenes of rustic life Most of his religious pictures have been destroyed, but examples of the others are in Antwerp, Amsterdam, and Vienna Aertsen was nicknamed Lange Pier [tall Pete]

Aeschines (ĕs'kĭnēz), c 389–314? B C , Athenian orator, the rival of DEMOSTHENES A man arisen from humble circumstances, he became powerful in politics because of his oratorical gifts At first opposed to Philip II of Macedon, he later changed sides, arguing that resistance to Macedonian power was useless Both he and Demosthenes were members of the embassy to Philip in 348 B C , and afterward Demosthenes bitterly accused Aeschines of accepting Macedonian bribes Aeschines defended himself in his orations *Against Timarchus* (Timarchus being an ally of Demosthenes) and *On the False Legation* (342 B C , Demosthenes' oration on the occasion had the same title) The trouble between the two orators grew and culminated in the affair of the gold crown that the orator Ctesiphon proposed should be given Demosthenes in 330 B C Aeschines brought suit with *Against Ctesiphon* Demosthenes replied with his sturdy defense *On the Crown* Aeschines lost, was fined, and retired to Asia Minor

Aeschylus (ĕs'kĭlus, ēs'–), 525–456 B C , Athenian tragic poet b Eleusis He was the first of the three great Greek writers of TRAGEDY He fought at Marathon (which sole fact his epitaph, written by himself, states proudly) and at Salamis In middle age he went to Sicily to live at the court of Hiero I, and he died at Gela He wrote perhaps 90 plays (seven survive in full) and won 13 first prizes In each case four connected plays were submitted (a tragic trilogy plus a lighter satyr play) Aeschylus really invented tragedy Before him a tragedy was a dialogue between a chorus and one actor —a dramatically limited form Aeschylus added an actor and increased the potentialities of his vehicle immeasurably (Though only two actors and the chorus appeared on the stage at the same time, an actor often took more than one part) Aeschylus seems to have introduced actors' costumes, to have decorated his scene, and to have placed supernumeraries on the stage He also, by his supreme poetic ability, his piety, and his high-mindedness, made Athenian tragedy more of an artistic and intellectual creation than it had been before. His extant plays are hard to date The earliest is probably *The Suppliants*, simple in plot (on the marriage of the 50 daughters of DANAÜS) and with only one actor besides the chorus, whose passages dominate the tragedy *The Persians* (472? B C), glorifying the Athenian victory over Persia at Salamis, has two actors but the new form is still unpolished *The Seven against Thebes*, the grimmest and most awful of his tragedies, can be dated in 467 *Prometheus Bound* (see PROMETHEUS), of uncertain date, is striking for its bold attack on the relations of god and man, but the later two parts of its trilogy, which are lost, probably left Zeus as magnificent as ever The last three tragedies of Aeschylus compose the only extant ancient trilogy, the *Oresteia*, with which the poet won first prize in 458 The plays are *Agamemnon*, *The Choëphoroe*, and *The Eumenides*, three actors are used—an innovation of SOPHOCLES *Agamemnon* is by many considered the greatest Attic tragedy, in suspense it is approached in ancient drama perhaps only by the *Oedipus Rex* of Sophocles The modern reader of Aeschylus usually compares him unfavorably with Sophocles, Aeschylus prospers ill in translation, and this is true especially of his choral lyrics, which are, at their best, rivals of the odes of Pindar. The choruses, more important in Aeschylus than in his successors, are both ethical commentaries on the action and means for the presentation of the action Vivid in its character portrayal, majestic in its tone, and beautiful in its lyricism, Aeschylus' tragic poetry has been esteemed among the greatest of all time He alone of Greek tragedians was honored at Athens by having his plays performed repeatedly after his death There are many English translations Browning's *Agamemnon* is a poetic translation, and Eugene O'Neill's *Mourning Becomes Electra* is an American version of the trilogy For bibliography, see J E Harry, *Greek Tragedy*, Vol I (1933)

Aesculapius see ASCLEPIUS

Aesir see GERMANIC RELIGION

Aeson (ē'sŏn), in Greek mythology, father of JASON He was driven from his kingdom by his brother PELIAS One legend says that he died while Jason was seeking the GOLDEN FLEECE, another that, after Jason's return, Aeson's youth was restored by MEDEA

Aesop (ē'sŏp, ē'sōp), Greek fabulist About him nothing is known, and it is probable that he never existed An old legend makes him a slave of Samos in the 6th cent B C and gives him wild adventures The fables called Aesop's fables were preserved principally through BABRIUS, PHAEDRUS, and PLANUDES MAXIMUS See FABLE

aesthetics (ĕsthĕt'ĭks), the science of beauty and art The several fine arts are the realization or expression of beauty through their appropriate media, as wood, marble, pigment, and sounds The province of aesthetics is to determine the nature of beauty in general and the laws governing its expression in a concrete medium On the nature of beauty, there are two types of thought—the objective, generally maintaining that beauty inheres in the external object, and the subjective, generally maintaining that beauty depends solely upon the perception of the observer There are innumerable shades of variation between these two poles A theory of aesthetics is an essential part of any complete philosophic theory, and almost every philosopher has attempted to draw up his own laws of beauty Some of the most interesting theories of aesthetics have been those of Plato, Aristotle, the 3d earl of Shaftesbury, Hegel, Bosanquet, Fechner, and, in recent years, Croce and Santayana Aesthetics also embraces all the arts as well as the principles underlying the works of critics of painting, sculpture, architecture, literature, and music See George Santayana, *The Sense of Beauty* (1896), Irving Babbitt, *The New Laokoon* (1910), K E Gilbert and Helmut Kuhn, *A History of Esthetics* (1940), H M Kallen, *Art and Freedom* (2 vols , 1942)

aestivation see HIBERNATION

Aeta see PYGMY

Æthelbald (ē'thulbôld, ă'–), d 757, king of Mercia (716–57), grandson of a brother of Penda He was in exile many years before he became king A strong ruler, he by 731 controlled all England S of the Humber and led expeditions into Northumbria (740) and against the Welsh (743) He was murdered by his own bodyguard

Æthelbald, d 860, king of Wessex, son of ÆTHELWULF and brother of ALFRED During his father's pilgrimage to Rome (855–56), Æthelbald ruled, and in 856 he led a group who refused to receive the king back Æthelwulf left Wessex to his son and resumed his reign over Kent, Devon, Sussex, and Essex After Æthelwulf's death, in 858, Æthelbald married his father's widow, Judith of France At his death Æthelbald was succeeded by his brother Æthelbert

Æthelbert (ē'thulburt, –bûrt, ă–), d 616, king of Kent (560?–616) Although he was defeated (possibly at Wimbledon) by the West Saxons in 568, he later reconstructed his broken power and was the strongest ruler in England S of the Humber His wife Bertha, daughter of the Frankish king, Charibert of Paris, was a Christian Æthelbert received St Augustine of Canterbury, who converted the king to Christianity and made his capital, Canterbury, a great Christian center The laws issued by him are the earliest extant body of laws in any Germanic language and in their list of payments for physical injuries illustrate the social order of the time

Æthelbert, d 866, king of Wessex (860–66), son of ÆTHELWULF and brother of ALFRED In 858 at the death of his father he began to rule Kent (with Surrey, Sussex, and Essex), and he reunited them with Wessex when in 860 he succeeded his brother ÆTHELBALD Throughout his reign the attacks of the Danes were severe, and they continued through the reign of his brother and successor, ÆTHELRED

Æthelflæd (ē'thulflĕd, ă'–) or **Ethelfleda** (ĕthŭlflē'du), d 918, daughter of King ALFRED of England and wife of Æthelred, ealdorman of Mercia After her husband's death in 911 she reigned alone and was known as the Lady of the Mercians Her energetic prosecution of resistance against the Danes and her wise government, both before and after her husband's death, won her a reputation as one of the most remarkable women in English history

Æthelfrith (ē'thŭlfrĭth, ă–), d 617, king of Northumbria He was the first great leader to arise among the northern Angles, and he ruled over both Bernicia and Deira, probably beginning c 593 He repulsed an attack by the Scottish Gaels under Aidan in 603 and about 10 years later defeated the Welsh at Chester During Æthelfrith's lifetime (if not solely as a result of the battle of Chester) the West Welsh were separated from their northern brethren by the penetration of the English to the Irish Sea Æthelfrith forced his brother-in-law Edwin, who had pretensions to the throne in the Deiran line, into a long exile Edwin found a protector in Rædwald of East Anglia, who made war on Æthelfrith and killed him in battle at the Idle river near present-day Nottingham

Æthelmar of Valence. see AYMER OF VALENCE

Æthelred (ē'thŭlrĕd, ă'–), d 871, king of Wessex (866–71), son of ÆTHELWULF and brother of ALFRED He succeeded his brother ÆTHELBERT as king and as overking of Kent and possibly of East Anglia On one occasion he gave military aid to his brother-in-law Burgred, king of Mercia Æthelred spent much of his short reign gathering forces to oppose the Danes, who had occupied York (866) and ravaged much of England Alfred was his important second in command in a series of battles (870–71) Although Æthelred had young children, Alfred succeeded his brother in April, 871, as better fitted to defend the kingdom

Æthelred, 965?–1016, king of England (978–1016), called Æthelred the Unready [from Old Eng unræd=without counsel] He was the son of EDGAR and the brother of EDWARD THE MARTYR The obscure circumstances of Edward's murder in 978 started Æthelred's reign under a cloud of suspicion The catastrophes of the period occurred partly because Æthelred was a weak king, but his reign coincided with the height of Danish power, and his people were often treacherous The first payment of tribute to raiding Danes was in 991—a payment raised by the DANEGELD then and frequently thereafter In 997 the Danes came not only to raid but to stay and to plunder the rich realm until 1000 It is impossible to assign reasons or blame for the devastation of Strathclyde by the English in 1000 or the massacre of Danes in England in 1002, both of which may have been at the king's order Æthelred seems to have tried to defend his kingdom, in 1002 he married Emma, sister of Richard II, duke of Normandy, perhaps in an attempt to gain an ally, in 1007 the army was placed under a single commander, by 1009 a national navy had been built, but was rendered useless by the treason of many commanders, who took to piracy A severe harrying at will by the Danes in 1009–12 left England disorganized and hopeless, and when the Danish king SWEYN returned in 1013 to conquer he was well received in the DANELAW, and London capitulated without much fighting Æthelred fled to Normandy Upon Sweyn's death in 1014 Æthelred's restoration was negotiated in the first recorded pact between an English king and his subjects CANUTE, son of Sweyn withdrew, but returned in 1015 and was opposed desperately by Æthelred and his son, EDMUND IRONSIDES. Æthelred died in April, 1016 Edmund was declared his successor and made a treaty with Canute, but died in November Canute ruled England and married Emma, Æthelred's widow, Æthelred's heirs were restored only with EDWARD THE CONFESSOR

Æthelstan see ATHELSTAN

Æthelwulf (ē'thulwōōlf, ă'–), d 858, king of Wessex (839–56), son of EGBERT and father of ÆTHELBALD, ÆTHELBERT, ÆTHELRED, and ALFRED He had been underking of Kent (with Surrey, Sussex, and Essex) before his father's death in 839, and upon becoming king of Wessex he became overking of Kent He was compelled to defend his country against the invasion of the Danes, and with Æthelbald he won a notable victory over them at Aclea in 851 He also campaigned against the Welsh A man of great piety, he sent his son Alfred to Rome and went there himself on a pilgrimage in 855 In 856 he took as his second wife Judith, daughter of Charles II (Charles the Bald) of France Learning before his return to England that Æthelbald would resist his resumption of the kingship, Æthelwulf left his son as king of Wessex and himself ruled only in Kent and its dependencies, where Æthelbert succeeded him

Aetius (ā'shēus), d 367, Syrian theologian He became prominent (c 350) as an exponent of the extreme ARIANISM principally developed by his secretary EUNOMIUS Members of his party were called Aetians and Anomoeans

Aetius, c 396–454, Roman general At first unfriendly to VALENTINIAN III, he later made his peace with GALLA PLACIDIA and was given a command in Gaul An ambitious general, he was embroiled in difficulties with his rival BONIFACE, who defeated him near Rimini in 432 Aetius went briefly into exile among the Huns but returned in 433 and rose to be the chief power of the Western Empire He defeated the Germans in Gaul, then crowned his career by commanding Roman and Visigothic troops in the repulse of Attila and the

Huns in the battle of Châlons (451)—a battle generally said to have saved the West Valentinian, presumably jealous of Aetius' success, had him murdered

Aetna· see ETNA

Aetolia (ētōl′yù), region of ancient Greece, N of the Gulf of Corinth and the Gulf of Calydon, E of the Achelous river (separating it from Acarnania) Little is known of the early population of Aetolia, but later Aetolians, though they had coastal cities, were primarily an inland farming and pastoral people They had famous shrines at Calydon (to Artemis) and Thermum (to Apollo) Aetolia was of little significance in Greek history until the rise of the Aetolian League After the downfall of that confederation, Aetolia was absorbed by the Romans into Achaea

Aetolian League, confederation centering in the cities of Aetolia It was formed in the 4th cent B C and began to gain power in the 3d cent in opposing the ACHAEAN LEAGUE and the Macedonians In alliance with the Romans, the Aetolians helped to defeat Philip V of Macedon at Cynoc ephalae in 200 B C The Aetolians, then dissatisfied, turned against Rome and made an alliance with Antio hus III of Syria His defeat (189 B C) spelled the ruin of the league Though it formally continued, its power was totally gone

Afanasyev, Aleksandr Nikolayevich (ŭlyĭksan′dur nyĭkull′uvĭch ŭfuna′syŭf), 1826–71, Russian folklorist His collections, published from 1866 on, were instrumental in introducing Russian popular tales to world literature A selection was translated into English as *Russian Fairy Tales* (1945)

affidavit (ă″fudā′vĭt), written statement sworn to before a magistrate or before some other person authorized by law to administer oaths, such as a notary public It must be signed by the party making the statement and by the officer administering the oath An affidavit is used upon the hearing of a motion in court (or in support of some contention) when it is not necessary that the person be cross-examined It thus differs from a deposition, which is made by a witness who was examined and cross-examined out of court An affidavit cannot be used upon the trial of issues raised by pleadings Affidavits are also used whenever written attestation of some fact is needed A willful misstatement of fact in an affidavit constitutes perjury

Afghan hound, large, slender hunting dog related to the greyhound Its coat is thick and silky and long-haired over most of the body, but shorter along the back, the limbs and the pendulous ears are feathered, and the head has a topknot The tail is set low and carried high A papyrus believed to date from 3000 or 4000 B C indicates that the dog was known to the ancient Egyptians It was developed chiefly in Afghanistan, where it has long been bred for hunting in the mountains

Afghanistan (ăfgă′nĭstăn″, ăfgă″nĭstan′), kingdom (c 253,000 sq mi , pop c 12,000,000), S central Asia The capital is KABUL Afghanistan lies between Iran on the west and Pakistan on the east, between the USSR (Turkmen SSR, Uzbek SSR, and Tadzhik SSR) on the north and Baluchistan on the south A narrow strip, the Wakhan, stretches in the northeast to touch Sinkiang prov , China, and Kashmir The great mass of the country is steep-sloped with mountains, the ranges fanning out from the towering Hindu Kush (reaching more than 24,000 ft) across all the center of the country There are, however, many fertile valleys and plains within the mountain ranges and on the edges Here are cultivated fields of barley and wheat and orchards yielding fine fruits, such as the famous peaches and grapes of KANDAHAR In the south and particularly in the southwest are great stretches of untenantable desert To the north, between the north central mountain chains (notably the Koh-i-Baba or the Kuh-i-Baba and the Paropamisus) and the Amu Darya river (formerly called the Oxus), which marks part of the boundary with the USSR, are the regions of Afghan Turkistan, the highlands of Badakshan (with the finest lapis lazuli in the world), the Amu Darya plain, and the rich valley of HERAT on the Hari Rud in the northwest corner of the country (the heart of ancient ARIANA), connected with the Khurasan region Farther east is the anciently splendid BALKH and the modern MAZAR-I-SHARIF The regions thus vary greatly, though prevailingly the land is dry, and the rivers are mostly not navigable The longest is the Helmand, which flows generally SW from the Hindu Kush to the Iranian border Its water was used in the remote past for irrigation, and the waters of the Hari Rud and the Amu Darya have also been utilized The Kabul river, on which the capital stands, is particularly famous because it leads to the KHYBER PASS and so south to the riches of India This route has been much used by conquerors, and the incursions of various invaders from prehistoric days until relatively recent times helped to make the population of present Afghanistan almost as variegated as the regions In the north there are the Tadzhiks about Herat and in the Wakhan, the nomadic Turkmen, and the Uzbeks In the central mountains are the Hazaras, who speak a Mŏngolian language In the east and the south are the Afghans and their almost, if not quite, undistinguishable kinsmen, the Pathans (a name used particularly for those in the North-West Frontier Prov , Pakistan), they speak Afghan or Pushtu This and Iranian are the principal languages of Afghanistan A unifying factor among the people is religion, for almost all the inhabitants of Afghanistan are Moslem The large majority are Sunnite, the minority (perhaps as many as 1,000,000) Shiite Diversity is, however, remarkable Anthropological study has not yet been extensive enough to supply a true picture of the variations in culture Differences are, however, obvious in such distinctions as that between the nomadic "tent" Afghans and the sedentary "house" Afghans Grazing is of great importance in the economy, and the fat-tailed sheep is a staple of Afghan life, supplying skins and wool for clothing, meat and fat for food Karakul is the largest single item of Afghanistan export Fine horses are the pride of many tribesmen Early in 1950 mineral wealth was largely undeveloped, though plans were under way for exploitation of coal, oil, copper, and sulphur deposits, formerly much silver and some gold came from the area Afghanistan is also traditionally known for its native plants producing castor beans, madder, and asafetida Industry was still in 1950 only in the stage of infancy, though Kabul has minor processing and manufacturing plants (matches, shoes, furniture, and the like) Only a little of the potential hydroelectric power has yet been developed Communications are poor in this mountainous country There are no railroads, and motor roads, though extensive, are subject to great difficulties, the road from Kabul to Herat via Bamian, for instance, must cross high mountain passes in great danger of avalanche The airplane promises to take much of the transport that is still carried on the backs of pack animals Generally, however, despite the recent efforts of the government, the peoples of Afghanistan have a relatively low material culture Constant strife has hindered development The position of Afghanistan across the land road to India has enticed conquerors The high mountain barriers, on the other hand, has helped the invaded Thus, the very topography that kept Afghanistan disunited served at the same time to make the hill tribes independent It is probable that there were well-developed civilizations in S Afghanistan in prehistoric times before the land had been reduced to utter desert, but the archaeological record has not yet been made clear Certainly cultures had flourished in the north and the east before Darius I by conquest annexed those areas to the Persian Empire Later Alexander the Great conquered them on his way to India, and after him came the independent kingdom of BACTRIA, which flourished with its capital at Balkh from the middle of the 3d cent B C until the middle of the 2d cent B C It fell to conquering Parthians and rebellious tribes (notably the Saka) The present Afghanistan remained divided, as petty rulers rose and fell, struggling against conquerors from the west Buddhism spread from the east, but it was wiped out, and the conquest by Moslems, which began in present W Afghanistan in the 7th cent A D , was to provide the stable religion Petty Moslem kingdoms were founded The greatest of them was that with its capital at GHAZNI, and MAHMUD OF GHAZNI, who conquered the lands from Khurasan in Iran to the Punjab in India early in the 11th cent , was the greatest of the rulers The state fell to conquering hordes from Ghor in 1152 Later Afghanistan was to succumb to the conquest of Jenghiz Khan and then to that of Tamerlane BABER, a descendant of Tamerlane, used Kabul for his conquest of India and the establishment of the Mogul empire in the 16th cent Meanwhile Islam had been accepted even by most of the remote hill tribes, and the new peoples who came in to take over the devastated land also took the new religion Tribes and families continued at strife In the 18th cent Iranian conquest under Nadir Shah marked the real beginning of Afghanistan as a unit because after his death (1747) his lieutenant, AHMED SHAH, established a unified state covering most of the present Afghanistan as well as NW India His dynasty, the Durani, gave the Afghans the name (Durani) that they themselves frequently use The Durani line ended when DOST MOHAMMED succeeded to the emirate of Afghanistan in 1802 His rule saw the emergence of the 19th-century problem of Afghanistan The struggle between Great Britain and Russia for central Asia and British desire to guard India led to the Afghan Wars The first of these began in 1838, and though British soldiers took the major cities of the east and south, the war culminated in a massacre of the British in Kabul in 1842 The following decade saw the struggles that made Khyber Pass a famous name in British military annals Dost Mohammed, ousted from his emirate, was restored with British help, but internal family and tribal strife continued Dost Mohammed's successor, SHERE ALI, was opposed by his brothers and nephews When he turned from British to Russian aid, the second of the full-scale Afghan Wars began (1878) Fortunes varied, but the upshot of the war was the ousting (1880) of Shere Ali and the establishment of the Anglophile ABDU-R-RAHMAN KHAN as emir until his death in 1901 He did much to establish order in his unruly land The boundary between North-West Frontier Prov and Afghanistan was established by Sir Mortimer Durand in 1893 as the Durand line, but the question of the exact status of some tribal lands was left unclear, and troubles continued with the Afridis, the Wazirs, and other border tribes The Anglo-Russian agreement of 1907 guaranteed the independence of Afghanistan under British influence That influence was resented, especially in the First World War, when the Afghans remained neutral but sympathized with the Moslem Turks, thus feeling led in 1919 to a short war against the British, but the emir, AMANULLAH, soon negotiated the Treaty of Rawalpindi and then devoted himself to an earnest effort to modernize his country The emirate was changed (1926) to a kingdom, and radical reforms were introduced Westernization, however, provoked the wrath of his fanatical Moslem subjects, who rose in 1929 under a leader called the Water Boy Amanullah had to resign, but Mohammed Nadir Shah, placed on the throne after the suppression of the revolt, continued moderate efforts to modernize Afghanistan until he was assassinated in 1933 His son and successor, Mohammed Zahir Shah, set out to strengthen the country and to build its economy The aspect of Afghan life was early in 1950 still somewhat anachronistic Afghan women still went completely veiled, and the educational system was only in early stages of formation (the Univ of Kabul was, for example, founded in 1932), but development programs were begun, and some irrigation schemes inaugurated to redeem the desert lands These plans were forwarded by lend-lease in the Second World War and by some American loans and aid after the war Afghanistan was deeply interested in the division of India into India and Pakistan, in early 1950 the Afghan government was protesting the incorporation of the tribal lands within the Durand line into Pakistan and urging the creation of an independent or autonomous state with a Pathan majority, to be made from the North-West Frontier Prov and to be called Pushtunistan See Sir George MacMunn, *Afghanistan from Darius to Amanullah* (1929), Jamal ud-Din Ahmad and Muhammad Abdul Aziz, *Afghanistan* (1937), Sir Percy Sykes, *A Short History of Afghanistan* (1940)

Afghan language (ăf′găn″, -gun), Iranian language of the Indo-European family See LANGUAGE (table)

Afghan Turkistan, wild region, N Afghanistan, between the Hindu Kush and the Amu Darya

Afinogenov, Aleksandr Nikolayevich (ŭlyĭksăn′dur nyĭkull′uvĭch ăfē″nŭgyĕ′nuf), 1904–41 Russian playwright He was the author of the popular Soviet play *Fear* (1931, Eng tr , 1934) Other plays available in English are *Dalyokoye* (1935, Eng trs *Remote* 1936, *Distant Point*, 1941, *Far Taiga*, 1940) *Listen, Professor* (1941, Eng tr , 1944), and *On the Eve* (1941, Eng tr in *Seven Soviet Plays*, 1946) Afinogenov was killed in a German air raid on Moscow

A F of L. see AMERICAN FEDERATION OF LABOR

Afonso For rulers thus named, see ALFONSO

Afragola (afragō′la), town (pop 29,281), Campania, S Italy, 4 mi NE of Naples A rural center, it has an Angevin castle, now used as orphanage

Africa, continent (with adjacent islands c 11,860,000 sq mi , pop c 175,000,000), lying across the equator, mainly in the Northern Hemisphere Madagascar is the largest of the islands included Africa is entirely surrounded by water At the points where it lies closest to Europe and Asia it is separated from them by the Straits of Gibraltar and the Suez Canal respectively Africa is otherwise bounded by the Mediterranean Sea on the north, by the Red Sea, the Gulf of Aden, and the Indian Ocean (including the Mozambique Channel) on the east, and by the Atlantic Ocean (including the Gulf of Guinea) on the west The smooth coast affords few natural harbors Africa is mainly a plateau averaging 2,000 ft in height Important mountainous areas are confined to the northeast (Atlas Mts), to the southwest tip (the Drakensberg), and to the east central region (split by the Great Rift Valley), where is Mt Kilimanjaro (19,565 ft), the greatest continental elevation The high lakes of E central Africa, including Lakes Rudolph, Nyasa, and Tanganyika and Victoria Nyanza and Albert Nyanza, are a major factor in much of the continental drainage system, they feed several great rivers, including the Nile (NE Africa), the Congo (equatorial Africa), and the Zambezi (SE Africa) The Niger drains W central Africa Africa, although mainly in the tropics, displays many varieties of climate Most of the north (which includes the Libyan Desert and the Sahara) and the Kalahari in the south are extremely arid There are more or less open savannas along the borders of the arid regions Dense jungle covers west equatorial Africa, where rainfall is heavy throughout the year Native Negro stocks, speaking a great variety of languages, inhabit most of the continent Large concentrations of non-Negro populations are in North Africa and in the Union of South Africa In the civilization of Egypt, established before 3000 B C , Africa perhaps may

claim the most ancient settled culture in the world Ethiopia, the second oldest African country which survives in some form from antiquity, has been traced to the 3d cent B C In ancient times the Mediterranean region of Africa was of great world importance Rome gradually acquired this area after finally defeating and destroying Carthage in 149 B C. With the dissolution of the West Roman Empire, the northern coastal regions were divided among barbarians Later a degree of unity was restored by invading Arabs (7th–11th cent), who propagated Islam effectively, today there are c 60,-000,000 Moslems in Africa After the 8th cent the Moslems (chiefly Moors) from the northern lands of Africa invaded the Christian countries of S Europe and were not finally expelled until the 15th cent Portugal, stimulated by the wish to establish a safe trade route to India, pioneered in exploring the coasts of Africa, and a Portuguese, Bartholomew Dias, was the first to round (1488) the Cape of Good Hope He was followed by Vasco da Gama, who sailed to India in 1499 Portugal established many coastal ports to trade in the commodities for which Africa became famous—spices, ivory, gold, and slaves Dutch, British, and French competition severely restricted Portugal in the two following centuries, when the slave trade reached its zenith In the 18th and the 19th cent , explorations of the interior of Africa by (among others) James Bruce, Mungo Park, John Speke, David Livingstone, and Sir Henry Stanley exposed the existence of great wealth which might be exploited by founding colonies Though the Dutch had colonized the Cape of Good Hope in the 17th cent and the British had founded the colony of Sierra Leone in 1807, the really intense struggle for empire in Africa did not arise until the final disappearance of the slave trade in the mid-19th cent By 1912 the major powers of Europe had accomplished the partition of Africa, and Egypt, Ethiopia, and Liberia alone retained at least nominally complete independence France pushed its claims to NW Africa and ultimately acquired French West Africa, French Equatorial Africa, and the French Cameroons and established protectorates in Algeria, Morocco, and Tunisia French territories in other parts of Africa are French Somaliland, French Togoland, Madagascar, Mauritius, and Réunion The main group of British possessions is in E Africa, it comprises Anglo-Egyptian Sudan, British Somaliland, Uganda, Kenya, Tanganyika, Zanzibar, Nyasaland, Northern Rhodesia, Southern Rhodesia, Bechuanaland, Basutoland, and Swaziland The Union of South Africa is a dominion of the British Commonwealth of Nations Gambia, Sierra Leone, the Gold Coast, and Nigeria are the British possessions on the west coast Portugal's African empire comprises Portuguese Guinea, Angola, and Mosambique Belgium's possessions are the Belgian Congo and Ruanda-Urundi The Spanish possessions in Africa are the smallest—Spanish Guinea, Spanish Sahara, Ifni, and the protectorate of Spanish Morocco Tangier International Zone is bordered by Spanish Morocco The former extensive German holdings —Togoland, Cameroons, German Southwest Africa, and German East Africa—were lost after the First World War Still undecided in early 1950 was the final disposition of Italy's empire, which included, before the conquest of Ethiopia (1936), Libya, Eritrea, and Italian Somaliland In the Second World War the independence of Ethiopia was reestablished, and there was a series of major campaigns in North Africa which ended in 1943 with the defeat of the Axis forces See C P Lucas, *Partition and Colonization of Africa* (1922), R V Light, *Focus on Africa* (1941), Walter Fitzgerald, *Africa* (6th rev ed , 1949)

African Methodist Episcopal Church, one of the leading Negro denominations of METHODISM It was founded by Richard ALLEN

African Negro art, primarily a sculpture and handicraft art of equatorial Africa Though of ancient and obscure origins, the examples known today are mainly of recent fabrication, because the materials used were for the most part not lasting in the tropical climate The style of the work ranges from extreme naturalism to extreme conventionalization and from crudity to the greatest technical refinement Generally speaking, ancestor worship has inspired the portrait art of the open countries, whereas in the jungles animistic beliefs have led to the production of ritual masks and fetishes Important sources of art objects include Dahomey, Liberia, the Ivory Coast and the Gold Coast, Nigeria, the Cameroons, the Belgian Congo, and French Equatorial Africa Among the most ancient and highly prized examples are the bronzes and ivories of Benin, Nigeria, the best of which were probably produced during the 16th and 17th cent They include figures, heads, and reliefs cast in bronze by the elaborate cire-perdue method The introduction of this technique has been variously ascribed to the ancient Egyptians, the Moslems and the Portuguese Aside from these Benin bronzes and ivories, only some terra-cotta heads from Ife, Nigeria, remain of earlier *objets d'art*. White domination has brought a rapid decline in production, and the number of fine examples is limited. Since 1905 there has been a growing appreciation of this art, first among European artists and then among collectors and galleries everywhere Unfortunately this popularity has led to widespread appearance of inferior and false products African sculpture has, however, had an incalculable influence on abstract modern art and is considered the highest sculptural achievement of the 19th cent by some critics See J J Sweeney, ed , *African Negro Art* (1935), Paul Guillaume and Thomas Munro, *Primitive Negro Sculpture* (1926)

African Negro music. Researches into African music are of recent date because efforts to study it were ineffectual until after the invention of the phonograph Highly complex rhythms are its outstanding feature It is a physical music, inseparable from bodily movements There is great virtuosity in African drum-beating Polyphony exists to a large degree, possibly because of the antiphonal character of much of African singing Melody, not harmony, is its basis The Negro is highly susceptible to the influence of other cultures, and European and Arabian elements have been assimilated to the extent that it is difficult to determine what elements are native to African music The xylophone and several wind instruments have been borrowed from Asiatic sources How much the spiritual of the American Negro is indebted to African music is the subject of much disagreement See E M von Hornbostel, *African Negro Music* (1929)

Africanus, Sextus Julius (sĕk'stŭs jo͞ol'yŭs ăfrĭkā'nŭs), fl 221, Christian historian, resident in Palestine He wrote a history of the world from the creation to 221, which was used by Eusebius, and also letters and a sort of anthology, mostly of materials on magic

Afridis (ăfrē'dēz), Afghan tribe, North-West Frontier Prov , Pakistan, near the Khyber Pass The Afridis often raided trading caravans using the pass, and in the late 19th and early 20th cent Great Britain dispatched numerous military expeditions to repress them

Afrikaans (ă'frĭkäns', -käns'), standard language of the South African Dutch It is a Germanic language of the Indo-European family See LANGUAGE (table)

afterbirth see PLACENTA

afterdamp, see DAMP

Afton (ăf'tŭn) **1** Town (pop 1,261), extreme NE Okla , in a rich farm area The Grand River Dam is near by **2** Town (pop 1,211, alt c 6,100 ft), W Wyo , near the Idaho line, laid out c 1896 by Mormons, inc 1902 It is a dairy center for the Star Valley There is a Mormon tabernacle here, and near by is a Univ of Wyoming agricultural experiment station

Afton, river of Ayrshire, Scotland It is the "sweet Afton" of Burns's poem

Afyonkarahisar (äfyōn'kä"rähĭsär') [Turkish, = black castle of opium], city (pop 29,030), NW Turkey It is the center of a region growing opium poppies

Afzelius, Adam (ä'dăm äfsā'lē-o͝os), 1750–1837, Swedish botanist and founder of the Linnaean Institute at Uppsala He edited the autobiography of Linnaeus and wrote several books on the plants of the Guinea coast

Afzelius, Arvid August (är'vēd ou'gŭst), 1785–1871, Swedish historian, mythologist, and song writer His best-known large work is *Swedish Folk Tunes from Olden Times* (1814). His song *The Sea God* is still sung He also translated the *Elder Edda* and wrote a history of the Swedish people His autobiography, *Memories*, was published in 1901

Ag, chemical symbol of the element SILVER

Agabus (ăg'ŭ-), prophet who foretold the famine in the time of Claudius Caesar and the imprisonment of Paul Acts 11 27,28, 21 10,11

Agade, ancient Mesopotamian city see AKKAD

Agadir (ägädēr', ăgĭdēr'), town (pop 12,438), French Morocco, a port on the Atlantic Ocean It has a good natural harbor and is the gateway to the fertile Sous region The port was opened to foreign shipping in 1930. Agadir was the scene of an international incident in 1911 When French soldiers were intervening in a revolt in Morocco, the German cruiser *Panther* appeared at Agadir with the announced intention of protecting German property This move threatened the French program in Africa, and for a time war seemed imminent, but the question was settled by later agreement

Agag (ā'găg) **1** King of the Amalekites who was defeated and spared by Saul, but killed by Samuel 1 Sam 15 **2** The allusion is not understood in Num 24 7

Agagite (ā'gŭgīt), a not necessarily ethnical term used of Haman because of his hatred of the Jews Esther 3 1

Aga Khan (Aga Sultan Sir Mahomed Shah) (ä'gä khän'), 1877–, Indian leader Hereditary ruler of the Mohammedan Ismaili sect, with followers in India, East Africa, and Central Asia, the Aga Khan was born to great power. He tried to secure Moslem support for British rule in India, particularly by founding (1906) the All-India Moslem League, and he was chairman of the British Indian delegation to the imperial conference in London in 1930–31. He also represented India at the Geneva disarmament conference (1932) and in the League of Nations (1932, 1934–37) He is, however, perhaps best known for his fabulous wealth and for his interest in horse racing. He early took up residence in Europe

agalloch: see ALOES

Agamedes: see TROPHONIUS.

Agamemnon (ăg"əmĕm'nŏn), in Greek legend, the leader of the Greek armies in the TROJAN WAR. He and his brother Menelaus suffered misfortunes because of the curse placed on their father, ATREUS Menelaus married HELEN, and Agamemnon married Helen's sister CLYTEMNESTRA, who bore him ORESTES, ELECTRA, and IPHIGENIA His quarrel with ACHILLES—a main theme in the ILIAD—was brought on when Agamemnon, deprived of CHRYSEIS, took BRISEIS from Achilles. On his return from Troy, he brought CASSANDRA as his captive Soon after his return, Clytemnestra and her lover, AEGISTHUS, murdered him. The necessity for Orestes and Electra to avenge his death is the basis for the *Oresteia* of Aeschylus

Aga Mohamad Khan or **Agha Mohammed Khan** (both ägä' mōhä'mŭd kän'), d 1797, shah of Persia, founder of the Kajar (Qajar) dynasty Captured and emasculated by family enemies at the age of five, he grew up with hatred toward the world He was vigorous and able, but his cruelty is proverbial He captured and killed (1794) the last ruler of the Zand dynasty and ended his campaign with a wholesale massacre in Kerman He made himself shah in 1796 Aga Mohamad resisted a Russian invasion and himself invaded (1795) Georgia He was detested by his people and his murder was not regretted The succession of his nephew Fath Ali caused great rejoicing

Agana (ägä'nyä), city and municipality, on Guam, on the west coast 5 mi east of the naval base at Apra Harbor Before it was completely destroyed (1945) in the Second World War, it was the largest and most important town (1940 pop 10,004) on the island U S appropriations were made in 1946 for its rehabilitation

Aganippe (ăg"ənĭp'ē), in Greek legend, nymph whose fountain on HELICON gives poetic inspiration to all who drink therefrom The MUSES are therefore called, at times, Aganippides (ăg"ənĭp'ĭdēz") [Gr , = daughters of Aganippe]

Agapemone (ăgŭpĕm'ənē) [from Gr , = abode of love], English religious community of men and women, holding all goods in common It was founded (c 1850) at Spaxton, near Bridgwater, Somerset, by Henry James Prince (1811–99), with Samuel Starky and others Prince and Starky were clergymen who had been prohibited from preaching in the Church of England Prince, known to his disciples as "the Lord" and "the Beloved," believed himself to be the Holy Ghost and proclaimed the imminent second coming of Christ The sect was sometimes called the Lampeter Brethren, but this term belonged rather to a group of clergymen earlier associated with Prince at St David's College, Lampeter, Wales A branch establishment, known as the Ark of the Covenant, was opened in London c 1890, its pastor, J H Smyth-Pigott, later succeeded Prince as head of the sect

Agapetus I (ăgŭpē'tŭs) or **Agapitus I, Saint** (-pī'tŭs), d 536, pope (535–36), a Roman, successor of John II and predecessor of St SILVERIUS He went to Constantinople to dissuade JUSTINIAN I from the projected invasion of Italy by BELISARIUS and pawned the church vessels to pay for the journey. He was unsuccessful, but while in Constantinople he accomplished the deposition of the patriarch Anthimus, who held Monophysitic doctrines and had been uncanonically elected This action has been regarded in the Roman Church as an exercise of the papal prerogative of deposing bishops. Feast April 22

Agar (ā'gər), the same as HAGAR

agar (ā'gär, ä'-, ăg'ər) or **agar-agar**, product obtained from several species of red algae or seaweed, *chiefly from the Ceylon or Jaffna moss (Gracilaria lichenoides)* and species of *Gelidium*. Although agar comes chiefly from the Far East, California is also a source of supply Cooked in water and cooled, agar becomes gelatinous, its chief uses are as a culture medium (particularly for bacteria) and as a laxative, but it serves also as a thickening for soups and sauces, in jellies and ice cream, for clarifying beverages, and for sizing fabrics

Agasias (ăgā'shēăs), 1st cent B C , Greek sculptor; son of Dositheus. His Borghese Warrior is in the Louvre Another **Agasias**, 1st cent B C , Greek sculptor, was the son of Menophilus A statue by him is in the national museum at Athens

Agassiz, Alexander (ăg'ŭsē), 1835–1910, American naturalist, b. Neuchâtel, Switzerland, son of Louis Agassiz In 1849 he came to the United States. He studied at Harvard (A B , 1855) and at the Lawrence Scientific School (B S , 1857) From 1862 until his death he was connected in various capacities with Harvard and with the Museum of Comparative Zoology founded there largely through his father's efforts. In 1867 he became superintendent of the Calumet and the adjacent Hecla copper mines on Lake Superior Under his direc-

tion the mines were completely reorganised and established on a successful financial basis Agassiz instituted many safety and welfare measures The Calumet and Hecla interests were consolidated (1871) in a single company, of which Agassiz was president until his death From the mines he obtained the wealth which he expended in the interests of science—chiefly in contributions to Harvard and in financing expeditions and publications on his research. In 1875 he studied Lake Titicaca and parts of the west coast of South America, in 1877, 1878, and 1880, traveling on the steamer *Blake*, he made, for the U S Coast Survey, oceanographic explorations off the east and southeast coasts of the United States, extending into the Gulf of Mexico and into West Indian waters to the Barbados He studied coral formations in the Tortugas (1881), in the Hawaiian Islands (1885), in the Bahamas, Cuba, the Bermuda islands, and the Florida Keys (1893–94), in the Great Barrier Reef of Australia (1896), and in the Maldive Islands (1902) His theory of the formation of coral atolls and reefs, refuting that of Darwin, was substantiated by observations made on these expeditions In 1904 Agassiz investigated marine life in the tropical Pacific waters off the west coast of South America He wrote *North American Acalephae* (1865), *Embryology of the Starfish* (1865), *Revision of the Echini* (1874), *North American Starfishes* (1877), and, with Elizabeth Cary Agassiz, *Seaside Studies in Natural History* (1865) See study by his son G R Agassiz (1913)

Agassiz, Elizabeth Cary, 1822–1907, American author and educator, b Boston In 1850 she married Louis Agassiz. She accompanied his expeditions to Brazil (1865–66) and along the Atlantic and Pacific coasts of the Americas (1871–72) She conducted a girls' school from 1856 to 1863 and was influential in the founding of Radcliffe College, which she served until 1903 as its first president Her writings include *A Journey in Brazil* (in collaboration with her husband, 1868), a biography of her husband (1885), and, with her stepson Alexander Agassiz, *Seaside Studies in Natural History* (1865) See study by L A Paton (1919)

Agassiz, Louis (Jean Louis Rodolphe Agassiz) (zhäˈ lwēˈ rôdôlfˈ), 1807–73, Swiss-American zoologist and geologist, b Fribourg, Switzerland He studied at the universities of Zurich and Erlangen (Ph D, 1829), Heidelberg, and Munich (M D, 1830) His *Fishes of Brazil* (1829) was produced at Munich from material turned over to him by C P J von Martius, who had collected it with J B von Spix Agassiz practiced medicine briefly, but his real interest lay in other fields of scientific research In 1831 he went to Paris, where he continued his study of fossil fishes under the guidance of Cuvier While in Paris he made a life-long friend of Alexander von Humboldt, who in 1832 urged him to accept the professorship in natural history at the Univ of Neuchâtel He remained there until 1846 and made the place a noted center for scientific study Among his many publications during this period was *Recherches sur les poissons fossiles* (5 vols and atlas, 1833–43), a work of historic importance in the field It was illustrated in part by his first wife, Cecile Braun Agassiz Between 1839 and 1845 he also wrote studies of fossil echinoderms and fossil mollusks and his *Fresh Water Fishes of Central Europe* (1839–42) Agassiz was an opponent of Darwinism, he considered that new species could arise only through the intervention of God From Neuchâtel he made annual studies of the Aar glacier, presenting in his *Études sur les glaciers* (1840) the first exposition of glacial movement and deposit He presented the theory that glaciers had formerly been much more extensive, that ice sheets had once covered all countries where unstratified gravel (boulder drift) could be found Agassiz's American career began when he came to the United States to deliver the Lowell Institute lectures at Cambridge in 1846 Two years later he accepted the professorship of zoology and geology at the Lawrence Scientific School of Harvard. His first wife died in Germany in 1848, and in 1850 in Cambridge he married Elizabeth Cabot Cary In the United States he was primarily a teacher and a most popular lecturer He published in 1850 the results of his study of Lake Superior. He wrote *Contributions to the Natural History of the United States* (4 vols, 1857–62), the first volume containing his famous "Essay on Classification" His expeditions included one to Brazil (1865–66) and one along the Atlantic and Pacific coasts of the Americas from Boston to California (1871–72) on the vessel *Hassler* Through his efforts the Harvard Museum of Comparative Zoology was established (1859) During the summer of 1873 he conducted the Anderson School of Natural History on Penikese Island, Buzzards Bay. He gave a tremendous impetus in America to the study of science direct from nature and trained a generation of American scientists See biographies by Elizabeth C Agassiz (1885), Jules Marcou (1896), and M. L. Robinson (1939), Lane Cooper, *Louis Agassiz as a Teacher* (1917)

Agassiz, Lake, c.700 mi long and 250 mi. wide, of the Pleistocene epoch, formed by the melting of the continental ice sheet some 10,000 years ago over much of the present NW Minnesota, NE North Dakota, and S Manitoba It was named in 1879 in memory of Louis Agassiz, for his contributions to the theory of the glacial epoch Lake Traverse, Big Stone Lake, and the Minnesota river are in the channel of the original outlet (the prehistoric River Warren) to the south, but as the ice completely disappeared, the water drained N into Hudson Bay, leaving Lakes Winnipeg, Manitoba, Winnipegosis, Red Lake, Lake of the Woods, and many smaller lakes The bed of the old lake, the Red River valley, has become an important wheat-growing region because of its rich, deep soil See Warren Upham, *The Glacial Lake Agassiz* (1895, U S Geological Survey, Monographs, Vol XXV)

agate, cryptocrystalline variety of quartz banded in two or more different colors, extensively used as a semiprecious gem stone and in the manufacture of delicate balances The banded appearance owes its origin to the fact that agates are built up by the slow deposition of silica from solution into cavities in older rock—often igneous rocks The layers differ in porosity, and the stones can be artificially stained so as to produce combinations of color more vivid and pleasing than are found in the natural state The cutting and staining of agates has long had its center at Idar and Oberstein in Germany Important sources of the stones are Brazil, Uruguay, India, and the United States (in the Lake Superior region and in some Western states) The moss agate or mocha stone is so called because it contains a dendritic inclusion resembling moss See also chalcedony, onyx, sard

Agatha, Saint (ăgˈəthə), 3d cent., Sicilian virgin, martyred under Decius She is mentioned in the Canon of the Mass and is invoked against storms Symbols palm and pincers Feast ᵻFeb 5

Agatharchus (ăgˈəthärˈkəs), 5th cent B C, Greek painter He is credited with important discoveries in the application of shading and perspective and is said to have been the first painter of scenery for use in the performance of a tragedy

Agathocles (ugăˈthuklēz), 361?–289 B C, Greek tyrant of Syracuse (317–289 B C) He warred with the other cities of Sicily and with Carthage He undertook a campaign in Africa (310–307? B C) and threatened Carthage Suffering ill fortune, Agathocles returned to Sicily and there declared himself king He had a reputation among the ancients for great cruelty

Agathon (ăgˈəthŏn), c 450–c 400 B C, Athenian tragedian Plato's *Symposium* has as its scene the celebration of Agathon's first dramatic victory Fragments of his work survive

Agave see pentheus

agave (ugāˈvē, -gäˈ-) [Gr, =noble], any of the species of plants of the genus *Agave*, economically important in their native tropical America for the fibers, soap, food, and beverages obtained from the different kinds *Maguey* (mugäˈ) is a Mexican name for several species, particularly those used in making the popular intoxicating beverages pulque and mescal Juice of the maguey contains the sugar agavose and has been used medicinally Sisal hemp and henequen, Tampico hemp or istle, and pita are among the fibers obtained from agaves The name amole or soap plant is applied to some The leaves of agaves are typically long, stiff, fleshy, often sharp tipped, and in a cluster at the ground or along a trunk The flowers, produced annually in some kinds but usually at much longer intervals, are borne on a tall, rapidly growing stalk, which rises well above the leaf cluster The flower stems of a few kinds are reputed to make good razor strops The species most often cultivated in the North for decoration requires 10 or often many more years to blossom, giving rise to the name *century plant*, also called American aloe After blooming, the century plant dies back and is replaced by shoots The agave cactus, *Leuchtenbergia principis*, is a true cactus resembling an agave The false aloe of the E United States is sometimes considered an agave

Agawam (ăgˈəwäm) 1 Town (pop 7,842), SW Mass, on the west bank of the Connecticut below West Springfield; settled 1635, inc 1855 Woolens are produced here Near by is a race track (1935). 2 Former name of Ipswich, NE Mass

Agdistis. see Cybele

age, in classical mythology, a period of the world's history, especially as systematized by Hesiod and Ovid These ages were the Golden Age, ruled by Cronus (Saturn), a period of serenity, peace, and eternal spring, the Silver Age, ruled by Zeus (Jupiter), less happy than the preceding, with luxury prevailing, the Bronze Age, a period of strife, the Iron Age, the present, a time of travail, when justice and piety are no more Hesiod had also a Heroic Age before the Iron Age, in it the Trojan War was fought The term *era* rather than *age* is now used to denote the grand divisions of geologic time (see geology).

Agee (ăgˈē-ē), father of Shammah, a mighty man. 2 Sam 23 11

Ageladas (ăjˈəlāˈdəs), c 540–c 460 B C., Greek sculptor of the Argive school, famous for his statues of gods and Olympian athletes A popular tradition, discredited by many authorities, names him as the teacher of the great sculptors, Polycletus the elder, Phidias, and Myron

Agen (ăzhēˈ), city (pop 26,051), capital of Lot-et-Garonne dept, SW France, on the Garonne, in a wine and fruitgrowing region Dating from Roman times, it became under the Carolingians the seat of the county of Agen or Agenois The county was reconquered from the English in the Hundred Years War and incorporated into the province of Guienne. A handsome old town, Agen has a remarkable, largely Romanesque cathedral

Agenor (ujēˈ-), in Greek mythology 1 Phoenician king, father of Cadmus and Europa. 2 Trojan hero, son of Antenor

agent-provocateur. see espionage

age of consent, the age at which the law provides that persons are bound by their words and acts There are different ages at which one has legal capacity to consent to marriage, to choose a guardian, to conclude a contract, and the like For marriage, the age is generally higher for males than for females Age of consent also means the age below which consent of the female to sexual intercourse cannot be offered as a defense to a charge of rape At common law this age was 10, state statutes in the United States generally set it between 13 and 18 See consent

ageratum (ăjˈərāˈtəm, ûjĕrˈu-) [Gr, =unaging], any plant of the genus *Ageratum*, tropical American annuals sometimes called flossflower The small composite flowers, commonly a lavender blue, are in thick terminal clusters borne throughout the summer and cultivated for beds, borders, and even pots The common species is *Ageratum houstonianum* A similar but perennial native plant (*Eupatorium coelestinum*), the mistflower, is sometimes called hardy ageratum

Agesander. see Laocoön

Agesilaus II (ujĕˈsĭlāˈəs), c 444–360 B C, king of Sparta After the death of Agis I (398? B C) he was brought to power by Lysander, whom he promptly ignored After the Peloponnesian War the Greek cities in Asia Minor had not been ceded to Persia despite Spartan promises, and Agesilaus went there (396) to oppose the Persian satraps Tissaphernes and Pharnabozus by attacking them He had to return to Greece, where he won (394) a hollow victory over the Thebans and their allies at Coronea, but could not reestablish Spartan hegemony In 386 by the King's Peace (or Peace of Antalcidas), the cities of Asia Minor were yielded to Persia Thebes and Athens entered an alliance against Sparta, and war followed After Agesilaus had deliberately excluded Thebes from the peace talks, Thebes renewed the war and the Theban general Epaminondas won (371 B C) a resounding victory at Leuctra Sparta did not recover Agesilaus took Spartan mercenaries to Asia Minor and Egypt and died on the way back His rule had seen the ruin of Sparta, though he was much admired by some contemporaries, notably Xenophon

Aggeus (ăjēˈəs), Vulgate form of Haggai.

Agincourt (ăˈjĭnkôrt, Fr ăzhĕkōōrˈ), modern Fr *Azincourt* (ăzĕkōōrˈ), village, Pas-de-Calais dept, N France, c 30 mi SE of Boulogne-sur-Mer. Here, on Oct 25, 1415, Henry V of England defeated a much larger French army in the Hundred Years War His success was mainly due to the superiority of the masses of English longbow men over the heavily armored French knights and demonstrated the obsolescence of the methods of warfare proper to the age of chivalry The battle is the core of Shakspere's drama *Henry V*

Agira (ăjēˈrä), town (pop 14,411), E central Sicily, Italy Once a flourishing Greek colony, it declined under the Romans There are marble quarries in the vicinity

Agis I (āˈjĭs), d 398? B C, king of Sparta. He prosecuted the Peloponnesian War and was the Spartan general at Mantinea (418 B C) He used the advice of Alcibiades in invading Attica and establishing a post there Later he quarreled with his adviser Agis aided Lysander in the final Spartan victories of the war He is sometimes called Agis II

Agis II, d 331 B C, king of Sparta He led a revolt of Peloponnesian cities against Alexander the Great, who was in Asia The rebels were crushed, and Agis was killed at Megalopolis He is sometimes called Agis III.

Agis III, d c 240 B C, king of Sparta He sought by reform and by returning to the constitution of Lycurgus to revive dying Spartan power after 244 B C He failed and was murdered.

Aglaia. see Graces

Aglipay, Gregorio (grāgōˈrēō äglēpīˈ), 1860–1940, Philippine clergyman A priest who joined the revolutionary forces of Emilio Aguinaldo, he later took his followers from the Roman Catholic Church to found the Philippine Independent Church Bishop Aglipay attracted many followers, said to number more than 1,000,000. His church, which retained many of the forms of the Roman Church, later

established friendly relations with the Unitarians. After Aglipay's death dissension shook the organization, and one faction in 1947 allied itself with the Protestant Episcopal Church Aglipay was defeated by Manuel Quezon in the presidential election of 1935

Agnes, Saint, 4th cent , virgin martyr A noble Roman girl, she was martyred at 13 after rejecting a well-born suitor She is commemorated in the Canon of the Mass On her feast two lambs are blessed and from their wool are made the pallia sent by the pope to archbishops Feast Jan 21

Agnes Scott College see EMORY UNIVERSITY

Agnew, David Hayes (ăg'nū), 1818–92, American surgeon, b Lancaster co , Pa , M D Univ of Pennsylvania, 1838 He practiced in Philadelphia and from 1872 was famous as professor of surgery at the Univ of Pennsylvania He attended President Garfield at the time of his assassination See biography by J H Adams (1892)

Agnew, Paul Gough, 1881–, American engineer, b Hillsdale co , Mich , grad Hillsdale College, 1901, M A Univ of Michigan, 1902, Ph D Johns Hopkins 1911. He specialized in the standardization of weights and measures He was physicist (1906–19) of the Bureau of Standards and then secretary of the American Standards Association

Agni, see HINDUISM

Agnolo di Ventura see AGOSTINO DI GIOVANNI

agnosticism (ăgnŏs'tĭsĭzm), form of skepticism which holds that reason cannot penetrate beyond experience and that, therefore, metaphysical positions cannot have any definite proof Among prominent agnostics have been Herbert Spencer, T H Huxley (who coined the word *agnostic*), and Auguste Comte Kant was an agnostic who argued that belief in divinity can rest only on faith The term is most frequently used with reference to doubt concerning the existence of divinity and the possibility of immortality The agnostic position turns on the definition of what constitutes knowledge and proof

Agnus Dei (ăg'nŭs dē'ī, ān'yōōs dā'ē) [Latin], the Lamb of God, i e , Jesus Christ John 1 29 The lamb of the Passover sacrifice was said to prefigure the crucified Savior (as throughout Revelation) and hence the HOST In the MASS the precommunion hymn is named *Agnus Dei* because those are its opening words It is usually the final number of sung Masses In iconography a lamb with halo and cross is called an Agnus Dei

agora (ă'gurə) [Gr ,=assembly], the public square or market place of a Greek city It was usually in a readily accessible part of the city and served as a general meeting ground About it were often the public buildings, such as the royal palace, the law courts, the assembly house, and the jail A favorite architectural device was the colonnade surrounding the agora The agora was quite similar to the Roman FORUM

Agoracritus (ăg"ərăk'rĭtus), fl 5th cent B C , Athenian and Parian sculptor, said to have been the favorite pupil of Phidias His best-known work was the colossal *Nemesis* at Rhamnus in Attica, ascribed by some to Phidias himself Fragments of this statue and its pedestal are in the British Museum and in the national museum at Athens

Agostino di Duccio (ägōstē'nō dē dōō'chō), b 1418, d after 1481, Florentine sculptor, who excelled in very low reliefs and in sculptural decorations Among his important works are the reliefs of the façade of the cathedral at Modena, portions of the interior decorations and the tomb of Malatesta in the so-called temple of Malatesta at Rimini, and the façade of San Bernardino at Perugia, in colored marble and glazed terra cotta, one of the finest examples of architectural sculpture of the Renaissance A marble relief *Madonna and Children* is in the Duomo, Florence

Agostino di Giovanni (dē jōvän'nē) and **Agnolo di Ventura** (ä'nyōlō dē vāntōō'rä), fl 1310–c 1350, Italian architects and sculptors, who often worked together and have therefore erroneously been called brothers They served jointly as architects of Siena, where they designed the convent and church of St Francis and other important buildings Their sculptural masterpiece was the tomb of Bishop Tarlati, at Arezzo, destroyed by the French

Agostino Veneziano (vānätsē'nō) or **Agostino di Musi** (dē mōō'zē), c 1490–c 1540, Italian engraver He studied with Marc Antonio Raimondi, with whose work his is compared He worked in Rome, Florence, and Venice, executing plates after Raphael, Dürer, Michelangelo, and others His prints are scarce and highly prized

Agoult, Marie Catherine Sophie (de Flavigny), comtesse d' (märē' kätürēn' sōfē' du flavēnyē' kōtĕs' dägōō'), pseud **Daniel Stern,** 1805–76, French author, b Frankfurt, Germany She was the mistress of Liszt, to him she bore three children, among them Cosima, who became the wife of Hans von Bülow and later of Richard Wagner Mme Agoult's works include autobiographical romances and social and political writings She is the "Arabella" of George Sand's *Lettres d'un voyageur* See the autobiographical *Mes Souvenirs, 1806–1833* (1877)

agouti (ăgōō'tē), name applied to rodents of the genera *Dasyprocta* and *Myoprocta* of Central and South America and the West Indies They are usually about 1½ ft long, with slender legs, a rudimentary tail, and a speckled coat which varies from reddish to black They are chiefly nocturnal and forest animals Some confusion has arisen from the occasional use of *Agouti* instead of *Cuniculus* as the generic name of the paca, a large South American rodent

Agra (ä'grə, ăg'rə), city (pop 284, 149), W central United Provs , India, on the Jumna river The present city was established (1566) by Akbar to replace FATEHPUR SIKRI as capital In the reign (1632–58) of Shah Jehan many magnificent buildings were erected in a mixture of Mogul and Pathan styles The TAJ MAHAL, tomb of the shah and his empress, is the greatest, other notable examples are the Pearl Mosque and the Great Mosque (in the ancient fort) Agra declined after the capital was moved (1658) to Delhi Before its capture by the British (1803), it underwent repeated disorders and conquests From 1835 to 1858 it was the capital of the Northwest Provs Today a rail junction about midway between Bombay and Calcutta, it has much trade Cotton spinning and carpet manufacture are important industries With Agra College (founded 1823) and a medical school, it is a major educational center of N India

Agra and Oudh, United Provinces of, India· see UNITED PROVINCES

Agram, Yugoslavia see ZAGREB

Agramonte, Aristides (ärestē'dās agramōn'tā), 1869–1931, Cuban physician and pathologist, M D Columbia, 1892 A member of the medical corps of the U S army, he was appointed pathologist on the Commission on Yellow Fever in Havana, with Walter REED and James CARROLL, in 1900 He was professor of bacteriology and experimental pathology at the Univ of Havana Shortly before his death he undertook the organization of a department of tropical medicine at Louisiana State Univ

Agramonte, Ignacio (ĕgnä'syō), 1841–73, Cuban revolutionist He played an important part in the Ten Years War He was an official of the revolutionary government (1869), but, disagreeing with Carlos Manuel de CÉSPEDES, resigned For a time commander in chief of the revolutionary forces, he died in battle

Agrapha of Jesus (ăg'rəfə) [Gr ,=not written], sayings attributed to Jesus not found in the Gospels There are quotations in the New Testament outside the Gospels (e g , Acts 20 35), and in early Christian literature there are some Agrapha from oral tradition Thus the papyri found at OXYRHYNCHUS have given some new Agrapha Many are probably PSEUDEPIGRAPHA, i e , ascribed to Jesus with false intent

agrarian laws, in ancient Rome, the laws regulating the disposition of public lands (*ager publicus*) It was the practice of Rome to confiscate part of the land of conquered cities and states, and this was made public land So long as this remained public land, it was occupied by tenants who paid rent, usually in kind, to the state From the earliest times the patricians gained the lion's share in the assignment of public lands for occupation, and the holding of public lands tended always in Italy to become the exclusive prerogative of the wealthy There was also a tendency to consider land long occupied as real property of the occupier The agrarian laws resulted from the continued efforts of the poorer classes to gain, by alienation or reallotment, some share in the public lands Since these lands were occupied without lease, the strictly legal aspects were not difficult, but inasmuch as most agrarian legislation challenged the lucrative privilege of the powerful of retaining the lands they held, the agrarian laws were often flagrantly disobeyed or calmly ignored In 486 B C Spurius CASSIUS VISCELLINUS tried to pass a law assigning some new lands to the poor of Rome and Latium, but Roman jealousy prevented its passage The most famous of early agrarian laws were the Licinian Rogations of C LICINIUS CALVUS STOLO (367 B C), which limited strictly the amount of land any citizen could hold and the number of sheep and cattle he could pasture on public land These laws fell into desuetude About 233 B C , C Flaminius succeeded in assigning some public lands to poor citizens The next serious attempt to rectify an increasingly difficult situation was the Sempronian Law of 133 B C devised by Ti Sempronius GRACCHUS This reenacted the provisions of the Licinian Rogations and added to the maximum allowance an extra amount for each son The occupants were to be reduced to the legal maximum and the surplus given to the poor The occupants were to receive in compensation full title to the land they retained A commission was set up to execute the law, but the senate by an emergency decree abolished the commission thus emasculating the law In 123 B C , Caius Gracchus revived the Sempronian Law, but this time the senate ruined the reform by allowing the new tenants to sell their new land, which the wealthy bought up From time to time newly acquired lands would be assigned to the poor, but as a rule they simply passed into the hands of the wealthy landholders In the 1st cent B C there were several assignments of public lands to veterans in Italy as well as on the borders of the empire The wholesale confiscation and reassignment of private lands by Sulla (82 B C) and Octavian and Antony (43 B C) were called agrarian laws The first step in the final collapse of the democratic effort which had resulted in the agrarian laws was the edict of Domitian assigning the title of public lands in Italy to those who held them The poorer classes were now confirmed in a dependency on the powerful which foreshadowed the greater dependency of FEUDALISM

Agricola (Cneius Julius Agricola) (ugrĭ'kŭlu), A D c 37–A D. 93, Roman general, the real conqueror of Britain After a distinguished army career (partly in Britain), he was made consul (A D 77 and then was (A D 78?–A D 85?) legate or governor of Britain He pacified most of the island conquering North Wales and taking the Roman eagles far into Scotland He also circumnavigated the island He was an enlightened governor, seeking to Romanize Britain without harshness or oppression of the people Agricola was also, as portrayed in the biography by his son-in-law, Tacitus the finest exemplar of the old Roman virtues in his day

Agricola, Georg (gā'ôrk), Latinized from **Georg Bauer** (bou'ur), 1490?–1555, German physician and scientist known as the father of mineralogy He was a pioneer in physical geology and the first to classify minerals scientifically His celebrated work *De re metallica* (1556) was a standard in metallurgy and mining for over a century and was translated into English (1912) by Herbert C Hoover and Lou H Hoover

Agricola, Johann or **Johannes** (yō'hän, yōha'nus) 1492–1566, German Protestant minister, whose family name was Schnitter (originally Schneider) He was born at Eisleben and is sometimes called Magister Islebius He was early associated with Martin Luther and was active in the founding of Protestantism In 1536 he espoused antinomianism, thus breaking with Luther He was court preacher in Brandenburg and helped draw up the Augsburg Interim Agricola also made a collection of German proverbs

Agricola, Rudolphus, 1443–85, Dutch humanist whose real name was Roelof Huysman He opposed scholasticism and spread the culture of the Renaissance throughout Germany

Agricultural Adjustment Administration (A A A), U S government agency established (1933) in the Dept of Agriculture under the Agricultural Adjustment Act of 1933 as part of F D Roosevelt's New Deal program An administrator and six regional directors were appointed. The basic idea was to help farmers by cutting supplies of staple crops, thus raising the farm prices and changing the agricultural pattern from overproduction of staple crops to more diversified farming Farmers were offered contracts, by which they were given benefit payments in return for limiting acreage given to staple crops, in the case of cotton and tobacco coercive taxes forced (1934–35) farmers to cut the amount of staple crops marketed The curtailment, along with severe droughts, helped to push farm prices up In 1936 the Supreme Court declared important sections of the act invalid because they infringed upon the powers of the states Congress promptly adopted (1936) the Soil Conservation and Domestic Allotment Act, which encouraged conservation by paying benefits for planting soil-building crops instead of staple crops, thus seeking to attain the chief end of the earlier act, other conservation practices were also encouraged Business recession and bumper crops sent farm prices tumbling in 1937, and the Agricultural Adjustment Act of 1938—declared valid by the Supreme Court in 1940—established the "ever-normal granary", the AAA was empowered in years of good crops to make loans to farmers on staple-crop yields and store the surplus produce, to release it later in years of low yield, thus trying to establish stable prices Soil conservation was continued and farmers could by two-thirds vote adopt compulsory marketing quotas (as they did for cotton and tobacco) By 1941 under the several acts the government had made direct payments of about $5,300,000,000 to farmers In the Second World War, the AAA turned its attention to increasing food production for war needs In 1942 it was included in the Food Production Administration In 1946 its functions were taken over by the Production and Marketing Administration See E G Nourse and others, *Three Years of the Agricultural Adjustment Administration* (1937), G S Shepherd, *Agricultural Price Policy* (2d ed , 1947)

agriculture. In its etymological sense, agriculture is tilling the soil Culture and colony are closely related words In broader meanings, agriculture includes the care of livestock, forestry, and some manufacturing, as buttermaking The introduction of agriculture wrought fundamental changes in human life, the hunter and the fisher must go where his food is to be found, but one who cultivates a crop cannot wander far Tillage leads to habitations in settlements, neighborhoods, or communities, so it leads to civilization Such a change, from hunting to agriculture, was associated with

the revolutionary change from the Paleolithic period to the Neolithic period Stock raising is sometimes associated with tillage and tends to improve conditions rather than to change them fundamentally, but if not associated with tillage, stock raising encourages a nomadic life. The herdsman must seek new pastures For Europeans and their descendants, mixed farming, with livestock and diversified crops, has been typical since the Neolithic period when the major crops and animal species were domesticated It has usually been subsistence farming, producing primarily for the use of the family and their neighbors Subsistence farming typically is associated with other occupations, as with watchmaking and wood carving in Switzerland Such combined occupations may be seen in many parts of Europe and America In the United States as the Western frontier disappeared and settlements increased, more and more land was cleared and used for crops and pasturage Farming became a business of increasing importance as the growth of large cities created bigger markets With the development of mechanized machinery still larger areas were brought under cultivation The United States became a leading food-producing nation Agricultural colleges and government agencies have sought to increase the productiveness of depleted soil by disseminating knowledge of rotation of crops, of good cultivation practices, of soil chemistry, and of other agricultural problems See P A Kropotkin, *Fields, Factories, and Workshops* (rev ed , 1913), Lyman Carrier, *The Beginnings of Agriculture in America* (1923), N S B Gras, *A History of Agriculture in Europe and America* (1925), U P Hedrick, *A History of Agriculture in the State of New York* (1933), *Farmers in a Changing World*, 1940 yearbook of the U S Dept of Agriculture, Harold Barger and H H Landsberg, *American Agriculture, 1899–1939* (1942), W R Van Dersal, *The American Land* (1943), C M Wilson, ed , *New Crops for the New World* (1945), Karl Brandt, *The Reconstruction of World Agriculture* (1945), publications of the U S Dept of Agriculture

Agriculture, United States Department of, division of the U S government The Secretary of Agriculture has been a member of the President's cabinet since 1889 Specific agricultural aid from the Federal government began in 1839, when Congress appropriated $1,000 to the Patent Office for collecting and distributing seeds, making agricultural investigations, and procuring agricultural statistics In 1862 the Dept of Agriculture was created and was until 1889 under a commissioner The department is now one of the chief research, planning, service, and regulatory agencies of the government Its principal duty is to serve farmers, by helping them to solve their problems of production, marketing, farm organization, land tenure, and land utilization However, it also serves urban consumers, both directly and indirectly The department is directed by the Secretary, an Undersecretary, and an Assistant Secretary The staff officers include the directors and chiefs of the many bureaus and services The Agricultural Research Administration supervises the work of the bureaus of agricultural and industrial chemistry, animal industry, dairy industry, entomology and plant quarantine, human nutrition and home economics, and plant industry, soils, and agricultural engineering It also controls the Office of Experiment Stations and the Agricultural Research Center (at Beltsville, Md) Other important units within the department include the Soil Conservation Service, Forest Service, Rural Electrification Administration, Federal Crop Insurance Corporation, Farm Credit Administration, Farmers Home Administration, Commodity Credit Corporation, and Production and Marketing Administration The Bureau of Agricultural Economics is the main agency for compiling and disseminating agricultural statistics It develops plans and programs for the whole department as a basis for the entire pattern of agricultural, conservational, and marketing services and acts as the department's liaison agency with other government agencies The library is the largest agricultural research library in the world Of great value to farmers, horticulturists, and many others are the publications of the department See *The Department of Agriculture* (U S Dept of Agriculture, Miscellaneous Publication 532)

Agrigento (ägrējĕn'tō), Latin *Agrigentum*, city (pop 27,785), capital of Agrigento prov , S Sicily, Italy, on a height 2 mi from the sea Its Italian name until 1927 was Girgenti Now an agricultural market and export center for sulphur, it was founded (*c* 580 B C) as Acragas or Akragas by Greek colonists of Gela and became one of the most splendid and prosperous cities of the Grecian world, as is shown by its imposing ruins Destroyed c 406 B C by Carthage, it recovered but fell definitively to the Romans in 210 B C Between the city and the sea there are remains of several Doric temples (6th-5th cent. B C), the largest was that of Zeus The temple of Concord is very well preserved There also are Roman remains, Christian catacombs, and an archaeological museum. About 3 mi. to the southwest is Porto Empedocle, which functions as the port of Agrigento; it is named after Empedocles, who was born at Agrigento

agrimony (ăg'rĭmō"nē), any plant of the genus *Agrimonia*, perennials growing wild chiefly in the North Temperate Zone or cultivated in herb gardens The divided leaves are aromatic and astringent and are used in making a tonic tea Inconspicuous yellow flowers are followed by small top-shaped burs Hemp or water agrimony is related to the asters

Agrippa, in Palestinian history see HEROD

Agrippa, Marcus Vipsanius (mär'kŭs vĭpsā'nēŭs ugrĭ'pu), *c* 63 B C –12 B C , Roman general A close friend of Octavian (later Emperor AUGUSTUS), he won a name in the wars in Gaul before becoming consul in 37 B C He organized Octavian's fleet and is generally given much credit for the defeat of Sextus Pompeius in the naval battles at Mylae and Naulochus (like Mylae, on the north coast of Sicily) in 36 B C He took part in the war against Antony, and his naval operations were the basis of Octavian's decisive victory at Actium in 31 B C He was perhaps the most trusted of all Augustus' lieutenants and rendered many services, notably in putting down disorders in both East and West His third wife was Augustus' daughter Julia, by whom he was father of two sons who died young, one son who turned out badly (Agrippa Postumus), and two daughters (Julia and Agrippina I)

Agrippa von Nettesheim, Heinrich Cornelius (hĭn'rĭkh kôrnā'lyōōs agrĭ'pa fŭn nĕ'tus-hīm), 1486–1535, German physician He is remembered for his interest in magic, which involved him in trouble with the Church His life under royal patrons in Germany, Italy, and France was one of great storm and stress He died in poverty at Grenoble His *De occulta philosophia*, a defense of magic, and his feminist *De nobilitate et praecellentia feminei sexus* are two of his chief works See biography by Henry Morley (1856)

Agrippina I (ă"grĭpī'nu), d A D 33, Roman matron, daughter of Agrippa and Julia and granddaughter of Augustus She was the wife of GERMANICUS and accompanied him on his provincial duties After her husband's death (A D 19) she accused TIBERIUS of having caused Cn Calpurnius Piso to poison Germanicus, and she was consistently on bad terms with the emperor Exiled to an island in the Bay of Naples, she starved herself to death She is also called Agrippina Major or Agrippina the Elder Her son Caius became emperor (see CALIGULA)

Agrippina II, d A D 59, Roman matron, daughter of Germanicus and Agrippina I By her first husband, Cn Domitius Ahenobarbus, she was the mother of NERO When her brother Caligula became emperor, she had some power until she was discovered conspiring against him She achieved her ambitions after her uncle Emperor CLAUDIUS I took her as his third wife She dominated the emperor and persuaded him to advance the interests of Nero at the expense of his own son, BRITANNICUS She almost certainly poisoned Claudius, thus bringing Nero to power She quarreled with Seneca and the other ministers, and her son, weary of her intrigues, had her murdered Colonia Agrippina (modern Cologne) was named for her

Agua (ä'gwä, ä'wa), inactive volcano, 12,310 ft high, S Guatemala In 1541, climaxing three days of unceasing rain and earthquakes, a wall of water, whose origin is not scientifically explained, swept down from its slopes, completely destroying CIUDAD VIEJA Over 1,000 inhabitants were drowned, including the governor, Doña Beatriz de la CUEVA The flood forced the founding of ANTIGUA.

Agua Caliente see TIJUANA

Aguadilla (ä"gwädē'ya, ä"wä–), city (pop 13,468), NW Puerto RICO, a port on the north coast Founded in 1775, it is a port of entry and has manufactures of embroideries, furniture, and straw articles Sugar (the principal crop), coffee, tobacco, cotton, coconuts, and vegetables are raised Columbus is supposed to have landed here in 1493

Aguascalientes (ä"gwäskälyĕn'tĕs, ä"was–), state (2,499 sq mi , 1946 estimated pop 189,132), N central Mexico, on the central plateau, bounded on the east, north, and west by Zacatecas With fertile soil, the state is fairly rich in agricultural produce Cattle are raised on the wide plains and in the foothills, and there is some mining in the mountainous areas, though much of the mineral wealth, especially copper, remains unexploited It is noted for the warm mineral springs, for which it is named, and for a fine climate **Aguascalientes,** the capital (pop 82,234), is a pleasant city Mineral springs make it a health resort Founded in 1575, it was long a Spanish outpost against hostile Indians The city is built over an intricate system of tunnels constructed by earlier inhabitants as yet unidentified Railroad development in the late 19th cent made Aguascalientes commercially important It has a large smelter, cotton and woolen mills, and other factories In 1914 the city was the scene of the Convention of Aguascalientes, an unsuccessful attempt in the Mexican Revolution to end factional strife between Venustiano CARRANZA and Francisco VILLA Villa's troops, known then as the Army of the Convention, later occupied Mexico city

ague: see MALARIA

Aguesseau, Henri François d' (ärē' frăswä' dägĕsō'), 1668–1751, French orator and statesman. He became *procureur général* in the Parlement of Paris (1700) and chancellor of France (1717) Because of his opposition to John LAW he was exiled to his estates Recalled, he devoted himself to judicial reform The name also appears as Henri François Daguesseau

Aguilar, Grace (ägĕlär', ägwĭl'ur), 1816–47, English author, of Jewish descent Besides several works on Jewish history, she wrote sentimental but interesting novels They include *The Mother's Recompense* (1851) and two historical novels, *The Vale of Cedars* (1850) and *The Days of Bruce* (1852) Only one, *Home Influence* (1847) appeared in her lifetime

Aguilar (ăg'ĭlar), city (pop 1,397, alt *c* 6,700 ft), SE Colo , S of Walsenburg and on the Apishapa river, inc 1894.

Aguilera, Ventura Ruiz (vāntōō'ra rōōēth' ägwē lā'ra), 1820–81, Spanish poet He edited several journals and held office under liberal ministries In his writings he tried to arouse the masses to a sense of national dignity His verse includes *Elegías* (1862) and *La Arcadia moderna* (1872)

Aguinaldo, Emilio (ägwĭnal'dō, āmē'lyō agēnäl'dō), 1869?–, Philippine leader In the insurrection against Spain in 1896 he took command, and by terms of the peace that ended it he went into exile at Hong Kong After the Spanish-American War broke out, he led a Philippine insurrection in concert with U S attacking forces He set up a republic with its capital at Malolos and himself as president, and when Philippine independence was brushed aside in the peace treaty, he headed (1899–1901) a rebellion against U S occupying forces until he was captured by Frederick FUNSTON In 1935 he was defeated in the presidential election by Manuel Quezon Aguinaldo was charged with cooperating with the Japanese occupying the Philippines in the Second World War and in 1945 was taken into custody but was not tried

Aguirre, Lope de (lō'pā dā agē'rā), *c* 1510–1561, Spanish rebel in colonial South America A horse trainer in Peru, he was often involved in violence and sedition before joining (1560) the expedition of Pedro de Ursúa down the Marañón and the Amazon On that expedition he earned a name for monstrous violence and cruelty He was one of the men who overthrew and killed Ursúa, then he killed Ursúa's successor and took command himself He and his men reached the Atlantic—probably by the Orinoco—and on the way wantonly laid waste Indian villages In 1561 he seized Margarita Island and held it in a grip of terror He was, however, foiled in his plan to take Panama secretly and crossed to the mainland, openly proclaiming rebellion against the Spanish crown Surrounded at Barquisimeto, Aguirre in desperation crowned his far from admirable life by the murder of his own daughter He surrendered and was shot See A F Bandelier, *The Gilded Man* (1893)

Aguihas, Cape (ugŭ'lus) [Port ,=needles], W Cape Prov , Union of South Africa It is the most southerly point of Africa The name is derived from the saw-edged reefs and sunken rocks running out to sea, they have wrecked many vessels A powerful lighthouse guards ships The meridian of the cape (long 20° E) is the dividing line between the Atlantic and the Indian oceans

Agur (ā'–), unidentified author of Proverbs 30

Ahab (ā'hăb) [Heb ,=father's brother], d *c* 853 B C , king of Israel (*c* 874–*c* 853 B C), son and successor of OMRI **1** Ahab was one of the greatest kings of the northern kingdom He consolidated the good foreign relations his father had fostered, and he was at peace much of his reign His marriage with JEZEBEL helped his friendship with Tyre, and the alliance of his daughter ATHALIAH **1** with the king's son in Jerusalem made Ahab sure of his less powerful neighbor Ahab's prestige is seen in inscriptions mentioning his alliance against SHALMANESER III, who won an indecisive victory (*c* 854 B C) at Karkar on the Orontes After this campaign Ahab and BEN-HADAD **2** of Damascus went to war over the country E of the Jordan Ahab was killed in battle The biblical account of Ahab's reign (1 Kings 16 28–22 40) is most interested in its religious aspects To the devout, Ahab's foreign wife, with her Tyrian cults and behavior, represented evil Besides, she was a willful woman and entertained exalted ideas of royal prerogative She met her match in ELIJAH, the champion of Israel's God He could not endure compromise with national apostasy, and he must have been an important factor in the discontent which began to develop in Israel at this period Ahab was succeeded by his sons, first Ahaziah, then Jehoram The Ahab of Jer 29 21,22 is a different person, a lying prophet

Aha of Shabcha (ä'ha, shăb'kha) or **Achai of Shabcha** (ă'khī), d 761?, Babylonian rabbi He was the author of *Sheiltoth* (questions), a collection of legal and ethical sermons or treatises intended to be of use to laymen as well as to the scholars for whom most of the learned Jews wrote Aha is the first scholar after the close of the compilation of the Talmud of whom there is record His work emphasizes the value of the basic virtues and everyday morals.

Aharah (āhăr'û), the same as AHIRAM.

Aharhel (ûhär'-), Judahite family. 1 Chron. 4.8.

Ahasai (āhās'āī, āhā'sī), priest Ahzai RV. Neh. 11 13 Jahzerah 1 Chron 9 12

Ahasbai (āhās'bāī, -bī), father of ELIPHELET 3

Ahasuerus (āhās"ûē'rûs), Hebrew form of the name Xerxes, as used in the Bible The Ahasuerus of Esther is probably Xerxes I That of Tobit 14 15 may intend Cyaxares I, destroyer of Nineveh The name of the father of DARIUS THE MEDE is also given as Ahasuerus

Ahava (āhā'-), unidentified place, where Ezra collected one of his expeditions Ezra 8 15,21,31

Ahaz (ā'hăz) [Heb ,=he is possessor], d c 727 B C , king of Judah (*c* 731–727 B C), son of Jotham His reign marks the end of the real independence of Judah A coalition of Pekah of Israel and Rezin of Syria attacked him and nearly took Jerusalem Ahaz appealed for help to Tiglath-pileser III of Assyria, who defeated Ahaz's enemies, but required tribute of Judah Ahaz sent some of the Temple gold as payment The greatest figure in this time in Judah was the prophet Isaiah, who opposed the Assyrian alliance Ahaz is denounced in the Bible for his heathen abommations and his sacrilege with the Temple gold. In Ahaz's reign Judah lost Elath, her Red Sea port, permanently He was succeeded by Hezekiah. 2 Kings 16, 2 Chron 28, Isa 7, 38 Achaz Mat 1 9 A different Ahaz, otherwise unknown, is mentioned in 1 Chron 8 35 and 9 42

Ahaziah (āhûzī'û) [Heb ,=God has taken] **1** Died c 852 B C , king of Israel (*c* 853–852 B C), son of Ahab He was hardly a worthy successor of his father, except as he entertained Ahab's religious views He was succeeded by his brother JEHORAM **1** 1 Kings 22 51–53, 2 Kings 1, 2 Chron 20 35–37 **2** Died c 846 B C , king of Judah (*c* 846 B C), son of JEHORAM **2** and ATHALIAH **1** He was considered a typical descendant of Ahab He was killed in Jehu's coup d'état while visiting at Jezreel His mother succeeded him 2 Kings 8 25–29, 9, 2 Chron 22 He is called Azariah in 2 Chron 22 6 and Jehoahaz in 2 Chron 21 17 and 25 23

Ahban (ā'băn), Jerahmeelite 1 Chron 2 29

Aher (ā'-) [Heb ,=another], Benjamite 1 Chron 6 12 Perhaps the same as AHIRAM

Aidan, Saint (ā'dŭn), d 651, Irish monk He came at the request of Oswald of Northumbria to convert the English and founded the abbey on Lindisfarne Symbols torch and stag Feast Aug 31

aids, in FEUDALISM, type of feudal due paid by a vassal to his suzerain or lord The exact nature and the specified occasions for payment of aids has not been satisfactorily explained by modern students of feudal law Aids varied with time and place, though it is traditional in English-speaking countries to say that aids were due on the knighting of the lord's eldest son, on the marriage of the lord's eldest daughter, and for ransom of the lord when in captivity These are the three aids specified in the MAGNA CARTA (1215), which forbade the king to levy aids from the barons on occasions other than these, except by the "common counsel" of the realm In later issues of the charter, aids do not appear It is very difficult to distinguish aids from other forms of feudal dues such as SCUTAGE and TALLAGE The term had a very much wider scope than might be supposed from reading the Magna Carta In general aids fell into disuse with the decline of feudalism, though they continued nominally due long afterward in most places In France the aids were converted into a form of royal tax and continued until the Revolution

Aiea (ā"ēā'ā), town (pop 3,553), on Oahu, T H , NW of Honolulu It is a center of sugar culture

Aiglon, L' see NAPOLEON II

Aigues-Mortes (ĕg-môrt'), town (pop 3,320), Gard dept , S France, near the Mediterranean Louis IX, who embarked from here for his two crusades, developed the port It has kept its 13th-century ramparts and a fortified tower (Tour de Constance)

Aija (āī'ju), the same as AI **1**

Aijalon (ā'jû-, ī'jŭ-, ā'jû-), occasionally spelled Ajalon **1** Town, S central Palestine Joshua 19 42 Judges 1 35, 2 Chron 11 10, 28 18. **2** Town, N central Palestine Judges 12 12 **3** Valley over which Joshua commanded the moon to stand still Joshua 10 12

Aijeleth Shahar (āj'ûlĕth shā'hăr) [Heb.,=hind, or help, of the morning], superscription of Ps 22, probably the tune to which it was to be sung, named from the first words of some other verse set to it Other superscriptions of similar explanation are Al-taschith (ăl"tăs'kĭth) [Heb ,=destroy not] Pss 57, 58, 59, 75 Jonath-elem-rechokim (jō'nŭth-ē'lĕm-rēkō'kĭm) [Heb ,=dove of the distant terebinths or dove of the silence of distant places] Ps 56 Mahalath (mā'hûlăth) Ps 53 Mahalath Leannoth (lēăn'ŏth) Ps 88 Shoshannim (shō-shăn'ĭm) [Heb ,=lilies] Pss 45, 69 Shoshannim-Eduth (-ē'dŭth) Ps 80. Shushan-eduth (shō'-shăn-) Ps 60

Aiken, Conrad (ā'kĭn), 1889–, American poet and novelist, b Savannah, Ga , grad Harvard, 1912 He has been variously and extensively influenced by other poets, notably T S Eliot, but all his poetry shows in mood, sound, and structure his preoccupation with music Volumes of his poetry include *Earth Triumphant and Other Tales* (1914), *The Jig of Forslin* (1916), *The Charnel Rose; Senlin, a Biography; and Other Poems* (1918), which contains the well-known Morning Song from "Senlin"; *Selected Poems* (1929), awarded a Pulitzer Prize in 1930, *John Deth* (1930), *Time in the Rock* (1936); and *Brownstone Eclogues* (1942). He has edited antholo-

gies, including *American Poetry, 1671-1928* (1929) and, with W. R. Benét, *An Anthology of Famous English and American Poetry* (1945) His novels suggest the method of James Joyce in their concern with psychological association—*Blue Voyage* (1927), *Great Circle* (1933), *King Coffin* (1935), and *A Heart for the Gods of Mexico* (1939). He has also written short stories and criticism See Houston Peterson, *The Melody of Chaos* (1931)

Aiken, George L., 1830–76, American playwright and actor, b Boston. He was especially skillful in adapting short stories and novels for theater production. The most famous is his version of Mrs Stowe's *Uncle Tom's Cabin*, first produced in Troy, N.Y., Sept , 1852, and soon brought to New York city Its run of over 300 nights was unprecedented

Aiken, city (pop 6,168), co seat of Aiken co , W S C , NE of Augusta, Ga , laid out 1834, inc 1835 With an excellent climate and located in the midst of fine scenery with gardens and forests, it is a popular health and pleasure resort during the greater part of the year There are many large estates and facilities for sports, especially riding and polo Aiken is also an industrial center for a cotton, pottery-clay, and timber area

ailanthus (ālān'-) or **tree of heaven,** hardy deciduous tree of the genus *Ailanthus*, naturalised from China in the 18th cent. and now grown extensively in cities in Europe and America because of its smoke resistant, insect-free nature The large compound leaves lend a tropical aspect to the trees, which are of rapid growth Since the male flowers have a disagreeable odor, only the female, or seed-bearing, trees should be planted Ailanthus wood is used in Europe for making woodenware and charcoal, certain silkworms feed on its leaves, and the bark has been used medicinally Rows of the trees are sometimes pruned back and treated as hedges There are varieties with red fruit, drooping leaves, and purple leafstalks

aileron see AIRFOIL

Ailly, Pierre d' (pyĕr' dāyē'), 1350-1420, French theologian and writer, a cardinal of the Roman Church. He was the teacher of Gerson and his predecessor as chancellor at the Univ of Paris (1385–95) A nominalist, Ailly partly followed MARSILIUS OF PADUA, he urged that a general council be called to name a new pope as the only means of settling the Great Schism (see SCHISM, GREAT) He seems to have been more concerned with a practical solution than with the theoretical implications of his position He attended the Council of Pisa Although he accepted (1411) the red hat from the antipope John XXIII (see COSSA, BALDASSARE), Ailly continued to work for his objective solution to the schism He was instrumental in convoking the Council of Constance (1414-18) and in holding it to its purpose (see CONSTANCE, COUNCIL OF) Ailly's vast number of writings embrace theology, philosophy, cosmography, plans for ecclesiastical reform, and French religious verse His best-known work, the *Imago mundi*, an astronomical compendium, was studied by Columbus See J P McGowan, *Pierre d'Ailly and the Council of Constance* (1936)

Ailsa Craig (āl'sə), conspicuous rocky island, 1,114 ft high, off SW Scotland, in Ayrshire, at the mouth of the Firth of Clyde and W of Girvan Its structure is largely of granite The island has a lighthouse and is a breeding place of sea birds

Ain (ĕ), department (2,219 sq mi , pop 306,778), E central France, bordering on Switzerland and traversed by the Ain river, a tributary of the Rhone It occupies, roughly, the BRESSE region Bourg-en-Bresse is the capital

Ain (ā'ĭn) 1 Town, N Palestine. Num. 34 11. 2 See EN-RIMMON

Ainsworth, William Harrison, 1805–82, English novelist He was editor of Bentley's miscellany (1840–42) and *Ainsworth's Magazine* (1842–53) His first success, *Rookwood* (1834), was followed by a number of popular historical novels, in an imaginative but immature style, including *Jack Sheppard* (1839), *The Tower of London* (1840), *Old St Paul's* (1841), and *The South Sea Bubble* (1868) See biography by S M Ellis (1911)

Ainsworth, trading city (pop 1,833), co seat of Brown co , N Nebr , in a region of streams and lakes, gateway to the cattle country, settled 1877, inc 1883

Aintab, Turkey: see GAZIANTEP.

Aintree, racecourse, Lancashire, England near Liverpool Started in 1836, it was one of the first regular steeplechase courses The course, 4½ mi long, with 30 jumps, is difficult and dangerous The most important race run here is the Grand National, founded in 1839.

Ainu (ī'nōō), aborigines of Japan The more civilized Japanese invaders forced the Ainu to retreat to the northern islands, where today, in Hokkaido, in Sakhalin, and on some of the Kurile Islands, c 17,000 live as hunters and food gatherers Physically short and stocky, with abundant, slightly wavy hair, they lack the Mongoloid traits of their neighbors and seem most closely akin to the races of Europe. Their language is unrelated to any known speech. Once a warlike people, they have been thoroughly subdued for several centuries. Their religion is highly animistic. Both native culture and population have markedly declined

air: see ATMOSPHERE, LIQUID AIR; RESPIRATION, VENTILATION.

air, law of the, in the broader sense, the law connected with use of the air, including air communication (e g , radio and telegraph) In a narrower sense used here it embraces law, both national and international, concerning civil aviation (military aviation is not included) After the First World War civil air transport grew to be a major business, and it became clear that regulation was necessary, both national (in the larger and better-developed countries) and international In 1919 a meeting of the nations victorious in the war resulted in the International Convention for Air Navigation, commonly called the Paris Convention The convention was a compromise between two contradictory views, some nations held that a state had sovereignty over the air above it, others that there should be freedom of the air comparable to the freedom of the seas, the convention recognized the sovereignty of each state over its air space without prejudice to innocent passage by aircraft of another state It further provided that each aircraft (like each ship) must have a registered nationality Rules were adopted as to the air-worthiness of aircraft, certification of pilots as competent, and licensing of pilots Among the 33 signatory nations were Great Britain, France, Italy, and Japan The United States signed but did not ratify the convention Nevertheless U S air laws were modeled on it The Air Commerce Act of 1926 provided extensive Federal regulations as to licensing of pilots, airways, altitude of flying, scientific aids and equipment for flying, and the like Those regulatory powers were put in the charge of the Bureau of Air Commerce in the Dept of Commerce This was replaced in 1938 by the Civil Aeronautics Authority, an independent agency By the reorganization of 1940 the functions of the Civil Aeronautics Authority were assigned to the Civil Aeronautics Administration and the Civil Aeronautics Board in the Dept of Commerce Other countries have also adopted legislation modeled on the Paris Convention There were also many bilateral agreements among nations and several more general conventions—notably the Pan American Convention on Air Navigation (1925) The need for sounder regulation of international air transport and for uniformity of equipment, laws, and regulations became more apparent as air traffic developed to an enormous business in the 1920s and 1930s and transoceanic air travel became a commonplace The Second World War emphasized this need, and even before the war's end an international civil aviation conference met in Chicago in Nov , 1944 Representatives of 52 nations met, but the USSR did not take part Several agreements were drawn up There was much discussion of the "five freedoms of the air"—freedom to fly across the territory of a state without landing, freedom to land for non-traffic purposes, the right to disembark in a foreign country traffic from the country of registry of the aircraft, the right to pick up in a foreign country traffic destined for the country of registry, and the right to carry traffic between two foreign countries The first two were accepted, but the fifth was bitterly opposed, only the first two were included in the International Air Services Transit Agreement, which was generally signed The conference, after considerable debate, set up the Provisional International Civil Aviation Organization (PICAO), which had its seat at Montreal After ousting Spain, this organization became in 1947 the INTERNATIONAL CIVIL AVIATION ORGANIZATION (ICAO), affiliated with the United Nations

air brake see BRAKE

air conditioning, process for regulating the humidity, temperature, and circulation of air in buildings and rooms Air is conditioned in theaters, hotels, factories, office buildings, railway cars, and homes in order to maintain the temperature-humidity combination most suitable to human comfort and health Dust and soot are filtered from the air in the process, permitting purified air to be circulated In hospitals and public places the air is sometimes sterilized by means of chemicals Many industries use air conditioning to regulate the temperature and humidity so that it is most suitable to their particular products and processes and to remove substances from the air which might be harmful to the health of the workers See E L Joselin, *Ventilation and Air Conditioning* (2d ed , 1948)

aircraft carrier, ship designed to carry aircraft and to permit their take-off therefrom and landing thereon. Its distinctive features are a flat upper deck (flight deck) which functions as a take-off and landing field and a main deck (hangar deck) beneath the flight deck for storing and servicing the aircraft Obstructions above the flight deck are minimized by localising them along the starboard side amidships Developments in radio and radar have made carrier air operations possible under all weather conditions except in severely stormy, rough water. The aircraft carrier emerged after the First World War as an experimentally modified cruiser and became, toward the close of the Second World War, the most important capital ship Aircraft carriers are indispensable in tactical sea-borne operations against a sea- or land-based enemy possessing air power Modern carriers with their air groups provide the principal striking, defending, and investigating arms of the fleet, the other ships being disposed so as to afford the carriers maximum protection from and optimum effectiveness in attack See Oliver Jensen, *Carrier War* (1945)

Airdrie (ârˈdrē), burgh (1931 pop 25,954, 1948 estimated pop 30,645), Lanarkshire, Scotland, E of Glasgow There are metalworks and manufacture of boilers, paper, and biscuits Its free library was the first established in Scotland

Airedale terrier see TERRIER

airfoil, surface designed to react in a particular way when exposed to a moving stream of air For example, the wing surfaces of an airplane produce lift Some airfoils are manipulated to produce variable reactions Ailerons (surfaces hinged usually to the trailing edges of the wings) can be manipulated to produce banking and either clockwise or counterclockwise rotation of the plane, the propeller blades can be varied in pitch to change maximum thrust The rotor blades on an autogiro can be suddenly pitched so as to jump the craft into the air.

air forces The history of air forces begins with the use of balloons by French forces in Italy in 1859 and by the Federal forces in the American Civil War, but it was much later in the 19th cent that their true military value for observation and reconnoitering was realized In the First World War the Germans used captive balloons for directing artillery fire Destroyers towed captive balloons to spot enemy submarines During the Second World War, London and many other large cities and military objectives were defended by captive balloons which supported wire cables Airplanes were first used for war purposes by Italian forces against the Turks in Tripoli in 1911, although the United States had purchased a Wright biplane for military use in 1908 At the beginning of the First World War airplanes, because of their inability to carry loads, were used primarily for reconnoitering, but as their efficiency increased they were employed in air combat, as bombers, and to photograph enemy territory Formation flying, mass attack, and bombing raids on enemy lines of communication and munition depots marked the further advance of military aeronautics The German Zeppelin raids began in 1915, airplane attacks were most numerous in 1917 Airplanes and seaplanes executed some antisubmarine patrols in the First World War Since the First World War the rapid and extensive advance in aeronautical knowledge and technique has made air forces a major factor in armaments Aeronautical development kept pace with the great advances in scientific and engineering design and practice Commercial aviation became profitable for high-cost passenger and freight service (e g , air mail) Through intensive research programs in aeronautical engineering started by all major powers near the beginning of the Second World War and continued in the victor countries, the cost of passenger and freight service was greatly reduced and the commercial airlines network was extended to cover the earth with frequent fast flights In the Second World War the development of AIR POWER altered the nature of warfare Use of aircraft to control the sea and the air over both land and sea was decisive in nearly all major engagements The principal uses of aircraft in the Second World War were transportation of personnel and cargo (for supply, attack, and evacuation), strategic and tactical bombing, torpedoing of naval and merchant ships, mining of harbors, shipping lanes, and dams, defensive and offensive patrolling, often combined with attack (including antisubmarine action), photo reconnaissance, fighter bombing, and fighter attack for the defense of friendly units on land, at sea, or airborne or for the promotion of offensive action Major developments of the Second World War included increased horsepower per unit of engine weight, improved techniques of flying and plane design resulting in greater safety and efficiency, and an accumulation of geographical, aerological, and other knowledge essential to modern aviation The applications of radar, rocket and jet propulsion, and remote radio control in aviation are important problems of research See *Jane's All the World's Aircraft* (latest ed)

air gas see FUEL

air lock, compartment connecting with the outer atmosphere that part of a CAISSON which contains compressed air By its means access can be gained to the caisson without loss of pressure It is also used at the head of tunnel excavations under water It has a door at each end When the outer door of the air lock is opened, men or material may be admitted into the compartment The outer door is then closed The pressure in the compartment is then raised to equal the pressure in the caisson, after which the inner door can be opened The reverse of this procedure takes place on leaving the compressed-air region Great care must be exercised in passing workmen through an air lock, so that the change of atmospheric pressure takes

place gradually Too sudden change of pressure may cause caisson disease, or "the bends"

air mail. Demonstration flights which showed the feasibility of carrying mail by air were made in England and in the United States in 1911 In the United States, after money for experimentation was appropriated by Congress in 1918, the first regular air-mail service for carrying civilian mail began on May 15, 1918 Army pilots and army equipment were used The first flight was from New York city to Washington, D C The Post Office Dept took over operation of the line from the army in Aug , 1920, and in 1921 the line was discontinued In May, 1920, the transcontinental route from New York city to San Francisco was completed On July 1, 1924, coast to coast service all the way by air was scheduled for the first time (before then the mail had been transferred to trains at night) In 1925 the Postmaster General was authorized to award air-mail contracts to private companies The Post Office Dept , however, continued to operate the transcontinental service until 1927 The Civil Aeronautics Authority was established in 1938 to control all nonmilitary flying It took over the work of the Bureau of Air Mail (created in the Interstate Commerce Commission in 1934) Air-mail service now extends to nearly all parts of the world

airplane or **aeroplane,** a heavier-than-air craft, mechanically driven and fitted with fixed wings by means of which support is maintained through the dynamic action of the air Early attempts were made to build flying machines according to the principle of bird flight, but it was not until the beginning of the 20th cent that flight in heavier-than-air craft was achieved In 1891 Otto LILIENTHAL constructed his first GLIDER Samuel P LANGLEY commenced his experiments with model aircraft in 1892, in 1903 his power-driven monoplane failed to rise after two attempts On Dec 17, 1903, the Wrights produced the first power-driven, full-sized, heavier-than-air flying machine at Kitty Hawk, N C The first flight lasted 12 seconds, but later flights on the same day were a little longer, a safe landing was made after each attempt The machine was a biplane (an airplane with two main supporting surfaces or wings) with two propellers chain-driven by a gasoline motor Modern airplanes are monoplanes (having one main supporting surface or wing) and are of three general classes, the high-wing, mid-wing, and low-wing Airplanes may be further classified as propeller-, jet-, or turbojet-driven The airplane is comprised of six essential parts—fuselage, wings, stabilizer or tail plane, rudder, one or more engines and landing gear The fuselage is the main body of the machine, streamlined in form, to which are attached the wings and the tail unit The fuselage usually contains control equipment, passengers, and cargo The wings are the main supporting surfaces At the trailing edge of the wings are auxiliary hinged surfaces known as ailerons which can be manipulated to impress a rolling motion on the airplane The stabilizer, or tail plane, is a fixed airfoil at the rear of the airplane, employed to lessen its pitching motion To the rear of the stabilizer are usually hinged the *elevators,* movable auxiliary surfaces The rudder, generally at the rear, is a movable auxiliary airfoil which gives the craft a yawing movement when in normal flight Most engines are of the conventional internal-combustion type and may be air or liquid cooled During and after the Second World War, duct-type and gas-turbine engines became increasingly important and practical for aircraft motivation The landing gear is the understructure which supports the weight of the craft when on the ground or on the water and which reduces the shock on landing There are five common types—the wheel, float, boat, skid, and ski types The lift of an airplane, or its ability to fly, obtained by forcing the machine through the air, is the result of the direct action of the air against the lower surfaces of the wings and the vacuum created on the upper side The vacuum effect furnishes more than half the lift of the plane The lift varies with the speed, there being a minimum speed at which flight can be sustained Thus the landing speed of modern planes varies from less than 40 to more than 120 mi per hour The development of the airplane has been directly associated with that of the internal-combustion engine, minimum weight with maximum horsepower being the governing factors The Wright brothers' first engine weighed about 12 lb per horsepower, while the modern engine of conventional type weighs 1 lb or less per horsepower, jet and gas-turbine engines being much lighter per horsepower Much has also been done toward improving equilibrium, stability, and control in flight and other factors making for safety For epoch-making flights, see AVIATION See also AUTOGIRO, HELICOPTER, ORNITHOPTER, SEAPLANE See bibliography under AERONAUTICS and also publications of the U S National Advisory Committee for Aeronautics

air plant or **epiphyte,** any plant that does not normally root in the soil but grows upon another living plant while remaining independent of it except for support (thus differing from a PARASITE) An epiphyte manufactures its own food (see PHOTOSYNTHESIS) in the same way that other plants do, but obtains its moisture from the air or from moisture-laden pockets of the host plant, rather than from the soil Some epiphytes are found in every group of the plant kingdom but particularly among the algae, lichens, mosses, and ferns Of the flowering plants, the best-known epiphytes are orchids and Spanish moss Epiphytes may grow upon the trunk, branches, or leaves of the host plant, sometimes so thickly as to damage the original plant by crowding out its leaves They are most abundant in the moist tropics Other plants not strictly epiphytes are popularly known as air plants Such plants are usually capable of producing plantlets from the leaves without direct contact with the soil, as in *Bryophyllum*

airport, a place for the landing and taking off of aircraft which provides facilities for their shelter, supply, and repair or a place used for receiving and discharging passengers and cargo by air Along an established AIRWAY, in addition to the terminal airports, there are secondary airports, landing fields, and emergency landing fields An airport should be within easy and quick reach of the principal centers of distribution Other essential factors are that the landing fields be as near level as possible, the ground be firm and easily drained, approaches to runways be unobstructed by poles, trees, wires, fences, and buildings, and the site be reasonably unaffected by smoke or fog, which is one of the greatest hazards in landing An airport on a water front has the added advantage of being able to accommodate both land planes and seaplanes The size and shape of an airport depend largely on the requirements of the service and the available tract of land or water or both A large airport should have a minimum runway of about half a mile, and many of the more important ones are well over a mile square Besides the hangars, terminal airports are provided with office and terminal buildings Office buildings are placed so that a clear view is obtained of the landing field, and the necessary provisions are made for the administrative and operating forces, traffic control, radio communication, and weather observation At airports of entry, accommodation is also provided for customs and immigration officials The terminal building is designed for the expeditious handling of passengers and cargo As a knowledge of weather conditions is one of the most important and vital factors in air transport, all large airports maintain a trained staff who constantly observe weather conditions, receive weather information from other sources, and in turn transmit it by radio to aircraft in operation and to other airports Warning signals regarding storms, high winds, and other hazards are also displayed in conspicuous places, so that they can be readily seen by the pilots of approaching aircraft During hours of darkness beacon lights boundary lights, obstacle lights, and illuminated wind indicators are kept burning, and for actual landing of planes by night powerful floodlights are used Airports are known in Great Britain as aerodromes Airports used in connection with airships are, in general, similar to those used for heavier-than-air craft, except that a mooring mast and facilities for the production of inflating gas are installed See H V Hubbard and others, *Airports* (1930), H K Glidden, *Airports* (1946), J H Frederick, *Commercial Air Transportation* (rev ed , 1946), M B Baker, *Airline Traffic and Operations* (1947)

air power. The rapid development of aviation in the 20th cent was reflected in the use of aircraft in war (see AIR FORCES) and gave rise to theories of the strategic value of air power The rather tentative use of scout planes at the beginning of the First World War was followed by the creation of small forces of fighter planes, which engaged primarily in "dog fights," and by the first intensive air bombing Yet the experience did little more than suggest the potential military use of the airplane A few enthusiasts appreciated its significance, among them the American Gen William Mitchell and the Italian Gen Giulo Douhet Both of them fought for intensive development of air power, and Douhet pleaded for predominance of the air force, arguing that future wars would be won by air power alone Mitchell was ignored and then court-martialed for criticism of his superiors Douhet won more of a hearing Meanwhile Great Britain, France, and Italy established separate departments of the government for air, headed by cabinet members The first powers to devote themselves seriously to the development of air power were Hitler's Germany and Mussolini's Italy Italian aviators were given practical experience in the conquest of Ethiopia (1935–36), and both German and Italian aviators in the civil war in Spain (1936–39) showed the effectiveness of air bombing against modern cities The early days of the Second World War seemed to uphold Hitler's boasts of the power of the *Luftwaffe* under Hermann Goering Planes were to a great extent responsible for German victories in Poland, Norway, the Low Countries, and France, and the first German setback was in the failure of bombers to win any decisive results in the Battle of Britain The capture of Crete (1941) by air-transported soldiers seemed to bear out some of the more extreme claims of air-power enthusiasts. The effec of air power in revolutionizing war at sea was demonstrated by the sinking of the *Prince of Wales* by Japanese aircraft (Dec , 1941) The extensive us of aircraft carriers and of land-based planes in sea warfare was the decisive factor in the battles of th Coral Sea and Midway The value of intensive ai bombing was shown in the U S. capture of th Pacific islands and in the enormous destructio wrought on the Axis-held Continent by bomber based in England Air power played an incalcu lably large part in the winning of the war. Th dauntless Russian airmen did much to make th Russian counteroffensive possible Allied bombin planes (in size from small attack bombers to Super fortresses), fighters, and transport planes were es sential to victory Parachute troops and air transported troops proved their value, the Allie conquest of New Guinea repeating the lesson o Crete Nevertheless opponents of extreme advo cates of air power pointed out that no major battl was won by air forces alone but only by air force combined with land troops, naval forces, or both The eminence of air power was, however, accepte by all The introduction of the atomic bomb an jet propulsion toward the end of the war had altere the concept of air power somewhat and opened new era of argument concerning its nature and uses

air pump · see PUMP

airship, dirigible balloon, i e , a balloon furnishe with a propelling system and a means of controllin the direction of motion There are three genera types—nonrigid, in which the supporting structur is held in form by internal pressure in the gas bag semirigid, in which the form is maintained in a simi lar manner with the addition of a rigid or jointe keel, and rigid, which has a completely rigid frame The nonrigid type, simple in construction and ver light, is suitable only for the smaller class of airshi such as the blimp, which is useful especially for pa trol work The rigid airship consists, in general, o a latticework structure of aluminum or duralumin divided into separate compartments Within th compartments are the gas cells, and the whol frame is covered with a fabric envelope Arms, sup porting propellers driven by engines in the interio of the ship, jut out from the side U S armed force now have no rigid airships, but in those of the re cent past, accommodation for crew, passengers, an cargo was provided within the main structure, ther being main observation and control cabins direct l connected at the bottom Lifting power in airship is obtained by the use of hydrogen or helium helium, although without so high a lifting power has the decided advantage of being nonflam mable The elongated shape of airships was adopt ed because of its advantages over the spheroida shape of free ballons in its suitability for propulsio and steering Sails, paddles, flapping wings, an crude propellers were tried for propulsion, the pro pellers proved best as suitable engines were devel oped The first successful power-driven airshi was constructed by Henri Giffard, in 1852, and i 1855, he built a larger and more efficient vessel pro pelled by a five-horsepower steam engine which wa able to make a little headway against a strong wind Other experimentors of this period were Dupuy d Lôme, and the Tissandier brothers In 188 Charles Renard and Captain Krebs built and suc cessfully operated an airship named *La France* propulsion of which was obtained by electri storage batteries In Germany, Welfert built a airship propelled by a benzine engine He mad many successful flights beginning in 1880 In 189 he lost his life in an explosion in the air Other out standing names in the development of the airshi are Alberto Santos-Dumont, a young Brazilian and Count Ferdinand von ZEPPELIN and Hug Eckener, both of Germany Santos-Dumont, work ing in France, built airships of various shapes an volumes In 1901 he won a prize for flying aroun the Eiffel Tower To Zeppelin and Eckener belon the credit for successfully developing the rigid typ of airship Great Britain constructed only a few nonrigid airships Except for the *Mayfly,* whic met with disaster upon completion, the building o rigid airships was not undertaken in England unti the First World War, when the *R33, R34,* and other were built The *R34,* the first airship to cross th Atlantic, crossed in 1919, returning in 75 hr Post war airships constructed in England were the *R10* and *R101,* which were built as commercial vessels The *R101* met with disaster in France on her maide trip to India The *Graf Zeppelin,* built in Germany in 1926–27, traveled 20,000 mi around the world i 1929 In the United States little was done regard ing airships before the First World War except fo the purchase of a few of the nonrigid type Afte 1916 many sea scouts were built of the nonrigi type for the Navy Dept The first rigid airshi built was the *Shenandoah,* completed in 1923 Thi was the first vessel to use helium as a lifting gas She was wrecked by a violent storm in 1927 The *Los Angeles,* built by Germany as part of her repa rations payment to the United States and com pleted in 1924, was successfully navigated acros the Atlantic late in 1924 by Captain Eckener. In

1932 the *Los Angeles* was retired from active service in the navy and was dismantled in 1939 The *Akron*, a much larger and more powerful airship, capable of long-range flights and of carrying a fleet of airplanes, was commissioned in 1931 but was wrecked in a storm at sea in 1933 A sister ship, the *Macon*, commissioned in 1933, was wrecked in 1935 The *Hindenburg* and those aboard, burned at its mooring mast at Lakehurst, N J , in 1937 No rigid airship survived the Second World War The *Graf Zeppelin* and the *Graf Zeppelin II* were destroyed by Germany near the end of the war to prevent their falling into Allied hands See E A Lehmann and H L Mingos, *Zeppelins* (1927), C E Rosendahl, *What about the Airship?* (1938), P W. Litchfield and Hugh Allen, *Why, Why Has America No Rigid Airships?* (1945).

airsickness Flying at high altitudes and at great speed may produce bodily conditions classified generally as airsickness The motion of the flying ship causes symptoms of seasickness in susceptible individuals As in seasickness, the vestibular apparatus of the inner ear is affected in some manner not clearly understood SCOPOLAMINE, administered to pilots from ½ to 1 hr before flying, has been found effective in eliminating airsickness symptoms for a period of about 4 hr Altitude sickness, similar to "mountain sickness," is induced by a decrease in air pressure and in the amount of oxygen Two forms of altitude sickness known as anoxia, in which the body cells lack sufficient oxygen, have been described In one, this lack of sufficient oxygen, for even a short time, results in a loss of muscular control and may cause unconsciousness The other form is a chronic condition resulting from repeated exposure to a rarefied atmosphere Complete lack of oxygen for even one minute may destroy brain cells and may result in degeneration of the adrenal glands Aeroembolism is a condition resulting from rapid ascents to extreme altitudes As in CAISSON DISEASE the sudden change of atmospheric pressure causes the release of atmospheric nitrogen bubbles which block the circulation

airway, defined by the National Advisory Committee for Aeronautics as an air route between air traffic centers which is over terrain best suited for emergency landings, with landing fields at intervals equipped with aids to air navigation and with a communication system for the transmission of information pertinent to the operation of aircraft The term may apply to an air route for land planes, for seaplanes, or for both The airway between two or more airports does not necessarily follow a straight line, since it is often advisable to deviate in order to avoid mountains or certain localities where weather conditions are generally unfavorable Prevailing winds are also a factor to be considered in selecting an airway, particularly when airships are to be used At the extremities of an airway are the terminal airports and at intervals are intermediary airports and landing fields Intermittent communication is kept with all aircraft in flight, and the progress of each machine is carefully recorded throughout its journey All established airways now have definite air markings for day flying and beacon lights for navigation at night The air markings consist of large painted signs on roofs, highways and other prominent places which indicate the name of the locality, the direction and distance of the nearest airport or landing field, and other information Such markings are of as simple a form as possible, so painted as to stand out clearly from the background and to be easily recognizable at an average altitude Whenever possible they are illuminated for night traveling Airway beacon lights are placed c 10 mi apart along the route and are generally of about 1,800,000 candle power revolving six times a minute Code landmark beacons indicate specific features identifiable from the aircraft by the color and timing of the lights All such lights in the United States are under the supervision of the Dept of Commerce, as are the radio beacons which enable a flier to find an airport and land in it successfully even in the thickest fog Definite flying rules have been established, all aircraft being required to keep to the right of an airway and to observe the regulations governing minimum altitudes, the approaching, overtaking, or crossing of other aircraft, acrobatic flying, and dropping of objects Definite scheduled air transportation in the United States may be said to have had its beginning in 1918, when the first air-mail line was established The main cities of Europe are connected by excellent airways, and service is maintained throughout the year Great Britain has a network of airways between all principal points at home and abroad which has steadily increased since its establishment in 1919 Airways also cross and connect all continents except Antarctica See J H Frederick, *Commercial Air Transportation* (rev ed , 1940), M. B Baker, *Airline Traffic and Operation* (1947).

Airy, Sir George Biddell, 1801-92, English astronomer, educated at Trinity College, Cambridge He served as Lucasian professor of mathematics at Cambridge (1826–28) and Plumian professor of astronomy and director of the observatory (1828–35). From 1835 to 1881 he was astronomer royal, in charge of Greenwich Observatory. His researches in magnetism and meteorology were important, and he introduced new and improved instruments, some designed by himself, at the observatory He found a corrective for atmospheric chromatic dispersion as it affected telescopic observation and worked out a device to rectify the disturbance of the compass in vessels made of iron He was responsible for the astronomical observations required for defining the boundary between the United States and Canada See his autobiography (ed by his son, 1896)

Aisha see AYESHA

aisle (īl) [Latin, *-wing, s* is not etymological], in architecture, a narrow side space separated from the rest of the floor plan by a line of piers or columns An early form is in the halls of Egyptian temples, while the Roman basilica shows a later use The early Christian and Romanesque churches borrowed the aisle from the Roman basilica, inaugurating its almost universal inclusion in church construction In Gothic churches, the side aisles are usually lower than the nave or main body of the building, the upper portion of the nave walls thus forming a clerestory Most Gothic churches have one aisle flanking the nave on either side, but side aisles total four or six in some churches The terms "nave aisle" and "transept aisle" refer to position, and ambulatory refers to an aisle continued around the choir end of the church

Aisne (ān, Fr ĕn), department (2,868 sq mi , pop 453,411), NE France, touching the Belgian border An agricultural area producing grain and sugar beets, it occupies parts of Ile-de-France, Picardy, and Champagne Laon is the capital Soissons, Château-Thierry, and Saint-Quentin are the historic towns of the region, which has been the scene of fighting in many wars The Aisne river, a tributary of the Oise, was an important battle line in the First World War

Aitken, Robert Grant (āt'kĭn), 1864–, American astronomer, b Jackson, Calif , grad Williams, 1887 He became astronomer at Lick Observatory, Mt Hamilton, Calif , in 1895, associate director in 1923, director in 1930, and emeritus director in 1935 He went with the observatory's eclipse expedition to Flint Island in the Pacific in 1908 He studied especially the double stars, of which he has discovered more than 3,000 He is the author of *The Binary Stars* (2d ed , 1935)

Aitken, Robert Ingersoll, 1878–1949, American sculptor, b San Francisco Among his most noteworthy works are the monuments to William McKinley at St Helena, Calif , Berkeley, Calif , and San Francisco, the Dewey monument at San Francisco, sculptured figures on the western pediment of the Supreme Court Building, Washington, D C , and the mortuary relief, *The Gates of Silence* He designed the 50-dollar gold coin issued by the United States

Aitkin (ā'kĭn), village (pop 2,063), co seat of Aitkin co , central Minn , on the Mississippi N of Mille Lacs Lake and WSW of Duluth, in a fertile farm and resort region, settled 1870

Aix-en-Provence (ĕks'-ā-prôvās', ĕk"sā-), city (pop 32,076), Bouches-du-Rhône dept , SE France It has trade in wines, cereals, and olive oil Aix was founded (c 122 B C) as Aquae Sextiae by the Romans, beside mineral springs In 102 B C , Marius defeated the Teutons here Aix has been, since its beginning, the capital of PROVENCE (except when replaced by Arles) and was made an archiepiscopal see in the 5th cent Here in 1486 the estates of Provence approved union of Provence with the French crown, and from 1501 to 1789 Aix was the seat of a provincial PARLEMENT. A center of medieval Provençal literature, Aix has a university (founded 1409), part of which is now at Marseilles Good King RENÉ held his brilliant court here (late 15th cent) Though Aix does not lack beautiful monuments (notably the baroque town hall and the Gothic Cathedral of St Sauveur), it is rather through its pervasive charm that it has become a favorite sojourn for painters CÉZANNE was born here

Aix-la-Chapelle, German see AACHEN

Aix-la-Chapelle, Treaty of. 1 Compact of May 2, 1668, which ended the French invasion of the Spanish Netherlands (see DEVOLUTION, WAR OF) France kept most of its conquests in Flanders, Cambrai, Aire, Saint-Omer, and the province of Franche-Comté were returned to Spain, and the remainder of Spain's possessions in the Low Countries were guaranteed by the TRIPLE ALLIANCE **2** Treaty of 1748, ending the War of the AUSTRIAN SUCCESSION In general, it restored the *status quo ante*, but awarded Silesia and Glatz to Prussia and conferred the duchies of Parma, Piacenza, and Guastalla on the Spanish infante, Philip It confirmed the PRAGMATIC SANCTION, and it renewed the ASIENTO agreement of 1713, the trade agreements with Britain regarding the Spanish colonies, and the recognition of the Protestant succession in England

Aix-les-Bains (ĕks'-lā-bĕ', –bĭng', Fr ĕks'-lā-bĕ'), town (pop 10,720), Savoie dept , E France, beautifully situated on Lake Bourget at the foot of the Alps It is a famous spa with alum and sulphur springs frequented since Roman times

Ajaccio (ŭyă'chŏo, ŭjă'sō, Ital ăyät'chō) city (pop 27,536), capital of Corsica, France, a fortified seaport on the Gulf of Ajaccio The house where Napoleon I was born is now a museum Ajaccio is a farm market center In Sept , 1943, it was the first town of Corsica to liberate itself from German occupation

Ajah (ā'ju), variant of AIAH I

Ajalon (ā'ju–, ă'–), variant of AIJALON.

Ajanta (ujŭn'tu), village, NW Hyderabad state, India It is noted for its monastic cave dwellings and shrines lined with frescoes representing scenes from the life of Buddha The caves provide a study of Buddhist art from 200 B C to A D 600

Ajax (ā'jăks), Gr *Aias*, in Greek legend **1** Hero of the TROJAN WAR, called the Telamonian Ajax or Ajax the Greater He was the son of TELAMON and leader of the Salamis warriors Ajax was a giant, overpoweringly strong and slow to think and speak He rescued the body of Achilles, and when Achilles' armor was given to Odysseus, Ajax, maddened with jealousy, committed suicide The story of his death is told differently in the *Ajax* of Sophocles, which says that Ajax went insane, attacked a flock of sheep, thinking them warriors, and then in a lucid moment realized what he had done and killed himself in humiliation **2** Leader of the forces from Locris in the Trojan War, called the Locrian Ajax, Ajax of Oileus (his father), or Ajax the Lesser In the Trojan War he violated Cassandra at the altar of Athena, and Athena caused him to be shipwrecked on the way home Poseidon saved him, but Ajax, boasting of his own power, defied the lightning to strike him down and was instantly struck by it Other versions of the story say that he stole the Palladium and that later Poseidon destroyed him for blasphemy

Ajmer (ŭjmēr', ŭj–), state (2,400 sq mi , pop 583,693), NW India It comprises two detached areas surrounded by Rajasthan, and it is identical with the former British province of Ajmer-Merwara Hardy grains and cotton are grown For early history see RAJPUTANA) **Ajmer,** city (pop 147,258), the capital, was founded c 1100 A Jain temple (constructed 1153, now converted into a mosque), the shrine of the Moslem saint Khivaja Muin-ud-din (d 1235), and the palace of Akbar are the most notable buildings Cotton is processed, and there are large railroad shops The city has a college

Ajodhya (ujō'dˈyu) or **Oudh** (oud), town, E central United Provs , India, joint municipality with FYZABAD (total pop 55,215) It was the capital of the kingdom of Kosala, which fell A D c 1000 Many pilgrims visit the place, which is associated with Hindu legends Ayodhya is the official name

Akaba, Jordan see AQABA

Akan (ă'-), descendant of Esau Gen 36 27 Jakan· 1 Chron 1 42

Akbar (ăk'bur), 1542-1605, Mogul emperor of India (1556-1605), grandson of Baber He succeeded his father, Humayun, under a regent and began to rule in his own right in 1560 By continual warfare he enlarged his original domain in N central India to include Afghanistan, Baluchistan, and nearly all the Indian peninsula N of the Godavari river To unify this vast state he initiated administrative and fiscal reforms and held to the policy of religious toleration Although he was himself illiterate, Akbar's courts at Delhi, FATEHPUR SIKRI, and Agra were centers of the arts, letters, and learning A passion for spiritual certainty led him to promulgate (1582) the Din-i-Ilahi [divine faith], an eclectic religion in place of Mohammedanism, but it disappeared after his death

Akeldama (ukĕl'dumu), variant of ACELDAMA

Akeley, Carl Ethan (āk'lē), 1864–1926, American naturalist, animal sculptor, and author, b Orleans co , N Y He served (1887–95) at the Museum of Milwaukee and from 1895 to 1909 was at the Field Museum, Chicago (now the Chicago Natural History Museum), here he developed his method of mounting habitat groups and became a master of animal sculpture From 1909 he was affiliated with the American Museum of Natural History, New York Of his many small bronze groups of African wildlife among the best known are *The Wounded Comrade* (elephants) and *Lion and Cape Buffalo* On a larger scale are the groups *Vandi Spearman* and *Lions* in the American Museum of Natural History Akeley made numerous expeditions to Africa to collect specimens for the Field Museum and the American Museum of Natural History, for his work he invented the cement gun and the Akeley camera, both widely used by naturalists He was influential in establishing wildlife sanctuaries in Africa He wrote *In Brightest Africa* (1923) His first wife, Delia Denning Akeley (later Mrs Warren D Howe), aided him in field work and in mounting groups, in 1924 and 1928 she headed expeditions for the Brooklyn Museum She wrote *J T., Jr , the Biography of an African Monkey* (1928), *Jungle Portraits* (1930), and *All True* (1931) Akeley's second wife, Mary Jobe Akeley, before their marriage in 1924 had taught at Hunter College and had explored the Canadian Rockies (Mt Jobe was named for her) She collaborated in Akeley's work and after his death in Africa assumed direc-

tion of the expedition on which they were then engaged She made another expedition (1935–36) to the Transvaal and Southern Rhodesia Her books include *Akeley's Africa* (1929), *Restless Jungle* (1936), *The Wilderness Lives Again* (1940), and, with Akeley, *Adventures in the African Jungle* (1930) and *Lions, Gorillas, and Their Neighbors* (1932)

Akenside, Mark (ā'kĭnsĭd), 1721–70, English poet and physician, studied medicine at the universities of Edinburgh and Leiden His chief literary work was a didactic poem, *The Pleasures of Imagination* (1744) Among the earliest if not the best neoclassical odes in English were his *Odes on Various Subjects* (1745), and his *Epistle to Curio* (1744) was a vigorous political satire In the *Museum*, a magazine which he edited in 1746–47, he continued to write in both veins Under George III, Akenside turned Tory and became physician to the queen See biography by C T Houpt (1944)

Akers, Benjamin Paul, 1825–61, American sculptor, b Cumberland co , Maine He made portrait busts of Longfellow and other American celebrities before setting up a studio in Rome His work (of which the best known is *The Dead Pearl Diver*) was neoclassical Deeply religious, Akers was nicknamed "St Paul "

Akhenaton see IKHNATON

Akhetaton see TEL-EL-AMARNA

Akhisar (ăk"hĭsär'), city (pop 23,799), W Turkey It is the biblical THYATIRA

Akhmatova, Anna (ăn'nŭ ŭkhmä'tûvŭ), pseud of **Anna Andreyevna Gorenko** (ŭndrā'uvnu gôryĕng'kô), 1888–, Russian poet of the Acmeist school She remained in Russia after the revolution and was idolized by the Russian people Her poems, whether of love (1910–18, when she divorced the poet Gumilev) or tragedy (in 1921 and after 1940), are sculptured in their simplicity yet rhythmic in the tradition of Pushkin

Akiba ben Joseph (ŭkē'bu), A D c 50–c 132, Palestinian rabbi He was one of the first Jewish scholars to make a systematic compilation of the Hebrew oral laws This compilation, known as the *Mishnah of Rabbi Akiba*, exercised a profound influence upon the development of Mishnaic doctrines Akiba believed in the Messianic mission of BAR KOCHBA and sided with him in his revolt against Rome He was an idol of the people, the facts of his life are obscured with legends He was imprisoned and, it is said, tortured to death by the Romans, he is one of the 10 martyrs mentioned in the Jewish penitential prayer See biography by Louis Finkelstein (1936)

Akita (ä'kētä), city (1940 pop 61,791, 1947 pop 110,300), capital of Akita prefecture, NW Honshu, Japan, a port on the Sea of Japan Oil refining is one of its industries Japan's largest oil field lies in Akita prefecture, which also contains important copper mines

Akka see PYGMY

Akka, Palestine, see ACRE.

Akkad (ă'kăd, a'kad), region of Mesopotamia, occupying the northern part of later Babylonia The southern part was Sumer In both regions city-states had begun to appear in the 4th millennium B C In Akkad a Semitic language or a language akin to the Semitic tongues, Akkadian, was spoken The rulers in Akkad were generally opposed by the Sumerians, and both conflicted with the Elamites Akkad flourished after Sargon began (c 2800? B C) to spread wide his conquests, taking them from his capital, Agade (ugä'dĕ, ugä'dē) (or the city of Akkad), to the Mediterranean shores He held firm overlordship of all the petty states of Sumer and Akkad So did his successors, the most notable being Naram-sin After more than a century decline seems to have set in Mountain tribes overran the empire Later the Sumerians held sway, and the kingdom of Ur embraced both Akkad and Sumer Elam took over the power generally toward the end of the 3d millennium while a new wave of Semitic-speaking peoples entered Mesopotamia It was by defeating the Elamites that Hammurabi was able to create Babylonia, which had its capital in Akkad The name also appears as Accad

Akkerman, see BELGOROD-DNESTROVSKI, Ukraine

Akkub. 1 Descendant of David 1 Chron 3 24. **2** Levitical family 1 Chron 9 17, Ezra 2 42, Neh 7 45, 11 19, 12 25 **3** One of the Nethinim **Ezra** 2 45 **4** One who explained the law Neh 8 7

Aklavik (ăklä'vĭk), post of the Royal Canadian Mounted Police and public seaplane anchorage in the Mackenzie dist , Northwest Territories, on the Peel river c 30 mi from its mouth on Beaufort Sea

Akmolinsk (ŭkmulyĕnsk'), city (1939 pop over 30,000), capital of Akmolinsk oblast, Kazakh SSR, on the Ishim river and at the junction of the Petropavlovsk-Balkhash and South Siberian railroads. Founded in 1830, it is a rural center, with flour mills, sawmills, and plants producing agricultural machinery

Akrabbim (ŭkrăb'ĭm) see MAALEH-ACRABBIM.

Akron (ăk'run) **1** Railroad town (pop. 1,417), co. seat of Washington co , NE Colo , ENE of Denver, in a farm area, founded 1882, inc 1887 **2** Town (pop 1,314), NW Iowa, on the Big Sioux (here marking the S.Dak. line) and N of Sioux City; platted 1871 as Portlandville, inc. 1882 It is a farm trade and processing point **3** Village (pop 2,263), W N Y , NE of Buffalo, in a farm and dairy region, inc 1849 Gypsum products are made here Near by is the Tonawanda Indian Reservation (chiefly Seneca) **4** City (pop 244,791), co seat of Summit co , NE Ohio, on the Little Cuyahoga and SE of Cleveland, settled 1807, inc as a city 1865 Its site on the old Indian Portage Path was included in the Western Reserve Akron is an important industrial center, the hub of the country's rubber industry, it produces also breakfast foods, chemicals, and other products The Ohio and Erie Canal and later the railroad spurred the city's commercial growth It is a port of entry With a fine municipal airport, a huge Zeppelin airdock, and an airport stadium (1937), Akron is the U S center for lighter-than-air craft, the dirigibles *Akron* and *Macon* were built here The Portage Lakes are south The first important application of the sit-down strike technique occurred in Akron in 1936, several thousand rubber workers were involved The **University of Akron** (city supported, coeducational) was chartered in 1870, opened in 1872 as Buchtel College (Universalist), became the Municipal Univ in 1913, and was renamed in 1926 It includes colleges of education, engineering, and liberal arts (Buchtel) and a two-year general college, Guggenheim Airship Institute, and a city testing laboratory Rubber chemistry is a specialty

Aksakov, Ivan Sergeyevich (ĭvän' sĕrgyā'ûvĭch ŭksä'kuf), 1823–86, Russian publicist, son of Sergei Timofeyevich Aksakov He exerted great political influence and was editor of various Slavophile journals, among them the weekly *Rus*

Aksakov, Sergei Timofeyevich (syĭrgā' tyĭmufyā'uvĭch), 1791–1859, Russian writer, famous for his descriptions of the Orenburg region His chief work is *Family Chronicle* (1856, Eng tr , 1916–24), a remarkable picture of life on a country estate in the days of serfdom Though influenced by Gogol, his work is devoid of social criticism

Aksum or **Axum** (both ăksōōm'), town (pop 10,000), N Ethiopia It was the capital of a line of emperors who ruled (1st–6th cent) part of modern Ethiopia and much of the Anglo-Egyptian Sudan They erected here gigantic obelisks carved in the form of towers Aksum is a major center of Coptic Christianity Its cathedral is said to house the Ark of the Covenant

Akte see ATHOS

Aktyubinsk (ăktyōō'bĭnsk), city (1936 estimated pop 45,000), capital of Aktyubinsk oblast, Kazakh SSR, on the Trans-Caspian RR Founded in 1869, it developed rapidly after the construction (1905) of the railroad There are metallurgical plants (chrome, nickel), a chemical industry (fertilizers), machine shops, and flour mills

Akureyri (ä'kurā"rē), port (pop 6,180), N Iceland, on the Eyja Fjord The second largest city of Iceland, it exports train oil, fish products, wool and sheepskins

Akyab (ăkyăb', ăkyab'), town (pop 38,094), W Burma, on the Bay of Bengal It became a large center for exporting rice after the British occupation in 1826 In the Second World War it was held by the Japanese from 1942 to 1945

Al, chemical symbol of the element ALUMINUM

Alabama (ălŭbă'mu), state (51,609 sq mi , 1940 pop 2,832,961, 1949 estimated pop 2,920,000), SE United States, admitted 1819 as the 22d state (a slaveholding state) The capital is MONTGOMERY, the largest city is BIRMINGHAM, and the seaport is MOBILE Alabama is bounded on the north by Tennessee, on the east by Georgia, on the south by Florida and the Gulf of Mexico, and on the west by Mississippi Except for the mountainous section in the northeast (the southern end of the CUMBERLAND PLATEAU), the state is a rolling plain with a mean elevation of c 600 ft in two geologic regions—the Appalachian piedmont above the fall line and the coastal plain below These plains, drained by the Alabama and Tombigbee rivers and their tributaries, are primarily given over to agriculture The central BLACK BELT yields cotton and lesser crops —corn, peanuts, hay, sweet potatoes, oats, Irish potatoes, peaches, sugar cane, and sorghum Where the Tennessee river loops across the north, hydroelectric power from the TENNESSEE VALLEY AUTHORITY has been increasingly turning an agricultural land into an industrial section The mineral riches of coal, iron, and limestone have also contributed to the state's industries, and Birmingham is a leading U S iron and steel center Lumbering and Gulf fishing also add to the wealth of Alabama, which is still predominantly devoted to farming Agriculture was known to the four great Indian groups of the region (Creek and Cherokee in the east, Choctaw and Chickasaw in the west) when the Spanish explorers arrived Pánfilo de Narváez may have visited Alabama in 1528, Cabeza de Vaca certainly did, and Hernando de Soto spent some time in the region in 1540 White settlement was begun, however, not by the Spanish but in 1702 by the French under the sieur de BIENVILLE in the Mobile area French and British contended for the furs gathered by the Indians, and the region went (1763) to the British, who were victorious over France and Spain in the French and Indian Wars At the close of the American Revolution, Great Britain ceded (1783) to the United States all lands east of the Mississippi except the Floridas (see WEST FLORIDA CONTROVERSY) The Territory of Mississippi was set up in 1798, but the land was still largely wilderness with a considerable fur trade, centered at SAINT STEPHENS, and with only the beginnings of cotton cultivation Both were interrupted in the War of 1812, when part of the Creek Confederacy took the warpath under William WEATHERFORD Andrew Jackson decisively defeated the Indians at Horseshoe Bend on March 27, 1814 This victory, coupled with the need of England for cotton, ushered in the period of heavy settlement Immigrants poured into the Alabama region from the neighboring states, especially Georgia The wealthy newcomers took up land in the fertile bottom lands and established great slave-worked plantations that produced cotton for the markets of the great southern ports, Mobile and New Orleans Poorer newcomers took over less fertile uplands, where they scrabbled a living as best they could So many came that the Territory of Alabama was set up in 1817 with William W Bibb as governor, two years later it became a state In cotton-prosperous Alabama the slave-owning planters were dominant, and as the Civil War loomed closer the support of Southern rights and secession sentiment grew under the urging of "fire-eaters" such as William L YANCEY Alabama broke away from the Union on Jan 11, 1861, and shared in the fate of the Confederacy Federal troops held the Tennessee valley after 1862 and one of the great naval battles of the war was won by Admiral D G FARRAGUT in Mobile Bay in 1864, but most of the state was not occupied in force until 1865 In the Reconstruction era, Alabama's ruined agricultural economy supported a corrupt regime of scalawags and carpetbaggers Few reforms emerged, but the mining of coal and iron was expanded by Daniel PRATT and H F DE BARDELEBEN to mark the rise of Alabama industry Farming was still dominant and the fortunes of the state still rose and fell with the market price of cotton, but constant use and erosion began to exhaust the land Diversification of crops, much advocated in the 20th cent , was sped when the boll weevil invaded the cotton fields and the great demand in the First World War brought high prices for food crops The depression and the agricultural program of F D Roosevelt's New Deal caused more farmers to produce subsistence crops and took more land away from the wasting cotton culture The social and economic problems of Alabama were brought to national attention in the quarrels concerning the SCOTTSBORO CASE and the operations of TVA The state also contributed figures of importance to the national scene, such as Hugo L Black and John H and William Bankhead Industrialization was much quickened in the Second World War with the appearance of factories producing machines, munitions, powder, and war supplies, and many varied industries arose The Univ of Alabama, at Tuscaloosa, is the leading institution of higher learning Others are Alabama Polytechnic Institute, at Auburn, Birmingham-Southern College and Howard College, at Birmingham, Huntingdon College, at Montgomery, Alabama College at Montevallo, Spring Hill College at Spring Hill, and Tuskegee Institute, at Tuskegee See A J Pickett, *History of Alabama* (1900), W L Fleming, *Civil War and Reconstruction in Alabama* (1905), T P Abernathy, *The Formative Period in Alabama, 1815–1828* (1922), A B Moore, *History of Alabama* (1935), C S Davis, *The Cotton Kingdom in Alabama* (1939), Federal Writers' Project, *Alabama, a Guide to the Deep South* (1941)

Alabama, river formed in central Alabama by the confluence of the Coosa and Tallapoosa just above Montgomery It flows 312 mi W, SW, then S to the Tombigbee, with which it forms the Mobile river c 30 mi N of Mobile It is navigable

Alabama see CONFEDERATE CRUISERS

Alabama, University of, mainly at University, near Tuscaloosa, state supported, coeducational, chartered 1820, opened 1831 It has colleges of arts and sciences, education, engineering, and medicine (at Birmingham) and schools of chemistry, metallurgy, and ceramics, commerce and business administration, home economics, law, and mines An experiment station of the U S Bureau of Mines, the state natural history museum, the state geological survey, and a business research bureau are here

Alabama City, Ala see GADSDEN

Alabama claims. In the Civil War the *Alabama* and other CONFEDERATE CRUISERS inflicted great damage on Northern merchant marine Since these were built, fitted out, and otherwise aided by British interests, the United States claimed damages These claims came to be the sore point in British-American relations, already aggravated by other disputes W H Seward failed to reach a settlement while he was Secretary of State However, his successor, Hamilton Fish, brought about the Treaty of Washington (1871), which provided for arbitration. Charles Francis Adams for the United

States, Alexander J E Cockburn for Great Britain, and three members from neutral countries constituted the tribunal, which met at Geneva in 1871–72 The arbitrators threw out American claims for indirect losses, but awarded the United States $15,500,000 for all the direct damage done by the *Alabama* and the *Florida* and for most of the damage caused by the *Shenandoah* The British were absolved of blame in the cases of several less important cruisers

Alabama College: see MONTEVALLO

Alabama Polytechnic Institute, at Auburn; land-grant and state supported, coeducational, chartered and opened 1872 as Alabama Agricultural and Mechanical College, renamed 1899 It has schools of agriculture, architecture and allied arts, chemistry, education, engineering, home economics, pharmacy, science and literature, and veterinary medicine

alabamine: see ASTATINE

alabaster (ăl'ŭbăs"tur), fine-grained, massive, translucent variety of GYPSUM, pure white or streaked with reddish brown, used in statuary and for other decorative purposes It is soft enough to be scratched with the fingernail and hence is easily carved, but also easily broken, soiled, and weathered It is quarried in England and also in Italy Vases and statuettes of Italian alabaster are sold as "Florentine marbles" The alabaster of the ancients, called Oriental alabaster and onyx marble, to distinguish it from true alabaster, is MARBLE, a calcium carbonate, whereas gypsum is a calcium sulphate The calcium carbonate form occurs both in underground masses (TRAVERTINE) and in cave formations (see STALACTITE AND STALAGMITE) Important sources of supply are Algeria, Egypt, Iran, and Mexico (from which it is exported under the name Mexican onyx), in the United States there are important sources in Utah and Arizona Oriental alabaster was extensively used by the Egyptians in sarcophagi, in the linings of tombs, in the walls and ceilings of temples, and in vases and sacrificial vessels The Romans worked the Algerian and Egyptian quarries and used the stone for similar purposes In modern times it was used by Mohammed Ali for his mosque in Cairo The French make extensive use of alabaster in interior decoration See G P Merrill, *Stones for Building and Decoration* (3d ed, 1903), John Watson, *British and Foreign Marbles* (1916)

Alachua (ălkch'ŏŏu), city (pop 1,081), N central Fla, NW of Gainesville, founded 1884 It is a shipping center for truck, chiefly watermelons

Alacoque, Margaret Mary see MARGARET MARY, SAINT

Alagez, Mount see ARAGATS, MOUNT

Alai (ălī'), mountain range, Kirghiz SSR, a western branch of the Tien Shan system The Alai extends 200 mi west from the border of China and rises to c 16,500 ft

Alain de Lille (ălăⁿ' du lēl'), c 1128–c 1202, French scholastic philosopher, a Cistercian, called The Universal Doctor He was born in Lille, taught in Paris, lived long in Montpellier, and died at Cîteaux An eclectic, he wished to temper the rational with the mystical He held that the mind unaided by revelation can know the universe, but by faith alone can man know God Though he was a neoplatonist, he made use of numerous Aristotelian and neo-Pythagorean elements The mathematical and deductive method had an important place in his theology, reason is preferred to authority His chief work was *De fide catholica contra haereticos* Two poems have been translated into English, the satiric *Complaint of Nature* (Eng tr, 1908) and the encyclopedic *Anticlaudian* (Eng tr, 1935) He is also called Alanus de Insulis.

Alais, France see ALÈS

Alajuela (ălahwā'lă), city (1944 estimated pop, 10,170), W central Costa Rica, NW of SAN JOSÉ It is one of the four principal cities of the central plateau Sugar is the chief industry

Alamán, Lucas (lōō'kus ălămän'), 1792–1853, Mexican historian and statesman As deputy to the Spanish Cortes, he failed to win a hearing for the insurgents in Mexico He later (1822) organized in London a company to exploit Mexican mines Returning to Mexico, he was minister in the provisional government after the fall of ITURBIDE and was until his death active in national and international affairs Alamán founded the Archivo General and the National Museum, in Mexico city He wrote *Disertaciones sobre la historia de la república mexicana* (3 vols, 1844–49) and *Historia de México desde 1808* (5 vols, 1849–52)

Alamanni or **Alemanni, Luigi** (lwō'jē ălämän'nē, ălāmän'nē), 1495–1556, Italian poet He conspired against Cardinal de' Medici (later POPE Clement VII) and was forced to flee to France, where he was patronized by Francis I He wrote lyrical verse of polish and dignity, outspoken satires, a long poem, *The Cultivation of the Fields*, inspired by Vergil's *Georgics;* and *Girone il Cortese*, a romantic poem For a translation of one of his sonnets, see Lorna de' Lucchi, *An Anthology of Italian Poems* (1922)

Alameda. 1 (ălūmē'dŭ,–mā'dŭ) City (1940 pop 36,256; 1945 special census pop 89,906), W Calif, on an island just off the eastern shore of San Francisco Bay, inc as a town 1854, as a city 1884 A residential city, with fine beaches and parks, it is also a manufacturing and shipping center, with shipyards and railroad shops Shipbuilding is its chief industry Alameda is the seat of a large U S naval air station (formerly Benton Field), of a U S coast guard base, and of a U S maritime school The city is connected with the mainland by bridges and a tunnel **2** (ălumē'dŭ) Village (pop 2,691), SE Idaho, a suburb of Pocatello, laid out 1912, inc 1924

Alamein (ălūmān', ă–) or **El Alamein** (ĕl), town, N Egypt, on the Mediterranean coast 70 mi W of Alexandria It was the site of a decisive British victory in the North African campaigns of the Second World War (see NORTH AFRICA, CAMPAIGNS IN) In preparation for Marshal Rommel's attack from Libya (begun May 26, 1942) the British forces retreated into Egypt and by June 30 had set up a defense line extending 35 mi from Alamein S to the Qattara Depression, a badland which could neither be crossed nor flanked If this position had fallen, the British might have lost Alexandria and might have been forced to withdraw from North Africa The defenders at first depended upon the depleted 8th Army and extensive mine fields, by September, however, British air power had ascendancy In August, Gen Bernard L Montgomery took command of the 8th Army, newly supplied and with its ranks filled The British offensive opened on Oct 23 with tremendous air and artillery bombardments The artillery guns were concealed, and deception played a part in the victory Montgomery's forces cleared the German mine fields and on Nov 1 and 2 burst through the German lines near the sea and forced a swift Axis retreat out of Egypt, across Libya, and into E Tunisia Egypt was definitely saved, and with the landing on Nov 7 and 8 of American troops in Algeria the Axis soon suffered total defeat in North Africa For his victory Montgomery was made a viscount with the title Montgomery of Alamein

Alameth (ā'l–), Benjamite 1 Chron. 7 8.

Alamgir see AURANGZEB

Alammelech (ulăm'ulĕk), town, NW Palestine Joshua 19 26

Alamo (ăl'ŭmō) **1** Town (pop 1,137), co seat of Crockett co, W Tenn, NW of Jackson, in a farm area **2** City (pop 1,744), extreme S Texas, WNW of Brownsville, in the irrigated district of the lower Rio Grande valley, inc 1924

Alamo, the [Spanish, =cottonwood], building in San Antonio, Texas, "the cradle of Texas liberty" Originally constructed after 1744 as the chapel for the Mission San Antonio de Valero, it was later fortified In the Texas Revolution, San Antonio was taken by Texas revolutionaries in Dec, 1835, and was lightly garrisoned When Santa Anna approached with an army of several thousand in Feb, 1836, only a handful of men held the Alamo, and confusion, indifference, and bickering among the insurgents throughout Texas prevented any help going to them, except for 32 volunteers from Gonzales who slipped through the Mexican lines after the siege had already begun Defying Santa Anna's demands for surrender, the Texans in the fort determined to fight against the hopeless odds The siege, which began Feb 24, ended with hand-to-hand fighting within the walls on March 6 William B Travis, James Bowie, David Crockett, and some 184 other defenders were dead, but the heroic resistance roused fighting anger among Texans, who six weeks later defeated the Mexicans at San Jacinto, crying, "Remember the Alamo!" The chapel-fort was bought by the state in 1883 the surrounding area was added in 1905, and the whole was restored and improved in 1936–39 See John Myers Myers, *The Alamo* (1948)

Alamogordo (ăl"umugôr'dō,–du), town (pop 3,950), co. seat of Otero co, S central N Mex, near the Sacramento Mts, settled 1898 It is the trade center of a farm, timber, and recreation area and the seat of a state school for the blind In a remote part of the Alamogordo air base, the first atomic bomb was exploded in a test which took place on July 16, 1945 Near Alamogordo are White Sands National Monument, Mescalero Apache Indian Reservation, and Lincoln National Forest Alamogordo Dam is not here but in the Pecos near Fort Sumner

Alamo Heights, city (pop 5,700), S central Texas, a suburb of San Antonio, inc 1926

Alamosa (ălumō'sŭ), city (pop 5,613, alt c 7,500 ft), co seat of Alamosa co, S Colo, on the Rio Grande and in the San Luis Valley, founded 1878 It is the shipping and processing center for a prosperous farm and ranch area Adams State College for teachers is here Great Sand Dunes National Monument lies to the northeast

Alamoth (ā'l–). Hebrew musical term, unknown in meaning, although some have guessed "soprano," connecting it with a word for "maidens" It occurs in 1 Chron 15 20 and in the title of Ps 46 The term *Shemnith* (shĕm'ĭ–) [Heb, =eighth], in the titles of Pss 6 and 12, has been explained as "bass," complementary to Alamoth

Aland Islands (ä'lŭnd, ô'–), Finnish *Ahvenanmaa* (ä'vĕnänmä'), Swed *Ålandsöerna* (ô'lântsû'urnä), archipelago (572 sq mi, pop 27,676), in the Baltic Sea, between Sweden and Finland, at the entrance of the Gulf of Bothnia It belongs to Finland The chief town is Mariehamn (Finnish *Maarianhamina*), a port on Aland, the largest of the islands The islands were early colonized by Swedes, who still form a majority of a population of fishermen and farmers The importance of the islands is strategic They were ceded by Sweden to Russia in 1809 In the Crimean War the Russian fortifications were destroyed (1854), and remilitarization was forbidden by the Treaty of Paris (1856) With Finland, the archipelago became independent of Russia in 1917 Pro-Swedish feelings among the islanders led to a dispute between Sweden and Finland, but in 1921 the League of Nations temporarily settled the case by awarding the islands to Finland with an autonomous status and renewed the ban on their militarization A Finnish-Swedish agreement to allow Finland to fortify the islands was blocked (May, 1939) by Russia in the Council of the League Finnish fortifications erected during the Finnish-Russian War (1939–40) were later dismantled, and a demilitarization agreement, signed by Finland and Russia in Oct, 1940, was renewed after the Second World War Despite the continuing autonomy of the islands, sentiment for greater independence or for union with Sweden remains strong

Alans or **Alani** see SARMATIA

Alarcón, Hernando de (ĕrnän'dō dā alarkōn'), fl 1540, Spanish explorer in the Southwest He was given command of a fleet that was supposed to support the land expedition of Francisco Vásquez de CORONADO In the summer of 1540 he sailed up the Gulf of California, proved definitely that Lower California was a peninsula, not an island, and discovered the Colorado river He explored the river a few months before García López de CÁRDENAS discovered the Grand Canyon

Alarcón, Pedro Antonio de (pādrō antō'nyō), 1833–91 Spanish writer and diplomat He was active in politics during his youth and became editor of a revolutionary journal in Madrid, later he was ambassador to several countries of Europe In 1875 he was admitted to the Spanish Academy His first book was a novel, *El final de Norma* (1855), but his first important literary work was the very successful report on the war in Africa (1860) This was followed by other interesting books of travel The lighter works of Alarcón, *El sombrero de tres picos* (1874, Eng tr, *The Three-cornered Hat*, 1891) and *El capitán Veneno* (1881, Eng tr *Captain Venom*, 1914) are now best known They are short novels, in which the author shows a keen power of observation, an extraordinary ability to describe with color and plasticity, and a subtle humor Two of his longer novels are *El escándalo* (1875, Eng tr, *The Scandal*, 1945) and *El niño de la bola* (1880)

Alarcón y Mendoza, Juan Ruiz de (hwän' rōōēth' dā alarkōn' ē mändō'thä), d 1639, Spanish dramatic poet, one of the great literary figures of the *siglo de oro* [golden age], b Mexico After a stay in Spain (1600–1608), where he studied law, he returned to Mexico Disappointed of preferment there he returned to Spain (1613) and obtained a minor post in the Council of the Indies His comedies appeared in two volumes (1628, 1634) Alarcón's carefully wrought plays in the classical tradition are—unlike those of his great contemporary, Lope de Vega—notable for characterization Perhaps the best-known is *La verdad sospechosa* [the suspicious truth], which was the model for Corneille's *Le Menteur* [the liar] Among the others are *Las paredes oyen* [the walls have ears] and *El anticristo*

Alaric I (ă'lurĭk), c 370–410, Visigothic king He headed the Visigothic troops serving Emperor Theodosius I, after whose death (395) they rebelled and chose Alaric as their leader (see VISIGOTHS) Alaric devastated Thrace, Macedonia, and Greece Stopped, but not defeated, by STILICHO, he retired northward, and by an agreement with the Eastern emperor, ARCADIUS, occupied Epirus About 400 he invaded Italy, where after some indecisive warfare he agreed with Stilicho on a joint attack against the Eastern Empire This attack failed to materialize, and in 408 Alaric again left Epirus and invaded Italy Stilicho persuaded the Romans to buy Alaric's alliance through a huge payment, but shortly afterward Emperor HONORIUS had Stilicho executed for treason Alaric again turned on Rome (409) and forced the city to accept a puppet emperor, Attalus, whom he himself deposed, the next year, for disregarding his advice After the failure of renewed negotiations with Honorius (who all the while held out at Ravenna) Alaric stormed and sacked Rome (410) and then marched south to attack Sicily and Africa A storm destroyed his fleet, and Alaric, having turned back, died of an illness His brother-in-law Ataulf was elected his successor It is said that Alaric was buried with his treasures near Cosenza in the bed of the Busento river, which was temporarily diverted from its course That the secret might be kept, the slaves employed in the labor were killed.

Alaric II, d 507, Visigothic king of Spain and of S Gaul (c 484–507), son and successor of Euric. He issued (506) at Toulouse the BREVIARY OF ALARIC for his Roman subjects. Alaric's adherence to Arianism gave CLOVIS I, king of the Franks, an easy pretext for attacking him in the name of orthodoxy. Alaric was defeated and slain at Vouillé (507), and the Visigoths lost all their possessions in Gaul save Septimania.

Alasco or à Lasco, Johannes: see LASKI, JOHN.

Alashehir or **Alaschir** (both ä"lashĕ'hĕr, –shĕhĕr'), town (pop 8,883), W Turkey. It is a trade center. The site of ancient PHILADELPHIA is near by.

Alaska, U S territory (571,065 sq mi, with water surface 586,400 sq mi; 1939 pop 72,524, 1949 estimated pop c 92,000), NW North America. JUNEAU is the capital, ANCHORAGE the largest city. Alaska is a huge block of land at the northwest extremity of the continent between the Arctic Ocean on the north and Pacific Ocean on the south. Its rugged coast line in the west thrusts in the Seward Peninsula to the Bering Strait, which separates it by only a few miles from the Asiatic USSR. The strait widens to the Bering Sea, which cuts into Alaska with Norton Sound, below Seward Peninsula, and Bristol Bay, just N of the Alaska Peninsula. Alaska thrusts toward Russia again in the Alaska Peninsula, which is continued by the ALEUTIAN ISLANDS, reaching out toward the Russian Komandorski Islands, they divide the Bering Sea from the Pacific. The south shore of Alaska is deeply indented by Cook Inlet and Prince William Sound, the Kenai Peninsula between them, running southwest, continues in Kodiak Island. Prince William Sound is itself a part of the wide Gulf of Alaska. Where the coast runs SE from the Gulf of Alaska lies the narrow Panhandle of Alaska, cutting into the Canadian province of British Columbia. Except for the Panhandle, the eastern boundary of Alaska is with Yukon territory. Not only the rough coast but the high mountain ranges of Alaska cut the Territory into isolated regions. The difficulties of communication are one of the most troublesome problems of Alaska, air transport is answering it in part, and all Alaskan towns have their much-used airports, but even so the towns are for the most part isolated, self-contained units. This is true even in the Panhandle, the most populous of the regions, with the capital and others of the best-known towns—KETCHIKAN, old SITKA, and SKAGWAY. The region is one of a narrow coast, rising steeply to the mountains of the Coast Range and the St Elias Mts, and of islands of the ALEXANDER ARCHIPELAGO. It is connected with Seattle by steamships plying the Inside Passage and is more "civilized" than the other sections of Alaska, although tourists find the abrupt mountains, the dense forests, and the villages of Haida, Tlingit, and Tsimshian Indians exotic and remote. The climate is generally mild, and the combination of the Japan Current and the high cold mountains on the coast produces extremely heavy rainfall. The scenic wonders of mountain and fjord are augmented by the glaciers such as the Malaspina Glacier at the entrance to the Panhandle and the acres of blue ice in Glacier National Monument. The chief economic reliance of the people is upon fish, notably the Alaska salmon. Some riches still come from the mines that were the spur for founding most of the towns, and the third of the Alaskan trilogy of wealth—fish, minerals, furs—was formerly of great importance. The land is generally so steep that agriculture is minimal. This is not true of S central Alaska. There, between the mountains of the coast and the wide curve of the Alaska Range, which sweeps up to Mt McKinley (in MOUNT MCKINLEY NATIONAL PARK), the highest point in North America, there are wide valleys that can support farms, here is the much-publicized MATANUSKA VALLEY, with its market center at Palmer. Anchorage, the metropolis of the region, is the larger center for the Matanuska Valley and, more important, the center for the Alaska RR, for airways, and for U S defense installations. It is also connected with the Alaska Highway and continued its wartime boom after the Second World War was over. The Kenai Peninsula also has farmlands (mostly potential). There the port of Seward, having lost its commanding position as terminus of the Alaska RR to Whittier, fell back upon the development of a highway. Communication is essential to the Alaskan community. Valdez on Prince William Sound is enhanced by the Richardson Highway to Fairbanks (linked with the Alaska Highway). Cordova, which formerly was the port for the big Kennecott copper mine up the Copper river, was injured by the closing of the mine and the railroad to it in 1938 and took recourse only to sea communications, the products of its fish canning are taken away by steamer. Kodiak also depends upon the ocean lanes. Extreme W Alaska is dominated by the ALEUTIAN RANGE, which is the spine of the Alaska Peninsula (c 500 mi long) and is continued in the grass-covered, treeless Aleutian Islands. The climate there is unremittingly bad, foggy and in the winter disagreeably damp and cold and subject to violent winds (the williwaws). The native ALEUTS were the first to feel the pressure of white civilization when Russian fur traders came in the 18th cent. When the hunting of the sea otter declined in the 19th cent so did the importance of the islands, only to be reawakened when Japanese attack in the Second World War showed their prime significance in strategy. Bloody fighting took place on them (notably on Attu), and Dutch Harbor became a major key of the U S. defense system. On the Alaska Peninsula recent volcanic action attracted much interest, particularly in the Valley of Ten Thousand Smokes in 1912 (the area is now in Katmai National Monument). North of the peninsula is Bristol Bay, where much fishing goes on in summer. The Pribilof Islands in the Bering Sea, also belonging to the region of W Alaska, are noted principally as the source of sealskins and the pelts of the Pribilof blue fox. Farther to the north is the Seward Peninsula, with the fabulous NOME, where gold was gathered on the beaches after 1899. Except for the gold, however, the peninsula—mostly tundra covered—remained unexploited. The Eskimo lives his simple and efficient life on the peninsula and the islands off the coast and gets his food from the surrounding waters. The interior of Alaska, between the ALASKA RANGE in the south and the BROOKS RANGE in the north, was also opened to settlement by the discovery of gold, and gold in early 1950 was still the major product of FAIRBANKS, the metropolis of the interior. Some agriculture had, however, been developed around Fairbanks in the valley of the Tanana river (a tributary of the Yukon), and more was anticipated, it was argued that farming could be developed in much of the whole Yukon valley, famed mostly in the past for its furs and for its gold fields. The climate of the interior is continental, with an intensified effect, the summers are short but very hot, the winters long and very cold. Arctic Alaska, N of the Brooks Range, is, contrary to popular belief, not so cold as the interior. It is, however, mostly BARREN GROUNDS, cut by numerous short rivers and one long river (the Colville). The northernmost reach of Alaska is Point Barrow. If the arctic regions are defined as the region N of the Arctic Circle rather than N of the Brooks Range, they include lands that are usable for growing potatoes and other vegetables. Alaska, which still seems a remote land to most of the people of the United States, was first reached by white men not from the United States or Canada, but from Russia. The adventurous and disastrous voyage of Vitus BERING and Aleksandr Chirikov in 1741 capped the march of Russian traders across Siberia. The survivors who returned with fine sea-otter skins started a rush of fur traders (the *promyshlenniki*) to the Aleutian Islands. Rough, resourceful men, they survived great hardships to take away fortunes in fur. Their hardships were, however, mild in comparison with the harsh treatment they gave the unfortunate natives. The trade was later organized by merchants with larger interests in the reign of Catherine II. Grigori SHELEKHOV in 1784 founded the first permanent settlement in Alaska on Kodiak in 1784. He sought a monopoly of the fur trade and sent (1791) to Alaska the man who was to dominate Russian days there, Aleksandr BARANOV. The monopoly was granted to the Russian American Company in 1799, and it was Baranov who directed its activities in Alaska. Sitka was founded in 1799 as his capital and was rebuilt after destruction by the Indians in 1802. From a "castle" at Sitka, Baranov ruled, extending the Russian trade far down the coast and even, after several unsuccessful attempts, founded (1812) a farming settlement at Ross in Alta California. Earlier Nikolai Rezanov had visited San Francisco and in 1806 obtained food from the Spanish there for the then-starving Sitka. Rivalry for the Northwest coast was strong even before the Russian monopoly was created, for not only the long-established Spanish but newly come British and U S vessels were venturing in the N Pacific. The voyage of Capt James COOK brought him to Alaskan waters in 1778. His explorations were followed by others, notably George VANCOUVER. Canadian fur traders pushed across the continent in the wake of Sir Alexander Mackenzie, and the American Lewis and Clark expedition had been followed by the founding of the short-lived post at Astoria. A clash of interests occurred. Baranov was removed from his post in 1818 and Russian naval officers on detached service—most prominent among them Baron Wrangel—took charge of the colony, which was by negotiations with Great Britain and the United States in 1824 limited definitely to lat 54° 40′ N. Already the Russians had begun to withdraw from the American coast, and Alaska settled into a long period of decline. As the Crimean War threatened, the Russian American Company reached an agreement with the Hudson's Bay Company, but its precarious position was obvious, and after the war Russia undertook to dispose of Alaska altogether. The monopoly was withdrawn in 1863. In 1867 the territory was bought by the United States for $7,200,000. The purchase was due almost solely to the determined energy of Secretary of State William H Seward, and for many years afterward—even after Alaska had begun to return fortunes in gold and fish—the land was sometime derisively called Seward's Folly or Seward's Icebo Immediately there was no return, and Alaska wa neglected. The Alaska Commercial Company u herited the Russian commercial rights but was n active. The U S army officially had Alaska charge until 1876, when scandals caused the soldie to be withdrawn. After a small lapse when gover ment resided only in customs men, the navy wa given charge in 1879. Most of the territory was n even known, although the British (notably S John Franklin and Capt F W. Beechey) ha early explored the coast of the Arctic Ocean, an the Hudson's Bay Company men Robert Campbe and Alexander Murray had explored the Yuko where Fort Yukon was founded in 1847. It wa not until after gold was discovered in the Junes region in 1880 that Alaska was given a governo and a feeble local administration by the Organ Act of 1884. Missionaries, who had come to th region in the late '70s, exercised considerable u fluence. Most influential of them all was Sheldo Jackson, best known for his introduction of ren deer to help the Alaskan Eskimo, beggared by th wanton destruction of the fur seals. The sealin was the subject of a long international controver (the BERING SEA FUR-SEAL CONTROVERSY), whic was not ended until after gold had changed Alask permanently. Paradoxically, the first finds tha had tremendous influence on Alaska were not Alaska at all, but in Canada. The development Fortymile Creek and in the upper Yukon area pr pared the way for the great Klondike strike of 189 which brought a stampede. Most of the mine were from the United States, and most of the came through Alaska. The big discoveries Alaska itself followed—Nome in 1899, Fairbank in 1902. The miners and prospectors—the sou doughs—took over Alaska, and the era of the roug mining camps reached its height, this was th Alaska of Jack London, Rex Beach, and romanc It was also lawless, and a criminal code was b latedly applied in 1899. Not until 1906 did Alask get a territorial representative in Congress, an self-government was not established then. Th vexed question of the boundary between the Pa handle of Alaska and British Columbia, know usually as the Alaska Boundary Controversy was settled in 1903 by the Alaska Boundary Tr bunal, a six-man board made up of three American (Elihu Root, Henry Cabot Lodge, and Georg Turner) and three representatives of Canadia British interests (Viscount Alverston, Sir Louis Jetté, and A B Aylesworth), the decision wa generally favorable to Alaska. A period of rapi building and development began. Mining, requi ing heavy financing, passed into the hands Eastern capitalists, notably the monopolisti Alaska Syndicate. Opposition to the "interests became the burning issue in Alaska and wa catapulted into national U S politics in the charge and counter-charges about the giving of Alaska coal lands to the large companies and their cohorts Gifford Pinchot and R A Ballinger were the chie antagonists, and this was a major issue on whic Theodore Roosevelt split with President W H Taft. Taft was defeated in the 1912 election. Be fore that time a new era had begun for Alaska wit the establishment of local government in 191 (Juneau had officially replaced Sitka as capital u 1900 and had begun to function as capital in 1906). The building of the Alaska RR from Seward t Fairbanks was commenced with government fund in 1915. Already, however, the flush of gold feve had begun to die, and Alaska receded into one o its periods of lull. The fishing industry, quietly going forward in the noise of gold rushes, had be come the major Alaskan industry, which it stil remained in 1950. Mining was revived by use o the deep-dredging process in the 1920s, and the rise in the price of gold in Franklin D. Roosevelt' New Deal also aided the mines. Alaska's latest lull was ended by its greatest boom on the approach of the Second World War. Already development of transoceanic aviation had pointed out the valu of arctic bases, and the threat of the Japanese showed glaringly the importance of Alaska to the defense of North America. The Japanese did ac tually get a foothold in the Aleutian Islands in 1942 and were ousted only after hard fighting in 1943. More important, Alaska became an arsenal, and money poured in for creation of army camps, naval bases, and air bases. Still more important, the Alaska Highway was built, supplying a still-weak but much-needed link in communication. The growth of air travel in the period between the wars created a modern transport net, but still more transportation means were needed to forward the anticipated settlement schemes. The permanent defense bases, the Univ of Alaska, the success of arctic farming in Siberia—all brightened the hopes for more development of farming and the growth of stable settlements. Alaskans in 1946 voted in favor of statehood and in 1950 were looking forward confidently to entrance into the Union in the future. See W W Woollen, *The Inside Passage to Alaska, 1792–1920* (1924), Jeanette P. Nichols, *Alaska. a History* (1924), Merle Colby and

Federal Writers' Project, *A Guide to Alaska, Last American Frontier* (1939, new ed., 1941), Stuart Ramsay Tompkins, *Alaska Promyshlennik and Sourdough* (1945), Herbert H Hilscher, *Alaska Now* (1948)

Alaska, University of, at College, near Fairbanks, land grant and territorial, coeducational, chartered 1917, opened 1922 as Alaska Agricultural College and School of Mines It became a university in 1935 and has a school of mines, extension services in agriculture, home economics, and mines, agricultural experiment stations, a museum, a geophysical observatory, and a seismograph It cooperates in research projects with government and private institutions

Alaska Highway, 1,527 mi long, from Dawson Creek, British Columbia, to Fairbanks, Alaska Built (March–Oct , 1942) in the Second World War by U S troops to supply the forces in Alaska, it was a significant engineering feat because of the difficulties of terrain and weather A Canadian road already connected Dawson Creek with Edmonton, Alta The Haines Cutoff connects the Alaska Highway with the Panhandle of Alaska In the last stretch to Fairbanks the road used the previously built Richardson Highway In 1946 the Canadian part of the road was transferred to Canadian control It was formerly called the Alaska Military Highway, the Alaskan International Highway, and the Alcan Highway See P H Godsell, *The Romance of the Alaska Highway* (1944)

Alaska Range, S central Alaska, rising to the highest mountain in North America, Mt McKinley The range divides S central Alaska from the great plateau of the interior

Alastor (ulă'stur), in Greek mythology, the spirit of vengeance It is an epithet applied to Zeus or any other god in his aspect as avenger and is also sometimes applied to the evildoer who is subject to vengeance Another mythological Alastor, the brother of Nestor, was killed by Hercules

Ala-Tau (ä'lä-tou') [Turki, =snowy peak], six lofty mountain ranges of central Asia In general they are near Lake Issyk Kul and belong to the Tien Shan system All are economically unproductive and are chiefly inhabited by Turki-speaking pastoral tribes The **Dzungarian Ala-Tau** (zo͝ongä'rĭ-tou) is for 130 mi the border between the Kazakh SSR and Sinkiang prov , China, and rises to 16,550 ft This, the northernmost branch of the Tien Shan, extends from southwest to northeast c 250 mi The **Kungei Ala-Tau** (ko͝ong-gä'), a branch of the Tien Shan, rises to 16,360 ft and lies north of the lake It extends from east to west 130 mi and forms part of the boundary between the Kirghiz SSR and the Kazakh SSR The **Kuznetsk Ala-Tau** (ko͝oznĕtsk'), SW Siberia, Russian SFSR, rises to 6,890 ft It extends generally from north to south c 250 mi The **Talass Ala-Tau** (talas'), a range of the Tien Shan, Kirghiz SSR, rises to 13,200 ft and extends from east to west c 150 mi The **Terskei Ala-Tau** (tĕr'skā), in the Kirghiz SSR, rises to 16,440 ft and lies south of the lake It extends from east to west 225 mi The **Trans-Ili Ala-Tau** (trăns'-ēlē'), a range of the Tien Shan in the Kazakh SSR, rises to 16,460 ft and extends from east to west some 250 mi more or less

Alatyr (ŭlutĭr'), city (pop c 26,000), Chuvash ASSR, E European RSFSR, at the junction of the Alatyr and Sura rivers It is an agricultural center, founded in 1552

Álava see BASQUE PROVINCES

Alba or **Alva, Fernando Álvarez de Toledo, duque de** (ăl'bu, ăl'vu, Span both fĕrnän'dō ăl'värăth dā tōlä'dhō dō͝o'kā dā ăl'vä), 1508–82, Spanish general After a distinguished military career in Germany and Italy, Alba returned to Spain as adviser to King Philip II Advocating a stern policy toward the rebels against Spain in the NETHERLANDS, he was appointed (1567) captain general there, with full civil and military powers The regent, MARGARET OF PARMA, opposed him and resigned, and Alba became regent and governor general A religious fanatic and ruthless absolutist, he set out to crush the Netherlanders' attempts to gain religious toleration and political self-government The special court he set up at Brussels, popularly known as the Court of Blood, spread terror through the provinces, where Alba's name is still remembered with loathing Some 18,000 persons were executed (among them the popular EGMONT and HOORN), and their properties were confiscated Increased taxation also fanned popular resentment Several cities rebelled, but were punished with much bloodshed, and the forces of WILLIAM THE SILENT, who had invaded the Netherlands, were defeated Nevertheless, after six years of his rule, Alba found the Netherlands more resolutely opposed to Spanish rule than ever, while at the court of Philip II he was accused of having compromised the royalist cause His resignation (1573) was accepted, and Requesens was appointed in his stead In 1580 Philip again resorted to him for the conquest of Portugal After seizing Lisbon, Alba permitted a massacre of the citizens.

Albacete (älbäthä'tā), city (pop. 50,567), capital of **Albacete prov.,** SE Spain, in Murcia, at the Southeast end of La Mancha plateau Under the Moors, Albacete was a part of the kingdom of MURCIA, with which it was incorporated (1269) into Castile The city now has a modern aspect and is mainly an agricultural center

albacore see TUNA

Alba-Iulia (ăl'bä-yo͞o'lyo), Hung *Gyulafehérvár*, Ger *Karlsburg*, city (pop 14,420), central Rumania, in Transylvania It is the center of a wine-producing region The Roman Apulum, it was destroyed several times in its history It was the seat of the princes of Transylvania and has many historic monuments The Karlsburg fortress was built by Emperor Charles VI

Alba Longa (ăl'bu lông'gŭ), city of ancient Latium, in the Alban Hills near Lake Albano, c 12 mi SE of Rome It was a city before 1100 B C and apparently was then the most powerful in Latium Legend says it was founded by Ascanius, son of Aeneas, that Romulus and Remus were born here, and that it was thus the mother city of Rome Tradition also said that Tullus Hostilius, king of Rome, razed it in 665 B C Possibly Rome was founded from Alba Longa, and certainly the Romans destroyed it (c 600 B C ?)

Alban, Saint, 3d or 4th cent , traditionally the first British martyr He lived and died at Verulamium, now St Albans Feast Roman Catholic Church, June 22, Church of England, June 17

Albanel, Charles (sharl albanĕl'), 1616–96, French missionary explorer in Canada, a Jesuit priest After arrival in Canada (1649), he was stationed many years at Tadoussac and explored the surrounding wilderness At the time when the British Hudson's Bay Company was beginning operations, he was a leader of a French party that went (1671–72) by the Saguenay river, Mistassini Lake, and the Rupert river to Hudson Bay The region was claimed for France On another journey there he was captured (1674) by the British and taken to England After returning (1676) to Canada, he served at missions in the West and died at Sault Ste Marie

Albani, Francesco (franchäs'ko albä'nē), 1578–1660, Italian painter, fellow student with Guido Reni under Calvaert and Lodovico Carracci He won fame by completing the painting in the chapel of San Diego in the national Spanish church at Rome, which Annibale Carracci had begun In conjunction with Guido Reni, Albani painted a picture of the *Assumption* in the manner of Carracci His allegorical pictures of *The Four Elements* are noted His style is graceful and charming

Albani, Madame (ălbä'nē), 1852–1930, stage name of Marie Louise Emma Cécile Lajeunesse, Canadian operatic soprano She studied with Francesco Lamperti in Milan, made her debut in Messina (1870), and afterward sang with great success both in Europe and in the United States Her last triumph came as Isolde in Berlin (1896), with Jean de Reszke as Tristan She was made Dame of the British Empire in 1925 See her reminiscences, *Forty Years of Song* (1911)

Albania, (ălbā'nyŭ,) Albanian *Shqipnia* or *Shqiperia*, republic (10,629 sq mi , estimated pop 1,120,000), SE Europe, on the Adriatic coast of the Balkan Peninsula between Yugoslavia (north) and Greece (south) Tirana is the capital As a region, Albania is often understood to extend deeply into SW Yugoslavia and, to a lesser extent, into NW Greece, in both these countries there are considerable Albanian minorities Save for a fertile coastal strip Albania is rugged and mountainous, rising in the north to more than 8,000 ft Agriculture (corn, wheat, tobacco, and stock raising) is the chief occupation There are valuable mineral deposits (copper and bituminous coal), as yet only partly exploited A hydroelectric power plant was begun in 1947 Communications are poor except for the roads linking the chief inland cities (Tirana, Scutari, Elbasan, Koritsa, and Argyrokastron) and the main ports (Durazzo, Valona, and Sarande) The Drin (north) and the Voyutsa (south) are the chief rivers The Shkumbi river cuts Albania approximately into halves, it also separates speakers of the northern dialect (Gheg) from speakers of the southern dialect (Tosk) of the Albanian language, which belongs to the Illyrian subfamily of Indo-European languages (see LANGUAGE, table) Some Greek is spoken in the south The people are mainly hill tribes of very ancient stock About 60 percent are Moslem, about 20 percent Orthodox, and about 10 percent Roman Catholic The region, which anciently comprised parts of ILLYRIA and EPIRUS, was known to the ancient Greeks for its mines The coastal towns, Epidamnus (see DURAZZO) and APOLLONIA, were colonies of Corcyra (Corfu) and Corinth, but the interior formed an independent kingdom, which reached its height in the 3d cent B C Fought over by Macedonia and Rome, the country was under at least nominal Roman rule by the 1st cent. A D In fact, the Albanian mountain tribes were never fully subdued by any of their many conquerors, and the chieftains of their clans throughout the centuries retained much authority. After being occupied (5th cent) by the Ostrogoths, Albania was reconquered (535) for the Byzantine Empire by Justinian I Byzantine control was effective in the coastal cities, but was chronically superseded, inland, by the Serbs and the Bulgars As the bridgehead (across the Strait of Otranto) of Italian influence in the Balkans, Albania became after the 11th cent the theater of international rivalries Venice established autonomous colonies at SCUTARI and Alessio, Almalfi established its power at Durazzo In 1082 the Normans under ROBERT GUISCARD began, with fluctuating success, to dispute Albania with Byzantium Their efforts were continued by the Neapolitan Angevins Charles I of Naples was proclaimed (1272) king of Albania, however, in the 14th cent the Serbs under Stephen Dushan conquered most of the country and the Turks began their conquest. The Angevin domains were soon reduced to Durazzo, which in 1363 passed to a local lord The stout resistance to the Turks led by the Albanian national hero, SCANDERBEG, supported by Venice and Naples, collapsed in 1478, when Albania passed under Ottoman rule Durazzo, acquired by Venice in 1392, held out against the Turks till 1501 Ottoman domination lasted longer and influenced the country more deeply than that of any other foreign power Islam became the majority religion Numerous local revolts were suppressed Early in the 19th cent ALI PASHA ruled Albania like a sovereign, but was at last brought to ruin by the Porte The first of the BALKAN WARS gave the Albanians the opportunity to proclaim (1912) their independence An international control commission traced the borders of Albania in 1913 and destroyed the dream of a Greater Albania by assigning large tracts to Montenegro, Serbia, and Greece In the Second Balkan War (1913) Albania was occupied by the Serbs In 1914 WILLIAM, PRINCE OF WIED, became king of Albania, but he was soon expelled by his premier, ESSAD PASHA The First World War having begun, Albania was occupied by Serbs, Montenegrins, Greeks, and Italians, these, though allied, conflicted in their interests In 1916 the Bulgarians and Austrians entered Albania, which remained a battleground till the end of the war The borders of 1913 were subsequently reestablished, with minor changes Proclaimed a republic (1925), Albania was again made a kingdom under ZOG in 1928 In April, 1939, Italy, which had come to exert a virtual protectorate over the country, occupied Albania and united it with the Italian crown The chronic dispute between Albania and Greece regarding their respective minorities furnished a convenient pretext for the Italian attack on Greece in 1940 in the Second World War, S Albania again became the scene of heavy fighting The Albanian puppet government declared war on the Allies in 1940, but anti-fascist resistance forces later fought guerrilla warfare against the Axis Powers The strongest of these groups, led by Enver Hoxha, was radically leftist When Allied task forces landed late in 1944, Hoxha's partisans seized most of Albania and established (1946) a republic Under Hoxha's presidency a Communist one-party government was imposed Guided by the COMINFORM, Albanian foreign policy clashed with British, Greek, and Yugoslav interests See Rose Wilder Lane, *The Peaks of Shala* (1922), Ferdinand Schevill, *History of the Balkan Peninsula* (1922), E P Stickney, *Southern Albania or Northern Epirus in European International Affairs, 1912–1923* (1926)

Albania (ălbā'nēu), ancient name of a region in the E Caucasus, bordering on the Caspian Sea It is now largely comprised in the Azerbaijan SSR The Albanian or Caspian Gates (Latin *Albaniae Pylae*) are probably identical with the Iron Gates at DERBENT, RSFSR

Albano, Lake (ălbu'nō), picturesque crater lake central Italy, in the Alban Hills 15 mi SE of Rome It is c 6 mi in circumference An underground tunnel built in the 4th cent B C is still its only outlet ALBA LONGA was located near the lake South of the lake is Albano Laziale, a small town on the Appian Way, noted for the beautiful villas built here by the ancient Romans There are several Roman remains

Albany, Alexander Stuart or **Stewart, duke of.** see STUART OR STEWART, ALEXANDER

Albany, Louisa, countess of (ŏl'bŭnē), 1752–1824, wife of Charles Edward STUART (the Young Pretender), self-styled count of Albany, daughter of a German noble, the prince of Stolberg-Gedern Married in 1772, she was made unhappy by her dissolute husband, left him after eight years, and became the mistress of the poet Vittorio Alfieri until his death in 1803 After that she was mistress of a French artist, François Fabre Secret marriages with both men were rumored, but not well attested See biographies by Vernon Lee (pseud of Viola Paget, 1884) and Margaret Mitchiner (1937)

Albany, Robert Stuart or **Stewart,** 1st **duke of:** see STUART OR STEWART, ROBERT

Albany, ancient and literary name of Scotland Variants are Alban and Albin. ALBION usually refers to England

Albany, port (pop 4,761), Western Australia, SSE of Perth and on Princess Royal Harbour of King George Sound Founded in 1826 as a penal colony, it is the oldest settlement in the state. It is a rail terminus. Fruit is the chief export.

Albany. 1 Residential city (pop. 11,493), W Calif., on San Francisco Bay adjoining Berkeley, inc 1908 A U S Dept of Agriculture research laboratory is here 2 City (pop 19,055), co seat of Dougherty co , SW Ga , on the Flint river, founded 1836, inc 1841 It is an industrial city in a productive coastal-plain pecan area Meat packing is done here, and hosiery is produced Albany is also a tourist center, the transportation point for near-by Radium Springs, a popular resort Chehaw State Park is just east Albany State College (Negro, coeducational, 1903) is here 3 Town (pop 1,623), E Ind , NE of Muncie 4 Town (pop 1,259), co seat of Clinton co , S Ky , SSW of Danville, in the Cumberland foothills near the Tenn line The area was settled c 1800 and yields timber, coal, and farm produce 5 City (pop 2,010), co seat of Gentry co , NW Mo , on the East Fork of the Grand and NE of St Joseph, in a farm area, founded c 1845 6 City (pop 130,577), state capital, and co seat of Albany co , E N Y , on the west bank of the Hudson In 1609 Henry Hudson visited the site, and five years later the Dutch built Fort Nassau on Castle Island for their fur trade In 1623 several Walloon families began a permanent settlement at the Dutch post here, Fort Orange, which was renamed Albany (1664) when the English took control Albany was chartered as a city in 1686 and was made the state capital in 1797 It was long important as a fur-trading center and was active in the French and Indian Wars In 1754 the ALBANY CONGRESS met here The city's trade grew with the development of the state and of transportation, particularly after the opening of the Champlain and Erie canals in the 1820s A port of entry, it has much shipping, industry, and trade, with oil refineries and railroad shops Its products include machinery, chemicals, paper, and wood products Albany is the seat of the New York State College for Teachers, of the observatory (Dudley Observatory) and the schools of pharmacy, law, and medicine of Union Univ (see UNION COLLEGE), and of the Albany Institute of History and Art Dominating the city is the capitol (built 1867–98 7 City (pop 5,654), co seat of Linn co , NW Oregon, on the Willamette and S of Salem, founded 1848, inc 1864 It is a trade center in a fertile area of farms and orchards The state Republican party was organized here in 1856 8 City (pop 2,230), co seat of Shackelford co , N Texas, NE of Abilene The frontier army post, Fort Griffin, occupied from 1867 to 1881, was in the county Albany, earlier a center of ranching and salt-working, is still proud of the fine Hereford cattle bred here but is also a farm market and refines oil from near-by fields

Albany, river rising in W central Ontario and flowing east and northeast c 610 mi to the west side of James Bay The Kenogami, Little Current, and Ogoki rivers are its chief tributaries The river was named for the duke of York and Albany, later James II

Albany, Fort, fur-trading post, central Ont , at the mouth of the Albany river on James Bay It was founded by the Hudson's Bay Company as one of its earliest forts (before 1682) In the Anglo-French struggle for the Hudson Bay trade, it was first taken by the French under the chevalier de Troyes in 1686 and was later captured by Iberville, but from 1697 to 1713 it was the only post of the region in the possession of the British company It continued as a major post of the trade

Albany Congress, 1754, meeting at Albany, N Y , of commissioners representing seven British colonies in North America to treat with the Iroquois, chiefly because war with France impended A treaty was concluded, but the Indians of Pennsylvania were resentful of a land purchase made by that colony here and allied themselves with the French in the ensuing French and Indian War The meeting was notable as an example of cooperation among the colonies, but Benjamin Franklin's Plan of Union for the colonies, though voted upon favorably at Albany, was refused by the colonial legislatures and by the crown as demanding too great a surrender of their powers

Albany Regency, informal group of leaders of the DEMOCRATIC PARTY in New York state after 1820 Close cooperation, backed by social connections and a loose but vigorous program of democratic reform, was used by the members to enforce party regularity and to control elections, partly through the SPOILS SYSTEM Notable figures in the Regency were Silas WRIGHT, Martin VAN BUREN, William L MARCY, Azariah C FLAGG, and the elder Benjamin F BUTLER The power of the group was attacked by other groups, notably the ANTI-MASONIC PARTY, and was shaken by internal differences as to the radical reforms of Andrew JACKSON The slavery issue and the quarrel between BARNBURNERS and HUNKERS led to the decay of the Regency's prestige, which dwindled to nothing after the elections of 1848

albatross (ăl'bŭtrŏs), sea bird of the order of tube-nosed swimmers, which includes petrels, shearwaters, and fulmars The wandering albatross, made famous by Coleridge's *Rime of the Ancient Mariner*, has a wingspread of from 10 to 12 ft , although the wings are only about 9 in wide Albatrosses eat mainly fish, floating carrion, and refuse. Most albatrosses are found in the S Pacific region, e g , the wandering and the sooty species; a few, the black-footed, the short-tailed, and the Laysan albatrosses, regularly frequent the N Pacific, and the yellow-nosed occasionally does

Albay, Philippine Islands see LEGASPI

Albemarle, Arnold Joost van Keppel, 1st earl of (äl'bümärl), 1669–1718, Dutch adherent and close adviser of William III of England He accompanied the king to England (1688), was made an earl in 1696, and served William throughout his reign, then returned to Dutch service. He fought in the War of the Spanish Succession.

Albemarle, George Monck or Monk, 1st duke of: see MONCK OR MONK, GEORGE

Albemarle, town (pop 4,060), co seat of Stanly co., central N C , ENE of Charlotte, inc 1842 It has lumber, cotton, hosiery, and flour mills

Albemarle see GALÁPAGOS ISLANDS

Albemarle Point, site on the Ashley river, S C Here the English colonists of CHARLESTON made their first settlement in 1670

Albemarle Sound, arm of the Atlantic Ocean, NE N C , extending inland c 60 mi It is a fishing and boating resort A 4 5-mile bridge (opened 1938) spans the sound near Edenton

Albéniz, Isaac (ēsäk' älbā'nēth), 1860–1909, Spanish pianist and composer As an infant prodigy he toured Spain and South America unaccompanied He was influenced and encouraged by D'Indy, Fauré, Dukas, and Liszt, but it was Felipe Pedrell, in Madrid, who turned him toward the spirit of Spanish folk music, which characterizes his most significant works He is best known for *Iberia*, piano pieces in four books (1906–9) See Gilbert Chase, *The Music of Spain* (1941)

Alberdi, Juan Bautista (hwän' boutē'stä älbĕr'dē), 1810–84, Argentine publicist and diplomat With other young intellectuals he opposed Juan Manuel de ROSAS, and after 1838 he spent years of exile in Uruguay, Chile, and Europe, writing against ROSAS After the overthrow of ROSAS by URQUIZA (1852), Alberdi was employed on diplomatic missions Many of the suggestions made in his *Bases y puntos de partida para la organización política de la república argentina*, published in Valparaiso (1852), a masterpiece of political science, were incorporated into the Argentine constitution of 1853 After the overthrow of Urquiza, Alberdi settled in Paris and wrote political tracts against MITRE and SARMIENTO, sociological works, and essays In his less serious sketches he used the pseudonym Figarillo

Alberdingk Thijm, Josephus Albertus (yōsā'fōōs älbĕr'tōōs al'burdĭngk tĭm'), 1820–89, Dutch writer of poetry and prose dominated by a strongly Roman Catholic, often mystical, spirit Among his best works are the poem *De Klok van Delft* (1846) and the long short story *De Organist van den Dom* (written 1848) His son, **Karel Alberdingk Thijm** (kä'rl), pseud **Lodewijk van Deyssel** (lō'du-wĭk van dī'sl), 1864–, a leader of the literary revival of the 1880s, gained a greater reputation by his brilliant naturalistic novel, *Een Liefde* [a love] (1887)

Alberni (ălbûr'nē), city (pop 1,807), on S central Vancouver Island, British Columbia PORT ALBERNI, which adjoins it, is at the head of Alberni Canal, a 22-mile inlet allowing passage to the largest ocean vessels The cities' industries are based on forest products

Alberoni, Giulio. (jōō'lvō älbārō'nē), 1664–1752, Italian statesman in Spanish service, cardinal of the Roman Church As representative after 1713 of the duke of Parma at the court of PHILIP V of Spain, Alberoni gained influence and ultimately became prime minister With the princess des URSINS he arranged the marriage of the king with ELIZABETH FARNESE His aim was to strengthen Spain, to nullify the Peace of UTRECHT, and to crush Austrian hegemony in Italy The expeditions by which he recovered Sardinia from Austria (1717) and Sicily from Savoy (1718) precipitated the QUADRUPLE ALLIANCE of Britain, the Netherlands, France, and Austria Spain had to yield, and Philip was forced to dismiss and banish (1719) Alberoni, who retired to Rome He later became papal legate in the Romagna and in Bologna

Albert I, 1875–1934, king of the Belgians (1909–34); nephew and successor of Leopold II He married (1900) ELIZABETH, a Bavarian princess In the First World War his heroic resistance to the German invasion of Belgium in 1914 greatly helped the Allied cause Albert spent the entire war in the field at the head of his army, and in 1918 he led the Allied offensive which recovered the Belgian coast The king and his queen did much to improve social conditions in Belgium and in the Belgian Congo Albert's democratic and affable ways won him immense popularity and respect both at home and abroad He died in a rock-climbing accident in the Ardennes and was succeeded by his son, Leopold III His daughter, Marie José, married Humbert, crown prince (later king) of Italy See biography by Emile Cammaerts (1936).

Albert I, c 1250–1308, German king (1298–1308), son of RUDOLF I Albert was invested with Austria and Styria in 1282 His ambitious disposition and his power caused the electors to reject his candidacy for the crown (1292) and to choose ADOLF OF NASSAU In 1298 he led an army to the diet of Frankfurt, which deposed Adolf; he was subsequently chosen as Adolf's successor His failure to secure Holland and Zeeland (1300) encouraged the Rhenish archbishops and the elector palatine, backed by Pope BONIFACE VIII, to rebel (1300-1302), but he put down the revolt with the aid of the Rhine towns, in whose favor he had previously suppressed all tolls imposed since the death of Emperor Frederick II Albert's title was not recognized by Boniface till 1303 He interfered to keep Hungary out of the hands of WENCESLAUS II of Bohemia, but his campaign was unsuccessful until Wenceslaus's death (1305) Albert's son Rudolf succeeded Wenceslaus III (1306), but Bohemia was lost to the Hapsburgs at Rudolf's death (1307) Albert was assassinated by a band of conspirators, one of them his nephew He was succeeded by Emperor Henry VII

Albert II, 1397–1439, German king, king of Hungary and Bohemia (1438–39), duke of Austria (1404–38), son-in-law of Emperor Sigismund He was unable to suppress the revolt of the Bohemians and died of dysentery on a disastrous campaign against the Turks With Albert began the lasting HAPSBURG rule over the Holy Roman Empire until its dissolution in 1806

Albert (Prince Albert), 1819–61, royal consort of Victoria of Great Britain, whom he married in 1840 He was of WETTIN lineage, the son of Ernest I, duke of Saxe-Coburg-Gotha His unpopularity as an alien prince in England was not diminished by his dependence on the opinions of Baron von Stockmar The English came in time to admire him for his irreproachable character, his devotion to the queen and their children, and his responsible and studious concern with public affairs and with her handling of them His influence was strong in diplomacy, and his insistence on a moderate approach to the Trent Affair (1861) may have averted war with the United States See his letters, ed by Hector Bolitho (1933) and by Kurt Jagow (Eng tr by E T S Dugdale, 1938), biography by Hector Bolitho (1932)

Albert I, 1848–1922, prince of Monaco (1911–22) He was noted for his scientific expeditions and for his valuable contributions in the field of oceanography Louis II succeeded him as prince

Albert, 1490–1545, German churchman, a cardinal of the Roman Church, he belonged to the house of Brandenburg He became archbishop-elector of Mainz in 1514 In 1516, at Albert's direction, Johann TETZEL began to preach an indulgence in Albert's diocese It was this preaching which Martin Luther attacked Albert, a patron of Ulrich von HUTTEN, was expected to go over to the Reformers, but after 1525 he became actively opposed to them Later he invited the Jesuits to preach in his diocese He was a friend of Erasmus

Albert, Eugen Francis Charles d' (dăl'bĕr), 1864–1932, pianist and composer, b Glasgow, son of a German-French musician A pupil of Liszt, he was renowned as a piano virtuoso in Europe and first toured the United States, 1889–90, with Sarasate He became director of the Berlin Hochschule in 1907 As a composer, he is remembered for the operas *Tiefland* (1903) and *Die toten Augen* (1916) He was married to Teresa CARRENO, 1892–95

Albert, Lake see ALBERT NYANZA

Alberta (ălbûr'tu), province (c 248,800 sq mi ; with water surface 255,285 sq mi , pop 803,330), W Canada The capital is Edmonton, other important cities are Calgary, Lethbridge, and Medicine Hat Alberta is bounded on the east by Saskatchewan, on the north by Mackenzie dist , Northwest Territories, on the west by British Columbia, and on the south by Montana Westernmost of the Prairie Provs , it lies on a high plateau, rising on the west to the Continental Divide at the British Columbia border There are the foothills of the Rocky Mts and the mountains themselves, with three noted national parks—Jasper, Banff, and Waterton Lakes (the Canadian section of Waterton-Glacier International Peace Park) Although known as a prairie province, only about one quarter of its area is actually treeless—the undulating prairie of S Alberta Central Alberta has parklike, partly wooded country, and the northern stretches bear thousands of acres of virgin timberland Endowed with many lakes, streams, and rivers, the province is drained by the Peace, the Athabaska, the north and south branches of the Saskatchewan, the Red Deer, the St Mary, the Milk, and many other rivers The population is concentrated in S and central Alberta, except for farm centers in the fertile valley of the Peace, the northern portion is sparsely settled and still knows the presence of the fur trapper Agriculture ranks high in the provincial economy; grain, especially wheat, is a dominant crop, but mixed farming is developing In the south, expanding irrigation projects, such as the St. Mary-Milk project and those around Calgary, are placing thousands of additional acres under cultivation. Noted for its beef and dairy cattle, its hogs, and its sheep, the province is also rich in mineral re-

sources. Vast coal beds contain about 87 percent of the coal reserves of Canada. Oil has been commercially important since it was discovered in 1914 in quantity at Turner Valley, SW of Calgary, and rich new petroleum deposits were disclosed in the late 1940s, mainly in central Alberta. The bituminous sands along the Athabaska in N Alberta, as yet little exploited, are considered by some geologists to contain the greatest oil reserve yet known in the world The province also has extensive resources of natural gas Industrial development was accelerated by the Second World War, among Alberta's chief industries are meat packing, flour milling, oil refining, dairying, lumbering, textile milling, and the manufacturing of iron, steel, and clay products Alberta's early history was dominated by the fur trade Traders arrived from the upper Great Lakes before Sir Alexander Mackenzie crossed the region on his way to the Pacific The area remained under the control of the Hudson's Bay Company, with the most important post at Fort Chipewyan In 1870 the region became part of Canada Ranching began soon afterwards and is still important The Canadian Pacific Railway, completed in 1885, brought the homesteader Alberta received its name when it was separated (1882) from the Northwest Territories and was created a district and was named Alberta It became a province in 1905 In 1935 the Social Credit party captured the provincial legislature and William ABERHART became premier of the first SOCIAL CREDIT government in the world, upon his death in 1943, C E Manning was elected to his place, but the government's attempts to reform banking and money control were largely declared unconstitutional by the courts The Univ of Alberta is at Edmonton See C M MacInnes, *In the Shadow of the Rockies* (1930), W A Mackintosh, *Prairie Settlement the Geographical Setting* (1934), C H Douglas, *The Alberta Experiment an Interim Survey* (1937), M W Campbell, *The Saskatchewan* (1950)

Alberta, University of, at Edmonton, provincially supported, coeducational, chartered 1906, opened 1908 It has faculties of agriculture, applied science, arts and science, dentistry, education, law, and medicine and schools of commerce, household economics, nursing, and pharmacy Affiliated are two men's colleges, St Joseph's (Catholic) and St Stephen's (United Church)

Albert Achilles, 1414–86, elector of Brandenburg (1470–86), younger son of Elector FREDERICK I He succeeded his brother in 1470 and in 1473 issued the *Dispositio Achillea*, which established the indivisibility of Brandenburg and subjected it to the law of primogeniture The *Dispositio* remained in force until 1918

Albert Canal, waterway, 81 mi long Belgium, from the Meuse at Liége to the Scheldt (Escaut) at Antwerp Inaugurated in 1939, it was named for King Albert I, who started it in 1930 Connecting the vital industrial area of Liége with the chief port of Belgium, the canal was also intended as a defense barrier However, its fortifications were quickly overrun by German forces in May, 1940, in the Second World War The speedy capture of formidable Fort Eben Emael, near Liége, was particularly spectacular

Alberti, Domenico (dōmā'nēkō älbĕr'tē), c 1710–c 1740, Venetian singer, player on the harpsichord, and composer His prominence was chiefly due to his development of a type of broken-chord bass accompaniment, named for him Alberti bass

Alberti, Leone Battista (lā ō'nā bät-tēs'tä), 1404–72, Italian architect, musician, painter, and humanist He was one of the architectural founders of the Italian Renaissance His *De re aedificatoria* (1485) was the first printed book on architecture and was instrumental in spreading appreciation for antique Roman architecture His buildings show a pure classical style Among his works are, at Mantua, the Church of Sant' Andrea, which served as a model for many Renaissance churches, and, in Florence, the façade of Santa Maria Novella and the Rucellai Palace, where superimposed pilasters were used for the first time in the Renaissance Alberti designed also the so-called temple of the Malatesta in RIMINI, almost completely destroyed during the Second World War

Albertinelli, Mariotto (märyōt'tō älbĕr"tēnĕl'lē), 1474–1515, Florentine painter, of noble descent, one of the great masters of the High Renaissance He studied under Piero di Cosimo in the atelier of Cosimo Rosselli Here he formed a lasting friendship with his fellow student Bartolomeo di Pagholo, who, on joining the Dominicans, left to Albertinelli the completion of his *Last Judgment*, a fresco for Santa Maria Novella and now in the Uffizi Of Albertinelli's independent works, the *Visitation* (Uffizi) is his masterpiece In collaboration with Fra Bartolomeo he painted *Madonna and Saints* (Florence); *Annunciation* (Volterra), *Assumption*, and *Madonna in Glory* (cathedral, Besançon)

Albert Lea (lē), city (pop 12,200), co seat of Freeborn co, S Minn, near the Iowa line S of Minneapolis, settled 1855, platted 1856 It is a trade and manufacturing center in a diversified farm area Its manufactures include oil burners and clothing.

Albert Memorial, monument in Kensington Gardens, London, erected (1872–76) to the memory of Albert, prince consort It was executed from designs by Sir George Gilbert Scott and is a leading example of Victorian Gothic architecture The statue of the prince and the group *Asia* are the work of J H Foley Several other sculptors collaborated on the monument

Albert Nile: see BAHR-EL-JEBEL

Albert Nyanza (nyän'zu, nyän'su), **lake,** area 2,064 sq mi, central Africa, on the Belgian Congo—Uganda border, at an altitude of 2,018 ft It is almost enclosed by cliffs and wooded slopes It receives the Semliki river and the Victoria Nile, and it is drained by the Albert Nile (see BAHR-EL-JEBEL) There is steamer service reaching to Murchison Falls on the Victoria Nile The lake, discovered by Sir Samuel Baker in 1864, was named for the consort of Queen Victoria of England It is also called Lake Albert

Albert of Brandenburg, 1490–1568, grand master of the TEUTONIC KNIGHTS (1511–25), first duke of Prussia (1525–68), grandson of Elector Albert Achilles In 1525 he turned Protestant, secularized the dominions of the order which had elected him, and transformed them into the hereditary duchy of PRUSSIA, for which he did homage to King Sigismund I of Poland On the extinction of his line (1618), Prussia passed to the senior line of Brandenburg, and in 1701 it was made a kingdom

Albert the Bear, c 1100–1170, first margrave of Brandenburg (1150?–1170) He was a loyal vassal of Emperor Lothair II, who, as duke of Saxony, invested him (1123) with the East March (Austria), Albert was later deprived of the greater part of it He was rewarded for his share in Lothair's Italian campaign with the North March, which he used as a base for campaigns against the Wends (1134). Invested (1138) with Saxony by Conrad III, he was driven out by HENRY THE PROUD and in 1142 made peace with HENRY THE LION He took part in the Wendish Crusade of 1147, but generally preferred more conciliatory methods of dealing with his pagan neighbors, and as a result he inherited Brandenburg from its last Wendish prince and became (1143 or 1150) the first margrave Albert's achievements in Christianizing and Germanizing NE Germany were very important

Albertus Magnus, Saint (älbĕr'tŭs măg'nŭs), or **Saint Albert the Great,** b 1193 or 1206, d 1280, scholastic philosopher, called the Universal Doctor A nobleman of Bollstädt in Swabia, he joined (1223) the Dominicans and taught at Hildesheim, Freiburg, Regensburg, Strasbourg, and Cologne before the Univ of Paris made him doctor of theology in 1245 Later he taught again at Cologne, and he was also briefly (1260–62) bishop of Regensburg He was a thorough student of Aristotle, and he not only followed Robert Grosseteste in his approach to Aristotelian thought but also did much to introduce Aristotle's scientific treatises and scientific method to Europe Like Roger BACON, he had a scientific interest in nature He made notable botanical observations (recorded in such works as *De vegetabilibus*), was the first to produce arsenic in a free form, and studied the combinations of metals In philosophy he set out in his *Summa theologiae* to controvert AVERROËS and others and to reconcile the apparent contradictions of Aristotelianism and Christian thought He wrote many treatises, and many more have been ascribed to him, the problem of determining which are genuinely of his authorship is difficult He was a strong influence on his favorite pupil, St THOMAS AQUINAS Albertus was canonized in 1931

Albertville, town (pop c 6,000), SE Belgian Congo, on Lake Tanganyika It is connected by steamer with Kigoma, the terminus of the railroad from Dar-es-Salaam, and by rail with Kabalo Copper, cotton, and peanuts are exported

Albertville, city (pop 3,651), NE Ala, NNW of Gadsden, in a cotton and truck area It has textile mills

Albi (älbē'), city (pop 27,185), capital of Tarn dept, S France, in Languedoc, on the Tarn It has textile manufactures An episcopal see since the 5th cent, Albi was ruled from the late 12th cent until the French Revolution by its bishops It was the center of the heresy to which it gave its name (see ALBIGENSES) The council finally ending the heresy was held here in 1254 Built of red bricks, Albi is a marvel of medieval architecture The huge Gothic cathedral (13th-14th cent) resembles a fortress rather than a church Other structures include the episcopal palace (13th-15th cent) and an 11th-century bridge

Albia (äl'bēu), city (pop 5,157), co seat of Monroe co, S Iowa, SE of Des Moines and W of Ottumwa, near large coal fields, founded as Princeton, inc 1859 Farm equipment is made here

Albigenses (älbĭjĕn'sēz) [Latin,=people of Albi, one of their centers], religious sect of S France in the Middle Ages They were officially heretics, but actually they were CATHARI, i e, not Christians at all, but Provençal adherents of the great Manichaean dualistic system that was endemically popular in the Mediterranean basin for centuries (see MANICHAEISM and BOGOMILS). They held the coexistence of two principles, good and evil, represented by God and the Evil One, light and dark, the soul and the body, the next life and this life, peace and war, and the like They believed that Jesus lived only in semblance (a typically Gnostic idea) They were extremely ascetic, bound to absolute chastity, and abstaining from flesh in all its forms, including milk and cheese They were in two classes, believers and Perfect, the former much more numerous, making up a catechumenate not bound by the stricter rules such as the Perfect observed The Perfect were those who had received the sacrament of *consolamentum*, a kind of laying on of hands Their clergy the Albigenses held in high regard One of the most curious practices of the sect was the custom of suicide, preferably by starvation, for if this life is essentially evil, its end is to be hastened They had proselyting enthusiasm and preached vigorously This fact partly accounted for their success, for at that time preaching was unknown in ordinary parish life In the field of asceticism also the contrast between local clergy and the Albigenses was helpful to the new sect Albigensianism appeared in the 11th cent and soon had powerful protectors Local bishops were ineffectual in dealing with the problem, and the pope sent St Bernard of Clairvaux and other Cistercians to preach in Languedoc, the center of the movement In 1167 the Albigenses held a council of their own at Toulouse Innocent III attacked the problem anew, and his action in sending (1205) St Dominic to lead a band of poor preaching friars into the Albigensian cities was decisive These missionaries were hampered by the war that soon broke out In 1208 the papal legate, a Cistercian, Peter de Castelnau, was murdered, probably by an aid of RAYMOND VI of Toulouse, one of the chief Albigensian nobles The pope proclaimed (1208) the **Albigensian Crusade.** From the first, political interests in the war overshadowed others, behind Simon de MONTFORT, the Catholic leader, was France, and behind Raymond was Peter II of Aragon, irreproachably Catholic Innocent attempted to make peace, but the prize of S France was tempting, and the crusaders continued to harry the whole region In 1213, at Muret, Montfort was victor and Peter was killed The war went on, with the son of Philip II (later Louis VIII) as one of the leaders Simon's death in 1218 robbed him of victory and left his less competent son to continue the fight Raymond's son, Raymond VII, joined the war, which was finally terminated with an honorable capitulation by Raymond By the Peace of Paris (1229) Louis IX acquired the county of Toulouse The religious result of the crusade was negligible In 1233 Pope Gregory IX established a system of legal investigation in Albigensian centers and put it into the hands of the Dominicans, this was the birth of the medieval INQUISITION After 100 years of the Inquisition, of tireless preaching by the friars, and of careful reform of the clergy, Albigensianism was dead See Steven Runciman, *The Medieval Manichee* (1947)

albino (älbī'nō) [Portuguese,=white], animal or plant lacking normal pigmentation The absence of pigment is observed in the body covering (skin, hair, and feathers) and in the iris of the eye The blood vessels of the iris show through, giving it a pink or reddish color, and the eyes are highly sensitive to light Albinism is inherited as a Mendelian recessive character in humans and other animals Through experimental breeding, races of albinos have been established among some domestic animals, e g, mice, rabbits, pigeons, and chickens Albino animals are sometimes held sacred, e g, white elephants in Siam and white cattle in India The presence of an excess of black pigment is called melanism

Albion (äl'bēun), ancient and literary name of Britain It is usually restricted to England and is perhaps derived from the chalk cliffs [Latin *albus*= white] ALBANY generally designates Scotland

Albion (äl'bēun) **1** City (pop 1,855), co seat of Edwards co, SE Ill, founded 1818 by Englishmen led by Morris BIRKBECK and George FLOWER, inc 1869 Several old houses are preserved **2** Town (pop 1,234), co seat of Noble co, NE Ind, NW of Fort Wayne, laid out 1847 The surrounding countryside with its numerous lakes is beautiful "Limberlost," the home of Gene Stratton Porter, is here **3** Industrial city (pop 8,345), S Mich, on the Kalamazoo and S of Lansing, settled 1833, inc as a village 1855, as a city 1885 Heating and cooling equipment is made Albion College (Methodist, coeducational, 1835) is here Near by is Starr Commonwealth, a home for delinquent boys **4** City (pop 2,268), co seat of Boone co, E central Nebr, SW of Norfolk, settled 1871, inc 1873 **5** Village (pop 4,660), co seat of Orleans co, W N Y, on the Barge Canal and W of Rochester; inc 1828 It has a cannery and stone quarries A state training school for women is here **6** Manufacturing borough (pop 1,604), NW Pa, near Erie, settled 1815, inc 1861

Albizu Campos, Pedro (pädrō älbē'sōō kam'pōs), 1891–, Puerto Rican political leader, grad Harvard (B A, 1916, LL B, 1921) After service in the First World War, he entered politics and became

the fiery champion of Puerto Rican independence. Convicted of seeking to overthrow the U S government, he was imprisoned (1937–43) at Atlanta, then hospitalized in New York before returning to Puerto Rico in 1947 His party made a poor showing in the 1948 election

Alboin (ăl'boin), d 572?, first Lombard king in Italy (569–572?) After concluding an alliance with the Avars, he led a mixed host across the Alps into Italy in 568 He took Milan in 569 and after a three-year siege reduced Pavia, which became his capital He conquered most of N and central Italy from the Byzantines (see LOMBARDS) According to a legend probably based on fact, he was murdered at the instigation of his wife, ROSAMOND

Alborg, Denmark see AALBORG

Albornoz, Gil Álvarez Carrillo de (hĕl' ăl'vărăth kărē'lyō dā ălbōrnōth'), 1310?–1367, Spanish and papal statesman and general, cardinal of the Roman Church He was archbishop of Toledo before he received (1350) the red hat Under Alfonso XI of Castile he distinguished himself fighting against the Moors at Tarifa and Algeciras and was chancellor of Castile, but at the accession (1350) of Peter I (Peter the Cruel) he left Spain and entered the service of the pope, then at Avignon Put in charge of the papal armies, he was sent (1353) to the Papal States as cardinal legate Using the prestige of Cola di RIENZI, he entered Rome with him By skillful diplomacy and force of arms when necessary, he restored papal authority in the Romagna and the Marches, where the communes and petty local tyrants had enjoyed practical autonomy He compiled the law code of the Marches, known as the Constitutions of Aegidius (1357), which was in use until 1816 He died soon after becoming papal legate at Bologna, where the college he founded for Spanish students still exists His military and political accomplishments had no lasting results

Albrecht. For rulers thus named, see ALBERT

Albrechtsberger, Johann Georg (yō'hän gā'ôrg ăl'brĕkhtsbĕr"gur), 1736–1809, Austrian musical theorist, one of Beethoven's teachers In 1772 he became court organist in Vienna and in 1792 was appointed chief organist and choirmaster of St Stephen's Church, Vienna His compositions, including Masses, symphonies, chamber music, and six oratorios, reveal capable workmanship, but did not transcend their own time

Albret, Jeanne d' see JEANNE D'ALBERET

Albret (ălbrā'), former duchy, SW France, in the LANDES of Gascony The powerful lords of Albret became kings of NAVARRE by the marriage (1494) of Jean d'Albret with Catherine de FOIX, queen of Navarre, who also brought him FOIX and BÉARN Their son, Henri d'Albret, married (1527) MARGARET OF NAVARRE, thus adding ARMAGNAC to his territories, which now included nearly all Gascony He was made a peer of France in 1550, when Albret was raised to a duchy His daughter and heir, JEANNE D'ALBRET, married Antoine de BOURBON, and their combined territories were inherited by Henry of Navarre, who in 1589 became king of France as Henry IV Henry added Albret to the royal domain in 1607 as part of the province of Gascony

Albright, Ivan Le Lorraine (ōl'brīt), 1897–, American painter, b Chicago He made medical drawings in the First World War In his somber and meticulous painting even commonplace subjects take on a macabre and symbolic significance He is represented in leading galleries throughout the United States His twin brother, Malvin Albright (1897–), also a well-known painter, has exhibited widely under the name Zsissly

Albright, Jacob, 1759–1808, American Protestant religious leader, founder of the Evangelical Association (later the Evangelical Church), b near Pottstown, Pa A Pennsylvania German and a Lutheran, he was converted c 1790 to Methodism Preaching and forming classes in the German settlements he was ordained a minister (1803) by representatives from these classes and was elected bishop at the first annual conference held by his followers in 1807 The movement, unrecognized by the Methodists, did not take the name Evangelical Association until after Albright's death A college in Reading, Pa, bears his name The Evangelical Church united in 1946 with the United Brethren in Christ to form the EVANGELICAL UNITED BRETHREN CHURCH

Albright College. see READING, Pa

Albumazar (ăl"bōōmā'zur), 805?–885, Arabian astronomer, more fully Abu-Mashar Jafar ibn Mohammed Something of his achievement is known through manuscripts in the Escorial library in Spain and other libraries of Europe In his *De magnis conjunctionibus* he claimed that the world had been created when the seven planets were in conjunction in the first degree of Aries and that its end would come when they should be in conjunction again in the last degree of Pisces In his astronomical tables he used the Persian calculations of the years and pointed out that they did not follow the Jews' reckoning of time The name of Albumazar was given to the chief character in a play, *L'astrologo* (1606), by G B. della Porta, and an adaptation in English, called *Albumazar*, by Thomas Tomkis was performed in 1614

albumin (ălbū'mĭn) [from Latin,=white of egg], member of a class of proteins which are soluble in water and coagulate on heating Albumins are complex organic compounds widely distributed in plant and animal tissues, e g , leucosin is found in wheat, lactalbumin in milk, serum albumin in blood, and ovalbumin in eggs The white of egg is now believed to be a mixture of proteins and is generally spelled *albumen* In the human body the serum albumin, along with other proteins in the plasma, plays an important part in regulating the distribution of water in the body Egg white is frequently used as an antidote for poisons In industry the value of albumins lies chiefly in their ability to clear liquids of suspended particles They are used in textile printing, in the fixation of dyes, in refining sugar, and in other processes

Albuquerque, Afonso de (ăfō'zō dŭ ăl"bŭkĕr'kŭ), 1453–1515, Portuguese admiral, the real founder of the Portuguese Empire in the East He first went to India in 1503, and in 1506 he set out with Tristão da CUNHA, carrying secret instructions to supersede Francisco de ALMEIDA in command After they had gone along the coasts of Madagascar and E Africa and captured the island of Socotra, Albuquerque left Tristão da Cunha and with his own fleet ravaged the Oman coast and took (1507) Hormuz, he attempted to build a fort at Hormuz, but had to retire to Socotra when some of his men deserted Almeida disavowed the conquest and, after Albuquerque had arrived in India, refused to yield office to him and imprisoned him When a Portuguese fleet arrived with confirmation of Albuquerque's appointment, Almeida yielded In 1510 Albuquerque's expedition against Calicut failed, and after capturing Goa he had to yield it briefly only to capture it again and make it a mainstay of Portuguese strength In 1511 he sailed to Malacca and took it, thus bringing SE Asia into the Portuguese orbit He made peace with the ruler of Calicut and set out to gain control of the Red Sea He did not succeed in his attempt (1513) to take Aden, but Hormuz fell to him in 1515 While on his way from Hormuz to India he received word that he had been superseded He died at the entrance to Goa harbor By his conquests, his system of forts, and his genius in administration, he had made the Portuguese secure in the East See K G Jayne, *Vasco da Gama and His Successors* (1910)

Albuquerque (ăl'bukûr"kē), city (pop 35,449), co seat of Bernalillo co , W central N Mex , on the upper Rio Grande and SW of Santa Fe, inc 1890 Largest city of the state, it is an important commercial, industrial, rail, and air center, serving a rich timber, mineral, farm, and livestock area The city has railroad shops, lumber mills, and wool warehouses, among its manufactures are bricks and tiles, dairy products, woodwork, and Indian jewelry and curios It is divided into the old and the new town, the old was founded in 1706 and named San Felipe de Alburquerque, in honor of Philip V of Spain and the duke of Alburquerque (the first r was later dropped from the name of the city) New Albuquerque was platted in 1880, in connection with the railroad In a mountain region, it is a noted health resort with many sanatoriums and hospitals (including a U S veterans' hospital and a U S Indian hospital) The UNIV OF NEW MEXICO (see NEW MEXICO, UNIVERSITY OF), Catholic Teachers College of New Mexico, and a U S school for Indians are here Other points of interest include the Church of San Felipe de Neri (1706) and the old-town plaza Albuquerque is in the Pueblo Indian country with many pueblos near by See Erna Fergusson, *Albuquerque* (1947)

Alburg (ôl'bûrg), town (pop 1,623), NW Vt , a peninsula jutting into Lake Champlain from the Canadian line It is a port of entry Settlement, attempted by the French before 1750, was accomplished in 1782 A bridge was built in 1937 between Rouses Point and Alburg

Albury (ăl'bŭrĭ), town (pop 14,419), New South Wales, Australia, on the Murray and WSW of Canberra It is a gold-mining and wool-trading center The Hume Reservoir is near by

Alcaeus (ălsē'us), d c 580 B C , Greek poet of Lesbos, a noted early writer of personal lyrics The extant fragments of his charming, impulsive verse are concerned with politics, war, love, and wine An aristocrat, he was often embroiled in political battles with the ruling tyrants He was, according to tradition, a literary associate of SAPPHO The Alcaic strophe (ălkā'ĭk), said to have been his invention was much used by Greek lyrists The stanza has four lines—two of 11 syllables, the third of 9, and the fourth of 10 It was greatly admired by Horace, who used it with slight modification

Alcalá de Henares (ălkălä' dā ānā'rĕs), city (pop. 18,013), Madrid prov , central Spain, in New Castile It is triply famous as the former seat of a great university founded in 1508 and transferred to Madrid in 1836, as the birthplace of Cervantes, and as the scene of the Cortes in which ALFONSO XI promulgated the *Ordenamiento de Alcalá* Among its landmarks are a Gothic collegiate church and the fine archiepiscopal palace. Leather, soap, and china are made

Alcalá la Real (lä räăl'), city (pop 8,437), Jaén prov , S Spain, in Andalusia It has well-known mineral springs. Here in 1810 the French defeated the Spanish in the Peninsular War

Alcalá Zamora, Niceto (nēthä'tō ălkälä' thämō'rä), 1877–1949, Spanish statesman and president of Spain (1931–36) After holding several cabinet posts under the monarchy, he turned republican and was jailed for his political activity in 1930 After leading the successful revolution of 1931, he became first provisional and then constitutional president of the Spanish republic A middle-of-the-road liberal, he was ousted by the Cortes on a Socialist motion (April, 1936) and was succeeded as president by Manuel Azaña He went into exile first to France and then (1942) to Argentina

alcalde (ălkăl'dē, Span ălkăl'dā) [Span , from Arabic,=the judge], Spanish official title, in existence at least since the 11th cent , originally designating a judge with certain administrative functions The office was deprived of most of its purely judicial powers in 1812, since 1877 the alcalde has been the chief of the municipal government and the local representative of the governor The office was also instituted in the Spanish colonies There, the *alcalde mayor* was the administrator of a provincial division usually though not always smaller than that of a corregidor, he might even be the assistant of a corregidor The alcalde proper became the *alcalde ordinario*, a municipal officer, who frequently exercised the powers of mayor and sheriff and was in some villages the sole representative of the law Another Spanish title, *alcaide* or *alcayde*, has the same origin, but is used to designate the governor of a castle or a fortress

Alcamenes (ăl"kumē'nēz), 5th cent B C , Athenian sculptor, said to have been a pupil and rival of Phidias He worked in gold, ivory, marble, and bronze and was celebrated for his number and unusual artistry of his statues His *Aphrodite of the Gardens* at Athens was one of the great masterpieces of antiquity Pausanias erroneously attributed to him the sculptures of the west pediment of the temple of Zeus at Olympia

Alcamo (ăl'kamō), rural city (pop 38,129), NW Sicily, Italy The ruins of ancient SEGESTA are near by

Alcántara (ălkăn'tara), town (pop 4,404), Cáceres prov , W Spain, in Estremadura, near the Tagus There are a fine Roman bridge built in honor of Emperor Trajan and ruins of the convent and church of the Knights of Alcántara The **Order of Alcántara,** one of the great military religious orders of Spain, established its seat here in the 13th cent after the expulsion of the Moors and enjoyed a period of great splendor (13th-14th cent) The dignity of grand master passed to the Castilian crown in the 15th cent

Alcatraz (ăl'kutrăz"), rocky island in San Francisco Bay, W Calif Fortified by the Spanish and used after 1859 as a U S military prison, it was made in 1933 a Federal prison for dangerous criminals Nicknamed "The Rock," the island prison has a reputation for strict discipline and is allegedly escapeproof

alcazar (ăl'kuzär", Span *alcázar* (ălkă'thär) [Arabic,=the palace], type of palace in Spain, generally royal, built in the centuries of Moorish domination Formed around large courts, within strong walls, it stood in the streets of a city and was defensible but not fortresslike The fortress palace was a separate type, to which the Alhambra belonged There are alcazars at Seville, TOLEDO, Segovia, and Córdoba The term is also commonly used for any palace in a Mohammedan country

Alcazarquivir (ălkă"tharkēvēr'), city (pop 35,786), E Spanish Morocco Here, on Aug 4, 1578, was fought the "battle of the three kings," in which the king of Morocco (whose army won the victory), his Portuguese-supported rival, and Sebastian of Portugal all perished The name also appears as Al Qasr al Kabir and Kasr el Kebir

Alcestis (ălsĕ'stĭs), in Greek mythology, daughter of Pelias She was won in marriage by Admetus, who fulfilled her father's condition that her suitor come for her in a chariot drawn by wild animals So great was her wifely devotion that when Admetus was granted life by the gods if someone else would die in his place, she willingly gave her life Hercules, however, rescued her from Hades and reunited husband and wife

alchemy (ăl'kumē), ancient art of obscure origin in which chemistry had its roots Some scholars hold that it was first practiced in early Egypt and others that it arose in China (in the 5th or in the 3d cent B C) and was from there carried westward Alchemy centered chiefly around experiments with metals and with other chemical materials Alchemical apparatus included the alembic (or *ambix*) for distillation and the *kerotakis* for sublimation A chief goal of alchemy was to transmute the base metals into gold In its beginnings alchemy was chiefly a craft and it embraced many kinds of metalwork, including the use of alloys resembling gold and silver. Alexandria is generally

considered a center of early alchemy, and the art was influenced by the philosophy of the Hellenistic Greeks, the conversion of base metals into gold (considered the most perfect of metals) was a part of a general striving of all things toward perfection Alchemy was early associated with astrology It is believed that the concept of the philosopher's stone (called also by many other names including the elixir and the grand magistery) may have originated in Alexandria, this was an imaginary substance capable of transmuting the less noble metals into gold and also of restoring youth to man Alchemy, strongly tinged with magic, reached the Arabs (perhaps in the 8th cent) and remained for several centuries under the Moslem influence, in the 12th cent it reached parts of Europe through translations of writings of the Arabs (the early Greek treatises were not known in Europe in the Middle Ages) Arabian alchemy was preserved especially in the works of GEBER, and the earlier Greek alchemy in that of Zosimus and others The alchemical writings of the Middle Ages were couched in symbolic and cryptic language The alchemists became obsessed with their quest for the secret of transmutation, some adopted deceptive methods of experimentation, and many gained a livelihood from hopeful patrons This pseudo-alchemy fell into disrepute However, in the searching experimental quests of the alchemists chemistry had its beginnings, indeed, the line between alchemy and chemistry is impossible to draw TRANSMUTATION OF ELEMENTS has been accomplished in modern chemistry See Lynn Thorndike, *A History of Magic and Experimental Science* (6 vols , 1923–41), John Read, *Prelude to Chemistry* (1937), A J Hopkins, *Alchemy· Child of Greek Philosophy* (1943), F. Sherwood Taylor, *The Alchemists* (1949)

Alcibiades (ălsĭbī'dēz), c 450–404 B C , Athenian statesman and general. Of the family of Alcmaeonidae, he was a ward of Pericles and was for years a devoted attendant of Socrates He turned to politics after the Peace of Nicias (421 B C , see NICIAS) brought the PELOPONNESIAN WAR to a temporary halt and was the leader in agitating against Sparta So successful was he that Athens joined an alliance against Sparta, and when Sparta attacked (418 B C) Argos, Alcibiades led an Athenian force to help the Argives Athens and the allies were roundly beaten at Mantinea When Melos refused an alliance with Athens, Alcibiades led the expedition that took the island, killed all the men, and sold the women and children into slavery—as a demonstration of Athenian might. He was (415 B C) the chief promoter of the Sicilian campaign and was one of the three leaders (with Nicias and Lamachus) of the Athenian forces On the night before the expedition sailed, all the statues of Hermes (the hermae) in Athens were mutilated, a sacrilege that caused fear and commotion in the city Alcibiades was accused—almost certainly falsely—of the crime and was not allowed to have an immediate trial before sailing When the forces reached Sicily, he proposed an attempt to win allies rather than attacking the hostile cities of Selinus and Syracuse at once This was the policy carried out to ultimate disaster, but not under the direction of Alcibiades, for he was summoned home to stand trial Instead he fled to Sparta, where he gave advice to King AGIS I, who was successful against Athens Alcibiades, however, fell into trouble with the Spartan king, presumably because of an affair with the queen, and c 413 he fled to the protection of the Persian satrap TISSAPHERNES He then sought to return to Athens, and after the oligarchy of the Four Hundred fell (411), he was recalled at the instance of Thrasybulus Athens seemed to have a short new era of greatness, as the fleet again became mistress of the Aegean when Alcibiades in 410 won a victory over the Peloponnesian fleet off CYZICUS In command of Athenian forces, he recovered (408) Byzantium, and he was acclaimed in Athens A new Spartan commander, however, appeared in Lysander, who defeated the Athenian fleet at Notium in 406 B C. Though Alcibiades was absent on another expedition at the time, he was, nevertheless, blamed and exiled He went to a castle he owned on the western shore of the Hellespont There in 405 B C he attempted to warn the Athenian fleet at AEGOSPOTAMOS against a surprise attack by the Spartans, but his advice was ignored A little later at the behest of Lysander, the Persian satrap PHARNABAZUS had Alcibiades murdered Historians and commentators have disagreed in their estimate of Alcibiades from his own day to the present, some have viewed him as a highly competent and unappreciated leader, but most have considered him an evil adviser largely responsible for the decline of Athens

Alcimus (ăl'sĭ-) [Gr , =brave], Hellenizing Jew, appointed to the high priesthood, but opposed by the Maccabees 1 Mac 7, 9 1,54–57, 2 Mac 14 3,13,26

Alcinoüs (ălsĭl'nōŭs, -nō'ŭs), in Greek legend, hospitable king of Phaeacia; father of Nausicaä He entertained Jason and Medea as well as Odysseus.

Alciphron (ăl'ăfrŏn,-frŭn), fl. A D. c 200?, Greek satirist. His extant work (in fine Attic style) consists of 118 imaginary letters by common people living in Athens in the 4th cent. B C. and tells much about domestic life

Alcmaeon (ălkmē'ŭn), in Greek legend, one of the EPIGONI, son of AMPHIARAÜS and ERIPHYLE He killed his mother in revenge for his father's death For this crime he was persecuted by the ERINYES. Later he married CALLIRRHOË and lived in peace until his wife demanded the robe and necklace of HARMONIA When he tried to regain these from his former wife, Arsinoë, her brothers killed him

Alcmaeonidae (ălk"mēŏn'ĭdē), Athenian family powerful in the 7th, the 6th, and the 5th cent B C Blamed with the murder of the would-be tyrant Cylon (c 632 B C), they were considered attainted and were exiled, but they were again in Athens in the 6th cent The most prominent members of the family later were CLEISTHENES, PERICLES (whose mother was an Alcmaeonid), and ALCIBIADES

Alcman (ălk'mun), fl before 600 B C , Greek poet of Sparta, founder of the Dorian school of choral lyric poetry. Short choral fragments and a longer one (part of a *parthenion* or choir song for girls) survive His verse, simple, clear, and musical, was often sung at festivals and public functions

Alcmene (ălkmē'nē), in Greek legend, wife of AMPHITRYON Zeus, in love with her, visited her in the form of Amphitryon She bore Hercules to Zeus and Iphicles to Amphitryon.

Alcoa (ălkō'ŭ), industrial city (pop 5,131), E Tenn , S of Knoxville, inc 1919 It was founded in 1913 by the Aluminum Company of America, which has established large reduction plants here

Alcobaça (ălkōōbă'sŭ), town (pop 4,016), Leiria dist , W central Portugal, in Estremadura. It became a center of the Cistercians in the reign of Alfonso I, and the abbey (building begun 1152) was the greatest of medieval Portugal It exercised enormous influence on education, social conditions, finance, and politics The early kings of Portugal are buried here

alcohol, any of a class of organic compounds which are composed of carbon and hydrogen with one or more hydroxyl (see HYDROXIDE) radicals present in each molecule In common usage the term *alcohol* is applied to ETHYL ALCOHOL The class includes METHYL ALCOHOL, the amyl, butyl, and propyl alcohols, glycol, a colorless liquid with a sweetish taste used sometimes as a substitute for glycerin in explosives, and GLYCERIN or glycerol Alcohols are generally classified according to the number of hydroxyl groups in the molecule Those which have one hydroxyl group are called monohydric or monatomic alcohols These include methyl, ethyl, propyl, butyl, and amyl alcohol Glycol, with two hydroxyl groups, is a dihydric alcohol, and glycerol, with three hydroxyl groups, is trihydric The monohydric alcohols are further classified as primary, secondary, or tertiary according to the number of carbon atoms attached to the carbon atom that is bound to the hydroxyl group Chemical reactions involving the hydroxyl (oxygen-hydrogen) group of atoms present in an alcohol molecule are of two types, that in which the hydroxyl group as a whole is replaced and that in which the hydrogen only is involved in the reaction Alcohols differ in boiling and melting points, densities, and other physical properties, they range from volatile liquids to paraffinlike solids at ordinary temperatures

alcoholism results from the ingestion of relatively large amounts of ethyl alcohol Alcohol is absorbed through the gastrointestinal tract, the rate of absorption is dependent chiefly upon the concentration of the alcohol—the presence of food in the stomach decreases the rate Ingestion of adulterated alcoholic beverages containing methyl (wood) alcohol results in a condition known as methyl-alcohol poisoning. One of the disastrous effects of such poisoning is optic neuritis which may lead to complete blindness within a few days Washing out the stomach is the treatment Consumption of alcohol in small amounts may have no obvious effects Taken in larger quantities it usually causes muscular incoordination, the reflexes are less rapid, the face becomes flushed, occasionally pallid, and nausea and vomiting may occur A state of partial consciousness may be followed by coma The condition known as acute alcoholism results from the action of alcohol on the central nervous system The term alcoholism, however, more usually means chronic alcoholism, caused by the cumulative effect upon the organs and tissues of the body following the frequent ingestion of large amounts of alcohol. Physiological and structural changes may ensue, e g , chronic gastritis, which leads to loss of appetite and malnutrition Neuritis and DELIRIUM TREMENS are among related syndromes Chronic alcoholism is now considered to be a symptom of psychic instability, and the problem is being studied by various educational institutions At Yale University scientific studies of alcoholism were undertaken at the laboratory of applied physiology in 1930, and a school of alcoholic studies was established there in 1943 The first free clinics in the United States for diagnosis, treatment, and guidance of inebriates were established (1944) in New Haven and Hartford, Conn. The organization known as Alcoholics Anonymous was founded in 1934 for aiding those who desire help, chiefly through association with and encouragement from others who have been alcoholics. In 1937 the Research Council on Problems of Alcohol was organized and in 1938 it became affiliated with the American Association for the Advancement of Science

Alcorn Agricultural and Mechanical College: see PORT GIBSON, Miss

Alcott, Bronson (Amos Bronson Alcott) (ôl'kut), 1799–1888, American educational reformer and transcendental philosopher, b. near Wolcott, Conn His meager formal education was supplemented by indiscriminate reading while he worked on the farm or in a clock factory or peddled Yankee goods in the South He taught in several places until, in 1834, he opened his famous Temple School in Boston His own record and that made by Elizabeth Peabody, his assistant, show his concern with the threefold mental, physical, and spiritual development of the child He was working on lines similar to Froebel's, but was not as thorough, practical, or consistent His disappointment at his failure in Boston was lessened when he heard of Alcott House, a school founded by his disciples in England He named and wrote for the *Dial* (the transcendental "Orphic Sayings" being his most famous contribution) and was a nonresident member of Brook Farm With three Englishmen he started (1843) a high-thinking, cooperative vegetarian community, "Fruitlands," near Harvard, Mass , but abandoned it in 1844 Poverty dogged the family but did not disturb the calm, kindly Alcott in his pursuit of the soul of the universe The wholesome family life of the Alcotts is reflected in the writings of his daughter Louisa May ALCOTT Her success relieved him of financial worry and freed him to continue his rambling "conversations" on tour through the West He became superintendent of the Concord public schools, whose reformation he described in his *Reports* From 1879 on he was dean of the Concord School of Philosophy, which annually gathered disciples to hear him and many other speakers Among his writings are *Observations on the Principles and Methods of Infant Instruction* (1830), *Record of a School* (1835), *Conversations with Children on the Gospels* (1836–37), and *Ralph Waldo Emerson* (1882) See his journals (ed by Odell Shepard, 1938), H. W Morrow, *The Father of Little Women* (1927), Odell Shepard, *Pedlar's Progress* (1937)

Alcott, Louisa May, 1832–88, American novelist and writer of children's books, b Germantown, Pa , daughter of Bronson ALCOTT She is chiefly remembered for one of the most popular girls' books ever written, *Little Women*, in which the character Jo March is largely autobiographical Among her friends and tutors were Emerson and Thoreau, but in her works she recorded her impatience with most of her father's transcendental plans. An impulsive, warmhearted girl, she early began to assist in the family support and tried domestic service, sewing, and teaching, at 17 she contemplated a stage career and wrote several melodramatic plays By 1860 her poems and short stories began to be published in the *Atlantic Monthly* Her first book, *Flower Fables* (1854), was a collection of tales originally written for Emerson's little daughter Her letters written to her family while she was a Civil War nurse and published as *Hospital Sketches* (1863) were received with enthusiasm, and her first novel, *Moods*, followed in 1864 In 1867 she became editor of *Merry's Museum*, a magazine for children *Little Women*, published in 1868–69, had a phenomenal sale in English and in numerous translations Among the well-loved books for young people which followed in rapid succession are *An Old-fashioned Girl* (1870), *Little Men* (1871), *Eight Cousins* (1875) and its sequel, *Rose in Bloom* (1876), *Under the Lilacs* (1878), *Jack and Jill* (1880), and *Jo's Boys* (1886) Her second novel, *Work* (1873), described some of her early trials as a wage earner Although Louisa Alcott regarded herself as more of a moralist than an artist in literature, she combined idealism and practicality in stories of family life which generations of young people have loved See her letters and journals (1889), biography by M B Stern (1950)

Alcoy (ălkoi'), city (pop 42,519), Alicante prov , E Spain, in Valencia, on the Alcoy river An important industrial center manufacturing paper (especially cigarette paper), matches, and textiles, it also has trade in grain, wine, and oil from the surrounding region

Alcuin (ăl'kwĭn), 735?–804, English churchman and educator He was educated at the cathedral school of York by a disciple of Bede, he became principal in 766 CHARLEMAGNE invited him to court (781?) to set up a school For 15 years Alcuin was the moving spirit of the Carolingian renaissance He combated illiteracy with a system of elementary education On a higher level he established the study of the seven liberal arts, the trivium and quadrivium, which became the curriculum for medieval Western Europe He encouraged the study and preservation of ancient texts His dialogue textbook of rhetoric, called *Compendia*, was much used. He wrote verse, and his letters were

preserved. Alcuin's treatise against Felix of Urgel did much to defeat the heresy of ADOPTIONISM He died as head of the abbey of St Martin of Tours, where he had one of his most famous schools See E J B. Gaskoin, *Alcuin* (1904).

Alda, Frances (ăl'du), 1883–, stage name of Frances Davis, operatic soprano, b Christchurch, New Zealand She studied with Mme Marchesi in Paris and made her debut at the Opéra-Comique in 1904 She sang at the Metropolitan Opera, New York, 1908–29 From 1910 to 1928 she was married to Gatti-Casazza See her autobiography, *Men, Women, and Tenors* (1937).

Aldan (ŭldän'), city (1939 pop over 10,000), Yakut ASSR, RSFSR, in E Siberia It is on the Aldan Plateau and 265 mi SSW of Yakutsk, a gold-mining center Until 1939 it was named Nesametny

Aldan (ŏl'dŭn), borough (pop 2,642), Delaware co, SE Pa, near Philadelphia

Aldan (ŭldän'), river, 1,300 mi. long, rising in the Stanovoi Range, Yakut ASSR, RSFSR, in E Siberia. It winds N and E around the Aldan Plateau, then turns northward and finally westward to enter the Lena 100 mi N of Yakutsk It is navigable for 1,100 mi Tributaries are the Amga (left) and the Uchur and Maya (right)

Aldanov, Mark (märk' ŭldä'nuf), pseud of **Mark Aleksandrovich Landau** (ŭlyĭksän'drŭvĭch län'dou), 1886–, Russian political writer and novelist Emigrating to France after the October Revolution, he won fame abroad with *The Thinker*, a tetralogy on the revolutionary era 1793–1821, comprising *The Ninth Thermidor* (1923, Eng tr, 1926) *The Devil's Bridge* (1925, Eng tr, 1928), *The Conspiracy* (1927), and *St Helena Little Island* (1921, Eng tr, 1924) He returned to the Napoleonic era in *The Tenth Symphony* (1931; Eng tr, 1948) and *For Thee the Best* (1939, Eng tr, 1945), which treat the problem of human frustration as exemplified in well-known figures connected with the Congress of Vienna In *The Key* (1930, Eng tr, 1931), *The Flight* (1930), and *The Cave* (1934–36), he dealt with the effect of the Russian Revolution on the lives of the émigrés, and in *The Fifth Seal* (1939, Eng tr, 1943) he portrayed the decay of revolutionary idealism and the general disillusionment prevalent in Europe and among Russians on the eve of the Second World War He came to the United States in 1941

Aldegrever, Henrich (hĭn'rĭkh ăl'dugrāvur), b 1502, d after 1555, German painter and engraver His real name was Heinrich Trippenmeker, and he lived and worked in Soest, Westphalia His paintings are rare, and he is best known for his remarkable engravings, which include portraits and religious and mythological compositions Among the most famous are his portrait of John of Leiden, his *Parable of the Wicked Rich Man, The Wedding Feast*, and the series *Labors of Hercules* Aldegrever is one of the greatest of the German Little Masters His work shows the influence of Dürer in its severity and richness of detail

aldehyde (ăl'dĭhīd) [quasi-abbreviation of *alcohol* and New Latin *dehydrogenatus*=deprived of hydrogen], any member of a class of organic compounds characterized by having in their molecules a carbon-hydrogen-oxygen (CHO) group of atoms The aldehydes result from partial oxidation of primary alcohols (when some hydrogen is removed) and are named for the acids which they produce when they in turn are oxidized For example, by the oxidation of ethyl alcohol, acetaldehyde, a typical aldehyde, is formed, which upon oxidation yields acetic acid The aldehydes are important in industry in the manufacture of synthetic resins (e g, bakelite) and of dyestuffs, and also as disinfectants Many aldehydes occur in essential OILS of certain plants The term *aldehyde* is commonly used to indicate acetaldehyde, called also acetic aldehyde or ethanal, a colorless liquid, boiling at 20 8° C and melting at −120° C It is used in silvering mirrors and in the manufacture of dyes and of the hypnotic drug paraldehyde Benzaldehyde, called also benzoic aldehyde or, commercially, oil of bitter almonds, is a colorless liquid with a characteristic almond odor, boiling at 180° C, soluble in alcohol, but insoluble in water It is formed by the oxidation of benzyl alcohol and is oxidized to benzoic acid It is prepared in various ways from bitter almonds crushed and boiled in water, when a glucoside called amygdalin is hydrolysed; from toluene, or directly from benzal chloride by treatment with an alkali or from benzyl chloride by oxidation Benzaldehyde is used in the preparation of certain aniline dyes and of other products, such as perfumes and flavorings FORMALDEHYDE is the first member of the aldehyde series See also FURFURAL

Alden, Henry Mills (ôl'–), 1836–1919, American editor, b Mt Tabor, Vt, grad Williams, 1857, and Andover Theological Seminary, 1860 He was managing editor of *Harper's Weekly* from 1863 to 1869, then editor of *Harper's Magazine* from 1869 until his death As an editor, his policy was to recognize the novice and to encourage the best type of Americanism His department, the "Editor's Study," served as a vehicle for personal expression His *Magazine Writing and the New Literature* was published in 1908

Alden, John, c 1599–1687, Puritan settler in Plymouth Colony He came to America on the *Mayflower* and was prominent as assistant to the governor of the colony He moved (c 1627) to Duxbury and there was neighbor and friend of Miles STANDISH Alden's marriage to Priscilla Mullens gave rise to the romantic legend made familiar to all Americans in Longfellow's poem, *The Courtship of Miles Standish*

alder, name for deciduous trees and shrubs of the genus *Alnus*, widely distributed, especially in the Northern Hemisphere, mostly on mountains and in moist places It has small conelike woody fruits The black alder (*Alnus glutinosa*) is an Old World species now naturalized in E North America Its bark, still used for dyes and tanning, was formerly also used for medicinal purposes, its wood, suitable for turning and allegedly durable in water, is made into pilings and pumps The wood of the western American red alder (*A rubra*) is used for making furniture

Alderdice, Frederick Charles (ôl'dûrdĭs'), 1872–1936, Newfoundland statesman, b Belfast, Ireland. He was prime minister for several months in 1928 and again from 1932 to Feb, 1934, when Newfoundland passed under the administration of a commission appointed by Great Britain Alderdice became vice chairman of this commission

Alderman, Edwin Anderson, 1861–1931, American educator, b Wilmington, N C, grad Univ of North Carolina, 1882 One of the most liberal interpreters of the South, Alderman held successively the presidency of three great Southern universities the Univ of North Carolina, 1896–1900, Tulane Univ, 1900–1904, and the Univ of Virginia, from 1904 until his death He wrote on the South as well as on education See biography by Dumas Malone (1940)

Alderney (ôl'durnē), Fr *Aurigny* (ōrēnyē'), anc *Riduna*, island (c 3 sq mi, pop 1,521), in the English Channel, northernmost of the larger CHANNEL ISLANDS It is separated from the French coast and from other islands by swift tidal races The soil is fertile and well cultivated about St Anne, the principal town, the main crops are potatoes and grains Cattle breeding is important

Aldershot (ôl'durshŏt), municipal borough (1931 pop 34,280, 1947 estimated pop 26,130), Hampshire, England, SW of London It is the site of the largest and most complete military training center (est 1854) in the United Kingdom

Alderson, residential town (pop 1,493), S W Va, on the Greenbrier river and NE of Bluefield, settled 1777 A federal reformatory for women is here

Aldhelm, Saint (ôld'hĕlm), 640?–709, English churchman He was abbot of Malmesbury (from 675) and bishop of Sherborne (709) Aldhelm was a student of the classics, and his own Latin was widely imitated His prose is chiefly represented by letters His verse includes riddles and short poems which influenced St Boniface St Aldhelm promoted the Latin method of reckoning EASTER, as established at the Synod of Whitby An old spelling of his name is Ealdhelm Feast May 25 See E S Duckett, *Anglo-Saxon Saints and Scholars* (1947)

Aldington, Richard (ôl'–), 1892–, English poet and novelist In 1913 he married Hilda Doolittle ("H D"), the American poet, they were later divorced At one time regarded as a leader of the imagist poets, Aldington subsequently came to disagree with their theories Among his volumes of verse are *Images Old and New* (1915), *War and Love* (1915–18), and *A Fool i' the Forest* (1925) *Death of a Hero* (1929) and *The Colonel's Daughter* (1931) are novels, *The Strange Case of Charles Waterton* (1949) is a biography See his book of reminiscences, *Life for Life's Sake* (1941)

Aldrich, Chester Holmes (ôl'drĭch), 1871–1940, American architect, b Providence, R I, educated at Columbia and at the École des Beaux-Arts, Paris From 1903 he was a partner in Delano & Aldrich, the designers of many distinguished buildings, including the Chapin School, the Colony Club, the Child Education Foundation, the Nightingale School, and the Knickerbocker Club, all in New York, the Smith College music school, Northampton, Mass, the Hotchkiss School chapel and dormitory, Lakeville, Conn, the Riggs Foundation, Stockbridge, Mass; and the J D. Rockefeller residence at Pocantico Hills, N Y

Aldrich, Henry, 1647–1710, English theologian, musician, writer, and architect In 1689 he became dean of Christ Church College, Oxford Univ, to which he left his valuable music library; several Oxford buildings are of his designing. His book on logic (1691) was long used as a text, and some of his compositions (chiefly church services and anthems) are still heard

Aldrich, Nelson Wilmarth, 1841–1915, U.S. Senator from Rhode Island, b Foster, R I He rose in local politics as state assemblyman (1875–76) and U S Representative (1879–81) before he served as Senator (1881–1911) Aldrich, after the death of Henry B Anthony, dominated Rhode Island politics, and because of his wide interests in banking, manufacturing, and public utilities he was popularly considered the spokesman of big business in the Republican party and the nation From the controversy of 1888 he was the great proponent of protective tariffs and was successful in saving the Payne-Aldrich Tariff Act of 1909 even against the combined opposition of the Democrats and the Progressives. He took charge of Republican administrative legislation after 1897 and helped force the Silver Republicans out of the party, the Gold Standard Act of 1900 completing the work As Theodore Roosevelt's sympathies grew increasingly progressive Aldrich led the Senate opposition to him Aldrich was deeply concerned with monetary problems, helped shape the Aldrich-Vreeland Currency Act of 1908, and headed the National Monetary Commission to study bank reform He visited Europe in this study, which he continued after leaving the Senate The "Aldrich plan," published in 1911, was not made into law but it did offer information used by the Democrats in setting up the Federal Reserve System. See biography by N W Stephenson (1930)

Aldrich, Richard, 1863–1937, American music critic and writer, b Providence, R.I., educated at Harvard and in Germany From 1891 to 1902 he was assistant to H E Krehbiel, music critic of the New York *Tribune*, and from 1902 to 1924 Aldrich was chief music critic of the New York *Times* His principal published works are *How to Sing* (1902), translated from the German of Lilli Lehmann, *Guide to Parsifal* (1904), *Guide to the Ring of the Nibelung* (1905); and *Concert Life in New York* (pub posthumously, 1941)

Aldrich, Thomas Bailey, 1836–1907, American author and editor, b Portsmouth, N H He lived in New Orleans, Portsmouth, and New York, until in 1865 he settled in Boston *The Story of a Bad Boy* (1870), a zestful narrative based on his own boyhood in Portsmouth, first made him known, and it remains his most widely read work Though his novels, sketches, and plays were well received, he excelled in light verse and the short story As a poet his discriminating craftsmanship is at its best in his shorter poems His short stories, especially those in *Marjorie Daw and Other People* (1873), had a naturalness which concealed their artistry and which influenced other writers, as did his use of the surprise ending As editor of the *Atlantic Monthly*, 1881–90, Aldrich increased the magazine's reputation as a model of taste, but his own preoccupation with literature in a more restricted sense narrowed its scope See biography by Ferris Greenslet (1908), Mrs T. B Aldrich, *Crowding Memories* (1920)

Aldrovandi, Ulisse (ōōlē'sā ăldrōvän'dē), 1522?–1605?, Italian naturalist, professor at the Univ of Bologna He instigated the establishment (1567) of the Bologna Botanical Garden and wrote an early pharmacopoeia His chief work was the *Natural History* (13, possibly 14, vols), of which four volumes (some sources say five) were published before his death, the remaining volumes were prepared for publication from his manuscripts

Aldus Manutius (ăl'dŭs munū'shŭs), 1450–1515, Venetian printer He was educated as a humanistic scholar and became tutor to Alberto and Lionello Pio, princes of Carpi Aldus became interested in printing as a way of making books available to scholars, and Alberto Pio provided him with money to establish a printery in Venice, where many good manuscripts were accessible Aldus was at this time about 40 years old His purpose was to print hitherto unpublished Greek and Roman classics He was especially interested in producing books of small format for scholars at low cost To this end he added to his Greek alphabet a series of ligatures or tied letters, similar to the conventional signs used by scribes, which represented in the width of one character two to five letters To save space in Latin texts he had a type designed after the Italian cursive script This was the first *italic* type used in books (1501) Books produced by him are called Aldine and bear his mark, which was a dolphin and an anchor Aldus employed competent scholars as editors, compositors, and proofreaders to insure accuracy in his books He was a classical scholar in his own right and an associate of Erasmus and Linacre Much of his type was designed by Francesco Griffi, called Francesco da Bologna The Aldine Press was later managed by other members of the family, including a son, Paulus Manutius (1512–74), and a grandson, Aldus Manutius (1547–97).

ale: see BEER

Aleandro, Girolamo (jĕrō'lämo ălāän'drō), 1480–1542, Italian librarian and scholar, cardinal of the Roman Church, called Hieronymus Aleander. He was librarian of the Vatican. He took part in the controversy with Luther, especially at the Diet of Worms **Girolamo Aleandro**, the younger, 1574–1649, his grandnephew, a scholar and poet, was one of the founders of the Academy of Roman Humorists He wrote in Italian and Latin

Alecsandri, Vasili (vāsē'lē ălĕksän'drē), 1821–90, Rumanian poet and statesman He was foreign minister (1859–60) and minister to France (after 1885) Besides writing lyric poetry he collected Rumanian folk songs.

Alecto: see ERINYES.

Aledo (ŭlē'dō), city (pop. 2,593), co. seat of Mercer co, NW Ill, 88W of Rock Island, in a farm area; inc 1885 Roosevelt Military Academy is here

Alegría, Ciro (sē'rō älägrē'ä), 1909–, Peruvian novelist Imprisoned several times for his political activities as a member of the APRA party, he finally went as an exile to Chile in 1934 In 1941 he won the Latin American Novel Prize for *El mundo es ancho y ajeno* (Eng tr, *Broad and Alien Is the World*, 1941), in which he depicted the exploitation of the Indian by the white man The novel is primarily a strong social document Alegría was already well known in South America for an earlier prize-winning novel of regional character, *La serpiente de oro* (1935, Eng tr, *The Golden Serpent*, 1943)

Aleichem, Sholom (shō'lŭm älā'khŭm) [Heb ,= Peace be upon you! (a very common form of greeting in Yiddish)], 1859–1916, Yiddish author, b Russia His real name was Solomon, or Shalom, Rabinowitz The first part of his pseudonym is also written Sholem or Shalom His five novels, many plays, and some 300 short stories, all written in Yiddish, have been translated into Russian, German, and other European languages, but he is perhaps best known for his humorous tales of life among the poverty-ridden and oppressed Russian Jews of the late 19th and early 20th cent, English translations of some of these include *The Old Country* (1946) and *Tevye's Daughters* (1949) In the last years of his life Sholom Aleichem lived in the United States, he died in New York city See Maurice Samuel, *The World of Sholom Aleichem* (1943), Melech Grafstein, ed, *Sholom Aleichem Panorama* (1949)

Aleijadinho (ŭlā"zhŭdē'nyō) [Port ,=little cripple], 1730–1814, Brazilian sculptor, a native of Minas Gerais His real name was António Francisco Lisbôa In spite of being maimed in hands and feet, he is known for the brilliance of his church sculpture He carved two pulpits, the high altar, and a doorway for the Church of São Francisco at Ouro Preto The distinctive Churrigueresque style of his known works, carved in wood and native soapstone, has caused much church sculpture in Minas Gerais to be attributed to him

Alekhine, Alexander (ŭlyō'khĭn), 1892–1946, Russian-French chess player, b Moscow At the age of 16 he gained the rank of master and in 1927, by a surprising defeat of Capablanca at Buenos Aires, became world champion In 1930 at San Remo, Italy, he won without losing a single game in a tournament that included all of the major European players In 1935 he lost the championship to Max Euwe, but regained it in 1937 and kept it until his death His clear and realistic style and the brilliance of his middle-game and end-game combinations are found in his book, *My Best Games of Chess, 1924–1937* (1939)

Aleks-. For some Russian names beginning thus, see ALEX-, e g, for Aleksandr, see ALEXANDER

Aleksandropol, Armenia see LENINAKAN

Aleksandrov (ŭlyĭksän'drŭf), city (pop 12,655), RSFSR, c 60 mi NE of Moscow It has varied industries (radios, cotton textiles, clothing, and food) The famous Uspenski convent, dating from the 16th and 17th cent, was formerly used as a place of exile Ivan the Terrible resided here (1564–81) and here organized his political police, the Oprichnina (see IVAN IV)

Aleksandrov-Grushevski, see SHAKHTY

Aleksandrovsk, Ukraine see ZAPOROZHE

Aleksandrovsk-Sakhalinski (ŭlyĭksän'drŭfsŭkhŭlyēn'skē), city (1926 pop 2,748, 1948 estimated pop, with surrounding area, c 100,000), on N Sakhalin, Far Eastern RSFSR It is a port on the Tatar Strait and a coal-mining center Founded in 1881, it was formerly a place of exile

Alekseyev, Mikhail Vasilyevich (mēkhīēl' vāsē'lyŭvĭch ŭlyĭksyā'ŭf), 1857–1918, Russian general, chief of staff (1915–17) of Nicholas II He urged the tsar to abdicate in favor of the tsarevich in order to save the dynasty Alekseyev was chief of staff under the Kerensky government, but after its overthrow he resigned to join General KORNILOV and was head of the counterrevolutionary government in the south after Kornilov's death

Alekseyev, Yevgeny Ivanovich (yĭvgā'nyē ēvu'nuvĭch), 1843–1909, Russian admiral, natural son of Alexander II. His policy as viceroy in the Far East probably contributed to the outbreak (1904) of the Russo-Japanese War Early in that war he was commander in chief of the army and navy, but after a series of defeats he was recalled (1905)

Alema (äl'–), town, E of the Jordan 1 Mac 5 26

Alemán, Mateo (mätā'ō älämän'), 1547–1614?, Spanish novelist He studied medicine, was chief accountant at Madrid, led an exciting and adventurous life, was sent to jail twice for his debts, and at the age of 60 found a refuge in Mexico. He owes his fame to one of the best picaresque novels, *Guzmán de Alfarache* The first part was published in 1599 and the second part in 1604 It was translated into many languages, Le Sage adapted it in French, and James Mabbe translated it into English as *The Rogue; or, The Life of Guzmán de Alfarache* (1922).

Alemán, Miguel (mēgĕl' älämän'), 1902–, president of Mexico (1946–) Son of a revolutionary general, Alemán became a highly successful lawyer and a champion of Mexican labor. He was governor of Veracruz from 1936 to 1940 but resigned to manage the presidential campaign of Manuel ÁVILA CAMACHO, under whom Alemán held (1940–45) the ministry of the interior After defeating Esequiel Padilla in the presidential election of 1946, Alemán undertook a vigorous program of modernizing Mexico by encouraging foreign investment, developing reclamation and power projects, improving communication and education, and generally raising the standard of living.

Alemanni (älĭmä'nī), Germanic tribe, closely connected with the Suebi (see GERMANS) By the 5th cent A D they occupied territories on both sides of the Rhine south of its junction with the Main (present Alsace, Baden, and NE Switzerland) Their westward expansion brought them into conflict with the Franks, whose king CLOVIS I defeated them in 496. In 506 he forced them to retire into Rhaetia, and in 536 they passed entirely under Frankish rule The High German dialects of SW Germany and Switzerland are called after them Alemannic, and in French speech their name (*Allemands*) came to signify all Germans.

Alemanni, Luigi· see ALAMANNI, LUIGI

Alembert, Jean le Rond d' (shäⁿ lŭ rō' däläbĕr'), 1717–83, French mathematician and philosopher Illegitimate son of the chevalier Destouches, he was found on the steps of the St Jean le Rond church and put into a foundling home, from which his father later had him taken to be cared for and educated Diderot made him coeditor of the ENCYCLOPÉDIE, for which he wrote many mathematical, philosophical, and literary articles and the "preliminary discourse" (1751) He withdrew in 1758, apparently for reasons of discretion A member of the Academy of Science (1741) and the French Academy (1754, appointed secretary, 1772), he had great influence on the intellectual life of his time His writings include a famous treatise on dynamics (1743), a work on the theoretical and practical elements of music (1759), and a history of the members of the French Academy (1787)

Alemtejo, Portugal see ALENTEJO

Alençon, François, duc d' see FRANCIS, duke of Alençon and Anjou

Alençon (äläsôⁿ'), town (pop 16,692), capital of Orne dept, N France, in Normandy, on the Sarthe It was the capital of the county and (after 1414) the duchy of the same name, which passed (1525) to the French crown and was an appanage of Valois princes It has long been famous for its lace industry

Alentejo (älänta'zhō), historic province, SE Portugal, now divided into Upper Alentejo (Port *Alto Alentejo*, 4,888 sq mi, pop 317,628) and Lower Alentejo (Port *Baixo Alentejo*, 5,318 sq mi, pop 375,511) The capital of Upper Alentejo is Évora, and the capital of Lower Alentejo is Beja Estremoz and Vila Viçosa are also in the province Alentejo, "the granary of Portugal," is drained by the Guadiana and tributaries of the Sado The climate varies greatly with the seasons Sheep, horses, cattle, and hogs are bred, and grains, olives, and fruits are grown It was from the time of Portugal's beginning involved in the many wars with Castile (see PORTUGAL) The name formerly was spelled Alemtejo

Alep (ŭlĕp') or **Aleppo** (ŭlĕ'pō), Arabic *Haleb*, city (pop c 320,000), NW Syria It was the Greek and biblical Berœa or Berea (as in 2 Mac 13 4) An ancient city on the main caravan route across Syria to Baghdad, it was the center of a kingdom of the Hittites before 1000 B C and was taken by the various conquerors of Syria Its importance was enhanced after the fall of Palmyra in A D 272 A flourishing city of the Byzantine Empire, it was taken by the Arabs in the 7th cent, recovered by the Byzantines in the 10th cent, and taken by the Seljuk Turks late in the 11th cent The Crusaders formally besieged it, but without success in 1124 Saladin took it in 1183 and made it his stronghold It was conquered by the Mongols under Hulagu Khan in 1260 and again by Tamerlane in 1401, but was not long held In 1517 the Ottoman Turks made it a part of their empire, and it was a great commercial center Ibrahim Pasha took it (1832) for Mohammed Ali of Egypt who was forced to give it up in 1840 Its importance declined with the establishment of new trade routes, but it revived after Syria was established as a French mandate and then recovered its independence It has silk and cotton textile industries and much trade in wool, hides, and fruit It has often been severely damaged by earthquake

Aleramo, Sibilla (älärä'mō sēbēl'lä), 1878?–, Italian novelist and poet, whose real name is Rina Faccio Her novel *Una donna* (1906, Eng tr, *A Woman at Bay*, 1908) was a literary sensation and, widely translated, was considered a feminist document Her later works, largely autobiographical, are essentially concerned with erotic experience They include the novels *Trasfigurazione* [transfiguration] (1922) and *Amo, dunque sono* [I love, therefore I am] (1927); two volumes of verse, and a poetic drama, *Endimione* (1923)

Ales, Alexander· see ALESIUS, ALEXANDER

Alès (älĕs'), formerly **Alais** (älā', älēs'), town (pop 20,027), Gard dept, S France Located in a coal-mining region, it has metal industries The Peace of Alais (1629) stripped French Protestants of their political power (see HUGUENOTS)

Alesia (ŭlē'shu), hilltop town of Celtic and Roman Gaul, supposedly on the site of Alise Sainte-Reine, near Dijon It was in the hands of VERCINGETORIX and many of his men (52 B C) when Caesar besieged them He prevented Vercingetorix' allies from raising the siege and starved out the town. Gallic resistance to Rome ended

Alesius, Alex, or **Alexs, Alexander** (u-lē'shus, both ŭ-lēs'), 1500–1565, Scottish Protestant theologian As canon of the collegiate church at St Andrews he tried to reclaim Patrick Hamilton, abbot of Fern, from his heretical Lutheran views but was himself persuaded to accept the reformed teachings In 1532 he escaped to the Continent, where he gained the confidence of Luther and Melanchthon By them he was commended to Henry VIII, and arriving in England in 1535, he enjoyed friendly association with Cranmer, Thomas Cromwell, and others He lectured on divinity at Cambridge and afterward practiced medicine in London After Cromwell's fall in 1540, Alesius returned to Germany, where he was professor of theology, first at Frankfurt-an-der-Oder and later at Leipsig

Alessandri, Arturo (ärtōō'rō älĕsän'drē), 1868–, president of Chile (1920–25, 1932–38) A lawyer of humble birth, he rose to a cabinet position by 1913. Presidential candidate of the Liberal Alliance, a conglomerate group made up of all the enemies of the conservatives, Alessandri was elected on a program of social and political reform, including the introduction of direct vote for president, the entire separation of Church and state, greater autonomy of the provinces, and socialistic legislation. An army revolt forced him out of office after a troubled administration His second term was likewise stormy

Alessandria (älĭsän'drēu, Ital älās-sän'drēä), city (pop 51,949), capital of Alessandria prov, Piedmont, N Italy A commercial and communications center, it also makes felt hats Alessandria was founded in 1168 as a stronghold of the LOMBARD LEAGUE and was named for Pope Alexander III At first a free commune, it passed in 1348 to the duchy of Milan and in 1713 to the Duke of Savoy. There are two 14th-century churches, a modern cathedral, and a citadel

Alesund or **Aalesund**, Nor *Ålesund* (all ô'lusôn), city (pop 18,143), More og Romsdal co, W Norway, a seaport on three small islands The largest fishing harbor in Norway, it has cod and herring fleets and is a whaling base It is the commercial center of the STOR FJORD region

Aletsch (ä'lĕch), largest glacier (66 sq mi.) in the Swiss Alps It lies between the Jungfrau and the Aletschhorn (ä'lĕch-hôrn), the second highest peak in the Bernese Alps

Aleut (ăl'ēōt), native inhabitant of the Aleutian Islands Of the same racial stock as the ESKIMO, the Aleuts have become, through long contact with Indians and whites, chiefly a mixed breed In their semicivilized mode of life they more closely resemble their North American Indian neighbors than they do the Eskimos Their language is a member of the Eskimo-Aleut family When first noted by Bering in 1741, their estimated population was between 20,000 and 25,000 Because of their skill in hunting sea mammals, the Aleuts were dispersed by Russian fur traders throughout the coastal waters of the Gulf of Alaska, some as far south as California The ruthless policies of their masters and conflict with the fierce mainland natives reduced their population by the end of the 18th cent to one tenth its former size After that time they lived in comparative isolation and neglect until the strategic importance of their islands recently focused the attention of the U S government on their condition, and measures were instituted for their economic betterment Converts of the Russian Orthodox Church, they yet retain a few of their earlier superstitous beliefs See H B Collins, Jr, *The Aleutian Islands: Their People and Natural History* (1945)

Aleutian Islands (ŭlōō'shŭn), chain of islands curving southwest from the tip of the Alaska Peninsula and approaching the Russian Komandorski Islands Actually a partially submerged continuation of the Aleutian Range, they divide Bering Sea from the Pacific They fall into four main groups. The Fox Islands nearest Alaska include among the larger islands Unimak, Unalaska (with Dutch Harbor on small Amaknak island), Umnak, and Akutan The Andreanof Islands are many, some of the larger ones are Amlia, Atka, Adak, Kanaga, and Tanaga Among the Rat Islands the most important are Amchitka and Kiska The Near Islands are farthest west and the smallest group of all, the two larger islands are Agattu and Attu. Within their general area are Shemya and the other Se-

michi Islands The islands are generally rugged and show the traces of volcanic action There are few good harbors, and the many reefs make navigation treacherous Temperatures are relatively moderate, but constant fog makes the climate dreary The islands, almost completely treeless, have a luxuriant growth of grass, bushes, and sedges Sheep have been grown on some of them Vitus BERING discovered them in 1741, and the native Aleuts were exploited for fur hunting by Russian traders Fishing and fur hunting are now government controlled Dutch Harbor became a transshipping point for Nome in 1900 In 1940 a U S naval base was established there, and the Aleutian Islands were important in the Second World War The Japanese occupied Attu and Kiska in 1942 The United States built bases on Adak and Amchitka and launched a counterattack In 1943 U S forces by bitter fighting took Attu and the Japanese withdrew from Kiska U S bases were also built on Shemya, Umnak, and Atka See Murray Morgan, *Bridge to Russia* (1947)

Aleutian Range, mountain chain, SW Alaska, extending along the entire Alaska Peninsula and continuing, partly submerged, in the Aleutian Islands The range has shown recent volcanic activity, notably at Katmai (Valley of Ten Thousand Smokes)

Alex . For some Russian names beginning thus, see ALEKS-, e g, for Alexandrov, see ALEKSANDROV

Alexander III, d 1181, pope (1159–81), a Sienese named Rolando Bandinelli, successor of ADRIAN IV and predecessor of LUCIUS III He was a learned canonist who had studied law under Gratian and had taught at Bologna He came to Rome under Eugene III, was made a cardinal, and became a trusted adviser of Adrian IV Alexander's election to the papacy was opposed by a few cardinals, who elected an antipope, VICTOR IV Although the antipope was supported only by Germany and some Lombards, the schism thus begun continued until 1178 with antipopes Paschal III and Calixtus III Alexander was forced by Emperor FREDERICK I into exile in France In the long struggle with the emperor, the pope was aided by the LOMBARD LEAGUE, which named the town of Alessandria for him After the battle of Legnano, the emperor was forced to submit Alexander had already (1174) received the penance of Henry II of England for the murder of St Thomas à Becket, whom Alexander canonized (1173) He convened and presided at the Third LATERAN COUNCIL One of the great medieval popes, he issued many decretals, established the procedure for canonizing saints, inaugurated the two-thirds rule for papal elections, protected the universities, and was one of the most distinguished champions of ecclesiastical independence in the Middle Ages See M W Baldwin, *The Medieval Papacy in Action* (1940)

Alexander IV, d 1261, pope (1254–61), a Roman named Rinaldo di Segni, successor of INNOCENT IV and predecessor of URBAN IV Popes Gregory IX (Alexander's uncle) and Innocent III were also of the noble Segni family An irresolute pope, Alexander struggled unsuccessfully with the Roman commune and with the HOHENSTAUFEN, particularly MANFRED, whom he excommunicated Alexander upheld and aided the Franciscan order

Alexander VI, 1431–1503, pope (1492–1503), a Spaniard (b Játiva) named Rodrigo de Borja or, in Italian, Rodrigo Borgia, successor of INNOCENT VIII and predecessor of PIUS III He took Borja as his surname from his mother's brother Alfonso, who was Pope Calixtus III Rodrigo became cardinal (1456), vice chancellor of the Roman Church (1457), and dean of the sacred college (1476) Cardinal Borgia had four children by a Roman woman, Vannozza, among them were Cesare and Lucrezia Borgia The conclave that elected Alexander was corrupt The foreign relations of the papacy in his time were dominated by the increasing influence of France in Italy, culminating in the invasion of Charles VIII in 1494 Alexander prevented Charles from taking the church property in Rome, but he turned over to the French the valuable Ottoman hostage Djem, brother of BAJAZET II Alexander's son, Cesare Borgia, was the principal leader in papal affairs, and papal resources were spent lavishly in building up Cesare's power For his daughter Lucrezia, Alexander arranged suitable marriages The favoritism shown his children and the lax moral tone of Renaissance Rome as well as the unscrupulous methods employed by Cesare and other papal officials have made Alexander's name the symbol of the worldly irreligion of Renaissance popes It was Alexander who proclaimed the line of demarcation, awarding part of the new discoveries in the world to Spain, part to Portugal The original line was subsequently (1494) in the Treaty of Tordesillas moved westward so that it ran 370 leagues W of the Cape Verde Islands, it was this redefinition that gave Portugal a claim to Brazil Alexander was a munificent patron of the arts See Orestes Ferrara, *The Borgia Pope Alexander VI* (1940)

Alexander I, 1777–1825?, emperor and tsar of Russia (1801–25), son of PAUL I (in whose murder he may have taken an indirect part) The liberalism of his Swiss tutor, Frédéric César de LA HARPE, was at first influential in shaping his policy, but he proved unable to carry out a consistent scheme of internal reform as proposed by Mikhail M SPERANSKI He joined the coalition against NAPOLEON I in 1805, but after the defeats of AUSTERLITZ and Friedland he signed (1807) the Treaty of Tilsit, which brought Russia into Napoleon's CONTINENTAL SYSTEM Although an alliance between the two emperors was reached (1808) at the Congress of ERFURT, relations deteriorated, and in 1812 Napoleon invaded Russia The French defeat left Alexander one of the most powerful rulers in Europe He entered Paris at the head of the allied armies in 1814 He still used his power in the cause of liberalism, saving France from harsh treaty terms at the Congress of Vienna (see VIENNA, CONGRESS OF) and in the Treaty of Paris, he gave autonomy to Finland, which he annexed in 1809, and to Poland, of which he became king in 1815 However, he soon came under the dual influence of Metternich and of the pietistic Julie de KRÜDENER, who encouraged him to promote the HOLY ALLIANCE By 1818 he had become completely reactionary, morbid, and embittered, with alternating periods of dissipation and brooding mysticism With the help of his favorite, Aleksey A ARAKCHEYEV, he established in parts of Russia the notorious "military colonies" of "militarized" peasantry serving as police Alexander's reign witnessed the brilliant beginnings of modern Russian cultural life St Petersburg became a social and artistic center of Europe KRYLOV and PUSHKIN dominated the literary scene National consciousness was stirred by the Napoleonic invasion Being childless, Alexander was succeeded by his brother, NICHOLAS I Concerning Alexander's death, there is a considerable mystery Officially, he died at Taganrog in 1825 It is widely believed, however, that he actually had himself secretly taken away on the yacht of the 1st Earl Cathcart, a former ambassador to Russia, and spent the rest of his life in penitence as a monk—possibly to be identified with one Feodor Kuzmich, a hermit who died in Siberia in 1864 When his tomb was opened by the Soviet government in 1926, it was found empty, and recent biographies have revived the story of his escape Some light may be shed on the question when the Cathcart papers are opened in 1964 An excellent picture of Alexander's period is found in Tolstoy's *War and Peace.* See biographies by C Joyneville (3 vols, 1875), Maurice Paléologue (Eng tr, 1928), and L I Strakhovsky (1947)

Alexander II, 1818–81, emperor and tsar of Russia (1855–81), son and successor of Nicholas I Influenced by his humane and liberal education (particularly the teaching of the poet ZHUKOVSKY) and by the sad outcome of the Crimean War (1853–55), he put into effect a great program of internal reforms, of which the most important was the emancipation (1861) of the serfs (see EMANCIPATION, EDICT OF) The emancipation changed the whole social order of the empire, but many of its features —particularly the communal ownership of the land and the high cost to the peasants of their small plots—ultimately proved disastrous and were factors in subsequent revolutionary movements The other major reforms were the ZEMSTVO system of local self-government (1864), a new judicial system (1864), and the introduction (1874) of compulsory military service These reforms were not enough to satisfy the liberals and radicals, and Russia came to be disturbed by revolutionary and terrorist activities (see NIHILISM), these, intensified by harsh governmental persecution, resulted in the assassination of the tsar on March 13, 1881 (N S), the very day he signed a liberal constitution drafted by LORIS-MELIKOV The chief events of Alexander II's reign were the unsuccessful Polish revolution of 1863, the acquisition by Russia of much territory in Asia, the formation (1872) of the THREE EMPERORS' LEAGUE, and the war with Turkey (see RUSSO-TURKISH WARS) Alexander II's reign and that of his successor, Alexander III, were the high-water mark of Russian literature and music, best represented by TURGENEV, DOSTOYEVSKY, Leo TOLSTOY, MOUSSORGSKY, and TCHAIKOVSKY See H F Skrine, *Expansion of Russia, 1815–1900* (1903), Stephen Graham, *Tsar of Freedom* (1935)

Alexander III, 1845–94, emperor and tsar of Russia (1881–94), son and successor of Alexander II His father's assassination, his limited education, the military environment in which he was reared, the influence of advisers such as Mikhail N KATKOV and Konstantin P POBYEDONOSTZEV, and numerous attempts on the life of Alexander III himself, all contributed to the reactionary policy that characterized his reign He harshly suppressed revolutionary activities and liberal thought, subjected minorities to forcible Russification, encouraged the persecution of Jews, and strengthened the nobility, which had lost much of its power under his predecessor More positive achievements were the creation of industries and the construction of the TRANS-SIBERIAN RAILROAD, both due to the initiative of Count WITTE, land and labor reforms, and a foreign policy (conducted by Nikolai K GIERS) which helped to preserve peace in Europe The THREE EMPERORS' LEAGUE of Russia, Austria, and Germany was replaced (1892) by a Franco-Russian entente. Alexander III was succeeded by his son, Nicholas II

Alexander, 1893–1920, king of the Hellenes (1917–20), second son of CONSTANTINE After his father's abdication, he was raised to the throne through the support of the Allies, who mistrusted the sympathies of his elder brother George (later King George II) Alexander's death was due to the bite of a pet monkey

Alexander III, king of Macedon see ALEXANDER THE GREAT

Alexander I, 1078?–1124, king of Scotland (1107–24), son of MALCOLM III and St MARGARET OF SCOTLAND He succeeded his brother Edgar, who had divided the kingdom so that Alexander ruled only N of the Forth and the Clyde Early in his reign he decisively quelled an uprising in N Scotland. Alexander encouraged, as his mother had, ecclesiastical conformity with English ways and established several monasteries, including the abbeys at Inchcolm and Scone He opposed, however, the efforts of the English hierarchy to rule the Church in Scotland

Alexander II, 1198–1249, king of Scotland (1214–49), son and successor of WILLIAM THE LION When King John became embroiled with the English barons, Alexander, who held land in England, joined them (1215) With Henry III, who came to the English throne in 1216, Alexander made an agreement whereby he gave up his claims as an overlord in old Northumbria and exchanged lands he held in central England for lands in the north Later Henry and he nearly went to war over the homage Alexander owed for these northern lands Alexander was assiduous at home in quelling disorder His reign saw a notable growth in religious houses and ecclesiastical architecture Alexander III succeeded him

Alexander III, 1241–86, king of Scotland (1249–86), son and successor of Alexander II He married a daughter of HENRY III of England and disputed with him the old English claims to overlordship in Scotland The great achievement of Alexander was his final acquisition for Scotland of the Western Isles and of the Isle of Man, which his father had already claimed from Norway To drive the Scots from the islands King HAAKON IV of Norway sailed with a great fleet in 1263, but a storm battered his ships, and he fought the inconclusive battle of Largs in the River Clyde (1263) Alexander signed a treaty with Haakon's successor, MAGNUS VI, assigning the Western Isles and the Isle of Man to Scotland This was followed by an arrangement with Norway providing for the marriage of Magnus's son Eric with Alexander's daughter Margaret Alexander survived his children, and when he died his only near relative was his little granddaughter MARGARET MAID OF NORWAY With his death peaceful relations between England and Scotland ended, and the dynastic struggle between ROBERT I (Robert the Bruce) and John de BALIOL (1249–1315) began See biography by James Fergusson (1937)

Alexander (Alexander Karageorgevich) (kärujôr'juvĭch), 1806–85, prince of Serbia (1842–58), son of KARAGEORGE He was elected to succeed the deposed MICHAEL of Serbia Weak and vacillating, he yielded to Russian influence in refusing aid to the Serbs of Hungary in their struggle against the Magyar nationalists during the Kossuth regime (1848–49) and later submitted to Turkish and Austrian pressure in withholding his support from Russia in the Crimean War His pro-Austrian policy finally led his Russophile subjects to depose him and to recall MILOSH as king In 1858 he was condemned to death *in absentia* by a Serbian court for his alleged part in the assassination of Michael III He was the father of Peter I of Yugoslavia.

Alexander (Alexander Obrenovich) (ôbrĕ'nuvĭch), 1876–1903, king of Serbia (1889–1903), son of King MILAN He succeeded on his father's abdication Proclaiming himself of age (1893), he took over the government, abolished (1894) the relatively liberal constitution of 1888, and restored the conservative one of 1869 In 1897 he recalled his father, gave him command of the army, and permitted him to undertake a campaign against the pro-Russian Radical party In 1900 he married Draga Mashin (see DRAGA) despite ample proof of the lady's extremely shady past The scandal of the marriage exasperated his opposition In 1903, after Alexander had suspended and restored the constitution, he and his queen were assassinated, under fittingly revolting circumstances, by a clique of officers Peter Karageorgevich was recalled as King Peter I, and the Obrenovich dynasty came to an end

Alexander, 1888–1934, king of Yugoslavia (1921–34), son and successor of Peter I Of the Karageorgevich family, he was educated in Russia and became crown prince of Serbia upon the renunciation (1909) of the succession by his brother George He led the Serbian army in the Balkan War of 1912, became regent in June, 1914, led the Serbian army in the First World War, and became (Nov , 1918) regent of the kingdom of the Serbs, Croats,

and Slovenes. In 1922 he married Princess Marie of Rumania. After his accession increasing disorder arose from the Croatian autonomy movement After the assassination (1928) of Stefan RADICH, Alexander in 1929 dismissed the parliament, abolished the constitution, abolished the parties, and became absolute ruler To emphasize the unity he hoped to give the country he changed (Oct., 1929) its official name to Yugoslavia Though he announced the end of the dictatorship in 1931 and proclaimed a new constitution, he continued to keep the substance of power in his own hands His authoritarian and centralizing policy brought him the hatred of the separatist minorities, particularly the Croats and Macedonians, as well as the opposition of Serbian liberals In foreign policy he was loyal to the French alliance and to the LITTLE ENTENTE In 1934 he debarked at Marseilles on a state visit to France A member of the Croatian terrorist organization, the Ustashi, fired on his car, killing the king and fatally wounding the French foreign minister, Louis Barthou Accusations made by the Little Entente against Hungary and Italy for fostering Ustashi activities very nearly led to the outbreak of hostilities Alexander was succeeded by his young son, Peter II See Stephen Graham, *Alexander of Yugoslavia* (1939)

Alexander (Alexander of Battenberg), 1857–93, prince of Bulgaria (1879–86), second son of Prince Alexander of Hesse-Darmstadt by his morganatic wife, Countess Julia von Hauke He served in the Russian army against the Turks (1877–78) and, backed by the tsar, was elected hereditary prince of Bulgaria under Turkish suzerainty In 1885 he united E Rumelia with Bulgaria and thus incurred the wrath of the Russian tsar and of Serbia, which declared war. Alexander was victorious, and by an agreement with Turkey became governor of E Rumelia, but he was forced to abdicate by a pro-Russian faction of officers. Ferdinand was elected to succeed him

Alexander, in the Bible **1** Kinsman of Annas Acts 4 6 **2** Son of Simon of Cyrene, probably a Christian Mark 15 21 **3** Heretic condemned by Paul 1 Tim 1 20 **4** Coppersmith who did Paul harm 2 Tim 4 14 **5** Jew who tried to speak during a riot at Ephesus The last three may be the same man The Alexanders in the books of the Maccabees are Alexander the Great and ALEXANDER BALAS

Alexander, in Greek legend see PARIS

Alexander, Archibald, 1772–1851, American Presbyterian clergyman, b near Lexington, Va He was president (1797–1806) of Hampden-Sydney College, pastor (1807–12) of the Pine St Church, Philadelphia, and afterward, until his death, professor of theology at Princeton Theological Seminary, which he helped found

Alexander, Francis, 1800–1881, American painter and portrait lithographer, b Windham Co, Conn He worked under the influence of Gilbert Stuart in Boston and later in Italy One of his most charming portraits is that of Mrs Fletcher Webster (Mus of Fine Arts, Boston) Other works include a portrait of Charles Dickens and several of Daniel Webster

Alexander, Harold Rupert Leofric George, Viscount Alexander of Tunis, 1891–, British field marshal, b Ireland, educated at Harrow and Sandhurst, son of the earl of Caledon A long military career was high-lighted by service in the First World War and in the North-West Frontier Prov, India (1935) In the Second World War he commanded the retreats at Dunkirk (1940) and in Burma (1942) before, as commander in the Middle East (Aug, 1942–Feb, 1943), he had superior command of the British triumph in North Africa He then commanded the conquest of Sicily (1943) and the bitter fighting in Italy In 1944 Alexander was made field marshal and Allied commander in chief in the Mediterranean, in 1945 he was appointed governor general of Canada, and on Jan 1, 1946, he was created viscount

Alexander, Hartley Burr, 1873–1939, American poet and philosopher, b Lincoln, Nebr, grad Univ of Nebraska, 1897 He is the author of several philosophical works He was interested in the American Indian, and this is reflected throughout his poetry Plans which he made for the decoration of the Nebraska state capitol have contributed to its beauty and significance

Alexander, John White, 1856–1915, American portrait, figure, and mural painter, b Allegheny (now part of Pittsburgh) At 18 he became an illustrator on the staff of Harper & Brothers and three years later made his first trip to Europe He achieved a high reputation as a portrait painter, counting among his sitters Robert Louis Stevenson, Joseph Jefferson, Oliver Wendell Holmes, John Burroughs, and Grover Cleveland The Metropolitan Museum contains his *Walt Whitman, The Ring,* and *Study in Black and Green* His portraits of Rodin and Robert Blum are in the Cincinnati Museum Other well-known easel paintings include *The Pot of Basil* (Mus of Fine Arts, Boston) and *The Blue Bowl* (R I School of Design, Providence) Alexander also executed various murals including *The Evolution of the Book* (Library of Congress), *Apotheosis of Pittsburgh* (Carnegie Inst, Pittsburgh), the unfinished *Industrial Development of Pennsylvania* (state capitol, Harrisburg) Alexander is particularly remembered for his graceful studies of women.

Alexander, Samuel, 1859–1938, British philosopher, b Australia From 1893 to 1924 he was professor of philosophy at Victoria Univ, Manchester He conceived of space-time as the ultimate principle from which all other qualities of existence are emergent He has written *Space, Time, and Deity* (1920), *Spinoza and Time* (1921), *Art and the Material* (1925), and *Beauty and Other Forms of Value* (1933) See studies by M R Konvitz (1946) and John W McCarthy (1948)

Alexander, Stephen, 1806–83, American astronomer, b Schenectady, N Y, grad Union College, 1824 In 1834 he became adjunct professor of mathematics at Princeton and from 1840 to 1877 held professorships in astronomy, mathematics, and mechanics His conscientious astronomical observations of nearly 50 years, chiefly in connection with solar eclipses, represented a major contribution to astronomical data and furnished material for many notable papers which were published in the *Astronomical Journal* and in the *Reports* or *Contributions* of the Smithsonian Institution

Alexander, Sir William, d 1640 see STIRLING, WILLIAM ALEXANDER, EARL OF

Alexander, William, known as **Lord Stirling,** 1726–83, American Revolutionary general, b New York city Although the House of Lords rejected his claim to succeed as the 6th earl of Stirling, he was, nevertheless, in America generally considered a nobleman He served in the French and Indian War and joined the Continental army early in the Revolution He fought well at the battle of Long Island (1776) and was captured by the British but was soon exchanged and later saw action at Trenton, Brandywine, Germantown, and Monmouth In 1778 he helped to expose the CONWAY CABAL

Alexander Archipelago, just off SE Alaska It and the mountainous coast make up the Panhandle of Alaska, the most populous section of the Territory A submerged mountain system, the islands rise steeply from the sea Deep fjordlike channels separate them and cut them from the mainland, and the Inside Passage from Seattle to Alaska threads its way among them Some of the islands are CHICHAGOF ISLAND, ADMIRALTY ISLAND, BARANOF ISLAND (with the town of Sitka), WRANGELL ISLAND (with the town of Wrangell), REVILLAGIGEDO ISLAND (with the town of Ketchikan), Kupreanof Island, Mitkoff Island, and Prince of Wales Island

Alexander Balas (bā'–), d 145 B C, ruler of Syria, putative son of Antiochus IV He seized power from his uncle Demetrius I (c 152 B C), Jonathan the Maccabee supported him Eventually he was defeated by Ptolemy Philometor 1 Mac 10–11

Alexander City, city (pop 6,640), E central Ala, SE of Birmingham, in a farm area, settled in the mid-19th cent, inc 1873 It has textile mills Martin Lake is near by

Alexander John I, prince of Rumania see CUZA, ALEXANDER JOHN

Alexander Karageorgevich. see ALEXANDER, prince of Serbia, and ALEXANDER, king of Yugoslavia

Alexander Nevski, Saint (nĕv'skē) [Rus, =of the Neva], 1220?–1263, grand duke of Vladimir-Suzdal He earned his surname by his victory (1240) over the Swedes on the Neva river In 1242 he defeated the Livonian Knights He is a national hero of Russia

Alexander of Aphrodisias (ăfrŏdĭsh'ēus) fl 200, Greek Peripatetic philosopher Most celebrated ancient commentator on Aristotle, he was called for his preeminence the Exegete His influence was strong down to the Renaissance, when his interpretations of Aristotle were used to counter those of the Church Two original treatises are extant

Alexander of Hales (hālz), d 1245, English scholastic philosopher, called the Unanswerable Doctor He was a Franciscan and a lecturer at the Univ of Paris His *Summa universae theologiae* was the first systematic exposition of Christian doctrine to introduce Aristotle as a prime authority His eclectic work also contains elements of neoplatonism and Augustinianism and Arabic ideas, these are not always harmonized Alexander held that all created things spiritual as well as corporeal, are made up of matter and form This teaching became the central feature of Franciscan scholasticism Alexander was one of the important influences on St Thomas Aquinas

Alexander of Pherae (fēr'ē), d 358 B C, tyrant of the city of Pherae in Thessaly after 369 B C. He was opposed by other Thessalian cities and by the Thebans PELOPIDAS failed (368) in one expedition against him and was briefly imprisoned Returning in 364 Pelopidas destroyed Alexander's power in the battle of Cynoscephalae, though the Theban leader was killed Alexander was murdered by members of his own family

Alexander Severus (Marcus Aurelius Alexander Severus) (sĭvēr'us), d. 235, Roman emperor (222–35), b Syria His name was changed from Alexius Bassianus (221) when he was adopted as the successor to HELIOGABALUS He was of a virtuous and studious character, but proved unable to maintain military discipline. Although successful in a campaign (231–33) against Ardashir I of Persia, he failed to suppress a mutiny on the Rhine, where he was murdered by the supporters of MAXIMIN.

Alexanderson, Ernst Frederik Werner, 1878–, American engineer and inventor, b Uppsala, Sweden, grad Royal Institute of Technology, Stockholm, 1900 He came to the United States in 1901 and joined the General Electric Company at Schenectady in 1902 His many inventions in the radio field include a high-frequency alternator, a multiple-tuned antenna, and a system of television

Alexander the Great or **Alexander III,** 356–323 B C, king of Macedon, conqueror of much of Asia, one of the greatest leaders of all time The son of PHILIP II of Macedon and OLYMPIAS, he had ARISTOTLE as his tutor and was given the education of a model prince Though he had difficulties with his father, who neglected Olympias for another wife, Alexander had no part in the murder of Philip He succeeded to the throne in 336 B C and immediately showed his brilliance by quieting the restive cities of Greece, then putting down uprisings in Thrace and Illyria On a false rumor that Alexander was dead, Thebes revolted The young king rushed south and sacked the city, sparing only the temples and Pindar's house Greece and the Balkan Peninsula secured, he then crossed (334) the Hellespont and undertook the war on Persia that his father had been planning The march he had begun was to be one of the greatest in history At the Granicus river (near the Hellespont) he met and defeated a Persian force and moved on to take Sardis, Miletus, and Halicarnassus None could stand up against his skill in planning and executing his military moves Having taken most of Asia Minor, he entered (333) N Syria and there in the battle of Issus he met and routed the hosts of DARIUS III of Persia, who fled before him Alexander, triumphant, now seems to have envisioned conquest of the whole of the Persian Empire It took him nearly a year to reduce Tyre and Gaza, and in 332, in full command of Syria, he entered Egypt There he met no resistance When he went to the oasis of Amon he was acknowledged as the son of Amon-Ra, and from that time forward he seems to have had a conviction of his own divinity In the winter he founded Alexandria, perhaps his greatest monument, and in the spring of 331 he returned to Syria, then went to Mesopotamia where he met Darius again in the battle of Gaugamela (more frequently called the battle of Arbela after the town 60 mi. away) The battle was hard, but Alexander was victorious He marched S to Babylon, then went to Susa and on to Persepolis He was now the visible ruler of the Persian Empire, pursuing the fugitive Darius to Ecbatana, which submitted in 330, and on to Bactria There the satrap Bessus, a cousin of Darius, murdered the Persian king and declared himself king. Alexander went on through Bactria and captured and executed Bessus He was now in the regions beyond the Oxus (the modern Amu Darya), and his men were beginning to show dissatisfaction In 330 a conspiracy against Alexander was said to implicate the son of one of his generals, PARMENION, Alexander not only executed the son but also put the unquestionably innocent Parmenion to death This arbitrary harshness further alienated the soldiers, who murmured against Alexander's adoption of Persian dress and his manners of an Oriental despot Nevertheless Alexander conquered all of Bactria and Sogdiana after hard fighting and then went on from what is today Afghanistan into N India Some of the princes there received him favorably, but at the Hydaspes (the modern Jhelum) he met and defeated an army under Porus He overran the Punjab, but here his men would go no farther He had built a fleet, and after going down the Indus to its delta, he sent Nearchus with the fleet to take it across the unknown route to the head of the Persian Gulf, a daring undertaking He himself led his men through the desert regions of modern Baluchistan, S Afghanistan, and S Iran The march was accomplished only with great suffering but finally ended at Susa in 324 Here he found that many of the officials he had chosen to govern the conquered lands had indulged in corruption and misrule He also found that there was feeling against him In Greece, for instance, many decried his execution of his own nephew, the historian CALLISTHENES, and it is said that he requested the Greek cities to treat him as a god and thus aroused much more feeling against him Alexander's Macedonian officers resented his attempt to force them to mingle and even intermarry with the Persians (he had himself married ROXANA, a Bactrian princess, as one of his several wives) and resisted his Orientalizing ways and his vision of the equality of peoples There was a mutiny, which was put down In 323 Alexander was planning a voyage by sea around Arabia when he took a fever and died He was 33. Whether or not he had plans for a world empire cannot be told. He had

accomplished greater conquests than any before him, but he had not even had time to mold the government of the lands he had taken, and after his death his generals fell to quarreling about dividing the rule (see DIADOCHI) His only son was Alexander Aegus, born to Roxana after Alexander's death and destined for a short and pitiful life There has been much written of Alexander and his character—his manly beauty, his impulsiveness (he killed a dear friend in a debauch), his visionary schemes, his sense of his own divinity Inconstestably, however, he was one of the greatest generals of all time and one of the most powerful personalities of antiquity To him must be credited the spread of HELLENISM and profound changes in the history of the world He early passed into legend He was said to have cut the Gordian knot, and wonderful stories were told of his feats on his horse Bucephalus As centuries went on the mists grew thicker about his historical personage, and a whole literature of romance grew up about him in the Middle Ages Biographies of him were written in ancient times by Arrian and Plutarch See modern biographies by Ulrich Wilcken (Eng tr, 1932), F A Wright (1934), L. V. Cummings (1940), and W W Tarn (1948)

Alexandra, 1844–1925, queen consort of Edward VII of Great Britain, whom she married in 1863 She was the daughter of Christian IX of Denmark

Alexandra, Mount· see RUWENZORI

Alexandra Feodorovna (fēō"durōv'nu, Rus fyŏ'dŭrŭvnŭ), 1872–1918, Russian empress, consort of NICHOLAS II, a Hessian princess and a granddaughter of Queen Victoria Neurotic and superstitious, she was responsible for the influence of RASPUTIN at court and used her great influence over her husband to encourage his reactionary policy Her unpopularity increased during the First World War, when she was suspected of being pro-German On July 17, 1918, she was shot by the Bolsheviks at Ekaterinburg, together with her husband and children

Alexandretta or **Alexandrette,** Turkish seaport· see ISKENDERUN

Alexandretta, sanjak of (sän"jäk', ă"lĭgzăndrĕ'tŭ), former name of Hatay prov (2,141 sq mi, pop 254,141), S Turkey, comprising the cities of Antioch (the capital) and its port, Alexandretta (now Iskenderun) It has a mixed population, with a high percentage of Syrian Christians Awarded to Syria in 1920, it became in 1936 the subject of a complaint to the League of Nations by Turkey, which claimed that Turkish minority privileges in the sanjak were being infringed An agreement between France (then mandatory power in Syria) and Turkey was effected (1937) by the League, and Alexandretta was given autonomous status Riots between Turks and Arabs resulted (1938) in the establishment of joint French and Turkish military control Finally, in 1939, France transferred the district to Turkey

Alexandria, town (pop 2,175), SE Ont, NNE of Cornwall It has a Roman Catholic cathedral

Alexandria, Arabic *Al Iskandariya,* city (pop 928,237), N Eygpt, a port on the Mediterranean Sea It is at the western extremity of the Nile delta on a narrow isthmus between the sea and Mareotis lake The city was founded late in 332 B C by Alexander the Great It was the capital (304 B C –30 B C) of the Ptolemies, and much of the Mediterranean trade passed through its sheltered port Alexandria soon outgrew Carthage and became the largest city in the West It was the great center of Hellenistic and Jewish culture (the Septuagint was prepared here) The city contained two celebrated royal libraries, to which Antony added a vast collection of rolls from PERGAMUM One library was kept in a temple of Zeus and the other in the museum The collections at their maximum were said to contain about 490,000 different rolls or, counting duplicates, a total of about 700,000 rolls Around the museum a great university arose and attracted many scholars, including Aristarchus of Samothrace, the collator of Homeric texts, Euclid, the mathematician, and Herophilus, the anatomist, who founded a medical school Alexandria formally became part of the Roman empire in 30 B C It was the greatest of the provincial capitals, with a population of c 300,000 free persons and an even larger number of slaves Julius Caesar occupied (49 B C) the city while in pursuit of Pompey, and Octavian (later Augustus) entered it (30 B.C) after the suicide of Antony and Cleopatra In the late centuries of rule under the Roman and Byzantine empires Alexandria was a center of Christian learning rivaling Rome and Constantinople, and a patriarchate was established here The famous libraries were destroyed—possibly in part in Julius Caesar's invasion, certainly more under Aurelian and still more in the razing of pagan temples and structures under Theodosius I in 391 Although a decline in shipping had severely hurt Alexandria's prosperity, it still had 300,000 inhabitants when it fell in 642 to the Arabs They moved the capital of Egypt to what is now Cairo, and Alexandria's decline continued, becoming especially rapid in the 14th cent, when the canal to the Nile silted up On his campaign in Egypt, Napoleon took the city in 1798 but lost it to the British in 1801 In the 19th cent Alexandria (sunk to 12,000 persons) gradually regained importance when the canal was reopened and the harbor improved Today there is a modern harbor (lying to the west of the ancient disused harbor) which handles most of Egypt's foreign trade. There are rail connections with Cairo and most of the Nile valley in Egypt The city is noted for its extensive parks and its fine beaches on the Mediterranean Much of the ancient city is covered by modern buildings or is under water Only a few landmarks are readily accessible, these include ruins of the museum and of the PHAROS and a granite shaft called Pompey's Pillar The spacious Greco-Roman museum houses a vast collection of antiquities In the Second World War the city was saved (1942) from possible capture by Marshal Rommel through Gen B L Montgomery's victory at ALAMEIN

Alexandria 1 City (pop 4,801), E central Ind, NE of Indianapolis Limestone quarried in the surrounding area is used for the manufacture of rock-wool insulation **2** City (pop 27,066), parish seat of Rapides parish, central La, beautifully situated on the Red River, laid out 1810, inc 1818 Its industries are based on the materials produced in the area—cotton, sugar, farm products, and lumber. Commercial fishing and ski manufacture are important A Roman Catholic cathedral (1898) is here, and a state park near by Several state institutions are in the sister city, PINEVILLE **3** City (pop 5,051), co seat of Douglas co, W Minn, SE of Fergus Falls, in a resort region with many lakes, settled 1857, laid out 1865 It is the trade center of a rich farm area Knute Nelson lived here after 1871 The KENSINGTON RUNE STONE is exhibited at the Chamber of Commerce **4** City (pop 33,523), N Va, just S of Washington, D C, on the Potomac, patented 1657, permanently settled in the early 18th cent, laid out 1749, inc as a town 1779, as a city 1852 It is a port of entry and an important railroad center with repair shops and extensive yards and has varied industries, including foundries and metalworking plants In recent years many old places of interest (often associated with George Washington) have been restored, among them are Gadsby's Tavern (1752), Carlyle House (1752, Washington received his commission as major from General Braddock here), Christ Church (1767–73), and Ramsay House (1749–51) The George Washington Masonic National Memorial Temple (1923–32) houses Washington momentos One of the Washington family estates, Woodlawn, was made a national shrine in 1949 Alexandria was part of the District of Columbia from 1789 to 1847 Near by are an Episcopal seminary (1823) and Mt Vernon

Alexandria Bay, resort village (pop 1,748), N N Y, on the St Lawrence and N of Watertown, inc 1878 It is a port of entry and a gateway to the Thousand Islands Sturgeon fisheries are here The Thousand Islands Bridge spans the St Lawrence to Canada from Collins Landing near here

Alexandria Troas (trō'ăs) or **Troas,** ancient Greek seaport city, Mysia, NW Asia Minor It was important under the Greeks and Romans Acts 16 8, 11, 20 5,6, 2 Cor 2 12, 2 Tim 4 13

alexandrine (ălĭgzăn'drĭn), in modern prosody, a line of 12 or 13 syllables, usually considered an iambic hexameter, with the last foot containing a final unstressed syllable if the line has 13 syllables It derives its name, probably, from a medieval romance on Alexander Rhyming couplets of two alexandrines of equal length have been the classic form for French serious poetry since the time of Ronsard, e g, in the dramas of Racine, Corneille, Rostand The important English use is in the Spenserian stanza of eight iambic pentameters and an alexandrine, which rhymes with the last pentameter, e g (*Faerie Queene*)

The builder Oak, sole king of forests all,
The Aspin good for staves, the Cypress funeral.

See ONOMATOPOEIA for a further example

Alexis (ŭlĕk'sĭs), 1629–76, tsar of Russia (1645–76), son and successor of Michael His reign, marked by numerous popular outbreaks, was a crucial one for the later development of Russia A new code of laws, promulgated in 1648, remained in effect until the early 19th cent, it favored the middle class and the landowners, but tied the peasants to the soil The reforms of Patriarch NIKON resulted in a dangerous schism in the Russian Church, and Nikon's deposition (1666) was a prelude to the abolition of the Moscow patriarchate in 1717. In 1654 the Cossacks of the Ukraine, led in revolt against Poland by Bohdan CHMIELNICKI, voted the union of the Ukraine with Russia War with Poland resulted and ended in 1667 with Russia retaining most of the Ukraine A serious revolt broke out two years later among the Don Cossacks under Stenka RAZIN and was quelled in 1671 Alexis was succeeded by his son Feodor III. A younger son, by a second marriage, was Peter the Great (Peter I).

Alexis (Aleksey Petrovich) (ŭlyĭksyā' pĕtrô'vĭch), 1690–1718, Russian tsarevich, son of Peter the Great (Peter I) by his first wife and father of Peter II. Opposing his father's anticlerical policy, Alexis renounced his right of succession and fled to Vienna (1717). Peter, who feared that Alexis might win foreign backing, enticed him to return; he then had him arrested and tried for treason. Sentenced to death, Alexis died from the effects of torture shortly before his scheduled execution

Alexishafen (ŭlĕk'sĭs-hä"fŭn), harbor of N Astrolabe Bay, E New Guinea, in the Territory of New Guinea In the Second World War it was the site of a Japanese air base taken in 1944 by Allied forces It is sometimes called Sek Harbour.

Alexius I (Alexius Comnenus) (ŭlĕk'sēŭs, kumnē'nŭs), 1048–1118, Byzantine emperor (1081–1118) Under the successors of his uncle, ISAAC I, the empire had fallen prey to anarchy and foreign invasions In 1081 Alexius, who had become popular as a general, overthrew Nicephorus III and was proclaimed emperor. Among the dangers besetting the empire, that of the Norman invasions (1081–85) under ROBERT GUISCARD and his son BOHEMOND was the most immediate Alexius, though a superior diplomat, failed to secure the aid of either Emperor Henry IV or Pope Gregory VII, but obtained Venetian help at the price of valuable commercial privileges. This and a truce with the Turks enabled him to defend the Balkan Peninsula until the death of Robert Guiscard, when the Normans temporarily withdrew. Next, Alexius secured the alliance of the CUMANS and with their help defeated (1091) the PETCHENEGS, who had besieged Constantinople In 1095 he repulsed the Cumans, who had turned against him During that period he also regained territory from the Turks and suppressed insurrections in Crete and Cyprus Amid these difficulties, Alexius had again sought the help of the rulers of the West This appeal, however, was not the cause of the First Crusade (see CRUSADES), which began shortly afterward Faced with the presence of an unruly and pillaging host within his territory, Alexius sought both to rid himself of the Crusaders and to employ them for his own purposes Thus he furnished (or bribed) them with money, supplies, and speedy transportation to Asia Minor, but only after he had persuaded the leaders to swear him fealty and agree to surrender to him all conquests in territories that formerly had belonged to the Byzantine Empire In return, he pledged himself to lead the Crusade and furnish a contingent He never fully kept his pledge, partly because of the breach of faith of Bohemond, who seized Antioch for himself, in 1099 Alexius began operations against Bohemond, who in 1108 was forced to acknowledge Alexius as his suzerain The last years of Alexius' reign were consumed by fresh struggles with the Turks and by the intrigues of his daughter ANNA COMNENA against his son and heir, John II Alexius' reign, though at the cost of onerous taxation, restored Byzantine military and naval power and political prestige

Alexius II (Alexius Comnenus), c 1168–1183, Byzantine emperor (1180–83), son and successor of Manuel I His mother, Mary of Antioch, who was regent for him, alienated the population by favoring the Latin element in Constantinople In 1183 Alexius' cousin Andronicus, after instigating a massacre of the Latins, stormed the city, had Alexius sign the death sentence of his mother, and, as Andronicus I, became joint emperor One month later he strangled Alexius and married his widow

Alexius III (Alexius Angelus) (ăn'jūlŭs), d after 1210, Byzantine emperor (1195–1203) He acceded to power by deposing and blinding his brother Isaac II This act served as pretext for the leaders of the Fourth Crusade (see CRUSADES) to attack Constantinople (1203) The Crusaders made Isaac II and his son Alexius IV joint emperors, Alexius III having fled. In 1204 Alexius III's son-in-law was briefly emperor as Alexius V. Another son-in-law, Theodore I, became emperor of Nicaea Alexius died in obscurity

Alexius IV (Alexius Angelus), d. 1204, Byzantine emperor (1203–4), son of ISAAC II With the encouragement of his brother-in-law, Philip of Swabia, he obtained (1202) from the leaders of the Fourth Crusade (see CRUSADES) the promise of help in the deposition of his uncle, Alexius III. Made joint emperor with Isaac II after the entry of the Crusaders into Constantinople, he was overthrown for his subservience to his allies and was strangled by order of Alexius V.

Alexius V (Alexius Ducas Mourtzouphlos), (dōō'kŭs môrt'sōōflōs), d. 1204, Byzantine emperor (1204), son-in-law of Alexius III The head of the Byzantine national party, he overthrew Emperors Isaac II and Alexius IV (who had been instated by the Crusaders), thus precipitating the conquest and sack of Constantinople (1204) by the army of the Fourth Crusade (see CRUSADES). He was deposed and executed, and Baldwin I was elected by the Crusaders as Latin emperor of Constantinople.

Aleyn, Simon· see BRAY, Berkshire, England

alfalfa (ălfăl'fŭ) [from Arabic], a perennial (*Medicago sativa*), the most important legume for forage and hay in North America. It is valued for its high yield (two to six mowings a year being possible

from established meadows), its adaptability to a wide range of soils and climates, its high protein content, and its addition to the productivity of the soil It is a trefoil, related to the clovers Its flowers are usually blue or purple but some varieties have yellow flowers, and in others both yellow and blue or purple flowers occur It is not adapted to acid soils or to soils with poor drainage Alfalfa was cultivated in ancient times As lucern, a name by which it is still known, it came to the Atlantic seaboard of North America Varieties cultivated in Latin America have been brought to the W United States, where alfalfa has become the principal hay crop Young alfalfa shoots have been used as food for humans and found to have antiscorbutic properties Carotene and chlorophyll for commercial uses can be extracted from alfalfa

Al-Farabi (äl-furʹäʹbē) or **Alfarabius** (älʺfurāʹbēus), d 950, Arabian philosopher of Damascus Author of an encyclopedic work which draws largely from Aristotle, he was one of the earlier Moslem philosophers to develop a philosophical method reconciling Aristotle and Islam Neoplatonism also is clearly influential in Al-Farabi He might be said to correspond in Arabian philosophy to Robert Grosseteste in scholasticism

Alfaro, Flavio Eloy (fläʹvyō äloiʹ älfaʹrō), 1867–1912, president of Ecuador (1897–1901, 1907–11) Regarded as the greatest of Ecuador's liberal champions, he introduced material and constitutional reforms that largely undid the clericalism of GARCÍA MORENO Exiled by the opposition, he returned to lead a revolt, but was defeated and imprisoned He was dragged from prison by a frenzied mob and murdered.

Al-Fasi, Isaac ben Jacob ha-Kohen (ulfäʹsē), 1013–1103, Jewish Talmudic scholar, b near Fez, North Africa His *Halachoth*, a codification of the Talmud, is his greatest work, it contains a simplified exposition of complicated Talmudic passages He is also known for his collection of *Responsa*, a great deal of which was written in Arabic and later translated into Hebrew

Alfieri, Vittorio, Conte (vēt-tōʹrēō kōnʹtā älfyäʹrē), 1749–1803, Italian tragic poet A Piedmontese, born to wealth and social position, he spent his youth in dissipation and adventure From 1767 to 1772 he traveled over much of Europe but returned to Italy imbued with a sense of the greatness of his own country He considered himself a prophet called to revive the national spirit of Italy Determined to become a tragic dramatist, he evolved a highly individual style, vigorous and harsh The first of his tragedies, *Cleopatra*, was staged in Turin in 1775 From 1776 to 1786 he wrote 19 tragedies, among them *Saul* (written in 1782), *Antigone*, *Agamemnon*, *Orestes*, *Philip the Second* (all four 1783), *Sophonisba* (1788), and *Maria Stuart* (1804) They are distinguished by lofty tone, restraint, and verse which, if not great, is worthy of admiration They are in the style of the French classical tragedy His minor verse is chiefly notable for its energy He was also the author of comedies, of a bitter satire against France, the *Misogallo*, and of a very revealing autobiography (1804, Eng tr , 1810) The period of Alfieri's greatest literary activity coincided with the beginning of his friendship with the countess of Albany, wife of Charles Edward Stuart, the Young Pretender. The remainder of his life was spent with her, and they may have secretly married after her husband's death His complete works were posthumously edited and published (1805–15) by the countess of Albany His tragedies were translated into English by Charles Lloyd (1815) and E A Bowring (1876) For a selection from his verse, see Lorna de' Lucchi, *An Anthology of Italian Poems* (1922) See Gaudense Megaro, *Vittorio Alfieri, Forerunner of Italian Nationalism* (1930); C D R Miller, *Alfieri* (1936)

Alfonsine tables or **Alphonsine tables** (älfōnʹsĭn), improved planetary tables They were a revision of the Ptolemaic tables and were made at Toledo by about 50 astronomers, assembled for the purpose by Alfonso X of Castile The tables, completed c 1252, were printed in Venice in 1483

Alfonso I, d 1134, king of Aragon and of Navarre (1104–34); brother and successor of Peter I He was the husband of URRACA, queen of Castile His life was spent in continuous warfare He was obliged to abandon his efforts to extend his authority over Castile in order to fight the Moors, from whom he captured Saragossa (1118) Calatayud (1120), and many other towns His raid into Andalusia had a great moral, if not practical, effect. He was succeeded by his brother Ramiro II in Aragon (see ARAGON, HOUSE OF) and by García IV in NAVARRE

Alfonso II, 1152–96, king of Aragon (1164–96), count of Barcelona (1162–96), son and successor of Raymond Berengar IV of Barcelona and Petronella of Aragon. He inherited Provence (1166) and Roussillon (1172) and successfully defended against the counts of Toulouse the claims to the French fiefs of his house He conquered (1171) Teruel from the Moors and resettled it, and he released himself from homage to Castile, but followed a varying policy toward the Castilian king, Alfonso VIII. A patron of troubadours, he wrote Provençal verse His son, Peter II, succeeded him.

Alfonso III, 1265–91, king of Aragon and count of Barcelona (1285–91), son and successor of Peter III He was forced to grant wide privileges to the Aragonese nobles At first he supported the claim to Sicily of his brother James (later JAMES II of Aragon) against CHARLES II of Naples Later, however, he released Charles from captivity, recognized papal suzerainty over Sicily, and pressed James to abandon his claim He also made war on Castile and on his uncle, JAMES I of Majorca James II succeeded him

Alfonso IV, 1299–1336, king of Aragon and count of Barcelona (1327–36), son and successor of James II Before his accession he conquered (1323–24) SARDINIA, where later a revolt involved him in a war with Genoa He was succeeded by his son, Peter IV

Alfonso V (Alfonso the Magnanimous), 1396–1458, king of Aragon and Sicily (1416–58) and of Naples (1443–58), count of Barcelona He was the son of Ferdinand I, whom he succeeded in Aragon and Sicily In 1420 Queen JOANNA II of Naples sought his aid against LOUIS III, rival king of Naples, and adopted him as her heir They quarreled in 1423, and at her death (1435) Joanna left her throne to RENÉ of Anjou Attempting to conquer Naples, Alfonso was at first captured by the Genoese, but was released through the agency of Filippo Maria Visconti, duke of Milan In 1442 he defeated René, took Naples, and was recognized (1443) as king by Pope Eugene IV Leaving his Spanish possessions under the rule of his wife, Alfonso spent the rest of his life in Naples, where he accorded great privileges to Spanish nobles and tried to introduce Spanish institutions A great patron of arts and letters, he held a splendid court and beautified the city Alfonso became involved in Italian politics and tried to stem through diplomacy the advance of the Turks At his death he left Naples to his son Ferdinand I and the rest of his kingdom to his brother John II

Alfonso I, Port *Afonso Henriques*, 1111?–1185, first king of Portugal, son of Henry of Burgundy After his father's death (1114), his mother, Countess Theresa, ruled the county of Portugal with the help of her Spanish favorite, Fernando Péres, until in 1128 young Alfonso, allying himself with discontented nobles, took power and drove her into Leon with the still-faithful Péres (Alfonso did not, despite the popular legend, put her in chains at Guimarães) Beginning as little more than a quasi-independent guerrilla chief, Alfonso spent his life in almost ceaseless fighting against the kings of Leon and Castile and against the Moors to increase his prestige and his territories In 1139 he defeated the Moors in the battle of Ourique (fought not at Ourique, but at some undetermined place) In 1147 he took Santarém by surprise attack and in that same year, with the help of the English, Flemish, and German crusaders, captured Lisbon Styling himself king after 1139, he put (1143) his lands under papal protection, and Alfonso VII of Castile recognized the title, which was confirmed (1179) by Pope Alexander III Alfonso's son SANCHO I ascended an established throne

Alfonso II (Alfonso the Fat), 1185–1223, king of Portugal (1211–23) His reign was spent in struggles with the Church and his brothers and sisters, to whom his father, Sancho I, had left many of his estates Alfonso's measures against the Church holdings and the bishops led to his excommunication (1219) Though he was himself most unwarlike, Portuguese soldiers took part in the battle of Navas de Tolosa and pushed conquests against the Moors He was succeeded by Sancho II

Alfonso III, Port *Afonso o Bolonhez* [Alfonso of Boulogne], 1210–79, king of Portugal (1248–79), son of Alfonso II, successor of Sancho II By his marriage with Matilda, countess of Boulogne, he became count of Boulogne, but he had ambitions to gain the throne of Portugal Through intrigues, capped by an agreement reached (1245) in Paris with the archbishop of Braga and the bishop of Coimbra, he secured support for the deposition of Sancho II and entered Portugal He controlled most of the country before the death of Sancho, whom he succeeded to the throne His reign saw the completion of the reconquest of Portugal from the Moors with the taking of the rest of the Algarve (1249) This involved him in a long quarrel with Alfonso X of Castile, who had been receiving revenues from Algarve, but the two kings reached an agreement by which Alfonso III married the illegitimate daughter of Alfonso X, and Alfonso X was to relinquish all rights to the Algarve when the heir born of this union (the later King DINIZ) should reach the age of seven Since Matilda of Boulogne was still living, Alfonso's second marriage brought the Portuguese king into disfavor with the Church, but the matter was patched up after Matilda's death, and the disagreement with Castile was ended by an agreement at Badajos in 1267 Alfonso III, despite the promises he had made in Paris, undertook vigorously to recover properties that had been alienated to the Church, and his seizure of lands caused a long break with the Church, healed shortly before his death He called the Cortes of Leiria (1254), the first Portuguese Cortes to include commoners He also instituted administrative and financial reforms, encouraged the cities and commerce, and commuted many feudal dues into money payments French and Provençal culture was imported to the court, and the period was one of great intellectual and cultural activity

Alfonso IV, 1291–1357, king of Portugal (1325–57), son and successor of DINIZ Disgruntled at the favoritism his father showed toward Alfonso's illegitimate half brothers, Alfonso rose in revolt in 1320, and though peace was patched up twice by his mother, St Elisabeth (or St. Isabel) of Portugal, he was estranged from Diniz most of the five years before his father's death He was then involved in a fruitless war with Alfonso XI of Castile until 1340 The two kings immediately thereafter campaigned together against the Moors and won the notable battle of Tarifa Alfonso is, however, best remembered for countenancing the murder of his son's mistress (or wife), the most romantic figure in Portuguese history, Inés de CASTRO, in 1355 The prince (later PETER I) promptly led a rebellion, but peace between father and son was restored before Alfonso's death

Alfonso V (Alfonso the African), 1432–81, king of Portugal (1438–81), son of Duarte and Queen Leonor He was just six when his father died, and in his minority there was a struggle for the regency between the queen mother and the duke of Coimbra (Dom Pedro, uncle of Alfonso) The duke was triumphant and retained power after Alfonso was declared of age (1446) until, influenced by the machinations of the illegitimate half brother of Dom Pedro (see BRAGANÇA, family), the young king took unjust measures against Dom Pedro and brought on a civil war The king's troops killed (1449) his uncle at Alfarrobeira Alfonso undertook ventures in Morocco and by capturing Alcacer-Seguer (1458) and Tangier (1471) won the name Alfonso the African, but these campaigns were ultimately not fruitful Even less rewarding was his long attempt to win the throne of Castile after his marriage—never sanctioned by the Church—in 1475 to JUANA LA BELTRANEJA, officially the daughter and heiress of Henry IV of Castile though generally thought to be the child of Beltrán de la Cueva This claim brought Alfonso into war with ISABELLA I of Castile and her husband, FERDINAND V of Aragon Alfonso, badly beaten, capitulated in 1479 His son, the later John II, was exercising control in Portugal long before Alfonso's death

Alfonso VI (Alfonso the Victorious), 1643–83, king of Portugal (1656–67), son and successor of John IV Slightly paralyzed and mentally defective, unable to govern, he distinguished himself under the regency of his mother by associating with rowdy youths When the leader of them was sent away, he, under the direction of the count of Castelho Melhor, ousted his mother by a palace revolution in 1662 The count of Castelho Melhor then directed the government ably, and organized the army for the great repulse of the Spanish under John of Austria in 1663, thus earning for the king the ironic title Alfonso the Victorious After the marriage of Alfonso to Marie Françoise of Savoy, daughter of the duke of Nemours, in 1666, the young queen took a hand in government She and the king's younger brother (later Peter II) fell in love, and by concerted action they forced Castelho Melhor from power and had Alfonso sign away his crown to his brother, who became prince regent After obtaining a quick annulment of her marriage to Alfonso, his queen was wedded to his brother Alfonso was confined in the Azores until 1674 and after that at Sintra

Alfonso I (Alfonso the Catholic), 693?–757, Spanish king of Asturias (739–57) He was the son-in-law of PELAYO Strife among the Moors facilitated his conquests in parts of Galicia, Leon, and Santander

Alfonso II (Alfonso the Chaste), 759?–842, Spanish king of Asturias (791–842), grandson of Alfonso I He continued the struggle against the Moors and established his residence at Oviedo, which his father, Fruela I, had founded His alliance with Charlemagne and Emperor Louis I met opposition among his nobles Alfonso II built the first church on the site of SANTIAGO DE COMPOSTELA

Alfonso III (Alfonso the Great), 838?–910?, Spanish king of Asturias (866–909) The kingdom was consolidated in his reign, though after his forced abdication it was divided among his sons.

Alfonso V (Alfonso the Noble), 994?–1027, Spanish king of Asturias and Leon (999–1027) While he was still a minor, the Moors under Al-Mansur were defeated Alfonso gave Leon its *fuero* [charter] and was killed in the siege of Viseu

Alfonso VI, 1030–1109, Spanish king of Leon (1065–1109) and Castile (1072–1109). He inherited Leon from his father Ferdinand I. Defeated by his brother, SANCHO II of Castile, he fled to the court of Al-Mamun, Moorish ruler of Toledo After Sancho's assassination (1072) he succeeded to the throne of Castile and took Galicia from his

brother García (1073), thus becoming the most powerful Christian ruler in Spain He raided Moslem territory and penetrated as far as Tarifa After the conquest of strategic Toledo (1085), he took many other cities and reached the line of the Tagus Aroused by his advance, Abbad III (see ABBADIDES) and his Moslem allies called to their aid the Almoravide YUSUF IBN TASHUFIN, who defeated Alfonso in 1086 and again in 1108, when Alfonso's only son was killed in battle Alfonso's reign gave a tremendous impulse to the reconquest of Spain and was also notable for the exploits of the Cid His court at Toledo became the center of cultural relations between Moslem and Christian Spain, while French influence also grew strong through his many French followers At this time the Cluniac reform was introduced into Spain Alfonso was succeeded by his daughter URRACA

Alfonso VII (Alfonso the Emperor), 1104–57, Spanish king of Castile and Leon (1126–57), son and successor of URRACA He recovered the places in Castile which his stepfather, Alfonso I of Aragon, had occupied and soon gained supremacy over the other Christian states in Spain In 1135 he had himself crowned emperor in Leon His many victories over the Moors had no permanent results, the most famous was the conquest of Almería (1147) Alfonso left Castile to Sancho III and Leon to Ferdinand II

Alfonso VIII (Alfonso the Noble), 1155–1214, Spanish king of Castile (1158–1214), son and successor of Sancho III Chaos prevailed during his minority, but he quickly restored order after assuming the government He married Eleanor, daughter of Henry II of England, and their daughter, Blanche of Castile, married Louis VIII of France Alfonso incorporated the provinces of Álava and Guipúzcoa into Castile and took Cuenca (1177) Attacked simultaneously by a coalition of Navarre, Aragon, and Leon and by the Moors, he was defeated by the Moors at Alarcos (1195) He later made peace with his former Christian enemies and led them to the great victory over the Almohades at Navas de Tolosa (1212) At Palencia he founded the first university in Spain (1212 or 1214) He was succeeded by his son, Henry I (1214–17), who was succeeded by his nephew, Ferdinand III

Alfonso IX, 1171–1230, Spanish king of Leon (1188–1230), son and successor of Ferdinand II He conquered from the Moors several cities in Estremadura and was frequently at war with Alfonso VIII of Castile His marriages with Theresa of Portugal and Berenguela of Castile were both annulled by the pope as being within the forbidden degree He defeated (1230) the Moors at Mérida His son by Berenguela, Ferdinand III, reunited Leon and Castile (1230)

Alfonso X (Alfonso the Wise), 1221–84, Spanish king of Castile and Leon (1252–84), son and successor of Ferdinand III, whose conquests from the Moors he continued, notably by taking Cádiz (1262) His mother, Beatriz, was a daughter of Emperor Philip of Swabia and a granddaughter of Isaac II, the Byzantine emperor On the death (1250) of Conrad IV and of William, count of Holland, Alfonso was elected by a faction of German princes as antiking to Richard, earl of Cornwall, and (after 1272) to Rudolf of Hapsburg He did not go to Germany, however, and in 1275 renounced his claim In his domestic policy he showed weakness toward the nobles He debased the coinage, thus adding to the general discontent After the death (1275) of his eldest son, Ferdinand, in fighting against the Moors in Andalusia, civil war for the succession broke out between Ferdinand's children and Alfonso's second son, who eventually succeeded him as Sancho IV Sancho's partisans in the cortes at Valladolid even declared Alfonso deposed (1282) The king died while the dynastic dispute was still unsettled. Though unfortunate in politics, Alfonso did much to stimulate the cultural life of his time Under his patronage the schools of Seville, Murcia, and Salamanca were furthered, and Moslem and Jewish culture flowed into Western Europe He was largely responsible for the *Las Siete partidas*, a compilation of the legal knowledge of his time, for the ALFONSINE TABLES in astronomy, and for other scientific and historical works A collection of poems for music, *Songs to the Virgin*, in Galician, is attributed to him

Alfonso XI, 1311–50, Spanish king of Castile and Leon (1312–50), son and successor of Ferdinand IV His vigorous campaign against Granada led to an invasion by the Moors from Morocco, they took Gibraltar in 1333 In 1340, having formed alliances with Portugal, Navarre, and Aragon, Alfonso won the great victory of Tarifa (also called the battle of the Salado), in 1344, aided by many foreign soldiers, of whom Chaucer's Knight is a type, he took Algeciras He died while besieging Gibraltar Alfonso was succeeded by his son Peter I (Peter the Cruel) By the *Ordenamiento de Alcalá* issued at Alcalá de Henares in 1348, he enforced the *Siete partidas* of Alfonso X

Alfonso XII, 1857–85, king of Spain (1870–85), son of ISABELLA II He went into exile with his parents at the time of the revolt of the CARLISTS in 1868 and was educated in Austria and England In 1870 his mother abdicated in his favor, and in 1874 he was proclaimed king He entered Madrid in triumph early in 1875 and soon won great popularity. Supported by MARTÍNEZ DE CAMPOS and CÁNOVAS DEL CASTILLO, he consolidated the monarchy, suppressed republican agitation, and restored order His wife MARIA CHRISTINA (1858–1929) was regent during the minority of his posthumous son Alfonso XIII

Alfonso XIII, 1886–1941, king of Spain (1886–1931), posthumous son and successor of Alfonso XII His mother MARIA CHRISTINA (1858–1929) was regent until 1902 In 1906 Alfonso married Princess Victoria of Battenberg In spite of his personal popularity, the monarchy was threatened by social unrest in the newly industrialized areas, by Catalan agitation for autonomy, by dissatisfaction with the Moroccan situation, and by the rise of socialism and republicanism After keeping Spain out of the First World War, Alfonso, dissatisfied with the functioning of parliamentary government, supported (1923) PRIMO DE RIVERA in establishing a military dictatorship At the fall (1930) of Primo de Rivera, popular discontent was running high After the municipal elections of 1931 showed an overwhelming republican majority, Alfonso "suspended the exercise of royal power" and went into exile (April 14, 1931) A few weeks before his death in Rome he renounced his claim to the throne in favor of his third son, Juan (see BOURBON, family)

Alford, Henry (ôl'furd), 1810–71, English clergyman and scholar, dean of Canterbury He is best known for several hymns (e g *Ten Thousand Times Ten Thousand* and *Come, Ye Thankful People, Come*) and for his critical edition of the New Testament in Greek (4 vols , 1849–61) He was the first editor (1866–70) of the *Contemporary Review*

Alfred [Old Eng Ælfred], 849–899?, king of WESSEX (871–899?), one of the most heroic and best-loved figures of English history, b Wantage, Berkshire He is sometimes called Alfred the Great Youngest of the four sons of King ÆTHELWULF, he was sent in 853 and again in 855 to Rome, where the pope invested him with the honorary dignity of a Roman consul Although he lacked adequate instruction and learned to read English only after he was 12, these trips stimulated his desire for learning His adolescence was marked by ill-health and deep religious devotion, both of which persisted for the rest of his life Few facts are known of him during the end of his father's reign and those of his older brothers, ÆTHELBALD and ÆTHELBERT, but when ÆTHELRED took the throne (866?), Alfred became *secundarius* (viceroy?) and aided his brother in subsequent battles against the Danes, who now threatened to overrun all England When the Danes turned from the east and north regions late in 870 to Wessex, Æthelred and Alfred resisted with varying fortunes in the victory at Ashdown, Berkshire, the defeat at Basing, and several indecisive engagements Upon his brother's death after Easter in 871, Alfred became king of the West Saxons and overking of Kent (with Surrey, Sussex, and Essex) Faced by a persistent enemy too powerful to defeat decisively, Alfred cleared the Danes from Wessex by a heavy payment (see DANEGELD) in 871 In 876 and 877 the Danes returned to ravage for several months and finally, halted by Alfred's army, swore to leave Wessex forever In a surprise invasion early in 878 the Danes, however, crushed Alfred's forces, and he fled to Athelney in the fens of Somerset, from which he continued to wage guerrilla war The famous legend of Alfred and the cakes, in which he appears as an unrecognized king, exposed to the scolding of a peasant woman, probably reflects this period of his life The West Saxons rallied, however After the men of Devon had won a victory at Cynwit (Countisbury?), Alfred gathered an army to win a complete victory at Ethandun (Edington) He then dictated the Peace of Chippenham or Wedmore by which Guthrum, the Danish leader, accepted baptism and probably agreed to separate England into English and Danish "spheres of influence" The Danes moved into E Anglia and E Mercia, and Alfred established his overlordship in W Mercia In later campaigns scantily recorded, Alfred captured London and again defeated the Danes (885–86) Another treaty with Guthrum in 886 marked off the DANELAW E and N of the Thames, the Lea, the Ouse, and Watling Street, leaving the south and west of England to Alfred, established the relative indemnities of Englishmen and Danes in law, and attempted to prevent border raids The years of security which followed gave Alfred the opportunity for numerous reforms Against further probable attacks by the Danes, he reorganized the militia or *fyrd* about numerous garrisoned forts throughout Wessex and commanded the construction of a fleet Drawing from the old codes of ÆTHELBERT of Kent, INE of Wessex, and Offa of Mercia, he issued his own code of laws, marked at once by Christian doctrine and measures for a strong, centralized monarchy He reformed the administration of justice and energetically participated in it. He came eventually to be considered the overking of all England although this title was not realized in concrete political administration His greatest achievements, perhaps, were the revival of learning and the establishment of Old English literary prose His conviction of the necessity for education caused him to gather together a group of scholars, including the Welsh Asser, the Mercians Werferth and Plegmund, the Frank Grimbald, and John the Old Saxon These strengthened the Church by reviving learning among the clergy and organized a court school like that of Charlemagne, in which not only youths and clerics but also many nobles were taught Alfred himself between 887 and 892 learned Latin in order to make the best Latin works available in English translations—Gregory the Great's *Pastoral Care*, Bede's *Ecclesiastical History*, Orosius's universal history, Boethius's *Consolation of Philosophy*, and St Augustine's *Soliloquies* The adaptation of Boethius is most remarkable for the liberal interpolation of his own figures and thoughts The Orosius is interesting for the addition of accounts of voyages made by OHTHERE and WULFSTAN, in the North Sea and the Baltic Although he did not write it, Alfred influenced the extant form of the ANGLO-SAXON CHRONICLE All these pursuits were interrupted, but not ended, by new Danish invasions between 892 and 896 The struggle was severe because Alfred's military reforms had not been completely executed and because the already strong invading forces were joined by settlers from the Danelaw He received excellent support from his son EDWARD THE ELDER, his daughter ÆTHELFLÆD, and her husband Æthelred of Mercia In the critical year of 893 the great Danish fort at Benfleet was successfully stormed One Danish expedition attempting conquest by way of the Thames and Severn was defeated at Buttington, another occupying Chester was besieged and forced back to Essex In 896 the Danes slowly dispersed to the Danelaw or overseas, and Alfred's new long ships fought with varying success against pirate raids on the south coast Alfred's career was later embroidered by many heroic legends, but history alone can justify the inscription on the statue at his birthplace "Alfred found learning dead, and he restored it, the laws powerless, and he gave them force the Church debased, and he raised it, the land ravaged by a fearful enemy, from which he delivered it Alfred's name shall live as long as mankind shall respect the past." Our knowledge of Alfred's life depends upon the biography by Asser, the *Anglo-Saxon Chronicle*, the royal charters, and Alfred's own writings See the various editions of Alfred's works, Bishop Asser, *Life of King Alfred* (tr by A S Cook, 1906), Charles Plummer, *The Life and Times of Alfred the Great* (1902), R H Hodgkin, *A History of the Anglo-Saxons*, Vol II (1935)

Alfred, town (pop 1,039), co seat of York co , SW Maine, W of Biddeford, settled 1764, inc 1794 A Shaker settlement was here from c 1793 to 1925

Alfred University, at Alfred, N Y , SW of Hornell, nonsectarian, with state and private support, coeducational, opened as a school 1836, chartered 1857 as Alfred University It is especially known for the state college of ceramics, chiefly developed by Charles F BINNS

algae (ăl'jē) [plural of Latin *alga*=seaweed], group of plants belonging to the most primitive phylum of the plant kingdom, the thallophytes, plants which lack true roots, stems, leaves, and flowers Unlike the fungi, the other large group of thallophytes, the algae have chlorophyll They are of world-wide distribution and form the chief aquatic plant life both in the sea and in fresh water Practically all seaweeds are algae The simplest algae are single cells, the more complex forms consist of many cells grouped in a spherical colony (e g , *Volvox*), in a ribbonlike filament (e g , *Spirogyra*), or in a branching thallus form (e g , *Fucus*) The cells of the colonies are generally similar, but some are differentiated for reproduction and for other functions Many algae are microscopic, though the marine thallod forms (e g , KELP) may attain a length of more than 100 ft Some of the primitive forms are free swimming, a few of these (e g , *Euglena*) are regarded by zoologists as animals and by botanists as plants (see ANIMAL) The four chief algal groups are, in order of complexity, blue-green algae and green algae, which include most of the fresh-water forms, and brown algae and red algae, chiefly salt-water forms Algae are an important source of food for fish Pond scum or frog spit, a green slime found in stagnant water, is an alga, as is the green film found on the bark of trees. Marine algae include IRISH MOSS and GULFWEED See also DIATOM and SEAWEED See L H Tiffany, *Algae, the Grass of Many Waters* (1938), J E. Tilden, *The Algae and Their Life Relations* (1935).

Algardi, Alessandro (älgĕs-sän'drō algär'dē), 1602–54, Italian architect, sculptor, and designer, b. Bologna, studied under Lodovico Carracci In Rome he achieved his first great work, the statue *St Magdalene*, for the Church of San Silvestro. He

erected the VILLA DORIA PAMPHILI and built the altar of St Niccolò Tolentino and the façade of the Church of San Ignazio In collaboration with Borromini he decorated St Peter's Church His best sculpture is a bas-relief over the altar of St Leo in this church, representing *Attila's Retreat from Rome* He made a *Pietà*, a crucifix, and other statues in ivory There are a few prints, in the style of Agostino Carracci, attributed to him

Algarotti, Francesco, Conte (frănchās'kō kŏn'tā ălgärŏt'tē), 1712–64, Italian writer and scientist He was an intimate friend of Frederick the Great, at whose court he lived for several years and who erected a memorial to him He wrote on many subjects—travel, science, music, and literature His works translated into English include *Sir Isaac Newton's Philosophy Explained for the Use of the Ladies* (1737, Eng tr, 1939), *An Essay on Opera* (1755, Eng tr, 1767), and his letters (Eng tr, 1769) He was a pioneer Italian essayist

Algarve (ălgär'vu), province (1,958 sq mi, pop 317,628), S Portugal, coextensive with Faro dist The capital is Faro Algarve is the most southerly of the provinces (see PORTUGAL)

Al-Gazel (ăl-guzĕl'), or **Ghazali** (gnz'lē), 1058–1111, Arabian philosopher, native of Khurasan He was a professor at Baghdad for some years, but abandoned his career and became a mystical ascetic His principal works, *The Destruction of the Philosophers* and *The Restoration of the Sciences of Religion*, show a profound distrust of speculation and philosophic method in approaching the mysteries of religion He was one of the most mighty opponents of Moslem rationalism, and his teaching undoubtedly was influential in causing the suppression of rationalism in Baghdad in the 13th cent

algebra [Medieval Latin, from Arabic,=reunion of parts], branch of mathematics in which the operations of arithmetic are generalized In elementary algebra this generalization is achieved by the use of letters to represent numbers A term is the product of several numbers and letters, such as $6xy^3$ It represents a number whose value depends on the values of the unknowns, the letters x and y The number 6 in this term is a coefficient and the number 3 written above and to the right of the y is an exponent The sum or difference of two or more terms is named according to the number of terms in the final expression, e g, binomial and trinomial Rules are formulated for the addition, subtraction, multiplication, and division of such expressions and for the simplification of the resulting expressions This simplification may involve such operations as factoring, combining like terms, canceling, and removing parentheses (symbols of grouping) With these techniques many equations can be solved Algebra is used in most branches of mathematics (e g, geometry, trigonometry, and calculus) and in the applications of mathematics (e g, physics and statistics) In most of these applications algebra is needed in order to solve an equation expressing a relationship between the unknown quantity and various known quantities Historically it is hard to distinguish the emergence of algebra from arithmetic Some of the problems solved by the early Egyptians (as shown in the Ahmes papyrus written c 1650 B C), by the Babylonians, and by the Greeks (especially by Diophantus) seem to require algebra, but these ancients apparently had no such body of generalized theory and probably solved their problems by special methods Some aspects of generality appear in the work of the Hindu mathematicians (e g, in that of Aryabhatta, Brahmagupta, and Bhascara) Generality was lost again in the work of the Arabians, whose great contribution to mathematics was to preserve and pass on the Hindu notation for numbers, the decimal system In the 13th cent this way of writing numbers was introduced into Europe by Leonardo of Pisa A hundred years later the work of François Viète showed that generality (i e, true algebra as distinguished from arithmetic) was again appearing Modern abstract algebra is a further generalization in which not only the numbers but also the operations are generalized It has been developed by Karl F GAUSS, William R HAMILTON, Evariste GALOIS, Max Noether, and others See W L Hart, *Introduction to College Algebra* (1937), E T Bell, *The Development of Mathematics* (1940)

Algeciras (ălhŭsĕr'ŭs, Span alhāthē'ras), city (pop 20,226), Cádiz prov, S Spain, in Andalusia, a Mediterranean seaport on the Bay of Algeciras opposite Gibraltar It was taken from the Moors in 1344. In the naval engagements of July, 1801, near Algeciras, the British defeated the French and Spanish fleets The city suffered in the Spanish civil war of 1936–39.

Algeciras Conference: see MOROCCO

Alger, Horatio (ăl'jur), 1834–99, American writer of boys' stories, b Revere, Mass Trained for the ministry, he left his charge (1866) and went to New York Living there for 30 years, he spent much of his time at the Newsboys' Lodging House He wrote over 100 books for boys, the first, *Ragged Dick*, being published in 1867 By leading exemplary lives, struggling valiantly against poverty and other odds, all Alger's heroes win wealth and honor. His works were amazingly popular and left a strong mark upon the character of a generation of American youth Alger gave away, chiefly to street boys he befriended, most of his large income and died poor See H R Mayes, *Alger a Biography without a Hero* (1928)

Alger, Russell Alexander, 1836–1907, U S Secretary of War (1897–99), b near Medina, Ohio After moving to Michigan he engaged in the lumber business, in which he later made a fortune In the Civil War he rose from the ranks to be a brevet major general He was governor of Michigan (1885–86) and was prominent in national affairs of the Republican party He was made Secretary of War by President McKinley, but the inefficiency of his department—in bad condition when he took charge—and his appointment of William R SHAFTER were bitterly criticized, and he resigned He was later (1902–7) Senator from Michigan

Algeria (ăljēr'ĭu), Fr *Algérie* (alzhārē'), French government general (847,552 sq mi, pop 7,234,684), N Africa ALGIERS is the capital, other important ports are ORAN, BÔNE, and PHILIPPEVILLE, and the chief inland city is CONSTANTINE Algeria fronts on the Mediterranean in the north, with c 650 mi of coast between Tunisia and Libya on the east and Morocco on the west In the south it has a desert frontier with French West Africa in the Sahara The northern coastal strip is narrow and broken, with poor natural harbors From it the mountains of the Tell Atlas (or Maritime Atlas) rise abruptly Beyond is the fertile, well-populated band of hilly country that has for more than 3,000 years been producing cereals for foreign lands under foreign exploitation Its plains and valleys run east and west and have since immemorial times been part of the best land route of communication across N Africa Between the blooming Tell and the fastnesses of the Saharan Atlas there are semiarid plateaus, which are suitable for grazing and for cultivation of alfa (esparto), they are dotted with salt marshes and shallow salt lakes called shotts Beyond lies the great harshness of the Sahara itself, interrupted only by a few date-bearing oases, such as those of Touggourt, Tuat, and Biskra In the southeast is the Hoggar, a center of the nomadic Tuareg culture The remote Tuareg represent only one of the many variations in the native peoples usually called Berbers The tribesmen in early days had little or no unity, and indeed Algeria has no natural boundaries and was not a political entity until after the French occupation Native groups were contending for regional power over parts of the land before the Romans knew the coastal and subsidiary area Carthaginian power had extended over the present Algerian coast The richness of the Tell attracted the Roman conquerors to take part in the wars of NUMIDIA and MAURETANIA, and after 146 B C, Rome gradually took control of the hills and some of the plateau country beyond Grain ships went from the little ports with precious food for Rome, and the cities came to be Latinized In the Christian days of the empire, coastal N Africa was an integral part of the great whole, and St Augustine was bishop at Hippo (now Bône) This civilization was worn away not only by the incursions of the barbarians but also by revolts and dissensions in the Roman colonies themselves The drastic conquests of the Vandals in 430–31 only marked the culmination of a long process Though the Byzantines regained part of old Roman Africa in 534, their hold was insecure and Roman culture did not revive The next conquerors had a far more profound effect, for when the Arabs arrived in the 7th cent they brought with them Islam, and gradually all of the peoples of present Algeria took over the religion Many of the Berbers adopted the Arabic language, and Arabs were mingled with the older population, except in such remote areas as the Hoggar and Kabylia (the region of the Kabyles in the northeast) Little dynasties rose and fell with their capitals at Tiaret, Bougie, and Tlemcen, and sometimes the region or part of it was molded into a greater whole, usually with religious as well as political power The ALMORAVIDES and the ALMOHADES, for instance, united much of the present Algeria with Morocco and Spain in a great Moorish empire The local control was, however, lax, and local potentates were always able to establish themselves, even if nominal power resided in a larger unit In 1518 Algiers was seized and brought under Turkish rule (see BARBAROSSA), but the Turkish power never extended much beyond the Tell, and its strength was concentrated on the coast, which became a stronghold for pirates preying on the Mediterranean commerce (see BARBARY STATES) A number of punitive expeditions were sent against the city of Algiers, but to little effect The ruler in the city, the dey, became virtually independent of Turkish rule altogether at the beginning of the 18th cent, and he maintained himself as ruler of much of present Algeria partly from the proceeds of piracy, he therefore defied foreigners The so-called Algerine War in the second decade of the 19th cent did have the effect of forcing a halt in holding European and American captives for ransom The dey, however, maintained his hostile attitude toward foreigners until he was engulfed in the imperial ventures of the French France took Algeria in 1830, conquered (1830–47) the northern belt against opposition led by ABD-EL-KADIR, and took upland Kabylia after 1850 The Sahara region in the south was not brought under effective control until the period 1900–1909 France undertook to develop the resources of the land Modern ports were built at Algiers, Oran, Bône, and Philippeville, a railroad with branch lines was constructed through the Tell, and a road system was stretched out through the Sahara Irrigation increased cultivable areas, and new products became important, notably wine and tobacco Mineral resources, such as the phosphates near Tébessa, have been exploited Education and health services have been begun and expanded Many colonists came to the northern area, though only a little more than 10 percent of the population is of European descent The government of Algeria was reorganized in 1946, with supplementary legislation in 1947, opening all civil and military posts to Moslems A governor general is appointed by France The three northern departments (Oran, Algiers, and Constantine) elect their own legislative assembly (first elections 1948) The four southern departments (Aïn-Sefra, Ghardaïa, Touggourt, and the Saharan Oases) are organized as the Southern Territory The Fezzan and Ghadames, formerly part of Libya, were after the Second World War provisionally attached to Algeria Algeria played a part in the Second World War, notably in the attack of British vessels on the French vessels at Oran in 1940 and after the Allied landing for the conquest of North Africa in 1942 Algiers became the Allied headquarters and was also the seat of Charles de Gaulle's provisional French government The war also had the effect of fanning the desire of the Moslem natives for independence—the major problem of France in Algeria See Stéphane Gsell, Georges Marçais, and Georges Yver, *Histoire d'Algérie* (1929), A Berque, *L'Algérie, terre de l'art et d'histoire* (1937), *L'Encyclopédie coloniale et maritime Algérie et Sahara* (1946)

Algerine War. see BARBARY STATES, DECATUR, STEPHEN, TRIPOLITAN WAR

Algiers (ăljērz') Fr *Alger* (alzhā'), city (1936 pop 264,232, city area 1947 estimated pop 473,261), N Algeria, capital of Algeria and a chief port of N Africa Founded (late 10th cent) by the Berbers on the site of the Roman Icosium, it became important after Turkish rule was established (1518) by BARBAROSSA, and a great mole was built to protect the port Algiers was a base for the Barbary pirates (see BARBARY STATES) who preyed on Mediterranean commerce, and the city was visited with many European punitive expeditions, notably by a Spanish expedition (1509) and later one led by Emperor Charles V (1541), by Abraham Duquesne's French fleet (1682–83), by Stephen Decatur's force (1815), and by the Anglo-Dutch fleet under Lord Exmouth (1816) The ruling official in the city, called the dey of Algiers, had virtually sovereign power in the 18th and 19th cent He lost it when the French conquest of Algeria opened (1830) with the capture of Algiers Under French rule a modern city was built along the harbor Above it the older part with its narrow, crowded streets rises steeply up a height that is surmounted by the 16th-century Casbah [fortress], the whole of the old quarter is by extension called the Casbah Algiers has become a tourist center The leading university of French Africa, a Moslem university, an observatory, and celebrated botanical gardens are here In the Second World War, Allied forces, bent on the conquest of North Africa, took the city on Nov 8, 1942 It became the headquarters of the Allied forces and of Charles de Gaulle's provisional French government

Algoa Bay (ălgō'ă), arm of the Indian Ocean, cutting into SE Cape Prov, Union of South Africa Discovered by the Portuguese in the late 15th cent, it was used as an anchorage Port Elizabeth is on the shore of the bay

Algoma (ălgō'mu), city (pop 2,652), NE Wis, on Lake Michigan S of Sturgeon Bay, inc 1879 A county normal school is near by

Algona (ălgō'nu), city (pop 4,954), co seat of Kossuth co, N Iowa, on the Des Moines river and N of Fort Dodge, in a farm area, settled 1854, inc 1872

Algonac (ăl'gŭnăk), resort village (pop 1,931), S Mich, on the St Clair and NE of Detroit, inc 1867 It has long been a shipbuilding center and makes speedboats and gas engines Algonac State Park is near by

Algonquian (ălgŏng'kwōăn, -kēun), linguistic family of North America It was one of the most widespread of Indian linguistic stocks, in historical times tribes speaking the languages extended from New Brunswick to the Continental Divide Edward Sapir's suggestion of a great Algonquian-Wakashan (or Algonquian-Mosan) family has not been proved this would tie together Algonquian, Kootenai, Salishan, Chemakuan, and Ritwan (Yurok and Wiyot) languages The culture of the various peoples of the Algonquian family varied with their location Generalizations about them are usually based on the tribes of the Atlantic seaboard and Canada who have been longest known to the whites Some of the peoples of the Algonquian fam-

ily may be listed as Algonquin (from whom the name Algonquian is taken), Abnaki, Montagnais, Massachuset, Mahican, Micmac, Narragansett, Pennacook, Penobscot, Wampanoag, Wappinger, Delaware, Chickahominy, Powhatan, Shawnee, Potawatami, Menominee, Cree, Ojibwa, Ottawa, Arapaho, Blackfoot, and Cheyenne (see also LANGUAGE, table) The name also appears as Algonkian.

Algonquin Indians (ălgŏng'kwĭn, -kĭn), North American Indian tribe The name of the ALGONQUIAN linguistic stock (to which they belong) is derived from their name A small tribe of Canada, they were among the first Indians with whom the French formed alliances, and their name was used to designate other tribes in the area Despite French aid, they were dispersed in the 17th cent by the Iroquois, and the remnants of the tribe chiefly found refuge near white settlements in Quebec and Ontario They mingled with whites and other Indian groups, so that little remains that might be designated as of Algonquin culture The name is also spelled Algonkin

Algonquin Provincial Park, 2,741 sq mi , S Ont , set aside in 1893 as a game preserve and public recreation area It is on the watershed between the Ottawa river and Georgian Bay and is a region of fine forests, innumerable lakes, and many clear streams

Alhambra (ălhăm'brŭ), city (1940 pop 38,935, 1946 special census pop 44,013), in San Gabriel township, S Calif , NE of Los Angeles, founded 1881, inc 1903 A residential and industrial city, with an airport, it produces aircraft, oil-refinery machinery, and a large variety of other manufactures

Alhambra [Arabic, =the red], extensive group of buildings on a hill overlooking Granada, Spain Built chiefly between 1248 and 1354, they formed a citadel of the Moorish kings once in control of the country After the expulsion of the Moors in 1492, the structures suffered mutilations, but were extensively restored after 1828 The Alhambra is a true expression of the once flourishing Moorish civilisation and is the finest example of its architecture in Spain It comprises citadel remains, the palace of the kings, and the quarters once used by officials and nobles The halls and chambers surround a series of open courts, which include the Court of Lions containing arcades resting on 124 white marble columns The building has magnificent examples of the so-called honeycomb and stalactite vaulting, its walls and ceilings are decorated with geometric ornament of great minuteness and intricacy, executed in marble, alabaster, glazed tile, and carved plaster See also ALCAZAR See Washington Irving, *Legends of the Alhambra* (1832)

Ali (ä'lē, ălē'), 602?–661, fourth caliph (656–61) He was the son of Abu Talib, Mohammed's uncle, but was more closely related to the Prophet as the husband of FATIMA. One of the Prophet's most faithful followers, he was expected to become caliph on Mohammed's death, but Abu Bakr was chosen Ali succeeded only on Othman's death He was strongly opposed by AYESHA, who fomented a revolt. This Ali put down, but he was never able to suppress MUAWIYA. Ali was murdered at Kufa by fanatics (the Kharijites), and his son HASAN abdicated in favor of Muawiya The division in Islam between SUNNITES and SHIITES comes from the time of Ali He and his son Husein are the great saints of the Shiites

Aliah (älī'ŭ) see ALVAH.

Alian (älī'un) see ALVAN

Alibamu Indians (ălĭbă'mōō), North American Indian tribe of the Natchez-Muskogean linguistic stock They lived in S Alabama in the early 19th cent and were members of the Creek confederacy Alabama takes its name from them

Ali Bey: see BADIA Y LEBLICH, DOMINGO

Alicante (älēkan'tā), city (pop 83,140), capital of Alicante prov , SE Spain, in Valencia An excellent Mediterranean port, it ships wine, oil, cereals, and fruit from the fertile surrounding region After its reconquest (c 1250) from the Moors, the city was contested between Castile and Aragon until it went to Aragon in 1309 In the civil war of 1936–39 air raids by Insurgent planes caused damage and casualties (1938)

Alice, city (1940 pop 7,792, 1947 estimated pop 12,000), co seat of Jim Wells co , S Texas, W of Corpus Christi, inc 1910 Long a cow town at a railroad junction, Alice still ships many cattle and also gets wealth from oil fields

Alice Springs, town (pop 2,078), Northern Territory, Australia, 88E of Darwin, in a pastoral area nearly in the center of the continent and at the terminus of the Central Australian RR Formerly called Stuart, it was the capital of Central Australia (1926–31), a former subdivision of the Northern Territory There is opal mining

Aliceville, town (pop 1,475), W Ala , WSW of Tuscaloosa and near the Tombigbee, in a farm area It has a textile mill

alien, person not belonging to the sociological or political group with which he is in physical association. The attitude of the group toward aliens is a matter of custom, usage, and law. All modern governments have laws covering the rights and privileges of aliens, and there is a large body of international law on the subject. A state has the right to exclude undesirable aliens, and most states, including the United States, forbid the admission of criminals, paupers, and the diseased. A state may exclude completely certain groups and nationalities, but such discrimination is likely to cause unfriendly feelings From the right to exclude aliens proceeds the right to establish the conditions upon which they will be admitted and to make special laws concerning them An alien, while he resides in a country, is subject to the laws of that country and not to those of his own country, except in the case of EXTERRITORIALITY jurisdiction. A state distinguishes between aliens who are merely traveling or living there temporarily and those who have come to stay or to earn their livelihood, and wider powers are assumed over the second class Such aliens are subject to taxation and often may be drafted to serve in the national defense An alien, though he be under the laws of the country in which he resides, still owes ALLEGIANCE to his own country and as a citizen may call upon it to intercede if he feels that the country in which he lives has failed properly to protect his person or property The home state usually points out or protests injustice, but it may threaten reprisals Such situations have frequently caused international dispute, and there is controversy as to how far a nation is justified in interfering in behalf of its nationals abroad On the other hand, an alien may find ASYLUM in the country to which he has fled unless treaties of EXTRADITION provide for the DEPORTATION of such refugees A state also has the right to expel an alien who was once admitted As population in a state increases and the competition for livelihood becomes more intense, hospitality towards the alien tends to change to hostility This process was seen in the United States in more restrictive IMMIGRATION laws and more stringent deportation laws In time of war the laws governing aliens are stricter, and special restrictions usually govern enemy aliens Treaties between most of the important governments of the world provide that in case of war a reasonable period should be given enemy citizens in either country to withdraw under supervision After this time the remaining enemy aliens may be expelled or may be permitted to remain under whatever conditions the government chooses to impose Thus, in the Second World War enemy aliens in the United States were required to register, were excluded from certain areas, and in some cases were confined to camps See E M Borchard, *The Diplomatic Protection of Citizens Abroad* (rev ed , 1927), W C Van Vleck, *Administrative Control of Aliens* (1932), Milton Konvitz, *The Alien and the Asiatic in American Law* (1946)

Alien and Sedition Acts, 1798, passed by the U S Congress when warfare with France threatened (see XYZ AFFAIR) The Federalists in power, fearing the ideas of the French Revolution and denouncing the French sympathies of the followers of Thomas Jefferson, adopted the acts, which were a naturalization act requiring 14-year rather than 5-year residence as a prerequisite to citizenship, two alien acts empowering the President to expel "dangerous" aliens and to imprison any who resisted expulsion, and a sedition act directed against those who should "unlawfully combine or conspire" against the administration or should write or speak "with intent to defame" the government, the Congress, or the President President John Adams opposed the alien laws and made no use of them Many were, however, indicted under the sedition act, and 10 persons (including Thomas COOPER) were tried and convicted The acts provoked the KENTUCKY AND VIRGINIA RESOLUTIONS

Aligarh (älēgŭr'), town (pop 112,655), W central United Provs , India There are ancient Buddhist remains and numerous Moslem buildings Aligarh Moslem Univ (opened 1875) attracts students from all the East Aligarh has trade in grain and cotton and processes cotton The native name is Kol

alimentary canal, the digestive passage which extends from the MOUTH to the anal orifice and includes the pharynx, esophagus, STOMACH, INTESTINE, and rectum The entire tract is about 30 ft in length, its wall comprising peritoneal and muscular coats and a mucous-membrane lining which contains glands This gastrointestinal tract together with associated organs (LIVER and PANCREAS) performs the functions of DIGESTION and absorption of food By muscular contractions (peristalsis) unused material reaches the anus

alimony, in law, allowance for support which by order of a court a husband pays to his wife who is not living with him Temporary alimony is allowed pending the outcome of a suit for DIVORCE, for SEPARATION, or for a decree of NULLITY OF MARRIAGE, whether the wife be plaintiff or defendant Permanent alimony is the allowance to the wife after the action has been tried and the decree rendered Laws concerning the award of alimony vary greatly in the states of the United States Usually it is not allowed in annulments It is allowed after separation by judicial decree, but in some states only if the wife is not the guilty party and in others at the discretion of the court. Alimony originally was not granted after a divorce, but the contrary practice is now general in the United States Alimony ceases on the death of the husband, because it is not payable out of his estate unless there are arrears Although remarriage does not necessarily terminate alimony, the amount may be reduced or cut off at the court's discretion if the second husband is able to support the wife In all cases the amount of, and the continuing need for, alimony are questions which can always be reopened in a court having jurisdiction over the parties. The rule that the husband cannot obtain alimony from the wife has been changed in a few states but for the most part holds, since the wife generally has no duty to support the husband. A decree awarding alimony is a court order issued to the husband personally, and failure to pay constitutes CONTEMPT OF COURT

Ali Pasha (ä'lē päshä'), 1741?–1822, Turkish military governor, the pasha of Yannina (now Ioannina), called the Lion [Turkish *Arslan*] of Yannina His father, governor at Tepelene in S Albania, was murdered, and Ali went to live with the mountaineer brigands who infested the country He soon rose to leadership among them, came to the attention of the Turkish government, and as its agent reduced the rebellion of a governor at Scutari in Albania About 1787 he became governor of Yannina, where his power grew until he ruled as a quasi-independent despot over most of Albania and Epirus He made war on the French along the Adriatic coast and entered on an alliance (1814) with Great Britain By 1820 it became apparent that he intended to create a Mediterranean state for himself, and the Porte, which until then had looked the other way, ordered him deposed Ali refused to comply, thus keeping Turkish troops engaged against him while they were needed against the Greeks, who had begun their fight for independence. Ali was assassinated by an agent of the Porte, his head was publicly exposed at Constantinople The rugged court of Ali at Yannina was described by several French and English visitors, notably by Byron in *Childe Harold*

Aliquippa (ălĭkwĭp'ŭ), borough (pop 27,023), Beaver co , W Pa , on the Ohio river, in an industrial region NW of Pittsburgh Aliquippa grew after the expansion of steel mills in 1909 A large Jones & Laughlin Steel Corp. plant is here

alizarin (ălĭz'urĭn) [from Arabic, =juice], mordant dye It is a compound of carbon, hydrogen, and oxygen occurring in the root of the MADDER plant, which was the only source of the dye until its synthesis (patented 1869) was accomplished It is produced commercially from anthracene In the pure state it exists in the form of a powder or crystals It is of importance in industry since with salts of metals it forms brilliant lakes, although by itself it is a poor dye Turkey red is produced with an aluminum mordant, other shades of red with calcium and tin salts, dark violet with iron mordants, and brownish-red with chromium Purpurin, also used in dyeing, occurs with alizarin in madder and is produced synthetically

Aljubarrota (ăzhōōbŭrô'tu), village (pop. c.500), Leiria dist , W central Portugal, S of Leiria. Here was fought on Aug 14, 1385, the momentous battle in which the Portuguese, aided by English archers, defeated the forces of the Spanish King John I of Castile, thus assuring Portuguese independence and making possible the vigorous administration of John I of Portugal Nun'Alvares was the Portuguese hero of the battle

alkali (ăl'kulī) [ultimately from Arabic, =roasted, i e , the ashes of saltwort, which are full of soda] In chemistry, the term is generally applied to a strong BASE, e g., sodium hydroxide and potassium hydroxide Alkalies exhibit the characteristic properties of bases in a marked degree, as they are extremely soluble in water and neutralize acids to form salts and water Each a strong CAUSTIC in concentrated solution, they are distinguished from the weak alkalies, as ammonium hydroxide, by the term "caustic alkalies" They are used commercially in the manufacture of SOAP, cotton goods, and paper Sodium hydroxide for household use is sold under the name LYE **Alkali metals**, a group so called because the members all react violently with water to form very active, or strong, bases, are composed of the elements cesium, rubidium, potassium, sodium, and lithium. **Alkaline earths** are a group of oxides which resemble the alkalies in character—specifically, the oxides of barium, strontium, and calcium and also sometimes that of magnesium These oxides all react with water to form the hydroxide of their constituent metal. The active, divalent metals themselves are referred to as metals of the alkaline earths.

alkali soils contain an excess of the soluble salts natural to all soils Such soils, which are often encrusted with the salts, occur usually where rainfall is insufficient to leach out the salts Those in which the salts are chiefly sulphates of sodium, magnesium, and potassium are known as white alkali soils Those containing a large amount of sodium carbonate are known as black alkali soils because,

although the salt is white, the carbonate form decomposes the humus, thus blackening the soil The black alkalies are the more harmful to plants Temporary improvement of alkali soils can be accomplished by thorough cultivation, by growing tolerant plants on the soil, and, for the black alkali soils, by adding gypsum Liming the soil helps to counteract the effects of Epsom salts (magnesium sulphate) in it Actual removal of large amounts of the alkali can be achieved by flooding the area with nonalkaline water and underdraining it

alkaloid (-loid), any of a class of organic compounds composed of carbon, hydrogen, nitrogen, and usually oxygen and derived from plants The term *alkaloid* indicates alkaline or BASE properties Typical examples are ATROPINE, CAFFEINE, COCAINE, CODEINE, MORPHINE, NICOTINE, QUININE, and STRYCHNINE Aconitine is the alkaloid of ACONITE Cinchonine and quinine are derived from CINCHONA Curarine is in the deadly poisonous extract CURARE, conine is found in poison HEMLOCK; and veratrine is prepared from sabadilla seeds Emetine is the alkaloid of IPECAC

alkalosis: see ACIDOSIS

Al-Khowarizmi (ăl-khōwārēz'mē), fl 820, Arabian mathematician of the court of Mamun in Baghdad His treatises on Hindu arithmetic and on algebra made him famous He is said to have given algebra its name, and the word *algorism* is said to have been derived from his name Much of the mathematical knowledge of medieval Europe was derived from Latin translations of his works

Al-Kindi see KINDI

Alkmaar (ălk'mär), municipality (pop 37,471) and town, North Holland prov, NW Netherlands An important market center, it has industries, including iron foundries The cheese market of Alkmaar, held weekly in front of the ancient weighhouse, is world famous The Spanish under Alba unsuccessfully besieged Alkmaar in 1573

Allah (ă'lu, ă'lu), Arabic name of GOD It is used not only in Islam but also among Arabic-speaking Christians

Allahabad (ăl"uhŭbăd',-bad'), city (pop 260,630), United Provs, India, former provincial capital On the site of Prayag, an ancient Aryan holy city, Allahabad is at the junction of two sacred rivers, the Jumna and the Ganges, and is visited by many Hindu pilgrims The oldest monument is a pillar (c 242 B C) with inscriptions from the reign of Asoka The city is a trading center and has a university

All-American Canal, SE Calif, built 1934–40 A part of the Federal irrigation system of the Hoover Dam, it taps the Colorado river at Imperial Dam, c 20 mi above Yuma, Ariz, and runs 80 mi west to a point beyond Calexico, Calif Three main canals, diverting from the All-American Canal, supply water to the IMPERIAL VALLEY The Coachella Main Canal, completed in 1948, diverts from the All-American 36 mi from its head and carries water 123 mi N and E to the Coachella Valley

Allan, Sir Hugh, 1810–82, Canadian financier and shipowner, b Scotland He emigrated to Canada in 1826 and shortly thereafter was employed by a large shipbuilding company in Montreal He founded the Allan line of steamships For his services in developing Canadian commerce, he was knighted in 1871 The following year the Canadian government gave him the contract to build the Canadian Pacific Railway, but the PACIFIC SCANDAL (1873) led to the cancellation of the contract

Allbutt, Sir Thomas Clifford (ôl'bŭt), 1836–1925, English physician, educated at Cambridge Univ and studied medicine at St George's Hospital, London, and in Paris From 1892 he taught at Cambridge An authority on diseases of the circulatory system, particularly those of the arteries, he also made notable studies of diseases of the nervous system He invented the short clinical thermometer His writings on the history of medicine are highly regarded He edited a valuable *System of Medicine* (1896–99) See study by H D Rolleston (1929)

Allegan (ăl'ĭgăn), city (pop 4,526), co seat of Allegan co, S Mich, on the Kalamazoo and S of Grand Rapids, in a farm area, settled 1834, inc as a village 1838, as a city 1907 It manufactures automobile parts.

Allegany (ăl'ŭgā"nē, ăl"ŭgā'nē), village (pop 1,436), W N Y, on the Allegheny and W of Olean, in an oil region, inc 1906 Dairy products are made here St Bonaventure College (Catholic, Franciscan, for men, 1859) is near by, as are Allegany State Park and the Allegany Indian Reservation (Seneca and some Cayuga)

Alleghany, variant spelling see ALLEGHENY

Allegheny (ăl'ugā"nē, ăl"ugā'nē), river rising in N central Pennsylvania and flowing NW into New York, thence generally southwest c 325 mi to the Monongahela, forming the Ohio, at Pittsburgh Before the advent of railroads, the river was an important channel of commerce and is still used to some extent in the transport of bulky freight.

Allegheny College see MEADVILLE, Pa

Allegheny Mountains, a western part of the Appalachian Mts, extending SW from N Pennsylvania through Maryland, West Virginia, and Virginia. The heights vary from c 2,000 ft in the north to over 4,000 ft in the south The eastern portion of the range, with a steep escarpment often called the Allegheny Front, is generally more rugged than the western portion, which is a plateau reaching into E Ohio and Kentucky The Allegheny upland, like the Cumberland upland into which it extends on the south, was largely formed by the folding of sedimentary rocks There has been much subsequent erosion and leveling The Alleghenies are rich in coal and contain iron, petroleum, and gas

allegiance, formal tie which binds one to a superior, whether a person or an institution The term usually refers to allegiance to governments, but it may have reference to any institution which one is bound to support Allegiance in strict usage is a legal tie, but as used in ordinary speech the term includes also those emotional ties which supplement the legal one, and thus it is synonymous with loyalty Allegiance to the government is due from both CITIZENS and subjects and may be of four kinds natural allegiance arises from membership by birth within the bounds of a political society, express allegiance arises from an oath or promise to support a political society and usually results from NATURALIZATION, local allegiance is the temporary allegiance one may owe a government when residing under its protection as an alien, and legal allegiance arises from an oath taken in certain cases to support a government temporarily, as when a foreign soldier joins its armed forces or when areas are taken by an enemy and such an oath is administered to the remaining inhabitants Under the customary law of Europe a subject did not have the right to change his allegiance without the consent of his government, but in the 19th cent, under the lead of the United States, this conception was challenged, and the right of all persons to choose the government to which they wished to give allegiance was partly established Great Britain in 1870 gave British citizens the right to expatriate themselves, and Sweden, Denmark, Germany, and other European states followed, but the right is by no means universally allowed

allegory (ăl'ĭgôr"ē) [Gr, =one thing said for another], in literature, an elaborate work intended to convey a meaning not superficially connected with the thought or the action literally expressed The term is used for narratives of some length, as contrasted with the shorter but similar parable, fable, or metaphor In allegory the characters may be types or personifications, and the story may be enjoyed for itself without perception of its main and hidden purpose Symbolism differs from allegory in that symbolism requires understanding of what is symbolized if the work is to have meaning Celebrated allegories include Spenser's *Faerie Queene* and John Bunyan's *Pilgrim's Progress* Many have interpreted the *Song of Solomon* as an allegory, Richard Wagner looked upon his *Ring* as one great allegory, and many pastoral poems are intended as such Jonathan Swift's *Gulliver's Travels* might be called a mock allegory, and Samuel Butler's *Erewhon* shows a Utopian type of allegory

Allegri, Gregorio (grĭgō'rēō ăl-lā'grē), 1582–1652, Italian singer and priest, composer of a nine-part *Miserere* sung annually during Holy Week in the Sistine Chapel To keep it for that exclusive use, its publication was forbidden under pain of excommunication In 1770 Mozart, visiting in Rome, heard the work and wrote it down from memory It was later published

Alleine, Joseph (ăl'ĭn), 1634–68, English nonconformist clergyman and scholar He served as chaplain (1653–54) at Corpus Christi College, Oxford, and as assistant minister (1655–62) at Taunton until ejected from the church for nonconformity He then worked and preached as an evangelist, subjected to fines and imprisonment and hunted from place to place He was a much-loved Puritan preacher, and his influence was far-reaching His *Alarm to the Unconverted* (1672), which was republished in 1675 as *A Sure Guide to Heaven,* was afterward printed a number of times in England and America See Charles Stanford, *Joseph Alleine His Companions and Times* (1861)

Alleluia, Latin form of the expression HALLELUJAH

Allen, Ethan, 1738–89, hero of the American Revolution, leader of the Green Mountain Boys, and promoter of the independence and statehood of Vermont, b Litchfield, Conn He had some schooling and was proud of his deist opinions, with which he annoyed orthodox Congregational ministers, he later incorporated his ideas in *Reason the Only Oracle of Man* (1784) A man of Gargantuan strength with a taste for showy clothes and manners and great volubility of speech, he was a born leader After fighting briefly in the French and Indian War, he interested himself in land speculation, and in 1770 he appeared as one of the proprietors in the NEW HAMPSHIRE GRANTS He and his brothers, notably Ira ALLEN, became the leaders of the New England settlers and speculators in the disputed lands—invoterate enemies of the Yorkers (settlers under New York patents) and violent opponents of all attempts of New York to exert control in the area He was active in forming the GREEN MOUNTAIN BOYS and became their leader in defying the New York government and harrying the Yorkers Governor Tryon of New York put a price on the heads of Allen and two of his followers, but Ethan was not captured After the outbreak of the American Revolution, he made the Green Mountain Boys into an independent patriot organization Joined by Benedict ARNOLD (with a commission from Massachusetts) and some Connecticut militia, Ethan Allen and his men captured Ticonderoga from the British on May 10, 1775 Legend says that when the British officer asked him under what authority he acted, Ethan Allen roared, "In the name of the Great Jehovah and the Continental Congress!" The story is, however, almost certainly apocryphal Allen then urged an expedition against Canada, and the Green Mountain Boys were attached to Gen P J Schuyler's invasion force, but the men chose not Allen, but his cousin Seth WARNER, as leader Allen went on the expedition and in a rash plan to capture Montreal before the main patriot army arrived was captured (Sept, 1775) by the British He told his own story of this in the popular *Narrative of Captain Ethan Allen's Captivity,* which appeared in 1779, a year after he had been exchanged He returned to VERMONT, which had declared its independence but was unrecognized by the Continental Congress. Ethan Allen and his brother Ira then devoted themselves to insuring the new political unit in one way or another The region remained in danger of British attack, and the British late in 1779 opened negotiations with Ethan Allen in an attempt to attach Vermont to Canada Ethan and his brother entered into devious negotiations with the British agents and Tories either with the serious intent of annexation to Canada or with the aim of protecting Vermont and enhancing its value to the United States No conclusion was reached, and the victory at Yorktown ending the American Revolution also ended the talks Ethan Allen withdrew from politics in 1784, and Vermont was still independent and still dickering with Congress and dealing with internal struggles between the Allen party and their opponents when he died at Burlington He is remembered as a salty, colorful leader, a strong adherent to the principles of individual liberty, and the fiery defender of the men of the Vermont country See Matt B Jones, *Vermont in the Making* (1939), biography by Stewart Holbrook (1940).

Allen, Florence Ellinwood, 1884–, American jurist, b Salt Lake City, Utah, grad Western Reserve Univ, 1904, LL B New York Univ, 1913 A judge of the Ohio supreme court from 1922 to 1934, she was in 1934 the first woman to be appointed to a U S Circuit Court of Appeals She wrote *The Constitution of Ours* (1940)

Allen, Frederick Madison, 1879–, American physician, b Des Moines, Iowa, M D Univ of California, 1907 He investigated diabetes and metabolism and wrote books on these subjects He was director (1920–33) of the Physiatric Institute, Morristown, N J, and later was on the staff of the New York Polyclinic Hospital and Medical School.

Allen, Grant (Charles Grant Blairfindie Allen), 1848–99, English author, b Canada Known first as a writer on popular science, he is remembered for his novel, *The Woman Who Did* (1895), an attack on the double standard of morality

Allen, Hervey, 1889–1949, American novelist and poet, b Pittsburgh, grad Univ of Pittsburgh, 1915, and studied at Harvard After service in the First World War he taught English in Charleston, S C, where in collaboration with DuBose Heyward he wrote *Carolina Chansons* (1922) Later poetry is in *Earth Moods and Other Poems* (1925), *Poems for Annette* (1929), and other volumes Allen's biography of Poe, *Israfel* (2 vols, 1926), was immediately popular His historical novel, *Anthony Adverse* (1933), was both the longest and the best-selling novel of the century up to its time and was further famous as a moving picture *Action at Aquila* (1938) is a Civil War tale Of six related novels he planned to write on early American history, three appeared, *The Forest and the Fort* (1943), *Bedford Village* (1944), and *Toward the Morning* (1948) He succeeded Stephen Vincent Benét as editor of the "Rivers of America" series

Allen, Horatio, 1802–90, American civil and mechanical engineer, b Schenectady, N Y, grad Columbia, 1823 In 1828 the Delaware & Hudson Company sent him to England to buy a steam locomotive, this, the *Stourbridge Lion,* built by George Stephenson and operated by Allen near Honesdale, Pa, in Aug, 1829, was the first steam locomotive in the United States to run on rails. Shortly after Peter Cooper's *Tom Thumb* was finished, the second serviceable locomotive in the country was completed for the Delaware & Hudson under Allen's supervision at the West Point Foundry Later he specialized in marine engines, becoming one of the foremost designers of river and ocean steamboats He served as chief engineer and as president of the Erie RR and as consulting engineer for the Panama RR and the Brooklyn Bridge

Allen, Ira, 1751–1814, political leader in early Vermont, b Cornwall, Conn He was the younger brother and the assistant of Ethan ALLEN Though he was a member of the GREEN MOUNTAIN BOYS,

he took little part in their activities His cool shrewdness, his adeptness in business matters, and his brilliant planning complemented the colorful vigor and rash violence of his brother He it was who organized the Onion River Land Company and secured the lands about the Winooski and Lake Champlain that the Allens worked hard to protect He took part in the conventions at Dorset and Westminster that brought about the independence of VERMONT, and he was a leading figure in the political life in the years following, holding many offices He was involved in the long negotiations with the British and was accused of treason He was of no political consequence after Vermont became a state He helped to establish the Univ of Vermont His brief autobiographical note appeared in J B Wilbur, *Ira Allen, Founder of Vermont* (1928)

Allen, James Lane, 1849–1925, American novelist, b Lexington, Ky, grad Transylvania College, 1872 After he had taught for a few years, his stories, essays, and poems of Kentucky in periodicals were so well received that he could devote himself to writing His first book, *Flute and Violin* (1891), was a collection of stories, his first successful novel was *A Kentucky Cardinal* (1894), still a minor classic of romantic fiction *Aftermath* followed in 1895, and *The Choir Invisible* in 1897 *The Reign of Law* (1900) reflected his interest in Darwinian evolution Later novels were less popular See G C Knight, *James Lane Allen and the Genteel Tradition* (1935)

Allen, Richard, 1760–1831, founder of the African Methodist Episcopal Church He was born a slave in Philadelphia Out of the Free African Society (1787) developed the church (founded 1794) When a national organization was realized in 1816, Allen was chosen as bishop See C H Wesley, *Richard Allen, Apostle of Freedom* (1935)

Allen, William, 1704–80, American jurist, b Philadelphia He and his father-in-law, Andrew Hamilton, decided the choice of Philadelphia instead of Chester as provincial capital, and he helped finance the building of Independence Hall Allen was chief justice of Pennsylvania (1750–74), secured (1763) postponement of the sugar duties, and helped (1766) Franklin's efforts to have the Stamp Act repealed He wrote *The American Crisis* (1774), containing a plan for colonial reconciliation with England When it was not accepted he made his home in England Allentown, Pa, was named for him

Allen, Zachariah, 1795–1882, American inventor, b Providence, R I, grad Brown He invented the application of power by belting (instead of by cogwheels as before) and also an automatic cutoff valve for steam engines He is said to have made the first central hot-air furnace system for heating buildings He wrote many books and magazine articles

Allen, town (pop 1,389), SE central Okla, near the Canadian river SE of Shawnee

Allen, Bog of, area of morass and peat bog with patches of cultivable land, near the center of Ireland, in Counties Offaly, Laoghis, and Kildare

Allen, Lough (lŏkh, lŏk), lake, 8 mi long and 3 mi wide, Co Leitrim and Co Roscommon, Ireland, near the headwaters of the Shannon

Allenby, Edmund Henry Hynman Allenby, 1st **Viscount** (ă'lunbē), 1861–1936, British field marshal Active service in Bechuanaland (1884–85) and Zululand (1888) and in the South African War (1899–1902) was followed by command of the cavalry in France on outbreak of the First World War (1914) and of the 3d Army (1915 17) As commander in chief of the Egyptian Expeditionary Force (1917–19), he invaded Palestine, captured Jerusalem, and ended Turkish resistance by the battle of Samaria (Sept 18–21, 1918) He was British high commissioner for Egypt and the Sudan (1919–25) See A P Wavell, *Allenby* (1941) and *Allenby in Egypt* (1945)

Allendale. 1 Borough (pop 2,058), NE N J, N of Ridgewood, settled 1740, inc 1894 **2** Town (pop 2,217), co seat of Allendale co, SW S C, near the Savannah SSW of Columbia, in a farm area noted for its watermelons There are good hunting and fishing grounds in the area

Allende, Ignacio (ēgnä'syō ayän'dā), 1779–1811, Mexican revolutionist He was a captain in the army when he entered into the movement against Spanish control He played a prominent part in the revolution and after the great defeat at Calderón Bridge (Jan 17, 1811) took chief command of the forces, leaving Miguel HIDALGO Y COSTILLA only nominal power The revolutionists went northward, hoping to reach the United States, but the treachery of one of their leaders led to capture by the royalists Allende was shot at Chihuahua

Allen Park, village (pop 3,487), SE Mich, west suburb of Detroit, settled 1776, inc 1927

Allenport, borough (pop 1,078), Washington co, SW Pa, on the Monongahela and SE of Washington, Pa, inc 1931 Steel is made here

Allenstein (ă'lunshtīn) or **Olsztyn** (ôl'shtĭn), city (1939 pop 50,396, 1946 pop 29,053), S former East Prussia, transferred to Polish administration in 1945 It is a trade and railroad center Founded (1348) by the Teutonic Knights, who built its impressive castle, it was ceded to Poland in 1466 and to Prussia in 1772 Allenstein was retained by Germany after a plebiscite in 1920 The city, which suffered heavy damage in the Second World War, was entirely resettled by Poles after 1945 and was made the capital of Olsztyn prov (c 7,500 sq mi, pop 351,828)

Allenstown, rural town (pop 1,673), S N H, on the Suncook and SE of Concord, inc 1831 Granted to Samuel Allen's family in 1722, it was settled before 1748 Timber for the *Constitution* was cut here

Allentown, industrial city (pop 96,904), co seat of Lehigh co, E Pa, on the Lehigh river and N of Philadelphia, laid out c 1752 as Allentown, inc as a borough 1811 and renamed Northampton, renamed Allentown 1838, inc as a city 1867 In the Pennsylvania Dutch region, it has metal, cement, and textile industries and is a trading center for farmers It is the seat of Cedar Crest College (for women, 1868) and Muhlenberg College (Lutheran, for men, 1848) A flourishing town before 1790, it was settled by representatives of various German religious groups The Liberty Bell was brought here (1777) for safekeeping, and the city became a munitions center for the Continental army Civil War recruits from the city were so numerous that they became known as "the First Defenders"

Allen University see COLUMBIA, S C

allergy, term used to denote a hypersensitivity on the part of susceptible individuals to substances which are innocuous to other individuals Such allergy-producing agents are known as allergens or antigens They include air-borne substances, e g, pollen and danders, vegetable oils (from poison ivy and certain other green plants), bacteria, various proteins, and physical agents such as light, heat, and cold There is some evidence that in a susceptible person the allergen causes the tissues or organs affected (e g, the lungs in ASTHMA) to release a substance called histamine and also other substances The reaction of the body to the allergens also produces antibodies in the blood stream Diseases such as HAY FEVER, asthma, urticaria, and eczema are caused by such reactions The most obvious method of treating the allergic individual is to remove the allergen when known, e g, a particular kind of food or a pet animal When it is not possible to escape air-borne irritants such as ragweed, injections of the allergen (gradually increasing in strength) are given to hyposensitize the susceptible individual A third method of treatment is through the use of certain drugs, e g, epinephrine, which have the effect of counteracting the released histamine More recently, benadryl and pyrobenzamine have been found to relieve the symptoms

Allerton, Isaac (ă'lurtun), c 1586–1659, Puritan settler in Plymouth Colony Possibly a London merchant, he had been in Leiden before coming to America in the *Mayflower* From 1626 to 1631 he was much in England, acting as the agent of the colony, and there he bought up the rights of merchants in the enterprise and in 1630 secured a new patent (see PLYMOUTH COLONY)—but not the sort of grant William Bradford and others wanted Allerton was at best incompetent and ran up the debt, even if he was not—as his neighbors accused him of being—dishonest He had to leave Plymouth Colony in 1631 and was later at Marblehead, at New Amsterdam, and in the New Haven colony

Alleyn, Edward (ă'lĭn), 1566 1626, English actor A member of the earl of Worcester's players in 1586, he married the stepdaughter of Philip Henslowe and with him built the Fortune Theatre (1600) Here, as a member of the lord admiral's company, he played leading roles in Marlowe's *Tamburlaine, Jew of Malta,* and *Faustus* Alleyn was the main rival of Richard Burbage, and his popularity brought him great wealth, which he employed in the founding (1613) of Dulwich College and in aiding Dekker, John Taylor, and other writers After his wife's death, he married a daughter of John Donne

Allia (ă'lēu), small river, Latium, Italy Near its confluence with the Tiber, N of Rome, the Gauls defeated the Romans in 390 B C

Alliance. **1** City (pop 6,253), co seat of Box Butte co, NW Nebr, in the Great Plains region, founded 1888 as the terminus of the Chicago, Burlington, & Quincy RR Shipping and trade center for a large grain and livestock area, it has railroad repair shops, manufactures dairy products, and has a seed-potato testing ground **2** City (pop 22,405), NE Ohio, NE of Canton and SE of Akron, on the Mahoning, laid out 1838 as Freedom, inc as a village 1854, as a city 1889 It is an industrial, distributing, and rail center, with manufactures of steel, aircraft, heavy mill machinery, and other industrial equipment It is the seat of Mt Union College (Methodist, coeducational, 1846), with Clarke Observatory Near by is the county sanatorium for the tubercular

Allibone, Samuel Austin, 1816–89, American author and librarian, b Philadelphia He is chiefly known for his *Critical Dictionary of English Literature and British and American Authors* (3 vols., 1858–71), a standard reference work for half a century and still useful. He compiled *Poetical Quotations from Chaucer to Tennyson* (1873) and other similar works and, after 1879, was librarian of the Lenox Library, New York city

Allier (älyā'), department (2,848 sq mi; pop 373,381), central France, in the BOURBONNAIS, traversed by the Allier river Moulins (the capital), Montluçon, and Vichy are the chief towns

Allier, river, 255 mi long, rising in central France, in the Cévennes, and flowing 255 mi N past Vichy and Moulins to join the Loire near Nevers

alligator [Span, =the lizard], large reptile similar to the CROCODILE, which also belongs to the order Crocodilia The American alligator, which is about 12 to 14 ft long, is found from North Carolina to Florida and in the Gulf states When young, it is dark brown or black with yellow transverse bands These fade as the animal grows older, and the adult is black Alligators eat fish and other water life, they are not known to attack man except in self-defense From 20 to 50 eggs are laid in a mound of vegetation The demand for alligator leather has reduced the number of wild specimens The Chinese species is smaller than the American Closely related to the alligator is the cayman, or caiman, of Central and South America

alligator pear. see AVOCADO

Allingham, William (ă'lĭngm), 1824–89, Irish poet He was editor of *Fraser's Magazine* from 1874 until 1879 He is chiefly remembered for one poem, "The Fairies," beginning "Up the airy mountain, Down the rushy glen" See his diary (ed posthumously by his wife and Dollie Radford, 1907)

Allioni, Carlo (kär'lō al"lēō'nē), 1725–1804, Italian physician and botanist, whose *Flora Pedemontana* (3 vols, 1785) introduced a number of new plants to the botanical science of his day

Allison, William Boyd, 1829–1908, U S Senator from Iowa (1873–1908), b Ashland co, Ohio, grad Western Reserve College, 1849 After admission to the bar, he settled in Dubuque, Iowa, where after 1857 he was a successful lawyer and a politician He served in the House of Representatives before entering the Senate One of the more influential Republican members of Congress, he spoke for the farmers of the Midwest and was considered a "moderate" Allison opposed high tariffs on goods needed in quantity by the farmers and helped to build compromise tariff bills He changed the bill for "free and unlimited coinage" of silver to allow specified limited coinage and thus gave his name to the BLAND-ALLISON ACT

Alliston, town (pop 1,733), S Ont, SSW of Barrie and on the Boyne and Nottawasaga rivers

alliteration (ulit'-) [Latin], in rhetoric, the repetition of sounds for effect, especially by beginning neighboring words with the same sound In the Germanic languages it was the ancient basis of versification Old English poetry, for example, called for two alliterated words in the first half and one in the second half of each line, a conscious reversion to this form is in *Piers Plowman*

Mercy hight that maid, a meek thing withal,
A full benign burd, and buxom of speech

A more modern example of poetic alliteration is in A C Swinburne's *Forsaken Garden,* "The wind that wanders, the weeds wind-shaken" The Germanic languages have many common alliterative phrases, e g, in English, 'bed and board," "hearth and home," "kith and kin," "weep and wail"

Alloa (ă'lōu), burgh (pop 13,323), Clackmannanshire, Scotland, near the head of the Firth of Forth It is a seaport, manufacturing agricultural machinery and bottles and with engineering works The seat of the earl of Mar, Alloa Park, is near here

Allobroges (ulō'brujēz), Celtic tribe in Gaul, inhabiting later Dauphiné and Savoy They were conquered (121 B C) by Quintus Fabius Maximus, who was called Allobrogicus In the time of Julius Caesar they sided with Rome

Allon [Heb, =oak] **1** Simeonite 1 Chron 4 37 **2** Naphtalite city Joshua 19 33

Allon-bachuth (-bāk'uth) [Heb, =oak of weeping], spot close to Bethel, where they buried Rebecca's nurse Gen 35 8

allopathy (u-lŏp'u-thē) [Gr, =difference of feeling], term first used by Hahnemann, early in the 19th cent, for the established system of medicine of that time To this he opposed his system of HOMEOPATHY See also MEDICINE

Allori, Agnolo di Cosimo see BRONZINO, IL

Allori, Alessandro (ălēs-sän'drō al-lō'rē), 1535–1607, Florentine painter, known also as Alessandro Bronzino (brōndzē'nō) after the death of his master and foster father, Il Bronzino After studying in Rome, where he acquired something of the grand manner of Michelangelo, Allori returned to Florence, here he had many commissions for churches and public buildings and painted portraits of distinguished contemporaries The portrait of Giuliano de' Medici, duc de Nemours, believed to be a copy of a lost Raphael, is considered Allori's best work This and many other paintings by him are in the Uffizi His son and pupil, **Cristofano Allori** (krēstōfä'nō), 1577–1621, of the later Florentine school, was an excellent portraitist and, like his father, painted many of the celebrated people of

his time. His work is distinguished by great delicacy of technique and richness of color *Judith and Holofernes*, *St Julian*, and the *Sacrifice of Isaac* are in the Pitti Palace, Florence

allotropy (ulŏt'rupē) [Gr ,=other form], chemical term indicating the occurrence of an element in two or more forms The difference in form results from variation in the number and arrangement of the atoms in the molecule of an element and not from differences in chemical composition For example, the diamond and graphite are two of the allotropic forms of CARBON They are unlike in physical appearance (physical properties), but alike in chemical activity (chemical properties) Among other elements which exhibit striking allotropism are OXYGEN, PHOSPHORUS, and SULPHUR

Allouez, Claude Jean (klōd' zhă' ălwā'), 1622–89, French missionary in Canada and the Old Northwest, a Jesuit priest After arriving (1658) in Canada he served at posts in the St Lawrence region until 1665, when he went to Lake Superior and founded the Chequamegon Bay mission (near present Ashland, Wis) A canoe trip around Lake Superior in 1667 supplied material for the well-known Jesuit map of the lake Later he founded several missions, including that at De Pere, made his headquarters at Green Bay, and spent his last years as missionary to the Illinois and Miami Indians His accurate and informed reports made the Great Lakes country known

Alloway (ăl'–), hamlet, Ayrshire, Scotland, near Ayr The birthplace of Burns and the scene of "Tam o' Shanter," it has a Burns museum and monument

alloy (ăl'oi, uloi') [O Fr ,=combine], substance having metallic properties and consisting of two or more metals or of metals and nonmetallic elements united to form either a mixture or a compound The properties of an alloy differ from those of the constituent elements Most metals are used in the form of alloys, for by combining various elements in different proportions an alloy can be produced which has properties better suited for certain purposes than has the pure metal Most of the commercially important alloys are heterogeneous, i e , microscopic examination reveals them to be composed of crystals embedded in a matrix or of interlocking crystals of several types Gray cast iron and Babbitt metal are heterogeneous alloys In homogeneous alloys the components form in the solid state a solid solution which has, throughout the substance, uniform physical properties Gold and silver form homogeneous alloys Because of the softness of gold it is usually alloyed with copper or silver, and the proportion of gold is indicated in terms of carats Coin silver is 90 percent silver and 10 percent copper, and sterling silver is 92 5 percent silver and 7 5 percent copper Two important alloys of copper are BRASS and BRONZE Nickel coins are made of an alloy of about 75 percent copper and 25 percent nickel Monel metal is a nickel alloy STEEL is iron alloyed with carbon in proportions which are varied to suit the purpose Among the metals added to steel to form alloys are chromium, tungsten, and manganese

All Saints, Nov 1, feast of the Roman Catholic and Anglican churches, the day on which the church glorifies God for all his saints, known and unknown Old names are All hallows and Hallowmass It is one of the principal feasts of the year in the Roman Catholic Church all are obliged to hear Mass on it, and it has an octave and a vigil of fasting and abstinence Its origin probably lies in the common commemoration of martyrs who died in groups or whose names were unknown In the 7th cent the Pantheon at Rome was dedicated in honor of Our Lady and all martyrs, and before 900 All Saints was generally celebrated on Nov 1 The vigil (Oct 31), Halloween, is associated, in countries where Celtic influence is strong, with age-old customs peculiar to that night In certain parts of the British Isles bonfires and fortunetelling like those of midsummer night continue Elsewhere, especially in America, mumming and masquerading are popular, and jack-o'-lanterns are displayed Tales of witches and ghosts are told, and in remote communities old superstitions are kept One of the special games, bobbing for apples, is known to date from the Middle Ages These pagan survivals of Halloween probably represent old Celtic practices associated with Nov 1, the beginning of winter. Probably All Saints rose apart from Celtic influence, and the customs of Halloween have survived independently of the Christian feast ALL SOULS' DAY has no connection with Halloween

All Saints Bay, Brazil see TODOS OS SANTOS BAY.

All Souls College see OXFORD UNIVERSITY.

All Souls' Day, Nov 2 (exceptionally, Nov 3), feast of the Roman Catholic Church on which the church on earth prays for the souls of all the faithful departed still suffering in PURGATORY The proper office is of the dead, and the Mass is a REQUIEM All Souls' Day and Christmas are the only days of the year on which a priest may say three Masses Though not obliged by church law to hear Mass on this day, laymen generally observe it, and indulgences applicable to the souls in purgatory are granted. General suffrages for the departed, e.g., for those of a parish, of a city, or of a regiment, are very ancient (2 Mac. 12 43–45), but the modern feast was probably established first by an 11th-century abbot of Cluny for his community and later extended throughout the Church. In Catholic countries there are many customs peculiar to All Souls' Day, e g , leaving lights in the cemeteries on the night before These vary from region to region For the customs of Halloween (Oct 31), apparently an independent development, see ALL SAINTS

allspice, dried green berry of the pimento or allspice tree (*Pimenta officinalis*), a small evergreen belonging to the myrtle family The tree is cultivated in the West Indies for its aromatic leaves and berries, the latter are supposed to combine the flavors of different spices and are used in medicine and for seasoning various foods, particularly pickles and relishes The name is also applied to fragrant shrubs, such as the Carolina allspice (*Calycanthus floridus*) and the wild SPICEBUSH (*Benzoin aestivale*) which grows in the NE United States

Allston, Robert Francis Withers, 1801–64, South Carolina planter and statesman His administration as governor (1856–58) was noted for its agricultural and educational reforms He was one of the most advanced and scientific planters of the day, and his *Memoir of the Introduction and Planting of Rice in South Carolina* (1843) and *An Essay on Sea Coast Crops* (1854) had permanent influence on rice-growing methods in the South

Allston, Washington, 1779–1843, American painter and author, b Georgetown Co , S C After graduation from Harvard (1801) he went to London, where he studied painting under Benjamin West A result of four years in Rome was his lifelong friendships with Coleridge and Washington Irving The peak of his fame as a painter was reached in England, 1810–18, an important work of this period was a portrait of Coleridge After his return to America (1818) his career declined, most of his efforts being expended on the colossal but never completed *Belshazzar's Feast* (now in the Boston Athenaeum) His paintings, usually biblical or classical in subject, show the influence of the Venetian school Among the best known are *The Dead Man Revived* (Pa Acad of the Fine Arts), *Uriel in the Sun* (Stafford House, England), *Jeremiah* (Yale Univ), *Witch of Endor* (Gardiner Coll , Boston), and *A Spanish Girl* and *The Deluge* (Metropolitan Mus) Among his numerous pupils was Samuel F B Morse Allston began to write verse as a student at Harvard, the only published collection of his poetry is *The Sylphs of the Seasons* (1813) *Monaldi*, a romance, was published in 1841 Allston's first wife was William Ellery Channing's sister, Ann, after her early death he married Martha Dana, sister of Richard Henry Dana See biographies by M F Sweetser (1879), J B Flagg (1892) and E P Richardson (1948)

alluvium (ulōō'vēum), soil or land originating from the deposit of sediment by running water Its mixed composition makes it exceedingly fertile Alluvial fans occur at the bases of gentle slopes, alluvial cones at the bases of steep grades, flood plains and alluvial terraces along rivers, and deltas at the mouths of rivers The best-known alluvial regions are the deltas and flood plains of the Mississippi, the Nile, the Ganges-Brahmaputra, and the Tigris-Euphrates

Allward, Walter Seymour, 1876–, Canadian sculptor, b Toronto He created the Vimy Ridge Memorial in France, commemorating the Canadian troops of the First World War, and many monuments in Canada

Alma (ăl'mŭ) **1** City (pop 1,840), co seat of Bacon co , SE Ga , N of Waycross, in the coastal-plain farm area, inc 1906 **2** City (pop 7,202), S Mich , N of Lansing, settled 1853, inc as a village 1872, as a city 1905 Its industries include beet-sugar and oil refining and dairying Alma College (Presbyterian, coeducational, 1886) and the Michigan Masonic Home are here Several Indian mounds are found in the vicinity **3** City (pop 1,272), co seat of Harlan co , S Nebr , on the Republican river near the Kansas line, in a farming area, founded 1871 **4** City (pop 1,139), co seat of Buffalo co , W Wis at the foot of bluffs on the Mississippi and SW of Eau Claire, settled c 1852, inc 1885 A Federal dam here was completed in 1935

Alma (ăl'mŭ, Rus ălmă'), small river, S European RSFSR, in S Crimea It enters the Black Sea 16 mi N of Sevastopol It was the scene (Sept , 1854) of an allied victory over the Russians in the Crimean War

Alma-Ata (ăl'mŭ-ă'tă, -ätä', Rus ălmä'-ătă'), city (pop 230,528), capital of the Kazakh SSR and of Alma-Ata oblast, in the northern foothills of the Trans-Ili Ala-Tau On the Turksib RR, it has important industries processing the regional produce (cotton, fruit, meat, and tobacco) Founded in 1854 as Verny, it was twice destroyed by earthquakes (1887, 1910), but developed rapidly after the construction of the Turksib It was renamed Alma-Ata in 1927 It has a university (founded 1928), an academy of science (1945), two opera houses, and several theaters and museums Alma-Ata also is the center of a moving-picture industry.

Almadén (ălmädhān'), city (pop. 12,468), Ciudad Real prov., central Spain, in New Castile It is the center of one of the richest mercury-mining regions in the world The mines have been exploited since Roman times

Almagest (ăl'mŭjĕst) [Arabic distortion of Gr ,= the greatest composition], name derived from the Arabian translation of the less well-known Greek title of the *Syntaxis*, the famous astronomical work of Claudius Ptolemy The original Greek version was translated, some centuries after it was written, into Arabic and then into Latin It was highly influential in Europe in the Middle Ages Chiefly an abstract of the astronomical science of the Alexandrian Greeks, it preserved the work of Hipparchus

Almagro, Diego de (dyā'gō dā almä'grō), c 1475–1538, Spanish conquistador, a leader in the conquest of Peru A partner of Francisco PIZARRO, he took part in the first (1524) and second (1526–28) expeditions and in the bloody subjugation of the Inca after 1532 He aided (1534) BENALCÁZAR in thwarting Pedro de ALVARADO in Ecuador. No match for the crafty Pizarro brothers, he lost out in the division of spoils, but was granted the lands S of CUZCO In 1535 Almagro set out on a march incredible in its hardships—south through the freezing cordillera of the Andes, probably as far as Coquimbo in present Chile, and then, after finding no gold, back north through the desert wastes of ATACAMA He believed Cuzco was within his jurisdiction and so seized (1537) the city from Hernando PIZARRO, whom he injudiciously set free Civil war ensued, and Almagro's forces were defeated. Begging for his life, he was promised it, then he was garroted by orders of Hernando Pizarro His half-Indian son, Diego de Almagro, inherited his rights. Later the youth nominally headed the revolt which began with the assassination of Francisco Pizarro, but in 1542 he was captured and executed by the new governor, VACA DE CASTRO

Al-Mamun see MAMUN

almanac, calendar with notations of astronomical and other data In simple form almanacs have been known almost since the invention of writing, for they served to record religious feasts, seasonal changes, and the like The Roman *fasti*, originally a list of *dies fasti* (days when legal business might be transacted) and *dies nefasti* (days when legal business should not be transacted), were later elaborated into various lists, some of them resembling modern almanacs In the Middle Ages there were various means of noting saints' days, seasons, and the like, but the almanac did not become a really prominent type of reading matter until the introduction of printing in Western Europe in the 15th cent made possible the reproduction of many copies The almanac then developed promptly Regiomontanus produced one of the famous early almanacs (his *Ephemerides*) out of his astronomical knowledge Most of the works of the almanac type were given over to a great extent to astrology and predictions of the future This sort of literature had a great vogue, persisting late, in 1708 Jonathan Swift ridiculed such an almanac by one John Partridge in his "Isaac Bickerstaff" pamphlets The core of the predictions—foretelling the weather—has persisted in many modern almanacs, but the crude and sensational magic began to disappear early, to be replaced by more or less scientific information There appeared late in the 18th cent truly scientific almanacs—notably the British NAUTICAL ALMANAC (founded 1767), which was the inspiration for the *American Ephemeris and Nautical Almanac* (founded 1855), these recall the serious purpose of Regiomontanus The popular almanac, however, developed in the 17th and 18th cent into a full-blown form of folk literature, with notations of anniversaries and interesting facts, home medical advice, statistics of all sorts and qualities, jokes, and even fiction and poetry. The first production (except for a broadside) of printing in British North America was an almanac for the year 1639 Almanacs continued popular in the colonies, and some of high quality were produced early One was the *Astronomical Diary and Almanack* begun by Nathaniel Ames in 1725, and this was the forerunner of the most famous of them all, Benjamin Franklin's *Poor Richard's Almanack* (pub by him 1732–57), which in its title recalled one of the most popular and long-lasting of English almanacs, that of "Poor Robin" (founded c 1662) Franklin's humorous and pointed anecdotes and more especially his collection of proverbs marked by common sense and shrewd wisdom are still known to most Americans The longest lasting of all American almanacs was first published in 1793 by Robert Bailey Thomas, it came later to be called *The Old Farmer's Almanack* In the rural homes of the United States in the 19th and early 20th cent. the almanac on a nail in the kitchen was a virtual necessity To fill the demand all sorts of almanacs were issued—regional, humorous, statistical, all usually filled with advertisements of patent medicines and the like Out of the welter of these emerged the best type of present-day almanacs, handy and dependable compendiums of large amounts of statistical information. Noteworthy

are *The World Almanac and Book of Facts* (first pub as a booklet in 1868; discontinued 1884; revived 1885), *Information Please Almanac* (first pub 1947), and the regional *Texas Almanac* (first pub 1857) The name almanac has also been applied to many other types of literature not properly considered almanacs, such as the *Almanach de Gotha*, a periodical record of the royal, princely, and noble houses of Europe

Al-Mansur: see MANSUR.

Alma-Tadema, Sir Lawrence (ăl'mŭ-tăd'ĭmŭ), 1836–1912, English painter, b Friesland, Netherlands He studied in Belgium, where he lived until 1869 In that year he went to England, there he became a citizen and enjoyed a long popularity and many honors He is best known for his scholarly and meticulous paintings of intimate classical subjects, such as *A Reading from Homer*

Almaville (ăl'muvĭl), village (pop 2,282), S Que., on the St Maurice river at the head of the Shawinigan Falls and opposite the town of Shawinigan Falls, N of Trois Rivières.

Almeida, Antonio José de (äntō'nyō zhōzā' dŭ ălmā'dŭ), 1866–1929, Portuguese statesman. A republican, he was minister of the interior in the provisional government after the revolution of 1910 As leader of the moderate Evolutionist party, he was premier of a coalition cabinet in the First World War and later (1919–23) was president of the republic

Almeida, Francisco de (frănsĕsh'kō), c 1450–1510, Portuguese admiral, viceroy of Portuguese India He first arrived in India in 1503 as captain major of a fleet and helped Portuguese forces defeat the ruler of Calicut In 1505 he was back as viceroy, instructed to develop Portuguese commerce by building fortifications on the east coast of Africa, securing the allegiance of the Indian rulers, and taking the control of the spice trade from the Arabs In Africa he built a fort at Kilwa and burned Mombasa, and in India he worked diligently to become master of all sea trade The Egyptians, seeing their commerce threatened, built a fleet (with the help of Venice) and defeated (1508) Almeida's son, who was killed in the action. Off Diu in 1509 Almeida beat them and their Indian allies in a great naval battle Almeida at first refused to yield his power to Afonso de ALBUQUERQUE and had Albuquerque imprisoned (1509), but later did give him command. On his way home Almeida was killed by Hottentots near the Cape of Good Hope See K G Jayne, *Vasco da Gama and His Successors* (1910)

Almeida Garrett, João Batista de (zhwăō' bătēsh'tŭ dŭ ălmā'dŭ gurĕt'), 1799–1854, Portuguese dramatist and poet, leader of the romantic movement in Portugal. The family fled to the Azores in the period of the French occupation, and he spent some years there before he returned to graduate from the Univ of Coimbra He supported the revolution of 1820 and was strong in espousing democracy and liberty He was by the reactions of politics forced into exile twice (1823–26, 1828–32), and by his return he had completely abandoned classicism for romanticism, which he expressed most effectively in his plays *Alfageme de Santarém* and *Frei Luis de Sousa* and his long poems *Camões* and *Dona Branca* He is generally considered the greatest of Portuguese dramatists and is high in the rank of poets and developers of Portuguese folklore. He was a supporter of Dom Pedro in the war (1832–33) with Dom Miguel and later had many political offices and did much to forward the democratic cause Among his other works are collections of poetry, *Flores sem fruto* [flowers without fruit] (1844), *Folhas caídas* [fallen leaves] (1853), a book of folklore, *Romanceiro* (1843), and the prose *Viagens na minha terra* [journeys in my native land] (1846).

Almelo (ăl'mulō), industrial town (pop. 39,574), Overijssel prov., E Netherlands

Almería (älmärē'ä), city (pop 69,824), capital of Almería prov., S Spain, in Andalusia. A busy port on the Gulf of Almería, it ships out the celebrated grapes of the region, other fruits, esparto fibers, and iron and other minerals mined near by Probably founded by Phoenicians, Almería flourished from the 13th to the 15th cent A D as the outlet of the Moorish kingdom of Granada; it fell to the Christians in 1489. There is a Moorish fort, now in ruins, and a Gothic cathedral In 1937, during the civil war, the city was shelled by German warships and seriously damaged

Almirante (älmērän'tā), small port (pop 1,566), NW Panama, on Almirante Bay. It is the port of exit for the banana-growing region of S Costa Rica and N Panama.

Almodad (-mō'-), descendant of Shem Gen 10 26, 1 Chron 1 20

Almohades (ăl'mūhădz, -hädz) or **Almohads** (-hădz), Berber Moslem dynasty that ruled Morocco and Spain in the 12th and 13th cent It had its origins in the puritanical sect founded by Mohammed ibn Tumart, who (c 1120) stirred up the tribes of the Atlas to purify Islam and oust the Almoravides His successors, ABDU-L-MUMIN, Yusuf II, and YAKUB I, succeeded in conquering Morocco and Moslem Spain, and by 1174 the Almohades had completely displaced the Almoravides. With time the Almohades lost some of their fierce purifying zeal; Yakub had a rich court and was the patron of Averroës Yakub defeated (1195) ALFONSO VIII of Castile in the battle of Alarcos, but in 1212 the Almohade army was defeated and Almohade power in Spain was destroyed by the victory of the Spanish and Portuguese at Navas de Tolosa In Morocco they also lost power, there to the Meremide dynasty, who took Marrakesh in 1269.

Almon: see ALEMETH 2

almond, kernel of the fruit of a tree (*Amygdalus*, or *Prunus, communis*) resembling the peach The tree is probably native to W Asia In California it is rapidly becoming an important crop The tree, of moderate size, is very ornamental and flowers early in the spring There are two kinds of almonds the sweet, with a pink blossom, and the bitter, with a white blossom From the sweet almond is obtained by pressure a bland, fixed oil used in medicine as a demulcent Bitter almonds also yield almond oil and a glucoside called amygdalin, which when decomposed gives prussic acid The sweet almond, especially the broad or Jordan variety, is a favorite nut much used in fine cookery and confectionery Almond cake, the residue left after the oil has been extracted, is used in the making of soaps and cosmetics In Syria and Palestine, where the almond tree breaks into sudden bloom in January, it early came to symbolize beauty and revival The rod of Aaron in the Bible (see AARON'S-ROD) bore almonds. The beauty of the almond in bud, blossom, and fruit gave motif to sacred and ornamental carving For the ornamental shrub, see FLOWERING ALMOND

Almon-diblathaim (-lŭthā'ĭm), camping place of the Israelites Num 33 46,47 Called Beth-diblathaim in a denunciation of Moab Jer 48 22

Almonte (ăl'mŏnt), town (pop 2,543), SE Ont., on the Mississippi river (tributary of the Ottawa) and SW of Ottawa It is a manufacturing town

Almoravides (ălmŏ'rŭvĭdz, -vīdz) or **Almoravids** (-vĭdz), Berber Moslem dynasty that ruled Morocco and Moslem Spain in the 11th and 12th cent Its real founder was ABDULLAH IBN YASIN, who by force of arms converted some Saharan tribes to his own reformed religion and then advanced on Morocco. After his death (1059), YUSUF IBN TASHUFIN and his brother Abu Bakr came to power MARRAKESH was founded in 1062 and was the center of a powerful empire Called by the Moors in Spain to help stem Christian reconquest, Yusuf entered Andalusia and defeated (1086) Alfonso VI of Castile Later he subdued the local Moslem rulers and governed Moslem Spain with N Morocco (Abu Bakr had S Morocco) The Almoravides were rough and puritanical, contemptuous of the luxurious Moslem culture in Spain Their rule was never entirely stable and in the 12th cent was attacked by the ALMOHADES, who finally (by 1174) won both Morocco and Moslem Spain

Almquist, Carl Jonas Love (kärl' yōō'nas lōō'vu älm'kvĭst), 1793–1866, Swedish writer Most of his writings—novels, plays, poems, and short stories—are contained in *The Book of the Thorn Rose* (14 vols., 1832–51) His novel *Sara Videbeck* (1839) was translated into English in 1919 His career was varied and checkered, he was a civil servant, the founder of an unsuccessful farm colony, a teacher, a clergyman, and a socialist He was convicted of forgery and escaped a murder charge by fleeing to America In 1865 he returned to Europe and lived in Bremen as Professor Westermann See Axel Hemming-Sjoberg, *A Poet's Tragedy* (Eng tr., 1932)

almug or **algum**, precious wood mentioned in the Bible (2 Chron 2 8, 9 10,11), used in the Temple of Solomon and in his palace, brought from Ophir and Lebanon It is perhaps a red SANDALWOOD

Aloadae (ulō'udē) or **Aloidae** (ă'lōĭ'dē), in Greek legend, two giants who warred on the Olympian gods Their names were Otus (ō'tus) and Ephialtes (ē"fēăl'tēz), and they were putative sons of one Aloeus, but were really children of Aloeus' wife by Poseidon They managed to capture and imprison Ares for some months, and they tried to reach heaven to overthrow the gods by piling the mountain Ossa on Olympus and the mountain PELION on Ossa Apollo killed them, and they suffer forever in Hades To pile Pelion upon Ossa is thus to attempt an enormous and fruitless task.

alod (ă'lŏd) In feudal tenure, lands held without obligation to any suzerain were termed held in alod. Alodial lands existed both in England and on the Continent, but their number early decreased as landowners sought protection by turning their lands over to more powerful lords and receiving the holdings back as fiefs. In modern times the distinction between fee simple and alod has vanished.

aloe (ăl'ō) [Gr.], any species of the genus *Aloe* (ăl'ōē), perennials, chiefly from the warm dry regions of South Africa, but cultivated in other climates as pot or tub plants because of their rugged aspect. The different kinds, ranging in height from a few inches to tree size, bear flowers of red or yellow and large fleshy leaves in a stiff cluster. Products obtained from the juices of various species in different regions include the drug aloes (used chiefly as a cathartic and emmenagogue), an insect repellent, and a transparent pigment used in miniature painting, from the fibers are made cords and nets. In ancient times the juice was used in embalming A Mohammedan, returned from his pilgrimage to Mecca, hangs an aloe above his door. The ALOES mentioned in the Scriptures and the American aloe or AGAVE do not belong to this group of plants. The false aloe is sometimes considered an agave.

aloes (ăl'ōz), drug obtained from the ALOE; also a biblical name for an aromatic substance of various uses, mentioned in connection with myrrh and spices (Ps 45.8, Prov 7 17, Cant 4 14; John 19 39) and thought to be the fragrant wood of the modern aloeswood, also called eaglewood, agalloch (ăg'ulŏk), or agilawood (ăg'ĭlŭ-), an *Aquilaria* native to Asia In the East the aloeswood has been valued for medicinal purposes, as an incense, and for the beautiful grain of its wood which takes a high polish and was used for setting precious stones The tree lignaloes (lĭnăl'ōz, lĭgnăl'ōz) of Num 24.6, sometimes thought to be the aloeswood, may have been a different plant The aloe and the American aloe or AGAVE are not to be confused with the aloes of the Scriptures

Aloidae: see ALOADAE.

Alost (ălōst'), Flemish *Aalst* (ălst), town (pop. 42,020), East Flanders, Belgium, NW of Brussels It has textile manufactures (cotton, linen, and silk) The Church of St Martin and the town hall date from the 15th cent

Aloth (ă'lŏth) see BEALOTH

Aloysius, Saint (ălō'shŭs), 1568–91, Italian Jesuit, of the Gonsaga family He died of the plague, which he caught from people he had tended. He is the patron of youth. St Aloysius has been especially extolled for his purity Feast June 21

alpaca (ălpăk'ŭ), partially domesticated South American hoofed mammal of the camel family It belongs to the same genus (*Lama*) as the wild guanaco and the vicuña and, like the llama, is probably a descendant of the guanaco Although the flesh is sometimes used for food, the animal is bred chiefly for its long, lustrous wool, which varies from black, through shades of brown, to white Flocks of alpaca are kept by Indians in the highlands of Bolivia, Chile, and Peru Grasses which grow close to the snow line provide pasturage for the animals They require a pure water supply The Incas had domesticated the alpaca and utilized its wool before the Spanish Conquest Exporting of alpaca wool to Europe began after Sir Titus Salt discovered (1836) a way of manufacturing alpaca cloth The name alpaca is sometimes used for materials such as mohair which do not contain alpaca wool

Alp Arslan (ălp ärslän'), 1029–72, Seljuk sultan of Persia (1063–72) He embraced Islam and was a vigorous conqueror of the Christians. Successful invasions of Armenia and Georgia were followed by penetration of the Byzantine Empire A campaign against Romanus IV ended in 1071 with the brilliant victory of Alp Arslan at MANZIKERT The emperor was captured but was apparently treated not only with magnanimity but even with courtesy, he was released for a ransom Alp Arslan was assassinated in 1072, but his conquests and his extraordinarily orderly and well-run government were continued by his son Malik Shah, who controlled most of Asia Minor

Alpena (ălpē'nu), resort city (pop 12,808), co. seat of Alpena co., N Mich., on Thunder Bay of Lake Huron and N of Bay City, laid out 1856 as Fremont, renamed 1859, inc 1871 There are fisheries, limestone quarries, and cement and paper plants

alpenhorn see ALPHORN

Alpes-Maritimes (alp'-märētōm'), department (1,442 sq mi., pop 448,973), SE France, bordering on Italy and surrounding Monaco. It is a part of the French RIVIERA. Nice is the capital. The formerly Italian districts of BRIGUE and TENDE were added in 1947 (not included in figures given)

Alpha, borough (pop 2,301), W N J , near Phillipsburg, inc 1911.

alphabet [Gr *alpha-beta*, like Eng. ABC], type of WRITING, theoretically having a one-for-one relation between character (or letter) and phoneme (see PHONETICS). Few alphabets have achieved the ideal exactness An alphabet is called a syllabary when one character represents a syllable rather than a phoneme; such is the kana, used in Japanese to supplement the originally Chinese characters normally used The alphabet of modern Western Europe is the Roman alphabet, the base of most alphabets used for newly written languages of Africa and America, as well as for scientific alphabets. Russian, Serbian, Bulgarian, and many languages of the USSR are written in the Cyrillic alphabet, an augmented Greek alphabet Greek, Hebrew, and Arabic all have their own alphabets The great writing of India is the Devanagari, an alphabet with syllabic features, thus, invented probably for Sanskrit, is the source of a number of Asiatic scripts. The Roman is derived from the Greek, perhaps by way of Etruria, and the Greeks had imitated the Phoenician alphabet. The exact

steps are unknown, but the Phoenician, Hebrew, Arabic, and Devanagari systems are based ultimately on signs of the Egyptian HIEROGLYPHIC writing This was not alphabetic, but in the phonogram it bore the germ of phonemic writing; thus the sign "bear" might (to use an English analogy) mean also the sound *b*, and "dog" *d* A similar development created the Persian CUNEIFORM syllabary Two European alphabets of the late Roman era were the RUNES and the OGHAM An exotic modern alphabet is the Cherokee syllabary of SEQUOYAH, suggested by, but not based on, the Roman alphabet. Another was the Mormon Deseret alphabet See LETTERING and TYPOGRAPHY See Isaac Taylor, *The Alphabet* (1883), W S Mason, *A History of the Art of Writing* (1920); Edward Clodd, *The Story of the Alphabet* (new ed , 1938); Oscar Ogg, *26 Letters* (1948)

Alpha Bottis: see ARCTURUS

Alphaeus (ălfē'ŭs) 1 See CLEOPHAS 2 Father of the evangelist Matthew Mark 2 14; Mat 9 9

alpha particle and alpha ray· see RADIOACTIVITY, RADIUM, RAY

Alphege, Saint'(ăl'fĕj), d 1012, English churchman, archbishop of Canterbury after having been bishop of Winchester The Danes captured him and held him for ransom, but St Alphege would not ask his people to buy him back The Danes murdered him

Alpheus (ălfē'ŭs), in Greek legend, river-god He fell in love with Arethusa, a nymph of Artemis She tried to escape him and, changing into a fountain, plunged into the earth. He followed her, hence the legend of the course of the River Alpheus and of the fountain of Arethusa

Alpheus (ălfē'ŭs), Gr Alpheios (ălfē'ŏs'), river, 69 mi long, rising in the Taygetus mts , S Greece, and flowing NW through the Peloponnesus, past Olympia, into the Ionian Sea In Greek mythology, its waters were said to pass under the sea and to emerge at Syracuse in the fountain of ARETHUSA Hercules, to clean the stables of AUGEAS, turned the Alpheus through them It is the river Alph of Coleridge's poem, *Kubla Khan* The lower Alpheus was formerly known as Rouphia

Alphonse (ălfŏn'), 1220–71, count of Poitiers and of Toulouse, brother of Louis IX of France By his marriage to the daughter of RAYMOND VII, count of Toulouse, he inherited Raymond's lands in 1247, thus facilitating their incorporation (1271) into the French crown lands An able administrator, he did much to heal the wounds of the Albigensian Crusade During Louis's absence in the Holy Land he was coregent with Blanche of Castile (1248–52) and regent (1252–54)

Alphonsine tables see ALFONSINE TABLES

Alphonso. For rulers thus named, see ALFONSO

Alphonsus Liguori, Saint (ălfŏn'sŭs lĭgwō'rē), 1696–1787, Italian churchman, Doctor of the Church He was named Alfonso Maria de' Liguori In 1732 he founded the Congregation of the Most Holy Redeemer (the Redemptorists) for religious work among the poor, especially in the country He refused the archiepiscopal see of Palermo but accepted (1762) a miserable country diocese near Capua He labored incessantly until 1775, when sickness forced him to resign He worked for his order under great difficulties, caused by an anticlerical government and overzealous monks Goatherds of the mountains were his especial care St Alphonsus was an accomplished musician and wrote many hymns and instrumental pieces His point of view in casuistry, which has become standard, is called equiprobabilism in deciding whether a course of conduct is morally permissible, the opinions of good theologians are to be followed, when they differ, a course is allowable which a substantial number allow, in general the less austere point of view is preferable St Alphonsus was unusual, even among Catholics, for his great devotion to the Virgin Feast Aug 2

alphorn or alpenhorn [Ger ,=Alps horn], wooden horn from 3 to 12 ft long, sometimes curved slightly, with conical bore and a cup-shaped mouthpiece It produces only the natural harmonics of the tube, slightly modified, however, by the materials of the horn and its somewhat irregular shape In Switzerland it is used to call cattle and to entertain tourists The RANZ DES VACHES is played upon it

Alpine (ăl'pĭn), town (1940 pop 3,866; 1947 estimated pop 5,100), co seat of Brewster co , W Texas, in the mountains N of the Big Bend of the Rio Grande Founded in 1882 with the coming of the railroad, it is today a railroad junction and shipping point for cattle and for sheep ranches Sul Ross Teachers College here has a museum with historical and archaeological exhibits The mountain scenery attracts visitors, and Big Bend National Park is near.

alpine plants, natives of high mountainous regions, in demand for cultivation in alpine and ROCK GARDENS, where they are grown under artificial conditions that imitate those of their native habitat The plants are typically perennial, dwarf in form, and are profuse bloomers, some becoming turflike They often require a high altitude and a short growing season to thrive, and some will not succeed except in a specially constructed garden with a system for supplying cool water underground, comparable to the melting snows of mountains. Many common garden plants, such as primroses and irises, have alpine representatives, but alpine species of the gentians, saxifrages, and sedums are among those most commonly planted. The EDELWEISS is a popular alpine See A J Macself, *Alpine Plants* (1923), H D Correvon, *Rock Garden and Alpine Plants* (1930)

Alps, great mountain system, S central Europe It swings north, east, and southeast in a great arc from the Mediterranean coast between France and Italy to the Adriatic coast of Yugoslavia, with its northernmost point in S Bavaria The Alps thus form a barrier separating the great plain of the Po in N Italy from France (west), Germany (north), and the Danuban plain (east) The larger parts of Switzerland and Austria, between Germany and Italy, are covered by the Alps and their foothills Cut by numerous gaps and saddles (passes), the Alps do not form a complete climatic or strategic barrier However, the cisalpine (i e , of N Italy) climate is noticeably milder than that of the transalpine slopes, moreover, though the Alps have often been crossed by invaders, they are easily defensible Alpine waters drain, through three rivers rising there, to the North Sea (the Rhine), to the W Mediterranean (the Rhone), and to the Adriatic (the Po), they also feed the Danube, which flows to the Black Sea The Alpine chain represents the western culmination of a vaster mountain system, stretching SE to the Caucasus and the Himalayas It is more immediately connected with the Jura, from which it is separated by the Rhone, the Carpathians, from which it is separated by the Danube, the DINARIC ALPS, which continue the main chain along the Yugoslav coast and link it with the Balkans; and the APENNINES The Alps are the result of extensive folding and overthrusting of the earth's crust due to pressure exerted from the south Movements of the crust probably began in the Mesozoic, the uplift of the mountain mass probably culminated in the Pleistocene epoch of the Cenozoic Where the sedimentary layers have been worn away, the older crystalline rocks are exposed, forming the angular peaks Among the Alpine peoples the word *Alp* or *Alm* designates not the snow-capped peaks, but the high pastures above the timber line, where the cattle (cows, goats, and sheep) are taken to graze in summer In the high Alps, dairying is the chief industry and cheese the staple food Agriculture is confined to the valleys and foothills, viticulture and fruitgrowing are important on the southern slopes New industries are being introduced through increasing exploitation of the huge hydroelectric potential and may radically alter the traditional Alpine economy The tourist trade, especially in the Western and the Central Alps, has contributed to the prosperity of the frugal and hard-working Alpine population and has received great impetus from the growing popularity of MOUNTAINEERING The relatively low base level (3,000–4,000 ft) of the magnificent Alpine peaks stresses the majesty of their height and allows a great diversity of climate and vegetation on various levels Many valleys contain large and beautiful lakes, notably those of Geneva, Lucerne, Zurich, Constance, Como, and Garda, and the Lago Maggiore Above the timber line there is a wealth of characteristic ALPINE PLANTS, and, still higher, vast glaciers (see GLACIER) and a perpetual mantle of snow The alpine fauna is sparse, the CHAMOIS and the MARMOT are its only distinctive members The subdivisions of the Alps are generally arbitrary The Western Alps, stretching from the Riviera to the SIMPLON, comprise, from south to north, the Maritime Alps in Provence and Liguria, the Cottian and Graian Alps in DAUPHINÉ and Piedmont, and the MONT BLANC group and the Pennine Alps in SAVOY, the Val d'AOSTA, and the VALAIS Mont Blanc (15,772 ft) is the highest peak of the entire Alpine system; Monte Viso, the MATTERHORN, the GRAN PARADISO, and Monte ROSA are among the other chief peaks of the Western Alps, the Mont CENIS and Simplon tunnels and the Great and Little SAINT BERNARD passes are the main thoroughfares The Central Alps include the Bernese Oberland (see BERN), the Lepontine Alps, centered around the SAINT GOTTHARD group; and the Rhaetian Alps (E Switzerland, including the ENGADINE) The JUNGFRAU, the FINSTERAARHORN, and PIZ BERNINA are among the loftiest of all Alpine peaks, the St Gotthard and LOTSCHBERG tunnels and the FURKA, SPLÜGEN, MALOJA, and STELVIO passes are vital links The Eastern Alps comprise the Alps of VORARLBERG, the Austrian and Italian Tyrol (including the ÖTZTAL ALPS, the ZILLERTAL ALPS, the ORTLES group and the DOLOMITES), the HOHE TAUERN, with the GROSSGLOCKNER, the Alps of BAVARIA and Salzburg, the SALZKAMMERGUT; the Alps of Styria, and, farther south, the Carnic Alps (between Carinthia and Italy), the Karawanken (between Carinthia and Yugoslavia), and the Julian Alps (between Yugoslavia and Italy) The ARLBERG, BRENNER, and SEMMERING passes and tunnels are the main through routes See A E H Tutton, *High Alps* (1931), R L G. Irving, *The Alps* (1940).

Alps, Australian: see AUSTRALIAN ALPS.

Als (ăls), Ger *Alsen* (ăl'zŭn), island (121 sq mi , pop 34,294), Denmark, in the Little Belt, separated from S Jutland by the narrow Als Sound Sonderborg, the chief city, is on both sides of the sound. Agriculture and fruitgrowing are the main occupations. After being ceded to Prussia in 1864, the island was restored to Denmark as a part of N Schleswig after the plebiscite of 1920

Alsace (ălsās', ălsās, Fr alsās'), Ger *Elsass* (ĕl'zăs), region and former province, E France, along the Rhine border with Germany It is now divided into three departments, Bas-Rhin, Haut-Rhin, and Territory of Belfort Virtually the whole population can speak French, but a very large majority have also retained their Alemannic dialect. Although the Roman Catholic Church is very powerful here, about 25 percent are Protestants The fertile Alsatian plain along the Rhine gives way in the west to the VOSGES Largely agricultural, Alsace also has important cotton manufactures, chiefly at Mulhouse and Colmar, and large potash and minor oil deposits. The wines (notably Riesling) are highly prized. STRASBOURG is the chief city A part of the Roman province of Upper Germany (see GAUL), Alsace fell to the Alemanni (5th cent) and to the Franks (496). The treaty of Verdun (843, see VERDUN, TREATY OF) included it in Lotharingia, the Treaty of MERSEN (870) put it in the kingdom of the East Franks (later Germany). The 10 chief cities of Alsace gained (13th cent) virtual independence as free imperial cities The rest of the country was divided into petty feudal and ecclesiastic fiefs except in Upper Alsace (8 Alsace), where the HAPSBURG family consolidated its original holdings. In alliance with the Swiss, the Alsatian towns successfully resisted (1476–77) the pretensions of Charles the Bold of Burgundy They accepted the Reformation, but the rural areas remained generally Catholic The Peace of Westphalia (1648) transferred all Hapsburg lands in Alsace to France it moreover transferred all imperial rights throughout the "landgraviate of Alsace" to the French crown The vagueness of this clause helped Louis XIV when, on various pretexts, he forcibly took control of virtually all Alsace, including Strasbourg (1680–97) The Treaty of Ryswick (1697) confirmed France in its new possessions MULHOUSE, being allied with Switzerland, and a few other isolated holdings were not annexed to France until the French Revolution The province, with its own PARLEMENT at Colmar, retained a favored fiscal and religious status until 1790 The Edict of Nantes, promulgated before the annexation of Alsace, could not be revoked here; religious worship thus remained free In 1871, on debatable historical grounds, all Alsace except BELFORT was incorporated into Germany, as a result of the FRANCO-PRUSSIAN WAR. Until its recovery (1918) by France, Alsace and part of LORRAINE formed the "imperial land" (*Reichsland*) of Alsace-Lorraine, held in common by all the German states that formed the empire Many Alsatians emigrated to France rather than submit to a policy of thorough "Germanization" Clamor for the return of Alsace-Lorraine became the chief rallying force for French nationalism and was a major cause of the armaments race that led to the First World War After the first enthusiasm over the reunion with France, confirmed by the Treaty of Versailles (1919), had died down, problems faced the French government A strong particularist movement gained ground, demanding cultural and even political autonomy The movement received considerable impetus from recurrent efforts by the French government to end the CONCORDAT OF 1801, which had remained valid in Alsace-Lorraine though it had been ended in the rest of France in 1905 These efforts met the determined resistance of Catholic conservatives. The German occupation of Alsace in the Second World War began in 1940, a large part of the population having previously been evacuated to central France Alsace was considered part of Germany, and Alsatians were drafted into the German army When, late in 1944, French and American troops began the reconquest of Alsace, they were generally hailed as liberators By Jan , 1945, after heavy and difficult fighting, Alsace was fully recovered for France

Alsberg, Carl Lucas, 1877–1940, American chemist, b New York city, grad Columbia (B A , 1896, M D , 1900) In the Dept of Agriculture he served (1908–12) with the Bureau of Plant Industry and as head (1912–21) of the Bureau of Chemistry and was director (1921–37) of the Stanford Univ. Food Research Institute From 1937 he was director of the Giannini Foundation of Agricultural Economics at the Univ of California His numerous researches covered many phases of biochemistry and the chemistry of foods

Alsen, Denmark see ALS

alsike (ăl'sĭk, –sīk, ôl–), species of perennial CLOVER, *Trifolium hybridum*, with pinkish blossoms, widely naturalized and an important pasture crop in the United States and Canada. It is also called Swedish clover

Alsop, Richard (ôl'sŭp), 1761–1815, American author, b Middletown, Conn , of a wealthy family

As one of the CONNECTICUT WITS he collaborated with Theodore Dwight (1764–1846) and others in the *Echo* (1807) and later Federalist satires His poetry includes *The Charms of Fancy* (1856) and imitations of Scandinavian heroic literature In prose his most popular work was *A Narrative of the Adventures . of John R Jewitt* (1815), based on Jewitt's journal and his conversations See biography by K P Harrington (1939)

Alta (ăl'tu), town (pop 1,269), NW Iowa, ENE of Sioux City near Storm Lake, in a farm area, inc 1878 It has a municipal hospital

Alta California, see CALIFORNIA

Altai or Altay (both ăltī', ăl'tī, ăltī', Rus. ŭltī'), mountain system, SW Siberia, largely in the MOUNTAIN-ALTAI Autonomous Oblast, RSFSR, and in the Kazakh SSR It extends along the Russo-Mongolian border between the upper Irtysh river and the upper Yenisei river and includes the Kolyvan Range in the west, the Sailyugem Range in the southeast, and the central Katun and Chuya Alps The highest peak, Belukha (15,155 ft), is in the Katun Alps Numerous glaciers give birth to the headwaters of the Irtysh, Ob, and other rivers Connected with the Altai system are the Salair Ridge and the Kuznetski ALA-TAU (to the north), the Sayan Mts. (to the northeast), the Tannu-Ula Range (to the east), and the Mongolian Altai (see MONGOLIA) Formed mostly of much-folded Paleozoic strata, eroded to plateaus, and lifted again, the system has a continental climate with rainy summers and cold, dry winters It has dense forests to 6,500 ft and alpine meadows below the snow line (8,200 ft) The Altai and several of its branches are extremely rich in minerals (lead, zinc, silver, wolfram, copper, mercury, and gold) LENINOGORSK is the largest mining center, Kolyvan has a wolfram mine opened in 1726 The inhabitants of the region, mainly Russians and Oirots, engage in hunting, cattle breeding, and farming

Altai Territory, administrative division (101,005 sq mi , pop 2,520,084), RSFSR, in SW Siberia, drained by the Ob river. Barnaul is the capital It includes the MOUNTAIN-ALTAI Autonomous Oblast (southeast), which contains most of the Altai mts The central section is the richest black-earth area of Siberia and produces wheat, sugar beets, flax, and dairy products The Turksib RR passes through the territory, which was first settled by Russians in the early 18th cent

Altamira (ăl"tămē'ra), site of the caverns in N Spain, near Santander, where famous examples of Paleolithic CAVE ART were discovered in 1879

Altamirano, Ignacio Manuel (ēgnä'syō manwĕl' altămēra'nō), 1834–93, Mexican novelist, of pure Indian blood At 14 an unlettered country boy, he later, after formal education, became an advocate of learning and freedom After Maximilian was executed, he was a key figure in the reconstruction of the republic under Benito JUAREZ He edited the *Correo de Mexico* and as a poet interpreted the Mexican landscape He is best known for two novels—*Clemencia* and a story sketching Mexican customs, *La navidad en las montañas* [Christmas in the mountains]

Altamira y Crevea, Rafaél (räfäĕl' altămē'rä ē krāvā'ä), 1866–, Spanish jurist and historian He was appointed professor of the history of the law in the universities at Oviedo (1897), Madrid (1914), and Mexico city (1945) From 1921 to 1940 he was a judge of the Permanent Court of International Justice (the World Court) Among his numerous works on education, social science, literature, law, and history, his *Historia de España y de la civilización española* (5 vols , 1900–1930) is the best known, an English adaptation is C E Chapman, *A History of Spain* (1931) The translation, *A History of Spanish Civilization*, appeared in 1930

Altamont (ăl'tumŏnt), city (pop 2,111), S central Ill , SE of Springfield, inc as a village 1872, as a city 1901 It is a railroad junction and shipping point in a farm area.

Altamura (ăl"tămōō'ra), city (pop 31,099), Apulia, S Italy It is a purely agricultural center The imposing cathedral, with twin campaniles, was begun by Emperor Frederick II in 1232

Altar (ăltăr'), extinct volcano, 17,300 ft high, S central Ecuador Its name is derived from a fancied resemblance to an altar It is also called Capac Urcu

altar, table or platform for the performance of sacrifice In its simplest form the altar is a small pile, with a square or circular surface, made of stone or wood Its features vary according to its purpose, the altar of libation usually has a drain for the liquid, and so does the altar of bloody sacrifice The altar of burnt offering (including incense) often has a depressed hollow for a fire Altars in Egypt, in Mesopotamia, in Greece, and in Rome and among the Aztec and the Maya were highly adorned with friezes, cornices, elaborate platforms, and canopies At Pergamum there was a huge monumental altar 40 ft high Altars as a rule were out of doors in the ancient world and in Central America The Christian altar is the place to celebrate the EUCHARIST, a sacrifice in the traditional view. In the Western Church the altar is a long narrow table of stone, often reminiscent of a tomb, at its back is a REREDOS, which often bears a canopy In the Roman rite there are in the middle of the altar a crucifix and a tabernacle to contain the reserved Host There is a recess in each altar stone containing bones of martyrs, thus is even true of tiny portable altars carried by chaplains In Eastern rites the altar is square and has no backing or reredos, it is away from the wall Most Protestant denominations have no altar, instead, a typical practice is to have a permanent communion table below and in front of the pulpit

Al-taschith, see AIJELETH SHAHAR

Altavista (ăltăvĭs'tù), industrial town (pop 2,919), SW Va , on the Roanoke and SSW of Lynchburg, inc 1910, rechartered 1936 The town has cedar-chest and rayon industries

Altay, see ALTAI.

Altdorf (ält'dôrf), town (pop 5,692), capital of Uri canton, Switzerland It is the scene of the traditional exploits of William Tell, commemorated in open-air theatrical festivals

Altdorfer, Albrecht (ăl'brĕkht ältdôr'fur), 1480–1538, German painter and engraver He served as city architect of Regensburg, where much of his life was spent He was a follower of Dürer, with whom he is thought to have studied, but his work has a gentler and more romantic character than that of his master Fine examples of his painting are *Susanna Bathing*, *Victory of Alexander over Darius* (painted in contemporary costumes), *St George and the Dragon*, and *Holy Family at a Fountain* Altdorfer excelled in painting landscape and particularly forest interiors, which often predominate in his enchanting compositions He was probably the first German to paint a pure landscape He was no less successful as an engraver and etcher *Virgin of Regensburg* and *St Jerome* are among his noted prints See study by Sturge Moore (1900)

Altenburg (ăl'tŭnbōōrk), city (pop 51,805), Thuringia, S central Germany, on the Pleisse river There are manufactures of machines, textiles, and playing cards Lignite is mined near by First mentioned in 976, Altenburg became (12th cent) an imperial city It passed 1329 to the house of Wettin and later was the capital of the duchy of SAXE-ALTENBURG It was burned by the Hussites in 1430 The tower of the monastery, founded (1172) by Emperor Frederick I, still stands, the 15th-century ducal castle is now a museum

alternating current see ELECTRICITY, GENERATOR

Altgeld, John Peter (ält'gĕlt), 1847–1902, governor of Illinois (1892–96), b Germany He came with his immigrant parents to Ohio, where he grew up After practicing law and serving as county attorney at Savannah, Mo , he moved to Chicago in 1875 There he wrote *Our Penal Machinery and Its Victims* (1884), arguing that American judicial methods were weighted against the poor, and in 1886 he was elected to the Cook co superior court He was elected governor in the wave of Democratic success across the nation in 1892 and established himself as a champion of labor, of reform, and of liberal thought Charging a miscarriage of justice, he pardoned three anarchists imprisoned because of the Haymarket riot of 1886 In the strike at PULLMAN in 1894, when President Cleveland sent in Federal troops on the grounds of interference with U S mails, Governor Altgeld sturdily protested, calling the act unconstitutional Though conservatives in his day roundly denounced him as a radical and he was not reelected when he ran as an advocate of free silver in 1896, he has later been exalted as a champion of human rights and of the underprivileged See W R Browne, *Altgeld of Illinois* (1924), Harry Barnard, *"Eagle Forgotten" the Life of John Peter Altgeld* (1938)

althea, shrubby see ROSE OF SHARON

Althing (ăl'thĭng) [Icelandic,=general diet], parliament of Iceland This assembly, the oldest in Europe, was convened at Thingvellir, SW Iceland, in 930 It was dissolved in 1800, was revived as an advisory body in 1843, and in 1874, when Iceland was granted a constitution, became again a legislative body The members serve for four years Its upper house (one third of the members) and lower house (two thirds) sometimes work together in a United Althing The Althing in 1944 voted the independence of Iceland from Denmark, a decision ratified by popular vote

Althouse, Paul Shearer (ălt'-), 1889–, American tenor, first entirely American-trained singer of leading roles with the Metropolitan Opera Company, New York His debut was made there in 1915, and he later sang successfully in Europe and Australia as well as in many U S cities He was the first American to sing the role of Tristan (Metropolitan Opera House, 1913)

Altichiero da Zevio (ältēkyā'rō da tsā'vyō), c 1330–c 1395, early Italian painter, follower of Giotto and founder of the school of Verona His frescoes at Padua in the churches of Sant' Antonio and San Giorgio are famous

altimeter (ăltĭm'ĭtur, ăl'tĭmē"tûr), device used in airplanes and balloons to determine altitude, commonly a type of BAROMETER A barometer, however, can indicate only the altitude above sea level and not the distance above the surface of the ground A more recently developed device is known as a terrain-clearance indicator. This type of altimeter measures the time required for radio waves transmitted from the airplane to be reflected back to the plane from the surface below, converts the time lapse into feet, and thus indicates the actual vertical distance from the terrain or objects below.

altitude, in astronomy, the angular distance of a heavenly body above the astronomical horizon The angle used in measuring is that which a line drawn from the eye of the observer to the heavenly body makes with the plane of the horizon. The reading of the apparent altitude, as determined by a telescope attached to a graduated circle, must be corrected for refraction and certain other errors to ascertain the true altitude In navigation, observations are made with a sextant.

altitude, in physical geography, the elevation of a physical feature of the earth above the mean sea level Mean sea level, the average of the heights of the surface of the sea over a long period of time, is determined by a recording apparatus called a tide gauge The altitude of any feature is calculated by trigonometric triangulation or (less accurately) by photographic surveying or barometric readings On topographical maps altitude is represented usually by contour lines and sometimes by hachures or by differential coloring

altitude sickness see AIRSICKNESS

Alto (ăl'tō), town (pop 1,141), E Texas, ESE of Palestine, in a tomato-growing region, inc 1909

alto (ăl'tō) [Ital , =high], formerly the highest male voice or part in music which was also called countertenor, now a term used for the lowest female voice or part and synonymous with contralto In several families of instruments the member next to the highest is called alto, e g , the alto saxophone and alto clarinet and the tenor violin or viola.

Alto Adige, see TRENTINO–ALTO ADIGE

Alton (ŏl'tun) **1** City (pop 31,255), SW Ill , on bluffs above the Mississippi N of St Louis, laid out 1817 in a region visited by Jolliet and Marquette in 1673, inc 1821 A shipping and industrial center, it has numerous manufactures, including flour, steel, glass, chemicals, farm and mine tools, brass, and petroleum It is the seat of Shurtleff College (Baptist, coeducational, 1827), a boys' military academy, and a junior college for girls There is a monument to Elijah P Lovejoy A tablet marks the scene of a Lincoln-Douglas debate (1858) The PRINCIPIA (at Elsah) and Pere Marquette State Park are near by **2** Town (pop 1,025), NW Iowa, on the Floyd river and NE of Sioux City , inc 1883 **3** Town (pop 1,209), S N H , NE of Concord, settled 1770, inc 1796 It is a resort and rural region on Merrymeeting river and includes villages near the southern end of Lake Winnipesaukee

Altona (ăltō'nu), village (pop 1,065), SE Man , SSW of Winnipeg and near the N Dak border, in a grain and stock-farming region It has flour mills

Altona (ăl'tōna), river port of Hamburg, N Germany, on the Elbe It was incorporated into the city of Hamburg in 1938 It has chemical and other industries

Altoona (ăltōō'nu) **1** Industrial city (pop 80,214), central Pa , near the source of the Juniata E of Pittsburgh, settled c 1769, laid out 1849, inc as a borough 1854, as a city 1868 Extensive bituminous coal mining is done near here Industries include textile products, lumber, sand, paper, and automobile shops The city is a railroad center with railroad shops, and 5 mi west of the city is the famous scenic Horseshoe Curve of the Pennsylvania RR The Altoona motor speedway is well known Governor Curtin called a conference of governors in 1862 at Altoona to pledge support to Lincoln's administration The near-by historic hotel, Fountain Inn, appears in Dickens's *American Notes* **2** City (pop 1,239), W central Wis , near Eau Claire, settled 1882, inc 1887

alto-relievo see RELIEF

Altschuler, Modest (mŭdyĕst' ält'schōō'lûr), 1873–, Russian-American conductor, studied at the Moscow Conservatory In 1903 he organized the Russian Symphony Orchestra, which until 1919 introduced to American audiences works of Rachmaninov, Scriabin, and other modern Russian composers

Alturas (ältōr'us), city (pop 2,090), co seat of Modoc co , NE Calif , on the Pit river, inc 1901 A trade center in a timber, grain, and livestock area, it is the headquarters for the Modoc National Forest

Altus (ăl'tus), city (pop 8,593), co seat of Jackson co , SW Okla , between the Wichita Mts and the Red River, founded c 1892, inc 1901 Cotton and food products are made here and shipped It is the chief city on the W C Austin (formerly Altus) project of the Bureau of Reclamation, started in 1941 Ultimately some 50,000 acres will be irrigated by water from the North Fork of the Red River diverted by the dam, which is 110 ft high and 1,100 ft long

alum (ăl'ŭm), any of a series of double crystalline salts They are sulphates of a univalent cation (a positively charged atom or radical), e g , sodium, potassium, ammonium, or thallium, combined with a trivalent cation, e g , aluminum, chromium, or manganese Commonly the terms *alum* and *common alum* are applied to potassium alum or potash

alum, the double sulphate of potassium and aluminum, which is used in the purification of water, in tanning hides, as a mordant in dyeing, and as an astringent. Sodium aluminum sulphate, also known as alum, is used in some kinds of baking powder. Chromium potassium sulphate or chrome alum is used in the textile industry as a mordant, in tanning, and in the fixing bath to harden the gelatine on photographic films and plates

alumina (ŭlōō'mĭnŭ) [from Latin, =alum] or **aluminum oxide**, occurring almost pure in nature as CORUNDUM (e g , RUBY and SAPPHIRE) and combined with silica in CLAY, SLATE, and MARL The crystalline forms are extremely hard Corundum, next to the diamond in hardness, and emery (an impure form of corundum) are used as abrasives Alundum or aloxite, an artificial form of the oxide, is a hard white or gray crystalline powder prepared from bauxite and extensively used as an abrasive It is used also in making crucibles and other laboratory apparatus When precipitated from solutions containing coloring matter, alumina absorbs these substances and insoluble pigments are formed Such a precipitate is called a LAKE, and the process employing lakes is mordant dyeing Alumina is insoluble in water and in most acids but reacts with sodium hydroxide Precipitated alumina prepared from bauxite is used in the preparation of metallic aluminum.

aluminum [from Latin, =alum], called in British countries **aluminium** (ăl"ūmĭn'yum), silvery-white metallic element (symbol=Al, for physical constants, see ELEMENT, table) It is extremely light, weighing much less than the more common metals iron, copper, zinc, and lead, and for this reason is used in airplane, dirigible, and automobile construction It resists corrosion, being acted upon only slightly by water or moist air, upon exposure, a thin layer of oxide is formed almost immediately upon its surface, preventing further oxidation Since it keeps its brightness and is an excellent conductor of heat, it is used extensively in the manufacture of cooking utensils and kitchenware It is a conductor of electricity, and since it is ductile it is employed often in place of copper for high-tension wires Because of the metal's malleability and resistance to moisture, aluminum foil is used increasingly in place of tin foil as a wrapper Powdered, it is used in paints Since it is a powerful reducing agent, the metal is mixed in very small quantities with molten iron and steel to assure sound castings (i e , without holes), the aluminum combining with the gaseous impurities This reducing power is utilized also in the preparation of certain elements, such as manganese and chromium, from their oxides When a mixture of powdered aluminum and iron oxide, called THERMITE, is ignited, much heat is generated and the reaction is utilized in welding Although one of the most plentiful elements, aluminum does not occur free in nature It appears in numerous compounds, including CLAY, BAUXITE, MICA, FELDSPAR, ALUM, CRYOLITE, and the several forms of aluminum oxide (ALUMINA), such as emery, CORUNDUM, alundum, SAPPHIRE, and RUBY It is present also in the Oriental AMETHYST, AQUAMARINE, Oriental EMERALD, TOPAZ, TOURMALINE, and TURQUOISE Sir Humphry Davy recognized the existence of the metal and, with other chemists in the early 19th cent , considered alumina as an oxide Oersted succeeded (1825) in obtaining the impure metal, but Wohler had greater success and is usually credited with its first isolation (1827) H E Sainte-Claire Deville first secured the pure metal in 1854 and set about perfecting a process for its commercial production Not, however, until 1886 was the method discovered by which aluminum is produced today—in the United States by C M Hall, a student at Oberlin College, and in France by Paul Héroult, working independently Hall's process consists essentially of the electrolysis of alumina (a compound of aluminum and oxygen) dissolved in fused cryolite The alumina is first prepared from bauxite and then dissolved in the molten cryolite In the electric furnace carbon rods serve as positive electrodes, and the carbon lining of the furnace acts as the negative electrode The molten aluminum collects at the negative electrode and can be drawn off Oxygen is given off at the positive electrodes Aluminum may also be obtained from clay Important among the alloys of aluminum are DURALUMIN, aluminum bronze, and MAGNALIUM

aluminum oxide see ALUMINA.

alundum see ALUMINA.

Alush (ā'lush), wilderness camping ground of the Israelites Num 33 13,14

Alva, Fernando Álvarez de Toledo, duque de. see ALBA, FERNANDO ÁLVAREZ DE TOLEDO, DUQUE DE

Alva (ăl'vu), city (pop 5,055), co seat of Woods co , NW Okla , on the Salt Fork of the Arkansas river, settled 1893. It is the business and community center of a large wheat-growing area. Near by is a state teachers college

Alvah (-vŭ), duke of Edom. Gen. 36.40. Aliah 1 Chron 1 51

Alvan, Horite. Gen 36.23. Alian. 1 Chron 1.40

Alvarado, Juan Bautista (hwän' boutēs'tä ălvärä'-dhō), 1809–82, governor of Alta California (1836–42), b Monterey, Calif Out of the chaotic times in the more or less neglected Mexican province, he emerged as a brilliant and ambitious politician After a small but successful revolt in 1836, he declared California an independent state with himself as governor He pacified his opponents in San Diego and Los Angeles, but the southern faction continued to view the northern upstart with suspicion until he secured (1838) regular appointment as Mexican governor He and his uncle, Mariano Guadalupe Vallejo, who acted as military commander, could not accomplish much, and after they disagreed both men were removed in 1842 Alvarado was one of the leaders of a new and successful revolt in 1844–45, but the new government was shortly faced with the Bear Flag revolt and the Mexican War, and Alvarado's public career, typical of the turbulence of California in his day, ended

Alvarado, Pedro de (pā'dhrō dā), 1485?–1541, Spanish conquistador He went to Hispaniola (1510), commanded a vessel in the expedition (1518) of Juan de Grijalva, and was the chief lieutenant of Hernán CORTÉS in the conquest of Mexico He commanded at Tenochtitlán in the absence of Cortés Sent out by Cortés in 1523, he conquered Guatemala and Salvador He was governor and captain general of Guatemala until his death He met with much opposition from the *audiencia* in Mexico, but, strengthening his power on two voyages to Spain (1527–28, 1536–39), he exercised absolute control He founded many cities and developed the colony An expedition to Ecuador (1534 35), made in an attempt to share in the booty Francisco PIZARRO was taking from the Inca empire, led to defeat at the hands of Sebastian de Benalcázar and Diego de Almagro In 1540 Alvarado sailed for the Moluccas, stopping in Mexico, he was diverted to a search for Cíbola by the viceroy, Antonio de MENDOZA, and by the stories of MARCOS DE NIZA When the Indians of Nueva Galicia revolted (1541), Alvarado took part against them in the Mixtón War He commanded a foolhardy attack at Nochistlán and was accidentally killed in the subsequent retreat Juan Rodríguez CABRILLO took command of the maritime expedition Alvarado's wife, Doña Beatriz de la CUEVA, succeeded him as governor of Guatemala His letters concerning the conquest of Guatemala have been published See J E Kelly, *Pedro de Alvarado* (1932)

Alvarado (ălvurā'dŭ), city (pop 1,324), N Texas, S of Fort Worth, in a blackland farming area

Álvarez, José (José Álvarez de Pereira y Cubero) (hōsā' ăl'vurĕth dā pĕrā'ra ē kōōbā'rō), 1768–1827, Spanish classicist sculptor, follower of Canova He was employed on the decoration of the Quirinal Palace in Rome On returning to Madrid he became director of the Academy of San Fernando and sculptor to Ferdinand VII He is best known for his portrait statues of Spanish royalty and for his mythological figures in marble

Álvarez, Juan (hwän' al'vurĕs), 1790?–1867, Mexican general, president of Mexico (1855) An Indian, he fought well under MORELOS Y PAVÓN in the revolution and was later a prominent leader in the Acapulco region In 1854 he commenced the liberal Revolution of Ayutla, which overthrew (1855) SANTA ANNA He yielded the presidency soon to Ignacio COMONFORT Álvarez later fought against the French invaders and the imperialist troops of Maximilian

Álvarez Quintero, Serafín (sărnfēn' al'vurĕth kēntā'-rō), 1871–1938, and **Joaquín Álvarez Quintero** (hwakēn'), 1873–1944, Spanish dramatists They wrote in collaboration a large number of highly successful plays of all types, the most popular have been genre pictures of Andalusian middle-class life, which are racy, brilliant, and witty comedies The brothers were admitted to the Spanish Academy in 1922 Among their best-known plays are *Los galeotes* (1900), *Mañana de sol* (1905, Eng tr , *A Bright Morning*, 1916), *El genio alegre* (1906), *Las de Caín* (1908), *Doña Clarines* (1909), and *Malvaloca* (1912)

Alvear, Carlos María de (kar'lōs mārē'ä dā ălvăr'), 1789–1852, Argentine general and statesman, supreme director of the United Provs of La Plata (1815) He was a leader in the domestic revolution (Oct 8, 1812) which overthrew the first and set up the second triumvirate of the young republic and resulted in the popularly elected constituent assembly of 1813 Commanding the patriot army besieging Montevideo, he received the capitulation of the royalists (June 20, 1814) He became supreme director in Jan., 1815, but was deposed in April, after attempting to establish a dictatorship His attempt to seize the government in 1820 was unsuccessful In the war with Brazil, Alvear won the decisive battle of Ituzaingó (Feb 20, 1827) From 1838 to 1852 he was minister to the United States

Alvear, Marcelo Torcuato de (märsā'lō tôrkwa'tō), 1868–1942, Argentine statesman and diplomat, president of the republic (1922–28). A Radical, he became minister to France after a victory of the Radical party in 1916 placed IRIGOYEN in the presidency Succeeding Irigoyen in 1922, he secured enactment of some reforms, especially agricultural measures, but largely because of a split with Irigoyen his administration was, on the whole, fruitless Later the breach was healed, and Alvear became the leader of the Radical party In 1931 he was barred from the presidential race, and in the 1937 election he was defeated

Alverstone, Richard Everard Webster, 1st Viscount (ôl'vûrstun), 1842–1915, lord chief justice of England (1900–1913) He served on various international arbitration commissions, including those dealing with the Bering Sea Fur-Seal Controversy and the Venezuela Boundary Dispute (1898–99) In the Alaska Boundary Dispute, he gave the deciding vote against the Canadian claims He was created baronet in 1899, baron in 1900, and viscount in 1913 He wrote *Recollections of Bar and Bench* (1914)

Alves, Francisco de Paula Rodrigues: see RODRIGUES ALVES, FRANCISCO DE PAULA.

Alvin, city (pop 3,087), S Texas, SSE of Houston This region of the Gulf Coast plain produces truck and flowers and some oil

Alvord, Clarence Walworth (ăl'vurd), 1868–1928, American historian, b Greenfield, Mass Educated at Williams (B A , 1891), Friedrich Wilhelm Univ in Berlin, and the Univ of Chicago, he became (1901) an instructor in history at the Univ of Illinois (Ph D , 1908) and was full professor there (1913–20) and at the Univ of Minnesota (1920–23) He was general editor (1906–20) of the *Illinois Historical Collections*, edited the *Centennial History of Illinois* (6 vols , 1918–24) and wrote its first volume, and was the principal founder of *The Mississippi Valley Historical Review* and its managing editor (1914–23) He also wrote *The Mississippi Valley in British Politics* (1917)

Alvord, Henry Elijah, 1844–1904, American agriculturist, educator, and specialist in dairy husbandry, b Greenfield, Mass He was a pioneer in developing the cooperative creamery system Between 1886 and 1893 he served as professor and president of various state agricultural colleges In 1895 he became first chief of the dairy division of the Bureau of Animal Industry, U S Dept of Agriculture

Alvsborg, Swed *Alvsborgs län* (ălfs'bôr"yus lĕn'), county (4,919 sq mi , pop 338,996), SW Sweden. Vanersborg is the seat Its northern section, the historic province of Dalsland, W of Vanern lake, is an agricultural and lumbering district, the rest of the county consists of the western part of Vastergotland prov , with important textile plants and with large power works at TROLLHATTAN Alvsborg was formerly also spelled Alfsborg or Elfsborg

Alyattes (ălī'ătēz), d 560 B C , king of Lydia He built up the kingdom While he was warring with Cyaxares of Media an eclipse of the sun occurred (585 B C) The two kings then made peace. Alyattes continued Lydian conquest of the Ionian cities of Asia Minor His immense, round tomb can still be seen N of Sardis He was the father of CROESUS

Alypius (ulĭp'ēŭs), fl c 360, Greek author of *Introduction to Music*, which is the chief source of our knowledge of Greek musical notation

alyssum (-lĭs'-), any species of the genus *Alyssum*, low garden plants (annual and perennial) especially used in borders and rock gardens for their masses of yellow or white blossoms Yellow tuft (with a long blooming season) and golden tuft (also called gold-dust or basket-of-gold) are favorite yellow kinds and are perennial They have been called madwort or heal-bite because of an old belief that they cured hydrophobia The **sweet alyssum,** similar, but cultivated as an annual, is classed botanically in the genus *Lobularia*, but catalogues include it in the genus *Alyssum* It has fragrant white or lilac flowers, and is most popular as a garden flower but may be used as a potted plant These plants all show their relationship to the mustards.

Am, chemical symbol of the element AMERICIUM

Amad (ā'măd), unidentified city of Asher, NW Palestine Joshua 19 26

Amadas or **Amidas, Philip** (both ăm'ŭdăs), 1550–1618, English navigator With Arthur Barlowe he was sent by Sir Walter Ralegh in 1584 to prospect the North American coast Their favorable report on Roanoke Island, N C , led to the colonizing expedition (1585) under Sir Richard Grenville and Sir Ralph LANE See W A Raleigh, *English Voyages of the Sixteenth Century* (1906)

Amadeus VIII (ămudē'ŭs), 1383–1451, count (1391–1416) and duke (from 1416) of Savoy, antipope (1439–49) with the name Felix V In 1434 he appointed his son regent of Savoy and retired to the hermitage of Ripaille, on Lake Geneva, which he had founded In 1439 the Council of Basel (see BASEL, COUNCIL OF) declared EUGENE IV deposed, and elected Amadeus, much respected for his probity, to the papacy Although a layman, Amadeus reluctantly accepted, believing that he could bring peace to the Church As Felix V, he was recognized only in Germany When Nicholas V became pope, Felix had no supporters and yielded his claim. He was subsequently made a cardinal

Amadeus, 1845–90, king of Spain (1870–73), duke of Aosta, son of Victor Emmanuel II of Italy Juan PRIM urged his election as king by a constituent assembly after the expulsion (1868) of Queen

ISABELLA II Amadeus accepted the crown reluctantly. Just before the new king arrived in Spain, Prim was assassinated The dissensions of the ministers and the Cortes, the repeated attempts on the king's life, and the renewal of rebellion by the CARLISTS finally made Amadeus's life in Spain unendurable He abdicated and returned to Italy A year later Alfonso XII was proclaimed king

Amadis of Gaul (ă'mŭdĭs), Fr *Amadis de Gaule* (ämädēs' dŭ gōl'), famous romance of chivalry, first composed in Spain or Portugal and probably based on French sources It dates from the 13th or 14th cent , but the first extant version, in Spanish, a revision by Garcia de Rodriguez de Montalvo, was published in 1508 It was translated into French in 1540 and appeared in English in 1619. It was immensely popular in France and Spain until it was superseded by *Don Quixote* It was, in fact, a sign of inelegance not to be acquainted with its noble code of honor and ideal of the perfect knight There were numerous continuations of the original Its influence is apparent in Sir Philip Sidney's *Arcadia* The story became the subject of a lyric tragedy by Philippe Quinault (1684), with music by Jean Baptiste Lully, and it inspired the opera *Amadigi* (1715) by George Frideric Handel

Amado, Jorge (zhôr'zhû ŭmä'dô), 1912–, Brazilian novelist His works deal largely with the sufferings of the common man and have a strong leftist viewpoint They are marked by grim and violent realism with a fluently poetic appreciation of Brazilian life and land and compassion for the oppressed Typical are *Cacáu* [cacao] (1933), *Suór* [sweat] (1934), and *Terras do sem fim* (1942; Eng tr , *Land of Violence*, 1945).

Amagasaki (ä'mägäsä'kē), city (1940 pop. 181,011, 1947 pop 233,183), Hyogo prefecture, S Honshu, Japan, a port on Osaka Bay The Yodo river traverses this great industrial center, which has metallurgical works and chemical and textile manufactures

Amager (ä'mägûr), island (25 sq mi , pop 150,775), Denmark, in the Oresund Its northern end is occupied by part of Copenhagen

Amakusa Islands (ämäkōō'sä), archipelago (341 sq mi , 1940 pop 192,595, 1947 pop 260,854), in the East China Sea, W of Kyushu, Japan There are c 70 islands in the group

Amal (ä'mŭl). Asherite 1 Chron 7.35

Amalasuntha (ä"mŭlŭsŭn'thŭ), d. 535, Ostrogothic queen in Italy (534–35), daughter of Theodoric the Great After her father's death (526) she was regent for her son Athalaric After her son's death (534) she ruled Italy jointly with her husband She alienated her people by her good relations with the Byzantine emperor, Justinian I In 535 the Goths revolted, and Amalasuntha was imprisoned and murdered by order of her husband Justinian used her murder as a pretext for attacking and reconquering Italy

Amalek (ăm'ŭlĕk), aboriginal people of Canaan and the Sinai peninsula They waged a constant warfare against the Hebrews until dispersed by Saul Their eponymous ancestor was a duke of Edom and Esau's descendant Gen 14 7, Ex 17 8–16, Gen 36 12,16, Num 13 29, 14 25,45, 24 20, Judges 3 13, 6 3,33; 7 12, 1 Sam 15 5–8, 30 1–20, 1 Chron 1.36, 4 43

Amalfi (ämäl'fē, Ital ämäl'fē), town (pop 4,259), Campania, S Italy, a port on the north shore of the Gulf of Salerno Founded, according to tradition, in the 4th cent A D , it was (9th cent) the first Italian maritime republic A duchy in 953, it rivalled Pisa, Venice, and Genoa in wealth and power Amalfi lost its independence to the Normans (1131) and was sacked by Pisa (1135, 1137) Its early maritime code was the *Tavole Amalfitane* The sea swept away part of the town in 1343 The cathedral in Sicilian-Arabic style (10th cent , repeatedly restored) has an imposing façade, its fine bronze doors were cast (11th cent) in Constantinople Attached to the cathedral is a picturesque cloister (*chiostro del Paradiso*)

amalgam, an ALLOY combining mercury and practically any other metal, e g , bismuth, cadmium, copper, gold, lead, silver, tin, and zinc Platinum and iron are exceptions Almost all amalgams are artificially formed, not occurring in nature, the chosen metal being allowed to dissolve in the mercury These alloys are widely used—e g , zinc amalgam to prevent the polarization of the zinc plates in batteries, tin amalgam in the manufacture of mirrors; and silver, gold, and copper amalgams in dentistry The **amalgamation process** for the extraction of gold and silver from their ores is based upon the fact that mercury dissolves gold and silver to form an amalgam The gold ore is crushed and treated with mercury, in which the gold dissolves The amalgam thus formed is removed and the mercury separated from the gold by heating, the mercury vaporizes at comparatively low temperatures and the gold remains

Amalia, duchess of Saxe-Weimar see ANNA AMALIA.

Amalric I (ŭmăl'rĭk, ä'mŭlrĭk) or **Amaury I** (ŭmô'rē, Fr. ämōrē'), c 1135–1174, Latin king of Jerusalem (1163–74), brother and successor of Baldwin III He spent his reign in attempts to gain and hold the suzerainty of Egypt, but was balked by the Turkish sultan NUREDDIN, one of whose lieutenants finally obtained control of the country and left it at his death to SALADIN During Amalric's frequent absences in Egypt, Nureddin repeatedly raided the increasingly weak Latin states of the East Amalric was succeeded by his son, Baldwin IV.

Amalric II or **Amaury II**, d. 1205, Latin king of Jerusalem (1197–1205) and king of Cyprus (1194–1205), brother and successor (in Cyprus) of GUY OF LUSIGNAN. His title to Jerusalem was established through his marriage with Isabella, eldest daughter of Amalric I (see JERUSALEM, LATIN KINGDOM OF)

Amalric of Bena (bē'nä), d 1207? French professor of philosophy He taught heretical precepts concerning God, a pantheistic universe, and a progressive Trinity. Before he died, he publicly retracted, but his followers in Champagne formed a heretical sect, the Amalricians They were condemned by Pope Innocent III and by councils held at Paris (1210) and the Lateran (1215) The heresy caused a temporary ban to be laid on Aristotle and the Arabic philosophers at the Univ of Paris and, later, led to the condemnation of some of the works of John Scotus ERIGENA.

Amalthaea (ămŭlthē'ŭ), in Greek legend, nurse of Zeus Some myths make her a nymph, but more commonly she is a she-goat with wonderful horns. One of these, broken off, became the CORNUCOPIA

Amam (ä'mäm), city of Judah Joshua 15 26

Aman (ä'–), the same as HAMAN

Amana (ŭmä'nŭ), unidentified mountains Cant 4 8

Amana Society (ŭmăn'ŭ), corporate name of a group of seven small villages (total pop c 1,400), E central Iowa, clustered around the Iowa river WNW of Iowa City, settled 1855 by members of the Community of True Inspiration The community originated in one of the Pietist religious sects of 17th-century Germany Led by Christian Metz (1794–1867), members came to America in 1843 to escape persecution at home Settling first near Buffalo, N Y , they developed a communal way of life which reached its flowering in Iowa Amana became one of the most successful of such communities in America In 1932 it was made a cooperative corporation, with separation of religious and economic administration The villages with their unpainted, grapevine-covered houses have long been famous for the products of their woolen mills, woodworking shops, and fertile farms See B M Shambaugh, *Amana That Was and Amana That Is* (1932)

Ama-no-hashidate see MIYAZU, Japan.

Amanullah (ämänōō'lä), 1892–, emir (1919–26) and king (1926–29) of Afghanistan, commonly called Amanullah Khan He was hostile to the British at the beginning of his reign and invaded India, but no really serious fighting had occurred before the Treaty of Rawalpindi was signed (1919) British influence was strong, and the emir after a tour of Europe attempted a strong program of Westernization in Afghanistan He accomplished much, but his fanatical Moslem subjects rose against his reforms, and he had to flee in 1929 In the Second World War he made tentative gestures toward recovering his throne with German help in 1941

Amapala (ämäpä'lä), town (pop 2,809), on TIGRE ISLAND, S Honduras, a small port on the Gulf of Fonseca It is the chief Pacific port of the country Products must be transshipped by launch to and from SAN LORENZO

amaranth (ăm'–) [Gr ,=unfading], any of a number of species of the widely distributed genus *Amaranthus*, annual plants growing wild, as weeds, or cultivated for their colorful foliage and conspicuous heads of chaffy flowers, which are usually red and in tasselike or short, thick spikes The amaranth has long been a poetic symbol for immortality, being used by the Greeks to wreathe their idols and decorate their tombs Some of the weed species are known as green amaranth, pigweed, and TUMBLEWEED The better-known garden kinds are love-lies-bleeding or tassel flower, Joseph's-coat, and prince's-feather Tender shoots of the amaranth are used as potherbs in Mexico and the Orient, and the seeds were ground into a meal in ancient Mexico The COCKSCOMB and GLOBE AMARANTH are related to the amaranths

Amarapura (ä"mŭrŭpōō'rä), town (pop 8,254), central Burma, on the Irrawaddy river A silk-weaving center, it was twice (1783–1823, 1837–60) capital of Burma It was finally replaced by Mandalay Its great temples and fortifications are now in ruin

Amaravati (ä"mŭrŭvŭ'tē), ruined town, NE Madras prov , India It was the capital (c 100 B C –A.D c 225) of the Buddhist Andhra kingdom

Amariah (ăm"ŭrī'ŭ) [Heb ,=whom God promised] **1** High priest, son of Meraioth. 1 Chron 6 7,52 Perhaps he is the same as **2** and **3** **2** High priest, son of Azariah 1 Chron 6 11 Perhaps he is the same as **1**, **3**, and **4** **3** Ancestor of Ezra Ezra 7 3 Perhaps he is the same as **1** and **2** **4** High priest under Jehoshaphat 2 Chron 19 11 Perhaps he is the same as **2** **5** Levite 1 Chron 23 19; 24 23 **6**, **7** Contemporaries of Ezra, perhaps the same person Ezra 10 42, Neh. 11 4 **8** A priestly family 2 Chron. 31 15, Neh 10 3; 12 2,13. See IMMER **1** and IMRI **1**. **9** Ancestor of the prophet Zephaniah. Zeph. 1.1.

Amarillo (ămŭrĭl'ō,–rĭl'yō), city (pop. 51,686), co seat of Potter co., extreme N Texas. The metropolis of the Panhandle, it is a prosperous city with tall buildings and green-treed streets in the midst of treeless plains that are swept by summer dust storms and winter blizzards The spot was known to Indians, buffalo hunters, and cowboys before the railroad came in 1887 The first huddle of buffalo-hide shelters was succeeded by a noisy cow town, which in the 20th cent became a market for wheat farms and, after the discovery of natural gas and oil, mushroomed into an industrial city. Amarillo packs meat, mills flour, smelts ores, makes oil-field supplies and agricultural implements, and processes farm and dairy products It is the nucleus of a highly developed region, in near-by communities are many industrial establishments, including a helium plant It has a junior college, a veterans' hospital and other hospitals, supports a symphony orchestra, and has an annual music festival

amaryllis (ăm"ŭrĭl'ĭs) [from the name of a shepherdess in pastorals, e g , those of Theocritus, Vergil, and Ovid], name commonly used for bulbous lilylike plants of several genera (particularly *Hippeastrum*, *Sprekelia*, and *Lycoris*), all of these are related to the genus *Amaryllis*, which has a single species sometimes called belladonna lily. This, the true amaryllis (*Amaryllis belladonna*), is a South African plant cultivated for its showy and fragrant flowers, commonly rose red in color The best known of the plants called amaryllis belong to the genus *Hippeastrum*, these have heavy stalks topped by a cluster of lilylike flowers of various colors from white to orange and red They are native to tropical America and are popular elsewhere as house and greenhouse plants or in warm regions as garden plants One species is called Barbados lily

Amasa (ăm'ŭsŭ, ŭmā'sŭ) [Heb ,=burden] 1 Cousin of Absalom, with whom he revolted Later he became David's commander in chief, he was murdered by Joab 2 Sam 17 25, 19 13, 20 4–13; 1 Kings 2 5 **2** Ephraimite chief 2 Chron 28 12

Amasai (ämä'ĭ, ämā'–) [Heb ,=burdensome] 1 Chief of the deserters from Saul to David 1 Chron 12 18 **2** Priest 1 Chron 15 24 **3** Levite 1 Chron 6 25,35 **4** Levite contemporary with Hezekiah 2 Chron 29 12

Amashai (umā'shāī), priest contemporary with Nehemiah Neh 11 13 He is perhaps the same as MAASIAI

Amasiah (ăm"ŭsī'ŭ) [Heb ,=whom God bears], captain in Jehoshaphat's army 2 Chron 17 16

Amasis I (umā'sĭs), d c 1557 B C , king of ancient Egypt (c 1580–c 1557 B C) The founder of the XVIII dynasty, he drove out the Hyksos The name also appears as Ahmose

Amasis II, d 525 B C , king of ancient Egypt (569–525 B C), of the XXVI dynasty In a military revolt he dethroned APRIES He erected temples and other buildings at Memphis and Sais He encouraged Greek merchants and artisans to settle at Naucratis His revision of the laws is said to have influenced the laws of Solon He had alliances with Greek leaders and maintained himself partly with Greek mercenaries He died just before the Persian invasion under CAMBYSES The name also appears as Ahmose II

Amatei, Louis (ämätā'ĭs), 1855–1913, Italian sculptor, trained at the Royal Academy, Turin He moved to the United States in 1884, was naturalized, and later opened a studio in Washington, D C , where he executed the bronze doors of the Capitol and painted numerous murals. He established the School of Architecture and Fine Arts of George Washington Univ The Alamo monument in Austin, Texas, the military memorial in Galveston, Texas, and *El Caney*, a Pan-American Exposition group, are outstanding achievements

amateur The Amateur Athletic Union of the United States declares that "an amateur sportsman is one who engages in sports solely for the pleasure and physical, mental, or social benefits he derives therefrom " A professional athlete, on the other hand, is paid Definitions and rules governing amateurs differ from country to country Baseball, football, rowing, tennis, and golf are outside the jurisdiction of the Amateur Athletic Union of the United States, each of these sports having a governing body of its own Intercollegiate sports are theoretically open only to amateurs, and present-day "athletic scholarships" and other forms of athletic subsidies are considered by many educators and students a violation of the amateur spirit For international athletic meets, such as the Olympic games, each contestant must be certified as an amateur by the authorized athletic organization of his country

Amati (ämä'tē), family of violinmakers of Cremona, Italy The founder of the Cremonese school was Andrea Amati (ändrā'ä) (fl. 1535–80), whose violins date from c 1564 His labels bore the name Amadus His sons were Antonio Amati (äntō'nyō) and Geronimo or Girolamo Amati (jĭrō'lämō, jĭrō'-lämō), who worked together and followed in general the patterns of their father in making small violins of graceful shape and sweet but not very powerful

tone. **Niccolò Amati** (nēk-kōlō') (1596–1684), son of Geronimo, brought the Amati violin to its height after c 1645. Although he still used the family's designs, he usually made larger instruments, of more powerful tone Antonio STRADIVARI and Andrea Guarneri were pupils of Niccolò Niccolò's son, Geronimo (1649–1740), was the last of his line to achieve distinction The Latin forms of the first names, Andreas, Antonius, Hieronymus, and Nicolaus, were generally used on the labels, and the family name was sometimes Latinized as Amatus

Amato, Giovanni Antonio d' (jōvän'nē äntō'nyō dämä'tō), 1475–1555, Neapolitan painter, called Il Vecchio [the elder] He imitated the style of Pietro Perugino Paintings by him are in the churches at Naples, among them the *Holy Family* in a chapel of San Dominico Maggiore

Amaury. For persons thus named, see AMALRIC

Amaziah (ăm"əzī'ə) [Heb ,=strength of God] 1 Died c 775 B C , king of Judah (c 802–c 775 B C), son and successor of Jehoash of Judah The two incidents of his reign were the conquest of Edom, including the capture of Petra, and an unprovoked attack by Amaziah on King Jehoash of Israel Jehoash took Amaziah prisoner, entered Jerusalem, and sacked the Temple Amaziah died at Lachish, assassinated, and his son Uzziah succeeded 2 Kings 14; 2 Chron 25 2 Simeonite 1 Chron 4 34 3 Levite. 1 Chron 6 45 4 Priest at Bethel, Amos's enemy Amos 7 10–15

Amazon (ă'məzŏn), in Greek legend, one of a tribe of women who allowed no men in their country (in Asia Minor) and spent their time in hunting and warfare Bellerophon once fought with them One of the 12 labors of HERCULES was to steal the girdle of their queen, HIPPOLYTE According to one legend, THESEUS married Hippolyte, according to another, her sister ANTIOPE In the TROJAN WAR the Amazons fought against the Greeks, and their leader, PENTHESILEA, was killed by Achilles

Amazon, Port *Amazonas* (ămŭzŏ'nŭsh), river rising in the Andes of Peru in the sources of two major headstreams, the Marañón (generally considered part of the Amazon proper) and the longer Ucayali It flows across the whole of Brazil to the Atlantic The Amazon is one of the greatest rivers of the world and carries more water than any other river Its length, with the Marañón, is more than 3,000 mi , with the Ucayali instead, it is nearly 4,000 mi The gradient of the river is very low Manaus, 1,000 *mi* upstream, is only c 100 ft higher than Belém near the mouth and is an ocean port, ships with a draft of 14 ft can reach IQUITOS, Peru, more than 2,000 mi from the sea The drainage basin is enormous, covering not only most of N Brazil but also parts of Bolivia, Peru, Ecuador, Colombia, and Venezuela In the lowlands stretching E from the Andes is the largest rain forest in the world—a hot, wet, green land with the annual rainfall in spots of the upper and lower regions exceeding 100 in The beginning of the river as the Marañón is, however, in the cold heights of the Andes not far from the Pacific Ocean It flows north before turning east and coming down from the mountains to join the Ucayali and form the Amazon proper (which is, however, occasionally called the Solimões from the Brazilian border to the junction with the RIO NEGRO) The NAPO comes in from the north before the Amazon flows eastward out of the jungle forests of Peru into the jungle forests of Brazil Before it reaches the mouth of the Negro, the Amazon receives the PUTUMAYO or Içá and the Caquetá or Japurá from the north and the JURUÁ and the PURUS (which has a remote but famous tributary, the ACRE) from the south On the large Negro just before its junction with the Amazon is MANAUS, metropolis of the region and capital of the state of Amazonas, and below that the MADEIRA pours in the waters collected over the large Madeira-Mamoré drainage basin to the south Between the Madeira and another large southern tributary, the XINGÚ, the flood plains narrow as highlands on both sides approach the Amazon From the south comes the TAPAJÓS to empty in this stretch of the Amazon Below the Xingú the river reaches its delta, with many islands formed by alluvial deposit and submergence of the land Around the largest of these, MARAJÓ, the river splits into two large streams Of these the northern threads its way around many islands, the southern, called the Pará river, receives the TOCANTINS and has the important port of BELÉM. The immense discharge of the Amazon is visible far out to sea It was probably first seen in 1500 by Vicente Yáñez Pinzón, who explored the lower part Real exploration of the river came with the voyage of Francisco de ORELLANA down the Napo in 1540–41, his fanciful stories of female warriors gave the river its name Not long afterward Pedro de Ursúa began (1559) the expedition that ended with the baleful melodramatics of Lope de AGUIRRE Nearly a century later Pedro TEIXEIRA led the voyage upstream (1637–39) that really opened the Amazon to world knowledge The valley was largely left to its sparse Indian inhabitants (mostly groups of the Guaraní-Tupi linguistic stock and meager material culture), and it is for the most part still left to them today. Steamship service was regularly established on the river in the 1850s, and settlements were made (such as that of Confederate veterans from the United States at Santarém), but except for the region around the mouth, which was settled early, the valley has not been much exploited The wild-rubber boom on the upper Amazon in the late 19th and early 20th cent reached its peak in 1912 but soon fell off, for Brazil could not compete with the newly developed rubber plantations in the Far East. Rubber is still obtained in quantity from the rubber trees and there was a mild boom in the Second World War The factories of São Paulo and Rio de Janeiro are now supplied with native rubber Cacao, native to the Amazon valley, is still grown in small quantities The selvas [tropical forests] yield some exotic woods, copaiba (used for pharmaceuticals and varnish), and other products Japanese settlers were largely responsible for building up jute production The huge Brazilian region, mostly comprised in PARÁ and in the huge Amazonas state (614,913 sq mi , 1940 pop 438,008, 1949 estimated pop 511,393), is largely undeveloped The Brazilian government in the 1940s undertook plans of development, setting aside money expressly for its exploitation The establishment of a health service (chiefly by launch) in the Second World War is a promise of future preparation for settlement See C R Markham, ed , *Expeditions into the Valley of the Amazons* (1859); H W Bates, *The Naturalist on the River Amazons* (1910), H M Tomlinson, *The Sea and the Jungle* (1928), José Toribio Medina, *The Discovery of the Amazon* (Eng tr , 1936)

Ambarvalia (ămbərvā'lyə), in Roman religion, yearly procession around the fields, held on May 29, accompanied by prayers to Ceres for fertility. There are similar Christian observances, e g , the ROGATION DAYS

ambassador see DIPLOMATIC SERVICE

Ambato (ämbä'tō), city (1944 estimated pop. 21,692), central Ecuador, in a high Andean basin. Ambato is a rail and highway commercial center The region's porous volcanic soil limits agriculture, but some sugar, grains, fruits, cochineal, cotton, and hides are produced Near Ambato in 1821 the patriot *Antonio José de* SUCRE, at first defeated by Spanish royalists, later won over them after receiving help from José de San Martín This victory led to the decisive battle of PICHINCHA Near the epicenter of the disastrous earthquake which struck central Ecuador in 1949, Ambato was almost destroyed

amber [Arabic], fossil resin exuded in past geologic time by coniferous trees now extinct It is used in the manufacture of beads, amulets, mouthpieces, cigar and cigarette holders, pipes, and other small ornamental objects Its chief chemical constituents are carbon, hydrogen, and oxygen, in varying proportions, because of the content of succinic acid in Baltic amber it is often called succinite An essential oil (amber oil) is obtained from amber When rubbed with a cloth, amber becomes charged with static electricity The chief source of the world's amber is the Baltic coast of Germany, Lithuania, and Latvia, millions of pounds have been taken from the mine at Palmnicken (in former East Prussia) Some is found off the coasts of Sicily and England The normal color is dark yellow to brown The best amber is transparent, but some varieties are cloudy Bubbles of air, leaves, bits of wood, and insects are frequent inclusions, the insects sometimes being extinct species new to science Amber was known in the Bronze Age and to the Greeks and Romans, who used it extensively in jewelry Thales was familiar with its electrical properties, and Pliny recounts several instances of its artistic uses It is connected with many superstitions and is believed to be a preventive of disease and ill luck.

Amberg (äm'bĕrk), city (pop 36 795), Upper Palatinate, central Bavaria, on the Vils river Precision instruments are manufactured Until 1810 it was the capital of the Upper Palatinate The Gothic Church of St Martin and a 15th-century town hall are its outstanding buildings Near Amberg there are large iron mines known since the Middle Ages Here in 1796 Archduke Charles of Austria defeated the French under Jourdan

Amberger, Christoph (krĭs'tŏf ämbĕrgur), c 1500–1562?, German painter He is particularly noted for his fine portraits, such as those of Charles V and Sebastian Münster. He made a number of religious paintings for the churches of Augsburg His portraits have sometimes been confused with Holbein's The Art Institute of Chicago has two

ambergris (ăm'bərgrēs), waxlike, fatty substance originating pathologically in the digestive tract of the sperm whale It is found in the seas of tropical regions floating on the surface in yellow, gray, black, or variegated masses It is soluble in alcohol and of great value as a fixative in perfumes Its active principle is ambrain

Ambiorix (ămbī'ərĭks), fl. 54 B.C , Gallic chieftain of the Eburones (in what is now central Belgium) He had been favorably treated by the Romans, but he joined another tribe in attacking Julius Caesar's legates. When he heard of Caesar's approach, he fled across the Rhine

Ambler, borough (pop 3,953), SE Pa , near Philadelphia, inc 1888 Asbestos, boilers, and chemicals are manufactured here It has a school of horticulture for women

Ambleside, village, Westmorland, England, in the Rothay valley near the head of Windermere It is a tourist center for the Lake District The parish church, built by Sir George Gilbert Scott in 1854, contains a stained-glass window contributed by English and American admirers of Wordsworth At near-by Waterhead is a Roman camp with two forts one of which is excavated and preserved

Amboina (ămboi'nu), Malay *Ambon,* island (314 sq mi , pop 66,821), East Indonesia, one of the Moluccas In the Banda Sea SW of Ceram, it is 32 mi long and 10 mi wide, with a generally rugged terrain Discovered in 1512 by the Portuguese, it was taken in 1600 by the Dutch and was temporarily under British rule during two periods (1796–1802, 1810–17) The fertile island produces nutmeg, cloves, rice, and sugar The natives in the south were Christianized by the Portuguese and Dutch; those in the north are Mohammedans The chief town, also called Amboina (pop 17,334), is a port (exporting copra and spices) and the site of an airport Early in the Second World War the port was an important Allied naval base, which fell to the Japanese in Feb , 1942 The name is sometimes spelled Amboyna

Amboise, Georges d' (zhôrsh' dămwäz'), 1460–1510, French statesman, cardinal of the Roman Church He became archbishop of Rouen in 1494 In 1498, as the most intimate friend of the new King, Louis XII, he became chief minister Subsequently he was appointed cardinal and papal legate in France He devoted himself primarily to the furtherance of Louis's ambitions in Italy and was lieutenant general in Italy at the conquest of Milan (1500) His ambitions for the papal crown were disappointed by the election of Pius III (1503), but Julius II designated him (1503) papal legate in France for life He negotiated the abortive treaties of Blois (1504) and helped form the League of CAMBRAI (1508) His domestic administration was beneficent, by his patronage of artists and writers, he contributed, more than any other figure of his time, to the promotion of the Renaissance in France

Amboise (ămbwäz'), town (pop 4,224), Indre-et-Loire dept , NW central France, on the Loire E of Tours Its celebrated castle, mostly in late Gothic style with Renaissance additions, overlooks the town from a rocky height It was a royal residence from the reign of Charles VIII (who was born and died here) to that of Francis II Leonardo da Vinci, who presumably worked on it, is buried in its chapel Amboise castle served repeatedly as a prison The town has many handsome Renaissance buildings

Amboise, conspiracy of, also known as the **Tumult of Amboise,** 1560, plot of the French Huguenots and other enemies of Charles and François de GUISE It was possibly supported by Elisabeth of England and by Calvin in Geneva The plan, presumably worked out by Louis I de CONDÉ, provided for a march, led by Godefroi de la Renaudie, a nobleman from Limousin, on the castle of Amboise, the abduction of King FRANCIS II, and the arrest of the duke and the cardinal Cardinal de Guise was forewarned, and the rebels, beaten before they had united their forces, were ruthlessly massacred For weeks the bodies of hundreds of conspirators were hanging from the castle and from every tree in the vicinity The Huguenots were enraged, to appease them Catherine de' Medici used her power to appoint the moderate Michel de l'Hôpital chancellor His first act was to bring about the Edict of Romorantin (1560), which halted Protestant persecution until the outbreak (1562) of the Wars of Religion

Amboy (ăm'boi), city (pop 1,986), N Ill , S of Rockford, in a farm area, inc 1857

Amboyna, Indonesia see AMBOINA

Ambracia (ămbrā'shə), Latin *Arachthus,* city of ancient Greece, in Epirus, on the Arachthus river and near the Ambracian Gulf, an inlet of the Ionian Sea Founded (7th cent B C) by Corinthian colonists, it was ceded (294 B C) by Macedon to Pyrrhus, who made it the capital of Epirus It was conquered by Rome in 189 B C It is the modern Greek town of Arta (pop 9,441), an agricultural trading center

Ambridge, borough (pop 18,968), W Pa , on the Ohio and NW of Pittsburgh near Aliquippa It has a large structural steel plant and manufactures metal products and electrical machinery Members of the HARMONY SOCIETY established here the communistic settlement Economy (1825–1906) Some of the old buildings remain

Ambrogio Stefani da Fossano see BORGOGNONE

Ambrose, Saint (ăm'brōz), 339?–397, bishop of Milan, Doctor of the Church, b Trier, of Christian parents Educated at Rome in the classics and in law, he became (c 370) governor of Liguria and Aemilia and was much loved for his justice and his concern for the people. Popular demand caused his appointment (371) as bishop, though he was reluctant and lacked religious training. He became at once an ardent student of religious matters and

a pillar of the Catholics. Though Arianism was supported by VALENTINIAN II, he fought it, and after he had persuaded GRATIAN to outlaw (379) all heresy, Arianism disappeared from the West. St Ambrose, a great spiritual administrator, insisted upon the spiritual authority of the Church even over the emperor, and he anticipated Canossa when he forced THEODOSIUS I to do penance for the massacre at Salonica. Ambrose's preaching spurred the conversion of St Augustine. His writings, based on the Scriptures and the creed, were enhanced by wide knowledge of classical and patristic writings. Among the works of St Ambrose translated in *A Select Library of Nicene and Post-Nicene Fathers* are *On the Duties of the Clergy* (*De officiis ministrorum*), which shows the influence of Cicero's ethics, and *On the Christian Faith* (*De fide*), which was written at Gratian's request. Among his untranslated works is the *Hexaemeron*, this uses the allegorical method of biblical exegesis which was developed by Philo, Origen, and St Basil and which also reflects the mysticism of St Ambrose. His name is attached to the type of PLAIN SONG called Ambrosian chant. About 386 he introduced the practice of having the congregation sing liturgical hymns and antiphonal psalms in the diocese of Milan. His hymns, written in the iambic dimeter that became standard in Western hymnody, were more singable and more popular than those of St Hilary of Poitiers. Of the extant "Ambrosian" hymns, only six are definitely his. Feast: Dec. 7. See E. K. Rand, *Founders of the Middle Ages* (1928), biography by F. H. Dudden (1935).

ambrosia (ămbrō'zhu), in Greek religion, food with which the Olympian gods preserved their immortality. It was accompanied by the drink called nectar, wine of the gods.

Ambrosian Library, founded c.1609 in Milan by Cardinal Federigo Borromeo. It is one of the earliest public libraries, being open to citizens and strangers. It is especially rich in early Greek and Latin texts (e.g., Homer and Vergil) and incunabula and has a good collection of paintings.

ambulatory (ăm'bŭlŭtôr"ĕ) [Latin,=place to walk], commonly the aisle passing around the choir of a church and behind the altar. The term also refers to the covered walk or passageway in a cloister and to the narrow passageway in a classic peripteral temple which comes between the row of columns and the wall of the cella or naos.

Amchitka (ămchĭt'kŭ), island, 40 mi. long, off W Alaska, one of the ALEUTIAN ISLANDS. A U.S. air base was established here in the Second World War.

Amecameca (ămā"kămā'kä), town (pop. 7,573), Mexico state, SE of Mexico city. It is the starting point for ascents of POPOCATÉPETL and IXTACCÍHUATL. Here on the Sacro Monte is a shrine to which crowds of people make a pilgrimage every Ash Wednesday.

amendment, in law, alteration of the provisions of a legal document. The term usually refers to the alteration of a STATUTE or a CONSTITUTION, but it is also applied in PARLIAMENTARY LAW to proposed changes of a bill or motion under consideration and in judicial PROCEDURE to the correction of errors. A statute may be amended by the passage of an act which is identified specifically as an amendment or which renders some previous statutory provision nugatory. Written constitutions, however, for the most part must be amended by an exactly prescribed procedure. The CONSTITUTION OF THE UNITED STATES, as provided in Article 5, may be amended when two thirds of each house of Congress approves a proposed amendment and three fourths of the states thereafter ratify it. Congress decides whether state ratification shall be by vote of the legislatures or by popularly elected conventions. Only in the case of the Twentieth Amendment (repeal of prohibition) was the convention system used. Many state constitutions (e.g., New York) require that a proposed constitutional amendment be submitted to a referendum.

Amenemhet I (ă"mĕnĕm'hĕt, ä"–), d. 1970 B.C., founder of the XII dynasty of ancient EGYPT. He came of a powerful family of Thebes and seized (2000 B.C.) the kingship. He centralized the government and subjected the long-powerful nobles (monarchs) to a virtually feudal state. His son and successor, SESOSTRIS I, was coregent from 1980.

Amenemhet II, d. 1903 B.C., son and successor of Sesostris I, was coregent with his father (1938–1935 B.C.), then sole ruler (1935–1906), finally coregent with his son and successor, SESOSTRIS II. He reopened the mines of Sinai. **Amenemhet III,** d. 1801 B.C., was the son and successor of SESOSTRIS III, with whom he had been coregent. He extended the irrigation system. The first Nilometer was established. Thousands of acres in the Fayum were reclaimed. Under his successor, **Amenemhet IV,** d. 1792 B.C., the power of the dynasty declined, and his successor, a woman, Sebenekfrure, was last of her family.

Amenhotep I (ä"mĕnhō'tĕp, ă"–) or **Amenophis I** (ă"mĕnō'fĭs), fl. 1557 B.C., king of the XVIII dynasty of ancient Egypt, successor to his father, Amasis I. His chief exploits were military. He pushed southward and reestablished the boundary at the second cataract fixed by Sesostris III in the Middle Kingdom. He invaded Syria as far as the Euphrates. His successor, THUTMOSE I, was not his son. **Amenhotep II** or **Amenophis II,** son and successor of THUTMOSE III, succeeded (1448 B.C.) as coregent and later ruled for 26 years alone. Young and vigorous, he put down a revolt in Syria and maintained his father's conquests. He built extensively, especially at Karnak. On his death (c. 1420 B.C.) he was succeeded by his son THUTMOSE IV. **Amenhotep III** or **Amenophis III** succeeded his father, Thutmose IV, c. 1411 B.C. His reign (until c. 1375 B.C.) marks the beginning of the decline of the XVIII dynasty. It is the age of greatest Egyptian splendor, he enjoyed peace in his Asiatic empire (in spite of incursions by Bedouins and Hittites) and invaded Nubia once only. The accounts of royal celebrations and games give a clear picture of the Egyptian kingdom enriched and softened by the tribute of the known world. This is the period of the greatest elaboration in Egyptian architecture and sculpture. Amenhotep III built especially at Luxor and Karnak. His wife, TIY, was given an unprecedented position as queen consort and exerted much influence over her husband and his son and successor, IKHNATON.

Amenia (umē'nēu), unincorporated village (pop. 1,052), SE N.Y., NE of Poughkeepsie near the Conn. line, in a farm and resort region. Thomas Lake HARRIS had his Brotherhood of the New Life settlement in Amenia (1863–67). J. E. Spingarn lived here at his estate, "Troutbeck," and owned the local newspaper from 1911 to 1926.

Amenophis see AMENHOTEP.

America [for Amerigo VESPUCCI], the lands of the Western Hemisphere—North America, Central America (sometimes Middle America), and South America. In English, America and American are frequently used to refer only to the United States. Martin WALDSEEMÜLLER first used the name.

America, patriotic hymn of the United States beginning, "My country, 'tis of thee." The words were written in 1832 by Samuel Francis Smith while he was a theological student in Andover, Mass. According to his own account he was asked by Lowell Mason to examine a book of German school songs with the idea of either translating some of them or of writing English words to them. There he found the tune (probably to the words *Heil dir im Siegerkranz*) which inspired his poem, and only later did he discover that he had used the tune of GOD SAVE THE KING. See C. A. Browne, *The Story of Our National Ballads* (rev. ed., 1931).

American, river rising in three forks in N central California, in the Sierra Nevada near Lake Tahoe, and flowing W and SW into the Sacramento river at Sacramento. Gold discoveries in 1848 along the river and its forks played an important part in the history of California.

Americana (umĕrĭkā'nu,–kä'nu,–kā'nu), defined as all that has been printed about the Americas, printed in the Americas, or written by Americans, but usually restricted to the formative period in the history of the two continents. The Columbus letter (1493), a two-leaf newssheet announcing to the Spanish court the discovery of the islands of the Indies, is the earliest known printing about America. Richard Hakluyt's *Divers Voyages touching the Discovery of America* was published in London in 1582. Early American books were printed by Juan PABLOS, Stephen DAYE, and William BRADFORD. The John Carter Brown Library, Providence, the New York Public Library, the Newberry Library, Chicago, and the Huntington Library, San Marino, Calif.—all have fine collections of Americana. See Isaiah Thomas, *The History of Printing in America* (1810), Joseph Sabin, Wilberforce Eames, and R. W. G. Vail, *Bibliotheca Americana: a Dictionary of Books Relating to America* (29 vols., 1868–1937), M. B. Stillwell, *Incunabula and Americana* (1931).

American Academy in Rome, founded 1894 as the American School of Architecture in Rome, chartered by New York state 1897, incorporated under its present name by act of Congress 1905. In 1911 the charter was amended to include the American School of Classical Studies in Rome. The academy comprises schools of fine arts and classical studies in Rome and the headquarters of the officers and board of trustees in New York city. It awards annually to U.S. citizens under 30 years of age competitive fellowships bearing a yearly stipend, a travel allowance, and residence in Rome. Only men are eligible for the fine arts fellowships; these are awarded in architecture, painting, sculpture, music, and landscape architecture. C. F. McKim was a founder of the academy and its first president.

American aloe see AGAVE.

American architecture. Each group of white settlers in North America brought with it the building techniques and the prevailing forms of its home country and thus gave rise to different types of colonial building. But in all areas the differences between American and European conditions and climates, the fact that available building materials were not those of the home country, the frequent lack of trained architects and craftsmen, and often the poverty of the settlers produced rapid and profound change. Thus in French America stone building was rare and was often replaced by a sort of stucco over half timber or, in the St. Lawrence valley, by wood, a characteristic low, rectangular plan with high hipped roofs, however, persisted. Only in New Orleans, where the government sent skilled architects and engineers, was anything produced which approached the sophistication of the home country. The comparatively short Spanish reign in Florida also produced highly complex structures, such as the forts at St. Augustine and Matanzas, the St. Augustine Cathedral, and various houses, but this beginning had little enduring influence. In the Southwest, however, the Spanish impress was more permanent, there the settlers, already inured to American conditions in Mexico, borrowed widely the Indian techniques of construction in small-stone masonry and in adobe and produced work admirably fitted to its surroundings. In it the Mexican baroque details and church forms appeared in a new and simpler guise, as in the Texas, New Mexico, Arizona, and California missions. The Dutch settling in New Amsterdam were essentially traders and, well backed from Holland, rapidly developed a typical 17th-century Dutch village. They brought an adequate number of craftsmen with them, so that their environment was a closer copy of the home environment than was true anywhere else. But outside the large centers they modified their building types. The English settlements were of two basic types and produced two types of building, one, in the South, based on the large mansion house and plantation system, the other, in the North, based on small-scale individual activities in farming, fishing, lumbering, and commerce. In both cases the settlers tried first to build as they had at home—many-gabled half-timber houses of late Gothic inspiration. In the South brick rapidly superseded wood as the chief building material, and the growing classicism of English architecture was almost immediately reflected, as in the official buildings of Williamsburg. In the North the climate rapidly forced the covering of half-timber houses, the lowering of roof slopes, and the simplification of plans, poverty (except in space and natural resources) prompted simplicity of detail. In the 18th cent., growing prosperity and widening commerce brought a new influx of well-trained craftsmen, and English architectural books became increasingly available. There was a flowering of native craftsmen and designers who adapted the English precedent to American conditions with great skill. The result can be seen especially well in Charleston (S.C.), Annapolis, Philadelphia, Portsmouth (N.H.), Newburyport, Marblehead, and the earlier buildings of Salem (Mass.). The same period produced many churches in which the current English types by Christopher Wren and James Gibbs received simple, but elegant, American interpretations (e.g., St. Paul's Chapel, New York). Toward the end of the colonial period, styles based on a more direct study of ancient Roman and Greek structures were beginning to appear in Europe. The Adam trend (see ADAM, ROBERT) rapidly appeared in America, especially in interior detail. In a more monumental way the Adam style is typical of the work of Charles BULFINCH in Boston and of Samuel McINTIRE in Salem, both among the growing number of native-born designers. Architectural books began to be published in America, and American simplifications of Adam work were spread widely by means of the earlier books of Asher BENJAMIN. Both Washington and Jefferson gave serious thought to architecture and were deeply involved in the building of WASHINGTON, D.C. Both looked to the ancient classic world as the truest source of inspiration. Jefferson's ideals were perfectly expressed in his own house at Monticello and in the Virginia capitol and the Univ. of Virginia. The eventual result was the CLASSIC REVIVAL in America. This was introduced largely by European architects who came to the New World in search of commissions and honor. The Greek revival appeared first in the work of Benjamin Henry LATROBE in Philadelphia and Washington and was spread widely by the architects who followed him. The later books of Asher Benjamin and those of Minard Lafever spread the new type of detail over the country, and details from them can be found alike in Louisiana and Maine, in the Carolinas and Wisconsin. Yet certain regional constants persisted beneath this uniformity of style. The plantation regions still built great mansions, often with two-story colonnades, and farmhouses of basically 18th-century type still dominated much of New England, it was in the port cities that the uniformity was greatest. Temple-type porticoes decorated churches, banks, and public buildings. Masonry vaults, built with great skill, created fireproof structures for public use. Dignified simplicity marked commercial buildings, in city houses the established local types had doors and fireplaces and cornice details of the new kind. In the newly settled areas (upstate New York and the new states W. of the Alleghenies) the Greek revival style had its greatest chance at experimentation and the creation of new house types. It was this period which largely cre-

ated Nantucket and many New York, Ohio, and Michigan towns and contributed much to the New Orleans we know today Meanwhile, prior to the Mexican War, in the Southwest the Spanish tradition remained supreme, although in California it was becoming more and more modified by the environment and was borrowing occasionally also from the Eastern states The houses of Monterey are typical of this mixture As early as the end of the 18th cent the "castellated Gothic" of the English dilettanti began to have American imitators, occasional houses and a few churches were built in a primitive kind of Gothic in the first two decades of the 19th cent The romantic revival of the Gothic that was dominant in England was increasingly popular in the United States from 1835 on, especially for churches and cottages, the Gothic work of A J Davis, Richard Upjohn, and Minard Lafever won instant acclaim, and the widely distributed books of A J DOWNING on domestic architecture and landscape gardening helped spread the new gospel Although the church work was sometimes derivative, many of the cottages and mansions were well planned, original, and charming Local designers often interpreted the Gothic stone detail in wood Just before and during the Civil War, the writings of Ruskin began to influence American architects profoundly An epidemic of American versions of the Victorian Gothic followed but was generally short-lived It left, however, a valuable residue in the forcing of a new, more logical, and deeper questioning of the bases of design The two decades following the Civil War were confused, in architecture as in politics Great strides in industrialization changed building methods and techniques A new study of the functional basis of house design brought many experimental forms into being Westward expansion and growing urbanization made an extraordinary amount of building necessary, but they promoted crude speculation in land and often resulted in jerry-building At the same time new wealth sought expression in unbridled ostentation, and increasing foreign travel brought acquaintance with all types of European building, overwhelming existing local traditions of taste and technique However, the growing use of metal in building, the new freedom in planning, and an almost unconscious skill in the relating of volumes within a building evidenced the continuing existence of architectural creativeness Under such conditions eclecticism in taste was inevitable, and in the United States eclecticism dominated architecture from the late 1880s to the great economic debacle of the 1930s Many architects went to Paris, if possible to the École des Beaux-Arts, to receive the traditional doctrines The expression of purpose, materials, and techniques was forgotten, and architecture in becoming "scholarly" became largely superficial In the earlier periods, almost up to the Civil War, the architect and the engineer had often been identical or at least had worked for the same ends Eclecticism put an end to this unity The engineer designed the structural elements which the architect decorated, in the process both forgot the great principle of the oneness of visible form and structure Yet throughout this chaotic period certain creative efforts continued One was the development of a high technical ability in planning, i e , in arranging spaces within a building so that they would function efficiently Another was the extraordinary development of the techniques of industrialized BUILDING in steel and in reinforced concrete, together with the organization of the building industry to make possible the swift and economical erection of projects of almost any size In both planning and the techniques of building the United States was far in advance of most European centers American houses in general were excellently arranged, and American hotels, railroad stations, and office buildings were the envy of the world Thus the basic search for an expressive and functional architecture never entirely died The old colonial and classic revival tradition of direct construction continued long to dominate in many of the simpler buildings The later Ruskinian influence made many designers rebel against the senseless details of the ruling taste The work of Henry Hobson RICHARDSON expressed this rebellion The William Morris movement toward realizing the importance of craftsmanship also had tremendous influence These protests were climaxed by the work of the so-called Chicago school and in the designs and writings of its archprophet, Louis Henry SULLIVAN He had many followers, especially in Chicago, but later in Minneapolis and on the West Coast, young men caught his enthusiasm and designed buildings—especially houses—in accordance with the demands of use and site and the search for a creative, expressive beauty Of these young men, Frank Lloyd WRIGHT, one of the acknowledged founders of the so-called modern movement, was the most famous All through the decade preceding the First World War the rumblings of protest had been growing stronger Hints of new and different kinds of architecture being built abroad were becoming known The depression of the 1930s brought to an end the concept of the inevitability of eclecticism. The new work that came gradually into being had four chief roots First, new economic conditions which forced attention on new problems—mass housing and community planning, great power developments, and new types of factory. From these problems flowed others, such as recreational developments and shopping centers, from power developments came the inspiration of social purpose and great scale, from factory design (as emphasized by the industrial demands of the Second World War) came new approaches to planning, a study of the use of new materials, and a new realization of the importance of the human element in industrial buildings Second, the work in Europe of the International school, especially of Le Corbusier and Gropius, and that of other, freer modern European architects, such as Oud and Mendelsohn and Aalto and other Scandinavian designers (see MODERN ARCHITECTURE) Third, the work of Frank Lloyd Wright and the inspiration derived from the continually changing products of his superb creative imagination This proved a valuable counterinfluence against the more rigid doctrines of the International school and encouraged continued freely creative design in which use, construction, materials, effects, and expressive power were all integrated into one organic whole Frequently local and traditional materials —stone and wood, for instance—were used in close combination with newer materials such as large sheets of plate glass and metal posts or frames Fourth, and perhaps most important, the result of the coupling of applied science and industrial production This produced a great number of new materials—metal alloys, plastics, adhesives—and rendered cheaper and more available many older materials such as glass and wood veneers It led also to increased perfection in mechanical equipment, especially in heating (as in panel or radiant heating) and ventilation (as in air conditioning) The new architecture of the United States is increasingly flexible It produces different results in different regions, as climate and materials suggest, it adapts itself to buildings of all types—schools, churches, factories government buildings, houses It is growing visually richer as its techniques and materials are increasingly mastered, little by little it is becoming as satisfactory emotionally as it has been physically See S E Kimball, *Domestic Architecture of the American Colonies and Early Republic* (1922) and *American Architecture* (1928), Talbot Hamlin, *American Spirit in Architecture* (1926) and *Greek Revival Architecture in America* (1944), T E Talmadge, *The Story of Architecture in America* (1927), J M Fitch, *American Building* (1948), Louis Henry Sullivan, *Autobiography of an Idea* (1926), Frank Lloyd Wright, *Autobiography* (1943)

American art. The North American colonies in the 17th cent enjoyed neither the wealth nor the leisure to cultivate the fine arts extensively The colonial craftsman in pewter, silver, glass, or textiles followed closely the European model Minor portrait painters alternated "limning" with coach and sign painting Even in the 18th cent it was seldom possible to earn a living by art alone The silversmith Paul Revere turned his talents to commercial engraving and the manufacture of false teeth The crafts in general followed English, Dutch, and Bavarian models, though in furniture some variations appeared in the Hadley and Connecticut chests and the Windsor and rocking chairs and in the work of talented craftsmen such as Samuel McIntire, William Savery, and Duncan Phyfe A steady demand for portrait painting attracted such artists as John Smibert, Peter Pelham, and Joseph Blackburn from England, Gustavus Hesselius from Sweden, Jeremiah Theus from Switzerland, and Jacobus Strycker and Pieter Vanderlyn from Holland The first known native-born painter, Jeremiah Dummer, was also a silversmith Joseph Badger, Robert Feke, Ralph Earl, John Trumbull, and Charles Willson Peale, who followed, did not depart widely from the tradition of 18-century English portraiture, but while their work is harder and cruder, it is often more vigorous In the early work of John Singleton COPLEY this vigor is combined with a great native talent Another 18th-century American painter, Benjamin WEST, set up shop in London and became painter to the king and president of the Royal Academy Both his training and practice were European but his studio became the mecca of American painters who for half a century came to study under him His training in historical painting did not stand them in good stead on their return to America, where no demand existed for such work Gilbert Stuart, however, emerged from his tutelage a superb portrait painter and after gaining success in England returned to America, where he executed a long series of famous and charming portraits and set a standard rarely surpassed in this country Of all the arts sculpture was, perhaps, the least cultivated in the colonies The wax portraits of Patience Wright and the figureheads of William Rush are almost the only works of known authorship prior to the Revolution The period from the birth of the republic to the Civil War did not see much increased demand for the fine arts Such early painters as Washington Allston, Samuel F B Morse, John Vanderlyn, and John Trumbull, who sought a market in America for historical painting in the classical manner of Jacques Louis David, were quickly disillusioned Portrait painting alone could provide the patronage enjoyed by such men as Mather Brown, Henry Benbridge, Edward Savage, Thomas Sully, John Neagle, Chester Harding, and the miniaturists Edward G Malbone and John Wesley Jarvis None of these men equaled Stuart or Copley, but all of them produced work of real interest Perhaps even more interesting, however, was the gradual rise of a number of excellent genre painters—Henry Inman, William Sidney Mount, Henry Sargent, and George Caleb Bingham. These were the earliest painters of the American scene Meanwhile J J Audubon achieved fame as the painter of American birds It is significant that he had to go to England for recognition and publication of his work The first half of the 19th cent saw the first school of American landscape painting Thomas Doughty and Thomas Cole started the HUDSON RIVER SCHOOL, which was continued by Asher Durand, John Frederick Kensett, and Frederick Edwin Church Despite a tendency toward the panoramic, the better work of these men showed a direct inspiration by nature which has never ceased to be an important factor in American art In sculpture portraiture provided the main source of patronage John Frazee and Hezekiah Augur with little training produced forceful and original work in marble and wood Horatio Greenough began the long tradition of the American sculptor in Italy, where he was soon followed by Thomas Crawford, Hiram Powers, and Harriet Hosmer All of them were greatly influenced by Thorvaldsen More authentic talents, perhaps, were Clark Mills, whose figure of Gen Andrew Jackson was the first equestrian statue cast in America, and Thomas Ball and William Rimmer, whose untutored work had originality and power In painting, the post-Civil War period produced works of enduring worth and striking individuality. It is probable that in no period has art enjoyed more ardent patronage in America Not only the newly wealthy industrialists but also the state and Federal governments showed an unprecedented readiness to support the arts Much of the more popular work of the period, such as the historical and mural paintings of Leutze and the panoramas of Bierstadt, have relatively little aesthetic interest today But Whistler, Ryder, Eakins, and Winslow Homer have seldom been equaled in our history The four are strikingly dissimilar Whistler, an expatriate, cultivated a delicate art of suggestion in his oils and etchings alike Ryder, a hermit, produced a visionary art of deep significance Eakins painted with uncompromising honesty the everyday world about him And Homer's water colors are among the strongest realistic interpretations of pure landscape This was also the period of the fine romantic landscape painters George Inness, Alexander H Wyant, Homer D Martin, and Ralph Blakelock In Inness and perhaps even more in William Morris Hunt, the influence of the BARBIZON SCHOOL was brought to America Although French influence had begun to supplant German, the portrait painters William M Chase and Frank Duveneck reflect Munich John La Farge, who studied in Paris, did much to widen the cultural horizon His religious murals and stained glass set a new standard for these arts in America John Singer Sargent excelled rather in society portraiture, and Elihu Vedder and Edwin Abbey in illustration At the close of the century the influence of French impressionism appears in the work of five admirable painters, John Twachtman, Childe Hassam, William Glackens, Maurice Prendergast, and Mary Cassatt The late 19th cent also saw a greatly increased demand for sculpture In addition to portraits, an illustrative sculpture of figures and figure groups became popular The work of John Rogers and Frederic Remington is notable in this minor field After the Civil War a great number of commemorative works and monuments were commissioned Outstanding among these are such works as John Quincy Adams Ward's statue of Gen G H Thomas and Augustus Saint-Gaudens's of David Farragut American trained, Ward introduced a strong note of realism into a tradition suffering from the somewhat vapid classicism of the Italianates His heroic Washington in bronze at the New York Subtreasury Building is an American masterpiece His student Daniel Chester French also devoted his talents to monumental sculpture Saint-Gaudens and Olin Levi Warner furthered the trend toward realism under the inspiration of the French romantic realists Both of them studied in Paris Saint-Gaudens eventually dominated the sculpture of the period and set a high standard of dignity and style in such works as the Adams Memorial and the Shaw Memorial His followers, Herbert Adams, Paul Wayland Bartlett, Karl Bitter, Gutzon Borglum, John Flanagan, Frederick MacMonnies, Lorado Taft, and many others, carried on his tradition with varying success George Grey Barnard gave it a new probity in his famous statue of Lincoln in Cincinnati His fine collection of French medieval sculpture (see CLOISTERS, THE) was one of many

important collections, both of sculpture and of painting, which now began to be available to the American art student and the American public Such collections, together with the rapid growth of art schools, widened the understanding of the European past and lessened the naïveté of earlier periods The 20th cent in America is characterized by an immense expansion and rapid perfection of the industrial arts Such factors as the improved printing processes and the mass production and standardization of architectural units and such a new art as the moving picture have opened fresh fields to the artist and have had a direct influence on all the fine arts It is characteristic of this period that the distinction between the fine and the industrial arts has become increasingly tenuous American painting of the 20th cent has reflected most of the radical movements and fleeting schools of the same period in Europe but with less violent departure from tradition and with a more constant interest in local color and in subject matter generally The opening years saw a vigorous movement towards realism in subject and technique headed by such men as Robert Henri, John Sloan, and George Bellows With others they formed The EIGHT, a group not so much distinguished for a common ideal as for a freedom of thought which opened the way to quite other ideals than those of its founders America was first introduced to cubism, futurism, and expressionism at the famous Armory Show of 1913 under the auspices of an original but essentially romantic painter, Arthur B Davies Among the artists early affected by abstraction were Max Weber, Charles Demuth, John Marin, Walt Kuhn, Maurice Sterne, Marsden Hartley, and Stuart Davis The 1930s and '40s saw a continued growth in the interest in varying degrees of abstraction, in both painting and sculpture In artists such as Georgia O'Keeffe, Charles R Sheeler, and Peter Blume it took on a mixed character of selective realism combined with formal design The photographer Alfred Stieglitz maintained galleries devoted to promoting the work of many of these artists But abstraction has never threatened the existence of naturalistic painting, well represented by Eugene Speicher, Edward Hopper, J S Curry, Charles Burchfield, and countless others In 1934 the U S government initiated a Section of Painting and Sculpture as a branch of the Dept of the Treasury This section, later transformed into the Section of Fine Arts, has charge of the embellishment of Federal buildings and has carried on an ambitious program of mural painting with projects open to competition In a few years it commissioned a large number of murals, employing the work of many notable artists including Thomas Hart Benton, George Biddle, and Boardman Robinson This section should not be confused with the Works Progress Administration program initiated in 1935 and later discontinued Both these acts of government sponsorship stimulated the arts and particularly the art of mural painting, which had already attracted the interest of socially minded artists because of its public character and because of the vigorous exploitation of its possibilities by the noted Mexican fresco painters, J C Orozco and Diego Rivera In sculpture, as in painting, the 20th cent has seen a radical departure from the anatomical realism of the preceding period and a growing concern for formal design and expressive form. This is clearly seen in the work of such different men as Jacob Epstein, Gaston Lachaise, Elie Nadelman, Robert Laurent, William Zorach, and Alfeo Faggi A more conservative and eclectic talent is that of Paul Manship, whose popular and decorative style lends itself to many types of architectural and monumental sculpture Naturalism is represented in Mahonri Young's figures of laborers and Jo Davidson's portraits and in the work of the women sculptors Anna Vaughn Hyatt and Malvina Hoffman See William Dunlap, *History of the Arts of Design in the United States* (new ed , 1918), Samuel Isham, *The History of American Painting* (new ed., 1927), Suzanne Lafollette, *Art in America* (1929), Lorado Taft, *The History of American Sculpture* (new ed , 1930); Sadakichi Hartmann, *A History of American Art* (new ed , 1932), Holger Cahill and A. H Barr, *Art in America* (1935), Jerome Mellquist, *The Emergence of an American Art* (1942)

American Colonization Society, organized Dec , 1816–Jan., 1817, at Washington, D C , to transport free Negroes from the United States and settle them in Africa The freeing of many slaves, principally by idealists, created a serious problem, since no sound provisions were made for establishing them in society on an equality with white Americans anywhere in the United States Southern fears that the freedmen would encourage a slave revolt were much stirred by the uncovering in 1822 of the obscure plot of Denmark Vesey, a free Negro of Charleston, S C Robert Finley, principal founder of the colonization society, found much support among prominent men, notably Henry Clay A journal, *The African Repository*, was founded, and money was raised—with some indirect help from the Federal government when (1819) Congress appropriated $100,000 for returning to Africa Negroes illegally brought to the United States. In 1822 an agent, Eli Ayres, and Capt R. F. Stockton of the U.S. purchased land in Africa, where subsequently Jehudi ASHMUN and Ralph R. GURLEY laid the foundations of LIBERIA The colonization movement came under the bitter attack of the ABOLITIONISTS, who charged that in the South it strengthened slavery by removing the free Negroes The Negroes themselves were not enthusiastic about abandoning their native land for the African coast. The colonization society, with its associated state organizations, declined after 1840 More than 11,000 Negroes were transported to Liberia before 1860 From 1865 until its dissolution in 1912, the society was a sort of trustee for Liberia See E L Fox, *The American Colonization Society, 1817–1840* (1919)

American Falls, city (pop 1,439), co seat of Power co , SE Idaho, on the Snake river and SW of Pocatello The American Falls themselves were well known to travelers on the Oregon Trail, who often camped near them The town grew after the railroad came in 1892 A dam built in 1925–27 made a lake which covered most of the city. The new city, moved a half mile, is the center of a large irrigated farming section The reservoir, 25 mi. long, now also serves as a part of the MINIDOKA PROJECT Wheat is the most notable crop There is a hydroelectric plant in American Falls. A trout hatchery is near by.

American Federation of Labor, a federation of trade unions of the United States, Canada, and dependencies In 1881, parts of various workingmen's trade organizations, meeting in Pittsburgh, formed the Federation of Organized Trades and Labor Unions of the United States and Canada, which in 1886 became the American Federation of Labor With a strong executive council at the top (15 members elected annually) and with loosely federated autonomous unions at the bottom, the A F of L operates through national labor and trade locals which form into city central bodies and state and national federations Representation to the annual national convention, which constitutes the legislative branch of the A F of L , is made on the basis of one delegate each for the city central bodies, state federations, and national departments, with the national and international unions having one delegate for approximately every 4,000 members (32,000 members or more, five delegates) Issues at the conventions are decided mostly by a majority vote, on the basis of one vote for every 100 members or major fraction thereof Based on unionism by crafts and opposed to organization by industry, the A F of L has through the use of strikes secured higher wages, shorter hours, workmen's compensation, compulsory state education, and laws against child labor Under the leadership of Samuel Gompers and, after his death in 1924, of William Green, the A F of L became the largest labor federation in the United States, with a membership of over 7,500,000 A split (Nov , 1935) over the organization of mass-production industries and the formation of industrial unions resulted in the suspension of 10 affiliates in Sept , 1936, and their expulsion from the federation in Oct , 1937 These, under the leadership of John L Lewis, formed the Committee for Industrial Organization (see CONGRESS OF INDUSTRIAL ORGANIZATIONS) Although reconciliation efforts failed, two unions were later readmitted to the A F of L —the International Ladies Garment Workers Union (June, 1940) and the United Mine Workers (Jan , 1946) The U M W stalked out again in Dec , 1947, on a difference with the A F of L over the filing of non-Communist affidavits as required by the Taft-Hartley Act In the Second World War the A F of L pledged a no-strike policy With the formation of its Education and Political League it was influential in the 1948 national election See Samuel Gompers, *Seventy Years of Life and Labor* (1925), L L Lorwin and J A Flexner, *The American Federation of Labor* (1933), Florence Peterson, *American Labor Unions* (1945), issues of the *American Federationist*, official organ published since March, 1894

American Fork, city (pop 3,333), N central Utah, on American Fork Creek in the valley of Utah Lake, S of Salt Lake City, settled 1850 by Mormons, inc 1853 A poultry-raising center in an irrigated area, it is now served by the Provo river project

American Fur Company, chartered by John Jacob ASTOR (1763–1848) in 1808 as a rival to the great companies in Canada, the North West Company and the Hudson's Bay Company Astor's most spectacular venture in the fur trade, the post at ASTORIA, Oregon, was made under a subsidiary company, the Pacific Fur Company His early operations around the Great Lakes were under another subsidiary, the South West Company, in which Canadian merchants had a part Both failed. It was only in 1817, after the government had excluded foreign traders from U S territory, that the American Fur Company took over the trade in the Lakes region Ramsay Crooks and Robert Stuart were Astor's chief partners, and through an alliance with the Chouteau interests of St Louis, operations were expanded after 1821 in the Missouri river region and later into the Rocky Mts. (see also MOUNTAIN MEN). The company was notable as one of the first great trusts and maintained its virtual monopoly by buying out or crushing the small opposition companies that kept springing up. After Astor withdrew in 1834, the company was split, and the name properly belonged to the northern firm under Ramsay Crooks's presidency, but in popular usage it was employed for all the succession companies The American Fur Company had much influence in shaping the history of the frontier, not only in preparing the way for white settlement but in opening traffic in lead, Great Lakes fishing, and steamboating See H M Chittenden, *The American Fur Trade of the Far West* (3 vols , 1902); K W. Porter, *John Jacob Astor* (1931), Bernard De Voto, *Across the Wide Missouri* (1948).

American ivy: see VIRGINIA CREEPER

Americanization, term used to describe the cultural process by which the immigrant to the United States gradually assimilates American speech, ideals, traditions, and ways of life. The name has also been given to the movement fostering assimilation, which grew to crusading proportions in the first quarter of the 20th cent as a result of the great immigration from the eastern and southern countries of Europe from 1880 to the outbreak of the First World War (see IMMIGRATION) Fear and suspicion of the newcomers and of their possible failure to become assimilated gave impetus to the movement Joined by social workers interested in improving the slum conditions surrounding the immigrants and by representatives of the business and industrial world who feared that the source of cheap labor might be colored by the spread of radical social doctrines, organizations were formed to propagandize and to agitate for municipal, state, and Federal aid to educate the immigrants and to teach them American ways Spearheading the drive were the North American Civic League for Immigrants (a New England group), the Committee for Immigrants in America, and the National Americanization Committee (both with headquarters in New York city) The coming of the First World War with the resultant heightening of American nationalism strengthened the movement The Federal bureaus of education and of naturalization joined in the crusade and aided the private Americanization groups Giant rallies, patriotic naturalization proceedings, and Fourth of July celebrations featured the campaign With America's entry into the struggle, Americanization was made an official part of the war effort State after state passed legislation providing for night-school classes and other facilities for the education and Americanization of the foreign-born The anti-Red drive conducted by the Dept of Justice in 1919–20 stimulated the movement and led to even greater legislative action on behalf of Americanization Virtually every state which had a substantial foreign-born population had provided educational facilities for the immigrant by 1921 The passage of this legislation plus the return of "normalcy" and, more especially, the coming of the quota system of immigration caused the Americanization move to subside and the private groups to disband See E G Hartmann, *The Movement to Americanize the Immigrant* (1948)

American Labor party, organized in New York by labor leaders and liberals in 1936, primarily to support Franklin D Roosevelt's New Deal and the men favoring it in national and local elections It gathered strength in New York state and particularly in New York city and had considerable weight there in tipping the scales toward chosen Democratic or Republican candidates After 1939 it was much torn by strife between left-wing and right-wing factions, chiefly concerning policy toward the USSR In 1944 a right-wing group, defeated in the primaries, withdrew to form the Liberal party, and in 1948 many members withdrew when the party endorsed Henry A. Wallace

American Legion, national association of the veterans of the First and Second World Wars, founded in PARIS in 1919 The preamble to the constitution, adopted at the convention in St Louis that same year, expresses its purposes in part as, "to uphold and defend the Constitution of the United States, to maintain law and order; to foster and perpetuate a one hundred percent Americanism, . . to safeguard and transmit to posterity the principles of justice, freedom, and democracy, to consecrate and sanctify our comradeship by our devotion to mutual helpfulness " To achieve these ends the American Legion has done much work in social welfare, particularly child care It is by far the largest of the veterans' associations and, with its system of state departments and local posts centered in headquarters at Indianapolis, exerts considerable influence on the national life The annual convention, at which policies are formulated, gains much attention, and the political force of the organization is considerable The efforts of the American Legion have been bent not only to obtaining benefits for the veterans but also to building up the military strength of the United States and to attacking "subversive" or "anti-American" teachings and organizations. Its poli-

cies have been criticised by opponents as reactionary, as in William Gellermann's book, *The American Legion as Educator* (1938) It is organized on a nonpartisan, nonpolitical basis There is also a woman's auxiliary for the wives, mothers, sisters, and daughters of veterans Veterans of the women's corps of the armed services in the Second World War are members of regular posts See Richard Seelye Jones, *A History of the American Legion* (1947)

American literature. Colonial American literature naturally began as a somewhat tardy part of English literature The 17th-century historical narratives of Capt John Smith of Virginia and of Gov William Bradford and John Winthrop of Massachusetts were the earliest writing in the colonies Cotton Mather, in his *Magnalia Christi Americana* (1702), was consciously literary The earliest poetry was written by Anne Bradstreet, Michael Wigglesworth, and Edward Taylor, but the first book published in the colonies was the *Bay Psalm Book* (1640) Austere Calvinism found its last great utterance in America in the sermons of the Puritan Jonathan Edwards A true lyric poet did not appear until Philip Freneau, who was also probably the earliest professional journalist in the colonies The first weekly newspaper appeared in 1704 in Boston, and the first daily in 1784 in Philadelphia Benjamin Franklin, who founded the early *Saturday Evening Post*, was a master of shrewd, witty prose, shown especially in his *Poor Richard's Almanack* (begun 1732), the most famous of many almanacs of that period, and in his autobiography In the political writing attendant on the American Revolution, the prose of Thomas Paine, Alexander Hamilton, Thomas Jefferson, and George Washington was decisive William Hill Brown has been credited with the first American novel, but Charles Brockden Brown was our first professional novelist, as Royall Tyler was the first professional American playwright Washington Irving, with his sketches, tales, and histories, was the American man of letters first recognised as such in Europe In the 19th cent , despite the early popularity of Fitz-Greene Halleck, William Cullen Bryant was the outstanding poet before the appearance of Emerson, Longfellow, Whittier, and Poe The American historical novel was made popular by its great exponent, James Fenimore Cooper, and was written also by William Gilmore Simms and Robert M Bird A significant and influential group of writers in the first half of the 19th cent was the transcendentalists in Concord, Mass It included Ralph Waldo Emerson, Henry David Thoreau, Bronson Alcott, Margaret Fuller, and Theodore Parker Nathaniel Hawthorne, on the edge of the group, was preeminent as the novelist of New England, interpreting the brooding, Puritan spirit in romantic tales, while his friend Herman Melville interpreted romanticism in novels full of exotic subject matter and cloudy philosophy Oliver Wendell Holmes in novels, essays, and poems showed another side of New England life, as did James Russell Lowell, whose *Biglow Papers* brought native dialect into literature and who was not only a poet, but an editor, a critic, and a teacher Richard Henry Dana, Jr , wrote his masterly story of adventure at sea in 1840 Most romantic of New England poets was Henry Wadsworth Longfellow, whose poems on American themes, such as *Hiawatha* and *Evangeline*, were widely known John Greenleaf Whittier wrote poems of American rural life, and he, Lowell, and the novelist Harriet Beecher Stowe served the antislavery cause well Magazines, such as the *Southern Literary Messenger* (1834–64), the *North American Review* (1815–1940), the *Knickerbocker Magazine* (1833 65), and *Godey's Lady's Book* (1830–98)—the latter edited for years by Sara Josepha Hale—helped maintain literary standards During New England's literary ascendancy, Edgar Allan Poe, working mostly in Richmond and New York, created the modern short-story form, wrote poems revealing his genius for metrics, and became our first mature, systematic literary critic, his influence as poet and critic has been strongest in France The scholarly European tradition brought back to America by George Ticknor, Henry Wadsworth Longfellow, and others was continued by James Russell Lowell and later great teachers William Hickling Prescott, John Lothrop Motley, Francis Parkman, and George Bancroft were unsurpassed as historians in their day, and their work remains valuable Early drama in America was undistinguished, but is best represented in the 18th cent by works of William Dunlap, in the 19th by those of John Howard Payne, Robert M. Bird, George Henry Baker, and Nathaniel Parker Willis, and later in the century by those of Bronson Howard, Augustin Daly, and J A Herne The pioneering figure in poetry in the latter half of the 19th cent was Walt Whitman, who sought a new American form in chants on a variety of subjects and who also wrote some of the best poems to come out of the Civil War, other poets included Sidney Lanier and John Bannister Tabb The fine lyric gift of Emily Dickinson remained unknown until after 1915, although she died in 1886. Among lesser poets, the best known by 1900 were perhaps Bliss Carman, Richard Hovey, and William Vaughn Moody. Moody was also a popular playwright, as were Clyde Fitch, Augustus Thomas, and David Belasco In fiction, the new nationalism, interest in "local color," and the tall tales and folklore of the country produced a sectional literature Prominent among those who wrote in the Western country were Bret Harte, Edward Eggleston, and Joaquin Miller, in the South, Joel Chandler Harris, George W Cable, Thomas Nelson Page, and James Lane Allen; in New England, Louisa M Alcott, Sarah Orne Jewett, and Mary E W Freeman, and in the Midwest, James Whitcomb Riley Greatest of all was the humorist Mark Twain in his stories of the Mississippi river, with his collaborator, Charles Dudley Warner, he also gave a name to a novel and a period, the Gilded Age A school of fiction which dealt with political and economic evils grew up in the latter half of the 19th cent and included the novels of Edward Bellamy, Rebecca Harding Davis, Harold Frederic, Helen Hunt Jackson, David Ross Locke, and others, direct precursors of Frank Norris and Upton Sinclair. Some of the most influential prose of the period was in the nonfiction of Henry Adams and Henry George The sudden expansion of magazines after the Civil War had provided a market for new American fiction and especially for the short story, which Bret Harte, Ambrose Bierce, Richard Harding Davis, O Henry, and many others helped perfect Henry James, expatriate, excelled in the form and wrote realistic novels, subtly analysing his characters. Edith Wharton to some degree followed his lead in her short stories and novels William Dean Howells was the most influential literary editor as well as representative novelist of the last of the 19th cent and the first part of the 20th and also wrote popular farces The realism which was attenuated in his novels became grim in the work of Hamlin Garland and Stephen Crane, leading to what is known as naturalism in the writings of Theodore Dreiser, Sherwood Anderson, and many writers of the period of disillusion after the First World War At the same time romance was popular in another school of fiction, much of it historical Writers in this field include S Weir Mitchell, Charles Major, Mary Johnston, Paul Leicester Ford, Winston Churchill, F Marion Crawford, and Owen Wister Most popular romancer was Jack London, writer of Western stories The late 19th cent saw also a number of flourishing humorists, of which Mark Twain was most famous—Artemus Ward, Petroleum V Nasby, Finley Peter Dunne, Seba Smith, Josh Billings, and the short-story writer Frank Stockton In direct line of succession were the columnist and poet Eugene Field, George Ade and Don Marquis in the 20th cent , and such contemporary writers as Ogden Nash, James Thurber, and the so-called "*New Yorker*" humorists In the 20th cent the naturalists' merciless dissection of character in fiction led to dialogue and narration very closely imitating the states of mind of characters in the subjective fiction of such novelists as Erskine Caldwell, John Dos Passos, James T Farrell, William Faulkner, Vardis Fisher, F Scott Fitzgerald, Ben Hecht, Ernest Hemingway, and Thomas Wolfe Perhaps also in the pursuit of truth in fiction, many American regional novels were written by Mary Austin, Branch Cabell, Willa Cather, Mary Ellen Chase, Edna Ferber, Rachel Field, Henry Blake Fuller, Oliver La Farge, Zona Gale, Ellen Glasgow, Sinclair Lewis, J P Marquand, Elizabeth Madox Roberts, John Steinbeck, and Booth Tarkington, to name only a few The interest in America's past led these among many others to write outstanding historical novels Hervey Allen, Stephen Vincent Benét, James Boyd, Esther Forbes, MacKinlay Kantor, Margaret Mitchell, Kenneth Roberts, and Stark Young The short story has followed the novel in subject matter and has been especially well handled by Wilbur Daniel Steele, Katharine Anne Porter, Dorothy Parker, William Saroyan, Eudora Welty, and others Americans are also established as writers of the detective story Harriet Monroe's founding (1912) of *Poetry a Magazine of Verse* was a welcome outlet for the renewed interest in poetry and was the first of a legion of small magazines which followed New poetic forms were sought by H D (Hilda Doolittle) and Amy Lowell in imagism, by Vachel Lindsay and Carl Sandburg in free-verse chants, by Ezra Pound and by T S Eliot and his followers in 17th-century English poets and the French symbolists, by John Gould Fletcher and Conrad Aiken in Oriental as well as English influence Wallace Stevens and E E Cummings represent extreme individualism. Local material was also cultivated by the poets —Robert Frost, Edgar Lee Masters, Robinson Jeffers, Lew Sarett, J P Blackmur, and many others Of the traditionalists in form, E. A Robinson was the earliest in the century and perhaps greatest, later came Wilbam Ellery Leonard, Elinor Wylie, Hart Crane, and Sara Teasdale The first well-known Negro poet was Paul Laurence Dunbar; in the 20th cent his race was well represented in poetry by Countee Cullen, James Weldon Johnson, and Langston Hughes and in prose by Zora N Hurston, Richard Wright, and Claude McKay, among others Archibald MacLeish, Stephen Vincent Benét, and Edna St Vincent Millay were outstanding among the poets who adapted their poems and poetic plays to radio broadcasting during and after the Second World War Since 1920 the American theater has been vigorous The outstanding playwright is Eugene O'Neill, and there have been excellent plays by Maxwell Anderson, Philip Barry, Marc Connelly, Rachel Crothers, Ben Hecht, Lillian Hellman, Sidney Howard, George S. Kaufman, Elmer Rice, Clifford Odets, Thornton Wilder, and Tennessee Williams Essayists include the 19th-century naturalists John Burroughs and John Muir and Donald Culross Peattie in the 20th cent , the philosophers William James, George Santayana, Josiah Royce, and John Dewey, and Agnes Reppher and E B White In criticism the "new humanists" Irving Babbitt, P E More, and W C Brownell represented moderately conservative thought in the first decades of the 20th cent and were later opposed by a group which included Van Wyck Brooks, Randolph Bourne, H L Mencken, H S Canby, and others Edmund Wilson, Lewis Mumford, and Malcolm Cowley were friendly to the new realism and interested in the Marxist theories of the social responsibility of literature, which in the '30s were applied especially by Max Eastman, Waldo Frank, Granville Hicks, and Bernard Smith. Preoccupation with aesthetics in criticism had been characteristic of T S Eliot and Ezra Pound in this whole period and in the '40s was notable also in the writing of R P Blackmur, I A Richards, Yvor Winter, and others Historical writing in this century also found a more realistic approach to its subjects, with emphasis on economic, sociological, and psychological factors in civilisation John Fiske, Henry Adams, Theodore Roosevelt, and Woodrow Wilson marked increasingly the transition from older schools of thought, and the pioneers of the new movement were Frederick Jackson Turner, John B McMaster, James H Robinson, Charles A Beard, Albert B Hart, Herbert L. Osgood, William A Dunning, John R. Commons, Charles M Andrews, and James Ford Rhodes Historians prominent since 1920 include Henry Osborn Taylor, Carl Becker, Carlton J H Hayes, Herbert E Bolton, Allan Nevins, H S Commager, Arthur Schlesinger, Arthur Schlesinger, Jr , and S E Morison See *The Cambridge History of American Literature* (ed by William P Trent and others, 4 vols , 1917–21), *Literary History of the United States* (ed by Robert Spiller and others 2 vols and a volume of bibliography, 1948)

American Museum of Natural History, incorporated in New York city in 1869 to promote the study of natural science and related subjects Buildings on its present site were opened in 1877 Among the buildings since added are the Hayden Planetarium (opened 1935) and the Roosevelt Memorial building (completed 1936) A board of trustees controls and directs the museum's activities. As a result of its wide explorations and its program of research the museum has acquired specimens and data of great value Resources are derived from endowment, grants from the city, and a membership fund Among the facilities for study are an extension library , illustrated lectures, publications, a special school service whereby the museum cooperates with city schools, circulating exhibits, habitat groups of animals and plants, a mineral and gem collection, an unrivaled assemblage of skeletons of extinct animals, especially dinosaurs, and replicas of invertebrates in glass The Indians of North and South America are admirably portrayed, with exhibits of their basketry, pottery, and porcelain

American party see KNOW-NOTHING MOVEMENT

American Philosophical Society, first scientific society in America, founded in 1743 in Philadelphia It was an outgrowth of the junto formed by Benjamin Franklin in 1727 Franklin was the first secretary of the society, and Thomas Hopkinson the first president In 1769 the Philosophical Society merged with the American Society for Promoting Useful Knowledge This combined organization elected Franklin its first president, an office which he held until his death David Rittenhouse and Thomas Jefferson were his immediate successors The society, which has a notable library, includes all fields of intellectual and scientific study Its transactions date from 1771 and records of its proceedings from 1838

American Red Cross · see RED CROSS

American Revolution, 1775–83, struggle by which the THIRTEEN COLONIES on the Atlantic seaboard of North America won independence from Great Britain and became the United States. It is also called the American War of Independence. By the middle of the 18th cent , differences in life, thought, and interests had developed between the mother country and the little colonies expanding between the sea and the mountains. Local institutions took shape in the colonies, and though there was little feeling of intercolonial unity (as shown by the failure of the plan of union in the Albany Congress), there was a general appreciation of divergence from

the English attitudes and interests The British government, like other imperial powers in the 18th cent , favored a policy of MERCANTILISM, and many colonials felt that their activities were unfairly limited The NAVIGATION ACTS, intended to regulate commerce in the British interest, could not be well enforced on the long American coast, and smuggling, though officially a crime, was generally regarded in the colonies as an open and honorable profession There had been brushes between officials and colonials, some quite serious (e g , Bacon's Rebellion), but the underlying causes of trouble emerged only after 1763 The Treaty of Paris in that year ended the FRENCH AND INDIAN WARS and removed a long-standing threat to the colonies At the same time the ministry (1763–65) of George GRENVILLE in Great Britain undertook a new colonial policy, intended to make the colonies pay for their defense and return revenue to the mother country The tax levied on molasses and sugar in 1764 caused some consternation among New England merchants and makers of rum, but it was the STAMP ACT (1765) with its direct demand for revenue that roused a violent outcry among the colonial people—Northern merchants, Southern planters, and pioneer farmers and land speculators Everywhere leaders such as James OTIS, Samuel ADAMS, and Patrick HENRY denounced the act with eloquence, societies called the SONS OF LIBERTY were formed, and the Stamp Act Congress was called to protest that Parliament was violating the rights of trueborn Englishmen in taxing the colonials, who were not directly represented in the supreme legislature The threat of boycott and refusal to import English goods supported the colonial clamor Parliament repealed (1766) the Stamp Act but passed an act formally declaring its right to tax the colonies The incident was closed, but a barb remained to wound American feelings Colonial political theorists—not only hotheads such as Samuel Adams, Patrick Henry, Josiah Quincy, and Alexander MacDougall but also moderates such as John DICKINSON, John ADAMS, and Benjamin FRANKLIN—asserted that taxation without representation was tyranny and repeated the doctrines of John LOCKE The teachings of 18th-century French philosophers and continental writers on law, such as Emmerich de Vattel, were implicit in the colonial arguments based on the theory of NATURAL RIGHTS The colonials tended to claim that they were subject only to the king and that King George III, who, though hedged in by Parliament, did have some hand in the actions of his ministers, was a tyrant Trouble flared when the ministry of Charles TOWNSHEND adopted (1767) the TOWNSHEND ACTS, which taxed numerous imports, care was taken to lay an "external" or indirect tax, since direct taxes had been hotly challenged by the colonials The indirect taxes were challenged too, and though the duties were not heavy, the principle was attacked Incidents came in interrupted sequence to make feeling run higher and higher—the seizure of a ship belonging to John HANCOCK in 1768, the bloodshed of the BOSTON MASSACRE in 1770, the burning of H M S GASPÉE in 1772 Even repeal of the Townshend Acts in 1770 did no more than temporarily quiet the turmoil, for the tax on tea was kept as a sort of token of Parliament's supremacy Indignation in New England led to the BOSTON TEA PARTY in 1773 Despite the earnest pleas of William Pitt the elder (see CHATHAM, WILLIAM PITT, 1ST EARL OF) and Edmund BURKE, Parliament replied with coercive measures These (and the QUEBEC ACT) the patriotic colonials called the INTOLERABLE ACTS, and resistance was prompt The Sons of Liberty and individual patriots were already spreading statements of the colonial cause to win merchant and farmer, workingman and sailor, to the defense of liberty Committees of correspondence had been formed by the patriots to exchange information and ideas and to build colonial unity, and in 1774 the committees of correspondence prepared the way for the CONTINENTAL CONGRESS The representatives at this First Continental Congress, except for a few radicals, had not the remotest idea of independence but wished only to persuade the British government to recognize their rights A plan of reconciliation offered by Joseph GALLOWAY was rejected, it was agreed that the colonies would refuse to import British goods until colonial grievances were righted, those grievances were listed in petitions to the king, and the congress adjourned Before it met again the situation was changed On the morning of April 19, 1775, shots had been exchanged by patriots and British soldiers, men had been killed, and a revolution of violence had begun (see LEXINGTON AND CONCORD, BATTLES OF) On the very day (May 10, 1775) when the Second Continental Congress met, Ethan ALLEN and his Green Mountain Boys, together with a force under Benedict Arnold, took Fort Ticonderoga from the British, and two days later Seth WARNER captured Crown Point Boston was under British siege, and before that siege was climaxed by the costly British victory usually called the battle of Bunker Hill, the Congress had chosen (June 15, 1775) George WASHINGTON as commander in chief of the Continental armed forces The war was on in earnest Some delegates had come to the Congress already committed to declaring the colonies independent of Great Britain, but even many stalwart upholders of the patriot cause were not ready to take such a step. The lines were being more clearly drawn between the pro-British LOYALISTS and the colonial patriots The time was one of indecision, and the division of the people was symbolized by the split between Benjamin Franklin and his Loyalist son, William FRANKLIN The Loyalists were numerous, especially among the holders of large properties A large part of the population was more or less neutral, swaying to this side or that or else remaining inert in the struggle, which was to some extent a civil war So it was to remain to the end Civil government and administration had fallen apart and had to be patched together locally In some places the result was bloody strife, as in the partisan raids in the Carolinas and Georgia and the Mohawk valley massacre in New York, elsewhere hostility did not produce open struggles In the parlous early days of doubt Thomas PAINE wrote a pamphlet, *Common Sense*, which urged the patriot cause In arms the cause did not prosper too greatly Delegations to the Canadians had been unsuccessful, and the QUEBEC CAMPAIGN (1775–76) ended in disaster The British gave up Boston in March, 1776, but the prospects were still not good for the ill-trained, not too well-armed volunteer soldiers of the Continental army when the Congress decided finally to declare the independence of the Thirteen Colonies The DECLARATION OF INDEPENDENCE is conventionally dated as of July 4, 1776 Drawn up by Thomas JEFFERSON (with slight emendations), it was to be one of the great historical documents of all time It did not, however, have any immediate good effect The British under Gen William HOWE and his brother, Admiral Richard Howe, came to New York harbor After vain attempts to negotiate a peace, the British forces struck Washington lost Brooklyn Heights (see LONG ISLAND, BATTLE OF), retreated northward, was defeated at Harlem Heights on Manhattan and at White Plains, and took part of his dwindling army into New Jersey Thomas Paine in a new pamphlet, *The Crisis*, exhorted the patriots to courage in desperate days, and Washington showed his increasing military skill and helped to restore patriot spirits in the winter of 1775–76 by crossing the ice-ridden Delaware and winning small victories over forces mostly made up of Hessian mercenaries at Trenton (Dec 26) and Princeton (Jan 3) In 1777 the British undertook a plan to wipe out the flickering revolt by a concerted plan to split the colonies with converging expeditions concentrated upon the Hudson valley Gen William Howe, instead of taking part in it, moved into Pennsylvania, defeated Washington in the battle of Brandywine (Sept 11), took Philadelphia, and beat off (Oct 4) Washington's attack on Germantown Meanwhile the British columns under Gen John BURGOYNE and Gen Barry ST LEGER had failed (see SARATOGA CAMPAIGN), and Burgoyne on Oct 17, 1777, ended the battle of Saratoga by surrender to Gen Horatio GATES The victory is commonly regarded as the decisive battle of the war, but its good effects again were not immediate The patriot army still had to endure the hardships of the cruel winter at VALLEY FORGE, when only loyalty to Washington and the cause of liberty held the half-frozen, half-starved men together Among them were three of the foreign idealists who had come to aid the colonials in their struggle—KALB, STEUBEN, and LAFAYETTE At Valley Forge, Steuben trained the still-raw troops, who came away from Valley Forge a disciplined fighting force and gave a good account of themselves in 1778 Sir Henry CLINTON, who had succeeded Howe in command, decided to abandon Philadelphia for New York, and Washington's attack upon the British in the battle of Monmouth (see MONMOUTH, BATTLE OF) was cheated of success mainly by the equivocal actions of Gen Charles LEE The warfare in the Middle Atlantic region settled almost to stagnation, but foreign aid was already coming Agents of the new nation—notably Benjamin Franklin, Arthur Lee, Silas Deane, and later John Adams—were striving to get help, and in 1777 BEAUMARCHAIS had succeeded in getting arms and supplies sent to the patriots in time to help win the battle of Saratoga That victory made it easier for France to enter upon an alliance with the United States, for which Franklin and Vergennes signed (1778) a treaty Spain entered the war against Great Britain in 1779, but Spanish help did little for the United States, while French soldiers and sailors and French supplies and money were of crucial importance The warfare had meanwhile shifted from the quiescent North to other theaters George Rogers CLARK by his daring exploits (1778–79) in the West, climaxed by the second capture of Vincennes, established patriot prestige on the frontier Gen John SULLIVAN led an expedition (1779) against the British and Indians in upper New York. The chief fighting, however, was in the South. The British had taken Savannah in 1778 In 1780 Sir Henry Clinton attacked and took Charleston (which had resisted attacks in 1776 and 1779) and set Gen Charles CORNWALLIS off on the CAROLINA CAMPAIGN Cornwallis swept forward to beat Horatio Gates soundly at Camden (Aug., 1780), and briefly only guerrilla bands under Francis MARION, Andrew PICKENS, and Thomas SUMTER continued to oppose the British S of Virginia. Another low point had been reached in American fortunes Bitter complaints of the inefficiency of the Congress, political conniving, lack of funds and food, and the strains of long-continued war had increased widespread apathy and disaffection, and the British tried to take advantage of the division among the people In 1780 occurred the most celebrated of the disaffections, the treason of Benedict ARNOLD Lack of pay and shortages of clothing and food drove some Continental regiments into an orderly mutiny of protest in Jan , 1781 The dark was, however, already lifting A crowd of frontiersmen with their rifles defeated a British force at Kings Mt. in Oct , 1780, and Nathanael GREENE, who had replaced Gates as commander in the Carolina campaign, and his able assistant, Daniel MORGAN, together with Thaddeus KOSCIUSKO and others, ultimately forced Cornwallis into Virginia The stage was set for the YORKTOWN CAMPAIGN Now the French aid counted greatly, for Lafayette with patriot troops held the British troops in check, and it was a Franco-American force which Washington and the comte de ROCHAMBEAU led from New York S to Virginia The French fleet under Admiral de GRASSE played the decisive part Previously naval forces had been of little consequence in the Revolution State navies and a somewhat irregular national navy had been of less importance than Revolutionary privateers Esek HOPKINS had led a raid in the Bahamas in 1776, John BARRY won a name as a gallant commander, and John Paul JONES was one of the most celebrated commanders in all U S naval history, but their exploits were single incidents It was the French fleet—ironically, the same one defeated by the British under Admiral Rodney the next year in the West Indies—which bottled up Cornwallis at Yorktown Outnumbered and surrounded, the British commander surrendered (Oct 17–19, 1781), and fighting was over The rebels had won the American Revolution The Treaty of Paris (see PARIS, TREATY OF) formally recognized the new nation in 1783, though many questions were left unsettled The United States was floundering through a post-war depression and seeking not too successfully to meet its administrative problems under the Articles of Confederation (see CONFEDERATION, ARTICLES OF) The leaders in the new country were those prominent either in the council halls or on the fields of the Revolution, and the first three Presidents after the Constitution of the United States was adopted were Washington, Adams, and Jefferson Some of the more radical Revolutionary leaders were disappointed in the turn toward conservatism when the Revolution was over, but liberty and democracy had been fixed as the highest ideals of the United States The effect of the American Revolution on liberal thought in European countries cannot by its very nature be weighed, but the presence of a youthful democracy in the world had some influence on the French Revolution and most assuredly later helped to inspire revolutionists in Spain's American colonies Naturally the stirring events of the birth of the country have been often represented in U S literature It has given dramatic material to playwrights from William Dunlap to Maxwell Anderson, to novelists from James Fenimore Cooper and William G Simms to S Weir Mitchell, Paul Leicester Ford, and Kenneth Roberts Older histories, still read for their literary value, are those of George Bancroft, John Fiske, and G O Trevelyan Countless excellent studies have been made of particular aspects and incidents, recent examples are H E Wildes, *Valley Forge* (1938), R B Morris, ed , *The Era of the American Revolution* (1939), Philip Davidson, *Propaganda and the American Revolution 1763–1783* (1941), and Carl Van Doren, *Secret History of the American Revolution* (1941) and *Mutiny in January* (1943) For works of more general interest, see Carl L Becker, *The Eve of the Revolution* ("Chronicles of America" series, 1918), A M Schlesinger, Sr , *The Colonial Merchants and the American Revolution, 1763–1776* (1917), C H Van Tyne, *The Causes of the War of Independence* (1922) and *The War of Independence American Phase* (1929), C H McIlwain, *The American Revolution a Constitutional Interpretation* (1923), C M. Andrews, *The Colonial Background of the American Revolution* (1924), J F Jameson, *The American Revolution Considered as a Social Movement* (1926), S. F Bemis, *The Diplomacy of the American Revolution* (1935), E B Greene, *The Revolutionary Generation, 1763–1790* ("A History of American Life" series, 1943), John C. Miller, *Origins of the American Revolution* (1943) and *Triumph of Freedom, 1775–1783* (1948).

American University: see WASHINGTON, D.C.

American Veterans Committee (AVC), organization of veterans of the Second World War, founded in Jan., 1943, and designated the American Veterans Committee in Oct, 1944 In 1946 the AVC had close to 80,000 members It opposed special privileges for veterans ("Citizens first, veterans second") though advancing their best interests The struggle in 1947 to eject extreme leftist elements from the organization was successful The AVC backed (1949) plans for a world veterans' association Efforts to merge the American Veterans Committee with the American Veterans of World War II met with defeat in 1949

American Veterans of World War II (Amvets), organization of veterans of the Second World War, founded in Dec, 1944 The Amvets numbered c 100,000 and had posts in every state by 1947, when President Harry S Truman signed the bill giving this organization a national charter In its 1949 national convention, the American Veterans of World War II rejected a proposed merger with the American Veterans Committee, recommended a Federal bonus to Second World War veterans, proposed a pacific military pact, and advocated the registration of Communists in the United States

americium (ămurĭ'shēum), radioactive element of the actinide series (symbol=Am, for physical constants, see ELEMENT, table) It is formed from plutonium on the emission of beta rays and was first produced in the cyclotron Americium emits alpha particles and has a half life of 500 years Americium hydroxide has been obtained in a pure form

Americus (umĕr'ĭkus), city (pop 9,281), co seat of Sumter co, SW Ga, SE of Columbus, inc 1832 It is an industrial center in a farm and lumber area Fertilizer is produced There is a state junior college

Amerighi, Michelangelo da see CARAVAGGIO, MICHELANGELO AMERIGHI DA

Amersfoort (ä'mursfôrt), municipality (pop 55,447) and town, Utrecht prov, central Netherlands A manufacturing center today, it has medieval houses, a 14th-century water gate, and the 15th-century Gate of Our Lady. Johan van Oldenbarneveldt was born here

Amery (ă'mûrē), city (pop 1,461), NW Wis, NW of Eau Claire, settled 1884, inc 1919

Ames, Fisher, 1758–1808, American political leader, b Dedham, Mass, grad Harvard, 1774, son of Nathaniel Ames Admitted to the bar in 1781, he began political pamphleteering and by a speech in the Massachusetts convention that ratified the Federal Constitution set himself on the road to being a leading Federalist As a Congressman (1789–97) and after his retirement he was high in party councils, a staunch follower of Hamilton and a violent attacker of Jefferson Of Ames's able speeches perhaps the best known was that made in 1796 when the House was disposed to nullify Jay's Treaty by withholding appropriations, he spoke for the treaty He was the archetype of the New England conservative of his period, a strong proponent of order and of the rights of property

Ames, James Barr, 1846–1910, American jurist, b Boston, grad Harvard Law School, 1873 At Harvard he was successively associate professor (1873), professor (1877), and dean (1895) A disciple of LANGDELL, Ames insisted that legal education should require the study of actual cases instead of abstract principles of law At the time of his death the case method was in general use in the United States Ames's careful historical scholarship is displayed in his *Lectures on Legal History* (1913) His writings in various fields of law (e g, torts and trusts) evince a clear grasp of the underlying jurisprudential principles

Ames, Joseph, 1689–1759, English bibliographer He compiled *Typographical Antiquities* (1749), a valuable list of English books printed before 1600

Ames, Joseph Sweetman, 1864–1943, American physicist, b Manchester, Vt, grad Johns Hopkins (A B, 1886, Ph D, 1890) He was associated with Johns Hopkins throughout his career, serving successively as professor of physics and director of the physical laboratory, as provost, as president (1929–35), and as president emeritus An authority on aerodynamics, he was a member of the National Advisory Committee for Aeronautics from 1917 to 1939 (chairman from 1927) He wrote several books in the field of physics

Ames, Nathaniel, 1708–64, American almanac maker, b Bridgewater, Mass His *Astronomical Diary and Almanack*, begun in 1725 and issued after c 1732 from Dedham, Mass, was highly popular and served as a model for Franklin's *Poor Richard's Almanack* and later almanacs After Ames's death it was continued to 1795 by his son Nathaniel, Jr The elder Ames was a physician and also after 1750 landlord of the Sun Tavern at Dedham He was the father of Fisher Ames See Samuel Briggs, ed, *The Essays, Humor, and Poems of Nathaniel Ames* (1891), G L Kittredge, *The Old Farmer and His Almanack* (1904).

Ames, Oakes, 1804–73, American manufacturer, railroad promoter, and politician, b Easton, Mass With his brother Oliver (1807–77) he managed the family's well-known shovel factory at Easton. The business expanded under demands from the expanding Midwest frontier and the Western gold diggings Active in founding the Republican party in Massachusetts, Ames served in Congress from 1863 to 1873 Interested in the construction of the Union Pacific Railroad, Ames secured control of the CRÉDIT MOBILIER after ousting T C DURANT, its founder The financial scandals of that company brought upon Ames in 1872 public disgrace and the censure of Congress.

Ames, Oakes, 1874–1950, American botanist, b North Easton, Mass, grad. Harvard (B A, 1898, M A, 1899), son of Oliver Ames He was associated with Harvard from 1899, becoming professor of botany in 1926, Arnold professor of botany in 1932, and research professor of botany in 1935 (emeritus from 1941) An authority on orchids, he was the author of many articles and of *Orchidaceae* (7 fascicles, 1905–22) and *Enumeration of the Orchids of the United States and Canada* (1924) He also wrote *Economic Annuals and Human Cultures* (1939)

Ames, Oliver, 1831–95, American capitalist, governor of Massachusetts, b North Easton, Mass, son of Oakes Ames (1804–73) He early entered the family's shovel factory at Easton, where he showed inventive skill, managerial capacity, and business acumen On his father's disgrace and death, he pledged his own income to satisfy his father's creditors, aided by railroad recovery and through capable management, he cleared the estate, made good his father's large philanthropic bequests (about $1,000,000), and amassed great wealth of his own He entered politics, was a state senator (1880-82) and lieutenant governor (1882–86), and as governor (1886–89) was noted for his businesslike methods, excellent appointments, and educational and financial reforms

Ames, Winthrop, 1871–1937, American theatrical producer, b North Easton, Mass, grad Harvard, 1895 He was director (1904–8) of the Castle Square Theatre, Boston, then he undertook directorship of the New Theatre, New York This ambitious project, following that of the New Theatre, Chicago (founded 1906), had for its object the encouragement of the American drama by experimentation and freedom from commercialism When the New Theatre in New York failed, Ames built (1912) the Little Theatre and, later, the Booth Theatre Before his retirement in 1932, he produced Gilbert and Sullivan operas with great success The Winthrop Ames Memorial Collection was donated by his wife to the New York Public Library in 1938

Ames, city (pop 12,555), central Iowa, on the Skunk river and N of Des Moines, laid out 1864, inc 1869 It has varied manufactures The campus of the IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS lies 2 mi from the town proper The headquarters of the state highway commission is at Ames

Amesbury, small market town, Wiltshire, England, N of Salisbury STONEHENGE, the chief megalithic monument in Britain, is near Amesbury is the Almesbury of Arthurian legend

Amesbury, town (pop 10,852), NE Mass, on the Merrimack, settled 1654, inc 1668 It produces metal goods and specialties Whittier lived here most of his life

amethyst (ăm'uthĭst) [Gr, =non-drunkenness], variety of QUARTZ, violet to purple in color, used as a gem It is the most highly valued of the semiprecious quartzes It is associated with a number of superstitions, being regarded as a love charm, as a potent influence in improving sleep, and as a protection against thieves and drunkenness Brazil, Uruguay, Ceylon, Siberia, and parts of North America are important sources of supply The so-called Oriental amethyst or purple sapphire is not a variety of quartz, but a very much harder and rarer stone—a variety of corundum

Amharic (ămhă'rĭk), standard language of Ethiopia It belongs to the Ethiopic group of Semitic languages See LANGUAGE (table)

Amherst, Jeffrey Amherst, Baron (ăm'urst), 1717–97, British army officer He served in the War of the Austrian Succession and in the early part of the Seven Years War In 1758 he was sent to America as a major general to lead the Louisburg campaign in the French and Indian War The capture (1758) of the French fortress gave Britain her first important victory in the war, and Amherst replaced James Abercromby as supreme commander in America. The next year (1759), pushing northward from Albany, he took Crown Point and Ticonderoga, but he arrived too late to help General Wolfe take Quebec He directed (1760) the capture of Montreal and returned (1763) to England In the American Revolution, Amherst refused to command British troops in New England, but in 1778 he became commander in chief of home defenses Amherst, for whom Amherst College is named, was created baron in 1776 and made a field marshal in 1796 See biography by J C Long (1933)

Amherst, town (pop 8,620), co seat of Cumberland co, N N S. It is a manufacturing and lumbering town, in a region noted for scenic beauty Near by are the ruins of Fort Lawrence and Fort Beauséjour, built in 1750–51 on the English-French boundary.

Amherst. 1 Town (pop 6,410), W Mass, NE of Northampton, settled 1703, inc 1775. Emily Dickinson was born and lived here all her life, and Noah Webster lived here, 1812–22 The town was named for Lord Jeffrey Amherst It is the seat of the Univ of Massachusetts (see MASSACHUSETTS, UNIVERSITY OF) and of **Amherst College** (nonsectarian, for men), opened in 1821, chartered in 1825 by Congregationalists A leading and well-endowed small college with noted alumni, it has fostered the missionary spirit, emphasized liberal arts education, and pioneered in the fields of survey courses, student government, and student-health programs Amherst has a natural science museum, it holds in trust the Folger Shakespeare Memorial Library, Washington, D C See C M Fuess, *Amherst* (1935) **2** Town (pop 1,174), S N H, SW of Manchester, inc 1760 It was granted by Massachusetts in 1728 to soldiers of King Philip's War and their heirs and was settled about five years later Horace Greeley and G W Kendall were born in the town Franklin Pierce and Jane Means Appleton were married in the Robert Means House (built 1785) **3** Village (pop 2,896), N Ohio, near Lake Erie NW of Elyria, in a sandstone quarry area, settled c 1810

Amherstburg, town (pop 2,853), S Ont, on the Detroit river where it enters Lake Erie Fort Malden was built here in 1796 The village contained about 100 houses when the War of 1812 began and was a British naval station as well as a garrison town At the close of the war it was held by the Americans Only 20 mi. S of Detroit, the town is now in the summer resort district

Amherst College see AMHERST, Mass

Ami (ä'mĭ) [Heb, =architect], servant of Solomon whose descendants came out of exile Ezra 2 57 Amon Neh 7 59

Amici, Giovanni Battista (jōvän'nē bät-tēs'ta ämē'chē), 1786?–1863, Italian astronomer, mathematician, and naturalist He became director of the observatory and professor of astronomy at Florence and published papers on various scientific subjects His most important work was in designing and improving physical and astronomical apparatus, especially the microscope and reflecting telescope

Amicis, Edmondo de see DE AMICIS, EDMONDO

Amida (ă'mĭdu, umī'du), ancient city, E Asia Minor, on the Tigris A Roman colony from A D 230, it was captured (4th cent) by Shapur II of Persia It is the modern DIYARBAKIR, Turkey.

Amidas, Philip see AMADAS, PHILIP

amide see AMMONIA

Amiel, Henri Frédéric (ärē' frādārēk' amyĕl'), 1821–81, Swiss critic, b Geneva His introspective *Journal intime* aroused interest on its incomplete, posthumous publication (1883, augmented 1923) It is the revelation of a personality seeking to explain and justify his lifelong inactivity There is an English translation (1936) by Van Wyck Brooks and Charles Van Wyck Brooks of the parts published so far

Amiens (ă'mēunz, -ĕnz", Fr ämyĕ'), city (pop 79,807), capital of Somme dept, N France, on the Somme river It has an old textile industry and was the capital of PICARDY An important Gallo-Roman town and an early episcopal see, Amiens was overrun and occupied by many invaders In the First World War it was taken and lost by the Germans in 1914, became an important British base, and was heavily bombarded in 1918 More than half of the city was destroyed in the Second World War The Cathedral of Notre Dame, damaged in the First World War, escaped harm in the second conflict It is the largest and one of the finest of French Gothic cathedrals (begun 1220) It is 470 ft long and has a nave 140 ft high, the transept dates from the 14th cent, the spire (370 ft high) and the large rose window were added in the 16th cent The sculptured façades are particularly beautiful Near the cathedral stands a statue of Peter the Hermit, who was born at Amiens

Amiens, Treaty of, 1802, peace treaty signed by France, Spain, and the Batavian Republic on the one hand and Great Britain on the other England was to give up most conquests made in the FRENCH REVOLUTIONARY WARS, and France was to evacuate Naples The peace lasted barely a year (see NAPOLEON I)

Aminadab (umĭn'u-) variant of AMMINADAB.

Amite (umēt') town (pop 2,499), parish seat of Tangipahoa (tăn'jĭpuhō") parish, SE La, NE of Baton Rouge, settled 1836, inc 1861 It is in an area producing strawberries, cotton, corn, and dairy products Gravel pits are near by

Amittai (ămĭt'ăī) [Heb, =loyal], father of Jonah. Jonah 1 1

Amityville (ăm'ĭtēvĭl), residential village (pop 5,058), on the south shore of Long Island, SE N Y, E of New York city, settled 1780, inc 1894. It is a summer resort with small manufactures

Ammah (ăm'u), hill near Gibeon. 2 Sam. 2 24.

Amman, Jost (yōst' ăm'ăn), 1539–91, Swiss engraver, glass painter, and painter In 1560 he established himself in Nuremberg, where he continued the tradition of the German Little Masters, producing over 540 spirited engravings on wood or copper His illustrations of the Bible are well known. The museum at Basel has *Man with a Rose*, his only known painting

Amman (ămăn'), city (pop c 12,000), N Trans-Jordan, the capital and royal residence It is on the Wadi Zerka (or Jabbok), NE of the Dead Sea Amman is the biblical Rabbah (răb'u) or Rabbath, capital of the Ammonites It was rebuilt and renamed Philadelphia by Ptolemy II Philadelphus Amman contains notable Roman ruins Deut 3 11, Joshua 13 25, 15 60, 2 Sam 11 1, 12 26–29, 17 27, 1 Chron. 20 1, Jer 49 2,3, Ezek 21 20, 25 5, Amos 1 14

Ammanati, Bartolomeo (bärtōlōmā'ō ăm-mănā'tē), 1511–92, Italian sculptor and architect He studied under Bandinelli in Florence and assisted Jacopo Sansovino in his work on the Library of St. Mark's, Venice Ammanati, whose style was much influenced by Michelangelo's Medici tombs, made a colossal statue of Hercules, at Padua In Rome he collaborated with Vignola and Vasari in their work at the villa of Pope Julius III His best work here was in the Ruspoli Palace and in the court of the Collegio Romano Returning to Florence in 1557, he became architect to Cosimo de' Medici He made the Santa Trinità bridge over the Arno and a number of fountains, among them the Neptune fountain for the Piazza della Signoria He built the court façade of Pitti Palace, the Guigni Palace, and a cloister of Santo Spirito The poet Laura Battiferri was his wife

Ammann, Othmar Hermann (ōt'mär, ō'mŏn), 1879–, American civil engineer, b Switzerland, grad Federal Polytechnic Institute, Zurich, 1902 He came to the United States in 1904 and was naturalized in 1924 He served (1925–40) with the Port of New York Authority and was its director of engineers (1937–40) An authority on bridges, he participated in either the designing or the construction of Hell Gate, George Washington, Triborough, and Bronx-Whitestone bridges in New York city and of San Francisco's Golden Gate Bridge

Ammers-Küller, Jo van (yō' văn ăm'urs-kül'ûr), 1884–, Dutch novelist and short-story writer Her works, nearly always tendentious, are largely feministic Among her novels which have been translated into English are *The Rebel Generation* (Eng tr, 1928), *The House of Joy* (Eng tr 1929) and its sequel, *Jenny Heysten's Career* (Eng tr, 1930); *No Surrender* (Eng tr, 1931), sequel to *The Rebel Generation;* and the historical novel *The House of Taselnick* (Eng tr, 1938)

ammeter: see GALVANOMETER.

Ammi (ăm'ī) [Heb, =my people], figurative name of Israel after reconciliation with God Hosea 2 1 Cf LO-AMMI

Ammianus Marcellinus (ămēā'nŭs märsĕlī'nŭs), c 330–c 400, Latin historian, b Antioch After retiring from a successful military career, he wrote a history of the Roman Empire as a sequel to that of Tacitus, his model The history, in 31 books, covered the years from A D 96 to 378, only Books XIV–XXXI, covering the years A D 353–78, survive Though written in an extreme rhetorical style, it is a reliable and impartial account A pagan and an admirer of Julian the Apostate, Ammianus was not prejudiced against Christianity

Ammiel (ămī'ĕl) [Heb, =people of God] 1 Spy Num 13 12 2 Father of MACHIR 2 3 Porter of the Temple 1 Chron 26 5 4 See ELIAM 1

Ammihud (ămī'hŭd, ŭmī'hŭd) [Heb, =people of Judah] 1 Ancestor of Joshua Num 1 10, 2 18, 7 48,53, 10 22, 1 Chron 7 26 2 Simeonite Num 34 20 3 Naphtalite Num 34 28 4 Judahite 1 Chron 9 4 5 Father of a king of Geshur 2 Sam 13 37

Amminadab (ămĭn'ă-)[Heb, =my people is princely] 1 Aaron's father-in-law Ex 6 23; Num 1 7, 2 3, 7 12, 10 14, Ruth 4 19,20, 1 Chron 2 10 **Amminadab' Mat** 1 4, **Luke** 3 33 2 Head of a Levitical family, 1 Chron 15 10–12 3 The same as IZHAR

Amminadib (ămĭn'ădĭb, ŭmĭn'ădĭb), word of uncertain significance Cant 6 12

Ammishaddai (ămĭshăd'ī), [Heb, =people of the Almighty], Danite, father of AHIEZER 1. Num 1 12, 2 25, 7 66,71, 10 25

Ammizabad (ŭmĭz'ubăd) [Heb, =my people have given], son of BENAIAH 1 1 Chron 27 6

Ammon (ăm'ŏn), in the Bible, people living E of the Dead Sea A marauding, nomadic tribe, they had few large settlements With seldom a peaceful interlude, they were hostile to the Hebrews Their eponymous ancestor was Lot's son Gen 19.38, Deut 2 19,20,37, 23 3,4, Judges 3 13, 1 Sam 11, 2 Sam 10–12, 2 Chron 20; Neh 2.10; 4 7, Jer 49 1–6

Ammon, Egyptian god· see AMON.

ammonia [from *sal ammoniac*, said to have been made first near the temple of Jupiter Ammon in Egypt], a compound of nitrogen and hydrogen, each molecule containing one atom of nitrogen to three of hydrogen It is a colorless gas at ordinary temperatures, with a characteristic penetrating odor, and is slightly more than one half as heavy as air. The "ammonia" sold for household use is an aqueous solution, the gas being extremely soluble in water, one volume of water dissolving about 1,200 volumes of ammonia at 0° C. The solution exhibits basic properties, since only a part of the gas goes into solution and the rest reacts with the water to form ammonium hydroxide To this the cleansing action is due Ammonia gas liquefies at –33 4° C and solidifies at –78° C under normal pressure (760 mm) At ordinary temperatures, it is easily liquefied by added pressure For this reason and because a relatively large amount of heat is absorbed when the liquid reverts again to the gas, ammonia is used extensively in REFRIGERATION It reacts with acids to form salts with nitric acid it yields ammonium nitrate, used in making explosives, with hydrochloric acid, ammonium chloride or SAL AMMONIAC, and with sulphuric acid, ammonium sulphate, which is used in fertilizers Ammonia is important commercially It is employed in the preparation of nitric acid in the OSTWALD PROCESS or oxidation process and in the preparation of soda by the SOLVAY PROCESS It is used also in medicine. Ammonia is prepared in several ways: as a by-product in the destructive distillation of coal, synthetically, by the HABER PROCESS; and by the cyanamide process, in which calcium carbide is treated with nitrogen and the resulting product with water It is prepared in the laboratory by heating an ammonium salt with a strong base Originally, ammonia was obtained by the destructive distillation of the horns and hoofs of animals, and the resulting solution of the gas was known consequently as spirits of hartshorn The compound occurs in nature in small quantities in the air and is among the products of the decomposition of animal and vegetable matter It occurs also in animal excretions When an atom of hydrogen is added to the ammonia molecule, the ammonium radical is formed, consisting of one atom of nitrogen and four of hydrogen. It does not appear free, but only in compounds In solution it forms a positively charged ion It behaves chemically as a monovalent metal, its compounds resembling those of the more active monovalent metals, such as potassium and sodium Certain compounds, as amides and amines, are considered derivatives of ammonia Acetamide, benzamide, and formamide are examples of amides. Amides are formed by the replacement of one or more of the hydrogen atoms of the ammonia molecule by an equal number of the characteristic radical of an organic acid, such as the acetyl radical of acetic acid or the benzoyl radical of benzoic acid. Amines can be derived from ammonia by replacing one or more of the hydrogen atoms in the ammonia molecule with a corresponding number of alkyl groups (each a chain of carbon and hydrogen atoms) or of aryl groups (each a ring of carbon and hydrogen atoms). The aliphatic amines are related to the fats and fatty acids Both amides and amines are classified as primary, secondary, or tertiary depending upon the number of hydrogen atoms replaced in the ammonia molecule

ammoniac or **gum ammonia** (ŭmō'nēăk'), yellowish substance with a sickening, bitter taste, obtained in the milky exudence from the injured stem of a plant (*Dorema ammoniacum*) found in Persia, India, and parts of W Asia It is a gum resin soluble in alcohol, benzol, carbon disulphide, and ether In industry it is used in the manufacture of porcelain cements, and in medicine as an expectorant When gum ammoniac is distilled it yields a liquid, oil of ammoniac

ammonite (ăm'ŭnīt), one of a type of extinct marine molluska, related to the nautilus and resembling it in having an elaborately coiled and chambered shell The type included numerous species, which were widely distributed during the Mesozoic era.

amnesia [Gr, =forgetfulness], condition characterized by loss of memory for long or short intervals of time It may be caused by injury, shock, senility, severe illness, or mental disease In some cases, memory of events prior to the illness is lost, in others, events following the illness are forgotten One form of the condition known as tropic amnesia or coast memory affects white men on the west coast of Africa, this condition is thought to be hysteric in origin. APHASIA of the amnesic variety is caused by an organic brain condition and is not to be confused with other forms of amnesia. To cure amnesia, attempts are made to establish associations with the past by suggestion, and HYPNOTISM is sometimes employed

amnesty (ăm'nĭstē), in law, exemption from prosecution for crime Amnesties are usually extended during a period of prolonged disorder or insurrection The criminals are offered a promise of immunity from prosecution if they will abandon their unlawful activities. After a revolution or civil war the victorious side will often extend amnesty to the losers, e g, the United States granted a qualified amnesty to the Confederate forces after the Civil War An amnesty is distinguished from a PARDON, which treats the crime as a nullity.

Amnon [Heb, =faithful]. 1 David's eldest son He ravished his half sister Tamar and was killed for it by her brother Absalom. 2 Sam. 3.2; 13. 2 Judahite. 1 Chron. 4.20.

amoeba (ŭmē'bŭ) [Gr., =change], member of a genus (*Amoeba*) of PROTOZOA A common species, *A. proteus*, found in fresh-water ponds and streams, is about 1/100 in. long The amoeba is a single CELL. The cytoplasm consists of an outer clear layer, called ectoplasm, surrounding an inner granular mass, called endoplasm The nucleus is oval Pseudopods or false feet form as outpushings of the ectoplasm and into them the endoplasm flows In this way locomotion in the direction of the pseudopod is achieved Pseudopods are formed also to obtain food (minute animals and plants) from the water The pseudopods engulf the food, which is then enclosed in a bubblelike vacuole and circulated through the protoplasm until digestion is completed. Theories which attempt to account for the formation of pseudopods include those based on changes in surface tension and in viscosity. Digestive enzymes are secreted by the cytoplasm into the food vacuoles as they circulate through the cell The products of digestion are assimilated and solid wastes are egested through any part of the surface Oxygen in the water diffuses into the cell and carbon dioxide is eliminated from the cell directly through its surface The contractile vacuole, which alternately fills and bursts, expels water and possibly other substances. The amoeba moves away from intense light, from heat, and from chemicals. It moves toward food Reproduction is usually by binary fission (splitting), with the nucleus dividing by mitosis Under unfavorable conditions some amoebae undergo division into spores inside a hard cyst wall, from which the spores emerge when conditions are favorable Members of a closely related genus, *Pelomyxa* (or *Chaos*), are multinucleate protozoa visible to the naked eye, some of them reaching a diameter of 8 mm.

Amok (ā'–) [Heb., =deep], postexilic Jewish family. Neh 12 7,20

amole· see SOAP PLANT

Amon (ā'mŏn) 1 Died c 641 B C, king of Judah (c 643–c 641 B.C.), son and successor of Manasseh He was inattentive to the worship of God, and the biblical accounts denounce him strongly Jeremiah was his contemporary Amon was murdered, and Josiah succeeded him 2 Kings 21 19–26, 2 Chron 33 20–25 2 Ahab's governor of Samaria 1 Kings 22 26, 2 Chron 18 25 3 See AMI.

Amon (ā'mŭn, ă'–) or **Ammon** (ă'mŭn), ancient Egyptian deity, originally the local god of Thebes He was represented as a ram, as a man with a ram's head, or as a perfect man, on whose head were the two high feathers emblematic of royalty and in whose hands were a scepter and a handled cross The divine triad of Thebes consisted of Amon with his wife Mut [the mother] and his son Chumsu. His principal temple stood in the oasis of Siwa in the Libyan desert, 12 days' journey from Memphis In his solar character Amon was allied with the sun-god Amen Re He was identified by the Greeks with Zeus and by the Romans with Jupiter The wealth and power of Amon rendered his high priest a figure of importance in Egyptian politics, from the XII dynasty on. The oracle at Siwa was famous among the Greeks See also EGYPTIAN RELIGION.

amontillado (ŭmŏn"tĭlä'dō), dry SHERRY noted for its delicate bouquet, resembling the wine of Montilla, from which it derives its name A blend of pale, dry sherries of the *palma* type, it assumes in aging a darker tint.

Amontons, Guillaume (gēyōm' ămōtō'), 1663–1705, French physicist. He is known for his work on friction and on the relationship of temperature and pressure and also as an inventor of instruments such as the hygrometer.

Amor: see CUPID AND EROS.

Amorites (ăm'ŭrīts), in the Bible, aboriginal people of Canaan There is also evidence of them in Babylonia At the time of Joshua they were living both E and W of the Dead Sea, and Sihon and Og are named as kings. Gen. 10 16, 14.7, 15 16, Num. 13 29, 21.13,21–32; Deut 1 4–7, 4.47,48, Joshua 5.1; 10 6

amortization, reduction, liquidation, or satisfaction of a debt or the sum used for this purpose. The term is commonly used in ascertaining the investment value of securities. Thus, if a security is bought at more than its face value, a part of the premium is periodically charged off so as to bring the value of the security to par at maturity; or if the security is bought at less than its face value, the discount is similarly charged off. Another application of amortization is treating dividends of investments having limited duration, such as mine stock, as both interest on capital and the return of the capital, designating part of the interest as return of capital and reinvesting this part at a set rate. The term necessary for the stock to return its original cost can then be figured Paying off a mortgage by installments or paying off this or any other debt by a SINKING FUND is amortization. The term has been used also of the alienation of lands to a corporation, especially to an ecclesiastical corporation. Amortization by paying off a certain number of bonds each year is practiced by

public corporations; national governments of limited credit and private corporations commonly amortise by sinking funds Nations of the best credit usually refund debts by the issuance of new bonds. The satisfying of a debt by a single payment may also be termed amortization See H A Finney, *Principles of Accounting* (1924).

Amory (ā'mûrē), city (pop 3,727), NE Miss , N of Columbus and near the Tombigbee, founded 1887 It is a railroad, shipping, and trade center for a cotton and dairy area

Amos (ā'mus), book of the Old Testament, third of the books of the Minor Prophets The prophet was a shepherd of Tekoa in S Palestine, who preached in the first half of the 8th cent. B C in the northern kingdom of Israel under Jeroboam II, especially against hypocritical worship, oppression of the poor, and immorality The book falls into three parts God's judgment on various Gentile nations, finally on Israel (1 2), three sermons on the doom of Israel (3–6); and five visions of destruction (7–9), of which the last promises redemption The book contains powerful passages The name of another Amos occurs in the genealogy of Luke 3 25 For bibliography, see OLD TESTAMENT

Amos, town (pop. 2,862), W Que , on the east bank of the Harricanaw river and NE of North Bay, Ont Incorporated and named in 1914, it is a center of the Quebec mining industry

Amoskeag Falls, see MANCHESTER, N H

Amoy (umoi'). Mandarin *Hsia-men*, city (pop 158,271), S Fukien prov., China, a port on Amoy Island at the mouth of the Lung river It was captured (1841) by the British in the OPIUM WAR and became a TREATY PORT in 1842 Despite its excellent harbor, trade is limited, largely because communications in the mountainous hinterland are poor Tea grown in the region is the chief export, and the locally manufactured paper, macaroni, and wine are distributed to other parts of China Imports greatly exceed exports, the deficit being made up by money sent back from emigrants abroad to their relatives There is a large university in Amoy It was captured by the Japanese in May, 1938, and held till the end of the Second World War in 1945 The Communists took it in 1949

Amoz (ā'mŏz), father of the prophet Isaiah Isa 1 1

Ampelius, Lucius (ămpē'lēus), fl at some time between 100 and 400, Roman author His *Liber memorialis* is a compendium of historical, geographical, and mythological miscellanea It includes reference to the sculptures of Pergamum

ampelopsis (ăm"plŏp'-) [from Gr ,=looking like a vine], botanically, name for woody vines of the genus *Ampelopsis*, but from long association also used in horticultural practice for the VIRGINIA CREEPER, BOSTON IVY, and others of related genera Species of the genus *Ampelopsis*, including the pepper vine of the Southern states, have small greenish flowers, tendrils without disk tips, and showy berries of various colors The vines are chiefly cultivated for wall and arbor coverings, but a few grow wild

Ampère, André Marie (ăm'pĕr, ädrā' marē' äpĕr'), 1775–1836, French physicist, mathematician, and natural philosopher He was professor of physics at the Ecole polytechnique, Paris, and later at the Collège de France Known for his contributions to electrodynamics, including the formulating of Ampère's law, he confirmed and amplified the work of Oersted on the relationship of electricity and magnetism and invented the astatic needle The ampere was named for him His writings include *Observations électro-dynamiques* (1822) and *Essai sur la philosophie des sciences* (1834)

ampere [for A M Ampère], electrical unit of current strength and unit of measurement of rate of flow of an electric current The intensity of the current (in amperes) may be determined (according to OHM'S LAW) by dividing the electromotive force (volts) by the resistance (ohms) The international ampere is defined (electrochemically) as the unvarying electric current which, when passed through an aqueous solution of silver nitrate, causes 0.001118 g of silver to be deposited per second A current of one-ampere strength transfers, therefore, a unit quantity of electricity per second, i e , one coulomb per second

Amphiaraüs (ăm"fēurā'ŭs), in Greek legend, prophet; husband of ERIPHYLE and brother-in-law of Adrastus. He sailed with the Argonauts and joined the Calydonian hunt. Though he foresaw the disaster of the expedition of the SEVEN AGAINST THEBES, Eriphyle insisted that he should go, and he had to accede because he and Adrastus had agreed that in case of difference between them Eriphyle should decide His sons were ALCMAEON and AMPHILOCHUS.

amphibian, (ămfi'bēun), a cold-blooded vertebrate animal of the class Amphibia, which is intermediate between the fish and the reptiles. Animals of this group characteristically undergo a metamorphosis from an aquatic to a partially terrestrial form. See FROG, NEWT, SALAMANDER, TOAD

amphibious warfare (ămfi'bēus), the combination of land and sea forces to take or defend a military objective. The general strategy is very ancient and was extensively employed by the Greeks in their warfare, e g , in the Athenian attack in Sicily in 415 B C. The term is, however, of recent coinage It is sometimes applied to the joint operations of Allied army and naval forces in the disastrous Gallipoli campaign (1915) of the First World War In the Second World War *amphibious warfare* became a staple form of fighting Though the German capture of Crete in 1940 was not a typical amphibious operation, it did emphasize the third element important in sea-land fighting in the Second World War--air power When Japan entered the Second World War on a large scale in Dec , 1941, combined operations were necessary for the Japanese to capture their objectives, particularly those on islands such as the Philippines and New Guinea These operations were not, however, typical of the problems of amphibious warfare, since in the Japanese landings there was little opposition The same was true of the Allied landings in North Africa in Nov , 1942 Later campaigns, however, were to a large extent dependent upon the development of special vessels built to be seaworthy and yet capable of allowing tanks or foot soldiers to emerge without difficulty into shallow water for landing These were vital in the "island hopping" by which U S marines, soldiers, and sailors took the regions of the Pacific from the Japanese conquerors a group of islands at a time The typical pattern was heavy and continued air bombardment of Japanese defenses, followed by a landing from the landing craft or landing ships with complete equipment, the landing forces were supported in the early stages by naval guns until land artillery could come into action By this method the islands were reconquered The same basic strategy was used in the landing on Sicily in 1943—an experience that helped to spur the building of special ships suited for landing tanks, supplies, and men The most spectacular example of amphibious warfare was the invasion of Europe by the Allies from England on June 6, 1944 This action was a prime example of the combined movements of naval craft, armed land forces, and aircraft (used for offense, protection of other forces, and transport) The landing of U S forces in the Philippines in Oct , 1944, was marked especially by another special aspect of amphibious war, the use of the aircraft carrier, the landing troops had an air umbrella supplied by 18 carriers The culminating amphibious actions of the war were the landings on Iwo Jima in Feb , 1945, and Okinawa in April, 1945 The need for amphibious operations against the Japanese home islands was removed when Japan surrendered before the planned operations were begun

amphictyony (ămfĭk'tēŏnē, -ō"nē, -ūnē"), in ancient Greece, a league connected with maintaining a temple or shrine There were a number of these, but by far the most important was the Great Amphictyony or Delphic Amphictyony, a league originally of 12 tribes, which had meetings in the spring at the temple of Anthela near Thermopylae and in the autumn at Delphi The Amphictyonic Council passed legislation regarding religious matters and had power to declare a sacred war against an offender Each tribe had two votes By the 6th cent the religious organization had begun to have political influence The greater city-states by using pressure on the lesser got control of more tribal votes and were able to control laws and policy The significance of the Amphictyonic Council was shown by Philip II of Macedon, who after managing to get on the council by securing the votes of the Phocians, used sacred wars as a pretext for furthering his conquests in Greece This one large unifying organization, therefore, in the end had no real unifying power in divided Greece The Great Amphictyony continued in existence (but with no power) until late in the Roman Empire

Amphilochus (ămfi'lukŭs), in Greek legend, son of Amphiaraus and ERIPHYLE and brother of ALCMAEON He was one of the EPIGONI and fought in the Trojan War

Amphion (ăm'fēun), in Greek legend, son of Antiope and ZEUS, husband of NIOBE He and his twin brother Zethus took Thebes from their kinsman Lycus and killed Lycus and his wife, DIRCE, in revenge for their cruelty to Antiope The brothers built the walls of Thebes with stones which were put together by the music of Amphion's lyre

Amphipolis (ămfi'pulĭs), ancient city of Macedonia, on the Strymon (Struma) river near the sea and NE of later Salonica The place was known as Ennea Hodoi [nine ways], before it was settled and was of interest because of the gold and silver and timber of Mt Pangaeus to which it gave access Athenian colonists were driven out (c 464 B C.) by Thracians, but a colony was established in 437 B C This was captured by Sparta, and Brasidas and Cleon were both killed in a battle here in 422 After it was returned to Athens in 421, it actually had virtual independence until captured (357) by Philip II of Macedon His retention of Amphipolis was a major cause of the war with Athens The kings of Macedon held it until they were conquered by Rome Paul, Silas, and Timothy passed through Amphipolis Acts 17.1

amphitheater [Gr], open structure serving for the exhibition of gladiatorial contests, struggles of wild beasts, sham sea battles, and similar spectacles There is no Greek prototype of amphitheaters, which were primarily Roman and were built in many cities throughout the empire More or less well-preserved examples are in Rome (see COLOSSEUM), Verona, and Capua in Italy, at Nîmes and Arles in France, at Cirencester in England, and in Sicily, Greece, and North Africa The typical amphitheater was elliptical in shape, with seats, supported on vaults of masonry, rising in many tiers around an arena at the center, there were corridors and stairs assuring the easy circulation of great throngs The arena itself was usually built over the quarters for gladiators, for wild animals, and for storage Until the erection of the Colosseum (A D 80), practically all amphitheaters were of wood, the notable exception being that of stone built at Pompeii c 70 B C The word *amphitheater* is now applied to modern structures used for concerts and athletic displays and having little similarity to their ancient prototypes Examples are at Wembley near London and in New York (the old and the new Madison Square Garden)

Amphitrite (ămfĭtrī'tē), in Greek religion, queen of the sea, wife of Poseidon and mother of Triton She was a Nereid.

Amphitryon (ămfĭ'trēun, -ŏn"), in Greek legend, son of Alcaeus and husband of Alcmene After accidentally killing Alcmene's father he went into exile but later warred on the hereditary enemies of her family While he was off fighting, Zeus took the opportunity to visit Alcmene in the form of Amphitryon She bore HERACLES to Zeus and Iphicles to Amphitryon, who accepted both as his sons Amphitryon became the type of the wronged husband Plautus burlesqued this legend in his *Amphitruo*, and the theme was later a favorite with writers of French comedy and farce (notable among them Molière)

amphora (ăm'furu), large, two-handled vessel of earthenware, used by the Greeks and Romans to hold liquids, as a standard unit of capacity, and as an ornament The body, commonly ovoid and with a narrow neck, was mounted on a base or ended in a point to be inserted into the ground Two vertical handles extended usually from shoulder to orifice Decorated amphorae were presented as prizes to victors in the Panathenaic games

Amphias (ămp'lēus), Christian in Rome Rom 16 8

amplification, radio: see TUBE, VACUUM

ampulla (ămpŭl'ù), small glass or earthenware bottles used by the ancient Romans for holding perfumes and oils and for serving wine. They were usually globular in shape, narrow-necked, and equipped with one or two handles The name is applied also to flasks carried by travelers in the Middle Ages, to containers holding the unguent for coronation ceremonies, and, in church ritual, to vessels containing oil, water, or wine The famous *sainte ampoule*, long used at Rheims in the coronation of French monarchs, was destroyed in the Revolution

Amqui (ăm'kwē), town (pop 1,594), E Que , between Matapedia and Mont Joli at the base of the Gaspé Peninsula

Amram [Heb ,=my people is exalted] **1** Moses' father, ancestor of a Levitical family Ex 6 18,20, Num 3 19,27, 26 58,59, 1 Chron 6 2,3,18; 23 12, 13, 24 20, 26 23 **2** See HEMDAN **3** Jew who had married a foreign wife Ezra 10 34

Amram ben Sheschna (shĕsh'nā) or **Amram Gaon** (gā'ŏn), d 875, Hebrew scholar He is chiefly known as the author of the *Siddur Rab Amram* (prayer book), a compilation of the order of prayers, with their context for the whole year and the liturgical laws governing the ceremonial observances of all the holidays This book is the basis for the modern orthodox Jewish religious rites

Amraphel (ăm'rufĕl, ămrā'fĭl) see CHEDORLAOMER and HAMMURABI

Amritsar (ămrĭt'sŭr), city (pop 391,010), NW Punjab state, India Established in 1577 by Ram Das, the fourth guru [Hindustani,=teacher], it is the center of the Sikh religion The Golden Temple (refurbished 1802) is especially sacred Trade in the products of N India and the manufacture of silks, carpets, and fabrics of goat hair are the principal economic activities There is a branch of Punjab Univ Here in an open-air meeting place, the Jalianwala Bagh, on April 13, 1919, hundreds of Gandhi's followers were killed and thousands wounded, when they were fired upon by soldiers under British control

Amru-l-Kais (ăm'rōōl-kīs'), 6th cent , Arabian poet His verse is, like all the poetry of the pre-Islamic period, intensely subjective and formally perfect He was esteemed by Arabs as the great model for erotic poetry He probably went to Constantinople and lived for many years in high favor with the imperial court. He is represented in the MUALLAQAT

Amsdorf, Nikolaus von (nē'kōlous fŭn ăms'dôrf), 1483–1565, German Protestant reformer. He became a devoted supporter of Martin Luther Elector John Frederick I of Saxony appointed Amsdorf bishop of Naumberg in 1542, but after the

elector was captured by Emperor Charles V, the office was withdrawn (1547) A zealous defender of Luther's doctrines, Amsdorf attacked all who deviated from them in the slightest, including Melanchthon He took part in the founding of a new university at Jena and superintended the Jena edition of the works of Luther

Amsler, Samuel (sa'mōōzĕl ämz'lûr), 1791–1849, Swiss engraver He was a friend of Overbeck and Thorvaldsen in Rome Most of his excellent engravings are reproductions of their work and that of Raphael

Amsterdam (ăm'sturdăm", Dutch amsturdäm'), municipality (pop 798,358), and city, constitutional capital and largest city of the Netherlands, in North Holland A major port, it is also the seat of one of the world's chief stock exchanges, a center of the diamond-cutting industry, and one of the great commercial, intellectual, and artistic capitals of Europe It is mainly on the south bank of the IJ, formerly written Y (both ī), the IJ is the mouth of the short Amstel river (for which Amsterdam is named) on the Zuider Zee Amsterdam is connected with the North Sea by the North Sea Canal, which accommodates the largest ocean-going vessels, and by the older North Holland Canal The Merwede Canal connects with the Rhine delta and thus with industrial NW Germany, with which there is considerable transit trade Because of the soft ground, Amsterdam is built on wooden piles and is cut by numerous concentric and radial canals flanked by streets and crossed by some 400 bridges The old and picturesque houses along the canals, once patrician homes, now are mostly offices and warehouses The main streets are the Dam, on which stand the 15th-century Nieuwe Kerk [new church] and the 17th-century Dam Palace (formerly the city hall, since 1808 a royal palace), the Damrak, with the stock exchange, and the Kalverstraat and Leidsche-straat, which are the chief shopping centers Outstanding buildings are the Oude Kerk [old church], built c 1300, the weighhouse (15th cent), the city hall (16th cent), and the Begunage (Dutch *Begynenhof*), of the 17th cent Originating in the 13th cent, Amsterdam was chartered in 1300 and joined the Hanseatic League in 1369 Having accepted the Reformation, the people of Amsterdam in 1578 expelled their pro-Spanish magistrates and joined the rebellious Netherland provinces The commercial ruin of Antwerp and Ghent and a large influx of refugees from all nations (notably of Flemish merchants, of Jewish diamond cutters from Portugal and Spain, and of French Huguenots) contributed to the rapid growth of Amsterdam after the late 16th cent The Peace of Westphalia (1648), by closing the Scheldt (Escaut) to navigation, further stimulated the prosperity of Amsterdam at the expense of the Spanish Netherlands Taken (1795) by the French, Amsterdam became the capital of the kingdom of the Netherlands under Louis Bonaparte The constitution of 1814 made it the capital of the Netherlands However, The Hague remains the seat of the government and of the sovereigns, who are merely sworn in at Amsterdam Occupied in the Second World War by German troops from 1940 to 1945, Amsterdam suffered severe hardship and (after the premature Dutch rising late in 1944) even famine Of the Jews (about 10 percent of the pre-war population) only a few survived The birthplace of Spinoza and the residence of Rembrandt, Amsterdam reached its apex as a center of thought and art in the 17th cent, it has since then maintained its high reputation Rembrandt and the other Dutch masters are best represented in the celebrated Rijks Museum, founded by Louis Bonaparte Among other museums are the municipal museum and Rembrandt's house The Univ of Amsterdam was founded as an academy in 1632 and reorganized in 1876

Amsterdam. **1** Industrial city (pop 33,329), E central N Y, on the Mohawk and NW of Albany, inc 1885 Its industries include the making of rugs, carpets (begun about a century ago), and brooms Fort Johnson, home of Sir William Johnson, is near by **2** Village (pop 1,177), E Ohio, SE of Carrollton, settled 1830, inc 1904

Amu Darya (ä'mōō dar'yu, amōō' daryä), river, c 1,450 mi long, rising in central Asia, in the Hindu Kush It flows generally northwest, marking much of the boundary between the USSR and Afghanistan and then between the Turkmen SSR and the Uzbek SSR It enters the Aral Sea through a delta 90 mi long The Amu Darya is rich in fish, and it provides much water for irrigation in the arid regions of the USSR and portions of Afghanistan In ancient times it was called the Oxus and figured importantly in the history of Persia and in the campaigns of Alexander the Great

amulet (ă'myōōlĭt), object worn as a charm to ward off evil influences Reliance on such protective agencies, related to fetishism and to primitive medical practices, is found in many cultures Egyptians wore a multiplicity of amulets in both life and death, the Hebrews wore phylacteries with words from Holy Writ In the 4th cent Christians wore crosses and amulets enclosing sacred objects and significant passages of Scripture. Amulets are of innumerable materials and forms In many cultures the teeth, claws, and other parts of animals are supposed to communicate their properties to the wearer Materials often said to have mysterious qualities include diamond, amethyst, bloodstone, agate, coral, and amber and certain metals and plants Symbolical shapes and figures, such as the wheel of the sun-god and the swastika, are very common in amulets Much modern jewelry originated as forms of the amulet, and much decorative art has employed magical designs as motifs Walls and doorways are favorite spots for protective devices Examples of magic formulas used in amulets are ABRACADABRA and the MAGIC SQUARE The Christian use of amulets is explained on the principle that they are pious reminders or that by putting on one the Christian puts himself under protection of God or a saint After the cross the most popular Christian amulet is a medal worn about the neck, typically of silver and bearing the image of a saint, e g, Our Lady, St Theresa of Lisieux, or St Christopher (in automobiles)

Amundsen, Roald (rō'ĭl ä'mōonsûn), 1872–1928, Norwegian polar explorer He served (1897–99) as first mate on the *Belgica* (under the Belgian Adrien de Gerlache) in an expedition to the Antarctic, and he commanded the *Gjoa* in the arctic regions in the first negotiation of the NORTHWEST PASSAGE (1903–6) His account appeared in English as *Amundsen's North West Passage* (1908) He then purchased Fridtjof Nansen's *Fram* and prepared to drift toward the North Pole and then finish the journey by sledge The news that Robert E Peary had anticipated him in reaching the North Pole caused Amundsen to turn his eyes south In striving for the South Pole he was successful, reaching it on Dec 14, 1911, after a dash by dog team and skis from the Bay of Whales (an inlet of Ross Sea) He arrived there just 35 days before Robert F SCOTT This story he told in *The South Pole* (Eng tr, 1913) He had added much to the knowledge of Antarctica In 1918, back in the arctic regions, he set out to negotiate the Northeast Passage in the *Maud* After two winters he arrived at Nome, the first after N A E Nordenskjold to sail along the whole northern coast of Europe and Asia Amundsen then turned to air exploration He and Lincoln ELLSWORTH in 1925 failed to complete a flight across the North Pole, but the next year in the *Norge*, built and piloted by Umberto NOBILE, they succeeded in flying over the pole and the hitherto unexplored regions of the Arctic Ocean N of Alaska A bitter controversy followed with Nobile as to the credit for the success Yet in 1928 when Nobile crashed in the *Italia*, Amundsen set out on a rescue attempt and lost his life The story of the ventures with Ellsworth written by the two of them appear in *Our Polar Flight* (1925) and *The First Crossing of the Polar Sea* (1927) See the autobiographical *My Life as an Explorer* (Eng tr., 1927), biography by Bellamy Partridge (1929)

Amur (ämōōr'), Chinese *Hei-lung-kiang* (hā'-lōōng'-jĕäng'), river, 1,830 mi long, formed by the junction of the SHILKA and ARGUN rivers at the Russo-Manchurian border in NE Asia Following the border for 1,180 mi, it flows generally SE past Blagoveshchensk and Khabarovsk, near where it leaves the border and flows NE through the Maritime Territory into the Tatar Strait opposite the island of Sakhalin Its estuary is 10 mi wide The Amur, which is navigable for its entire length during the ice-free months (May-Nov), is an important artery for the transport of grain and lumber and is rich in fish The chief tributaries originating in Siberia are the Zeya, Bureya, and Amgun, those originating in Manchuria are the Sungari and Ussuri

Amurath. see MURAD

amylase see DIASTASE

Amyot, Jacques (zhak' amyō'), 1513–93, French humanist, translator of Heliodorus' *Aethiopica* (1547), of Longus' *Daphnis and Chloe* (1559), and particularly of Plutarch's *Lives* (1559)

Amyot or **Amiot, Joseph** (zhōzĕf' amyō'), 1718–1794?, French Roman Catholic missionary in China, a Jesuit He wrote *Mémoires concernant l'histoire, les sciences et les usages des chinois* (15 vols, 1776–89) and was one of the first Europeans to make Chinese literature, antiquities, and customs known to Europe He was an early authority on the Manchu language

Amyraut, Moïse (mōēz' amĕrō'), or **Moses Amyraldus** (ämĭrăl'dus), 1596–1664, French Protestant theologian As pastor of Saumur he won a reputation as theologian and orator, and he was appointed (1631) to present to Louis XIII the protest of the synod against infractions of the Edict of Nantes He became professor of theology at Saumur and wrote extensively on theological subjects

Amzi (ăm'zī) [Heb, =strong] **1** Levite 1 Chron 6 46 **2** One of a priestly family Neh 11 12

Anab (ā'năb) [Heb, =grape town], hill town, S Palestine, 10 mi SSW of Hebron. It is now in ruins Joshua 11 21, 15 50

Anabaptists (ăn"ŭbăp'-) [from Gr, =rebaptizers], name applied in scorn to certain Christian sects holding that infant baptism is not authorized in Scripture and that baptism should be administered to believers only A convert, if baptized in infancy, must be rebaptized Anabaptists were prominent in Central Europe in the Reformation, forming the radical wing of the Reformers, their principal centers were in Germany, Switzerland, Moravia, and the Netherlands They are to be distinguished from the BAPTISTS, primarily an English group. The Anabaptists were widely persecuted because of their advocacy of the separation of Church and state and of far-reaching social and economic reforms They were never united, and there was disparity of doctrine and aim among the various groups, but certain principles they held in common They believed in the absolute brotherhood of Christ, in the direct accountability of each soul to God, and in peace in its widest sense They refused to bear arms or to take oaths and taught that obedience to the state was evil if it conflicted with conscience Martin Luther sought to suppress the Anabaptists as dangerous, they were dissatisfied with what they considered the halfway measures of the Reformation Thomas MÜNZER, a Saxon pastor who helped to incite the Peasants' War, gained a strong following among them by his socialistic teaching Melchior Hoffman, an Anabaptist leader in the Rhine district, proclaimed the imminent return of Christ In Münster c.1533 some of the Anabaptists had gathered to set up a theocracy, first under the direction of Bernard Rothmann, a preacher, and Jan Matthys or Johann Matthyszoon, a fanatical Dutch baker, then under Bernhard Knipperdollinck In 1534 JOHN OF LEIDEN assumed control In his "Kingdom of Zion" there was no law, no marriage, no property This extreme form of Anabaptism ended with the execution of the leaders in 1535 Another group of Anabaptists, under the leadership of MENNO SIMONS, became MENNONITES Others, descendants of the followers of Jacob Hutter, moved in 1874 from Russia to South Dakota (see HUTTERISCHE COMMUNITY) See E B Bax, *The Rise and Fall of the Anabaptists* (1903), R J Smithson, *The Anabaptists Their Contribution to Our Protestant Heritage* (1935)

Anabasis (ună'bŭsĭs) [Gr, =going up, i e, to the sea from the interior], celebrated Greek prose history of the campaign of CYRUS THE YOUNGER, by XENOPHON It tells the story of the retreat of the Ten Thousand, a Greek mercenary band collected by CLEARCHUS, after the battle of CUNAXA They went up the Tigris, into Armenia, going due northward through the mountains (this was in December), finally down to the sea at Trapezus (Trebizond) and thence back home to Greece This retreat, through the most rugged country, in the coldest weather, by a band of men who had practically no supplies and were much harassed by the Persians, is a peculiar testimony to the Greek morale The Ten Thousand marched some 1,300 mi from Sardis to Cunaxa and more than 900 from there to Trapezus

Anacharsis (ănukär'sĭs), 6th cent B C, Scythian prince and philosopher He is supposed to have toured Greece, to have visited Athens, and to have been given the most signal honors, e g, initiation at Eleusis and Athenian citizenship Many witty remarks are attributed to him by classical writers, and he is called one of the Seven Sages

Anacletus, Saint see CLETUS, SAINT

Anaconda (ănŭkŏn'dŭ), city (pop 11,004), co seat of Deer Lodge co, SW Mont, NW of Butte, laid out 1883, inc 1888 Marcus DALY chose this place for the smelter of the Anaconda Copper Mining Company and in the 1890s tried unsuccessfully to make it the state capital The present high-stacked smelter dominates the life of the city, and there are foundries, machine shops, and by-product plants manufacturing arsenic, sulphuric acid, and phosphate fertilizer

anaconda, nonvenomous snake of South America, largely aquatic but partially arboreal, related to the BOA CONSTRICTOR and the PYTHON The largest of the true boas is the species of anaconda in N South America called water boa, which reaches a length of 30 ft It is olive green with black spots and rings It eats birds, small mammals, and fish, which it kills by constriction

Anacortes (ănukōr'tĕz), city (pop 5,875), NW Wash, on the Strait of Georgia S of Bellingham It is a port of entry and a shipping and processing center for a lumbering, farming, and fishing region

Anacostia (ănŭkŏs'tēu), river, flowing into the Potomac at Washington, D C, rising near Bladensburg, Md

Anacreon (unăk'rēun, -ŏn), fl c 521 B C, Greek lyric poet, b Teos He lived much at Samos and at Athens, where Hipparchus patronized him His poetry, graceful and elegant, celebrates the joys of wine and love Little of his verse survives The Anacreontics (-ŏn'tĭks) are poems after the manner of Anacreon written from the Alexandrian period to the Renaissance.

Anadarko (ănudär'kō), city (pop 5,579), co seat of Caddo co, SW Okla, on the Washita river and SW of Oklahoma City, founded 1901 It is the center of a rich area producing cotton, grains, alfalfa, livestock, and oil Among the many Indians in the

section are some of the few remaining of the once great Delaware tribe. An annual Indian exposition is held here

Anadyomene (ăˌnədīŏˈmĭnē) [Gr ,=rising, i e , out of the sea], name of APHRODITE in her aspect of springing from the sea into which the blood of URANUS fell.

Anadyr (ănədĭrˈ), river, 550 mi long, rising in the Kolyma Range, SFSR, in extreme NE Siberia. It flows eastward S of the Anadyr Range and N of the Kamchatka peninsula into Anadyr Bay, an inlet of the Bering Sea There are coal and gold deposits along its shores The town of Anadyr (pop c 1,000) is a port on the Anadyr estuary

ana-, for words beginning thus see ANE-

anagram [Gr ,=something read backward], rearrangement of the letters of a word or words to make another word or other words A famous Latin anagram was an answer made out of the question that Pilate asked The question was *Quid est veritas?* [what is truth?], and the answer *Est vir qui adest* [it is the man who is here] An anagram that reads the same backward as forward is a palindrome, e g , "Able was I ere I saw Elba"

Anah (āˈnə), name appearing several times in the genealogy of Esau's family Three persons may be distinguished, but if the genealogy refers to tribes rather than to persons, Anah may be a single tribal name Gen 36, 1 Chron 1

Anaharath (ănˈəhāˈrăth), unidentified town, E central Palestine Joshua 19 19

Anaheim (ănˈəhīm), city (pop 11,031), S Calif , SE of Los Angeles, founded 1857 by Germans, inc 1870 In a citrus-fruit and walnut area, the city has canneries and manufactures canning equipment, chemicals, and wire

Anahuac (ənuwăkˈ), unincorporated town (pop c 1,500), co seat of Chambers co , SE Texas, at the mouth of the Trinity and E of Houston A prominent port of early Texas, it was the scene of two clashes (1832, 1835), in which Anglo-American settlers were successful in opposing officials of the Mexican government Today it is a small port with an oil refinery and a recycling plant

Anáhuac (ănäˈwäk) [Aztec,=near the water], geographical term used variously in MEXICO before the Spanish Conquest Today it commonly refers to that part of the central plateau of Mexico comprising the PÁNUCO and LERMA river systems and the lake basin of the Valley of Mexico

Anah (ănˈăhˈū, ānäˈyū), the name of two who returned from the Exile Neh 8 4, 10 22

Anak (āˈnăk), in the Bible, ancestor of the Anakim (ănˈəkĭm) or Anakims, a race of giants inhabiting Hebron and its vicinity at the time of the conquest of Canaan ARBA is given as Anak's father, and his sons are given as Ahiman, Sheshai, and Talmai Joshua and Caleb practically extirpated the race Num 13 22,28,33, Deut 1 28, 9 2, Joshua 11 21, 14 15, 15 13,14, 21 11, Judges 1 20

Anamim (ănˈəmĭm), unidentified tribe of Egypt Gen 10 13, 1 Chron 1 11

Anammelech (ənămˈəlĕk), god of an otherwise unknown Samaritan cult 2 Kings 17 31

Anamosa (ănəmōˈsə), city (pop 4,069), co seat of Jones co E central Iowa, NE of Cedar Rapids and on the Wapsipinicon river, in a limestone area, first named Dartmouth, then Lexington, inc 1856 The state reformatory for men is here Grant Wood was born near Anamosa

Anan (āˈnən) [Heb ,=cloud], scaler of the covenant Neh 10 26

Ananda see BUDDHISM and PALI LITERATURE

Anani (ănāˈnī) [Heb ,=God protects], descendant of David 1 Chron 3 24

Ananiah (ănˈənīˈə) [Heb ,=God protects] **1** Ancestor of AZARIAH **20** **2** Benjamite town, probably just N of Jerusalem Neh 11 32

Ananias (ănˈənīˈəs) [Gr ,=Heb ANANIAH and HANANIAH] **1** Man who, with his wife Sapphira, held back part of a gift to the church and lied about it They were rebuked by Peter and fell dead Acts 5 1–11 The name has become a term for liar **2** High priest at Jerusalem, a Roman sympathizer, hated by most of the Jews for his oppression and his alliance with the Roman interest He was assassinated between A D 60 and 67 Acts 23 2–5, 24 **3** Christian at Damascus who took charge of Paul after his conversion Acts 19 10–22 **4** One of the THREE HOLY CHILDREN

Anarajapura, Ceylon see ANURADHAPURA

anarchism (ănˈärkĭzəm) [Gr ,=having no government], theory that equality and justice are to be sought through the abolition of the state and the substitution of free agreements between functional and territorial groups Capitalism and private property, considered limitations on the freedom of personality, would be abolished Necessary production would be carried on by decentralized, freely associating groups Anarchism differs from SOCIALISM in considering the state an intrinsic evil Zeno of Citium, founder of Stoic philosophy, is regarded as the forefather of anarchism, but it is important to distinguish the philosophic and literary school of anarchism from that which has a political tendency and even a program Individual mystics in the Middle Ages and individual modern writers belong to the first category, certain medieval religious associations, as well as the ANABAPTISTS in the 16th cent and the Levelers in 17th-century England, were anarchists of a political stamp, though motivated by religion The philosophy of modern political anarchism was outlined in the 18th and 19th cent by William GODWIN, P J PROUDHON (who has been credited with inventing the term), and others BAKUNIN attempted to orient the First INTERNATIONAL towards anarchism but was defeated by Marx Bakunin gave modern anarchism its collectivist and violent tone, in which it has largely persisted despite the revisionary efforts of KROPOTKIN and TOLSTOY Political anarchism in Russia was suppressed by the Bolsheviks after the Russian Revolution Anarchism's only real mass following was in Latin countries, where it was a force in the syndicalist movement, especially in Spain In the United States early anarchists such as Josiah WARREN were associated with cooperation and with utopian colonies Violent doctrines were introduced from Europe, and after the Haymarket riot in Chicago in 1886 and the assassination of President McKinley in 1901 a law was passed forbidding anarchists to enter the country The execution of Sacco and Vanzetti in 1927 attests the fear of anarchism in America As an organized movement anarchism is well-nigh dead, but it retains importance as a philosophical attitude and a political tendency See C E M Joad, *Introduction to Modern Political Theory* (1924), Herbert Read, *Poetry and Anarchism* (1938)

Anastasia, Saint (ănəstāˈshə), 4th cent , Roman noblewoman, kind to the poor, martyred under Diocletian She is mentioned in the Canon of the Mass As her feast is Dec 25, she is commemorated in the Christmas Mass at dawn

Anastasius I (ănəstāˈshəs, -zhəs), c 430–518, Roman emperor of the East (491–518), successor of Zeno, whose widow he married He broke the power which the Isaurians had enjoyed since Leo I, made peace with Persia, maintained relations with Theodoric the Great, and made Clovis I an ally His reign saw the abatement of some taxes and the abolition of gladiatorial contests He built a wall to protect Constantinople against the Slavs and Bulgars His Monophysite inclinations stirred religious unrest throughout the empire Anastasius was succeeded by Justin I

Anath (āˈ–), father of SHAMGAR

anathema (unăˈthĭmu) [Gr ,=set aside, as a devoted object], traditional Christian decree of EXCOMMUNICATION The usual form of a canon of a council is "If anyone does so-and-so, let him be anathema" Formerly in the Roman Catholic Church anathema was attended often with ceremonial rite with "bell, book, and candle" In 1 Cor 16 22 the expression Anathema Maranatha (măˈrunāˈthu) includes an Aramaic word, the whole probably means "anathema—may the Lord come!"

Anathoth (ănˈuthŏth, -thōth) **1** Town, c 2 mi NE of Jerusalem It was the home of Jeremiah Jer 1 1, 1 Chron 12 3, 1 Kings 2 26, Neh 7 27 Its adjective is Antothite, Anetothite, Anathotite 1 Chron 27 12, 12 3 **2** Chief of the people Neh 10 19 **3** Benjamite 1 Chron 7 8

Anatolia (ănətōˈlēu) [Gr ,=sunrise], Asiatic part (287,117 sq mi , pop 17,293,562) of TURKEY It comprises 97 percent of all Turkey Anatolia, the westernmost part of Asia, is a plateau crossed by mountains and is a peninsula between the Black Sea on the north, the Aegean Sea on the west, and the Mediterranean on the south It is almost identical with, and is sometimes used to mean, ASIA MINOR

anatomy [Gr ,=to cut apart], study of body structure and structural relationships The study of body tissues is known as histology (microscopic anatomy) Comparative anatomy deals with the study of structure in various animal forms Embryology is the study of developmental anatomy in prenatal forms Among the early contributors to the science of anatomy were GALEN, VESALIUS, William HARVEY, and John HUNTER The works of Leonardo da Vinci include many drawings of dissections of the human body Modern anatomists are concerned with the study of living structures as well as with general body structure in the cadaver At a conference in Basel, Switzerland, in 1895 an international anatomical nomenclature was established See D C Kimber and C E Gray, *Textbook of Anatomy and Physiology* (12th ed , 1948)

Anau, see ANNAU

Anaxagoras (ănˈăksăgˈərəs), c 500–c 428 B C , Greek philosopher of Clazomenae He is credited with having transferred the seat of philosophy to Athens He was closely associated with many famous Athenians and is believed to have been the teacher of Socrates His belief that the sun was a red-hot stone and that the moon was made of earth merely reflecting the sun's rays resulted in a charge of atheism and blasphemy, forcing him to flee to Lampsacus, where he died Anaxagoras' outstanding contribution to philosophy was his postulation of an all-pervading mind (*nous*) This caused the formation of the world and imposed order upon what was originally an infinite number of particles in an undifferentiated mass These particles represented specific qualities, such as hair, water, flesh, gold Mind set the mass in motion, causing the infinitely small particles to combine, like with like, thus bringing into being the stuff of the perceptual world See F M Cleve, *The Philosophy of Anaxagoras* (1949)

Anaximander (unăkˈsĭmănˈdur), c 611–c 547 B C , Greek philosopher, b Miletus, pupil of Thales. Anaximander postulated the boundless (*apeiron*) as the primary source of all things The boundless was a kind of unlimited neutralized reservoir which, by its constant motion, separated out from itself opposites, e g , hot and cold, moist and dry The interaction of these opposites gave rise to the stuff of the universe The boundless made good the imbalances caused by the encroachment of one opposite upon another, a process Anaximander called justice, similar in contemporary terms to the law of compensation Anticipating the theory of evolution, he held that man achieved his physical state by adaptation to environment, that life had evolved from moisture, and that man developed from fish

Anaximenes (ănˌəksĭmˈnēz), 6th cent B C , Greek philosopher, last of the Milesian school founded by Thales He taught that the single substance of the universe was air All other natural elements were produced by rarefaction or condensation and were merely different degrees of density of the basic substance Anaximenes believed the earth to be a flat disk floating on air

Ancenis, Peace of, 1468, treaty between Louis XI of France and Francis II of Brittany, concluded at Ancenis near Nantes, France See LOUIS XI

ancestor worship, religious practice found in every stage of civilization and type of culture Among civilized peoples it has been prominent especially in China and Japan, and it was usual among Romans and Greeks Essential to ancestor worship is the belief in the power of the dead and their free association with gods Belief in ghosts or in the necessity of propitiating the dead does not predicate ancestor worship Ancestor worship is sometimes associated with an extreme conservatism and a distaste for leaving the family home See APOTHEOSIS, MANES, SHINTO

Anchieta, José de (zhōzāˈ dŭ ănshēāˈtu), 1530–97, Portuguese missionary in Brasil, a Jesuit He wrote in Spanish, Portuguese, and Tupi and wrote poetry as well as prose tracts on history, philosophy, and religion He is usually called the first Brazilian writer

Anchises (ăn-kīˈsēz, ăngkīˈsēz), in Greek legend, Trojan hero, father of AENEAS by Aphrodite

anchor, device used to secure a ship, a boat, a buoy, or some other floating object by means of weight, by friction, or by hooks called flukes Normally the anchor rests firmly on the bottom of the sea or stream In ancient times and among simple seagoing peoples the anchor may be merely a large stone or a bag or basket filled with stones, a bag filled with sand, or a log of wood weighted with lead Lead-weighted logs were used by the Egyptians, and the Greeks are credited with the first use of iron anchors The Romans had metal devices with arms like modern anchors Changes and improvements over the centuries resulted in two types of modern anchor The ordinary anchor consists of the shank (the stem, at the top of which is the anchor ring), the stock (the cross piece at the top, either fixed or removable), the crown (the bottom portions), and the arms fastened at right angles to the stock and curving up to end in the flukes or palms (flat triangular portions that come to points in the bills or pees) The patent anchor, unlike the ordinary one, has either no stock at all or a stock lying in the same plane as the arms, it has tripping palms that come out when the anchor falls Modern ships have several anchors, usually there are two forward and two aft (the sheet anchors) A stream anchor is lighter than the regular anchor and is used in narrow or congested waters A grapnel is a simple shank with four or five upturned hooks radiating about the center A sea anchor is a wooden framework covered with canvas and weighted at the bottom, it is a temporary device used by disabled ships Anchors, formerly made of wrought iron, are now usually made of forged steel

Anchorage (ăngˈkurĭj), city (1939 pop 3,495, 1949 estimated pop 19,000), S central Alaska, at the head of Cook Inlet Founded (1915) as a town for the headquarters and shops of the Alaska RR then being constructed, it grew as a railroad town, but also became a center of fishing, a market and supply point for gold-mining regions to the north, the metropolis for the coal mining and farming of Matanuska Valley, and the air-traffic capital of Alaska Glenn Highway connects it with the Alaska Highway The Second World War saw the establishment of the largest army post in Alaska and a large air base near by Air and rail traffic grew enormously. After the war it remained a defense center and continued to grow as Alaska's largest city

anchoret or **anchorite** see HERMIT

anchovy (ănˈchōvē), small fish of the herring family Spanish and Italian anchovies (*Engraulis encrasi-*

cholus), abundant in the Mediterranean and nearby waters, are cured by a process involving fermentation Norwegian or Swedish anchovies are sprats or brislings of the genus *Clupea* and are cured without a fermentation process

anchovy pear, West Indian tree (*Grias cauliflora*) and its fruit, which is eaten as a pickle like the mango and resembles it in taste.

ancien régime (äsyĕ' rāshēm') [Fr ,=old regime], expression used specifically to designate the order of things in France before the social changes of the FRENCH REVOLUTION (1789).

Ancon (ăng'kŏn, Span ängkōn'), town (pop 1,946), Panama Canal Zone, near the Pacific end of the canal and NW of Panama city The residential and medical center of this part of the zone, Ancon is virtually a part of Panama city

Ancona, Alessandro d' : see D'ANCONA, ALESSANDRO

ancona (ängkō'nu, Ital ängkō'nä), city (pop 57,100), capital of the Marches and of Ancona prov , central Italy, a port on the Adriatic Late in the 4th cent B C , Greeks from Syracuse took refuge in Ancona. It prospered under the Romans, and Trajan enlarged its harbor In the 9th cent. A D it became a semi-independent maritime republic under the nominal rule of the popes, under whose direct control it passed in 1532 The city suffered great damage in the Second World War The Byzantine Romanesque Cathedral of San Ciriaco (11th–13th cent) and the archaeological museum were partly destroyed, but the white marble Arch of Trajan was undamaged

ancon sheep (ăng'kŏn) or **otter sheep,** breed of sheep which originated, probably as a mutation, in the flock of a Massachusetts farmer, Seth Wright (or Wite), in 1791 The distinguishing characteristics —short, crooked legs and a long back—appeared first in a ram Realizing that such sheep would be easier to confine because of their difficulty in jumping fences, the farmer began breeding experiments and soon established the type, but it later became extinct

Ancre, Concino Concini, marquis d' : see CONCINI

Ancren Riwle (ăng'krŭn rē'ōōlu, rōōl', ăng'krŭn) [Mid. Eng ,=anchoresses' rule], English tract written c 1200 by an anonymous cultivated English churchman for the instruction of three young ladies who were about to settle in a hermitage in the West Midlands It is one of the few extant examples of early Middle English prose

Ancrum (ăn'krum), parish (pop 858), Roxburghshire, Scotland, NW of Jedburgh **Ancrum Moor,** near by, was the scene of the defeat (1545) of 5,000 English by Scots under Archibald Douglas

Ancus Martius (ăng'kŭs mär'shŭs), fourth king of ancient Rome (640?–616? B C) This semilegendary king is supposed to have enlarged the area of Rome

ancylostomiasis. see HOOKWORM.

Ancyra see ANKARA, Turkey

Andalusia (ăndŭlōō'zhŭ, –shu), Span. *Andalucía* (ăn"dälōōthē'ä), region (33,675 sq mi , pop 5,219,362), S Spain, on the Mediterranean, the Straits of Gibraltar, and the Atlantic Comprising the provinces of Almería, Cádiz, Córdoba, Granada, Huelva, Jaén, Málaga, and Seville, it covers all S Spain It is crossed in the north by the Sierra Morena and in the south by mountain ranges which rise in the Sierra Nevada to the highest peak in Spain, between the ranges lies the basin of the Guadalquivir With a subtropical climate, Andalusia has many affinities with Africa, which it faces Barren lands contrast with richly fertile regions, where cereals, grapes, olives, sugar cane, and citrus and other fruits are produced Cattle, bulls for the ring, and fine horses are bred The rich mineral resources, exploited since Phoenician and Roman times, include copper, iron, zinc, and lead The fertility and mineral wealth of S Spain has attracted Mediterranean peoples since ancient times. In the 11th cent B C the Phoenicians settled here and founded several coastal colonies, notably Gadir (now CÁDIZ) and, supposedly, the inland town of Tartessus, which became the capital of a flourishing kingdom (sometimes identified with the biblical TARSHISH) Greeks and Carthaginians came in the 6th cent B C , the Carthaginians were **expelled** (3d cent B C) by the Romans, who included S Spain in the province of Baetica In 711 the MOORS, crossing the Straits of Gibraltar, established here the center of their western emirate (see CÓRDOBA). Andalusia remained under Moorish rule until in the 13th cent. most of it was reconquered by the kings of Castile, only the Moorish kingdom of GRANADA survived until it fell to the Catholic kings in **1492** The Moorish period was the golden age of Andalusia Agriculture, mining, trade, and industries (textiles, pottery, and leather working) were fostered and brought tremendous prosperity; the Andalusian cities of Córdoba, SEVILLE, and Granada, embellished by the greatest Moorish monuments in Spain, were celebrated as centers of culture, science, and the arts. From the 16th cent Andalusia, except the flourishing ports of Seville and Cádiz, generally suffered in the decline of Spain Andalusia fell to the Insurgents early in the Spanish civil war of 1936–39 Moorish influence is still noticeable in the character, language, and customs of the people. Andalusian songs, dances, and festivals enjoy great popularity; these are also influenced by the large groups of gypsies who live in the region.

Andalusia (ăndŭlōō'shŭ, –shū), city (1940 pop. 6,886; 1948 special census pop 8,767), co seat of Covington co , S Ala , near the Fla. line 8 of Montgomery, in a farm and pine area; settled in the early 19th cent , inc 1901.

Andaman Islands (ăn'dŭmŭn, –măn) (2,508 sq mi ; pop 21,316), in the Bay of Bengal Lumbering is the chief economic activity, and the population is made up of native Negritos and settlers from the Indian mainland The climate is tropical. A penal colony was established here in 1858 and abolished in 1945 The islands are joined with the more southerly Nicobar Islands to form a state of India, the Andaman and Nicobar Islands, with its capital at Port Blair

Andelys, Les (lăsdŭlē'), town (pop 3,735), Eure dept , N France, on the Seine On the border between Normandy proper and the Norman VEXIN, it was, in the Middle Ages, of considerable strategic importance Richard I of England built CHÂTEAU GAILLARD near by Les Andelys suffered considerable damage in the Second World War Poussin was born here

Anderida (ăndĕr'ĭdŭ), ancient Roman fort at the present PEVENSEY, Sussex East, England The fort was built toward the end of the 3d cent and was one of a group of forts intended for defense against the Saxons, who took the fort in 491

Anderlecht (an'durlĕkht), town (pop 85,168), Brabant, Belgium, 3 mi SW of Brussels and on the Charleroi-Brussels Canal It is an industrial and residential suburb of Brussels.

Andermatt (ăn'dürmät), resort village (pop 1,496), Uri canton, Switzerland, at the north entrance to the St Gotthard Pass and above the St Gotthard Tunnel

Andernach (ăn'dürnäkh), town (pop 13,869), in the former Rhine Prov of Prussia, W Germany, after 1945 in Rhineland-Palatinate A busy port on the Rhine, it has manufactures of chemicals and pottery Drusus founded a garrison here, and in 939 Andernach was the scene of a victory gained by Emperor Otto I over the rebellious dukes of Franconia and Lotharingia From 1167 until 1801 it belonged to the archbishopric of Cologne Andernach has a 15th-century tower and a 16th-century town hall

Andersen, Hans Christian, 1805–75, Danish poet, novelist, and writer of fairy tales Brought up in poverty, at 14 he left Odense to seek his fortune in Copenhagen The theater lured him and he tried acting, but without success Generous patrons came to his aid and finally interested King Frederick VI, who sent him to school for several years at public expense Although he managed to pass his examinations, these years were unhappy ones In 1829 the fantasy *A Journey on Foot from the Holmen Canal to the Eastern Point of Amager* was published This was followed in 1830 by the first collected volume of his poems Granted a traveling pension by the king, he wrote sketches and impressions of the European countries visited His first novel, *Improvisatoren* (1835), marked the turning point in his career The critics, who had derided him as temperamental, egotistical, and ineffectual, now granted him some favor With the publication in the same year of his first book of fairy tales, *Eventyr*, he found at last the medium of expression which was to immortalize his genius Other volumes of fairy tales followed on an average of one a year, until he became unquestionably the best-known Danish author and a storyteller without a peer Among the most popular of his tales are "The Fir-Tree," "The Ugly Duckling," "The Brave Tin Soldier," "The Little Mermaid," and "The Red Shoes" His autobiography, *The Story of My Life* (1855), was translated into English in 1871 See biography by Signe Toksvig (1934), C B Burnett, *The Shoemaker's Son* (1941)

Andersen Nexo, Martin (mär'tĕn ăn'dürsĕn nĕksō'), Dan *Nexø*, 1869–, Danish novelist Born in a Copenhagen slum, he spent his childhood on the island of Bornholm He has written with realism and with pity of the poor. His proletarian novels *Pelle the Conqueror* (4 vols , 1906–10, Eng tr , 1913–17, in one volume, 1930) and *Ditte, Daughter of Mankind* (5 vols , 1917–21, Eng tr , *Ditte Girl Alive!* 1920, *Ditte, Daughter of Man*, 1921, *Ditte Toward the Stars*, 1922, in one volume, 1931) made him internationally famous and did much to improve social conditions in Denmark. In his later life he lived much in Russia and has written several books on that country Of his four-volume autobiography, the first two volumes are translated into English as *Under the Open Sky* (1938). See Harry Slochower, *Three Ways of Modern Man* (1937)

Anderson, Alexander, 1775–1870, American engraver, b New York city A graduate of the medical department of Columbia College, he soon abandoned medicine for copperplate engraving He was the first to practice wood engraving successfully in America Among the numerous cuts, chiefly book illustrations, which Anderson produced are designs for Webster's *Elementary Spelling Book*, Holbein's *Dance of Death*, published as *Emblems of Mortality*; and Shakspere's plays. A good example of his skill is the *Water Fowl*, after Teniers. See biography by F. M. Burr (1893).

Anderson, Carl David, 1905–, American physicist, b New York city, grad. California Institute of Technology (B S , 1927; Ph D., 1930). Associated with the institute's physics department from 1930, he became professor in 1939 For his discovery of the POSITRON, he shared with Victor F. Hess the 1936 Nobel Prize in Physics The MESON (or mesotron) was discovered in cosmic rays in 1937 by Anderson and Seth Neddermeyer and almost simultaneously by J. C. Street and E C. Stevenson

Anderson, Clinton Presba, 1895–, U.S. Secretary of Agriculture (1945–48), b Centerville, S.Dak. He had a newspaper and insurance background before he served New Mexico as treasurer (1933–34) and as administrator of relief (1935) and compensation (1936–39). As a Representative (1941–45), he was put in charge of the House investigation covering scarcities and agency administration of food products, while he was also a member of the Committee on Ways and Means (1945). He was chosen (May, 1945) Secretary of Agriculture by President Truman He formulated a long-range farm program with flexible farm-price supports and quit his post (May, 1948) in order to be elected (Nov , 1948) Senator from New Mexico

Anderson, Elizabeth Garrett, 1836–1917, English physician A sister of Millicent Garrett Fawcett, Elizabeth too worked for woman suffrage. With difficulty she obtained a private medical education under accredited physicians and in London hospitals, in 1865 she was licensed to practice by the Scottish Society of Apothecaries In London in 1866 she opened a dispensary, later a small hospital, for women and children, the first in England to be staffed by women physicians, it was known after 1918 as the Elizabeth Garrett Anderson Hospital Largely as a result of her efforts, British examining bodies opened their examinations to women In 1908 Dr Anderson was elected mayor of Aldeburgh, Suffolk See M G Fawcett, *What I Remember* (1924), biography by her daughter, L G Anderson (1939)

Anderson, Elizabeth Milbank, 1850–1921, American philanthropist, b New York city From 1884 she used her large fortune to advance higher education of women and in behalf of enlightened charity In memory of her parents she established (1905) the Memorial Fund Association, later called the Milbank Memorial Fund, the income from which was to be used "to improve the physical, mental, and moral condition of humanity, and generally to advance charitable and benevolent objects "

Anderson, John August, 1876–, American astronomer, b Clay co , Minn He was associate professor of astronomy at Johns Hopkins (1908–16) and then became physicist at Mt Wilson Observatory In 1943 he retired He wrote (with H C Jones) *Absorption Spectra of Solutions* (1909)

Anderson, Judith, 1898–, Australian-American actress, b Adelaide, Australia She went on the stage in 1915 (in *A Royal Divorce*) and in 1918 came to the United States After 1920 she had many important parts With her playing of the queen to Gielgud's Hamlet (1936), her ability as a great tragic actress was recognized She played Lady Macbeth in the Maurice Evans production (London, 1937, New York, 1941) Her Medea in the play by Robinson Jeffers (1947) won wide acclaim.

Anderson, Marian, 1902?–, American Negro contralto, b Philadelphia, where she received most of her musical education. She began her concert career in 1924, but her first great successes were in Europe. After her return to the United States in 1935, she soon became known to Americans as one of the greatest of living singers Her rich voice has a compass of three octaves

Anderson, Mary, 1872–, American labor expert, chief (1919–44) of the Women's Bureau, U S Dept of Labor, b. Sweden. She came to the United States in 1888 After some years as an industrial worker in garment and shoe factories, she became an organizer for the National Boot and Shoe Workers' Union and one of the founders of the National Women's Trade Union League In 1918 she was appointed assistant to the chief of the Women's Bureau, becoming its chief in 1919 On her retirement (1944) she was succeeded by Frieda S. Miller.

Anderson, Mary Antoinette, later **Madame de Navarro,** 1859–1940, American actress, b. Sacramento, Calif. After early training, she received encouragement from Charlotte Cushman and made her debut as Juliet at Louisville, Ky , in 1875. Her first success was as Meg Merrilies in an adaptation of Scott's *Guy Mannering*, but she later excelled in such Shakesperian roles as Desdemona, Rosalind, and Lady Macbeth and as Galatea in W. S. Gilbert's *Pygmalion and Galatea*. Her youth, beauty, and genuine if untrained talent made her a favorite in the United States and won her a welcome in England In 1890 she married Antonio de Navarro and retired to England. She wrote *A Few Memories* (1896) and *A Few More Memories* (1936) and collaborated with Robert Hichens in the dramatization of his *Garden of Allah*.

Anderson, Maxwell, 1888–, American playwright, b Atlantic, Pa., grad. Univ. of North Dakota, 1911, and M A. Stanford, 1914. He was a journalist on the Pacific coast and in New York city before 1924, when *What Price Glory*, written in collaboration with Laurence Stallings, proved to be the dramatic event of the season Anderson, whose plays are often written in blank verse, is one of the few dramatists to make consistent use of poetry on the modern stage Other plays include *Saturday's Children* (1927), *Gods of the Lightning* (with Harold Hickerson, 1928), on the Sacco-Vanzetti case, *Elizabeth the Queen* (1930), *Valley Forge* (1934), *Joan of Lorraine* (1946), and *Anne of the Thousand Days* (1948). *Winterset* (1935) and *High Tor* (1937) won respectively the 1936 and 1937 New York Drama Critics Circle award, and *Both Your Houses* (1933) won the 1933 Pulitzer Prize for drama See his *Essence of Tragedy* (1939)

Anderson, Robert, 1750–1830, Scottish editor He is known for his *Complete Edition of the Poets of Great Britain* (14 vols , 1792–1807).

Anderson, Robert, 1805–71, American army officer, defender of Fort SUMTER, b near Louisville, Ky , grad West Point, 1825 He fought in the Black Hawk, Seminole, and Mexican wars and was promoted major in 1857 In Nov , 1860, he took command of the U S force in the harbor of Charleston, S C., where he distinguished himself in the Fort Sumter controversy Anderson, made a brigadier general in the regular army (May, 1861), commanded the Dept of Kentucky (June–Oct) He retired from active service in Oct , 1863 In Feb , 1865, he was brevetted major general for his gallant service in the defense of Fort Sumter

Anderson, Sherwood, 1876–1941, American author and editor, b Camden, Ohio Sketchily educated, he started work at 12 and at 17 served in Cuba in the Spanish-American War He became an advertising writer and later, in Elyria, Ohio, manager of a paint factory, suddenly he left his job there and went to Chicago to write Encouraged by Dreiser, Sandburg, Floyd Dell, and others, he published *Windy McPherson's Son* (1916), his first novel *Marching Men* (1917) and *Mid-American Chants* (1918) followed, but not until *Winesburg, Ohio*, a book of short stories, was published in 1919 did he win wide recognition for his portrayal of the lives of inarticulate Americans He lived for a time in New York and New Orleans and finally settled in Marion, Va , where he became editor of two weekly newspapers, one Republican, one Democratic His works include short stories in *The Triumph of the Egg* (1921) and *Horses and Men* (1923), the novels *Poor White* (1920), *Dark Laughter* (1925), *Beyond Desire* (1932), *Kit Brandon* (1936), and the autobiographical books *A Story Teller's Story* (1924), *Tar a Midwest Childhood* (1926), *Sherwood Anderson's Note Book* (1926), and *Sherwood Anderson's Memoirs* (1942)

Anderson. 1 Industrial city (pop 41,572), co seat of Madison co , E central Ind , on the White River and NE of Indianapolis, platted 1823, inc as a town 1838, as a city 1865 Its manufactures include machinery for glassware manufacture, iron castings, engine parts, and gas ranges Anderson College and Theological Seminary (Church of God, coeducational, 1917) is here Mounds State Park at Anderson has numerous prehistoric mounds and a museum of natural history and archaeology A tuberculosis hospital is in the city The Moravians had an Indian mission near by in 1801–6 **2** City (pop 19,424), co seat of Anderson co , NW S C , between the Saluda and Savannah rivers, in a rich farm, cotton, and livestock area, laid out 1827, inc 1882 It has textile mills and other industries A junior college and the county fairgrounds are here

Anderson, river of the Mackenzie dist , Northwest Territories, flowing into the Arctic Ocean at Liverpool Bay It is 465 mi long

Andersonville, village (pop 211), SW Ga , NNE of Americus, inc 1881 In **Andersonville Prison** (now a state park) here, tens of thousands of Union soldiers were confined (1864–65) in the Civil War under conditions so bad that over 12,000 of them died Andersonville National Cemetery, near by, contains more than 13,000 soldiers' graves See W B Hesseltine, *Civil War Prisons* (1930)

Andersson, Karl Johan (yōs'hän än'dürsōn"), 1827–67, Swedish explorer in Africa In 1850 he set out from Walfish Bay, accompanied by Francis Galton, to visit Damaraland and Ovamboland, but did not get beyond Etosha Pan On a second trip he reached Lake Ngami (long the goal of explorers) and penetrated for 60 mi beyond it In 1859, on a third trip, he reached the Kubango river He died on another journey to explore the upper reaches of the Kunene He wrote *Lake Ngami* (1855) and *The Okavango River* (1861). *Notes of Travel in South Africa* is a posthumous account of his last trip

Andes (ăn'dēz), mountain system, over 4,000 mi long, South America The ranges run generally parallel to the Pacific coast and extend from Tierra del Fuego northward as the backbone of the entire continent. The Falkland Islands are a continuation of the Andes, and recent evidence shows that the system is continued in Antarctica. The Andes go through seven South American countries—ARGENTINA, CHILE, BOLIVIA, PERU, ECUADOR, COLOMBIA, and VENEZUELA. The ranges are continuous and make one of the world's most important mountain masses, loftier than any other except the Himalayas, there are many peaks higher than Mt McKinley, the highest in North America In the south the mountains run east and west, in Tierra del Fuego, then turn north between Argentina and Chile The westernmost of the mountains run into the sea, lining the coast of S Chile with islands In the mountains of the Patagonian border are high glacier-fed lakes in both Argentina and Chile The region has noted resorts. The highest range of the Andes is on the central and northern Argentine-Chilean border Here are lofty ACONCAGUA (highest mountain of the Western Hemisphere), and TUPUNGATO, and between them USPALLATA PASS, with the Transandine Railway and the Christ of the Andes Other major peaks such as LLULLAILLACO flank the main range, and in Argentina subandean ranges enclose the high, cold Puna de Atacama The new Transandine Railway of the North crosses Socompa Pass The central Andes broaden out in Bolivia and Peru in multiple ranges with high altiplano [plateau] country and many high intermontane valleys, where the great civilization of the Inca had its home High in the mountains on the Peru-Bolivian border is Lake Titicaca In Bolivia are the notable volcanoes, ILLIMANÍ and ILLAMPÚ, and in S Peru is El MISTI The western or coastal range in Peru has lofty peaks (notably HUASCARÁN) and is crossed by the highest railroad of the Andes (from La Oroya to Lima) The ranges approach each other again in Ecuador, where the N Andes begin Between two volcanic cordilleras (with noted CHIMBORAZO and COTOPAXI) are rich intermontane basins In Colombia the Andes divide again, the western range running between the coast and the Cauca river, the central between the Cauca and the Magdalena, and the eastern running N parallel to the Magdalena, then stretching out on the coast into Venezuela. The Andes continue in some of the islands of the West Indies, and in Panama northern Andean spurs connect with the mountains of Central America and thus with the Sierra Madre and the Rockies Obviously the Andes do much to determine the whole pattern of communication, climate, weather, and life in South America Andean waters reach the Orinoco, the Amazon, and the Río de la Plata The plateaus and valleys of Bolivia, Peru, Ecuador, and Colombia have been peopled since remote times and saw the rise not only of the Inca but of other great Indian civilizations, notably the Chibcha Agriculture was the basis of these cultures (with the native llama and alpaca domesticated), and the lands there are still tilled, mostly for subsistence crops only In modern times the produce of the Andes that has been of importance to world commerce is the great mineral wealth, notably copper, silver, and tin See Sir Martin Conway, *The Bolivian Andes* (1901), Isaiah Bowman, *The Andes of Southern Peru* (1916), A. G Ogilvie, *Geography of the Central Andes* (1922)

Andizhan (ändĭzhän', Rus ŭndyĕzhän'), city (pop 83,691), capital of Andizhan oblast, Uzbek SSR, in the Fergana Valley It is a rail junction and the industrial center of an area producing cotton and silk

Andocides (ändŏs'ĭdēz), c 440–c 390 B C , one of the Ten Attic Orators (see ORATORY) In 415 B C he was accused of mutilating the hermae and, in association with ALCIBIADES, of other sacrilege He went into exile, and one of his speeches was a plea to be restored to citizenship After he returned in 403, he was again accused (399) of sacrilege and again defended himself.

Andorra (ändôr'rù), Fr *Andorre* (ädôr'), small state (191 sq mi , pop 5,231), in the E Pyrenees between France and Spain, under the joint suzerainty of the president of France and the bishop of Urgel (Spain) Drained by the Valira river, Andorra comprises several high mountain valleys generally poor in soil but supporting large flocks of sheep The population, Catalan in speech and Catholic in religion, live in six villages, of which Andorra la Vieja is the most important Smuggling is an important occupation In 843 Emperor Charles II made the count of Urgel overlord of Andorra, in 1278 the bishop of Urgel was made joint suzerain The rights of the count passed by inheritance through the counts of Foix and the house of Albret to Henry IV of France and from the French kings to the French presidents Actually, Andorra has always maintained virtual independence and does homage to its two suzerains only through nominal yearly gifts The state is governed by a council of 24 headed by a syndic The constitution preserves traces of an ancient communal agrarian organization.

Andover (ăn'dōvur) **1** Town (pop 11,122), NE Mass , near the Merrimack, settled 1643, inc 1646 Woolen and rubber goods are produced PHILLIPS ACADEMY and Abbot Academy (for girls) are here The former Andover Theological Seminary is now at Newton Centre Samuel Francis Smith wrote the words for *America* while a student at the seminary There are art galleries and several old buildings Harriet Beecher Stowe lived and is buried here. **2** Rural town (pop 1,108), S central N H , NW of Concord, granted 1751 to Edmund Brown and others, settled 1761, inc 1779 **3** Village (pop 1,290), W N Y , SW of Hornell, in an oil region, inc 1892

Andrada e Silva, José Bonifácio de see BONIFÁCIO, José

Andrade, Olegario Víctor (ōlāgä'ryō vēk'tōr ändrä'dhā), 1839?–1882, Argentine romantic poet and journalist, sometimes called the national poet of Argentina because of his patriotic fervor Although he supported himself by writing for provincial newspapers and in 1880 was made editor in chief of the government newspaper in Buenos Aires, *Tribuna nacional*, his fame was won through his poems These, strongly influenced by Victor Hugo, had a grandiloquent and sonorous tone, suitable for reading aloud Most of his best-known poems are didactic, among them "El nido de cóndores" (written 1877), which describes San Martín's crossing of the Andes, and "La Atlántida" (written 1881), a hymn to the future progress of the Latin race

Andrassy, Julius, Count (ŏn'drash-shē), Hung *Andrássy Gyula* (dyōō'lō), 1823–90, Hungarian statesman One of the leading figures in the revolution and the war of independence of 1848–49, he supported the liberal program of Louis KOSSUTH and after the Hungarian defeat went into exile, mostly in Paris and London, until 1858 With Francis DEAK he then rose into prominence in the negotiations leading to the compromise (*Ausgleich*) of 1867, which created the AUSTRO-HUNGARIAN MONARCHY, and Andrassy became the first constitutional prime minister of Hungary He opposed Austrian interference, attained the creation of a separate Hungarian defense force, put down the opposition led by Kossuth's partisans, and established Magyar supremacy at the expense of the Slavic and other minorities of the kingdom. In 1870 his influence was largely responsible for keeping Austria-Hungary neutral in the Franco-Prussian War As foreign minister of the Dual Monarchy (1871–79) he reversed the anti-Prussian policy of his predecessor, Beust, held Austria-Hungary to the THREE EMPERORS' LEAGUE, and signed (1879) the Dual Alliance with Germany (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) His chief program was to limit Russian expansion in the Balkans and to maintain the *status quo* among the Slavic peoples At the Congress of BERLIN (1878) he obtained for the Dual Monarchy the right to occupy BOSNIA AND HERCEGOVINA This step provoked much opposition in Hungary because it further increased the Slavic element in the empire, and Andrassy resigned

Andrassy, Julius, Count, Hung *Andrássy Gyula*, 1860–1929, Hungarian statesman, son of the elder Count Andrassy He occupied several cabinet posts before becoming (1900) minister of the interior of Austria-Hungary in the coalition cabinet under WEKERLE He opposed the Austrian diplomacy of 1914, and as foreign minister (late in 1918) he severed all connections with Germany in the hope of obtaining a separate peace for Austria-Hungary. In 1921 he was involved in the attempt of King Charles (Emperor CHARLES I) to regain the Hungarian throne, and he later led the royalist opposition to Admiral Horthy and Count Stephen Bethlen He wrote a number of political and historical studies, notably *Bismarck, Andrassy, and Their Successors* (1927, in English)

André, Brother (ä'drā, an'drā, Fr ädrā'), 1845–1937, Canadian religious mystic, b St Grégoire d'Iberville, Que His secular name was Alfred Bissette, Bassette, or Bessette For some 40 years he was a porter at a school in Montreal After 1900 he became noted for his simplicity and faith Many miraculous cures were attributed to him Through his efforts the Oratory of St Joseph was built in Montreal See H P Bergeron, *Le Frère André* (1938, Eng tr , 1938)

André, John (ăn'drē), 1751–80, British spy in the American Revolution He was captured (1775) by Gen. Richard Montgomery in the Quebec campaign but was exchanged and became adjutant general under Sir Henry Clinton Major André negotiated with Benedict ARNOLD for the betrayal of West Point and was captured (Sept. 23, 1780), when returning to New York, by John Paulding, David Williams, and Isaac Van Wert, near Tarrytown, N Y He was tried, condemned, and hanged at Washington's headquarters at Tappan, despite protests from Clinton Major André's charming personality and his talents in the arts had won him many American friends, who mourned him as a romantically tragic young man

Andrea del Sarto see SARTO, ANDREA DEL.

Andreani, Andrea (ändrā'ä ăn"drāä'nē), c 1540–1623, Italian wood engraver He worked at Florence, Mantua, Siena, and Rome. His engravings are rare and are highly valued for their excellent drawing, for their spirited execution, and, particularly, for their masterly treatment of light and shade Among the best are *Pavement of Siena Cathedral*, 12 large prints, after Beccafumi, *The Deluge, Destruction of Pharaoh's Host*, and *Christ Triumphus*, after Titian, *The Miraculous Draught of Fishes*, after Raphael, and the fine series *Triumph of Julius Caesar*, after Mantegna.

Andreanof Islands see ALEUTIAN ISLANDS

Andree, Karl Theodor (tä'ōdōr än'drā), 1808–75, German journalist and geographer His works include geographies of North America and Argentina He founded and edited *Globus*, an ethnographic and geographic publication continued by his son **Richard Andree** (rĭkh'ärt), 1835–1912, who was an ethnographer of central Europe

Andree, Salomon August (sä'lōomōn ou'gŭst ändrā'), Swed *Andrée*, 1854–97, Swedish polar explorer An aeronautical engineer, he was the first to attempt arctic exploration by air His first attempt by balloon in 1896 never got fairly started, but in 1897 he set out again in a balloon called the *Eagle* Tragic mishaps attended the expedition from the start, and when Andree and his men reached lat 82° 56′ N they did not have sufficient clothing for the attempt to travel by sledge and by boat All died of exposure Search expeditions found no trace of them, and it was not until 1930 that the remains were found In the equipment were Andree's diaries, included in *Andrée's Story* (Eng tr , 1930) See G P Putnam, *Andrée the Record of a Tragic Adventure* (1930)

Andreev, Leonid Nikolayevich see ANDREYEV

Andreini (ändrā'ēnē), family of Italian actors celebrated in the COMMEDIA DELL' ARTE of the 16th and 17th cent **Francesco Andreini** (frunchā'kō), 1548–1624, joined the Gelosi troupe of players, excelled in a variety of roles, and composed scenarios such as *Le bravure del capitan Spavento* (1607) More celebrated was his wife, **Isabella Andreini** (ē"zäbāl'lä), 1562–1604, whose maiden name was Canali Beautiful, virtuous, and well educated, she was one of the most famous actresses of her time After joining the Gelosi troupe, she became a leading player when it was managed by Francesco Andreini, whom she married in 1578 The heroines which she portrayed were later given the name Isabella She wrote many poems and the pastoral *Mirtilla* (1588), her letters appeared in 1607 (new ed , 1647) She was lauded by the poets Tasso and Marini, and after her death a medal was struck in her honor Her son **Giovanni Battista** or **Giambattista Andreini** (jōvän'nē bät-tēs'tä, jambät-tēs'tä), 1579?–1654, was an actor, a writer, and a stage director He probably had early training in the Gelosi and c 1604 managed the Fidele, another troupe He gained fame for his poems, comedies, and religious plays His play *L'Adamo* (1614) is said to have been a source for Milton's *Paradise Lost* Giovanni's wife, **Virginia Andreini** (vērjē'nyä), 1583–c 1628, whose maiden name was Ramponi, was an actress of repute, noted for her beauty See Allardyce Nicoll, *Masks, Mimes, and Miracles* (1931)

Andrew, Saint [Gr ,=manly], one of the Twelve Disciples, brother of Peter Mat 4 18, 10 2, Mark 3 16, 13 3, Luke 6 14, John 1 40 42, 6 8,9, 12 22, Acts 1 13 Tradition calls him a missionary in Asia Minor, Macedonia, and S Russia, with his martyrdom in Greece He is said to have died on an X-shaped cross (St Andrew's cross) He is patron of Russia and Scotland, Scotland is represented on the Union Jack by a white St Andrew's cross on a blue field He has been frequently portrayed in art, favorite subjects are his calling and his martyrdom His feast Nov 30

Andrew II, d 1235, king of Hungary (1205–35), son of Bela III He expelled the Teutonic Knights from Transylvania, which he later settled with Saxon immigrants, to whom he gave (1224) the right to establish an autonomous administration He continued his predecessors' policy of alienating crown lands to the magnates, and the lesser nobles forced him to issue a Golden Bull (1222), which strengthened the royal power and the liberties of the majority of the nation Among the important provisions of this "Magna Carta," which was expanded in 1231, were that the diet should meet annually, that no noble should be executed except when regularly convicted, that no tax should be levied on the lands of the nobles or the Church that charges against nobles for which the punishment was death or confiscation of goods should be heard by the king or at least reviewed by him, that foreigners should not receive offices without the consent of the diet, and that offices should not be perpetual In the event that the king violated any of these provisions the nobles were to have the right of resistance Andrew took part (1217) in the Fifth Crusade He was the father of St Elizabeth of Hungary and of Bela IV, his successor

Andrew, John Albion, 1818–67, Civil War governor of Massachusetts (1861–66), b Windham, Maine, grad Bowdoin, 1837 He practiced law in Boston, and his antislavery sympathies drew him into politics, he was one of the organizers of the Free-Soil party and later of the Republican party Sensing the coming conflict, he secured, soon after taking office as governor, special legislation placing the militia in readiness and an appropriation for transporting it to Washington When Lincoln's call came, the 6th Massachusetts was the first regiment to reach the capital The same spirit characterized Andrew's actions throughout the war, and his zeal was imparted to the people When peace came, he advocated a policy of friendship and leniency toward the South, but he did not live to urge it See biography by H. G. Pearson (1904), W B Hesseltine, *Lincoln and the War Governors* (1948)

Andrewes, Lancelot (ăn'drōōz), 1555–1626, Anglican divine, bishop of Chichester (1605), of Ely (1609), and of Winchester (1619) One of the most learned men of his time, he was among the first to be selected to make the new version of the Bible (now the Authorized Version) He had a royal chaplaincy to Elizabeth, James I, and Charles I His preaching gave him great favor with King James, who was keenly interested in theology Bishop Andrewes was the great theologian of the High Church party of the 17th cent and was opposed to Puritanism, his position being somewhat similar to that of LAUD His gifts were very great, but to many of his day his outstanding characteristics were his goodness and piety, his contributions to charity were noteworthy His *XCVI Sermons* were edited (1629) by Bishops Laud and Buckeridge, his *Private Devotions*, translated (1647) from his prayers in Greek and Latin, have passed through a number of editions Richard Crashaw, the poet, paid him a beautiful tribute in "Upon Bishop Andrewes Picture before His Sermons," and Milton, a Puritan, wrote a Latin elegy on his death See biographies by R L Ottley (1894) and Alexander Whyte (1896), T S Eliot, *For Lancelot Andrewes* (1928)

Andrew Johnson National Monument see NATIONAL PARKS AND MONUMENTS (table)

Andrews, Charles McLean, 1863–1943, American historian, b Wethersfield, Conn A graduate of Trinity College, Hartford (B A , 1884), and of Johns Hopkins (Ph D , 1889), he was associate professor at Bryn Mawr (1889–1907) and professor at Johns Hopkins (1907–10) and Yale (1910–31) Andrews, a leader in the reinterpretation of British colonial policy in America, studied the colonies in the light of the larger imperial problem, and his seminar in colonial institutions at Yale stimulated much able research in this field He himself capped his long, distinguished career with *The Colonial Period of American History* (4 vols , 1934–38, Vols I–III, *The Settlements*, Vol IV, *England's Commercial and Colonial Policy*) This excellent work won him the 1935 Pulitzer Prize for history and, in 1937, the gold medal for history and biography awarded only every 10th year by the National Institute of Arts and Letters His other books include *Colonial Self-Government, 1652–1689* (1904, in the "American Nation" series), *The Fathers of New England* (1919) and *Colonial Folkways* (1919, both in the "Chronicles of America" series, and *The Colonial Background of the American Revolution* (1924) He also compiled manuscript and bibliographical guides and wrote works on various historical subjects

Andrews, Christopher Columbus, 1829–1922, American diplomat and author, b Hillsboro, N H , studied law at Harvard One of the New England emigrants to Kansas in 1854, he later (1857) went to St Cloud, Minn In the Civil War he rose to be a brevet major general in the Union forces His Republican political activities led to his serving as minister in Stockholm (1869–77) and consul general in Rio de Janeiro (1882–85) Andrews was an acute observer of landscapes, events, life, and manners, and his own life is reflected in his books, *Minnesota and Dacotah* (1857), *My Experience in Rebel Prisons* (1893), *History of the Campaign of Mobile* (1867), *Life and Manners in Sweden and Norway* (undated), and *Brazil Its Conditions and Prospects* (1887) His interest in forest conservation was awakened in Sweden, and he was a pioneer of forest culture in the United States See his recollections (1928)

Andrews, Elisha Benjamin, 1844–1917, American educator and administrator, b Hinsdale, Vt He served in the Civil War, afterwards graduating from Brown in 1870 and from Newton Theological Seminary in 1874 He became successively president of Denison Univ , president of Brown Univ , superintendent of schools in Chicago, and chancellor of the Univ of Nebraska, from which he retired in 1908 His numerous works range from *Wealth and Moral Law* (1894) to *The History of the United States* (6 vols , 1913)

Andrews, Ethan Allen, 1787–1858, American educator and classical scholar, b New Britain, Conn , grad Yale, 1810 He became a teacher of the classics at the Univ of North Carolina He later headed academies in New Haven, Conn , and in Boston His chief work, *A Copious and Critical Latin-English Lexicon* (1850), is still used

Andrews, Joseph, c 1805–1873, American engraver, b Hingham, Mass *Plymouth Rock, 1620*, after P F Rothermel, is his chief plate He excelled in portraiture, and among his best portraits are the head of Washington, after Gilbert Stuart, and one of Franklin Andrews did much work for publishers, including a number of plates for the *Galerie historique de Versailles*

Andrews, Lorrin, 1795–1868, American missionary to the Hawaiian Islands, b present Vernon, Conn , grad Princeton Theological Seminary, 1825 He founded (1831) on Maui a training school for teachers, offered courses in printing (which he had himself learned from a book), and began (1834) publishing the first Hawaiian newspaper After 1841 he had posts in the native Hawaiian government, becoming (1852) an associate justice of the supreme court His cultural contribution was marked by his *Dictionary of the Hawaiian Language* (1865, revised by H H Parker, 1922) and his interest in native songs and folklore

Andrews, Roy Chapman, 1884–, American naturalist and explorer, b Beloit, Wis , grad Beloit College, 1906 Connected with the American Museum of Natural History from 1906, he was its director from 1935 to 1941 Until 1914 he specialized in the study of whales and other water mammals in Alaska, along the coast of Asia, and in Malayan seas, as told in his *Whale Hunting with Gun and Camera* (1916) and *Ends of the Earth* (1929) About 1912 he conceived the idea of making expeditions into central Asia to study both fossil and living plants and animals in order to test H. F Osborn's theory that central Asia was a dispersal center for northern mammalian life On his first expedition he explored the province of Yünnan in SW China and the borders of Burma and Tibet, described in his *Camps and Trails in China* (1918) In 1919 he made a reconnaissance survey of N Mongolia, as related in *Across Mongolian Plains* (1921), in order to select the sites and plan for the larger expeditions which he led into the field in 1922, 1923, 1925, 1928, and 1930 The expeditions resulted in increased knowledge of the geography and geology of Mongolia and in the discovery of several of the world's great fossil fields, which have yielded the remains of many primitive animals and plants previously unknown to science *On the Trail of Ancient Man* (1926) is a popular narrative of the earlier expeditions, while all are discussed in Andrew's *New Conquest of Central Asia* (1932) His writings include also *Meet Your Ancestors* (1945) and the autobiographical works *Under a Lucky Star* (1943) and *An Explorer Comes Home* (1947)

Andrews, Stephen Pearl, 1812–86, American reformer and author, b Templeton, Mass He was a fervent abolitionist, the inventor of a universal language, and a proponent of the Pitman shorthand system which he did much to introduce into America In *The Science of Society* (1851–53) he elaborated upon the anarchistic ideas of Josiah WARREN His other writings include *The Basic Outline of Unsociology* (1872)

Andrews, Thomas, 1813–85, Irish chemist and physicist He discovered and named the phenomenon of critical temperature, the temperature above which a gas cannot be liquefied, no matter how great the amount of pressure

Andrews, William Loring, 1837–1920, American bibliophile He was a founder of the library of the Metropolitan Museum of Art and of the Grolier Society and the Society of Iconophiles He wrote on New York city and on early books and printers

Andrews **1** Town (pop 1,520), extreme SW N C , WSW of Asheville, in the Nantahala National Forest near the Ga line It is a lumber-mill town **2** Town (pop 2,008), E S C , NNE of Charleston It is a trade center for a farm and lumber area

Andreyev, Leonid Nikolayevich (lyĭunyĕt' nyĭkull'uvĭchĭndrā'uf), 1871–1919, Russian short-story writer and playwright Always a seeker after the hidden motive of human action, he became the spokesman for the intellectual in the twilight era around 1900 In his early short stories Andreyev probed individuals in the traditional style of Russian realism Later he used allegory and symbol, as in *The Red Laugh* (1905, Eng tr , 1905), a drama inspired by the Russo-Japanese War, and *When the King Loses His Head* (1906, Eng tr , 1920), suggested by the Revolution of 1905 Besides the popular drama of a circus clown, *He Who Gets Slapped* (1916, Eng tr , 1921), his best-known plays are *Anathema* (1904, Eng tr , 1910), an allegory on the futility of goodness, *The Life of Man* (1907, Eng tr , 1914), a morality, *King Hunger* (1907, Eng tr , 1911), *The Seven Who Were Hanged* (1908, Eng tr , 1909), and *The Pretty Sabine Women* (1912, Eng tr , 1914), a political satire *Judas Iscariot* (1910, Eng tr , 1947) is a collection of short stories Andreyev's great popularity declined, owing to the lack of any positive note in his writings An anti-Bolshevist, he died in Finland His name also appears as Andreev See biography by Alexander Kaun (1924)

Andreyevsky, Sergei Arkadyevich (syĭrgā' urkā'dyĭvĭch ŭndrā'ufskĕ), 1847–1918, Russian lawyer and literary critic He was the first to recognise the importance of Dostoyevsky (in an essay on *The Brothers Karamazov*, 1888) His masterpiece is the autobiographical *Book of Death* (1922)

Andria (ăn'drēa), rural city (pop 54,438), Apulia, S Italy It is the center of a region producing wine and olive oil Emperor Frederick II favored it and built near by the imposing Castel del Monte with eight round towers.

Androgeus (ăndrŏ'jēŭs), in Greek legend, Cretan prince, son of MINOS and PASIPHAË He was killed by AEGEUS, king of Athens. Minos revenged his son by compelling the Athenians to send human sacrifices to Crete, to be killed by the MINOTAUR.

Andromache (ăndrŏ'mukē), in Greek legend, Trojan woman, wife of Hector and mother of Astyanax After the Trojan War she was carried away by NEOPTOLEMUS, whose father, Achilles, had slain her husband Neoptolemus died, and she married Hector's brother Helenus She is mentioned in the *Iliad*, the plays of Euripides and Racine which bear her name treat her captivity by Neoptolemus

Andromeda (ăndrŏ'mŭdu), in Greek religion, princess of Ethiopia, daughter of Cepheus and Cassiopeia (kā"sēōpē'u, -sēu-) Cassiopeia angered Poseidon by saying that Andromeda (in another account, Cassiopeia herself) was more beautiful than the Nereids Poseidon sent to prey upon the country a sea monster who could be appeased only by the *sacrifice* of the king's daughter Andromeda was left on a rock by the sea, to wait for the monster There she was found by PERSEUS, who rescued her and married her Cassiopeia was changed into a constellation

Andromeda, in astronomy, a northern constellation lying south of Cassiopeia and merging on the west with Pegasus The brightest of the spiral nebulae is in Andromeda To the naked eye the nebula looks like a faint star with a hazy outline, its distance from the earth has been estimated to be from about 750,000 to more than 900,000 light years, and its size is believed to be about that of our Milky Way galaxy

Andronicus I (Andronicus Comnenus) (ăndrŏnī'kus, kŏmnē'nus), 1110?–1185, Byzantine emperor (1183–85), nephew of John II He acceded to the throne by strangling his cousin ALEXIUS II Though notorious in his younger years for his scandalous morals, he was a competent ruler He took strict measures to protect the peasants against the great landowners, enforced honesty on the tax collectors, and was the terror of corrupt officials His severity and his failure to stop the rapid advance of WILLIAM II of Sicily against the capital led to his overthrow and the elevation of ISAAC II Andronicus was tortured by the rabble for two days before he died He was the last of the Comneni on the throne of Constantinople

Andronicus II (Andronicus Palaeologus), (pālēŏ'lugus), 1258–1332, Byzantine emperor (1282–1328), son and successor of Michael VIII He devoted himself chiefly to church affairs, renewing the schism by renouncing the union established at the Second Council of Lyons He made a treaty with the rising kingdom of Serbia Against the Turkish menace he allied himself with Roger de FLOR, with little success His reign, which ruined his empire to its doom, was cut short by his grandson, who forced him into a monastery and became emperor as Andronicus III

Andronicus III (Andronicus Palaeologus), c 1296–1341, Byzantine emperor (1328–41), grandson of Andronicus II, whom he deposed During his reign the Turks gained almost complete control of Asia Minor, while STEPHEN DUSHAN of Serbia conquered part of Macedonia and Albania He was succeeded by his son, John V

Andronicus [Gr ,=conqueror of men], apostle at Rome Rom 16 7

Andronicus, Livius see LIVIUS ANDRONICUS

Andros, Sir Edmund, 1637–1714, British colonial governor in America, b Guernsey As governor of New York (1674–81) he was bitterly criticized for his high-handed methods and he was embroiled in disputes over boundaries and duties (see NEW JERSEY), going so far as to arrest Philip CARTERET When James II, partly influenced by Edward Randolph, consolidated all the New England colonies into the Dominion of New England, he named (1686) Andros governor In 1688 New York and the Jerseys were also put under his control The suppression of charters and colonial assemblies, interference with local customs and rights, and Andros's overbearing ways caused intense friction After news of the overthrow of James II in 1688 reached the colonies, the colonials in Boston rebelled (1689), seized Andros and other officials, and sent them to England as prisoners He was soon released and later was governor of Virginia (1692–97) and governor of Guernsey (1704–6) See Viola F Barnes, *Dominion of New England* (1923)

Andros (ăn'drŏs), island (145 sq mi , pop 17,926), off Greece, in the Aegean Sea, second largest and northernmost of the CYCLADES The chief town is the port of Andros (pop 3,028) The island produces silk, citrus fruit, and wine and has manganese deposits Colonized by Athens in the 5th cent B C , Andros rebelled in 410 B C , became a free state, and later passed under the rule of Macedon and Rome Seized from the Byzantines by Venice in 1204, it was dominated, with interruptions, by Venice until it fell (1514) to the Turks

Androscoggin (ăndruskŏg'ĭn), river, c 175 mi long, formed in NE New Hampshire and flowing south, then east, to enter W Maine Later turning south again, it joins the Kennebec near Bath Long important for logging, it now also furnishes power for Rumford, Auburn, Lewiston, and other towns

Andros Island: see BAHAMA ISLANDS

Androuet du Cerceau (ădrōō-ă' dü sĕrsō'), family of French architects active in the 16th and 17th cent. It was founded by **Jacques Androuet** (shăk'), c 1510–c 1584, surnamed du Cerceau [Fr ,=circle] from the emblem of a circle marking his workshop Though a leader in introducing the Italian Renaissance style into France, he is known by his writings rather than by authenticated buildings Of his two sons, who both worked on the Louvre, **Baptiste Androuet du Cerceau** (bătēst'), c 1544–1602, designed the Pont Neuf spanning the Seine at Paris and became supervisor of royal construction in Paris, while **Jacques Androuet du Cerceau,** the younger, d 1614, worked on the Tuileries Baptiste's son **Jean Androuet du Cerceau** (zhăⁿ') is known for his mansions in Paris

Andrus, Leonard, 1805–67, pioneer of the steel PLOW industry, b Cornwall, Vt After some years as a merchant in Malone and Rochester, N Y , he traveled in 1834 through the Middle West, decided to found a settlement at GRAND DETOUR, Ill , and returned in 1835 with a group of settlers He was associated with John DEERE in making (1837) the first Grand Detour steel plow The moldboard of this plow was made by Deere of a broken circular saw from the sawmill of Andrus Andrus and Deere were partners in a steel-plow factory from 1843 to 1847, and Andrus afterward continued the factory at Grand Detour In 1937 a centennial celebration of the making of the first Grand Detour steel plow was held at Grand Detour, and a memorial, designed by Avard Fairbanks, was dedicated there to Andrus

Andrusov, Treaty of (ăn'drōōsŏf", Rus ŭndrōō'suf), 1667, signed by Poland and Russia at the village of Andrusovo (ŭndrō'suvŭ) (formerly Andrusov), RSFSR, SW of Smolensk It ended the war of Tsar ALEXIS of Russia against JOHN II of Poland Russia gained Smolensk and the Ukraine E of the Dnieper, including Kiev

Andújar (andōō'hăr), city (pop 22,924), Jaén prov , S Spain, in Andalusia, on the Guadalquivir river It is famous for its pottery and for its water-cooling jars made of porous stone

Anegada see VIRGIN ISLANDS, BRITISH

Anem (ā'nĕm), the same as **EN-GANNIM 2**

anemia. When the amount of hemoglobin in the blood or the number of red cells of the blood or both are reduced, the condition is referred to as anemia It is a symptom of a variety of diseases Causes are a loss of blood, inadequate blood formation, or increased destruction of red blood cells Hemorrhage results in a deficiency in the number of red corpuscles Transfusion is necessary if the loss is considerable An iron deficiency in the blood may result in a low hemoglobin content Lack of the antianemic factor of the liver, which occurs most frequently in pernicious anemia, affects the number and the formation of red blood cells In the latter stages of pernicious anemia, in chronic infections, malaria, lead or arsenic poisoning, overdosage of certains drugs, or after excessive exposure to X ray or radium, the bone marrow may be affected, with a resultant lack of red blood cell formation An anemic individual feels weak, tires easily, becomes short of breath readily, and complains of faintness, dizziness, and palpitation There may be pallor, a rapid pulse, and sometimes a heart murmur In anemias due to an iron deficiency, the hemoglobin may be increased by a diet containing foods rich in iron In anemias due to a lack of the antianemic factor, the condition is treated by injection of liver extract together with a diet rich in vitamins and minerals Folic acid has also been found to stimulate the formation of red blood cells

anemometer see WIND

anemone (unĕm'unē) or **windflower,** any of the perennial herbs, wild or cultivated, of the genus *Anemone* In general, the plants are spring blooming, with showy single flowers on plant stems and with three-divided leaves Not all are hardy. A rich legendary history has gained the anemone many names and attributes It is said to have sprung from the blood of Adonis, Romans held it valuable in preventing fever, it has been applied for bruises and freckles, for some it is tainted with evil and by the Chinese has been associated with death The name windflower is accounted for in several ways, one of which is Pliny's statement that anemone blossoms are opened by the wind Anemones contain an acrid principle—anemonin—poisonous, but formerly used medicinally Best known of the wild kinds are the white- or purplish-flowered wood anemone, sometimes known specifically as the windflower, and the greenish-white-flowered tall anemone or thimbleweed (from the thimblelike fruit) The most common cultivated kinds include the tall and autumn-flowering Japanese anemone for gardens and the large poppy anemones of florists Similar to the wood anemone is the wild rue anemone of another genus The PASQUEFLOWER is sometimes considered an *Anemone*.

aneroid barometer see BAROMETER

anesthesia (ănĭsthē'zhu) [Gr ,=insensibility], loss of sensation, especially of tactile sensibility, induced by drugs General anesthesia, usually employed in surgical operations of long duration, causes loss of consciousness and is produced by inhalation anesthetics (e g , ether, chloroform, nitrous oxide, and cyclopropane) Avertin, given rectally, is sometimes used to initiate general anesthesia and is later supplemented by an inhalant anesthetic Local anesthetics (e g novocaine and ethyl chloride) are used in dentistry and in minor surgery and cause anesthesia of a localized area at the point of application Anesthesia of short duration may be induced by intravenous injection of sodium pentothal Spinal anesthesia is produced by injecting the anesthetic beneath the membrane of the spinal cord This method is often used in surgery of the abdomen and legs Caudal anesthesia, used in obstetrics, is produced by injecting the anesthetic into the caudal or sacral canal SCOPOLAMINE has been used to lessen the pain accompanying childbirth Early experimenters with nitrous oxide (laughing gas) were Sir Humphry DAVY of England and Horace WELLS of the United States Ether was used as a general anesthetic in the United States by Crawford W LONG in 1842, but more general use of ether came after a demonstration at the Massachusetts General Hospital in Boston by William T G MORTON in 1846 Sir James Y SIMPSON in 1847 was the first to employ a general anesthetic in obstetrics See Victor Robinson, *Victory over Pain* (1946)

Aneto, Pico de (pē'kō dā ănā'tō), Fr *Pic de Néthou* or *Pic d'Anethou*, peak, 11,168 ft high, NE Spain, in the Maladetta group near the French border, highest of the Pyrenees

Anetothite (ăn'ĭtōthīt) see ANATHOTH

Aneurin (ănū'rĭn, ă'-), Welsh bard, perhaps a son of the historian Gildas He is said to be the author of *Gododin*, a 900-line poem on a defeat of the Britons by the Saxons The poem is one of the oldest pieces in Welsh literature Neither the date nor the place of this defeat is known certainly See W F Skene, *Four Ancient Books of Wales* (1868)

Angara (ang"gurā', Rus ŭn-gŭrā'), river, RSFSR, in Siberia, the outlet of Lake Baikal and a right tributary of the Yenisei The Upper Angara (Rus *Verkhnyaya Angara*), 250 mi long, rises NE of Lake Baikal, into which it empties, and is partly navigable The Angara proper, 1,075 mi long, leaves Lake Baikal near its southeastern end, flows N past Irkutsk, turns west after receiving the Ilim river, and joins the Yenisei above Yeniseisk In its course below the junction with the Ilim it is also known as the Upper Tunguska (Rus *Verkhnyaya Tunguska*) It is navigable above and below the 50-mile rapids below its junction with the Oka at Bratsk A large-scale hydroelectric power project is under way

angel [Gr ,=messenger], bodiless, immortal spirit, limited in knowledge and power accepted in the traditional belief of Judaism, Christianity, and Islam Angels appear frequently in the Bible, often in critical roles, e g , comforting Hagar (Gen 16 7–14), visiting Abraham and Lot (Gen 18, 19), wrestling with Jacob (Gen 32 24-32), and guiding Tobit (TOBIT 5) In the gospels an angel announced the Incarnation to the Virgin Mary (Luke 1), and an angel at the empty tomb revealed the Resurrection (Mat 28 3) The Bible also speaks of guardian angels, protecting individuals or nations Dan 10 13,20, Mat 18 10 The "angels of the churches" are perhaps their bishops Rev 2–3 The hierarchy of angels in three choirs appears early in the Christian era, the classes are, from the highest seraphim, cherubim, thrones, dominions, virtues, powers, principalities, archangels, angels Eph 1 21, Col 1 16 Roman Catholics and Orthodox venerate angels, and the cult of guardian angels is especially extensive in Western Christendom (Feast of Guardian Angels Oct 2) Protestants generally abandoned the cult of angels along with the saints The angels of hell, or dark angels, or devils, are the evil counterpart of the heavenly host, the chief of them, Satan (or Lucifer), was cast out of heaven for leading a revolt They are often viewed as the initiators of evil temptations Job 1–2, Isa 14 4 23, Mat 25 41, Luke 10 18, Eph 6 12, Jude 9 Famous literary depictions are those of Milton's *Paradise Lost* and Dante's *Divine Comedy* See ARCHANGEL, CHERUB, SERAPH, GABRIEL, MICHAEL, RAPHAEL, SATAN

Angela dei Merici, Saint (ănˈjĕlä dāˈē märēˈchē), 1470–1540, Italian nun of the third order of St Francis She was the founder of the Ursulines, a teaching order Feast May 31

Angel Falls, waterfall, SE Venezuela, in the Guiana Highlands It is said to be between 3,300 and 5,000 ft high

angelica (ănjĕl'ĭku), any species of the genus *Angelica*, plants of the Northern Hemisphere and New Zealand, valued for their various aromatic parts and formerly for their potency as a medicament and protection against evil spirits and the plague, which probably accounts for the name Angelica is a poetic symbol for inspiration The roots and fruits yield angelica oil, used in perfume and for flavoring liqueurs (such as angelica), the leafstalks are candied and used in decorating pastry, and the plants were once blanched and eaten like celery The species most often used for these purposes is *Angelica archangelica* (European)—and sometimes the purple-stemmed angelica (*Angelica atropurpurea*, American) These and other species of the

genus are often planted in herb gardens or in borders for the bold effect of their large compound leaves The flowers are white or greenish and are inconspicuous

Angelico, Fra (frä ănjĕl'ĭkō), 1387–1455, Florentine painter, b Vicchio, Tuscany He was diversely called Guido (his baptismal name), or Guidolino, di Pietro, Giovanni da Fiesole, and, after his beatification, Il Beato Fra Giovanni Angelico da Fiesole Nothing is known of his family or early training, but he was already an accomplished artist, probably a miniaturist, when he entered the Dominican convent at Fiesole in 1407 In 1408 he took the vows of the order and the name Giovanni In his novitiate the brotherhood was exiled to Cortona, and his earliest extant works are there—*Madonna and Saints*, with a predella illustrating the life of St Dominic (in San Domenico), and *Annunciation*, with scenes from the life of the Virgin and of St Dominic on the predella (Oratorio del Gesù) In 1418 the brotherhood returned to Fiesole, where Fra Angelico executed some of his most famous frescoes and altarpieces and several small reliquaries for the local churches and convents In 1436 under the protection of Cosimo de' Medici, the Dominicans of Fiesole removed to the convent of St Mark's in Florence, which was decorated by the frescoes of Fra Angelico At this time he probably studied the great frescoes in the Brancacci Chapel and came under the influence of the works of Orcagna The most celebrated of his many paintings in St Mark's are *Christ as a Pilgrim Welcomed by Two Dominicans*, *Crucifixion with St Dominic* (in the cloisters), and the great *Crucifixion* (in the chapter house), with Mary and saints on one side and on the other the founders of the monastic orders adoring the Cross In a frieze below are portraits of 17 Dominicans Though badly restored, this remains one of the most beautiful works in Italian painting On the upper floor (containing over 40 frescoes) are *Christ on the Cross*, *Annunciation*, *Entombment of Christ*, *Agony in the Garden*, *Transfiguration*, and three reliquaries painted for Santa Maria Novella—*Adoration of the Magi*, *Madonna of the Star*, and *Coronation of the Virgin* In 1445 he was summoned to Rome by Pope Eugene IV to decorate the Cappella del Sacramento (demolished) in the Vatican, and in 1447 he visited Orvieto, where, assisted by Benozzo Gozzoli, his pupil, he painted *Christ as Judge* and *Prophets*, in the Cappella Nuova of the cathedral Returning to Rome, he began the following year what is probably his greatest achievement, the series of frescoes in the Chapel of Nicholas V in the Vatican, representing scenes from the lives of St Stephen and St Lawrence, the most vigorous and technically perfect of his works He treated none but religious subjects, and a remarkable idealistic unity pervades all his works He was one of the greatest colorists of all time and his faces and figures are among the most expressive and spiritual in Christian art Perhaps because of the reverence in which he was held in his own time and in later times, his works have been unusually well preserved and there are between 200 and 300 in existence, most of them still in Florence Other important works include *Assumption* and *Dormition of the Virgin*, a small panel (Gardner Mus, Boston), *Crucifixion* and *The Nativity* (Metropolitan Mus), *Gabriel, the Announcing Angel* and *The Virgin Receiving the Divine Message*, originally the panels of a diptych (Edsel B Ford Coll, Detroit), the predella, *Christ in Glory*, with over 266 figures of saints and angels, originally part of the now badly damaged altarpiece in San Domenico, Fiesole (National Gall, London), *The Ascension* (Corsini Palace, Rome) See biographies by G C Williamson (1901), R Langton Douglas (2d ed, 1902), and I B Supino (Eng tr, 1927)

Angel Island, W Calif, N of San Francisco, largest island in San Francisco Bay It was discovered in 1775 From 1863 to 1946 it was a U S army base

Angell, James Burrill, 1829–1916, American educator, editor, and diplomat, b Scituate, R I, grad Brown, 1849, and studied abroad He became professor of modern languages at Brown Resigning in 1860, he served as editor of the Providence *Journal* Later, as president of the Univ of Vermont (1866–71) and of the Univ of Michigan (1871–1909), Angell became known as an administrator In this period he served also as minister to China (1880–81) and to Turkey (1897–98) See his *Reminiscences and Selected Addresses* (1912)

Angell, James Rowland, 1869–1949, American educator and psychologist, b Burlington, Vt, grad Univ of Michigan (B A, 1890, M A, 1891), M A Harvard, 1892, son of James B Angell After study abroad, he taught at the Univ of Minnesota, then at the Univ of Chicago (1894–1920), where he became professor and head of the psychology department (1905), dean of the university faculties (1911), and acting president (1918–19) He served as president of Yale from 1921 until his retirement in 1937, in his administration the physical facilities of Yale were greatly expanded In 1937 he became educational counselor of the National Broadcasting Company His writings include several standard psychology textbooks, *Chapters from Modern Psychology* (1911), *American Education* (1937), and articles on psychology and education

Angell, Sir Norman, 1874–, British internationalist and economist, whose name originally was Ralph Norman Angell Lane At 17 he left his school in Geneva to go to the W United States, where he became a ranch hand and later a reporter on a San Francisco paper He jumped into fame with *The Great Illusion* (1910), the thesis of which is the futility of war because of the common economic interests of the nations involved After Japanese aggression in Manchuria and Italian moves in Ethiopia, Angell wrote against the British Conservative policy of condoning such aggression in *The Defence of the Empire* (1937) and *Peace with the Dictators?* (1938) Later works are *America's Dilemma Alone or Allied?* (1940), *Let the People Know* (1943), and *The Steep Places* (1947), urging greater unity among Western democracies Norman Angell was knighted in 1931, as one of the most valiant fighters for peace he received the 1933 Nobel Peace Prize

Angels Camp, city (pop 1,163), central Calif, E of Stockton, founded 1848 after the discovery of gold in the Mother Lode, inc 1912 Mark Twain's story of the jumping frog is said to have its locale here

Angelus (ăn'jŭlus), family name of three Byzantine emperors (1185–1204) see ISAAC II, ALEXIUS III, ALEXIUS IV

Angelus (ăn'jŭlus) [Latin,=angel], daily prayer of the Roman Catholic Church, said usually three times daily, as announced by a bell, traditionally at six in the morning, at noon, and at six in the evening It is said in honor of the Incarnation, the second and third passages coming from Luke 1 38 and John 1 14 respectively It also includes a collect and repetition of the Ave Maria The distinctive order of the ringing of the Angelus bell is three times, three times, nine times

Angelus Silesius (ăn'jŭlus sĭlē'zhŭs), pseud of **Johannes Scheffler** (yōhăn'ŭs shĕf'lur), 1624–77, German poet, b Breslau A physician, he became a priest after his conversion to Catholicism. His religious pastoral poems, the best of their period, are deeply mystical

Angerman, Swed *Ångermanälven* (ông'ûrmänĕl"vun), river, 280 mi long, rising in N central Sweden and flowing into the Gulf of Bothnia at Harnosand It is one of the main arteries for the floating of logs from the forests to the coast for processing

Angermanland, Swed *Ångermanland* (ông'ûrmänland"), historic province, NE Sweden It is now administratively divided between VASTERNORRLAND and VASTERBOTTEN counties

Angerona (ănjurō'nu), Roman goddess of silence, of fear, or of grief

Angers (ăzhā'), city (pop 86,083), capital of Maine-et-Loire dept, W France, on the Maine It is an industrial center and an important market for Anjou wines The historic capital of ANJOU, Angers dates from pre-Roman times Excavations made in 1937 revealed important Roman and early medieval remains There is a fine cathedral (12th–13th cent) and a museum containing remarkable 14th-century tapestries and a large collection of the sculpture of DAVID D'ANGERS The 13th-century castle and the 15th-century house of Olivier Barrault were among the buildings damaged by the Germans in 1940

Angevin (ăn'jŭvĭn) [Fr,=of Anjou], name of two medieval dynasties originating in France The first ruled over parts of France and over Jerusalem, and England, the second ruled over parts of France and over Naples, Hungary, and Bohemia, with a claim to Jerusalem The older house issued from one Fulk, who became count of ANJOU in the 10th cent Among his descendants was FULK (1092–1143), king of Jerusalem (Fulk V of Anjou) A younger son inherited the kingship of Jerusalem as BALDWIN III and was succeeded by AMALRIC I, BALDWIN IV, and BALDWIN V, with whom the branch ended (1186) Fulk V's elder son, GEOFFREY (Geoffrey Plantagenet), inherited Anjou, conquered NORMANDY, and married MATILDA, daughter of Henry I of England Their son became (1154) the first Angevin (or Plantagenet) king of England as HENRY II His successors were RICHARD I, JOHN, HENRY III, EDWARD I, EDWARD II, EDWARD III, and RICHARD II, after whom the English branch split into the houses of LANCASTER and of YORK A nephew of Kings Richard I and John became (1196) duke of Brittany as ARTHUR I From his sister and her Capetian husband, PETER I, the subsequent rulers of BRITTANY issued The second house of Anjou was a cadet branch of the Capetians and originated with Charles, a younger brother of King Louis IX of France Charles was made count of Anjou, acquired PROVENCE by marriage, and in 1266 was invested with Naples as CHARLES I (see NAPLES, KINGDOM OF) His successors were CHARLES II, Robert, and JOANNA I of Naples and Provence On the death (1382) of Joanna I the succession to Naples was contested by two cadet branches, both descended from Charles II of Naples The first was represented by Charles of Durazzo (CHARLES III of Naples), a great-grandson through the male line, and by his children, LANCELOT and JOANNA II They retained, for the most part, actual possession of the kingdom, despite the efforts of the rival line, issued from Margaret, a daughter of Charles II Margaret married CHARLES OF VALOIS, whose son and grandson were King Philip VI and John II of France John made a younger son, Louis, duke of Anjou, Joanna I of Naples adopted Louis as heir, Louis thus became Louis I of Naples and Provence His successors were LOUIS II, LOUIS III, and RENÉ Though the last two were successively designated as heirs by Joanna II, Naples was seized by Alfonso V of Aragon and eventually remained in Spanish hands René became duke of Lorraine by marriage His death (1481) left only a brother, Charles of Maine (d 1486, without issue), and Anjou, Maine, Provence, and the Angevin claim to Naples all passed to the French crown The theoretical claim to Jerusalem stemmed from Charles I of Naples, whom Pope John XXI invested (c 1276) with the title René's claim to the title was transmitted to the house of Lorraine The Hungarian branch of Anjou began (1308) with Charles Robert (CHARLES I of Hungary), a grandson of Charles II of Naples and of Emperor Rudolf I Charles I's son became king of Hungary and Bohemia as LOUIS I Hungary passed to his daughter Mary and to her husband, Emperor Sigismund, and Bohemia to Ladislaus II of Poland, husband of Louis's daughter Jadwiga

Anghiera, Pietro Martire d' (pyĕ'trō märtē'rā dänggyā'ra), 1457?–1526, Italian geographer and historian In 1487 he removed to Spain Knowing Columbus, Vespucci, Magellan, and other explorers and navigators, he was in regular receipt of information about the explorations in his time His chief work is *De orbe decades octo* (1530)

Angier (ăn'jur), town (pop 1,028), central N C, S of Raleigh, in a farm area

Angilbert, Saint (ăng'gĭlbûrt), d 814, Frankish statesman and courtier under Charlemagne, abbot of St Centula (now Riquier), near Amiens He was highly regarded in the Carolingian revival as a writer of Latin poetry Feast Feb 18

angina pectoris (ănjī'nu pĕk'tûrĭs) [Latin,=tightening of the heart], is characterized by chest pain, experienced usually under or to the left of the sternum (breast bone) The pain extends down the left arm or right arm or both It is caused by occlusion of the coronary arteries, which results in a lack of oxygen to the heart muscle Occurring usually after the age of 50, more frequently in men than in women, angina pectoris usually follows exertion, excitement, a heavy meal, or exposure to cold Associated symptoms are faintness and difficulty in breathing Drugs, such as amyl nitrite or nitroglycerine, which dilate the blood vessels of the heart, are used in treatment In all cases, physical and mental activities must be restricted The basic treatment, however, depends upon the cause

Angkor (ăng'kôr), great collection of ruins N of Tonle Sap, W Cambodia, Indo-China, for five and a half centuries the heart of the KHMER EMPIRE The most celebrated of the monuments are the buildings at Angkor Thom (which became the Khmer capital in the 9th cent) and the temple of Angkor Wat Angkor was raided in the 12th cent by the Chams and in the 14th and early 15th cent by the Thai It was abandoned before 1450 for Phnom Penh The ruins were discovered by the French in 1861

Angkor Thom (tôm'), ruined capital of the KHMER EMPIRE, N of Tonle Sap, W Cambodia, Indo-China The city, which covered an area of more than 5 sq mi, was walled and surrounded by a moat Five avenues cross the moat on causeways and enter the city through gates surmounted by four-faced heads These heads, formerly believed to represent Siva, are now generally considered to be those of the bodhisattva Lokesvara Rows of huge seated stone figures, carrying on their laps the sacred many-headed cobras, line the avenues The buildings that survive are chiefly temples, some terraces belonged to the royal palace and other associated buildings Near the center is the Bayon, a temple of Siva or of Lokesvara (possibly also a royal tomb), with a central tower rising to over 150 ft and about 50 smaller towers The outer wall of almost every building is covered with carvings, of these the most elaborate are the bas-reliefs of the Bayon, depicting scenes of Khmer life and episodes from the Hindu epics See H G Q Wales, *Towards Angkor* (1937), Larry Briggs, *A Pilgrimage to Angkor* (1943)

Angkor Wat (wät'), great temple of the ancient Khmer Empire, Cambodia, Indo-China, a mile S of Angkor Thom. The temple with its five lofty acorn-shaped towers rising in a central pyramid more than 200 ft high is comparable, as an architectural entity, to the Taj Mahal. Across the moat which surrounds the temple a broad causeway, 600 ft long, leads to the main gate Within the gate a series of wide courtyards and long galleries leads to the shrine of Vishnu, which is reached by a flight of 38 nearly upright stone steps, each 2 ft. thick The Angkor Wat is rich with carvings

angle, in plane geometry, the figure formed by two straight lines meeting at a point. The lines are called the sides of the angle, the point at which they meet is the vertex. In solid geometry, an angle is formed by the intersection of two or more planes.

When two planes intersect, they intersect in a line and the angle thus formed is called dihedral When the angle is formed by three planes, they must all go through the same point, and the angle is called trihedral In trigonometry the plane angle is considered to be the amount of rotation about its vertex required to carry one of its sides (called the initial side) into the position of the other side (the terminal side). With this definition it is possible to consider positive and negative angles as well as angles larger than one complete rotation The magnitude of a plane angle is given in degrees, each degree representing 1/360 of a complete rotation For example, a right angle, an angle whose sides are perpendicular to each other, is 90°, since it is 90/360 or ¼ of one complete rotation A minute is 1/60 of a degree, a second is 1/60 of a minute Angles of less than 90° are acute, angles of more than 90° but less than 180° are obtuse, angles of more than 180° are reflex Two angles are complementary if their sum is 90° and supplementary if their sum is 180° Certain figures are named for the number of angles formed by their sides, e g , the TRIANGLE and the quadrangle

Angles: see ANGLO-SAXONS; EAST ANGLIA; MERCIA; NORTHUMBRIA

Anglesey or **Anglesea** (both ăng'gŭlsē), island county (276 sq mi ; 1931 pop 49,029, 1948 estimated pop 49,130), NW Wales Known as Mona to the Romans, who conquered it under Agricola in A D 78, the island shows many traces (such as dolmens) of prehistoric occupation It was the last stronghold of the druids against the Romans Conquered by Edward I in the 13th cent and made into a shire, Anglesey was important from medieval times as a route to Ireland HOLYHEAD is today the eastern terminus of the packet service to Dublin. The island's surface is flat and low, and the principal industries are agriculture, sheep raising, fishing, and shipping There are two bridges over the narrow MENAI STRAIT to the mainland

anglesite (ăng'glusīt), pale green, blue, yellow to white, or colorless mineral, a sulphate of lead formed by the oxidation of GALENA, crystallizing in the orthorhombic system and occurring also in granular or massive form It is widely distributed and commonly associated with galena and other lead minerals It is an important lead ore

Angleton, city (pop 1,763), co seat of Brazoria co , S Texas, SSW of Houston, settled 1896, inc 1912 It grew as a rail center in a region that once boasted large plantations but is now given over mainly to vegetables, cattle, and oil

Anglican Communion, the body of churches in all parts of the world that are in communion with the Church of England (see ENGLAND, CHURCH OF) They include the Protestant Episcopal Church of America (see EPISCOPAL CHURCH, PROTESTANT), the Scottish Episcopal Church, and the Church of Ireland Worship is liturgical and is regulated by the BOOK OF COMMON PRAYER See *The Anglican Communion a Survey* (ed by J W C Wand, 1948)

Anglin, Margaret Mary, 1876–, American actress, b Ottawa, Canada She made her debut in New York (1894) as Madeline West in Howard Bronson's *Shenandoah*, a Charles Frohman production In 1898 she won fame as Roxane in Rostand's *Cyrano de Bergerac* and from 1900 to 1903 played leads at the Empire Theatre With Henry Miller in 1903–4, she played in *Camille* by Dumas fils and *The Devil's Disciple* by G B Shaw, and later, when she and Miller formed a producing company, she discovered and won acclaim in William Vaughn Moody's play *The Great Divide* (1906) She performed in *Antigone*, *Electra*, and *Medea*, receiving the Laetare Medal at the Univ of Notre Dame in 1927 She appeared in New York in Ivor Novello's *Fresh Fields* in 1936 and as Mrs Malaprop in Sheridan's *Rivals* in 1942

Anglo-Catholic movement · see OXFORD MOVEMENT

Anglo-Egyptian Sudan (sōōdăn'), condominium, (967,500 sq mi ; pop. 7,547,500), NE Africa, on the Red Sea The capital is Khartoum Anglo-Egyptian Sudan is bordered on the north by Egypt, on the east by the Red Sea, Eritrea, and Ethiopia, on the south by Kenya, Uganda, and the Belgian Congo, and on the west by French Equatorial Africa and Libya It comprises most of the SUDAN The outstanding geographical feature of the country is the Nile, which, with its tributaries, the Blue Nile and the White Nile, traverses the east The northern half of Anglo-Egyptian Sudan (Nubia), except for a narrow cultivated strip which is annually flooded by the Nile and for the irrigated plain of GAZIRA (both producing cotton), belongs to the Sahara and is an undulating plateau (mostly 2,000–5,000 ft high) which rises to 7,000 ft in the mountains on the Red Sea coast The desert supports a sparse population of pastoral nomads (predominantly white) and yields hides, wool, and salt. The south, populated by Negroes, has a rugged terrain, and there is a steady increase in rainfall as the equator is approached. In the southwest there are tropical forests, and in the southeast swamp forests and alluvial grasslands Peanuts, sesame, millet, and hardwoods are produced in the south. The country's railroads (c 2,000 mi long) are supplemented by a road system in central and S Anglo-Egyptian Sudan and by steamer service on the rivers. Ancient Egypt colonized NUBIA as far as the Fourth Cataract of the Nile, but it may have withdrawn by 1500 B C Nubia embraced Coptic Christianity in the 6th cent , but in the 15th cent conquering Arabs converted the people to Islam and proceeded south to take territories controlled by Ethiopia The country was not unified until, in the early 19th cent , the Egyptians occupied Nubia to take gold and slaves, they founded (1823) Khartoum as their headquarters Sir Samuel Baker, while in Egyptian service (1870–73), completed the conquest of the south and began to suppress the slave trade He was followed (1874–81) by Charles Gordon, who established military posts on the upper Nile, dealing the slave traders a mortal blow. In 1881 began the revolt of the MAHDISTS, who scored great victories at El Obeid (1883) and at Khartoum (1885), but by 1898 an Anglo-Egyptian army under Lord Kitchener finally destroyed their power A convention (1899) between Great Britain and Egypt provided for the territory to be administered by a governor general appointed by Egypt with the assent of Great Britain; this status was affirmed in the Anglo-Egyptian treaty of 1936 In June, 1948, the governor general established a predominantly elective legislative assembly and an executive council (at least half Sudanese) In the first elections (Nov , 1948) the Independence Front, which wishes the immediate establishment of a separate state, secured a large majority over the National Front, which favors union with Egypt See H A MacMichael, *Anglo-Egyptian Sudan* (1934)

Anglo-Saxon Chronicle, customary name for the annals of the English until 1154 It is made up of several units and is uneven in style Its extant form was probably begun c 892 by monks at Winchester under the supervision or possibly at the dictation of Alfred the Great, entries from earlier years were incorporated from Bede and old monkish records The narrative from 893 to 897 is an example of good Anglo-Saxon prose, that from 897 to 910 is crude, but the hand of a good writer is seen again up to 924 The last unit, the *Peterborough Chronicle*, carries the narrative to 1154

Anglo-Saxon literature, the literary writings in Old English (see ENGLISH LANGUAGE) Much of the early literature of England was in Latin (see MEDIEVAL LATIN LITERATURE) The earliest Anglo-Saxon poems, although recorded after the conversion of the English to Christianity, reveal a strong current of old Germanic paganism The great example of this half-pagan poetry is the epic BEOWULF A dignified, often sad tone pervades *Beowulf* and the many shorter poems of the period, which include WIDSITH, of great archaeological interest, and *Deor*, the earliest English lyric Religious poetry in Anglo-Saxon begins with the hymn of CÆDMON, recorded by BEDE, poets of Cædmon's school and others paraphrased parts of the Bible and achieved some stirring poetry, especially in the epic fragment JUDITH The work of CYNEWULF and his followers reflects the growing interest in saints' legends and homilies For vividness and religious intensity, "The Dream of the Rood" is notable, as are "The Battle of Maldon" and "The Battle of Brunanburh" (see MALDON and BRUNANBURH) for the typically heroic spirit of the Anglo-Saxons in war The usual form of early Anglo-Saxon poetry is an alliterative, four-stress line, broken by a caesura into two half lines and end-stopped Rhyme was only an occasional ornament until the later period, which was marked by increasing use of run-on lines and rhyme Stylistic features include the use of kennings—e g , "whale's road" for "sea"—and repetition with variations within the sentence Literary prose in England began to be written in Anglo-Saxon instead of Latin only when KING ALFRED made his extensive and excellent translations from Latin to educate his people The ANGLO-SAXON CHRONICLE was probably undertaken at his order The finest original prose is generally said to be found in the homilies of ÆLFRIC and of Wulfstan, bishop of Worcester and archbishop of York. See E E Wardale, *Chapters on Old English Literature* (1935), C W Kennedy, *The Earliest English Poetry* (1943), Kemp Malone, "The Old English Period," in A C Baugh, ed , *A Literary History of England* (1948), G P Krapp and E V K Dobbie, eds , *The Anglo-Saxon Poetic Records* (6 vols , 1932–)

Anglo-Saxons, name given to the Germanic-speaking peoples who settled in England after the decline of Roman rule there. The Angles (Latin *Angli*) mentioned by Tacitus are probably the same people, who seem to have come from what is now Schleswig in the later decades of the 5th cent. Their settlements in the eastern central and northern portions of the country were the foundations for the later kingdoms known as EAST ANGLIA, MERCIA, and NORTHUMBRIA The SAXONS, a Germanic tribe who had been continental neighbors of the Angles, also settled in England in the late 5th cent after earlier marauding forays there The later kingdoms of SUSSEX, WESSEX, and ESSEX were the outgrowths of their settlements. The Jutes, a tribe about whom very little is known except that they probably came from the area around the mouths of the Rhine, settled in Kent (see KENT, KINGDOM OF) and the Isle of Wight The use of the term "Anglo-Saxons" to denote the non-Celtic settlers of England dates from the 16th cent In more modern times it is loosely used to denote any of the people of or descendants of the peoples of the British Isles, including the Danes and the Normans For chronology and bibliography, see ENGLAND

Angmagssalik (ăngmäg'sälĭk), trading post, on E Greenland, on the coast just south of the Arctic Circle The radio meteorological station, established in 1925, has great strategic importance

Angola (ăng-gō'lu) or **Portuguese West Africa,** colony (with CABINDA 481,351 sq mi , pop 3,378,010), W Africa, on the Atlantic Ocean The capital is Luanda, although it was announced (1927) that Huambo would become the capital Angola extends c 1,000 mi along the coast between the Congo on the north and the Cunene river on the south It is otherwise bordered by the Belgian Congo on the north and east, by Northern Rhodesia on the east, and by South-West Africa on the south. Most of Angola is a desiccated plateau Rainfall is generally low, and nearly all the land is desert or savanna. In the northeast, however, there are densely forested valleys which yield hardwoods and diamonds, and along the coast there is a narrow strip where rainfall is heavy and palm trees are cultivated. Much of the savanna region is suitable for raising livestock, especially goats and sheep The crops of Angola include wheat, corn, palm oil, coffee, and cotton Industry (mostly food processing) is minor, but profit is derived from transporting the metals of the Katanga region in the Belgian Congo by the railroad which extends from Beira in Mozambique W across Africa to the port of Lobito in Angola The country has, besides, a shorter rail line and a fair road net The Portuguese first explored and settled Angola in the late 15th cent , and, except for a short occupation (1641–48) by the Dutch, it was always under Portugal's control. Until recently, however, strong Bantu states maintained their practically independent existence in Angola with no Portuguese interference Angola supplied most of the slaves exported to Brazil in the 19th cent With the end of slavery, food products, including sugar, coffee, and palm oil, became important exports See J C B Statham, *Through Angola* (1922)

Angola (ăng"gō'lu) **1** Resort city (pop 3,141), co seat of Steuben co , NE Ind , NE of Fort Wayne, in hill and lake country near Pokagon State Park. Automotive and aircraft products are made in the city Tri-State College (coeducational) is here **2** Village (pop 1,663), W N Y , near Lake ERIE SW of Buffalo, inc 1873

Angora, Turkey see ANKARA.

Angostura, Venezuela see CIUDAD BOLÍVAR.

angostura bark (ăng"gŏstū'rŭ, -stōr'u), bitter bark of a South American tree of the genus *Cusparia* (or *Galipea*) Formerly valued as a tonic, it is now used in **angostura bitters,** an aromatic appetizer often added to cocktails

Angoulême, Charles de Valois, comte d'Auvergne, duc d' (shärl' du välwä' kōt' dôvĕr'nyu dük' dăgōōlĕm'), 1573–1650, natural son of Charles IX of France He turned against Henry IV, conspired with Henriette d'ENTRAGUES, his half sister, and was imprisoned until 1616 After his release he held high military rank

Angoulême, Louis Antoine de Bourbon, duc d' (lwē' ätwan' du bōōrbō' duk'), 1775–1844, last dauphin of France, son of Charles X His career was undistinguished, his most notable achievement being the command of the French forces sent (1823) to aid King Ferdinand VII of Spain When his father abdicated in 1830, the dauphin also renounced his claim in favor of Henri, comte de CHAMBORD, and spent the rest of his life in exile in Austria

Angoulême, Margaret of or **Marguerite d'** · see MARGARET OF NAVARRE

Angoulême, Marie Thérèse Charlotte, duchesse d' (märē' tārĕz' shärlôt' dushĕs'), 1778–1851, wife of Louis Antoine d'Angoulême, daughter of Louis XVI She was imprisoned (1792–95) by the revolutionists Energetic and ambitious, she exerted considerable political influence in the reigns of Louis XVIII and Charles X She died in exile at Frohsdorf, Austria

Angoulême (ăgōōlĕm'), city (pop 39,087), capital of Charente dept , W France, on the Charente It has important paper manufactures and liquor distilleries Of pre-Roman origin, it was an early episcopal see and became (9th cent) the seat of counts ruling the surrounding region as vassals of the dukes of AQUITAINE Recovered from England in 1373, it later was an appanage of a branch of the house of Valois (see ANGOUMOIS)

Angoumois (ăgōōmwä'), region and former province, W France, surrounding Angoulême, its chief city, and occupying most of Charente dept. In the Charente valley there are excellent vineyards The brandy made from their grapes is called cognac, after Cognac, the chief distillery center The region was ruled by the counts of ANGOULÊME, the last of whom became king of France in 1515 as Francis I and definitively incorporated Angoumois into the royal domain

Angra do Heroísmo (äng'grŭ dōō ĕrōĕsh'mō), town (9,435), capital of Angra do Heroísmo dist, on Terceira, in the Azores It is a small port and in the past was the home of many prominent Portuguese in exile

Angstrom, Anders Jons, Swed *Anders Jöns Ångström* (än'dûrs yŭns' ông'strûm), 1814–74, Swedish physicist He was educated at the Univ of Uppsala and in 1839 became a member of its faculty He is particularly remembered for his study of light, especially spectrum analysis He wrote on optical research (1853), the solar spectrum (1869), the spectra of simple gases (1871), and the earth's temperature (1871) His son **Knut Johan Angstrom** (knŭt' vōō'hän), 1857–1910, is known for his work on solar radiation

angstrom unit (äng'strum) [for A J Angstrom], unit of length, 1/100,000,000 of a centimeter, used to measure wave lengths of light

Anguier, François (frăswä' ägyā'), 1604–69, French sculptor He is noted for the mausoleum of Henri II, duc de Montmorency, in Moulins and for the monuments of the Longuevilles and of Jacques Souvre (Louvre) He and his brother, **Michel Anguier** (mēshĕl'), 1614–86, are considered among the best sculptors of their century Michel executed the marble group *The Nativity* in the Church of Val-de-Grâce, Paris, and the decorations for the apartments of Anne of Austria (Louvre) and for the triumphal arch at Porte Saint-Denis, Paris A third brother, **Guillaume Anguier** (gēvōm'), 1628–1708, a painter, was director of the Gobelin factory

Anguilla, British West Indies, see SAINT KITTS

Anguille, Cape (äng-gil'), most westerly point of Newfoundland

Anguille Range, W N F, running NE from Cape Anguille into the highlands of St George Bay

Angus, earls of. see DOUGLAS, ARCHIBALD

Angus, maritime county (874 sq mi, 1931 pop 270,190, 1948 estimated pop 280,651), E Scotland, N of the Firth of Tay between Perthshire and the North Sea The county town is Forfar, and the county was formerly Forfarshire The surface varies from wild rugged mountains (the Sidlaw Hills and part of the Grampians) to the fertile valleys of the Esk and Isla The county is mainly agricultural, with important jute and linen industries at Dundee, Arboath, Forfar, and Brechin There is some granite quarrying, shipbuilding, and fishing Angus has numerous historical remains, the most famous of which is Glamis Castle

Anhalt (än'hält), former German state (898 sq mi, 1939 pop 432,289), central Germany, surrounded by the former Prussian provinces of Saxony and Brandenburg It was included after 1945 in the Russian-occupied state of Saxony-Anhalt Dessau, the capital, and Kothen are the chief cities Anhalt has some mineral resources (salt, lignite, copper, and zinc) Sugar beets are the main crop, grain and cattle are produced in the region of the Lower Harz There are chemical industries and some textile manufactures Anhalt until 1918 was ruled by one of the most ancient houses of Germany, issued from a son of Albert the Bear It was divided, at most times, into several principalities held by various branches of the family Reunited into a single duchy in 1863, it joined the German Empire in 1871, became a republic in 1918 and joined the Weimar Republic Celebrated members of the house of Anhalt were Leopold I, prince of Anhalt-Dessau, and Sophie of Anhalt-Zerbst, empress of Russia as Catherine II

Anhwei or **An-hui** (both än'hwā'), province (56,488 sq mi, pop 22 122,093), E central China Hofei is the capital Anhwei may be divided into two climatic areas The northern half, within the Yellow River valley, is very cold in winter and dry throughout the year It has a single harvest annually, the chief crops being wheat, kaoliang, millet, and beans The southern half, through which the Yangtze river flows, enjoys a relatively moist, warm climate Often two crops a year are grown there, mainly rice, cotton, and sugar cane, and mulberry trees are raised for silk culture Coal and iron are abundant throughout the province, and some smelting is done, principally at Wuhu Communications in Anhwei are fairly good The Hwai river (in the north) and the Yangtze are navigable A railroad connecting Nanking and Shanghai crosses the province, and there are many motor roads

anhydride (ănhī'drīd, –drĭd) [New Gr, =without water], any nonmetallic oxide which unites with water to form an ACID For example, sulphur trioxide is the anhydride of sulphuric acid, since it reacts with water to form sulphuric acid Although the term is usually reserved for the anhydrides of acids, it is used also to denote a metallic oxide which unites with water to form a base Acid anhydrides are also called acidic oxides, and basic anhydrides are called basic oxides

Ani (ä'nē), ancient ruined city of Asia Minor, now in Turkey, c 30 mi SE of Kars The capital of medieval Armenia, it was often besieged by various invaders and was finally destroyed by an earthquake in the 14th cent There are notable ruins of a cathedral and several churches (11th–13th cent) and remnants of double walls

Aniakchak (ănĕăk'chăk), volcano, W Alaska, in the Aleutian Range, on the Alaska Peninsula. It erupted in 1931. Aniachak has a crater 6 mi. in diameter

Aniam (ănī'ŭm) [Heb, =the people's lament], Manassite 1 Chron 7 19

Aniene (ănyā'nā), Latin *Anio*, river, 60 mi long, Latium, central Italy, emptying into the Tiber 2 mi above Rome Below Tivoli, where it forms a celebrated waterfall, it is also called the Teverone It has supplied Rome with water since ancient times and now also feeds several hydroelectric plants

aniline (ăn'ulēn) [New Latin, =belonging to anil, from Arab, =indigo, from Sanskrit, =blue], colorless, oily liquid compound of carbon, hydrogen, and nitrogen, an amine, basic in character, boiling at 184°C and solidifying at –6°C It is of great importance in the dye industry, being used as the starting substance in the manufacture of many dyes—e g, indigo—and as an aid in the manufactures of others For this reason many dyes have the word *aniline* in their common name, as aniline black (one of the best black dyes known), aniline red, yellow, blue, purple, orange, green, and others Today these synthetic dyes have largely replaced the natural ones Aniline is prepared commercially by the reduction of nitrobenzene, a product of coal tar It was obtained originally from three sources, from indigo, from coal tar, and from the reduction of nitrobenzene It was some time, however, before these products were shown to be identical by A W von Hofmann, a German chemist, who gave aniline its name

Anim (ā'–) [Heb, =fountains], place, Palestine, probably c 8 mi SW of Hebron Joshua 15 50

animal, any member of the animal kingdom as distinguished from the plant kingdom Demarcation between animals and plants is usually based on a fundamental difference in their method of obtaining food Green plants characteristically manufacture their food from inorganic substances (see PHOTOSYNTHESIS) Animals, on the other hand, must secure organized food Animals have specialized means of locomotion and possess more highly developed nervous systems and sense organs They are adapted for securing, ingesting, and digesting their food In all but the simpler forms there is a distinct alimentary canal or digestive system It is easy to distinguish between plants and animals of the higher groups, but among the simpler and the microscopic forms it is more difficult Some single-celled organisms, e g, *Euglena*, possess chlorophyll and carry on photosynthesis but are bounded by a flexible membrane and lack the cellulose wall characteristic of plant cells *Euglena* can swim freely by lashing the water with its flagellum Classification of such forms is controversial Plants without chlorophyll (bacteria, molds, mushrooms and other fungi, and the seed-producing Indian pipe) are unable to carry on photosynthesis Animals and plants are interdependent—green plants provide oxygen and are the ultimate source of all food for animals From animals the plants obtain carbon dioxide and minerals Animals, like plants, have been classified by phylum, class, order, family, genus, and species The word *animal* is sometimes incorrectly limited to the members of the class Mammalia See also INVERTEBRATE, VERTEBRATE, ZOOLOGY See R W Hegner, *Parade of the Animal Kingdom* (1935), R L Ditmars and William Bridges, *Wild Animal World* (1937), A H Clark, *Animals Alive* (1948)

animal heat, the heat produced in the body of an animal by the oxidation of food Animals whose body temperature depends largely on the environmental temperature are known as cold-blooded or poikilothermous animals Warm-blooded or homoiothermous animals (the birds and mammals) when in normal health maintain a generally constant temperature generated within the body regardless of the environment In humans the normal oral temperature is usually considered to be 98 6°F, although the normal range is from 98°F to 99°F, normal rectal temperature ranges from 99°F to 100°F and 99 6° is taken as the average Excess heat in humans is removed chiefly through the skin and the respiratory system Fever results if excess heat is not eliminated When, as in cold weather, more body heat is required to maintain the normal temperature, the rate of oxidation can, within certain limits, increase

animals, domestication of see DOMESTICATION.

anima mundi see WORLD SOUL

animated cartoon, form of the moving picture in which a series of static drawings are arranged and photographed and then synchronized with sound In 1905 Emile Cohl, in France, produced several films with animated puppets, and in 1907 he made *Mr Stop* and *Drame chez les Fantoches*, the first films to use animated drawings Other pioneers were the Americans Winsor McCay, who made *Gertie the Dinosaur* (1909), Bud Fisher, who began his "Mutt and Jeff" cartoons (c 1918), and Pat Sullivan, who produced "Felix the Cat" cartoons (1924) The outstanding maker of animated cartoons is Walt Disney, who based his technique on an invention of single-frame photography Known all over the world are his "Mickey Mouse" series, "Silly Symphonies," *Snow White*, *Fantasia*, *Dumbo*, *Bambi*, and *Pinocchio* Lotte Reiniger's work with cut-out paper figures, Georg Pal's "Puppetoons," and Berthold Barthosch's use of Frans Masereel's woodcuts in *L'Idée* (1930–34) were important developments in the perfection of this film form. See R D Feild, *The Art of Walt Disney* (1942)

animism (ă'nĭmĭzm), belief that all objects in the natural world are infused with consciousness, a view common in most so-called primitive societies Trees, mountains, stones, and the like are usually regarded as having personalities and may even be considered as having quasi-human or divine doubles (e g, dryads and river-gods) These natural objects are to be propitiated, cajoled, and outwitted and are thus dealt with like persons rather than objects A soul may be attributed to each of them—frequently in a very rudimentary sort of way This belief is connected with rites to obtain for humans some of the qualities of animals, e g, the cunning of the fox Usually the universe is considered to contain a great many "spirits" which have a more or less material existence and interfere in the activities of the material world, these may include the spirits of the dead Animism is thus connected with ancestor worship. Among certain groups there arose the concept of a spirit that is nonpersonalized (e g, in the South Seas the spiritual force called mana and the American Indian idea of manito) Belief in such has by some been called animatism—a term also sometimes used to mean the belief that beasts, objects, and phenomena have personalities but no individual souls With the development of great organized religions, animism tends to disappear or at least to be obscured in popular belief Animism remains, however, clearly the major part of Japanese Shinto and of many of the varieties of Buddhism The subject aroused the interest of 19th-century students of myth and religion E G Tylor attempted to explain its origin on a rationalistic basis, and later Sir James Frazer sought to show that animism is "primitive science" Today the prevailing view is that animism is primarily an expression of thought that is based on emotional response to the universe without differentiation between persons and things See FETISH, IDOL, SHAMAN

Anio, river, Italy see ANIENE

anise (ăn'ĭs), annual plant (*Pimpinella anisum*) native to the Mediterranean region but long cultivated elsewhere for its aromatic and medicinal qualities It has flat-topped clusters of small yellow or white flowers followed by seedlike fruits—the aniseed of commerce From the seeds and sometimes from the leaves is derived anise oil (obtained also from the star anise), an unrelated woody plant) The oil is an official drug of the U S Pharmacopoeia, it is used also as a perfume, as a flavoring, in liqueurs, and, in drag hunting, to scent a trail for the dogs in the absence of a fox The anise of the Bible (Mat 23 23) is dill **Anisette** is an anise-flavored liqueur

Anita (ănē'tŭ), town (pop 1,088), SW Iowa, W of Des Moines, platted 1869, inc 1875

Anjou (ăn'jōō, Fr ăzhōō'), region and former duchy, W France, on both sides of the Loire and E of Brittany It occupies, roughly, Maine-et-Loire dept A fertile lowland with excellent vineyards, it is well watered by the Loire, Mayenne, Sarthe, Loir, and Maine rivers Angers and Saumur are the chief towns A county since the 9th cent, Anjou was often attacked by the dukes of Brittany and by the Normans By the 10th cent it was in the hands of the first line of the counts of Anjou (see ANGEVIN dynasty), who expanded their holdings vigorously FULK NERRA acquired Saumur from the counts of BLOIS His successor, Geoffrey Martel, won TOURAINE from Blois (1044) and Maine from Normandy (1051) FULK (d 1143), after protracted wars with HENRY I of England over the possession of Maine, married his son GEOFFREY (Geoffrey Plantagenet) to Henry's daughter Matilda When Fulk departed for Jerusalem, of which he became king, Geoffrey succeeded him in Anjou (1129–51) and conquered Normandy, of which he was crowned duke in 1144 His son, later HENRY II of England, established the English Angevin dynasty and, marrying ELEANOR OF AQUITAINE, brought most of W France to England When Henry II's grandson, ARTHUR I, duke of Brittany, rebelled against his uncle, JOHN of England, he won the support of PHILIP II of France, to whom he did homage (1199) for Anjou, Maine, and Touraine After Arthur's premature death, Philip II in 1204 seized all Anjou, John's attempt at reconquest failed In 1246 Louis IX of France gave Anjou in appanage to his brother Charles, count of Provence, who later also became king of Sicily and Naples (see CHARLES I) Charles II of Naples gave Anjou as dowry to his daughter Margaret when she married Charles of Valois, son of Philip III of France When their son became (1328) King Philip VI of France, Anjou was again united to the French crown John II of France, however, made Anjou a duchy (1360) and gave it to his son Louis (later LOUIS I of Naples) On the death (1480) of Louis's grandson, RENÉ, King Louis XI annexed Anjou to the French royal domain In the 16th cent Anjou was held as appanage at various periods, the last duke being FRANCIS of Alençon and Anjou

Ankara (ăng'kûrû, ăng'kărä), city (pop 226,712), capital of Turkey, central Anatolia Known in ancient days as Ancyra and later as Angora, it was an important commercial center from Hittite times, in the 1st cent. A D it became the capital of a Roman province. It flourished under Augustus, in the ruins of a marble temple dating from his reign was found the *Monumentum Ancyranum*, an inscription valuable as a record of Augustan history Here in 1402 Tamerlane defeated and captured Sultan Bajazet I Ankara declined and was a small town of no importance when, in 1920, Kemal ATATURK chose it for the Turkish Nationalist government In 1923 the government was transferred here from Istanbul, partly to break with past tradition, partly to take advantage of the central situation of Ankara The city grew with amazing speed Except for its ancient citadel atop a high rock, it is completely modern, with impressive public buildings, wide streets, theaters, an opera, and a university (founded 1925) The region and the town have been noted for centuries for the breeding of longhaired goats and the production of Angora wool or MOHAIR

Anking, China see HWAINING

Ann, Cape, NE Mass, N of Massachusetts Bay It is noted for its old fishing villages, resorts, and artists' colonies, especially GLOUCESTER and ROCKPORT See Roger W Babson and F H Saville, *Cape Ann* (1936)

Anna (Anna Ivanovna), 1693-1740, empress and tsarina of Russia (1730-40), daughter of Ivan V and niece of Peter the Great (Peter I) On the death of her distant cousin, Peter II, she was chosen empress by the supreme privy council, which thus hoped to gain power for itself Anna signed articles limiting her power, but autocracy was soon restored Vindictive and sensual, she distrusted both the nobility and the people and surrounded herself with Baltic-German favorites, among whom BIRON was notable She allied herself closely with Austria, intervening in the War of the POLISH SUCCESSION on the side of Augustus III and joining Emperor CHARLES VI in a campaign (1736-39) against Turkey Charles's separate peace with the Turks at Belgrade forced Russia to make peace in turn, at the price of all recent conquests save Azov During Anna's reign began the great Russian push into central Asia Anna was succeeded by her grandnephew, Ivan VI

Anna [Gr, = Heb HANNAH] **1** Aged prophetess who hailed Jesus' presentation at the Temple Luke 2:36-38 **2** In Tobit, the mother of young Tobias

Anna, city (pop 4,092), S Ill, N of Cairo, inc 1865 It is a shipping and processing center in an orchard and farm area, has marble and granite works, and manufactures shoes and staves A state hospital for the insane is here

Anna Amalia, duchess of Saxe-Weimar (ämä'lya, zäk'su-vī'mär), 1739-1807, German patron of science and letters Her court at Weimar, known as the Athens of Germany, attracted such authors as Herder, Wieland, Goethe, and Schiller She wrote the music for Goethe's *Erwin und Elmire*

Anna Comnena (kŏmnē'nu), b 1083, d after 1148, Byzantine princess and historian, daughter of Emperor Alexius I She plotted, during and after her father's reign, against her brother, JOHN II, in favor of her husband, Nicephorus Bryennius, whom she wished to have on the throne Her plot was discovered, but she was pardoned and retired to a convent There she wrote the *Alexiad* (finished in 1148), one of the outstanding Greek historical works of the Middle Ages Covering the reign of Alexius I and the First Crusade, it tends to glorify her father and his family, however, Anna's familiarity with public affairs and her access to the imperial archives give her work great value There is an English translation by Elizabeth A S Dawes (1928) See Georgina Buckler, *Anna Comnena* (1929)

Anna Ivanovna see ANNA, empress of Russia

Anna Leopoldovna (lyä"upôl'duvnu) or **Anna Karlovna** (kar'lûvnu), 1718-46, duchess of Brunswick-Wolfenbüttel, regent of Russia (1740-41), daughter of Charles Leopold, duke of Mecklenburg-Schwerin, and of Catherine, sister of Empress Anna of Russia She married the duke of Brunswick-Wolfenbüttel, and their son, IVAN VI, succeeded (1740) Anna as emperor After the deposition of Ivan by Empress ELIZABETH, Anna Leopoldovna and her husband were imprisoned She died in childbirth

Annam (unăm', ă'năm"), state (c 57,000 sq mi, pop c 7,200,000), E Indo-China Between Tonkin on the north and Cochin China on the south, Annam extends nearly 800 mi along the South China Sea The ridge of the Annamese cordillera separates N and central Annam from Laos on the west, then swings southeastward and runs along the coast of S Annam, which includes the plateaus that stretch to the borders of Cambodia and Cochin China In N and central Annam there are narrow coastal plains, interrupted by spurs of the mountains that almost reach the sea as at the Porte d'Annam, a pass important in Annamese history The short, often torrential, rivers, flowing from west to east, form deltas given over to the growing of rice, but the crop is too small to feed the population. Cinnamon, cocoa, and cotton are other agricultural products In peacetime, Annam is an important producer of raw silk There is little industry, aside from some weaving of silk and cotton and the preparation of various fish products The principal cities are Hué (the capital) and Tourane The inhabitants are mostly farmers and fishermen Of the various peoples, most important are the Annamese (the majority), others are the Chinese, the Thai, the Muong, and the remnant of the Chams The Annamese have been strongly influenced by Chinese culture Confucian principles permeate their social structure, Confucian, Buddhist, and Taoist elements have been combined into a popular religion which is basically a blend of animism and ancestor worship The origins of the Annamese state may be traced to the peoples of the Red River valley in Tonkin After more than 2,000 years of contact with the Chinese, they fell under Chinese rule as the result of an invasion c 214 B C and remained subject (with some interruptions after A D 923) until 1428, when the Annamese rose and established an independent kingdom The region to which the Chinese gave the name of Annam comprised, besides Tonkin, the three northern provinces of modern Annam, the balance of modern Annam formed, from late in the 2d cent A D, the kingdom of the Chams or CHAMPA Against the incursions of the Chams, the Chinese and later the Annamese of Tonkin fought a series of wars, indecisive until 1472, when the Chams were severely defeated and the Annamese kingdom was extended south to the vicinity of Tourane The native Annamese dynasty that had overthrown the Chinese soon fell into decadence After 1558 the kingdom was in effect divided between two great families, one ruling from modern Hanoi over Tonkin and Annam as far south as Porte d'Annam, the other ruling from Hué over Annam from Porte d'Annam to the vicinity of Quinhon It was to these two domains that Europeans, whose first extensive contacts with Indo-China came in the 16th cent, gave the names of Tonkin and Cochin China In the 17th cent the lords of Hué pushed southward, taking from the Chams the remainder of present-day Annam and penetrating the Cambodian provinces on the lower Mekong The early 18th cent saw their control extended into part of Laos and, at the expense of Cambodia, to the shores of the Gulf of Siam The dynasties of Hué and Tonkin were alike overthrown in the last decades of the 18th cent, but in 1802 all of the Annamese lands were united under the restored dynasty of Hué as the empire of Annam In 1807 the Annamese extended a protectorate over Cambodia, which led, in succeeding decades, to frequent wars against Siam The first emperor of Annam (1802-20) showed favor to the French, who had been sending missionaries into Indo-China since the 17th cent and who had aided in establishing the empire His successors attempting to withdraw into isolation, mistreated French nationals and Annamese Christian converts The way was thus opened for French military operations, beginning in 1858, which resulted in the seizure of modern Cochin China and of Tonkin A French protectorate over Annam was established in 1884, as well as a separate protectorate over Tonkin, in 1887 Annam became part of the Union of Indo-China After the Second World War, Annamese and Tonkinese nationalist leaders demanded independence for the state of VIET NAM, and Annam (like Tonkin and Cochin China) was plunged into a long series of disorders Under the Viet Namese regime of Bao Dai, Annam was divided into Central Viet Nam and the special administrative district of the southern plateaus

Annandale-on-Hudson (ăn'undāl-), unincorporated village, SE N Y, on the east bank of the Hudson and near Red Hook It is the seat of BARD COLLEGE

Anna Perenna (pĭrĕn'nu), in Roman religion, goddess of the new year She was worshiped in the Ides of March (the first full moon of the year) as a bringer of long life and happiness Late Roman poets identified her with Anna, sister of DIDO

Annapolis (unăp'ulĭs), city (pop 13,069), state capital, and co seat of Anne Arundel co, central Md, on the south bank of the Severn river near its mouth on Chesapeake Bay SSE of Baltimore The city, which contains many colonial buildings, is the business and shipping center for the fruit and vegetable farmers of S Maryland and is a port of entry Sea food is packed, and small sea craft are built here It was settled c 1648 as Providence by Puritans from Virginia, who successfully revolted against the Catholic governor in 1655 only to lose control after the Restoration in England Later it was called Anne Arundel after the wife of the 2d Lord Baltimore, and in 1694, when it became the provincial capital, it was named Annapolis for Anne of England It rapidly became an important colonial social and commercial center The first newspaper in Maryland was published here in 1745 The town was the scene of the Annapolis convention (1786) which led to the FEDERAL CONSTITUTIONAL CONVENTION Points of interest include the statehouse (1772), meeting place of Congress (1783) where Washington resigned as commander in chief of the Continental army, the Old Treasury (c 1695), the library (1737), SAINT JOHN'S COLLEGE; and the UNITED STATES NAVAL ACADEMY.

Annapolis, river of W Nova Scotia, rising c 75 mi NE of Annapolis Royal and flowing into Annapolis Basin Its valley is noted for apple orchards

Annapolis Basin, tidal arm of the Bay of Fundy, c 10 mi long and 3 to 5 mi wide, W N S Its entrance, about a half mile wide and bordered by 500-foot cliffs, is known as Digby Gut

Annapolis Royal, town (pop 782), W N S, on the Annapolis river 6 mi above the Annapolis Basin Founded as Port Royal by the sieur de MONTS in 1605 (see SAINT CROIX I), it was destroyed (1614) by Samuel ARGALL but was rebuilt by the French The fort changed hands between French and English five times from 1605 to 1710, when it finally capitulated to a force of New Englanders under Francis Nicholson The name was then changed in honor of Queen Anne The fort resisted attacks by French and Indians in 1744 and 1745 Fort Anne National Park (about 31 acres, est, 1917) includes the ruins of the fort The officers' quarters (built 1797-98) have been restored as a museum.

Ann Arbor, city (pop 29,815), co seat of Washtenaw co, S Mich, on the Huron and W of Detroit, in a rich fruitgrowing area, laid out 1824, inc as a village 1833, as a city 1851 Ann Arbor grew as a farm trade center, its manufactures include machine tools and metal products Headquarters of the cooperative Michigan Municipal League are here Ann Arbor is the seat of the Univ of Michigan (see MICHIGAN, UNIVERSITY OF), where music and dramatic festivals are held in May The Nichols Arboretum is famous for its lilacs and peonies Indian trails crossed here, and several Indian mounds are found near by

Annas [Gr, for Heb HANANIAH], Jewish high priest who examined Jesus Non-biblical sources say that he was retired high priest His son-in-law was Caiaphas John 18:13,24, Acts 4:6-22

Annau or **Anau** (ănou'), village, Turkmen SSR, 5 mi SE of Ashkhabad, near the Iranian border It has a 15th-century mosque, a citadel, ancient burial mounds, and other remains Here Raphael Pumpelly discovered (1903) traces of habitation dating back to c 3000 B C There are indications of ancient cultivation of grain, and beautifully designed pottery has been found See Raphael Pumpelly, *The Prehistoric Civilization of Anau* (1908)

Anne, Saint [ultimately from Heb HANNAH], in tradition, mother of the Virgin and wife of St Joachim She is not mentioned in Scripture, but her cult is very old In the West she has been especially popular since the Middle Ages She is patroness of Quebec prov, and Ste Anne de Beaupré is one of the principal shrines in the New World Brittany, also under her patronage, has as its principal shrine and the scene of its most important pardon Sainte-Anne-d'Auray She is invoked by women in childbirth In art she is usually an elderly veiled woman and often appears teaching her daughter to read Feast July 26

Anne, 1665-1714, queen of England, Scotland, and Ireland (1702-7), later queen of Great Britain (1707-14), daughter of James II and Anne Hyde, successor to William III Reared as a Protestant and married (1683) to Prince George of Denmark (d 1708), she was not close to her Catholic father and acquiesced in the revolution (1688), which put William III and her sister, Mary II, on the throne With them she was soon on bad terms because of private animosities, partially caused by Anne's favorite This woman was her attendant and intimate friend from girlhood, Sarah Jennings, who had married John Churchill (later the duke of Marlborough) and who was to exercise great influence in Anne's private and public life They addressed each other as Mrs Freeman (Anne) and Mrs Morley (Sarah) to avoid obligations of rank Of Anne's many children the only one to live much beyond babyhood—the duke of Gloucester—died at the age of 11 in 1700 Since neither she nor William had surviving children and support for her exiled Catholic half brother rose and fell in Great Britain (see STUART, JAMES EDWARD, and JACOBITES), the question of succession continued vexed after the ACT OF SETTLEMENT (1701) and after Anne's accession This last Stuart ruler, she was the first to rule over the United Kingdom of Great Britain, which was created when the Act of Union joined Scotland and England in 1707 Her reign, like that of William III, was one of transition to parliamentary government, Anne was for example, the last English monarch to exercise (1707) the royal veto Domestic and foreign affairs alike were dominated by the War of the SPANISH SUCCESSION (1702-13), called Queen Anne's War in its imperial phase (see FRENCH AND INDIAN WARS) On the Continent the duke of MARLBOROUGH won glory for English arms At home the costs of the fighting were an issue between the conservative Tories, who were cool to the war, and the more democratic Whigs, who favored it Party lines were slowly hardening, but party government and ministerial responsibility were not yet established, intrigues and the favor of the queen still made and unmade cabinets, though public opinion and elections did have increasing influence. Thus it was at least

partly through the pressure of the Marlboroughs that Anne was induced (1705–6), despite her Tory sympathies, to oust Tory ministers in favor of Whigs The Marlboroughs forced the dismissal of Robert HARLEY in 1708, though the scolding duchess had already lost much of her power to Anne's new favorite, the quiet Mrs Masham (later Lady MASHAM), kinswoman and friend of Harley When the unpopularity of the war and the furor over the prosecution of SACHEVERELL showed the power of the Tories (who won the elections of 1710) and made the move feasible, Anne gave the power to Harley, and the Marlboroughs were dismissed Harley, as earl of Oxford, was political leader until 1714, when he was replaced by his Tory colleague and rival, Viscount Bolingbroke (see ST JOHN, HENRY) Soon afterward the queen died and, Jacobite plans having failed, she was succeeded by GEORGE I of the house of HANOVER Queen Anne was a dull, stubborn, but conscientious woman devoted to the Church of England and within it to the High Church party She supported the act (1711) against "occasional conformity" and the Schism Act (1714), both directed against dissenters and both repealed in 1718 She also created a trust fund called Queen Anne's Bounty for poor clerical livings Her reign, significant in the growth of empire and constitution, also saw developments in the intellectual awakening that produced such thinkers as Bishop George Berkeley and Sir Isaac Newton and such scholars and writers as Richard Bentley, Swift, Pope, Addison, Steele, and Defoe The British press grew rapidly as a political instrument Sir Christopher Wren and Sir John Vanbrugh were at the same time popularizing Palladian architecture and setting in stone and brick the rich elegance that was perhaps the most attractive aspect of life and society under Queen Anne See biography by M R Hopkinson (1934), G M Trevelyan, *England under Queen Anne* (1932), G N Clark, *The Later Stuarts* (1934), B C Brown, ed , *Letters and Diplomatic Instructions of Queen Anne* (1935)

annealing, process in which glass and metallic substances, such as steel and certain others containing copper, tin, or zinc, are treated in order to render them less brittle It consists in heating the substance, often almost to the temperature at which it liquefies, and then cooling it very slowly under controlled conditions It is believed that the heating process permits the molecules of the substance to assume a more stable arrangement Annealing is distinguished from TEMPERING

Anne Boleyn, queen of England see BOLEYN, ANNE

Annecy (ănsē'), city (pop 24 414), capital of Haute-Savoie dept , E France, SE of Geneva It is beautifully situated at the foot of the Alps on Lake Annecy In 1535 the bishop of GENEVA, driven out by the Reformation, made it his residence St FRANCIS OF SALES, who was born here, was bishop from 1602 to 1622, his memory still fills the city, which has many fine churches, monasteries, and seminaries Annecy is now a diocese in its own right, that of Geneva having been united with the dioceses of Fribourg and Lausanne The center of the city, traversed by narrow canals, is medieval in character The castle of the counts of Geneva (12th–14th cent) dominates Annecy from a hill

Anne de Beaujeu (du bōshû'), c 1460–1522, regent of France With her husband, Pierre de Beaujeu, duc de Bourbon, she acted as regent for her brother, Charles VIII, after the death of Louis XI (1483) She displayed remarkable ability and preserved the royal authority intact against the rebelling great nobles In 1491 she and her husband arranged the marriage of Charles VIII to ANNE OF BRITTANY, but soon afterward their influence declined

Annensky, Innokenty Feodorovich (ĭnŏkĕn'tyĭ fyô'dûrvĭch ĭnyĕn'skĭ), 1850–1909, Russian symbolist poet He began his literary career with a modernized translation of Euripides His poetry, *Quiet Songs* (1904) and *The Cypress Chest* (1910), although hard to comprehend, has permanent appeal

Anne of Austria, 1601–66, queen of France, daughter of Philip III of Spain Married to Louis XIII (1615), she was neglected by her husband and sought the society of Mme de CHEVREUSE She injured her reputation by unwise frivolities, especially by her flirtation with the duke of Buckingham, she was accused by Cardinal Richelieu of treasonable correspondence with Spain but was pardoned (1637) In spite of the express wish of her husband, she assumed (1643) the regency for her son LOUIS XIV She entrusted the government to MAZARIN, and her administration was disturbed by the wars of the FRONDE After Mazarin's death (1661), her son excluded her from participation in affairs of state. Anne of Austria is a central figure of Dumas's *Three Musketeers*

Anne of Bohemia, 1366–94, queen consort of RICHARD II of England, daughter of Emperor Charles IV, sister of Emperor Wenceslaus She was married to Richard early in 1382, quickly gained popularity in England, and influenced the king toward clemency and moderation She introduced Bohemian fashions into England, and it was probably through her entourage that the writings of Wyclif were introduced into Bohemia, where they gained much prominence among the HUSSITES.

Anne of Brittany, 1477–1514, queen of France as consort of CHARLES VIII (1491–98) and of LOUIS XII (1499–1514) She was the daughter of Duke FRANCIS II of Brittany, from whom she inherited the duchy in 1488 Her hand was eagerly sought by a number of suitors, who had their eyes on her duchy. On her father's death a French army under Louis de la Trémoille invaded Brittany, while Jean d'Albret, Archduke Maximilian (later Emperor MAXIMILIAN I), Louis of Orléans (later Louis XII of France), and HENRY VII of England sent small forces to young Anne's assistance La Trémoille was victorious, and Anne was forced to promise not to marry without the consent of the French crown Warfare was, however, resumed in 1489, and Anne appealed to Maximilian for protection In 1490 Maximilian married Anne by proxy but failed to assist her with armed strength Besieged at Rennes, Anne was forced by the French to seek annulment of her marriage, and in 1491 she was married to Charles VIII It was agreed that if Charles died without issue before Anne, she was to marry his successor Accordingly, in 1499, she married Louis XII, who had previously obtained a divorce from his first wife Brittany remained theoretically separate, but the marriage (1514) of Claude, Anne's daughter by Louis XII, to Francis of Angoulême (later Francis I of France) led to the eventual incorporation (1532) of Brittany into France See biography by H J Sanborn (1917)

Anne of Cleves (klēvz), 1515–57, queen of England, fourth wife of Henry VIII She was the sister of William, duke of Cleves, one of the most powerful of the Protestant princes After the death of Jane Seymour, Henry was free to marry again, and a marriage with Anne for political purposes was considered advisable and was especially forwarded by Thomas CROMWELL The marriage was agreed upon in 1539, and though Henry, after seeing his bride, tried to break the contract, they were married (Jan , 1540) Henry found Anne dull and unattractive, and a turn in policy destroyed the political utility of the marriage In July, Henry had the marriage declared null and void Anne gave her consent and, by agreement, lived the rest of her life in England.

Anne of Denmark, 1574–1619, queen consort of James I of England, daughter of Frederick II of Denmark and Norway She married James in 1589 and was crowned with him at Windsor in 1603 Court entertainments and the embellishment of buildings interested her more than affairs of state Although believed to be inclined toward Catholicism, she died a Protestant Of her six children, the three who survived infancy were Henry, prince of Wales (d 1612), Charles (later Charles I), and Elizabeth (later electress palatine and queen of Bohemia)

annexation, formal act by which a state asserts its sovereignty over a territory newly incorporated within its dominions Many varieties of territories are subject to annexation, chief among them those uninhabited by civilized peoples, those inhabited by settlers of the annexing power, those which already have the status of protectorates of the annexing state, and those conquered by the force of arms The governing body of the annexing power must ratify the act of annexation, and the consent of other interested powers must be obtained in order that the annexation be generally recognized in international law The full exercise of the annexing power's sovereignty is the final objective test of the validity of annexation Objections of philosophers such as Kant and efforts to establish the self-determination of inhabitants as the only grounds for the transfer of territory have failed to put an end to annexation as an instrument of national policy In America, the annexation of Texas to the United States in 1845 was instrumental in starting war with Mexico

Anniston, city (pop 25,523), co seat of Calhoun co , NE Ala , ENE of Birmingham, in a mining region of the Appalachian foothills Founded in 1872 as an iron-manufacturing "company town," it was opened for settlement in 1883 Its manufactures iron, steel, textile, and chemical products Near by are a fish hatchery and U S Fort McClellan

annual, plant which germinates, blossoms, and dies within one year, being perpetuated from year to year by seed only, as distinguished from the BIENNIAL and the PERENNIAL Annuals of cool temperate regions usually germinate in the spring and die in the fall, those of regions where the growing period is at a different season are adapted for growth at that time Cultivated annuals are usually considered to be of three general types tender, half-hardy, and hardy Tender and half-hardy annuals cannot mature and blossom in an ordinary growing season unless they are started early under glass and are set outdoors as young plants Hardy annuals are usually sowed where they are expected to bloom and often will spring up voluntarily year after year by reseeding themselves, the blooming season will be prolonged, however, if seed are not allowed to form Some biennials and even fast-growing perennials may be treated as annuals Plants considered typical annuals include species of cosmos, larkspur, petunia, and zinnia. See H. S Ortloff, *Annuals in the Garden* (1932); V. H. Rics, *How to Grow Annual Flowers* (1936), *Growing Annual Flowering Plants* (U S. Dept. of Agriculture, Farmers' Bul 1171).

annuity: see INSURANCE.

Annulment of marriage: see NULLITY OF MARRIAGE.

Annunciation of the Virgin: see MARY.

Annunzio, Gabriele D': see D'ANNUNZIO, GABRIELE

Annville, village (pop. 3,163), Lebanon co , SE Pa , near Harrisburg It is the seat of Lebanon Valley College (coeducational, 1866)

anode: see ELECTRODE and ELECTROLYSIS.

anodyne. see SEDATIVE.

Anoka (ănŏ'kŭ), city (pop 6,426), co seat of Anoka co , E Minn , on the Mississippi at the confluence of the Rum and NW of Minneapolis, settled 1844, laid out 1853, inc. 1878 Originally a trading post and lumber town, it grew as a farm trade center and resort On June 18, 1939, a tornado killed several people and destroyed many buildings here A state hospital for the insane was established here in 1900

Anopheles: see MOSQUITO

Anquetil Duperron, Abraham Hyacinthe (ăbrà-hăm' yäsĕt' äkŭtē'l' dŭpĕrô'), 1731–1805, French Orientalist While studying for the priesthood (which he did not enter), he became deeply interested in Eastern languages After study (1755–61) in India, chiefly with the Parsis, he returned to Europe with 180 manuscripts and a knowledge of Sanskrit, Avestan, Pahlavi, and Persian His three-volume translation of the *Zend-Avesta* (1771) introduced Zoroastrian texts to Europe It was bitterly criticised by Sir William Jones and other scholars in England Anquetil Duperron also translated the *Upanishads* into Latin and wrote works on India

Ansbach (ans'bakh), city (pop 31,745), capital of Middle Franconia, W Bavaria, on the Rezat river It has manufactures of cars, motors, and chemicals The city developed around an 8th-century Benedictine abbey and in 1331 became the residence of the Franconian branch of the Hohenzollern It passed to Prussia in 1791 and to Bavaria in 1806 The 12th-century Romanesque Church of St Gumbertus was rebuilt in the 15th cent Formerly the name appeared as Anspach

Anschar or **Anscharius, Saint** see ANSGAR, SAINT

Anschluss see AUSTRIA

Anselm, Saint (ăn'sĕlm), 1034?–1109, Italian churchman, archbishop of Canterbury (1093–1109), Doctor of the Church, b Aosta He was a monk in France at Avranches and at Bec, where he was befriended by LANFRANC, then prior In 1062 Anselm succeeded Lanfranc In 1078 he became abbot The many possessions of the abbey in England threw Anselm at once into English public life He frequently visited Lanfranc at Canterbury So much did William the Conqueror esteem Anselm that as he lay dying he asked for him After Lanfranc's death (1089) WILLIAM II of England delayed appointing a successor, until in 1093, in fear of death, he made Anselm archbishop Anselm literally had to be forced to accept the crozier, but after his installation he showed the firmness of purpose necessary if the Church was to retain independence of the king Anselm soon asked permission to go to Rome to receive the pallium from URBAN II, but William hesitated to recognize Urban as pope The king finally sent a mission to get the pallium, but Anselm would accept it from no one but a papal legate In 1097 Anselm went to Rome, and the king seized the diocesan property on specious charges against Anselm, the archbishop stayed abroad with the pope until the king's death in 1100 At the Council of Bari (1098) as apologist for the West, he defended the use of *filioque* in the CREED Anselm's relations with HENRY I were a struggle over INVESTITURE Henry wanted to reinvest the archbishop, and he did invest several bishops, but Anselm would not be reinvested and had nothing to do with Henry's bishops Finally in 1107, after Anselm had gone in vain to Rome for relief, Henry gave up the struggle and agreed not to ask to invest bishops, Anselm agreeing to do homage for his temporalities Anselm had been of service to the king, even in the course of the quarrel, by arranging Henry's marriage with Matilda of Scotland and by helping to prevent Robert of Normandy from invading England. St Anselm was an early Western proponent of the philosophical theory that what is known by faith is amenable to natural reason, this is the bearing of his first famous work, *Monologium* A notable phrase sums up the idea, *fides quaerens intellectum* [faith seeking to be understood] In *Cur Deus Homo?*, a work on the Incarnation, St Anselm proposed an explanation of the ATONEMENT that has been largely accepted in theology He also proposed a famous ontological proof of the existence of God—that our ability to conceive of an Infinite Being necessarily entails the existence of that Being He was in controversy with Roscelin. St Anselm's meditations, prayers, and hymns are famed for their devout eloquence. He was a man of holy life and was much loved by those about him Feast April 21 The primary source for his life is the writing of his companion, Eadmer. See biographies by R W. Church (1905) and Joseph Clayton (1933).

Ansgar, Saint (ăns'gär), 801–65, Frankish missionary to Scandinavia, called the Apostle of the North He was the first archbishop of Hamburg (from 831) Other forms of the name are Anskar, Anschar, and Anscharius Feast Feb 3. See C H Robinson, *Anskar, the Apostle of the North* (1921)

Anshan (ăn'shän'), city (pop 219,715), central Liaoning prov., China, on a branch of the South Manchurian railroad. The Anshan steel mill, one of the largest in China, processes the iron from nearby deposits

Anskar, Saint. see ANSGAR, SAINT

Ansley, Clarke Fisher, 1869–1939, American teacher and editor, b Swadona, near Springfield, Ill , grad Univ of Nebraska, 1890, and studied for two years at the universities of Leipzig, Heidelberg, and Paris After teaching English at Nebraska, he was professor of English at the State Univ of Iowa (1899–1917) and dean of its College of Fine Arts (1911–15) Having turned to editing, he conceived the idea of a one-volume, entirely new general encyclopedia, compact enough and simply enough written to serve as a guide to the "young Abraham Lincoln " This work was started in 1928 as *The Columbia Encyclopedia* with Ansley as its editor in chief He lived to see the first edition published (1935)

Anson, Adrian Constantine, 1852-1922, American baseball player-manager, known usually as "Cap" or "Pop" Anson, b Marshalltown, Iowa For most of his career he played with the Chicago club of the National League and was four times league batting champion As manager (1879–97), he lead the team to five pennants In 1939 he was elected to the National Baseball Hall of Fame and is considered one of baseball's greatest player-managers of the 19th cent

Anson, George Anson, Baron, 1697-1762, British admiral His famous voyage around the world was undertaken to attack the Spanish possessions in South America Shipwreck at Cape Horn and scurvy reduced his six-ship squadron to one ship and a crew, with which the indomitable commander captured a prize vessel on the Pacific and finished his voyage As first lord of the admiralty he reorganized naval administration and established in 1855 the corps of marines See *A Voyage round the World* (comp by Anson's chaplain, Richard Walter, 1748, ed by G S L Clowes, 1928), biographies by Sir John Barrow (1839) and M V Anson (1912)

Anson, Sir William Reynell, 1843–1914, English jurist He was a founder of the school of law at Oxford Univ From 1899 to his death he sat in Parliament as a member for Oxford His *Principles of the English Law of Contract* (1879) and *The Law and Custom of the Constitution* (1886–92) are frequently consulted standard works See memoir ed by H H Henson (1920)

Anson. 1 Town (pop 2,130), central Maine, on the Kennebec and W of Skowhegan, inc 1798 Lumber products are made here **2** City (pop 2,338), co seat of Jones co , W central Texas, NW of Abilene, settled c 1880, inc 1904 Its past as a cow town is commemorated each year in the Cowboys' Christmas Ball, but Anson is today primarily a shipping point for cotton and other crops, with cotton gins, a mattress factory and other small industries

Ansonia, city (pop 19,210), SW Conn , on the Naugatuck and NW of New Haven, settled 1651 from Derby, inc 1893, coextensive with Ansonia town, inc 1889 Copper and brass and other metals are produced

Ansted, town (pop 1,422), S W Va , SE of Charleston, settled 1790 It is the trade center for a mining region Hawks Nest State Park is near

Anstey, F., pseud of **Thomas Anstey Guthrie,** 1856–1934, English novelist and playwright A barrister, he turned to writing humorous fiction He contributed to *Punch* and produced many popular books, which include *Vice Versa* (1882), a lighthearted satire of English public-school life, *Voces Populi* (1890), a series of humorous dialogues, and the play *The Man from Blankley's* (1893) See his memoirs, *A Long Retrospect* (1936)

ant, cosmopolitan social insect of the order Hymenoptera, to which the bee and the wasp also belong The body is divided distinctly into three regions, with a narrow constriction between the thorax and abdomen Ants are usually black or various shades of brown, red, and yellow The majority nest underground, in galleries or chambers, often beneath stones, others nest in wood, in decaying tree trunks, or in plants, and some make paper nests in trees Mounds of earth excavated from the nest are often piled up at the entrance Colonies range from a few dozen individuals to hundreds of thousands. They usually consist of one or more queens, egg-laying females which are usually winged, female, usually sterile, wingless workers, and fertile males, usually winged Worker ants are the ones generally seen. Males and fertile females swarm in a nuptial flight; the time of the year depends upon the species Soon after mating, the males die The female or queen then returns to the earth, sheds her wings, and finds or makes a burrow in which she seals herself. There she lays a few eggs and feeds and cares for the first brood of young. They hatch as workers, which enlarge the nest and care for the queen and the following generations The queen is then able to lay fertilized eggs for the rest of her life, which may be as many as 15 years Workers usually live from about 4 to 7 years In some species the queen cannot establish the colony herself and is adopted by workers of her own or another species Adult ants live chiefly or entirely on liquids obtained from plants or animals or both Certain ants obtain sweet secretions from ants called repletes and from the APHID and other small insects which they feed and protect Parasites are often found in ant colonies Ants sometimes make slaves of other species Among the ant pests which invade dwellings are Pharaoh's ant, a tiny yellowish species, now widely distributed in the New World, the odorous house ant, the Argentine ant, found chiefly in the S United States and California, the little black ant, and the black carpenter ant, which bites humans and damages timbers of buildings and telephone poles The black pavement ant gnaws at roots and steals seeds The mound-building ant makes large anthills The agricultural ants, some of which are called leaf cutters, parasol ants, fungus growers, and harvester ants, are widely distributed pests numerous in the warmer regions The Texas leaf-cutting ant is a serious crop pest Like others of the genus *Atta*, the workers macerate leaves on which they grow fungi for food In tropical America and Africa long columns of the carnivorous army or driver ants travel like armies and often overrun dwellings The TERMITE is miscalled white ant See *House Ants* (U S Dept of Agriculture, Leaflet 147), *Red Harvester Ant and Its Control* (U S Dept of Agriculture, Farmers' Bul. 1668), W M Wheeler, *Ants* (1910), J S Huxley, *Ants* (1930), C P Haskins, *Of Ants and Men* (1939)

Antaeus (ăntē'ŭs), in Greek mythology, giant, son of Poseidon He became stronger whenever he touched the earth, his mother, GAEA He killed everyone with whom he wrestled until Hercules overcame him by lifting him in the air

Antakya, Turkey see ANTIOCH

Antalcidas (ăntăl'sĭdus), d after 371 B C , Spartan diplomat The agent of Sparta in Persia, he managed to undermine Athenian influence there and persuaded Artaxerxes II to agree to the so-called Peace of Antalcidas or King's Peace (386 B C), but the terms were those of the Persian king Cyprus and the Greek cities in Asia Minor were returned to Persia, Athens was allowed to retain Imbros, Lemnos, and Scyros, other Greek communities were to be independent, their alliances were outlawed The treaty was much criticized as ignominious for Greece Sparta used the terms to justify arrogant action against other city-states and thus brought on the Spartan defeat at LEUCTRA in 371 B C

Antalya (ăntälyä'), city (pop 25,037), SW Turkey A Mediterranean seaport and a silk production center, it was known in ancient times as Attaleia or Attalia, in the Middle Ages as Satalia or Sataleh, and more recently as Adalia It is mentioned in Acts 14 25 as the port whence Paul and Barnabas sailed to Antioch. Situated on a tall cliff, Antalya is a picturesque town, its ancient wall, built in different epochs, remains virtually intact Near by there are chrome and manganese deposits

Antar (ăntär'), fl 600, Arabian warrior and poet, celebrated in his own day as a hero, for he rose from slave birth to be a tribal chief His poetry is represented by one poem in the MUALLAQAT He is the hero of the popular Arabic *Antar*, a romance which has developed over centuries He has become in it the ideal of a Bedouin chief, rich, generous, brave, and kind.

Antarctica (ănt"ärk'tĭkŭ), continent, area between 5,000,000 and 6,000,000 sq mi , surrounding the South Pole The waters about the continent are sometimes called the Antarctic Ocean but actually are only the southernmost parts of the Atlantic, Pacific, and Indian oceans The seas, whipped by cold, violent winds and clogged with drifting ice, ice packs, and mountainous icebergs, also show extreme and rapid variability that makes them doubly dangerous to navigation The continent was therefore completely unknown until modern times and is still imperfectly known Its roughly circular outline is broken by two deeply indenting seas, Ross Sea on the Pacific side and Weddell Sea on the Atlantic side, and by a long narrow land projection, the Palmer Peninsula, which stretches toward South America, some 600 mi away The other southernmost lands, Africa and Australia and New Zealand, are much farther away, and the great southern continent is isolated by distance as well as difficulty of access The coasts are protected from intruders by belts of pack ice, sometimes hundreds of miles wide, and by hanging ice shelves, which end in sheer ice cliffs 50 to 200 ft. high These ice barriers and the glaciers that come from the mountains and thrust tongues of ice into the sea "calve," making enormous icebergs (many 30 mi or more long) Beneath the ice shelves there are some small islands, but Antarctica has only a few large islands, and those are near the Palmer Peninsula. Off the tip of the peninsula are the South Shetlands The South Orkneys in the Atlantic and Macquarie in the Pacific are farther away The Falklands, which show antarctic conditions, lie closer to South America. The term "Antarctic Archipelago" was originally a misnomer given to the Palmer Peninsula (and the adjacent land) under the impression that it was an island, part of the string of islands off the peninsula is still sometimes called the Antarctic Archipelago but is now more usually called the Palmer Archipelago Antarctica itself is upheaved in giant mountain ranges, some with peaks rising over 15,000 ft high The central area is a high plateau hidden under a perpetual ice cap Almost all of the continent (with an estimated average altitude of 6,000 ft , almost twice that of any other continent) is, indeed, covered by a vast ice sheet It has unassailably the severest climate on earth, with winter temperatures dropping to −70°F and even −80°F, and in the brief, unthawing antarctic summers temperatures remain an average of 15°F lower than those of the ARCTIC REGIONS In broad general plan the two ends of the earth are in truly antipodal contrast—in the north a circumpolar landlocked sea, in the south a circumpolar ocean-surrounded land mass From this difference comes the much more intense cold in the south and the greater dangers and difficulties of exploration Although there was for centuries a tradition that another land lay south of the known world, attempts to find it were defeated by the ice Navigators—notably Capt James Cook in 1774—made their way into antarctic waters, and the British mariner William Smith discovered the South Shetlands in Feb , 1819, and confirmed his discovery the following autumn The discovery of Antarctica itself came as a by-product of the search by whalers for new whaling grounds, although the question as to who made it is still in some dispute An American, Capt Nathaniel PALMER, in Nov , 1820, sighted an unknown coast He told the Russian voyager, Admiral Bellingshausen, who, speaking of it to others, called it Paalmer's Land An Englishman, Capt Edward Bransfield, sailed between the South Shetlands and the continent in Jan , 1821, and probably saw the continent In 1830 another Englishman, John BISCOE, sighted high mountains two years later he landed on an island and, thinking it part of the mainland, called it and the near-by peninsula Graham Land Hence the double name for the peninsula which Americans call Palmer Peninsula and the British call Graham Land The British also question Palmer's log and consider either Bransfield or Biscoe the discoverer The voyages of James Weddell, John Balleny, Dumont d'Urville, Charles WILKES, and James C Ross followed in the first half of the 19th cent That of Ross was important in opening the Ross Sea approach For nearly a half century then interest in polar exploration concentrated on the arctic region A renewed turn to the south was marked by the explorations of the Belgian, Adrien de Gerlache, in 1897-99, his expedition was the first to winter in the area of Antarctica As the 20th cent began, scientific interest quickened and led to a number of well-equipped expeditions, notably those of C E BORCHGREVINK, William BRUCE, Erik von DRYGALSKI, Otto Nordenskjold, Robert F SCOTT, Jean B CHARCOT, and Sir Douglas MAWSON, all these wintered in the Antarctic Extensive scientific surveys were made Several expeditions were fired by the desire to reach the South Pole, E H SHACKLETON failed (1908–9), but Roald AMUNDSEN succeeded (Dec 14, 1911), to be followed almost immediately (Jan 18, 1912) by Robert F Scott Considerable knowledge of the interior of Antarctica was gained, but the First World War interrupted the search When interest was resumed, the airplane provided a new method of exploration, with George Hubert WILKINS and Richard E BYRD as the pioneers The years just before and after 1937 were highly productive, with the British expedition (1934–37) under John Rymill, the Norwegian expedition (1936–37) of Lars Christensen, the fourth antarctic journey (1938–39) of Lincoln ELLSWORTH, and the voyage (1937–39) of the British *Discovery II*, on the fifth of her two-year commissions to investigate the distribution and the feeding grounds of whales In 1939–41 the U S Antarctic Service, with Richard E Byrd in command, pursued research from two bases 2,000 mi apart, one (see LITTLE AMERICA) on the Bay of Whales (an inlet of Ross Sea), the other on Palmer Peninsula A British expedition under J. W S Moor in 1944 evolved plans for systematic study of the peninsula and the mainland coast, including the establishment of meteorological stations In the years 1946–48 knowledge of Antarctica was tremendously increased by three U S expeditions The U S navy's "Operation Highjump," led by Byrd, was much the largest, most completely organized, and most thoroughly mechanized expedition ever sent to Antarctica It involved 12 navy vessels, airplanes, a submarine, and many scientists and experts, as well as some 4,000 navy officers and men Achievements were commensurate with its size Topographical knowledge was greatly broadened by exploratory flights, recorded

by moving pictures Unfrozen areas were found, especially a warm-lake region in the quadrant toward Australia, a bay or inland sea some 20,000 sq mi in area was discovered, many new lofty peaks were noted, and islands under the Ross ice shelf were indicated by the magnetometer Photomapping clarified old knowledge and added new Photographs, specimens, and data were brought back to the United States for analysis A smaller naval expedition in 1947-48 supplemented the work by further photomapping, by more investigation of the warm-lake region, and by obtaining tons of mineral specimens The expedition (1946-48) led by Finn Ronne centered at the base of the Palmer Peninsula and cooperated with the British Falkland Islands Dependencies Survey Many discoveries were made, including a mountain range running SE from the Palmer Peninsula to the high, snow-covered central plateau, which was shown to be a continuation of the Andes It was demonstrated that the theory that a strait between Ross Sea and Weddell Sea cuts Antarctica is almost certainly false In 1947 Australia sent an official expedition into the antarctic regions Chile and Argentina, the USSR, Norway (cooperating with Britain and Sweden), and Japan all showed interest in Antarctica in the years after the Second World War The wide range of national interest reflects a similarly wide range of conflicting claims to antarctic territory The latent strife of opposing national interests was demonstrated by the tension caused in 1939 when German aviators dropped flags at various points on the coast The various claims on Antarctica cut the continent and its surrounding waters like pieces of a pie that has as its circumference the circle of lat 60° S Beginning at long 20° W and reading clockwise, the claims are Norway, long 20° W–45° E (Queen Maud Land), Australia, long 45° E–160° E (Australian Antarctic Territory), except for the Adélie Coast (French) between long 136° E and 142° E, New Zealand, long 160° E–150° W (Ross Dependency), officially unclaimed but explored by U S expeditions, long 150° W–90° W, and the area of overlapping claims (Chile, long 90° W–53° W, Argentina, long 74° W–25° W, and Great Britain, long 80° W 50° W south of lat 58° S and long 50° W–20° W south of lat 50° S) The USSR, while making no specific claims, insists upon Russian rights by reason of Bellingshausen's work The United States recognizes no claims in Antarctica and makes no official claims, although U S explorers have dropped flags on areas they have explored One of the usual requisites for establishing claims to a territory —that of settlement—has thus far proved impossible The **antarctic regions** are definitely not friendly to man Though the Antarctic Circle is drawn the same distance (23° 30′ of latitude) from the South Pole that the Arctic Circle is from the North Pole, the area of antarctic weather conditions is much greater than that of arctic weather conditions The cold is intensified by the incredibly strong winds that blow mainly outward from the central plateau of Antarctica and drive the melting shore ice and the great icebergs to sea and extend the area of cold to lat 50° S While the arctic regions have a rapid and varied summer vegetation some year-round and abundant summer animal life, and human inhabitants, the antarctic regions have only mosses, lichens, and algae as vegetation, no year-round land animal life except a wingless insect about ⅛ in long and microscopic organisms, and no human inhabitants What other animal life there is relies on the sea and is found only in the sea and directly on the coast There are, however, a surprising number of birds the emperor penguin is the only year-round resident, but Adélie penguins and smaller birds are summer visitors In that season whales and seals also arrive Many scientists say, however, that Antarctica may have been tropical or temperate millions of years ago and may again be habitable millions of years from now Classic narratives of antarctic exploration include Robert F Scott, *The Voyage of the "Discovery"* (1905-7) and *Scott's Last Expedition* (1913), E H Shackleton, *The Heart of the Antarctic* (1909), Roald Amundsen, *The South Pole* (Eng tr, 1913), Sir Douglas Mawson, *The Home of the Blizzard* (1915), Richard E Byrd, *Little America* (1930) and *Discovery* (1935), and Finn Ronne, *Antarctic Conquest* (1949) For more general studies, see Otto Nordenskjold and Ludwig Mecking, *The Geography of the Polar Regions* (Eng tr, 1928), J Gordon Hayes, *Antarctica* (1928) and *Conquest of the South* (1932), Andrew Croft, *Polar Exploration* (rev ed, 1947), U S Board on Geographical Names, *The Geographical Names of Antarctica* (1947)

Antares (ăntâr'ēz) [Gr, =similar to Mars, i e in color], bright star in the constellation Scorpius It is a giant red star about 360 light years from the earth Measured by the Michelson interferometer, its diameter is c 420,000,000 mi

anteater, name applied to various animals which feed on ants, termites, and other insects, but more properly restricted to a completely toothless group of the order Edentata There are three genera, all found in tropical Central and South America The great anteater or ant bear (*Myrmecophaga*) has an elongated, almost cylindrical head and snout, a sticky tongue about 12 in long, a coarse-haired body about 4 ft long, and a long, broad tail The large, sharp claws on the forefeet are weapons of defense and are useful for opening the hard earth mounds of termites The collared or lesser anteater (*Tamandua*), less than half the size of the great anteater, is a short-haired yellowish and black arboreal creature The two-toed anteater (*Cyclopes*) is about the size of a squirrel and has a tail and silky yellow fur For the scaly anteater, see PANGOLIN

antelope, name applied to a large group of hoofed ruminant mammals of the order Artiodactyla They are usually included in the family Bovidae but are in some classifications considered a separate family, Antilopidae The true antelopes are confined to Africa and Asia Their unbranched horns, unlike the antlers of the deer, are not shed and consist of a hollow chitinous shell with a bony core Africa is the home of most antelopes, including the bushbuck, waterbuck, lechwe, marshbuck, impala or palla, kudu, nyala, springbuck, bongo, dik-dik, klipspringer, ELAND, and GNU The GAZELLE is found in Africa and Asia Native to India are the nilgai or blue bull, the four-horned antelope, and the black buck, the saiga lives on the steppes of S Russia and in central and W Asia, and the chiru in Tibet The hunting of antelopes for their flesh, hide, and horns has greatly reduced their numbers, some to the verge of extinction Many are protected in Kruger National Park, Transvaal, and in other reserves See also PRONGHORN and ROCKY MOUNTAIN GOAT

antenna (ăntĕn'ŭ) or **aerial** (âr'ēul), in radio, a system of wires or metal bars to project or intercept RADIO WAVES Antennas have a frequency characteristic based on the relation between their physical dimensions and the wave length of the signal, i e, a wire of given length is inherently tuned to a radio wave of the same length and of simple fractions of this length All antenna arrays that are not straight vertical conductors display another fundamental property, directivity This quality makes possible a more efficient use of power in transmitting, through the concentration of signal into desired areas In receivers it is helpful in selecting one of several signals having the same frequency but arriving from different directions Vacuum-tube and receiving-circuit development and the introduction of the loop antenna made possible satisfactory reception without any external antenna in many locations For operation at high frequencies, however, as in television, frequency modulation, and radar, antennas designed to meet specific circuit requirements are necessary

Antenor (-tē'nur), in Greek legend, wise Trojan counselor, father of Agenor

Antenor, fl last half of 6th cent B C, Greek sculptor, who executed the bronze statues of Harmodius and Aristogiton In 480 B C Xerxes carried these statues away from Athens but they were discovered later at Susa by Alexander and sent back A marble figure of a woman, by this artist, was found in the ruins of the Acropolis at Athens

Antequera (antākā'ra), city (pop 23,218), Málaga prov, S Spain, in Andalusia, in a fertile region at the foot of the Sierra de los Torcales It has important textile manufactures The Cueva de Menga, a large prehistoric burial chamber, was discovered near by in 1842

Antequera y Castro, José de (hōsā' dā ăntākā'ra ē kā'strō), 1690–1731, leader of a revolt in Paraguay A Peruvian lawyer and prosecutor of the *audiencia* of Charcas, he was sent to Asunción to probe charges against the governor of Paraguay, Diego de los Reyes Antequera sided with the opposition, became governor himself, and made the celebrated pronouncement that "the authority of the people is superior to that of the king" He lead the uprising of the COMUNEROS in a war against the authority of the viceroy and was finally captured and beheaded in 1731 This first struggle for freedom was the forerunner of the Spanish American revolts against Spain

Anteros (ăn'tĭrŏs) [Gr, =opposed to love], in Greek legend, son of APHRODITE and Ares He was severally represented as opposed to his brother EROS, as the god of passion, or as the avenger of unhappy love, though he is relatively obscure

anthem [ultimately from ANTIPHON], short sacred choral composition used in Protestant services, usually accompanied and having an English text It arose in the Anglican church, as the English counterpart of the Latin motet, at the hands of Christopher Tye (1497?–1572?), Thomas TALLIS, and William BYRD (b 1542 or 1543) Significant names in its development are Henry Purcell, Handel, and Mendelssohn A full anthem is entirely choral, while a verse anthem includes parts for solo singers The term is also used for any hymn of praise or jubilation in poetry or music, hence the term "national anthem" See M B Foster, *Anthems and Anthem Composers* (1901), A T Davison, *Protestant Church Music in America* (1933)

anthemion (ănthē'mēun), radiating, fan-shaped motive of ornament, suggestive of a palm leaf or of honeysuckle and found in Egyptian, Assyrian, and Aegean art it was profusely used by the Greeks and Romans on their buildings and on all sorts of decorative objects The designers of the Renaissance employed the motive with numberless variations, and it is used today in new forms

Anthemius of Tralles (ănthē'mēŭs, trăl'ēz), 6th cent, Greek architect, engineer, and mathematician By order of Emperor Justinian and with the aid of Isidorus of Miletus, he built (532–37) the Church of HAGIA SOPHIA in Constantinople

anthology (ănthŏl'ŭjē) [Gr, =garland], collection of selected literary pieces, often of verse The name was first given to the GREEK ANTHOLOGY Anthologies have become very popular in modern times, a collection of Vergilian and other Latin poems, the *Catalecta*, by J J Scaliger appeared early (1573) Two successful anthologies of English poetry are *The Golden Treasury* (1861) by Francis Turner Palgrave and *The Oxford Book of English Verse* (1900, new ed, 1939) by Arthur Quiller-Couch

Anthon, Charles, 1797–1867, American classical scholar, b New York city, grad Columbia, 1815 He taught at Columbia College from 1820 to his death and was also rector (1830–64) of Columbia Grammar School His editions of classical texts were among the first American editions to have notes and explanations for study He issued editions of Sir William Smith's classical dictionaries and also compiled one of his own, based on a French original

Anthony, Saint (ăn'tunē, ăn'thunē), 251?–c 350, Egyptian hermit, called St Anthony of Egypt and St Anthony the Abbot At 20 he became a hermit, and at 35 he went into utter seclusion He experienced then, says tradition, every temptation the devil could devise and repelled them A colony of hermits grew up about him, and after 20 years he emerged to rule them in a community, the monks being in solitude except for worship and meals After a few years he went away to the desert near Thebes, where he lived most of the rest of his long life St Anthony was the father of Christian MONASTICISM, his community became a model, but he did not write the rule ascribed to him His type of community is seen in the West among the Carthusians St Athanasius wrote his life He is a patron of herdsmen and is invoked against ERYSIPELAS The story of his temptations provided Flaubert with a theme There are imaginative paintings of him by Bernardino Luini, Van der Goes, and Guido Reni Feast Jan 17

Anthony, Andrew Varick Stout, 1835–1906, American illustrator and wood engraver As a youth he traveled in Central America and California The drawings and text of "Scraps from an Artist's Note Book," which appeared in *Harper's Magazine*, are descriptive of Honduras He illustrated the works of Whittier, Longfellow, and Hawthorne and designed fine editions for Ticknor & Fields and their successors From 1894 until his death he was associated with Harper & Brothers

Anthony, Henry Bowen (ăn'tunē), 1815–84, American editor and politician, b Coventry, R I, grad Brown, 1833 Under his editorship (1838–49), the Providence *Journal* became the focus of conservative thought in Rhode Island He was elected governor in 1849 and 1850 From 1858 until his death he was a U S Senator and undisputed boss of the Republican party in the state

Anthony, Marc see ANTONY

Anthony, Susan Brownell (ăn'thunē), 1820–1906, American reformer and leader of the woman-suffrage movement, b Adams, Mass, daughter of Daniel Anthony, Quaker abolitionist From the age of 17, when she was a teacher in rural New York, she agitated for equal pay for women teachers, for coeducation, and for college training for girls When the Sons of Temperance refused to admit women into their movement, she organized the first women's temperance association, the Daughters of Temperance At a temperance meeting in 1851 she met Elizabeth Cady Stanton, and from that time until Mrs Stanton's death in 1902 they were associated as the leaders of the woman's movement in the United States and were bound by a warm personal friendship Susan B Anthony lectured (1851–60), on women's rights and on abolition, and, with Mrs Stanton, secured the first laws in the New York state legislature guaranteeing to women rights over their children and control of property and wages In 1863 she was a coorganizer of the Women's Loyal League to support Lincoln's government, especially his emancipation policy After the Civil War she opposed granting suffrage to freedmen without also giving it to women, and many woman-suffrage sympathizers broke with her on this issue She and Mrs Stanton organized the National Woman Suffrage Association In 1890 this group united with the American Woman Suffrage Association to form the National American Woman Suffrage Association, of which Miss Anthony served as president from 1892 to 1900 In 1872 she led a group of women to the polls in Rochester, N Y, to test the right of women to the franchise under the terms of the Fourteenth Amendment Her arrest, trial, and sentence to a fine (which she refused to pay) were a *cause célèbre*, other women followed her example until the case

was decided against them by the Supreme Court. From 1869 she traveled and lectured throughout the United States and Europe, seeing the woman movement gradually advance to respectability and political importance. The secret of her power, aside from her superior intellect and strong personality, was her unswerving singleness of purpose. With Elisabeth Cady Stanton and Matilda Joslyn Gage, she compiled Volumes I to III of the *History of Woman Suffrage* (1881–86), using a personal legacy to buy most of the first edition and present the volumes to colleges and universities in the United States and Europe. The *History* was completed by Ida Husted Harper (Vols. IV-VI, 1900–1922, Susan B. Anthony contributed to Vol. IV). See biographies by I. H. Harper (3 vols., 1898–1908) and Rheta Childe Dorr (1928).

Anthony (ăn'thunē), city (pop. 2,873), co. seat of Harper co., S Kansas, W of Arkansas City near the Okla. line; laid out 1878, inc. 1879.

Anthony of Padua, Saint, 1195–1231, Portuguese Franciscan, b. Lisbon. He was renowned for his eloquence. In a vision he received the child Jesus in his arms, and he is usually represented thus in art. He was known as a preacher and for his holy life and was canonized the year after he died in Padua. He is popularly invoked by Roman Catholics to find lost articles. Feast: June 13.

anthracene (ăn'thrusēn), colorless, crystalline solid with a blue fluorescence, melting at 217° C. and boiling at about 350° C. It is insoluble in water, but soluble in alcohol, ether, chloroform, and other organic solvents. Its molecule consists of 14 atoms of carbon and 10 of hydrogen, the carbon atoms are arranged in three hexagonal BENZENE rings set side by side and interlocking, and the hydrogen atoms are attached at the free corners. Anthracene is obtained from coal tar and is important for its derivative anthraquinone, used in the preparation of ALIZARIN and other dyes. It is the first member of the **anthracene series** of aromatic hydrocarbons. In the molecule of each member of the series the ratio of hydrogen to carbon atoms is the same, i.e., the number of hydrogen atoms is 18 less than twice the number of carbon atoms.

anthracite see COAL.

anthrax, acute infectious disease caused by the anthrax bacillus. The bacilli affect animals primarily, but are transmitted to man through contact. Individuals who handle hides of animals (e.g., farmers and butchers) are particularly susceptible; anthrax is therefore included among the occupational diseases. The bacillus may exist in the form of a spore for many years. Cutaneous lesions (pustules) are found commonly on the hands, arms, and shoulders, and in the lungs. More rarely the gastrointestinal tract may be affected. Prompt injection of the specific anthrax serum is the treatment. To prevent the disease, raw materials such as hides and wool which may carry the anthrax spores are disinfected. Robert KOCH succeeded in obtaining, in 1876, pure cultures of the anthrax bacillus and demonstrated the relationship of the microbe to the disease. Confirmation of the anthrax bacillus as the cause of the disease was given by PASTEUR, who also developed a method of vaccinating sheep and cattle against anthrax.

anthropology (ănthrupŏl'ujē) [from Gr. *ánthrōpos* = man], the science of man and his works. It is concerned with the origin, development, and varieties of mankind and of CULTURE. A synthesizing science, anthropology deals with all varieties of phenomenon as they concern man and often employs the techniques and conclusions of other fields. It is divided primarily into physical anthropology and cultural anthropology. Physical anthropology includes human paleontology (or paleoanthropology), studies of the major biological divisions or races of mankind, and somatological studies. Cultural anthropology includes ARCHAEOLOGY, which is the study of prehistoric and extinct cultures, and ETHNOLOGY, which deals with the living cultures of mankind and their variety and with linguistics, the science of LANGUAGE. Anthropology differs from other sciences concerned with man and his behavior mainly in the scope of its interests and in its emphasis on data from nonliterate peoples and archaeological record. Applied anthropology is the practical operation of anthropological techniques in areas such as those of colonial administration, industrial relations, and minority-group and other problems. See Franz Boas, ed., *General Anthropology* (1938), R. H. Lowie, *Introduction to Cultural Anthropology* (1940), Ralph Linton, ed., *The Science of Man in the World Crisis* (1945) and *Most of the World* (1949), A. L. Kroeber, *Anthropology* (1948), Clyde Kluckhohn, *Mirror for Man, the Relation of Anthropology to Modern Life* (1949).

anthropometry (ănthrupŏm'utrē), system of measuring the human body and its parts by accurate and mechanical techniques. By such means, gross and relative size of the physique, coloration, and a number of observable physical traits can be presented as objective data, valid for statistical treatment and scientifically meaningful. It is frequently employed in human paleontology, race classification, and growth studies. See Ales Hrdlicka, *Practical Anthropometry* (2d ed., 1939).

anthropomorphism (ăn"thrupômôr'fizm) [Gr., = having human form], in religion, conception of divinity as being in human form. The idea is especially familiar in the mythology of Greece, but anthropomorphism is widespread and might be called latent in religion. There is some question as to whether a God shorn of *all* human characteristics is conceivable. Ancient Christian apologists defended themselves against charges of anthropomorphism by pagan philosophers, the orthodox doctrine is that Christ has two distinct natures (one divine, one human). The modern descriptive study of religion by anthropologists makes little use of the concept of anthropomorphism.

Antibes (ătēb'), town (pop. 13,778), Alpes-Maritime dept., SE France, a Mediterranean port. It exports oranges and olives. It was founded as a Greek colony (Antipolis) in the 4th cent. B.C. Cap d'Antibes, a near-by promontory, is a fashionable resort of the French Riviera.

antibiotic substances (ăn"tēbīŏ'tĭk), chemical substances obtained from microorganisms and having an antagonistic effect on certain other microorganisms. These substances are produced in the ordinary growth processes of the organisms. The majority are effective chiefly because they inhibit the growth of microbes, although many actually destroy microbial cells. However, the exact methods of action have not been fully determined. Among the substances most useful for treating human diseases are PENICILLIN, streptomycin, chloromycetin, and aureomycin. Streptomycin, derived from *Streptomyces griseus*, one of the actinomycetes (moldlike bacteria which normally produce, at some stage, a fine mycelium), was discovered in 1943 by Selman A. Waksman and an associate. It has been found effective in treating infections of the urinary tract and various diseases including tularemia, a form of meningitis in children, and some forms of tuberculosis. Chloromycetin is produced by *Streptomyces venezuelae*, an actinomycete discovered in a sample of soil from Venezuela. It can be produced synthetically and is effective against typhus, typhoid fever, and a number of other diseases. Aureomycin is produced by *Streptomyces aureofaciens* and has been used successfully in treating many diseases, including undulant fever, amoebic dysentery, pneumococcal and viral pneumonia, Rocky Mountain spotted fever, and typhus fever. Early observations of antagonism between organisms were made by Pasteur, by Metchnikoff, and by a number of other investigators. From the latter part of the 19th cent. it was known that the bacteria *Pseudomonas aeruginosa* (or *Bacillus pyocyaneus*) produced substances with antibacterial properties. Isolation of the first antibiotic substance (in crystalline form) from soil bacteria is credited to René J. Dubos, who obtained (1939) from *Bacillus brevis* a substance originally called by him gramicidin, later he gave the name tyrothricin to this crude substance in which are found the two components gramicidin and tyrocidine. Gramicidin is effective against mastitis in cattle and some local infections in humans, e.g., surface ulcers and sinusitis, but cannot be used intravenously because it destroys red blood cells; tyrocidine is ineffective in treating infections. Numerous other antibiotic substances have been isolated, but some produce toxic effects in the human body and others require further study. See S. A. Waksman, *Microbial Antagonisms and Antibiotic Substances* (1945), Samuel Epstein and Beryl Williams, *Miracles from Microbes* (1946).

antibody, specific substance produced by the tissues of the body when stimulated by another substance known as an antigen. Among the antigens are bacteria, bacterial toxins, viruses, and foreign proteins. Antibodies of various types (e.g., agglutinins, antitoxins, and bacteriolysins) give IMMUNITY by neutralizing the specific antigen. The serum for this immunization is obtained from animals after antibodies have been produced in them by injection of gradually increasing amounts of antigen.

Antichrist (ăn'tĭkrīst), in Christian belief, a person who will represent the powers of darkness on earth, to oppose the will of God and destroy His religion. 1 John 2:18–22, 4:3, 2 John 7. Scholars have seen affinities to Antichrist in Hebrew false prophets and in Persian dualistic ideas. It has been a commonplace for Christians to identify enemies of their belief with Antichrist, e.g., with early Christians it was Nero, with some Protestants the pope.

Anti-Comintern Pact see COMINTERN and AXIS.

Anti-Corn-Law League, organization formed in 1839 to work for the repeal of the English CORN LAWS. It was an affiliation of groups in various cities and districts with headquarters at Manchester and was an outgrowth of the smaller Manchester Anti-Corn-Law Association. Richard COBDEN and John BRIGHT were its leading figures.

Anticosti (ăntĭkŏs'tē), low, flat island (pop. 424), 135 mi. long and 10 to 30 mi. wide, E Que., at the head of the Gulf of St. Lawrence NE of the Gaspé Peninsula. The island was discovered by Cartier in 1534. Louis XIV granted it to Jolliet as a reward for his discovery of the Mississippi, and it long remained in the hands of Jolliet's heirs. Attempts to colonize it failed. Henry Menier, French chocolate manufacturer, purchased it in 1895 and made it a game preserve. In 1926 it was bought by the Consolidated Paper Corp.

anticyclone [opposite of a CYCLONE], area of high barometric pressure, from which the air moves spirally outward. The air is deflected by the earth's rotation according to Ferrel's law (clockwise in the Northern Hemisphere, counterclockwise in the Southern Hemisphere). The atmosphere in an anticyclone is characterized by clear skies, low humidity, and lack of precipitation. In the United States, anticyclones, or "highs," move in a general easterly direction at 400 to 600 mi. a day.

antidote see POISON.

Antietam campaign (ăntē'tum), Sept., 1862, of the Civil War. After the second battle of BULL RUN, Gen. R. E. LEE crossed the Potomac to invade Maryland and Pennsylvania. At Frederick, Md., he divided (Sept. 10) his army, sending Stonewall Jackson to capture the large Union garrison at Harpers Ferry and thus to clear his communications through the Shenandoah Valley. With the remainder, Lee marched NW toward Hagerstown. Gen. G. B. MCCLELLAN learned of this division of forces and moved to attack. In the battle on South Mt. (the Blue Ridge N of the Potomac, 12 mi. W of Frederick) on Sept. 14, 1862, McClellan defeated Lee's rear guard and took the passes of that range. Lee then fell back to Sharpsburg (c. 9 mi. W of South Mt.), where his position lay behind Antietam Creek. On Sept. 15 the Harpers Ferry garrison capitulated to Jackson, who, with part of his command, joined Lee before McClellan attacked. The battle of Antietam (or Sharpsburg) opened on the morning of Sept. 17. Early assaults on Lee's left were repulsed. In the afternoon Burnside's corps crossed the Antietam over the bridge on Lee's right and drove the Confederates back, but A. P. Hill's division arrived from Harpers Ferry and repulsed the attack. The battle was not renewed. On Sept. 18–19 Lee recrossed the Potomac into Virginia unmolested. The fighting at Antietam was so fierce that Sept. 17, 1862, is said to have been the bloodiest single day of the war. It was a Union victory only in the sense that Lee's invasion was stopped. The scene of the battle of Antietam has been set aside as a national battlefield site (183.32 acres, est. 1890).

Anti-Federalists, in American history, opponents of the FEDERALIST PARTY and the policies of Alexander HAMILTON in the early days of the republic. They looked on Thomas JEFFERSON as their leader and later called themselves Democratic-Republicans. With them began the DEMOCRATIC PARTY.

antifreezing solution, aqueous solution having a freezing point well below that of water, widely used in automobile cooling systems under weather conditions of low temperature. It is desirable that an antifreezing solution should not corrode metal parts, attack rubber, or have high viscosity at low temperatures, but should have a low freezing point, remain freely liquid at low temperatures, and show little evaporation at ordinary temperatures. Alcohol is used extensively, since it has little corrosive action, it tends, however, to evaporate rapidly. Salt solutions, such as that of calcium chloride, used formerly are highly corrosive. The solution of glycerin (glycerol) does not flow readily at low temperatures. Ethylene glycol has a low freezing point and does not evaporate readily, but it acts upon rubber. The following table of antifreezing solutions for automobile radiators gives the percent by volume in water of the substance and the freezing point (on the Fahrenheit scale) of the solution:

Substance	Freezing Point of Solution (Percentage by Volume in Water) 10%	20%	30%	40%	50%
Denatured alcohol (90% by vol.)	26.6°	19.4°	10.4°	−2.2°	−18.4°
Wood alcohol (97% by vol.)	23°	10.4°	−2.2°	−20.2°	−40°
Distilled glycerin (95% by vol.)	28.4°	21.2°	12.2°	−0.4°	−14.8°
Ethylene glycol (95% by vol.)	26.6°	15.8°	3.2°	−11.2°	−31°

antifriction metal, ALLOY used to line bearings in machinery when ball bearings are not used. Such alloys are not uniform, they consist of a soft material, called the matrix, in which are embedded hard particles. The soft material flows slightly under pressure, making a smooth surface which conforms to the shape of the axle or shaft. The hard particles take the load and distribute it evenly through the bearing. The bearing metals are alloys of antimony, copper, lead, tin, and zinc in various combinations, to some of which the names BABBITT METAL and white metal are applied.

antigen see ANTIBODY.

Antigo (ăn'tĭgō), city (pop. 9,495), co. seat of Langlade co., NE Wis., NE of Wausau, settled 1876, inc. 1885. Dairy and wood products are made. The county historical society has a museum in Antigo.

Antigone (ănt'ĭgunē), in Greek legend, daughter of Oedipus She followed her father in his banishment and disgrace When her brothers ETEOCLES and POLYNICES were killed in the war of the SEVEN AGAINST THEBES, CREON, regent of Thebes, forbade the burial of Polynices Antigone, in spite of his command, performed the funeral service for her brother Creon buried her alive Her story is told by Sophocles in *Oedipus at Colonus* and *Antigone*

Antigonish (ănt"ĭgŏnĭsh'), town (pop 2,157), NE N S, on the West River near its mouth and NE of Truro It was settled by the French in 1763, by the English in 1784 The town is known for its cooperative movement promoted by SAINT FRANCIS XAVIER UNIVERSITY

Antigonus I (Antigonus Cyclops) (ănt'ĭgunus sī'klŏps), 382? 301 B C, general of ALEXANDER THE GREAT and ruler in Asia He was made (333 B C) governor of Phrygia, and after the death of Alexander he was advanced by the friendship of ANTIPATER, who with PTOLEMY and CRATERUS, supported Antigonus in 321 against PERDICCAS and EUMENES In the wars of the DIADOCHI, Antigonus was the leading figure because he seems to have had the best chance to re-create Alexander's empire He had control of Asia Minor, Syria, and Mesopotamia at the time (316) when Eumenes was murdered His great power, however, ultimately caused LYSIMACHUS, SELEUCUS I, and PTOLEMY I to unite against him Antigonus' son, Demetrius Poliorcetes (later DEMETRIUS I of Macedon), was an able agent in the bid to build the empire by invading Greece, and Antigonus defeated (306) Ptolemy, but they both went down to defeat in the battle at Ipsus Antigonus was killed

Antigonus II (Antigonus Gonatas) (gōnā'tŭs), c 320–239 B C, king of Macedon, son of Demetrius I He took the title king on his father's death but made good his claims only by defeating the Gauls in Thrace and by taking Macedon in 276 His rule was very troubled PYRRHUS attacked him, and so did Ptolemy II A confederation of Greek cities headed by Athens waged (c 266–c 262 B C) the so-called Chremonidean War against him, and the Achaean League under Aratus gained power Yet Antigonus maintained himself and had a court notable for the poets and philosophers He rebuilt the Macedonian state and briefly united Greece He was succeeded by DEMETRIUS II

Antigonus III (Antigonus Doson) (dō'sŏn, -sun), d 221 B C, king of Macedon On the death of Demetrius II he became regent for Demetrius' son Philip (PHILIP V) He married the widow of Demetrius, and in 227 he proclaimed himself king The attacks of CLEOMENES III on the ACHAEAN LEAGUE caused Aratus to call for the help of Antigonus, who led his troops south in 224 In 222 he crushed Cleomenes at Sellasia in Laconea Meanwhile he had reconstituted the Hellenic League, and when he died he left power in Greece as well as Macedon to Philip V

Antigua (ănte'gwa, Span antē'gwä) or **Antigua Guatemala** (gwatumä'lu, Span gwatämä'lä) [Span, =Old Guatemala], city (pop 12,601), S central Guatemala After the destruction of CIUDAD VIEJA, Antigua was founded at the head of the same valley, dominated by the inactive volcanos AGUA and Acatenango (12,982 ft high) and the active volcano Fuego (12,854 ft high) In its heyday its splendor rivaled that of Lima and Mexico city By the 18th cent its population had increased to 80,000, and churches, convents, monasteries, public buildings, and homes were characterized by massive luxury The life of Antigua was continually subject to disaster from flood, volcano, plague, and earthquake and constant internecine struggles and scandals of ecclesiastical and lay authority In 1773 two earthquakes leveled the city The captain general ordered the removal of the capital to a plan supposedly free from earthquakes and there founded GUATEMALA CITY Today Antigua is a popular stopping point for tourists and the center of a rich coffee-growing region See Dorothy Popenoe, *Santiago de los Caballeros de Guatemala* (1933)

Antigua (ănte'gwa, ănte'gwu), island, area 108 sq mi, British West Indies In the LEEWARD ISLANDS colony, it is the principal island of the Antigua presidency (pop 41,826), with SAINT JOHN'S as the capital It is mountainous with a much-indented coast Island dependencies of the presidency are Barbuda (62 sq mi) and Redonda (1 sq mi) Chief products are sugar and molasses Discovered by Columbus in 1493, Antigua was ignored until the British established a settlement in 1632 For a short time in 1666 the French occupied it, but it was almost immediately returned to the British In accordance with an agreement of 1940 the United States operates defense bases on Antigua under a 99-year lease

Antigua Guatemala see ANTIGUA OR ANTIGUA GUATEMALA.

Anti-Lebanon, see *Anti-Libanus*, mountain range between Syria and Lebanon, rising to Mt. HERMON The name also appears as Anti-Liban

Antilles. see WEST INDIES

Antilochus (ănt'ĭlukus), in Greek legend, hero of the Trojan War, companion of Achilles. He died to save the life of his father, Nestor, and he and PATROCLUS were buried with Achilles

Anti-Masonic party, American political organization which rose after the disappearance in W New York in 1826 of William Morgan A former Mason, he had written a book purporting to reveal Masonic secrets The Masons were said, without proof, to have murdered him, and in reaction local organizations arose to refuse support to Masons for public office In New York state Thurlow WEED and William H SEWARD attempted unsuccessfully, to use the movement, which appealed strongly to the poorer classes, to overthrow Martin VAN BUREN and the ALBANY REGENCY Anti-Masonry spread from New York to neighboring states and influenced many local and state elections At Baltimore, in 1831, the Anti-Masons held the first national nominating convention of any party and issued the first written party platform—innovations followed by the older parties The vote for their presidential candidate, William WIRT, mostly hurt Henry Clay Usually the Anti-Masons in national politics acted with the NATIONAL REPUBLICAN PARTY in opposition to Jacksonian democracy, and in 1834 they helped to form the WHIG PARTY See W B Hesseltine, *The Rise and Fall of Third Parties* (1948)

antimony (ănt'ĭmō"nē) [Late Latin], silver-white crystalline element (symbol =Sb [Latin *stibium*], for physical constants, see ELEMENT, table), metallike in appearance but displaying properties of both a metal and a nonmetal It is like nitrogen, phosphorus, arsenic, and bismuth in chemical activity in that it forms similar compounds It unites with hydrogen to form stibine, a poisonous gas With oxygen it forms several compounds, a trioxide, a tetroxide, and a pentoxide The trioxide when heated with the bitartrate of potassium yields tartar emetic Antimony unites directly with the halogens and combines with sulphur Antimony is employed in making alloys, such as BRITANNIA METAL, TYPE METAL, BABBITT METAL and sometimes PEWTER Because it expands upon solidification, it makes good castings It is employed also in the preparation of battery plates, in the vulcanizing of special rubber, and in paints and explosives Its compounds have long been used in medicine, e g, TARTAR EMETIC (For antidote, see antimony under POISONING, table) Antimony occurs free in nature only rarely Its ores, however, are widely distributed throughout the world, in North and South America, Mexico, Europe, and Asia The chief commercial source of the element is STIBNITE, a sulphur compound known since very early times A method for the extraction of antimony from it was first described in the works of BASILIUS VALENTINUS Although known to the ancients, the element was first adequately described at the beginning of the 18th cent by LÉMERY Antimony is detected in compounds by MARSH'S TEST

Antin, Mary, 1881-1949, American author, b Russia In 1894 she emigrated to the United States with her parents and received her education in Boston and at Columbia Univ In 1901 she married Professor Amadeus Grabau She is known for her writings on the immigrant, notably *From Polotzk to Boston* (1899), *The Promised Land* (1912), her most widely read book, and *They Who Knock at Our Gates* (1914)

antinomianism (ănt"ĭnō'mēunĭzm) [Gr, =against law], tendency always more or less latent in Christian thought Its proponents hold that Christians, bought by the precious blood of Jesus and justified by their faith, have no need to regard the moral law, especially as laid down in the Old Testament The great argument against antinomianism is the sixth chapter of Romans The idea behind antinomianism was strong among Gnostics, in some of the medieval heresies, and in the teachings of Johann Agricola The only members of a great sect which has held antinomianism are the ANABAPTISTS In colonial Massachusetts, Anne Hutchinson was persecuted for antinomianism

Antinoüs (ănt"ĭnō'ŭs), c 110–130, favorite of Emperor Hadrian, b Bithynia He was constantly with the emperor until on a journey in Egypt he was drowned in the Nile—some say in saving Hadrian's life His beauty was legendary, and Hadrian mourned him greatly, had him deified, founded the city of Antinoöpolis in Egypt in his honor, and seems to have renamed the youth's birthplace Antinoopolis A cult was inaugurated in his honor, coins were struck with Antinoüs' head on them, and many busts and statues were made

Antioch (ăn'tēŏk), town of ancient Phrygia, near the Pisidian border and therefore called Pisidian Antioch Its site is north of the present Antalya, Turkey It was visited by St Paul Acts 13 14, 14 21, 2 Tim 3 11

Antioch or **Antakya** (äntakyä'), town (pop 27,448), S Turkey, on the Orontes river, at the foot of Mt Silpius and 20 mi from the sea It was founded c 300 B C by Seleucus I near two already existing Greek colonies and was named for his father; the population was largely Macedonian Lying at the crossing of routes from the Euphrates to the sea and from El BIKA to Asia Minor, it soon grew into one of the largest commercial centers and most sumptuous cities of the world: the two main streets, at right angles to each other, were lined with marble colonnades and adorned with temples, palaces, and statues The city was surrounded by a thick wall; its remains as well as those of the aqueduct, the theater, and the castle are still visible today It was here that the followers of Jesus were first called Christians after having severed themselves from the synagogue (see Acts 11 26, 13.1). Antioch is one of the three ancient patriarchates and is the seat of a Melchite, a Syrian rite, a Maronite, a Latin rite, and a Jacobite PATRIARCH Aurelian, who recovered it from Shapur I of Persia, erected more magnificent buildings and churches St John Chrysostom estimated the population (4th cent) at 200,000. In 538 Antioch fell to the Persians, and in 637 to the Arabs Nicephorus I reconquered it (969) for the Byzantine Empire, but in 1085 it fell, through treason, to the Seljuk Turks The army of the First Crusade (see CRUSADES) laid siege to Antioch in 1097 and conquered it in 1098 BOHEMOND I was made prince of Antioch His principality, which extended from Iskenderun southward beyond Latakia, was one of the most powerful of the Crusaders' states In 1108 Bohemond was forced to recognize Emperor Alexius I of Byzantium as his suzerain, but the Byzantines could not for long enforce their claims and Bohemond's successors held Antioch as a virtually independent fief from the Latin Kingdom of Jerusalem After its fall (1268) to the Mamelukes of Egypt, Antioch declined, in 1516 it was conquered by the Ottoman Turks With the sanjak of ALEXANDRETTA, Antioch was transferred to Syria in 1920 and restored to Turkey in 1939 The city has suffered many severe earthquakes, the most destructive in recent times was in 1872 Modern Antioch occupies but a fraction of the ancient city Excavations begun in 1935 at Antioch and at its ancient suburban resort, Daphne, have yielded splendid mosaics (1st-6th cent A D)—mostly copies of lost paintings—and many other important remains An earlier find was the Great Chalice of Antioch (see CHALICE) held by many to be the Holy Grail

Antioch 1 Town (1940 pop 5,106, 1947 special census pop 9,923), W Calif, on the San Joaquin near its junction with the Sacramento and NE of Oakland, founded 1849–50, inc 1872 A power plant of the Central Valley project is located at this processing center of a farm region 2 Summer resort village (pop 1,098), NE Ill, near the Wis line NNW of Chicago, in a lake region, settled 1836, inc 1857

Antioch College, at Yellow Springs, Ohio, nonsectarian, coeducational, chartered 1852, opened 1853 Antioch is a pioneer in experimentation, the chief feature being the cooperative plan by which students partly work their way by alternating periods of study and full-time work More recent is a community-government plan for training in group living Horace Mann and Arthur E Morgan were noted presidents

Antiochus I (Antiochus Soter) (ănt'ĭukus sō'tur), d c 261 B C, king of Syria (280–c 261 B C), son of SELEUCUS I He did not, like his father, seek to expand in Europe The Seleucid holdings were much reduced, particularly by the Egyptians under Ptolemy II, and the territories he left to his son Antiochus II were far from being all of Syria

Antiochus II (Antiochus Theos) (thē'ŏs), d 247 B C, king of Syria (c 261–247 B C), son of Antiochus I In warfare with Ptolemy II he had varied fortune, but his marriage to Ptolemy's daughter Berenice sealed the peace, and Antiochus was confirmed in most of the Syrian possessions his father had lost Antiochus' second marriage had evil results, on the death of Antiochus, his son by an earlier marriage, SELEUCUS II, and Berenice in behalf of her infant son struggled for the throne, a war with Ptolemy III ensued

Antiochus III (Antiochus the Great), d 187 B C, king of Syria (223–187 B C), son of Seleucus II At his accession the Seleucid empire was dissolving He could not restore it completely—Bactria and Parthia were not brought back though they were made vassal kingdoms—but he did much to revive the glory of the Seleucid dynasty He led an expedition to India (212–205 B C) Though he was earlier defeated by the Egyptians at Rafa, he and Philip V of Macedon undertook (202) to wrest Egyptian territories from the boy king, Ptolemy V Antiochus, successful, did not properly appreciate the growing power of Rome While Philip V was engaged by the Roman armies, Antiochus recovered S Syria and Asia Minor In 196 he seized the Thracian Chersonese and thus alarmed the Greeks They as well as the Egyptians sought the aid of the Romans Antiochus, who disregarded the advice of Hannibal (at his court in 193), waited and then challenged Rome by accepting the invitation of the Aetolian League to interfere in Greece in 192 The Romans crushed him (191) at Thermopylae and again at Magnesia (190). He also lost naval engagements, and in 188 he was forced to give up all his territory W of the Taurus Thus the Seleucid empire became a purely inland Asiatic state, and dreams of reviving Alexander's empire were dead.

Antiochus IV (Antiochus Epiphanes) (ĕpĭ'fənēz), d. 163 B.C., king of Syria (175–163 B.C.), son of Antiochus III; successor of his brother Seleucus IV His nephew (later Demetrius I) was held as a hostage in Rome, though still claiming the throne. Antiochus is best known for his attempt to Hellenize Judaea and extirpate Judaism—a policy that brought on the rising of the MACCABEES Antiochus invaded Egypt, which was torn by strife between Ptolemy VI and his brother (later Ptolemy VII), and would probably have conquered that land if the Romans had not intervened in his siege of Alexandria (168). Antiochus was briefly succeeded by his son, Antiochus V, a boy king who was overthrown by Demetrius I.

Antiope (ănt'ĭ'əpē), in Greek legend **1** Daughter of the king of Boeotia Zeus loved her and came to her as a satyr She fled the wrath of her father, who committed suicide. She married Epopeus, but her brother Lycus recovered her, and he and his wife Dirce mistreated her. Antiope's twin sons by Zeus, AMPHION and Zethus, rescued her and killed DIRCE. **2** Sister of HYPPOLYTE, queen of the Amazons According to one legend she loved THESEUS, who abducted her This legend makes her the mother of HIPPOLYTUS

Antipas (ăn'tĭpăs) **1** See HEROD **2** Martyr at Pergamum, traditionally its first bishop Rev 2 13

Antipater (ănt'ĭpətûr), d 319 B C, Macedonian general He was one of the ablest and most trusted lieutenants of PHILIP II and was a friend of ALEXANDER THE GREAT When Alexander went on his Asiatic campaign, Antipater was left as regent (334–323 B C) in Macedon He resisted the attempt of Olympias to gain the regency and governed ably After the death of Alexander he put down a rebellion of many of the Greek cities in the Lamian War and punished Athens Antipater was a leading opponent of the regent, Perdiccas, and after Perdiccas was defeated in 321 by Ptolemy I, Antigonus I, and Craterus, it was Antipater who held the kingdom together After his death it fell violently apart in the wars of the DIADOCHI.

Antipater, in the Bible see HEROD

Antipatris (ăntĭp'ətrĭs) city, Roman Palestine, founded by Herod the Great and named after his father It was some 10 mi NE of Joppa, on the north-south road Paul was taken there on the way to Caesarea Acts 23 31

Antiphilus (ăntĭf'ĭləs), fl. 4th cent B C., Greek painter, of Egyptian origin He invented a grotesque caricature called a gryllos, a creature part man, part animal or bird He painted portraits of Philip of Macedon and Alexander the Great

Antiphon (ăn'tĭfŏn, -fən), c 479 B C –411 B C, Athenian orator He probably was not a barrister, but wrote defenses for others to speak Of his 15 extant orations three were for use in court, the rest for the instruction of his pupils He did much to advance attic prose writing His position in politics was with the conservative aristocrats, and he was instrumental in setting up the Four Hundred in 411 B C When they fell, Antiphon was executed among the first, before ALCIBIADES returned

antiphon (ăn'tĭfən), in liturgical music, generally a short response sung before and after a psalm The introit, offertory, and communion of the Mass were originally antiphons which later were used independently Certain festival chants, sung preparatory to the Mass itself, are called antiphons There are also the four antiphons of the Blessed Virgin Mary, which are in the nature of office hymns and are sung by alternating choirs (i e , antiphonally), each one belonging to a certain portion of the year The best known of these is SALVE REGINA, of whose text there are many polyphonic settings

Antipodes (ăntĭp'ədēz), rocky uninhabited islands, S Pacific, c 450 mi SE of New Zealand, to which they belong The Antipodes are so named because of their location in relation to Greenwich, England

antipodes [Gr , =having feet opposite], people or places diametrically opposite on the globe Thus antipodes must be separated by half the circumference of the earth (180°), and one must be as far north as the other is south of the equator, midnight at one is noonday at the other New Amsterdam and St. Paul, small islands nearly midway between South Africa and Australia, are more nearly antipodal to Washington, D C , than is any other land

antipope [Latin, =against the pope], one supposed to be pope whom subsequent popes do not recognize as their predecessor in the Holy See. Important antipopes were NOVATIAN, Clement III (GUIBERT OF RAVENNA), Nicholas V (see RAINALDUCCI, PIETRO), Clement VII (see ROBERT OF GENEVA), Benedict III (see LUNA, PEDRO DE), John XXIII (sometimes called John XXII, see COSSA, BALDASSARRE), and Felix V (see AMADEUS VIII).

antique. The term is used collectively to designate classic Greek and Roman works of art, particularly sculptures; as an adjective to indicate an object, a period, or a style of ancient or early times, and as a noun, for objects of art, furniture, rugs, pottery, metalwork, costumes, jewelry, and household goods of early production The demand and prices paid for antiques have led to the widespread making of reproductions and reconstructions, some with spurious marks of age. The genuineness of antique furniture is judged by such details as toolmarks, patina, kind and grain of wood, structure and line, hardware, nails, and signs of wear Collections of antique furniture are preserved in European and American museums and mansions Outstanding collections of American antiques are in the American wing of the Metropolitan Museum, the Museum of Fine Arts, Boston; Henry Ford's Edison Institute of Technology, Dearborn, Mich., the museum of the Bucks County Historical Society, Doylestown, Pa , the national shrines Mt Vernon and Monticello. See Esther Singleton, *The Collecting of Antiques* (1926); Carl Drepperd, *The Primer of American Antiques* (1944)

Anti-Saloon League, U S organization working for prohibition of the sale of alcoholic liquors Founded in 1893 as the Ohio Anti-Saloon League at Oberlin, Ohio, by representatives of temperance societies and evangelical Protestant churches, it came to wield great political influence and was a large factor in securing the passage of the Eighteenth Amendment A critical study of the national lobby of the Anti-Saloon League appears in P H Odegard, *Pressure Politics* (1928)

anti-Semitism, sentiment, ranging from antipathy to violent hatred, against the JEWS Before the 19th cent , anti-Semitism was largely religious, based on dislike for the "perfidious" Jews who crucified Christ, and was expressed in the later Middle Ages by sporadic persecutions and expulsions—notably the expulsion from Spain under Ferdinand and Isabella—in severe economic and personal restriction (see GHETTO), and in fantastic legends such as those of ritual murder by Jews of Christian children However, the Jews being generally restricted to the profession of unpopular trades (notably usury), the sentiment was also economic in nature After the emancipation of the Jews, brought about by the Enlightenment of the 18th cent and by the French Revolution, religious and economic motives were gradually replaced by "race" feeling This development was due not only to the rising nationalism of the 19th cent , but also to the conscious preservation, among Orthodox Jews, of cultural and religious barriers that isolated the Jewish minorities from their fellow citizens The unpopularity of the Jews, on whom all evils could be blamed with impunity, was exploited either by demagogues, such as Édouard DRUMONT in France, to stir the masses against an existing government, or by reactionary governments, as in Russia, to find an outlet for popular discontent The millions of Russian and Polish Jews who, after the assassination (1881) of Alexander II, fled the pogroms and found refuge in other countries contributed to the popular feeling that Jews were aliens and intruders In addition, a spurious document, the "Protocols of the Wise Men of Zion," purporting to outline a Jewish plan for world domination, emerged in Russia early in the 20th cent and has circulated throughout the world ever since After the Russian Revolution of 1917, the Jews were accused of plotting to dominate the world by their international financial power or by a Bolshevik revolution, the argument varied according to the audience addressed These emotional arguments received pseudoscientific backing from theories of "Aryan" superiority These theories emerged in the 19th cent with the writings of Count GOBINEAU and Houston Stewart CHAMBERLAIN and found their climax in those of Alfred ROSENBERG, which were incorporated in the official doctrine of German NATIONAL SOCIALISM by Adolf Hitler Hitler's persecution of the Jews during the Second World War is unparalleled in history It is estimated that between 5,000,000 and 6,000,000 European Jews were exterminated between 1939 and 1945 (see CONCENTRATION CAMP) Hitler's fall, though it stopped persecution, did not stop anti-Semitism, which is likely to last as long as fear and insecurity make the masses receptive to anti-Jewish agitation

antiseptic, an agent that inhibits the growth of microorganisms without necessarily causing their destruction Examples of antiseptics are alcohol, iodine, lysol and carbolic acid in dilute solutions, sunlight, and water at high temperature Powders of the sulfanilamide drug group are used in surgical wounds as an antiseptic LISTER was the first to employ an antiseptic (carbolic acid) in surgery, following the discovery by PASTEUR that microorganisms are the cause of infection Modern surgical techniques for avoiding infection are founded on asepsis, the absence of pathogenic organisms Sterilization of the area of operation, the air in the operating room, the instruments, and everything that comes in contact with the wound are attempts to achieve asepsis

antislavery movement: see SLAVERY and ABOLITIONISTS

Antisthenes (ăntĭs'thənēz), b 444? B C , d after 371 B C , Greek philosopher, founder of the CYNICS Antisthenes in his middle age rejected the Sophist doctrines of his teacher, Gorgias, and became one of Socrates' most ardent followers He believed virtue to be the chief aim of man. Man to attain virtue must reduce to a minimum his dependence on the external world, thus, he must disregard social convention, shun pleasure, and live in poverty Antisthenes, like Xenophanes, repudiated polytheism, substituting one god, whom he described as unlike anything known to man.

Anti-Taurus see TAURUS

antitoxin, substance formed in the body fluid which neutralizes the poisonous products (toxins) of bacteria In healthy individuals, immunity to disease results from the production of antitoxins The immunity may be increased by injecting specific, specially prepared antitoxins For example, those used in the treatment of diphtheria and tetanus are obtained from the blood serum of horses which have received injections of the specific toxin to stimulate antitoxin formation

Anti-Trust Act see CLAYTON ANTI-TRUST ACT and SHERMAN ANTI-TRUST ACT

Antium, Italy see ANZIO

Antlers, lumber town (pop 3,254), co seat of Pushmataha co , SE Okla , on the Kiamichi, inc 1903.

Antofagasta (äntōfägä'stä), city (pop 49,106), N Chile, a port on the Pacific. Most important of the republic's northern cities, Antofagasta was founded by Chileans in 1870 to exploit nitrates in the desert of ATACAMA, then under Bolivian administration. Its occupation by Chilean troops in 1879 began the War of the Pacific (see PACIFIC, WAR OF THE), and after the war it was, with the province, ceded to Chile Antofagasta has depended primarily on nitrates and copper exports, often threatened by sharp fluctuations in world demands. The open harbor is partially protected by a breakwater With highway and rail connections to N Chile, Bolivia, Argentina, and S Chile, the city has become an international commercial center Industries include a brewery, a fish cannery, an explosives plant, soap and paint factories, a clothing mill, and foundries and ore refineries Backed by desert hills, Antofagasta, though enjoying a moderate climate, hardly ever receives rain Water is bought from 280 mi away

Antoine, André (ädrā' ätwän'), 1858–1943, French theatrical manager In 1887 he formed his own company, which came to be called the Théâtre Libre Here, by means of private subscriptions, he was able to present the foremost works of the naturalist school He produced many of the first plays of Brieux, Curel, and Lavedan and of contemporary Russian, German, and Scandinavian masters before his project proved a financial failure in 1894. In 1897 he founded the Théâtre Antoine, where he continued the tradition of his Théâtre Libre for 10 years He was appointed director of the Odéon in 1906 and remained at this theater until 1914 The work of Antoine became a model for experimental theaters in Europe and the United States See S M. Waxman, *Antoine and the Théâtre-Libre* (1926)

Antoine, Père (pâr' äntwän') [Fr , =Father Anthony], d 1829, Spanish priest in New Orleans, a Capuchin friar His Spanish name in religion was Antonio de Sedella, his family name was Moreno. Through many years of service at St Louis Cathedral under Spanish, briefly French, and then U.S. rule, he won his French congregation from distaste for his harshness to great love and respect He was almost constantly at war with the authorities The Spanish colonial rulers once sent him back as a prisoner to Spain, and U S officials were later highly incensed at his secret dealings with the Spanish The legend that he was empowered to introduce the Inquisition to Louisiana but refrained from doing so is apparently based on fact He is the chief figure in the historical novel *Père Antoine* (1947) by Edward F Murphy

Antokolski, Markus (mär'kŏos äntŭkôl'skē), 1843–1902, Russian sculptor Most of his works are statues of famous personages such as Socrates, Spinoza, and Peter the Great His masterpiece, of Ivan the Terrible, was cast in bronze for the Hermitage collection

Antonelli, Giacomo (jä'kōmō äntônĕl'lē), 1806–76, Italian statesman, cardinal of the Roman Church, adviser to Pope PIUS IX He received the red hat in 1847, presided over the council drafting the constitution for the papal states, and became the premier of the pope's first constitutional cabinet After return from his exile in Gaeta (1849), Pius IX made him secretary of state His vigorous diplomacy was directed against Italian national unification.

Antonello da Messina (äntônĕl'lō dä mäs-sē'nä), c 1430–c 1479, Italian painter, b Messina One of the first in Italy to practice the Flemish technique of oil painting, he is thought to have introduced it into Venice, where he was active c 1475 His paintings are notable for their fine luminosity and keen observation Among them are *Pietà* (Venice), *Annunciation* (Syracuse), *Calvary* (Antwerp), *St Jerome* and *Christ on the Cross* (National Gall , London), and *Madonna and Child* (one in the National Gall of Art, Washington, D C., another in the Metropolitan Mus)

Antonescu, Ion (yôn äntônĕ'skōō), 1882–1946, Rumanian marshal and dictator He served in the First World War, later became chief of staff, but fell into disfavor with King Carol II because of his suspected intrigues with the IRON GUARD. In the Second World War, on Sept 2, 1940, Carol,

threatened with revolution and German intervention, appointed Antonescu premier with dictatorial powers Two days later Antonescu forced the king to abdicate in favor of Carol's son, MICHAEL In Nov, 1940, Rumania joined the Axis Powers, and early in 1941 Antonescu ruthlessly suppressed a revolt by the Iron Guard, which, though it had helped him to power, had been disappointed in its hope of dominating Rumania Antonescu gave Hitler virtual control over Rumanian economy and foreign policy, tolerated violent pogroms against the Jews, and declared (June 22, 1941) a "holy war" on Russia Military disasters and economic misery caused increasing opposition to Antonescu's regime With two Russian armies deep in Rumania, King Michael in Aug, 1944, had Antonescu and his cabinet arrested in a theatrical coup Antonescu was tried (1946) for war crimes by a people's court, sentenced, and executed

Antonines (ăn'tunīnz), collective name of the Roman emperors of the 2d cent These emperors are usually listed as ANTONINUS PIUS, his adopted sons, MARCUS AURELIUS and Verus, and COMMODUS

Antoninus, Saint (ăntōnī'nus), 1389–1459, Italian churchman, named Antoninus Pierozzi He was a Dominican and became archbishop of Florence He ruled well and was renowned for his charitable work in the city His *Summa moralis* is a long, pioneering work in moral theology It has great interest in that its special theme is commercial ethics and the morality of banking, it shows admirably the effect the new business methods were having on everyday life Feast May 10 See Bede Jarrett, *St Antonino and Medieval Economics* (1914)

Antoninus, Wall of, ancient Roman wall built across N Britain from the Firth of Forth to the Firth of Clyde by the prefect Lollius Urbicus in the reign of Antoninus Pius—probably A D 140–42 Built as a protection against the peoples to the north, it had a ditch on the north, 19 forts along its southern side, and was 37 mi long Its construction was similar to that of HADRIAN'S WALL See Sir George Macdonald, *The Roman Wall in Scotland* (2d ed, 1934)

Antoninus Pius (Titus Aurelius Fulvus Boionius Arrius Antoninus) (pī'us), A D 86–A D 161, Roman emperor (138–161), b Lanuvium After a term as consul (120) he went as proconsul to Asia, where he governed with distinction He was adopted by the emperor HADRIAN and, on succeeding him, administered the empire with marked ability Italy was embellished with fine buildings and the provinces were eased of much of their burden During his reign Agricola built in Britain the Wall of Antoninus The empire enjoyed peace in his time His wife was Faustina, aunt of his successor, MARCUS AURELIUS

Antonito (ăn'tunē'tō), town (pop 1,220, alt c 7,900 ft), S Colo, S of Alamosa and near the N Mex line, inc 1889 It is a railroad center for a large farm area

Antony or **Marc Antony,** Latin *Marcus Antonius,* c 83 B C–30 B C, Roman politician and soldier, one of the romantic figures of history He was of a distinguished family His mother was a relative of Julius CAESAR, his stepfather was P Cornelius LENTULUS Sura Antony was notorious from his youth for riotous living, but even his enemies admitted his courage and endurance in war Between 58 and 56 B C he campaigned in Syria with Aulus Gabinius and then in Gaul with Caesar, who saw signs in Antony of great promise and made a protégé of him Antony became quaestor and in 49 B C tribune When the situation between POMPEY and Caesar became critical, Antony and Q CASSIUS Longinus, another tribune, vetoed the bill to deprive Caesar of his army and fled to him Caesar crossed the Rubicon, and the civil war began At the battle of Pharsala Caesar took the right wing, and Antony gave distinguished service as the leader of the left After a conspiracy had resulted in the assassination of Caesar, Antony, then consul, at Caesar's funeral aroused (44 B C) the mob against the conspirators and drove them from the city When Octavian (later AUGUSTUS), Caesar's adopted son and heir, arrived in Rome for his patrimony, Antony joined forces with him, but they soon fell out Antony went to take Gaul as his assigned proconsular province, but DECIMUS BRUTUS would not give it up, and Antony besieged him at Modena The senate, urged by CICERO, who excoriated Antony in the *Philippics,* sent the consuls Aulus HIRTIUS and C Vibius Pansa to attack Antony The consuls fell in battle, but Antony retired into Transalpine Gaul (43 B C) Octavian now decided for peace and arranged with Antony and M Aemilius LEPIDUS the Second Triumvirate, Antony receiving Asia as his command In the proscription following this treaty Antony had Cicero killed Antony and Octavian crushed the republicans at Philippi, and the triumvirate ruled the empire in 42 B C In the same year Antony met CLEOPATRA, and their tragic love affair began In the course of Antony's stay in the East his wife Fulvia (widow of CLODIUS) and a brother of his had become so alienated from Octavian that civil war had broken out in Italy At about the time Antony arrived in Italy, Fulvia died (40 B C) and a peace was patched up between Octavian and Antony, who married Octavian's sister Octavia; she became, thereafter, Antony's devoted partisan and the strongest force for peace between the two In 36 B C Antony undertook an invasion of Parthia The war was costly and useless, and Antony succeeded only in adding some of Armenia to the Roman possessions In 34 B C, Antony settled in Alexandria as the acknowledged lover of Cleopatra He gave himself up to pleasures and indulgence, caring neither for the growing ill will in Rome nor for the increasing impatience of Octavian, who saw the wealth of the entire East flowing into Alexandria In 32 B C the senate deprived Antony of his powers, and civil war was inevitable In 31 B C, Antony and his fleet met M Vipsanius Agrippa with Octavian's fleet off Actium, and Antony found his great galleys were no match for the swift small craft Octavian had built In the middle of the battle Cleopatra retired with her boats, and Antony followed her His navy surrendered to Octavian The situation of the two lovers was desperate Returning to Alexandria, they set about fortifying Egypt against Octavian's arrival When at length (30 B C) Octavian did come, Antony committed suicide, under the impression, it is said, that Cleopatra had died already She killed herself soon afterward The most celebrated drama on Antony is, of course, Shakspere's *Antony and Cleopatra* Dryden rewrote this in *All for Love, or, The World Well Lost* For Antony's part in Caesar's funeral Shakspere's *Julius Caesar* is interesting The name also sometimes appears as Marc Anthony

Antothijah (ăntuthī'ju), descendant of Benjamin 1 Chron 8 24

Antothite (ăn'tōthīt) see ANATHOTH

Antrim (ăn'trĭm) maritime county (1,098 sq mi, 1937 pop 197,266 and 1948 estimated pop 216,527, excluding Belfast), Ulster prov, Northern Ireland Belfast is the county town The eastern and seaward third of the county is mountainous, broken by picturesque glens, to the west, where Antrim borders on Lough Neagh, there are the fertile valleys of the Bann and the Lagan On the north coast, near Portrush, is the extraordinary basaltic formation known as the GIANT'S CAUSEWAY The region is chiefly agricultural (oats, flax, potatoes), with fishing and cattle breeding important occupations BELFAST is a major British port and the chief industrial center of Ireland There are no other large urban areas Larne, Lisburn, Ballymena, Carrickfergus, and Antrim are important local centers

Antrim, town (pop 1,627), Co Antrim, Northern Ireland, on Lough Neagh An agricultural market in a flax-growing region, it has linen mills The round tower here dates from c 900

Antrim, town (pop 1,127), S N H, on the Contoocook and SW of Concord, settled 1741, inc 1777 Many settlers were Scotch-Irish

Antung (ăn'tōōng'), province (24,046 sq mi, pop 3,341 908) NE China, bordered on the southeast by the Yalu river, which separates it from Korea, and by the Bay of Korea The capital is Tunghwa A part of Manchuria, it was included in Manchukuo and was created a province in 1945, largely out of the southeastern section of the former province of Liaoning The city of Antung is the only major port on the coast (c 50 mi long) The Hun, an unnavigable tributary of the Yalu, is the longest river which crosses this mountainous province Antung is adequately served by rail, it includes a section of the South Manchurian RR Except that its overseas trade is less, Antung is economically much like the present province of LIAONING

Antung, city (pop 315,242), S Antung prov, China A former TREATY PORT, opened in 1907, it is at the mouth of the Yalu river A southern terminus of the South Manchurian RR, Antung enjoys a large export trade in timber and soybean products

Antwerp, (ăn'twûrp), Flemish *Antwerpen* (ant'vĕrpun), Fr *Anvers* (ăNvĕr'), province (1,104 sq mi, pop 1,266,647), N Belgium It is a level cultivated plain drained by the Scheldt (Escaut) river and the Albert Canal Antwerp (the capital) and Malines are the chief cities The province, which is mostly Flemish-speaking, was a part of the duchy of BRABANT

Antwerp, Flemish *Antwerpen,* Fr *Anvers,* city (pop 259,622, with suburbs c 600,000), capital of Antwerp prov, Belgium, on the Scheldt (Escaut) river Rivaled only by Rotterdam as the largest seaport of continental Europe, Antwerp is also a world center of the diamond trade and industry, the seat of the oldest stock exchange (founded 1460), an industrial center (oil refineries, automobile plants, assembly plants, and flour mills), and one of the great historical and artistic cities of Europe Major imports are cotton, grain, and (from the Belgian Congo) copper and other ores, major exports are textiles and machinery Transit trade to and from W Germany, notably the Ruhr area, is a vital part of the port's activities An early seat of the counts of Flanders and one of the old communes of Brabant, Antwerp rose into prominence with the decline (15th cent) of Bruges and Ghent In 1446 the English Merchant Adventurer gave the port great impetus by moving their factory from Bruges to Antwerp By the middle of the 16th cent Antwerp was the commercial and financial hub of Europe, with a population of c 200,000 Its busy docks were the marvel of the day The diamond industry, established in the 15th cent, expanded greatly after the arrival of Jewish craftsmen expelled from Portugal Antwerp's prosperity suffered a fatal blow when the city was sacked by mutinous Spanish troops in 1576 (the "Spanish Fury"), but Antwerp resisted for 14 months (1584–85) before surrendering to the Spanish under Alexander Farnese To favor Dutch commerce, the Peace of Westphalia (1648) closed the Scheldt to navigation, thus reducing Antwerp to insignificance Napoleon I revived its trade but the Dutch-Belgian treaty of separation (1839) gave the Netherlands the right to collect a toll on Scheldt shipping The modern expansion of Antwerp dates only from 1863, when Belgium is deemed this right by a cash payment In the First World War, the Germans reduced the formidable defenses of Antwerp, which suffered great hardship In the Second World War, Antwerp was captured (Aug, 1944) by British troops, became a vital Allied supply base, and was heavily attacked and damaged by German rocket weapons The artistic fame of Antwerp dates from the rule (15th cent) of Philip the Good of Burgundy, who founded an academy of painting Quentin MASSYS and RUBENS made Antwerp their home, and Sir Anthony VAN DYCK was born here Many of their works are in the museums and churches of Antwerp Christophe PLANTIN (16th cent) made the city a printing center Among the many splendid buildings of Antwerp are the Cathedral of Notre Dame (14th–15th cent), one of the finest of Gothic cathedrals with a spire 400 ft high, and the old guild house that line the Groote Markt [market place] The zoological garden has long been world famous

Antwerp, rural village (pop 1,086), NW Ohio, on the Maumee near the Ind border Cheese is made here

Anu see BABYLONIAN RELIGION

An Uaimh, Co Meath, Ireland see NAVAN

Anub (ā'nŭb), Judahite 1 Chron 4 8

Anuradhapura (unōō'radupōō'ru) or **Anarajapura** (una'raju–), town (pop 12,287), N Ceylon It is the site of a city, founded in 437 B C, which was (4th cent B C–8th cent A D.) the capital of Ceylon and one of the leading Buddhist centers of the world Ruins include large stupas, a temple hewn from the rock, and the Brazen Palace (so called from its metal roof) Many Buddhist pilgrims visit the BO TREE grown from a slip of the tree at BUDDH GAYA under which Buddha is believed to have attained enlightenment

Anvers see ANTWERP

Anville, Jean Baptiste Bourguignon d' (zhäN' batēst' bōōrgēnyō' dävēl'), 1697 1782, French geographer and cartographer His maps of ancient geography, characterized by careful accurate work and based largely on original research, are especially valuable He became cartographer to the king, who purchased his maps, atlases, and other geographical material (the largest collection in France), Anville himself made more than 200 maps

Anyox, mining area, W British Columbia, NNE of Prince Rupert Here are large copper mines and a pyrite smelter

Anza, Juan Bautista de (hwan' boutēs'ta dā an'sä), 1735–88, Spanish explorer and official in the Southwest and the Far West, founder of San Francisco, b Mexico Accompanied by Father F T H Garcés and a small expedition, he opened (1774) an overland road from Sonora through present Arizona to California, reaching San Gabriel and Monterey Viceroy A M Bucareli, who was alarmed by the threatened encroachments of the Russians and the British on the Pacific coast, sent (1775) Anza on a new expedition to establish a colony In 1776 he chose the site of San Francisco, where a presidio was founded by one of his lieutenants and a mission was founded by Father Francisco Palóu under the direction of Father Junipero Serra Later, as governor of New Mexico (1777–88), Anza built up Spanish frontier defenses and established order Journals of men on his California journey are in *Anza's California Expeditions* (ed by H E Bolton, 5 vols, 1930) For his diaries and a study of his policy, see A B Thomas, *Forgotten Frontiers* (1932)

Anzengruber, Ludwig (lōōt'vĭkh an'tsungrōō"bur), 1839–89, Austrian author After working as a clerk and as an actor, while he unsuccessfully tried to supplement his income by writing, Anzengruber at 30 joined the imperial police In 1870 *Der Pfarrer von Kirchfeld* [the parish priest of Kirchfeld], the first of a long series of folk plays, was an immediate success and was followed by *Der Meineidbauer* (1871, Eng tr, *The Farmer Forsworn,* 1913–15) and *Die Kreuzelschreiber* [the illiterates] (1874) *Das vierte Gebot* [the fourth commandment] (1878), laid in Vienna, is considered to be one of the first naturalistic plays. He also wrote two novels and many short stories

Anzhero-Sudzhensk (ănzhĕ"rū-sōōjĕnsk'), city (pop 71,079), RSFSR, in Siberia, E of the Ob river and on the Trans-Siberian RR. One of the

largest coal-mining centers of the Kuznetsk Basin, the city was formed in 1928 out of Anzherka and Sudzhenka.

Anzio (ăn'sēō, Ital ăn'tsyō), Latin *Antium*, town (pop 5,989), Latium, central Italy, on the Tyrrhenian Sea and 33 mi. S of Rome. A Volscian town, it later became a favorite resort of the Romans. Nero was born here; among the ruins of his villa two famous statues, the Apollo Belvedere and the *Girl of Anzio*, were found. Anzio declined in the Middle Ages, was later a residence of the popes, and is now a flourishing bathing resort. In Jan., 1944, Allied troops landed here to draw German forces from Cassino and thus permit a breakthrough to Rome. The large beachhead forces absorbed fierce German attacks and held out until contact was established in May with the main body of the U.S. 5th Army.

Aomori (ä'ōmō'rē), city (1940 pop. 99,065, 1947 pop. 90,828), capital of Aomori prefecture, extreme N Honshu, Japan, a port on Aomori Bay. It is the chief port of N Honshu and an export and import center for Hokkaido, and it has a fishing fleet. The prefecture yields timber and farm products.

aorist: see TENSE.

Aosta, Emmanuel Philibert of Savoy, duke of (aō'stä, -stä), Ital. *Emanuele Filiberto di Savoia, duca d'Aosta*, 1869–1931, Italian general, son of King Amadeus of Spain and cousin of Victor Emmanuel III of Italy. In the First World War he held the Piave front after the Italian defeat at Caporetto and later occupied Friuli. He became a marshal in 1926. His son Amadeus (1898–1942), who succeeded to his title, was viceroy of Ethiopia (1937–41), he surrendered to the British in 1941 after a valiant defense.

Aosta (aō'stu, -stä, Ital. aō'stä), town (pop. 13,466), capital of Val d'Aosta region, NW Italy, near the junction of the Great and Little St. Bernard roads. Emperor Augustus founded (25 B.C.) a colony here on the site of an older settlement. In the 11th cent. Aosta was given as a fief to Humbert, the founder of the Savoy dynasty, the cadet line of the house bore the title of dukes of Aosta. Roman remains include walls and gates, a triumphal arch, a theater, and an amphitheater. There are medieval towers and a fine cathedral (9th-15th cent.).

Aosta, Val d' (väldhō'stä), autonomous region (1,260 sq. mi., pop. c. 83,000), NW Italy, bordering on France and Switzerland. Until 1945 it was Aosta prov. The Italian constitution of 1947 placed the region outside the Italian customs barrier and made it a free zone. A French dialect is spoken here. Aosta is the capital. A high Alpine country, the Val d'Aosta includes the Italian slopes of MONT BLANC, the MATTERHORN, and Monte ROSA, its highest peak is the GRAN PARADISO. Life is concentrated in the valleys of the DORA BALTEA and its tributaries. The Great and the Little SAINT BERNARD roads join in the upper Aosta valley. There are many resorts. After passing (11th cent.) to the counts of Savoy, the region shared the history of Piedmont. The feudal system long prevailed here, more than 70 castles are still standing.

Apa (ä'pä), short river forming the northern border of E Paraguay with Brazil.

Apache (upăch'ē), town (pop. 1,047), SW Okla., NE of the Wichita Mts., in a farm and oil district, settled and inc. 1901.

Apache Indians, North American Indian peoples of the Southwest. They speak Athapascan languages, the southernmost branch of which is called Apachean (see LANGUAGE, table). The NAVAHO INDIANS also speak an Apachean language. Many local designations and confusion with neighboring tribes make them hard to identify in early literature. There were many groups—E of the Rio Grande along the mountains were the Jicarilla, the Lipan, and the Mescalero groups. In W New Mexico and Arizona were the Western Apache, including the Chiricahua and the Coyotero. The Kiowa Apache in the early southward migration attached themselves to the Kiowa, whose history they have since shared. The Apache as known in historic times were dependent upon hunting game and gathering roots and berries. The women were expert at making basketry, but the arts of pottery and weaving were not highly developed. Social organization was simple, but the Apache mother-in-law taboo—a man could not speak to, or look directly at, his mother-in-law—was remarkably rigorous. The Apache are known principally for their fierce fighting qualities and for their cruel treatment of captured enemies. They preyed on the PUEBLO INDIANS and offered particularly strong resistance to white encroachment. In the latter part of the 19th cent. their leaders, particularly COCHISE and GERONIMO, were famous across the United States for their counteraggression to white aggression. See M. E. Opler, *An Apache Life-Way* (1941).

Apalachee Bay (ăpulăch'ē), arm of the Gulf of Mexico, NW Fla., S of Tallahassee.

Apalachee Indians, tribe of North American Indians once centered about Apalachee Bay, NW Florida. Prosperous agriculturalists, they fought off the raids of the Creek Indians until early in the 18th cent. Combined Indian and British forces then conquered them, wiping out their villages along with Spanish missions and garrisons. Many of the Apalachee were sold into slavery, and a remnant who fled to Louisiana were extinct a century later. They were of Natchez-Muskogean linguistic stock.

Apalachicola (ăp"ulăchĭkō'lu), city (pop. 3,268), co. seat of Franklin co., NW Fla., SW of Tallahassee, on Apalachicola Bay (a fine landlocked harbor) at the mouth of the Apalachicola river, founded c. 1820, inc. 1838. It is a port of entry and an important center for oyster, shrimp, and other fisheries. Its position as one of the country's largest cotton-shipping ports after 1830 was ruined by the Civil War blockade. There is a monument to John Gorrie, who invented a method of making ice in 1845. A bridge (1935) spans the bay from east to west. The spelling Appalachicola is incorrect.

Apalachicola, river, NW Fla., formed by the junction of the Chattahoochee and Flint rivers at the Ga. line and flowing S to Apalachicola Bay. It is navigable. The river valley is noted for its rare specimens of the cedar of Lebanon.

Aparri (apär'rē), municipality (1948 pop. 24,974), on N Luzon, Philippine Islands. It is the port for a large tobacco-producing area.

apartment house, building providing separate dwelling quarters for a number of persons or families. Its most phenomenal development has been in the United States since 1900. In Paris, blocks of apartments were erected in the mid-19th cent. and were considered a suitable mode of residence, but in England and the United States at that time any residence not a private house was considered undesirable. Prior to 1870, apartments existed in New York only in the form of tenements in the common sense of the word. Crowded and unsanitary, they constituted in themselves a deterrent to any general acceptance of multiple quarters. However, after the Civil War a revised form of housekeeping was needed economically and physically to provide proper accommodations for the huge new tide of population that was flowing into the cities. About 1870, with only the old-fashioned disfavored tenement as a basis, improvements began to be introduced, and with buildings erected between 1870 and 1875 the genesis of the modern apartment house commenced. About 1885 the new developments of fireproof steel-frame construction, the improvement of the elevator, and the introduction of electric lighting made possible a rapid evolution, around 1900, apartment plans had emerged which provided comfortable quarters for the person of moderate means. In 1901 a tenement-house law was put into effect in New York covering fire protection, sanitation, and every feature relating to the safety and the health needs of occupants of such buildings. In the erecting of apartment houses a phenomenal activity has taken place since 1921 in all the larger cities, reaching its peak in New York. There the private house is now a rarity. New York has buildings which shelter only a few families and others which domicile thousands. They run a full economic range from the cheapest walk-up apartments without elevator service to the extremely luxurious duplex and triplex suites of the very wealthy. The cooperative apartment is a building in which the tenants own, rather than rent, their individual quarters, buying them as they would a private dwelling. The apartment hotel combines the accommodations of apartments, including cooking space, with the services characteristic of a hotel. Apartment houses have now spread to the suburbs of the larger cities, where they often include gardens, tennis courts, and children's playgrounds. The populations of the urban centers, both in the United States and in Europe, have now come to consider apartment-house living as normal.

apatite (ăp'utīt), calcium phosphate mineral (sp. gr., 3.1–3.2, hardness, 5), containing fluorine or chlorine or both. It is colorless when pure, but there are impure colored varieties which are sometimes cut as gem stones. Such gems cannot be very extensively used because of their comparative softness. The principal use for apatite is in the manufacture of phosphorus fertilizers. Among the sources of gem apatite are Ehrenfriedersdorf, Saxony, Schlaggenwald, Bohemia, St. Gotthard, Switzerland, and Auburn, Maine; there are extensive deposits in Renfrew co., Ontario, and in Ottawa co., Quebec.

Apaturia (ăpūchō'rēu, -tyō'rēu), in Greek religion, yearly meeting of the phratries (clans). It is known chiefly to modern readers through the Apaturia at Athens in October or November.

ape, name for certain primates. It is now usually limited to those which most closely resemble man—the GORILLA, the CHIMPANZEE, the ORANGUTAN, and the GIBBON. Formerly ape was used as a synonym for monkey or applied to certain tailless monkeys. The anthropoid apes differ from the typical Old World monkeys in having no external tail and no cheek pouches. Except in the gibbon, ischial callosities are absent. The arms are longer than the legs. Apes are chiefly arboreal but they can stand in a semierect position. They have 32 teeth, a vermiform appendix, a flattened breastbone, and a brain which is similar in structure to that of a man but smaller. See R. M. Yerkes and A. W. Yerkes, *The Great Apes* (1929).

Apeldoorn (ä'pŭldôrn), municipality (pop. 82,686), and town, Gelderland prov., E central Netherlands. It has manufactures of pharmaceuticals, refrigerators, and paper. Near by are the royal summer palace of Het Loo and several sanatoriums.

Apelles (upĕl'ēz), fl. 4th cent. B.C., Greek painter, the most celebrated of antiquity, but now known only through descriptions of his works. He is supposed to have studied under Ephorus of Ephesus and under Pamphilus at Sicyon. He was court painter to Philip of Macedon (Philip II) and to Alexander the Great. Among portraits of Alexander was one in the Temple of Diana at Ephesus which showed him wielding the thunderbolts of Zeus. Apelles excelled in painting horses, and according to Pliny the portrait of Antigonus Cyclops on horseback was his masterpiece. Most famous, perhaps, was the picture of Aphrodite rising from the sea. A drawing made by Raphael from Lucian's description of Apelles' *Calumny* is in the Louvre. Apelles is said to have been the first to recognize the talents of PROTOGENES.

Apelles, Christian at Rome. Rom. 16:10.

Apennines (ă'punīnz), Ital. *Appennino* (äp-pān-nē'nō), mountain system, traversing the entire length of the Italian peninsula. From the Cadibona Pass in Liguria, where it adjoins the Ligurian Alps, to the Strait of Messina, it is c. 840 mi. long, the mountains of Sicily are a continuation. The greatest width is c. 80 mi. The highest peak, in the GRAN SASSO D'ITALIA group, rises to 9,560 ft., but generally the peaks are much lower. There are several volcanic lakes and volcanoes (two, VESUVIUS and ETNA, are still active) and many mineral springs. The few important rivers (Arno, Tiber, and Volturno) all flow W into the Tyrrhenian Sea. The Apennines are pierced by many railroad tunnels and highway passes, and by the Appian, Cassian, Flaminian, and Salarian ways (see ROMAN ROADS). The forests of the Apennines (chestnut, birch, oak, and pine) have been greatly reduced by man through the centuries, deep erosion and frequent landslides resulted. Attempts at reforestation are being made. The peaks mostly have a bare, savage aspect. Pastures are very extensive. The lower hills are covered with olive groves and vineyards, and corn is grown in some areas up to altitudes of 2,500 ft.

Apharsachites (ufar'sukĭts) or **Apharsathchites** (ufar'săthkĭts), Assyrian colonists settled in Samaria. Ezra 4:9, 5:6, 6:6. The **Apharsites** (ufar'sīts) apparently were other colonists. Ezra 4:9.

aphasia (ufā'zhu) [Gr., =speechlessness], condition caused by a lesion of the brain, in which an individual is unable to express himself in speech or in writing or to comprehend the written or spoken word. Treatment consists of reeducation, the oral and lip-reading methods employed in the education of deaf and mute children have been found to be of assistance in therapy.

Aphek (ā'fĕk) **1** Place, where Ahab defeated Benhadad. It has been identified with the modern Fiq on the plateau above Galilee (c. 3 mi. east), due E of Tiberias. It was on a road from Damascus. **1** Kings 20:26–30. This is probably the Aphek meant by Elisha in 2 Kings 13:17. **2** City of Asher. Joshua 13:4, 19:30. Aphik. Judges 1:31. **3** City of Judah, probably the same as APHEKAH and perhaps the same as **4** or **5** or both. Joshua 12:18. **4, 5** Two places, where the Philistines encamped. 1 Sam. 4:1; 29:1. Some believe them to be the same place, some identify one or the other or both with **3**.

Aphekah (ufē'ku), unidentified place, probably the same as APHEK **3**. Joshua 15:53.

Aphiah (ufī'ú), ancestor of King Saul. 1 Sam. 9:1.

aphid (ā'fĭd, ăf'ĭd) or **plant louse**, parasitic insect, one of the most injurious to crops and other vegetation. It is also referred to as green fly and blight. The majority are from 1/25 to ¼ in. long. On house and field plants the species frequently seen is soft-bodied and green with long legs and antennae. Some are wingless and some have two pairs of membranous wings. There is much variation in form among individuals of the same species. The reproductive cycle is complex and varies in different species. In many species fertilized eggs which are laid in the fall hatch in the spring or summer into females called stem mothers. A stem mother produces, by PARTHENOGENESIS and viviparously, wingless females which give rise parthenogenetically to a number of generations of wingless females. Finally, winged females are produced which migrate from the crowded host plant to another one, there to continue the cycle of winged and wingless generations. Toward fall males and egg-laying females are produced. Fertilized eggs are then deposited in crevices of the host plant. Those which survive the winter hatch as the stem mothers. Insect enemies, fungi, and damp weather help to keep in check the vast numbers of aphids. Some aphids deposit their eggs in the tissues of leaves or stems and cause a GALL. Many species secrete from the end of the alimentary tract a sweet substance or honeydew. The ant, which prizes this material as food, cares for the aphids as "ant cows." Among the aphid pests causing serious damage to food

crops are the grain, cabbage, corn-root, apple, woolly apple, and hickory aphids, the alder blight, the beech-tree blight, and the phylloxera

Aphik (ā'fĭk) see APHEK 2

Aphrah (ăf'rŭ), in the punning passage of Micah 1 10, apparently the name of a town The name meant "dust" in Hebrew or sounded like a word meaning "dust," hence probably the use of the name.

Aphrodite (ăfrŭdī'tē), in Greek religion, Olympian goddess of love, beauty, and fertility According to some legends she was the daughter of Zeus and Dione, according to others she was born out of the sea into which the blood of URANUS fell (whence the representations of Aphrodite Anadyomene) She was according to the usual legend the wife of HEPHAESTUS, but she loved Ares, to whom she bore Eros and Anteros She also gave her favors to Anchises (father of Aeneas) and DIONYSUS (father of Priapus) She is, as goddess of fertility, most closely connected with ADONIS She was called Cytherea and Cyprus because her worship was important in Cythera and in Cyprus as well as in Paphos and Corinth She had a cult as Aphrodite Urania, the heavenly goddess, which recalls her affinity with the Oriental goddess Astarte (Ishtar), and there is good reason to believe that her worship was imported into Greece from the Orient She is also called Pandemos—goddess of all the people The myrtle, the rose, the apple, the dove, and the sparrow are sacred to her By awarding Aphrodite the APPLE OF DISCORD, PARIS won HELEN and thus brought on the Trojan War Aphrodite was consistently on the Trojan side She is identified with the Roman VENUS

Aphses (ăf'sēz) [Heb ,=dispersion], head of a priestly course 1 Chron 25 15

Apia (ăpē'ŭ), town (pop 3,500), capital of Western Samoa, on the northern coast of UPOLU island The chief port of Western Samoa, it has been since 1923 the port of entry for TOKELAU

Apianus, Petrus (pē'trŭs ăpĭā'nŭs), Latinized from **Peter Bienewitz** or **Bennewitz** (pā'tur bē'nŭvĭts, bĕn'uvĭts), 1495–1552, German cosmographer and mathematician He was professor of mathematics at Ingolstadt and was noted for his knowledge of astronomy and his general learning Best known among his writings is the *Cosmographia* (1524), which has some of the earliest maps of America

Apicius, Marcus Gabius (upĭsh'ŭs), 1st cent A D , Roman gourmet He squandered most of his large fortune on feasts and then, anticipating a need to economize, committed suicide The cookbook called *Apicius* probably dates from a century later

Apis see EGYPTIAN RELIGION

Apo, Mount (ä'pō), active volcano, 9,690 ft high, on S Mindanao, Philippine Islands It is the highest peak of the islands

apocalypse (upŏk'ŭlĭps) [Gr ,=uncovering], type of ancient Hebrew and Christian prophetic literature, exemplified by the biblical REVELATION, often called simply the Apocalypse The same sort of mysterious writing, depending mainly on visions, appears extensively in Isaiah, Ezekiel, Daniel, Joel, and Zechariah The book called 4 ESDRAS is one of the chief Jewish apocalypses; other PSEUDEPIGRAPHA also are apocalyptic Modern books of this sort are seen among the works of SWEDENBORG See also FOUR HORSEMEN OF THE APOCALYPSE

Apocrypha (upŏk'rĭfu) [Gr ,=hidden things], appendix to the Authorized Version of the Old Testament containing the following books and parts of books 1 and 2 ESDRAS, TOBIT, JUDITH, ESTHER 10 4–16, WISDOM, ECCLESIASTICUS, BARUCH, Dan 3 24–90 (see DANIEL and THREE HOLY CHILDREN), Dan 13 (see SUSANNA 1), Dan 14 (see BEL AND THE DRAGON), the Prayer of Manasses (see MANASSEH 2), 1 and 2 MACCABEES The Western canon includes all these except 1 and 2 Esdras and the Prayer of Manasses, which are often given in an appendix to editions of the Vulgate (where the 1 and 2 Esdras of the Apocrypha are called 3 and Esdras) At first Protestants regarded as valuable for instruction the parts of the Western canon which they did not accept as canonical (see OLD TESTAMENT), but relegation of these parts to a separate, secondary part of the Bible resulted in their being practically discarded by many Protestants For Jewish and Christian works resembling biblical books but not included in the Western or the Hebrew canon—sometimes called apocryphal—see PSEUDEPIGRAPHA

Apodaca Juan Ruiz de (hwän' rōōēth' dā ăpōdhä'kä), 1754–1835, Spanish naval officer and statesman He was sent to London by the Central Junta of Seville to gain English support against Napoleon After service as governor of Cuba (1812–15), Apodaca, as viceroy of New Spain (1816–21), devoted himself to repressing revolutionary movements The royalist cause was at first successful, but with the defection of ITURBIDE it failed. Feeling that Apodaca was not making sufficient effort to put down the revolution, a group in Mexico city, headed by the Masons, forced him to surrender his authority He returned (1821) to Spain, where he held various offices. He had the title visconde de Venadito.

Apollinaire, Guillaume (gēyōm' ăpōlēnâr'), 1880–1918, French poet, b. Rome. An illegitimate child, he was christened Wilhelm Apollinaris de Kostrowitsky Apollinaire, a leader in the restless period of technical innovation and experiment in the arts in the second decade of the 20th cent , wrote short stories in a Gothic spirit (as in *L'Hérésiarche et Cie*, 1910), bizarre, exquisite poems (collected especially in *Alcools*, 1913, and *Calligrammes*, 1918), a surrealistic drama *Les Mamelles de Tirésias* (1918), and art criticism which advanced the cause of CUBISM and its practitioners

Apollinarianism (ŭpŏlĭnâ'rēunĭzm), heretical doctrine taught by Apollinaris or Apollinarius (c.315–c 390), bishop of Laodicea, near Antioch. A celebrated scholar and teacher, author of scriptural commentary, philosophy, and controversial treatises, he propounded the theory that Christ possessed the Logos in place of a human mind. Apollinarianism was popular in spite of its repeated condemnation, particularly by the First Council of Constantinople It anticipated MONOPHYSITISM

Apollinaris Sidonius (Caius Sollius Apollinaris Sidonius) (upŏlĭnâ'rĭs sĭdō'nēŭs, sĭdō'-), fl 455–75, Latin writer, b Lyons. He had a minor part in imperial politics and was bishop of Clermont. He wrote inconsequential panegyric poetry and letters that are an interesting historical source.

Apollo (ŭpō'lō) or **Phoebus Apollo** (fē'bus), in Greek religion, Olympian god of light, music, poetry, prophecy, and pastoral pursuits He seems to have been originally and primarily a god of shepherds, flocks and herds, and beekeepers (see ARISTAEUS), and in anger he could send pestilence and wolves against the flocks The animals of the wild country were particularly connected with him—the deer, the raven, and the swan He was always represented as a beautiful young man and sometimes as a young shepherd with a shepherd's crook As god of music the lyre was sacred to him, and he was the father of ORPHEUS (by CALLIOPE) He was also the god of healing and the father of ASCLEPIUS Identification with Helios as the sun-god, the bringer of light and morning, was consistent with his youth and vigor The principal legend of his birth is that he and his twin sister, ARTEMIS, were born to Zeus and LETO in DELOS He was sometimes called Delius, and the island had one of his principal shrines Most important was, however, the shrine at DELPHI, where he was particularly the god of prophecy speaking through the oracle at the center of the earth The significance of the shrine made him one of the most potent figures in Greek mythology One of the legends concerning Delphi was Apollo's slaying of the PYTHON The Pythian games honored him Various legends, such as that of CASSANDRA, are concerned with the gift of prophecy Perhaps better known in later time was his connection with the higher arts of civilization as the laurel-crowned god of music and poetry, attended by the MUSES Apollo was adopted wholeheartedly by the Romans, who emphasized his cult as god of healing Representations of him in art are numerous The most celebrated statue is the **Apollo Belvedere** (bĕl"vĭdēr'), a marble statue in the Belvedere of the Vatican, Rome, a Roman copy, dating from the early empire, of a Greek original in bronze The right forearm and the left hand were restored by a pupil of Michelangelo The statue represents the god as a vigorous and triumphant youth, naked except for the chlamys draped over his extended left arm, and with the aegis clasped in his hand

Apollo, borough (pop 3,232), W Pa , SW of Kittanning, laid out 1815, inc 1848 It has a steel mill

Apollo Belvedere see APOLLO, in Greek religion

Apollodorus (upŏl"ŏdôr'ŭs), fl c 415 B C , Athenian painter, called the Shadower, said to have introduced the use of light and shade Among his few known works are *Ajax Struck by Lightning* and *Priest in the Act of Devotion*, both were at Pergamum in the time of Pliny the Elder

Apollonia (ăpulō'-nēŭ) [Greek,=of Apollo], name of several ancient Greek towns The most important was that in Illyria, a port on the Adriatic It was founded by Corinthians and later a Greek and a Roman intellectual center Julius Caesar used it as a base Octavian (later AUGUSTUS) was here when he received news of Julius Caesar's death Others were in Thrace on the Aegean (a town famous for a large statue of Apollo), in N Sicily, and in the Chalcidice (visited by Paul on his way to Salonica Acts 17 1)

Apollonius (ăp"ŭlō'nēŭs) [Latin,=of Apollo] **1** Governor of Coele-Syria and Phoenicia for Seleucus IV He oppressed the Jews and was killed by Judas Maccabaeus 1 Mac 3 10–24, 2 Mac 4 4, 5.24 **2** Governor of Coele-Syria under Alexander Balas 1 Mac 10 69

Apollonius of Perga, fl 247–205 B C , Greek mathematician of the Alexandrian school He produced a treatise on conic sections which included, as well as his own work, much of the work of his predecessors, among whom was Euclid Most of his other works have been lost

Apollonius of Tralles see FARNESE BULL

Apollonius of Tyana (tīā'nŭ), fl A D 100?, Greek philosopher, leading exponent of NEO-PYTHAGOREANISM Inasmuch as his biographer, Philostratus, is considered unreliable, nothing is certainly known of Apollonius' life. He is said to have wandered widely in the empire, and he was accounted a great seer and wonder-worker. See D. M. Tredwell, *A Sketch of the Life of Apollonius of Tyana* (1886)

Apollonius Rhodius (rō'dēŭs), 3d cent. B.C., epic poet of Alexandria and Rhodes. He became librarian at Alexandria. His extant work, the *Argonautica*, is a Homeric imitation in four books on the story of the Argonaut heroes; though labored in style, it contains occasional depth of feeling and originality

Apollos (ŭpŏl'ŭs) [Gr ,=belonging to Apollo], Alexandrian Jew who became a Christian missionary. Acts 18 24–19 1; I Cor 1 12, 3.4–6; 4.6.

Apollyon (ŭpŏl'yŭn), Greek name of the destroying angel Rev. 9.11. See SATAN and HELL.

apologetics, phase of theology which devotes itself, by appeal to reason, to defending Christian belief against attack. Of course, the apologist defends his own point of view; thus Roman Catholic theologians include defense of the authority of the Church as a part of apologetics, while many Protestants limit their apologetics largely to the defense of the verbal inspiration of the Bible. Apologetic works are many Famous names in early Christian apologetics includes Aristides, Tertullian, and Origen More recent examples are Melanchthon (Lutheran), Antoine Arnauld (Jansenist), and Alfred Schweitzer (modernist) A special, traditional type of apologetic work is the autobiography of conversion Examples of this are St Augustine, *Confessions*, J H Newman, *Apologia pro vita sua*, and Thomas Merton, *The Seven-Storey Mountain* (1948)

Apopka (ŭpŏp'kŭ), city (pop 1,312), central Fla , near Lake Apopka, settled 1856 It is a shipping center for an area growing ferns, citrus fruit, and vegetables

Apopka, Lake, central Fla., popular fishing lake Winter Garden is on its south shore

apoplexy or **stroke**, the result of cerebral hemorrhage, usually occurring after the age of 40 in individuals who have high blood pressure Symptoms which precede an apoplectic attack include dizziness and headache or a sensation of pressure in the head, hemorrhage from the nose or into the retina may also be symptomatic In some individuals apoplexy has occurred without any previous symptoms Coma accompanying the seizure may be of short or long duration Paralysis of one side of the face and the opposite side of the body is a typical sequel As the blood clot is resorbed, the individual gradually regains the use of his muscles Treatment consists of a decrease in salt intake, sedation, and rest

apostle (upŏs'ŭl) [Gr ,=envoy], one of the prime missionaries of Christendom The apostles par excellence are SS PETER, ANDREW, JAMES (the Greater), JOHN, THOMAS, JAMES (the Less), JUDE (or Thaddaeus), PHILIP, BARTHOLOMEW, MATTHEW, SIMON, and MATTHIAS (replacing JUDAS ISCARIOT) Traditionally the list of the Twelve Disciples includes Judas and not Matthias, and the list of the Twelve Apostles includes Matthias and not Judas St PAUL is always classed as an apostle, and so are sometimes a few others, such as St BARNABAS The principal missionary to any country is often called its apostle, e g , St Patrick is the apostle of Ireland, St Augustine the apostle of England For the Apostles' Creed, see CREED, for the *Teaching of the Apostles*, see DIDACHE

Apostle Islands, group of over 20 islands, off N Wisconsin, in SW Lake Superior Part of Wisconsin, they are reached by boat from Bayfield and Ashland Their wave-eroded cliffs are noted Madeline, the largest, includes LA POINTE town

Apostolic Constitutions: see CONSTITUTIONS, APOSTOLIC

apostolic succession, in Christianity, belief that the chosen successors of the apostles enjoyed by the grace of God the same position as the apostles in the Church and that the bishops of today, as the successors of previous bishops and so on back to the apostles, enjoy this position Hence the ecumenical councils are held infallible (and, among Roman Catholics, ex cathedra pronouncements of the pope), God conferring infallibility to guarantee the purity of His Church It is generally held that the essential to maintaining the apostolic succession is the right consecration of bishops, and it is on that ground that the Roman Catholic Church refuses to recognize the apostolic succession in the Church of England. The apostolic succession is to be distinguished from the Petrine supremacy (see PAPACY) Scriptural authority is given as Mat. 18 18, 28 19,20 See ORDERS, HOLY

apostrophe: see PUNCTUATION and ABBREVIATION

apotheosis (upŏ"thēō'sĭs, ă"pŭthē'ŭsĭs) [Gr ,=deification], in religion, the act of raising a person who has died to the rank of a god It received its greatest exploitation in history at Rome under the emperors In the life of the emperor his genius was worshiped, but after he died he was often enrolled solemnly as one of the gods to be adored publicly In the East, apotheosis was known in Egypt and in many dynasties It is difficult to say where ancestor worship ends and apotheosis begins, at least so far as a royal family is concerned. Apotheosis is es-

pecially understandable when it is remembered that many Greeks believed that the heroes of Homer had lived as men, yet they worshiped the heroes as demigods

Apoxyomenus (ăpŏk″sĕŏm′ĭnŭs) [Gr ,=scraping one's self], a Roman copy in marble of a bronze statue by LYSIPPUS It represents an athlete scraping the sand and oil from his body with a strigil after a contest in the palaestra It was found in Rome in 1849

Appaim (ăp′ăĭm) [Heb ,=the nostrils], Jerahmeelite 1 Chron 2 30,31

Appalachia (ăpălāch′ă), town (pop 3,010), extreme SW Va , in the Cumberland Plateau near the Ky line, settled 1890, inc 1906 It is a coal-mining center and railroad junction

Appalachian Mountains (ăpălā′chŭn,-chōōn,-lăch′-), general name for the numerous groups of elevations in E North America, extending SW from the St. Lawrence valley in Quebec prov , Canada, to the Gulf Coast plain in Alabama They include the WHITE MOUNTAINS, GREEN MOUNTAINS, CATSKILL MOUNTAINS, ALLEGHENY MOUNTAINS, BLUE RIDGE, BLACK MOUNTAINS, GREAT SMOKY MOUNTAINS, CUMBERLAND PLATEAU, and other ranges The Appalachians, mainly formed by folding (see MOUNTAIN), consist largely of sedimentary rocks and are for the most part much worn down In general, the eastern portions are more rugged than the western, which are largely plateau formations of horizontal rock structure Mt Mitchell, 6,684 ft high, in the Black Mts , is the highest elevation in the system Valuable coal deposits, iron, petroleum, and gas are found in parts of the Appalachians Comprising as they do some of the most beautiful scenery in the country, the mountains abound in resorts Crossed by few passes, the system especially in the central sections was a barrier against early westward expansion and played an important part in the history of the United States See Douglas W. Johnson, *Stream Sculpture on the Atlantic Slope* (1931), N M Fenneman, *Physiography of Eastern United States* (1938)

Appalachian Trail, for hikers, extending 2,050 mi along the ridges of the Appalachian Mt system from Mt Katahdin, Maine, to Mt Oglethorpe, N Ga It owes its inception to Benton MACKAYE See guides published by the Appalachian Trail Conference

Appalachicola, see APALACHICOLA

apparition (ăpurĭ′shŭn) Belief in apparitions and ghosts is ancient and widespread and is based on the idea that the spirit of a man (or of any object) is "a shape within a shape," endowed with volition and motion of its own A ghost is an apparition or specter of a dead person A wraith, double, or fetch among the Highland Scots is the spirit of a person just before his death Apparitions were often considered as premonitions or warnings These included particular shapes attached to certain families, as the spectral horseman, the hound, or the white bird Summoning apparitions by means of incantations, CRYSTAL GAZING, polished stones, hypnotic suggestion, and various other devices is one of the oldest means of DIVINATION and WITCHCRAFT Some spirits are considered beneficent (as the genius of a family), but most are thought to be revengeful and dangerous, trying to lure the living to the world of shades The most malignant are those of persons who have died violent deaths, suicides, those with guilty secrets, and those who were unburied or not buried with proper rites Many burial customs have originated in the desire to placate the dead and keep them from haunting the living Modern belief in supernatural appearances finds an expression in studies of CLAIRVOYANCE, SPIRITISM, and PSYCHICAL RESEARCH. Often optical illusions are regarded as ghosts or phantasms Modern science explains some supernatural appearances by means of telepathy, autosuggestion, or hallucination Perhaps the most famous apparitions in literature are the ghost in *Macbeth* and that of Hamlet's father

appeal, in law, hearing by a superior court of errors allegedly committed by an inferior court There are two types of errors, of fact and of law An error of fact is drawing a false inference from evidence presented at the trial An error of law is an erroneous determination of the legal rules governing PROCEDURE, EVIDENCE, or the matters at issue between the parties When the appeal is taken from a jury trial, only errors of law may be reviewed, but when it is taken from a trial where the judge sat without a jury, his errors both of law and of fact may be examined Should the appeals court conclude that no error was committed, it will affirm the decision of the lower court If it finds that there was error, it may direct a retrial or grant a JUDGMENT or DECREE in favor of the party who lost in the lower court. The determinations of appeals courts are usually printed, often with an opinion indicating the basis for the court's decisions Such opinions are of great utility in guiding the inferior courts and in establishing uniform legal principles in matters where dispute may arise

appendix, vermiform. Considered to be a vestigial remnant, the vermiform appendix, a wormlike tubular structure about 3 in long, springs from the caecum, a portion of the large intestine (colon), located in the lower right abdomen Infection of the appendix may result in **appendicitis.** This condition occurs at any age, but is most common in the second and third decades of life The clinical picture of appendicitis varies considerably Symptoms include shifting pain which increases in severity, later becoming localized in the lower right abdomen, and tenderness and muscle spasm over the site of the appendix Variables are fever, a more rapid pulse, nausea, and vomiting Additional symptoms are diarrhea or constipation or alternating diarrhea and constipation Diagnosis is confirmed if examination of the blood shows a high white blood count and an increase in polymorphonuclear cells The use of cathartics instead of an enema may result in an abscess with rupture of the appendix and a spread of infection to the peritoneum (peritonitis) Early surgery is imperative

Appenzell (ă′puntsĕl), canton, Switzerland Mostly meadowland, it also has textile manufactures It was ruled after the 11th cent by the abbots of St Gall, against whom it revolted in 1403 In 1411 Appenzell allied itself with the Swiss Confederation, which had helped defeat the abbot, and in 1513 it became a Swiss canton In 1597 Appenzell split into two independent half-cantons Ausser-Rhoden (94 sq mi , pop 44,756), with its capital at Herisau, accepted the Reformation Inner-Rhoden (67 sq mi , pop 13,383) remained Catholic, its capital, Appenzell (pop 4,756), is noted for the manufacture of embroideries

Appert, Nicolas (nēkôlä′ äpâr′), sometimes known as **François Appert** (frāswä′), 1750–1841?, French originator of a method of CANNING This process, based on his theory that heat destroys or neutralizes the ferments which cause food spoilage, consisted in heating foods for varying periods in corked bottles After years of experimentation he opened in 1806 a factory (destroyed 1814) at Massy, near Paris, and in 1810 published his results (Eng tr , *The Art of Preserving*, 1920), winning a prize of 12,000 francs which had been offered by the French government for a method of preserving foods for army and navy stores He lost public confidence after an investigation by Gay-Lussac, who, although supporting Appert's method, opposed his theory However, through the influence of Berthollet, Appert was able in 1817 to establish a factory in Paris. His last years are obscure

Apphia (ăf′ĭə), Christian woman associated with Philemon Philemon 2

Appian (ă′pēən), fl 2d cent , Roman historian A Greek, born in Alexandria, he was a government official there and later at Rome His history of the Roman conquests from the founding of Rome to the reign of Trajan is undistinguished and strongly biased in favor of Roman imperialism, but it reproduces many documents and sources which otherwise would have been lost. Of the 24 books, written in Greek, only Books VI–VII and Books XI–XVII have been fully preserved

Appiani, Andrea (ändrā′ä äp-pyä′nē), 1754–1817, Italian painter in oil and fresco His best frescoes, which approach those of Correggio in grace and beauty, are in Milan His oil paintings include *Rinaldo in the Garden of Armida*, *Venus and Cupid*, and *Olympus*.

Appian Way (ă′pēən), Latin *Via Appia*, road built (312 B C) under Appius Claudius Caecus This "queen of roads" connected Rome with Capua and was later extended to Beneventum (Beneveuto), Tarentum (Taranto), and Brundisium (Brindisi) It was the chief highway to Greece and the East Its total length was more than 350 mi The substantial construction of cemented stone blocks has preserved it to the present Branch roads led to Neapolis (Naples), Barium (Bari), and other ports The first stretch of road out of Rome has the Church of St Sebastian with its catacombs, and there are interesting tombs See ROMAN ROADS In 1784 Pope Pius VI built the new Appian Way from Rome to Albano, parallel with the old

Appii forum (ăp′ēĭ) [Latin,=Appius' market, cf RV], important stop on the Appian Way, c 40 mi E of Rome It was at the head of a canal through the Pontine Marshes When Paul arrived here on his way to Rome, he was met by Christians from the city Acts 28 15 The modern Italian successor is Foro Appio

Appius Claudius, see CLAUDIUS, Roman gems.

apple, best known and commercially most important fruit of the temperate zones and its tree *Malus sylvestris* or *Pyrus malus*, a member of the rose family It lives long, is easy to grow, and thrives in any good soil and at higher altitudes than any other fruit tree There are said to be more than 7,500 varieties, of which only about 50 are of commercial importance The leading apple-growing region of the world is North America Of Asiatic and European origin, the apple has been cultivated since prehistoric times According to ancient tradition the forbidden fruit of the Garden of Eden was the apple (Gen 3) In religious painting, the apple represents the fruit of the tree of knowledge of good and evil, as do occasionally the pear and the quince It was sacred to Aphrodite in classical mythology (see APPLE OF DISCORD) The apple is attacked by several diseases (e g , canker, rust, and scab) and by insect pests Some species of CRAB APPLE are native to North America See S A Beach, *Apples of New York* (1905), J C Folger and S M Thomson, *The Commercial Apple Industry of North America* (1921), A H Hoare, *Commercial Apple Growing* (rev ed , 1949), bulletins of state experiment stations and of the U S Dept of Agriculture

Appleby, John Francis, 1840–1917, American farmer, b Onondaga co , N Y He was the inventor of the Appleby knotter, patented in 1878 after long experimenting It was first manufactured on a large scale after its value was recognized by William DEERING, and was soon adopted on harvesters generally It is still commonly used on grain binders

Appleby, municipal borough (pop 1,618), county town of Westmorland, England, in the Eden valley It is the market center for a farm area A 16th-century grammar school and the site of historic Appleby Castle are here

Applegarth, Robert, 1834–1924, English trade-union leader, a carpenter by trade A charter member of the Amalgamated Society of Carpenters and Joiners, he became in 1862 its general secretary, under his leadership, this, with other unions, pressed the fight for legalization of unions and for protection of their funds and in 1871 was successful See biography by A W Humphrey (1913)

Applegate, Jesse, 1811–88, American pioneer in Oregon, b Kentucky With his family he moved (1821) to Missouri, and there in 1843 he joined the "great emigration" of more then 900 people over the Oregon Trail—a trek pictured in his *Day with the Cow Column in 1843* (ed by Joseph Schafer, 1934, pub with *Recollections of My Boyhood* by Applegate's nephew) Established as a leader on the westward journey, he was elected (1845) a member of the legislative committee of the provisional government which ruled Oregon until it was made (1849) a U S territory Later he helped organize the new government, and, as surveyor general, he did much exploring and opened a wagon route to California

applejack, brandy made by partly freezing hard cider and removing the ice or by distilling hard cider or fermented apple pomace It is popularly associated with New Jersey, and because of its potency when undiluted it is colloquially called "Jersey lightning"

apple of discord, in Greek mythology, a golden apple inscribed "*for the fairest*," thrown by the uninvited ERIS among the guests at the wedding of PELEUS and THETIS APHRODITE ATHENA, and HERA all claimed it They chose a mortal PARIS, to settle the dispute To sway his decision Hera offered him empire and riches, Athena glory in war, and Aphrodite the fairest of women. HELEN Paris decided in favor of Aphrodite The abduction of Helen by Paris led to the TROJAN WAR

Appleseed, Johnny, see CHAPMAN, JOHN

Appleton, Daniel, 1785–1849, American publisher, b Haverhill, Mass He built up in New York one of the largest publishing houses in the country The firm was continued by his sons under the name D Appleton & Company See G M Overton, *Portrait of a Publisher* (1925).

Appleton, Sir Edward Victor, 1892–, English physicist, grad St John's College, Cambridge After returning from active service in the First World War he became assistant demonstrator in experimental physics at the Cavendish Laboratory in 1920 He was professor of physics at the Univ of London (1924–36) and professor of natural philosophy at Cambridge Univ (1936–39) Since 1939 he has been secretary of the Dept of Scientific and Industrial Research. He received the 1947 Nobel Prize in Physics for his contributions to the knowledge of the ionosphere which led to the development of radar He was knighted in 1941

Appleton, Nathan, 1779–1861, American manufacturer, b New Ipswich, N H He was a wealthy Boston importing merchant when he invested money in the venture of a cotton mill at Waltham undertaken by Francis C LOWELL, and he was a major figure in financing the building of the manufacturing town envisioned by Lowell—which was to be LOWELL, Mass As a Congressman (1831-32, 1841–42) Appleton showed, especially by favoring protective tariffs, the shifting of interests of the wealthy in New England from commerce to textile and other mills. He was one of the founders of the Boston Athenaeum

Appleton. 1 Village (pop 1,877), W Minn , on the Pomme de Terre and NW of Granite Falls, settled 1869, laid out 1870, inc 1881 It is a farm trade center 2 City (pop 28,436), co seat of Outagamie co , E Wis , on the Fox near its exit from the north end of Lake Winnebago, in a dairying and stock-raising region, settled before 1850, inc 1857 Falls provide power for the city's paper mills and allied industries Appleton had the nation's first hydroelectric plant (1882) and the state's first electric streetcar (1886) It is the seat of LAWRENCE COLLEGE OF WISCONSIN Harry Houdini was born in Appleton

Appleton City, city (pop 1,188), W Mo, SE of Kansas City, in a farm and timber area, founded 1868, inc 1871

apple worm see CODLING MOTH

Appomattox (ăpŭmă'tŭks), town (pop 992), in Appomattox Co, central Va, E of Lynchburg, near the source of the Appomattox River, which winds 150 mi E to the James, inc 1925 R E Lee surrendered to U S Grant at near-by **Appomattox Courthouse,** April 9, 1865 After P H Sheridan's victory at Five Forks on April 1, 1865, Lee abandoned PETERSBURG and Richmond and retreated west, planning to unite at Danville, Va, with the army of J E Johnston, who was still holding out against W T Sherman in North Carolina But Grant pursued vigorously Part of the Union army pressed hard on Lee's flank and rear, while Sheridan cut off further retreat at Appomattox Courthouse Realizing the futility of carrying on the struggle, Lee surrendered the remnants of the Army of Northern Virginia on April 9 The surrender marked the virtual end of the war, as the remaining Confederate armies, on hearing of Lee's capitulation, followed suit The site of the surrender has been made a national historical monument (968 25 acres, est 1940)

Apponaug, R I see WARWICK

Apponyi, Albert, Count (ŏp'pônyē), 1846-1933, Hungarian statesman The son of the conservative chancellor George Apponyi, he entered the house of deputies in 1872 Though a royalist he favored liberal electoral reforms, and, as minister of education (1907), free education in elementary schools However, the rigid state control which accompanied his program roused bitter opposition In 1920, as chief Hungarian delegate to the Paris Peace Conference, Apponyi signed, under protest, the Treaty of Trianon (see TRIANON, TREATY OF) He represented his country in the League of Nations until his death

apprenticeship, system of learning a trade from one who is engaged in it and of paying for the instruction by a given number of years of work Apprenticeship flourishes wherever there is handicraft production It was known in ancient Babylon, Egypt, Greece and Rome, as well as in Europe and to some extent in the United States Typically, a master of a trade agrees to instruct a young man, to give him shelter, food and clothing, and to care for him during illness The young man binds himself to work for the master for a given time After that he may become a journeyman, working for a master for wages, then—sometimes without service as a journeyman—he may set up as a master himself The medieval guilds supervised to some extent the relation of master and apprentice and decided the number of apprentices in a given guild The Industrial Revolution, with its introduction of machinery, put an end to most of these guilds, but apprenticeship continues in highly skilled trades, competing with technical schools The terms of apprenticeship are regulated by many trade unions, as well as by law It is sometimes arranged for orphans and other wards of the state See R A Bray, *Boy Labour and Apprenticeship* (1911)

appropriation, in constitutional law, the allotment by a legislature of money for a particular purpose The Constitution of the United States provides that no money may be drawn from the Treasury except under appropriations made by law and that no appropriations shall be made for more than two years In the United States a general appropriation bill is passed at the beginning of each session of Congress, in England, at the end of sessions of Parliament Legislative appropriation is always required in democratic governments See also BUDGET See A E Buck, *Public Budgeting* (1929)

APRA see HAYA DE LA TORRE, VÍCTOR RAÚL, PERU

Apra Harbor (ä'pä) or **Port Apra,** in Sumay town, on GUAM, on the west coast 5 mi W of Agana The only good harbor on the island, it is the port of entry, closed to foreign vessels except by permit There is a large U S naval base

Apraksin, Feodor Matveyevich (fyô'dur mŭtvyā'uvĭch ŭprak'syĭn), 1671-1728, Russian admiral He helped Peter the Great create the Russian navy and won several naval battles in Peter's wars against Sweden Apraksin was created count in 1709.

apricot [Arabic from Latin,=early ripe], tree, *Prunus armeniaca,* and its fruit, of the plum branch of the rose family, native to temperate Asia and long cultivated in Armenia The fruit is used raw, canned, preserved, and dried California is the chief place of cultivation in the United States, although by selecting suitable varieties the apricot can be grown in most regions where the peach is hardy In the British Isles the apricot is grown mostly in greenhouses or trained on walls

Apries (ā'prē-ēz), king of ancient Egypt (588-569 B C), of the XXVI dynasty He succeeded Psamtik II and sought to recover Syria and Palestine He attacked Tyre and Sidon but failed (586 B C) to relieve the siege of Jerusalem by NEBUCHADNEZZAR A revolt in Egypt caused him to seek the assistance of AMASIS II, who killed him and took the throne Apries is called Pharaoh-hofra (fā'rō-hōf'ru) in the Bible Jer 44

April. see MONTH

Apsaras: see HINDUISM.

apse [Gr.,=round vault, loop], the termination at the sanctuary end of a church, generally semicircular in plan but sometimes square or polygonal The apse appeared early in Roman temples and basilicas, it was originally a semicircular recess with a half dome as ceiling and contained the monumental statue of the deity The motive was adopted in the early Christian churches, in these the apse occupied the eastern end of the building where the altar, the bishop's throne, and the seats of the clergy were placed A fine example of this early form is in the cathedral of Torcello near Venice Because of its location and function in the church services, the apse became the architectural climax of the church interior and was richly ornamented In the early churches, the half-dome ceiling was incrusted with handsome mosaics, the walls were veneered with fine marbles, and the altar and pulpits were also richly decorated The apse steadily increased in liturgical and architectural emphasis, chapels were added to it, and with the introduction of the ambulatory, its whole aspect was altered until it became crystallized in the hands of the Gothic designers In England the apse was in most cases a square termination, and in Italy its form remained a simple semicircle, as the chapels were in another part of the church In France the entire choir—composed of apse, ambulatory, and radiating chapels (the whole termed a *chevet*)—attained, in the 12th and 13th cent, its great splendor The abundant structural ornamentation of both the interior and the exterior of the apse gave a complex and rich appearance, far from its original simplicity

Apsheron (ŭpshĭrŏn'), peninsula, Azerbaijan SSR, extending c 40 mi into the Caspian Sea It contains about 15 percent of the world's petroleum reserves There also are mud volcanoes, natural-gas wells, and salt lakes The principal oil fields are at Balakhany, Sabunchi, Surakhany, Kara-Chukhur, Kala, and SW of BAKU, on the southwest shore The peninsula is included within the Baku city limits

apteryx see KIWI

Apuleius, Lucius (ă"pyōō'lē'ŭs), fl 2d cent, Latin writer of African birth, b Hippo (now Bône, Algeria) His *Golden Ass* or *Metamorphoses,* a romance, is one of the few surviving examples of the Latin novel It has been tremendously popular, influencing strongly the later novel, e g, the works of BOCCACCIO, Cervantes, Fielding, and Smollett Other works by Apuleius include *The Apology* or *On Magic,* his defense in a suit brought by his wife's family for gaining her affections by magic, *Florida,* an anthology from his own works, and *On the God of Socrates, On the Philosophy of Plato,* and *On the World,* philosophical treatises

Apulia (upū'lēu), Ital *Puglia* (pōō'lyä), region (7,469 sq mi, pop 2,642,076), S Italy, occupying approximately the southern third of the Italian east coast, opposite Albania Its southernmost tip, a peninsula between the Strait of Otranto and the Gulf of Taranto, forms the heel of the Italian boot Apulia is divided into five provinces, Bari, Brindisi, Foggia, Ionio, and Lecce, named after their chief cities (except for Ionio, with its capital at Taranto) Bari is the regional capital Apulia is mostly a plain, its low coast is broken by the mountainous peninsula of Monte GARGANO Agriculture—producing wine, olive oil, almonds, figs, corn, and oats—is the chief occupation Sheep and goats are raised The scarcity of water has always been a vital problem, and drinking water is carried by a modern aqueduct across the Apennines In ancient times only the northern part of the region was called Apulia, the southern peninsula was called Calabria, a name which later was shifted to designate the toe of the boot The region was settled by several Italic peoples and by Greek colonists before its conquest (4th cent B C) by Rome After the fall of Rome, Apulia was held successively by the Goths, the Lombards, and the Byzantines In the 11th and the 12th cent it was conquered by the Normans under ROBERT GUISCARD, who set up the duchy of Apulia After the Norman conquest of Sicily, Palermo replaced MELFI as the center of Norman power, and Apulia became a mere province, at first of the kingdom of Sicily, then of the kingdom of Naples Its coasts were at times occupied by the Turks and the Venetians The feudal society long prevailed in the rural areas, much-needed social and agrarian reforms have proceeded slowly since the 19th cent The characteristic Apulian architecture of the 11th to 13th cent, showing Greek, Arabian, Norman, and Pisan influences, reflects the varied history of the region.

Apure (ăpōō'rā), river, c 500 mi long, W Venezuela, rising in tributaries in the Andes and flowing E to the ORINOCO Draining much of the western portion of the Orinoco basin, it is navigable for c 400 mi

Apurímac (ăpōōrē'mäk), river rising in S Peru, in the Andes, c 100 mi from the Pacific. It flows generally northwest to join the URUBAMBA and form the UCAYALI Upper sections of the Apurímac are Ené and Tumbo One of the most famous of Incan suspension bridges spans the river

Aqaba (ä'kăbă), village (pop c 200), Jordan, at the head of the Gulf of Aqaba, the northeast arm (100 mi long and 10 mi wide) of the Red Sea, lying between Egypt and Arabia It is the only Jordanian port with direct access to the Red Sea, and it was acquired from Hejaz in 1925 At this site, since at least 1000 B C, there has always been a port which handled trade to and from Palestine and Syria EZION-GEBER, Solomon's base, was near Aqaba, and ELATH was close by, perhaps on the very site of Aqaba

Aquae Sextiae see AIX-EN-PROVENCE.

aquamarine (ăk"wumurēn') [Latin,=sea water], transparent BERYL with a blue or bluish-green color Sources of the gems include Brazil, Germany, Siberia, Ceylon, Madagascar, and parts of the United States The name chrysolite aquamarine is often applied to yellowish-green beryl Oriental aquamarine is a transparent crystalline corundum with a bluish tinge The emerald is similar in composition, differing only in color.

aquarelle see WATER-COLOR PAINTING

aquarium, name for a tank or bowl, an artificial pond, or a museum for aquatic animals and plants It is not known when and where glass containers first came into use as aquariums Some believe that it was in Egypt Goldfish have been bred in captivity in China for several hundred years and are still the most commonly kept fish in the home aquarium, but tropical toy fish e g, guppies, have become increasingly popular in recent years For every inch of body length of fish, the container should provide from about 18 to 24 sq in of water surface in contact with air A rectangular tank is preferable to a round one It is harmful to the fish to have copper, brass, zinc, or galvanized iron in contact with the water Tanks having new wood or new concrete should be filled with water, changed at intervals, for a number of weeks before fish are put into them If the aquarium is properly set up and remains unpolluted, it is rarely necessary to do more than replace the water lost by evaporation Frequent changes of water are harmful Debris on the bottom can be siphoned off Green plants are useful in an aquarium, since they release oxygen in the presence of sunlight, which they need at least part of the day Sometimes supplementary artificial light is needed Plants which grow in sand and gravel are preferable Most satisfactory are species of *Sagittaria* and *Vallisneria* Other desirable plants are *Myriophyllum, Anacharis* (*Elodea*), and *Nitella Cabomba* does not survive long Fish should not be put into the aquarium for at least a day after the plants have been placed in the water Most aquarium fish remain healthy if the water temperature is kept between 70° and 75°F Goldfish can stand lower temperatures than can tropical fish Sometimes heating units and oxygenators are necessary Useful as scavengers are snails (among the most desirable are the large Japanese snails, the African paper-shelled snails, the ram's-horn snails, and pond snails), small catfish, and freshwater mussels Greenness of the water and on the walls of the aquarium is caused by algae It is usually the result of too much light or the presence of too many fish Any food not consumed by fish within five minutes after feeding should be removed from the tank to avoid pollution Marine aquariums containing sea anemones and other marine life can also be maintained indoors See I M Mellen and R J Lanier, *1,001 Questions Answered about Your Aquarium* (1935), W T Innes, *The Modern Aquarium* (latest ed) and *Goldfish Varieties and Water Gardens* (1947)

Aquarius (ukwâ'rēus) [Latin,=the water bearer], large zodiacal constellation, resembling the form of a man pouring a stream of water from a jar It is also the 11th sign of the ZODIAC From the third week in February to about the middle of March the sun is in the part of the heavens represented by this sign

aquatint, etching technique The plate is covered with a porous ground through which the acid bites many tiny pockmarks in the metal The tones produced resemble those of a wash drawing The technique is said to have been introduced by J B Le Prince c 1750 It is often used in combination with other types of etching See B F Morrow, *The Art of Aquatint* (1935)

Aquaviva, Claudio (klou'dyō akwävē'vä), 1543-1615, Italian Jesuit He was fifth general (1581-1615) of the Society of Jesus and composed the *Ratio,* the basis of Jesuit education

aqueduct (ă'kwudŭkt) [Latin,=conveyor of water], channel or trough built to convey water, chiefly for providing a city with a supply of fresh water Aqueducts were employed from early times, probably first in Mesopotamia Their construction reached a peak in Roman times in those around Rome as well as in Gaul and Spain and other parts of the empire Such a peak of skill was not again reached until the 19th cent The first Roman aqueduct was the Aqua Appia built c 312 B C, probably the first of those supported for some distance by a high arched structure was the Aqua Marcia (con-

structed between 146 and 140 B C), which became noted for the purity of its water. Portions of some of the original Roman aqueducts are still standing. An aqueduct of the Maya from Chapultepec to Tenochtitlán (Mexico city) was very important before the Spanish Conquest. Many large cities in the United States now obtain their water from considerable distances. Los Angeles draws much of its water from the Owens river (by means of an aqueduct more than 230 mi long) as well as from the Colorado river, also over a distance of more than 200 mi, the Colorado river aqueduct carries water for a number of cities of S California. Most of the supply for New York city is conducted through the CATSKILL AQUEDUCT and the CROTON AQUEDUCT. The topography of the land influences the design of the aqueduct, part of the aqueduct is usually above ground and part below.

Aquidneck (ukwĭd'nĕk), Indian and early colonial name of RHODE ISLAND in Narragansett Bay, largest island of the state of Rhode Island.

Aquila (ăk'wĭlu, ukwĭl'u) [Latin,=eagle], Christian of Jewish origin from Pontus who lived at Rome. He and his wife, Prisca or Priscilla, were friendly to Paul. Acts 18 2,18,26, Rom 16 3, 1 Cor 16 19.

Aquila or **Aquila degli Abruzzi** (ä'kwēlä dā'lyē ăbrōōt'sē), city (pop 20,573), capital of Abruzzi e Molise region and of Aquila prov, S central Italy, beautifully situated at the foot of the GRAN SASSO D'ITALIA. Anciently a castle, it rose to importance in the 13th cent and later became the second city of the kingdom of Naples, enjoying some autonomous rights, with flourishing trade and a university. It suffered several devastating earthquakes, but it has kept its medieval ramparts and gates, a 16th-century castle, and many old houses and fine churches.

Aquila Pontucus (pŏn'tĭkus), 2d cent., Jewish translator of the Old Testament from Hebrew into Greek. The characteristic feature of Aquila's version was its extremely literal rendering of the Hebrew. It was much used by Jews, even in the synagogues. No complete specimen exists.

Aquilegia see COLUMBINE.

Aquileia (ăkwēlā'yə), town (pop 1,116), Friuli-Venezia Giulia, NE Italy, near the Adriatic. Founded in 181 B C, it became a Roman stronghold against the barbarians and (6th cent) the see of a patriarch. It was repeatedly destroyed by invaders. Fleeing the Lombards, the patriarch took refuge in Grado, the island port of Aquileia, and remained there while Aquileia elected its own patriarch. The pope recognized (9th cent) both patriarchates, in 1445 that of Grado was transferred to Venice. After the 11th cent. Aquileia flourished under the temporal power of its patriarchs, who acquired Friuli, Carniola, and Istria. Decline began in the 14th cent., and in 1420 Venice occupied Aquileia and Friuli. From the early 16th cent. until 1918 Aquileia was under Austrian rule. The patriarchate was abolished c 1751. Aquileia has kept its famous Romanesque basilica (11th cent., partly restored in the 14th cent.), with the best-preserved mosaic floor of its kind and with frescoes of the 12th and 13th cent. The local archaeological museum has mosaics, sculptures, and glass objects dating from late Roman times. Grado, now joined to the mainland by a bridge, is a popular bathing resort.

Aquinas, Saint Thomas: see THOMAS AQUINAS, SAINT.

Aquitaine (ăk'wĭtān), Latin *Aquitania*, former duchy and kingdom in SW France. At the time of Julius Caesar, one of whose lieutenants conquered Aquitaine in 56 B C, the province occupied the territory between the Garonne and the Pyrenees, under Augustus it was extended northward and eastward almost as far as the Loire. Aquitaine was to appear in later history both in the narrow and in the wide meaning of the word. The VISIGOTHS under Ataulf included it in their kingdom (5th cent.), but with the victory (507) of Clovis I over Alaric II at Vouillé it passed to the Franks. In the chaotic strife among the various Merovingian kingdoms much of Aquitaine, notably GASCONY, escaped Frankish control. By 736 Pepin the Short had recovered Aquitaine, but Gascony remained virtually independent. Charlemagne erected Aquitaine into a kingdom for his son Louis (later Emperor LOUIS I). After the death (838) of Louis's son, Pepin I, the kingdom was reunited, after some struggle, to the West Frankish (French) kingdom. A duchy of Aquitaine, enfeoffed to the French crown, soon emerged. The ducal title was given to the counts of Poitiers and, late in the 9th cent., to William, count of Auvergne. The duchy of Aquitaine (or GUIENNE, as it was then already called) was one of the most powerful states in Western Europe. It included the subfiefs of Poitou, Saintonge, Aunis, Marche, Périgord, Limousin, Angoumois, and Auvergne. In the 11th cent. the dukes acquired Gascony and made Bordeaux their capital. Their claim to the county of Toulouse, however, was not successful. The marriage of ELEANOR OF AQUITAINE to Louis VII of France, its subsequent annulment, and her marriage (1152) to Henry II of England initiated a long struggle between France and England over the title to Aquitaine. After 1154 the fiefs composing the duchy were held by the English kings as vassals of France. PHILIP II annexed Poitou to the French royal domain, and in the HUNDRED YEARS WAR, which was largely caused by the refusal of England to do homage for its French fiefs, France recovered all of Aquitaine. Guienne and Gascony, Angoumois, Aunis, and Saintonge were part of the royal domain by 1454.

Ar, city of Moab, probably one of the important centers E of the Dead Sea. It has been tentatively connected with two ruined places, one on the Arnon c 10 mi E of Aroer, the other on the old Roman road c 10 mi SW of Aroer. Num 21 15,28, Deut. 2 9,18,29, Isa 15 1. It is the nameless city of Num. 22 36, Deut 2 36, and Joshua 13 9.

Ara (ä'rə), Asherite. 1 Chron 7 38.

Arab see ARABIA and ARABS.

Arab (ă'rĭb) [Heb.,=ambush], hill town, S Palestine, near Hebron. Joshua 15 52.

Araba or **Arabah** (both ă'rəbä, ä'rubä), depression, S Palestine, extending from the Dead Sea S to the Gulf of Aqaba and lying on the boundary (not yet officially set in April, 1950) between S Israel and Jordan. It is in the Old Testament variously called a wilderness, a plain, and a desert.

arabesque (ărubĕsk') [Fr.,=Arabian] term applied to any complex, linear decoration based on flowing lines. Although such decoration is perhaps most fully exploited in Moorish art, in which it is characteristically nonrepresentational, arabesque in modern usage derives from a type of Renaissance design which was Greco-Roman in inspiration.

Arabia, peninsula (c 1,000,000 sq mi, pop between 5,000,000 and 7,000,000), SW Asia. The Persian name is Arabistan. It includes all the territory lying between the Red Sea (with its northern extension, the Gulf of Aqaba) on the west and the Persian Gulf and the Gulf of Oman on the east. The peninsula is bounded on the south by the Gulf of Aden and the Arabian Sea. Politically, Arabia is made up of two independent countries, Saudi Arabia and Yemen, six semi-independent states—Aden, Bahrein, Kuwait, Oman, Qatar, and Trucial Oman (all under British protection)—and several neutral territories. British possessions include the colony of Aden and the Kuria Muria islands. Arabia is mainly a great plateau which slopes gently from west to east. The coast, for the most part elevated above the somewhat depressed interior, precipitates what little moisture is carried by the dry winds which cross Arabia. This makes the interior of the country so arid that there is not a single perennial stream, and large areas, especially the Rub al Khali in the south, are without water and forbid exploration. In certain regions, notably the NEJD in central Arabia and along much of the HEJAZ (the precipitous Red Sea coast), sufficient water collects in or below the surface of water courses (wadies) to create oases which support settled agricultural communities. Only in SW Arabia (the YEMEN, see this heading for discussion of the term "Arabia Felix"), where the coastal mountains rise to c 10,000 ft, does the rainfall permit extensive agriculture, here Mocha coffee and large crops of grain are raised. The climatic conditions of the Yemen obtain to a lesser extent on the northeast coast of OMAN. About four fifths of the Arabian population is sedentary and is supported by agriculture, the remaining fifth are pastoral nomads who raise goats and sheep. Until recently Arabia was a poor country with little to export except small quantities of hides, wool, and coffee and the famed highly bred horses. Thus the country hardly felt the absence of good ports (except that of ADEN). In recent years, however, E Arabia has been revealed as very rich in oil reserves. American and British—and, to a lesser degree, Dutch and French—firms have a monopoly on the drilling concessions, and much oil is produced. In time, undoubtedly, modern technology will strongly affect the traditional ways of Arabia. Archaeological evidence points to very early trade between Yemen and what is now Somaliland in Africa. From time to time peoples of Arabian provenience invaded and settled the inviting regions of the eastern Mediterranean basin, such, possibly, were the HYKSOS, conquerors of Egypt (17th cent B C), and the Israelites, who seized Palestine. Little is definitely known of Arabian history in this early period preceding the oldest inscriptions discovered—those dating from c 1000 B C. In ancient historical times much of Arabia was divided between the domains of Ma'in and SHEBA. Political unity in Sheba seems to have been hastened by Darius' conquest of N Arabia and its organization into a satrapy. No ancient power ever attempted the complete conquest of Arabia, because of the formidable difficulties involved in crossing the deserts. Rome did invade (24 B C) N Arabia but soon withdrew, although for a long period it held the northern part of the Hejaz. Ethiopia, during its great expansion under the Aksumite kings (see AKSUM), twice (300–378, 525–70) held Yemen and the south coast (the HADRAMAUT) and enriched itself with the trade from Persia and India. Arabian unity was not achieved until the establishment of ISLAM by MOHAMMED the Prophet, who came from MECCA, a religious center in the Hejaz. His dynamic faith, furthered by his immediate successors, unified the warring Arab tribes and sent them out on a career of immediate conquest in the 7th cent. First Egypt and Syria fell, and under the OMAYYAD caliphate Turkistan and Persia were conquered. Further Arab expansion was checked in the east by the Byzantine Empire, and in the west the defeat (732) inflicted by Charles Martel at the battle of Tours or Poitiers forced a withdrawal from France. The tremendous territorial expansion of Islam deprived the religion of its exclusively Arabic character, and the need for a more convenient administrative center led to the transfer of the seat of the CALIPHATE from Mecca to Damascus. Arabia was again without political cohesion, and independent emirates arose in Yemen, Oman, and elsewhere. In the 10th cent. a semblance of unity was imposed by the Karmathians, but in the 11th cent. anarchic conditions again prevailed. After the discovery of the route to India around the Cape of Good Hope, foreign powers were attracted to Arabia as a site for bases. The Portuguese seized (1508) Oman but were driven out (1659) by the Ottoman Empire, which attempted, but never with complete success, to control all Arabia. In the early 19th cent. the empire permanently lost Aden to Great Britain. Nationalist opposition to Turkish rule was aroused in the late 19th cent., by the WAHABI movement, which was a reform within Islam. Its cause was strengthened by the adherence of the founder of the present ruling family of Saudi Arabia, into whose hands much of Arabia fell. Although after its temporary eclipse in 1818 the Wahabi domain never again attained its greatest extent, the Wahabis continually harassed the steadily weakening Ottoman Empire. Just before the First World War, IBN SAUD revived the Wahabi movement, and during the war he revolted against the Turks. His strongest rival, HUSEIN IBN ALI, also led a successful revolt in the Hejaz. The Saud family prevailed in the violent struggle after the war and in 1925 founded SAUDI ARABIA, the dominant state of the peninsula. See D G Hogarth, *Arabia* (1922), T E Lawrence, *Revolt in the Desert* (1927), C M Doughty, *Travels in Arabia Deserta* (new ed., 1936), Philip K. Hitti, *History of the Arabs* (3d ed., 1943).

Arabian art and architecture: see MOSLEM ART AND ARCHITECTURE.

Arabian Desert: see EGYPT.

Arabian music, term used popularly to include the music of all the Islamic peoples. It includes some elements which are the result of Greek influence, and it is related to Hindu music, as well as to other Semitic musical cultures—Assyrian and Hebrew. Theory concerning it abounds, but little actual music is extant. The principal theorist was Al-Farabi (10th cent.), who introduced the Greek conception of tetrachords into the tonal system. After his reform, the Arabian gamut was extended to include 12 notes roughly corresponding to the chromatic scale of Western music. In the 13th cent. five more notes were added, each a quarter tone below each diatonic whole tone. This scale of 17 notes provides the possibility for an infinite number of modes, most of which resemble the Greek modes. That which sounds like the major mode of Western Europe is a specifically Persian element. Melody employs the system of *maqams*, melody types which correspond to the Hindu *ragas* (see HINDU MUSIC). The rhythms of Arabian music are provided by the meters of poetry. In folk music the rhythms are simple, often endlessly reiterated, and the melodic range is short. In art music, there is contrast of strict and free rhythms, but in general the rhythmic element of Arabian music is less highly organized than the *tala* of Hindu music. Arabian music's principal form is the *nuba*, which is a sort of cantata, in nine parts, some of which are instrumental, some vocal. All Arabian music is monodic, the occasional harmonic intervals in ensemble music are accidental. The principal instruments are a long lute and a short lute, and the influence of Arabian music on that of Europe lies mainly in the introduction of the lute by the Moors in Spain. See H G Farmer, *A History of Arabian Music* (1929), Curt Sachs, *The Rise of Music in the Ancient World* (1943).

Arabian Nights see THOUSAND AND ONE NIGHTS.

Arabian Sea, northwestern part of the Indian Ocean, lying between Arabia and India. The Gulf of Aden and the Gulf of Oman (extended by the Persian Gulf) are its principal arms. The Indus river is the greatest of the many streams which pour their waters into the sea. Aden, Basra, Bombay, and Karachi are its chief ports.

Arabic language, Semitic language, one of the most widely spoken languages on earth. See LANGUAGE (table).

Arabic literature. The first Arabic writing is a golden age of lyric poems, from the 4th to the 7th cent. They are strongly personal odes, often very short, some longer than 100 lines. The life of the camp is in them, with themes of love, fighting, and the chase. The poet talks directly, not romantically, of nature and never lacks a serious note on the power of God. The poems read excellently in translation. They survive only through col-

lections, chiefly the MUALLAQAT, HAMASA, and MOFADDALIYAT The most esteemed of the poets are AMRU-L-KAIS, ANTAR, and ZUHAIR The Prophet Mohammed was not interested in poetry and he continually decried it, so Arabic poetry fell into a decline from which it recovered only in far different form The KORAN supplanted poetry by becoming the prime piece of literature, the chief object of study of the Moslem world The second great period of Arabic literature was a result of the rise of the new Arabic-Persian culture of Baghdad under the Abbasids in the 8th and 9th cent. Philosophy, mathematics, law, Koranic exegesis, history, and science were cultivated, and to this period is owed the collections of early Arabic poetry During the 7th and part of the 8th cent, Arabic poets had become entirely artificial Bedouin themes alone might inspire poetry, and the only poets were city men At the end of the 8th cent in Baghdad a group of young poets arose who established a new court poetry Two of these were ABU-L-ATAHIYA and ABU NUWAS The new poetry was successful, but soon was once more in decline Typical of the time is Mutanabbi (d 965), with a careful, exaggerated, formal style He always has been one of the most popular Arabic poets, but he is disappointing when compared to Amru-l-Kais This is an age of preciosity, e g, the poet HARIRI (11th cent), whose avowed aim was to combine "refinement with dignity of style, and brilliancies with jewels of eloquence." An unusual poet, who represents first the liberalism and then the orthodoxy of his time, is ABU-L-ALA AL-MAARRI Prose romance had long before this begun to be the main literary interest The influence of India and Persia is seen in Arabic stories, but it was the Arabs who cast them in their permanent form The greatest collection is the THOUSAND AND ONE NIGHTS The historical and geographical works in Arabic are important writers in this field include BUKHARI, TABARI, MASUDI, IBN-KHALDUN, and IBN-BATUTA The great Western center of Arabian culture was Spain, especially Córdoba under the Omayyads The Spanish Arabs had fine poets and scholars, but they are dwarfed by the great philosophers—AVEMPACE, AVERROËS, and IBN TUFAIL Since 1200 in Spain and 1300 in the East, there has been little Arabic literature of wide interest After 1870, with the growth of Western influence on the East, a vernacular literature arose in Syria and in Egypt, which aims to rouse Arabic national consciousness in literature either by a return to classical models or by an imitation of Western forms See R A Nicholson, *A Literary History of the Arabs* (1907, 2d ed, 1930), Sir C J Lyall, *Translations of Ancient Arabian Poetry, Chiefly Prae-Islamic* (1885)

Arabistan see ARABIA

Arab League, association of the countries predominantly Arabian in descent Long efforts to form such a Pan-Islamic federation succeeded in 1944 when a conference was held at Alexandria and a protocol calling for an Arab League was signed In 1945 the Arab states met in Cairo to draft a constitution, which was accepted by Egypt, Syria, Lebanon, Trans-Jordan (now Jordan), Iraq, Saudi Arabia, and Yemen A representative of Palestinian Arabs, though he did not sign the document because he represented no recognized government, was, nevertheless, given full status and a vote in the Arab League. The charter provided for coordination among the signatory nations on education, finance, law, trade, and foreign policy, and it forbade the use of force to settle disputes among the members The league supported Syria and Lebanon in their disputes (1945) with France At the conference of foreign ministers in London (Sept, 1945) the league demanded an independent Libya The league early announced opposition to the formation of a Jewish state in Palestine and insisted that the country as a whole, with the majority of its population remaining Arab, be given independence The league failed to dissuade the United Nations from partitioning Palestine, and when the state of ISRAEL was created in May, 1948, the league countries jointly attacked it Israel resisted successfully, and dissensions soon developed among the members of the organization on what attitude they should take towards that nation

Arabs. In the widest sense the Arabs are those persons whose primary language is Arabic Except for minor settlements elsewhere, they comprise the vast bulk of the population of Arabia, Syria, Lebanon, Jordan, Iraq, Anglo-Egyptian Sudan, North Africa (where, however, there are many speakers of Hamitic languages), and the portions of Palestine which do not belong to Israel The term does not usually include Arabic-speaking Jews (found chiefly in Yemen, North Africa, and Iraq), but it does include Arabic-speaking Christians (chiefly inhabiting Syria, Lebanon, and Palestine). A narrower use of the term *Arab* confines it to the Moslem inhabitants of ARABIA. It was the Moslems from Arabia whose invasions in the 6th and 7th cent widely diffused both the Arabic language and Islam A great Arab civilization was built up, and learning flourished in the Islamic lands. Medicine, mathematics, and science were particularly developed by the Arabs, and such philosophers as Kindi and Al-Gazel absorbed Greek philosophy (particularly Aristotle) and expanded upon it The waves of Arab conquest across the East and into Europe widened the scope of their civilization and contributed greatly to world development In Europe they were particularly important in Sicily, which they held from the 9th cent to the late 11th cent, and the civilization of the MOORS in Spain was part of the great Arabic pattern Christian scholars in those two lands gained much of the Islamic knowledge, and scholasticism and the beginnings of modern Western science were derived ultimately from the Arabs The emergence of the Seljuk Turks in the 11th cent and of the Ottoman Turks in the 13th cent ended the specifically Arab dominance in Islam, though Moslem culture still remained on the old Arab foundations See C H Haskins, *The Renaissance of the Twelfth Century* (1927), Philip K Hitti, *History of the Arabs* (3d ed, 1943)

Aracaju (ä"rukushōō'), city (pop 50,306), capital of Sergipe, NE Brazil Founded late in the 16th cent, it is today a port with only coastwise trade Sugar is exported

Arachne (ürăk'nē) [Gr, =spider], in Greek legend, girl who challenged ATHENA to a trial of skill in weaving The goddess changed her into a spider

arachnid (ürăk'nĭd), animal with eight legs, belonging to the class Arachnida of the phylum Arthropoda See DADDY LONGLEGS, MITE, SCORPION, SPIDER, TICK

Arad (ă'răd) **1** Benjamite 1 Chron 8 15 **2** Town, c 15 mi S of Hebron Joshua 12 14, Judges 1 16 The "king Arad" of Num 21 1 and 33 40 is a mistranslation for "king of Arad"

Arad (ărăd'), city (pop 87,291), W Rumania, in Crisana-Maramures, on the Mures river and near the Hungarian border It is a commercial center with varied industries (flour mills, tanneries, machine shops, and manufactures of electric appliances) About 35,000 of the inhabitants are Hungarians First mentioned in the 14th cent, it was long (1542–1689) under Turkish occupation The citadel was built (18th cent) by Maria Theresa

Aradus (ăr'udus), islet and town of ancient Phoenicia, the modern Ruad, N of Tripoli off the Syrian coast It was the most northerly of the important Phoenician centers In the Old Testament it is Arvad Gen 10 18, 1 Chron 1 16, Ezek 27 8,11, 1 Mac 15 23

Arafat (ărafat'), granite hill, Saudi Arabia, near Mecca In commemoration of Mohammed's stop here on his flight (hegira) from Mecca to Medina, the hill is visited by hordes of pilgrims Its springs supply water to Mecca It is also called Jebel-er-Rahm (jĕ'bul-ur-ram'), Arabic for "mountain of mercy"

Arafura Sea (ărufōō'ru), part of the Pacific Ocean, between Australia and New Guinea It contains several islands of Indonesia The Timor Sea is to the west, the Coral Sea east

Aragats, Mount (ărugăts', Rus ărugats'), or **Mount Alagez,** (ălugyôs'), extinct volcano, 13,435 ft high, Armenian SSR, in the Lesser Caucasus, highest peak of the Armenian SSR There is an astrophysical research center at c 5,000 ft

Arago, Dominique François (dôměnk' frăswa' aragō'), 1786–1853, French astronomer and physicist He is noted for his astronomical lectures, delivered while he was director of the Paris Observatory, and for his discoveries in magnetism and optics He also contributed his services to the state, as a member of the provisional government of 1848 and, for a time, as minister of war and of the navy His collected works (1854–62) include his well-known *Astronomie populaire* (4 vols)

Aragon, Louis (lwē' ărăgō'), 1897–, French poet, novelist, and journalist A onetime Dadaist and surrealist, he was later a Communist and editor of the radical Paris daily *Ce Soir* Novels available in English translation are *The Bells of Basel* (1934, Eng tr, 1936), *Residential Quarter* (1936, Eng tr, 1938), *The Century Was Young* (1941, Eng tr, 1941), and *Aurelien* (1945, Eng tr, 1947). His best poetry, written during the Second World War, includes *Le Crève-Cœur* (1941) and *Les Yeux d'Elsa* (1942) Translations of miscellaneous pieces which he wrote as a leader of the French underground appear in *Louis Aragon, Poet of the French Resistance* (ed. by Hannah Josephson and Malcolm Cowley, 1945)

Aragon (ă'rugŏn), Span *Aragón* (ărägōn'), region (18,382 sq mi, pop 1,058,806) and former kingdom, NE Spain, bordering in the north on France and in the east on Catalonia Comprising the provinces of Huesca, Teruel, and Saragossa, Aragon includes the southern slopes of the Pyrenees, which here reach their greatest height, a central plain drained by the Ebro, and the western fringe of the central plateau of Spain The region is sparsely populated and desertlike Irrigation works, started by the Moors, were resumed in the 16th cent., the two lateral canals of the Ebro are the most important. In the oases and irrigated areas cereals, grapes, olives, and sugar beets are grown. Sheep are raised throughout Aragon, and cattle in the Pyrenees. Sugar refining is the only important industry. The Aragonese, mostly poor and deeply religious, have remained secluded in their small towns, jealously preserving their ancient traditions At the death (1035) of Sancho III of Navarre, his western territories were erected into the kingdom of Aragon for his natural son, Ramiro I He and his successors extended their dominions southward at the expense of the Moorish emirate of SARAGOSSA, and in the 12th cent Saragossa replaced Huesca as their capital. From 1076 to 1134 Aragon was reunited with Navarre, and in 1137 it became united, through personal union, with CATALONIA Both regions preserved their own cortes, laws, language, and customs and evolved along separate lines Their deep historical, social, and cultural differences at times caused much friction With the expansion of the house of Aragon (see separate article), the name Aragon came to signify a confederation of its Spanish possessions (Aragon, Catalonia, MAJORCA, and VALENCIA) and several French fiefs In the bitter struggles (12th–15th cent) between kings and nobles, the nobles gained more and more privileges until PETER IV defeated them in 1348 The justiciar, a type of magistrate created in the 12th cent, acted as a sort of intermediary between king and nobles, after 1348 he lost most of his political power but gained more juridical importance Aragon played only a minor role in the expansionist policy of its kings in the Mediterranean United with Castile after 1479 through the marriage of Ferdinand the Catholic with Isabella, Aragon preserved its cortes and its city privileges These, however, were gradually limited by the centralizing policies of the Spanish monarchy, and in 1716 Philip V abolished most of the remaining political privileges to punish the Aragonese for siding with Archduke Charles (later Emperor Charles VI) in the War of the Spanish Succession The passionate attachment of the Aragonese to their liberties was illustrated by the episode of Antonio PÉREZ under Philip II and by the heroic defense of Saragossa in the Peninsular War

Aragon, house of, family which ruled in Aragon, Catalonia, Majorca, Sicily, Naples, Sardinia, Athens, and other territories in the Middle Ages It is descended from RAMIRO I of Aragon (1035–63), natural son of SANCHO III of Navarre Under Ramiro's successors—SANCHO I, PETER I, and ALFONSO I—Navarre was temporarily (1076–1134) united with Aragon During that period considerable territory was wrested from the Moors Ramiro II (1134–37) was succeeded by his daughter, Petronella, and her husband, RAYMOND BERENGAR IV, count of Barcelona Aragon and CATALONIA (see also BARCELONA) remained united under their descendants—ALFONSO II, PETER II, JAMES I, PETER III, ALFONSO III, JAMES II, ALFONSO IV, PETER IV, JOHN I, and MARTIN I, after a brief interregnum (1410–12) they passed to MARTIN'S nephew, FERDINAND I, and from him to ALFONSO V, JOHN II, and Ferdinand II, who after his marriage with Isabella of Castile became joint king of Castile as FERDINAND V or Ferdinand the Catholic His grandson, Charles I (later Emperor CHARLES V) succeeded him and merged the houses of Aragon and Castile with that of Hapsburg Through its merger of 1037 with the house of Barcelona, the house of Aragon had acquired various fiefs in S France, notably Roussillon, Provence, and Montpellier, and suzerainty over others Most of these it lost between 1213 and 1246, mainly because Peter II intervened in the ALBIGENSIAN CRUSADE and was defeated (1213) at Muret In the same period (1229–38), however, James I won the BALEARIC ISLANDS and VALENCIA from the Moors, in 1282 Peter III became king of SICILY, and in the 14th cent, after a long struggle, Alfonso IV conquered SARDINIA The duchies of ATHENS and Neopatras were under the nominal rule of the family in the 14th cent, and in 1442 the kingdom of NAPLES was conquered by Alfonso V Only rarely were these possessions united under a single ruler, mostly they were held by various branches of the house, often at war with each other as well as with other rulers in Spain The kingdom of MAJORCA, with ROUSSILLON and Cerdagne, was separate from 1276 to 1343, that of Sicily, from 1296 to 1409, and Naples, from 1458 to 1501 Even when united under one ruler, as they were under Alfonso V, the various possessions retained their distinct institutions, which continued important in diminished and varying degree after the union of the crowns of Aragon and Castile See also NAVARRE

Araguaia (ărugwī'u), river, more than 1,000 mi long, rising in Mato Grosso, Brazil, and flowing generally N to the TOCANTINS

Arah (ā'rŭ) [Heb., =wayfarer] **1** Asherite 1 Chron 7 39 **2** Family in the return from the Exile Neh. 7.10.

Araish, El, Spanish Morocco see LARACHE.

Arakan (ărŭkăn', ărăkăn'), division (16,001 sq mi., pop 1,186,738), W Burma, extending along the Bay of Bengal and at the foot of the Arakan Yoma mountain range, which rises to 10,918 ft at Victoria Peak The chief city is Akyab. The Arakanese, who are of Burmese stock with strong Indian influences, are mostly engaged in intensive rice culti-

vation. The country, which is geographically isolated, was at various times under Burmese rule, but was not finally absorbed into Burma till 1783, it was the first Burmese territory ceded to the British (1826)

Arakcheyev, Aleksey Andreyevich (ŭlyĭksyā' ŭndrā'yĭvĭch äräkchā'ĕf), 1769–1834, Russian general and minister of war He organized the bodyguard of Paul I, who created him a count, and under ALEXANDER I reorganized the Russian army on the line of strict discipline Made minister of war in 1808, he became one of the most powerful men in Russia in the second half of Alexander's reign

Aral Sea (ä'rŭl, Rus ŭrāl'), inland sea, area 24,635 sq mi., USSR, in the Kazakh SSR and the Kara-Kalpak ASSR, 175 mi E of the Caspian Sea Fed by the Syr Darya and Amu Darya rivers, it is 230 mi long and 175 mi wide, is 170 ft above sea level, has an average depth of 55 ft , and is slightly saline (1 03 percent) There is no outlet The western and northern shores are rocky escarpments (Ust-Urt Plateau), the desert lands of the Kyzyl Kum stretch to the east There are many small islands Navigation is hindered by storms and shallowness, the only route being from Muynak to Aralsk The sparse population (mainly in the northeast and the south) engages in fishing (sturgeon, carp, perch) First mentioned by Arab geographers as the Khwarazm Sea, it was reached by the Russians in the mid-19th cent

Aram (ā'răm) **1** Ancient people and their country, roughly identifiable with Syria Movement of Arameans westward to Syria apparently took place before 1200 B C The Bible records constant contacts between Hebrews and Aram, mentioning states of Damascus, Beth-rehob, Geshur, Maachah, and Zoba Their language was a form of Aramaic Gen 10 22, Num 13 21, Judges 18 28, 2 Sam 8 5,6, 10 6–19, 1 Kings 11 23–25, 1 Chron 19 6, Ps 60 **2** Descendant of Nahor Gen 22 21 **3** Asherite 1 Chron 7 34 **4** In the Gospel genealogy, see RAM 1

Aram, Eugene (ā'rŭm), 1704–59, English philologist, whose execution for murder after a brilliant scholastic career is the basis for *The Dream of Eugene Aram* (1829), a poem by Thomas Hood, and *Eugene Aram* (1832), a novel by Bulwer-Lytton Aram was a self-taught linguist and was the first philologist to identify the Celtic languages as Indo-European He was at work in 1758 upon a comparative dictionary of all European tongues when the discovery of a skeleton led to his conviction, confession, and hanging for the murder of his friend Daniel Clark in 1745 See study by E R Watson (1913)

Aramaic (ărămā'ĭk), Semitic languages of Syria, flourishing in the centuries before and after Christ. See LANGUAGE (table)

Aram-naharaim (ā'rām-nā"hārā'ĭm) [Heb ,=Aram of the rivers], the same as PADAN-ARAM

Aram-zobah (ā'rŭm-zō'bu), the same as ZOBA

Aran (ā'răn) [Heb ,=wild goat], descendant of Seir the Horite Gen. 36 28, 1 Chron 1 42

Aranha, Oswaldo (ushvăl'dō urä'nvû), 1894–, Brazilian statesman and diplomat He was minister of justice (1930–31) and minister of finance (1931–34) under Getulio Vargas and later was ambassador to the United States (1934–38) Aranha was foreign minister from 1938 to 1944, when he resigned, denouncing Vargas In 1947 he served as delegate to the United Nations

Aran Islands or **Arran Islands** (both ăr'un), Co Galway, W Ireland, in Galway Bay The three islands are Inishmore, which is also known as Arranna-naomh [Irish,=Aran of the Saints] (ä'run-nänāv'), from the number of monks gathered here, Inisheer, and Inishmaan There are many early Christian and pre-Christian remains The islands are barren, and living is primitive Robert Flaherty's moving picture, *Man of Aran*, is an authentic representation of the life See J M Synge, *The Aran Islands* (1911)

Aranjuez (aranghwāth'), town (pop 21,771), Madrid prov., central Spain, in New Castile near the Tagus river, noted as a royal residence since the 16th cent. The palace, burned in the 17th cent., was rebuilt by Philip V (1727) The Jardín de la Isla along the Tagus is the finest of the several palace gardens

Aransas Pass (ărăn'sŭs), city (pop 4,095), S Texas, NE of Corpus Christi, settled 1890, inc 1910 A Gulf port, it has a deepwater ship channel that goes through Harbor Island and through the pass between St Joseph Island and Mustang Island, where Port Aransas stands A sea wall protects the city, which ships much oil, has a carbon-black plant, and is also a fishing port

Arany, John (ō'rônyu), Hung *Arany János* (yä'nōsh), 1817–82, Hungarian poet Interrupting his studies at Debrecen, he joined a company of actors, but, disillusioned, returned to his native town of Nagykoros and became professor of Hungarian literature at the local college After his satirical poem *The Lost Constituton* (1845) won the prize of the Kisfaludy Society, he began work on his epic *Toldi* (1846), later adding *Toldi's Eve* (1854) and *Toldi's Love* (1879), which have been translated into English. Among his other works is an epic trilogy, *Buda's Death*, *Ildiko*, and *Prince Csaba* (unfinished), in addition to the ballads which are perhaps his finest works. His style, simple and often reminiscent of folk song, is compelling and powerful, and he is considered by some critics the greatest of all Hungarian poets He was secretary (1864–79) of the Hungarian Academy of Sciences

Arapahoe (ŭrăp'uhō), city (pop 1,002), S Nebr , on the Republican and SW of Kearney, in a farm area, laid out 1871

Arapahoe Peak, 13,506 ft high, N central Colo , in the Front Range of the Rocky Mts It has a large glacier

Arapaho Indians (ŭrăp'uhō), North American Indians of Algonquian linguistic stock, once settled about the North Platte and Arkansas river regions Tradition places their early home in N Minnesota, but nothing is known of the date or circumstances of the separation of the Arapaho from other Algonquian peoples They are thought to be most closely related to the Cheyenne and to the Blackfoot (see LANGUAGE, table) Traditionally the Southern Arapaho were allied with the Cheyenne against the Pawnee The Arapaho stressed membership in age-graded societies, mainly for ceremonial purposes Their annual sun dance was a major tribal event, and later the Arapaho fervently adopted the ghost-dance religion There are three major divisions—the Atsina or GROS VENTRE INDIANS, allied with the Blackfoot Indians and now on a reservation with them, the Southern Arapaho, now living with the Cheyenne in Oklahoma, and the Northern Arapaho, considered by the Indians to represent the parent group, settled since 1876 on the Wind River Indian Reservation in Wyoming with their former enemies, the Shoshone Wyoming and Oklahoma Arapaho were estimated to number 1,900 in 1942

Ararat (ă'rurăt), region, W Turkey and E Armenian SSR, a portion of Armenia The region, identical with ARMENIA in many ancient records, is stated in the Bible to be the landing place of Noah's ark Gen 8 4, Jer 51.27, 2 Kings 19 37, Isa 37 38 In ancient Assyrian inscriptions Ararat appears as Urartu Today it is called Massis in Armenian, Aghri Dagh (or Egri Dagh) in Turkish, and Koh-i-nuh in Persian Mt Ararat (16,946 ft high), in Turkey, is sometimes identified as the spot where the ark came to rest

Aras (ärəs'), river, 550 mi long, rising in Turkish Armenia near Erzerum It flows generally east, forming parts of the borders between Turkish and Soviet Armenia and between Soviet and Iranian Azerbaijan After entering the Azerbaijan SSR it joins the Kura before emptying into the Caspian Sea Much of its course is rapid and tumultuous The Aras is the Araxes of the ancients

Arason, Jon see ARESSON, JON

Aratus (ură'tus), 3d cent B C , Greek court poet, of Soli in Cilicia He wrote an astronomical treatise, *Phenomena*, which was quoted by Paul at Athens Acts 17 28.

Aratus, d 213? B C , Greek statesman and general of Sicyon, prime mover and principal leader of the second ACHAEAN LEAGUE To him was due the credit for bringing into the confederation many of the principal cities of Greece (e g , Athens and Argos), but his also was probably the blame for the subsequent Macedonian domination of the Peloponnesus, for, in fighting Sparta and the Aetolian League, he called in ANTIGONUS III

Araucanian Indians (ă"rôkā'nēun, ă"ru-), South American people, occupying at the beginning of the Spanish conquest of Chile (1540) the region W of the Andes between lat 30° S and lat 43° S Though vigorous and warlike, the Araucanians were an agricultural people living in small settlements Drinking *chicha* was a daily practice, and at feasts long bouts of intoxication were common In wars some cannibalism was practiced The known history of the Araucanians begins with the Inca invasion (c 1448–c 1482) under Tupac Yupanqui, but Inca influence was never strong Against the Spanish under Pedro de VALDIVIA the Araucanians offered resistance, notably under LAUTARO and CAUPOLICÁN, and their stout fight was immortalized in the epic by ERCILLA Y ZÚÑIGA They were successful in protecting S Chile and by 1598 had erased almost all Spanish settlements S of the Bío-Bío Their struggle continued intermittently in the 17th and 18th cent in the uprisings of 1723, 1740, and 1766 White immigration southward brought on the war of 1880–81, which ended with Araucanian submission Earlier, especially at the beginning of the 18th cent , Araucanians fleeing white pressure had gone across the Andes into Argentina. Capturing wild horses, they became wanderers on the plains and absorbed the PUELCHE Gen Julio A Roca subjugated them in his campaigns (1879–83) There are a number of tribes and a number of languages, which make up a separate linguistic family Most important is Mapuche The Araucanians continue to influence Chilean life

Araunah (ărô'nu), Jebusite who sold his threshing floor to David that an altar might be erected there This site, on Mt Moriah, was afterward used for the Temple. 2 Sam 24 15–25 Ornan 1 Chron 21 14–30, 2 Chron 3 1

Arawak (ă'rəwăk), linguistic stock of American Indians occupying at the time of the Spanish Conquest the islands of the Greater Antilles, the Bahamas, and Trinidad It is believed that the tribes came from South America Before the arrival of the Spanish they were driven from the Lesser Antilles by the Carib Most of the Arawak died out after the Spanish Conquest

Araxes, river see ARAS

Arba or **Arbah** (both är'bu), eponym of Kirjath-arba, "the city of Arba," more usually called HEBRON He is called the father of ANAK Gen. 35 27, Joshua 14 15, 15 13, 21 11

Arbela (ärbē'lu), town of ancient Assyria Its name is sometimes given to the battle fought at Gaugamela, some 60 mi away In the battle Alexander the Great defeated the hosts of Darius III in 331 B C Arbela is the modern Erbil

arbitration, industrial, method of settling disputes between employer and employees by seeking and accepting a decision by a person or persons not a party to the dispute Such arbitration may be compelled by the government, as in New Zealand (since 1894), Australia (since 1904), Canada (Lemieux Act, 1907), and Italy (1926), or it may be by voluntary agreement, as is often the case in the United States In the United States the government is occasionally forced to intervene, in case of a strike affecting the public welfare, by persuading the parties concerned to accept the decision handed down by the arbitrator Machinery for that purpose has been set up at both Federal and state levels in the form of mediation and arbitration boards through such laws as the Erdmann Act (1898), the Esch-Cummins Act (1920), and the Act of 1926 Formal agreement to abide by the decision is usually made in voluntary arbitration See Herbert Feis, *The Settlement of Wage Disputes* (1921), E M Burns, *Wages and the State* (1926), H A Millis and R E Montgomery, *Organized Labor* (1945), Vol III of *Economics of Labor*

arbitration, international, acceptance by states of the decision rendered by a third party or an impartial body respecting a dispute between them If the parties do not agree in advance to abide by the decision but merely to consider whether to accept it, the process used is conciliation, not arbitration Arbitration was practiced by the Greek city-states, and in the Middle Ages high ecclesiastical authorities were called upon to settle controversies In the 19th cent the growing intercourse of nations throughout the world made recourse to arbitration a more general practice An outstanding case involving the United States in the 19th cent was the arbitration of the ALABAMA CLAIMS Great advances were made as a result of the HAGUE CONFERENCES, notably the establishment of the Permanent Court of Arbitration (the HAGUE TRIBUNAL) Many treaties now provide for arbitration of disputes Functions analogous to arbitration were performed by the Permanent Court of International Justice (the WORLD COURT) and have been transferred to the INTERNATIONAL COURT OF JUSTICE See C M Bishop, *International Arbitral Procedure* (1930, J H Ralston, *International Arbitration from Athens to Locarno* (1929), John B Moore, *International Adjudications, Ancient and Modern* (6 vols , 1929–36)

Arblay, Madame d' see BURNEY, FRANCES

Arboga (är'bō"gu), town (pop 8,087), Vastmanland co , central Sweden, on the Arboga river Incorporated in 1330, it flourished especially in the 17th cent , and several diets assembled there

Arbogast (är'bŭgăst), d 394, Frankish general in Roman service He fought for THEODOSIUS I against the Visigoths in Thrace and for VALENTINIAN II against the usurper MAXIMUS In 392 Valentinian was murdered in Gaul, presumably on the order of Arbogast, who set up a puppet emperor, Eugenius, in the West In 394 Theodosius defeated Arbogast and Eugenius, Arbogast was slain in his flight

Arboleda, Julio (hō̄'lyō ärbōlā'dhä), 1817–1862?, Colombian poet and politician He was an important political force and spent some time in prison and some time in exile In 1860 he appeared as a revolutionist against Mosquera and was named president by his followers, but his career was ended some months later by assassination He is best known as the author of the unfinished epic poem *Gonzalo de Oyón*.

Arbor Day, in the United States, day specifically designated for the planting of trees It was first suggested by Julius Sterling MORTON of Nebraska in 1872 It is celebrated at different times in different states because of seasonal variation Planting of trees by school children has been a usual method of marking Arbor Day

arboretum see BOTANIC GARDEN

arborvitae (är"burvī'tē) [Latin,=tree of life], aromatic evergreen tree of the genus *Thuja*, with scalelike leaves borne on flattened branchlets of a fanlike appearance and with very small cones Some of the numerous varieties are dwarf forms There are several species, two native to North America, the remainder native to Asia but sometimes cultivated in this country *Thuja occidentalis*, of E North America, called arborvitae, white cedar, or northern white cedar, has many garden forms and is popular for hedges The leaves were once

used as a remedy for rheumatism, and their oil as a vermifuge *T plicata* of W North America, called western arborvitae, red cedar, or western red cedar, is much used for shingles, doors, and interior finishing The wood of both of these species is weak, soft, brittle, and light but quite resistant to decay, whence its popularity for fence posts

Arbroath (arbrōth'), **Aberbrothock** (ăb"ərbruthŏk'), or **Aberbrothwick** (ăb"ərbrōth'ĭk), burgh (pop 17,635), Angus, Scotland, on the North Sea It is the Fairport of Scott's *Antiquary* There are ruins of an abbey founded by William the Lion in 1178 A seaport and industrial town, it makes shoes and distills tar

Arbuckle Mountains, range of old mountains, S Okla Though reaching an average altitude of only 700 ft, they have interesting geological formations Platt National Park and Lake Murray State Park are parts of the region

Arbuthnot, John (arbŭth'-, är'-), 1667–1735, British writer, wit, and scientist, court physician (1705–14) to Queen Anne He is best remembered for his satirical writings, notably the five "John Bull" pamphlets ridiculing the Whig war policy (1712), which appeared as "The History of John Bull" in *Miscellanies in Prose and Verse* (1727) A friend of Swift, Pope, and Gay, Arbuthnot was a member of the SCRIBLERUS CLUB and wrote most, if not all, of "Memoirs of Martinus Scriblerus," published in Pope's works (1741) To him Pope addressed the famous "Epistle to Dr Arbuthnot" (1735) See G A Aitken, *The Life and Works of John Arbuthnot* (1892), L M Beattie, *John Arbuthnot* (1935), a critical study

arbutus, trailing see TRAILING ARBUTUS

Arc, Joan of see JOAN OF ARC.

arc. In electricity, the arc as first demonstrated by Sir Humphry Davy early in the 19th cent and so called by him because of its shape is the highly luminous and intensely hot path formed when two charcoal (carbon) rods, originally touching and transmitting an electric current, are pulled apart a short distance The current continues to flow from one to the other, the charcoal vaporizing, becoming incandescent, and acting as conductor between the two rods On one rod, the anode, which is commonly known as the positive carbon, a depression (called the crater) appears when direct current is used, while on the other rod, the cathode or negative carbon a cone is formed The size of both rods decreases continuously during operation, as a result of the oxidation of the carbon Before the invention of the incandescent lamp the carbon arc was used for LIGHTING purposes Coke was found to be more satisfactory than charcoal Various mechanical devices to maintain the carbon electrodes at a constant distance were employed Later, in place of carbon, metallic substances such as magnetite and copper were introduced as electrodes The mercury-arc lamp was invented by P C Hewitt (see MERCURY) The principle of the electric arc is employed in WELDING (as in the flaming hydrogen arc when hydrogen is introduced between tungsten electrodes) and is also used for generating heat in the electric furnace For oscillating arc, see OSCILLATOR

arc, in geometry, a curved line or any part of it, in particular a portion of the circumference of a circle

Arca, in Syria see ARKITE

Arcade, village (pop 1,683), W N Y , SE of Buffalo, in a dairy region, settled c 1800, inc 1871

arcade, series of arches supported by columns or piers An arcade may stand free, if it is attached to a wall, it is termed a wall arcade or a blind arcade The earliest-known arcades were in Roman architecture, in which piers, ornamented with engaged columns carrying an entablature, invariably formed the arch supports However, in Diocletian's palace at Spalato there are arches supported by columns and resting directly upon their capitals, the type which was given full development in Romanesque and Gothic architecture In the early Christian basilica columnar arcades separated nave and side aisles and supported the wall of the clerestory From this beginning was developed the rich system of bays used in Romanesque and Gothic church interiors, in which lofty arcades extended the full length of the nave Both free-standing and blind arcades were used in Romanesque façades (notably in N Italy) and in the west fronts of English and French Gothic cathedrals, where the arches were often filled with statues of saints Richly designed arcades surrounded the enclosed cloisters of the medieval and Renaissance monasteries, they were similarly used in the courts of dwelling houses in Italy and Spain and in the courtyards of Mohammedan mosques The Romanesque structures of Spain, Sicily, and S Italy made frequent use of arcades composed of interlacing arches, in which the arch rings overlap to alternate columns or piers Continuous arcades, extending over sidewalks, are common in Italian towns, notably in Bologna

Arcadia (ärkā'dēə), region of ancient Greece, in the middle of the Peloponnesus, without a seaboard, and surrounded and dissected by mountains The Arcadians, shepherds and hunters relatively isolated from the rest of the world, lived a proverbially happy, simple, natural life By far the largest city was MEGALOPOLIS, founded by Epaminondas It had some political power, especially in the Achaean League, but Arcadia as a whole was of little significance The independent mountaineers periodically fought against Spartan power, but did not cooperate well Other cities were MANTINEA, TEGEA, ORCHOMENUS, and Heraea A shrine of Zeus recalled the story of the eponymous hero, Aras

Arcadia 1 City (1940 pop 9,122, 1949 special census pop 21,556), in Monrovia township, S Calif , E of Pasadena, inc 1903 The area has orange and walnut groves, poultry farms, and truck gardens The Santa Anita race track is here 2 City (pop 4,055), co seat of De Soto co , S central Fla , on Peace river It is a trade and shipping center for an extensive livestock and citrus-fruit area 3 Town (pop 1,601), parish seat of Bienville parish, NW La , E of Shreveport, in a cotton area It has a training school for Negroes 4 City (pop 1,830), W Wis , on the Trempealeau and S of Eau Claire, inc 1925

Arcadius (ärkā'dēəs), c 377–408, Roman emperor of the East (395–408), son and successor of THEODOSIUS I His brother HONORIUS inherited the West He entrusted the government successively to RUFINUS, EUTROPIUS, and other ministers and was later much influenced by his wife EUDOXIA The chief events of his reign were the invasion (395) of Greece by ALARIC I, Alaric's expulsion (396) after the return of STILICHON, the temporarily successful revolt (399 400) of the Gothic officials and mercenaries in Constantinople, and the exile (404) of the patriarch St JOHN CHRYSOSTOM His son, Theodosius II, succeeded him

Arcagnolo see ORCAGNA

Arcanum (ärkā'nŭm), village (pop 1,188), Darke co , SW Ohio, NW of Dayton

Arcas (är'kəs), in Greek legend, son of Zeus by Callisto The people of Arcadia were said to be his descendants For the story of his becoming Arcturus, see CALLISTO

Arcata (ärkā'tu), city (1940 pop 1,855, 1948 special census pop 3,392), N Calif , N of Eureka and on Humboldt Bay, founded 1850, inc 1903 Its industries include lumbering and dairying Humboldt State College (coeducational, 1913) is here

Arc de Triomphe de l'Étoile (ärk' dŭ trēōf' du lātwäl') [Fr , =triumphal arch of the Étoile, i e , the Star, an open place, so called from its shape], imposing triumphal arch in Paris standing upon an elevation at the end of the Avenue des Champs Élysées and in the center of the Place de l'Étoile, which is formed by the intersection of 12 radiating avenues It commemorates the victories of Napoleon I, under whose decree it was built Construction was begun in 1806 by J F CHALGRIN from his own designs and was carried on after his death successively by L Goust, J N Huvot, and G A Blouet, who brought the arch to completion in 1836 It is 160 ft high, about 150 ft wide, and 72 ft deep, with colossal symbolic groups flanking the arch In 1920 the body of a French unknown soldier of the First World War was interred beneath it and a perpetual flame was lighted

Arce, Manuel José (manwĕl' hōsā' är'sā), d 1847, first president of the Central American Federation, (1825–29) Prominent in the revolution against Spain (1821) and his opposition to incorporation of Central America into Mexico, he was elected by the Liberals, but subsequently deserted his party and ruled arbitrarily with the support of the Conservatives He was overthrown by Francisco MORAZAN

Arcesilaus (ärsĕs"ĭlā'əs), c 316–c 241 B C , Greek philosopher of Pitane in Aeolis He was the principal figure of the Middle Academy Despite his position in the ACADEMY, his teachings diverged sharply from Platonic doctrine By emphasizing the doubt expressed by Socrates as to the possibility of gaining knowledge, he took a position comparable to that of the Skeptics As an intellectual agnostic he taught that knowledge and opinion could not be distinguished from each other As to behavior in practice, Arcesilaus held that we act on ideas rather than on certain knowledge, and so he avoided the usual ethical trap of skepticism Arcesilaus indirectly influenced Carneades and his school Arcesilaus was, in his day, the great opponent of Stoicism See M M Patrick, *The Greek Skeptics* (1929)

Arch, Joseph, 1826–1919, English labor leader, a Primitive Methodist preacher He founded the National Agricultural Labourers Union in 1872 and became its president In 1873 Arch visited Canada and the United States to study labor and immigration problems In Parliament he served (1885–86, 1892–1900) as one of its first labor members and was instrumental in enfranchising the agricultural laborers See his autobiography (ed by the countess of Warwick, 1898)

arch, the spanning of a wall opening by means of separate units (such as bricks or stone blocks) assembled into an upward curve which maintains its shape and stability through mutual pressure of the separate pieces The weight of the supported load is thus converted into two lateral pressures which are received by the solid piers (abutments) flanking the opening The downward and outward lateral pressures which they resist are called thrusts The blocks—voussoirs—composing the arch have a wedge shape, the block which fits into the crown of the arch is the keystone The curve at the inner edge is the intrados, that at the outer edge is the extrados The spring is the level at which the arch commences the upward rise There is also the flat arch composed of voussoirs radiating from a center An arch may also be executed in a homogeneous material, such as concrete, forming a single continuous unit, in which case there is little or none of the active lateral thrust In modern fireproof construction the word *arch* is also used for the masonry which fills the space between steel beams and acts as floor support Examples of arch construction have been found which date from c 3500 B C The arch was used by the Egyptians, Babylonians, and Greeks, chiefly for underground drains, and also by the Assyrians in the construction of vaulted and domed chambers In Europe the oldest-known arch is the Cloaca Maxima, the huge drain at Rome built by Lucius Tarquinius Priscus c 578 B C The Etruscan arched structures formed the starting point from which the Romans developed the semicircular arch to a full architectural expression in the vaults and domes of their monumental buildings Its use was continued in early Christian, Byzantine, and Romanesque architecture In the 13th cent the pointed arch (used as early as 722 B C in Assyrian drains) came into general use The contact of Europeans with Saracenic architecture during the Crusades is offered among other theories for its introduction into Europe But it is likely that the pointed arch may have been independently rediscovered in Europe in the Middle Ages as a device for solving many of the mechanical difficulties of vault construction Its adoption was an essential element in the evolution of the Gothic system of design With the Renaissance there was a return to the round arch, which prevailed until the 19th-century invention of steel beams for wide spans relegated the arch to a purely decorative function Though the circular and pointed forms have predominated in the West, the Mohammedan nations of the East developed a variety of other arched shapes including the ogee arch used in Persia and India, the horseshoe arch used in Spain and North Africa, and the multifoil or scalloped arch used especially in the Mohammedan architecture of Spain See also TRIUMPHAL ARCH

archaeology (ärkēŏ'lŭjē) [Gr , =study of beginnings], scientific study of the relics of man found in deposits dating from the beginnings of human life to the era of modern history Archaeology provides the materials for establishing the history of prehistoric times and supplements documentary material in the study of historic periods To locate, excavate, interpret, record, preserve, and, if necessary, restore his finds, the present-day archaeologist requires expert assistance from historians, anthropologists, linguists, geologists, chemists, botanists, architects, engineers, and photographers Materials have been collected since ancient times, notably by the Romans and during the Renaissance Research into the life and culture of the past, initiated in Italy after the introduction of a knowledge of ancient Greece by Greek scholars dispersed by the fall of Constantinople (1453), inspired the excavation of Greek sculpture In the 18th cent the progress of Greek and Roman archaeology was advanced by Johann Winckelmann and E Q Visconti and by excavations at HERCULANEUM and POMPEII, in the 19th, by the acquisition of the Elgin Marbles The study of ancient cultures in the Aegean region was stimulated by the excavations of Heinrich Schliemann at Troy and in Greece and of Sir Arthur Evans at Crete The foundations of Egyptology, a prolific branch of archaeology because of the antiquity of Egyptian culture and the wealth of material preserved in the Egyptian climate, were laid by the recovery of the ROSETTA STONE and the work of French scholars who accompanied Napoleon to Egypt Investigations which have reconstructed ancient life in the Nile valley and rewritten Egyptian history have been carried on in the 19th cent by C R Lepsius, A É Mariette, and G C C Maspero, and in the 19th and 20th cent by W M Flinders Petrie, J H Breasted, and other scholars Interest in the Near East was stimulated by the work of Edward Robinson (1794–1863) on the geography of the Bible and by the decipherment of a cuneiform inscription copied by H C Rawlinson from the BEHISTUN rock in Persia Archaeology in Mesopotamia was notably advanced in the 19th cent by Jules Oppert, P É Botta, and A H Layard, in the 20th, by C L Woolley The scientific explanation of prehistoric finds dates from the conclusion advanced in 1832 by the Danish archaeologist C J Thomsen that human industrial culture may be divided into stages of progress based on the principal materials used for weapons and implements These stages are the PALEOLITHIC PERIOD, the NEOLITHIC PERIOD, the BRONZE AGE, and the IRON AGE This sequence of culture is accepted as in general true of most of the world, it indicates the condition of a people rather than absolute divisions of time. In

different areas the succession is not synchronous, nor are the stages of equal duration in all areas Parts of Africa are still in the Neolithic period, the Bronze Age is represented in remote regions of Siberia Some peoples have passed directly from the Stone to the Iron Age Important prehistoric finds have been made at HALLSTATT, Austria, Villanova (near Bologna), Italy, and LA TÈNE, Switzerland, and in the study of such characteristic remains as the BARROW, KITCHEN MIDDEN, LAKE DWELLING, MOUND building, and MEGALITHIC MONUMENTS The study of past times is enhanced, especially in America, by the investigation of the life and customs of existent aboriginal groups Advanced indigenous cultures were ignored until the publication of J L Stephens's account of his travels (1839) in Central America excited the interest of archaeologists in the MAYA In the 19th cent fruitful studies were begun of the TOLTEC and of the AZTEC who followed them in Mexico and of the INCA in South America The culture of the MOUND BUILDERS of the Mississippi and Ohio valleys was first described by E G Squier and E H Davis in *Ancient Monuments of the Mississippi Valley* (1848) G E A Nordenskiold wrote of the CLIFF DWELLERS of the SW United States in *The Cliff Dwellers of the Mesa Verde* (Eng tr , 1895?) Studies of the BASKET MAKERS of the Southwest have been illuminating The antiquity of man in America had been considered as from 5,000 to 6,000 years until excavations near Folsom, E of Raton, N Mex , in 1926 revealed a culture possibly 20,000 years old (see FOLSOM CULTURE) In the 20th cent archaeological researches have been vigorously prosecuted in all parts of the world Important efforts have been made to promote systematic research and the scientific study of archaeological materials and to preserve them Museums with valuable collections include the Metropolitan Museum and the American Museum of Natural History in New York, the British Museum, the Louvre, national museums in Denmark, Norway, and Sweden, rich in remains of the Iron Age, the Vatican and Capitoline museums, Rome, collections from Pompeii and Herculaneum at Naples, and museums in Athens and Cairo Many universities have established schools and museums of archaeology Organizations, such as the Carnegie Institution, the Smithsonian Institution, and the National Geographic Society in the United States, promote archaeological studies See also INDIANS, AMERICAN See R V D Magoffin and E C Davis, *The Romance of Archaeology* (1930), W G Childe, *Progress and Archaeology* (1944), Grahame Clark, *Archaeology and Society* (2d ed , 1947), W W Taylor, *The Study of Archeology* (1948), publications of learned societies, e g , Archaeological Institute of America, Hellenic Society, Egypt Exploration Society, and Palestine Fund

archaeopteryx (ärˌkēŏpˈtərĭksˌ) [*archaeo-*, Gr , = primitive, *pteryx*, Gr , = wing], primitive bird, two incomplete fossils of which were discovered in the 19th cent in the late Jurassic limestone of Solnhofen, Bavaria A true bird, as is shown by the presence of feathers and the structure of the legs and wings, it nevertheless had many characteristics now found only in reptiles or in bird embryos It was smaller than a crow

Archaeozoic era see ARCHEOZOIC ERA

Archangel (ärkˈänˈjəl), Rus *Arkhangelsk* (ŭrkhänˈgĭlsk), city (pop 281,091), capital of Archangel oblast, RSFSR, a major port on the mouth of the Northern DVINA, 25 mi from the White Sea The port is free of ice from July to September Archangel, which is the largest sawmilling and lumber-exporting center of the USSR, also ships resin, turpentine, furs, and hog bristles It is the terminus of a railroad from Vologda The city was founded (1583) as Novo-Kholmogory after a party of English merchants had landed here, it was renamed (1716) for a monastery The Cathedral of the Archangel Michael was built in 1685 99 Until the foundation (1703) of St Petersburg, Archangel was the principal port of Russia It regained importance after the construction (1897) of the railroad, and it played a major role as a supply port in both world wars From 1918 to 1920 it was occupied by the Allies and the White Army

archangel (ärkˈān-), chief ANGEL, differing from other angels only in importance Three are best known, MICHAEL, GABRIEL, and RAPHAEL, they have set functions According to Tobit 12 15 there are seven archangels

Archbald, mining and industrial borough (pop 8,296), NE Pa , on the Lackawanna river and NE of Scranton, settled 1831 by Welsh, inc 1877

Archbold, village (pop 1,236), NW Ohio, SW of Wauseon

Archdale, residential town (pop, 1,097), central N C , SE of High Point, founded 1773 by Quakers

Archelaus (ärˌkēlāˈəs) [Gr , = ruler of the people] see HEROD

Archeozoic era (ärˌkēəzōˈĭk) [Gr , = primeval life], first grand division of geologic time, characterized by the formation of the oldest accessible rocks, the Archean system The Archean is, however, covered by rock systems of more recent origin over most of the surface of the earth, where it is not covered, it has been greatly altered by METAMORPHISM. One of the largest areas exposed is the Canadian Shield of central and E Canada (and the N United States near Lake Superior), where Sir William LOGAN did his pioneer work The rocks of this region, and of the Archean as a whole, are generally GRANITE, SCHIST, or GNEISS. The most notable formations are the Keewatin and Coutchiching of Minnesota and the adjoining part of Canada, the Grenville of Ontario, which, however, may be of the PROTEROZOIC ERA, and the widely distributed Laurentian The Keewatin series is composed chiefly of metamorphosed lava, with some sediments, and the Coutchiching series of sedimentary gneisses and schists, the Grenville limestone, marble, gneiss, and quartzite are predominantly metamorphosed sediments, the Laurentian gneiss and granite are probably younger than the other series, having been forced up through the Grenville as IGNEOUS ROCK in some great earth movement After the appearance of the Laurentian the Temiskaming or Sudburian sediments were deposited, and a second series of gneisses and granites, the Algoman, was formed Fossils have been reported from this era, but none have yet been found in strata universally acknowledged to be Archeozoic Indirect evidence, however, supports the belief that rudimentary life existed The Archeozoic is estimated by some geologists to have endured 500,000,000 years Many combine it with the Proterozoic as Pre-Cambrian time

Archer, William, 1856 1924, English author and critic and translator of Ibsen, b Scotland, grad Edinburgh Univ Largely through his efforts *Pillars of Society* was produced in London in 1880, other plays of Ibsen's followed in subsequent years, and Archer edited Ibsen's *Prose Dramas* (5 vols , 1890 91) He became dramatic critic of the London *World* and launched Shaw on a journalistic career, his criticisms for the *World* were collected as *The Theatrical "World"* (1893–97) His writings include *America To-day* (1900) and *Real Conversations* (1904) *The Green Goddess* (1921), a play, was produced successfully in England and the United States See biography by his brother, Charles Archer (1931)

Archer, the see SAGITTARIUS

Archer City, city (pop 1,675), co seat of Archer co , N Texas, S of Wichita Falls, settled c 1880 inc 1910 Founded as a cow town, it now serves oil fields, ranches, and poultry, grain, and dairy farms

archery An important military skill before the introduction of gunpowder, shooting with BOW AND ARROW was revived as a sport (c 1675) in England by Charles II The object of the archer is with a specified number of arrows to hit or to come as close as possible to the inner circle –the "bull's-eye"—of the target, which is composed of a number of concentric circles In the United States, archery became a popular sport after 1879, when the National Association of Archers (now the National Archery Association) was formed National championship matches are held annually Famous American archers include W H Thompson, L W Maxson, Dr R P Elmer, and Mrs M C Howell

Arches National Monument see NATIONAL PARKS AND MONUMENTS (table)

Archevites (ärˈkēvīts), colonists sent into Samaria by the Assyrian government They were probably natives of Erech Ezra 4 9

Archi (ärˈkē) see ARCHITE

Archibald, Raymond Clare, 1875–, American mathematician, b Nova Scotia, grad Mt Allison College, 1894, and Harvard (B A , 1896, M A , 1897) He studied at the universities of Strasbourg (Ph D , 1900), Berlin, and Rome and at the Sorbonne From 1908 he taught at Brown Univ , becoming professor of mathematics in 1923 In 1945 he became professor emeritus His works include a bibliography of Simon Newcomb (1905), *Euclid's Book on Divisions of Figures with a Restoration* (1915), *Benjamin Peirce* (1925), and *Bibliography of Egyptian Mathematics* (1927–29) He edited the American Mathematical Society *Bulletin* and the *American Mathematical Monthly*

archil (ärˈkĭl, -chĭl) or **orchil** (ôrˈ–) [O Fr], purple dye extracted from certain species of LICHEN, also called orchella weeds, found in various parts of the world The archil of commerce is either a powder (called cudbear) or a paste, archil proper

Archilochus (ärkĭlˈŭkŭs), fl c 700 or c 650 B C , Greek poet, b Paros His masterful iambic satire and his innovations in the use and construction of the personal lyric were much appreciated by the ancients A few fragments of his verse survive

Archimedes (ärkĭmēˈdēz), 287–212 B C , Greek mathematician, physicist, and inventor He is famous for his work in geometry (on the circle, sphere, cylinder, and parabola), physics, mechanics, and hydrostatics He lived most of his life in his native Syracuse, where he was on intimate terms with the royal family Few facts of his life are known, but tradition has made one or two stories famous According to one, Hiero II asked him to determine whether a certain crown was pure gold or alloyed with silver Archimedes was perplexed until one day in his bath he realized that gold and silver being of different density, would displace different weights of water and that he could test the crown thus To illustrate the principle of the lever he is said to have told Hiero, "Give me place to stand, and I will move the world " His machines of war were so ingenious that the besieging armies of M Claudius Marcellus were held off for three years When Syracuse was taken, the general gave orders to spare the scientist, but Archimedes was killed The general raised him a great tomb and did him high honors In 75 B C , Cicero, who was visiting Syracuse, rediscovered Archimedes' tomb Nine of Archimedes' treatises survive, demonstrating his discoveries in mathematics and in floating bodies They are entitled *On the Sphere and Cylinder, The Measurement of the Circle, On the Equilibrium and the Center of Gravity of Planes, On Conoids and Spheroids, On Spirals, The Quadrature of the Parabola, Arenarius* (a system for counting into very high numbers), *On Floating Bodies,* and *The Method* See study by T L Heath (1920)

Archimedes' principle states that a solid body immersed in a liquid is buoyed up by a force equal to the weight of the liquid displaced When a solid body heavier than water is immersed in water and weighed thus, it apparently loses weight, i e , weighs less than when weighed in air Furthermore, this apparent loss of weight is found to equal the weight of the water which has been displaced by the solid As a result, then, it is said that the solid body is buoyed up by a force (in physics, forces are measured in units of weight) equal to the weight of the water displaced A body lighter than water will float in water but with a certain portion of its volume beneath the surface, thus displacing a certain volume of the water When the weight of this volume of water is determined, it is found to equal the total weight of the floating body itself Therefore, it is said that a floating body displaces its own weight in a liquid Archimedes' principle is applied in determining the displacement of ships and, in the laboratory, the specific gravity of substances It is applied also to gases, especially with respect to the "lifting" force of balloons Archimedes is also supposed to have invented the machine known as **Archimedes' screw** It consists of a cylinder inside of which a continuous screw, extending the full length, forms a spiral chamber By placing the lower end in water and revolving the screw, the water is raised to the top A machine of this general type is used in the Netherlands for drainage purposes The principle is further applied in the spiral conveyors designed for handling loose, light materials such as grain, sand, and ashes and also in some types of high-speed tools

Archipelago (ärkĭpĕˈlŭgō) [Ital , from Gr = chief sea], ancient name of the AEGEAN SEA, later applied to the numerous islands it contains The word now designates any cluster of islands

Archipenko, Aleksandr (älyĭksändrˈ ärkĭpĕngˈkō), 1887–, Russian sculptor in America His somewhat abstract figures, often based on the female nude, have gained him international celebrity His *White Torso* in silvered bronze (examples in the National Gall , London, and in the Chicago Art Club) is characteristic Archipenko's highly decorative and rhythmic creations in bronze, terra cotta, cement, and colored ceramics are to be seen in many modern galleries Archipenko is also known as an abstract painter and as a gifted teacher

Archipiélago de Colón see GALAPAGOS ISLANDS

Archippus (ärkĭpˈəs) [Gr , = master of the horse], Colossian Christian Col 4 17, Philip 2

Archite (ärˈkīt), customary epithet of HUSHAI It refers to a district probably near Bethel At Joshua 16 2 AV has "the borders of Archi," and RV, more clearly, "the Archites"

architecture, construction in which the human requirements and the building materials involved have been so dealt with as to furnish a practical and aesthetic solution, thus differing from the pure utility of engineering construction Modern architecture, however, often approaches actual engineering in its mechanical completeness, and modern works of engineering—airplane hangars, for example—often achieve, without intention, an undeniable beauty As an art, architecture is abstract and nonrepresentational The means used for achieving beauty are dimensional forms and the spatial relationship integral to the structure itself and independent of any extraneous associations While always under the necessity of enclosing the requisite spaces for living and working, architecture in each of its historical phases has also permanently preserved for study the social and religious patterns of the era The course of architecture has often been made to seem merely a succession of more or less arbitrary 'styles", however, behind each of the greater styles lies, not a casual trend or vogue, but a period of serious and urgent experimentation directed toward answering the needs of a specific way of life Climate, methods of labor, available materials, and economy of means impose their dictates Behind the works of the past can be discerned the search for methods permitting the most sparing outlay and the greatest expediency The processes of style formation generally are slow and conservative, only by experimentation and

over a long period, sometimes lasting for centuries, can the suitable mechanical technique and artistic form be attained The one word *style* is forced, unhappily, to apply, not only to great organic modes such as the Gothic, but to all the numerous minor fashions, such as the Empire style Each of the greater styles has been given its impetus by the discovery of a new structural method and has arrived laboriously at adequate employment of it Once developed it survives tenaciously, giving way only when social changes or new forms of construction have reduced it finally to a complete anachronism Most of this is well illustrated by MODERN ARCHITECTURE, which has been evolving since the first uses of structural iron and steel in the mid-19th cent Up to the present there have been three great developments in architectural construction—the post-and-lintel, or trabeated, system, the arch system, either the cohesive type, employing plastic materials hardening into a homogeneous mass, or the thrust type, in which the loads are received and counterbalanced at definite points, and the modern steel-skeleton system In Egyptian architecture, to which belong some of the earliest extant structures entitled to be designated as architecture, the post-and-lintel system was employed exclusively and produced the earliest stone columnar buildings in history The architecture of W Asia, reaching back, as in Egypt, to more than 3,000 years B C, employed the same system, however, arched construction also was known and used The Chaldaeans and Assyrians, chiefly dependent upon clay as their material, built vaulted roofs of damp mud bricks which adhered to form a solid shell—the first examples of the cohesive system It remained, however, for the Greeks, using also the simple post-and-lintel system, to bring it after generations of experimentation to a climax in buildings of limited variety but of high perfection Greek architecture, with its pure and completely honest forms, arrived at its apogee in the PARTHENON and the other majestic marble temples of the 5th cent B C (See also ORDERS OF ARCHITECTURE) Roman architecture, borrowing and combining the columns of Greece and the arches of Asia, erected a wide variety of monumental and lavish buildings over the civilized world Their momentous invention of CONCRETE enabled the imperial builders to bring toward a culmination the cohesive system of vault construction of W Asia and to cover vast unbroken floor spaces with great inert vaults and domes, as in the rebuilt Pantheon (2d cent A D) Masonry vaulting, thus first employed as a monumental architectural element by Roman builders, was destined to pose its problems to future centuries, both in East and West The Romans and the early Christians also used the wooden truss for roofing the wide spans of their basilica halls Neither Greek, Chinese, nor Japanese architecture has used the vault system of construction However, in the Asiatic division of the Roman Empire, vault development continued, and here Byzantine architecture experimented with new principles and developed the PENDENTIVE, which perfected in the 6th cent the vaulted system in the Church of HAGIA SOPHIA, Constantinople Instead of insuring vault stability by massive bulk the builders seized the scientific devices of opposing one vault thrust against that of another and of transferring thrusts to definite points where they could be conveniently abutted In Romanesque architecture, vaulting again became dominant in the West, this time being executed in cut stone In Lombard Romanesque (11th cent) the Byzantine concentration of thrusts was enhanced by the device of vault ribs and of piers to support them The idea of organic supporting and buttressing skeleton of masonry, here appearing in embryo, became the vitalizing aim of the medieval builders In 13th-century Gothic architecture it emerged in perfected form, as in the Amiens and Chartres cathedrals The various possibilities of vaulted architecture, first explored in ancient Mesopotamia, had now, in medieval Europe, been finally coordinated into one of the few supreme styles The birth of Renaissance architecture (15th cent) inaugurated a period of several hundred years in Western architecture during which the multiple and complex buildings of the modern world began to emerge, while at the same time no new and compelling structural conceptions appeared The forms and ornaments of Roman antiquity were resuscitated and were ordered into numberless new combinations, and structure served chiefly as a convenient tool for attaining these effects BAROQUE architecture was the chief 17th-century manifestation of the Renaissance, while the GEORGIAN STYLE was among its notable 18th-century expressions The first half of the 19th cent was given over to the CLASSIC REVIVAL and the GOTHIC REVIVAL The architects of the later 19th cent found themselves in a world being reshaped by science, industry, and speed. The needs of a new society pressed them, while steel, reinforced concrete, and electricity were among the new factors at their disposal The imitation of dead styles became yearly more pointless, and individual architects began the conscious search for adequate new structural and artistic formulas After a half century of assimilation and experiment it seems possible to recognise the modern steel-skeleton style in its essence See BUILDING See Russell Sturgis and A L Frothingham, *History of Architecture* (1915); F M Simpson, *History of Architectural Development* (1921), Talbot Hamlin, *Architecture through the Ages* (1940) and *Architecture—an Art for All Men* (1947); Bannister Fletcher, *History of Architecture* (1943)

architrave (är'kĭtrāv), in architecture, the principal beam and lowest member of the classical entablature, whose other main members are the FRIEZE and the CORNICE Its position is directly above the columns, between which it extends, thus carrying the upper members of the order (see ORDERS OF ARCHITECTURE) The term also applies to molding around the sides and top of a door or window frame and to that for a wainscot or other panel

archons (är'kŏnz, -kunz) [Gr, =leaders], in ancient Athens and other Greek cities, officers of state Originally in Athens there were three archons the *archon eponymos* (so called because the year was named after him), who was the chief officer of state, the *archon basileus*, who was primarily connected with sacred rites, and the *archon polemarchos* (the polemarch), who—theoretically, at least—had military leadership Six more archons, the *thesmothetai* (thesmothetes), were later added, they were junior officers, generally in charge of the courts The archons were elected, and after they had served and their records had been approved, they entered the AREOPAGUS In 487 B C the election law was altered, and the archons were thereafter chosen by lot, the office, which had previously been limited to the two upper classes, was opened to the third class Thereafter the archontate declined greatly in importance The lists of eponymous archons kept after the 7th cent are a valuable source

Arciniegas, Germán (hĕrmän' ärsēnyä'gäs), 1900–, Colombian historian and diplomat He gained prominence as a journalist and publisher Translated works are *The Knight of El Dorado the Tale of Don Gonzalo Jiménez de Quesada* (1942) and *Germans in the Conquest of America* (1943) He edited *The Green Continent* (1944), an interpretation of Latin America by its leading writers

Arcola (ärkō'lu), city (pop 1,837), E central Ill, ESE of Decatur, in a broomcorn area, platted 1855, inc 1865

Arcole (är'kōlā), village, Venetia, NE Italy, 15 mi SE of Verona Here in 1796 Napoleon Bonaparte defeated the Austrians in a three-day battle

Arcos de la Frontera (är'kōs dā la frōntā'ra), city (pop 10,919), Cádiz prov, SW Spain, in Andalusia, on a rocky hill above the Guadalete river At the summit are a Gothic church and the palace of the duke of Arcos Wine and olive oil are produced

Arcot (ärkŏt'), town (pop 16,583), E central Madras state, India It was the first important city captured (1751) by Robert Clive in the British-French struggle for S India After being taken by the French (1758), by the British (1760), and by Hyder Ali (1780), it came in 1801 under British control Arcot is a center for trade in rice, sugar cane, peanuts, and cotton Weaving is the chief industry

Arctic Archipelago (ärk'tĭk ärkĭpĕ'lugō), off N Canada, in the Arctic Ocean The largest islands are BAFFIN ISLAND, VICTORIA ISLAND, BANKS ISLAND, ELLESMERE ISLAND, and MELVILLE ISLAND The group was assigned to Canada in 1880

Arctic Ocean, sea, roughly circular and almost entirely landlocked, at the top of the world, extending from the North Pole to lat 80° N (or, including the fringe of smaller seas, lat 70°) Geographers, regarding it as a subsidiary of the Atlantic, prefer to call it the Arctic Sea With an area of c 5,400,000 sq mi, it is a little smaller than the Antarctic continent and about one sixth the size of the Atlantic Ocean The lands which lock it in are Greenland, Canada, Alaska, the USSR, and Norway Fringing the Arctic proper are the Greenland Sea, Baffin Bay, and the Beaufort, East Siberian, Laptev, Kara, and Barents seas Its islands are the ARCTIC ARCHIPELAGO, Wrangel Island, the New Siberian and Lyakhov islands, Severnaya Zemlya, Novaya Zemlya, the Franz Josef archipelago, and Spitsbergen Iceland lies just outside the Arctic Circle (see ARCTIC REGIONS) The Arctic was formerly known as the Frozen Ocean, and it was long thought that no life could exist there Instead, despite drifting ice, ice packs, vast ice floes, and winter temperatures to −60° F, there are hares, polar bears, gulls, and guillemots as far north as 88° and plankton in all the waters In the Arctic Ocean the widest continental shelf known to the world stretches N from Siberia, and a similar shelf, extending N from North America, is partly exposed in the Arctic Archipelago before it drops off in the northwest to an oval basin, which reaches from the North Pole S toward BERING STRAIT and is the deepest part of the sea—14,070 ft near the pole The basin was almost wholly unexplored until the Amundsen-Ellsworth flight over it in 1926 This and subsequent flights and explorations proved that the deep water has no islands The only other considerable depth is in the Greenland Sea E of Greenland Connected with the Pacific only by the narrow and very shallow Bering Strait, the Arctic does communicate widely with the Atlantic, principally through the Greenland Sea Even there, though surface waters communicate freely and a strong subsurface current brings warm water from the Atlantic into the polar basin, exchange of deeper waters is barred by a submerged mountain range This is the Faeroe-Icelandic Ridge, which has peaks emerging as islands Thus the Arctic, though small, has an independent existence, with peculiar temperatures, ice conditions, and currents Because several major rivers in Siberia and Canada, draining a large land area, bring in much water and evaporation is only slight, the outflow through the Greenland Sea is important It creates the cold current, the East Greenland Current, which flows south along the east coast of Greenland A weaker current goes through Smith Sound and Baffin Bay and is known as the Labrador Current Another weak current flows out of the Bering Strait The water which does not flow out by the Greenland Sea seems to be deflected by the north shore of Greenland and forms the current which, off the northwest shores of the Arctic Archipelago, runs southwest and west and turns again to seek the outlet, thus giving rise to a circular flow in the Arctic itself. This current causes the ice in the Siberian seas to be relatively light as compared with the heavy-pressure ice phenomena off Greenland and Ellesmere Island (in the Arctic Archipelago) The drift of the ice southward and westward has been noted and utilized by recent explorers Some of the ice pack remains in the Arctic basin Some, carried out by the East Greenland Current, melts before going far enough south to reach the regular Atlantic shipping lanes, the icebergs that harass ships are generally brought from the fjords of W Greenland by the Labrador Current The cold Arctic currents give the northeast shores of North America and Asia a much colder climate than the northwest shores of Europe and North America, which are warmed by the NORTH ATLANTIC DRIFT (see also GULF STREAM) and the JAPAN CURRENT The Arctic currents are also less saline and lighter than these warmer currents and therefore the Arctic water is at the surface and the Atlantic current beneath, where they are exchanged in the Greenland Sea The broad general picture of the Arctic was established some years ago, but Arctic research was stimulated when it was recognized that the shortest air routes between capitals and commercial centers of the Northern Hemisphere lie above the Arctic Ocean Flights over the North Pole are now made with almost routine frequency Scientific equipment has also facilitated research, with aerial photography and photogrammetic map making, radar and the Fathometer for measuring ocean depths, and radio to maintain contact with the rest of the world Detailed knowledge of drifts and ice floes, water depths, and the ocean floor has been vastly increased One fact of great potential importance is now being studied—the Arctic Ocean is warming Recorded temperatures, glacial regressions, and the appearance of observed species of fish in larger numbers, at higher latitudes, at earlier seasons, and for longer periods prove that over decades a "climatic improvement" has taken place Similar changes have been reported in subarctic latitudes Whether the warming is a phase in a cycle or permanent cannot yet be said For an account of exploration and for bibliography, see ARCTIC REGIONS

Arctic Red River, rising in the Mackenzie dist, W Northwest Territories, in the northern ranges of the Rockies and flowing 230 mi generally NW to the Mackenzie At its mouth are a post of the Royal Canadian Mounted Police and the Arctic Red River Post (1900) of the Hudson's Bay Company

arctic regions, northernmost area of the earth, centered about the North Pole and the Arctic Ocean It extends more than one third of the way to the equator The Arctic Circle at 66° 17′ N could be considered arbitrarily the boundary, but the weather boundary determined by temperature is a wavy line changing with the seasons In summer the coldest areas are on the icecap in N Greenland and in the never-melting region about the North Pole In winter the lowest temperatures are in N Siberia and N central Canada The arctic regions, therefore, are marked in winter by an ellipse with the ends hanging over the northern continents, in summer the regions are wide over the oceans and pressed far northward over the continents The cold loses its full grip on the arctic regions in summer, everywhere there is at least one month with a temperature above freezing Under the "midnight sun" temperatures mount and vegetation springs to life in the BARREN GROUNDS and the TUNDRAS wherever the soil can give sufficient nourishment The flowers of the arctic meadows have pleased the eyes of many explorers The abundant animal life has many fur bearers and many animals with a high food value for man There are seal, walrus, whale, and many fish. Duck and other water fowl light on the summer lakes. On the rocky coasts are rookeries of auks, terns, and other sea birds The ESKIMO has used this abundant animal life to adapt

himself to arctic conditions. Arctic explorers have generally succeeded in so far as they have learned what the Eskimo can teach, as did Vilhjalmur STEFANSSON The first explorers in the arctic regions were the Norsemen, the VIKINGS Much later the search for the NORTHWEST PASSAGE and the NORTHEAST PASSAGE to reach the wealth of the Orient from Europe spurred exploration to the north This activity began in the 16th cent and continued in the 17th, but the hardships suffered and the negative results obtained by early explorers —among them Martin FROBISHER, John DAVIS, Henry HUDSON, William BAFFIN, and William BARENTZ—caused interest to wane The fur traders in Canada did not begin serious explorations across the barren grounds until the latter part of the 18th cent Alexander MACKENZIE undertook extensive exploration after the beginnings made by Samuel Hearne, Philip Turnor, and others. Already in the region of NE Asia and W Alaska the Russian explorations under Vitus BERING and others and the activities of the *promyshlennyki* [fur traders] had begun to make the arctic coasts known After the Napoleonic Wars, British naval officers, inspired by the efforts of John BARROW, took up the challenge of the North Sir John FRANKLIN, F W BEECHEY, John Ross and James ROSS, W E PARRY, P W DEASE, Thomas SIMPSON, George BACK, John RAE—each name carries its own story of courage, hardship, and adventure The disappearance of Franklin on his expedition of 1845–48 gave rise to more than 40 searching parties, English and American The general outlines of the arctic Canadian coast and the archipelago N of Canada were made known Otto SVERDRUP, D B MACMILLAN, and Vilhjalmur STEFANSSON added significant knowledge Meanwhile FRANZ JOSEF LAND was discovered, NOVAYA ZEMLYA explored The Northeast Passage was finally navigated in 1875 by N A E NORDENSKJOLD Roald AMUNDSEN, who went through the Northwest Passage in 1903–6, also went through the Northeast Passage in 1918–20 GREENLAND attracted some explorers, and some sought to be first at the North Pole The credit went to Robert E PEARY in 1909 Fridtjof NANSEN in the brilliantly conceived drift of his vessel *Fram* in the ice in 1893–96 failed to reach the North Pole but added enormously to the knowledge of the Arctic Ocean and earned rank as one of the greatest of arctic explorers Air exploration of the regions began with the tragic balloon attempt of S A ANDREE in 1897 In 1926 Richard E BYRD and Floyd BENNETT flew over the North Pole, and Amundsen and Lincoln ELLSWORTH flew from Spitsbergen to Alaska across the North Pole and unexplored regions N of Alaska In 1928 George H WILKINS flew from Alaska to Spitsbergen The new era was thus inaugurated The accent was not only upon the air but also upon cooperative enterprise rather than individual explorations The use of the "great circle" route for world air travel increased the importance of arctic regions, while new ideas of the agricultural and other possibilities of arctic and near-arctic regions led to many projects of development The USSR was particularly active In 1937 and 1938 many field expeditions were sent out by British, Danish, Norwegian, Russian, Canadian, and American groups to learn more of the North The Soviet group under Ivan Papinin set down on an ice floe near the North Pole and drifted with the current for 274 days Valuable hydrological, meteorological, and magnetic observations were made The four men were taken off the floe at lat 70° 48′ N, long 19° 48′ W, after having drifted from lat 89° 26′ N, long 78° W Arctic drift was further explored (1937–40) by the Russian icebreaker *Sedov*, and the existence of Sannikov Island was proved a myth In 1938 air photographs by Lange KOCH over N Greenland proved the much-sought Peary Channel to be only a fjord Before the Second World War the USSR had established many meteorological and radio stations in the arctic regions Russian activity in practical exploitation of resources also pointed the way to the development of the arctic regions, thus, Igarka at the mouth of the Yenisei above the Arctic Circle was built up to develop the mineral and timber resources of the region Between 1940 and 1942 the Royal Canadian Mounted Police vessel, the *St Roch*, made the first west-east journey through the Northwest Passage In the war interest in transporting supplies gave rise to considerable study of arctic conditions After the war interest in the North was keen The Canadian army in 1946 undertook a project which had as one of its objects the testing of new machines (notably the snowmobile) for use in developing arctic regions After the war there was a strong impulse to develop Alaska and N Canada, but no consolidated effort, like that of the Russians, to take the natives into partnership for a full-scale development of the regions Classic narratives of arctic exploration include N A E. Nordenskjold, *The Voyage of the "Vega"* (Eng tr., 1881); G W. De Long, *The Voyage of the "Jeannette"* (1883); A W Greely, *Three Years of Arctic Service* (1886), Fridtjof Nansen, *Farthest North* (Eng tr., 1897) and *In Northern Mists* (Eng. tr , 1911); Roald Amundsen, *Amundsen's North-West Passage* (Eng tr , 1908); R E Peary, *The North Pole* (1910), Vilhjalmur Stefansson, *My Life with the Eskimo* (1913) and *The Friendly Arctic* (1921), Knud Rasmussen, *Greenland by the Polar Sea* (Eng tr , 1921) and *Across Arctic America* (Eng tr , 1927), G H Wilkins, *Flying the Arctic* (1928), and D L Brainard, *The Outpost of the Lost* (1929) For history and geography, see R N R Brown, *The Polar Regions* (1927), A W Greely, *The Polar Regions in the Twentieth Century* (1928), Otto Nordenskjold and Ludwig Mecking, *The Geography of the Polar Regions* (Eng tr , 1928); Robert Marshall, *Arctic Village* (1933); N M Crouse, *The Search for the Northwest Passage* (1934), Jeannette Mirsky, *To the North!* (1934), Peter Freuchen, *Arctic Adventure* (1935), Andrew Croft, *Polar Exploration* (rev ed , 1947)

Arcturus (ärktyōōr'ŭs) or **Alpha Boötis** (ăl'fu bō-ō'tĭs) [Arcturus from Gr ,=guard of the bear (see CALLISTO), Alpha Boötis, from Gr ,=chief star of the constellation Bootes (bō-ō'tēz)], one of the most brilliant stars of the northern celestial hemisphere An orange-colored first magnitude star, located almost directly in line with the two end stars of Ursa Major (i e , the last two stars in the handle of the Dipper), Arcturus is the most prominent object in the constellation Boötes Its heat has been found to be about two thirds as great as that of our sun, and its distance from our solar system is about 32 6 light years Its diameter, measured by means of the Michelson interferometer, is c 18,000,000 mi Arcturus was known to mariners in very ancient times, many Egyptian temples were oriented to it, and mention is made of it by Hesiod The Arcturus in AV (Job 9 9, 38 32), as often in the ancients, is probably the constellation Ursa Major, RV translates in those passages "the Bear " It is one of the stars noted by Halley as having changed its place between his time and that of ancient Greek astronomers or even of Tycho Brahe By means of a photoelectric cell, a beam from Arcturus, received in a telescope at Yerkes Observatory, Williams Bay, Wis , turned on the lights at the opening of the Century of Progress fair, Chicago, May, 1933

Ard [Heb ,=descent] **1** Son of Benjamin Gen. 46 21 **2** Benjamite, perhaps the same as **1** Num. 26 40 Addar 1 Chron 8 3

Ardashir I (ärdĭshēr') [another form of Artaxerxes], d 240, king of Persia (226?–240) He overthrew the last Parthian king, Artabanus (or Ardawan), entered Ctesiphon, and built reunited Persia out of the confusion of Seleucid decline He established the strong Sasani or Sassanian dynasty (see SASSANIDAE) and reconquered the old eastern territories Ardashir established ZORASTRIANISM as the state religion and gave much power to the priestly caste His move against Mesopotamia, Armenia, and Cappadocia caused ALEXANDER SEVERUS to campaign against him A great battle in 232 cost both armies heavy losses It was Alexander who had to retire, and though Alexander celebrated a triumph in Rome, Ardashir took Armenia and Persian power was firmly established Ardashir earned a reputation as a just, strong ruler He is sometimes called Ardashir Papakan, for his father, Papak Shapur I succeeded him

Ardashir II, king of Persia (379–83), of the Sasani or Sassanian dynasty (see SASSANIDAE) A provincial governor under SHAPUR II, he succeeded to the throne He earned popularity by remitting taxes, but his rule was weak, and he was deposed in favor of his nephew, Shapur III

Ardebil (ärdŭbĕl'), city (pop 63,406), NW Iran, near the Russian line and near the Caspian Sea It was the capital of Azerbaijan from c 700 to c 1100 The Safavids, originally high priests here, erected its beautiful shrine The fine library was taken to St Petersburg by Russians who captured the city in 1828

Ardèche (ärdĕsh'), department (2,145 sq mi , pop 254,598), S France, in VIVARAIS, traversed by the Ardèche, a western tributary of the Rhone Privas is the capital

Ardee (ärdē') [Irish,=ford on the Dee], town (pop 2,340), Co Louth, Ireland, on the Dee river and NW of Drogheda Roger de Pippart founded a Crutched Friary and built a castle here early in the 13th cent The castle was taken by Edward Bruce in 1315 and by Conn O'Neill in 1538 In 1641 it was captured by the Irish and retaken by the British Later it was used as headquarters by both forces in the war between James II and William III

Arden 1 Residential community (pop 612), NE Del , near Wilmington Founded as a single-tax colony in 1900, it is noted for its handicrafts **2** Town (pop 1,187), central S C , near Columbia

Arden, Forest of, well-wooded area, formerly very extensive, now in N Warwickshire, England Most of Shakspere's *As You Like It* is laid here

Ardennes (ärdĕn'), department (2,028 sq mi , pop. 245,335), NE France, bordering on Belgium, watered by the Meuse and the Aisne It contains part of the Ardennes Forest Except for several frontier towns (notably SEDAN) it constitutes, roughly, the old county of RETHEL, a part of CHAMPAGNE Mézières, which is a twin city of Charleville, is the departmental capital.

Ardennes (ärdĕn'), wooded plateau, from 1,600 to 2,300 ft high, partly in Ardennes dept , N France, but mostly in SE Belgium and N Luxembourg, E and S of the Meuse river The plateau is cut into wild crags and ravines by rapid rivers Agriculture and cattle raising are the main occupations of the population (mostly Walloons) In Germany, the Ardennes Forest is continued by the Eifel The chief cities (Liége, Namur) are in the Meuse valley, other towns are Spa, Verviers, Malmédy, Bouillon, and Bastogne A traditional battleground, the Ardennes saw heavy fighting in the First and the Second World wars, notably in the BATTLE OF THE BULGE (Dec , 1944–Jan , 1945)

Ardmore 1 City (pop 16,886), co seat of Carter co , S Okla , near the Red River, settled 1887, inc 1898 It is the commercial center of a rich farm area which also produces livestock, oil, and asphalt Its industries include cotton and cotton-oil processing, oil refining, flour milling, and the manufacture of machinery A state hospital and a U S Indian school are here The near-by Arbuckle Mts and state park offer recreational opportunities **2** Unincorporated town (pop 9,015), E Pa , W of Philadelphia Its chief manufacture is automobile trucks

Ardon (är'dŭn) [Heb ,=fugitive], Caleb's third son. 1 Chron 2 18.

Ardrossan (ardrŏs'ŭn), burgh (pop 6,889), Ayrshire, Scotland, on the Firth of Clyde and SW of Glasgow It is a resort and seaport, with an oil refinery Remains of the historic Ardrossan Castle are on a hill above the town

Ardsley, residential village (pop 1,423), SE N Y , in Westchester co , E of Dobbs Ferry, inc 1896 Columbia Univ maintains a large arboretum here Ardsley-on-Hudson is about one mile northwest

area, in geometry, the amount of surface measured in terms of some unit of surface, e g , square feet or acres In elementary geometry, formulae for the areas of the simple plane figures and the surface areas of simple solids are derived These are given in the following table

Plane Figures	*Area*
triangle	ab/2
parallelogram	ab
rectangle	ab
square	s^2
circle	πr^2
Solids	*Total Area*
right circular cylinder	$2\pi r(r+a)$
right circular cone	$\pi r(r+l)$
sphere	$4\pi r^2$

The abbreviations used are b=base (length of any side of a plane figure), a=altitude (perpendicular distance from the base to the farthest point of the figure, the bases of the solids mentioned meaning any of their circular faces), s=side, r=radius (of the base circle in the case of the solids), l=slant height (distance from vertex to base of a cone)

The areas of irregular figures, plane or solid, can be computed or closely approximated by the use of integral CALCULUS

Arecibo (ärsē'bō), city (pop. 22,134), N Puerto Rico A port, it is also a flourishing agricultural center where sugar, coffee, and other products are grown, and it has two large sugar centrals and a rum distillery

Areli (ârē'lī) [Heb ,=son of a hero], son of Gad Gen 46 16, Num 26 17

Arendal (ä'rundal), city (pop 11,570), co seat of Aust-Agder co , SE Norway, a port on the Skagerrak Before the steamship era it had the largest fleet in Norway

Arensky, Anton Stepanovich (ŭntôn' styĭp'ŭnôvĭch ărĕn'skē), 1861–1906, Russian composer, pupil of Rimsky-Korsakov at the St Petersburg Conservatory Upon his graduation (1882) he became professor of harmony and composition at the Moscow Conservatory, and in 1895 he succeeded Balakirev as conductor of the Imperial Court Choir He composed prolifically in various forms, but is known today for his opera *Raphael* (1894), his *Trio in D Minor* (1906), and his piano pieces, particularly the suites for two pianos

Areopagite see DIONYSIUS THE AREOPAGITE, SAINT

Areopagus (ârĕō'pugus) [by incorrect etymology assumed by the Greeks to mean *hill of Ares*, cf the *Mars' hill* of Acts 17 22], rocky hill, 370 ft high, NW of the Acropolis of Athens, famous as the sacred meeting place of the prime council of Athens This council, called the **Areopagus**, represented the ancient council of elders, which usually combined judicial and legislative functions from the beginning The Areopagus represented in the 5th and 6th cent B C the stronghold of aristocracy Solon gave it various censorial powers over the officers of the state Jurisdiction in murder cases had probably been given to it by Draco The change in the method of choosing the archons in 487 B C caused the beginning of the decline of the Areopagus In 480 B C the Areopagus enabled the manning of the fleet for the battle of Salamis, and in the years after 478 B C. the council still had great power, unchecked by the people's assembly But c 462 B C began a determined series of attacks which finally brought the august council to the status of a court

of homicide only, although its religious character remained PERICLES was a leader in this democratizing movement, AESCHYLUS was the most prominent opponent, and he brought his greatest trilogy to a close in the *Eumenides* with an open appeal for the preservation of the Areopagus

Arequipa (ärākē'pa), city (pop 79,185), S Peru It was founded by FRANCISCO PIZARRO in 1540 on the site of an Inca town in the Chili river valley The valley, an oasis of green in an arid plain, produces subsistence and feed crops for local consumption Near El MISTI volcano, Arequipa at c 7,800 ft altitude has a dry, mild climate It is the commercial hub of S Peru and N Bolivia The chief industry is the grading and sorting of alpaca wool, exported through MOLLENDO Although Arequipa was virtually leveled by earthquake in 1868, there has been considerable restoration of the impressive and lovely examples of lay and religious Spanish colonial architecture The building material, sillar, has given Arequipa the name of "white city" The Indians, the decorated churches, and the setting of lofty volcanoes give Arequipa a distinctive charm for tourists

Ares (ā'rēz), in Greek mythology, Olympian god, the god of war He was the son of Zeus and Hera and was the lover of APHRODITE (in some legends, her husband) He was usually given the attributes of a good soldier—courage, endurance, cleverness in battle He is also pictured in legend as a violent lover He was the father of EROS, ANTEROS, HARMONIA, DIOMED, and HIPPOLYTE He favored the Trojans in the TROJAN WAR, sometimes interfering unfairly in their behalf He is identified with the ROMAN MARS

Aresson, Areson, or **Arason, Jon** (all yōn' ä'rĕson), 1484?–1550, Icelandic churchman He was the last Roman Catholic bishop in Iceland before the Reformation, elected in 1522 Aresson established the first Icelandic printing press at Holar in 1528 When upon the death of Frederick I of Denmark the Reformation began, Aresson refused to enforce the new religious ordinances, and troops were sent from Denmark to compel his obedience Aresson continued the revolt and, finally captured, resolutely followed his sons, Ara and Bjorn, to the block He was the only Catholic bishop in the Scandinavian countries who was executed in the Reformation His poetry, secular and sacred, has been preserved

Aretas (ă'rĭtus, –tăs), dynastic name of the Arabian kings at Petra The best-known Aretas was, according to 2 COR 11:32, ruler of Damascus His daughter was married to HEROD ANTIPAS, who put her away in favor of HERODIAS Aretas attacked Antipas and defeated him, but Rome took Antipas' part TIBERIUS' death (A D 37) saved Aretas from the imperial army

Arethusa (ărĭthū'sa), in Greek mythology, nymph loved by the river-god ALPHEUS She fled his attentions and was changed into a fountain He pursued and caught her, whence the story that the waters of the Alpheus river flow beneath the sea from Greece to reappear in the fountain of Arethusa in the harbor of SYRACUSE

Aretnian syllables see GUIDO D'AREZZO

Aretino, Pietro (pyā'trō ärātē'nō), 1492-1556?, Italian satirist He led a life of adventure and wrote abusive works for hire He was a friend of Titian, who painted his portrait His comedies and letters, in spite of their indecency, have merit Ariosto called him the "scourge of princes" See T C Chubb, *Aretino, Scourge of Princes* (1940)

Aretnius, Guido see GUIDO D'AREZZO

Arezzo (ärät'tsō), city (pop 24,411), capital of Arezzo prov, Tuscany, central Italy It is an agricultural center that has largely preserved its medieval character An Etruscan town, later a Roman military station, it became (11th cent A D) a free commune Siding with the Ghibellines, it was defeated (1289) at Campaldino by Florence, to which it passed definitively at the end of the 14th cent In Roman times the famous red-clay Aretine vases were made here Late in the Middle Ages, Arezzo was a center of learning and the arts, Guido d'Arezzo, Petrarch, Aretino, and Vasari were born here The fine Gothic cathedral was not completed until 1510 In the Church of San Francesco are important frescoes by Piero della Francesca, the Palazzo della Fraternità dates from the 14th and 15th cent, and the Palazzo Pretorio houses an art gallery and a museum Notable are also the Romanesque church, the Pieve di Santa Maria, and the Renaissance Santa Maria delle Grazie

Argall, Sir Samuel (ar'gul), d 1626?, British ship captain, prominent in the early settlement of Virginia He commanded a ship sent to Jamestown in 1609 and had charge of one of the ships Baron De la Warr brought to the failing colony in 1610 He made voyages—supposedly to Bermuda, Cape Cod, and Canada—to get needed supplies for the colonies In 1613 on a voyage up the Potomac, Argall kidnaped POCAHONTAS He commanded the Virginia Company expedition that destroyed the rival French colonial settlement on MOUNT DESERT ISLAND in 1613, and in 1614 he led an expedition against Port Royal (now Annapolis Royal) As deputy governor of Virginia (1617–19), he governed autocratically, and the accusations of his opponents in the colony that he was unduly harsh with the poor have been credited by most, but not all, modern historians He was knighted in 1623 and in 1625 as an admiral commanded a fleet off the Spanish coast

Argand burner (ar'gănd) invented by Aimé Argand (āmā' ärgā') (1755–1803), Swiss chemist and physician The burner first introduced the principle of admitting air to the interior of the flame This was accomplished by means of a circular wick through the center of which a current of air was passed, thereby increasing the rate of combustion and affording more intense illumination Modern gas and oil burners are developments of this principle

Argelander, Friedrich Wilhelm August (frē'drĭkh vĭl'hĕlm ou'gōost är'gulandĕr), 1799–1875, German astronomer He became director of the observatory at the Univ of Bonn in 1837 and continued there the work of determining the positions of stars which F W Bessel had begun at Konigsberg The results of his observations appear in the *Bonn Durchmusterung* (1862), which records the positions and brightness of more than 324,000 stars in the northern heavens

Argenson, Marc Antoine René de Voyer, marquis de Paulmy d' (mark' ätwan' runā' du vwayā' markē' du pōlmē' darzhänsō'), 1722–87, French diplomat and author, son of René Louis d'Argenson He was minister of war (1757–58) and ambassador to Poland (1762–64) and Venice (1766–70) After 1770 he accumulated the library which was the foundation of the Bibliothèque de l'Arsenal and undertook the publication of two great collections of romances

Argenson, Marc Pierre de Voyer de Paulmy, comte d' (pyĕr, kōt), 1696–1764, French statesman and patron of literature, younger son of Marc René d'Argenson As secretary of state for war (1743–57), he assisted Maurice de SAXE in reforming the army, especially the artillery, and founded the École militaire He also had charge of printing, of the mails, and of the city of Paris The Champs Élysées and the Place de la Concorde were planned by him VOLTAIRE was his friend and DIDEROT and D'ALEMBERT dedicated the *Encyclopédie* to him

Argenson, Marc René de Voyer, marquis de Paulmy and **marquis d'**, 1652–1721, French official He was for 21 years lieutenant general of the Paris police later he became (1719) keeper of the seals and president of the council of finance

Argenson, René Louis de Voyer de Paulmy, marquis d' (lwē), 1694–1757, French foreign minister (1744–47), elder son of Marc René d'Argenson Well intentioned but impractical, he sought to form a federation of Italian states and to make France the disinterested arbiter of international affairs After committing numerous blunders, he was dismissed and appointed president of the Academy of Inscriptions A friend of VOLTAIRE and the Encyclopedists, he spent the rest of his life in study and literary pursuits He left memoirs

Argenteuil (arzhätû'ĕ), town (pop 53,513), Seine-et-Oise dept, N France, on the Seine A northwestern suburb of Paris, it has important heavy industries, which were severely bombed in the Second World War Argenteuil grew around a convent, founded in the 7th cent, here HELOISE was educated and, after her misfortune, became prioress The convent (later a monastery) was destroyed in the French Revolution, the famous relic, the Seamless Tunic, said to have been worn by Christ, was given by Charlemagne to the convent and is now enshrined in a 19th-century church

Argentia, N F see PLACENTIA BAY

Argentina, La (lä ärjäntē'na), d 1936, Spanish dancer, b Buenos Aires, Argentina, whose real name was Antonia Mercé Her first appearances in New York in 1916 and 1917 failed to attract attention, but her performances throughout the United States in 1928 won her fame She was responsible for the revival of interest in the Spanish classical dance, and she made popular many compositions by Albéniz, Granados, and Falla See La Meri, *Spanish Dancing* (1948)

Argentina (ärjäntē'na), republic (1,073,699 sq mi, with water surface 1,084,129 sq mi, pop 16,105,244), S South America, called also the Argentine The capital is BUENOS AIRES The second largest nation of South America, Argentina is more than one third the size of the United States Between the Andes on the west and the Atlantic on the east, it is an enormous triangle, stretching from the broad base near the Tropic of Capricorn southward 2,000 mi to the island tip of TIERRA DEL FUEGO, which points toward Antarctica In the Atlantic off the far south are the Falkland Islands, claimed by Argentina but administered by the British There are also large Argentine claims in Antarctica Argentina in the northeast fronts on the Río de la PLATA, one of the major waterways of the Western Hemisphere, which divides Argentina from Uruguay The tributary rivers also act as international boundaries of Argentina—the Uruguay, with Uruguay and Brazil, the Paraná and the Pilcomayo, with Paraguay In the northwest the land borders with Bolivia are in the arid Andean highlands and the semitropical CHACO. The western boundary with Chile follows the line of the Andes, in the highest elevations of the globe outside central Asia. The kingly ACONCAGUA has at its foot USPALLATA PASS and the TRANSANDINE RAILWAY, it is the highest of many snow-capped volcanoes, including Llullaillaco, Mercedario, Tupungato, and Maipú The climate of Argentine is as varied as its topography Humidity, lowest in the rainshadow of the eastern Andean slopes, increases markedly across plains of the PAMPA, the heart of Argentina, and across the "West Pampa" to the Atlantic In N Argentina, the Chaco and the physiographically similar Mesopotamia (between the Paraná and Uruguay rivers) are predominantly flat, but in the extreme northeast the country reaches into the Brazilian highland and converges with Brazil and Paraguay at IGUASSÚ FALLS The northern country—savannas and dense forests, interspersed with swamps—yields QUEBRACHO and MATE as well as lumber, tung nuts, and castor beans, agricultural produce (flaxseed, cotton, rice, and citrus fruits) comes chiefly from the cleared sections of the Mesopotamia Only here and in the Andean highlands is the native Indian element still strong Pioneer settlements of East Europeans in the 1930s and later gained considerable success in this neglected land Just to the south the Pampa owes most of its fabulous success to hard-working Italian immigrants, who came in the late 19th cent Yet the GAUCHO, the nomadic herdsman of an earlier day—depicted in *Martín Fierro*, the great Argentine folk epic by José Hernández—is still a legendary national symbol The vast, somewhat monotonous plain lies between the Chaco and the Colorado river (roughly lat 30° S to lat 40° S) and is some 400 mi wide from the Atlantic to the Andean foothills Its deep soil is the basic wealth of the republic, for commerce and industry rely upon the products of its farms and ranches As exporter of wheat, corn, and flaxseed, beef, mutton, hides, and wool, Argentina rivals the United States, Canada, and Australia Alfalfa, the leading crop, is grown to feed the cattle herds, which are among the world's finest Truck gardening, dairying, and fruitgrowing increase in importance about the city of Buenos Aires (coextensive with the federal district) Most of the principal cities of Argentina are on the Pampa, and Buenos Aires is leader of them all The largest city of South America, cosmopolitan Buenos Aires is one of the great ports of the world, connected by rail not only to other cities of the Pampa and S Argentina, but also to Paraguay, Uruguay, and Brazil, to Chile by two routes (the Transandine, via Mendoza, and the Transandine of the North, via Salta) and to Bolivia via Tucumán These lines, a road net, national and international airlines, and a small Argentine merchant marine built up in the Second World War give the nation the best communications system of the continent, with Buenos Aires in the hub Industries center in the city, mostly processing plants but also some factories—meat-packing plants (*frigoríficos*), flour mills, sugar refineries, oil refineries, chemical works, textile mills, cement plants, machine shops, and printing plants Near by are several industrial cities such as Avellaneda, Quilmes, and Lomas de Zamora Elsewhere on the Pampa are LA PLATA, capital of Buenos Aires prov supreme in meat packing, ROSARIO, second largest Argentine city, a huge grain port on the Paraná, SANTA FE, a northern commercial center, MAR DEL PLATA, a resort and fishing center on the Atlantic, and BAHÍA BLANCA, the largest port directly on the Atlantic, acting with its five subports as gateway to the southern part of the Pampa, the Plaza Huincul oil fields in Neuquén Territory, and the Patagonian lake district On the western edge of the Pampa is the third city of the republic, picturesque CÓRDOBA, with its old university and its trade in fruits and grain Córdoba shows the transition from the "Dry Pampa" to the desolation of the arid Andean foothills, mostly useful only for pasturing goats In the great arid stretches there are, however, small but remarkably productive oases, settled from Peru and Upper Peru (Bolivia) in the second half of the 16th cent—MENDOZA, SAN JUAN, TUCUMAN, and SALTA The oases produce wine, sugar, and all kinds of fruit The minerals of this northwestern region (coal, salt, borates, quartz, mica, onyx, gypsum, wolfram, zinc, tin, copper, lead, and silver), exploited to a small extent earlier, have been subject to more development recently The oil fields of Mendoza and Salta provs early in 1950 were of far greater economic value They in turn were surpassed by the oil fields of PATAGONIA, in the COMODORO RIVADAVIA military district, these supply about 70 percent of Argentina's oil output, and a pipe line linking them with Buenos Aires was completed in 1950. Except for the oil fields, Argentine Patagonia is largely undeveloped, although in the northwestern section there is a region of blue lakes cupped in the Andes Here Nahuel Huapí National Park (est 1934), adjoining the Chilean lake district, is a resort area, attractive both in winter and in summer Elsewhere Patagonia sweeps S from the Colorado river to Tierra del Fuego in bleak, wind-bitten plateaus, supporting little more than sheep grazing Like Siberia in diversity, it also has gained a bad name from use

as a penal colony. On the Atlantic a few small, river-mouth ports have fishing fleets, lumberyards, and processing plants—Viedma on the Río Negro, Rawson on the Chubut, Santa Cruz on the Santa Cruz, and Río Gallegos on the Gallegos Ushuaia on Beagle Channel is called the southernmost town in the world Into this forbidding country Welsh, Scottish, and English sheep ranchers came after 1880, and after the Second World War many Italian immigrants arrived, while the influx of Chileans has always been tied to boundary disputes Only a scant few of the native Indians remain These once warlike tribes were even lower in the scale of material culture than most of the Indians of Argentina Only in NW Argentina was there an agricultural people, under the influence of the Inca They are recalled by ruins N of Jujuy, but their importance was eclipsed in later time by the immigration of Araucanian Indians from Chile Elsewhere there were fierce warriors, who did much to hamper settlement but disappeared under white warfare and white pressure Argentina, unlike most of the Latin American nations, has a population that is overwhelmingly of European descent The Europeans probably first arrived in the region in 1502 in the voyage of Amerigo Vespucci (if the possibility of Phoenician discovery in ancient times is disregarded altogether) The search for a Southwest Passage to the Orient brought Juan Díaz de Solís to the Río de la Plata in 1516 Magellan entered (1520) the estuary, and Sebastian CABOT ascended the Paraná and the Paraguay His delight in native ornaments may be responsible for the name of the Río de la Plata [silver river] and the name of Argentina [of silver] Pedro de Mendoza in 1536 founded the first settlement of the present Buenos Aires, but Indian attacks forced abandonment of the settlement, and Asunción became the unquestioned leading city of the Río de la Plata region Buenos Aires was refounded in 1580 by Juan de GARAY His son-in-law, Hernando ARIAS DE SAAVEDRA (Hernandarias), one of the ablest of Spanish colonial administrators, secured the division of the Río de la Plata territories, and Buenos Aires achieved a sort of semi-independence under the viceroyalty of Peru The mercantilist system, however, placed Buenos Aires under severely hampering commercial conditions, and smuggling became an accepted profession, particularly in commerce with the Portuguese in Brazil and with the British While the cities of present W and NW Argentina grew by supplying the mining towns of the Andes, Buenos Aires was threatened by the activities of the Portuguese in the Banda Oriental The disparate development of the cities foreshadowed the separatist tendencies of the provinces after the republic was created In 1776 the Spanish government finally made Buenos Aires a free port and the capital of a viceroyalty that included present Argentina, Uruguay, Paraguay, and (briefly) Bolivia From this combination grew the idea of a Greater Argentina to include all the Río de la Plata countries, a concept that was to haunt many Argentine politicians after independence was won A prelude to independence was the British attack on Buenos Aires Admiral Sir Home POPHAM and Gen William Carr BERESFORD in 1806 took the city after the Spanish viceroy fled An Argentine militia force under Jacques de LINIERS ended the British occupation and beat off a renewed attack under Gen John WHITELOCKE in 1807 Creole self-confidence was built up On May 25, 1810 (May 25 is the Argentine national holiday), revolutionists, acting nominally in favor of the Bourbons dethroned by Napoleon (see SPAIN), deposed the viceroy, and the government was controlled by a junta The result was war against the royalists The patriots under Manuel BELGRANO won (1812) a victory at Tucumán On July 9, 1816, a congress in Tucumán proclaimed the independence of the United Provs of La Plata Other patriot generals were Mariano MORENO and Juan Martín de PUEYRREDÓN and, above all, that great liberator, José de SAN MARTÍN URUGUAY and PARAGUAY went their own way despite hopes of reunion In Argentina virtually permanent civil war followed independence with countless coups d'état, ephemeral triumphs of regional, social, or political factions, the strong man, the *caudillo*, only too often replaced by a new *caudillo*, and periods of democratic rule, too often beset by disorder, too often dislodged by "public opinion" that turned out to be only the views of an army clique Anarchy was not ended by the election of Bernardino RIVADAVIA in 1826 The unitarians, who favored a centralized government dominated by Buenos Aires, were opposed to the federalists, who opposed the oligarchy of Buenos Aires and were backed by autocratic *caudillos* with gaucho troops The unitarians temporarily triumphed when Argentinians combined to help the Uruguayans repel Brazilian conquerors in the battle of Ituzaingó (1827), which led to the independence of Uruguay The internal conflict was, however, soon resumed and was not even quelled when Juan Manuel de ROSAS, idol of the gauchos and most notorious *caudillo* of them all, established a dictatorship that lasted until 1852. Ironically, this federalist leader, who was nominally only the governor of Buenos Aires, did more than the unitarians to unify the country. Ironically, too, this enemy of intellectuals stimulated his political opponents to write in exile some of the finest works of the Spanish American romantic period, among the writers were Domingo F SARMIENTO, Bartolomé MITRE, José MÁRMOL, and Esteban ECHEVERRÍA After Rosas had involved himself in a political struggle in Uruguay, he was routed (1852) in the battle of Monte Caseros by combined Argentine, Brazilian, and Uruguayan forces, recruited by one of his former supporters, Justo José de URQUIZA As president, Urquiza called a constituent assembly at Santa Fe, and a constitution was adopted (1853) based on the principles enunciated by Juan Bautista ALBERDI Mitre, denouncing Urquiza as a *caudillo*, brought about the secession of Buenos Aires prov and the downfall of the Urquiza plans. Under the administrations of Mitre (1862–68), Sarmiento (1868–74), and Nicolás AVELLANEDA (1874–80), schools were built, public works started, and liberal reforms instituted The War of the Triple Alliance (see TRIPLE ALLIANCE, WAR OF THE) brought little advantage to Argentina In 1880 federalism triumphed Buenos Aires remained capital, but the federal district was set up, and Buenos Aires prov was given La Plata as its capital Conquest of the Indians by Gen Julio A ROCA made colonization of the region in the south and the southwest possible Already the Pampa had begun to undergo its agricultural transformation The immigration of Italians, Spanish (including Basques), French, Germans, British, Swiss, and East Europeans helped to fill the land and to make Argentina one of the world's granaries Establishment of refrigerating plants for meat made expansion of commerce possible The British not only were prime consumers of Argentine products but also invested substantially in building factories, public utilities, and railroads (which were nationalized in 1948) Efforts to end the power of the great creole landowners, however, were not genuinely successful, and the military tradition continued to play a part in politics, the army frequently combining with the conservatives and later with the growing ranks of labor to alter the government by coup d'état In the second administration of Roca, a serious boundary dispute with Chile was settled (1902), and perpetual peace between the two nations was symbolized in the CHRIST OF THE ANDES Even before the First World War, Argentina maintained neutrality, the wealthy southern nation had begun to act as spokesman for the rights and interests of Latin America as a whole, notably through Carlos Calvo, Luis M Drago, and later Carlos Saavedra Lamas Internal problems remained vexing, even with political change Electoral reforms introduced by Roque SÁENZ PEÑA led to the victory of the Radical party under Hipólito IRIGOYEN He introduced social legislation, but when, after the presidency of Marcelo T ALVEAR, Irigoyen returned to power in 1928 his policies aroused much dissatisfaction even in his own party In 1930 he was ousted, and the conservative oligarchy was again in power The administration (1932–38) of Agustín P JUSTO was opposed by revolutionary movements, and a coalition of liberals and conservatives won an election victory The Radical leader, Roberto M Ortiz became president, but serious illness caused him to withdraw, and the conservative vice president, Ramón S Castillo, succeeded Economic difficulties, intensified by the Second World War, helped to increase dissatisfaction In 1943 Castillo was overthrown by a military coup Gen Arturo Rawson was provisional president and was succeeded by Gen Pedro Ramírez A "palace revolt" in 1944 brought Gen Edelmiro Farrell to power, but the real power resided in a group of army colonels, chief among them Juan PERÓN Argentina belatedly (March, 1945) entered the Second World War on the side of the Allies and became a member of the United Nations A return to regular democratic procedure seemed momentarily to be promised, but Perón, who had won the firm support of labor, was overwhelmingly victorious in the election of Feb, 1946 He was aided rather than injured by the "blue book" issued by the U S Dept of State, showing the collaboration of the "colonels' government" with Germany in the war, for U S intervention in Latin America is particularly resented in Argentina Peron established a type of popular dictatorship new to Latin America, based on support from reactionaries, workers, the army, nationalists, and the clerical groups His regime was marked by creation of concentration camps, curtailment of freedom of speech, and transition to the one-party state To cure Argentina's serious economic ills a program of economic self-sufficiency was inaugurated The speed of industrialization was, however, limited by lack of power resources and machine tools Protective tariffs tended to strain international relations and hinder the disposal of Argentina's surplus agricultural produce, and the emergence of Argentina from a "colonial" status did not promise to be easy, though Argentine influence on other Latin American nations, especially Paraguay, Chile, and Bolivia, grew with the economic penetration forwarded by the Perón government See also SPANISH AMERICAN LITERATURE See Pierre Denis, *The Argentine Republic* (1922), F A Kirkpatrick, *A History of the Argentine Republic* (1931), Ricardo Levene, *A History of Argentina* (Eng tr, 1937), John W White, *Argentina the Life Story of a Nation* (1942), Ray Josephs, *Argentine Diary* (1944), Isabel Rennie, *The Argentine Republic* (1945)

Argentinita, La (la arjäntēnē'tä), 1898–1945, Spanish dancer, b Buenos Aires, Argentina, whose real name was Encarnación López She first came to the United States in 1930 and made an unsuccessful debut in *The International Revue* When she toured the United States (1938) and South America (1939) she had tremendous success, and for her performances of traditional and modern Spanish and South American dances was acclaimed the greatest Spanish dancer after La Argentina See La Meri, *Spanish Dancing* (1948)

Arghandab (ärkhändäb'), river, 250 mi long, rising in E Afghanistan and flowing SW to the Helmand Kandahar is in its valley

Arginusae, battle of (ärjīnū'sē), 406 B C, great naval engagement in the PELOPONNESIAN WAR, fought 406 B C The Athenians defeated the Spartans off the small Arginusae islands, between Lesbos and Asia Minor A storm at the end of the battle caused several Athenian ships to founder The failure of the eight Athenian commanders to rescue the crew was used as a pretext by their political enemies to have six of them executed A son of Pericles was among the victims

Argo (är'gō), in Greek mythology, the ship in which JASON and the ARGONAUT heroes sailed in quest of the GOLDEN FLEECE It was built with the help of Athena, by Argus, son of Phrixus It could utter prophecies, for it contained a piece of wood from the sacred oak tree at DODONA

Argob (är'gŏb) 1 One of the two guards murdered with King Pekahiah 2 Kings 15 25 2 District, Syria, possibly the modern Hauran Deut 3 4,13, 14, 1 Kings 4 13

argol see TARTAR

Argolis (är'gulĭs), region of ancient Greece in the NE Peloponnesus It was roughly identical with the Argive plain and was the area dominated by the city of Argos Nauplia is now the center of the region

argon (är'gŏn) [Gr, =inert], colorless, odorless, tasteless, inert gaseous element (symbol=A, for physical constants see ELEMENT, table), occurring in the air 0 93 percent by volume, and in some volcanic gases Its extreme inertness has caused it to be substituted for nitrogen in electric-light bulbs It is used in electric signs for its reddish glow when conducting an electric current It resembles XENON In 1894 it was first obtained by Lord Rayleigh and Sir William Ramsay Previously Lord Rayleigh had noticed that a liter of nitrogen extracted from the air and supposedly pure weighed more than a liter prepared from a nitrogen compound This difference in weight led him to conclude that another gas was present in the supposedly pure nitrogen Actually several inert gases were present, first samples of "argon" contained also helium, neon krypton, and xenon Ramsay obtained pure argon later by evaporation from liquid air Argon is prepared today from liquid air

Argonaut (är'gunôt') [Gr, =sailor on the Argo], in Greek mythology, one of the band of heroes who accompanied JASON to Colchis in the ship ARGO in quest of the GOLDEN FLEECE Versions of this ancient story vary, and the list of heroes in the several versions grows long Among them were ORPHEUS, ARGOS, HERCULES and HYLAS, Castor and Pollux, Peleus, Meleager, Amphiaraüs, Ancaeus, Laertes, Telamon, and the huntress Atalanta The helmsman was Tiphys The *Argo* set sail, but the voyage was interrupted for a year while the Argonauts tarried with the women of Lemnos who had killed all the men on the island The ship managed to get safely past the SYMPLEGADES On the return journey they passed between SCYLLA and CHARYBDIS and escaped the temptation of the Sirens' singing (see SIREN) because Orpheus' music was more entrancing

Argonne (är'gŏn, Fr ärgôn'), region NE France in Champagne and Lorraine (Meuse, Marne, and Ardennes depts), a hilly and woody district centering around Sainte-Menehould Its importance is mainly strategic Here in 1792 the French under Dumouriez and Kellermann repulsed the Prussians at Valmy The sector was a battleground throughout the First World War In the Allied victory drive of Sept-Nov, 1918, the Meuse-Argonne sector was carried by the Americans

Argos, in Greek legend see ARGUS

Argos (är'gŏs, är'gus), city of ancient Greece, in NE Peloponnesus, 3 mi inland from the Gulf of Argos or Nauplia and not far from the modern Nauplia It was the center of Argolis and for a time in the 7th cent B C, under Pheidon, dominated much of Peloponnesus For centuries it was one of the most powerful Greek cities, struggling with Sparta and rivaling Athens and Corinth Much of its power disappeared after Cleomenes I of Sparta took (c 494 B C) the city with great slaughter of

the inhabitants Pyrrhus was killed in an attack on Argos in 272 B C. The city joined the Achaean League in 229 B C , and in 146 B C it was taken by Rome, under whose rule trade flourished Argos figures in early Greek legend as the home of various heroes and was the principal center of the worship of the goddess Hera, a great temple was erected a few miles outside the city, toward Mycenae There is a small town called Argos on the site of the ancient city

Argos, town (pop 1,190), N Ind , S of South Bend and near Lake Maxinkuckee Dairy farming is done here

Arguedas, Alcides (älsē'dās ärgā'dās), 1879–, Bolivian novelist He studied social sciences in Paris and is versed in history and sociology He also represented Bolivia in Paris, in London, and in Bogotá. In his writings he examines the social ills of his country and shows particular interest in the lot of the Indians His best-known works are *Raza de bronce* (1919), *Un pueblo enfermo* [a sick people] (1910), and *Los caudillos bárbaros* (1929)

Arguello, Luis Antonio (lwēs' äntō'nyō ärgwā'yō), 1784–1830, governor of Alta California (1822–25), b San Francisco His father, José Darío Argüello, was commander of the San Francisco presidio, acting governor (1814) of Alta California, and governor (1815–22) of Baja (Lower) California, and Luis was early notable, especially as a leader of exploring expeditions He discovered Lassen Peak, probably in 1821 When Alta California accepted Mexican independence from Spain, he was elected (not appointed) governor and vigorously undertook colonization and improvement of trade His sister, Concepción, was the heroine of a celebrated romance with Nikolai Petrovich Rezanov

Argun (ärgōōn'), Mandarin *O-erh-hu-na*, river, 980 mi long, NE Asia, a headstream of the Amur It rises in Hingan prov , China, flows W past Hulun to the USSR–Chinese frontier, and forms for 500 mi the border between the USSR and Manchuria Silver-lead ores and coal are found along its banks

Argus (är'gŏs, -gus), in Greek mythology **1** Called Panoptes (pănŏp'tēz), hundred-eyed guardian of Io after she was changed into a heifer Hermes killed him His eyes were said to be seen in the tail of the peacock, sacred to Hera The people of Argos traced their origin to him **2** Son of Phrixus He built the ship Argo and joined the Argonaut heroes in the quest for the Golden Fleece **3** Dog of Odysseus, the first creature to recognize him when he reached home Argus leaped up to greet him, and fell dead

Argyll, dukes of, earls of, and **marquesses of,** Scottish nobles see the family name, Campbell

Argyllshire (ärgīl'shĭr) or **Argyll,** maritime county (3,110 sq mi , 1931 pop 63,050, 1948 estimated pop 66,335), W Scotland The county faces the Atlantic, and the coast line is extremely irregular, deeply indented by lochs There are numerous islands of the Inner Hebrides, chief among them Coll, Tyree, Mull, Jura, and Islay, and the elongated peninsula of Kintyre, extending S into the North Channel The county is wild and mountainous, cut by swift streams, and it is a favorite tourist resort Agriculture (oats, hay, and barley) is confined to coastal strips The region is one of the chief sheep-raising districts of the British Isles Cattle raising and fishing are important, and granite and slate are quarried Whisky is distilled at Campbeltown and elsewhere The most important historic remains are those of the ancient monastic center at Iona

Argyrokastron (äryĕrō'kästrŏn) [Gr ,=silver castle], Albanian *Argirokastra* (är"gērō'kä'strä), city (pop 10,910), S Albania, picturesquely situated above the Drin river An ancient place, dating probably from the 4th cent , it has an old citadel, rebuilt (19th cent) by Ali Pasha There are several 18th-century mosques and churches Argyrokastron was captured by Greek troops in Dec , 1940, and held by them until April, 1941

Arhus, Denmark see Aarhus

Aria (ä'rēŭ, ur'ĭ), province of the ancient Persian Empire, region about the Arius (now the Hari Rud) river It is now mostly included in the Herat region of E Iran and Herat prov about the city of Herat, NW Afghanistan

aria (är'ēä, ar'yä), air or melody, especially an accompanied solo in an opera, oratorio, or cantata The 17th-century Italian opera composers created the aria, which, in the operas of Alessandro Scarlatti, became standardized into the form of the *aria da capo*, having a contrasting, usually shorter, middle section, followed by a repetition of the first section The infinite variety possible within this pattern is illustrated in the arias of Handel, who brought the form to perfection The aria was the principal feature of opera composition until Wagner merged recitative and aria in his music dramas In the 18th cent the aria was also used as an instrumental form

Ariadne (ärīăd'nē), in Greek legend, Cretan princess, daughter of Minos and Pasiphaë She loved Theseus and gave him a clue of thread to guide him out of the Labyrinth after he had killed the Minotaur When Theseus left Crete he took Ariadne with him, but he deserted her in Naxos, where the god Dionysus found her and wedded her. Zeus gave her immortality and set her bridal crown among the stars In Italy Dionysus was identified with Liber and Ariadne with Libera.

Ariana or **Aryana** (both ärēä'nù, -ä'nù), general name for the eastern provinces of the ancient Persian Empire. It was used to mean the regions S of the Oxus (modern Amu Darya) river, those to the north being Transoxiana Ariana is included in present E Iran, N and E Afghanistan, and India NE of the Indus

Arianism, heretical movement founded by Arius He taught (c 318–321) that God had created from nothing and begotten before the creation of other things a Son, the first creature, but neither eternal nor equal with the Father Arius was excommunicated on the grounds that he had made Jesus Christ merely a divine creature, neither truly God nor truly man By implication, he had set up a demigod beside God Arianism was widely propagated among the masses through popular sermons and songs and among the powerful through the efforts of influential leaders, e g , Eusebius of Nicomedia The civil as well as the religious peace of the East was threatened, and Constantine I convoked (325) the Council of Nicaea (see Nicaea, First Council of) The council condemned Arianism and refuted it with the term *homoousion* [consubstantial, of the same substance] to describe the Son's relationship to the Father The best brief statement of the Catholic position controverted by Arians is found in the Nicene Creed "I believe in one Lord Jesus Christ, the only-begotten Son of God, born of the Father before all ages, God of God, light of light, true God of true God, begotten not made, consubstantial with the Father by whom all things were made " In opposing the formulary of Nicaea, the Arians were, in effect, attacking the whole Church, and they were banished But through the influence of Constantine I, Arius returned from exile, and Marcellus of Ancyra, St Eustathius, and St Athanasius were banished The wholesale deposition of bishops now became a custom, whatever group had the hegemony purged the Church of all opposing bishops, increasing intrigue and confusion among the people The exile of Athanasius to Rome brought Pope Julius I actively into the struggle A council wholly favorable to Athanasius, convened at Sardica (c 343), was avoided by the Eastern bishops and ignored by Emperor Constantius, an Arian Thus the Catholics were left dependent on Rome for support Soon triumphant Arianism split into three parties of its own, which rapidly became as violent toward each other as they had been toward the Catholics On the extreme left were the Anomoeans, followers of Eunomius and Aetius, never strong, condemned by other Arians and Catholics In the center was the court party later called Homoeans because, adopting the position that only scriptural terms were appropriate to Jesus Christ, they declared him like (Gr *homoion*) the Father This was the sect of Constantius and Valens, who furthered its aims constantly In the West the Homoeans exiled Pope Liberius and St Hilary of Poitiers and forced Hosius to abjure They were in power from 351 to 378, except under Julian and Jovian (361–64) The third party, the rightist conservative Arians, adopted *homoiousion* [like in substance] as safer than *homoousion* The Homoiusians were oppressed by the Homoeans, causing them to draw closer to the Catholics In time, most Homoiusian bishops accepted the *homoousion* The Catholics in the East had no sympathetic emperors like Valentinian I and Gratian in the West, so that it took the greatest efforts of such men as St Basil the Great and St Gregory Nazianzen to gain a Catholic victory In 379, for the first time in many years, the empire had two Catholic rulers, Theodosius and Gratian Theodosius' establishment of Catholicism as the state church (381) was apparently easily accomplished, and Arianism probably expired in the empire at once However, Ulfilas had carried (c 340) Homoean Arianism to the Goths living in what is now Hungary and Yugoslavia with such success that the Visigoths and other Germanic tribes became staunch Arians Arianism was thus carried over Western Europe and into Africa The Vandals remained Arians until their defeat by Belisarius (c 534) Among the Lombards the efforts of Pope St Gregory I and the Lombard queen were successful, and Arianism finally disappeared among them (c 650) In Burgundy the Catholic Franks broke up Arianism by conquest in the 6th cent In Spain, where the conquering Visigoths were Arians, Catholicism was not established until the end of the 6th cent (by Recared), and Arian ideas survived for at least another century Arianism brought many results—the ecumenical council, the Catholic Christological system, Nestorianism, and, by reaction, Monophysitism Politically, Arianism gave great impetus to the union of Church and state Since Arianism did not question the authority or institution of the hierarchy or any important practice of the Church, it was quite unlike the Reformation See H M Gwatkin, *Studies of Arianism* (1882); Adolf von Harnack, *History of Dogma* (Eng tr , 1895–1900).

Arias de Ávila, Pedro (pā'dhrō ä'ryäs dā ä'vēlä), known as **Pedrarias** (pādhrä'ryäs), c.1440–1531?, Spanish colonial administrator. He was sent (1514) as governor to Darien, where Vasco Núñez de Balboa was ruling. A long quarrel between the two ended with Balboa's execution Pedrarias was jealous of his power and notoriously harsh and cruel. He sent (1523) Francisco Fernández de Córdoba to usurp control of Nicaragua, conquered the year before by Gil González de Ávila. When Fernández de Córdoba tried to shake off the governor's control, Pedrarias captured and executed him Pedrarias extended the Spanish dominions and founded (1519) Panama city, he aided, then hindered, Francisco Pizarro and Diego de Almagro in their conquest of Peru Superseded as governor in 1526, he went to Nicaragua, where he retained power until his death His name also appears as Pedrarias Dávila

Arias de Saavedra, Hernando (ĕrnän'dō ä'ryäs dā sävä'drä), known as **Hernandarias** (ĕrnändä'ryäs), 1561–1634 Spanish colonial governor, b Asunción, in the present Paraguay In 1592 he was elected lieutenant governor of Asunción by the cabildo Having demonstrated his ability as an administrator, he was chosen governor of Río de la Plata prov three times (1597–99, 1602–9, 1614–18) His administration was more than able He introduced public schools He did much to pacify and protect the Indians, to extend and consolidate the Spanish settlements, and to stimulate the growth of Buenos Aires and other riverine cities He granted the Jesuits territorial privileges for religious colonization in Paraguay In 1617 he secured a royal order for the division of the region into two separate governments, Guairá (present Paraguay) and Buenos Aires or Río de la Plata

Arias Montanus, Benedictus (bĕnĕdĭk'tŭs ä'rēŭs mŏntā'nŭs), or **Benito Arias Montano** (bänē'tō ä'ryas môntä'nō), 1527–98, Spanish Benedictine monk, editor of the Antwerp Polyglot Bible He attended the Council of Trent (1562)

Arica (ärē'kä), city (pop 14,064), N Chile, a Pacific port just south of the Peruvian border At the northern limit of the desert of Atacama, Arica is rainless but is cooled by the action of the Peruvian current It is the terminus of a railroad to La Paz Agriculture—orchards, vineyards, corn, and vegetables—is carried on by irrigation In the War of the Pacific (see Pacific, War of the) Peru lost Arica to Chile By the settlement of the Tacna-Arica Controversy in 1929 Chile, while retaining sovereignty, was required to furnish complete port facilities to Peru Both Bolivia and Peru maintain customs houses, and exports of borax, tin, wolfram, antimony, copper, hides, sulphur, and some agricultural produce give Arica its importance Subject to earthquake, the town suffered severe damage in 1868

Arichat (ărĭshăt'), village, on Isle Madame, NE N S , S of Cape Breton Island First settled by the French in 1730, it was raided by John Paul Jones during the American Revolution

Aridai (urĭd'āī), one of Haman's sons Esther 9 9

Aridatha (ûrĭd'uthŭ), son of Haman Esther 9 8

Ariège (äryĕzh'), department (1,893 sq mi , pop 145,956), SW France, in the Pyrenees, bordering on Spain and Andorra Named after a tributary of the Garonne, it roughly corresponds to the old county of Foix Stock raising is the main occupation Foix is the capital

Arieh (ăr'ē) [Heb ,=lion], one of the two guards murdered with King Pekahiah 2 Kings 15 25

Ariel (ā'rēĕl) [Heb ,=lion of God], aid of Ezra Ezra 8 16 In two other passages AV has "honlike men" beside "sons of Ariel" in RV 2 Sam 23 20, 1 Chron 11 22 Nothing is known of this Ariel Ariel is also a symbolic name of Jerusalem Isa 29

Aries (ā'rē-ēz) [Latin,=ram], zodiacal constellation named in honor of the ram of the Golden Fleece It is also the first sign of the zodiac The "first point of Aries" is that part of the celestial sphere where celestial equator and ecliptic cross, the point where the sun's vernal passage crosses the equator A little more than 2,000 years ago, the sun entered the constellation Aries at the vernal equinox; but now, as a result of the precession of the equinoxes, the vernal equinox has moved westward into the constellation Pisces

Arikara Indians (ûrĭ'kurŭ), North American Indian tribe of Caddoan linguistic stock (see language, table), occupying part of the upper Missouri valley in North Dakota in the early 20th cent A semi-sedentary group, they were organized in village bands and lived in earth-covered lodges In winter they hunted buffalo, returning to their villages for spring planting They traded maize with the Cheyenne and other hunting tribes in return for buffalo hides and meat, and they were very active in bartering with early white traders, who frequently called them the Rees. They were closely associated with the Mandan Indians and share a reservation in Montana with the Mandan and the Hidatsa

Arimathaea (ăr"ĭmŭthē'ŭ), home of St. Joseph of Arimathea, not otherwise known. It may be the same as Ramathaim-zophim. Mat. 27 57, Mark 15 43, Luke 23 50,51, John 19 38.

Ariminium: see RIMINI, Italy

Arioch (ā'rēŏk) 1 See CHEDORLAOMER. 2 Captain under Nebuchadnezzar Dan. 2.14

Arion (ărī'ŭn), legendary Greek poet, inventor of the dithyramb. He is said to have lived at Periander's court in the 7th cent B C A story repeated by Herodotus tells how, having been thrown overboard by pirates, Arion was saved by a dolphin charmed by his music

Ariosto, Ludovico (lōdōvē'kō ăryōs'tō), 1474–1533, Italian epic and lyric poet, one of Italy's great poets As a youth he was a favorite at the court of Ferrara, later he was in the service of Ippolito I, Cardinal d'Este, and then of the duke of Ferrara He was never properly rewarded by his patrons While at the duke's court, he commenced the *Orlando Furioso*, published in its final form in 1532 This epic treatment of the ROLAND story, theoretically a sequel to the unfinished masterpiece of BOIARDO, is perhaps the greatest of Renaissance poems It was intended to glorify the Este family as Vergil had glorified the Julians It was formerly customary to dispraise Ariosto to the advantage of Tasso Ariosto also wrote lyric verse of unequal merit and several comedies, among them *I suppositi* [the pretenders] and *Il negromante* [the necromancer] The *Orlando Furioso* has been translated into English, as has *I suppositi* See E G Gardner, *The King of Court Poets* (1906); Leigh Hunt, *Stories from the Italian Poets with Critical Notices* (1846), Richard Garnett, *A Short History of Italian Literature* (1898)

Ariovistus (ă"rēōvī'stŭs), fl 58 B C, Germanic chieftain, leader of the Suebi Sometime before 60 B C he crossed the Rhine, defeated the AEDUI, and came to dominate much of GAUL In 60 B C he was made a friend and ally of Rome, but his power threatened the Romans in Gaul, and soon after winning the great victory of BIBRACTE over the Helvetii, Julius CAESAR undertook a campaign against Ariovistus He defeated the German leader somewhere in Upper Alsace in 58 B C Ariovistus fled across the Rhine

Arisai (urīs'āī), son of Haman Esther 9 9

Arish, El (ēl ărēsh'), town (pop 10,791), NE Egypt, on the Mediterranean Sea King Baldwin I of Jerusalem died here in 1118 in the course of his Egyptian campaign Here the French signed (1800) the treaty by which they undertook to evacuate Egypt

Arista, Mariano (mărvà'nō ărē'stä), 1802–55, Mexican general and president (1851 53) A royalist in the revolt against Spain, he later joined Agustín de ITURBIDE He fought in the Mexican army that tried to put down the Texan revolt (1836) In command of the army in N MEXICO in the Mexican War, he was defeated by Zachary TAYLOR at Palo Alto and Resaca de la Palma (1846) Arista succeeded J J Herrera as president, he was forced to resign

Aristaeus (ărīstē'ŭs), in Greek religion, a pastoral deity, son of APOLLO and Cyrene, especially honored as the inventor of beekeeping He loved Eurydice, wife of ORPHEUS, and brought about her death when fleeing him, she was bitten by a snake The nymphs punished him by destroying his bees, but a new swarm came from the bodies of cattle that he sacrificed in atonement for his sin His wife was AUTONOË, his son ACTAEON

Aristarchus (ăr"istär'kŭs) [Gr ,=excellent prince], Macedonian companion of Paul Philemon 24, Acts 19 29, 20 4, 27 2, Col 4 10

Aristarchus of Samos (sā'mŏs), 3d cent B C, Greek astronomer of the Alexandrian school Of his writings only a treatise, *The Sizes and Distances of the Sun and Moon*, remains This does not mention his conclusion that the earth moves round the sun and that the sun is at rest, but a quotation by Archimedes and statements by Copernicus prove that he held this theory Other conclusions in which he seems to have anticipated later scientists are that the sun is larger than the earth, that the earth rotates upon its axis causing day and night, and that its axis is inclined to the plane of the ecliptic, causing the change of seasons See T L Heath, *Aristarchus of Samos* (1913)

Aristarchus of Samothrace (sămʹuthrās), c 217–c 145 B C, Greek scholar, successor to his teacher, Aristophanes of Byzantium, as librarian at Alexandria His painstaking recension of Homer is responsible for the good texts of Homer extant Though none of his works (he is said to have written about 800 books of exegesis and commentary) survives, frequent quotations by ancient critics have given us an insight into his works and method His commentaries and recensions embraced a great number of writers, such as Alcaeus, Anacreon, Pindar, Hesiod, and the tragedians

Aristides, Saint (ărīstī'dēz), 2d cent, Greek philosopher, author of an early Christian apology It was presented to the emperor (c 126 or 136) to protest anti-Christian slanders and persecutions The text is embedded in BARLAAM AND JOSAPHAT. Feast Aug 31.

Aristides (ărīstī'dēz), d c 468 B.C, Athenian statesman and general He was one of the 10 generals who commanded the Athenians at the battle of Marathon (490 B.C) and in the next year became chief archon In 483 B C he was ostracized through the influence of Themistocles, who, in opposition to him, desired the formation of a navy. In 480 B C, however, Aristides fought with his countrymen at Salamis In the following year he was recalled to aid in the war against the Persians and commanded the Athenians at the battle of Plataea Later he organized the finances of the Delian League He is the classic example of probity in public life and was called Aristides the Just

Aristides, probably two Greek painters, one of the 5th cent B C, one of the 4th They may have been grandfather and grandson Ancient writers confused the two

Aristippus (ărīstĭp'ŭs), c 435–c 360 B C, Greek philosopher of Cyrene, first of the CYRENAICS He held pleasure to be the highest good and virtue to be identical with the ability to enjoy His doctrines, comprising the first coherent exposition of HEDONISM, were in opposition to those of the Cynics, although both groups drew upon aspects of Socratic philosophy.

Aristobulus: see MACCABEES

aristocracy (ărʺistŏkʹrusē) [Gr ,=power of the best (people)], in political science, government by the best citizens in the interest of the entire state As a political concept in the West it owes its formulation to Plato in the *Republic* All governments, even democracies, contain an aristocratic element in their composition in that the rulers are usually thought to be the best fitted for their function, by whatever criterion they may be actually chosen Historically, aristocracies have usually rested on landed possessions, have invoked the hereditary principle, and, despite frequent conflicts with the ruler, have flourished chiefly within the framework of MONARCHY Within themselves, aristocracies tend to be antiroyal, and the BOURGEOISIE in the West rose to prominence partly as a royal weapon against them Aristocracy may be based on wealth, as well as land, as in ancient Carthage and medieval Venice, or may be a theocracy like the Brahman caste in India The foe of the aristocratic principle is the democratic, and today aristocracy survives chiefly as a social concept

Aristogiton, see HARMODIUS AND ARISTOGITON.

Aristophanes (ărʺistŏfʹunēz), b c 448 B C, d after 388 B C, Athenian comic poet, greatest of the ancient writers of COMEDY His plays, the only full extant samples of the Greek Old Comedy, mix political, social, and literary satire The direct attack on persons, the severity of invective, and the burlesque extravagances made the plays fitting for the festival of Dionysus Aristophanes was conservative in all things, hence he distrusted sophistry and Socrates alike, satirized Euripides' art as degenerate, and deplored the tendency to excessive imperialism that ruined Athens in the Syracusan expedition The typical plan of an Aristophanic comedy is simple—the protagonist undertakes seriously some preposterous project, and the play is an elaboration of his success or failure Despite the absurdity of the situation, Aristophanes' characters are real as types, their verisimilitude comes from their perfectly natural behavior in unnatural circumstances In some respects the satiric tone of his plays can be compared to some of the plays of W S Gilbert in English literature Aristophanes' Greek is exceptionally beautiful, many of his choruses are among the finest lyric pieces in Greek literature, his careful diction and his ability to characterize in a few words are remarkable, and he shows himself especially astute in his parodies of Euripides Eleven of his plays survive *The Acharnians* (425 B C), an attack on the Peloponnesian War, *The Knights* (424 B C), a political satire on the demagoguery of the period, *The Clouds* (423 B C), a satire on the sophists and on Socrates, *The Wasps* (422 B C), a satire on the Athenian passion for litigation, *The Peace* (421 B C), a defense of the Peace of Nicias, *The Birds* (414 B C), an escape into an amazing imaginary kingdom, *Lysistrata* (411 B C), in which the Athenian women boycott their husbands to end a war, *The Thesmophoriazusae* or *The Women at Demeter's Festival* (411 B C.), in which the women conspire to ruin Euripides because of his misogyny, *The Frogs* (405 B.C), a literary satire involving Aeschylus and Euripides, *The Ecclesiazusae* or *The Women in Politics* (c 392 B C), in which the women take over the government, and *Plutus* (388 B C), in which the blind god of wealth recovers his eyesight and distributes the gifts of fortune more equitably See L E Lord, *Aristophanes* (1925), Gilbert Murray, *Aristophanes* (1933)

Aristophanes of Byzantium (bizăn'shēum, -shŭm, -tēum), c 257–c 180 B C, Greek scholar He was librarian at Alexandria, edited various texts, and reputedly invented the Greek diacritical marks Aristarchus of Samothrace was his pupil

Aristotle (ărʺistŏt'ŭl), 384–322 B C, Greek philosopher, one of the greatest thinkers of all time Born in Stagira, he is called the Stagirite His father, Nicomachus, was a physician Aristotle studied (366-347 B.C) under Plato at Athens He tutored (343–336 B C.) Alexander the Great, returned to Athens, and conducted a school in the Lyceum His habit of lecturing in the walking place (*peripatos*) of the Lyceum gave his school the name Peripatetic In 323 Aristotle left Athens in the anti-Macedonian agitation and fled to Chalcis, where he died Aristotle believed LOGIC to be the necessary introduction to philosophy He gave the name SYLLOGISM to the basic form in which all logical thought moves His premises were the universal and self-evident first principles common to all sciences and to metaphysics Though they are implicit in the mind of man (a priori), experience is necessary to actualize them Aristotle further systematized his logic by the use of what he called categories (see CATEGORY) Aristotle, like Plato, saw the universe as an ideal world, an interrelated organic system of eternal and unchangeable forms (*ideas*) The crucial difference between Aristotle and Plato lay in their conceptions of the relation of form to matter Aristotle argued that form was immanent in matter, that the two were bound together and could not exist separate from each other Aristotle explains motion and change as the union of form and matter Form is what causes motion in matter, form is the mover, matter the thing moved Motion is the realization of that which is possible (the potential) Aristotle taught that God, who was at once the First Cause and the Final Cause, was ultimately responsible for all motion All things move toward God, the pure and supreme form, as the final end, not by mechanical impulsion, but by attraction, as the object of desire The most famous of his extant works are *Organum* (six treatises on logic), *Metaphysics*, *Physics*, *On the Heavens*, *History of Animals*, *On the Parts of Animals*, *De Anima* (*On the Soul*, a psychological treatise), *Politics*, *Nicomachean Ethics*, *Rhetoric*, and *Poetics* In the delimitation of many fields of knowledge we follow Aristotle today Of his works the *Organum* is perhaps the most influential, from it arise the Aristotelian scientific method and the Aristotelian logic Aristotle's biological works are encyclopedic, consisting of his close observations of natural life and of his classification of it His information is astonishingly accurate This is not so true of his astronomical work, which set the arrangement of concentric spheres and fixed stars, later elaborated by Ptolemy and not controverted until Copernicus and Galileo Aristotle's analysis of the components of nature as earth, air, fire, and water perpetuated a common Greek error Aristotle's psychology was not successfully questioned until the faculty psychology was challenged in the late 19th cent The central idea of Aristotle's ethics was that the goodness of a thing lies in the realization of its specific nature The highest good for man is the complete and habitual exercise of the functions that make him a human being This, and not HEDONISM, is what Aristotle means by happiness, which he calls man's chief purpose His ethics emphasize the celebrated Greek notion of the golden mean (nothing too much) In politics he believed that the chief function of the state was to enable its citizens to live happy and virtuous lives For the essential conclusions of Aristotle in the *Poetics*, see TRAGEDY In the late 19th cent a work was found which has proved to be the famous CONSTITUTION OF ATHENS, Aristotle's account of Athenian government His works were extensively used in ancient times, but the Academy of Plato dominated philosophy to such an extent that Aristotelianism was secondary In the 9th cent Arabian scholars introduced Aristotle to Islam, and Moslem theology, speculation, and natural science all took on an Aristotelian form This was true in Baghdad and in Spain, where the great Arabian philosophers flourished It was largely from the Arabs and from Jewish thinkers, also strongly influenced by Aristotle, that he became the philosopher par excellence of the Christian Middle Ages Scholasticism is essentially an Aristotelian system, and it became almost heretical to question Aristotle's observations or conclusions Some have viewed the Renaissance as a revolt against Aristotelianism, but Francis Bacon's experimental method might be called a return to Aristotle See A E Taylor, *Aristotle* (1912), W D Ross, *Aristotle* (1923)

Aristoxenus of Tarentum (ărĭstŏk'sənus, turĕn'tŭm), fl 4th cent B C, foremost musical theorist of ancient Greece He was the first to base musical studies on the aural perception of sound Only two of his treatises are extant, *Elements of Rhythm* and *Elements of Harmony* See H S Macran, *The Harmonics of Aristoxenus* (1902)

arithmetic, the most elementary and ancient branch of mathematics It includes both the art of reckoning or calculating which is called concrete, practical, or elementary arithmetic, and the study of the theory of numbers, which is called abstract, theoretical, or higher arithmetic Both studies deal with numbers or numerical quantities and their behavior under the four fundamental operations of arithmetic—ADDITION, SUBTRACTION, MULTIPLICATION, and DIVISION—and the operations of involution and evolution The difference between elementary and abstract arithmetic lies in the concept of number In elementary arithmetic the familiar numbers of practical life are used, and the training covers, in addition to the actual techniques of calculation, the application of arithmetic to problems

like those met in the business world, e g , problems in percentage, interest, and merchandising In higher arithmetic, which is essentially abstract algebra, the concept of number is greatly generalized to include not only complex numbers, but also quaternions, tensors, and abstract entities with no other meaning than that they obey certain laws This division of arithmetic into the practical and the theoretical dates back to classical Greek times when the term *logistica* meant elementary arithmetic and the term *arithmetic* was reserved for the theory In neither field were the Greeks particularly *proficient* Calculations in those days were performed arduously upon an ABACUS since the decimal system was not used by the Greeks The little true theoretical arithmetic which might be accredited to them, such as the work of Diophantus and Euclid, was buried under the mysticism of the Pythagorean school which attached esoteric meanings to numbers Finally, when Leonardo da Pisa introduced into Europe the decimal system of numbers that he found in use among the Arabians, who had adopted it in turn from the Hindus, elementary arithmetic as it is known today began to emerge Modern higher arithmetic began to develop c 1800 with the work of Karl F Gauss, William R Hamilton, and others in generalizing the concept of number Its development has been greatly influenced by the work of Georg Cantor, J W Dedekind, and Karl Weierstrass on the logical basis of the number system and by the modern work on the theory of infinite numbers See D E Smith, *History of Mathematics* (1923), E T Bell *The Development of Mathematics* (1940), Moses Richardson, *Fundamentals of Mathematics* (1941), Alfred Hooper, *An Arithmetic Refresher* (1944)

Arius, c 256–336, Libyan theologian and heresiarch A parish priest in Alexandria, he advanced the doctrine famous as ARIANISM and was excommunicated locally (321) He was declared orthodox in Asia Minor, where he had fled (324), but he was anathematized by the Council of Nicaea (see NICAEA, FIRST COUNCIL OF) and banished by Constantine (325) But in the reaction after Nicaea, he was received again into the Church (335) The emperor had ordered the Athanasians at Alexandria to receive him at communion but before the order took effect he suddenly died

Arizona, state (113,580 sq mi , 1940 pop 499,261, 1949 estimated pop 745,000), SW United States, one of the Rocky Mt states, admitted 1912 as the 48th state The capital and largest city is PHOENIX Arizona is bounded on the north by Utah, on the west, where the COLORADO river is the main part of the line, by S Nevada and California, on the south by Mexico, and on the east by New Mexico At the northeast corner is the only spot in the United States where four states (Arizona, Utah, Colorado, and New Mexico) meet N Arizona is part of the Colorado plateau with dry plains more than 4,000 ft high, interrupted by the canyons of the Little Colorado and the Colorado (with the wonders of the GRAND CANYON), by isolated mountains (notably the SAN FRANCISCO PEAKS), and by some forest stretches The plateau breaks on the south in an escarpment of mountains—with some sheer bluffs such as the Tonto Rim—that run NE-SW across central Arizona with rocky peaks and broad forests of ponderosa pine To the south, where the GILA flows west across the entire state, are hot desert plains, striated in the southeast by mountain chains running north and south, in the west the plains fall to the relatively low (alt c 140 ft), hot region about YUMA Arizona has minerals —copper that has given it the name the Copper State, gold, silver, lead, zinc, nickel, asbestos, wolfram, molybdenum, and others Arizona has sunshine and dry air that in the 20th cent has been an attraction for tourists and for those in ill-health Yet, although there are mountain spots with annual rainfall of more than 30 in , the state as a whole has been a thirsty land In prehistoric times early Indians—the pit dwellers and later builders of pueblos which flourished in the 13th and 14th cent —undertook irrigation and adapted themselves to scarcity of water, as shown by the surviving Hopi villagers with their dry farming and by the ruined pueblos and homes of the CLIFF DWELLERS, which today awaken the casual traveler to the sense of vanished time The nomadic APACHE INDIANS and the NAVAHO INDIANS and the somewhat more settled peoples farther west (Maricopa, Pima, Papago, Yuma, and Yavapai) had living techniques governed by the drought The first-coming Spanish, Fray MARCOS DE NIZA in 1539 and Francisco VÁSQUEZ DE CORONADO in 1540, found SE Arizona forbidding Though Coronado's men explored far—Pedro de Tovar to the Hopi villages and García López de Cárdenas to the Grand Canyon, while an allied expedition under Hernando de Alarcón was voyaging in the lower Colorado—the region was neglected by the Spanish in favor of the more fruitful area of present New Mexico Antonio de ESPEJO and Juan de OÑATE visited the country, and late in the 17th cent the valiant Father Eusebio KINO, converting the Indians of Pimería Alta (Sonora and S Arizona), founded the first missions, Guevavi and Tumacacori, near present NOGALES, and San Xavier del Bac (1700) near present Tucson Tucson itself was to emerge (1776) as the "Old Pueblo" in the time of Juan Bautista de ANZA and Father F T H. GARCÉS Some mining was done, but there were few settlers when Old Bill Williams and other MOUNTAIN MEN trapped beaver in the mountains and when P St G Cooke and his Mormon Battalion entered (1846) Tucson in the Mexican War The Treaty of GUADALUPE HIDALGO (1848) and the GADSDEN PURCHASE (1853) gave Arizona to the United States, but it remained a relatively obscure part of New MEXICO, traversed by some of the gold seekers going to California Prospectors found gold and silver as well as then-neglected copper, and in 1863 Arizona was set off as a territory, with the capital at Prescott (1864–67), Tucson (1867–77), Prescott again (1877–89), and then Phoenix But the region was precariously held by U S soldiers in the cruel, intermittent warfare with the Apache (1861–86) under several leaders, notably COCHISE and GERONIMO, and Arizona was almost altogether abandoned in the Civil War In the '70s copper mining began on a large scale, and the big copper companies gained the prominence they continued to hold Cattlemen took advantage of the grasslands to establish baronial ranches in the 1870s and '80s, and Arizona was a characteristic part of the Old West, complete with the gun play of the frontier and the Graham-Tewkesbury feud, called the Pleasant Valley War, which started with the traditional friction between sheep rancher and cattleman Irrigation was being practiced by small groups of Mormon immigrants and by other farmers, and Phoenix was by 1912 the center of the controlled and growing richness of the SALT RIVER VALLEY Arizona was, however, still true frontier when it became a state after a storm over its constitution, which contained provisions for initiative, referendum, and recall President Taft refused to sign the statehood bill until the provisions were omitted in 1912 Arizona became a state, then promptly restored the "radical" sections, which, as events turned out, had no significant effect in state history After the First World War, Arizona lost its frontier rawness The three institutions of higher education—the Univ of Arizona, Arizona State College at Tempe and Arizona State College at Flagstaff—grew and improved Attention to conservation and to water use grew more intense Though much of the state is given to national forests and Indian reservations, much of it is intensively used Not only the Salt River Valley but also the Yuma region and the section about COOLIDGE DAM produce lettuce, melons, and other truck as well as cotton and other staples Arizona emerged successful from a long contest to secure a fixed percentage of water and power rights from the dams in the Colorado Copper production reached a new high under the pressure of the Second World War Control of some of the grazing rights regularized the large business of raising sheep, cattle, and goats And the growth of a large tourist industry made the people supremely conscious of the values of the Indian ruins and present Indian customs, of natural curiosities, such as the Grand Canyon, the Painted Desert, the Petrified Forest, and various curious rock formations, of the bizarre flora and fauna of the desert, of the uses of Lake Mead (see HOOVER DAM), of the vestiges of the Old West, and of the beauties of desert and mountain See T E Farish, *History of Arizona* (8 vols , 1915), J H McClintock, *Arizona, Prehistoric, Aboriginal, Pioneer, Modern* (3 vols , 1916), *Arizona and Its Heritage* (1936, Univ of Arizona, General Bul 3), Federal Writers' Project, *Arizona a State Guide* (1940), Ross Santee, *Apache Land* (1947)

Arizona, University of, at Tucson, land-grant and state supported, coeducational, chartered 1885, opened 1891 It includes colleges of agriculture, business and public administration, education, engineering, fine arts, law, mines, and liberal arts and schools of home economics, music, and pharmacy The state museum, state and U S bureaus of mines (Southwest Experiment Station), a laboratory of tree-ring research, and the Southwestern Forest and Range Experiment Station are here Because of the proximity of pueblos and cliff-dwelling remains, Indian archaeology is an important field of research

ark, in the Bible **1** Famous boat of NOAH which he built at God's command to preserve his family and certain creatures from the Flood Gen 6–9, Luke 17 27, Heb 11 7, 1 Peter 3 20 **2** Usually called Ark of the Covenant, the sacred wooden chest of the Hebrews, representative of God or identified with Him It was overlaid with gold inside and out and always heavily veiled, for the high priest alone could look upon its uncovered surface Especially guarded, it was carried about by staves thrust through rings on its side, for to touch it was a profanation punished by death Uzza, when one of its escorts, inadvertently transgressed this law and so lost his life As its presence implied victory, it accompanied the warriors into battle, where once it was captured by the Philistines Restored after many years, it found a resting place in Solomon's Temple. From this time on it is lost from view. Ex. 25 10–21; Num 10 33–36; Deut 10 1–5, Joshua 3–6; 1 Sam 4–7; 2 Sam. 6, 15 24,29, 1 Kings 8 3,9; 1 Chron 13; 15–16 6; 2 Chron 5; Jer 3 16; Heb 9 4.

Arkadelphia (ärkŭdĕl'fēă), city (pop 5,078), co seat of Clark co , SW Ark , on the Ouachita river, first settled c 1807, inc 1838 Ouachita College (Baptist; coeducational; 1886) and a state teachers college are here

Arkansas (är'kŭnsô), state (52,725 sq mi , 1940 pop 1,949,387, 1949 estimated pop 1,964,000), central and SW United States, admitted in 1836 as the 25th state (a slaveholding state) The capital and largest city is LITTLE ROCK, other important cities are FORT SMITH, PINE BLUFF, HOT SPRINGS, and TEXARKANA Arkansas is separated on the east from Tennessee and Mississippi by the Mississippi river, it is bounded on the north by Missouri, on the west by Oklahoma and a part of Texas, and on the south by Louisiana The Arkansas river flows southeast across the state from the mountains of the north and west, going between the Ozark plateaus (see BOSTON MOUNTAINS and OZARK MOUNTAINS) and the OUACHITA MOUNTAINS and running down to the plains of the south and east to empty into the Mississippi The other rivers of the state also generally trend southeast or south to the Mississippi the SAINT FRANCIS (which is for a distance the Missouri line), the WHITE RIVER, the OUACHITA, and the RED RIVER (which is for a very short distance the Texas line) The climate of the whole state is affected by the long, hot summers, and agricultural products are Southern, cotton still leads, but livestock, rice, corn, soybeans, fruits and berries, and truck and dairy produce also give the state wealth Of the various minerals most important are petroleum, coal, bauxite (Arkansas has more than 90 percent of the nation's supply), and natural gas Lumbering is still important in the forests of the state, which is heavily wooded The first white men to see (1541 42) those forests were the members of the Spanish expedition under Hernando DE SOTO More than a century later the French came Marquette and Jolliet descended (1673) the Mississippi to the mouth of the Arkansas (1673) La Salle, going to the mouth of the Mississippi in 1682, met the friendly QUAPAW INDIANS, and the next year his lieutenant, Henri de TONTI, established ARKANSAS POST among them The region was part of the French territory of Louisiana, which was transferred (1762) to Spain and was again held by France before passing to the United States with the LOUISIANA PURCHASE In 1811 and 1812 earthquakes at New Madrid, Mo , drove residents of that area to flee to Arkansas, which was part of the Territory of Missouri from 1812 to 1819, when it was made a separate territory The cotton boom of 1818 brought the first large wave of settlers and the Southern plantation system, moving west, fixed itself in the alluvial plains of S and E Arkansas In the highlands farmers worked hard for a subsistence and got no more The slaveholding planters held most political power, and though the poorer farmers were generally indifferent to questions of slavery and states' rights as the Civil War began, Arkansas after some hesitation seceded (May 6, 1861) from the Union Confederate defeats at PEA RIDGE (March, 1862), PRAIRIE GROVE (Dec , 1862), and Arkansas Post (Jan , 1863) led to Union occupation of N Arkansas, and Grant's Vicksburg campaign broke all the trans-Mississippi South from the rest of the Confederacy In Sept , 1863, Federal troops entered Little Rock, where a Unionist convention set up (Jan , 1864) a government which repudiated secession and abolished slavery The state was not, however, readmitted to the Union until 1868 Reconstruction in Arkansas reached a turbulent climax in the struggle (1874) of two Republican claimants to the governorship, Elisha Baxter and Joseph Brooks When their followers resorted to violence, President Grant declared for Baxter, who called a constituent assembly dominated by Democrats The convention adopted the constitution still in force in 1949 The corrupt regime of carpetbaggers and scalawags was detested by most Arkansas whites, but it brought advances in education and (at exorbitant costs caused by corruption) the building of railroads The broken plantation system was replaced, because of high cotton prices and the failure to give the freed Negroes any economic status, by share cropping and farm tenancy with the attendant evils that have plagued E and S Arkansas The people of the Ozarks remained pretty much as they had been, with a "backward" economy and with customs, skills, and superstitions that have given the hill folk a name for poverty and "quaintness " The fortunes of the state were pegged to the price of cotton, and the depression of the early 1930s struck hard Dispossessed tenants, Negro and white, formed (1939) the Southern Tenant Farmers Union, which after trouble with the authorities moved its headquarters to Memphis, Tenn A strike called in 1936 spread to other regions before its strength waned. Other impoverished farmers migrated W to California as "Arkies" —like the "Okies" from neighboring Oklahoma

After the First World War, Negroes moved in a steady stream to the industrial North And the Second World War brought further loss of population as men left Arkansas for war factories elsewhere The war, however, also boomed new industries in the state, notably the processing of bauxite into aluminum The decline of industrial output after the war has been offset by the vigorous efforts of a state development commission Leading institutions of higher education are the Univ of Arkansas, at Fayetteville, Arkansas State College, near Jonesboro, Arkansas Agricultural and Mechanical College, at Monticello, Hendrix College and Arkansas State Teachers College, at Conway, Ouachita Baptist College and Henderson State Teachers College, at Arkadelphia, and the College of the Ozarks, at Clarksville See T S Staples, *Reconstruction in Arkansas, 1862–1874* (1923), D Y Thomas, *Arkansas in War and Reconstruction, 1861–1874* (1926), Federal Writers' Project, *Arkansas a Guide to the State* (1941), D C Alexander, *The Arkansas Plantation, 1920–1942* (1943), J G Fletcher, *Arkansas* (1947)

Arkansas (ärkăn'zŭs, ar'kunsô'), river rising in central Colorado in the Rockies and flowing generally southeast almost 1,500 mi across Colorado, Kansas, Oklahoma, and Arkansas into the Mississippi midway between Memphis, Tenn , and Vicksburg, Miss The river is crossed by a bridge at Royal Gorge in Colorado, receives the Cimarron and Canadian rivers in Oklahoma, and passes through the cities of Wichita (Kansas), Tulsa (Okla), and Little Rock (Ark) It is the chief waterway for the state of Arkansas, where it drains a broad valley The John Martin Dam in SE Colorado (153 ft high and 13,946 ft long), for flood control and irrigation, was completed in 1948 The Blue Mountain Dam, the Hulah Dam, the Fall River Dam, and the Wister Dam are government projects on tributaries of the Arkansas See W K Moorehead, *Archaeology of the Arkansas River Valley* (1931), C B Davis, *The Arkansas* (1940)

Arkansas, University of, mainly at Fayetteville, land-grant and state supported, coeducational, chartered 1871, opened 1872, called Arkansas Industrial Univ until 1899 There are colleges of agriculture, arts and sciences, business administration, education, and engineering and schools of medicine (at Little Rock) and law

Arkansas City. 1 (ar'kunsô", arkăn'zus) Port town (pop 1,446), co seat of Desha co , SE Ark , on the Mississippi river, founded c 1873 **2** (arkăn'zus) City (pop 12,752), S Kansas, SSE of Wichita at the confluence of the Arkansas and the Walnut, laid out 1870, inc 1872 Its great activity in refining and shipping oil (after the discovery of rich oil fields here in 1914) overshadows the city's importance as a trade and manufacturing center for an agricultural region

Arkansas Indians see Quapaw Indians

Arkansas Post, community (estimated pop 64), SE Ark , on the Arkansas river and c 120 mi SE of Little Rock The oldest white settlement in the state, it was founded by the French in 1686 as a trading post It was an important port for a while, and during the Civil War it was a Confederate stronghold until a successful attack was made by Union troops under General McClernand in 1863 Arkansas Post State Park is adjacent

Arkansas State College, near Jonesboro, coeducational, chartered 1909, opened 1910 as an agricultural school, a junior college 1918–30, called an agricultural and mechanical college 1925–33

Arkhangelsk, RSFSR see Archangel

Arkhangelsky, Aleksandr Andreyevich (ŭlyĭksandr' undrā'yĭvĭch ŭrhŭnggyĕl'skĭ), 1846–1924, Russian composer and choral director, the first to substitute women's voices for boys' voices in Russian church choirs He composed Masses and sacred choruses

Arkite, Canaanite tribe centered about Arka a town near the E Mediterranean Sea NE of Tripoli Gen 10 17, 1 Chron 1 15 Arka, called Area Caesarea and Caesarea Libani by the Romans, was the birthplace of Alexander Severus, it was vainly besieged by the Crusaders in 1099

Arkwright, Sir Richard, 1732 92, English inventor His construction of a machine for spinning, the "water frame," patented in 1769, was an early step in the Industrial Revolution His machines and his gift for organization enabled him and his partner, Jedediah Strutt, to establish huge cotton mills and thus helped to start the factory system He became very wealthy and was knighted in 1786 See Ephraim Lipson, *History of the Woolen and Worsted Industries* (1921), George Unwin, *Samuel Oldknow and the Arkwrights* (1924)

Arlberg (ärl'bĕrk), pass, 5,910 ft high, W Austria, beside Arlberg peak, on the boundary between Tyrol and Vorarlberg The Arlberg Tunnel here is 6½ mi long

Arles (ärl), city (pop 20,138), Bouches-du-Rhône dept , SE France, in Provence, on the Rhone delta It has silk manufactures and trade in wine, olive oil, and fruits It was a flourishing Roman town (Arelas) and the metropolis of Gaul in the late empire Constantine I convoked (314) a synod at Arles which condemned Donatism, Constantine II was born here Arles was an archiepiscopal see from the 4th cent, until 1790 and the scene of many councils It became (879) the seat of the kings of Cisjurane Burgundy or Provence and (933) of the kingdom of Arles (see separate article) The burghers soon obtained extensive rights and were governed by an elected *podestat*, who appointed the consuls and other magistrates Arles retained a special status until the French Revolution Much of the city was destroyed in the Second World War and the population declined c 10,000, but most historical monuments were little harmed They include a Roman arena (2d cent A D), seating 26,000 and now used for bullfights, a Roman theater (1st or 2d cent A D), the Aliscamps (i e , Elysian Fields), remains of a Roman necropolis, the Church of St Trophime (11th–15th cent , formerly a cathedral), the town hall (17th cent), and the Museon Arlaten, a museum of Provençal culture and folklore, installed in a 16th-century mansion by Frédéric Mistral, who was born near Arles The very soul of Provence, Arles has attracted many painters, notably Van Gogh and Gauguin A few miles from Arles, at Fontvieille, is the mill where Alphonse Daudet wrote his *Lettres de mon moulin*

Arles, kingdom of. This kingdom was formed in 933, when Rudolf II, king of Transjurane Burgundy, united the kingdom of Provence or Cisjurane Burgundy to his lands and established his capital at Arles Emperor Conrad II annexed it to the Holy Roman Empire in 1033, but few of his successors troubled to have themselves crowned kings of Arles The imperial vicars, who nominally governed the realm, exercised little control, especially in the south, and its component parts (Provence, Vivarais, Lyonnais, Dauphiné, Savoy, W Switzerland, and Franche-Comté) gradually broke away When, in 1378, Emperor Charles IV ceded the vicariate of the realm to the dauphin (later Charles VI of France), the kingdom of Arles for all practical purposes ceased to exist

Arlington, Henry Bennet, 1st **earl of,** 1618 85, English courtier He fought for the royalists in the civil war, traveled on the Continent, and went to Spain as envoy for Charles II After the Restoration Charles made him a secretary of state (1662), and he became a member of the unscrupulous Cabal ministry He knew of the king's secret agreement with Louis XIV in the Treaty of Dover (1670) and seems to have furthered Charles's policies in the Declaration of Indulgence (1672) and in the third Dutch War He was made earl of Arlington in 1672 Impeached (1674) for corruption, betrayal of trust, and pro-Catholic activities, he was acquitted, resigned, and was made lord chamberlain (1674) See biography by Violet Barbour (1915)

Arlington, 1 City (pop 1,337), SW Ga , WSW of Albany, in the coastal plain, inc as a village 1881, as a city 1923 **2** Town (pop 40,013), E Mass , northwestern suburb of Boston, settled c 1630 Some 17th-century buildings remain **3** Village (pop 1,122), S Minn , N of Mankato, in a farm area **4** City (pop 1,157), E S Dak , S of Watertown, in a farm and dairy region, founded 1880, originally called Nordland by Scandinavian settlers **5** City (1940 pop 4,240, 1947 estimated pop 11,000), N Texas, E of, and near, Fort Worth, inc 1896 Founded near by in 1873, it was moved to the railroad in 1876 It is a market and industrial center in a farming district and is the seat of North Texas Agricultural College (a branch of the Agricultural and Mechanical College of Texas) **6** Town (pop 1,418), SW Vt , SSW of Manchester and on Batten Kill, in an area of country estates and summer homes, settled 1762 An Arlington view (from the home of Gov Thomas Chittenden) is represented on the Vermont state seal Mary Brownson, first wife of Ethan Allen, is buried in the St James churchyard Dorothy Canfield Fisher, whose forebears were early settlers of Arlington, lives here **7** Unincorporated town, N Va , across the Potomac from Washington, D C Here are various government offices, Arlington National Cemetery, and Lee Mansion National Memorial **8** Town (pop 1,460), NW Wash , N of Everett, in a dairy, poultry, and truck area

Arlington Heights. 1 Residential village (pop 5,668), NE Ill , just NW of Chicago, settled in the 1830s, inc 1887 Arlington Park race track is here **2** Village (pop 1,222), SW Ohio, near Cincinnati

Arlington Memorial Bridge, granite and concrete bridge across the Potomac, connecting the Lincoln Monument in Washington, D C , with Arlington National Cemetery, N Va , built 1926–32

Arlington National Cemetery, 408 acres, N Va , across the Potomac from Washington, D C , est 1864, extended in 1889 and 1897 In it are the graves of c 60,000 American war dead, and there are many commemorative monuments, the tomb of the Unknown Soldier and the marble amphitheater are notable The cemetery is part of "Arlington," the former estate of the Custis and Lee families, and includes Arlington House, now preserved as the Lee Mansion National Memorial

Arliss, George, 1868–1946, English stage and moving-picture actor In 1887–1901 he acted Ibsen, Pinero, and Shakspere roles in London and the British colonies In 1911 he had his first great success in the title role of L N Parker's *Disraeli*, and he later added to his reputation in such plays as Archer's *Green Goddess* and Galsworthy's *Old English* He repeated many of his stage successes in moving pictures See his autobiographies, *Up the Years from Bloomsbury* (1927) and *My Ten Years in the Studios* (1940)

arm, the upper extremity in man It includes shoulder, upper arm, forearm, and hand There is one bone, the humerus, in the upper arm The forearm has two parallel bones, the outer radius and the inner ulna The joints at the elbow and wrist give the motion of a hinge A third joint below the elbow, between radius and ulna, allows a sort of rotation Muscles stimulated through nerves cause the motion The biceps and triceps have opposite actions on the elbow joint In the adult the arm is five sixths as long as the leg

Arma (ar'mu), coal-mining city (pop 1,615), SE Kansas, N of Pittsburg near the Mo line, inc 1909

Armada, Spanish (ärmä'dŭ), 1588, fleet launched by Philip II of Spain for the invasion of England, called also the Invincible Armada Commanded, after the death of the marqués de Santa Cruz, by the duque de Medina Sidonia, it consisted of about 130 ships, including transports and merchantmen, and carried c 30,000 men It was to go to Flanders and from there convoy the army of the duke of Parma to invade England and seize the throne for Philip Setting out from Lisbon in May, it was delayed at Coruña, in July at Plymouth it found the English fleet, which was commanded by Charles Howard, later earl of Nottingham, the English captains included Sir Francis Drake, Sir John Hawkins, and Sir Martin Frobisher The English, by getting to windward of the Spanish and firing at long range, forced them up the English Channel and somewhat damaged them in three engagements, at Calais they sent fire ships among the Spanish, who in a panic cut their cables and set sail In the battle on the next day the English had the advantage, but, the wind suddenly changing, most of the Spanish ships escaped northward In attempting to sail home by Scotland and the west coast of Ireland, they were dispersed by storms, their provisions gave out, many of the men were killed or captured by the Irish Only about half the fleet reached home

armadillo (armudil'ō), mammal of the order Edentata, found from Patagonia northward to parts of the S and SW United States The head and body are almost completely covered by an armor of bone and horny material and there are few hairs The tail is usually covered by bony rings Armadillos can burrow into the ground with great speed Some can roll into a ball for protection They are omnivorous feeders, although insects form the bulk of their diet The nine-banded armadillo is the only species which ranges into the United States It produces either four or eight young In South America the largest is the great armadillo (about 3 ft long) and the smallest is the pichiciago (about 5 in long) The flesh of the armadillo is palatable

Armageddon (-gĭd'ŭn), great battlefield where, in the last times, the powers of evil will fight the powers of good Rev 16 16 If the usual etymology is correct, the name alludes to the frequency of battles at Megiddo

Armagh (ärmä'), inland county (449 sq mi , 1937 pop 108,815, 1948 estimated pop 113,125), Ulster prov , Northern Ireland The county town is Armagh, a notable ecclesiastical center for centuries The county rises from the boggy, fertile lowlands in the north to the barren hills in the south Mainly a farming region, it also produces cattle, sheep, pigs, and poultry and is noted for its fine linen It was organized as a shire in 1586

Armagh, urban district (pop 7,064), county town of Co Armagh, Northern Ireland, SW of Belfast From the 5th cent it has been the religious center of Ireland, St Patrick having been bishop of Armagh It is the seat of both Roman Catholic and Protestant archbishoprics Beside the two cathedrals, there are an observatory, the Royal School (1627), and St Patrick Diocesan College The town was subjected to several Danish raids, it was destroyed by Shane O'Neill in 1566 and was burned in 1642 Near by is Navan Fort, a large elliptical mound, on the site of Emania, the legendary capital of Ulster The town has linen mills

Armagnac (ärmänyak'), region and former county, SW France, in Gascony It is famous for its brandy Armagnac is roughly coextensive with Gers dept , Auch is the chief town The counts originated in the 10th cent as vassals of the dukes of Gascony, their power reached its height with Count Bernard VII, whose party dominated France in the early 15th cent Margaret, sister of Francis I of France, married the last count, who died without issue, Armagnac passed to her second husband, Henri d'Albret, king of Navarre, whose grandson became king of France as Henry IV Henry added Armagnac to the royal domain in 1607

Armagnacs and Burgundians, opposing factions which dominated French politics in the early 15th cent The rivalry of Louis d'Orléans, brother of

King Charles VI, and JOHN THE FEARLESS, duke of Burgundy, led to Louis's murder in 1407 In the troubles that followed, the partisans of Charles d'ORLÉANS, son of Louis, were led by BERNARD VII, count of Armagnac, after whom they were named The partisans of the duke of Burgundy, nicknamed Burgundians, had the support of part of the nobility and of the lower classes, notably the CABOCHIENS They were particularly strong in Paris Open civil war broke out in 1411 John the Fearless was at first successful in maintaining his power, but in 1413 the excesses of the Cabochiens turned the Parisians against him and the Armagnacs came into power During these events both factions had made overtures to the English, but after the invasion (1415) of France by Henry V of England, the Armagnacs became the national party, and the Burgundians allied themselves with the British The dauphin (later King Charles VII) took over the leadership of the Armagnacs when Charles d'Orléans was captured at Agincourt The conflict became part of the Hundred Years War In 1418 the Parisians, tired of Armagnac rule, opened their city to the duke of Burgundy, in the ensuing massacre Bernard VII and several thousand followers were killed. During one of the negotiations which he now began with the dauphin, John was assassinated (1419) His successor, PHILIP THE GOOD of Burgundy, continued his alliance with England until the Treaty of ARRAS (1435) Although the terms Armagnacs and Burgundians ceased to be used in their original meanings, the struggle between the French crown and Burgundy continued until the death of Charles the Bold in 1477 The name Armagnacs was applied in 1444 to a large army of ÉCORCHEURS whom Charles VII dispatched, under the command of the dauphin (later Louis XI) in an ultimately unsuccessful campaign against the Swiss confederates

armature, in art see SCULPTURE

armature. 1 In electricity, an important part of the electric GENERATOR and electric MOTOR Essentially it is a coil of wire which rotates in the magnetic field between opposite magnetic poles In its simplest form, the coil is wound around a central core of soft iron and the whole rotated The coil, when kept in motion by mechanical means as in the dynamo (a generator), in its movement cuts the magnetic lines of force between the opposite poles of a magnet and causes a current of electricity to be generated in the coil A commutator is applied to change the current so generated from alternating to direct (see ELECTRICITY) In simple electric motors, a current passed through the armature causes it to rotate between the poles of a stationary electromagnet A shaft attached rigidly to the armature and rotating with it makes possible the conversion of electrical to mechanical energy Armatures differ in the way in which the coil is wound about the core, in the shape of the core, and in the number of turns in the coil Although in general the armature is the rotating part, in some cases it is held stationary and the field rotated about it **2** In MAGNETISM, the armature is a piece of iron or steel commonly placed across or between the poles of a horseshoe magnet, or the opposite poles of two separate magnets, to prevent a decrease in the magnetic property during the time the magnets are not in use This type of armature is called the keeper

Armavir (ärmuvēr', Rus ûrmuvēr'), city (pop 83,677), Krasnodar Territory, SE European RSFSR, on the Kuban river It is the center of a rich agricultural region (grain and livestock) and a railroad junction Armavir was founded in 1848

Armenia (ärmē'nēu), region and former kingdom of Asia Minor Its boundaries varied widely in the course of history, but as a region it is generally understood to include present E TURKEY and the ARMENIAN SOVIET SOCIALIST REPUBLIC It thus forms a continuation of the Anatolian Plateau Mt Ararat, the highest point, is in Turkey, as are the sources of the Euphrates, Tigris, and Aras rivers and Lake VAN Trebizond, on the Black Sea, Erzerum, and Kars are the chief cities of Turkish Armenia, which, unlike Soviet Armenia, has no official standing The history of the Armenians is extremely ancient According to tradition, the kingdom was founded in the region of Lake Van by Haig or Haik, a descendant of Noah, and was ruled for centuries by Haig's successors It was frequently invaded, but never fully subdued, by the Assyrians, in whose inscriptions it is mentioned as Urartu (ARARAT) A battleground of Assyrians, Medes, and Persians, it was by the 6th cent B C a Persian satrapy Conquered (4th cent B C) by Alexander the Great, it became after his death part of the kingdom of SELEUCUS I and his descendants After the Roman victory over ANTIOCHUS III at Magnesia, the Armenians declared (189 B C) their independence under a native dynasty The imperialistic ambition of King TIGRANES led to war with Rome, defeated Armenia became tributary to the republic, and after the campaigns of LUCULLUS and POMPEY it was made a Roman protectorate The Romans distinguished between Greater Armenia and Lesser Armenia, respectively E and W of the Euphrates TIRIDATES, a Parthian prince, was confirmed as king of Armenia by Nero in A D 66 Christianity was introduced early, Armenia is the oldest Christian state In the 3d cent. A D, ARDASHIR I, founder of the SASSANIDAE, came to power in Persia and overran Armenia. Persecution of Christianity made innumerable martyrs and kindled nationalism among the Armenians, particularly after the partition (384) of the kingdom between Persia and Rome Attempts at independence were short-lived, as Armenia was the constant prey of Persians, Byzantines, White Huns, Khasars, and Arabs From 885 to 1046 the kingdom enjoyed autonomy under native rulers, the Bagratids, it then was reconquered by the Byzantines, who promptly lost it to the Seljuk Turks Pushed westward, a number of Armenians, led by Prince Reuben, established the kingdom of Little Armenia in CILICIA, which entertained close relations with its neighbor, the Latin Kingdom of Jerusalem In 1375 the Mamelukes conquered and destroyed the kingdom of Little Armenia Shortly afterward (1386–94) Tamerlane seized Greater Armenia and massacred a large part of the population The Ottoman Turks followed and by the 16th cent held all Armenia Under Ottoman rule the Armenians, though often persecuted and always discriminated against because of their religion, nevertheless acquired a vital economic role Constantinople and all other large cities of the Ottoman Empire had colonies of Armenian merchants and financiers Eastern Armenia was chronically disputed between Turkey and Persia It was from Persia that Russia, in 1828, acquired the present Armenian SSR There remains a considerable Armenian minority in NW Iran The Congress of Berlin (1878, see BERLIN, CONGRESS OF) also assigned the Kars, Ardahan, and Batum districts to Russia, which restored Kars and Ardahan to Turkey in 1921 The Armenian people underwent one of the worst trials in its history between 1894 and 1915 A systematic plan for its extermination was put into action under Abdu-l-Hamid II and was sporadically resumed, notably in 1915, when the Armenians were accused of aiding the Russian invaders The Armenians rose in revolt at Van, which they held until relieved by Russian troops The Treaty of Brest-Litovsk (1918) made Russian Armenia an independent republic under German auspices It was superseded by the Treaty of SÈVRES (1920), which created an independent Greater Armenia, comprising both the Turkish and the Russian parts In the same year, however, the Communists gained control of Russian Armenia and proclaimed it a Soviet republic, and in 1921 the Russo-Turkish Treaty established the present boundaries, thus ending Armenian independence Before 1914 there were c 2,500,000 Armenians in Russia, Turkey, and Iran Of these a large percentage were massacred or fled abroad See also ARMENIAN CHURCH and ARMENIAN LITERATURE See Jacques de Morgan, *Histoire du peuple arménien* (1919), Kevork Aslan, *Armenia and the Armenians* (1920)

Armenia (ärmā'nyä), city (pop 29,673), W central Colombia A coffee center, Armenia is also a rail and highway transshipping point for products passing between BUENAVENTURA and Bogotá, the capital, by way of Quindío Pass and IBAGUÉ

Armenian Church, independent Christian church, also called the Gregorian Church Its head, a primate of honor only, is catholicus or patriarch of Echmiadzin, some other bishops also are called patriarchs—those of Sis (Cilicia), Jerusalem, and Constantinople In general, Armenian practices are like those of other churches of Byzantine type, but in a few respects they resemble Western ways, e g , in the use of unleavened bread in the liturgy The liturgical language is Classical Armenian Armenia became Christian at the end of the 3d cent through the missionary work of St GREGORY THE ILLUMINATOR In the next century the young church made itself autonomous, apparently because of the efforts of the metropolitan bishop of Caesarea, St Basil the Great, to impose certain reforms After the Council of Chalcedon the Armenians rejected the orthodox position, this adoption, at least tacit, of MONOPHYSITISM completed the isolation of the Armenian Church from the rest of Christendom In 1198 the Armenians of Cilicia reunited with the Holy See The head of this Armenian rite under the pope is patriarch of Cilicia The rite shares most practices of the national church The Mechitarists, monks of Venice and elsewhere who cultivate Armenian letters and print Armenian books, are of this rite They are in friendly relation with members of the Armenian Church See Donald Attwater, *The Christian Churches of the East* (1947–48).

Armenian language, subfamily of Indo-European languages See LANGUAGE (table).

Armenian literature. The first work is a translation of the Bible, and its language became the standard of Classical Armenian The Armenian Church fostered literature from its inception, and the principal works are religious or hagiographical, most of them translations This is the so-called golden age of Armenian literature (5th cent) At first there was influence from Mesopotamia, hence the translations from the old Syriac of Aphrsates and St Ephraem Syrus. But Armenia turned west for inspiration, and there were translations of many of the fathers, e.g., Athanasius, Basil the Great, Gregory of Nyssa, Gregory Nazianzen, and John Chrysostom. Among secular works are renderings of Aristotle and of the romance of Alexander The original writings of this period are confined to saints' lives and histories The history of Moses of Khorni contains practically all that is known of pre-Christian Armenia. In the 12th cent many Armenians went to Cilicia to escape the Seljuk Turks, and a new literary period began Its principal figure is Catholicos Narses IV, prelate and poet, whose literary style is unexcelled in Armenian The literary language was still the Classical Armenian, but contemporary forms began to be used for writing in many fields—trade, agriculture, medicine, law, and political administration From the Middle Ages, Constantinople was the chief city of Armenians There, in the 18th cent , Mechitar (1676–1749), a monk of the Catholic Armenians (those in communion with the Holy See), founded a community to cultivate Armenian letters These monks (Mechitarists) center at Venice and do the main publishing in Armenian The 19th cent saw a considerable revival of Armenian letters, and this interest takes the form of a flourishing journalism

Armenian Soviet Socialist Republic, constituent republic (11,500 sq mi , pop c 1,300,000), USSR The capital is Erivan The Armenian SSR lies between Turkey on the west and the Azerbaijan SSR on the east, between Iran on the south and Georgia on the north It thus occupies a part of ancient ARMENIA Situated in the Lesser Caucasus, Soviet Armenia is a region of high, bare mountains, many over 10,000 ft, Mt Aragats (13,432 ft) being the highest Above 6,000 ft there are excellent pastures The ARAS is the chief river, artificial irrigation has made agriculture possible in the relatively low valley (c 3,000 ft) despite a minimal rainfall Lake SEVAN, the largest lake, furnishes considerable hydroelectric power The chief cities are Erivan, Echmiadsin (seat of the head of the Armenian Church), and Leninakan The main products of Armenia are wine, cotton, wool, volcanic building stones, and copper The region was taken by Russia from Persia in 1828 and was made a constituent republic in 1936 After the Turkish massacres of the Armenians, efforts have been made, with some success, to absorb Armenian refugees from all over the world in Soviet Armenia

Armentières (ärmuntēr', Fr ärmätyĕr'), town (pop 18,691), Nord dept , N France, in Flanders, on the Lys It is a rail center and has a large textile industry The scene of heavy fighting in the First World War, Armentières is known through the song *Mademoiselle from Armentières*

Armfield, Maxwell Ashby, 1882–, English etcher and illustrator His style is characterized by realism and precision His *Manual of Tempera Painting* was published in 1930

Arminianism see ARMINIUS, JACOBUS

Arminius (ärmĭ'nēus), d A D 21?, leader of the Germans, called Hermann in modern German He was a chief of the Cherusci in the area of modern Hanover, when the Romans were pushing E from the Rhine toward the Elbe Arminius, who had been a Roman citizen and soldier, secretly gathered a great force of allies and set upon P Quintilius Varus by surprise in the Teutoburger Wald in A D 9 In the ensuing battle Varus' army was utterly destroyed So great was the shock in Rome that the story goes that Emperor Augustus afterward would start up from sleep crying, "Varus, Varus, bring me back my legions!" The Romans never again made any real effort to absorb the territory E of the Rhine, though GERMANICUS CAESAR, called to aid the father of Arminius' wife, Thusnelda, against Arminius, badly defeated and wounded the German leader in A D 16 Arminius was later killed by treachery In the romantic period German nationalists made much of Arminius, who became a major national hero F G. Klopstock wrote a trilogy of plays about Arminius, and J E von Bandel erected a large monument to him near Detmold Tacitus glorified Arminius as the noble barbarian, and Tacitus is the source of modern knowledge of him

Arminius, Jacobus (jukō'bus), 1560–1609, Dutch Reformed theologian, whose original name was Jacob Harmensen He studied at Leiden, Marburg, Geneva, and Basel and in 1588 became a pastor at Amsterdam He undertook to defend the Calvinist doctrine of predestination against the attacks of Dirck Volkertszoon Coornhert, but his study resulted in his adopting instead views in sympathy with the critics He was professor of theology at the Univ of Leiden after 1603, and he engaged in violent theological debates, seeking to win the Dutch Reformed Church to his views **Arminianism** in his teaching was not yet well formulated, but in his works he advocated a moderate doctrine of election, belief that man could resist grace, and a much broader view of redemption than that of the Calvinists. His ideas were formulated after his death into a definite system by his disciple, Simon Episcopius, who drew up the "Remonstrance" (see REMONSTRANTS). Arminianism later was the doc-

trine of the Wesleys and the Methodist Episcopal Church.

Armistead, George (är'mĭstĕd), 1780–1818, American artillery officer distinguished in the War of 1812, b. Virginia He took part in the capture of Fort George on the Niagara frontier but is better remembered as the defender of Fort McHenry (see McHENRY, FORT) against British attack (Sept., 1814)—a defense that inspired the STAR-SPANGLED BANNER

Armistead, Lewis Addison, 1817–63, Confederate general, b New Bern, N C He was commissioned (1839) in the U S army from Virginia but resigned when that state seceded In the GETTYSBURG CAMPAIGN, Armistead, commanding a brigade under G E PICKETT in the famous charge, accomplished the farthest penetration of the Union lines, but he was mortally wounded A monument where he fell marks the "high tide" of the Confederacy

Armitage, Edward, 1817–96, English historical painter, studied under Paul Delaroche in Paris His early *Prometheus Bound* is in the Louvre After a year in Rome he exhibited (1845) at the Royal Academy He traveled in Russia and painted battle scenes of the Crimean War, but he is better known for his pictures of religious subjects, such as *The Remorse of Judas* (Tate Gall., London) and *Herod's Birthday Feast* (Guildhall, London) Armitage also painted numerous murals in fresco

Armoni (ärmō'nī) [Heb., =one of the palace], one of Saul's sons killed to end the Gibeonite famine 2 Sam 21 1–14

armor, apparatus for defense of persons, horses, and such objects as vehicles, naval vessels, and aircraft Characteristic forms of body armor are the shield, helmet, cuirass, and complete suit of mail Wood or hides, used as materials for armor in ancient times, were later replaced by metal Coverings worn to protect the body against weapons were known to the Assyrians and Etruscans, the Greek hoplite was protected by helmet, cuirass, shin guards (greaves), and shield The armor of the Roman legionary passed through many stages, but was characteristically a cuirass and a shield That of the medieval knights became more elaborate from the 11th cent to the 16th Chain mail gave place to a complete protective covering of steel plates The evolution of warfare, with increased emphasis on mobility, was diminishing the importance of armor, even before firearms speeded its disappearance Helmets and cuirasses were worn in action as late as the 17th cent, later they were used for ceremonial purposes in certain cavalry regiments In the wars of the 20th cent, steel helmets were reintroduced, and there were some experiments with shields, breastplates, and other protective clothing Armor was also used for vehicles The TANK, introduced in the First World War, was extensively used in the Second in mass formations, as were other armored vehicles Armor plate forms an important part of the defense of ships and aircraft

Armorica: see BRITTANY

Armour, Philip Danforth (är'mur), 1832–1901, American meat packer, b Stockbridge, Madison co, N Y At first a farmer and wholesale grocer (1856–63), Armour netted at least $2,000,000 selling meat during the Civil War He increased his wealth by moving his stockyards to Chicago, by personally supervising slaughter of animals, by selling the waste products, and by adapting principles of refrigeration to meat, but his prestige was dimmed by the "embalmed beef" scandals of 1898–99 See biography by Harper Leech and John C Carroll (1938)

Armour, city (pop 1,013), co seat of Douglas co, SE S Dak, NW of Yankton, founded 1886 It is a shipping center for grain, livestock, and poultry

Armour Institute see ILLINOIS INSTITUTE OF TECHNOLOGY

Arms, John Taylor, 1887–, American etcher and draughtsman, b Washington, D C He studied architecture at the Massachusetts Institute of Technology and was a practicing architect until the First World War, during which he served in the navy After the war he devoted himself to etching and became noted for his excellent studies of picturesque medieval architecture, among them illustrations for his wife's *Churches of France* and *Hill Towns and Cities of Northern Italy* His faultless technique and draughtsmanship won him numerous awards, and his work is in many principal galleries and collections He served as president of the Society of American Etchers Arms wrote the excellent *Handbook of Print Making and Print Makers* (1934). See monograph by Cynthia Eaton (1923)

arms, coat of: see BLAZONRY and HERALDRY

Armsby, Henry Prentiss, 1853–1921, American agricultural chemist, b Northbridge, Mass, Ph D Yale, 1879 He carried on important work on animal nutrition and the application to it of the law of the conservation of energy He was author of *The Nutrition of Farm Animals* (1917), *The Conservation of Food Energy* (1918), and *The Animal as a Converter of Matter and Energy* (ed by C R Moulton, 1925), posthumously published

Armstead, Henry Hugh, 1828–1905, English sculptor and silversmith His principal works are in bronze and marble *St Paul, David,* and *Moses* (all Westminster Abbey) and *Bishop Wilberforce* (Winchester Cathedral) are noteworthy examples Armstead was employed on the Albert Memorial

Armstrong, David Maitland, 1836–1918, American mural and genre painter and worker in stained glass, b Newburgh, N Y Windows by him are in Trinity, St Michael's, Holy Communion, and Ascension churches, New York, in St Paul's Chapel, Columbia Univ, and in All Souls' Church, Baltimore, N C See his *Day before Yesterday* (1920).

Armstrong, Edwin Howard, 1890–, American engineer and radio inventor, b New York city, grad Columbia (E E, 1913) He was associated in research with Michael I Pupin at Columbia and became professor there in 1934 Numerous awards have been given Armstrong for his contributions to the development of radio, e g, for the invention of the regenerative circuit (1912), the SUPERHETERODYNE circuit (1918), upon which the design of nearly all modern receivers is based, the superregenerative circuit (1920), and the development of "wide-swing" FREQUENCY MODULATION In 1947 he received the Medal for Merit for his contributions to military communications during the Second World War

Armstrong, John, 1717–95, American pioneer, the "hero of Kittanning," b Co Fermanagh, Ireland He laid out the town of Carlisle, Pa In 1756 he led the expedition that destroyed Kittanning, a Delaware Indian town on the Allegheny Later he was a major general in the American Revolution and a member of the Second Continental Congress

Armstrong, John, 1758–1843, American army officer, U S Secretary of War (1813–14), b Carlisle, Pa, son of John Armstrong, the "hero of Kittanning" From the beginning of the Saratoga campaign until after the end of the American Revolution he was on the staff of Horatio GATES In 1783 at the camp on the Hudson, Armstrong wrote the "Newburgh Addresses" or "Newburgh Letters," anonymously issued appeals urging the restive Continental officers to force from Congress recognition of their grievances General Washington denounced the appeals After marriage (1789) to Alida, sister of Robert R Livingston, Armstrong moved to Red Hook, N Y, and became a political supporter of George and De Witt Clinton He was U S Senator (1800–02, 1803–04) and was ambassador to France (1804–10) in the troubled times of Napoleon's CONTINENTAL SYSTEM As Secretary of War under President Madison, in the War of 1812 he was held responsible for the disasters of 1813–14, notably the failure of the expedition to Canada and the British capture of Washington city He resigned in public disfavor Armstrong wrote *Notices of the War of 1812* (1836–40), biographies of Richard Montgomery and Anthony Wayne, and books on agriculture and gardening

Armstrong, Samuel Chapman, 1839–93, American educator, philanthropist, and soldier, b Hawaiian Islands, of missionary parents, grad Williams, 1862 He served in the Civil War, rising to the rank of major general Appointed an agent of the Freedmen's Bureau in Virginia, he quickly realized the need for vocational training for Negroes and persuaded the American Missionary Association to found, in 1868, the Hampton Normal and Agricultural Institute, now the Hampton Institute Because of Armstrong's interest, Indians were later admitted to the institution, which he headed until his death See biography by E A Talbot (1904), F G Peabody, *Education for Life* (1918), a history of Hampton Institute

Armstrong, William George, 1810–1900, English inventor After creating numerous inventions, including a hydraulic crane and a hydroelectric engine, he built (c 1855) a breech-loading gun, made of successive rings of metal shrunk upon a rifle-bored steel barrel The gun, which revolutionized modern artillery, made him famous He also built warships and wrote on scientific subjects He was knighted in 1859 and created Baron Armstrong of Cragside in 1887 His engineering works expanded greatly and after his death were joined with another firm to form Vickers, Armstrong, Ltd, the immense munitions company long headed by Sir Basil Zaharoff

army, armed land force, under regular military organization—distinguished from the horde, the armed mass of all able-bodied men in a tribe The earliest known army was that of Egypt, like the later Oriental armies of Assyria and Persia, it was a professional body The Greeks made military service obligatory on citizens, their infantry was the first to fight in close order The Greek formation, the PHALANX, was adopted by Philip of Macedon and Alexander the Great Although heavy and light infantry and cavalry were all joined in the largest unit of the Roman army, the LEGION, the early triumphs of Rome rested on the maneuverability of small units, at first composed of citizen soldiers With the growth of Roman power, a professional standing army came into being, the legions of the empire came increasingly to be filled up with barbarians, whose lack of attachment to the state contributed greatly to the decline of Roman power The original Germanic method of organizing an army was by massing all men of fighting strength into a horde, this mass levy was the ancestor of the Anglo-Saxon fyrd and the modern militia. The army of the Middle Ages was based on FEUDALISM The great lords by the nature of their holdings were necessarily soldiers, with their private armies of vassal knights and yeomanry who followed as light-armed infantry and archers Alongside the feudal levies grew up bodies of mercenaries When the evolution of infantry tactics and the introduction of firearms ended the predominance of the knights in warfare, as artillery ended the significance of the castle, the mercenary became the dominant figure The CONDOTTIERE hired mercenaries and fought under the prince who was able and willing to pay most The German *Landsknechte* and the Swiss served all over Europe The professional soldier was also a notable feature of the armies of the Ottoman Turks, who threatened to destroy all the forces of Western Europe in the 15th cent The Turkish forces were at that time, however, still infused with the power of earlier Islamic conquerors—a unity that affected all later army organization After the Thirty Years War (1618–48), France emerged as the preeminent military power Under Louis XIV and Louvois, France organized a national standing army, which was the pattern for all Europe up to the French Revolution It took the form of a professional body, set apart from contact with civilian life and under an iron discipline that reached its harsh perfection under Frederick II of Prussia The introduction of conscription in the French Revolutionary Wars set in motion the development of mass armies, built around a professional nucleus It was by conscription that Napoleon's armies were largely recruited In the 19th cent the Prussian army, based on conscription and the maintenance of trained reserves, was the best-organized, best-drilled, and most widely imitated instrument of warfare Even so, Great Britain and the United States maintained their peacetime armies by voluntary enlistment The United States traditionally relied for emergencies on its citizen militia (the National Guard), though conscription was used in the Civil War Great Britain in 1907 organized a militia body, the territorials These countries too turned to conscription in the First World War and, at last, in peacetime—Great Britain in 1939, the United States in 1940 Warfare had evolved to the point where large masses of men were essential It evolved further, in the First World War and especially in the Second World War, to include women in auxiliary or regular services From very early times necessarily there had to be troops whose major duty was in supplying food, quarters, and the like for the troops actually engaged in fighting—even when the armies simply lived off the land There was, however, no formal distinction made between service troops and combat troops, as there was between infantry and cavalry (though this latter distinction was vitiated somewhat by the introduction of artillery) With the creation of the great citizen armies after the time of the American Revolution and the French Revolution, formal specialization proliferated more and more, with quartermasters, ordnance troops, engineers, medical specialists, and the like organized into separate units In many armies a newly developed body, the air force, has tended to become an entirely separate arm, like the navy The term *army* is still applied to all the armed land forces of a nation, as in "the French army" or "the U S army," but it also has other uses In combat the term came to be used for a self-contained force fighting in a particular region, e g, the Army of the North in the French Revolution and the Army of the Potomac in the U S Civil War In the modern armed forces of the United States, the division is the unit that has specialized services such that it is a self-contained unit, the unit next higher in the hierarchy of command is the corps, the unit above the corps is the army, which may be of varying size and structure In operations in the Second World War, army groups were created, including several armies (sometimes from different allied national armed forces) Above the army groups is the command of a theater of operations See STRATEGY AND TACTICS, MILITARY

army worm, striped green, brown, and yellow larva of a noctuid moth found in the United States and Canada E of the Rocky Mts and in other parts of the world It is especially destructive to young corn, timothy, millet, and some legumes When numerous, army worms move in hordes like an army from one field to another, ravaging crops The adult is a dull brown moth with a white spot on each forewing One method of control is by spreading a poison bran mixture on the fields, another is by digging ditches with deeper holes at intervals as traps. The fall army worm or grassworm of the same family attacks grasses and many other crops in the S United States

Arnall, Ellis Gibbs, 1907–, governor of Georgia (1943–47), b Newnan, Ga, grad. Univ of the South (Sewanee), 1928, and Univ of Georgia Law School, 1931 He had served as a member of the state house of representatives (1933–37), assistant

attorney general (1937–39), and attorney general before in the Democratic primary of 1942 he defeated Eugene TALMADGE The constitution of 1945 was notable among the many achievements of Arnall's liberal administration as governor In Dec , 1948, he became president of the Society of Independent Motion Picture Producers He wrote *The Shore Dimly Seen* (1946) and *What the People Want* (1948)

Arnan (är'năn) [Heb , = active], descendant of David. 1 Chron 3 21

Arnaud, Arsène see CLARETIE, JULES

Arnaud, Henri (ärnō', ärnō'), 1641–1721, pastor and leader of the WALDENSES When VICTOR Amadeus II of Savoy, in league with the French, set out to expel the Waldenses, Arnaud led (1686) a band of them into Switzerland In 1689 he led some of them back to their Piedmont valleys, where they withstood a combined French-Savoyard attack In 1690 Victor Amadeus turned against the French, and Arnaud gained the favor of the duke and acted as his agent while the Waldenses fought on the side of the Savoyards and were repatriated A new political turn sent Arnaud into exile again, and after 1699 he lived in Württemberg He wrote an account of the return of the Waldenses, *Histoire de la glorieuse rentrée des vaudois dans leurs vallées* (1710, Eng tr , 1827)

Arnauld (ärnō', ärnō'), French family involved in JANSENISM The name is also spelled Arnaut or Arnault The leader was a nun, **Marie Angélique de Sainte Madeleine** (märē' ăzhälēk' du sēt' mädulăn'), 1591–1661, abbess from early youth of PORT-ROYAL, a Cistercian house near Paris Under the influence of St Francis of Sales she reformed her abbey She was interested in Jansenism by DUVERGIER DE HAURANNE, and her introduction of the ideas into Port-Royal was a decisive step in their progress Her younger brother, **Antoine Arnauld** (ătwăn'), 1612–94, was a leading Jansenist controversialist He was a priest and a member of the Sorbonne His best-known work was an attack on the Jesuits, *De la fréquente communion* (1643) He also wrote against Calvinism and the freethinkers In 1656 he was expelled from the Sorbonne and the faculty of theology He lived for some years at Port-Royal-des-Champs, where he collaborated on the Port-Royal textbooks He withdrew to Belgium in 1679 The chief controversy of his later years was with Malebranche on the theology of grace His elder brother, **Robert Arnauld d'Andilly** (rōbĕr', dädēlē'), 1588 1674, was a translator of religious writings and an original religious poet He lived long in retirement at Port-Royal-des-Champs

Arndt, Ernst Moritz (ĕrnst' mō'rĭts arnt'), 1769–1860, German poet and historian An ardent nationalist and opponent of Napoleon I, he was forced to flee to Sweden and Russia because of his book, *Geist der Zeit* [spirit of the times] (Vol I, 1807, Vols II-III, 1813–18) He taught history at the Univ of Bonn (1818–20, 1840–60) and in 1848 was elected to the Frankfurt Parliament His verse, of the patriotic and martial variety, helped to influence German feelings against Napoleon See A G Pundt, *Arndt and the National Awakening in Germany* (1935)

Arne, Thomas Augustine, 1710–78, English composer of the song *Rule, Britannia* (see THOMSON, JAMES, 1700–1748) He composed music for Milton's masque *Comus* and set many of Shakspere's songs to music Other works are the oratorio *Judith* (1761), operas, and instrumental music See studies by W H Cummings (1912) and Hubert Langley (1938)

Arneth, Alfred, Ritter von (äl'frăt rĭ'tur fün är'nĕt), 1819–97, Austrian historian, an authority on 18th-century Austria His *Geschichte Maria Theresias* (10 vols , 1863–79) and his *Prinz Eugen* (1858) are his chief works

Arnhem (är'num), municipality (pop 96,051) and city, capital of Gelderland prov , E Netherlands A port on the Lower Rhine, it is an industrial center (textiles, leather goods, chemicals, engines, and electrical engineering) Dating from the 10th cent, it was long the residence of the dukes of Gelderland In Sept , 1944, British troops landed here in the huge Allied air-borne operation designed to outflank the German Siegfried Line, they were soon isolated and in a heroic stand lost two thirds of their strength, the remainder were evacuated (see also EINDHOVEN and NIJMEGEN)

Arnhem Land, aboriginal reservation, area 31,200 sq mi , Northern Territory, Australia, on a wide peninsula W of the Gulf of Carpentaria An archaeological expedition was made here in 1948 by American and Australian scientists

Arnim, Bettina von (bĕtē'nä fün är'nim), 1785–1859, German writer of the romantic school, whose maiden name was Elisabeth Brentano She was a friend of Beethoven and, supposedly, of Goethe, about whom she wrote the quite unreliable *Goethes Briefwechsel mit einem Kinde* (1835, Eng tr , *Goethe's Correspondence with a Child*, 1837) Her other works include a tale of the hardships of Silesian weavers, *Dies Buch gehört dem König* (1843) Her husband, **Ludwig Joachim von Arnim** or **Ludwig Achim von Arnim** (lōōd'vĭkh yōăkh'ĭm, akh'ĭm), 1781–1831, was the author of poems, plays, and novels His chief work was an unfinished novel of the Reformation, *Die Kronenwächter* [the guardians of the crown] (1817) Perhaps his best-known work is *Isabella von Ägypten* (1812, Eng tr , *Isabella of Egypt*, 1927), a *Novelle* With his brother-in-law, Clemens BRENTANO, he published a collection of folk songs, *Des Knaben Wunderhorn* [the boy's magic horn] (1806–8)

Arnim, Mary Annette (Beauchamp), Countess von. see RUSSELL, MARY ANNETTE RUSSELL, COUNTESS.

Arno (är'nō), river, 150 mi long, Tuscany, central Italy It rises in the Tuscan Apennines and flows past Florence and Pisa into the Tyrrhenian Sea Its upper valley, the Casentino, is famous for its lovely countryside

Arnold, Benedict, 1741–1801, American Revolutionary general and traitor, b Norwich, Conn As a boy he joined the colonial militia in the French and Indian War but soon deserted Early in the Revolution, his expedition against Ticonderoga was joined with that of Ethan ALLEN and the joint command took the fort Arnold pushed on to the northern end of Lake Champlain, where he destroyed a number of ships and a British fort In the QUEBEC CAMPAIGN, he invaded Canada (1775) by way of the Maine forests The march proved incredibly hard, and the force was impotent when it reached Quebec Richard MONTGOMERY arrived from Montreal, and the two small armies launched the unsuccessful assault on Dec 31, 1775 Arnold was wounded but continued the siege until spring, when Sir Guy Carleton forced him back to Lake Champlain Here he built a small fleet, which, although defeated, halted the British advance In Feb , 1777, Congress, despite Washington's protests and Arnold's service, promoted five brigadier generals of junior rank to major generalships over Arnold's head, an action which embittered the proud and ambitious man and may in part have motivated his future treason He soon won his promotion, however, by his spectacular defense (1777) against William Tryon in Connecticut In the SARATOGA CAMPAIGN, his relief of Fort Stanwix and his brilliant campaigning under Horatio Gates played a decisive part in the American victory He became (1778) commander of Philadelphia, after the British evacuation, and there married Peggy Shippen, daughter of a leading Tory Arnold was court-martialed because of disputes with civil authorities He was cleared of all major charges but soon afterwards began his treasonable correspondence with Sir Henry Clinton in New York Arnold became commander of West Point (1780), intending to betray it for a British commission and a sum of money The plot was discovered with the capture of John ANDRÉ, but Arnold escaped In 1781 in the British service he led two savage raids—one against Virginia and the other against New London, Conn —before going into exile in England and Canada See Carl Van Doren, *Secret History of the American Revolution* (1943), biographies by Oscar Sherwin (1931) and Malcolm Decker (1932)

Arnold, Bion Joseph, 1861–1942, American electrical engineer, b Casnovia, Mich An authority on electric traction, he was consultant in the building of the street railway systems of Chicago, Pittsburgh, Los Angeles, Cincinnati, and other cities and for the New York subways He devised the plan for the terminal electrification of the New York Central RR The magnetic clutch was invented by Arnold, and he was a pioneer in the use of alternating-current, direct-current, and single-phase electric traction systems

Arnold, Sir Edwin, 1832–1904, English poet and journalist, b Gravesend, educated at University College, Oxford For some years principal of the government college in Poona, India, he was a member of the staff of the *Daily Telegraph* after 1861 and chief editor after 1873 He won celebrity with *The Light of Asia* (1879), a blank-verse epic dealing with the life of Buddha The poem was attacked for its alleged distortion of Buddhist doctrine and for its tolerant attitude toward a non-Christian religion. *The Light of the World* (1891), on the life of Jesus, was not so successful Besides other volumes of poetry, Arnold wrote a number of picturesque travel books, among them *Seas and Lands* (1891) and *Japonica* (1892) He is also known for his translations

Arnold, Henry Harley, 1886–1950, American general, chief of the Army Air Forces (1941-46), b Gladwyne, Pa , grad West Point, 1907 Assigned (1911) to the aviation division of the Signal Corps, Arnold later served almost entirely with the air arm He was chief of the Air Corps from 1938 to 1940, when he became deputy chief of staff for the air Arnold was chief of the U S Army Air Forces throughout the war and was made (1944) general of the army and later (June, 1949) general of the air force—both "five-star" ranks He wrote a number of books, several of them with I C Eaker

Arnold, Matthew, 1822–88, English poet and critic, b Laleham, near Staines, educated at Rugby, grad Balliol College, Oxford, 1844, fellow of Oriel College, Oxford, 1845 He was the son of Dr Thomas Arnold After a brief period as secretary to the 3rd marquess of Lansdowne, Matthew Arnold reluctantly accepted (1851) an inspectorship of elementary schools which he held until 1886. In the line of duty he went on several missions to European schools, about which he wrote *The Popular Education of France, with Notices of That of Holland and Switzerland* (1861) and *Schools and Universities on the Continent* (1868), in addition to his official reports He strenuously advocated a system of secondary education completely state regulated Aside from prize school poems, Arnold's poetic career began with *The Strayed Reveller and Other Poems* (1849) and *Empedocles on Etna and Other Poems* (1852), both of which he signed "A " and later withdrew, dissatisfied with them. His *Poems* (1853) under his own name included some items from the suppressed books *Poems Second Series* (1855) followed, in 1857 he was elected professor of poetry at Oxford His later work included *Merope a Tragedy* (1858) and *New Poems* (1867), in 1867 he resigned his chair and practically stopped writing poetry His books of literary criticism began to appear while he was teaching at Oxford, the most important being *On Translating Homer* (1861), *On Translating Homer Last Words* (1862), *Essays in Criticism* (1865), and the second series of *Essays in Criticism* (1888) In *Culture and Anarchy* (1869) and *Friendship's Garland* (1871) he widened his field to include social criticism His interest in religion was responsible for *St Paul and Protestantism* (1870), *Literature and Dogma* (1873), *God and the Bible* (1875), and *Last Essays on Church and Religion* (1877), his lecture tours in America resulted in *Discourses in America* (1885) and *Civilization in the United States* (1888) Arnold believed poetry should be objective, and yet his best poems live because he exemplifies 19th-century romantic pessimism, because he was "wandering between two worlds," the dead one of lost dogmatic belief and the new ethical and moral order "powerless to be born " It is the poignant despair of "Dover Beach" and "Isolation To Marguerite" and the poems on the Grande Chartreuse and on Senancour which is appealing Some of his best poems are elegiac—"Thyrsis" (on his friend Arthur Hugh CLOUGH), "The Scholar Gypsy," and "Rugby Chapel" (on his father) He also wrote a vivid narrative poem in 'Sohrab and Rustum," based on an episode taken from FIRDAUSI, *Rustram and Isrult*, a modern treatment, and an effective dramatic monologue, "The Forsaken Merman " Arnold saw the need in England for "disinterested" criticism, neither personal nor historical His standards were classical, and although he was influenced by the French, it was from the Greek point of view as he understood it that he attacked the taste and manners of the "Barbarians" (aristocracy), the "Philistines" (middle class), and the "Populace" alike He became the apostle of "culture"—"the study of the best that has been thought and said in the world"—as the preventive of anarchy See his *Letters* (ed by G W E Russell, 2 vols , 1895), *Unpublished Letters* (ed by Arnold Whitridge, 1923), and *Letters to Arthur Hugh Clough* (ed by H F Lowry, 1932) and his notebooks (ed by Mrs Armine Wodehouse, 1902), commentary on his manuscript poetry notes by C B Tinker and H F Lowry (1940), studies by Lionel Trilling (1939), E K Chambers (1947), and E K Brown (1948)

Arnold, Thomas, 1795–1842, English educator, b Isle of Wight, educated at Winchester and Corpus Christi College, Oxford He was a fellow of Oriel College from 1815 to 1819, was ordained deacon in 1818, and was headmaster of Rugby School from 1827 to 1842 A man of great personal integrity and magnetic influence, Arnold through his reforms at Rugby revivified the entire English public school system Mathematics, modern languages, and modern history were added to the traditional classical curriculum The monitorial system was introduced, and independent thought was encouraged Through the medium of his weekly sermons to his students in Rugby Chapel, Arnold inculcated the Christian principles and ideals which formed the core of his own religious convictions An effective preacher, Arnold was an excellent classical scholar and historian as well An edition of Thucydides (1835), *History of Rome* (3 vols , 1838–43, to the Punic Wars), and *History of the Roman Commonwealth* (pub posthumously, 1845) are among the products of a lifetime of study Arnold's expression of liberal political and theological views made him unpopular, however, and general recognition was not accorded him until 1841, when he was appointed regius professor of modern history at Oxford His sudden death a year later cut short his influential and important career Matthew Arnold was his son and Mrs Humphry Ward his granddaughter See A P Stanley, *The Life and Correspondence of Thomas Arnold, D D* (1844), Arnold Whitridge, *Dr Arnold of Rugby* (1928), Lytton Strachey, *Eminent Victorians* (1918), Thomas Hughes, *Tom Brown's Schooldays* (1857), a novel of life at Rugby in which Arnold is portrayed as headmaster

Arnold, Thurman Wesley, 1891–, U S Assistant Attorney General in charge of the antitrust division (1938-43), b Laramie, Wyo., grad Princeton (B A , 1911), Yale (M A , 1911), and Harvard Law School (LL B , 1914). Dean of the Univ of West Virginia

law school (1927–30), professor of law at Yale (1930–36), author and prominent lawyer, Arnold served as special counsel to the AAA (1933) and as trial examiner for the SEC (1935) As Assistant Attorney General, he instituted suits attacking control of patents and housing and transportation trusts He was (1943–45) associate justice of the U S Court of Appeals for the District of Columbia but resigned (July, 1945) to go into private practice. He is best known for his book *The Folklore of Capitalism* (1937)

Arnold, borough (pop 10,898), SW Pa , on the Allegheny and NE of Pittsburgh, inc 1895. It manufactures glass

Arnold of Brescia (brŏ'shu), c 1090–1155, Italian reformer He was a priest of irreproachable life who was first prominent in a struggle at Brescia between the bishop and the city government A pupil of ABELARD, Arnold was sharply critical of the Church, declaring that secular powers only ought to hold property, for the Church was being tainted by her temporal power Unlike St BERNARD OF CLAIRVAUX (who also castigated abuse of ecclesiastical wealth), Arnold held that the very possession of property by the Church was bad At the Synod of Sens (1140), dominated by St Bernard, Arnold and Abelard were adjudged to be in error Pope INNOCENT II ordered Arnold exiled and his books burned Arnold returned to France, then went to Zurich In 1145 Pope Eugene III ordered him to go to Rome There the people had asserted the rights of the commune and had set up a republic Arnold was attracted to their cause and became their leader, eloquently pleading for liberty and democratic rights He was excommunicated by the pope in 1148 but continued to head the republican city-state even after Eugene III was permitted to reenter Rome When Adrian IV became pope, however, he took stern measures By placing Rome under an interdict in Holy Week, 1155, he forced the exile of Arnold When Emperor Frederick I came to Rome, his forces at the pope's request seized Arnold, who was then tried by the Roman Curia as a political rebel (not a heretic) and executed by secular authorities To the end he was idolized by the Roman populace See biography by G W Greenaway (1931)

Arnoldson, Klas Pontus (klas' pŏntŭs ar'nōldsōn), 1844–1916, Swedish journalist and peace advocate His untiring efforts for peace were rewarded by the 1908 Nobel Peace Prize, which he shared with Fredrik Bajer A book he wrote on world peace (1900) was widely read As a member of the second chamber of the Riksdag (1882–87) he introduced a motion for permanent neutrality In the union crisis in 1905, he opposed a war with Norway He founded several societies devoted to peace

Arnold von Winkelried see WINKELRIED

Arnolfo di Cambio (ärnōl'fō dē käm'byō), c 1232–c 1310, Italian architect and sculptor He was a pupil of the sculptor Nicola Pisano, as witnessed by the admirable tomb of Cardinal de Braye in the Church of San Domenico at Orvieto (c 1282), but forsook sculpture to become the foremost architect of the Italian Gothic era He designed many buildings in Florence, including the Baptistery (1290), the Church of Santa Croce (1294), and the Palazzo Vecchio (1298) From 1296 till his death he was occupied with the design and erection of the basic portion of Santa Maria del Fiore, Florence

Arnon (ar'nŏn), river of Jordan, entering the eastern side of the Dead Sea, called today Wadi Mojib. It is frequently mentioned in the Bible, as the border between Moab (on the south) and the Amorites and later as the border between Moab and Israel The city Aroer was on the Arnon Num 21 13,14, 24,26,28, Deut 2 24,36, 3 8,12,16, 4 8, Joshua 12 1,2, 13 9,16, Judges 11 13,18,26, 2 Kings 10 33, Isa 16 2, Jer 48 20

Arnprior (arnprī'ur), town (pop 3,895), SE Ont , at the confluence of the Madawaska and Ottawa rivers W of Ottawa Its chief industries are lumber, pulp and paper, and woolen goods

Arnsberg (ärns'bĕrk), town (pop 16,675), Westphalia, W Germany, on the Ruhr river It was the seat of the Westphalian VEHMGERICHT

Arnstadt (ärn'shtät), city (pop 27,846), Thuringia, S central Germany, on the Gera river It has manufacturers of gloves, shoes, and machinery Fluor spar and manganese are mined near by The Liebfrauenkirche is a fine 13th-century church J S. Bach was organist at the Church of St Boniface (1703–5, 1706–7)

Arnulf (ar'nŭlf), c 850–899, emperor (896–99), king of the East Franks (887–99), natural son of Carloman of Bavaria In 887 he led the rebellion of the East Franks against his uncle, Emperor CHARLES III (Charles the Fat), and was proclaimed their king He defeated the Normans in 891 but campaigned less successfully against the Moravians, with whom he finally negotiated a peace (894). In 894, at the request of Pope Formosus, he invaded Italy, then in a state of anarchy, but went no further than Piacenza, he returned in 895, captured Rome, and was crowned emperor (896), but he was stricken with paralysis and went home. Arnulf, whose personal appearance, energy, and bravery have often caused him to be likened to his great-great-grandfather, Charlemagne, was the last Carolingian to be crowned emperor.

Arod (ā'rŏd), son of Gad Num. 26.17. He is the **Arodi** (ār'udī) of Gen 46 16

Aroe Islands, Indonesia see ARU ISLANDS

Aroer (ār'ōŭr). **1** Roman road on the north side of the Arnon river and c 11 mi E of the Dead Sea It changed hands frequently A Roman road crossed the river at this point Deut 2 36, 3 12, 4 48, Joshua 12 12, 13 9, Judges 11 26, 2 Kings 10 33, Jer 48 19 **2** City of Gad, near Amman Joshua 13 25, Judges 11 33 **3** City of Judah, perhaps near Beersheba 1 Sam 30 28 In Chron 11 44 an Aroerite is mentioned, it is not known which Aroer is meant in this passage or in Isa 17 2

Aroostook (urōōs'tōōk, -tĭk, urōōs'-), river, c 140 mi long, rising in N Maine and winding generally E to the St John in New Brunswick prov It gives its name to a county famous for potatoes See Helen Hamlin, *Pine, Potatoes, and People* (1948)

Aroostook War. In 1838 Maine and New Brunswick both claimed territory left undetermined on the U S - Canadian border, including the valley of the Aroostook river Maine farmers were eying the farmlands there, and when New Brunswick sent Canadian lumbermen to do logging, Maine authorities got up a force to eject them New Brunswick asked for British regular troops and full-scale fighting seemed to be promised, but Gen Winfield Scott, sent with a U S force, managed to reach an agreement (March, 1839) which prevented trouble, and the boundary was settled by the WEBSTER-ASHBURTON TREATY

Arosa (arō'za), health resort and winter sports center (resident pop 1,980), Grisons canton, Switzerland

Arp, city (pop 1,139), E Texas, SE of Tyler, in an oil region, inc 1931

Arpad (ôr'pād), c 840–907?, chief of the MAGYARS. He led his people into Hungary in 895 The leaders of the Magyars and the Hungarian kings from St. STEPHEN I to Andrew III were of the house of Arpad (see HUNGARY)

Arpad (ar'pād), unidentified city, probably in W central Syria Hamath is always named with it. 2 Kings 18 34, 19 13, Isa 10 9, Jer 49 23. It is the **Arphad** (ar'fād) of Isa 36 19, 37 13

Arphaxad (arfāk'săd) **1** Median king at Ecbatana, defeated by Nebuchadnezzar He has not been surely identified with anyone in other records Judith 1 **2** Son of Shem It has been supposed that he was the eponym of the Chaldeans. Gen. 10 22,24, 11 10, Luke 3 36

arrack, ardent spirits distilled chiefly in the Far East from fermented juices or grains The introduction of European spirits has led to a decline in the native industry In the 19th cent , Ceylon was especially noted for palm toddy arrack Primitive methods of distilling yield raw spirits injurious because of a high content of fusel oil and acids. Other names are rack or raki

Arran, earls of. see HAMILTON, JAMES, and STUART, JAMES

Arran, island (165 sq mi ; pop 4,506), Buteshire, W Scotland, in the Firth of Clyde Oval shaped, it is largely granitic and is wild and rocky Its scenery and its hunting and fishing have made it a resort Brodick is the chief town See R Angus Downie, *All about Arran* (1933).

Arran Islands, Ireland see ARAN ISLANDS.

Arras (ă'rus, Fr ärăs'), city (pop 30,065), capital of Pas-de-Calais dept , N France, and historic capital of ARTOIS Of Gallo-Roman origin, it became an episcopal see c 500 By the 14th cent it had become a center of wealth and culture, renowned particularly for TAPESTRY With Artois, Arras passed successively to Burgundy, France, and Spain and was definitively reconquered by France in 1640 The city was almost destroyed in the First World War, but resisted all German assaults In the Second World War many buildings restored after 1919 were again damaged These include the Renaissance town hall and the 18th-century cathedral The restored 18th-century Abbey of St Vaast (now housing the museum) was left intact Despite the considerable destruction, Arras retains much of the general aspect of a 17th-century Spanish-Flemish town Its huge citadel dates from the 17th cent The house where Robespierre was born still stands.

Arras, Treaty of. 1 Treaty of 1435, between CHARLES VII of France and PHILIP THE GOOD of Burgundy Through it, France secured the alliance of Burgundy against England in exchange for important territories (notably Picardy), and exempted Philip from homage to the crown **2** Treaty of 1482, between LOUIS XI of France and the local governments of the Netherlands, following the death of MARY OF BURGUNDY In 1483 Mary's widower, Archduke MAXIMILIAN (later Emperor MAXIMILIAN I), reluctantly accepted the treaty Maximilian's infant daughter, MARGARET OF AUSTRIA, was to marry the dauphin (later Charles VIII), bringing Artois and Franche-Comté as dowry Maximilian's infant son (later PHILIP I of Castile) was to do homage for Flanders to France. When Charles VIII married ANNE OF BRITTANY, Maximilian forced him to restore Margaret's dowry by the Treaty of Senlis (1493).

Arreboe, Anders (ăn'ŭrs ă'rŭbō, -bō"ŭ), 1587–1637, Danish poet, bishop of Trondheim In his narrative poem, the *Hexaemeron* (written c 1630, pub 1661), he introduced the alexandrine meter which became the accepted vehicle for dignified poetry throughout the north

arrest, in law, seizure and detention of a person. Arrest may be either civil or criminal Civil arrest is most often used when one has been guilty of CONTEMPT OF COURT, but in some states it is also allowed where the defendant in a civil suit may attempt to flee the court's jurisdiction or otherwise frustrate justice Those who are suspected or convicted of crime are subject to criminal arrest Arrest is ordinarily accomplished by a warrant issued by a court or officer of justice In civil arrest a WARRANT must always be issued and the apprehension may not be effected on Sundays or legal holidays There are no time restrictions on effecting criminal arrest Any person may make such an arrest without a warrant if a crime is committed in his presence An officer of the law, besides, does not need a warrant to arrest one whom he reasonably suspects of having recently committed a felony In all other criminal cases there must be a warrant before the arrest Force may be used in effecting arrest, even to the extent of killing a person who resists arrest for a felony If an arrest is contrary to law, the apprehended person may procure his release by HABEAS CORPUS and may bring a civil suit for FALSE IMPRISONMENT In most cases the person detained may be released in BAIL Diplomatic personnel and members of Congress and of state legislatures during legislative sessions are the chief classes exempt from arrest

Arrhenius, Svante August (sfän'tu-ōu'gŭst ār'ā'nēŭs), 1859–1927, Swedish chemist He was associated with the Univ of Stockholm from 1891 (as rector, 1897–1902) and became director of the Nobel Institute for Physical Chemistry, Stockholm, in 1905 For originating (1884, 1887) the theory of electrolytic dissociation or ionization, he received the 1903 Nobel Prize in Chemistry He also investigated osmosis and toxins and antitoxins His works, translated into many languages, include *Immunochemistry* (1907), *Quantitative Laws in Biological Chemistry* (1915), *Destinies of the Stars* (1918), and *Chemistry in Modern Life* (Eng tr , 1925)

Arrian (Flavius Arrianus) (ă'rēun), fl 1st half of 2d cent , Greek historian, philosopher, and general He was governor of Cappadocia under Emperor Hadrian and in 134 repulsed a dangerous invasion of the Alans His chief work is the *Anabasis of Alexander*, the prime source on Alexander the Great Modeled on Xenophon, the *Anabasis* relies chiefly on the writings of two of Alexander's generals (Ptolemy I and Aristobulus) for source material Other extant works include the *Indica* (an account of a voyage of Alexander's general, Nearchus, to India) and parts of his edition of, and commentaries on, the *Discourses of Epictetus*

Arrol, Sir William, 1839–1913, British engineer, a pioneer in steel construction Among the bridges built under his supervision are the Forth and Tay bridges in Scotland, the Tower Bridge over the Thames (London), and the Nile bridge in Cairo The Manchester Ship Canal was his achievement

arrowhead, any plant of the genus *Sagittaria*, widely distributed marsh or aquatic perennial herbs The plants are white flowered, the best known have leaves shaped like arrowheads An important potatolike food of North American Indians was prepared by roasting or boiling the tubers, particularly of *Sagittaria latifolia*, one species has long been cultivated in the Orient for its starchy root Arrowheads are often grown in aquariums, ponds, and bog gardens

Arrow Lakes, two expansions of the Columbia river, S British Columbia Both lie at the bottom of narrow valleys bounded by high mountain ranges and are noted for their beauty Upper Arrow Lake is 36 mi long and c 2 mi wide, Lower Arrow Lake is 51 mi long and somewhat narrower Arrowhead is at the head of the upper lake and SE of Revelstoke Steamers ply the lakes

arrowroot, edible starch extracted from the rootstocks of various plants The true or West Indian arrowroot is obtained from a maranta (*Maranta arundinacea*), native to tropical America and now naturalized in Florida The mature rootstocks, peeled and ground to a pulp, yield about 26 percent of starch in a white meal that is easily digestible and is therefore valued as a food for children and invalids, usually in the form of pudding A perennial herb growing to 6 ft high, the maranta is sometimes sold by florists for the ornamental leaves, Indians are said to have used it to counteract the effect of poisoned arrows Some of the plant starches called arrowroot, and sometimes used as a substitute, are East Indian arrowroot (from *Curcuma angustifolia*), Florida arrowroot (from the coontie, *Zamia floridana*), and Brazilian arrowroot or TAPIOCA (from the bitter CASSAVA)

Arrowsmith, Aaron, 1750–1823, English cartographer and geographer He founded the map-making and publishing business carried on by his sons and by his nephew **John Arrowsmith,** 1790–1873 John Arrowsmith's *London Atlas* was famous, and

he was one of the founders of the Royal Geographic Society The Arrowsmith maps were among the best at the time of their publication

arrowwood, name for several woody plants formerly used for making arrows, particularly for various species of VIBURNUM The common arrowwood is *Viburnum dentatum*, which has flat-topped clusters of small, white flowers followed by dark blue berry-like fruits.

Arroyo (ärô'yō), town (pop 4,290), SE Puerto Rico It is a port of entry

Arroyo Grande (uroi'ō grān'dē), city (pop 1,090), S Calif, NW of Santa Barbara, in a vegetable-raising area, founded 1877, inc 1911

Aru Islands, Indonesia see ARU ISLANDS

Arsaces (är'sāsēz), fl 250 B C, founder of the Parthian dynasty of the **Arsacidae** (–sā'sīdē"), which ruled Persia from c 250 B C to A D 226 Arsaces led a successful revolt against Antiochus II, king of Syria, when Antiochus was engaged in war with Egypt and trying to cope with another revolt in Bactria Among the kings were Tiridates, Mithridates I, Mithridates II, and Phrasates IV Their empire became a formidable rival of the Roman power, but had begun to decay in the 2d cent A.D, when Avidius Cassius and Emperor ALEXANDER SEVERUS invaded the country The Arsacidae were overthrown by a revolt of the Persians, under ARDASHIR I, who in 226 slew Artabanus IV (Ardawan IV), the 29th and last of the Arsacidae.

arsenic (är'sənĭk) [Gr., =yellow orpiment, from a word meaning male, because of its strength] chemical element (symbol=As, for physical constants, see ELEMENT, table) It appears in three allotropic forms (see ALLOTROPY) a silver-gray, crystalline, metallike, brittle solid, tarnishing rapidly in air, a black, amorphous form, and a yellow, crystalline solid It passes directly from solid to gas at about 615°C It burns in the air, forming white clouds of an oxide In the periodic table it is grouped with nitrogen, phosphorus, antimony, and bismuth It combines readily with many elements with hydrogen, forming arsine, an extremely poisonous gas, with oxygen, forming a trioxide, commonly called "white arsenic" or simply "arsenic," and a pentoxide, with the halogens, forming halides, and with sulphur, forming REALGAR, ARSENOPYRITE, and orpiment, which is called "yellow arsenic" These last compounds, the sulphides, are the chief commercial source of the element. The element and its compounds are used widely—in glass works, in making pigments, animal poisons, and insecticides (PARIS GREEN), in calico and indigo printing, in tanning and taxidermy, as preservatives, in making poison gas for warfare, and in pyrotechny Small quantities of arsenic added to lead in the manufacture of lead shot assure perfectly spherical pellets, since the arsenic delays the solidification of the molten lead thereby making it flow more readily, the arsenic also contributes hardness Several of its compounds are used in medicine (arsenious oxide, arsenic iodide, arsenates), in the treatment of pernicious anemia and various skin diseases, to counteract the aftereffects of malaria, and in such common afflictions as hay fever On the other hand, arsenic is a strong poison (for symptoms and antidote, see POISONING, table). One delicate test for the presence of even microscopic quantities of arsenic in compounds is MARSH'S TEST When prepared commercially from sulphide ores, the ores, e g, arsenical pyrites, are heated (with air excluded) or roasted the arsenic sublimes and is condensed In another method white arsenic (arsenious oxide) is reduced with carbon Although certain arsenic compounds, such as realgar and orpiment, were known to the Greeks of Aristotle's time, the element itself was not The "arsenic," so called by them and by the later alchemists, was not true arsenic, but probably the oxide of arsenic, arsenious oxide The metallike element was first described by Albertus Magnus in the 13th cent

arsenopyrite (är"sĭnōpĭ'rīt, arsēn'ō–) or **mispickel**, silver-white to steel-gray mineral with the metallic luster characteristic of a PYRITE It is a sulpharsenide of iron (composed of iron, arsenic, and sulphur), crystallising in the orthorhombic system and occurring also in massive form. It is widely distributed and is an important source of arsenic Often it is found associated with other minerals and ores of lead and tin Saxony, Sweden, Switzerland, England (Cornwall), and various parts of the United States have important deposits

arson, the malicious and willful burning of a house or other building or structure or of a vehicle At common law, it was an offense against the security of habitation rather than against property rights. Although this rule still holds in some state jurisdictions of the United States, in others statutes have changed the meaning of the offense not only by extending its application to all sorts of things but also by stressing to a greater extent the protection of property rights. Some statutes distinguish several degrees of arson, e.g., arson committed at night is considered more serious than arson committed in the daytime. In most states setting fire to one's own habitation or other property to defraud a fire-insurance company is arson.

Arsonval, Arsène d' (ärsēn' därsōvăl'), 1851–1940, French physicist and physician. He worked under Claude Bernard and under Brown-Séquard (whom he succeeded in 1897 at the Collège de France) and was professor at the Sorbonne from 1901 to 1932. The D'Arsonval galvanometer is named for him A pioneer in electrotheraphy, he studied the medical application of high-frequency currents and originated the term *diathermy*.

Arta, Greece see AMBRACIA

Artagnan, Charles de Batz-Castelmore d' (shärl' dŭ bats'-kästĕlmôr' därtänyä'), c 1623–1673, French soldier of Gascon origin His career was spent in the king's musketeers under Louis XIV, he fell at the siege of Maastricht Memoirs attributed to Artagnan were used by Dumas père in the series beginning with *The Three Musketeers* Artagnan called himself *comte* without right

Artaphernes (är"tufûr'nēz), fl. 490 B C, Persian soldier, satrap of Lydia He was related to the king of Persia He was one of the generals commanding Darius' great expedition against Greece, which ended at MARATHON. He led detachments in the invasion of Xerxes (480 B C).

Artaxerxes I (är'tuzûrk'sēz), d 425 B C, king of ancient Persia (465–425 B C), of the dynasty of the Achaemenidae Artaxerxes is the Greek form of the name, Ardashir the Persian, he is sometimes called Artaxerxes the Long-handed He succeeded his father, XERXES I, in whose murder he had no part It is conventional to say that the weakness of the Persian Empire began to appear in his reign, and there were many risings in the provinces The revolt of Egypt, aided by the Athenians, was, however, put down (c 455) after years of fighting, and Bactria was pacified The Athenians sent a fleet under CIMON to aid a rebellion of Cyprus against Persian rule The fleet won a victory, but the treaty negotiated by CALLIAS was generally favorable to Persia In the reign of Artaxerxes, Ezra and Nehemiah began the revival of Judaism, on which the king seems to have looked with favor He also befriended the exiled Themistocles He was succeeded by XERXES II

Artaxerxes II, d 358 B C, king of ancient Persia (404–358 B C), son and successor of DARIUS II He is sometimes called in Greek Artaxerxes Mnemon [the thoughtful]; his Persian name is Ardashir His reign began badly with the attempt of CYRUS THE YOUNGER to seize the throne This was ended at the battle of Cunaxa (401 B C), where Cyrus was killed The story of the Greek contingent in the battle was made famous by Xenophon Artaxerxes relied heavily upon his officials, and the satraps PHARNABAZUS and TISSAPHERNES had real ruling power They managed by liberal broadcast of Persian gold to gain great influence in Greece, and the peace (386 B C) that is known by the name of ANTALCIDAS marked the imposition of Persian control of the Greek city-states The provinces of the empire were visited with unrest EVAGORAS made himself independent as a ruler of Cyprus but finally (c 385) submitted to the king Pharnabazus and Iphicrates, sent to reduce Egypt, disagreed and accomplished nothing A formidable and long-lasting revolt of the satraps (among them Mausolus) against the king was put down just before Artaxerxes' death In his reign the cult of MITHRA was revived, and Mithraism entered on its period of popularity

Artaxerxes III, d. 338 B C., king of ancient Persia (358–338 B C), son of Artaxerxes II He was originally named Ochus and is sometimes called Artaxerxes Ochus, his Persian name is Ardashir He gained the throne by a general massacre of the family and throughout his reign continued a policy of terror and blood An early expedition against Egypt failed, but he set out again (c.342) and, having destroyed Sidon on his way, reduced Egypt by bloody conquest He also put down the unruly satraps and centralized and strengthened the empire One of his ministers, the eunuch Bagoas, finally poisoned the king, put Artaxerxes' son Arses on the throne in 338, then deposed him in 336 in favor of DARIUS III

Artem (ärtyôm') city (1947 pop. c 50,000), SW Maritime Territory, RSFSR, in Siberia, NNE of Vladivostok It is a coal-mining center.

Artemas (är'tĭmus) [Gr.,=gift of Artemis], companion of Paul Titus 3 12

Artemidorus of Ephesus (ärtĕm"ĭdôr'us, ĕf'ĕsŭs), fl 103 B C, Greek geographer quoted by Strabo. He wrote 11 books on his Mediterranean travels.

Artemis (är'tumĭs), in Greek legend, Olympian goddess, a virgin huntress, daughter of Zeus and LETO and twin sister of APOLLO She was born in Delos and is sometimes called Delia. She also is called Phoebe Primarily she was the goddess of the wild, a forest dweller and the guardian as well as the huntress of wild animals She turned Actaeon, who had seen her naked, into a stag, and his own hounds destroyed him She loosed a wild boar in the lands of Oeneus and so caused the Calydonian hunt. Agamemnon killed a stag sacred to her and had to undertake to sacrifice his daughter. There is thus a strain of the avenger about a number of her legends such as the story of Niobe and the killing of Orion. All her attendants were virgins, and if any lost her chastity she was severely punished. The cypress was sacred to her, and the stag and the hind, the hound, the bear, and the boar were peculiarly hers Besides being a huntress, however, she was a protector of women, and in certain places, notably EPHESUS, she was the opposite of the virgin goddess, the GREAT MOTHER, and in some cults she was equated with Astarte As complementary to Apollo, she was also the goddess of the moon (with the Pleiades as attendants) and of the night, and her cults were frequently confused with those of Selene and HECATE. She was identified with the Roman Diana. In Greek popular religion worship of Artemis was very widespread and was blended with that of various earth and nature goddesses. In some places she seems to have been placated in forgotten times with human sacrifice.

Artemisia (är"tūmĭ'shĭŭ), 4th cent B C, ruler of Caria, sister, wife, and successor of Mausolus. In his memory she erected the Mausoleum She was a strong ruler and conquered Rhodes. She also patronized the arts An earlier Artemisia also ruled Caria under Xerxes I of Persia

artemisia. see WORMWOOD

Artemisium (är"tūmĭ'shĭŭm), cape, N Euboea, Greece, named for a great temple of Artemis. Off the cape in 480 B.C was fought a naval battle of the Persian Wars. The delay won by the defense of Thermopylae helped make it possible for the Greeks to ward off the Persian fleet, though the battle was indecisive.

Artemovsk (ûrtyô'mufsk), city (pop 55,165), E Ukraine, in the Donets Basin. The industrial center of a salt-mining region, it was founded in 1571 and was named Bakhmut until 1923

arteriosclerosis, hardening of the arterial walls accompanied by inflammatory changes A loss of elasticity, with fibrotic changes in the wall of the artery, results in a narrowing of the lumen (canal) of the artery. When these changes are marked in the blood vessels of the heart the cardiac musculature may be affected, and occlusion of the vessels may occur, similar changes in the blood vessels of the brain affect the intellect Arteriosclerosis may also result in hypertension because of the loss of elasticity in the vessel walls

artery, blood vessel carrying blood from the heart to the tissues of the body The largest arterial trunk leaving the heart, carrying oxygenated blood is the aorta, branches of which decrease in size, finally terminating in capillaries, which communicate with the venous system (see VEIN) The other large artery leaving the heart, the pulmonary artery, carries deoxygenated blood to the lungs The arterial wall comprises fibrous, elastic, and muscle layers The PULSE may be palpated in the larger arteries near the body surface

Artesia (ärtē'zhu), city (pop 4,071), SE N.Mex, just W of the Pecos river and N of Carlsbad, in an oil, farm, and livestock area, settled 1903, inc 1905 A large area is irrigated by water from artesian wells

artesian well (ärtē'zhun) [from *Artesium*, ancient name of the old ARTOIS prov, France], in its narrower sense, a natural fountain rising by hydrostatic pressure from a fissure in a layer of permeable rock between two impermeable layers in a basinlike geological formation In areas where the slope of the layers is sufficient to produce the required hydrostatic pressure, a true artesian well can be made by drilling through the upper impermeable layer into the permeable layer (known as the aquifer) Such borings were made anciently in Egypt and China In North America the necessary conditions exist in the Dakota artesian system (of which the aquifer is Dakota sandstone, underlying parts of the Dakotas, Kansas, Nebraska, Montana, Wyoming, and Saskatchewan), in the Illinois-Wisconsin system, along the Atlantic coastal plain S from Long Island, and in the Gulf Coast region, especially in Texas If the hydrostatic pressure is not great enough (when the level of the source of the water is not much above that of the land at the well or when the water has other escapes besides the well), the water is sometimes pumped to the surface, and the well is not truly artesian Water from artesian wells and springs is usually cold and usually free from organic impurities. Artesian springs occur where the ground water flows out through a natural opening Some of these, in which the water comes from deep in the earth, are known as thermal springs since the water is either warm or hot. Those which are called mineral springs contain large amounts of various minerals (all spring water contains some minerals in solution). Artesian springs exist in many parts of the world, e g., at Saratoga, N Y, Hot Springs, Ark, Hot Springs, Va, Yellowstone National Park, Bath, England; Carlsbad, Czechoslovakia, Vichy, France, and Wiesbaden, Germany. See also GEYSER.

Artevelde, Jacob van (yä'kôp vän är'tüvĕldü), c.1290–1345, Flemish statesman, of a patrician family of Ghent In 1337 the Flemish cloth industry underwent a severe crisis. The pro-French policy of the count of Flanders in the conflict between EDWARD III of England and PHILIP VI of France cut off English wool imports and thus ruined the Flemish merchants and weavers. Ghent re-

belled, and Artevelde was given virtually dictatorial powers as head of the city government. He negotiated (1338) a commercial treaty with England and obtained recognition of Flemish neutrality. The other towns of Flanders followed his lead, the count fled to France, and trade revived and prospered under Artevelde's reforms In 1340 Artevelde had Edward III recognized as king of France (and thus suzerain of Flanders) by the Flemish towns Artevelde's firm leadership and patrician origin soon were to cause suspicions Enemies accused him of proposing the lordship of Flanders to Edward the Black Prince In 1345 a riot broke out in Ghent, and Artevelde was killed by the mob

Artevelde, Philip van, 1340–82, Flemish popular leader, captain general of Ghent, son of Jacob van Artevelde In the struggle between the "Goods" (the propertied classes supported by the count of Flanders) and the "Bads" (the workers, led by the weavers), he put himself (1381) at the head of the rebellious weavers He captured Bruges (1382) and most of Flanders but was defeated and slain at Roosebeke by the French under Olivier de Clisson.

art galleries see MUSEUMS OF ART

Arthabaska, town (pop 1,883), SE Que , on the Nicolet river and SSW of Quebec

arthritis (ärthrī'tĭs) [Gr ,=inflammation of the joints], inflammation of a joint There are two classes of chronic arthritis, atrophic, which is marked by inflammation and degenerative changes in joint structures, and hypertrophic, marked by degeneration and by the formation of bony spicules in the joint Predisposing factors which may result in arthritis include infection, injury, changes in temperature, emotional disturbances, and endocrine imbalance The rheumatoid type of arthritis is acute and is marked by pain, heat, redness, and swelling Arthritis deformans, a chronic arthritis, may be atrophic or hypertrophic and leads to marked deformity of the joints Treatment includes removal of suspected foci of infection, a well-balanced diet, endocrine therapy, drugs for relief of pain, and correction of the deformity by apparatus and surgery

arthropod (är'thrŭpŏd") [Gr ,=having jointed feet], any member of the phylum of invertebrate animals called Arthropoda, which is represented by more species than all the other animal groups combined Included are the CRUSTACEAN animals, the SPIDER and its relatives, the CENTIPEDE and the MILLIPEDE, the numerous members of the INSECT group, and the extinct TRILOBITE Arthropods have segmented bodies, jointed appendages, and an exoskeleton containing a horny substance called chitin Either gills or trachea are the respiratory organs

Arthur. see ARTHURIAN LEGEND

Arthur I, 1187–1203, duke of Brittany (1196–1203) His father, Geoffrey, second son of Henry II of England, married Constance, daughter of Duke Conan IV of Brittany, and thus acquired the duchy Arthur, a posthumous child, was proclaimed duke in 1196, and an invasion by his uncle, Richard I of England, was repulsed On Richard's death (1199) Arthur's claim to the English crown was passed over in favor of his uncle JOHN, third son of Henry II Arthur allied himself with King Philip II of France, who invested him with all of Richard's fiefs in France The nobles of Anjou, Maine, and Touraine recognized Arthur as their ruler, but the young duke was captured (1202) by John while attempting to subdue Poitou Imprisoned in Rouen, he was presumably murdered by John in 1203 His story is told in Shakspere's *King John* Arthur's sister and heir married Pierre Mauclerc, who became duke of Brittany as PETER I

Arthur III, 1393–1458, duke of Brittany (1457–58), known before 1457 as comte de Richemont (kōt' dŭ rēshmôN'), constable of France in the Hundred Years War In 1435, by the Treaty of Arras, he succeeded in reconciling Philip the Good, duke of Burgundy, England's chief ally, to Charles VII of France He captured Paris from the English in 1436 and later had a leading part in winning Normandy permanently for France His nephew, Francis II, succeeded him

Arthur, Chester Alan, 1830–86, 21st President of the United States (1881–85), b Fairfield, Vt , grad Union College at Schenectady He studied law and before the Civil War practiced in New York city In the war he was for a time quartermaster general of New York state. In 1871 President Grant appointed him collector of the port of New York He administered this office with personal honesty but had an excessive staff of party supporters and appointees. President Hayes, bent on civil service reform, displaced Arthur in 1878, thus defying Senator CONKLING and the New York Republican machine At the Republican national convention of 1880, Garfield was nominated for President, and the Conkling "Stalwarts," who had supported Grant, were placated by the nomination of Arthur for Vice President Garfield's assassination soon after his inauguration made Arthur President He came into office handicapped by a record in machine politics and grave doubt as to his ability and integrity, but his administration proved honest, efficient, and dignified He effectively supported the civil service reform act of 1883, vetoed a Chinese exclusion bill which violated a treaty with China, and vigorously prosecuted the STAR ROUTE trials. See biography by George F Howe (1934)

Arthur, Joseph Charles, 1850–1942, American botanist, b. Lowville, N Y He was known for his work in vegetable physiology and pathology, especially on the life history and control of rusts and smuts His numerous publications include *History and Biology of Pear Blight* (1886), *Concerning the Potato Tuber* (1888), and *Manual of the Rusts in United States and Canada* (1934) With others he wrote *Handbook of Plant Dissection* (1886), *Living Plants and Their Properties* (1898), and *The Plant Rusts* (1929)

Arthur, Timothy Shay, 1809–85, American editor and moralist, b near Newburgh, N Y His only successful editorial venture was *Arthur's Home Magazine*, which he edited from 1853 until his death, the while producing a stream of books and moral tracts in the cause of temperance He was firmly convinced that all social ills are attributable to alcoholism The dramatization of his most successful novel, *Ten Nights in a Barroom and What I Saw There* (1854), is still known

Arthur, village (pop 1,405), E central Ill , ESE of Decatur, in a farm area, platted 1873, inc 1877 It is the trade center of a near-by Amish colony (1864) Among its manufactures are brooms, caskets, powdered milk, and cheese

Arthurian legend, the vast material popular in medieval story centering about King Arthur of Britain The earliest mention of Arthur in any literature, so far as is known, is a brief probable reference to him as a mighty warrior in the Welsh poem *Gododdin* (c 600) His battle of Mt Badon, but not his name, is mentioned by Gildas He next appears in Nennius (c 800) as a British chief who c 600 fought 12 victorious battles with the Celts against the Saxon invaders These and several subsequent references indicate that his legend had already developed into a considerable literature even before GEOFFREY OF MONMOUTH wrote his *Historia*, in which Arthur is made master of Europe After Geoffrey comes Wace, and modeled on Wace the English Layamon These were less influential in the literary development of Arthurian legend than CHRESTIEN DE TROYES His *Perceval* and the *Parzival* of WOLFRAM VON ESCHENBACH were two sources of the PARSIFAL story so artistically developed in Germany In the early 13th cent GOTTFRIED VON STRASSBURG composed his *Tristan*, the first great literary treatment of the TRISTRAM AND ISOLDE story, which became attached to the Arthurian legend A third outstanding theme in the legend is that of the quest by the knights for the Holy GRAIL After 1225 no great medieval Arthurian literature was produced on the Continent, but it flourished in England *Sir Gawain and the Green Knight* (see PEARL THE), written c 1370 90, is a long alliterative romance, one of the best Middle English works The last such work is the great *Morte d'Arthur* of Sir Thomas MALORY, the source of subsequent Arthurian material in literature Many poets and prose writers have used Arthurian themes since Malory, none more successfully than Alfred Tennyson, whose *Idylls of the King* has become for many the one source of information on Arthurian legend An example of the innumerable poems inspired by the Arthurian story is William Morris's *Defence of Guenevere* (1858) It was thought formerly, and still is thought by some, that the Arthurian legend was the work of inventive poets and romancers of the Middle Ages A well-established theory now is that Arthurian legend developed from stories of Celtic mythology The most archaic form in which these occur in British sources is the Welsh MABINOGION, but much of Irish mythology is palpably identical with Arthurian romance For instance, Cuchulain and Gawain are both thought to be derived from an Irish solar deity According to this theory, during the Dark Ages traditional Irish hero stories fused in Britain with those of the Welsh, the Cornish, and the North Britons The resultant legend with its hero Arthur was transmitted to their Breton cousins on the Continent probably by the year 1000 The Bretons, famous as wandering minstrels and able to speak both their own language and French, followed Norman armies over Western Europe and used for their repertory the stories of the legend By 1100 therefore, some Arthurian stories were well known even in Italy Such tales formed the material for the Arthurian romances Thus theory is a convenient way to account for the additions to Arthurian story, especially when two unrelated authors add identical supplementary material It also explains how a 6th-century chief in Nennius became the king of Western Europe in Geoffrey In the later form of Arthurian legend King Arthur and his knights kept court at CAMELOT, where they had the ROUND TABLE Arthur was the illegitimate son of King Uther Pendragon and as a boy showed his royal blood by drawing a sword from a stone The LADY OF THE LAKE presented him his sword Excalibur Because it is derived from history, mythology, legend, and fairy lore, Arthur's character is not consistent throughout the romances, and sometimes seems almost phantomlike. When he was fatally wounded in battle with Sir Modred he was taken by three queens to AVALON, whence (according to Celtic story) he will return to save his people Principal persons of Arthurian legend in its developed form were (besides those mentioned) Balin and Balan, brothers who unwittingly killed each other, Sir Bedivere, King Arthur's steward; Elaine, the name of several characters, especially Elaine of Astolat, whose love for Launcelot was unrequited, and Elaine daughter of King Pelles, who loved Launcelot and became Sir Galahad's mother, Enid, the wife of Sir Geraint, Sir Launcelot's son, Sir Galahad, purest of the knights and leader in the quest for the Holy Grail, Sir Gareth, a nephew of King Arthur, Sir Gawain, another nephew, frequently the ideal of knightly courtesy, Sir Geraint, married to Enid, whom he would not allow to stay with Queen Guinevere, Guinevere (Guenever, Guenevere), Arthur's queen, unfaithful to him in her romantic love for Sir Launcelot, Sir Kay, villainous foster brother of King Arthur, the Lady of the Lake, Sir Launcelot of the Lake (Lancelot du Lac), the queen's love, father of Sir Galahad Merlin, the great court magician, who lived in the forest of BROCÉLIANDE and was ruined by his mistress Vivien, Sir Modred (Mordred), King Arthur's treacherous nephew (or son), who fought with Arthur the king's last battle, MORGAN LE FAY, King Arthur's sister, a pupil of Merlin, Sir PELLEAS, lover of Ettarre; Sir Percivale (i e , Parsifal), and Vivien, an enchantress, mistress and pupil of Merlin, who was brought to ruin by her arts To modern readers, Arthurian legend has become the great mirror of the ideal of medieval knighthood and chivalry See editions of works cited, W W. Lawrence, *Medieval Story* (1911), J D Bruce, *The Evolution of Arthurian Romance to 1300* (2 vols., 1923–24), E K Chambers, *Arthur of Britain* 1927), R S Loomis, *Celtic Myth and Arthurian Romance* (1927) and *Arthurian Tradition & Chrétien de Troyes* (1949), R S Loomis and L H. Loomis, *Arthurian Legends in Medieval Art* (1938).

artichoke, name for two quite different plants having edible parts The French or globe artichoke (*Cynara scolymus*) is a thistlelike plant which bears a globular composite flower used in the immature state as a salad or vegetable, only the lower part of the scales and the center being eaten The cultivation of this south European plant is now a considerable industry in California A large part of the yearly crop is canned for South American export The edible blanched leaves and leafstalks are called chard For the other plant bearing the name artichoke, see JERUSALEM ARTICHOKE

artificial insemination see BREEDING

artificial lung, mechanical means of carrying on artificial respiration, used for individuals whose breathing mechanism cannot function normally Inability to inhale and exhale may result from disease (e g , infantile paralysis), from poisoning, or from asphyxia In such conditions a device which, by means of pressure changes, brings about inhaling and exhaling is employed The iron lung is a steel cylinder in which the patient lies with his head protruding through a sealed collar Rhythmically air is pumped into and out of the cylinder decrease in the pressure within the chamber causes expansion of the chest, and air enters the lungs, increase in pressure causes air to leave the lungs Among the newer, lighterweight devices is a bowl-shaped plexiglass respirator which fits over the patient's chest An electronic respirator, the electrodes of which must be attached to the phrenic nerve, has been devised.

artificial respiration. Measures which take the place of natural breathing in cases of paralysis, DROWNING, ELECTRIC SHOCK, and ASPHYXIA from choking, gas, or smoke include those performed by hand, by the pulmotor, and by the ARTIFICIAL LUNG, which is especially suitable in cases of infantile paralysis where respiration is paralyzed Various methods include the Sylvester, the Marshall Hall, and the Schafer (Schäfer, Schaefer) In the Schafer or prone pressure method, the person is laid on his stomach, one arm extended above the head and the other bent at the elbow, on which the head is placed with the face to the side, leaving the nose and mouth free Kneeling over the thighs, just below the patient's hips, one places the palms of one's hands on the small of the back, the little fingers along the lowest ribs Keeping the hands in this position and the arms straight, the operator then alternately leans forward, bearing down on the region of the patient's diaphragm, and swings backward, releasing the pressure This rhythmic pressure and release is performed at the rate of 12 to 14 times a minute without any interruption for at least 1½ hr or until the patient breathes. Application of warmth must be by a second person since only by uninterrupted artificial respiration is there likelihood of saving life.

artificial silk. see RAYON.

Artigas, José Gervasio (hōsā' hĕrvä'syō ärtē'gäs), 1774–1850, national hero of Uruguay, first leader in the movement toward independence A typical gaucho of the BANDA ORIENTAL, he joined the revolution against Spain in 1811 and became the leader of the "Orientales" In 1813 he instructed the delegates from the Banda Oriental to the Bue-

nos Aires assembly to work for a federation of autonomous La Plata provinces, but they were denied admission to the assembly by the centralist military junta Artigas then championed Uruguayan independence After an initial setback in 1813 by Buenos Aires and subsequently the restoration of Spanish power (1816), he still managed to rule much of the territory as protector against Spain, Brazil, and Buenos Aires Finally in 1820, when Artigas had once again renounced the United Provs of La Plata, the Portuguese captured the territory and annexed it to Brazil Artigas spent his remaining years in exile in Paraguay

artillery, term originally applied to all projectiles employed in war, but later limited to certain types of heavy guns and howitzers and the troops serving them The machine gun, light in weight and using rifle ammunition, does not fall into the category of artillery, nor does the mortar The use of artillery had to await the discovery of gunpowder Small guns are said to have been used at Crécy (1346), and the Turks at the siege of Constantinople (1453) used bronze cannon firing stone balls The chief early employment of artillery was against fortifications, it put an end to the long security of the medieval castle It was first used extensively in support of troops in the Thirty Years War under Gustavus II (Gustavus Adolphus) who greatly improved mobility and rapidity of fire Thereafter it played, until the introduction of the airplane in the 20th cent, an increasingly important part in warfare Artillery may be fixed (e g, coastal guns and many anti-aircraft guns) or mobile in varying degrees, it may be heavy (guns) or light (howitzers) Field artillery was at first mounted exclusively on horse-drawn vehicles, later railway cars were used, and in the Second World War artillery was completely mechanized Mechanized field guns may either be drawn by tractors or mounted on self-propelled trucks

Art Institute of Chicago, museum and art school, in Grant Park, facing Michigan Ave It was incorporated (1879) as the Chicago Academy of Fine Arts, an outgrowth of the Chicago Academy of Design (1866), it took its present name in 1882 Since 1893 the institute has been housed in its present Italian Renaissance building, designed by Shepley, Rutan, and Coolidge Besides its galleries of paintings and sculpture, the museum has departments of prints, textiles, furniture, and Oriental art, the Ryerson Library, and a school of drama (founded 1925) Among its old masters, the museum has an El Greco and a Rembrandt, it has a good collection of 19th-century French paintings

Artois (ärtwä'), region and former province, N France, inland but near the English Channel, between Picardy on the west and Flanders on the east It is now included in Pas-de-Calais dept A slightly hilly region, largely agricultural, it occupies part of the rich Franco-Belgian coal basin and has old textile manufactures Arras was the provincial capital and seat of the PARLEMENT A possession of the counts of FLANDERS, Artois was annexed (12th cent) to France by Philip II and made an appanage (1237) by Louis IX for his brother Robert Passing (14th cent) to BURGUNDY by marriage, it was contested, upon the death (1477) of Charles the Bold, between Louis XI of France and Emperor Maximilian I It was under Austrian and later under Spanish rule from 1493 until its conquest (1640) by Louis XIII The Treaty of the Pyrenees (1659) confirmed it in French possession Artois continued to be a battleground, particularly in the First World War there was very heavy fighting The region gives its name to the ARTESIAN WELL, known here for centuries

arts and crafts, term for that general field of applied designing in which hand fabrication is dominant The term was invented in England in the late 19th cent as a label for the current movement directed toward the revivifying of the decorative arts The chief influence behind this movement was William MORRIS By the middle of the 19th cent, factory processes had almost entirely driven handicraftsmen from their ancient trades and obliterated the techniques by which beautiful objects of utility could be produced The GOTHIC REVIVAL, however, had brought into existence a great body of knowledge concerning the arts of the Middle Ages, and Morris, together with the Pre-Raphaelite painters and a small group of architects and designers, eagerly returned to these arts as a rich source of inspiration The pupils and followers of Morris multiplied, and numbers of proficient craftsmen developed Their methods aimed at a practical demonstration not only of Morris's aesthetic creed but also of his ideas upon socialism and upon the moral need for integrating beauty with the accessories of daily life The Art Workers' Guild was established in 1884, the Arts and Crafts Exhibition Society held its first exhibition in London in 1888 The revival of folk arts has prospered, especially in remote communities and among American Indians of the Southwest Handicrafts are widely taught in schools, have been adopted by hobbyists, and are valued in occupational therapy See A H Eaton, *Handcrafts of the Southern Highlands* (1938)

Art Students League of New York, art school, founded in 1875 in New York city by a group of art students who wished to establish a self-governing institution Members of the League yearly elect a board of control, through whom invitations are extended to artists of national reputation to teach at the League Each student studies under the instructors of his choice, and teachers are allowed entire freedom as to teaching methods Instruction is offered in drawing, painting, sculpture, and graphic and applied arts Since 1892 the League has been housed in the American Fine Arts Building, New York city It conducts a summer school at Woodstock, N Y Among the many noted artists who have taught at the League are Thomas Eakins, W M Chase, Frank V DuMond, Kenyon Cox, Robert Bridgman, Augustus Saint-Gaudens, Daniel C French, Howard Pyle, Robert Henri, George Bellows, Kenneth H Miller, George Luks, Joseph Pennell, John Sloan, Thomas H Benton, George Gross, Morris Kantor, Kuniyoshi, and William Zorach

Artzybasheff, Boris (ärtsĭbä'shĕf), 1899–, American draughtsman, illustrator, writer, and cartoonist, b Kharkov, Russia, son of Mikhail Petrovich Artzybashev In 1919 he went to New York, where he worked in an engraving shop Later he became noted for his brilliant and imaginative work as an advertising artist and illustrator of books and periodicals Artzybasheff is also known as the author and illustrator of children's books, such as *Poor Shaydullah* (1931)

Artzybashev, Mikhail Petrovich (mĭkhīŭyĕl' pĕtrô'vĭch ärtsĭbä'shĕf), 1878–1927, Russian novelist, playwright, and essayist In 1907 he leaped into fame with a previously rejected (1903) novel, *Sanine* (Eng tr, 1914), in many countries proscribed as pornographic Soon the *Sanine* cult subsided, and he tried to hold his public with other sensational works, such as the novels *The Millionaire* (1910, Eng tr, 1915) and *Breaking-Point* (1912, Eng tr, 1915) and the plays *The Law of the Savage* (1912 Eng tr, 1923) and *Jealousy* (1913, Eng tr, 1923) Artzybashev opposed the Bolshevist Revolution and attacked it bitterly from abroad

Aruba, Dutch West Indies see CURAÇAO

Aruboth (ärʺōbŏth), part of Solomon's kingdom Aruboth RV 1 Kings 4 10

Aru Islands or **Aroe Islands** (both ä'rōō), group of about 90 low islands (3,306 sq mi, pop 18,176), East Indonesia in the Moluccas In the Arafura Sea SW of New Guinea, the islands were discovered in 1606 by the Dutch and colonized after 1623 Pearls and tortoise shell are the principal products, sago, rice, sugar, and tobacco are grown Dobo, principal town of the group, is on 6-mile-long Wamar island (pop 1,774) In the Second World War most of the town was destroyed by Allied bombing Arru is another spelling

Arumah (urōōʹmu), town, Palestine Judges 9 41

Arundel, Henry Fitzalan, 12th **earl of** (ăʹrundul), c 1518–1580, English statesman Lord chamberlain under Henry VIII, he was one of the council of 12 appointed by him for the minority of Edward VI and opposed so far as he dared the designs of John Dudley, duke of Northumberland, to crown Lady Jane Grey Arundel helped bring Mary to the throne and was prominent in her reign, but was always a suspect Catholic noble, though a powerful one, under Elizabeth

Arundel, Thomas Howard, 2d **earl of,** c 1586–1646, first great English art collector and patron of arts, educated at Trinity College, Cambridge He was appointed privy councilor in 1616 and later made earl marshal of England He formed a collection of ancient sculptures, including the *Parian Chronicle*, or *Marmor Chronicon* These sculptures were given to Oxford Univ in 1667 and became known as the **Arundel Marbles** His library was given to the Royal Society, the manuscripts known as the **Arundel Collection** were later transferred to the British Museum The **Arundel Society,** founded in 1849, reproduced the works of famous artists Discontinued in 1897, it was followed in 1904 by the **Arundel Club,** which reproduces, in photogravure, works of art in private collections

Arundel (ăʹrundul), municipal borough (pop 2,490), Sussex West, England It is on a hillside beneath the magnificent Arundel Castle, the seat of the dukes of Norfolk, which dates from the 12th cent

Arundel Club, Arundel Collection, Arundel Marbles, and **Arundel Society** see ARUNDEL, THOMAS HOWARD, 2d EARL OF

Arunta Desert, Australia see SIMPSON DESERT.

Aruwimi, river see CONGO

Arvad (ärʹvăd), variant of ARADUS

Arvada (ärvădʹu), town (pop 1,482), N central Colo, near Denver, in a farm area, inc 1904

Arval Brothers (ärʹvl), in Roman religion, organization of 12 priests, said to have been founded by the sons of ACCA LARENTIA The emperor was always a member of the group They worshiped an obscure goddess, DEA DIA, and their chief festival, held in May, was a blessing of fields

Arvida (ärvĕʹdu), city (pop. 4,581), S Que, on the south side of the Saguenay river and W of Chicoutimi It is the site of the immense plant of the Aluminum Company of Canada

Arvika (ärʹvē"kä), city (pop 14,727), Varmland co, W central Sweden It is a commercial center and also produces tobacco, farm machinery, and pianos

Aryabhatta (ärʺyubhŭtʹŭ), fl 5th cent, Hindu mathematician and astronomer He is one of the first known to have used algebra; his writings include rules of arithmetic and plane and spherical trigonometry and solutions of quadratic equations

Aryan [Sanskrit, =noble], proper name used for themselves by Hindus and other speakers of Indo-Iranian languages It came to be used for these and other Indo-European languages until it has practically ceased to have any linguistic usefulness The antiquity of Hindu culture was formerly much overestimated This, combining with the assumption (now considered naïve) that ancient linguistic and genetic relationships were complementary, produced a notion that there was a sort of parent "Aryan race" The word thus became a favorite in the racistic literature of the period of Gobineau, hence also in the intellectual apparatus of 20th-century German anti-Semitism These racial theories, old and new, are now regarded as historical nonsense See also LANGUAGE.

Aryans see ARIANA

Arza [Heb, =earth], steward at Tirzah 1 Kings 16 9

Arzamas (ŭrzumasʹ), city (pop 19,203), central European RSFSR, 65 mi S of Gorki An ancient city, Arzamas was a fortress in the 14th cent and has numerous old churches and monasteries It is now an agricultural center

As, Czechoslovakia see ASCH

As, chemical symbol of the element ARSENIC

Asa (āʹsu) [Heb, =physician] **1** Died c 870 B C, king of Judah (c 911–c 870 B C), son and successor of Abijah He was a "good" king, zealous in his extirpation of idols When Baasha of Israel took Ramah (a few miles N of Jerusalem), Asa bought the help of Benhadad of Damascus and recaptured Ramah His son Jehoshaphat succeeded him 1 Kings 15 8–24, 2 Chron 14–16 **2** Levite 1 Chron 9 16

asafetida (ăsʺŭfĕtʹĭdu) [Latin, =foetid asa; asa was a drug], ill-smelling gum resin exuded from the stem and roots of the genus *Ferula* It is used as a tincture in 70 percent alcohol and when greatly diluted is useful as a perfume and flavoring material The gum contains sulphides which impart the evil odor It is found in Persia and Afghanistan and is used in the Orient as a condiment In medicine it is sometimes used as a laxative and as an expectorant and sedative According to a superstition, if placed in a bag and worn around the neck it warded off disease

Asahel (āʹsuhĕl, āsʹu-) [Heb, =made by God] **1** David's nephew Murdered by Abner, he was avenged by his brother Joab 2 Sam 2 18 24, 3 27,30, 23 24, 1 Chron 11 26, 27 7 **2, 3** Levites 2 Chron 17 8, 31 13 **4** Priest Ezra 10 15

Asahiah (āʺsuhīʹu, āsʺu-) [Heb, =Asaiah], the same as ASAIAH **1**

Asahigawa (asähēʹgäʹwä) or **Asahikawa,** city (1940 pop 87,514, 1947 pop 107,508), W central Hokkaido, Japan, on the Ishikari river It is a commercial, industrial, and railroad center in a farm area

Asaiah (āʺsīʹu, āsʺu-) [Heb, =whom God has made] **1** One of Josiah's deputation to Huldah 2 Chron 34 20 Asahiah 2 Kings 22 12 **2** Simeonite 1 Chron 4 36 **3** Levite 1 Chron 6 30, 15 6,11 **4** Shilonite 1 Chron 9 5 Maaseiah Neh 11 5

Asama, Mount (asäʹma), or **Asama-yama**(-yäʹma), peak, c 8,200 ft high, central Honshu, Japan It is an active volcano

Asaph (āʹsăf) [Heb, =collector] **1** Choirmaster of David's time, or the eponym of a corps of singers His name is attached to a little collection of psalms Pss 50, 73–83 1 Chron 6 39, 9 15, 25 1, 2 Chron 20 14, 29 30, Neh 11 17, 12 46 **2** The same as ABIASAPH **3** Father of a chronicler 2 Kings 18 37, Isa 36 3,22 **4** King's forester Neh 2 8

Asareel (ăsāʹrēĭl) [Heb, =whom God has bound], son of Jahallel 1 Chron 4 16

Asarelah (ăsʺurēʹlŭ), Asaphite 1 Chron 25 2 Jesharelah 1 Chron 25 14

Asbestos, town (pop 5,711), SE Que, NNW of Sherbrooke A large plant here manufactures products of asbestos taken from the neighboring mines

asbestos [Latin, a noninflammable mineral, from Gr, =unquenchable], trade name used for any magnesium silicate mineral which is fibrous in structure and more or less resistant to acid and fire The name was originally given to fibrous forms of actinolite and tremolite, varieties of amphibole Chrysotile asbestos, a form of SERPENTINE, is the more important commercial asbestos Important varieties of amphibole are amosite, which is neither as strong nor as easy to spin as chrysotile but which is used in insulating materials, crocidolite, also known as blue asbestos, used because of its high strength for making asbestos-cement products, and tremolite, used in laboratories (for filtering acids and other chemicals) because of its resistance to chemical action Varieties of amphibole which are less important commercially include anthophyllite, actinolite, and hornblende. Asbestos is usually found lying in veins in other rock, in most cases it appears

to be the product of METAMORPHISM By far the largest asbestos-producing country is Canada; other important asbestos-producing countries are the USSR, Rhodesia, the Union of South Africa, Cyprus, and the United States Canadian asbestos is mostly chrysotile South African asbestos is largely amosite and crocidolite which was discovered on the Cape of Good Hope. In the United States, chrysotile asbestos is produced chiefly in Arizona and Vermont Asbestos is mined both in open quarries and in underground tunnels It is then crushed, dried, screened to remove the fibers from the ore, graded, and sold to spinners Among the chief products made from asbestos are asbestos yarns and ropes, pipe covering, brake linings, fire-fighting equipment, asbestos cloth, asbestos shingles, asbestos millboard, and asbestos plaster and plasterboard See *Asbestos* (U S Bureau of Mines, Bul 403)

Asbjornsen, Peter Christian, Nor *Ashjørnsen* (pä'tur krĕs'tyan as'hyŭrnsun), 1812–85, Norwegian folklorist, writer, and naturalist With his friend the poet Jorgen Moe, he began to collect legends *Norwegian Folk Stories* (4 vols , 1841–44), by the two friends, was immediately acclaimed throughout Europe as a valuable contribution both to comparative folklore and to literature In 1845 he published the first series of his *Norwegian Fairy Stories and Folk Legends* His books have been widely translated, editions in English are *Popular Tales from the Norse* (tr by Sir George W Dasent, 1858) and *Fairy Tales from the Far North* (tr by H L Braekstad, 1881)

Asbury, Francis (ăz'bŭrĭ,–bĕ–), 1745–1816, Methodist bishop in America, b England The Wesleyan conference in London sent him in 1771 as a missionary to America, where he promoted the growth of the CIRCUIT RIDER system which proved so eminently suited to frontier conditions His powerful preaching, his skill in winning converts, and his mastery of organization had, by the end of the Revolution, established Asbury as the leader of American Methodism In 1784 John Wesley ordained Dr Thomas Coke as superintendent of the societies in America, Asbury was to be associate superintendent At the American conference held that year, however, Asbury was the dominating figure and was made superintendent He then assumed the title of bishop and took steps to institute a centralized church government Although tormented by ill-health, he maintained personal supervision of the expanding church traveling on horseback over 5,000 mi each year and strongly entrenching Methodism over the entire area of the new nation His journal is valuable for its account of contemporary society as well as of his personal life See *The Heart of Asbury's Journal* (ed by E S Tipple, 1904), Herbert Asbury *A Methodist Saint* (1927)

Asbury Park, city (pop 14,617), E N J , a resort with an excellent beach on the Atlantic SE of New Brunswick, founded 1869, inc 1897 It was named for Francis Asbury The city has a municipal auditorium and a boardwalk

Ascalon (ăs'kŭ–), variant of ASHKELON

Ascanius (ăskā'nēŭs), in Roman myth, son of AENEAS and CREUSA, known also as Julus, by which name he was regarded as the eponymous ancestor of the Julian gens He is said to have founded ALBA LONGA

Ascension, name usually given to the departure of JESUS from the earth as told at the end of the Gospels according to Mark and Luke and in Acts 1 1–11 The annual commemoration of this is one of the principal feasts of the year in most Christian churches **Ascension Day** or **Holy Thursday,** as it is called, is the 40th day after Easter, being the Thursday after the fifth Sunday after Easter

Ascension, island, in the S Atlantic, NW of St Helena and belonging to the British St Helena Colony Little Ascension is a volcanic, rocky island with only 34 mi of area and few inhabitants Discovered by the Portuguese João da Nova in 1501, it was later taken by the British and used as a naval station In the Second World War, U S forces built an airfield here

Ascension Island, Caroline Islands see PONAPE

Ascensius, Jodocus Badius see BADIUS, JODOCUS

asceticism (ŭsĕ'tĭsĭzm), practice of self-denial or self-mortification for a religious or ethical purpose Asceticism is widespread, it may be in connection with taboo, with purification, with totemism, or with the desire to please the god or gods, or with any of several other ideas Thus, FASTING, a universal type of asceticism, is used to induce visions, to propitiate the dead, to show sorrow, or to gain strength In Hinduism fasting, flagellation, and abstinence from pleasures are common, in Buddhism, Nirvana is unattainable by those who do not practice asceticism, in Zoroastrianism and Manichaeism there were many ascetic taboos, in Greece the Cynics developed a very thoroughgoing detestation of fine clothes, food, and manners, in Judaism fasts were kept and pork was never eaten, and the Nazarites and Essenes had special ascetic practices, in Islam alcohol is forbidden In treating Christian asceticism it is usual to restrict the term to practices beyond those prescribed—hence the traditional fasting on set days, like sexual abstinence on the part of the unmarried, is just obedience to the law But the older churches have always recommended some voluntary mortification, especially in Lent, and have highly esteemed CELIBACY In Christian MONASTICISM (always voluntarily embraced), the common life, obedience, and personal poverty are regarded as the most ascetic of practices The general Protestant view rejected voluntary asceticism, Calvinism did this in teaching that one cannot merit more than sufficient for salvation (though Puritanism laid great stress on rigid obedience to the formulated moral laws), Lutheranism through the doctrine of justification by faith alone See HERMIT, FAKIR, RECHABITES

Asch, Sholem or **Shalom** (shō'lum ăsh', shä'lum), 1880–, Jewish novelist and playwright, b Poland He first came to the United States in 1910, was naturalized here in 1920, and has lived in various parts of Europe and the United States One of the most widely known Yiddish writers, he won his first success with the play *The God of Vengeance,* produced by Max Reinhardt in Berlin in 1910 and given in many languages and places since then Among his works available in English translations are the novels *Mottke the Thief* (1917), *Uncle Moses* (1920) *Three Cities* (1933), *Salvation* (1934), *The War Goes On* (1935), *The Nazarene* (1939) *The Apostle* (1943), *One Destiny* (1945), *East River* (1946), and *Mary* (1949) and the two collections of short stories and novelettes *Children of Abraham* (1942) and *Tales of My People* (1948) Several of his plays have been very successful in the Yiddish theater in New York city

Asch, Czech *Aš* (both ash), city (pop 11,378), NW Bohemia, Czechoslovakia, near the Bavarian border It has textile, lace, and embroidery manufactures A city of 22,930 in 1930, it lost its German-speaking population after 1945

Aschaffenburg (ăshä'fŭnbōōrk), city (pop 36,383), Lower Franconia, NW Bavaria, on the Main It has textile, paper, and metal industries The city was a Roman garrison, in the 9th cent it became the summer residence of the archbishops of Mainz It changed hands several times during the Thirty Years War and was stormed in 1672 by Turenne Aschaffenburg was heavily damaged in the Second World War

Ascham, Roger (ăs'kum), 1515–68, English humanist and scholar, b Yorkshire He was at St John's College, Cambridge, from 1530 and became interested in extending the study of Greek, later in life he was recognized as an outstanding scholar of Latin and Greek Ascham's *Toxophilus* (1545), a dialogue on archery, proved him a master of English prose He was tutor (1548–50) to Princess Elizabeth, and he seems to have been partly responsible for her love of the classics and her proficiency in Greek As a member of a diplomatic mission Ascham spent several years on the Continent and in 1553 was appointed Latin secretary to Queen Mary *The Scholemaster* (1570), a treatise on the teaching of Latin urged the use of the double-translation method His personal influence was large Dr Johnson's life of Ascham, included in many editions of Ascham's collected works, is a classic

Aschersleben (ä'shurslä"bun), city (pop 42,196), in the former Saxony prov of Prussia, central Germany Its industries produce chemicals, steel and iron, machinery, and textiles There are lignite and potash mines

Asclepiades of Bithynia (usklŏpēăd'ēz, bĭthĭn'ēu), c 124 B C –40 B C , Greek physician He was the founder of an influential school of medicine in Rome He propounded the theory that disease is caused by disturbances in the movement of the atoms or particles of which he believed the body was composed He used baths, massage, exercises, and diet as therapeusis Parts of his works are collected in C G Gumpert's *Asclepiadis Bithyni fragmenta* (1794)

Asclepius (ăsklē'pēus), Latin *Aesculapius* (ĕs"kūlā' pēus), legendary Greek physician, son of Apollo and Coronis His first teacher was the wise centaur Chiron When he became so skillful in healing that he could revive the dead, Zeus killed him Apollo persuaded Zeus to make Asclepius the god of medicine The worship of Asclepius is believed to have originated in Thessaly Temples were built at Epidaurus, Cos, Pergamum, and many other places, where treatments, including massage and baths, were given to the sick The serpent and the cock were sacred to Asclepius People who claimed descent from him and those who followed his teachings were known as Asclepiads

Ascoli Piceno (ä'skōlē pēchā'nō), city (pop 20,665), capital of Ascoli Piceno prov , the Marches, central Italy, 18 mi from the Adriatic It has silk manufactures The medieval aspect is preserved, and it has a 12th-century baptistery and notable churches and palaces

Ascot (ăs'kut), village, Berkshire, England On Ascot Heath, near here, are held annually in June the famous races instituted by Queen Anne in 1711

Aculum (ă'skŭlum), ancient town of Apulia, SE Italy, on a branch of the Appian Way Here Pyrrhus won a hard-fought battle against the Romans in 279 B C Modern Ascoli Satriano is in the region

Asenath (ăs'unăth), Poti-pherah's daughter, the Egyptian wife of Joseph, mother of Manasseh and Ephraim Gen 41 45,50–52, 46 20 Her marriage is the subject of Joseph and Asenath, one of the PSEUDEPIGRAPHA

Asenovgrad (ăsănôv'grät), city (pop 20,920), Bulgaria It is a farm center with wineries and tobacco manufactures, formerly known as Stanimaka There are several 16th-century churches and ruins of a 13th-century castle

asepsis see ANTISEPTIC

Aser (ā'sur), variant of ASHER

Asgard (ăs'gärd) [Norse,=home of the gods], the Norse Olympus, home of the 12 chief gods, or Aesir Odin was its chief, and VALHALLA, his home for heroes, was here There were also residences of the various gods The bridge BIFROST was its approach See also GERMANIC RELIGION

Askelon Judges 1.18, 1 Sam. 6 17; 2 Sam 1 20 Eshkalon Joshua 13.3

Ashkenaz (ăsh'kĕnăz"), eponym of a people perhaps localized in Armenia He was grandson of Japheth Gen 10 3 Ashchenas 1 Chron. 1 6, Jer 51 27 In modern times the term **Ashkenazim** (–năz'–) refers to the German Jews as distinguished from the Sephardim, the Jews of Spain and Portugal.

Ashkhabad (ăsh'kŭbăd", ăsh'kubăd', Rus ŭshkhubăt'), city (pop 126,580), capital of the Turkmen SSR and of Ashkhabad oblast, on the Trans-Caspian RR and near the Iranian border founded in 1881, it has cotton and silk factories, a moving-picture industry, several scientific and educational institutions, and a Turkmen museum It was partly destroyed by earthquake in 1948

Ashland. 1 Town (pop 1,608), co seat of Clay co, E central Ala, ESE of Birmingham. **2** Village (pop 1,139), central Ill, WNW of Springfield, in a farm area, inc 1869 **3** City (pop 1,186), co seat of Clark co, SW Kansas, near the Okla line, laid out 1884, inc 1886 Wheat and cattle are produced in the area Oil was found in 1935–36 **4** Industrial city (pop 29,537), E Ky, on terraces along the Ohio near the influx of the Big Sandy and NW of Huntington, W Va, settled 1815, laid out 1850, inc as a village 1858, as a city 1870 The region yields coal, clay, gas, and lumber The city is a railroad and river shipping point, among its products are iron and steel, coke, refined oil, chemicals, leather products, and bricks A coeducational junior college is here Near by is the "Traipsin' Woman's Cabin," scene of the annual American Folk Song Festival At near-by Raceland is a noted race track **5** Town (pop 2,457), NE Maine, on the Aroostook and W of Presque Isle, settled c 1837, inc 1862 It is a trade center, shipping mainly lumber and potatoes **6** Town (pop 2,479), E Mass, SW of Framingham, settled c 1750, inc 1846 Metal and electrical products are made here. **7** City (pop 1,709), E Nebr, on the Platte and, SW of Omaha, in a farm and recreation area, settled 1863, inc 1886 The site of an Oto Indian village is near **8** Town (pop 1,460), central N H, on the Pemigewasset and N of Franklin, near Squam Lake, organized 1867. **9** City (pop 12,453), co seat of Ashland co, N Ohio, NE of Mansfield, in a farm area, laid out 1815 as Uniontown, renamed 1822 Farm equipment, hardware, rubber automobile parts, toy balloons, and men's clothing are among Ashland's products It is the seat of Ashland College (Brethren Church, coeducational, 1878) **10** City (pop 4,744), SW Oregon, W of Klamath Falls near the Calif line, founded 1852, inc 1874 It is the seat of Southern Oregon College of Education and is the trade center for a region producing fruits, grain, and lumber Mineral springs and quarries are in the area, the Siskiyou Mts are within sight **11** Industrial borough (pop 7,045), Columbia and Schuylkill counties, E Pa, near Pottsville, settled 1845, laid out 1847, inc 1857 Anthracite, metal products, textiles, and shirts are produced here **12** Town (pop 1,718), central Va, N of Richmond, settled 1848, inc 1858 RANDOLPH-MACON COLLEGE is here Patrick Henry and Henry Clay were born near by, and not far from Ashland is "Scotchtown," Patrick Henry's home from 1771 to 1777 and later the girlhood home of Dolly Madison **13** City (pop 11,101), co seat of Ashland co, N Wis, a port of entry on Chequamegon Bay of Lake Superior, settled 1854, inc 1887 French explorers visited the bay shore in the 17th cent, and Father Allouez's mission was near here (1665) The first railroad to N Wisconsin (1877) brought growth to the town Early iron mining and lumbering gave way to papermaking, and iron ore from the Gogebic range to the southeast, coal, and lumber are shipped by lake Northland College is in Ashland The APOSTLE ISLANDS are to the north

Ashley, Anthony Ashley Cooper, Baron see SHAFTESBURY, ANTHONY ASHLEY COOPER, 1ST EARL OF

Ashley, William Henry, c 1778–1838, American fur-trader and politician, b Virginia In 1820 he was elected lieutenant governor of Missouri He sent fur-trading expeditions up the Missouri river to the Yellowstone in 1822 and 1823, the parties including Jedediah SMITH and other MOUNTAIN MEN A detachment of the second party under the command of Thomas FITZPATRICK went through SOUTH PASS to the Green River valley In 1825 Ashley accompanied his expedition, passing up the Platte and across to Green River, which he explored for a distance, and where he held the first rendezvous in the mountains In 1826 he led an expedition which reached the vicinity of Great Salt Lake Having acquired an ample fortune, he retired from active participation in the business and devoted himself to politics. He was defeated for the governorship of Missouri in 1824 and 1836, but from 1831 to 1837 was U S Representative and an able advocate of Western measures See H C. Dale, *The Ashley-Smith Explorations* (1918), Bernard De Voto, *Across the Wide Missouri* (1948).

Ashley. 1 City (pop 1,345), co seat of McIntosh co, S N Dak, near the S Dak boundary SE of Bismarck, inc 1920 In a grain, stock, and dairy area, it was founded on near-by Hoskins Lake as Hoskins and moved to its present site in 1888 to be on the railroad **2** Industrial borough (pop. 6,371), NE Pa., near Wilkes-Barre; inc 1870 Its industries include anthracite and metal products.

Ashley, river see CHARLESTON, S C

Ashmead, William Harris, 1855–1908, American entomologist, b Philadelphia. He became a field member of the staff of the U S. Dept. of Agriculture in 1887 After 1897 he was assistant curator of insects in the National Museum. His excellent taxonomical work is indicated by the 607 new genera and 3,100 new species he described and especially by his *Monograph of North American Proctotrypidae* (1893) and *Classification of the Chalcid Flies* (1904)

Ashmodai (ăsh"mŏdā'ĭ), DEMON, probably ASMODEUS

Ashmole, Elias (ăsh'mōl), 1617–92, English antiquary. A royalist in the civil war, Ashmole held court offices under Charles II His earlier interests were in astronomy and Rosicrucianism, but later he made exhaustive antiquarian studies, especially *The Institution, Laws, and Ceremonies of the Order of the Garter* (1672) and *The Antiquities of Berkshire* (3 vols, 1719) His donation to Oxford Univ in 1677 of a collection of curiosities bequeathed him by a friend formed the nucleus of the **Ashmolean Museum** (ăshmō'lēun), the first such public institution in England He later donated his library to Oxford, and the whole was housed in a building erected by Sir Christopher Wren See his memoirs (ed by R T Gunther, 1927)

Ashmun, Jehudi, 1794–1828, U S agent to Liberia, b Champlain, N Y, grad Univ of Vermont, 1816 After entering the Congregationalist ministry and spending a few years in teaching and editorial work, he was sent (1822) by the AMERICAN COLONIZATION SOCIETY to LIBERIA There he found the colony ridden with fever, short of supplies, and threatened by native attack Ashmun with a handful of men repulsed the attacks and built up the colony He wrote *History of the American Colony in Liberia, from December 1821 to 1823* (1826). See biography by R R Gurley (1835)

Ashmunein, Egypt see HERMOPOLIS MAGNA

Ashnah (ăsh'nu) [Heb, = strong], two towns, Palestine, W of Jerusalem Joshua 15 33,43

Ashokan Reservoir (ushō'kun), area c 13 sq mi, SE N Y, W of Kingston, completed 1916 It is supplied by the Esopus and Schoharie watersheds and provides part of New York city's water supply The water, aerated by hundreds of fountains, is carried to New York by the CATSKILL AQUEDUCT

Ashpenaz (ăsh'pēnăz), Nebuchadnezzar's chief eunuch Dan 1 3

Ashtabula (ăsh"tubū'lu), city (pop 21,405), NE Ohio, on Lake Erie at the mouth of the Ashtabula river, settled c 1801, inc as a village 1831, as a city 1891 City-manager government was adopted in 1916 Ashtabula is a port of entry and an important receiving port for large quantities of ore Varied manufactures include oxygen and acetylene, leather, and farming tools Hothouse vegetables are extensively cultivated

Ashtaroth (ăsh'turŏth), Hebrew form of the name of the goddess ASTARTE A city of Bashan was named Ashtaroth Joshua 9 10, 12 4, 13 12,31, 1 Chron 6,71 Astaroth Deut 1 4 Beesh-terah, an otherwise unidentified town, was probably the same Joshua 21 27

Ashteroth Karnaim (ăsh'tĕrŏth kärnā'ĭm) [Heb, = Astarte of two horns], place, E of the Jordan Gen 14 5 Carnaim 1 Mac 5 43,44 Carnion 2 Mac 12 21

Ashton, village (pop 1,203), E Idaho, near the Wyo line, settled 1900 as Vernon, renamed and inc 1906 The center of an irrigated region producing seed peas, potatoes, and grain, Ashton is also a tourist gateway to the Yellowstone and other scenic regions The American Dog Derby is run here each February

Ashton-under-Lyne, municipal borough (1931 pop 51,573, 1947 estimated pop 47,000), Lancashire, England, on the River Tame and NE of Manchester Its industries include cotton spinning, weaving, and dyeing, coal mining, leather manufacture, and metal casting

Ashtoreth (ăsh'tŏrĕth), Hebrew form of ASTARTE

Ashuapmuchuan, Lake (ăshwäp"mŏchwän'), 10 mi long and 4 mi. wide, S Que, W of Lake St. John It empties into the Ashuapmuchuan river, which is 165 mi long and flows into Lake St John

Ashur (ăsh'ur), founder of Tekoa. 1 Chron. 2 24, 4 5.

Ashur: see ASSYRIA.

Ashur-bani-pal. see ASSUR-BANI-PAL.

Ashurites (ăsh'urīts), unidentified people mentioned in the Bible 2 Sam 2 9 There are two likely interpretations (1) the Geshurites, as the Vulgate indicates, or (2) the house of Asher

Ashurnasirpal III (ä"shŏrnä'sĭrpäl), d. 860? B C, king of ancient Assyria (884–860? B C.), also called Ashur-nazir-pal III and Assurnasirbal III One of the earliest of the Assyrian conquerors, he took territory westward to the Mediterranean While warring constantly, he also commenced the system of placing Assyrian governors in conquered lands and thus helped to create a centralized state.

Excavations of his palace and temple at Calah revealed bas-reliefs and records of his conquests,

Ashvath (–vāth), Asherite. 1 Chron. 7.33

Ashville, village (pop. 1,101), S central Ohio, N of Circleville.

Ash Wednesday, in the Western Church, the first day of LENT, being the seventh Wednesday before Easter. On this day ashes are placed on the foreheads of the faithful to remind them of death and of the sorrow they should feel for their sins This practice dates from the early Middle Ages.

Asia, largest of the continents of the world. The conventional boundary with Europe—which may be said geographically to be a peninsula of the Eurasian land mass—lies approximately along the Ural mts , the Ural river, and the Caspian Sea Thus defined, Asia, including Ceylon but excluding the islands of JAPAN, the PHILIPPINE ISLANDS, and INDONESIA, has an area of c 16,000,000 sq mi and a population of c 1,050,000,000 (approximately half the world's total) In the west Asia Minor is separated from Europe by the Bosporus, the Dardanelles, and the Aegean Sea The connection of Asia with Africa is broken only by the Suez Canal between the Mediterranean and the Red Sea. In the far northeast, Siberia approaches close to North America at the Bering Strait Asia is washed on the south by the Gulf of Aden, the Arabian Sea, and the Bay of Bengal, on the east by the South China Sea, the East China Sea, the Yellow Sea, the Sea of Japan, the Sea of Okhotsk, and the Bering Sea, and on the north by the Arctic Ocean The continent ranges through all climatic extremes from torrid heat to arctic cold and from torrential rains (the product of the monsoons) to extreme aridity (as in the Gobi) The population is generally concentrated along the coasts, except in the north and in Arabia Farming is the chief occupation, in dry areas it gives way to grazing In S central Asia are great mountain systems Mt Everest (29,141 ft high), in the Himalayas, is the loftiest elevation in the world The Pamirs are sometimes regarded as the nodal mountain system of the continent, from them the Hindu Kush, the Tien Shan, the Karakorum, and the Himalayas seem to extend The great rivers of Asia, mostly radiating from the mountains, include the Ob, the Yenesei, and the Lena in the north, the Amur, the Yellow River, and the Yangtze in the east, and the Mekong, the Brahmaputra and the Ganges, and the Indus in the south The westernmost part of Asia is ASIA MINOR, or the Anatolian plateau, the major part of TURKEY To the southeast is the great peninsula of ARABIA, to which, on the northwest, is joined the Sinai peninsula (a part of Egypt) Along or near the E Mediterranean are PALESTINE (divided into ISRAEL and Arab territory), SYRIA, LEBANON, JORDAN (formerly Trans-Jordan), and IRAQ Other countries farther to the east—like those already enumerated (except Israel) predominantly Moslem in religion—are IRAN, AFGHANISTAN, and PAKISTAN Pakistan shares the Indian peninsula with INDIA In the Himalaya zone, N of India, are Nepal and Bhutan, to the southeast is the island dominion of CEYLON Southeastward extends the peninsula on which are situated BURMA, MALAYA, THAILAND, and INDO-CHINA Much of SE and E central Asia belongs to CHINA, which is bordered on the north by the MONGOLIAN PEOPLE'S REPUBLIC, on the southwest by TIBET, and on the northeast by KOREA A very large part of the continent is included in the UNION OF SOVIET SOCIALIST REPUBLICS, the north is Siberia, and in central Asia are several constituent republics

Asia Minor, peninsula, extreme W Asia, called also Anatolia The Black Sea is on the north, the Mediterranean on the south, and the Aegean arm of the Mediterranean on the west The Black Sea and the Aegean are linked by the Sea of Marmara and the two straits of the Bosporus and the Dardanelles—one of the most famous waterways of the world Near the south coast of Asia Minor are the Taurus mts , and the rest of the peninsula is occupied by the mountain-crossed, lake-dotted Anatolian plateau. It corresponds to most of TURKEY in Asia Asia Minor was the chief meeting place of Oriental and Occidental civilization in ancient times, for it was connected with Mesopotamia by the Tigris and Euphrates rivers and with Greece by its coasts After the decline of the Hittites, Greek colonies were begun on the coastlands, and the Greeks thus came in contact with Lydia and Phrygia and more especially with Troy The conquest of Asia Minor by the Persians led to the Persian Wars. Alexander the Great incorporated the region in his empire, and after his death it was divided in the wars of the Diadochi into small states. It was reintegrated by the Romans, but was subject to almost constant attack by invaders under the Byzantine Empire, falling to the Arabs and the Seljuk Turks It was temporarily reconquered for the West by the Crusaders, who set up ephemeral states Taken by the Ottoman Turks in the 13th to 15th cent., it was thereafter in the Ottoman Empire.

Asiel (ā'sēĭl) [Heb., =created by God], Simeonite. 1 Chron. 4.35.

Askalon (ăs'kŭ–), variant of ASHKELON.

Aske, Robert (āsk), d. 1537, leader of the PILGRIMAGE OF GRACE, the revolutionary movement in the north of England. Aske was hanged.

Askelon (ăs'ku–), variant of ASHKELON.

Asmara (ăsmä'rä, ăs–), city (pop. 98,000), capital of Eritrea. It is healthfully situated at an altitude of c 7,700 ft. Asmara is connected with its port of Massawa by a railroad and by an aerial cable (c 45 mi long). Animal and agricultural produce is processed, and there are light manufactures Italy took the city in 1889 and in 1897 transferred the capital here from Massawa.

Asmodeus (ăs"mōdē'ŭs), DEMON of Hebrew story He plays an important role in the book of Tobit (3.6, 8)

Asmoneans· see MACCABEES

Asnah (ăs'nu) [Heb ,=thorn bush], head of a family which returned with Zerubbabel Ezra 2 50

Asnappar. see ASSUR-BANI-PAL

Asoka (ŭsō'ku), d c 237 B C , ruler (c 255–c 237 B C) of the MAURYA empire His domain, much enlarged by conquest, included Afghanistan, Baluchistan, and nearly all the Indian peninsula north of lat 14° S These lands he ruled from his capital at Pataliputra After his conversion (c 257) from Brahmanism to BUDDHISM, he established many monasteries and sponsored a revision of the scriptures Knowledge of Asoka's reign is obtained chiefly from the pillars inscribed with his exhortation of the people to pious observance of Buddhism, a notable example is at SARNATH

Asopus (usō'pus), in Greek mythology, river-god He tried to prevent Zeus from abducting his daughter AEGINA, and Zeus killed him

Aso-san (ä'sō-sän'), group of five volcanic cones, central Kyushu, Japan One is active All lie in the largest volcanic crater (circumference 37 2 mi) in the world

asp, popular name of a poisonous snake known chiefly through the story of Cleopatra's suicide by allowing one to bite her Some historians believe that the species used was the vicious Egyptian cobra, or asp, *Naja haje,* which is smaller than the Indian cobra and of a dull brown color Others think that Cleopatra used the Egyptian or horned viper, or asp, *Cerastes cornutus,* a pale species of the Sahara

Aspadana. see ISFAHAN, Iran

asparagus (ŭspăr'u–), perennial garden vegetable (*Asparagus officinalis*), the tender shoots of which are cut and eaten in the spring The plant is cultivated from seed, is planted in rows 3 ft apart in rich, well-drained soil, and should be frequently tilled The shoots should not be cut until the plants are at least two years old Asparagus has been cultivated from antiquity Cato's directions as to the growing of asparagus, in his *On Farming* are similar to those in a modern manual of horticulture He recommends fertilizing with sheep manure to avoid weeds Columella also wrote on asparagus growing The feathery sprays of the garden asparagus are sometimes used by florists, but more popular for decorative purposes are other plants of the same genus—especially the SMILAX and the asparagus fern (*Asparagus plumosus*) See *Asparagus* (U S Dept of Agriculture, Farmers' Bul 829)

Aspasia (ăspā'shu), 5th cent ;B C , Greek courtesan, mistress of PERICLES She was probably a native of Miletus She was renowned for her learning, her wit, and her beauty. A famous story of her life told how she was accused of impiety by Pericles' enemies and how he defended her

Aspatha (ăs'puthu, ăspā'–), one of Haman's sons Esther 9 7

Aspen, city (pop 777, alt 7,850 ft), co seat of Pitkin co , W central Colo , SW of Leadville, founded c 1878, inc 1881 Once a populous silver camp, it is now a resort In 1949 Aspen was the scene of an international convocation in honor of the 200th anniversary of the birth of Goethe.

aspen, name for several species of POPLAR having relatively long, flat leafstalks which cause the broad leaves to tremble in even the faintest breeze. Thus trait led to the belief that the Cross was made of aspen The common American or quaking aspen (*Populus tremuloides*) is widely distributed over much of Canada and the United States (except the southeastern portion) Its western variety, the golden aspen (*P. tremuloides aurea*), is found from Alaska through the W United States to Mexico The aspen is often the first tree to reforest burned-over woodlands The large-toothed aspen is *P grandidentata,* of Canada and the United States southward to North Carolina and westward to Iowa and Ontario *P tremula* is widely distributed in Europe and Asia.

Asper, Hans (hänz' äs'pûr), 1499–1571, Swiss portrait painter and draughtsman His work has been confused with that of Holbein, whom he imitated Most of his work is in Zurich, where he was town painter and where he lived and died in poverty Included are well-known portraits of Regula Gwalter and of Zwingli and his daughter, as well as many fine drawings of flowers, birds, and game.

asperges (uspûr'jŭs), ceremonial sprinkling of the people with holy water by the priest before the Sunday High Mass in Roman Catholic churches The accompanying antiphon begins, *Asperges me, Domine, hyssopo* (purge me, Lord, with hyssop, i e , thou shalt sprinkle me, etc] At Easter time the antiphon is different, beginning, *Vidi aquam* [I saw water], this is based on Ezek 47 2

Aspermont, town (pop 1,041), co seat of Stonewall co., W central Texas, NW of Abilene The region produces grains, cotton, cattle, and some oil

Aspern (ăs'purn), eastern suburb of Vienna, Austria Here the Austrians under Archduke Charles defeated Napoleon I on May 21–22, 1809

asphalt (ăs'fôlt, –fält), brownish-black substance used commonly in road making or roofing and in waterproofing. Chemically, it is a natural mixture of HYDROCARBON compounds It varies in consistency from a solid to a semisolid, has great tenacity, melts when heated, and when ignited will burn with a smoky flame leaving very little or no ash It is found in nature in deposits termed "asphalt lakes," the best known of these is in Trinidad This natural asphalt was probably formed by the evaporation of petroleum Asphalt is obtained as a residue in the distillation or refining of petroleum This is its important commercial source It occurs in asphalt rock, a mixture of asphalt with sand and limestone, which when crushed is used as road-building material Asphalt is also used in the manufacture of paints and varnishes, giving an intensely black color

asphodel (ăs'fudĕl"), species of hardy stemless plants (genus *Asphodelus*), of the lily family, with a showy spike of white or yellow flowers, native to the Mediterranean region and India The asphodel or king's spear of the ancients, sacred to Persephone and associated with the dead, belongs to the genus *Asphodelus,* of which there are 14 species The asphodel of the early French and English poets was a NARCISSUS

asphyxia (ăsfĭk'sēŭ) [Gr ,=stopping of the pulse], suffocation, resulting from a deficiency of oxygen in the blood The lips and skin become bluish in color (cyanotic) Strangulation, foreign bodies in the respiratory tract, inhalation of poisonous gases (e g , illuminating gas), and drowning are frequent causes of asphyxia ARTIFICIAL RESPIRATION is an emergency treatment When the respiratory tract is blocked—e g , in diphtheria, in which a membrane may occlude the larynx—tracheotomy (surgical opening of the windpipe in order to establish an airway) may be the only means of saving life

Aspinwall, William Henry (ăs'pĭnwôl"), 1807–75, American merchant and railroad builder, b New York city He was apprenticed to, and in 1832 became a partner of, G G and S Howland (his uncles), in their New York trading and shipping firm Its business with Latin America was increased under his direction After the discovery of gold in California he organized the company which built (1850–55) the railroad across Panama With others, in 1848, he had organized the Pacific Mail Steamship Company, so that he held a monopoly of the California trade until the completion of the Union Pacific in 1869

Aspinwall. see COLÓN, Panama.

Aspinwall, residential borough (pop 4,716), SW Pa., near Pittsburgh, settled 1796, inc 1893.

aspirin, name for the acetyl derivative of SALICYLIC ACID It is a white crystalline compound of carbon, hydrogen, and oxygen Its use as a substitute for the more harmful antipyretics and as an analgesic is large

Aspropotamos: see ACHELOUS

Asriel (ăs'rēĕl) [Heb ,=God's vow], descendant of Manasseh Joshua 17.2, Num 26 31. Ashriel 1 Chron 7 14

ass, animal of the HORSE genus (*Equus*) widely known in its domesticated state as the donkey Herds of wild asses of several species are still found in Asia and in Africa They live in mountains and deserts and thrive on dry and rough forage Compared with the horse, the ass is usually smaller, has a large head, small hoofs, short mane and tail, and long ears Its bray is unlike any call of the horse In Mesopotamia and in Egypt the domestic ass was in use probably c 4000 B C , or about 2,000 years before the horse It is not certain whether the horse or the ass was the first to be domesticated. Both are among the latest additions to the list of domesticated animals The ass is often mentioned in the Bible (Gen 12 16, 22 3,5, Job 42 12, Num 22.30, Mat 21 1-7) In modern times, the ass is used chiefly in the warmer parts of the world. In the W United States, Mexico, and some other places, a very small ass, the burro, is used as a pack animal As a child's pet, the burro rivals the Shetland pony The breeds of asses used in America in the production of the MULE have included the Andalusian, Catalonian, Majorca, Maltese, and Poitou. From various breeds a breed called American has been developed. Famous American importers of asses have included George Washington and Henry Clay Asses were presented to Washington by the king of Spain (1785) and by General Lafayette (1786). The ass is hardy and

sure-footed Justly or unjustly, its stubbornness, stupidity, and patience are proverbial A male ass is called a jack or jackass, a female ass is called a jennet or jenny See C S Plumb, *Types and Breeds of Farm Animals* (1906), H J Peake, *Early Steps in Human Progress* (1933)

Assam (ăsăm′), state (62,738 sq mi, pop 8,197,186), NE India It is bounded by Burma on the east, by China, Tibet, and Bhutan on the north and by Pakistan on the west The capital is Shillong The terrain largely consists of hill ranges running generally from northeast to southwest and separated by streams and rivers which flow southwest The river valleys, particularly those of the Brahmaputra and Surma, contain the richest soil and support more than half the population The rainfall is often excessive, Cherrapungi in the southwest reputedly has the heaviest precipitation in the world (about 500 in annually) Rice is the principal crop, and citrus fruits, sugar cane, sesame, tea, cotton, and jute are important Industry is mainly based on the processing of agricultural products The hills produce abundant timber and some oil, coal and limestone Although the rail and road nets are limited, the rivers afford adequate commercial routes to Calcutta, West Bengal state, which is the metropolis of Assam The hills restrict north-south communication, and the population is very heterogeneous The largest element is Hindu and speaks Bengali There are various aboriginal tribes, notably the Nagas, Lushais, Garos, and Khasis The Ahom people of Burma invaded Assam in the 13th cent and dominated the land later The British assisted the Assamese several times in expelling Burmese invaders, and by the Treaty of Yandabo (1826) Assam was ceded to Great Britain and became part of Bengal It was made a separate province in 1874 Japan occupied the southern area for a time in 1944 A southwest section was incorporated in 1947 into East Pakistan

Assamese (ăs′ămēz″), language of the Indic group of the Indo-Iranian family of Indo-European languages See LANGUAGE (table)

Assandun, battle of (ă′sundun), a victory by the Danes under CANUTE over the English led by EDMUND IRONSIDE The battle was fought Oct 18, 1016, at what is now Ashingdon, in SE Essex

Assassin (usă′sĭn) [Arabic,=under the influence of hashish], European name for the member of a secret order of the Moslem SHIITES The order was founded by Hasan Sabbah (c 1090) in the mountain fortress of Alamut The distinguishing mark of the order was not in their tenets, but in their methods of disposing of enemies by ruthless murder Of the organization and its history, it is difficult to speak with absolute certainty, as is the case of most secret societies The grand master of the order, the Sheikh al-Jabal, known in Western Europe as the Old Man of the Mountain, was absolute ruler Under him the members were strictly organized into classes, according to the degree of initiation into the secrets of the order The most important of the classes was one of the lower groups of the hierarchy, the devotees, from whom unquestioning obedience and a fanatic disregard for their own safety —martyrdom was not avoided, but sought— were expected by their superiors, these men were the instruments of assassination It is generally believed that they were prepared for their tasks and rewarded by being taken occasionally into the earthly paradise in the fastness of the Old Man's fortress, where hashish was administered to them and they were allowed to indulge in the most exquisite forms of sensual pleasure The order grew strong over all Persia and Syria The succeeding grand masters of the order—six in all, after Hasan —were of great political significance About the end of the 12th cent the Syrian branch of the order made itself independent, it was with this branch that the Crusaders came in contact The coming of the Mongols doomed the power of the Assassins, Hulagu Khan in 1256 attacked their fortresses and with widespread massacre destroyed them in Persia The Syrian branch suffered a similar fate at the hands of Bibars, Mameluke sultan of Egypt Only scattered groups of the order persisted They are said to persist today, particularly in N Syria Tales of the Crusaders and the writings of Marco Polo brought the Assassins and the Old Man of the Mountain into European folklore The term *assassin* came into English and is today used to mean murderer and particularly one who kills for political motives

assault, in law, any unlawful attempt to use violence with the intent and the ability to do bodily harm to another If the act is consummated—that is, if the attempt is successful and the threat realized, if the fist lands a blow, the brick strikes home, or the like—the offense is BATTERY Every criminal assault is a tort, for which the party assaulted may sue for damages At common law, assault was a misdemeanor Under modern criminal statutes, varying degrees of assault (e g, assault with intent to kill, to do great bodily harm, to rape) are recognized as aggravated assaults and are felonies, though simple assault is still a misdemeanor.

assaying (ăsā′yĭng), in metallurgy, the process of determining the specific metallic content of an ore, alloy, or other substance, especially those containing precious metals It consists, in some cases, of subjecting the substances to complete chemical analysis and, in others, of simply determining the quantity present of one or more of the metal constituents An accurate assay depends first upon procuring a representative sample of the ore in question Since distribution of the ore's constituents is not uniform, a common method employed in obtaining this sample is to procure several samples, crush and mix them together, and from the final mass take the sample to be assayed Assays are gravimetric when the weight of the metal is determined, volumetric when the analysis involves the volume of the metal in solution as compared to that in a standardized solution A "wet" assay (one which involves the use of liquid reagents) is generally used in a determination of weight In a "dry" assay the ore is fused and the metal is finally obtained in a pure state Assaying of gold and silver is especially important, and government offices are established for public service throughout the country Ores of other metals, such as copper and iron, are also commonly assayed

assembly, unlawful: see RIOT, ROUT, AND UNLAWFUL ASSEMBLY

Asser (ă′sur), d 909, Welsh clergyman, monk of St David's He went to the court of King ALFRED c 884 and later was made bishop of Sherborne He is remembered for his biography of Alfred to 893, apparently modeled on that of Charlemagne by EINHARD He combined a translation of some text of the *Anglo-Saxon Chronicle* with his original observations on Alfred's life

Asser, Rab see ASHI, RAB

Asser, Tobias Michael Carel (tōbē′ăs mē′khāl kä′rul ăs′ur), 1838-1913, Dutch statesman and jurist He was a delegate to many international conferences, including the Hague Conference of 1899, and wrote on international law He forwarded international arbitration and was awarded the 1911 Nobel Peace Prize jointly with Alfred Fried

Asshurim (ăshōō′rĭm), unidentified Arabian tribe, whose eponym is named in Gen 25 3

Assideans see HASIDIM

assignats (ăsēnyä′, ăs′ĭgnäts) paper currency issued during the FRENCH REVOLUTION To redeem the huge public debt and counterbalance the growing deficit, the National Assembly issued (Dec, 1789) treasury notes to the amount of 400,000,000 French pounds at five percent, called assignats, which were intended as short-term obligations pending the sale of confiscated crown and church land They were made legal tender in April, 1790, and subsequent issues bore no interest Inflation resulted, and early in 1796, the assignats in circulation amounted to 36,000,000 000 pounds, their value had fallen below the cost of printing them "Territorial mandates," issued in 1796 as a new land-based currency, were also soon depreciated (see MANDAT) Inflation stopped only when all paper currency was demonetized and redeemed at the rate of 3,000 pounds in assignats or 100 francs in mandates to one franc in gold On May 21, 1797, all unredeemed assignats were voided See S E Harris, *The Assignats* (1930)

Assiniboia (ŭsĭnĭboo′ə), town (pop 1,585), S Sask, SW of Regina

Assiniboine (ŭsĭn′ĭboin), river rising in E Saskatchewan and flowing SE into SW Manitoba, southward until it is joined by the Qu'Appelle, then SE and E to the Red River at Winnipeg The Souris is its principal southern tributary From its headwaters at the source of the Qu'Appelle to its mouth the river is over 600 mi long The Assiniboine valley is one of Canada's leading wheat areas The river was discovered and explored by the Verendrye in 1730, when forts were built at its mouth and just below the site of Portage la Prairie It was the route by which settlement spread westward from the Red River valley in its advance to the plains The river was named for the Assiniboin Indians

Assiniboine, Fort, Canadian fur-trading post of the North West Company, on the Assiniboine river near the mouth of the Souris, in the present-day Manitoba Built (1794) on the north side of the Assiniboine and later moved to the south bank, it was variously known as Macdonell's House (for the brother of Miles Macdonell of the RED RIVER SETTLEMENT), Stone Indian River House, and Fort La Souris Although trade declined after 1805, the post was not closed until 1821 A fur-trading post of the Hudson's Bay Company on the Athabaska river was also known as Fort Assiniboine

Assiniboine, Mount, 11,870 ft high, SW Alta, on the Continental Divide in the Rocky Mts and S of Banff The highest peak between the U S boundary and the main line of the Canadian Pacific Railway, it is frequently climbed by expert mountaineers It was first climbed by Sir James Outram in 1901

Assiniboin Indians (ŭsĭn′ĭboin), North American Indian tribe Their culture is that of the N Great Plains, their language Siouan (see LANGUAGE, table) At the time of the first contact with the white man, they had no permanent village sites, moving about as their search for food required. They seem to have been a branch of the Yankton Dakota who moved north and westward at the end of the 16th cent to the region of Lake Winnipeg; later they went to the upper Saskatchewan and the upper Missouri rivers They were allied with the Cree against the Blackfoot

Assir (ăs′ĭr) [Heb.,=captive] 1 Son of Korah Ex 6 24, 1 Chron 6 22 2 Ancestor of Samuel 1 Chron 6 23,37 3 Son of Jeremiah, unless RV is right in translating "Jeconiah, the captive" 1 Chron 3 17

Assisi (usē′zē, Ital as-sē′zē), town (pop 4,686), Umbria, central Italy, 10 mi SE of Perugia, on a hill in the Apennines It owes its fame to St Francis of Assisi, who was born here in 1182, and has preserved its deeply religious and medieval atmosphere Above the saint's tomb two Gothic churches were built—the lower church and the upper church Both churches are decorated with frescoes depicting the life of St Francis by CIMABUE, GIOTTO, and others The Franciscan convent near by has a valuable library In the plain below Assisi is the imposing late Renaissance Church of Santa Maria degli Angeli, built around the little chapel of Porziuncola, where St Francis relinquished active leadership of his order Assisi has other fine churches, among them the cathedral (12th cent), the Santa Chiara, and the near-by San Damiano The countryside around Assisi is filled with memories of the saint

Associated Press see NEWS AGENCIES

association, in psychology, the tendency of an individual to link or connect consciously or unconsciously some word or idea with some other word or idea A basic technique in PSYCHOANALYSIS is known as free association, in which the patient is told to voice his thoughts exactly as they occur to him without regard to their seeming triviality This procedure is designed to reveal the areas of basic conflict and to bring into consciousness traumatic events and desires that have been repressed During free association the psychoanalyst observes not only the manifest content of the associations but the accompanying somatic reactions so that any attempt at conscious or unconscious suppression of material will be evident

associationism, theory that all consciousness is the result of the combination, in accordance with the law of association, of certain simple and ultimate elements derived from sense experiences It was developed by David HARTLEY and advanced by James MILL Its influence continued until late in the 19th cent See PSYCHOLOGY

Assos (ăs′ŏs) or **Assus,** ancient city, Mysia, NW Asia Minor, on the Gulf of Adramyttium E of Point Lectum, westernmost point of Asia There are extensive ruins St Paul passed through Assos Acts 20 13,14

Assuan, Egypt see ASWAN

assurance see INSURANCE

Assur-bani-pal (ă″sŏor-bä′nē-päl) or **Ashur-banipal** (ă′shŏor-), d 626? B C, king of ancient Assyria (669?-626? B C), son and successor of ESARHADDON The last of great kings of Assyria, he drove Tirhakah out of Egypt and firmly established NECHO in power there only to have Necho's son PSAMTIK I later revolt (660 B C) and wrest Egypt permanently from Assyria This uprising took place when Assur-bani-pal was campaigning against the Elamites and Chaldaeans His brother, in command at Babylon, headed a serious revolt, in which all the enemies of the king joined This was put down with difficulty, and Assur-bani-pal after taking Babylon slaughtered (648 B C) many of the inhabitants He then defeated Elam and sacked Susa, Elamite power disappeared Under Assur-bani-pal, Assyria reached the height of sumptuous glory His palace and the temples at Nineveh had some of the finest of ancient sculpture, particularly the virile and fine-lined bas-reliefs Assur-bani-pal made an enormous collection of cuneiform tablets in his library at his rich capital His reign ended the greatness of the empire, which succumbed to the Medes and the Persians only a few years after his death His great expenditures in wars to preserve the state contributed somewhat to its collapse Assurbanipal is probably the Asnapper (ăsnă′pur) or Osnapper (ŏsnă′pur) of Ezra 4 10 He is identified with, but only faintly resembles, the SARDANAPALUS of the Greeks

Assurnasirbal III see ASHURNASIRPAL III.

Assus, variant of ASSOS

Assyria (usĭr′ēu), ancient empire of W Asia It developed around the city of Ashur or Assur on the upper Tigris and south of the later capital, Nineveh Apparently the nucleus of a Semitic state was forming by the beginning of the 3d millennium B C, but it was inconsiderable, and its eponymous god, Ashur, was little honored while the kings of BABYLON and the HITTITES were powerful Assyria was not steadily a tributary state, for its fortunes depended on the might and ability of its ruler. Briefly in the 17th cent B C. it expanded, but it soon relapsed into weakness. The 13th cent. B C. saw Assyria threatening the sur-

rounding states, and under TIGLATH-PILESER I (reign c 1115–c.1102 B.C.), Assyrian soldiers entered the kingdom centered about Urartu (Ararat; see ARMENIA), took Babylonia, and crossed N Syria to reach the Mediterranean This empire was, however, only ephemeral, and Assyrian greatness was to wait until the 9th cent., when ASHURNASIRPAL III entered on his career He was not only a vigorous and barbarously cruel conqueror who pushed his conquests N to Urartu and W to Lebanon and the Mediterranean but also was an administrator Instead of merely making other kings pay tribute he installed Assyrian governors and thus created real control over the empire SHALMANESER III attempted to continue the policy and claimed many victories in his ceaseless campaigns, but he seems to have failed to establish hegemony over the Hebrews and their Aramaic-speaking allies Raids from Urartu were resumed and grew destructive after the death of Shalmaneser His palace in CALAH (the capital since c 1300) shows the development of architecture continuing After his reign advance seems to have halted, but the foundations of the empire had been laid Conquest was pushed by TIGLATH-PILESER III, who reigned from 745 to 728 B.C. He subdued Babylonia, defeated the king of Urartu, attacked the Medes, established control over Syria, and, as an ally of Ahaz of Judah (who became his vassal), defeated his Aramaic-speaking enemies centered at Damascus His successor, Shalmaneser V, and particularly Shalmaneser's successor, SARGON, expanded Assyria The great victory of Sargon at Raphia (720 B.C.) and his invasions of Armenia, Arabia, and other lands made Assyria indisputably one of the greatest of ancient empires His son SENNACHERIB devoted himself to retaining the gains his father had made He is particularly remembered in the West for his warfare against his rebellious vassal, Hezekiah of Judah His successor, ESARHADDON (reign 681–668 B.C.), defeated the Chaldaeans, who threatened Assyria, and carried his conquests to Egypt, where he deposed Tirhakah and established Necho in power Under Esar-Haddon's son ASSUR-BANI-PAL, Assyria reached its zenith and approached its fall A revolt in Egypt was put down, but when Assur-bani-pal was fighting against the Chaldaeans and the Elamites, an Egyptian revolt under Psamtik I was successful The rapid decline of Assyria had begun, but the reign of Assur-bani-pal (669?–626? B.C.) saw the Assyrian capital at its height of splendor The big library of cuneiform tablets he collected ultimately proved to be one of the most important historical sources of antiquity The magnificent Assyrian bas-reliefs reached their peak The royal court was luxurious Assyrian culture owed much to earlier Babylonian civilization, and in religion particularly Assyria seems to have taken much from its southern neighbor and subject The military aspect of the empire was its most prominent feature, for Assyria was embattled from beginning to end, and agriculture suffered from the constant need for men to fight the incessant battles The Assyrians ultimately had to import food The division of society into a fairly rigid three-class system was not unlike that of other early western Asiatic peoples, but it did not supply a solid base for the overgrown Assyrian state The lavish expenditures of Assur-bani-pal on warfare and decoration of his buildings helped to drain the resources It was not long after the death of Assur-bani-pal that Assyria fell The king of the Medes, Cyaxares, and the ruler of Damascus, Nabopolassar, joined forces to take Nineveh in 612 B.C. Under the son of Nabopolassar, NEBUCHADNEZZAR, Babylonia was renewed in power, and the great-grandson of Cyaxares, Cyrus the Great, was to establish the Persian Empire, which owed much to the earlier Assyrian state See A. T. E. Olmstead, *Western Asia in the Days of Sargon of Assyria* (1908), *History of Assyria* (1923), and *History of Ancient Persia* (1948), Sir Percy M. Sykes, *History of Persia* (3d ed., 1930)

Assyrian language, Semitic language of ancient times, in the Akkadian group. • See LANGUAGE (table)

Astacus (ăs'tukus), city of ancient Bithynia, N Asia Minor, founded by colonists from Megara at the eastern end of an arm of the Sea of Marmara Destroyed by Lysimachus, it was rebuilt on a new site by Nicomedes I and renamed NICOMEDIA for him The modern Izmit, Turkey, is near by.

Astaroth (ăs'turŏth), variant of ASHTAROTH.

Astarte (ăstär'tē), Semitic goddess of fertility, beauty, and love She was the most important goddess of the Phoenicians and corresponds to the Babylonian ISHTAR APHRODITE is also usually identified with her Because Astarte was a heavenly goddess and sometimes regarded as goddess of the moon, she was occasionally confused in later times with the Greek moon-goddesses ARTEMIS and Selene The Syrian goddess Atargatis is undoubtedly connected with her, but may have been a synthesis of Astarte and some other divinity In the Bible, which contains some of the earliest material on her, Astarte is mentioned with particular loathing The form of her name first used is Ashtaroth Later she appears as Ashtoreth—probably a taboo variant. Judges 2 13; 10 6; 1 Sam 12 10, 31 10; 1 Kings 11 5,33, 2 Kings 23 12

astatine (ăs'tătēn, -tĭn) [Gr., =unstable], chemical element (symbol=At, for physical constants, see ELEMENT, table), member of the halogen group of elements but showing some similarities in chemical activity to the metals Its discovery was announced in 1931 by Fred Allison and E. J. Murphy, and it was first known as alabamine It was produced in 1940 in the cyclotron at the Univ. of California by Emilio Segrè, D. R. Corson, and K. R. Mackenzie

Astell, Mary (ăs'tul), 1666–1731, English author and feminist Her *Serious Proposal to the Ladies* (2 parts, 1694–97) offered a scheme for a woman's college, an idea so far in advance of the time that it failed of accomplishment Her ideas were ridiculed in the *Tatler* Lady Mary Wortley Montagu and other intellectual women of the day were among Mary Astell's friends See study by Florence M. Smith (1916)

aster (ăs'-) [Gr., =star], in America name for two kinds of flowers, for those of the genus *Aster* sometimes called wild aster, and for a related plant more correctly called China aster Plants of the genus *Aster* are regarded in North America, where most species are native, as wild flowers but in Europe they are cultivated as garden flowers and often called Michaelmas daisy (they usually bloom at Michaelmas) Most species of *Aster* are perennial and fall blooming They have small daisylike or starlike composite heads of flowers on leafy, often tall, stems Their colors vary from white to pink, blue, and purple Among the more showy native species beginning to be cultivated in American gardens are the New England aster (*Aster novae-angliae*), purple (sometimes rose) flowered, and the New York aster (*Aster nova-belgii*), in shades of violet or blue The New England aster was used by Shakers as an application for skin disorders The China aster (*Callistephus chinensis*) is a popular fall-blooming garden annual It is an Asiatic plant that in cultivation has a very full head of ray flowers, varying from white and pink to deep purple

Asterabad, Iran: see GORGAN

Asteria (ăstēr'ēă), in Greek religion, daughter of the Titans Coeus and Phoebe and sister of Leto She was the mother of Hecate by Perses One legend says that she was pursued by Zeus and turned into a quail

asteroid or **planetoid,** small heavenly body or minor planet revolving around the sun The orbits of most asteroids lie at least partially between Mars and Jupiter More than 1,500 asteroids have been recognized and many more are believed to exist Toward the end of the 18th cent. astronomers were searching for a planet whose orbit should, according to Bode's law, lie between the orbits of Mars and Jupiter On Jan. 1, 1801, Piazzi discovered a small body, Ceres, traveling in the orbit which had been anticipated Ceres with its diameter of c. 480 mi. is the largest asteroid Pallas, which has a diameter of c. 304 mi., was discovered in 1802, Juno, c. 120 mi. in diameter, in 1804, and Vesta, with a diameter of c. 240 mi., in 1807 Astraea, found in 1845, was the next discovery From 1847 one or more asteroids were discovered each year After 1891 asteroids were identified by their paths on exposed photographic plates, a method inaugurated by the German, Max Wolf Many asteroids are about a mile or less in diameter and resemble meteorites rather than small planets Close approaches to the earth are made by some as they travel in their orbits Adonis, discovered in 1936, approaches within 1,500,000 mi. of the earth, and Hermes, discovered in 1937, came within 485,000 mi. of the earth One attempt to account for the presence of the asteroids is the theory that they are fragments of a planet which exploded Some scientists hold that this theory lacks supporting evidence Many believe that their origin like that of the planets, can be explained on the basis of the PLANETESIMAL HYPOTHESIS

asthma [Gr., =panting], condition characterized by "wheeze," breathing which may be continuous and paroxysmal A cough producing a sticky mucoid sputum is symptomatic Asthma is thought to have an allergic basis Heredity may be a factor The specific cause may be determined by skin tests Treatment consists of removing the cause when known and giving injections of adrenaline Relief is often obtained by inhaling the smoke of stramonium (Jimson weed) leaves In individuals hypersensitive to various dusts (e.g., house dust), to fur or feathers, or to certain foods (e.g., eggs, wheat, and milk), injections of the irritating substances are often helpful

Asti (ăs'tē), city (pop. 26,476), capital of Asti prov., Piedmont, NW Italy It is the center of a wine-producing region. Sparkling Asti is its best-known product There are several medieval towers and palaces and a fine Gothic cathedral

astigmatism, type of imperfect vision in which a defect in the refractive surfaces (the cornea and lens) of the eye results in a diffusion of the light rays on the retina (In the normal eye, the light rays are focused on the retina.) The condition may be congenital A similar optical effect may occur in old age or in the early stages of senile cataract Astigmatism is usually corrected by prescription of correcting lenses In some cases, improvement of vision is obtainable only by contact glasses

Astolat, in ARTHURIAN LEGEND see GUILDFORD

Aston, Francis William, 1877–1945, English chemist. He was affiliated with the Cavendish Laboratory, Cambridge, from 1910 In 1922 he received the Nobel Prize in Chemistry mainly for his discovery, by means of a mass spectrograph of his own invention, of a number of isotopes in non-radioactive elements His writings include *Isotopes* (1922) and *Mass-Spectra and Isotopes* (1942)

Aston, Hugh, c 1480–1522, English composer His *Hornpipe*, for virginals, is the earliest purely instrumental English music extant Its maturity of technique and style suggests the existence of an earlier English keyboard school of which, however, no compositions remain His name was also spelled Ashton, Austen, and Aystoun

Astor, John Jacob, 1763–1848, American merchant, b Waldorf, near Heidelberg, Germany At 16 he went to England, and in 1784 he arrived in Baltimore, penniless He went to New York, where in a few years he started business with a small shop for trade in musical instruments and furs Shrewdness, driving ambition, and stolid concentration brought him to a commanding position as the youthful economy of the United States expanded He was a prince of the China trade and was an astute investor in lands, principally in and around New York city, but he is perhaps best remembered as a fur trader He chartered the AMERICAN FUR COMPANY (1808) and founded subsidiary companies—the Pacific Fur Company (see ASTORIA, Oregon) and the South West Company (operating about the Great Lakes) His firm exercised a virtual monopoly of the trade in U.S. territories in the 1820s and still did when he retired from it in 1834 At his death the wealthiest man in the United States, he left a fortune that has continued to make the family name prominent Part of his money went to found the Astor Library (see NEW YORK PUBLIC LIBRARY) His Astor House was a forerunner of family hotel properties that much later included the Astor Hotel and the Waldorf-Astoria See biography by K. W. Porter (1941)

Astor, John Jacob, 1822–90, American capitalist, b New York city, educated at Columbia and Gottingen universities and at Harvard Law School, son of W. B. Astor (1792–1875) The third of the name in the United States he served in the Peninsular campaign and later took a minor part in New York civic and political affairs His son was William Waldorf Astor

Astor, John Jacob, 1864–1912, American capitalist, b Rhinebeck, N.Y., son of William B. Astor (1829–92) Fourth of the name in the United States, he served in the Spanish-American War and was drowned in the *Titanic* disaster He left two sons, Vincent, the son of his first marriage (to Ava Lowe Willing), and John Jacob Astor fifth of the name in America, the son of his second marriage (to Madeleine Talmage Force)

Astor, Nancy Witcher (Langhorne) Astor, Viscountess, 1879–, British political leader, b Virginia She was married first to Robert Gould Shaw and after her divorce (1903) from him she went to England There she was married (1906) to Waldorf Astor When he succeeded his father as viscount and reluctantly had to give up his seat for Plymouth in Parliament, she ran instead and was in 1919 the first woman to sit in Parliament (though Countess Markiewicz was elected earlier) In her years of service as a Conservative member to 1945 her sharp tongue in debate her passionate espousal of reforms in woman and child welfare and of temperance, and her gay lack of reverence for any and all won her respect and attention She and her husband in the 1920s were leaders in the "gradual" reform program of "Tory democracy," but in the late 1930s they turned more to pleas for settlement with the fascist powers, and their enemies said that the policy of appeasement which led to the Munich Pact was hatched by the "Cliveden set" of reactionaries —so called after the Astor country home "Cliveden" (given to the government in 1942), where all the great and near-great of whatever political stripe were invited for week ends

Astor, William Backhouse, 1792–1875, American capitalist, b New York city, son of John Jacob Astor (1763–1848) Educated in Germany, he was associated with his father in business after 1818 Later called the landlord of New York, he also inherited money from his uncle Henry Astor and left an immense fortune

Astor, William Backhouse, 1829–92 American capitalist and sportsman, b New York city He was a retiring man, notable principally for his wealth and for his marriage to Caroline Schermerhorn She became famous, with the assistance of Ward McAllister, as Mrs William Astor, the Mrs Astor of modern folklore, glittering queen of New York society's ostentatious Four Hundred Their son was John Jacob Astor (1864–1912)

Astor, William Waldorf Astor, 1st Viscount, 1848–1919, American-British capitalist, b New York city, educated in Germany and Italy and at the

Columbia School of Law; son of John Jacob Astor (1822–90) When his minor political career as state assemblyman and senator was halted by his failure to win an election to the U S Congress, he was consoled by service as minister to Italy (1881–85) In 1890 he moved to England, where he bought a newspaper and magazines and founded—mainly to forward the literary ambition shown in two mediocre novels—*Pall Mall Magazine* His estates, Cliveden and Hever Castle, were magnificent, his entertainments extravagant, his contributions to public causes—especially in the First World War—overpowering He was made a baron in 1916 and a viscount in 1917 His elder son, Waldorf Astor, who succeeded him as viscount, was a leader of "Tory democracy" His wife is Nancy, Lady Astor The younger son, John Jacob Astor, was aide-de-camp to the viceroy of India and a distinguished officer in the First World War He bought a major share of the London *Times* His wife is Lady Violet Astor

Astorga (ästôr'gä), city (pop 14,352), Leon prov, NW Spain, in the Cantabrian Mts In the 8th and 9th cent it was one of the chief cities of Asturias The cathedral, rebuilt in the 15th cent, has additions in various styles

Astoria (ästôr'ēu) **1** Town (pop 1,292), W central Ill, SW of Peoria, inc 1839 It is a trade center in a farm area **2** Commercial, industrial, and residential section of NW Queens borough of New York city; SE N Y, settled in the 17th cent as Hallet's Cove It was renamed for John Jacob Astor and incorporated in 1839 Several 18th-century houses remain Astoria Park is here **3** City (pop 10,389), co seat of Clatsop co, NW Oregon, on the south bank of the Columbia not far from its mouth, inc 1865 Capt Robert Gray sailed past the site in 1792, Lewis and Clark had an encampment (Fort Clatsop) near by in 1805, and in 1811 an American fur-trading post was established here A double expedition came by sea and by land under the orders of John Jacob ASTOR Though in the troubles of the War of 1812 the little post was sold (1813) to the North West Company, its brief and vigorous history not only had helped to establish the American claim to the Oregon country but had contributed much to exploration of the continent (see especially HUNT, WILSON PRICE, and STUART, ROBERT) The North West Company renamed the post Fort George, and though Astoria was formally restored by the British to the United States in 1818, the trade remained in British hands Astoria had disappeared before it was refounded (1843) by overlanders who came over the Oregon Trail, of which Astoria was briefly the terminus. It grew as a port for seagoing and river vessels and later attracted Scandinavian settlers It is a port of entry and has a fishing fleet, salmon canneries, flour mills, and sawmills. A fire in 1922 destroyed much of the old city See Washington Irving, *Astoria* (1836), K W Porter, *John Jacob Astor* (1931)

Astrabad, Iran see GORGAN

Astraea (ästrē'ù), in classical myth, goddess of justice who withdrew from the earth at the end of the Golden Age (see AGE) She was daughter of Zeus and Themis and has taken her place in heaven as the constellation Virgo

Astraeus (ästrē'us), in Greek religion, son of the Titans CREUS and Eurybia and father by Eos of the stars and the winds

Astrakhan (ä'strukän", Rus a'strūkhŭ"nyù), city (pop. 253,655), capital of Astrakhan oblast, SE European RSFSR. A Caspian port on the Volga delta, it is a major fishing and caviar-processing center, a railroad junction, and a transshipment point for the oil transported from Baku to the Volga Astrakhan has several technical schools Once the capital of the khanate of Astrakhan (see TATARS), the city was conquered by Ivan the Terrible in 1557 and settled by Cossacks The oldest section, the Kreml (see KREMLIN), has preserved its cathedral, monastery, and palace Astrakhan has retained much of its Oriental character

astrakhan (äs'trukän) [from Astrakhan], pelt of the newborn Persian lamb, used like fur in garments, and also the woolen fabric woven to resemble real astrakhan. This cloth is woven on a cotton base entirely covered by a pile of closely curled mohair Before weaving, the mohair is wound on spindles and steamed to produce a tight, permanent curl

astringent (ästrin'jŭt), any substance—such as alum, catechu, and gallic and tannic acids—which causes the constriction of organic tissue Other astringents are many metallic salts, as the sulphates of copper, iron, and zinc, the nitrate of silver, and the acetate of lead, the mineral acids, and various organic compounds, called vegetable astringents In medicine, astringents are used to stop hemorrhage and diarrhea and to inhibit secretions of mucous surfaces and of various glands They are applied both externally and internally

astrolabe (äs'trulāb), instrument probably used originally for measuring the altitudes of heavenly bodies and for determining their positions and movements Although its origin is ancient and obscure, its invention is frequently ascribed either to Hipparchus or to Apollonius of Perga For many centuries it was used by both astronomers and navigators A simple astrolabe consisted of a disk of wood or metal with the circumference marked off in degrees It was suspended by an attached ring Pivoted at the center of the disk was a movable pointer called by Arabian astronomers the alidade By sighting with the alidade and taking readings of its position on the graduated circle, angular distances could be determined Mariners, if sufficiently skilled in navigation, could use the astrolabe to determine latitude, longitude, and time of day and as an aid in making other calculations It was much used on voyages of discovery in the 15th cent and was important until the invention of the sextant in the 18th cent The more elaborate astrolabes bore a star map (the planisphere, a circular map, was added by Hipparchus), a zodiacal circle, and various other useful or decorative devices

astrology [Gr, =science of the stars], method of DIVINATION based on the theory that the stars influence human affairs and determine the course of events Astrological lore is very old, and the extensive knowledge that the ancient Egyptians, Babylonians, Assyrians, and Chaldaeans had concerning astronomy was gained because of the belief in the divine influence of heavenly bodies Astrology was popular in Greece in the 4th cent B.C and later was much studied by the Romans even after it had been officially prohibited In the Middle Ages it was associated with alchemy and other occult sciences and prepared the way for the development of the modern science of astronomy After the work of Copernicus, astronomy and astrology diverged, but astrology by no means withered away Many prominent figures from Wallenstein to Hitler have depended upon astrologers to guide their actions, and astrology gained wider currency as printing grew more common New schools of thought such as the hermetic philosophers of the 17th cent and the many groups of occultists in the 19th cent added new items to astrological teaching Astrology today has perhaps numerically more adherents than ever before, though it is generally discredited in academic circles Foretelling one's future is done by means of charts of the zodiac One's horoscope or *nativity* is a map of the heavens at the time of one's birth, showing the position of the heavenly bodies in relation to the 12 "houses" or signs through which they pass and their positions in relation to each other Each house has as its "lord" one of the heavenly bodies, and the one in the "ascendant" is the one of greatest significance to the inquirer, endowing him with his temperamental qualities, his tendencies to particular diseases, and his liability to certain fortunes or calamities Popular handbooks of astrology are legion The well-known astrologer Evangeline Adams, for instance, wrote *Astrology: Your Place in the Sun* (1928), *Astrology Your Place among the Stars* (1930), and *Astrology for Everyone* (1931) The many studies in the history of astrology include Franz Cumont, *Astrology and Religion among the Greeks and Romans* (1912), T O Wedel, *The Mediaeval Attitude toward Astrology* (1920), and Ellen McCaffery, *Astrology: Its History and Influence in the Western World* (1942)

astronomy, scientific study of the heavenly bodies Early astronomy consisted chiefly of observations of the positions and movements of the heavenly bodies and arose mainly from the need for designating time intervals The earliest known writings found in Babylonia, China, and India reveal some knowledge of astronomy It is believed that predictions of eclipses were probably made c 2000 B C The pseudo science of ASTROLOGY was early associated with astronomy Early Egyptian astronomy was of a practical nature, mapping of the heavens, identification of stars, and the development of instruments for determining the positions of stars had been accomplished centuries before the rise of the Old Kingdom Greek astronomers made the first important theoretical contributions to the science They had observed evidences of the roundness of the earth several centuries B C. Contributions were made by THALES, PYTHAGORAS, ERATOSTHENES, and many others ARISTARCHUS OF SAMOS held to a heliocentric view of the cosmos The astronomy of HIPPARCHUS and other Alexandrian Greeks was preserved in the *Almagest* of Claudius PTOLEMY, and the geocentric viewpoint set forth in it was displaced only after the enunciation of the heliocentric viewpoint in the 16th cent through the writings of COPERNICUS Observations of GALILEO with a telescope of his own making gave support to the Copernican theory, which revolutionized astronomy Johannes KEPLER was influenced by the work of Copernicus Tycho BRAHE made notable astronomical observations Studies of the laws of falling bodies by NEWTON and Galileo made it possible to explain the force which maintains the planets and their satellites in their orbits Among the chief theories of the origin of the solar system are the now generally discarded NEBULAR HYPOTHESIS and the PLANETESIMAL HYPOTHESIS, which is the most generally accepted theory in the 20th cent, although its inadequacies are many. A more recent theory is based on the origin of our solar system from a double star and postulates the existence of many other solar systems During the past few centuries astronomical knowledge has been advanced by many scientists among whom are Edmund Halley, Sir William and Sir J. F. W. Herschel, Joseph von Fraunhofer, C. G. Abbott, Albert Einstein, G. E. Hale, Sir J H. Jeans, Sir S. A Eddington, Harlow Shapley, and Otto Struve. Much of the recent history of astronomy is concerned with astrophysics, the science in which physics is applied to astronomy It includes studies of the composition of the heavenly bodies (for which the spectroscope is an essential instrument), studies of radiation, and studies of the light of heavenly bodies. See also ASTEROID; COMET, METEOR, MOON, PLANET, STAR, SUN. See G. C Fisher, *Exploring the Heavens* (1937), A L. Draper and Marian Lockwood, *The Story of Astronomy* (1939), George Gamow, *The Birth and Death of the Sun* (1940) and *Biography of the Earth* (1941), Sir J H Jeans, *The Universe around Us* (4th ed, 1944), C G Abbott, *The Earth and the Stars* (rev ed, 1946), W. T Skilling and R S Richardson, *Astronomy* (rev ed, 1947), W L. Kennon, *Astronomy* (1948)

Astrophel (äs'trūfĕl), name given Philip Sidney by Spenser in his elegy on him, from Sidney's own sonnet series, *Astrophel and Stella.*

astrophysics. see ASTRONOMY

Asturias (ästōō'rēus, Span ästōō'ryas), region (4,207 sq mi; pop 836,642) and former kingdom, NW Spain, S of the Bay of Biscay and E of Galicia, identical with Oviedo prov It is crossed by the CANTABRIAN MOUNTAINS The coal mines, exploited since Roman times, are the richest in Spain Iron and zinc are also mined Though high production costs and poor transportation have hindered industrialization, the steel mills and other metallurgical industries of Oviedo have been important since the late 19th cent. On the broad mountain pastures cattle are raised, and along the coast, where Gijón is the chief port, fishing is the main occupation, but the larger part of the population is engaged in mining The name Asturias is derived from an Iberian people that lived here before the Roman conquest (2d cent B C) and was absorbed later by the Visigoths When the Moors overran the peninsula, the core of Christian Spain persisted in the Asturian mountains, where Christian nobles fled, created the first Christian kingdom of Spain (see PELAYO), and defended themselves at the battle of COVADONGA From Asturias came the Christian reconquest of Spain, as the successors of King ALFONSO I extended their control over Asturias, Galicia, Leon, and parts of Castile, of Navarre, and of Vizcaya In the 10th cent the capital was moved from Oviedo to Leon and the kingdom of Asturias became the kingdom of Asturias and Leon, which three centuries later was united with the kingdom of Castile In 1388 John I of Leon and Castile made his son Henry prince of the Asturias —the title borne ever afterward by the heir to the throne The Asturians are noted for their stubborn courage and independence—traits shown in the warfare against Napoleon, in various uprisings, and on the Loyalist side in the Spanish civil war of 1936–39

Astyages (ästī'ujēs), 6th cent B C, king of the Medes (584–c.550 B C), son and successor of Cyaxares His rule was harsh and he was unpopular. His daughter married the elder Cambyses, and her son was CYRUS THE GREAT, who rebelled against his grandfather and overthrew (c 550 B C) him, thus creating the Persian Empire

Astyanax (ästī'unăks), in Greek legend, son of Hector and Andromache When the Greeks captured Troy, they killed him

Asunción (äsōōnsyōn'), city (pop. over 100,000), capital of Paraguay, on the Paraguay river and more than 600 mi N of Buenos Aires Approximately 75 percent of the exports and 90 percent of the imports of Paraguay clear through the port of Asunción. The city is also a center of industries, with flour mills, tanneries, distilleries, and shoe, furniture, and match factories From the east bank of the river, the city spreads out on gentle hills in a pattern of rectangular blocks Asunción, one of the oldest cities of South America, has a decidedly colonial aspect, enhanced by red-tiled roofs, colorful patios, and flowering trees. The outstanding structures are the government buildings, the postal and telegraph building, the municipal theater, the Godoi Museum, the Church of La Encarnación, and the modern, air-conditioned Bank of Paraguay The Panteón Nacional has the remains of Francisco Solano López and the tomb of the unknown soldier Several colleges, two normal schools, and the National UNIV are here The site of the city may have been visited by Ayolas, but the town, called Nuestra Señora de la Asunción [Our Lady of the Assumption], was founded in Aug, 1536, or Aug, 1537, by Juan de Salasar and Gonsalo de Mendoza A trading post on the route to Peru, it flourished under the governorship of Domingo Martínez de Irala and became the most important town in the Río de la Plata region The development of Buenos Aires ended the eminence of Asunción, but it has grown steadily in recent years.

Asuppim (ŭsŭp'ĭm) [Heb.,=gatherings]. AV in 1 Chron. 26.15 reads "the house of Asuppim"; RV reads more correctly "the storehouse."

Asura: see HINDUISM.

Asvins: see HINDUISM.

Aswan or **Assuan** (both: ăswän', ăswän'), city (pop. 25,397), Upper Egypt, at the First Cataract of the Nile. The granite quarries in the vicinity supplied material for the statues and buildings of the Pharaohs. In the Bible, Aswan is called Syene and is described as the south limit of Egypt. The foundation of the **Aswan Dam** of the Nile, near the city, was completed in 1902. It was designed and built by Sir William Willcocks. It is over a mile in length, is 176½ ft high, and is crossed by a roadway 26 ft. wide. The dam affects the water level of the Nile as far upstream as Abu Simbel, 174 mi distant. A system of locks permits navigation. The Aswan Dam and the barrages of Asyut are the chief means for regulating the level of the Nile for irrigation purposes.

asylum (ăsī'lŭm), extension of hospitality and protection to a fugitive and the place where such protection is offered. The use of temples and churches for this purpose in ancient and medieval times was known as sanctuary. In modern international law, the granting of asylum to refugees from other lands is the right of a state by virtue of its territorial sovereignty. A fugitive, however, has no right to demand asylum from the state to which he flees; that state makes its own determination in each case. Between most nations there are treaties of EXTRADITION providing for the mutual surrender of fugitives from justice, and there is a tendency to confine the granting of asylum to political refugees and victims of apparent discrimination and intolerance. A situation causing many international disputes is the use of embassies and legations, by virtue of their status of EXTERRITORIALITY, as places of refuge in times of disorder and conflict. The United States has never practiced this type of asylum except where lives were threatened by mob violence.

Asyncritus (ăsĭn'krĭtŭs) [Gr.,=incomparable], Roman Christian. Rom. 16.14.

Asyut (ăsōōt'), city (pop. 90,378), central Egypt, on the Nile. It is famed for its pottery. Near by is the Asyut barrage, which, together with the ASWAN DAM, is of great importance in regulating the flow of the Nile. Asyut was the ancient Greek city of Lycopolis and later a station of caravan trade.

At, chemical symbol of the element ASTATINE.

Atacama, Desert of (ätkä'mä), arid region, c 600 mi. long, N Chile, extending south from the border of Peru. The desert itself, c 2,000 ft above sea level, is a series of dry salt basins flanked on the west by the Pacific coastal range, averaging c 2,500 ft high, and on the east by the Andes. There is practically no vegetation, in many places rain has never been recorded. Of the streams descending from the Andes only the LOA reaches the Pacific. ANTOFAGASTA and other regional ports are without protected anchorages and are subject to frequent and severe earthquakes. Yet the Atacama has been a source of fabulous nitrate and copper wealth. The first European to cross the forbidding waste was Diego de ALMAGRO in 1537. From then until the middle of the 19th cent. it was largely ignored, but with the discovery of the use of sodium nitrate as a fertilizer and later the invention of smokeless powder using nitroglycerin, the desert had a mining boom. While the southern half of Atacama belonged to Bolivia, the companies exploiting the deposits were Chilean. Differences arose, and in the ensuing war (see PACIFIC, WAR OF THE) Chile won the entire area. When synthetic nitrates were developed after the First World War, the boom collapsed. See Isaiah Bowman, *Desert Trails of Atacama* (1924).

Atad (ā'tăd) [Heb.,=thorn], name of the unidentified threshing floor where Joseph and his brethren mourned the death of Jacob. Gen. 50.10,11.

Atahualpa (ätäwäl'pä), d. 1533, last Inca of Peru; favorite son of Huayna Capac. At his father's death (1525), he received the kingdom of Quito while his brother Huascar inherited the rest of the Inca empire. Shortly before the arrival (1532) of Francisco PIZARRO, Atahualpa rebelled against Huascar, imprisoned him, and made himself Inca. On Nov. 16, 1532, Pizarro met Atahualpa at Cajamarca. Invited into the city, Atahualpa was seized and imprisoned. Atahualpa offered as ransom a room full of gold and at the same time secretly ordered the death of Huascar. He was tried for his brother's murder and for plotting against the Spanish and was executed.

Atalanta (ătŭlăn'tŭ), in Greek legend, huntress who joined the CALYDONIAN HUNT and the voyage of the ARGONAUT heroes. She ran a race with each of her suitors, on condition that he who won should marry her and he who failed should die. Hippomenes (hĭpŏ'mĭnēz) won the race by dropping three golden apples which Atalanta turned aside to catch. Because Hippomenes and Atalanta forgot to honor Cybele, they were turned into lions and yoked to her chariot. Another account makes Milanion the successful suitor.

Atami (ä'tämē), city (1947 pop. 34,754), Shizuoka prefecture, central Honshu, Japan. It is a noted hot-springs resort.

Atarah (ăt'ərŭ) [Heb.,=crown], one of Jerahmeel's wives. 1 Chron. 2.26.

Atargatis: see ASTARTE.

Ataroth (ā't'rŏth) [Heb.,=crowns]. **1** Town of Gilead. Num. 32.3,34. **2** Unidentified place, E central Palestine. Joshua 16.7. **3** See ATAROTH-ADAR. **4** Place or family of Judah. 1 Chron. 2.54.

Ataroth-adar (-ă'dĭr), unidentified town, N of Jerusalem. Joshua 18.13. Ataroth. Joshua 16.2.

Ataroth-addar (-ăd'dĭr), the same as ATAROTH-ADAR.

Ataturk, Kemal (kĕmäl' ätätürk'), 1880–1938, Turkish leader, founder of modern Turkey. The name was taken in 1934 in place of his earlier name, Mustafa Kemal, it is made up of the Turkish words Kemal [the Perfect] and Ataturk [father of the Turks]. Born at Salonica, he ran away from school to enter a military academy, where his excellence at mathematics won him the surname Kemal. In 1908 he took part in the Young Turk revolution as chief of staff of ENVER PASHA, whom he later opposed. He served in Libya (1911-12), in the Second Balkan War (1913), and in the First World War. His efficient work in the Dardanelles, on the Armenian front, and in Palestine, though it merely helped to postpone disaster, won him the title pasha. In May, 1919, while on mission to E Anatolia, Kemal organized the Turkish Nationalist party and began to form an army. When the Turkish nation was aroused by the Greek landing at SMYRNA, he convoked nationalist congresses at Erzerum (July, 1919) and at Sivas (Sept.). Outlawed by Sultan MOHAMMED VI, who was in the hands of the Allies in Constantinople, he set up a rival government at Ankara. The signing of the Treaty of SÈVRES by the Constantinople government made the split with Ankara final. With the tacit consent of Soviet Russia, Kemal retook the Kars and Ardahan from Armenia (1920). Then, taking advantage of disagreements among the Allies, he expelled the Greeks from Anatolia in a brilliant campaign (1921–22). For his victory he received the official name Ghazi [victorious]. On Nov. 1, 1922, Kemal proclaimed the abolition of the sultanate and exiled the sultan's family. The Treaty of Lausanne (1923; see LAUSANNE, CONFERENCE OF) was a triumph for the nationalist cause. Kemal was elected president (1923) of the newly founded Turkish republic and reelected in 1927, 1931, and 1935—all four times by a unanimous parliament. With astounding energy he set out on a program of internal reform and "westernization," 15 years of his rule changed Turkey profoundly in the most essential as well as the minutest aspects of its life (see TURKEY). Like other dictators Kemal tolerated no opposition, and his methods were ruthless. With regard to Islam, he abolished (1924) the CALIPHATE, and broke all religious opposition to reform. Abroad, he pursued a policy of conciliation and neutrality. He established friendly relations with all neighbors, particularly Russia, helped to bring about the BALKAN ENTENTE, and freed Turkey from foreign influence, even though he had to refuse capital for industrialization of the country. Despite his energy, he was avowedly a heavy drinker, and the cause of his death was cirrhosis of the liver. Ismet Inonu succeeded him as president. See biographies by Dagobert von Mikusch (Eng. tr., 1931), H. E. Wortham (1931), and Hanns Froembgen (Eng. tr., 1937), D. E. Webster, *Turkey of Ataturk* (1939).

Ataulf (ă'tŏŭlf), d. 415, Visigothic king (410–15). Succeeding his brother-in-law, ALARIC I, he abandoned Alaric's plan of southward expansion, led the Visigoths out of Italy into S Gaul (France) in 412, and sought the alliance of the Western emperor, HONORIUS, whose sister, GALLA PLACIDIA, he married in 414. However, the general Constantius (later Emperor CONSTANTIUS III), jealous of Ataulf, turned Honorius against him. Constantius blockaded the Gallic ports, and Ataulf, cut off from supplies, led his people into N Spain (see VISIGOTHS). He was assassinated at Barcelona.

atavism (ă'tŭvĭzŭm), reversion to an ancestral type. It is evidenced by the sudden appearance in an individual of a characteristic not seen in the immediately preceding generation. Sometimes the characteristic is a family one which reappears after several generations. Other atavistic tendencies are seen in the appearance in a race of humans or in animals of a characteristic either unusual or abnormal for that race or group but normal to a supposedly ancestral race. Atavism is commonly explained, on the basis of the Mendelian laws of heredity, as the result of the recombination of the factors which determined the characteristics of the earlier individual.

ataxia (ŭtăk'sēŭ), lack of muscular coordination, resulting in irregular movements of the body. The condition has a number of causes. A transient state of ataxia (unsteadiness and staggering) is commonly observed in the intoxicated individual; the condition is permanent when the central nervous system is affected, e.g., in LOCOMOTOR ATAXIA.

Atbara (ătbä'rŭ, ăt-, ät'bŭrä), town, NE Anglo-Egyptian Sudan, at the junction of the Atbara river with the Nile. It is a railroad junction. Near by, in 1898, Kitchener defeated the Mahdists in a pitched battle.

Atbara, river, c.700 mi. long, E Africa, rising in NW Ethiopia and flowing to the Nile in Anglo-Egyptian Sudan.

Atchafalaya (ŭchä'fŭlī'ŭ), river, c 170 mi. long, branching in E Louisiana from the Red River a few miles above the Red's junction with the Mississippi. The Atchafalaya, navigable, flows generally south with a slow, winding course through several lakes (including Grand Lake) to Atchafalaya Bay, an inlet of the Gulf of Mexico in S Louisiana.

Atchison, David Rice, 1807–86, U.S. Senator, b. Frogtown, Ky., grad. Transylvania Univ. A lawyer and politician in Missouri, he was chosen to fill an unexpired term in the Senate in 1843 and was returned in 1849. He was chairman of the committee on Indian affairs and was elected president pro tempore many times. As a proslavery Democrat, Atchison was instrumental in having the KANSAS-NEBRASKA BILL passed. After his defeat for reelection in 1855, he was a leader of the border ruffians in the raids into KANSAS (1855–56). He supported the Confederacy in the Civil War. Atchison, Kansas, is named for him.

Atchison, city (pop. 12,648), co. seat of Atchison co., NE Kansas, on the Missouri, settled 1854, inc. 1855. A military post was established (1818–19) on near-by Cow Island, in the Missouri. The city boomed as an important wagon-train, river, and railroad terminal, one of the outfitting points for travel west. It is now a wholesale and jobbing center, with flour mills and other industries. Mt. St. Scholastica College (Catholic, for women, 1863) and St. Benedict's College (Catholic, for men; 1859) are here. A new bridge spanning the river was opened in 1938.

Ate (ā'tē) [Gr.,=folly], in Greek religion, personification of the rash temper which leads men to folly and misfortune. She was a daughter of ZEUS, who cast her from OLYMPUS. In the tragic writers she was also an avenger of evil deeds, hence she often was confused with NEMESIS and the ERINYES.

Ater (ā'tər). **1** Ancestor of a family that returned with Zerubbabel. Ezra 2.16, Neh. 7.21, 10.17. **2** Ancestor of a family of porters. Ezra 2.42, Neh. 7.45.

Athabaska (ăthŭbă'skŭ), river of Canada, 765 mi. long, most southerly of the Mackenzie headstreams. Rising in W Alberta in the Columbia snow field of the Canadian Rockies, not far from the headwaters of the North Saskatchewan, it flows N through Jasper National Park and then roughly NE and N to Lake Athabaska. Its chief tributaries are the Pembina, Lesser Slave, La Biche, and Clearwater. The river has always been the chief route to the Mackenzie valley, and for many years the Hudson's Bay Company took its goods overland from Edmonton to Athabaska Landing, whence they were sent down the river on scows to the Grand Rapids and there taken by tramway to the steamers below.

Athabaska, Lake, c 200 mi. long and 5 to 35 mi. wide, NE Alta. and NW Sask. It was surveyed and mapped (1790–92) by Philip TURNOR. It is on the margin of the LAURENTIAN PLATEAU. The lake receives the Athabaska river at its southwest end and is drained from its northwest part by the Great Slave river to Great Slave Lake and then by the Mackenzie to the Arctic Ocean. Fort Chipewyan was built at the west end of the lake by Roderick McKenzie of the North West Company in 1788 and has been maintained. Steamers of the Hudson's Bay Company ply the lake in summer between Chipewyan and Fond du Lac, where the canoe route begins via Wollaston Lake and Reindeer Lake to the Churchill river.

Athabaska, Mount, 11,452 ft. high, W Alberta, in the Canadian Rockies at the headwaters of the Athabaska river. It is on the edge of the Columbia snow field, and the Saskatchewan and Athabaska glaciers flow around it. The mountain was climbed by J. N. Collie in 1898.

Athabaska Pass, 5,736 ft. high, W Alta. and E British Columbia, leading from the headwaters of the Athabaska river across the Continental Divide to the Columbia river. It was discovered by David THOMPSON or one of his agents c 1811, and for the next 50 years it was the chief route of the Hudson's Bay men on their journeys to and from the Columbia river country. See L. J. Burpee, *On the Old Athabaska Trail* (1926).

Athach (ā'thăk) [Heb.,=lodging place], place, S Palestine, visited by David. 1 Sam. 30.30.

Athaiah (ăthā'yŭ), Judahite. Neh. 11.4. Uthai. 1 Chron. 9.4.

Athaliah (ăth"ulī'ŭ) [Heb.,=whom God afflicts]. **1** Died c 841 B.C., queen of Judah (c 846–c 841 B.C.), daughter of AHAB of Israel, wife of JEHORAM of Judah, and mother of AHAZIAH **2** of Judah, whom she succeeded. She had the males of the royal family murdered, but she was thwarted by her stepdaughter Jehosheba, who hid away a baby son of Ahaziah. Some years after, Jehosheba and her husband effected a coup d'état in favor of this baby, JEHOASH **2**. Athaliah they killed. These events are the subject of Racine's *Athalie*. 2 Kings 11; 2

Chron. 22-23. ‡ Benjamite 1 Chron 3 26 ‡ Father of one who returned with Ezra Ezra 8 7.

Athamas (ăth'ŭmăs), in Greek legend, king of Boeotia His first wife was Nephele (nĕf'ĭlē), mother of PHRIXUS and Helle He deserted her and married INO, mother of Learchus and Melicertes, Ino plotted to kill Nephele's children HERA punished Athamas by causing him to go mad and kill Learchus

Athanagild (uthă'nŭgĭld), d 567, Visigothic king of Spain (554–67) Having deposed his predecessor, Agila, with the aid of an army sent by Emperor Justinian I, he ceded a large portion of S Spain to the Byzantines and was unable to prevent them from extending their limits beyond the agreed line Although throughout his rule he had to fight the Byzantines the Franks, and the Basques, Athanagild strengthened his kingdom internally by conciliating the Catholics, whom his Arian predecessors had oppressed His court at Toledo was famed for its splendor Athanagild was the father of the Frankish queens Brunhilda and Galswintha He was succeeded by his brothers Liuva and Leovigild

Athanaric (ăth'ănărĭk), d 381, Visigothic chieftain He led the VISIGOTHS against Emperor VALENS and negotiated a favorable peace in 369 A pagan, he persecuted the Christians, possibly on that account he was involved in war with FRITIGERN Defeated by the Huns in 376, he fled to Transylvania and later (381) to Constantinople There Theodosius received him with royal honors, but he died two weeks later

Athanasian Creed (ăthŭnā'zhun), exact, elaborate Catholic statement on the Trinity and the Incarnation It is no longer believed to be by Athanasius, but rather by an unknown Western author of the 6th cent An English translation appears in the British Book of Common Prayer It is sometimes called *Quicunque Vult* [whoever wishes (to be saved)]

Athanasius, Saint (ăthunā'zhŭs), 295–373, Doctor of the Church, patriarch of Alexandria (328–73), called the father of orthodoxy Ordained a deacon, he was, in his youth, secretary and adviser to the bishop of Alexandria and attended the Council of Nicaea (see NICAEA, FIRST COUNCIL OF) with him There he distinguished himself for his eloquent opposition to ARIANISM As patriarch of Alexandria, he refused to yield to the demands of EUSEBIUS OF NICOMEDIA and of the emperor to reinstate Arius, who had been recalled from exile Tried at a council at Tyre (335) and deposed for sacrilege, Athanasius appealed to the emperor, his accusers then charged him instead with threatening to stop the Egyptian grain exports Constantine I unaccountably halted the trial and banished Athanasius to Trier This was the first of five exiles He was brought east and reinstated (337) and displaced again (339) He fled to Pope JULIUS I The West vigorously upheld him and the council at Sardica (343) vindicated him Emperor Constantius was Arian, and only in fear of the Catholic Constans did he allow Athanasius' return (346) For ten years—the most brilliant of his episcopate—Athanasius reigned in peace He strengthened his diocese and wrote some of his greatest works, including the *Defense against the Arians* (c 348), our best source for Christianity in the period 300–350 In his next exile (356–62) he composed a continuation of the *Defense* called *History of the Arians* (357–8) and his greatest doctrinal work, *Discourses against the Arians*, an exposition of the Nicene Christology to disprove Arianism and the views of MARCELLUS OF ANCYRA Athanasius was again in his see under Julian (362), who excepted him from the general amnesty Jovian brought him to Alexandria (363), and Valens drove him out (365), but he was finally restored to his see in 366 Athanasius defended Catholicism for the rest of his life and was ably assisted toward the end by ST BASIL THE GREAT Selected works, including those against the Arians and *De Incarnatione*, (c 318) a brilliant pamphlet of his youth, are translated in collections of patristic literature Feast May 2

Athapascan or **Athapaskan** (both, ăthŭpăs'kŭn), linguistic stock of North America It is one of the most widely distributed of families of languages, and the tribes speaking them are culturally very diverse They vary from the nomadic hunters of the Yukon and Mackenzie river basins to the NAVAHO INDIANS and APACHE INDIANS The languages fall into three geographical groups, Northern, Pacific Coast, and Apachean (see LANGUAGE, table) According to a suggestion never proved, Athapascan belongs to a greater linguistic family (called Na-Dene) This would unite with it first Tlingit, then Haida.

Atharva Veda: see VEDA.

atheism, doctrine that there is no supernatural being. Historically the term has been loosely used by various groups to describe any doctrine differing from their particular orthodoxy Thus Socrates was accused of atheism, as were the early Christians Spinoza was so charged and so were deists such as Thomas Paine and Thomas Jefferson. There have been few active advocates of atheism except the orthodox Marxian Communists, who feel religion to be a positive danger to the state. One type of atheist, like the agnostic, denies the possibility of achieving any conception of a divine being but goes further and says that therefore none exists

Athelney, Isle of (ăth'ulnē), small tract formerly surrounded by marshland, Somerset, England, near the junction of the Tone and Parrett rivers NE of Taunton King ALFRED took refuge from the Danes here in 878 and here, in 888, he founded a Benedictine abbey Relics have been found, including the Alfred Jewel now in the Ashmolean Museum at Oxford

Athelstan or **Æthelstan** (both ăth'ulstŭn, -stăn″, adh'ŭl-), d 940, king of the English (924–40), son (possibly illegitimate) of EDWARD THE ELDER He is said to have been the favorite grandchild of ALFRED Apparently he spent much of his youth with ÆTHELFLÆD, Lady of the Mercians After coming to the throne, he vigorously built up the state on the foundations laid by Alfred He made himself overking of all England, conquering Northumbria and establishing his hegemony firmly by victory over a coalition of his enemies at BRUNANBURH in 937 He also led forces into Cornwall He was popular as well as able, was generous to the Church, and issued laws that attempted to impose royal authority on customary law The royal family established continental connections, Athelstan's sisters were married to Charles III (Charles the Simple), Hugh the Great, Otto I, and Louis, king of Arles The long residence of the prince who was to be LOUIS IV of France at the court of his uncle Athelstan caused him to be called Louis d'Outremer The prince who was to be later Haakon I or Haakon the Good of Norway also spent years at Athelstan's court.

Athena (uthē'nu) or **Pallas Athena** (păl'ŭs), Olympian goddess of wisdom, patron of the arts of peace and of war, ruler of storms, and a guardian of cities, especially of Athens She is usually shown wearing a helmet and an AEGIS with the head of MEDUSA Her greatest gift to man was the olive tree The owl, the serpent, and the cock were sacred to her The Parthenon was built as a temple to her, and the PANATHENAEA festivals were held in her honor A representation of her as guardian of a city was the Palladium She was a virgin goddess, who sprang from the forehead of Zeus after he had swallowed her mother, Metis She was sometimes called NIKE The Romans identified her with MINERVA There are many representations of her in art

Athenaeus (ăth″unē'ŭs), fl c 200, Greek writer, b Naucratis, Egypt His anthological work, the *Deipnosophistae* (*Banquet of the Learned*), though of little literary merit, is valuable because of the wealth of curious information it contains

Athena Parthenos, by the Greek sculptor PHIDIAS, the chief treasure of Athens In Athena's temple, the Parthenon, the gold and ivory statue was dedicated c 438 B C The helmeted goddess, represented standing, with a shield and a spear at her left, held on her right hand a figure of Nike.

Athenodorus see LAOCOON

Athens (ăth'ĭnz), Gr *Athenai* (athē'nē), city (pop 481,225), capital of Greece, on the plain of ATTICA, between the Cephissus river (west) and the Ilissos river (east) Greater Athens, including the port of PIRAEUS on the Saronic Gulf and several suburbs, has a population of 1,124,109 The Parnes, Pentelicon, and Hymettus mts rise in a semicircle N, NE, and SE of Athens More than half of the industrial production of Greece is concentrated in the Athens area The industries include manufactures of silk, wool, and cotton textiles, machine-tool plants, and public utilities Athens is also the see of an archbishop, who presides over the Holy Synod of the Greek Orthodox Church The cultural legacy of ancient Athens to the world is incalculable, and Athens remains a cultural center, the seat of a university (founded 1837), a polytechnic institute, an academy of sciences, several schools of archaeology, and many museums and libraries Its ancient monuments attract thousands of tourists and students yearly It is the past commemorated by those monuments that makes Athens a world-known name To a great extent the references to the Greek heritage and Hellenic culture that abound in the writings of Western Europe are to Athenian civilization Athens more than any other Greek city-state created the golden period of ancient Greece Until the 6th cent B C, however, there were few signs of what Athens would become. It was an old city and proudly claimed that its inhabitants were autochthonous—had been there even before the settlements of Attica had been molded into a single state (an accomplishment attributed in legend to Theseus) The days of rule by kings were barely remembered or recorded The succeeding control by the aristocrats through the archontate (see ARCHONS) continued till the reforms of SOLON were begun in 594 B C. He abolished serfdom, replaced the laws attributed to DRACO, altered the economy and constitution to give power to all the propertied classes, and thus established a very qualified democracy These reforms were retained when the government of Athens fell under the rule of the tyrant PISISTRATUS and his sons, HIPPIAS and HIPPARCHUS—a period of tyranny that lasted until 510 B.C. The system of Solon also made it possible for CLEISTHENES to establish a democracy for the freemen of Athens, and the city was a democracy in most of the years of its greatness. Commerce had already begun to enrich Athenians, and the literature and art that were to develop rapidly had already started their growth It was with the PERSIAN WARS (500–449 B C) that the city-state emerged Much smaller and less powerful than SPARTA, Athens was more active and more effective in the fighting against the Great King of Persia, and the Athenian heroes MILTIADES, THEMISTOCLES, and CIMON not only were able military and naval leaders but also built Athens' might The creation of a great navy was perhaps of more importance than the memories of the victories of MARATHON and SALAMIS The fleet made possible the Athenian hegemony in the DELIAN LEAGUE which was created in 478 B C through the confederation of many city-states The league in the succeeding years was gradually transformed into an empire, with Athens as the queen of the sea The constant warfare between little states that characterized the whole history of ancient Greece did not cease, but peace with Persia was arranged in 449 B C and peace with Athens' greatest rival, Sparta, was negotiated in 445 Already with the rise of PERICLES to chief power in the city, Athens had reached its apogee In the days when that cool aristocrat managed the government of the democracy, SOCRATES was speaking his words of wisdom in the streets, AESCHYLUS was ending his career as a tragedian, and SOPHOCLES and EURIPIDES were writing some of the noblest dramas ever conceived The incomparable Parthenon was erected Sculpture and painting flourished Probably never again in the history of the West (unless in Renaissance Florence) was so much creative genius gathered in one spot The political peace did not long endure The rivalry with Sparta did not die, and the PELOPONNESIAN WAR began in 431 B C It went badly at the start The Long Walls built to protect the city and its port, Piraeus, did save the city itself so long as the fleet was paramount, but the Athenian allies fell away and the land empire Pericles had tried to build had disappeared before he died in 429 Fortunes varied in the war, which dragged on under the policy of a new Athenian leader CLEON and continued even after the expedition urged by ALCIBIADES against Syracuse failed dismally It ended in 404 with Athens completely humbled, compelled under Sparta's dictates to tear down the Long Walls and accept the government of the Thirty Tyrants Recovery after such exhausting defeat was surprisingly rapid The next year the Thirty Tyrants were overthrown by Thrasybulus, and by 376 Athens had a fleet again, had re-created the Delian League, and had won a naval victory over Sparta Sparta lost power in the battle of Leuctra (371), and though Athens did not achieve hegemony in Greece again, the city did have a period of great prosperity and comfort The coming of the Macedonian conqueror, PHILIP II, to Greece spelled Athen's political doom The fulminations of DEMOSTHENES against Philip availed nothing, and the attempt of the city to escape his grasp failed ultimately The battle of Chaeronea in 338 reduced the city, and Athenians did not dare dispute the mastery of Philip's son, Alexander the Great An attempt (323–322 B C) to escape the Macedonian control after Alexander's death failed, and Athens began to sink to the position of a provincial city Its last bid for greatness in the years 266–263 was firmly suppressed by Antigonus II Through the troubled times of the Peloponnesian War and the wars against Philip, Athenian achievements in philosophy, drama, and art continued ARISTOPHANES held up the mirror of comedy to humankind, PLATO taught in the Academy, and ARISTOTLE compiled an incredible store of information This glory sank away in the 3d cent as Athens' contributions were spread over the world in Hellenistic culture Athens became a rather inconsiderable ally of growing Rome, and a period of stagnation was broken only when Athens unwisely chose to support Mithridates VI of Pontus against Rome The result was the sack of Athens in 86 B.C. by Sulla, who sneered at Athenian claims of past greatness. Yet Athens sent out many teachers to Rome and kept a certain faded glory in decadence as a moderately prosperous small city in the backwash of empire This it remained to the days when the Eastern Empire was falling to barbarian attack Athens was taken (395), but probably not sacked, by the Visigoths under Alaric I. It continued as a provincial capital under Byzantine rule and was a center of religious learning and devotion. As a result of the creation (1204) of the Latin Empire of Constantinople (see CONSTANTINOPLE, LATIN EMPIRE OF) Athens passed (1205) to Othon de la Roche, a French nobleman from Franche-Comté, who was made *megaskyr* [great lord] of Athens and Thebes His nephew, Guy I, took the ducal title Under him and his successors the duchy of Athens enjoyed great prosperity but became thoroughly French in its institutions. In 1311 the duchy fell

to a band of Catalan soldier-adventurers who offered (1312) the ducal title to King Frederick II of Sicily, of the house of Aragon. Members of the house of Aragon carried the title, but Athens was actually governed by the "Catalan Grand Company," which also acquired (1318) the neighboring duchy of Neopatras. The French feudal culture disappeared, and Athens sank into insignificance and poverty, particularly after 1377 when the succession was contested in civil war. Peter IV of Aragon assumed sovereignty in 1381, but ruled from Barcelona. On his initiative the devastated duchy was settled by Albanians. Athens again knew a brief prosperity after its conquest (1388) by Nerio I Acciajuoli, lord of Corinth, a Florentine noble. Under the Acciajuoli family numerous Florentine merchants established themselves here, but in 1458 the fall of the Acropolis to the Turks marked the beginning of nearly four centuries of Ottoman rule, and Athens once more declined. Venice, which had held Athens from 1394 to 1402, recovered it briefly from the Turks in 1466 and besieged it in 1687–88. During the siege the Acropolis, used by the Turks as a powder magazine, was largely blown up in a bombardment. Modern Athens was built only after 1834, when it was declared the capital of newly independent Greece. Its population suffered extreme hardship during the German occupation (1941–44) in the Second World War, but the city escaped damage in the war and in the civil troubles that followed its liberation. Its main landmark and the pride of its citizens remains the ancient ACROPOLIS, which dominates the city and on which stand the remains of the PARTHENON, the PROPYLAEA, and the ERECHTEUM. Occupying the southern part of modern Athens, the Acropolis is ringed by the other chief landmarks of the ancient city—the PNYX, where the citizens' assemblies were held, the AREOPAGUS, the Theseum or Hephaesteum, a well-preserved Doric temple of the 5th cent. B.C., the old AGORA and the Roman forum, the Tower of the Winds (*see* ANDRONICUS OF CYRRHUS), the temple of Zeus or Olympieum (begun under Pisistratus in the 6th cent. B.C., completed in the 2d cent. A.D. under Hadrian, whose arch stands near by), the theater of Dionysus (oldest in Greece), and the ODEUM of Herodes Atticus. There are many Roman remains in the "new" quarter built east of the original city walls by Emperor Hadrian, here also are the royal palace and gardens. The STADIUM is E. of the Ilissos. Parts of the ancient city walls are still visible, particularly at the Dipylon, the sacred gate on the road to Eleusis, the Long Walls, however, connecting Athens and Piraeus, have almost entirely disappeared. For bibliography, see GREECE. See also W. S. Ferguson, *Hellenistic Athens* (1911), John Day, *An Economic History of Athens under Roman Domination* (1942)

Athens 1 (ăth'ĭnz) Industrial city (pop. 4,342), co. seat of Limestone co., N. Ala., near the Tenn. line, N. of Birmingham, in a cotton area, settled 1814, inc. 1818. Sacked and occupied by Federals in 1862, it was recaptured by Gen. N. B. Forrest in 1864. TVA power was purchased in 1934. The town has fine ante-bellum houses. Athens College (Methodist, coeducational, 1843) is here. **2** (ăth'-ĭnz) City (pop. 20,650), co. seat of Clarke co., NE Ga., on the Oconee and ENE of Atlanta, in a piedmont area. It was founded in 1801 as the site for the Univ. of Georgia (*see* GEORGIA, UNIVERSITY OF) and incorporated as a city in 1872. The city's industries—the making of textiles, tire cord, and cottonseed oil—depend mainly on the cotton produced in this diversified farm area. Numerous Georgia statesmen came from Athens, and some of their homes are among the many fine examples here of classic revival style—the Howell Cobb house (1850), the T. R. R. Cobb house (1830–43), the Joseph H. Lumpkin house (c. 1845), the Camak house (1817), and the Benjamin H. Hill house (1855). **3** (ă'thĭnz) City (pop. 1,062), central Ill., NW of Springfield, in a farm and coal area, inc. 1892. **4** (ă'thĭnz) Village (pop. 1,655), SE N.Y., on the west bank of the Hudson and S of Albany, settled 1686, inc. 1805. Bricks are made. **5** (ăth'-ĭnz) City (pop. 7,696), co. seat of Athens co., SE Ohio, on bluffs overlooking the Hocking river, inc. as a city 1912. It was surveyed in 1795–96 by the Ohio Company of Associates as the site of a university and settled shortly thereafter. Printing, publishing, and manufacture of business machines are industries. It is the seat of OHIO UNIVERSITY and of a state hospital for the insane. Wayne National Forest is north. **6** (ăth'ĭnz) Industrial borough (pop. 4,215), NE Pa., NW of Towanda at the confluence of the Chemung and Susquehanna rivers, settled c. 1778, laid out 1786, inc. 1831. Its manufactures include metal products, silk, and machine tools. Tioga Point Museum has Indian implements, geological specimens, and skeletal remains. **7** (ăth'ĭnz) City (pop. 6,930), co. seat of McMinn co., E. Tenn., between Knoxville and Chattanooga, in a farm area, laid out 1821. Tennessee Wesleyan College (junior, coeducational) is here. Athens was the scene of violence in Aug., 1946, when veterans of the Second World War forcibly took over supervision of the county elections in a successful effort to insure honest balloting. **8** (ăth'ĭnz) City (pop. 4,765), co. seat of Henderson co., E. Texas, SE of Dallas and SW of Tyler, founded before 1850, inc. 1901. The peaches, potatoes, tomatoes, other truck and fruit, and the oil of the surrounding area are shipped, and clay is made into pottery, brick, and tile.

Atherton, Gertrude Franklin (Horn), 1857–1948, American author, b. San Francisco. Her historical novels of California were pioneer works in that field and include *The Doomswoman* (first pub. serially, 1892), *The Californians* (1898), *Rezánov* (1906), and *Ancestors* (1907). She also wrote short stories (*The Splendid Idle Forties*, 1902) and the nonfictional *California: an Intimate History* (1914). *The Conqueror* (1902) is a novel based on Alexander Hamilton's life. Best-known later works are *Black Oxen* (1923), *The Immortal Marriage* (1927), about Pericles and Aspasia, her autobiography, *The Adventures of a Novelist* (1932), and the partly autobiographical *My San Francisco* (1946).

Atherton, residential town (1940 pop. 1,908, 1947 special census pop. 3,172), W Calif., S of San Francisco, inc. 1923.

Athlai (ăth'lī, ăthlā'ī) [Heb., =God afflicts], Israelite. Ezra 10:28.

athlete's foot. see RINGWORM.

Athlone, Godart van Ginkel, 1st earl of see GINKEL, GODART VAN.

Athlone (ăthlōn'), urban district (pop. 8,356), Co. Westmeath, Ireland, on the Shannon, here crossed by an interesting bridge. Its strategic location was important in Ireland's early history. Athlone Castle was besieged, unsuccessfully (1641), by men of Connaught and successfully (1691) by General van Ginkel for William III. Athlone has textile mills and is the site of the largest Irish radio transmitter.

Athol (ăth'ŭl), town (pop. 11,180), N Mass., W of Fitchburg. Machine parts are made here.

Atholl (ăth'ŭl), successively an earldom, a marquisate, and a dukedom of Scotland. See STUART, JOHN, and MURRAY, JOHN.

Atholl or **Athole** (both ăth'ŭl), mountainous district, 450 sq. mi., N Perthshire, Scotland. The castle at BLAIR ATHOLL is the seat of the dukes of Atholl.

Atholstan, Hugh Graham, 1st **Baron** (ăth'ulstun), 1848–1938, Canadian publisher and philanthropist, b. Huntingdon co., Que. He was founder and proprietor (1869) of the Montreal *Evening Star* (later the *Daily Star*) and of the *Family Herald and Weekly Star*, two of the largest and most influential of Canadian newspapers. He was made a knight in 1908, a baron in 1917. His contributions to charity were munificent.

Athor · see EGYPTIAN RELIGION.

Athos (ăth'ŏs, ā'thŏs) or **Akte** (ak'tē), easternmost of the three peninsulas of CHALCIDICE, NE Greece. About 30 mi. long and 1½ to 7 mi. wide, it forms the virtually independent state of the monks of **Mount Athos,** also called Hagion Oros [Gr., =Holy Mountain], at the southern tip of the peninsula, which rises above 6,000 ft. Here in the 10th cent. monks of the Orthodox Eastern Church (see MONASTICISM) formed a community which enjoyed administrative independence under the Byzantine emperors, the Ottoman sultans, and the modern Greek government. Under the direct rule of the patriarch of Constantinople, the community consists of 20 convents, besides many chapels and cells, and it is governed by a committee in which each convent is represented by one member. No female, human or animal, is admitted in the territory. The icons made at Mt. Athos are celebrated, the libraries contain a great wealth of ancient Byzantine manuscripts. See R. M. Dawkins, *The Monks of Athos* (1936).

Atitlán (ätētlän'), volcanic lake, 17 mi. long and 11 mi. wide, SW Guatemala, at an altitude of c. 5,100 ft. Set among mountains with three inactive volcanoes (Santiago Atitlán is 11,499 ft. high) near by, the lake is one of the largest in Central America and offers some of the most distinctive and magnificent scenery in the world. Through the principal towns, Santiago Atitlán, San Lucas Tolimán, and Panajachel, the Indians, paddling dugouts, transport produce to and from the Pacific coast and the highlands.

Atkins, railroad town (pop. 1,322), W central Ark., near the Arkansas. NW of Little Rock, in an area growing fruit and potatoes, settled 1840, inc. 1878.

Atkinson, George Francis, 1854–1918, American botanist, b. Raisinville, near Monroe, Mich., grad. Cornell, 1885. From 1892 he was affiliated with Cornell, first as professor of botany and later as head of the department. One of the ranking mycologists of the country, he wrote many papers on parasitic plants. Among his books are *The Study of the Biology of Ferns by the Collodion Method* (1894) and *Studies of American Fungi* (1900).

Atkinson, Henry, 1782–1842, American army officer, b. North Carolina. After service as a colonel in the War of 1812, he was a commander in the West and led two expeditions (1819, 1824) to the Yellowstone river. He was general commander of forces in the BLACK HAWK WAR and later superintended removal of the Winnebago Indians to Iowa. Jefferson Barracks (near St. Louis) and Fort Leavenworth were first built under his direction.

Atkinson, Wilmer, 1840–1920, American editor, b. Bucks co., Pa., grad. Freeland Seminary, Montgomery co., Pa., 1858. He founded the *Farm Journal* in 1877 in Philadelphia and edited it for 40 years. The *Journal*, one of the most widely circulated farm papers, was noted for its shrewd humor and practicality. It advocated such rural improvements as mail delivery and modern homes and conveniences and was one of the first periodicals to bar patent-medicine advertisers and to guarantee its subscribers against fraudulent advertising. See his autobiography (1920).

Atkinson, city (pop. 1,350), N Nebr., on the Elkhorn and near O'Neill, in a grazing region, settled 1876, inc. 1884.

Atlanta (ŭtlăn'tu, ăt-) **1** City (pop. 302,288), state capital, and co. seat of Fulton co., NW Ga., near the Appalachian foothills. It is the largest city and principal cultural, industrial, railroad, and commercial center of the state and a port of entry, as well as one of the leading cities of the South. Hardy Ivy, the first settler, built a cabin here (1833) on what had been Creek Indian land. The town, founded (1837) as Terminus, end of a railroad line, was incorporated as Marthasville (1843). Named Atlanta in 1845, it was incorporated as a city in 1847. Development as a marketing and industrial city was rapid, especially after Reconstruction. In the Civil War, Atlanta, an important center for Confederate communications and supplies, fell to W. T. SHERMAN on Sept. 2, 1864 (see ATLANTA CAMPAIGN). Most of the city was burned on Nov. 15, before Sherman began his march to the sea. A number of conventions and expositions in the 19th and 20th cent. drew attention to Atlanta's strategic distributory position. Atlanta has been capital since 1868 (chosen permanently by popular vote in 1877). The federal penitentiary here (est. 1899) is one of the most widely known prisons in the United States. In 1946 a hotel fire took many lives. Points of interest are the capitol (1889), housing the state library, the impressive city hall (1929), the High Museum of Art, the state archives building, housing a historical museum and library, the Roman Catholic co-cathedral of Christ the King, the building housing the huge *Cyclorama of the Battle of Atlanta*, large stockyards and the state farmers' market, the airport, and (near by) Fort McPherson. EMORY UNIVERSITY, GEORGIA INSTITUTE OF TECHNOLOGY, Oglethorpe Univ. (coeducational, 1916), Morris Brown College (Negro, Methodist, coeducational, 1885), Gammon Theological Seminary, Atlanta Southern Dental College, Woodrow Wilson College of Law, and Atlanta Law School are here. The **Atlanta University System** (Negro, organized 1929) includes four affiliated schools with adjacent campuses and some common facilities. Atlanta Univ. (coeducational, opened 1865, chartered 1867), formerly a college, is now the graduate school of the system (with academic business administration, and education courses). Atlanta Univ. School of Social Work (coeducational, 1920) became affiliated in 1938. Morehouse College (for men, 1867) and Spelman College (for women, 1881) are undergraduate units. Students and teachers are interchanged in the system and with other Atlanta Negro colleges. See also CLARK COLLEGE. **2** City (pop. 1,290), central Ill., SW of Bloomington, in a farm and coal area, founded 1854 as Xenia, inc. 1869. **3** Town (pop. 2,453), E Texas, S of Texarkana near the point where Texas, Arkansas, and Louisiana meet. It is a center for a truck-growing and lumbering area, and an oil field is near, in Louisiana.

Atlanta campaign, May–Sept., 1864, of the Civil War. In the spring of 1864 Gen. W. T. SHERMAN concentrated the Union armies of G. H. Thomas, J. B. McPherson, and J. M. Schofield around Chattanooga. On May 6 he began to move along the railroad from Chattanooga to Atlanta against Dalton, Ga., c. 30 mi. southeast, where Gen. J. E. JOHNSTON had a smaller Confederate force. Sherman had a twofold objective: the destruction of Johnston's army and the capture of Atlanta, c. 140 mi. southeast. Since Johnston was strongly entrenched, Sherman turned his left flank, forcing him back to Resaca, c. 12 mi. south. The campaign continued in this way—Sherman outflanking Johnston, who withdrew to previously fortified positions—until June 27, when Sherman tried a direct attack at Kennesaw Mt., c. 25 mi. NW of Atlanta, and was repulsed. He then reverted to flank operations. By July, Johnston had withdrawn to the south bank of the Chattahoochee river, where he prepared to fight on his own terms. On July 17, the day Sherman crossed the Chattahoochee, J. B. Hood replaced Johnston. Following Johnston's plan, Hood attacked Sherman's divided army (July 20) as it crossed Peach Tree Creek, a small tributary of the Chattahoochee, and was beaten. In the battles of Atlanta (July 22) and Ezra Church (July 28), Hood again failed to stop the Union advance; he then retired behind the strong works of Atlanta, which Sherman soon had under bombardment. The Union lines were gradually extended until the last Confederate line of communications south of the city was broken on Sept. 1. Hood abandoned Atlanta that night and Sherman occupied it on Sept. 2,

1864 The destruction of Hood's army was accomplished in another campaign (see HOOD, JOHN BELL). Significant points along the route of Sherman's advance are identified by the Atlanta Campaign National Historic Site (20 96 acres, est 1944).

Atlanta University System see ATLANTA, Ga.

atlantes (-lăn'tēz) [Latin plural of ATLAS], sculptured male figures serving as supports, or apparent supports, in the place of a column or pier They are also called telamones The earliest and most important example from antiquity is in the Greek temple of Zeus at Agrigento, Sicily, though the original place on the building of the now overthrown atlantes is uncertain The baroque architecture of the 17th cent made considerable use of atlantes, and they were a frequent decorative motive in mantelpieces and doorways of the classic revival in the early 19th cent.

Atlantic, city (pop 5,802), co seat of Cass co , SW Iowa, on the East Nishnabotna river and ENE of Council Bluffs, inc 1869 A trade and processing center in a farm area, it has packing plants and corn and pumpkin canneries and produces dairy foods

Atlantic Charter, program of peace aims, jointly enunciated by Prime Minister Winston Churchill of Great Britain and President F D Roosevelt of the United States on Aug 14, 1941, when they met at sea off the coast of Newfoundland The statement—which was not an official document—declared that (1) the two nations would seek no territorial aggrandizement, (2) no territorial changes would be made except through the freely expressed wishes of the people concerned; (3) sovereign rights and self-government would be restored to those who had been forcibly deprived of them, (4) all states would have access to the trade and the raw materials of the world, (5) all nations would collaborate to bring about improved labor standards, economic advancement, and social security for all, (6) a peace would be established to assure for all men in all lands freedom from fear and want, (7) the seas should be free to all, and (8) the use of force would be abandoned and all nations which threaten, or may threaten, aggression would be disarmed In the United Nations declaration of Jan 1, 1942, the signatory powers pledged adherence to the principles of the charter

Atlantic City, city (pop 64,094), SE N J , a seaside resort and convention center c 60 mi SE of Philadelphia and c 100 mi SSW of New York, on a 10-mile sand bar called Absecon Beach, inc 1854 It was a fishing village until the coming of the railroad (1854) The first boardwalk was built in 1870, the first rolling chairs appeared in 1884 The present boardwalk, lined with shops and hotels, is 7 mi long and 40 to 60 ft wide There are six amusement piers and a municipal auditorium whose main hall seats over 40,000 The Absecon Lighthouse in the city was operated from 1854 to 1932 Custom-built boats are made here

Atlantic Highlands, borough (pop 2,335), E N J , on Sandy Hook Bay, settled before 1675, inc 1887 It is a resort and residential area

Atlantic Ocean [Latin,=of Atlas], second largest ocean, estimated area 31,830,000 sq mi , extending in an S-shape from the arctic to the antarctic regions between the Americas and Europe and Africa It is connected with the Pacific Ocean by the Panama Canal and with the Indian Ocean by the Suez Canal The principal western arms are Hudson and Baffin bays, the Gulf of Mexico, and the Caribbean Sea, those in the east are the Baltic Sea, the North Sea, the Bay of Biscay, the Mediterranean, and the Gulf of Guinea The islands include, in the N Atlantic, i e , north of the equator, Greenland (the southern part), Iceland, Newfoundland, the British Isles, Bermuda, the West Indies, the Azores, the Canary Islands, the Madeira Islands, and the Cape Verde Islands, in the S Atlantic, Ascension, St. Helena, Tristan da Cunha, the Falkland Islands, South Georgia, and Bouvet The shortest distance across the Atlantic is between Dakar, Africa, and the bulge of Brazil More large rivers drain into it than into any other ocean The surface waters in the trade-wind belts attain the highest salinity known in ocean water The chief Atlantic currents are the Equatorial Currents (North and South) and their subsidiary currents, the Guinea and Brazil currents in the south, and the GULF STREAM that flows up the eastern coast of North America to the Grand Banks off Newfoundland, where it meets the Labrador Current, then bends eastward to form part of the NORTH ATLANTIC DRIFT. Heavy fogs form on the front where the warm Gulf Stream meets the cold Labrador Current This area is part of the busiest shipping lane in the world, it is patrolled for icebergs by the U S coast guard Scientific knowledge of the ocean floor dates from the circumnavigation of the British *Challenger* expedition (1872–76). A submarine ridge extends from E Greenland to N Scotland, part of it is known as the telegraph plateau from the network of cables laid here The mid-Atlantic ridge, from 300 to 600 mi wide, extending S from Iceland almost to the Antarctic Circle, is a center of volcanic activity and of earthquakes. It rises to an average height of c.10,000 ft ; a few of the peaks emerge as islands. It is flanked by a series of basins The chief Atlantic deeps are the Milwaukee Depth (30,246 ft) near the Bahamas and Nares Deep (27,972 ft.) near Puerto Rico. Commerce between the Mediterranean Sea and the NE Atlantic was initiated by the Carthaginians. From about the 7th cent A D , Scandinavians navigated on the Atlantic, they probably reached North America c 1000 Trade routes along the coast of Africa were opened in the 15th cent. by the Portuguese under the leadership of Henry the Navigator and to the Western Hemisphere after the voyages of Columbus

Atlantis, in Greek legend, large island in the western sea Plato, in his dialogues the *Timaeus* and the *Critias*, tells of the high civilization which flourished there until the island was destroyed by an earthquake Many writers have tried to prove that the island really existed The legend has persisted, and societies for the discovery of Atlantis are still active Many old maps show fabulous islands such as Antilia, Brazil, and the Island of the Seven Cities Plato described Atlantis as an ideal state and the name is considered as synonymous with UTOPIA Francis Bacon called his account of the ideal state *The New Atlantis*

Atlas (ăt'lŭs), in Greek religion, Titan; son of IAPETUS and Clymene Atlas was the father of the PLEIADES, the HESPERIDES, the HYADES, and (according to Homer) CALYPSO After the downfall of the Titans he was condemned to stand at the western end of the earth, bearing the sky on his head and hands PERSEUS is said to have changed him into Mt Atlas because of his inhospitality

atlas, collection of MAPS From very early times a representation of the mythological character Atlas, supporting the world, had been used to decorate maps, the term was probably first used in its present sense by Mercator

Atlas Mountains, system of nonvolcanic ranges, NW Africa It extends c 1,500 mi NE from Morocco through Algeria to Cape Bon in Tunisia The Grand, or High, Atlas in Morocco, including peaks which are perpetually snow-capped, is flanked on the northwest by the Middle Atlas and on the southwest by the Anti-Atlas A coastal range, the Maritime, Little, or Tell Atlas, extends from Ceuta, Morocco, to E Algeria, there it merges with the Saharan Atlas (which divides the plateau region of Algeria from the Sahara) and continues into Tunisia The Atlas region is economically important for the fertility of its valleys, the forests of its northern slopes, and its mineral wealth, especially its phosphates The Berber inhabitants were long unconquered

Atlin Lake (ăt'lĭn), long, irregular mountain lake (covering c 300 sq mi), NW British Columbia, touching the Yukon boundary The town of Atlin is on the east shore and is the headquarters of the Atlin dist , a region in which there is both placer and quartz gold mining The region is noted for its scenery and its hunting

Atmore, shipping city (pop 3,200), SW Ala , NE of Mobile, in a truck area, inc 1907 Near by is a state prison farm

atmosphere [from Gr ,=sphere of air], the mixture of gases surrounding the earth Since the substances in the atmosphere or air are not combined chemically, each retains its own characteristic properties The composition of the troposphere (the layer closest to the earth) has been calculated to be nitrogen, 78 09 percent, oxygen, 20 95 percent; argon, 0 93 percent, carbon dioxide, 0 03 percent, and minute amounts of neon, krypton, helium, hydrogen, xenon, and ozone In addition to these gases the atmosphere contains varying percentages of water vapor (measured in terms of relative HUMIDITY) When condensation occurs the moisture may take the form of clouds, dew, fog, frost, hail, rain, sleet, or snow. Carried in the air are dusts from many sources, including those of meteoric origin, and pollen, germs, salt particles, and various gaseous impurities Weather is dependent on the condition of the atmosphere, and the atmosphere is the chief agent of erosion Air pressure is measured by a barometer At sea level, under average conditions, the pressure is 14 7 lb per square inch or sufficient to support a column of mercury about 30 in. high or a column of water about 30 ft in height The pressure of air at sea level is taken as a unit of measure and is called an atmosphere Exploration of the atmosphere has been carried on with the aid of instruments carried aloft by manned and unmanned balloons and by rockets Meteorological information about the upper atmosphere is obtained regularly by means of the radiosonde (see BALLOON) The troposphere extends upward from the earth to a height of c 5 mi at the poles, to c.7 mi in the middle latitudes, and to c 10 mi at the equator The upper layer is the STRATOSPHERE, and the limiting boundary between the two layers is the tropopause Within the troposphere the air is constantly mixed because of ascending and descending currents, the temperature decreases about 1°C for each 500-foot increase in altitude until the stratosphere is reached The outer limit of the atmosphere is not known, but studies of the AURORA BOREALIS indicate that it must extend to at least 600 mi. from the earth. About nine tenths of the mass of the atmosphere lies within c.10 mi. of the earth's surface. It was long believed that the thin outer regions of the atmosphere were composed almost entirely of the lightest gases, hydrogen and helium, but more recent investigations indicate that oxygen and nitrogen predominate at all altitudes. Some scientists think, however, that the light gases may be proportionately more abundant at high than at low altitudes. The ionosphere, an electrified region from 50 to 250 mi. above the earth, reflects radio signals. Mars is the only other planet that shows evidence of atmospheric conditions at all capable of supporting life; the presence of vegetation on the planet is considered by some astronomers to be possible and by others probable.

Atoka (ŭtō'kŭ), city (pop 2,548), co seat of Atoka co , SE Okla., NE of Ardmore An agreement with the Indians was signed here in 1897.

atoll: see CORAL.

atom [from Gr ,=indivisible], in chemistry and physics, according to the ATOMIC THEORY an almost inconceivably minute particle of matter. It was considered by John DALTON to be the ultimate unit into which any given kind of matter could be divided This conception is no longer held Atoms are believed to consist of positively charged (+) particles called protons, negatively charged (−) particles called electrons, and neutral particles called neutrons In an atom there is a central portion called the nucleus, which contains protons and neutrons The nucleus, therefore, has a positive charge Around the nucleus are electrons equal in number to the number of protons in the nucleus Since an equality of positive and negative charges renders a substance electrically neutral, atoms are normally neutral, the extranuclear electrons (electrons outside the nucleus) neutralising the positive charge of the nucleus Ions are atoms or groups of atoms which are positively or negatively charged Atoms of different elements differ from one another in weight (see ATOMIC WEIGHT) and also in the number of protons in the nucleus and of electrons outside the nucleus, by which the atomic number (see PERIODIC LAW) is determined For example, an atom of hydrogen has one proton in the nucleus and, to neutralize this, one extranuclear electron The oxygen atom has eight protons in the nucleus and, therefore, eight extranuclear electrons The arrangement of the electrons varies in different elements The atoms of an element are of the same kind in that they react chemically in the same way, but they sometimes differ in mass (see ISOTOPE) Atoms of the same element or of two or more elements are joined together in chemical combinations called molecules The great variety of existing matter results from the large number of such combinations possible These combinations are constantly being formed, broken down, and re-formed in the life processes of plants and animals and in the continual change going on in the earth from chemical action Much is yet unknown concerning the structure of the atom The discovery of the X ray late in the 19th cent made possible the study of the structure of the MOLECULE and thus added to the knowledge about the atom Among the many who have contributed to knowledge of the atom are N. H D BOHR, Sir W H BRAGG, W L BRAGG, Albert EINSTEIN, Irving LANGMUIR, Max von LAUE, G N LEWIS, R A MILLIKAN, H. G MOSELEY, Max PLANCK, the 1st Baron RUTHERFORD, James CHADWICK, Werner Heisenberg, and Enrico FERMI Splitting of the atom resulting in the release of ATOMIC ENERGY was the work of many scientists In 1919 Lord Rutherford, by bombarding nitrogen atoms with accelerated alpha particles, changed some of the nitrogen atoms into atoms of oxygen and hydrogen In 1932 J D Cockcroft and E T S Walton bombarded lithium with a beam of accelerated protons and caused splitting (or fission) of the lithium atom Calculations of the energy released verified Einstein's equation stating the equivalence of mass and energy The discovery of the neutron by James Chadwick in 1932 provided scientists with an electrically uncharged and very penetrating particle for producing nuclear changes Enrico Fermi (in Italy in 1933) created nuclear changes in atoms by means of slow neutrons and produced element 93 from uranium (element 92). In Germany, O. F Hahn while repeating Fermi's experiments reported (1939) that he had found barium among the products resulting from the bombardment of uranium with slow neutrons Lise Meitner (who had worked with Hahn) and O R Frisch interpreted Hahn's results to indicate that the nucleus of the atom had been split into two fairly equal parts consisting of barium (atomic weight 137) and krypton (atomic weight 82). Lise Meitner and Frisch had left Nazi-controlled Germany and were, in 1938, working in Sweden. They communicated to Niels Bohr in Denmark their belief that splitting of the atom could be accomplished with the release of vast amounts of energy. Bohr and Albert Einstein were influential in persuading President Roosevelt to initiate investigations of the potentialities of uranium fission. Confirmation of the splitting of the uranium atom was received from Bohr's laboratory in Copenhagen, and the process

was soon repeated in the United States. The atomic research which followed resulted in the production of the ATOMIC BOMB and in the inauguration of a program for investigating peacetime uses of atomic energy.

atomic bomb, weapon depending for its explosive force on the release of atomic energy and first used in the Second World War The production of the atomic bomb was the culmination of intensive research which began in the United States in 1940 after fission (splitting) of the uranium nucleus by German scientists was reported. During the Second World War, Germany too was investigating atomic energy Research in the United States resulted in the production, at the atomic-bomb laboratory at Los Alamos, N.Mex., of the first atomic bomb On July 16, 1945, this bomb was tested at the Alamogordo air base in New Mexico On Aug 6, 1945, an atomic bomb was dropped from a B-29 superfortress on the city of HIROSHIMA Three days later a more powerful one was dropped on NAGASAKI. Both caused widespread death, bodily injury, and destruction

atomic energy, the energy derived from the splitting or fission of the nucleus of the atom Scientists in the United States visioned the prospect of unleashing atomic energy in 1939 after they had confirmed by experiments using the CYCLOTRON the reported splitting of the uranium nucleus by German scientists. President Roosevelt named a committee to investigate the use of atomic energy for military purposes In 1940 this uranium committee was reorganized as a subcommittee of the National Defense Research Committee, and on Dec 6, 1941, the project was enlarged to become a section of the Office of Scientific Research and Development On Aug 13, 1942, the "Manhattan District" was officially established in the Corps of Engineers to carry on special work, and in May, 1943, it took over all the work on the uranium project which had been under the OSRD Gen Leslie R Groves, in charge of the Manhattan District from 1942, acted as coordinator throughout the atomic-bomb project The work, which also involved cooperation with British and Canadian scientists, was conducted with the utmost secrecy Much of the early research was carried on at Columbia, Princeton, and the Univ of California, and scientists from these universities and other researchers later joined to concentrate on the problem of producing a chain reaction at the "Metallurgical Laboratory" of the Univ of Chicago, under Arthur H Compton. There, on Dec 2, 1942, a group working under Enrico Fermi achieved the first nuclear chain reaction (in which the uranium nucleus, bombarded by neutrons, splits as the result of capturing a neutron and releases other neutrons which cause fission of more nuclei) The uranium isotope of atomic weight 235 (known as U-235) was used in these experiments When this isotope captures a neutron it becomes uranium 236, which splits almost immediately into two nearly equal parts (the elements formed are not always the same) One problem was that of separating out the U-235 which occurs in uranium ore in the proportions of one part of U-235 to about 138 parts of U-238 Methods of separation were investigated by groups directed by E O. Lawrence at the Univ of California and by H C Urey at the Clinton Engineer Works, near Oak Ridge, Tenn Another fissionable material was revealed when it was discovered that changes resulting from the capture of a neutron by the nucleus of U-238 formed a new unstable element (of atomic number 93), neptunium. Neptunium quickly becomes transformed into another new element (of atomic number 94), plutonium, which, upon undergoing fission, yields at least as much energy as does U-235 (Fission of one uranium atom is said to yield 200,000,000 electron volts) A plant for producing plutonium was erected at Hanford, Wash In order to produce an explosion a chain reaction which will result in many fissions must be set up. Such a reaction was first achieved in a "pile" consisting of blocks of graphite and lumps of metallic uranium The word *reactor* has been adopted by the Atomic Energy Commission in preference to *pile*, and it is used to refer to all forms of chain-reacting systems developed later The special research necessary to design a bomb which would release atomic energy was accomplished under the direction of J. Robert Oppenheimer at the atomic-bomb laboratory at Los Alamos, N Mex, now the Los Alamos Scientific Laboratory. Other research centers include the Oak Ridge National Laboratory, where radioactive isotopes are manufactured for medical and other scientific studies; the Brookhaven National Laboratory on Long Island, N.Y., the Knolls Atomic Power Laboratory, Schenectady, N.Y.; and the Argonne National Laboratory, Chicago. The explosion of the atomic bombs had startled philosophers, moralists, politicians, and laymen, demonstrating the cataclysmic possibilities of the use of atomic energy. To channel that use to peaceful, rather than destructive, ends became a national and an international problem. The U.S. Congress set about creating a national control body with flurries of argument as to whether it should be predominantly a military or a civilian body. The Atomic Energy Act of 1946 marked the victory of the civilian advocates A five-man Atomic Energy Commission was established, the members to be appointed by the President with the advice and consent of the Senate David E Lilienthal was made its first head (resigned 1949). Its activities are carried on under six divisions—research, production, engineering, military application, reactors, and biology and medicine. Canada, Great Britain, and the United States proposed an international commission on atomic energy as early as Nov, 1945 On Jan 24, 1946, the Atomic Energy Commission was established by the United Nations, with responsibility to the Security Council on matters of security The deliberations of the commission resulted in the drawing up of a comprehensive plan for an international body to have wide powers to conduct and control research and production of atomic energy—a body that would in effect take over the exclusive management of production of atomic energy and would be empowered to punish violators of its regulations without being subject to the usual veto rule of the Security Council Bernard M Baruch was given large credit for the authorship of this plan, which was favored by the Western nations. The USSR, on the other hand, opposed the creation of such a powerful international body as infringing national sovereignty The Russians proposed instead that there should be immediate prohibition of the use of atomic weapons and immediate destruction of all such weapons existing; this was to be followed by the negotiation of an international convention intended to set up an international body having limited powers of inspection and control and subject to the management of the Security Council The two proposals were fundamentally opposed in principle, and negotiations in the Atomic Energy Commission came to a deadlock in 1948—a situation still continuing early in 1950.

atomic number · see PERIODIC LAW.

atomic theory, theory which holds that elementary matter is not continuous but is made up of extremely minute particles called atoms Democritus, in the 5th cent B C, held that matter is composed of atoms which are in constant motion and which are indivisible His beliefs were restated by LUCRETIUS Aristotle did not accept the theory of the atom The fundamental premises of the ancients was brought forward again by John DALTON in the early 19th cent He accepted their assumption that the atom is indivisible He held that the atoms of any element are of exactly the same size and weight (ATOMIC WEIGHT) and in these two ways are unlike the atoms of any other element He stated that atoms of the elements unite chemically in simple numerical ratios to form compounds No distinction was made at this time between the terms *atom* and MOLECULE, but shortly afterwards AVOGADRO used *molecule* to indicate the rapidly moving particles of which a gas is composed Support was given to the atomic theory by the work of Mendelejeff on the periodic law and by that of Arrhenius on ionization The discovery of the ELECTRON and the observations on RADIOACTIVITY were essential to the development of the modern concept of the structure of the ATOM The number of protons in the nucleus, or center, of the atom and the number and arrangement of the negatively charged particles (electrons) outside the nucleus determine the nature of the atom The atoms themselves are neutral since the positive and negative charges are equal Chemical action is believed to be caused by the tendency of some atoms to take on negatively charged particles (electrons) and of others to give them up An atom which has lost or gained an electron or electrons is called an ION See George Thomson, *The Atom* (3d ed., 1947)

atomic weight of an element, in chemistry, is the number expressing the ratio of the weight of an ATOM of that element to the weight of an atom of some other element taken as a standard For some time hydrogen, the lightest element, was used as a standard, the weight of its atom being taken as unity On this basis, the atomic weight of any element represented the number of times heavier one of its atoms was than an atom of hydrogen. For example, the atomic weight of oxygen was approximately, but not quite, 16, i.e., an oxygen atom was considered to be almost 16 times heavier than one of hydrogen Today, however, oxygen, taken as exactly 16, is used as a standard The atomic weight of hydrogen has become 1 0080 or 1 0081 This standard, *oxygen* = 16 000 (indicated usually by O = 16), in which oxygen is represented by a whole number, is more convenient, since oxygen forms many more compounds than hydrogen, thus permitting a wider direct comparison of the weight of its atom with the weights of the atoms of other elements. The determination of the accurate atomic weight of an element depends upon a careful and precise quantitative analysis of as many of its compounds as possible. Among the first chemists to work out systematically a group of atomic weights was Baron J. J. BERZELIUS. Others who have contributed are J. S. Stas, Stanislao CANNIZZARO, and T. W RICHARDS. Discovery of the specific-heat method for determining the approximate atomic weight of elements which do not form stable gaseous compounds was made by P. L Dulong and A T Petit F W. Aston discovered that although an element is composed of atoms which are chemically of the same nature—i e, which behave alike chemically—these atoms in some cases differ from one another in weight (see ISOTOPE) The atomic weight of an element which is made up of atoms differing in this way is an average of the weights of the different atoms For example, chlorine is composed of atoms with weight 35 and 37 These are present in such proportions that the element's atomic weight is 35 457 Some other elements having isotopic forms are bromine, lead, mercury, and tin

atonality (ā"tōnăl'ĭtĭ), in music, the absence of TONALITY The term has often been applied to any 20th-century music which does not observe the principles of harmonic relationship of the 18th and 19th cent Ears accustomed to 18th- and 19th-century tonality may not perceive the harmonic relationships which are present in certain 20th-century compositions and therefore label them atonal Some composers accept the designation, others do not Thus, a definition of atonality which is acceptable to all is not yet possible From the time of Rameau the seven tones of the diatonic scale were felt to bear certain definite relations to one another The five additional chromatic tones were available as auxiliary tones. Increased use of these auxiliary tones by 19th-century composers reached a peak in the chromaticism of Wagner In his and in Debussy's music the feeling of tonality is already beginning to break down Chords built in fourths instead of thirds, used by Arnold SCHÖNBERG *c* 1906 at the outset of his first period of atonal composition, contributed to the process Finally all the 12 tones were regarded as equal, bearing no fixed relations to one another In December, 1914, Schönberg arrived at the specific method of composing atonal music known as the 12-tone technique The composer arranges the 12 chromatic tones into a tone row, in which the tones may be in any order but in which no tone may be repeated until all 12 have been used This tone row must be the basis of the whole composition. It may be transposed, inverted, used backward, used to form chords, or used in counterpoint with itself, or in various other ways Melodic or harmonic formations which suggest diatonic harmony must be avoided in strict application of the system The principal objection to the system is that the ear cannot follow all the transformations to which the tone row is subjected The system, however, is yet in its infancy, and the last word concerning its significance has not been spoken Among Schönberg's disciples are Alban BERG, Anton von Webern, Egon Wellesz, and Ernst KRENEK, who is the theorist of the movement These composers and Schönberg himself have written 12-tone music which does not strictly adhere to all the principles of the system Various American composers, notably Walter PISTON, have written occasional 12-tone compositions A 12-tone system quite different from Schönberg's was developed contemporaneously by Josef Matthias Hauer (1883–), also an Austrian, but its influence has been less far-reaching See Adolfo Salazar, *Music in Our Time* (Eng tr., 1946), Nicolas Slonimsky, *Music since 1900* (1938), Ernst Krenek, *Music Here and Now* (Eng tr., 1939)

atonement [Mid Eng., = making *at one*], in Christian theology, the reconciliation of (naturally sinful) man with God, a fundamental problem The conception of the atonement most widely held is often called vicarious atonement It was first explicitly stated by St ANSELM in *Cur Deus Homo?* His doctrine, slightly altered or elaborated, has become part of Roman Catholic theology and of that of many Protestant churches Simply stated it is this man soon after his creation fell from GRACE, he has continued in a state of sin, and he is therefore by his own efforts unable to become reconciled with God God, desiring the reconciliation of man, offers man pardon for his sins if man will make satisfaction for them. But man's offense to God's majesty is greater than any conceivable satisfaction he can give Therefore God sent Jesus Christ to earth to reconcile man As God, Jesus Christ can satisfy God, and as man He can take on the sins of man By His life on earth, by His sufferings, and especially by His death on the cross, He satisfied God for the sins of man, and man, accepting his Redeemer, may enjoy the atonement Christ has bought The Jewish atonement of the Day of Atonement (Yom Kippur) has now little vicarious aspect

Atonement, Day of, Heb *Yom Kippur*, The most sacred Hebrew holy day, which falls at the end of September or beginning of October (on the 10th day of the 7th month, *Tishri*), is a day of prayer for forgiveness for sins committed during the year The Jews gather in synagogues on the Eve of Yom Kippur, when the fast begins, and return the following morning to continue confessing, doing penance, and praying for forgiveness In European countries, before the fast day, the people go to the

homes of their neighbors and acquaintances, friend and enemy alike, announce and accept forgiveness for the wrongs of the past year, and wish one another to be "written and sealed into the Book of the Living," where the names of all the virtuous are entered The synagogue is the scene of confession of sins and the reading of prayers

Atrato (äträ'tō), river of W Colombia, flowing across the base of the Isthmus of Panama N to the Gulf of Darien or Urabá. The valley yields platinum and gold

Atreus (ā'trēŭs), in Greek legend, king of Mycenae He was the son of PELOPS and therefore suffered from the curse laid on his father Atreus brought an even greater curse upon himself and his sons, AGAMEMNON and MENELAUS After his brother, Thyestes, seduced Atreus' wife, Atreus murdered three of the four sons of Thyestes and served them up to their father at a feast Thyestes thereupon laid a curse on the house of Atreus, who was later killed by Aegisthus, the one son of Thyestes to escape slaughter The descendants of Atreus were called the Atrides (utrī'dēz)

atrium (ā'trēŭm), term applied to certain rooms in the dwelling houses of ancient Rome and also to a type of entrance court in early Christian churches In the earliest Roman houses the atrium was utilised as an assembly place for the family In its center was a cooking hearth whose smoke issued through an opening in the roof In later houses, the hearth was placed elsewhere and in the center of the atrium was a tank (impluvium) to receive the rain water falling through the large roof opening which furnished light to the rooms grouped around the atrium In the more luxurious and complex Roman dwellings, the private apartments had a court of their own, called the peristyle, and the atrium then served only as a semipublic reception hall The ruins of Pompeii contain remains of atria in their various forms In early Christian churches, the atrium was a large arcaded or colonnaded open court serving as a general meeting place in front of the church itself, with a fountain used for ablutions in its center. The basilical churches of Sant' Ambrogio, Milan, and San Clemente, Rome, have noteworthy atria This type of large forecourt is a characteristic element of the Mohammedan mosque

Atropatene: see AZERBAIJAN, region, Iran

atrophy (ăt'rŭfē), condition brought about by the wasting away of living tissue Such wasting may be caused by malnutrition, e g , starvation, by disease which affects the nerve supply of muscles, e g , infantile paralysis, and by disuse or continued pressure, e g , long fixation by a plaster cast following fracture of an arm or leg

atropine (ăt'rupēn, -pĭn), poisonous alkaloid drug discovered in the plant deadly nightshade, or BELLADONNA, by P L Geiger in 1833 It may cause death by its action upon the heart and respiratory organs (For antidote, see POISONING, table) It is used in medicine as an anodyne in external application, affecting the nerve endings in the skin It reduces the secretion of some glands, as the pancreas, and stops it entirely in others, as the sweat glands The pupil of the eye is dilated greatly by its action upon the involuntary muscles It is valuable in the treatment of whooping cough and asthma It serves as an antidote for mushroom poisoning Tincture of belladonna is the common form in which the drug appears

Atropos see FATES

Atroth (āt'rŏth) [Heb ,=ATAROTH], town, E of the Jordan Num 32 35 Perhaps Atroth should be taken with the following name, Shophan, thus, RV has Atroth-shophan

Atsina Indians: see GROS VENTRE INDIANS

Attai (ăt'āī) [Heb ,=opportune] **1** Descendant of Jerahmeel 1 Chron 2 35,36 **2** One of David's Gadite warriors 1 Chron 12 11 **3** Son of Rehoboam 2 Chron 11 20

Attaleia or **Attalia**, see ANTALYA.

Attalla (utăl'u), railroad city (pop 4,885), NE Ala , just W of Gadsden, in a mine and cotton area, founded 1870, inc 1872 It has foundries

Attar see FERID EDDIN ATTAR

attar of roses, fragrant essential oil obtained from roses and used in making perfume It is extracted chiefly by distillation with water or steam and sometimes by enfleurage (a method employing another oil to absorb the floral oil which is later separated out by distillation) It is one of the most valuable of the volatile oils Much of the commercial supply comes from Bulgaria, where the damask rose (*Rosa damascena*) is used, some is obtained from France, where the cabbage rose (*R centifolia*) is the chief source, and also from other parts of Europe, from Asia Minor, and from India Attar of roses is known also as otto of roses and rose oil When marketed it is often adulterated with a less costly oil, e g , palmarosa oil Rose water is made either from the water (with small amounts of oil) remaining after distillation or from water to which a little of the oil has been added

Attawapiskat (ăt'uwupĭs'kăt), river of N Ontario, flowing 465 mi E, N, and E into James Bay.

Atterbom, Per Daniel Amadeus (pär' dā'nĕĕl ämädā'ŭs äturbōm'), 1790–1855, Swedish poet He was one of the founders of the literary Aurora Society and a member of the Swedish Academy. He is remembered for his fairy-tale play, *The Isle of Bliss* (1824) As a critic he wrote *Swedish Seers and Poets* (1841–55)

Attersee: see SALZKAMMERGUT

Attica (ă'tĭkù), region of ancient Greece, a triangular area at the eastern end of central Greece, around ATHENS It has rough hills and two coastal plains Greek legend says Theseus combined 12 townships into a single state, while the four Attic tribes are said to have been founded by Ion The historic Cleisthenes late in the 6th cent reclassified the people into 10 tribes By the 5th cent Athens was dominant, and the history of Attica thereafter was that of its chief city.

Attica. **1** City (pop 3,760), W Ind , on the Wabash river and SW of Lafayette, settled 1825, inc 1866. It is a trading center for farmers, and its industrial products include overalls, steel castings, and brick Bear Creek Canyon and a natural stone arch are scenic features near by **2** Village (pop 2,379), W N Y , SW of Batavia, settled 1804, inc 1837 Automatic stokers are made Attica State Prison is here

Atticus, Titus Pomponius, 109 B C –32 B C , Roman philosopher and patron of letters He was a friend of Cicero, who wrote several letters to him

Atticus Herodes see HERODES ATTICUS

Attila (ă'tĭlu), d 453, king of the HUNS (r 433–453), called the Scourge of God He extorted increased tribute and other humiliating concessions from the Eastern Roman emperor, Theodosius II In 441, on the pretext that the emperor had violated the treaty, he began ravaging the Balkans Peace was made, and Attila's tribute greatly increased in 443 and again in 447 In 450, however, the new Eastern emperor, MARCIAN, refused to pay further tribute, and his example was followed by Valentinian III, emperor of the West Attila's relations with the Roman Empire were further strained when Grata, Valentinian's sister, secretly offered herself to Attila in marriage and Attila's request for half the Western Empire as dowry was refused Setting out (451) from Hungary with an army of perhaps half a million Huns and allies, Attila invaded Gaul but was defeated by AETIUS (who was supported by the Visigoths) in the battle of Châlons (451) in Champagne He turned back and invaded N Italy (452) but abandoned his plan to take Rome itself His withdrawal has been ascribed to the eloquence of the embassy headed by Pope LEO I but appears to have been motivated largely by shortage of provisions and the outbreak of pestilence in the Hun army Attila died soon afterward in Hungary, suffering a hemorrhage while celebrating his wedding The fear Attila inspired in the Roman provincials has been preserved in many accounts of his savagery Though undoubtedly harsh, Attila was a just ruler to his own people He favored the presence of learned Romans at his court and was far less bent on devastation than other conquerors before and after him He appears in many legends, particularly as Etzel in the NIBELUNGENLIED See Marcel Brion, *Attila* (Eng tr , 1929)

Attis (ă'tĭs) or **Atys** (ă'tĭs), in Phrygian religion, fertility god Like ADONIS and TAMMUZ, he died and was resurrected each year, and the spring fertility rites (orgiastic in character) celebrated his rebirth His worship was connected with that of CYBELE. See Sir James G. Frazer, *Adonis, Attis, Osiris* (1906)

Attleboro (ăt'ulburu), city (pop 22,071), SE Mass , NE of Providence, R I , settled 1634, inc as a town 1694, as a city 1914 Its jewelry industry began in 1780, tools are also produced

Attlee, Clement Richard (ăt'lē), 1883–, British prime minister (1945–) and Labour party leader, educated at Haileybury and University College, Oxford Admitted to the bar (1905), he was a social service worker and a lecturer in the London School of Economics before the First World War, in which he gained the rank of major Elected mayor of Stepney in 1919 and sent to Parliament from Limehouse in 1922, he had posts in the 1924 and 1929 Labour governments but did not enter Ramsay MacDonald's coalition cabinet (1931) In 1935 he succeeded George Lansbury as party leader In the coalition cabinet of Winston Churchill, he was lord privy seal (1940–42), deputy prime minister (1942–45), dominions secretary (1942–43), and lord president of the council (1943–45) He was attending the POTSDAM CONFERENCE with Churchill when the elections of July, 1945, brought the Labour party to power and made Attlee prime minister After he became head of the government, Great Britain took great strides in nationalizing industry, ended its mandate in Palestine and recognized Israel, relinquished control of India, and strengthened British ties with Western European nations and with the United States See biography by Roy Jenkins (1948)

attorney, agent put in place of another to manage the affairs of the principal An attorney in fact is an agent who conducts business under authority which is controlled and limited by a letter, or power, of attorney granted by the principal. An **attorney at law is an officer of a court of law** authorized to represent the person (the client) employing him in legal proceedings In England until 1873 an attorney was the representative of a client in the management of affairs in a case at common law but not in arguing the case before the court and jury (see BAR, THE, and SOLICITOR) In the United States, the distinction was formerly made in some states between a counselor at law, who argued the case in court, and an attorney, who limited himself to advice and management of affairs without speaking in the actual trial, but that distinction has generally now disappeared Today an attorney at law is authorized to exercise all the functions of a practicing lawyer The growth of large business corporations, beginning in the 19th cent , has, however, brought into existence a large group of attorneys who rarely or never act as trial lawyers yet are some of the most influential members of the profession There has also been much specialization of work among the members of big law firms The professors of law in the law schools are also influential members of the profession who generally do not practice law All the men must, however, like the ordinary attorney, be admitted to the bar The requirement for admission to the bar varies in different states, but, generally speaking, a man must have certain qualifications or training before being acknowledged as an attorney at law Formerly a usual requirement was a stipulated amount of time spent in clerking and "reading law" in a law office, but now more generally the requirement is the passing of "bar" examinations or the successful completion of a stated course of study. The county, state, and Federal prosecuting officers are generally also called attorneys, as county attorney, district attorney, and Attorney General (see JUSTICE, UNITED STATES DEPARTMENT OF)

Attu (ă'tōō, ătōō'), island, 30 mi long, off W Alaska, westernmost of the ALEUTIAN ISLANDS An extremely rugged island, it rises more than 4,000 ft In the Second World War it was occupied (1942) by the Japanese, who removed the inhabitants to Japan U S forces landed (May 11, 1943) at Holtz Bay and Massacre Bay and in three weeks of bloody fighting retook the island An air base was established In 1945 the remaining natives were repatriated

Atuona (ätuōnä') or **Atuana** (ätōōä'na), town (pop 618), on Hiva Oa, S Pacific, capital of the Marquesas Islands dist , French Establishments in Oceania The town overlooks the Bay of Traitors on the south coast of the island Paul Gauguin lived in Atuona Valley and was buried there

Atwater, Wilbur Olin, 1844–1907, American chemist, b Johnsburg, N Y , grad Wesleyan Univ , 1865, Ph D Yale, 1869, and studied abroad From 1873 he taught at Wesleyan, founding there the first American agricultural experiment station, which he directed from 1875 until it was discontinued in 1877 In 1888 he became the first director of the Office of Experiment Stations, U S Dept of Agriculture, and in 1894 led the investigations in nutrition made by the Dept of Agriculture He was convertor of the Atwater-Rosa-Benedict respiration calorimeter, by which he demonstrated that the law of the conservation of energy is applicable to human metabolism

Atwater, city (pop 1,235), central Calif , NW of Fresno, in a farm area, inc 1922

Atwood, George, 1746–1807, English mathematician and physicist He was the inventor of Atwood's machine, a device for measuring the acceleration and velocity of falling bodies by mechanical means Besides a work on the motion of bodies, he published two on natural philosophy

Atwood, Wallace Walter, 1872–1949, American geographer and geologist, b Chicago, grad Univ of Chicago, 1897 (Ph D , 1903) He taught physiography at Chicago and at Harvard before he became (1920) president of Clark Univ , he retired in 1946 He founded (1925) and edited *Economic Geology* His books include *The Growth of Nations* (1936), *The United States in the Western World* (1944), and *The Rocky Mountains* (1945)

Atwood, city (pop 1,408), co seat of Rawlins co , NW Kansas, near the Nebr line, in a wheat and livestock area, founded 1878, inc. 1885

Atys see ATTIS

Au, chemical symbol of the element GOLD.

Aubanel, Théodore (tāôdôr' ōbänĕl'), 1829–86, French Provençal poet, with Frédéric MISTRAL a founder of the Felibrige He was the author of poems in *La Miougrano entre-duberto* [the split pomegranate] (1860) and *La Fiho d'Avignoun* [the young ladies of Avignon] (1885) and a play, *Lou Pan dóu pecat* [the bread of sin] (1878)

Aube (ōb), department (2,327 sq mi., pop 235,237), NE France, in CHAMPAGNE. It is named after a tributary of the Seine. Troyes is the capital

Auber, Daniel François Esprit (danyĕl' frāswa' ĕsprē' ōbĕr'), 1782–1871, French operatic composer His greatest successes resulted from his collaboration with the librettist Scribe Their first success together was *Le Maçon* (1825), and among the long succession which followed were *Fra Diavolo* (1830), *Le Domino noir* (1837), and *La Part du*

diable (1843), witty, tuneful, sophisticated works which were very popular in their time *La Muette de Portici* (1828, also known as *Masaniello*) was the model of the French grand opera of the 1830s

Aubert de Gaspé, Philippe: see GASPÉ, PHILIPPE AUBERT DE

Aubigné, Jean Henri Merle d': see MERLE D'AUBIGNÉ, JEAN HENRI.

Aubigné, Théodore Agrippa d' (tāôdôr' agrēpä' dôbēnyä'), 1552–1630, French poet and Huguenot soldier A devoted follower of Henry of Navarre (Henry IV) from 1568, he was later associated with Henri de Rohan in an abortive plot and fled France (1620), to live in Geneva His *Histoire universelle* (1616–18) is an account of the Huguenots from 1553 to 1602, his memoirs, which first appeared as *Histoire secrète* (1729), are also valuable His chief reputation rests on his monumental *Les Tragiques* (1616), which he composed largely in 1577–80 It is a partly satirical, partly epical poem of 9,300 lines, often eloquent and powerful

Aubigny, Robert Stuart or **Stewart, seigneur d'** (sānyûr' dôbēnyä'), d 1544, marshal of France Aubigny, a Scot, fought with distinction in the Italian Wars under Charles VIII and Francis I, notably at Marignano (1515) and Pavia (1525)

Aubrey, John, 1626–97, English antiquary At Oxford he met Anthony à Wood, whom he assisted with his *Athenae Oxonienses* Aubrey knew most of the celebrities of his period (which stretched from the reign of Charles I, through the Commonwealth, to the Restoration) and left copious memorandums as well as letters His *Lives of Eminent Men* was not published until 1813 It was republished as *Brief Lives*, edited by Anthony Powell (1949) and by Oliver Lawson Dick (1949) His *Miscellanies* appeared in 1696, *The Natural History and Antiquities of the County of Surrey* (5 vols, 1719) and *The Natural History of Wiltshire* (ed by John Britton, 1847) were not published in his lifetime See *Scandal and Credulities of John Aubrey* (ed by John Collier, 1931), biography by Anthony Powell (1948)

Aubry de Montdidier (ôbrē' du môdēdyā'), in French legend, a French courtier of Charles V, murdered near Montargis c 1371 by one Macaire The animosity of Aubry's dog toward Macaire was so great that the king ordered trial by combat between the dog and Macaire, armed with a cudgel The dog won, and Macaire confessed and was hanged It is thought that the circumstantial account of this event in medieval works was based on an older story, under this form it became celebrated in European literature

Auburn or **Lissoy,** village, Co Westmeath Ireland, NNE of Athlone It is the scene of Goldsmith's *Deserted Village*

Auburn 1 City (pop 4,652), E Ala, ENE of Montgomery, settled c 1836 ALABAMA POLYTECHNIC INSTITUTE is here **2** City (pop 4,013), co seat of Placer co, N central Calif, NE of Sacramento and on a fork of the American river settled 1848 after the discovery of gold, inc 1860 The city is a mountain resort in the Sacramento valley and the shipping center of an orchard and poultry region It has an airport The city is the seat of Placer Junior College (coeducational) The *Placer Herald* has been published in Auburn since 1852 Among the city's old buildings is the New Orleans Hotel, made famous by Bret Harte **3** City (pop 1,952), central Ill, SSW of Springfield, in a farm and coal area, inc 1865 **4** City (pop 5 415), co seat of De Kalb co, NE Ind, N of Fort Wayne, settled 1836 It is a trading center for farmers, and it manufactures machine parts The city has a large, well-planned residential section **5** City (pop 19,817), co seat of Androscoggin co, SW Maine, on the Androscoggin (here crossed by several bridges) opposite Lewiston, inc as a town 1842, as a city 1869 There was an Indian village at this site, white settlement began c 1786 Auburn was the first Maine city to adopt the city-manager plan (1917) Its great shoe industry dates from c 1835 Mt Apatite, 3 mi from Auburn, is a source of apatite **6** Town (pop 6,629), S central Mass, S of Worcester, settled 1714, inc 1837 Chains are among its products **7** City (pop 3,639), co seat of Nemaha co, SE Nebr, near the Missouri S of Nebraska City, in a fruitgrowing area Sheridan (founded 1868) and Calvert (founded 1881) united in 1882 as Auburn **8** City (pop 35,753), co seat of Cayuga co, W central N Y, in the Finger Lakes region, on the outlet of Owasco Lake and SW of Syracuse, settled 1793, inc 1848 Farm machinery, rope, shoes, and food products are made It is the seat of Auburn State Prison, in which Thomas Mott OSBORNE served a voluntary term The home and grave of William H Seward are here Seward's records and books are among the collections in the city's museum, which also has Indian relics **9** City (pop 4,211), W Wash, between Seattle and Tacoma, platted c 1887. It is a farm trading center and railroad junction

Auburndale, city (pop 2,723), central Fla, ENE of Tampa and NW of Lake Kissimmee, in a citrus-fruit area A citrus experiment station is near by

Aubusson, Pierre d' (pyĕr' dôbûsô'), 1423–1503, French soldier, a cardinal of the Roman Church, and grand master of the Knights Hospitalers (1476–1503) In 1480 he valiantly defended Rhodes against Sultan Mohammed II After the accession (1481) of Sultan BAJAZET II, Aubusson gave shelter to Djem, Bajazet's brother However, he soon sent Djem to France as a virtual prisoner and obtained a truce and a large annual pension from Bajazet in exchange for keeping Djem confined In 1489 Aubusson ceded his valuable hostage to Pope Innocent VIII, who made Aubusson a cardinal and granted new privileges to his order

Aubusson (ôbûsô'), town (pop 4,935), Creuse dept, central France Its famous tapestry and carpet manufactures, which date at least from the late 15th cent, have in recent times been revived Cardinal Aubusson was born here

Aucassin et Nicolette (ōkäsĕ' ā nēkôlĕt'), medieval French love story in prose and verse, composed probably in the 13th cent It is preserved in a manuscript which contains the music to which the verses were to be sung The simplicity of the story is its charm It has been often translated into English, notably by Edward Everett Hale, Andrew Lang, and Laurence Housman

Auch (ōsh), city (pop 11,489), capital of Gers dept, S France It has an important wine and brandy trade One of the principal cities of Roman Gaul, it became an archiepiscopal see in the 9th cent and was capital of ARMAGNAC and of GASCONY The cathedral (15th–16th cent) contains magnificent stained glass windows and woodwork

Auchinleck, Sir Claude John Eyre (ăr'ô"kĭnlĕk', ô"khĭn–), 1884–, British field marshal, educated at Wellington College A long army career led to command of the 1933 and 1935 operations based in the North-West Frontier Prov, India In the Second World War he commanded briefly at Narvik (1940), then in building defenses in England, and (1940–41), in India After succeeding (July, 1941) Gen Sir Archibald P Wavell in the Middle East command, he launched in Nov, 1941, a campaign into Libya and in June, 1942, was thrust back into Egypt In August he was removed, and in June, 1943, he once more became commander in chief in India He was made field marshal in 1946

Auchmuty, Sir Samuel (ôkmû'tē, ôk'–, ă'mŭtē), b 1758 (not, as commonly stated, 1756), d 1822, British general He was born in New York city and graduated from King's College (now Columbia Univ) in 1775 A Loyalist soldier in the American Revolution, he was commissioned in the British army and removed to England He served in India (1783–97) and in Egypt (1801–2), his success bringing him popularity and knighthood (1803) Commanding the British reinforcements to the Río de la Plata, he in 1807 captured Montevideo and served under John WHITELOCKE in the unsuccessful attack on Buenos Aires He became commander in chief at Madras (1810), captured Java from the Dutch (1811), and was commander in chief in Ireland for a short time in 1822 See Annette Townsend, *The Auchmuty Family of Scotland and America* (1932)

Auckland (ôk'lund), city (pop 123,457, metropolitan pop 263,370), on N North Island, New Zealand It is the chief port of the dominion Founded in 1841, it was formerly (1841–65) the capital of New Zealand Among the many fine buildings are Auckland University College, Anglican and Roman Catholic cathedrals, and the War Memorial Museum with its collection of Maori art Surrounding the city are many extinct volcanic cones, the highest of which is Mt Eden (644 ft) There are shipyards, ammunition plants, canneries, and a sugar refinery The chief exports are dairy products, hides, and timber The city is in an area known for its hot springs and health resorts

Auckland Islands, small uninhabited group, area 234 sq mi, S Pacific, 300 mi S of South Island, New Zealand, to which it belongs

Aude (ōd), department (2,449 sq mi, pop 268 889), SE France, in LANGUEDOC, at the foot of the Pyrenees Carcassonne, the capital, and Narbonne are the chief cities The Aude, a small river, reaches the sea E of Narbonne

Auden, Wystan Hugh (wĭs'tŭn hu' ô'dun), 1907–, Anglo-American poet, b York, England, educated at Oxford As the leader of a left-wing literary group known as the Auden Circle, he wrote with Christopher Isherwood, three verse plays, *The Dog beneath the Skin* (1935), *The Ascent of F 6* (1936), and *On the Frontier* (1938), as well as *Journey to a War* (1939), a record of their experiences in China He is co-author with Louis MacNeice of *Letters from Iceland* (1937) Other works of Auden, who is by many considered a successor of T S Eliot, include *The Double Man* (1941), *For the Time Being* (1944), *Collected Poetry* (1945), and *The Age of Anxiety* (1947), which won the 1948 Pulitzer Prize for poetry Lectures at the Univ of Virginia were the basis of essays in *The Enchafèd Flood, or, The Romantic Iconography of the Sea* (1950) In 1946 Auden became a citizen of the United States

Audenarde see OUDENARDE

audiencia (oudyän'syä), royal court in Spain and the Spanish Empire, having some administrative as well as judicial functions *Audiencias* appeared in Spain as early as 1274 and varied greatly in their forms and functions. By 1480 the common type was a tribunal of two chambers, one for civil jurisdiction, the other for criminal jurisdiction The regional *audiencias* established in the colonies were of great importance in the force they exerted against conquistadors, viceroys, and captains general The most important were viceregal *audiencias* The viceroys presided over these but could not interfere in juridical functions The *audiencia* came to exercise some executive and legislative power and, in a sense, was the core of Spanish colonial government

audio frequency see VIBRATION

audio-visual education see VISUAL EDUCATION

audiphone, instrument used to aid defective hearing in cases where the auditory nerve is not completely destroyed It consists of a sheet of hard rubber which is pressed against the upper teeth, the vibrations being conveyed through the teeth and bones of the head to the internal EAR

auditing, examination and statement of accounts and of vouchers and other documents connected with accounts by persons who have had no part in their preparation Systems of checking have long been used, especially in connection with public accounts In Italy the elaboration of commerce considerably increased the duties of an auditor in the late Middle Ages, but the auditing of business accounts did not become common until the 19th cent, when there were an increasing number of groups concerned with businesses which were continually growing in size and complexity Corporate charters usually came to be granted only on condition that licensed experts should conduct annual audits Such audits are particularly useful to the owners (partners or stockholders), executives (managers, officers, and directors), creditors or prospective creditors (investors, note brokers, commercial and investment bankers), and receivers, trustees, and creditors' committees of a business, as well as the vendors of its merchandise, the owners of patents and other recipients of profit shares or royalties, governmental regulatory bodies, and prospective donors to institutions An audit settles certain categories of questions It must determine whether all assets and liabilities shown are actual and are properly valued, incurred, and recorded A check must be made of the surplus, income, and capital-stock accounts, verified by the examination of the authorization for stock issues and by comparing the amount issued with the amount authorized Finally, auditing constitutes an independent check on the tendency to overstate assets and understate liabilities, satisfactorily made only by independent auditors The duties of auditors have been expanded into a comprehensive survey and analysis of the entire conduct of the financial and accounting branches of an enterprise Thus the auditor must add to his knowledge of ACCOUNTING a broad understanding of business and finance The accountant records the facts of a business, the auditor must determine whether or not such recording has been accurately and honestly done and then interpret and judge the facts, perhaps adding to his report recommendations for the future conduct of the business In many countries, auditors are now established as a separate profession, with government licenses See R H Montgomery, *Auditing Theory and Practice* (6th ed, 1940); W A Staub, *Auditing Developments during the Present Century* (1942), De W. C. Eggleston, *Auditing Procedure* (3d ed, 1947).

Audley of Walden, Thomas Audley, Baron, 1488–1544, lord chancellor of England (1533–44) under Henry VIII He was made lord keeper of the great seal in 1532 A loyal servitor of Henry VIII, he supported the divorce from Katharine of Aragon and as chancellor presided over the trials of Sir Thomas More and Bishop Fisher He continued subservient to the king in the prosecution of Anne Boleyn, Sir Thomas Cromwell, and other notables He was created baron in 1538

Audoux, Marguerite (märgurĕt' ōdōō'), d 1937, French novelist, a seamstress by trade Her unpretentious autobiographical novel, *Marie Claire* (1910, Eng tr, 1911), was widely read It was followed by *L'Atelier de Marie Claire* (1920, Eng tr, *Marie Claire's Workshop*, 1920)

Audran, Gerard (zhurar' ōdrā'), 1640–1703, French engraver, most important of a family of engravers He studied with his father, Claude Audran, and with his uncle, Charles Audran, and later with the painter Charles Le Brun The series of plates for Le Brun's *Battles of Alexander* is well known

Audubon, John James (ô'dŭbŏn), d 1851, American ornithologist He gave the place and date of his birth as near New Orleans in 1780, some scholars assert, however, that he was of illegitimate birth and was born at Aux Cayes, Haiti, in 1785 He was educated in France and in 1803 came to the Audubon estate, "Mill Grove," near Philadelphia, here he spent much time observing birds and making the first American bird-banding experiments In 1808 he married Lucy Bakewell, whose faith and support were factors in his eventual success Between 1808 and 1820 he lived mostly in Kentucky, in Henderson, frequently changing his occupation and neglecting his business to carry on

his bird observations He began painting portraits for a livelihood and descended the Mississippi to New Orleans, where for a time he taught drawing From 1823 to 1828 his wife conducted a private school, in which he taught for a short time, in West Feliciana parish, La In 1826 he went to Great Britain in search of a publisher and subscribers for his bird drawings, meeting with favorable response in Edinburgh and London *The Birds of America*, in elephant folio size was published in parts between 1827 and 1838, with engravings by Robert Havell, Jr The accompanying text, called the *Ornithological Biography* (5 vols., 1831–39), was prepared largely in Edinburgh in collaboration with William MacGillivray, who was responsible for its more scientific information Extracts from Audubon's contributions, edited in 1926 by F H Herrick as *Delineations of American Scenery and Character*, reveal his stylistic qualities and furnish many pictures of American frontier life Audubon worked on a smaller edition of his great work and also, in collaboration with John Bachman, began *The Viviparous Quadrupeds of North America*, which was completed by his sons Victor Gifford Audubon and John Woodhouse Audubon (plates, 30 parts, 1842–45, text, 3 vols, 1846–54) During these years his home was on the Hudson river in the northern part of Manhattan island While his drawings and paintings of bird life do not wholly satisfy the critical artist and the meticulous scientist, they represent a rare combination of artistic talent and scientific observation and remain one of the great achievements of American intellectual history His Manhattan home was purchased in 1932 for preservation as a shrine See his journal (1929) and letters (1930), both ed by Howard Corning, studies by F H Herrick (1917), E A Muschamp (1929), D C Peattie (1935), Constance Rourke (1936), A J Tyler (1937), and S C Arthur (1937) **Audubon societies** for the preservation and study of wildlife are organized in all parts of America and are united into an endowed National Association of Audubon Societies George Bird Grinnell founded the first Audubon Society *Bird Lore* is the official magazine of the association

Audubon, I City (pop 2,409), co seat of Audubon co, SW Iowa, NE of Atlantic, in a farm area, platted 1878 by the railroad, inc 1881 Canning is done here The city park has a wild-flower garden, a library, and a war memorial building **2** Borough (pop 8,906), SW N J , near Camden, inc 1905. A large cooperative housing project is here

Audubon societies: see AUDUBON, JOHN JAMES

Aue, Hartmann von see HARTMANN VON AUE

Auenbrugger, Leopold (lā'ōpōlt ou'unbrŏog"ur), 1722–1809, Viennese physician His findings on the use of percussion in diagnosing chest diseases were published in 1761 (Eng tr , *On Percussion of the Chest*, 1936) Although ignored for some 40 years, his method, revived by Jean Nicolas Corvisart, was ultimately generally adopted

Auer, Leopold (ou'ur), 1845–1930, Hungarian violinist and teacher, studied at the conservatories of Budapest and Vienna and with Joachim in Hanover He taught at the St Petersburg Conservatory, 1868–1917, succeeding Wieniawski In 1918 he came to the United States, where he taught at the Institute of Musical Art, New York, and the Curtis Institute of Music, Philadelphia He became an American citizen, 1926 He was tremendously successful as concert violinist, conductor, and teacher, numbering Mischa Elman, Heifetz, and Zimbalist among his pupils See his autobiography (1923)

Auerbach, Berthold (bĕrt'hōlt ou'urbäkh), 1812–82, German novelist, of Jewish origin He fought in the Revolution of 1848 and in the Franco-Prussian War By his *Schwarzwälder Dorfgeschichten* (1843, Eng tr , *Village Tales from the Black Forest*, 1846–47), somewhat stylised pictures of peasant life which were much imitated, he became the virtual founder of the peasant-story genre in German. *Diethelm von Buchenberg* (in *Schwarzwälder Dorfgeschichten*), *Das Frau Professorin* (1847, Eng tr., *The Professor's Wife*, 1850), and *Barfüssele* (1856, Eng. tr , *The Barefooted Maiden*, 1857), all *Novellen*, are considered typical Of his longer works, some of which are stories of Jewish life, the best known is *Auf der Höhe* (1865, Eng tr , *On the Heights*, 1867) A dramatization of *Das Frau Professorin* by Charlotte Pfeiffer held the stage for 50 years in Germany

Auerstedt (ou'ürshtĕt), village, central Germany, 15 mi NE of Weimar Here, on Oct 14, 1806, the French Marshal Davout defeated the Prussians under the duke of Brunswick; on the same day Napoleon I triumphed at Jena.

Augeas (ôjē'us), in Greek mythology, king who owned 3,000 oxen HERCULES was commanded to clean in one day his stables (the Augean Stables), which had not been cleaned for 30 years He did this by making the rivers Peneus and Alpheus flow through them

Auger: see DRILL

Augereau, Pierre François Charles (pyĕr' frēswä' shärl' ôshurō'), 1757–1816, marshal of France. He fought in the French Revolutionary and Napoleonic Wars and was a principal in the coup d'état of 18 FRUCTIDOR (1797) For his services in the Italian campaign Augereau was later created duke of Castiglione

Aughrim or **Aghrim** (ôg'rĭm, ôkh–), small town, Co Galway, Ireland It was the scene of a battle (July 12, 1691) in which the forces of William III under General van Ginkel won a decisive victory over those of James II under General St Ruth

Augier, Émile (Guillaume Victor Émile Augier) (gāyōm' vēktôr' amāl' ôshyā'), 1820–89, French dramatist and satirist His plays, pioneering in modern realism, exhibit the social foibles of his time from a strongly ethical point of view. His chief work, *Le Gendre de M. Poirier* (1854), was written with Jules Sandeau

Augsburg (ouks'bŏork), anc *Augusta Vindelicorum*, city (1939 pop 185,374, 1946 pop 160,055), capital of Swabia, W Bavaria, on the Lech It is the textile center of S Germany and has varied other industries Augsburg was a Roman colony founded by Augustus in 15 B C ; it became (6th cent) an episcopal see Created a free imperial city in 1276, it was a prominent member of the SWABIAN LEAGUE (1488–1534) The home of the FUGGER and WELSER families and the birthplace of Holbein and Burgkmair, it was one of Europe's most important commercial and banking centers in the 15th and 16th cent and a rallying point of German art and science Several important agreements were concluded here during the Reformation, the city remained predominantly Catholic It declined during the Thirty Years War Augsburg was rich in architectural beauty until the Second World War, when it was very heavily damaged by frequent bombings.

Augsburg, League of, defensive alliance formed (1686) by Emperor Leopold I with various German states, including Bavaria and the Palatinate, and with Sweden and Spain so far as their German interests were concerned It was an acknowledgment of a community of German feeling against French expansion The adherence of the Dutch Netherlands, England, and Savoy to this coalition resulted in the formation of the GRAND ALLIANCE (1689)

Augsburg, Peace of, 1555, temporary settlement within the Holy Roman Empire of the religious conflict arising from the REFORMATION Each prince was to determine whether Lutheranism or Roman Catholicism was to prevail in his lands (*cuius regio, eius religio*). Calvinists and other groups were ignored All church property held by abbots or bishops who changed their faith after 1552 was to be forfeited by them

Augsburg Confession see CREED

Augsburg Interim: see REFORMATION

Augur, Hezekiah, 1791–1858, American sculptor, self-taught Only after a business failure did he devote himself to his art His bust of Washington and *Jephtha and His Daughter* (Yale Art School) are among his best-known works

augurs see OMEN

August see MONTH

Augusta (ougŭ'stä), town (pop 17,716), E Sicily, Italy, a port and naval and air base on the Ionian Sea In 1676 it was the scene of a French naval victory over the Dutch Destroyed by the earthquake of 1693, it is now a modern city

Augusta (ôgŭs'tu, ûgŭs'–) 1 City (pop 2,235), co seat of Woodruff co , E central Ark., on the White River, settled 1846, inc. 1861 It has cotton gins and commercial fishing **2** City (pop 65,919), co seat of Richmond co , E Ga At the head of navigation on the Savannah and protected by levees, the city is a large cotton market and an important industrial center making cotton textiles, cottonseed products, brick and tile, lumber and processed farm products, chemicals, and fertilizer Augusta is also a winter resort, with a mild climate It was laid out by James Oglethorpe in 1735 as a trading post and named for the mother of George III, it was incorporated as a town in 1789, as a city in 1798 In the Revolutionary War, Augusta, after changing hands many times, was finally taken in 1781 by Continental forces under Andrew Pickens and Light-Horse Harry Lee It was capital of Georgia from 1785 to 1795 During the Civil War it was the site of the largest Confederate powder works. Points of interest include Paine College (Negro, Methodist, coeducational, 1883), the Univ of Georgia School of Medicine, a city junior college, Haines Institute (Negro), a U S arsenal (1819), the boyhood home of Woodrow Wilson, and numerous fine old houses of Georgian and classic revival design **3** City (pop. 3,821), SE Kansas, E of Wichita and on the Walnut, settled c 1868, inc 1871. Trading center for a rich farm region, it is also a distributing and refining point for oil fields **4** City (pop 1,701), N Ky , on the Ohio and SE of Cincinnati, founded 1792 The city, with a fine harbor, has in a tobacco and grain area It was the site of one of the first Methodist schools (c 1800) in the country **5** City (pop 19,360), state capital, and co seat of Kennebec co , SW Maine, on the Kennebec and NE of Portland Part of Hallowell before its incorporation as a town in 1797, it was made a city in 1849 Even before 1628, when the Plymouth Company established a trading post here, traders had visited this site, long known as Cushnoc. Fort Western was built in 1754 for protection against the Indians; Benedict Arnold's expedition to Quebec gathered at the fort in 1775. (The garrison house was restored as a museum in 1921.) The settlement about the fort developed with the shipping and shipbuilding on the Kennebec; a dam was built across the river in 1837, and manufacturing began Wood and paper products, shoes, and printing are important Fire destroyed most of the business section of Augusta in 1865. The domed capitol (1829), of Hallowell granite, was designed by Charles Bulfinch but has been considerably altered James G Blaine's home (early 19th cent) became the governor's mansion Augusta is the seat of a state hospital for the insane and of a U S arsenal and has an airport A soldiers' home is near by **6** City (pop 1,519), W central Wis , SE of Eau Claire, inc 1885

Augustana College (ô"gŭstān'ŭ), at Sioux Falls, S Dak , Lutheran, coeducational, opened 1860 as a seminary in Chicago, chartered 1865 It followed Norwegian pioneers westward, with various names and sites before it absorbed the Lutheran Normal School in Sioux Falls in 1918 In 1869 a Swedish section split off and became **Augustana College and Theological Seminary**, at Rock Island, Ill., since 1875 (mainly coeducational), it has a music school with a noted choir.

Augustenburg, Christian Augustus, Herzog von: see SCHLESWIG-HOLSTEIN

Augustine, Saint (ô'gŭstĭn, –tēn, ôgŭ'stĭn), Latin *Aurelius Augustinus*, 354–430, Doctor of the Church, one of the four Latin fathers, bishop of Hippo, b Tagaste (c 40 mi S of Hippo) His mother, St Monica, was a great influence in his life She brought him up as a Christian, but he gave up his religion when he went to school at Carthage There he became adept in rhetoric In his *Confessions* he repents bitterly of his life in Carthage Some time in his youth he became a convert to Manichaeism After 376 he went to Rome, where he taught rhetoric with success, in 384, at the urging of the Manichaeans, he went to Milan to teach His years at Milan were the critical period of his life Already mistrustful of Manichaeism, he came to renounce it after a deep study of Platonism and skepticism Augustine, troubled in spirit, was greatly drawn by the eloquent fervor of St AMBROSE, bishop of Milan After two years of great doubt and mental disquietude Augustine suddenly decided to embrace Christianity, and he was baptized on Easter, 387 Soon afterwards he returned to Tagaste, where he lived a monastic life with a group of friends In 391, while he was visiting in Hippo, he was chosen, against his will, to be priest of the Christians there For the rest of his life he remained in Hippo, where he became auxiliary bishop in 395 and bishop soon after He died in the course of the siege of Hippo by the Vandals St Augustine's influence on Christianity is thought by many to be second only to that of St Paul, and theologians, Roman Catholic and Protestant, look upon him as the founder of theology His *Confessions* is considered a classic of Christian mysticism This work (c 400), the prime source for St Augustine's life, is a beautifully written apology for the Christian convert Next to it his best-known work is the *City of God* (after 412)—Augustine's view of society and its transformation by Christian ends into a new order It is an apology for Christianity, written when the fall of Rome was attributed to that religion His greatest purely dogmatic work is *On the Trinity*, a systematization of Christian doctrine, but much of his theological teaching comes from his polemical writings His works against the Manichaeans, especially *Against Faustus* (his Manichaean teacher), are important for the light they throw on the religion they denounce and for the picture they present of the author's flight from dualistic materialism into Platonism, then into Christianity Against DONATISM, St Augustine directed two works, *On Baptism* and *On the Correction of the Donatists*, in which he formulated the idea, since then become part of Roman Catholicism, that the Church's authority is the guarantee of the Christian faith, her own guarantee being the APOSTOLIC SUCCESSION The most spectacular controversy in which St. Augustine was involved was his battle against PELAGIANISM The Pelagians denied original sin and the fall of man The implication of this, that God's grace was unnecessary for the first step toward salvation, aroused Augustine, who held that man was corrupt and helpless He wrote many treatises in this controversy and continued to elaborate his ideas afterwards From his writings the great controversies on grace proceed, and as professed followers of Augustine, Calvin and the Jansenists developed their predestinarian theologies Though revering Augustine, many theologians have refused to follow him in his more extreme statements on grace Another of St Augustine's important treatises, *On the Work of Monks*, has been much used by monastics. He also composed works on biblical exegesis One of his most interesting treatises is called *Retractions*, composed late in life, a kind of review of his works, in which he revised some of his views.

He was a master of style. His letters are numerous and revealing His feast is Aug. 28 His most important works are available in translation.

Augustine of Canterbury, Saint, d. c 605, Italian missionary, called the Apostle of the English, first archbishop of Canterbury (from 601) A Roman Benedictine monk, he was sent, at the head of some 40 monks, to England by Pope St. GREGORY I Arriving in 597, they were well received by King ÆTHELBERT, who gave them land at Canterbury St Augustine brought many books with him from Rome, inaugurating the love of learning which was to characterize Anglo-Saxon England. His mission, introducing the more widespread Roman ways, was resented by Celtic monks of the British Isles, whose austerities were more severe and who kept a different date of EASTER The differences were settled at the Synod of Whitby, when England abandoned Celtic practices Feast May 28 or 26 (in England) See Bede's *Ecclesiastical History;* H. H. Howorth, *Saint Augustine of Canterbury* (1913)

Augustinians, religious orders in the Roman Catholic Church The name is derived from the so-called Rule of St Augustine, an old, rather generalized, and flexible monastic rule The canons regular are often called Augustinian, or Austin, canons because they use the rule, two famous canons who used modifications of the rule in establishing new orders were St Norbert, founder of the Premonstratensians, and St Dominic The Austin friars are an entirely different group of religious, dating from the 13th cent., their life and motive were those of mendicants devoted to the apostolate in the world They have been at times very numerous and influential Luther was one of them. In the 20th cent there were three orders of Austin friars, the Augustinian Hermits (the most numerous, especially in the United States), the Recollects of St Augustine, and the Discalced Augustinian Hermits There are congregations of women corresponding to both canons and friars

Augustus (ôgŭ'stŭs, ŭ–), 63 B.C.–A.D. 14, first Roman emperor, a grandson of the sister of Julius CAESAR Named at first Caius Octavius, he became on adoption by the Julian *gens* (44 B.C.) Caius Julius Caesar Octavianus (Octavian), Augustus was a title of honor granted by the senate He lost his father when he was a boy, and his stepfather brought him up When Octavius was in his teens Caesar took a great interest in him and in his education and made Octavius his heir without the youth's knowledge Octavius was in Illyricum when Caesar was killed, and he set out promptly for Italy, at Brundisium (Brindisi) the army hailed him as its leader, but Octavius preferred to enter Rome unostentatiously Before he reached the city, he heard that he had been adopted into the Julian gens and was Caesar's heir At Rome ANTONY was in control, and Octavian was considered by Cicero and the senate as a leader against him Antony went north to take Gaul and was defeated at Modena and forced to flee (43–42 B.C.) Octavian, now dominant in Rome, secured the consulship and made an alliance with Antony and LEPIDUS as the Second Triumvirate Proscriptions having disposed of the enemies of the triumvirate, Octavian and Antony went east and defeated the army of BRUTUS and CASSIUS at Philippi (42 B.C.) Octavian now attacked Sextus POMPEIUS, who was master of the Mediterranean, and M. Vipsanius AGRIPPA drove Pompeius (36 B.C.) from the sea Meanwhile, at Rome, Octavian had been consolidating his power, avoiding carefully any seeming desire for any kind of royal honor and contenting himself with a consulship The growing disgust of Rome at Antony was helpful to Octavian, who had himself appointed general against Antony (31 B.C.) After the battle of ACTIUM, which Agrippa won over Antony and Cleopatra, Octavian was master of all Roman territories (30 B.C.) He set about at once to reform the city and the provinces He purged the senate of unworthy members and added new members, restored and built temples, and fostered a revival of Roman tradition Augustus had no court, and he considered himself, publicly at least, not the ruler, but the first citizen, of the republic The senate delighted to honor him in 29 B.C. he was made *imperator* [Latin,=commander; from it is derived *emperor*], in 28 B.C. *princeps* [leader; from it is derived *prince*], in 27 B.C. *augustus* [august, reverend], in 12 B.C. *pontifex maximus* [high priest], and a month (Sextilis) was renamed Augustus (August) in his honor His reforms were as prudent as far-reaching He divided the provinces into two classes—senatorial, ruled by a proconsul chosen by the senate with a term of one year, and imperial, in charge of a governor solely responsible to Augustus with an indefinite term. To man the provinces Augustus spread the army throughout the empire This was a boon to Italy, which had been cursed with a huge standing army for nearly a century Augustus desired no more conquest, and his consequent policy was to hold the borders set by Caesar. He probably wanted to make a buffer state of Germany between the Rhine and the Weser (or the Elbe), for otherwise it is hard to understand the occupation that led to the defeat of VARUS by ARMINIUS—the only real reverse Augustus ever suffered. Augustus fostered colonization throughout the empire, and he seems to have studied the plans of Caesar in this matter very carefully Taxation he made more equitable, and he had general censuses taken Knowing that the roads were the arteries of the empire, he lavished expenditures on them and regulated the post with much care Augustus is said to have remarked that he found Rome of brick and left it of marble, a saying at least partly true, for he built a new forum, beautified the streets, reformed the housing, and set up adequate police and fire protection He was munificent to arts and letters, and he was a close friend of MAECENAS and a patron of VERGIL, OVID, LIVY, and HORACE This is, indeed, called the Augustan Age of Roman art and letters Perhaps Augustus' greatest achievement was his establishment of the Pax Romana [Roman peace] This world peace may certainly be said to have made possible the civilization of the Roman Empire Augustus was succeeded by his stepson TIBERIUS For bibliography, see *Roman Empire* under ROME See also J. B. Firth, *Augustus Caesar* (1925); Mason Hammond, *The Augustan Principate* (1933), John Buchan, *Augustus* (1937)

Augustus II (Augustus the Strong), 1670–1733, king of Poland (1697–1733) and, as Frederick Augustus I, elector of Saxony (1694–1733) He commanded the imperial army against the Turks (1695–96) but without success, and he was replaced by Prince Eugene of Savoy as soon as he competed for the Polish throne, left vacant by the death of John III (John Sobieski) His physical prowess was equaled only by his lack of principle By dint of becoming a Catholic and of granting the Polish nobility unprecedented privileges he was elected king. With the help of PATKUL, Augustus allied himself (1699) with Emperor PETER I of Russia and FREDERICK IV of Denmark for an attack on young CHARLES XII of Sweden. In the resulting conflict (see NORTHERN WAR) Augustus invaded Livonia with his Saxon troops but was defeated by Charles XII at Klissow (1702) The Treaty of Altranstädt (1706) forced him to renounce the Polish crown in favor of STANISLAUS I and to give up his alliance with Russia After Charles's defeat by the Russians at Poltava (1709), Augustus revived the alliance, recovered Poland (1710), and was recognized by Sweden (1719) In Poland, where he kept a Saxon force, Augustus was highly unpopular His desire to secure the Polish throne for his son and successor in Saxony, Augustus III, was balked for some time after his death by the accession of Stanislaus I Among Augustus's many mistresses was Maria Aurora KÖNIGSMARK, and her son, Maurice de Saxe, was one among his innumerable illegitimate offspring A patron of the arts, Augustus greatly embellished DRESDEN and created the MEISSEN china manufactures

Augustus III, 1696–1763, king of Poland (1736–63) and, as Frederick Augustus II, elector of Saxony (1733–63), son of Augustus II, whom he succeeded in Saxony Claiming Poland, he allied himself with Empress Anna of Russia and Emperor CHARLES VI in the War of the POLISH SUCCESSION (1733–35), drove STANISLAUS I from Poland, and thus secured the throne In the War of the AUSTRIAN SUCCESSION (1740–48) Augustus opposed Maria Theresa because of his claims as a son-in-law of Emperor Joseph I, but he changed sides in 1742. When the SEVEN YEARS WAR broke out (1756), Augustus fled to Poland; he returned to Dresden only after the war was over (1763) Like his father, Augustus was a patron of the arts His indolence and sensuality kept him from business of state, which he left to his ministers, notably to Count BRÜHL

auk (ôk), member of the family of swimming and diving birds of the N Atlantic and Pacific which includes the guillemots and puffins Their legs are set far back on their bodies, making them clumsy on land, where they seldom go except to nest The flightless great auks or garefowl, the largest species, about the size of a goose, black above and grayish white below, were formerly abundant in the N Atlantic They were exterminated (c 1844) by being slaughtered in their breeding grounds for their flesh, feathers, and oil The least auklet (about 6½ in.), common in the Bering Sea region, is the smallest of the family, and the razor-billed auk (16–18 in.) is the largest surviving member The Eskimo capture the dovekie or little auk for food and make their feathered skins into clothing.

Aulander (ôlăn'dẽr), town (pop. 1,057), NE N.C., NE of Rocky Mount, in a farm area.

Aulard, Alphonse (älfôs' ôlär'), 1849–1928, French historian. He is an authority on the French Revolution, to the study of which he devoted his whole life. A professor at the Univ. of Paris, he founded the Société de l'Histoire de la Révolution and the monthly review, the *Révolution française* The first to study the French Revolution with a thoroughly scientific method, Aulard opposed the conclusions of Taine as prejudiced, nevertheless, he himself clearly represented the republican, bourgeois, and anticlerical concept of the Revolution, which he transmitted to his best-known disciple, Albert MATHIEZ. His works include *Études et leçons sur la Révolution française* (9 vols., 1893–1924), *Histoire politique de la Révolution française* (1901; Eng. tr., 4 vols., 1910), *Les Grands Orateurs de la Révolution Mirabeau, Vergniaud, Danton, Robespierre* (1914), and *La Révolution française et le régime féodal* (1919)

Aulie-Ata, Kazakh SSR: see DZHAMBUL

Aulis (ô'lĭs), small port of ancient Greece, in Boeotia From here the Greek fleet set out against Troy after the sacrifice of IPHIGENIA

Aulnoy, Marie Catherine Le Jumel de Barneville de la Motte, baronne d' (märē' katurēn' lu shümēl' du bärnvēl' dù là môt bürôn' dônwä'), b. 1650 or 1651, d. 1705, French writer Her chief work was a collection of fairy tales (1st ed., 1697), drawn from various sources, they have been translated often into English, as in *D'Aulnoy's Fairy Tales* (1923) and *The White Cat and Other Old French Fairy Tales* (1928) Her memoirs of life in England and Spain are largely fictitious

Aulus Gellius see GELLIUS, AULUS

Aungerville, Richard. see RICHARD DE BURY

Aunis (ônēs'), small region and former province, W France, on the Atlantic coast N of the Charente It is now a part of Charente-Maritime dept., including the islands of RÉ and OLÉRON A port of AQUITAINE, it was incorporated (1371) into the French crown lands Its chief cities, La ROCHELLE and ROCHEFORT, were important in later history

aura (ô'ru) emanation, usually invisible, enveloping the body or substance from which it radiates In spiritualism it is the mysterious light enveloping a spirit manifestation To theosophists the aura is a manifestation of the complex influences which together make up the body and the higher self or permanent ego, and it is apparent to those qualified to see it

Aurangabad (ourŭng"gäbäd'), town (pop. 50,924), NW Hyderabad state, India It was founded in 1610, and nearby is the great mausoleum (1711) of Aurangzeb's empress It is a center of trade in cotton and wheat

Aurangzeb (ôr'ŭngzĕb") or **Aurangzib** (–zĭb"), 1618–1707, Mogul emperor (1658–1707), youngest of the four sons of SHAH JEHAN After defeating his brothers in battle and imprisoning his father for life, he ascended the throne at Delhi with the reign title Alamgir A scholarly, austere man, he was intensely devoted to righteous government and to the Mohammedan religion Despite great popular dissatisfaction he rigorously suppressed Hinduism His costly conquests, especially in the Deccan, brought the empire to its greatest extent but so weakened it that after his death it fell apart His name also appears Aurungzebe, Aurungzeb, and Aureng-Zebe See Sir Jadunath Sarkar, *History of Aurangzib* (5 vols., 1912–24)

Auray (ôrā'), town (pop. 8,038), Morbihan dept., NW France, in Brittany, c 11 mi. W of Vannes About 4 mi to the north is the famous Basilica of Sainte-Anne-d'Auray (see ANNE, SAINT), built in Renaissance style in the 19th cent The yearly pilgrimage to the shrine takes place on July 26 and dates back to the 17th cent., when St. Anne appeared to Yves Nicolazic, a peasant. The town has many medieval houses Near Auray took place (1364) the decisive battle of the War of the BRETON SUCCESSION On the Champ des Martyrs, also near Auray, 800 royalists, who had landed at QUIBERON, were massacred (1795)

Aurelian (Lucius Domitius Aurelianus) (ôrē'lēŭn), c 212–275, Roman emperor (270–75) Rising in the ranks, he became consul under Valerian He succeeded CLAUDIUS II, whose victory over the Goths was the opening wedge for the territorial rehabilitation of the empire He conceded Dacia to the Goths, but consolidated the provinces within the Danube and held the barbarians beyond the Rhine. His most brilliant exploits were in the East, whither he went to reckon with Egypt, Mesopotamia, and Palmyra The last, ruled by ZENOBIA, gave him the most trouble, but he captured her and destroyed PALMYRA Aurelian went to Gaul, where he received the submission of the independent "emperor," Tetricus Aurelian was murdered, but before he died he had regained Britain, Gaul, Spain, Egypt, Syria, and Mesopotamia, and he had removed for a while the barbarian threat to the eastern provinces. He fortified Rome with a wall some 12 mi. in circumference, averaging more than 40 ft. in height Much of it still remains. TACITUS succeeded him.

Aurelius, Marcus: see MARCUS AURELIUS

aureole, in art, see NIMBUS.

aureole, in physics, luminous circle which under certain conditions surrounds the sun or other bright light It sometimes occurs as a series of concentric circles Color, more or less distinct, appears in this phenomenon, which is caused by aqueous vapor or dust particles in the atmosphere The colors result from REFRACTION of the light waves (see LIGHT).

Aureomycin: see ANTIBIOTIC SUBSTANCES.

Auriesville, unincorporated village, E central N.Y., near Amsterdam. It is the site of the Roman Catholic Shrine of Our Lady of Martyrs, commemorating St. Isaac Jogues and seven other martyrs, called the Jesuit Martyrs of North America. They were killed by the Iroquois.

Aurignac (ôrēnyäk'), village, S France, at the foot of the Pyrenees and SW of Toulouse Its caves contain relics of prehistoric man of the Aurignacian period (see PALEOLITHIC PERIOD).

Aurigny, Channel Islands see ALDERNEY

Aurillac (ôrēyäk'), town (pop 18,957), capital of Cantal dept, SE central France, in Auvergne There are many picturesque old houses, especially along the Jordanne river Pope Sylvester II was born here

Auriol, Vincent (vĕsäN' ôryôl'), 1884–, French Socialist statesman, president of the French republic (1947–) A deputy after 1914, he was finance minister under Léon Blum in the first Popular Front government (1936–37) and minister of justice in the succeeding Chautemps cabinet (1937–38) He escaped from France in 1943, joined Gen Charles de Gaulle, was a member of the provisional government (1945), and was elected president of the national assembly (1946) and of the republic (1947)

aurochs (ôr'ŏks), originally the name for the now extinct wild ox or urus of Europe (*Bos primigenus*), a large blackish-brown animal believed to be the ancestor of European domestic cattle It is mentioned in the writings of Julius Caesar The clearing of forests and hunting resulted in its extermination A cow believed to be the last survivor died in 1627 in the Jaktorowka Forest in W Poland The European BISON is often called aurochs

Aurora (urô'ru, ôrô'-) in Roman religion, goddess of dawn, identified with the Greek Eos A famous painting of Aurora and her train by GUIDO RENI is at Rome in the Rospighosi Palace

Aurora (ùrô'rù, ôrô'-), town (pop 2,726) S Ont, N of Toronto It has a residential school for boys and various small industries

Aurora. **1** Residential city (pop 3,437), N central Colo, in the Denver metropolitan area, inc 1903 Near by is a large army hospital **2** City (pop 47,170), NE Ill, W of Chicago and on the Fox river, settled 1834, inc 1837 It has large railroad shops and a variety of manufactures including iron and steel products, fabric goods typewriter supplies, and road-making machinery It was one of the first towns to use electricity for street lighting (1881) Aurora College (Advent Christian, coeducational, 1893) is here **3** City (pop 4,828), SE Ind, on the Ohio and W of Cincinnati, laid out 1819 Its products include furniture and coffins A flood inundated the city in 1937 Elmer Davis was born here **4** Iron-mining village (pop 1,528), NE Minn, E of Virginia and at the eastern edge of the Mesabi iron range, inc 1903 **5** City (pop 4 056), SW Mo, SW of Springfield in the Ozarks, laid out 1870 It is a trade center, whose small industries include flour and feed mills and a shoe factory Lead and zinc mines are in the region **6** City (pop 2,419), SE Nebr, W of Lincoln, in a grain and livestock area, founded 1872, inc 1877 **7** Village (pop 372), W central N Y, on Cayuga Lake, settled 1783, inc 1837 Wells College (for women, 1868) is here **8** City (pop 228) NW Oregon, near Salem, settled 1855 It was founded as a Christian communistic colony by a group of followers of William KEIL

Aurora, Tuamotu Islands see MAKATEA

aurora borealis (bôˌrēā'lĭs -ā'lĭs) [Latin, =northern dawn] and **aurora australis** (ôstrā'lĭs) [southern], luminous display seen in various forms and colors and believed to result from collisions of streams of charged particles from the sun with the gases of the earth's upper atmosphere The aurora borealis of the Northern Hemisphere is often called the northern lights, and the aurora australis of the Southern Hemisphere is known as the southern lights Each is visible over an area centering around the geomagnetic pole of its own hemisphere The aurora borealis is said to occur with greatest frequency along a line extending through N Norway, across central Hudson Bay, through Point Barrow Alaska, and through N Siberia It is often visible in Canada and the N United States and is seen most frequently at the time of the equinoxes Auroral displays appear in shades of red, yellow, green, blue, and violet and are usually brightest in their most northern latitudes The aurora is seen in a variety of forms, e g, as patches of light, in the form of streamers, arcs, banks, rays, or resembling hanging draperies A rare form is the corona which appears close to the zenith Measurements of the height of the aurora are made by calculations from studies of photographs taken simultaneously at a known distance of some miles apart It has been found that the aurora may extend 600 mi into the upper atmosphere, none has been found to be less than 35 mi from the earth Spectrographic analysis shows that most of the light of the aurora comes from oxygen and nitrogen, which therefore must comprise much of the upper atmosphere, excitation of these gases produces the various colors of the aurora The occurrence of the aurora has been found to coincide with periods of greatest sunspot activity and with magnetic storms (disturbances of the ionosphere which interfere with long-distance radio communication) Studies of the aurora are useful in making possible the prediction of magnetic storms and in determining the composition of the upper atmosphere.

Aurungzebe: see AURANGZEB.

Au Sable (ôsä'bùl), river, c 80 mi long, rising in several branches which unite in Crawford co, N Mich The combined stream flows S and E to Lake Huron, N of the mouth of Saginaw Bay Moving with swift current through a once heavily forested region, the river was important for log driving

Ausable (ôsä'bùl), river of NE New York formed at Au Sable Forks village by the junction of its East Branch (c 30 mi long) and its West Branch (c 25 mi long), both rising in the Adirondacks and flowing generally northeast The united stream flows c 20 mi northeast to enter Lake Champlain S of Plattsburg A stone-arch bridge (1842) crosses the river at Keeseville Above Keeseville is **Ausable Chasm** (c 1 5 mi long, 20–50 ft wide, and 100–200 ft deep), where the river plunges in waterfalls and rapids past curious rock formations.

Auschwitz, Poland see OSWIECIM

auscultation, one of the aids in diagnosis of disease It consists of listening to sounds produced in the body—either by application of the examiner's ear to the body surface or by means of the stethoscope The trained ear can distinguish abnormal sounds which are the result of abnormal physical states of the tissues and organs Auscultation is especially useful in examining the heart and lungs, but is also used for the abdomen

Ausonius (Decimus Magnus Ausonius) (ôsō'nēŭs, dĕs'ĭmŭs), c 310–c 395, Latin poet and man of letters, b Bordeaux He tutored Gratian, who, when he ascended the throne, made Ausonius prefect of Gaul, Italy, and Africa, and finally consul (379) When Gratian died, Ausonius returned to Bordeaux His numerous poetical writings are competent academic exercises in versification, but not inspired or inspiring poetry His work gives us a good picture of contemporary people and places *Mosella*, a description of his journey on the Moselle river, contains his best verse Among his other works are *Parentalia*, verse sketches of dead relatives, and *Ordo nobilium urbium*, a description of the leading cities of Europe He was at least vaguely Christian in religion

Aussig, Czechoslovakia see ÚSTÍ NAD LABEM

Aust-Agder (oust"-ag'dur), county (3,610 sq mi, pop 74, 861), SE Norway, formerly called Nedenes It comprises the SETESDAL There are nickel and iron mines Arendal is the county seat

Austell (ôstĕl'), industrial city (pop 1,229), NW Ga, just W of Atlanta, inc as a town 1885, as a city 1929

Austen, Jane, 1775–1817, English novelist The daughter of a clergyman, she spent the first 25 years of her life at "Steventon," her father's Hampshire vicarage Here her first novels, *Pride and Prejudice*, *Sense and Sensibility*, and *Northanger Abbey*, were written, although they were not published until much later She was one of a large and affectionate family, and her writing was carried on in odd moments in the common living room On her father's retirement in 1801, the family lived in Bath for several years and then in Southampton, settling finally at Chawton Cottage, near Alton, Hampshire, which was Jane's home for the rest of her life *Northanger Abbey*, a satire on romances of the school of Mrs Radcliffe, was sold for £10 in 1803, but as it was not published, was bought back by members of the family and did not appear in print until after its author's death The novels published in Miss Austen's lifetime were *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), and *Emma* (1816) *Persuasion* was issued in 1818 with *Northanger Abbey* The author's name did not appear on any of her title pages, and although her own friends knew of her authorship, she received little public recognition in her lifetime Her writing was done for her own pleasure and was subjected to the most careful polishing She was quite aware of her special excellences and limitations, comparing herself to a miniaturist In her own field of social comedy on a small stage she has never been surpassed, and such characters as Miss Bates, Mrs Bennet, and Mr Collins have delighted many generations of readers Admirers usually give first place either to *Emma* or to *Pride and Prejudice* See various editions of her letters, memoir by her nephew, J E Austen-Leigh (1870), R B Johnson, *Jane Austen* (1930), May Lascelles, *Jane Austen and Her Art* (1939), Sheila Kaye-Smith and G B Stern, *Speaking of Jane Austen* (1944)

Austerlitz (ô'stŭrlĭts, Ger ou'-), Czech *Slavkov u Brna* (slăf'kôf ōō bŭr'nô), town (pop 4,451), Moravia, Czechoslovakia, 10 mi E of Brno Here, in the "battle of the three emperors," Napoleon I defeated (Dec 2, 1805) the Russian and Austrian armies under Tsar Alexander I and Emperor Francis II The battle, fought on the first anniversary of Napoleon's coronation, was his most brilliant victory The "sun of Austerlitz" (it was a cloudless day) became synonymous with the peak of Napoleon's fortunes An armistice with Austria, concluded (Dec 4) at Nikolsburg, was followed by the Treaty of PRESSBURG Russia continued the war, but had to withdraw all troops from Austria A famous description of the battle is in Tolstoy's *War and Peace.*

Austin, Alfred, 1835–1913, English author. He was an editor (1883–95) of the *National Review*, and in 1896 succeeded Tennyson as poet laureate His most popular work, however, is prose, *A Garden That I Love* (1894, 1907), a miscellany in diary form See his autobiography (1911)

Austin, Jane Goodwin, 1831–94, American author, b Worcester, Mass A student of early New England history, she contributed stories of that period to the *Atlantic Monthly* and other magazines and wrote several novels Her "Pilgrim Books" for young people include *Standish of Standish* (1889) and *Betty Alden* (1891)

Austin, John, 1790–1859, English jurist The lectures which he delivered while he was (1826–32) professor of jurisprudence at the Univ of London were published (with additional material) as *The Province of Jurisprudence Determined* (1832) and *Lectures on Jurisprudence* (1869, 5th ed, 1911) These books presented an analysis of the principles underlying all legal systems and were not confined to an exposition of the rules of English law Austin argued that law was the expression of the will of the sovereign authority and was not to be confused with the dictates of religion and ethics Austin's work—in part stemming from that of Jeremy BENTHAM—had a strong influence on many later legal theorists, including John Stuart MILL His wife, Sarah Taylor Austin, was known as a translator Their daughter was Lucie, Lady Duff-Gordon See Jethro Brown, ed, *The Austinian Theory of Law* (1906)

Austin, Mary (Hunter), 1868–1934, American author, b Carlinville, Ill, grad Blackburn College, 1888 Her sympathetic interpretations of Indian and Spanish cultures in America were the outgrowth of her long residence in California and in Santa Fe, N Mex, and her conviction that an important culture is arising there Her works include *The Land of Little Rain* (1903), the play *The Arrow-Maker* (1911), a chapter on aboriginal literature in *The Cambridge History of American Literature*, a study of American poetry, *The American Rhythm* (1923), and *The Children Sing in the Far West* (1928) See the autobiographical *Earth Horizon* (1932), biography by H M Doyle (1939), study by T M Pearce, *The Beloved House* (1940)

Austin, Moses, 1761–1821, American pioneer, b Durham, Conn After developing lead mines in SW Virginia, he went (1796–97) to inspect prospects in Missouri, then Spanish territory In 1798 he moved to Potosi, Mo, which he founded, and was a miner and trader there Hard times caused him to go to Texas in 1820 and get the Spanish governor's permission to settle 300 families in Texas The grant was confirmed in 1821, but Moses Austin died before he could take out a colony. His son, Stephen F Austin, took up the plans

Austin, Stephen Fuller, 1793–1836, American leader of colonization in Texas, b Wythe co, Va, son of Moses Austin He grew up in Missouri, studied at Transylvania Univ in Kentucky, served (1814–20) in the Missouri territorial legislature, and was studying law in New Orleans when his father died Stephen took up the plans to colonize Texas and on a journey there (1821) selected the area between the Brazos and Colorado rivers He later went to Mexico city to have his grant cleared and confirmed by the newly independent Mexican government Austin's settlements, with the town of San Felipe de Austin and Brazoria, prospered Other American colonists poured in As friction developed over the years with the Mexican government, Austin opposed illegal efforts at Texan independence He was sent in 1833 to Mexico city to present the settlers' grievances, to ask that Texas be separated from Coahuila, and to get the Mexican immigration law modified He was accused of treason and imprisoned On his return to Texas in 1835 he opposed the government of SANTA ANNA and so forwarded the Texas Revolution He was sent as one of the commissioners (1835–36) of the provisional government to obtain aid in the United States, was defeated (1836) by Sam Houston for the presidency of Texas, and served briefly until his death as secretary of state See E C Barker, ed, *The Austin Papers, 1765–1837* (1924–28), biography by Barker (1925)

Austin, Warren Robinson, 1877–, U S representative at the United Nations (1946–), b Highgate, Vt, grad Univ of Vermont (Ph B, 1899) Admitted (1902) to the bar, Austin practiced law (1902–31) and also was state's attorney (1904–6) of Franklin co, Vt, and mayor (1909) of St Albans, Vt Serving (1931–46) as Senator from Vermont, he advocated a bipartisan U S foreign policy In the United Nations, amidst diplomatic conflict he ably presented his country's viewpoint before the UN Security Council

Austin. **1** City (pop 18,307), co seat of Mower co, SE Minn, on the Cedar near the Iowa line, settled 1853, platted 1856, inc 1870 The industrial and commercial center of a rich farming region, it has a meat-packing plant and railroad shops A junior college (coeducational) is here Horace Austin State Park (50 acres) is close by. **2** Borough (pop 1,050), N central Pa, SW of Coudersport, inc 1888. It is owned by a paper mill. A flood

occurred in 1911 when the Austin Dam gave way. **3** City (1940 pop 87,930; 1947 estimated pop. 112,000), state capital, and co. seat of Travis co., S central Texas, on the Colorado Laid out in 1838 as Waterloo, it was selected in 1839 as site of the capital and renamed to honor Stephen F Austin by the legislature of the Texas republic Fear of Mexicans and Indians drove the government officials out from 1842 to 1845, but Austin remained the nominal capital, became the temporary head of the state government when Texas was annexed to the United States in 1845, and was finally made permanent capital in 1870 It was for decades a small commercial city dependent on the capitol, the Univ of Texas (see TEXAS, UNIVERSITY OF), and other state and educational institutions, but after the 1920s and especially with the development of power and flood-control projects on the COLORADO river and with the urgencies of the Second World War, it boomed to considerable industrial activity It produces brick, tile, and pottery, food products, metalwork and machinery, and various other goods The massive capitol (completed 1885) is the most prominent of the many state buildings, which besides government buildings include a state mental hospital and schools for the blind, for the deaf, and for the Negro deaf, dumb, and blind Besides the university, Austin has St Edward's Univ, Austin Presbyterian Theological Seminary, Lutheran Concordia College, and two Negro colleges—Samuel Huston College and Tillotson College The hilly streets have many points of interest, including the house where O Henry lived (now a museum), the studio of Elisabeth Ney (also a museum), and the old French embassy, dating from the republic In the hills outside the city are many spots for recreation and enjoyment of the scenery, particularly Barton Springs

Austin canons · see AUGUSTINIANS

Australasia (ôstrulā'zhu, -shu), islands of the S Pacific, including Australia New Zealand, New Guinea, and adjacent islands The term is sometimes used to include all Oceania

Australia [Gr, =eastern], island continent between the Indian and Pacific oceans and SE of Asia Its greatest extent from east to west is some 2,400 mi and its greatest extent from north to south is nearly 2,000 mi, but the extremely irregular coasts keep it from seeming a square With the island state of TASMANIA in the south, the continent makes up the Commonwealth of Australia, a British dominion (2,974,581 sq mi, pop 7,580,820, excluding aboriginals) There are five continental states (QUEENSLAND, NEW SOUTH WALES, VICTORIA, SOUTH AUSTRALIA, and WESTERN AUSTRALIA) as well as the NORTHERN TERRITORY and the AUSTRALIAN CAPITAL TERRITORY (cut out of New South Wales, with CANBERRA, the federal capital) Australia also has jurisdiction of the Territory of Papua (see PAPUA, TERRITORY OF), NORFOLK ISLAND, and the AUSTRALIAN ANTARCTIC TERRITORY The Territory of New Guinea (see NEW GUINEA, TERRITORY OF) is governed by Australia under United Nations trusteeship, and NAURU, also under United Nations trusteeship, is governed jointly by Australia, the United Kingdom, and New Zealand The continent itself (the smallest continent or the largest island of the world, according to definition) is nearly as large as the continental United States It is on the whole excessively dry, supposedly because there are no mountains in the interior to precipitate rainfall Up from the narrow coast in the west the land rises abruptly in what from the sea seem to be mountain ranges but are actually the escarpment of a rough plateau that occupies approximately the western half of Australia It is from 1,000 to 2,000 ft high and has no permanent rivers or lakes In the southwest corner of Western Australia there is a fertile area, but the rest of the state is arid and valuable chiefly for its gold mines To the north the Timor Sea separates Australia from Indonesia The Territory of Northern Australia also fronts on the Timor Sea in the northwest and also belongs to the arid plateau, with tropical temperatures Its northernmost section, Arnhem Land (principally given over to reservations for aborigines), faces the Arafura Sea in the north and the huge Gulf of Carpentaria on the east On the eastern side of the gulf is the long spit of land called Cape York Peninsula, the northernmost section of Queensland, this, far from being dry, is wet jungle land. In the extreme east of Australia, hugging the coast, are the mountains of the Great Dividing Range, which runs down the whole east and then parallels the southeast coast, through Queensland, New South Wales, and Victoria It rises to Mt Kosciusko (7,305 ft) in the section called the Australian Alps, and it is a watershed The rivers on the eastern and southern slopes run to the Coral Sea and the Tasman Sea through narrow but rich coastal plains The rivers on the west flow either N to the Gulf of Carpentaria or W and SW to the Indian Ocean The longest of all Australian river systems, that of the MURRAY river and its tributaries the DARLING and the Murrumbidgee (with the Lachlan), drain the southern part of the interior basin that lies between the mountains and the great plateau The basin is not well supplied with water, but in the Great Artesian Basin of S Queensland wells can be sunk to obtain water for sheep ranching, and the rivers can be used for irrigation The Hume Dam in the Murray on the New South Wales–Victoria border creates a reservoir that irrigates a large agricultural area Most of the good farming areas and the good ports are in the east and particularly the southeast (except for the area about Perth in SW Western Australia) Victoria is the smallest but by far the most densely populated of the continental states Its capital, Melbourne, is surpassed in size only by Sydney, the capital of New South Wales, while Brisbane, the capital of Queensland (in the extreme southeast of the state), and Adelaide, the capital of South Australia, are also large Stock raising and grain production have long been staple occupations of Australia, and there are many vineyards Tropical and subtropical produce—citrus fruits, sugar cane, tobacco, and tropical fruits (mostly from the northeast)—are also important, and there is considerable dairying, some lumbering is done in the east and the southeast Besides the gold fields of Western Australia there are coal mines in New South Wales Gold and coal are also found elsewhere, as well as lead, silver, zinc, and tin Industries have developed in the large cities, and the Murray, besides being used for irrigation, is also a source of hydroelectric power Australia, remote from any other continent, has many distinctive forms of plant life, notably species of giant eucalyptus, and of animal life, including the kangaroo, the flying opossum, the wallaby, the wombat, the platypus, the spiny anteater, and many unusual birds Foreign animals when introduced have frequently done well Rabbits, brought into the land in 1788, have done entirely too well, multiplying until by the middle of the 19th cent they were a distinct menace to sheep raising In 1907 a fence 1,000 mi long was built from the north coast to the south to prevent the rabbits from invading Western Australia When Europeans first reached Australia, they found two general groups of natives speaking unrelated languages and having completely different customs—those in the north resembling the Western Papuans and those in the south supposedly related to the Dravidians of India The material culture of both groups was low, and they did not offer much opposition to white settlement Today they are some 75,000 in number and are concentrated on reservations in the northern, torrid area of the continent White settlement was slow in coming It seems probable that Australia was first sighted by a Portuguese, Manuel Godhino de Eredia, in 1601 and may have been sighted by a Spaniard, Luis Vaez de Torres (1605-6) In the century following it was visited by the Dutch, who named it New Holland In 1688 the British William Dampier landed at King Sound on the northwest coast Nearly a century later Capt James Cook reached Botany Bay in 1770 and sailed N to Cape York, claiming the coast for Great Britain Not long afterward, in 1788, the first British settlement was made—a penal colony on the shores of Port Jackson where Sydney now stands By 1829 the whole continent was a British dependency Exploration, begun before the first settlement was founded, was continued by such men as Sir Matthew Flinders (1798), Ludwig Leichhardt (lost with all his party in 1848), and John McDouall Stuart (first to cross the continent, 1862) Sheep raising was introduced early, and before the middle of the 19th cent wheat had become important enough to prompt the races of the "grain ships" taking their precious cargo half way around the world to England A gold strike in Victoria in 1851 brought a rush to that region and caused it to be separated from New South Wales With minerals, sheep, and grain forming the base of the economy, Australia developed The colonial administration was shifted, but confederation did not come until a constitution drafted in 1891 was approved by the British Parliament and was put in operation in 1901, by it the colonies of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania were federated. The Northern Territory was transferred to the federation in 1911 In that same year territory was acquired from New South Wales for building a new capital, Canberra, Parliament began meeting there in 1927 The executive power is vested in a governor-general (representing the British sovereign) and a cabinet presided over by a prime minister representing the party or a coalition given a majority in popular elections The parliament consists of two houses The distribution of federal and state powers is roughly like that of the United States, attempts to increase the power of the federal government at the expense of the state were frustrated by a referendum in 1944 From its early years, however, the federal government has been noted for its liberal legislation—woman suffrage was adopted in 1902; old-age pensions were provided in 1909, invalid pensions in 1910, maternity allowance in 1912, a subsidy to parents for each child born after the first (1941), and unemployment and sickness benefits in 1944 Education is not a federal concern, but is left to the states The systems established are generally effective, and the literacy rate is high Government grants have aided in the establishment of state universities—the Univ of Sydney (1852), the Univ of Melbourne (1854), the Univ of Adelaide (1874), and the Univ of Queensland (in Brisbane, 1909) The railroad systems in the growing land are also owned by the separate states and there is no uniformity A railroad crosses the continent from east to west, but a projected line from north to south has never been finished Air service is greatly aiding the communications system Australia had compulsory military service until 1929, and Australians were notable in service in the First World War They also were in arms in great numbers in the Second World War, Australia declared war on Germany on Sept 3, 1939, and compulsory service was reinstated in Oct, 1939, war was declared on Japan on Dec 9, 1941 The continent seemed in imminent danger of attack by the Japanese early in 1942, but the threat was averted by Allied victory in the battle of the Coral Sea Australia was admitted as a member of the United Nations and took an active part in UN affairs, Herbert V Evatt gaining considerable note See Sydney Upton, *Australia's Empty Spaces* (1938), S M Wadham and G L Wood, *Land Utilization in Australia* (1939); E J B Foxcroft, *Australian Native Policy* (1941), C H Grattan, *Introducing Australia* (1942), Griffith Taylor, *Australia* (1943) Australian Institute of International Affairs, *Australia and the Pacific* (1944)

Australian Alps, chain of mountain ranges, SE Australia, comprising the southern part of the Great Dividing Range and forming the watershed between the Murray river system and streams flowing into the Tasman Sea Its Mt Kosciusko (7,305 ft) is the highest peak in Australia

Australian Antarctic Territory, comprising the islands and territory (except Adélie Land) between long 45° E and 160° E and below lat 60° S Australian sovereignty was officially claimed in 1933

Australian bear see KOALA

Australian Capital Territory (911 sq mi, pop 16,905) SE Australia, within the state of New South Wales and containing Canberra, capital of the Commonwealth of Australia This area, formerly known as Yass-Canberra, was surrendered by New South Wales to the commonwealth in 1911 and was called the Federal Capital Territory until 1938 A part of the JERVIS BAY area was ceded in 1915 by New South Wales to the commonwealth

Australian literature Australian writing in the early 19th cent was a colonial offshoot of English literature The work of such early poets as M M Robinson, Judge Barron Field, Charles Tompson, Lionel Michael, and W C Wentworth (author of *Australasia an Ode*, 1823)] is minor and imitative English poetry Literature of and about Australia and of some consequence can be said to have begun with the nature poetry of Charles Harpur (1817–68) and the novels of Henry Kingsley (brother of Charles Kingsley), especially his *Geoffrey Hamlyn* (1859), and those of Catharine Helen Spence Henry Clarence KENDALL and Adam Lindsay GORDON discovered the beauty of the bush in their poems, and the lesser-known scholar James Brunton Stephens wrote an unusual poem, "Convict Once" The bush ballad, begun by Gordon, flowered in the work of John Farrell (1851-1904) and of A B ("Banjo") Paterson, whose *Man from Snowy River and Other Verses* (1895) is famous and whose song *Waltzing Matilda* was popular in the Second World War Edward Dyson and Henry Lawson both wrote more realistic ballads than Paterson and both wrote short stories, Lawson's *While the Billy Boils* (1896) includes some of the best tales of Australia A classic Australian novel is that by Marcus CLARKE, *For the Term of His Natural Life* (1874) Less powerful, but true to life in the bush, are the novels of Thomas A BROWNE (pseud. Rolf Boldrewood) Other popular older novelists are the poet Mrs G F Cross, whose maiden name was Ada Cambridge (*A Marriage Ceremony*, 1894), Mrs Campbell Praed (*Longleat of Kooralbyn*, 1887), and the diarist-novelist Joseph Furphy (pseud Tom Collins, *Such Is Life*, 1903). In the 20th cent the stature of Australian novelists increases with the work of Katharine Susannah Prichard (*Working Bullocks*, 1926) and of the master craftsman, Henry Handel RICHARDSON Of varying quality are the novels of Martin Boyd, M L Skinner (collaborator with D H Lawrence in *The Boy in the Bush*, 1924), F D Davison, Brian Penton, Miles Franklin, Eleanor Dark, Christina Stead, and the two women who write under the name M Barnard Eldershaw There is no outstanding Australian poet, although among many who are competent may be mentioned C J Brennan, Hugh R McCrae, J P McAuley, Kenneth Slessor, Douglas Stewart, R. D Fitzgerald, and Vance Palmer See H M Green, *An Outline of Australian Literature* (1930) and *Modern Australian Poetry* (1946), an anthology, descriptive bibliography of Australian authors to 1938 by E M Miller (1940), Walter Murdock, ed, *A Book of Australa-*

sian Verse (1924), George Mackaness, ed , *Poets of Australia* (1946); two anthologies of selections from Australian novels ed. by Colin Roderick (1945, 1947)

Austral Islands· see TUBUAI ISLANDS

Austrasia (ôstrā'shŭ), eastern portion of the MEROVINGIAN kingdom of the FRANKS in the 6th, 7th, and 8th cent , comprising, in general, parts of E France, W Germany, and the Netherlands, with its capital at Metz It took its origin from the partition (511) of the realm of CLOVIS I among his sons Austrasia was constantly troubled by dynastic rivalries between its rulers and those of the neighboring kingdom of NEUSTRIA These struggles reached their climax in the fierce fights between Queen BRUNHILDA of Austrasia and Queen FREDEGUNDE of Neustria During the reigns of CLOTAIRE I, CLOTAIRE II, and DAGOBERT I, Austrasia was temporarily reunited with Neustria With the decline of the royal power in Austrasia, the office of mayor of the palace developed into the real seat of power and finally became hereditary in the family of the CAROLINGIANS See F Funck-Brentano, *Earliest Times* (Vol I of *National History of France*)

Austria, Ger *Österreich* (ŭs'tŭrīkh), federal republic (32,375 sq mi , pop 6,818,593), central Europe It is bounded by Yugoslavia and Italy in the south, by Switzerland and Liechtenstein in the west, by Bavaria and Czechoslovakia in the north, and by Hungary in the east Its nine provinces (Ger *Bundesländer*) are VORARLBERG, TYROL, SALZBURG, CARINTHIA, STYRIA, UPPER AUSTRIA, LOWER AUSTRIA, BURGENLAND, and the capital, VIENNA The Alps traverse Austria from west to east in three main ranges and occupy three fourths of the country, the rest is hilly The highest peak of the Austrian Alps is the Grossglockner (12,460 ft) in the HOHE TAUERN group The scenic beauty of Tyrol, Salzburg, and the SALZKAMMERGUT has made Austria one of the chief tourist centers in Europe Austria is drained by the DANUBE and its tributaries the Inn, Enns, Mürs, and Mur Forestry, cattle raising, and dairying are the main sources of livelihood in the Alpine provinces, Vorarlberg also has an ancient textile industry In Upper and Lower Austria and in Burgenland agriculture and winegrowing predominate Self-sufficient only in beet sugar and potatoes, Austria depends on food imports Manufacturing is centered around the metalworking and machinery industries, most of the raw materials (iron, magnesium, copper, lead, and zinc) being mined in the country Other mineral resources include salt mines in Tyrol, Salzburg, and Upper Austria, and oil fields at Zistersdorf The chemical industry expanded after the Second World War More than half of the industries are concentrated in the Vienna basin, LINZ, STEYR, GRAZ, and LEOBEN are the other chief industrial centers Vienna is the seat of the federal government In the bicameral parliament the *Bundesländer*, which also have their own provincial assemblies, are represented by the upper house Austrians are predominantly Roman Catholic and, except for a small Slovene minority in S Carinthia, German speaking Educational standards are high Austria has three universities, at Vienna, Graz, and Innsbruck The word *Austria* in the past 10 centuries has designated various geographic and political concepts In its narrowest sense Austria meant only Upper and Lower Austria, including Vienna, in its widest meaning the word symbolized the imperial Hapsburg power, its present meaning—German-speaking Austria—dates only from 1918 This article is focused on the history of German-speaking Austria Other aspects are treated under HOLY ROMAN EMPIRE, HAPSBURG, AUSTRO-HUNGARIAN MONARCHY, HUNGARY; BOHEMIA, and NETHERLANDS, AUSTRIAN AND SPANISH The history of Austria reflects its position at the crossroads of Europe Vienna is at the gate of the Danubian plain, and the BRENNER PASS links Germany and Italy From the earliest times Austria has been a thoroughfare, a battleground, and an outpost It was occupied by Celts when the Romans conquered it (15 B C—A.D.10) and divided it among the provinces of RHAETIA, NORICUM, and Upper PANNONIA After the 5th cent A D , Huns, Ostrogoths, Lombards, and Bavarians overran and devastated the provinces In 788 Charlemagne conquered the area and set up the first Austrian (i e , Eastern) March in present Upper and Lower Austria to halt the inroads of the Avars It soon fell to the Moravians and later to the Magyars, from whom it was reconquered (955) by Emperor OTTO I Otto reconstituted the march and attached it to BAVARIA, but in 976 Otto II bestowed it as a separate fief on Leopold of BABENBERG, founder of the first Austrian dynasty. Emperor Frederick I raised (1156) Austria to a duchy, and in 1192 Styria also passed under Babenberg rule After the death of the last Babenberg, King OTTOCAR II of Bohemia acquired (1251–69) Austria, Styria, Carinthia, and CARNIOLA Fearing his power, the German princes elected (1272) the relatively obscure Rudolf of Hapsburg as German king Rudolf I asserted his royal prerogative to reclaim the four duchies from Ottocar (1276) and, after defending them (1278) against Ottocar's attack, incorporated them in his domains With this event both Austria and the house of Hapsburg made their entrance on the European stage After the murder (1308) of Rudolf's son, ALBERT I, the German princes balked at electing another member of the ambitious family. However, Albert's ducal successors did not waste their time They enlarged the Hapsburg holdings, which were ruled by the various branches of the family, by acquiring Tyrol (1363) and Trieste (1382) and extended their influence over the ecclesiastic states of Salzburg, TRENT, and Brixen (see BRESSANONE), which, however, remained independent until 1801–3 Marriage and inheritance were their preferred methods of aggrandizement. Marriage brought ALBERT II to the position of being elected German king in 1438 After his election the rulers of the Holy Roman Empire were chosen from the Hapsburg dynasty Despite their vast dynastic and imperialistic preoccupations, the emperors never ceased to consider German Austria the privileged core of their dominions FREDERICK III raised (1453) Austria to an archduchy During his long reign originated several of the factors that determined later Austrian history These were the protracted wars caused by Hapsburg rivalry with France, the Turkish menace, which reached its peak in the second siege of Vienna (1683), the lasting union (1526), under the same crown, of Austria, Bohemia, and Hungary (see FERDINAND I, emperor), and the Catholic REFORM, which gave the Jesuits and the ultramontane party characteristic influence over most phases of Austrian life The Austrian peasantry, especially in Tyrol, had gained some advantages in the Peasants' War of 1524–26, however, because of its Protestant leanings, it was severely repressed in the following two centuries The commercial revolution of the 16th cent harmed Austria by diminishing the importance of its trade routes and of the ancient gold and silver mines of Tyrol and Carinthia The THIRTY YEARS WAR (1618–48) broke Hapsburg supremacy in Germany and drained Austria of man power and funds The Holy Roman Empire afterwards continued a mere shadow existence, while the Hapsburg lands emerged as a distinct empire Bohemia and Moravia, defeated by the Austrians at the White Mt (1620), became virtually Austrian provinces and were subjected to Germanization But the growing Hapsburg absolutism was felt by the Austrians no less than by the Czechs Police regulations prescribed even the food and the clothes that each class of subjects was permitted to eat and to wear Censorship and obscurantism flourished Emperor CHARLES VI (1711–40), whose dynastic wars had drained the state, secured the succession to the Hapsburg lands for his daughter, MARIA THERESA, by means of the PRAGMATIC SANCTION Maria Theresa's struggle with FREDERICK II of Prussia in the War of the AUSTRIAN SUCCESSION and the SEVEN YEARS WAR opened a new phase in German history Except for the loss of Silesia, Maria Theresa held her own Her husband, FRANCIS I, became emperor in 1745, but his position was largely ornamental The major event of Maria Theresa's later reign was the first partition of Poland (1772 see POLAND, PARTITIONS OF), in that transaction and in the third partition (1795) Austria renewed its eastward expansion JOSEPH II, who succeeded her, impetuously carried forward the reforms which his mother had cautiously begun His unsuccessful attempt to centralize and Germanize his scattered and disparate dominions met active popular resistance, his project to consolidate his state by exchanging the Austrian Netherlands for Bavaria was balked by Frederick II The purest representative of "benevolent despotism" and the ENLIGHTENMENT, Joseph also decreed a series of revolutionary agrarian, fiscal, and judicial reforms They provoked such opposition, especially among the clergy and the landowners, that his successor, LEOPOLD II, had to resound the larger part In Joseph's reign the Austrian bourgeoisie emerged from its long intellectual torpor Music and architecture flourished in 18th-century Austria, and modern Austrian literature emerged early in the 19th cent In the reign of FRANCIS II, Austria was drawn (1792) into war with revolutionary France (see FRENCH REVOLUTIONARY WARS) and with NAPOLEON I The treaties of CAMPO FORMIO (1797) and Lunéville (1801) preluded the dissolution (1806) of the Holy Roman Empire, and in 1804 Francis II took the style "Francis I, emperor of Austria " His rout at Austerlitz (1805) led to the severe Treaty of Pressburg (see PRESSBURG, TREATY OF) An upsurge of nationalism resulted in the renewal of warfare in 1809, the defeat at Wagram preceded the even more humiliating Peace of SCHÖNBRUNN Austria was forced to take part in the Russian campaign of 1812 as Napoleon's ally, but in 1813 it again joined the coalition against Napoleon, an Austrian, Prince Karl Philipp von Schwarzenberg, headed the Allied forces The Congress of Vienna (1814–15, see VIENNA, CONGRESS OF) did not restore to Austria its former possessions in the Netherlands and in Baden but awarded it Lombardy, Venetia, Istria, and Dalmatia As the leading power both of the GERMAN CONFEDERATION and the HOLY ALLIANCE, Austria under the ministry of METTERNICH dominated European politics Extreme reaction and ruthless coercion characterised the age The European Revolution of 1848 shook the Hapsburg empire but was destined to failure there because of the conflicting nationalist aspirations that set the revolutionary movements of Germans, Slavs, Hungarians, and Italians against each other Revolts were at first successful throughout the empire (see HUNGARY, BOHEMIA, GALICIA; RISORGIMENTO), in Vienna the revolutionists drove out Metternich (March, 1848) Emperor FERDINAND at first granted a liberal constitution, which a parliament, convened in Vienna, was to revise After a new outbreak Vienna was retaken and the revolutionists were punished by troops under General WINDISCHGRÄTZ The parliament was transferred to Kremsier, Prince Felix zu SCHWARZENBERG became premier, and Ferdinand abdicated in favor of FRANCIS JOSEPH Absolutism returned The Kremsier parliament was dissolved, the provinces reduced to order, and Austrian leadership in Germany reasserted at the Convention of OLMÜTZ in 1850 Alexander BACH intensified (1852–59) Schwarsenberg's centralizing policy, thus heightening racial tension within the empire However, economic prosperity was promoted by the suppression of internal tariff barriers, and several reforms dating from 1848 were upheld, notably the complete abolition of feudal dues The military and political weakness of the empire was demonstrated by the Austrian loss of Lombardy in the Italian War of 1859 The moment was ripe for Prussia to strike a blow at its rival After involving Austria in the war over SCHLESWIG-HOLSTEIN in 1864, BISMARCK found an easy pretext for attacking and crushing Austria in 1866 (see AUSTRO-PRUSSIAN WAR) After the disaster of Sadowa, Austria was expelled from the German Confederation and moreover lost Venetia to Italy A reorientation toward the east and a reorganization of the government became inevitable, and in 1867 a compromise (Ger *Ausgleich*) established a dual state, the AUSTRO-HUNGARIAN MONARCHY. Constitutional government returned, but failure to provide a satisfactory status for the Slavs and the disastrous part of Austria in bringing about the First WORLD WAR caused the collapse of the monarchy in 1918, two years after Francis Joseph's death His successor, CHARLES I, abdicated, on Nov 12, after a peaceful revolution staged by the Socialist and Pan-German parties, German Austria was proclaimed a republic and a part of Greater Germany The Treaty of SAINT-GERMAIN (1919) fixed the present Austrian borders and forbade (as did the Treaty of Versailles) any kind of political or economic union with Germany This left Austria a small country of some 6,000,000 inhabitants, of which one third lived in a single large city that had been geared to be the financial and industrial hub of a large state The Dual Monarchy had been virtually self-sufficient economically, its component parts had complemented each other ideally The breakup and the consequent erection of tariff walls deprived Austria of raw materials, food, and markets Reorientation toward Germany was balked by the insistence of France, Italy, and Czechoslovakia on the treaty clauses against union (Ger *Anschluss*) with Germany In the immediate post-war period starvation and influenza exacted a heavy toll, especially in Vienna These ills were followed by currency inflation, ended only in 1924 by League of Nations aid, by chronic unemployment, by financial scandals and crises, and by growing political unrest "Red" Vienna, under the moderate Socialist government of Karl SEITZ, became increasingly opposed to the "Black" (i e , clericalist) rural population, which won the elections of 1921 The cabinet of Karl RENNER was succeeded by Christian Socialist and Pan-German coalitions under SCHOBER, SEIPEL, and other men Riots culminated in 1927 in severe outbreaks in Vienna, and two private militias—the *Heimwehr* of the monarchist leader E R von STAHREMBERG and the *Schutzbund* of the Socialists—threatened the authority of the state NATIONAL SOCIALISM, feeding on anti-Semitism, gained rapidly and soon absorbed the Pan-German party Engelbert DOLLFUSS, who became chancellor in 1932, though irreconcilably opposed to *Anschluss* and to National Socialism, increasingly tended toward corporative FASCISM and relied heavily on Italian support. His stern suppression of the Socialists precipitated a serious revolt (1934), which was bloodily suppressed by the army. Soon afterward a totalitarian state was set up, and both the Social Democratic and the National Socialist parties were outlawed. In July, 1934, the National Socialists assassinated Dollfuss but failed to seize the government. Kurt SCHUSCHNIGG continued his predecessor's policy, but he lost his strongest foreign support when Mussolini allied himself with Hitler (1936) German pressure on Austria increased, the National Socialists became a legal party again, and in 1938 were included in the cabinet Schuschnigg's last-minute attempt to prevent *Anschluss* by taking a plebiscite brought an ultimatum from

Germany Austria yielded and in March, 1938, was occupied by German troops. First governed by SEYSS-INQUART, it was fully incorporated into Germany in 1940 In 1943 the Allies agreed to re-establish an independent Austria at the end of the Second World War. Early in 1945 Austria was conquered by Russian and American troops, and in April a provisional government was set up under Karl Renner. The country was divided into five zones of military occupation—Vorarlberg and Tyrol (French zone), Salzburg and W Upper Austria (American zone), E Upper Austria, Lower Austria, and Burgenland (Russian zone), Carinthia and Styria (British zone), and Vienna, with a special regime In Jan , 1946, Austria was formally recognized by the Western powers An independent government was set up under a coalition cabinet, but a peace treaty with Austria had failed to materialise by the spring of 1950, largely because of dissension between the Western powers and Russia as to what constituted German-owned assets, which Russia claimed as reparations payments. Austrian economy had been shattered by the war, its recovery was blocked by the deterioration of trade between Western and Eastern Europe and by continued division into separate occupation zones See Louis Léger, *History of Austria-Hungary* (6th French ed , 1920, 1st English ed , 1907), Richard Kralik, *Österreichische Geschichte* (1913); W C Langsam, *The Napoleonic Wars and German Nationalism in Austria* (1930), K W Rothschild, *Austria's Economic Development Between the Two Wars* (1947); C A Gulick, *Austria from Habsburg to Hitler* (1948)

Austrian literature see GERMAN LITERATURE

Austrian Succession, War of the, 1740–48, general European war that broke out when, on the strength of the PRAGMATIC SANCTION, the archduchess MARIA THERESA succeeded her father, Emperor Charles VI, as ruler of the Hapsburg lands The elector of Bavaria (later Emperor CHARLES VII) advanced counterclaims to the succession while PHILIP V of Spain and AUGUSTUS III of Poland and Saxony advanced weak claims of their own FREDERICK II of Prussia, who on still shakier grounds claimed part of SILESIA, began the war by invading and rapidly occupying that province His cynical offer of support to Maria Theresa if she would cede Silesia was rejected Victorious at Mollwitz (1741), Frederick obtained the alliance of France, Spain, Bavaria, and Saxony The elector of Bavaria, who was promised the imperial election, advanced on Vienna In Oct , 1741, however, Prussia agreed to a truce in exchange for Lower Silesia This armistice, though soon broken by Frederick, caused the Bavarians to attack Bohemia instead of Vienna Joined by the French and Saxons, they took Prague (Nov , 1741) Meanwhile Maria Theresa had obtained full support from the Hungarian diet and the promise of aid from England, which had been at war with Spain since 1739 (see JENKINS'S EAR, WAR OF) Early in 1742 Austrian troops overran Bavaria and invested Prague and in July, Maria Theresa made peace with Prussia by ceding most of Silesia (Treaty of Berlin) Saxony also made peace and joined Austria as an ally in 1743 The epic retreat from Prague of the French under Marshal BELLE-ISLE (winter 1742-43) was followed by the victory of GEORGE II over the French at Dettingen (1743) In 1744 Frederick II started the Second Silesian War by invading Bohemia, but he was soon expelled by Austrian and Saxon forces On the death (1745) of Emperor Charles VII, Bavaria, once more overrun by Austrian troops, was forced out of the war These Austrian successes were balanced by the great French victory of Fontenoy (1745), where Maurice de SAXE defeated the British Anxious for peace, George II concluded (1745) the Convention of Hanover with Frederick II, who promised to support the imperial candidacy of Maria Theresa's husband (shortly afterward elected as Francis I) in return for the cession of Silesia guaranteed by Europe Defeated at Hohenfriedberg and at Kesselsdorf, Maria Theresa accepted the compromise in the Treaty of Dresden with Prussia (Dec , 1745) The war continued in N Italy, in the Low Countries, in North America (see FRENCH AND INDIAN WARS), and in India. The chief belligerents (Austria, England, Holland, and Sardinia on the one side, France and Spain on the other) grew weary of the war Although Maria Theresa secured (1748) the alliance of Russia, the other nations were bent on peace, and late in 1748 the Treaty of AIX-LA-CHAPELLE (see AIX-LA-CHAPELLE, TREATY OF, 2) was signed The only real beneficiary was Prussia, which emerged, much enlarged in territory, as a major European power

Austro-Hungarian Monarchy or **Dual Monarchy,** the Hapsburg empire from the constitutional compromise (Ger. *Ausgleich*) of 1867 between AUSTRIA and HUNGARY until its fall in 1918 The expulsion of Austria from the German Confederation after the Austro-Prussian War of 1866 caused Emperor FRANCIS JOSEPH to reorient his policy toward the east and to consolidate his heterogeneous empire. The agitation in Hungary for national independence necessitated a number of concessions if the Austrian and Hungarian crowns were to remain united in one person The *Ausgleich*, which was worked out by Count BEUST, Count ANDRASSY, and Francis DEAK, divided the Hapsburg empire into two states Cisleithania (the land W of the Leitha river) comprised Austria proper, Bohemia, Moravia, Austrian Silesia, and Austrian Poland; it was to be ruled by the Hapsburg monarchs in their capacity as emperors of Austria Transleithania included Hungary, Transylvania, Croatia, Slovenia, and part of the Dalmatian coast, it was to be ruled by the Hapsburg monarchs in their capacity as kings of Hungary CROATIA was given a special status Austria-Hungary was the greatest recent example of a multinational state in Europe, however, of the four chief ethnical groups (Germans, Hungarians, Slavs, and Italians) only the first two received full partnership The crown of Bohemia was conspicuously ignored Both Cisleithania and Transleithania elected independent parliaments to deliberate on internal affairs and had independent ministries A common cabinet, composed of three ministers, dealt with foreign relations, defense, and the finances of the whole empire It was responsible to the emperor-king and to the delegations of 60 members each, chosen by the two parliaments The regular armed forces were under unified command and currency was uniform throughout the empire, but there were separate customs regimes The strength of the Dual Monarchy lay in its vastness, its virtual economic self-sufficiency, its opportunities for commercial intercourse from the Swiss border to the Carpathians Its weakness was less in its ethnical diversity than in the unequal treatment accorded to its minorities in the spirit of the maxim, "Divide and rule " Of the Slavic elements the Czechs and Serbs were the most disaffected The efforts of the TAAFFE ministry to satisfy Czech demands failed The Italian minority was won to the Italian nationalist cause (see IRREDENTISM) The Rumanians of Transylvania had bitter grievances against their Hungarian masters Nationalist movements gained steadily throughout the empire, enlarged their demands from cultural autonomy to full independence, and ultimately broke up the monarchy These movements existed not only in the oppressed provinces, but also among Hungarian extremists, who desired total independence, and among Austrian Pan-Germans, who advocated the union of German-speaking Austria with Germany. The greatest danger to the monarchy probably was PAN-SLAVISM, spreading from Serbia and encouraged by Russia among the South Slavs Archduke FRANCIS FERDINAND, heir to the throne, apparently had a project by which Croatia was to become the nucleus of a third, South Slavic, partner in the monarchy, his assassination (1914) at Sarajevo cut short this hope and precipitated the First World War In external policy, Austria-Hungary early became reconciled with Germany and joined the THREE EMPERORS' LEAGUE At the Congress of Berlin (1878, see BERLIN, CONGRESS OF) Count Andrassy, the foreign minister, commenced an aggressive policy of eastward expansion (*Drang nach Osten*), notably by securing a mandate over BOSNIA AND HERCEGOVINA In 1879 he entered an alliance with Germany, joined also by Italy in 1882 (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) The formation of the Triple Entente (France, England, Russia) to oppose this alliance led to the tense diplomatic situation that preceded the First WORLD WAR The foreign policy of AEHRENTHAL led to the Bosnian crisis of 1908–9, and the reckless demands which his successor, BERCHTOLD, made on Serbia after the assassination of Francis Ferdinand helped to precipitate the cataclysm The internal weakness of the empire became immediately obvious. Czech regiments deserted wholesale from the beginning, Italy and Rumania, eying their respective minorities in Austria and Hungary, joined the Allies, Croats and Slovenes, won by Serbian propaganda, joined (1917) in agreement with the Serbs, to found a South Slavic state (see YUGOSLAVIA) Abroad, the Czechs under Masaryk and the Poles under Pilsudski formed legions fighting on the Allied side, and in Oct , 1918, Poland, Czechoslovakia, and Hungary proclaimed their independence The Austrian defeat at VITTORIO VENETO was followed by unconditional surrender, on Nov 11 Emperor CHARLES I abdicated, on Nov 12, German Austria was proclaimed a republic The treaties of Versailles, Trianon, and Saint-Germain fixed the boundaries of the successor states The breakup of the Dual Monarchy fulfilled the 19th-century liberal ideal of national self-determination, at the same time, the creation of small, strongly nationalist states, cut off from each other by tariff walls, has been criticized as representing a "Balkanisation of Europe " See Louis Léger, *History of Austria-Hungary* (6th French ed , 1920, 1st English ed , 1907), Wolf von Schierbrand, *Austria-Hungary the Polyglot Empire* (1917), Stephan Burian von Rajecz, *Austria in Dissolution* (Eng tr , 1924), Oszkar Jaszi, *Dissolution of the Hapsburg Monarchy* (1929), R A Kann, *The Multinational Empire* (1949).

Austronesian (ôs'trōnē'shŭn), name sometimes used for the Malayo-Polynesian languages.

Austro-Prussian War or **Seven Weeks War,** June 15–Aug. 23, 1866, between Prussia, allied with Italy, and Austria, seconded by Bavaria, Württemberg, Saxony, Hanover, Baden, and several smaller German states It was deliberately provoked by BISMARCK, over the objections of his king, in order to expel Austria from the GERMAN CONFEDERATION as a step toward the unification of Germany The pretext for precipitating the conflict was found in the dispute between Prussia and Austria over the administration of SCHLESWIG-HOLSTEIN The Austrian appeal to the German diet when Prussia declared the GASTEIN CONVENTION nullified by Austria and the Prussian proposal to reorganize the German Confederation immediately preceded the outbreak of hostilities Prussia with an efficient military machine that amazed Europe, overran the German states allied with Austria and crushed the Austrians at SADOWA (July 3) However, Bismarck had no intention of weakening Austria, a potential ally, more than necessary The preliminary peace of Nikolsburg (July 26) was followed (Aug 23) by the Peace of Prague Against Italy, the Austrians had won overwhelming victories on the land, at Custozza, and on the sea, at Lissa Nevertheless the peace treaty forced Austria to cede Venetia to Italy Prussia, satisfied with the exclusion, acknowledged in the treaty, of Austria from German affairs, demanded no territory from Austria, but annexed Hanover, Hesse-Kassel, Nassau, and Frankfurt The German Confederation was replaced by the Prussian-led NORTH GERMAN CONFEDERATION Thus the war paved the way for the establishment (1871) of the German Empire and the reorientation of Austria (reorganised in 1867 as the Austro-Hungarian Monarchy) toward the east The moderate peace terms facilitated the Austro-German alliance of 1879 See Heinrich Friedjung, *The Struggle for Supremacy in Germany, 1859–1866* (Eng tr , 1935)

Auteuil (ōtûl') old town, now incorporated into Paris, France Bordering on the Bois de Boulogne, it is the site of a fashionable racecourse.

Authari (ô'thärī), d 590, Lombard king (584–90) Elected by the Lombard dukes to end the anarchy which prevailed after the murder (572?) of Alboin, Authari consolidated Lombard power in N Italy and repelled several Frankish invasions.

authentic modes, in music see MODE

autobiography see BIOGRAPHY

autogiro (ôtōjī'rō) or **gyroplane** (jī'rōplān), type of aircraft which constitutes the first departure from the method of flying established by the Wright brothers Invented by Juan de la Cierva, it was the outcome of many experiments carried out in Spain between 1919 and 1924 It was successfully demonstrated in England in 1925 The fixed wings, unlike those of the ordinary monoplane, are greatly reduced in size, and the principal lift is supplied by airfoils which are rotated about a nearly vertical axis by aerodynamic forces generated by the passage of the plane through the air The lift on opposite sides of the plane of symmetry is equalized by the vertical oscillation of the blades or by the centrifugal force of the rotor's rotation Some advantages of the machine are that it will parachute to the ground if the engine fails, its descent being slowed by the turning rotor, that it becomes airborne with a very short take-off run, and that with a moderate headwind it can virtually hover with zero ground speed Thrust is supplied by an ordinary engine and propeller The body and tail assembly are conventional Control is maintained by rudder, elevators, and ailerons and in some models by changing the pitch of the rotor blades

autograph [Gr ,=self-writing], either a signature or a document written entirely by the author's hand Autographs of the great are eagerly sought by collectors, and rare examples—such as those of Button Gwinnett and other signers of the Declaration of Independence—bring very high prices A famous collection is the Emmet collection in the New York Public Library An entire manuscript in good condition by a writer whose autographs are rare may sell for thousands of dollars, the original of Poe's *Raven* and of Lewis Carroll's *Alice in Wonderland* are examples See M A Benjamin, *Autographs a Key to Collecting* (1946)

autointoxication, condition occurring usually because uneliminated toxins from waste products retained in the gastrointestinal tract bring about a poisoning Headache and fatigue are symptomatic. The condition may be corrected by proper elimination and a proper diet

Autolycus (ôtŏ'lĭkŭs), 4th cent B C , Greek astronomer and mathematician of Pitane in Aeolis. Of his two extant works, that on the revolving sphere is said to be the oldest completely preserved Greek treatise on a mathematical subject The other deals with the apparent rising and setting of the fixed stars.

Autolycus (ôtŏ'lĭkŭs), in Greek myth, celebrated robber who lived on Mt Parnassus. His daughter Anticlea was the mother of ODYSSEUS Some said Autolycus was a son of Hermes, who had given him remarkable powers of cunning

automatic writing, term used by spiritualists in relation to certain phenomena common in the

séances, where the writer is said to be "under control" of the spirit of one departed It has been used in the past as a means of DIVINATION In modern SPIRITISM, the planchette and ouija board have been used as instruments

automaton: see ROBOT

automobile. Nicolas Joseph Cugnot is generally conceded to have built in Paris in 1769 the first self-propelled vehicle, a heavy, three-wheeled carriage driven by steam cylinders and having a boiler that projected in front, its speed was c 3 mi an hour Another early car, built by Richard Trevithick of England in 1801, was also a three-wheeled vehicle driven by steam, and the engine drove the rear pair of wheels In the following years in England many steam road carriages were built and attempts were made to operate them on scheduled routes, but excessive bridge and road tolls and shortsighted legislation (notably the Red Flag Act, 1836) finally drove mechanical vehicles off the roads and retarded their development in England for decades The Red Flag Act, repealed only in 1896, required that self-propelled vehicles be preceded by a man carrying a red flag by day and a red light by night, speed was limited to 4 mi an hour Sir Goldsworthy Gurney, Walter Hancock, Scott-Russel, and George Medhurst in England and Oliver Evans and William T James in the United States contributed to the development of the early steam automobile Electric cabs were in use in Brighton, England, as early as 1887 The development of the automobile was accelerated by the introduction of the internal-combustion engine Probably the first vehicle of this type was the three-wheeled car built in 1885 by Karl Benz in Germany Another German, Gottlieb Daimler, built an improved internal-combustion engine c 1885 The Panhard car, introduced in France by the Daimler company in 1894, had many features of the modern car France was also a pioneer in the inception of the automobile as is evidenced by the French terms *chauffeur, chassis, tonneau, garage* In the United States, internal-combustion cars of the horseless-buggy type were manufactured in the 1890s by Charles Duryea and J Frank Duryea, Elwood Haynes, Henry Ford, Ransom E Olds, and Alexander Winton Many of the early engines had but one cylinder with a chain and sprocket drive on wooden carriage wheels The cars were generally open, accommodated two passengers, and were steered by a lever The tonneau type became common c 1903 Early experimenters included also John D Maxwell, H H Franklin, and Dave Buick W C Durant Hugh Chalmers, Benjamin Briscoe, and J N Willys were leaders in promotion and sales Henry Leland was noted for producing precision machine parts By 1903 Detroit was on the way to becoming the automotive center of the United States The noted Selden patent threatened the free growth of the industry in the early 20th cent George Selden designed a gasoline vehicle in 1879 and applied for a patent which was granted in 1895 Several early manufacturers licensed by Selden formed an association in 1903 and took over the patent in 1907 Henry Ford, the leader of a group of independent manufacturers who refused to acknowledge the patent, was engaged in litigation with Selden and the association from 1903 until 1911, when the U S Circuit Court of Appeals ruled that the patent, although valid, covered only the two-cycle engine, most cars, including Ford's, used a four-cycle engine Until c 1910 the automobile was in an experimental stage, and every conceivable type of drive, transmission, and steering was tried, the cylinders ranged in number from one to eight or more The improvement of roads, the rapidity and economy of automobile transportation, and the First World War were factors in the rapid development of the automobile Steam-driven cars, at first more common than gasoline models, gradually disappeared because of the engineering skill required of the driver Electric models require frequent recharging of storage batteries and are used today mainly for trucks making local deliveries The modern automobile is driven by the INTERNAL-COMBUSTION ENGINE For operational and technical features, see BRAKE, DIFFERENTIAL, GENERATOR, LUBRICATION, SHOCK ABSORBER, SPEEDOMETER, STEERING, TIRE, TRAFFIC REGULATION, TRUCK See H L Barber, *Story of the Automobile* (1917), C B Glasscock, *The Gasoline Age* (1937), B G Elliott and E L'Estrange, *The Gasoline Automobile* (5th ed, 1939)

automobile racing, sport in which specially constructed, high-speed automobiles race on an outdoor or an indoor track Automobile racing started in France in 1894 and appeared in America the following year. The Indianapolis Speedway meet, America's best-known automobile race, was first held in 1911 The sport did much to develop better types of automobile motors and equipment William K Vanderbilt, Barney Oldfield, Henry Ford, James Snyder, Edward V Rickenbacker, and Wilbur Shaw have been among the more famous racing drivers Sir Malcolm Campbell, George Eyston, and John R Cobb attained speeds of over 300 mi. per hour in speed trials. The racing of midget automobiles has become increasingly popular.

Autonoë (ôtŏn'ōĕ), in Greek legend, daughter of CADMUS and HARMONIA, wife of ARISTAEUS, and mother of ACTAEON.

autonomy (ôtŏn'ŭmē) [Gr, =self-rule], in a political sense, limited self-government, short of independence, of a political state or, more frequently, of some subdivision of a political state The term is also used for other self-governing units, as a parish, a corporation, or a religious sect The objective test of any autonomy is the recognition that the group may legislate for itself This right may be delegated or simply permitted by the state The autonomy of a nonpolitical body implies a disparity in kind such as exists between the two institutions of Church and state However, even political autonomy is frequently based on cultural and ethnic differences Autonomy within empires founded by force has frequently been a prelude to independence, as in the case of states formed out of the Hapsburg, tsarist, and Ottoman empires The situation of the autonomous border regions of the USSR today is peculiar in that one reason for their existence is to attract neighboring peoples into the Russian orbit Other regions thought of as autonomous, such as the British dominions, have moved towards more or less complete SOVEREIGNTY.

autumn crocus see MEADOW SAFFRON

Autun (ôtŭ'), town (pop 11,767), Saône-et-Loire dept, E central France Founded by Augustus to replace BIBRACTE, it became an early episcopal see and a center of learning There are Roman ruins, the cathedral dates from the 12th cent

Auvergne (ōvûrn', ōvärn', Fr ōvĕr'nu), region and former province, SE central France, in the MASSIF CENTRAL, occupying Cantal and Puy-de-Dôme depts and part of Haute-Loire It is traversed from north to south by the Auvergne mts, a chain of extinct volcanoes (of which the MONT-DORE group, the PUY DE DÔME, and the Plomb du CANTAL are the highest) surrounded by high basaltic plateaus There are numerous hot mineral springs, notably at La Bourboule, Mont-Dore, and ROYAT, these and the strange and beautiful scenery of the region attract many tourists CLERMONT-FERRAND is the chief city and industrial center Other towns include Aurillac, Riom, and Thiers The Auvergnats are descendants of the Arverni, a Celtic people whose leader, VERCINGETORIX, headed the revolt of Gaul against Julius Caesar, they have retained distinctive characteristics to a high degree They are mostly engaged in stock raising and dairying in the upper regions and in agriculture in the rich valleys, the Aurillac basin, and the Limagne, a fertile plain E of Clermont-Ferrand Their prosperity, however, dates only from recent times, when communications were improved, therefore, the Auvergnats tended to migrate in large numbers during the winters, working as tinkers, chimney sweeps, and street vendors, especially in Spain and, even now, in Paris As a part of AQUITAINE, Auvergne passed (1154) to the English Divided, through feudal quarrels, into several lordships, it was attached, in part, to the French crown lands in 1204, another major section (the duchy of Auvergne), which had passed to the dukes of Bourbon, was annexed (1527) by Francis I when Constable Charles de Bourbon committed treason Auvergne was fully incorporated into the royal domain by the 17th cent and put under the Parlement of Paris

Aux Cayes (ō kā'), **Cayes,** or **Les Cayes** (lā kā'), city (pop c 20,000), SW Haiti Most important of the southern ports, it handles about 7 percent of Haiti's exports, principally sugar and coffee

Auxerre (ōsĕr'), town (pop 20,809), capital of Yonne dept, NE central France, on the Yonne It is a trading center for CHABLIS wines St GERMANUS of Auxerre was bishop here in the 5th cent. The former abbatial church of St German (13th cent) is built on crypts dating back to the 6th cent The abbey (now a hospital) has a fine Romanesque clock tower The cathedral (13th-16th cent) shows the Gothic style prevalent in Champagne Auxerre was made part of Burgundy by the Treaty of Arras (1435)

Ava (ā'vu), in the Bible, unidentified city of Mesopotamia, perhaps the same as IVAH 2 Kings 17 24 Its inhabitants are called Avites 2 Kings 17 31

Ava (ä'vu), village, central Burma, on the Irrawaddy river c 10 mi S of Mandalay Founded in 1364, it was the capital of a dynasty of early Burmese kings till 1783 (when it was replaced by Amarapura) and again from 1823 to 1837 Only ruins remain of its greatness.

Ava (ā'vu), city (pop 1,393), co seat of Douglas co, S Mo, SE of Springfield, founded 1864 It is a mountain resort in a farm and timber area

Avacha (ävä'chu) or **Avachinskaya Sopka** (ävä'-chĭnskĭŭ sôp'kŭ), active volcano, 8,958 ft high, RSFSR, on S Kamchatka peninsula, in NE Siberia

Avadana: see BUDDHISM.

Aval: see BAHREIN ISLANDS

avalanche (äv'ulănch), rapidly descending mass of snow and ice, earth, or rock, usually set in motion by an addition to the weight of an insecure mass or by the removal, through melting or washing, of part of the base of the mass The action of an avalanche is often destructive since it is sudden, unanticipated, and violent

Avalon (äv'ulŏn), in Celtic or Welsh mythology, the happy otherworld of the dead and also the island to which the mortally wounded King Arthur was taken by three queens There Morgan le Fay was said to live, and from there Arthur was expected to return In medieval England, Avalon was placed at Glastonbury See ARTHURIAN LEGEND

Avalon 1 City (pop 1,637), on SANTA CATALINA, S Calif, founded 1888, inc 1913 The city is the center of the island's resort and sport activities, it has an Indian museum, a marine museum and aquarium, a bird sanctuary, and a casino and theater 2 Residential borough (pop 6,155), SW Pa, on the Ohio NW of, and near, Pittsburgh, settled 1802, inc 1874

Avalon Peninsula, area 3,579 sq mi, SE N F It is nearly divided at its center by Conception Bay on the north and St Mary's Bay on the south, which come within 20 mi of joining each other The peninsula is the most densely populated part of Newfoundland

Avalos, Ferdinando Francesco d': see PESCARA, FERDINANDO FRANCESCO D'AVALOS, MARCHESE DI

Avars (ä'värz), mounted nomad people who in the 4th and 5th cent dominated the steppes of central Asia Dislodged by stronger tribes, the Avars pushed west, increasing their formidable army by incorporating conquered peoples into it Reaching their greatest power in the late 6th cent, they plundered all of present S Russia and the Balkans Their siege (626) of Constantinople was unsuccessful, but they continued to dominate the Hungarian plain until Charlemagne defeated them The Avars were not mentioned after the 9th cent The modern Avars, a pastoral, Moslem people of Dagestan, USSR, number c 160,000 It is doubted that they are descended from remnants of the old Avars

Avebury, John Lubbock, 1st Baron: see LUBBOCK, SIR JOHN

Avebury or **Abury** (both ā'burē), village, Wiltshire, England, W of Marlborough The village, with a medieval church and manor house, lies within Avebury Circle, a Neolithic circular group of upright stones, older and larger than Stonehenge, but not so well preserved The village and the circle have belonged to the nation since 1943 and are administered by the National Trust

Aveiro (ävā'rō), city (11,247), capital of Aveiro dist, NW Portugal, on the Bay of Algarve and at the mouth of the Vouga river Partially built over the water, it is sometimes called the Portuguese Venice It has been notable as a fishing port since the 16th cent and was the birthplace of João Afonso, one of the discoverers of the Newfoundland fisheries Aveiro also produces salt In a convent here is the tomb of Joana, the daughter of Alfonso V who was a nun and died here

Avellaneda, Alonzo Fernández de (älōn'sō fĕrnän'dāth dā ävĕlyänä'dhä), name used by the Spanish writer who published a spurious second part of *Don Quixote* in the year 1614, before Cervante's own second part appeared (1615) Avellaneda's book is usually referred to as *El Quijote apócrifo* [the spurious Don Quixote], and the author is unidentified, although the work has been attributed to several men of letters

Avellaneda, Gertrudis Gómez de: see GÓMEZ DE AVELLANEDA, GERTRUDIS

Avellaneda, Nicolás (nēkōläs' ävāyänä'dhä), 1837–85, Argentine statesman, president of the republic (1874–80) As minister of education under Domingo F SARMIENTO (1868–74), he introduced many reforms After his election as president, he suppressed a revolt led by Bartolomé Mitre, the defeated candidate. His administration was notable for material progress and for the solution of two problems—the Indian question and the question of a federal capital An expedition under Julio A Roca drove the Indians beyond the Río Negro, opening the territory for colonization In Sept., 1880, the national congress decreed the federalization of Buenos Aires, which became effective under Roca, Avellaneda's successor

Avellaneda (ävāyänä'dhä), city (pop 282,054), Buenos Aires prov, Argentina, formerly known as Barracas al Sud It is an industrial city, containing many factories and warehouses. Although outside the federal district, it is usually considered a part of greater Buenos Aires

Avellino (ävāl-lē'nō), city (pop 20,578), capital of Avellino prov, Campania, S Italy It is an agricultural center Near by is the Benedictine convent and shrine of Monte Vergine (founded in 1119), visited yearly by thousands of pilgrims

Ave Maria (ä'vā märē'ä) [Latin,=hail, Mary], prayer to the Virgin universal among Roman Catholics, also called the Ave, the Hail Mary, the Angelic Salutation, and formerly the Ave Mary The words in English are "Hail Mary, full of grace, the Lord is with thee, blessed art thou amongst women, and blessed is the fruit of thy womb, Jesus. Holy Mary, Mother of God, pray for

us sinners now and at the hour of our death. Amen" The first part is from Luke 1 28,42 The prayer is much used in private as well as public devotions, e g , in the ROSARY. It has been much set to music, the compositions by Franz Schubert and C F Gounod being especially popular

Avempace (ä'vümpäs, ä"vĕmpä'thē), Arabic *Ibn Bajja*, d 1138, Spanish-Arabian philosopher Little is known of his life, but he was born in Saragossa and died in Fez, Morocco He is important chiefly for his influence on AVERROËS and for his introduction of Aristotelianism into Spain His chief extant work is the *Hermit's Rule*, which sets forth the ideal of man's gaining complete self-consciousness to the point where thought becomes identical with object. This goal is achieved by the gradual development of mental functions through rising stages

Aven (ā'–) [Heb , =nothingness], in the Bible, abusive name applied to towns to Bethel (see BETH-AVEN), to Heliopolis in Egypt in Ezek 30 17, and to some other place, traditionally Baalbek, in Amos 1 5.

Avenches (ävăsh'), anc *Aventicum*, town (pop 1,565), Vaud canton, Switzerland, c 7 mi NW of Fribourg With an estimated population of 80,000 in c 100 B C , it flourished in the 1st and 2d cent A D as the chief town of HELVETIA under the Romans The numerous remains include an amphitheater.

Aventine Hill: see *Rome before Augustus* under ROME

Avenzoar (ăv"unzō'ur, –zōar') or **Ibn Zohr** (ib'n zōr'), c 1090?–1162, Arabian physician, b near Seville, Spain He championed the experimental method of study in medicine His chief work, *Teisir*, was translated into Latin (1490)

average, statistical measure representing numerically the characteristics of a group of figures See MEAN, MEDIAN, MODE

Averell, William Woods (ă'vurul) 1832–1900, Union general in the Civil War, b Steuben co , N Y , grad West Point, 1855 Averell commanded a brigade and later a division in most of the cavalry operations of the Army of the Potomac He opposed Fitzhugh Lee in the cavalry engagement at Kelly's Ford in March, 1863, both sides claimed the victory Averell served under P H Sheridan in the Shenandoah Valley in 1864 and was brevetted major general in the regular army for his service

Averescu, Alexander (ävĕr'ĕskōō), 1859–1938, Rumanian general and statesman He fought in the Russo-Turkish War of 1877–78, which gained full independence for Rumania, in the Second Balkan War (1913), and in the First World War In Feb , 1918, he was chosen to form a cabinet to negotiate peace with the Central Powers He was president of the right-ist People's party, was premier in 1920–21 and again in 1926–27, and was made a marshal in 1930

Avernus (uvûr'nus), Ital *Averno* (ävĕr'nō) [from Gr =without bird], small crater lake, Campania, S Italy, between Cumæ and Puteoli, near the Tyrrhenian Sea Its intense sulphuric vapors, caused by volcanic activity (now extinguished), killed the birds flying over it, hence its name The ancient Romans, impressed by its vapors and its gloomy aspect, regarded it as the entrance to hell, later the name was used for hell itself

Averroës (uvĕr'ōēz), Arabic *Ibn Rushd*, 1126–98, Spanish-Arabian philosopher He was far more important and influential in Jewish and Christian thought than in Islam He was a lawyer and physician of Córdoba and lived for some time in Morocco in favor with the caliphs He was banished for a period, probably for suspected heresy Averroës's greatest work was his commentaries on Aristotle The Averroistic interpretation of Aristotle remained influential long after his death and was a matter of intellectual speculation well into the Renaissance He attempted to reconcile philosophy with religion by asserting that religion, though apparently differing from philosophy on many points, is actually the symbolical expression of philosophical truth This doctrine was attacked by the orthodox, both Catholic and Moslem, who saw it giving sanction to heretical opinions Though St THOMAS AQUINAS was respectful of Averroës, he attacked many of his ideas Averroës held the aristocratic view that freedom of speculation should be confined to the philosopher while the uneducated man should be forced to adhere strictly to the letter of the Koran He had the same Neoplatonic cast to his metaphysics as Avempace, to whom Averroës was certainly indebted for his ideas on the intellect Averroës's ideas were popular in Jewish thought, and they were the subject of frequent debate in Christian circles

Aversa (ävĕr'sa), city (pop 26,538), Campania, S Italy. It is an agricultural center noted for its white wine. In the 11th cent the county of Aversa was the first possession of the Normans in Italy. There are several notable churches.

Avery Island, c 2 mi in diameter, S La , lying in sea marshes and swamps, SW of New Iberia Here is a sanctuary for water birds, especially the egret The island's former owner, Edward Avery McIlhenny (see his *Bird City*, 1934) created Jungle Gardens, with many rare plants, trees, and flowers. Rock salt is mined on Avery Island, where salt production began soon after the arrival of the first white settler in 1791, although its presence was evidently known to the Indians Some of the prehistoric relics excavated on the island are in the possession of the Smithsonian Institution and Tulane Univ.

Avesta. see ZOROASTRIANISM

Aveyron (ävĕrō'), department (3,386 sq mi ; pop 307,717), S central France, occupying the old county of ROUERGUE It is called after a tributary of the Tarn Rodez is the capital

aviary (ā'vēărē), structure for confining birds. It usually refers to an outdoor screened area within which environmental conditions are suitable to the birds An adequate supply of clean food and water must be maintained, and there must be sufficient perches and flying space Protection against rats and other enemies is necessary and can be achieved by extending the netting underground Nesting sites and materials should be provided When the outdoor temperature is not suitable, an indoor aviary, kept at the proper temperature, well ventilated, and free from drafts and noxious fumes, is required Sanitary conditions of the cage and perches are of vital importance The early Romans constructed walled aviaries The collection by explorers since the 15th cent of unusual bird specimens and the introduction of the canary into Europe stimulated use of aviaries Aviaries are now found in public gardens and on private estates In the Bronx Zoological Gardens, New York, is a large outdoor cage in which the birds can fly

aviation In the limited sense aviation is the operation of aircraft heavier than air In a broader sense it includes not only piloting and air navigation but also all the activities upon which flying depends, e g , construction, maintenance and operation of aircraft, airports, signal beacons, and aviation schools, and aviation services such as weather service and AIR MAIL From early times man's desire to achieve flight was evident Myths and legends of many peoples relate adventures in flying, one of the most familiar is the Greek myth of Daedalus and Icarus. Incidents are related of men who attempted, in the 11th and 12th cent , to fly by attaching wings to their bodies Roger Bacon in the 13th cent suggested the construction of a flying machine with wings that could be operated by the person being carried The detailed observations, explanations, and drawings (including designs for ornithopters) preserved in the notebooks of Leonardo da Vinci mark the beginning of scientific studies of flight Leonardo's work in this field centered around studies of birds, although it included observations of bats and other flying creatures An Italian Jesuit, Francesco de Lana (1631–87), distinguished between lighter-than-air and heavier-than-air machines, his proposed design for a lighter-than-air craft is believed to be the first one published Flight was first successfully accomplished (1783) in a lighter-than-air device (see BALLOON) A number of investigators contributed to an understanding of the principles involved in achieving flight in heavier-than-air machines Among them were Sir George Cayley, who analyzed the mechanics of flight in his series of influential articles on aerial navigation (1809–10), W S Henson, who patented (1842) a design for a machine which closely foreshadowed a modern monoplane, John Stringfellow (with whom Henson was for a time associated), who later developed a model plane said to be the first power-driven machine to fly , and F H Wenham, who contributed (1866) a valuable study on the laws of flight and who later devised the first wind-tunnel experiments Alphonse Penaud, in France, made successful flying models of airplanes, helicopters, and ornithopters, wrote on the theory of flight, and patented (1878), with Paul Gauchot, a design for an amphibian monoplane notable for its streamlined form, retractable landing gear, and other advanced features Clément Ader, a French engineer, achieved flight (over a distance of about 150 ft in 1890 and about 300 yd in 1897) in his power-driven monoplanes fashioned after the bat. In 1894 a plane built in England by Sir Hiram S Maxim, operated by steam engines and carrying equipment and a crew of three, rose into the air from the track on which it was being tested In America, S P LANGLEY and Octave CHANUTE made notable contributions to the early development of the airplane The work of Otto LILIENTHAL inspired the Wright brothers The first successful flight in a man-carrying airplane powered by a motor was made on Dec 17, 1903, by Orville Wright (see KITTY HAWK), and later on the same day his brother Wilbur bettered the length of flying time In 1909 the U S. army purchased the first military airplane from the Wright brothers The first successful crossing of the English Channel was accomplished (1909) by Louis BLÉRIOT Glenn CURTISS made improvements in the design of airplanes and engines and constructed the first successful flying boat or seaplane (1912) Stimulated by awards of trophies and prizes of money, aviators demonstrated, during the early 1900s, the feasibility of air travel in various parts of the world. However, not long after the possibilities of aviation began to be realised, the First World War intervened (for the military development of aviation, see AIR FORCES and AIR POWER) After the war, aviation assumed a constantly increasing importance The first crossing of the N Atlantic (from Newfoundland to England with stops in the Azores and Portugal) was made by A C Read in a U S navy flying boat in May, 1919 In the same year John Alcock and A W Brown made the first nonstop flight from Newfoundland to Ireland and Ross Smith and his crew flew by airplane from London to Australia In May, 1926, Richard E Byrd and Floyd Bennett flew over the North Pole from Spitsbergen Charles A. Lindbergh accomplished the first transatlantic solo flight in May, 1927 The first east-west transatlantic flight, from Ireland to Newfoundland, was made in 1928 by Hermann Kohl, J C Fitzmaurice, and G von Hünefeld The first Pacific crossing was the feat of Charles Kingsford-Smith, who flew in May, 1928, from San Francisco to Australia, making two stops, the first nonstop flight from Japan to Washington state was made (1931) by Clyde E Pangborn and Hugh Herndon Round the world flights were made by Wiley Post and Harold Gatty (1931) in 8 days 15 hr 51 min , by Post alone (1933) in 7 days 18 hr 49½ min , and by Howard Hughes and four companions (1938) in 3 days 19 hr 8 min The first woman to cross the Atlantic by airplane was Amelia Earhart Putnam in 1928 she went as a passenger and in 1932 she made a transatlantic solo flight During the first decade after the war, progress in air transport in Europe far outstripped that in the United States, but later the United States forged ahead Private companies in the United States were permitted to contract for carrying mail by air after 1925, they thus obtained funds for expansion Air express service was inaugurated in 1927 Carrying mail was the chief concern of the companies until after 1930, when the transportation of passengers became profitable Rapid advances were made in the next few years, routes were extended and equipment improved Transpacific air-mail service begun by the Pan American Airways (later Pan American World Airways) system in 1934 was followed by the establishment of the first transoceanic aviation service for passengers on the *China Clipper*, from San Francisco to Manila (to Hong Kong in 1937) In 1939 the first transatlantic service to carry both mail and passengers was inaugurated by Pan American The Second World War interrupted much commercial air service, but tremendous pioneering work by the Army Air Transport Command and the Navy Air Transport Service opened up new routes With the cessation of the war, air transportation was gradually resumed until air routes penetrated all parts of the globe See also AERONAUTICS, AIRPLANE, AIRSHIP, JET PROPULSION, AIR, LAW OF THE, AIR FORCES, AIR POWER, AERIAL PHOTOGRAPHY, AIRSICKNESS See Antoine de Saint Exupéry, *Wind, Sand, and Stars* (Eng tr , 1939), E E Freudenthal, *The Aviation Business* (1940) and *Flight into History* (1949); S Paul Johnston, *Horizons Unlimited* (1941), H A Bruno, *Wings over America* (1942) H H Arnold and I C Eaker, *This Flying Game* (3d ed , 1943), Archibald Black, *The Story of Flying* (rev ed , 1943), Jeremiah Milbank, *The First Century of Flight in America* (1943), N H Randers-Pehrson, *History of Aviation* (1944), C C Fraser, *The Story of Aircraft* (3d ed , 1944) and *Heroes of the Air* (rev ed , 1946), D E Francis, *Aviation* (1945), Griffith Brewer, *Fifty Years of Flight* (1946), Stanley Brogden, *First to Fly from Roger Bacon to Sir Charles Kingsford-Smith* (1946)

aviation medicine see AIRSICKNESS and MEDICINE.

Avicebron. see IBN GABIROL, SOLOMON BEN JUDAH.

Avicenna (ăvĭsĕn'u), Arabic *Ibn Sina*, 980–1037, Arabian physician and philosopher, b near Bukhara He was a teacher and a courtier and lived long in Persia His position in medical history is remarkable, for though much of his work is unoriginal, Avicenna was the greatest name in medicine from 1100 to 1500 His medical masterpiece was the *Canon of Medicine* Avicenna's interpretation of Aristotle followed the Neoplatonic lead He saw God as emanating the universe from himself in a series of triads formed of mind, soul, and body This process terminated in the Aristotelian "active intellect," which governs directly all earthly regions and transmits to all things their appropriate forms Man's soul is also derived from it and is immortal He was not an absolute pantheist as he believed matter to exist independently of God Avicenna fixed the classification of sciences used in the medieval schools of Europe Our knowledge of his life derives from a sketch by one of his pupils based on his autobiography

Avienus (Rufus Festus Avienus) (ăvē-ē'nus), 4th cent , Latin poet To him are ascribed one long poem and part of another on geography (both apparently adapted translations from Greek) and an adaptation of the work of Aratus

Avignon (ăvēnyō'), city (pop 47,040), capital of Vaucluse dept , SE France, on the left bank of the Rhone It has a wine trade and silk manufactures Located in (but never a part of) the Comtat VENAISSIN, Avignon was the papal see during the

"Babylonian captivity," 1309–78 (see PAPACY), and the residence of several antipopes from 1378 to 1408 (see SCHISM, GREAT) Clement VI bought (1348) full title to Avignon from Joanna I, queen of Naples and countess of Provence After the end of the Great Schism, Avignon was ruled by papal legates, though actually the citizens were left free to govern themselves The city became an archiepiscopal see in 1475 Papal rule was tolerant, and the city prospered as a commercial center; it also was a haven for the Jews In 1791, after a plebiscite, Avignon was incorporated into France The huge papal palace, atop a hill, was built in the 14th cent to serve as residence, fortress, and church The Basilica of St Peter was built in the 14th to 16th cent Of the Bridge of St Bénézet (12th cent) across the Rhone only a fragment remains Avignon and near-by VAUCLUSE were celebrated by PETRARCH, who resided at the court of Clement VI

Ávila, Gil González de: see GONZÁLEZ DE ÁVILA.

Ávila (ä'vēlä), city (pop 19,590), capital of Ávila prov , central Spain, in Old Castile, on the upper Adaja river. It was founded in the late 11th cent. and is still surrounded by massive walls The Cathedral of San Salvador and the Basilica of St Vincent are the main landmarks Ávila, which was the birthplace of St Theresa, is now called Ávila de los Caballeros

Ávila Camacho, Manuel (mänwĕl' ä'vēlä kämä'chō), 1897–, president of Mexico (1940–46) When still young, Ávila Camacho joined the revolutionary forces Later he became brigadier general Under Lázaro CARDENAS he became (1938) minister of national defense As president he followed a middle-of-the-road policy based on the agricultural, industrial, and educational reforms begun by Cárdenas His administration was very friendly to the United States in the Second World War.

Ávila y Zúñiga, Luis de (lwēs' dāa'vēla ē thōō'nyēgä), c 1500–1564, Spanish historian, diplomat, and soldier, a favorite of Emperor Charles V, whom he followed in the Schmalkaldic war His account of the war (1547, Eng tr , 1555) is biased but had great influence

Avilés (ävēläs'), city (pop 10,695), Oviedo prov , NW Spain, in Asturias, a port on the Bay of Biscay. There are metalworks and sugar refineries, much coal is exported

Avim (ā'vĭm), unidentified town of Benjamin. Joshua 18 23

Avims (ā'vĭms), the same as AVITES **1.**

Avis (ä'vĭs), borough (pop 1,161), central Pa , near the West Branch of the Susquehanna and NE of Lock Haven

Avites (ā'vīts) **1** People of SW Palestine, probably assimilated by the Philistines Joshua 13 3. Avims Deut 2 23 **2** People of AVA

Avith (ā'vĭth), city of unknown site, E of the Dead Sea Gen 36 35, 1 Chron 1 46

Avitus (ăvī'tŭs), d 456?, Roman emperor of the West (455–56) He was proclaimed emperor in Gaul with the support of the Visigoths but was defeated at Piacenza and deposed by RICIMER.

Aviz, Port *Avis* (both uvĕsh'), village, central Portugal The Castilian order of the Knights of Calatrava assisted in the reconquest of Portugal and in 1166 settled at Évora Alfonso II granted them (c 1162) Aviz, and this branch of the order became separate and was known as the Order of Aviz, a strictly Portuguese organization The knights played an important part in Portuguese history After the death of Ferdinand I in 1383, his illegitimate brother, John, who was master of the Order of Aviz, led a revolution to prevent the crown from going to Beatriz of Castile. He himself became king as John I Thus the house of Aviz was established on the throne It was the most distinguished of Portuguese dynasties, reigning until 1580, when Portugal passed for a time under Spanish rule. Under the Aviz monarchs the Portuguese Empire was built and reached its zenith (see PORTUGAL)

Avoca (uvō'kŭ) **1** Town (pop 1,598), SW Iowa, on the West Nishnabotna river and NE of Council Bluffs; inc 1875 **2** Village (pop 1,006), S N Y , on the Cohocton and NW of Corning, settled 1843, inc. 1883. **3** Residential borough for miners' families (pop. 4,771), NE Pa , SW of Scranton, inc. 1889.

Avoca or **Ovoca** (both, uvō'ku), river of Co Wicklow, Ireland It is formed by the union of the Avonmore (14 mi long) and the Avonbeg (16 mi long) at the "Meeting of the Waters" celebrated by Thomas Moore. It flows 14 mi to the Irish Sea.

avocado (ăv"ŭkä'dō, ăv'–), broad-leaved evergreen tree of the genus *Persea*, common in tropical regions of the Americas. Since the early 20th cent it has been cultivated in California and Florida for the popular pear-shaped or round fruit, rich in oil content, nutritious, and used chiefly as a salad. The fruit is also called alligator pear or, in Spanish, *aguacate* The tree is ornamental

avocet (ăv'usĕt), wading bird about 15 to 18 in. long, related to the snipe and the stilt. North and South America, Europe, and Australia have one species each. The North American "blue shanks" is edible and, ruthlessly hunted, is now rare E of the Mississippi Its black and white wings and white body make it visible at a distance. Unlike most wading birds its front toes are webbed. By sweeping its long, thin, upwardly curved bill through the shallow water and mud, it captures small water animals, mainly harmful insects Other destructive insects are caught on the wing.

Avogadro, Amadeo, conte di Quaregna (ämädā'ō kōn'tā dē kwärā'nyä ävōgä'drō), 1776–1856, Italian physicist, b Turin He became professor of physics at the Univ of Turin in 1820 In 1811 he advanced the hypothesis, since known as Avogadro's law, that equal volumes of gases under identical conditions of pressure and temperature contain the same number of molecules Since then, through the work of other physicists, the number of molecules in the gram molecular volume has been determined and found to be the same for all gases This number (6.02×10^{23}) has been called Avogadro's number

Avon (ā'vŏn, ăv'ŭn) **1** Town (pop 2,258), central Conn , on the Farmington and W of Hartford; inc 1830 Avon Old Farms school for boys is here. **2** Town (pop. 2,335), E Mass , a suburb of Brockton, settled c 1700, inc 1888 **3** Village (pop 2,339), W central N Y , SW of Rochester, in a horse-breeding and dairying region, inc 1867 The Avon Horse Show is held annually Macaroni and alfalfa meal are made here **4** Village (pop 2,118), NE Ohio, near Lake Erie W of Cleveland, settled c 1814, inc. 1918

Avon (ā'vŭn, ăv'un) [Celtic, =river], name of several rivers in England **1** Also called **Bristol Avon** or **Lower Avon,** in Gloucestershire, Wiltshire, and Somerset. It rises at Tetbury, Gloucestershire, and flows 75 mi first S and then NW past Bath and Bristol to the Severn at Avonmouth. **2** Also called **East Avon,** in Wiltshire and Hampshire It rises at Devizes (near Avebury) and flows 48 mi E and S past Salisbury to the English Channel at Christchurch It is navigable below Salisbury **3** Also called **Upper Avon,** in Northamptonshire, Leicestershire, Warwickshire, and Worcestershire This is the most famous of the Avon rivers It rises near Naseby and flows 96 mi SW to the Severn near Tewkesbury, passing Rugby, Warwick, and Stratford-on-Avon. The Alne and Stour rivers are tributaries

Avon by the Sea, borough (pop 1,211), E N J , a resort S of Asbury Park, inc 1900

Avon Lake, village (pop 2,274), NE Ohio, on Lake Erie W of Cleveland It has several beaches

Avonmore (ăv'unmôr), borough (pop 1,354), SW Pa , ENE of, and near, Pittsburgh, inc 1893

Avon Park (ā'vŏn), city (pop 3,125), S central Fla , NW of Lake Okeechobee, in a lake region, settled c 1885 It is a packing and shipping center for a citrus-fruit area The freeze of 1894–95 discouraged settlers, but the arrival of a railroad in 1912 stimulated growth

Avranches (ävrăsh'), ancient town (pop. 6,693), Manche dept , NW France, in Normandy, on the Bay of MONT-SAINT-MICHEL. A Roman town, it became an intellectual center in the early Middle Ages, LANFRANC taught here Avranches was devastated in the Hundred Years War, the Wars of Religion, and the Second World War (see NORMANDY CAMPAIGN).

Awaj (äwäj'), river in SYRIA. see PHARPAR.

Awaji-shima (äwä'jē-shē'mä), island, 32 mi. long and 3 to 17 mi wide, in the Inland Sea, Japan, between Honshu and Shikoku islands. It produces grain and flowers

Awe, Loch (lŏkh" ō'), narrow lake, 23 mi. long, Argyllshire, Scotland.

awl see DRILL

ax or **axe,** one of the oldest of tools Chipped and polished stone axes are of many kinds, and axes were made in copper and bronze as man learned to work metals The stone ax served as a weapon, but its primary uses were in peaceful arts It was used in preparing soil for planting crops, in felling trees previously charred, and in many other ways The ax reached its greatest refinement as a tool, and its greatest usefulness, in the advance of white men across the wooded part of America from the Atlantic seaboard to the prairies In this region the most important items in the pioneer's equipment were the ax and the gun (at its best, a rifle) With the ax he built his log house with its puncheon floor and he cleared fields for his crops Evidence of the skill of the pioneer axmen is seen in the hewn beams of old American houses and barns The curved hickory handle of the single-bitted ax is of American origin The hatchet, an ax with a short handle and a hammer head, and the HAMMER are tools related to the ax The double-bitted ax was a religious emblem in Crete and elsewhere. See Thomas Hibben, *The Carpenter's Tool Chest* (1933), H. J. Peake, *Early Steps in Human Progress* (1933)

Axar Fjord, Icelandic *Axarfjör Fur* (äkh'särfyûr"dhûr), bay, NE Iceland. The Jokulsa empties into it.

Axel: see ABSALON.

Axel Heiberg Island (äk'säl hī'bûrg), off N Canada, in the Arctic Archipelago. It is W of Ellesmere Island. It was named by Otto Sverdrup (who explored it 1898–1902) for one of his patrons.

Axholme Isle (äks'hōlm), flat lowland, c.18 mi. long and 5 mi wide, Lincolnshire, England, W of the Trent Formerly marshy, it became very productive after it was drained in the early 17th cent. Epworth is the principal town.

Axis, coalition of states headed by Germany, Italy, and Japan, 1936–45 (see WORLD WAR, SECOND). The expression "Rome-Berlin axis" originated in Oct , 1936, with an accord reached by HITLER and MUSSOLINI. The Axis was solidified by an Italo-German alliance on May 22, 1939 This was extended (Sept. 27, 1940) by a military alliance among Germany, Italy, and Japan—the so-called Berlin Pact, to which Hungary, Rumania, Bulgaria, Slovakia, and Croatia adhered later The related Anti-Comintern Pact (see COMINTERN), originally concluded between Germany and Japan in 1936, later had as adherents, besides the Berlin Pact nations, Spain, Denmark, Finland, and the puppet governments of Manchukuo and Nanking.

Axminster (äks'–), urban district (pop. 2,326), Devonshire, England, NW of Lyme Regis The fine carpets for which it was famous were later made at Wilton

Axum, Ethiopia see AKSUM.

Ayacucho (äyäkōō'chō), city (pop. 18,275), S Peru In a silver-mining region, it is on a plateau near the plains of Ayacucho. Here Antonio José de SUCRE, commanding revolutionary troops, crushingly defeated (Dec 9, 1824) Viceroy José de la SERNA The battle not only secured Peruvian independence from Spain but also marked the triumph of the revolutionary forces in all South America

Ayala, Pedro López de: see LÓPEZ DE AYALA.

Ayala, Ramón Pérez de. see PÉREZ DE AYALA.

Aycock, Charles Brantley (ā'kŏk), 1859–1912, governor of North Carolina (1901–5), b Fremont, N C , grad Univ of North Carolina, 1880 He had been a lawyer, a county superintendent of schools, and a U S district attorney before he served as governor He is remembered chiefly for his heroic and successful efforts to spread and improve public education—a program which reverberated through the South to the benefit of both Negroes and whites

Aydelotte, Frank (ā'dulŏt), 1880–, American educator, b Sullivan, Ind , grad Indiana Univ , 1900, M A Harvard, 1903 In 1905–7 he was a Rhodes scholar After teaching English in various institutions he was president (1921–40) of SWARTHMORE COLLEGE and later director (1939–47) of the Institute for Advanced Study at Princeton, N J Outstanding in his field, he has held many important positions His works include *Elizabethan Rogues and Vagabonds* (1913), *College English* (1913), *The Oxford Stamp* (1917), and *Breaking the Academic Lock Step* (1944) See Swarthmore College Faculty, *An Adventure in Education* (1941).

Ayden (ā'dŭn), town (pop 1,884), E N C , S of Greenville, in a tobacco-growing area

Aydın (ïdēn'), city (pop 18,504), W Turkey, on the Meander river It is a center for trade in olive oil, olives, figs, and cotton There are ruins of the ancient Greek city of Tralles

Ayer (ār), town (pop 3,572), N Mass , ESE of Fitchburg; settled before 1670, inc 1871 U S Fort Devons and a state pheasant farm are near by

Ayesha (ī'shu, ä'ĭshä"), d 678, favorite wife of MOHAMMED the Prophet She was the daughter of Abu Bakr and was married to the Prophet soon after the hegira A brilliant, astute woman, she was devoted to her husband and his teachings, and after his death she exerted considerable influence, especially against Ali She fomented an unsuccessful revolt in Ali's tenure of the caliphate. The name also appears as Aisha

Aylesbury (ālz'bûrĕ), municipal borough (pop 13,387), Buckinghamshire, England, NW of London It is an agricultural market for the upper Thames valley and is famous for its ducks It has a dairy industry, flour mills, and, near by, silica-sand quarries The 13th-century church was restored by Sir George Gilbert Scott

Ayllón, Lucas Vásquez de (lōō'käs vä'skäth dā ïlyōn'), c 1475–1526, Spanish explorer. He came to Santo Domingo in 1502 In 1521 Francisco Gordillo, sent by Ayllón to explore northward, seems to have landed in either Florida or South Carolina. Ayllón secured title and permission to colonize In 1526 he sailed with three ships and c 500 settlers, landing probably in South Carolina, though some authorities claim it was on the site of the later Jamestown, Va. Fever and other hardships plagued the settlers, and when Ayllón died of fever, the survivors returned to Santo Domingo. Ayllón was buried at sea

Aylmer, John (āl'mûr), 1521–94, bishop of London. His name is also spelled Æilmer or Elmer. He was for a time tutor to Lady Jane Grey. In 1553 he was deprived of his church preferments for opposing the doctrine of transubstantiation, and he fled to Switzerland. There he aided John Foxe in making a Latin translation of the *Acts of the Martyrs* and wrote *An Harborowe for Faithfull and Trewe Subjects* (1559) in answer to a tract by John Knox. Returning to England after Elizabeth's accession, he rose in the Church of England to be (1576) bishop of London. Though he was a man of

great learning, his harsh treatment of his foes made him generally disliked.

Aylmer (āl'mûr) 1 Town (pop. 2,478), S Ont., near Lake Erie and E of St. Thomas Its industries are canning and dairying 2 Town (pop 3,115), SW Que., on the Ottawa river and W of Hull

Aylmer, Lake, Mackenzie dist., Northwest Territories, NE of Great Slave Lake

Aymara (īmārä'), South American Indians inhabiting the Lake Titicaca basin in Peru and Bolivia. They are believed to have been the originators of the great culture represented by the ruins of Tiahuanaco. Although subjugated after a long conquest in the 15th cent by the Inca, the Aymara continue to dominate the region The Aymara languages make up a separate unit; they are spoken in Peru and Bolivia in the Titicaca region The Aymara, conquered (1538) by Hernando and Gonsalo Pizarro, kept their pastoral and agricultural civilisation In general, social organization was, and still is, based on the patrilineal family unit.

Aymer of Valence (ā'mûr, vūlĕns', vālā'), d 1260, bishop of Winchester, son of King John's widow, Isabella, and Hugh X, count of La Marche He was thus half brother of King Henry III of England He is sometimes called Æthelmær With his brothers, Guy de Lusignan and William of Valence, he came to England in 1247 Henry forced the chapter of Winchester to elect Aymer bishop in 1250 but his youth and ignorance, combined with his disinclination to assume the responsibilities along with the revenues of office, delayed his consecration Hostility toward him and his brothers was an important factor in the Barons' War It is apparent that he was anything but a good influence in the Church and the state He refused to swear to the provisions drawn up by the Parliament of Oxford in 1258 (in which he was one of the king's 12 delegates), and later he and his brothers had to flee to the Continent But although the Winchester chapter had chosen a new candidate, Aymer was consecrated by the pope in 1260 and was on his way back to England when he died in Paris

Aymer of Valence, earl of Pembroke: see Pembroke, Aymer de Valence, earl of

Ayolas, Juan de (hwän' dā ayō'lās), d 1537?, Spanish conquistador, explorer of the Río de la Plata country He accompanied Pedro de Mendoza on his expedition of 1535–36 Sent to look for provisions, he sailed up the Paraná and founded a fort called Corpus Christi Later, leaving Domingo Martínez de Irala at a port called Candelaria, he went up the Paraguay in search of a route to Peru, He fought the Guaraní, possibly at the site of Asunción, crossed the Chaco to the mountains, and is said to have been killed by the Indians on his return to Candelaria

Ayr (ār), burgh (1931 pop 36,783, 1948 estimated pop 43,967), county town of Ayrshire, Scotland, on the Firth of Clyde at the mouth of the Ayr It is a seaport and resort Its manufactures include agricultural and mining machinery, leather goods, asphalt, and switch gear The heart of the Burns country, Ayr has various Burns memorials Alloway, the poet's birthplace, is a suburb There are associations too with Sir William Wallace and Robert the Bruce

Ayrshire (ār'shĭr, -shûr) or **Ayr,** maritime county (1,132 sq mi , 1931 pop 285,217, 1948 estimated pop 323,303), SW Scotland, on the Firth of Clyde The county town is Ayr Ayrshire is primarily an agricultural and pastoral region, with pleasant hills, vales, lochs, and rivers, the largest of which are the Ayr and the Doon Ayrshire cows are famous, and the county produces fine Cheddar cheese as well as varied manufactures (woolens, chemicals, leather, and explosives) The iron and coal deposits are mined extensively Ayrshire is rich in literary and historical associations After the departure of its ancient Roman invaders, Ayrshire came eventually under the control of the Northumbrian kings It is the country of Robert Bruce, Robert Burns, and James Boswell See D. C. Cuthbertson, *Autumn in Kyle* (1947)

Ayrshire cattle, breed of dairy cattle originated in Scotland, where, as in New Zealand, they are the leading dairy breed. They are raised in New England and, to some extent, elsewhere in the United States They have better beef qualities than most other dairy breeds They are red or brown and white and of medium size

Ayrton, Hertha (Marks) (ār'tûn), 1854–1923, English scientist, grad Girton College, Cambridge, 1880, wife of W E Ayrton In 1884 she invented a line divider used by artists, architects, and engineers For her work on the electric arc and on sand ripples, Mrs Ayrton was awarded (1906) a medal by the Royal Society, to which she was later elected a member. In 1906 she interrupted her scientific research to work with the Women's Social and Political Union in the campaign for woman suffrage. In 1915 she invented an anti-gas fan for use in the trenches in the First World War. She wrote *The Electric Arc* (1902). See memoir by Evelyn Sharp (1926).

Ayrton, William Edward, 1847–1908, English electrical engineer, educated at University College, London. In 1868 he entered the government telegraph service in India From 1884 until his death he was professor of electrical engineering at Central Technical College, South Kensington He made many improvements in telegraphy, invented a number of electrical measuring instruments, and wrote books and articles in his field His first wife, Matilda Chaplin Ayrton (1846–83), was a doctor, a pioneer among women in the field of medicine

Ayton or Aytoun, Sir Robert (both ā'tûn), 1570–1638, Scottish poet at the English court of James I He was private secretary both to Anne of Denmark and to Henrietta Maria Ben Jonson was one of his friends His own English poems (bearing no trace of Scottish dialect) are instinct with a courtly elegance and delicacy

Aytoun, William Edmonstoune (ā'tōn), 1813–65, Scottish poet and barrister He was professor of belles-lettres at Edinburgh Univ from 1845 to 1865 His literary fame rests on the *Bon Gaultier Ballads* (written with Sir Theodore Martin, 1845), parodies of poems by Tennyson, Macaulay, Mrs Browning, and others, on *Lays of the Scottish Cavaliers* (1849), and on *Firmilian, or, The Student of Badajoz* (1854), a mock tragedy, burlesquing the "spasmodic school" of poetry

Ayuthia or **Ayutthaya** (both āyōō'tēä, āyōōt'hīä), town (pop 15,821), S Thailand, N of Bangkok and on the Menam river It is an important center of trade, but is best known as the ancient Siamese capital Founded c 1350, it was destroyed by the Burmese in 1767, and the seat of government was transferred to Bangkok The ruins at Ayuthia are among the few important monuments of early Siamese civilisation

Ayutla (āyōōt'lä), city (pop 2,519), Guerrero, SW Mexico Its full name is Ayutla de los Libres [Ayutla of the free] Here was drawn up the Plan of Ayutla (1854), a program of reform directed toward removing the dictator, Santa Anna, and calling a constituent assembly to frame a federal constitution Preparing the way for the War of Reform (1858–61), the plan and the subsequent Revolution of Ayutla, which exiled Santa Anna and established a liberal government, were initially supported by Juan Álvarez, Ignacio Comonfort, Miguel and Sebastián Lerdo de Tejada, and Benito Juárez

Ayutthaya, Thailand see Ayuthia

Azal (ā'zăl), name of uncertain meaning in an apocalyptic passage Zech 14 5

azalea (uzā'lyu) [Gr ,=dry], any species of the genus *Azalea*, North American and Asiatic shrubs sometimes included in the genus *Rhododendron* but distinguished by the usually deciduous leaves Azaleas are handsome shrubs with large clusters of pink, red, orange, yellow, purple, or white flowers The better-known native American azaleas, often cultivated, include the flame azalea, orange, yellow, or scarlet flowered, of the Atlantic states, the fragrant white or pink swamp honeysuckle, found chiefly E of the Mississippi, and the pink or white pinkster or pinxter [=Pentecost] flower, native E of the Mississippi Ghent azaleas are popular cultivated hybrids Azaleas, like most other members of the heath family, require an acid soil and were formerly thought to prefer a dry soil Some have become popular as florists' pot plants

Azaliah (ăzŭlī'u) [Heb ,=God sets aside], father of Shaphan 1 2 Kings 22 3, 2 Chron 34 8

Azaña, Manuel (manwāl' āthan'yä), 1880–1940, Spanish statesman A playwright and critic, he lived in Paris during Primo de Rivera's dictatorship, and came to the fore in Spain as a revolutionary political leader in 1931 He was minister of war in the first republican cabinet, and premier (1931–33) under President Alcalá Zamora While premier, he pressed for social, military, and educational reforms. After the victory of the Popular Front in 1936, he again became premier, and in May, 1936, president of the republic after the ousting of Alcalá Zamora He headed the Loyalist government through the Civil War, in which he did not, however, play an important role In Feb , 1939, he fled to France His resignation, made public on March 1, came at the time when organized Loyalist resistance in Spain had collapsed

Azaniah (ăz"ŭnī'u) [Heb ,=whom God hears], Levite Neh 10 9

Azanza, Miguel José de (mēgĕl' hōsā' dā āthān'thä), 1746–1826, Spanish statesman and colonial administrator He served as secretary under José de Gálvez in Mexico and as secretary to the captain general of Cuba He held minor offices and aided in the French Revolutionary Wars He became minister of war (1793), but his French sympathies made him suspect As viceroy (1798–1800) of New Spain, he tried to reduce expenditures and he put down the insurrection known as the Conspiracy of the Machetes A member of the ephemeral first ministry of Ferdinand VII, he was one of the provisional junta that accepted the constitution of Bayonne. He served Joseph Bonaparte as minister and was made duke of Santa Fe When the Bonaparte regime fell, he retired to Bordeaux.

Azarael (ăzăr'ăēl) [Heb.,=whom God has helped], musician. Neh 12.36.

Azariah (ăzurī'u) [Heb ,=whom God has helped], common name in ancient Israel, especially among the priests The following are not necessarily all different persons 1 Chief officer under Solomon 1 Kings 4 2, 1 Chron 6 9 2 Chief officer under Solomon 1 Kings 4 5 3,4 Judahites 1 Chron 2 8,38,39 5 Kohathite Levite 1 Chron 6 36 Uzziah 1 Chron 6 24 6 High priest, 1 Chron 6 10,11 7 Father of Seraiah 2 1 Chron 6 13,14 8 Prophet who stirred King Asa to reform 2 Chron 15 9 King of Judah see Uzziah 1 10 Same as Ahaziah 2 11 High priest who withstood King Uzziah 2 Chron 26 17–20 12 High priest under Hezekiah 2 Chron 31 10–13 13,14 Levites 2 Chron 29 12 15,16 Sons of King Jehoshaphat 2 Chron 21 1 17,18 Aids of Jehoiada in the conspiracy against Athaliah 2 Chron 23 1 19 Ephraimite leader 2 Chron 28 12 20 Worker on the wall of Jerusalem Neh 3 23,24 21 Same as Seraiah 7 22 Interpreter of the law Neh 8 7 23 Sealer of the covenant Neh 10 2 24 Priest in postexilic Jerusalem 1 Chron 9 11 Seraiah Neh 11 11 25 See Jaazaniah 26 One of the Three Holy Children His name in Greek is Azarias

Azarieh, El, Palestine see Bethany

Azay-le-Rideau (azā'-lu-rēdō'), town (pop 1,387), Indre-et-Loire dept., NW central France, in Touraine Its famous Renaissance château (1518–29), framed by a beautiful park and mirrored by the Indre river, is distinguished by its architectural harmony and simplicity

Azaz (ā'zăz) [Heb ,=strong], descendant of Reuben 1 Chron 5 8

Azazel (uzā'zĕl, ăz'u-zĕl), in the Bible, an obscure term of the ritual of the scapegoat Lev 16 RV Azazel may be the name of the scapegoat or of a desert demon to whom the scapegoat was sent The name was later applied to one of the fallen angels AV translates Azazel "the scapegoat"

Azaziah (ăz"uzī'u) [Heb ,=whom God helps] 1 Musician 1 Chron 15 21 2 Ephraimite 1 Chron 27 20 3 Overseer of the Temple 2 Chron 31 13

Azbuk (ăz'bŭk), father of Nehemiah Neh 3 16

Azeglio, Massimo Taparelli, marchese d' (mas'sēmō täpärĕl'lē markä'zā dadzā'lyō), 1798–1866, Italian statesman and author, b Turin He studied painting, then turned to literature and wrote two historical novels, *Ettore Fieramosca* (1833) and *Niccolò de Lapi* (1841) He married a daughter of Manzoni In 1845 he became a leader of the movement for national liberation He urged a more unified policy but strongly opposed secret conspiracies and violent outbreaks In his pamphlets he denounced the papal government and condemned Austria's ruthless repression of the liberals He influenced King Charles Albert and fought against Austria (1848), being wounded at Vicenza In 1849 the new king, Victor Emmanuel II, made him prime minister, a post he held until 1852, when he was succeeded by the more radical Cavour He soon retired to private life His autobiography throws much light on the Risorgimento

Azekah (uzē'ku), ancient city, Palestine, lying W of Jerusalem Joshua 10 10,11, 1 Sam 17 1, 2 Chron 11 9, Neh. 11 30, Jer 34 7

Azel (ā'zĕl), descendant of Saul 1 Chron 8 37,38, 9 43,44

Azem (ā'zĕm) [Heb ,=bone], town, S Palestine, perhaps to be identified with Azmon. Joshua 15 29; 19 3 Ezem 1 Chron 4 29

Azerbaidzhan, USSR see Azerbaijan

Azerbaijan (ä'zurbĭjän', ăz"ur-), region (41,160 sq mi , pop 2,734,973), extreme NW Iran, comprising the Second and the Third Provs The chief city is Tabriz, and other cities of note are Ardebil and Maragha It is a mountainous region W of the Caspian Sea In the north the Aras river separates it from the Azerbaijan SSR In the west it borders on Iraq and Turkey Azerbaijan, which includes large Lake Urmia, has deep valleys and fertile lowlands that yield much grain as well as fruits The region has been known since antiquity and has, of course, varied in size and boundaries In remote times it was dominated by the kings of Van and Urartu (in Armenia), but by the 8th cent B C it had been settled by Medes, and it came to be the province of Media Minor in the Persian Empire Here Zoroaster is supposed to have been born After Alexander the Great conquered Persia, he appointed (328 B C) as governor the Persian Atropates, who established himself as an independent king Later the region, which came to be called Atropatene or Media Atropatene, was much disputed The Parthian rulers (the Arsacidae) established claims over it, and it was incorporated (A.D 226?) into Persia again by Ardashir I Shapur II enlarged the province with more territory in the north Briefly Heraclius, the Byzantine emperor, conquered it in the 7th cent , just before the Arabs converted it to Islam and made it part of the caliphate The Seljuk Turks dominated the region in the 11th and 12th cent , and the Mongols under Hulagu Khan established their capital at Maragha. After the conquest by Tamerlane in the

14th cent, Tabriz was an important provincial capital in the Timurid empire It was out of Azerbaijan that the Safavid dynasty arose (1492) to renew the state of Persia There was fierce fighting between the Ottoman Empire and Iran for Azerbaijan, but Abbas I in 1603 regained the region, which remained entirely in possession of the shahs until the northern part was ceded to Russia in the treaties of Gulistan (1813) and Turkamanchai (1828) The remainder was organized as a Persian province, and though the majority of the people are Turkic-speaking Azers or Azerbaijani (with some Armenians and Kurds), their culture is Iranian After the Second World War, there was (1946) an uprising of leftists in Azerbaijan, which was put down by force

Azerbaijan or **Azerbaidzhan** (both· ä″zurbĭjän′, ä″zur–, Rus a″zĭrbĭjan′), constituent republic (32,100 sq mi , 1946 estimated pop 3,300,000), USSR Baku is the capital Azerbaijan lies between Dagestan on the north and Armenia on the southeast, between Georgia on the west and the Caspian Sea on the east In the south the Aras river separates the republic from the Iranian region of Azerbaijan The Azerbaijan SSR includes the NAKHICHEVAN ASSR and the MOUNTAIN KARABAKH Autonomous Oblast It occupies the western ranges of the Greater and the Lesser Caucasus and the hot and arid KURA valley The climate is subtropical in the LENKORAN lowland along the Caspian S of the APSHERON peninsula, one of the richest oil regions of the world In the mountains there are large pastures used for stock raising, especially of sheep (for wool) BAKU is the center of the oil industry Other cities are Kirovabad (formerly Gandzha), with large cotton mills, and Nukha, a silk center Mineral resources, besides petroleum, are iron and copper Cotton, grapes, tea, fruit, and tobacco are grown Carpet manufacturing is an important home industry The people are mostly Turkic Azers or Azerbaijani, of Persian culture They are Shiite Moslems Minorities include Armenians, Russians, and highlanders of the Dagestan group Russia acquired the region from Persia by the treaties of Gulistan (1813) and Turkamanchai (1828) It was officially named Azerbaijan only after 1920, when it became a Soviet republic It joined the USSR in 1922 and became a constituent republic in 1936 Known to the ancients as Albania and later divided among several principates (notably Shirwan), the region was linked to the history of Armenia and to that of Persia particularly after its conquest (4th cent A D) by Shapur II

Azgad (ăz′găd), family in the return to Palestine Ezra 2 12, 8 12, Neh 7 17, 10 15

Aziel (ā′zĭ-ĕl), in the Bible, shorter form of JAAZIEL

Azilian see PALEOLITHIC PERIOD

Aziza (uzĭ′zu) [Heb ,=strong], Jew who had a foreign wife Ezra 10 27

Azizia (ăzĭz-ē′ä), town (pop 26,417), Tripolitania, Libya It is a market center for a livestock and agricultural area and a road junction Allegedly it is the hottest place on earth, in 1936 a temperature of 141°F was registered here

Azrael (ăz′rāĕl) [Heb ,=help of God], in the Koran, angel of death, who severs the soul from the body The name and the concept were borrowed from Judaism

Azriel (ăz′rēĕl) [Heb ,=help of God] **1** Manasseite 1 Chron 5 24 **2** Naphtalite 1 Chron 27 19 **3** Father of SERAIAH 9

Azrikam (ăz′rĭkăm) [Heb ,=help against the enemy] **1** Man of the house of David 1 Chron 3 23 **2** Descendant of Saul 1 Chron 8 38, 9 44 **3** Levite 1 Chron 9 14, Neh 11 15 **4** Chief of the royal household 2 Chron 28 7

Aztec (ăz′tĕk″), Indian people dominating central Mexico at the time of the Spanish Conquest Their language belonged to the Nahuatl subfamily of Uto-Aztecan languages They arrived in the Valley of Mexico from the north toward the end of the 12th cent and, until the founding of their capital, TENOCHTITLÁN (c 1325), were a poor, nomadic tribe absorbing the culture of near-by states For the next century they maintained a precarious political autonomy while paying tribute to neighboring tribes, but by alliance, treachery, and conquest during the 15th and early 16th cent they became a powerful political and cultural group To the north they established hegemony over the HUASTEC, to the south over the MIXTEC and ZAPOTEC and even as far as Guatemala Their subjugation of the people of Tlaxcala in the mountains to the east was bloody and intermittent, and Tlaxcala was to prove of great value to the Spanish In the west only did the Aztecs fail to conquer The TARASCAN Indians severely defeated them By absorption of other cultural elements and by conquest the Aztecs achieved a composite civilization, based on the heritage of TOLTEC and Mixteca-Puebla They accomplished nothing in architecture finer than TEOTIHUACÁN, but in the fortification of their island capital they became accomplished engineers. The Aztec further developed sculpture (notably the stone wheel or calendar using the 260-day year and 52-year time cycle), weaving, metalwork, ornamentation, music, and picture writing for historical records Education was almost universal and was intended to fit the youth to assume responsibility in the social, economic, political, and religious life of the state. Agriculture was well advanced. The political and social organization was based on three castes—nobility, priesthood, and military and merchant Aztec government cannot properly be called an empire, for conquered chiefs retained political autonomy but paid tribute and kept commerce open to the Aztec Prisoners of war were used for human sacrifice to satisfy the many gods of the Aztec nature pantheon, notably HUITZILOPOCHTLI The wholesale human sacrifice revolted the Spanish, who arrived under Hernán Cortés in 1519 and began the conquest of Mexico. The last of the independent Aztec chiefs, MONTEZUMA II, was killed, Tenochtitlán was razed (1521), and three years later CUAUHTÉMOC, last of the chiefs, was murdered. See G C Vaillant, *Aztecs of Mexico* (1941)

Aztec, village (pop 756, alt 5,590 ft), co seat of San Juan co , NW N Mex , laid out 1890, inc 1905 It is the trade center of a large fruitgrowing area Aztec Ruins National Monument is near by

Aztec Ruins National Monument see NATIONAL PARKS AND MONUMENTS (table)

Azubah (uzū′bu) [Heb ,=deserted] **1** Wife of Caleb 1 Chron 2 18 **2** Mother of Jehoshaphat 1 Kings 22 42, 2 Chron 20 31

Azuela, Mariano (märyä′nō äswā′lä), 1873–, Mexican novelist As a practicing physician in Guadalajara, Azuela quietly supported the revolutionary cause until he openly joined Francisco Villa after the assassination of Francisco I Madero During Villa's northward retreat before Carranza, Azuela tended the wounded and saw warfare and revolution to the full From this experience came his modern classic, *Los de abajo* (1915, Eng tr , *The Under Dogs*, 1929), which uses the "mass personage" as its hero and depicts the military exploitation of the Indian The novel is composed of linked sketches, short, crisp, and stark, and the literary style has rough vigor and intense realism It is the masterpiece among Mexican *indianista* novels Returning to Mexico in 1916, Azuela continued his medical practice, took a minor part in politics, and wrote novels and essays Among his novels are *María Luisa* (1907), *Los fracasados* [the defeated] (1908), *Mala yerba* (1909), *Los caciques* (1917), and *San Gabriel de Valdivias* (1938)

Azulai, Hayim Joseph David (ĥī-yĭm, uzōō′lī), 1724–1806, Hebrew bibliographer, b Jerusalem, d Leghorn, Italy He was one of the first to write about the history of rabbinical literature, and his works embrace almost every field of rabbinical lore His most important contribution is to be found in his bibliographical *The Name of the Illustrious*, which contains names of hundreds of Jewish authors, and *Assembly of the Wise*, which contains the titles of books Isaac ben Jacob published a systematic arrangement of these two works in 1852

Azur (ā′zur) [Heb ,=helper] **1** Father of HANANIAH **2** **2** Father of JAAZANIAH **4**

azurite (ăzh′urīt), a mineral, the blue basic carbonate of copper, occurring in monoclinic crystals or masses, which range from transparent to translucent and opaque It is usually associated with MALACHITE, which it resembles except in color, when the two minerals are very closely associated, the stone is called azurmalachite Beautiful crystals of azurite are found in the United States in Arizona and New Mexico and in France at Chessy (for which the mineral is sometimes called chessylite), they are used for ornamental purposes The mineral is an important ore of copper

Azusa (uzōō′su), city (1940 pop 5,209, 1947 special census pop 8,506), in Monrovia township, S Calif , E of Pasadena, founded 1887, inc 1898 It is the shipping center of a citrus-fruit area. Citrus Junior College (coeducational) is here

Azzah (ăz′u), variant of GAZA

Azzan (ăz′ăn), man of Issachar Num 34 26.

Azzur (ăz′ur) [Heb ,=helper], a sealer of the covenant Neh 10 17.

B

B, second letter of the ALPHABET. Its Greek correspondent is named beta It is a usual symbol for a voiced bilabial stop In MUSICAL NOTATION it is used to represent a note in the scale In chemistry B is the symbol of the element BORON

Ba, chemical symbol of the element BARIUM

Baader, Franz Xaver von (fränts′ ksävär′ fun bä′dür), 1765–1841, German philosopher and mystic A mining engineer until 1820, Baader was made professor of philosophy at Munich (1826) upon publication of his *Fermenta cognitionis* (1822–25) His philosophy, strongly influenced by that of Boehme, was based on faith in the redeeming love of God and on the mediation of the Roman Catholic Church He is considered one of the foremost modern theologians His collected works were published in 16 volumes (1851–60)

Baal (bā′ul), plural **Baalim** (bā′ulĭm) [Semitic, =possessor], name used throughout the Old Testament for the deity or deities of Canaan Baal is not the name of one god, but a name for the local presiding deity The local Baal could have his own name, as Melkart at Tyre and Baalzebub at Ekron The worship of Baal was characterized by fertility cults of orgiastic type, as shown in OT references to BAAL-PEOR and to the "high places," the sanctuaries of Baalim The strife between the worship of the God of Israel and the local cults combined ethical and national elements At first the Hebrews used the name Baal for their God without discrimination, but as the struggle between Canaanite polytheism and monotheism increased, the name Baal was discarded, hence the substitution of Ishbosheth for Esh-baal, of Jerubbesheth for Jerubbaal (a name of Gideon), and of Merib-baal for Mephibosheth. In the substituted term there is probably

a word meaning "shame" The final detestation of the term is seen in the use of the name Beelzebub (see SATAN), probably the same as Baalzebub 1 Kings 11.4–8, 2 Kings 1–2 The Baal of 1 Chron. 4 33 is probably the same as RAMAH 3 As cognates of Baal in other Semitic languages there are Bel (in BABYLONIAN RELIGION) and the last elements in the Tyrian names Jezebel, Hasdubal, and Hannibal

Baiah (bā'ŭlū) [Heb , fem of Baal] **1** The same as BILHAH 2 **2** The same as KIRJATH-JEARIM **3** Unidentified mountain, in the vicinity of Jamnia Joshua 15 11

Baalath (bā'ŭlăth) [Heb , fem of Baal] **1** Town of Dan Joshua 19 44 **2** Unidentified city 1 Kings 9 18, 2 Chron 8 6

Baalath-beer (-bē'ur) [Heb ,=Baalath of the well], apparently the same as RAMAH 3

Baalbek (bāl'bĕk), town, SW Syria, NW of Damascus It is important only for the ruins of a city great in ancient times It was devoted to the worship of Baal or Bel, the sun-god, and hence was called in Greek Heliopolis [city of the sun] It became very prominent in Roman days and was made a separate colony by Septimius Severus There are notable remains of temples, including a huge temple of Jupiter, begun under Antoninus Pius The city was repeatedly sacked by invaders and was destroyed by earthquake in 1759

Baal-berith (bā'ŭl-bē'rĭth) [Heb ,=Baal of the covenant], local god of Shechem Judges 8 33, 9 4 Beruth Judges 9 46

Baale (bā'ulē) [Heb , fem of Baal], the same as KIRJATH-JEARIM

Baal-gad (bā'ul-găd') [Heb ,=Baal of fortune], town, far N Palestine, possibly the later Caesarea Philippi Joshua 11 17, 12 7, 13 5

Baal-hamon (-hā'mŏn) [Heb ,=Baal of a multitude], location of Solomon's vineyard Cant 8 11

Baal-hanan (-hā'năn) [Heb ,=Baal is gracious] **1** King of Edom Gen 36 38,39, 1 Chron 1 49,50 **2** One of David's officers 1 Chron 27 28

Baal-hazor (-hā'zôr) [Heb ,=Baal of a village], place where Absalom ambushed Amnon 2 Sam 13 23 It was probably NNE of Bethel

Baal-hermon (-hur'mŏn) see HERMON, MOUNT

Baali (bā'ulī) [Heb ,=my Baal], title of God which is to be abandoned by Israel Hosea 2 16,17

Baalim (bā'ulĭm), plural of BAAL

Baalis (bā'ulĭs), king of the Ammonites contemporary with Jeremiah Jer 40 14

Baal-meon see BETH-BAAL-MEON

Baal-peor (bā'ul-pē'ôr) [Heb ,=BAAL OF PEOR] local divinity of Peor One of the apostasies of Israel involved this god, apparently the cult was orgiastic, and the name became symbolic of all shameful apostasies Num 25, Deut 4 3, Ps 106 28, Hosea 9 10 Peor Num 25 18, 31 16, Joshua 22 17 The god's name appears in BETH-PEOR Under the form Belphegor, the name became that of a devil in the Middle Ages, Machiavelli used it in his *Belfagor*

Baal-perazim (-pēr'ŭzĭm) [Heb ,=Baal of breakings], unidentified place where David defeated the Philistines 2 Sam 5 20, 1 Chron 14 11 Perizim of Isa 28 21 is probably the same

Baal-Schem-Tov (bul-shĕm'-tōv'), 1700–1760, Jewish founder of the modern HASIDIM, b Russia His original name was Israel ben Eliezer He lived and taught in Galicia Learned in Talmudic lore, he was in turn teacher of a heder (Hebrew school), worker in a clay pit, slaughterer, and keeper of a village tavern He spent much time living as a hermit in the woods where he learned the healing powers of various plants He prescribed herb remedies and prayers for the villagers and became known as Baal-Schem [the man with a reputation], pilgrims from distant places visited him because of his fame for performing miracles He believed in worshiping God joyously and led others to believe that man is nearest to God when he rejoices, not when he sorrows Baal-Schem-Tov also taught that the doors of repentance are always open so that one's occasional sins should not make him despair, and that learning is not necessary to gain favor with God—that the prayers of the unlettered, if they are happy, are as acceptable as those of the learned This new idea gave great comfort to the ignorant workers who had felt that God was inaccessible

Baal-shalisha (bā'ŭl-shāl'ĭshu), place perhaps in SHALISHA 2 Kings 4 42

Baal-tamar (-tā'mär) [Heb ,=Baal of a palm], unidentified place near Gibeah Judges 20 33

Baal-zebub (-zē'bŭb), god of Ekron see BAAL and SATAN

Baal-zephon (-zē'fŏn), place near the Israelites' crossing of the Red Sea Ex 14 2,9, Num 33 7

Baana or **Baanah** (both bā'unu) [Heb ,=son of affliction] **1** Murderer of Ish-bosheth 2 Sam 4 1–12 **2** Father of HELEB **3** Officer under Solomon 1 Kings 4 12 **4** Officer under Solomon 1 Kings 4 16 **5** One who returned with Zerubbabel, apparently the father of ZADOK **6** Ezra 2 2, Neh 7 7, 10 27

Baara (bā'ărŭ), wife of SHAHARAIM

Baaseiah (bā"ăsē'yŭ) [Heb ,=work of God], Levite 1 Chron. 6 40

Baasha (bā'ăshŭ), d c 886 B C , king of Israel (c 909–c 886 B C.). He made himself king by the murder of King Nadab and the royal family According to the Bible he was a wicked man· he fought against ASA of Judah, who won with the aid of Benhadad of Syria Baasha was succeeded by his son Elah 1 Kings 15 27–16 7, 2 Chron 16.

Bab, see BABISM

Babar see BABER

Babbage, Charles (băb'bĭj), 1792–1871, English mathematician and inventor He devoted most of his life and expended much of his private fortune as well as a government subsidy in an attempt to perfect a calculating machine which foreshadowed present-day machines He was a founder of the Royal Astronomical Society He wrote *Tables of Logarithms* (1827) and an autobiography (1864)

Babbitt, Irving, 1865–1933, American scholar, b Dayton, Ohio, grad Harvard, 1889 After study in Paris, he returned to Harvard in 1894 as instructor, becoming professor of French literature in 1912 He was a vigorous critic of romanticism, deprecating especially the influence of Rousseau on modern thought and art He advocated a humanism which was a violent doctrine of moderation and restraint looking to classical traditions and literature for inspiration. Babbitt's works include *Literature and the American College* (1908), *The New Laokoon* (1910), *The Masters of Modern French Criticism* (1912), and *On Being Creative* (1932) See F E McMahon, *The Humanism of Irving Babbitt* (1931), *Irving Babbitt* (ed by Frederick Manchester and Odell Shepard, 1941)

Babbitt, Isaac, 1799–1862, American inventor and manufacturer, b Taunton, Mass A goldsmith by trade, he was the first in the United States to manufacture (1824) ware of Britannia metal While superintendent of the South Boston Iron Works, he invented and patented (1839) a journal box and suggested lining the bearing surface for the journal or axle with a new alloy he had developed, later known as Babbitt metal

Babbitt metal, an ANTIFRICTION METAL alloy, first produced by Isaac Babbitt in 1839 Today the term is applied to a whole class of silver-white bearing metals or "white metals" which are used widely for machine bearings The alloy is composed of antimony, tin, zinc, arsenic, and copper combined in varying percentages

Babcock, Harold Delos, 1882 , American physicist, b Edgerton, Wis , grad Univ of California, 1907 From 1909 to 1948 he was on the staff at Mt Wilson Observatory in California He specialized in spectroscopy, working and writing on the Zeeman effect, standards of wave lengths, and other subjects in the field

Babcock, Stephen Moulton, 1843 1931, American agricultural chemist, b Bridgewater, Oneida co , N Y , grad Tufts College (B A , 1866), Ph D Univ of Göttingen, 1879 He was, from 1887 to 1913, professor of agricultural chemistry at the Univ of Wisconsin and chief chemist of the Wisconsin Agricultural Experiment Station He is known chiefly for the Babcock test (perfected in 1890) for determining the percentage of butterfat in milk The test advanced the modern dairy industry since it permits the rapid and accurate grading of milk at markets, discourages adulteration and thinning practices, and by making practical the testing of the milk of individual cows promotes the development of better dairy strains His experimental studies in the food requirements of animals paved the way for the work of E V McCollum on vitamin A The last two decades of his life were spent in basic researches upon the nature of matter and its relation to energy

Babel, Isaac Emmanuelovich (ē'sāk umanōōā'luvĭch bă'bul), 1894–, Russian short-story writer and playwright He won meteoric fame with *Odessa Tales* (1923-24), written in the Russo-Jewish jargon of his native city, and *Red Cavalry* (1926, Eng tr 1929), based on his experiences in Budenny's army and employing the race war slang of the Kuban Cossacks A brilliant and dramatic stylist, he turned to drama in *Sunset* (1928) and *Marya* (1935) and in the film-novel *Benya Krik* (1927, Eng tr , 1935), dealing with the exploits of an Odessa bandit His popularity has waned with the increasing proletarization of literature in Russia

Babel (bā'bĭl), in the Bible, Babylonian city where Noah's descendants (who spoke the same language) tried to build a tower to reach to heaven For this presumption their words were made incomprehensible Gen 11 1–9 Some see in this an etiological story on the diversity in speech and also a reminiscence of the ziggurats in Mesopotamia

Bab el Mandeb, see PERIM

Babenberg (bă'bŭnbĕrk), ruling house of Austria (976–1246) It possibly descended from, or succeeded, a powerful Franconian family of the 9th cent from whose castle the city of Bamberg probably took its name Emperor Otto II created Count Leopold of Babenberg margrave of the Eastern March (i e., Austria) Among Leopold's successors were LEOPOLD III, Leopold IV and Henry II, who were also dukes of Bavaria (1139–56), and Henry II, called Jasomirgott ("if God will") for his favorite phrase Henry II became the first duke of Austria In 1192 the Babenbergs inherited Styria. Duke Leopold V took part in the Third Crusade and later made RICHARD I of England a prisoner Leopold VI, called the Glorious, brought the house to its greatest power His son, Frederick II called the Quarrelsome, died childless in 1246, and Austria passed (1251) to OTTOCAR II of Bohemia, who married Frederick's sister

Baber, Babar, or **Babur** (all bă'bur) [Turki,=lion] popular name of Zahir-ud-din Mohammed, 1480–1530, founder of the Mogul empire of India A descendant of Tamerlane, he succeeded (1495) to a principality in central Asia His efforts during the next 20 years to wrest Transoxania (Tamerlane's original domain) from the Uzbeks succeeded only temporarily, but in 1504 he captured Kabul and established a kingdom in Afghanistan From there he invaded India in 1525 Though his force was small, he managed by using artillery to defeat the sultan of Delhi at Panipat in 1526 and to capture Agra and Delhi He finally conquered nearly all N India Baber, the conqueror, was also a distinguished musician and writer His autobiography (Eng tr by A S Beveridge, 1922) is his greatest work

Babeuf, François Noël (frāswä' nōĕl' bábŭf'), 1760–97, French revolutionist Of peasant origin, he spent his young manhood in service of the lay and clerical nobility and conceived a deep hatred for privilege of all sorts An enthusiastic supporter of the French Revolution from the start, he went to Paris only in 1794 After Robespierre had fallen and the Thermidorian reaction had begun, Babeuf founded his journal, the *Journal de la liberté de la presse* (later the *Tribun du peuple*), and argued that the Revolution in establishing only political equality had not gone far enough He was promptly arrested, but emerged from prison a more violent enemy of economic injustice than he was before Calling himself Gracchus Babeuf, he organized an egalitarian group, with the members drawn mostly from the ranks of common soldiers and Parisian workingmen, and announced a program of economic equality and communism—the suppression of private property, the establishment of a common administration, the right of all men to work and to share in the products of the economy Such radical ideas did not please the Directory, Babeuf's journal was halted, and his organization was banned The result was a plot by a secret society (organized on what was later called the cell system) to overthrow the government by force, this is called the Conspiracy of the Equals It was betrayed to the government, and after a long trial Babeuf was executed Thus ended what is generally considered the last stage of the French Revolution Babeuf's doctrines, however—Babouvism—were kept alive, largely by secret revolutionary societies, and reappeared especially in the Revolution of 1848 and in the Commune of Paris in 1871 A practical socialist, Babeuf was a forerunner of Karl Marx

babies'-breath see BABY'S-BREATH

Babine Mountains (bubēn', bă'bēn), minor chain central British Columbia between the Bulkley river and Babine river and lake

Babinet, Jacques (zhak' babēnā'), 1794–1872, French physicist and astronomer He became a professor at the College de France in 1838 He invented a polariscope and a goniometer (an instrument for measuring angles of crystals) and improved the air pump and the hygrometer His writings include popular works on science, an atlas, textbooks of geography and geometry, and *Études et lectures sur les sciences d'observation* (8 vols , 1855–68)

Babington, Anthony (bă'bĭngtun), 1561–86, English conspirator Once a page to MARY QUEEN OF SCOTS, he was among the Catholic nobles who harbored such Jesuits as Edmund Campion In 1586 he was accused of having plotted to murder Queen Elizabeth, to free Mary, and to make England a Catholic realm The proof which caused his execution was used to convince Elizabeth that it was necessary to behead Mary See A G Smith, *The Babington Plot* (1936)
