rotation of crops, agricultural practice of varying the crops on a piece of land in a planned series, to save or increase the strength of the soil, to increase crops, and to eradicate weeds, insects, and plant diseases In a rotation, it is desirable to alternate a cultivated crop (e g., Indian corn) and a legume (e g, clover), which adds nitrogen to the soil See W W Weir, *Productive Soils* (5th ed, 1946).

rotenone. see INSECTICIDE

Roth, Frederick George Richard (rōth), 1872–1944, American animal sculptor, b Brooklyn, N Y, educated at Bremen, Germany, and studied art in Vienna and Berlin His elephants, dogs, and horses, whether in small bronzes or life-size, are presented in an original and sympathetic manner Among his works are several in Central Park, New York city, including the dog *Balto*, the bronze lion at Baker Field, Columbia Univ, stone panels in Prospect Park, Brooklyn, illustrating Kipling's *Jungle Book*, and the equestrian statue of George Washington for Morristown, N J

Roth, Rudolf von (rōō'dôlf fŭn rōt'), 1821–95, German Orientalist He was the principal collaborator with Otton von Bohtlingk on a Sanskrit lexicon (7 vols, 1855–75)

Rothamsted Experimental Station (rō'thumstĭd), England's oldest and most important agricultural experiment station It was founded in 1843 by John Bennet Lawes on his manor at Harpenden, in Hertfordshire, where he had already begun experimenting with fertilizer In 1842 a patent had been granted him for the development of superphosphate—bone meal, or calcium phosphate, treated with sulphuric acid—an artificial fertilizer which his factory soon was producing in large quantities The station continued working with fertilizers and expanded its activities to include crop-production studies and animal nutrition experiments From the time of the organization of Rothamsted, Joseph Henry Gilbert was associated with Lawes in carrying on the work, and their collaboration continued for nearly 60 years A series of expansions started in 1902 provided new facilities and added to the staff botanists, bacteriologists, chemists, and writers, which increased the value of the station to Great Britain's varied agricultural interests, distributed as they were throughout the world. In 1934 a public appeal brought forth the funds needed to buy, from the Lawes estate, the grounds used by the station. The experimental work which had once been subsidized entirely by J. B Lawes came to be sustained by government grants, supplemented by the contributions of private interests. The departments among which the station's functions are divided are chemistry, soil microbiology, physics, botany, entomology, insecticides and fungicides, plant pathology, and statistics. Their work is recorded in *Rothamsted Memoirs on Agricultural Science* and *Rothamsted Monographs on Agricultural Science*. In 1890 these comprised 10 volumes, and sets of the bound volumes were distributed to major libraries, agricultural colleges, and other stations throughout the world An important function of the station now is the training of postgraduate research workers See A D Hall, *The Book of the Rothamsted Experiments* (1905); Sir Edward John Russell, *British Agricultural Research: Rothamsted* (new ed, 1947)

Rothe, Richard (rĭkh'ärt rō'tə), 1799–1867, German Lutheran theologian Rothe was influenced by Pietism while professor at Wittenberg Theological Seminary His strong development of the close connection between ethics and religion is presented in *Theologische Ethik* (3 vols, 1845–48)

Rothenburg ob der Tauber (rō'tənbōōrk ŏp dĕr tou'bur), town (pop 11,045), Middle Franconia, W Bavaria, on the Tauber and WNW of Ansbach Almost completely preserving its medieval appearance, it is entirely walled (the walls dating from the 14th and 15th cent), and it contains many Gothic and Renaissance buildings The town hall is considered one of the most beautiful in S Germany Founded in the 11th cent., Rothenburg was a free imperial city until 1803

Rothenstein, Sir William (rō'thunstīn), 1872–1945, English painter and writer He was well known for his portraits of notables and for his pictures of Jewish subjects, such as *Jews Mourning in the Synagogue* (Tate Gall, London) A self-portrait is in the Metropolitan Museum He was official artist to the British and Canadian forces in the First World War and unofficial artist to the Royal Air Force in the Second World War From 1920 to 1935 he was principal of the Royal College of Art, London Important as a picture of the period are his biographical sketches in *English Portraits* (1898) and *Twenty-four Portraits* (1920–23) and his autobiographical *Men and Memories* (2 vols, 1922–38) and *Since Fifty* (1940) Rothenstein was knighted in 1931

Rotherham (rŏdh'ərum), county borough (1931 pop 69,691, 1947 estimated pop 81,240), West Riding of Yorkshire, England, at the confluence of the Don and the Rother NE of Sheffield, in an iron- and coal-mining district On an old bridge over the Don is a 15th-century chantry chapel The Church of All Saints dates from the 15th cent The city's manufactures include steel, electrical equipment, glass, and chemicals

Rothermel, Peter Frederick (rō'dhurmĕl), 1817–95, b Nescopeck, Pa He was director (1847–55) of the Pennsylvania Academy of the Fine Arts Among his works are *Battle of Gettysburg* (Memorial Hall, Philadelphia) and *Embarkment of Columbus* (Pa Acad of the Fine Arts)

Rothermere, Harold Sidney Harmsworth, 1st **Viscount** (rō'dhurmēr), 1868–1940, English publisher He was the financial wizard of the publishing firm headed by his brother Alfred, Viscount NORTHCLIFFE In 1915 he founded the *Sunday Pictorial* and after his brother's death in 1922 gained control of the vast newspaper empire He was created viscount in 1919 Though long friendly to fascism and a proponent of appeasement in 1938, he wholeheartedly supported the British cause in the Second World War He died in Bermuda

Rothesay, David Stuart, duke of. see STUART, DAVID, DUKE OF ROTHESAY

Rothesay (rŏth'sē, -sā), burgh (pop 9,347), county town of Buteshire, Scotland, on Bute island in the Firth of Clyde Rothesay Castle dates from the 14th cent, destroyed in 1685, it was rebuilt in 1871 The burgh's harbor was improved late in the 19th cent It is the scene of an annual regatta in July Rothesay is a resort, and the Royal Northern Yacht Club has its headquarters here The prince of Wales has the title duke of Rothesay.

Rothschild (rŏth'chĭld, Ger rōt'shĭlt), prominent family of international bankers The first important member was Mayer Amschel Rothschild (mī'ur ăm'shĕl) (1743-1812), son of a small Jewish money changer in Frankfurt, Germany His first names are also variously spelled as Meyer and Anselm It was he who laid the foundation of the family fortune by his skillful operations as financial agent for the landgraves of Hesse-Kassel. His five sons were Amschel Mayer Rothschild (1773–1855), who remained at Frankfurt with his father, Salomon Rothschild (1774–1826), who established the Vienna branch of the family, Nathan Meyer Rothschild (see separate article), who founded the London branch, Karl Rothschild (1780–1855), who established the Naples Branch (closed 1860), and Jacob Rothschild (1792–1868), who settled in Paris. After the Napoleonic Wars the house of Rothschild, which remained a single family enterprise, attained increasing power, and in 1822 all five brothers were created barons by Emperor Francis I of Austria The Rothschilds were undoubtedly one of the world's chief financial powers in the 19th cent. The First World War and the subsequent events greatly reduced their influence and wealth. The Rothschild family has made it a tradition to cling to the Jewish faith and to engage in large-scale philanthropies, both for Jews and non-Jews. Many later and contemporary members of the family distinguished themselves as patrons of the arts, sportsmen, writers, and doctors They were, perhaps, the only Jewish family fully accepted in the highest society of London, Paris, and Vienna See E C Corti, *Rise of the House of Rothschild* (1928) and *Reign of the House of Rothschild* (1928), M. E. Ravage, *Five Men of Frankfurt* (1929)

Rothschild, Nathan Meyer, 1777–1836, English banker, b Frankfurt, Germany; third son of Mayer Amschel Rothschild The ablest member of the family, he came to England in 1797, was naturalized in 1804, and opened a business house in London in 1805 He acted as agent of the English government in supplying subsidies to the powers opposing Napoleon I and was of vital help in the ultimate defeat of Napoleon Though created an Austrian baron in 1822, he never carried the title After the Napoleonic Wars, the house of Rothschild, guided by Nathan Meyer Rothschild, floated several major loans to various countries and attained enormous power Aside from his financial acumen, Rothschild was aided in his transactions by a very efficient information service Thus he was informed of the allied victory at Waterloo by carrier pigeons and, in a single day, won a fortune and saved the London stock exchange from collapse by buying up all the shares sold by frightened investors. After his death the house of Rothschild was dominated by his son, **Baron Lionel Nathan de Rothschild,** 1808–79, who virtually established a family monopoly for the flotation of large international loans He was the first Jewish member of Parliament and an active philanthropist

Rothstein, Arnold (rōth'stēn), 1883–1928, American gambler, b New York city He started his gambling career at the age of 12 with money stolen from his father When he was 15, he ran away from home He became a professional gambler and operated gambling houses in New York city, Saratoga Springs, N Y, and Long Beach, L I, N Y He had a reputation for betting large amounts of money, one time as much as $140,000 on a single horse, and he ran a racing stable and a real-estate business Rothstein was supposed also to have been a ringleader of bank robbers and bootleggers He was murdered after refusing payment in a card game he had lost His assassin was never identified See Donald Henderson Clark, *In the Reign of Rothstein* (1929), Carolyn Rothstein, *Now I'll Tell* (1934)

rotogravure see PRINTING

Rotorua (rōtōrō'ə), borough (pop 7,512), on N North Island, New Zealand It is the largest health resort in the Hot Springs District There is a sanatorium on the south shore of Lake Rotorua

Rotrou, Jean de (zhăⁿ' du rōtrōō'), 1609–50, French dramatist *Saint-Genest* (1646) and *Venceslas* (1647) are noble and effective tragedies

Rotten Row, track in Hyde Park, London, for horseback riders The origin of the name is unknown

Rotterdam (rŏ'tərdăm, Dutch rôterdăm'), municipality (pop 637,165), South Holland prov, W Netherlands, on the New Meuse (Dutch *Nieuwe Maas*) near its mouth on the North Sea It is the largest port and the second largest city of the Netherlands HOOK OF HOLLAND, a part of the city, is its outer port Rotterdam has large shipyards, petroleum refineries, and manufactures of chemicals, machinery, food products, and clothing It is the seat of many important shipping and trading companies Before the Second World War, Rotterdam was (on the basis of the volume of trade) the largest port of continental Europe, rivaled only by Antwerp Its chief importance was—and continues to be—as a center for transit trade It is connected by waterways with the Ruhr basin of NW Germany, for which it acts as the chief transshipping point Chartered in 1328, it was long overshadowed by neighboring Delft and its port Delfshaven (now a suburb of Rotterdam), from which the Pilgrim Fathers sailed for America The separation (1830) of Belgium from the Netherlands diverted much trade from Antwerp to Rotterdam It experienced its greatest growth after the construction (1866–90) of the New Waterway, which made it accessible to even the largest ocean-going vessels, and with the phenomenal expansion of the industries of NW Germany. In May, 1940, when German forces invaded the Netherlands, the outskirts of Rotterdam were the scene of fighting On May 14, several hours after the city had capitulated, Rotterdam was subjected to a brutal and totally unnecessary bombardment by air Civilian casualties were high, and the entire center of the city was destroyed. Although Warsaw had been similarly treated earlier in the Second World War, the bombing of Rotterdam may be said to have opened the phase of unrestricted air warfare Extensive reconstruction work is still in progress (as of 1950) Most of the old houses of Rotterdam (including the birthplace of Erasmus) were destroyed, the Groote Kerk (a 15th-century church) was damaged. Among the important buildings that survived the raid are the exchange (18th cent.)

and the Boijmans (formerly spelled Boymans) Museum.

Roty, Louis Oscar (lwē' ōskär' rōtē'), 1846–1911, French medalist and engraver, one of the greatest medalists of the 19th cent. His best-known commemorative medals include those for the death of President Sadi Carnot and for the 25th anniversary of the Franco-Prussian War. He also designed French coins. The originality of his graceful designs won him high honors.

Rouault, Georges (shôrsh' rōō-ō'), 1871–, French artist. Study under Gustave Moreau after 1891 and association with fauvism left Rouault a highly individual artist. In various media—oil, water color, gouache, pastel, etching, and lithograph, often daringly mixed—and in rough conventionalized forms he spoke, at first with harsh anger and later with more tranquillity, of injustice and human suffering. Clowns, bourgeois judges, the passion of Christ, and the misery of war are recurrent subjects with Rouault.

Roubaix (rōōbā'), city (pop. 98,834), Nord dept., N France, in Flanders. With neighboring Tourcoing, it produces the larger part of all woolen textiles consumed in France.

Roubillac or **Roubiliac, Louis François** (both lwē' frāswā' rōōbēyäk'), 1695?–1762, French sculptor. He worked principally in England, where he became popular as the designer and builder of fine mausoleums.

Rouen (rōōā'), city (pop. 101,187), capital of Seine-Inférieure dept., N France, and ancient capital of Normandy. Situated on the Seine near its mouth at the English Channel, Rouen functions as the port of Paris, handling a larger volume of traffic than any other port of France. It also has important cotton manufactures and is an old commercial, administrative, and cultural center. Dating from pre-Roman times, Rouen was the victim of repeated raids (9th cent.) by the Norsemen. By the 10th cent. it was the capital of Normandy and a leading European city. It was held (1419–49) in the Hundred Years War by the English. Joan of Arc was burned here in 1431. From 1499 to 1789 it was, with interruptions, the seat of a provincial PARLEMENT. A judicial center, Rouen furnished many magistrates to France. The most illustrious sons of the city were, however, Pierre Corneille and Gustave Flaubert. Rouen has been an archiepiscopal see since the 5th cent. and is particularly rich in ecclesiastic buildings (see GOTHIC ARCHITECTURE). Much was damaged in the Second World War. One of the two strikingly different towers of the cathedral of Notre Dame (13th–15th cent.) was burned, the other, left intact, is the famous Tour de Beurre [butter tower]. The Church of St. Maclou and the palace of justice (both 15th–16th cent.) were partially destroyed. Undamaged buildings include the Church of St. Ouen (begun 14th cent.) and the Grosse Horloge, a Renaissance clock tower. Rouen's port installations suffered very heavy damage.

Rouergue (rōōĕrg'), region and former county, S France, in the S MASSIF CENTRAL. It is now occupied by Aveyron dept. Traversed by the Aveyron and Tarn rivers, it includes the southern end of the Auvergne Mts., where some coal is mined, and, in the south, part of the CÉVENNES Mts., with deeply eroded limestone plateaus (*causses*). Except in the valleys, rye and chestnuts are the only products. Sheep are raised in great quantity and furnish milk for the Roquefort cheese industry. Rodez, the historic capital, and Millau are the chief towns. The county of Rodez or Rouergue and the viscounty of Millau, formed in the feudal period as dependencies of the counts of Toulouse, passed to the French crown in 1271, were ceded to England by the Treaty of Brétigny (1360), and reverted to France in 1368. The lands passed to the Bourbon family. Henry IV, who inherited them, united them with the royal domain (1589) and incorporated them into the province of Guienne.

Rougé, Emmanuel, vicomte de (ämänüĕl' vēkōt' dŭ rōōzhā'), 1811–72, French Egyptologist. He was curator of the Egyptian section of the Louvre and professor of Egyptology at the Collège de France. He and LEPSIUS produced a consistent system for the interpretation of discoveries, and he worked out fundamental principles for studying Egyptian texts. He compiled a *Chrestomathie égyptienne* (4 vols., 1867–76). He sought to prove that the Semitic alphabet had an Egyptian origin.

Rouge (rōōzh), river rising in S Michigan and winding S and SE to the Detroit river at the city of RIVER ROUGE. Dearborn and part of Detroit also lie on the river.

rouge: see COSMETICS and POLISHES.

Rouget de Lisle, Claude Joseph (klōd' shōzĕf' rōōzhä' dŭ lēl'), 1760–1836, French poet, musician, and soldier. While an officer in garrison at Strasbourg for the army of the Rhine, he wrote the words and music of the MARSEILLAISE as a marching song for his soldiers. Although the song later became inseparably associated with the Revolution, he himself was a royalist and barely escaped the guillotine. The name also appears as Rouget de l'Isle.

Rough Riders, name popularly given to the 1st Regiment of U.S. Cavalry Volunteers in the Spanish-American War (1898). The regiment was a spectacular one, composed of ranchers and cowboys and Indians from the ranges of the Far West with a sprinkling of adventurous "blue bloods" from the Eastern universities. It was recruited largely by Theodore ROOSEVELT, who resigned his post as Assistant Secretary of War to enter active fighting. The command of the regiment went, however, to a man of more military experience, Leonard Wood. Roosevelt was made lieutenant colonel. Transportation difficulties caused its horses to be abandoned in Florida, and the regiment fought chiefly on foot in Cuba. It took part in the battles about Santiago, its exploits, especially at San Juan Hill, were highly publicized.

roulette (rōōlĕt'), game of chance popular at Monte Carlo and other gambling resorts and played in simplified form elsewhere. The roulette wheel is placed in the middle of an oblong table, it is usually marked off into 37 or 38 spaces alternating red and black. Each sector of the wheel is marked off at the edge with one of the numbers from 1 to 36. The one or two remaining sectors, of a different color, are marked off by zeros. The table has on either side of the wheel an arrangement of red and black squares containing numbers corresponding to those on the wheel, besides indications of certain bets (*manque*, that the winning number will be 1–18, *passe*, that it will be 19–36, *pair*, that it will be an even number, *impair*, that it will be odd, *rouge*, that it will be red, *noir*, that it will be black). The players place their stakes on the table in positions indicating their bets, and the *croupier* spins the wheel. A small ball, tossed into the wheel, finally comes to rest on one of the numbers at the margin, indicating the winner. Many betting combinations are allowed, with varying odds and maximum stakes. This gambling game dates from the late 18th cent.

Roumania: see RUMANIA.

Roumelia: see RUMELIA.

round, in music, a canon on a simple tune in which all the voices enter at the unison or the octave. An example is SUMER IS ICUMEN IN. Rounds were popular in 17th-century England, particularly during the reign of Charles II, when the catch reached its height. The catch was originally just a simple round, e.g., *Three Blind Mice*, written out in a single line of music with the effect gained by having another singer come in ("make the catch") at just the right time. Later comic effects, often quite bawdy, were added, resulting from the interweaving as the parts were sung together. *The Rounds and Canons of England* (1864) by E. F. Rimbault is a comprehensive collection.

Roundheads, derisive name for the supporters of Parliament during the English civil war (see PURITAN REVOLUTION). The name, which originated c. 1641, referred to the short haircuts worn by some of the Puritans in contrast to the fashionable wigs worn by many of the Cavaliers, who supported King Charles I.

Round Rock, town (pop. 1,240), central Texas, N of Austin. An old-established farm market with a lime kiln and dairy plants, it saw in 1878 the bloody gun battle in which Texas Rangers ended the outlaw career of Sam Bass.

Round Table, in ARTHURIAN LEGEND, the table at which King Arthur and his knights sat, said to have been round so that questions of precedence might not rise to vex the company. According to one version it was given to Arthur as a wedding gift by his father-in-law. The Siege Perilous was the seat at the table in which only he might sit who was to see the Holy GRAIL; GALAHAD claimed the seat. A round table of undetermined antiquity hangs now in the castle at Winchester. Traditionally King Arthur's, it may be a relic of one of the medieval jousts also called round tables.

Round Tops: see GETTYSBURG CAMPAIGN.

Roundup, city (pop. 2,644), co. seat of Musselshell co., central Mont., on the Musselshell river and N of Billings, inc. 1909. A cow town in the late 19th cent., it is now the center of a coal and oil region.

roundup, name given the periodic collecting of live stock on Western ranges in the United States. Cowboys, mounted on ponies especially trained for the work, gather cattle in herds, which they drive to headquarters. The purpose of the roundup is to enable the rancher to cull his herd, to select animals for marketing, to dip diseased live stock, to brand newly acquired cattle and the calves born since the last roundup, and to castrate calves. Roundups occur once or twice a year, usually in the spring and fall. Cowhands on the large ranches spend the entire day in the saddle, eat their meals at the chuck wagon (wagon carrying a stove and provisions), and sometimes sleep on the ground. The old flavor of the roundup has diminished somewhat in automobile days, but still persists.

roup (rōōp), infectious disease of poultry, marked by inflammation of the mucous membranes of the air passages and of the eyes. Its cause is not known, and the death rate is very high. The infected areas are treated with argyrol, and the birds should be isolated.

Rouphia, river, Greece: see ALPHEUS.

Rourke, Constance (rōōrk), 1885–1941, American writer, b. Cleveland, grad. Vassar, 1907. In 1908–9 she studied at the Sorbonne, and on her return to the United States she taught at Vassar until 1915. Her first book was *Trumpets of Jubilee* (1927), a social history. Her best-known works are *American Humor* (1931) and the biographies *Troupers of the Gold Coast* (1928), on Lotta Crabtree; *Davy Crockett* (1934), and *Audubon* (1936). Her last book, *The Roots of American Culture* (1942), includes essays on early American drama, music, art, and folklore.

Rousay (rou'zā), island, off N Scotland, one of the Orkney Islands. A complete Stone Age village was discovered here in 1938.

Rouses Point (rou'zĭz), village (pop. 1,846), extreme NE N.Y., on Lake Champlain, inc. 1877. At the Quebec line, it is a port of entry. There are fisheries here, and pharmaceutical goods are made.

Rousseau, Henri (ärē' rōōsō'), 1844–1910, French primitive painter, self-taught. He was called Le Douanier from his profession of customs official. His impressions of landscapes and figures in France and Mexico, where he served with the army, are simple and vivid. Using exotic, bright colors, his jungle scenes are especially effective. Among these are *The Snake Charmer* (Louvre) and *The Sleeping Gypsy* and *Jungle with a Lion* (both Mus. of Modern Art, New York). See study by D. C. Rich, (rev. ed., 1946).

Rousseau, Jean Jacques (zhäN' zhäk'), 1712–78, French philosopher, author, political theorist, and composer. He was born at Geneva, Switzerland, the son of a watchmaker. His mother died in childbirth, and the child's upbringing was haphazard. At 16 he set out on a wandering, irregular life which brought him to Turin, where he became an unenthusiastic Catholic convert. After serving as a footman in a powerful family, he left Turin (1731) and spent the next 10 years at Chambéry, Savoy, with his patroness, Louise Éléonore de Warens, who soon made him her lover. During that period he made several adventurous excursions to Switzerland and France, but always returned to *Maman*, as he called Mme de Warens. In 1741 he set out to make his fortune at Paris with a new system of musical notation, which turned out a failure. He made valuable contacts, however, and secured (1742) a position as secretary at the French embassy in Venice, but soon had to resign. In Paris he became an intimate of the circle of DIDEROT (to whose *Encyclopédie* Rousseau contributed the musical section), Melchior Grimm, and Mme d'ÉPINAY. At this time also began his liaison with Thérèse Le Vasseur, a half-illiterate servant girl who became his common-law wife. In his *Confessions*, his celebrated autobiography, Rousseau accused himself of having sent his five children by Thérèse to a foundling home. The theory has been advanced that Rousseau, who was developing a psychosis, had invented the whole episode and that Thérèse's children were not his or that there never were any children. In 1749 Rousseau won the first prize in a contest, held by the Academy of Dijon, on the question Has the progress of the sciences and arts contributed to the corruption or to the improvement of human conduct? Rousseau took the negative stand, contending that man was good by nature and was corrupted by civilization. His essay made him both famous and controversial overnight. Although it is still widely believed that all of Rousseau's philosophy was based on his call for a return to nature, this view is an oversimplification, due to an excessive importance attached to this first essay. Success came to Rousseau also in the musical field with the production (1752) of his pastoral melodrama, *Le Devin du village* [the village sage], some of its simple and graceful tunes are still performed. A second philosophical essay, *Discours sur l'origine de l'inégalité des hommes* (1754), is one of Rousseau's most mature and daring productions. After its publication Rousseau returned to Geneva, reverted to Protestantism in order to regain his citizenship, and returned to Paris with the title "citizen of Geneva." Mme d'ÉPINAY lent him a cottage, the Hermitage, on her estate at Montmorency. His unfortunate love for Mme d'Houdetot, sister-in-law of Mme d'Épinay, exerted a disastrous influence on Rousseau's unbalanced psyche. Rousseau began to quarrel with Mme d'Épinay, Diderot, and Grimm, whom he accused of complicity in a sordid plot against him, and left the Hermitage to become the guest of the tolerant duc de Luxembourg, whose château was at Montmorency. Here he finished his novel *La Nouvelle Héloïse* (1761), written in part under the impact of his love for Mme d'Houdetot; his *Lettre sur les spectacles* (1758), a diatribe against D'Alembert's suggestion (in the article "Genève" in the *Encyclopédie*) that Geneva would be better off for having a theater; his *Contrat social* (1762), and his *Émile* (1762). The last of these works contained a passage offensive to both the French and the Genevese ecclesiastic authorities. The book was burned at Paris and at Geneva, and Rousseau, with the connivance of high-placed friends, escaped to the Swiss canton of

Neuchâtel, then a Prussian possession. His house was stoned, and Rousseau fled once more, this time into the canton of Bern, settling on the small island of Saint-Pierre, in the Lake of Biel. Rousseau described his asylum in idyllic terms in his *Confessions* and in his *Rêveries d'un promeneur solitaire* (1776–78). In 1765 he was expelled from Bern and accepted the invitation of David Hume to live at his house at Wotton, Derbyshire. Here he began to write the first part of his *Confessions*, but after a year he quarreled violently with Hume, whom he believed in league with Diderot and Grimm. The fixed idea gained ever wider proportion and became a full-fledged persecution mania. After wandering for several years through the provinces of France (always accompanied by Thérèse, although he considered her and her mother to be leaders in the plot against him), he finally settled (1770) at Paris, where he lived in a garret and copied music for a living. The French authorities left him undisturbed, while curious foreigners flocked to see the famous man and to be insulted by him. At the same time he went from salon to salon, reading his *Confessions* aloud. It is remarkable that despite his obvious madness, his contemporaries thought him merely an eccentric. Shortly before his death, Rousseau moved to the house of a protector at Ermenonville, near Paris. The suggestion that he was killed in a violent quarrel with Thérèse has not been substantiated. In 1794 his remains were transferred to the Panthéon in Paris. Rousseau's influence on posterity has been equaled by few men, and it is by no means spent. Men as diverse as Kant, Goethe, Robespierre, Pestalozzi, and Leo Tolstoy have been his disciples. His influence was equally strong in the fields of politics, literature, and education. His political doctrine is largely contained in the *Contrat social*, but it must be supplemented by other writings, notably the *Discours sur l'origine de l'inegalité* and his draft of constitutions for Corsica (made at the request of Paoli) and for Poland (made at the request of Stanislaus II). Rousseau supposed that "natural man" was a pure animal, neither good nor bad, equality disappeared with the appearance of industry, agriculture, and property. Laws were instituted merely to consolidate the power of the oppressors over the oppressed, and inequality became permanent. Man cannot regain the freedom he lost when he ceased to be "natural man." But men may attain civic liberty by entering a social contract among themselves. This contract must be based on the assumption that sovereignty is inalienably vested in society as a whole and that this collective sovereignty cannot be delegated. This basic principle holds true whether the form of government be monarchic, aristocratic, or democratic (all three forms being justifiable in their time and place). No laws could be made without the consent of the collective sovereign. The common will, reflecting the common interest, is required for all important decisions, each citizen must subordinate himself to the common will, for the minority is deceived as to the true content of the general will. Personal property is sacred, but a measure of economic equality must be assured. Similarly, political equality is maintained as long as "power is never exerted except as rank and laws permit it." Contrary to widespread opinion, Rousseau never intended to lead society back to the "state of nature," which he considered an impossibility; his whole plan was to make the loss of its original innocence tolerable to mankind by substituting the social contract—a step forward rather than backward. Although Rousseau did not advocate collective ownership, his ideas had a profound impact on modern socialist and communist thought. In his pedagogical novel *Émile*, Rousseau traced the principles of all modern education. Its underlying theory, however—that a child at birth is entirely natural and unspoiled—has been discredited by modern psychology. According to Rousseau, education should do nothing but give the child an opportunity to develop its natural gifts unhampered and shield it from the corrupting influences of civilization. Everything it learns should be from an inner realization, not from books. The ultimate object of education should be to teach men to live. Religious dogma should be replaced by the teaching of a "natural religion," common to all. *Émile* not only influenced education, but it also made it fashionable for mothers to breast-feed their babies, contributed to the decline of swaddling clothes, and propagated the notion that fresh air and hygiene were essential to children's upbringing. Rousseau's epistolary novel, *La Nouvelle Héloïse*, knew immense popularity in its time, but is scarcely read today, while his *Confessions* remain one of the most widely read books of world literature. Proposing to describe not only his life, but his innermost thoughts and feelings, hiding nothing be it ever so shameful, Rousseau followed the model of St Augustine's *Confessions* but also created an entirely new, intensely personal style of autobiography. Despite their stated intention, however, the *Confessions* are far from ingenuous, and they must be read with the idea in mind that the man was suffering from paranoia. The *Nouvelle Héloïse*, *Émile*, the *Confessions*, and the *Rêveries* all transfer to the domain of literature Rousseau's longing for closeness with nature. His sensitive art apprehended the subtle nuances of the influence of landscape, trees, water, birds, and other aspects of nature on the shifting state of the human soul, and Rousseau was the father of romantic sensibility. The trend existed before Rousseau, but he was the first to give it full expression. His influence on German and English romanticism—and thus, indirectly, on romanticism in general—cannot be overestimated. Rousseau's style, in all his writings, is always personal, sometimes bizarre, sometimes rhetorical, sometimes bitterly sarcastic, sometimes deliberately plebeian, and often animated by a tender and musical quality which has never been quite successfully imitated in prose. Though self-taught, Rousseau possessed a thorough knowledge of musical theory, but his compositions exerted no direct influence on music. Indirectly, romanticism in music shows great affinity with Rousseauan sensibility. Rousseau's principal works are available in English translations. Publication of his correspondence was begun in 1924. Passions still fly high for and against Rousseau, and there is as yet no fully objective and documented biography. Among the principal biographies are those by John Morley (2 vols., 1873), Henri Beaudouin (2 vols., 1891, in French), Arthur Chuquet (1893), and Émile Faguet (1911, in French). Specialized studies of Rousseau are legion. See Émile Faguet, *Rousseau penseur* (1912), Henri Baldensperger and others, *Jean-Jacques Rousseau* (1912, in French), P. M. Masson, *La Religion de Jean-Jacques Rousseau* (3 vols., 1916), E. H. Wright, *The Meaning of Rousseau* (1929), Harald Hoffding, *Jean Jacques Rousseau and His Philosophy* (Eng. tr., 1930), W. J. McAllister, *Growth of Freedom in Education* (1931), Ernst Cassirer, *Rousseau, Kant, Goethe* (Eng. tr., 1945).

Rousseau, Théodore (tāôdôr'), 1812–67, French landscape painter of the Barbizon school, son of a tailor. He first received recognition in the Salon of 1848 and was commissioned by the state to paint his *Sortie de la forêt de Fontainebleau* (Louvre). Thereafter he enjoyed a modest success and lived simply in Barbizon near his friend Millet. Rousseau's landscapes are grave and full of a deep love of solitude. He is best represented in the Metropolitan Museum and in the Louvre.

Rousseau, Victor (vēktôr'), 1865–, Belgian sculptor, pupil of Van der Stappen. He was a professor at the Brussels Academy. Fine examples of his naturalistic work are in the museums of Brussels and Antwerp and include *Child, Demeter*, and *Towards Life*. His monument (1920) expressing Belgian gratitude for British protection of war refugees is on the Thames Embankment, London. Another war memorial is at Forest near Brussels.

Roussel, Albert (älbĕr' rōōsĕl'), 1869–1937, French composer. He prepared himself for a naval career and went to sea in 1887. In 1894 he resigned from the service to follow a musical career and studied (1898–1907) with Vincent d'Indy at the Schola Cantorum, where he taught counterpoint (1902–14). In technique he follows the post-romantic school of Franck and D'Indy, but often employs the images and emotions of impressionism. The influence of his Oriental travels is seen in his orchestral-choral *Evocations* (1912), written after a trip to Indo-China, and *Padmavati* (1914–18, Paris, 1923), which adapts Hindu scales and a Hindu story to the 18th-century opera-ballet technique. Other important works, showing the diversity of his art, are the ballet-pantomime *Le Festin de l'Araignée* (1912), the lyric drama *La Naissance de la lyre* (Paris, 1925) after Sophocles, *Joueurs de flûte* (1924), for flute and piano, his Third Symphony (1930), his Fourth Symphony (1935), and piano pieces, chamber music, and songs.

Roussillon (rōōsēyō'), small region and former province, S France, bordering on Spain along the E Pyrenees and on the Mediterranean. It is now the department of Pyrénées-Orientales. Perpignan is the historic capital. Wine, fruit, and olives are the chief products of this fertile and densely populated region. Conquered from the Arabs by the Franks (8th cent.), it formed a county which passed, in turn, under the suzerainty of the counts of Barcelona and the kings of Aragon, France, Majorca, and Spain. Louis XIII conquered it from Spain in 1642, and it was formally annexed to France by the Treaty of the Pyrenees (1659).

Rouvray, battle of: see HERRINGS, BATTLE OF THE.

Roux, Pierre Paul Émile (pyĕr' pōl' āmēl' rōō'), 1853–1933, French physician and bacteriologist. He was a pupil of Pasteur and director of the Pasteur Institute (1904–18). He assisted E. I. E. Nocard in the study (1898) of bovine pneumonia and with A. E. J. Yersin in 1889 demonstrated that the diphtheria bacillus produces a toxin. This led to the development by E. A. von Behring of methods of producing a specific antitoxin, revolutionizing the treatment of diphtheria. Roux worked with Metchnikoff on the problem of syphilis.

Roux, Wilhelm (vĭl'hĕlm rōōks'), 1850–1924, German anatomist. He was professor (1895–1921) at the Univ. of Halle. A pupil of Rudolf Virchow and E. H. Haeckel, he is considered a founder of experimental embryology, especially because of his discoveries through experiments on the frog's egg. He called his field "developmental mechanics" and in 1894 founded as its organ the *Archiv für Entwicklungsmechanik*.

Rouyn (rōō'ĭn, Fr. rōōăN'), town (pop. 8,808), extreme W Que., on Osisko Lake just S of Noranda and 140 mi. NNE of North Bay, Ont., inc. 1927. It is a mining center with an airport in a region producing gold, copper, and zinc.

Rovaniemi (rô'vänē"ĕmē), urban district (pop. 22,818), N Finland. The starting point of the Great Arctic Highway, it is a fur-trading, timber-shipping, and winter sports center. Late in the Second World War the fighting between Finns and Germans in the area resulted in considerable destruction.

Rovereto (rōvārā'tō), town (pop. 11,155), Trentino-Alto Adige, N Italy, on the Adige. With some surrounding territory, it was taken (15th cent.) from the bishopric of Trent by Venice, which ceded it to Austria in 1518. A part of S Tyrol, it was ceded to Italy in 1919. Near by the French defeated the Austrians in 1796.

Rove Tunnel (rōv, Fr. rôv), southern section of the Marseilles-Rhone Canal, SE France, starting near the village of Le Rove and piercing a rocky ridge. It is c.4.4 mi. long, with a water channel 72 ft. wide, and is considered one of the greatest pieces of engineering since the Panama Canal. It was opened in 1927.

Rovigno (rôvē'nyō) or **Rovigno d'Istria** (dē'strēä), Serbo-Croatian *Rovinj* (rô'vēnyu), town (pop. 9,438), NW Croatia, Yugoslavia, on the west coast of Istria. An Adriatic port, it was ceded by Italy in the Treaty of Paris of 1947. Rovigno was a Venetian possession from the 13th cent. until 1797, and it has kept a beautiful cathedral and campanile.

Rovigo (rôvē'gō), city (pop. 14,561), capital of Rovigo prov., Venetia, NE Italy, between the Adige and the Po. It is an agricultural center in the midst of a fertile plain producing mainly cereals and sugar beets. After 1482 it belonged to Venice, and its architecture shows Venetian influence. Rovigo has an important art gallery and several churches and palaces.

Rovinj, Yugoslavia: see ROVIGNO.

Rovno (rôv'nu), Pol. *Równe* (rôōv'nĕ), city (1931 pop. 40,788), capital of Rovno oblast, W Ukraine. It is the center of an agricultural region. An old settlement, it passed from Poland to Russia in 1793, back to Poland in 1921, and again to Russia in 1945. The population is largely Ukrainian.

Rovuma (rôvōō'mu), river, c.540 mi. long, rising in SW Tanganyika, near Lake Nyasa, and flowing W to the Indian Ocean. It forms most of the Tanganyika-Mozambique boundary. It is not navigable.

Rowan, Andrew Summers (rou'un), 1857–1943, American army officer, b. Monroe co., Va. (now W. Va.), grad. West Point, 1881. In the Spanish-American War he was the hero of the exploit involving Calixto García y Iñigues) described in Elbert Hubbard's essay "A Message to Garcia." Rowan wrote his own account in *How I Carried the Message to Garcia* (1923). After the war he served in the Philippines and in the United States and retired in 1909.

rowan tree see MOUNTAIN ASH.

Rowe, Nicholas (rō), 1674–1718, English dramatist and editor. He wrote a number of tragedies, the most popular in his day were *Tamerlane* (1701) and *Jane Shore* (1714). For his edition of Shakspere, which appeared in six volumes in 1709, he sent Thomas Betterton to Stratford to gather facts about Shakspere's life. In 1715 Rowe became poet laureate.

Rowell, Newton Wesley (rou'ul), 1867–1941, Canadian jurist and statesman, b. Ontario. Called (1891) to the bar of Ontario, he was elected (1911) to the Ontario legislature and was chosen to lead the Liberal party of the province. Member (1917–21) of the Canadian House of Commons, Rowell was president of the council in the Union government of Sir Robert Borden and a member of the imperial war cabinet. In the first Assembly of the League of Nations (1920) he was Canadian delegate. He wrote *The British Empire and World Peace* (1922) and *Canada a Nation* (1923). In 1936 he became chief justice of Ontario, and in 1937 he was appointed by Mackenzie King as head of the royal commission on dominion-provincial relations. Although he was obliged to resign in 1938 because of ill-health, the commission's findings are commonly called the **Rowell-Sirois Report** (1940). He was replaced as chairman of the commission by Joseph Sirois of Laval Univ. Other members were R. A. MacKay, H. F. Angus, and John W. Dafoe. The report is an exhaustive survey of the economic and welfare problems of all Canada and showed the need for an enlargement of dominion responsibilities—contrary to earlier Liberal party policies. No legislation established those responsibilities.

rowing. Boats propelled by oars (e.g., the GALLEY) were used in ancient times for both war and commerce. Rowing is now generally used only for small boats on rivers and lakes or for sport. The rower

faces the stern of the boat and propels the craft by repeatedly dipping his two oars into the water and pulling the oars—which are fixed by rowlocks or oarlocks to the sides of the boat—through the water in the direction of the stern by means of leverage In a small rowboat steering is accomplished by using one oar on the opposite side of the boat from the direction desired; in larger craft steering is often done by use of rudders In crew racing, a coxswain steers the shell by means of tiller ropes attached to a rudder, he also directs the crew Each member of the crew uses both hands on one oar and sits on the opposite side of the shell from the oarsman immediately in front of him The most famous of all crew races are those between Oxford and Cambridge, first held at Henley in 1829 Rowing is in the United States an old intercollegiate sport, a collegiate REGATTA took place between Harvard and Yale in 1852, 18 years after the first rowing club, the Castle Garden Amateur Boat Club, was organized in the United States Several rowing events have been included in the Olympic games

Rowland, Henry Augustus (rō'lund), 1848–1901, American physicist, b Honesdale, Pa., grad Rensselaer Polytechnic Institute, 1870 He was professor of physics at Johns Hopkins Univ from 1875 and was one of the founders of the American Physical Society He is known especially for his invention of a dividing apparatus for making grating lines and for ruling diffraction gratings on concave surfaces which advanced spectroscopy as an exact science and also for his experiments in determining the value of the ohm and the mechanical equivalent of heat

Rowlandson, Thomas (rō'lundsun), 1756–1827, English caricaturist, b London, son of a well-to-do merchant He studied at the Royal Academy and in Paris (where he spent three years) and early evinced talent in drawing and painting His passion for gambling, however, prevented him from producing much until c 1782, when, having squandered his inheritance, he was obliged to earn a living As a caricaturist and humorous commentator on social life Rowlandson speedily gained celebrity His drawing *Vauxhall Gardens* (1784) was a great success In 1798 a series of his drawings, *The Comforts of Bath* was reproduced This was followed by the famous *Tour of Dr Syntax* (three-volume series, 1812–21), *Dance of Death* (1814–16), and *Dance of Life* (1822)—all with text by William Combe Rowlandson also illustrated Smollett, Goldsmith, and Sterne Most of his drawings were first done in ink with a reed pen and given a delicate wash of color For reproduction he etched them himself on copper, the printer later coloring them by hand Rowlandson's work has enormous variety Along with his caricatures of high society are scenes of country life—taverns, barracks, county fairs, stage coaches, and admirable landscapes He traveled over England and over the Continent making spirited sketches A rollicking humor pervades his work, which is sometimes hurried and often coarse or sardonic, but never dull and never hackneyed Collections of Rowlandson's drawings are in the British Museum and the Victoria and Albert Museum and in the Metropolitan Museum See Joseph Grego, *Rowlandson the Caricaturist* (1880)

Rowlesburg (rōlz'bûrg), town (pop 1,452), N W Va , on the Cheat river and E of Grafton, chartered 1858

Rowley, William (rou'lē), 1585?–1642?, English playwright and actor He was sole author of several plays, but his best work, including *The Spanish Gipsie* (1653) and *The Changeling* (1653), was done in collaboration with Thomas Middleton His best-known plays are *A New Wonder* (1632), *A Match at Midnight* (1633), and *All's Lost by Lust* (1633)

Rowley (rou'lē), town (pop 1,533), NE Mass , S of Newburyport, settled 1638, inc 1639 The town still has fine 17th-century buildings

Rowley Regis (rō'lē rē'jĭs), urban district (1931 pop 41,235, 1947 estimated pop 48,530), Staffordshire, England, on the Stour and W of Birmingham, in the Black Country Rowley stone is quarried for road surfacing, and there are coal mines, iron foundries, and potteries

Rowne, Ukraine see ROVNO

Rowntree, Benjamin Seebohm (roun'trē), 1871–, English philanthropist and sociologist His several books on poverty and other social problems include the noted survey of York, *Poverty a Study in Town Life* (1901).

Rowson, Susanna Haswell (rou'sun), 1762–1824, American author, actress, and teacher, b England She was brought to America as a young child, but since her father was a British naval officer, his property was confiscated in the Revolution, and the family returned to England Susanna became governess to the children of the duchess of Devonshire. Her first novel, *Victoria*, appeared in 1786. The same year she married William Rowson Having acted for a short time in England, the Rowsons came to the United States in 1793, joining a theatrical company in Philadelphia Retiring from the stage in 1796, Mrs Rowson opened a school for girls in Boston, one of the best of its day, which she directed for 25 years, in the meantime writing novels, poetry, and textbooks She is remembered for one novel, *Charlotte a Tale of Truth* (1791), called in later editions *Charlotte Temple*, a sentimental story written with considerable realism, which went through more than 150 editions

Rowton, Montagu William Lowry Corry, 1st **Baron** (rō'tun, rou'–), 1838–1903, English philanthropist, grad Cambridge, 1860 He was called to the bar in 1863 From 1866 until 1881, he served as private secretary to Disraeli, who recommended him for the title of Baron Rowton (1880) and made him his literary executor Lord Rowton became interested in London housing conditions and promulgated a scheme for a poor man's hotel which was opened in Vauxhall in 1892. Its success led to the formation of a company which constructed a number of similar establishments known as Rowton Houses

Roxana (rŏksă'nu) or **Roxane** (rŏksă'nē), d 311 B C , wife of ALEXANDER THE GREAT She was the daughter of Oxyartes, king of Bactria, and Alexander married her (327 B C) to consolidate his power in Persia She and Alexander's posthumous son, Alexander Aegeus, were after Alexander's death embroiled in the wars of the DIADOCHI and were imprisoned by CASSANDER at Amphipolis They were later killed.

Roxana (rŏksă'nu), village (pop 1,255), SW Ill , on the Mississippi adjacent to Wood River, inc 1921

Roxas, Manuel (manwĕl' rō'hās), 1892–1948, Filipino statesman, b Capiz, Panay, grad Univ of the Philippines (LL B , 1913) He served in the Philippine house of representatives from 1921 to 1933 Roxas was (1935–37) a member of the Philippine national assembly, became (1938) secretary of finance in Manuel Quezon's cabinet, and was elected (1941) to the Philippine senate In the Second World War he was captured (1942) by the Japanese after he aided Gen Douglas MacArthur Supporting the Japanese-sponsored government during the war, he is said to have aided the Filipino underground at the same time In 1946 he became the first president of the republic of the Philippines and upon his death he was succeeded by Elpidio Quirino

Roxboro, town (pop 4,599), co seat of Person co , N N C , N of Durham near the Va line It is a textile-mill town, with a tobacco market, and has council-manager government

Roxburgh, county, Scotland see ROXBURGHSHIRE

Roxburgh (rŏks'burŭ), parish (pop 698), Roxburghshire, Scotland Jedburgh replaced it as the county town

Roxburghshire (rŏks'burŭshĭr) or **Roxburgh,** border county (666 sq mi , 1931 pop 45,788, 1948 estimated pop 47 085), S Scotland The county town is Jedburgh, the old historic town is Roxburgh The Cheviot Hills extend along the southern border between Scotland and England The region is drained by the Teviot and the Tweed, and the county is frequently called Teviotdale The main occupation of the region is sheep grazing, although there are some manufactures of farm implements, woolen textiles, and flour The county was important in the border warfare between England and Scotland Here was fought the battle of Ancrum Moor (1545) See W S Crockett, *Berwickshire and Roxburghshire* (1926)

Roxbury, Mass see BOSTON

Roy, village (pop 1,138), NE N Mex , SW of Clayton and near the Canadian river, in a farm area Carbon dioxide gas fields are near by

Royal Academy of Arts, London, founded (1769) by George III at the instigation of Sir William Chambers and Benjamin West, "for the purpose of cultivating and improving the arts of painting, sculpture, and architecture" Sir Joshua Reynolds was the first president The king himself chose the original 36 Academicians and fixed the number at 40 Until 1867 their successors were elected by the Academicians only, since that date by the Academicians and associates together Since its inception the academy has maintained two yearly exhibitions, one of the works of masters of the past and one of contemporary art, has maintained a free school (women students have been admitted only since 1860), and has administered funds (partly derived from its exhibitions) for the relief of distressed artists and their families and for prizes and scholarships In 1867 the academy was given a lease of 999 years on the old Burlington House and the adjoining gardens, where its galleries and school have since been erected See W R M Lamb, *The Royal Academy* (1935)

Royal Air Force, British military air arm The RAF was created as a service independent of either army or navy in April, 1918, by a merging of the Royal Flying Corps (established 1912) and the Royal Naval Air Service By the end of the First World War the RAF had more than 20,000 planes and had engaged in a number of strategic bombing raids on military targets within Germany In the interval between the two world wars the RAF was hampered by interservice rivalry, but the necessity for expansion became increasingly apparent in the '30s The British military air budget in 1937 was double that of the previous year Nevertheless, at the outbreak of the Second World War, Britain's air force was dangerously inadequate It met its first crisis valiantly, however, and held back the powerful German Luftwaffe [air force] during the evacuation of Dunkirk in 1940 Before the fall of France in June of that year the RAF had entered upon that struggle with the Luftwaffe that has come to be known as the Battle of Britain The RAF fighter command was unable to prevent the Germans from inflicting vast bombing damage on Britain throughout the summer and autumn of that year, but it was able to destroy German aircraft in such increasing numbers that by the spring of the following year the Axis threat of invasion had been halted By 1942, with the beginning of close cooperation between the U S Army Air Force and the RAF, the tide had completely turned Under Air Chief Marshal Sir Charles Portal and the bomber command's Air Marshal Arthur T Harris, effective retaliatory raids upon Axis and Axis-controlled countries began, developing into the enormous "saturation" raids, advocated by Harris, upon German cities and industrial targets The RAF specialized in long-range night raids. By June, 1944, Axis aircraft production, oil fields and refineries, and transportation, were so effectively crippled as to obviate effective air resistance to the Normandy invasion See H A. Jones and Walter Raleigh, *The War in the Air* (7 vols , 1922–37), C G Grey, *A History of the Air Ministry* (1940), Sir Arthur Harris, *Bomber Offensive* (1947), L E O Charlton, *The Royal Air Force September, 1939, to September, 1945* (5 vols , 1941–47)

Royal Canadian Mounted Police, constabulary organized (1873) as the Northwest Mounted Police to bring law and order to the Canadian Far West and especially to prevent Indian disorders In 1904 the name was changed to Royal Northwest Mounted Police and in 1920 to the present title The corps, which came to have a romantic reputation for daring exploits and persistence in trailing criminals, originally consisted of 300 men, they came to be known as Red Coats, Riders of the Plains, and Mounties In 1948 the force had 14 divisions, over 3,000 men, and motor vehicles, ships, airplanes, and tracking and sleigh dogs as well as horses It enforces dominion law throughout Canada, notably in preventing smuggling, in maintaining security, and in keeping order in the Arctic region, the Yukon, and the Northwest Territories See R C Fetherstonhaugh, *The Royal Canadian Mounted Police* (1938)

Royal George, English naval vessel, which sank with its commander, Admiral Richard Kempenfelt, and about 800 sailors and visitors, at Spithead, Aug 29, 1782, while undergoing repairs The incident is commemorated in William Cowper's poem, "On the Loss of the *Royal George* "

Royal Gorge, impressive canyon of the Arkansas river, S central Colo Its granite walls rise abruptly on either side of the narrow river bed to heights of considerably over 1,000 ft Just W of Canon City it is crossed by a suspension bridge 1,053 ft above the water

Royal Highlanders see BLACK WATCH

Royall, Kenneth Claiborne, 1894–, U S Secretary of the Army (1947–49), b Goldsboro, N C , grad Univ of North Carolina, 1914, and Harvard Law School, 1917 Royall was wounded in the First World War Later he was (1919–42) an eminent trial lawyer in his native state He rejoined the army (1942) to head the legal division and organized (1943) the office of fiscal director Named (1942) Undersecretary of War, he toured the world (April, 1946) He was the first to be Secretary of the Army

Royal Leamington Spa, England see LEAMINGTON

Royal Oak, residential city (1940 pop 25,087, 1947 special census pop 35,319), SE Mich , northwest suburb of Detroit, settled c 1820, inc as a village 1891, as a city 1921 Tools, paint, and mattresses are made The city was the headquarters of the Rev Charles E Coughlin The Detroit Zoological Park is here

Royal Society, first incorporated in 1662, in 1663 and again in 1669 chartered as the Royal Society of London for Improving Natural Knowledge It was founded by a group of learned men in London who met to promote scientific discussion, concerned particularly with the physical sciences It stimulates research in this field and acts in the capacity of adviser on scientific matters to the government, from which it receives annual subsidies The Royal Society ranks as the foremost organization of its kind, its membership always including leading scientists of the world Its activities include the publication of its *Proceedings* and *The Philosophical Transactions* Among those who served as president of the Royal Society are Samuel Pepys, Sir Isaac Newton, Sir Joseph Banks, Sir Humphry Davy, Sir William Huggins, Lord Rayleigh, Sir Archibald Geikie, Sir William Crookes, Sir Joseph John Thomson, Sir Charles Sherrington, Lord Rutherford, Sir Frederick Gowland Hopkins, and Sir William Henry Bragg See Sir Henry George Lyons, *The Royal Society* (1945), Dorothy Stimson, *Scientists and Amateurs a History of the Royal Society* (1949).

Royalton. 1 Village (pop. 1,772), S Ill., N of Cairo, in a farm and coal area; inc. 1907 2 Borough (pop 1,201), Dauphin co., SE Pa., on the Susquehanna river below Harrisburg. Shale and clay are found here, and brick is manufactured 3 Town (pop 1,291), E central Vt., along the White River The first settlement was raided in 1780 by Indians and Tories, who burned the buildings, killed some of the settlers, and took many prisoners to Canada, a granite monument commemorates the event

Royal Tunbridge Wells, Kent, England see TUNBRIDGE WELLS.

Royal Victoria College see MCGILL UNIVERSITY

Royan (rwäyäⁿ'), town (pop 5,086), 1936 pop 10,111), Charente-Maritime dept., W France, on the Gironde where it empties into the Bay of Biscay Known as a port since the 11th cent., it has been in recent times a very popular seaside resort The German garrison here held out long after the Allies had liberated France in 1944, and the picturesque old town was almost totally destroyed by Allied bombings late in April, 1945

Royat (rwaya'), town (pop 3,420), Puy-de-Dôme dept., S central France, at the foot of the PUY DE DÔME It is a thermal station frequented ever since Roman times for rheumatic and cardiac diseases It has a chocolate industry The old section of the town has houses dating from the 12th to 15th cent and a fortified Romanesque church.

Royce, Josiah (rois), 1855–1916, American philosopher, b. California, grad Univ of California, 1873 After studying in Germany and at Johns Hopkins, he returned to California to teach (1878–82) From 1882 until his death he was at Harvard, becoming a professor in 1892 Among his important works are *The Spirit of Modern Philosophy* (1892), *The World and the Individual* (1900–1901), *The Philosophy of Loyalty* (1908), and *Lectures on Modern Idealism* (1919) Royce, a thorough student of history and cognizant of scientific thought, was the foremost American idealist He held that the knowable world exists only in so far as beings with minds actually know it The finite self knows truth beyond itself only because it is part of the logos or world-mind Science successfully depends on description, but appreciation must precede description and consequently ideals must be deeper than the mechanism of science The natural order of the world must be also a moral order Man's ethical obligation is to the moral order and takes the form of loyalty to the great community, or collective individuals See Clifford Barrett, *Contemporary Idealism in America* (1932).

Roycroft Press see HUBBARD, ELBERT

Royden, Maude (Agnes Maude Royden), 1876–, English preacher and social worker, studied at Oxford The first woman to preach (1917–20) in an established Anglican church, she has also been active in social reforms, notably the woman-suffrage and social-hygiene movements Her several books include *Sex and Common Sense* (1922), *I Believe in God* (1927), and *Women's Partnership in the New World* (1941)

Royer-Collard, Pierre Paul (pyĕr' pôl' rwäyä'-kôlär'), 1763–1845, French statesman and philosopher He entered the law, took part in the French Revolution, but later developed legitimist sympathies, so that during the Consulate he devoted himself entirely to philosophy He lectured at the Sorbonne from 1811 to 1814 After 1815 he was deputy for Marne in the chamber almost continuously until 1839 From 1815 to 1820 he was president of the commission for public instruction Royer-Collard was a leader of the Doctrinaires, a middle-of-the-road group that included Guizot, Camille Jordan, Charles de Rémusat, and the duc de Richelieu In philosophy he opposed the sensationism of Condillac and helped introduce the ideas of Thomas Reid into France Victor Cousin was one of his pupils Royer-Collard left no important writings

Royersford, borough (pop 3,605), SE Pa., on the Schuylkill river and c 25 mi NW of Philadelphia, settled 1839, inc 1879

Royse City (rois), town (pop 1,190), N TEXAS, NE of Dallas, in a blackland farming area, settled c 1886, inc. 1888

Royston, urban district (1931 pop 3,831; 1943 estimated pop 16,689), Hertfordshire, England, on the ancient Roman Ermine Street It was the site of a Dominican priory in the 12th cent., and there is a 13th-century church Remains of Roman and previous occupation have been discovered in the neighborhood

Royston, city (pop 1,549), NE Ga., NE of Athens near the S C line, in a farm area

Rozebeke, Belgium see ROOSEBEKE

Rozhdestvenski, Zinovi Petrovich (zēnô'vē pētrô'-vĭch rŭzhdyĭstvyĕn'skē), 1848–1909, Russian admiral. He commanded the Baltic fleet during the Russo-Japanese War of 1904–5 and was ordered to take his fleet to Far Eastern waters by way of the Cape of Good Hope. His fleet was destroyed by Admiral Togo in the battle of TSUSHIMA (1905). On his return to Russia a court-martial declared him blameless in the disaster

RSFSR see RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC

Ru, chemical symbol of the element RUTHENIUM.

Ruad: see ARADUS

Ruanda-Urundi (rōōän'dä-ōōrōōn'dē), United Nations trust territory (19,536 sq. mi., pop 3,718,545), E Africa, under Belgian administration Usambara is the capital It is bordered on the north by Uganda, on the east by Tanganyika, and on the west by Belgian Congo and Lake Tanganyika Lying on a plateau, it has excellent ranching country, especially in the north Cotton, coffee, and tobacco are raised, and tin and gold are mined The territory is prosperous and has one of the densest populations in Africa It was a part of German East Africa After the First World War it was administered by Belgium as a mandate of the League of Nations, and after the Second World War it was made a trust territory See Negley Farson, *Behind God's Back* (1941).

Ruapehu (rōōŭpä'hōō), extinct volcanic peak, 9,175 ft high, on central North Island, New Zealand, highest mountain of North Island Skiing is a popular sport here

Rub al Khali (rōōb' al kha'lē) [Arabic,=empty quarter], desert, c 300,000 sq mi, occupying nearly all S Arabia away from the coastal zones It is usually considered part of Saudi Arabia, but since it is wholly without water and can sustain no life, its ownership is of little consequence The name Dahna is sometimes applied to the entire desert (predominantly of white sand) and sometimes only to the red-sand area of the northeast. The name also appears Ruba al Khali

rubber, solid substance, usually elastic, obtained from the milky secretion (latex) of various plants Pure rubber (often called caoutchouc) is a hydrocarbon made up of molecules of isoprene linked into loosely twisted chains Its properties of elasticity, toughness, impermeability, adhesiveness, and electrical resistance make it useful as an adhesive, a coating composition, a fiber, a molding compound, and an electrical insulator It is resistant to water, alkalies, and weak acids but is soluble in a number of hydrocarbons, including benzene, toluene, gasoline, and lubricating oils Although a large variety of plants contain latex, a milky fluid with globules of rubber in suspension, only a few, most of them tropical or subtropical, have been commercial sources Over 95 percent of the rubber used is obtained from the PARA RUBBER TREE, most of the remainder comes from the Castilla tree (or caucho), the Ceará tree (*Manihot*), guayule, a shrubby plant native to arid regions of Mexico and the SW United States, a few African vines, and, in Russia, from a Siberian dandelion Pre-Columbian Indians of South and Central America used rubber for balls, containers, and shoes and for waterproofing fabrics Although it was mentioned by Spanish and Portuguese writers in the 16th cent., rubber did not claim the interest of Europeans until reports (1736–51) to the French Academy of Sciences by Charles de la Condamine and François Fresneau Pioneer research in finding rubber solvents and in waterproofing fabrics was done before 1800, but rubber was used only for elastics and erasers, and these were made by cutting up objects imported from Brazil Joseph Priestley is credited with the discovery c 1770 of its use as an eraser, whence the name rubber The first rubber factory in the world was established in Vienna in 1811, the first in England by Thomas Hancock in 1820 Hancock devised the forerunner of the rubber masticator, and in 1835 Edwin Chaffee, an American, patented a mixing mill and a calender (a press for rolling the rubber into sheets) In 1823 Charles Macintosh found a practical process for waterproofing fabrics, and in 1839 Charles GOODYEAR discovered VULCANIZATION, which revolutionized the rubber industry In the 19th cent wild rubber was harvested in South and Central America and in Africa, most of it from the Para rubber tree of the Amazon basin After 1910 plantation rubber displaced wild rubber, and Malaya, Indonesia, and Ceylon became the chief producers For more than 100 years the United States has used over 50 percent of the world supply Akron, Ohio, is the leading manufacturing center In the United States above 50 percent of rubber imports are used in TIRE and inner-tube manufacture, 10 percent for belting, hose, tubing, insulators, valves, and gaskets, and about 6 percent for footwear Most of the Para rubber is exported as crude rubber prepared for market by rolling slabs of coagulated latex into thin sheets of crepe rubber or into heavier firmly pressed sheets, usually ribbed and smoked An increasing quantity of latex, treated with alkali to prevent coagulation, is shipped for processing in manufacturing centers For most purposes rubber is ground, dissolved in a suitable solvent, and compounded with other ingredients, e g, fillers and pigments such as carbon black for strength and whiting for stiffening, antioxidants, plasticizers, usually oils, waxes, or tars, accelerators, and vulcanizing agents The compounded rubber is sheeted, extruded in special shapes, applied as coating or molded, then vulcanized. Uncoagulated latex, compounded with colloidal emulsions and dispersions, is extruded as thread, coated on other materials, or beaten to a foam and used as sponge rubber Used and waste rubber may be reclaimed by grinding followed by devulcanization with steam and chemicals, refining, and remanufacture A threatened overproduction of rubber led in 1922 to the British Stevenson Plan which restricted production in British possessions. It was abandoned in 1928 after increased production in Netherlands-controlled areas The International Rubber Regulation Agreement designed to stabilize prices was ratified by Great Britain, the Netherlands, France, India, and Thailand in 1934, and it operated until 1943 American rubber companies, as a step toward diminishing foreign control of the supply, enlarged their plantation holdings in Liberia and in South and Central America The cutting off of Far Eastern rubber during the Second World War gave impetus to the growth of plantations in the Western Hemisphere and of the synthetic-rubber industry, which by 1946 had established facilities adequate to supply most of the world's rubber needs Although natural and synthetic rubber (see RUBBER, SYNTHETIC) have differing qualities which make each preferable for certain purposes and inferior for others, in a large proportion of rubber goods the cost factor is decisive and will determine the relative importance of the two products See P. W Barker, *Rubber* (1940); C M. Wilson, *Trees and Test Tubes* (1943), K E Knorr, *World Rubber and Its Regulation* (1945), P. T. Bauer, *The Rubber Industry* (1948).

rubber, synthetic. A number of rubberlike commercial products are generally known as synthetic rubber However, no synthetic substance identical with natural rubber in chemical and elastic properties has been produced There is no general agreement as to whether the expression *synthetic rubber* should be reserved for substances chemically identical with or closely related to natural rubber or whether it should be applied to all substances having the chief distinguishing physical characteristics of rubber Many names and a variety of classifications have been proposed for the rubberlike materials Some use the designation elastics in preference to rubber The term *elastomer* (ēlă'stumur) has been rather widely accepted for synthetic rubber material By some it is used to include all such substances and by others elastomer is used only for the vulcanizable substances, e g, Buna S, Chemigum, Neoprene, and Perbunan Butalastic polymers, elastoprenes, and other names have been used to indicate the synthetic rubberlike substances based on butadiene (a hydrocarbon derived from ethyl alcohol or from petroleum) Several types of synthetic rubber had been produced by the late 19th and early 20th cent During the First World War, Germany, cut off from supplies of natural rubber, produced synthetic rubber to satisfy emergency needs In 1939 Russia and Germany led the world in production Although research had been intensified in the United States after 1925, it was only during the Second World War that large-scale production was undertaken and soon resulted in creating a major industry The basic materials from which most synthetic rubbers are derived are the hydrocarbon substances, e g, petroleum, alcohol, coal tar, natural gas, and acetylene Rubberlike qualities are obtained by polymerization, i e, linking the molecules of the basic substances into long chains Natural rubber and the synthetic products each have some characteristics in which they are superior to the other In general natural rubber has properties which make it more suitable for processing, usually has greater elasticity, resilience, and resistance to tearing, and usually maintains its elasticity at lower temperatures Most synthetic rubbers have greater resistance to the harmful action of oils and organic solvents and to the effects of sunlight, heat, and acids and are less permeable to gases and liquids In the United States, as in some other countries, butadiene is the basis of many of the leading synthetic elastic materials, among these are Buna S, Perbunan (formerly Buna N), Hycar (Ameripol), and Chemigum. Buna S was the type produced in largest quantities under the government program during the Second World War Neoprene (formerly Duprene) was one of the first successful synthetic rubbers produced (1931) in the United States Butyl rubber is another commercially important type, in its production butadiene is sometimes employed, although isoprene or another related substance may be used Thiokol is a rubberlike material produced by a process of condensation rather than polymerization. See E O Kraemer, *Scientific Progress in the Field of Rubber and Synthetic Elastomers* (1946), Frederick Marchionna, *Butalastic Polymers* (1946); F A Howard, *Buna Rubber* (1947); Harry Barron, *Modern Synthetic Rubbers* (3d ed, 1949).

rubber plant or India-rubber tree, a large tree as it grows in its native Asia but elsewhere cultivated chiefly as a house plant, popular for its long, shining, leathery leaves. This plant (*Ficus elastica*) is no longer important as a source of rubber. It may be propagated by air LAYERING. Any plant that yields rubber may be called rubber plant.

Rubens, Peter Paul (rōō'bŭns), 1577–1640, foremost painter of the Flemish school, b. Siegen, Westphalia, where his family was in exile. His father was

an apothecary and a man of learning and had been an alderman of Antwerp before his expulsion as a Calvinist After his death in 1587, the family returned to Antwerp There the youthful Rubens attended a Jesuit school, acted as court page, and became an accomplished linguist After 1591 he was apprenticed to several minor painters In 1598 he was admitted to the painters' guild and two years later went to Italy He spent eight years in the service of the duke of Mantua In 1608, on the death of his mother, he returned to Antwerp, where he became almost at once the foremost painter of the city Students flocked to him He set up a fine studio and married Isabella Brant It was a period of prosperity, and Rubens was besieged with commissions, especially for church decorations and altarpieces of large dimensions For such works many helpers were needed, and he organized an enormous workshop of skilled apprentices Among his masterpieces of this period are such imposing compositions as the *Adoration of the Magi* (Prado) and the *Raising of the Cross* and *Descent from the Cross* (cathedral, Antwerp) In these works Rubens already rivaled the grandiose creations of Italian art which had dominated the imagination of northern artists for almost a century From 1620 to 1625 he executed numerous commissions for the French court, including a series of 24 paintings of the life of Marie de' Medici for the Luxembourg Palace (they are now in the Louvre) Much of the work on these large allegorical pictures was done by assistants, although Rubens designed them and added the finishing touches From this time on his workshop turned out a steady stream of monumental works *The Assumption* (cathedral, Antwerp) belongs to this period In 1626, on the death of his wife, he entered the diplomatic service, for which his pleasing personality, knowledge of languages, and acquaintance with royalty fitted him well In 1628 he went to Spain to arrange an agreement between Philip IV and England After nine months in Madrid, where he knew Velázquez and painted the royal family, he went to London There he was idolized and knighted He painted the ceiling at Whitehall and *The Blessings of Peace* (National Gall , London) On his return to Antwerp in 1630, Rubens, now 53, married the beautiful 16-year-old Helen Fourment His portraits of her (Vienna Mus , Louvre, and National Gall of Art, Washington, D C) are among his most joyous and personal paintings During the last 10 years of his life Rubens worked with incredible energy, producing many of his finest pictures Over 100 were painted for the Spanish court alone *The Judgment of Paris* and *Three Graces* (Prado) and *Venus and Adonis* (Metropolitan Mus) belong to this period Many of his last years were spent on his princely estate, "Castle Steen," near Brussels Rubens died of gout at the age of 63 and at the height of his powers and popularity Under his direction or influence a whole school of brilliant artists flourished in Antwerp The volume of Rubens's work is enormous Much that is attributed to him he scarcely more than supervised, but so absolute was his domination that almost everything proceeding from his workshop shows the mark of his genius Some of the great decorations, it is true, have an almost impersonal character Rubens owed to Italy his monumental composition, freedom of handling, and large conception But his color, technique, and lusty spirit were Flemish As he matured, his color became ever brighter and clearer, and he finally abandoned all violent oppositions of light and shade in favor of an all-pervading luminosity No artist has surpassed Rubens in depicting movement, and he delighted in painting scenes of mythical battle and abduction, in which nude figures struggle in attitudes of superabundant vitality Despite his superb religious paintings, a pagan joy of life is his most characteristic quality He explored all fields of painting In landscape, portrait, genre, and animal painting he was as supremely successful as in his large religious and allegorical works Some of his small pictures, such as *Helen Fourment and Her Children* (Louvre) and *Peasant Dance* (Prado), are among his greatest masterpieces Despite the rapidity with which he worked, his paintings are miracles of craftsmanship Contemporaries doubted the durability of his delicate glazes, but his pictures are singularly well preserved Over 2,000 paintings have been attributed to Rubens's studio Almost every principal gallery of Europe contains fine examples He is represented in many American galleries, including the Art Institute of Chicago, the Nelson Gallery, Kansas City, the National Gallery of Art, Washington, D C , the Metropolitan Museum, the Cleveland Museum, and the Gardner Museum, Boston See biographies by Louis Hourticq (1918) and Anthony Bertram (1929), study by S L Bensusan (1908).

rubeola: see MEASLES

Rubicon (rōō'bĭkŏn), Latin *Rubico*, small stream that marked the boundary between Cisalpine Gaul and ancient Italy It may have been the modern Fiumicino, but is not certainly identified In 49 B C , after some hesitation, Julius Caesar crossed it to march against Pompey in defiance of the senate's orders. He thus committed himself to conquer or to perish Thus "to cross the Rubicon" means to take an irrevocable step

rubidium (rōōbĭl'dēŭm) [Latin *rubidus*=red], rare, silver-white, very soft metallic element (symbol=Rb, for physical constants, see ELEMENT, table) It is included in the alkali-metals group of elements and, like the other members, is extremely active, reacting violently with water to form the hydroxide and oxidizing rapidly when exposed to the air It resembles especially potassium in its chemical activity Its salts color the Bunsen flame red Rubidium does not occur uncombined in nature, but is present in certain minerals, e g , lepidolite, and also in seaweed ashes, beet roots, cocoa, coffee, tea, and tobacco Combined with chlorine as the chloride, it occurs in many natural spring waters The metal is obtained by several methods from its compounds, such as the hydroxide and the cyanide Rubidium and its salts have little commercial value The metal is used in the manufacture of photoelectric cells It was discovered along with cesium by Bunsen and Kirchhoff (1860–61), these elements being the first to be discovered by means of the spectroscope The spectrum of rubidium exhibits two deep red lines

Rubinstein, Anton Grigoryevich (ŭntôn' grĭgôr'yŭvĭch rōō'bĭnstĭn), 1829–94, Russian pianist and composer As a piano virtuoso he ranked with Liszt He made his debut in Moscow at nine and later won the admiration of Mendelssohn, Chopin, and Liszt He toured the United States, 1872–73, with Henri Wieniawski and an orchestra conducted by Theodore Thomas A highly successful tour, it raised the standard of the American concert repertoire Earlier, in 1859, he had founded the Russian Musical Society and, in 1862, the St Petersburg Conservatory, of which he was twice director (1862–67, 1887–91) He was a prolific composer, but his real importance lies in his work as an educator, both of musicians and of the public His brother, **Nicholas Grigoryevich Rubinstein**, 1835–81, also a brilliant pianist and teacher, founded (1864) the Moscow Conservatory See Catherine D Bowen, *"Free Artist" the Story of Anton and Nicholas Rubinstein* (1939)

Rubinstein, Artur (rōō'bĭnstēn, -stīn), 1886–, Polish piano virtuoso, studied in Berlin as a protégé of Joseph Joachim He made his debut in 1898 with the Berlin Symphony Orchestra, conducted by Joachim, and first played in the United States in 1906, but it was after his third appearance here, in 1937, that he achieved his greatest acclaim He became a U S citizen in 1946

Rubio, Pascual Ortiz see ORTIZ RUBIO, PASCUAL

ruby, precious stone, a variety of red CORUNDUM, found chiefly in Burma, Siam, and Ceylon and classified among the most valuable of gems The Burmese stones are blood red, the most valued tint being the "pigeon's blood " The Siamese stones are darker and the Ceylon stones lighter than the Burmese specimens Star rubies, i e , those that show an internal star-shaped formation when cut in cabochon (with a rounded top), are rare Stones sometimes confused with the ruby are spinel ("balas ruby"), rubellite (pink TOURMALINE), and pyrope GARNET

Rückert, Friedrich (frē'drĭkh rŭ'kurt), pseud **Freimund Raimar** (frī'mōōnt rī'mär), 1788 1866, German Orientalist and poet An editor and a professor of Oriental languages, he wrote many imitations of Oriental poetry and some works for the theater At his best he was a fine lyric poet, and many of his works are still popular Among them are the patriotic and anti-French *Geharnischte Sonette* [sonnets in armor] (1814), *Liebesfrühling* [the springtime of love] (1823), and *The Wisdom of the Brahmins* (1836, Eng tr , 1882) Well-known poems are the ballad *Barbarossa* and the lyric "Dedication," set to music by Schumann Five of the *Kindertotenlieder* [elegies for children] (1834) were set to music by Mahler

Ruckstull, Frederick Wellington (rŭk'stŭl'), 1853–1942, American sculptor, b Alsace, brought to the United States in 1854 He studied art in Paris for 12 years The leading spirit in organizing (1893) the National Sculpture Society, he was active in promoting the interests of sculpture in the United States His important works include *Evening* (Metropolitan Mus), *Mercury Teasing the Eagle of Jupiter* (St Louis), *Solon* (Library of Congress), *Wisdom* and *Force* (Appellate Courthouse, New York), *Victory* (soldiers' and sailors' monument, Jamaica, Queens borough, New York), *Gloria Victis* (Confederate monument, Baltimore), and equestrian statues at Harrisburg, Pa , and Columbia, S C He wrote *Great Works of Art and What Makes Them Great* (1925)

rudbeckia (rŭdbĕ'kēŭ), any plant of the genus *Rudbeckia*, North American composite-flowered herbs with usually yellow rays The best known are the BLACK-EYED SUSAN and GOLDEN GLOW. Rudbeckias are often called coneflower, a name also used for species of *Lepachys* and *Echinacea*—related plants with composite flowers.

rudder, mechanism for steering a vessel or airplane In ships it is a flat-surfaced section fastened by hinging to the stern. When the ship follows a straight course, the rudder is in line with the vessel, and if the rudder is turned to one side or the other it offers sufficient resistance to the water to deflect the stern, thus changing the direction of the ship. The movement of the rudder is controlled by a helm or tiller In the earliest times a single paddle or oar at the stern served to turn a boat, and in very small craft it still does. The construction of Greek and Roman vessels required two rudders, one at either end, to maintain a course when the prow or stern moved up out of the water The vikings placed their rudder not directly on the stern but on the right side toward it, which gave the name starboard (steerboard) to the right side of a vessel By early 14th cent the stern rudder had largely replaced the side rudder Wooden rudders gave way to iron and steel in the latter half of the 19th cent The rudder of a modern steamship or motor ship consists of a heavy steel frame, made up of a vertical member, from which radiate arms, all of which are covered with steel plate The top of the rudder extends into the ship's hull through a watertight stuffing box Large liners have rudders that are 60 ft or more in height and weigh 100 tons In aeronautics, the rudder is a part of the tail assembly and gives right or left direction Upward and downward direction is achieved through the rudderlike action of ailerons, these are movable surfaces which are hinged to the trailing edge of the wings.

Rude, François (frăswä' rüd'), 1784–1855, French sculptor, son of a coppersmith As a Bonapartist, he left Paris after the battle of Waterloo and spent 12 years in Brussels In 1828 he attracted attention by exhibiting in Paris *Mercury Fastening His Sandal*, followed by the *Neapolitan Fisher Boy*, both now in the Louvre, where also is his *Jeanne d'Arc* The animation and natural expression shown in the *Fisher Boy* found larger and wider play in the great patriotic group, *Le Départ* (*Departure of the Volunteers*; known also as *La Marseillaise*), on the Arc de l'Étoile, Paris, Rude's most famous work Other achievements are his Napoleon at Fixin on the Côte-d'Or, the tomb of Godefroy Cavaignac, Montmartre Cemetery, Paris; and the statue of Marshal Ney, Paris

Rüdesheim (rü'dus-hīm), town (pop 5,736), Hesse, W Germany, on the right bank of the Rhine and WSW of Wiesbaden The vineyards of the vicinity produce some of the most excellent Rhine wines There are several castle ruins near by

Rudinì, Antonio Starabba, marchese di (äntô'nyô starab'bä markā'zā dē rōōdēnē'), 1839–1908, Italian statesman. A Sicilian revolutionist, he became mayor of Palermo (1864), prefect of Naples (1868), minister of the interior (1869), and twice premier (1891–92, 1896–98) as the leader of the right He renewed the Triple Alliance (1891) and attempted a rapprochement with France He was obliged to resign in 1898 after having severely suppressed a series of bread riots

Rudolf I (rōō'dôlf) or **Rudolf of Hapsburg, 1218–91,** emperor (never crowned) and German king (1273–91), founder of the HAPSBURG dynasty The death of RICHARD, EARL OF CORNWALL (1272), the desire for a native, resident king, and the eagerness of the pope for the restoration of order after the great interregnum (see HOLY ROMAN EMPIRE) led to the election of Rudolf, count of Hapsburg Rudolf immediately sought the pope's friendship, and subsequently eased imperial-papal relations by renouncing sovereignty over the Papal States and S Italy The losses which the imperial power had suffered in the interregnum led Rudolf to seek expansion of his private possessions, as a means to this end he decided to deprive OTTOCAR II of Bohemia—who had, besides, opposed his election—of the imperial fiefs which he had seized He forced Ottocar to submit (1276) and crushed his attempt at rebellion (1278), in 1282 he invested his sons Albert (later King ALBERT I) and Rudolf with Austria, Styria, and Carniola, thus establishing the Hapsburgs in these states Rudolf tried to overcome internal anarchy by issuing local land peaces, and to strengthen the central government by taxing the imperial towns, but these measures had little success He also failed to have Albert elected king in his lifetime Adolf of Nassau succeeded Rudolf

Rudolf II, 1552–1612, emperor (1576–1612), king of Bohemia (1575-1611) and of Hungary (1572–1608), son and successor of Emperor Maximilian II Mentally sick, he was unable to maintain order in the empire The revolt (1604–6) led by Stephen BOCSKAY in Hungary ended with the treaties of Vienna and Szitvatorok, negotiated with Bocskay and Sultan AHMED I by Rudolf's brother, MATTHIAS, who took over the actual power In 1608 Matthias forced him to cede Hungary, Austria, and Moravia BOHEMIA, where the Protestant nobles rebelled in 1609, also passed (1611) to Matthias, who on Rudolf's death was elected emperor. Rudolf's turbulent reign was a prelude to the Thirty Years War He is remembered for his passionate, if often misguided, interest in science. Tycho Brahe, Kepler, and Drebbel worked at his court at Prague. In Golden Lane, a street of Prague, he locked up alchemists, ordering them to transmute base metals to gold.

Rudolf, 1858–89, Austrian archduke, crown prince of Austria and Hungary; only son of Emperor Francis Joseph and Empress Elizabeth His mysterious death at Mayerling (near Vienna), together with that of his mistress, Baroness Maria Vetsera, was officially declared a double suicide but is still the subject of vivid speculation.

Rudolf, Lake, from 10 to 30 mi wide and 180 mi. long, NW Kenya colony, in the Great Rift Valley. At its northern extremity it touches Anglo-Egyptian Sudan and Ethiopia Surrounded by volcanic mountains, it has no outlet

Rudolf of Hapsburg see RUDOLF I.

Rudolstadt (rōō'dŏlshtät"), town (pop 22,100), Thuringia, central Germany, on the Thuringian Saale and S of Weimar It has manufactures of china, glass, musical instruments, and pharmaceuticals Founded before 800, it was (1584–1918) the seat of the princes of SCHWARZBURG-RUDOLSTADT. The Heidecksburg Palace, rebuilt in 1735, is now a museum

rue (rōō), aromatic, woody herb of the genus *Ruta*, native to Europe, sometimes cultivated for ornament. The common rue of history and literature is *Ruta graveolans*, which has greenish-yellow flowers and blue-green leaves sometimes variegated, with a very strong odor and a bitter taste The leaves are now sometimes used in herb vinegars, in the preparation of cosmetics and perfumes, and as a treatment for roup in poultry In medieval times rue was much used as a drug Its use as a condiment was thought to prevent poisons from affecting the system, and it was strewn about law courts in parts of Great Britain as a preventive against diseases carried by criminals It was sometimes associated with witches, but also symbolized grace, repentance, and memory Shakspere in *Richard II* refers to it as the "sour herb of grace" It is also mentioned in *Hamlet*, *A Winter's Tale*, and many other great works of literature including Milton's *Paradise Lost* See M W Kamm, *Old-Time Herbs for Northern Gardens* (1938).

Rueda, Lope de see LOPE DE RUEDA.

Ruef, Abraham (Abe Ruef) (rōōf'), 1865–1936, American political boss, b San Francisco, grad Univ of California, 1884 He practiced law in Oakland, Calif, after 1886 and became a familiar figure in San Francisco ward politics At first in the local Republican party, Abe Ruef later became the leader of the Union Labor party After securing the election (1903) of Eugene Schmitz, a musician, as mayor of San Francisco, Ruef came to control the city politically and directed it with shocking corruption until he was indicted in 1907 In a sensational trial—Prosecutor Francis J Heney was shot in the courtroom—Ruef was convicted of bribery and extortion and was sentenced (1909) to a 14-year prison term

ruffed grouse see GROUSE

Ruffin, Edmund (rŭ'fĭn), 1794–1865, American agriculturist, one of the Southern "FIRE-EATERS," b Prince George co, Va His interest in improving the worn-out land led him to become a pioneer in soil chemistry Against much opposition he advocated the benefits of marl and proved its value His arguments were propounded in *An Essay on Calcareous Manures* (1832, rev ed, 1852) He founded (1833) and edited until 1842 an excellent agricultural publication, the *Farmers' Register* An ardent supporter of states' rights and secession, he left Virginia for the more congenial political milieu of South Carolina, where on April 12, 1861, he was given the privilege of firing the first shot against Fort Sumter With the surrender of Robert E Lee at Appomattox he committed suicide See biography by A O Craven (1932)

Ruffo, Fabrizio (fäbrē'tsēō rōōf'fō), 1744–1827, Neapolitan general, cardinal of the Roman Church In the French Revolutionary Wars he led the royal Neapolitan army against the PARTHENOPEAN REPUBLIC, set up at Naples under French protection Promising the Neapolitan rebels full immunity from reprisals, he obtained their capitulation in June, 1799 Cardinal Ruffo was in good faith and sympathized with the grievances of the revolutionists, but in granting full pardon he possibly exceeded his authority Even before Naples surrendered, Admiral Horatio NELSON appeared with his fleet, rudely called the cardinal to task for his leniency, and revoked the capitulation terms The rebels, who had been only vaguely informed of the change, capitulated nevertheless Their leader, Caracciolo, was executed on Nelson's flagship, and a general massacre of the rebels began

Rufinus (rōōfī'nŭs), d 395, Roman statesman, minister of THEODOSIUS I and ARCADIUS He influenced Theodosius to order the massacre at Salonica (390) and was generally hated for his rapacity. After Theodosius' death he virtually ruled the Eastern Empire for Arcadius, but his attempt to marry his daughter to the young emperor was thwarted by EUTROPIUS Rufinus still hoped to become coemperor, but he was assassinated by the Gothic mercenaries under Gainas, possibly on the instigation of STILICHO

Rufus [Latin, =ruddy] **1** Son of Simon of Cyrene. Mark 15 21. **2** Christian in Rome Rom. 16.18. Perhaps the same as **1.**

rug: see CARPET AND RUGS.

Rugby, urban district (1931 pop. 23,826; 1947 estimated pop 44,380), Warwickshire, England, near the Avon It is an important railroad junction and engineering center, with a prominent radio transmitting station It is, however, known chiefly as the seat of one of the great English public schools Rugby School was founded in 1567 by Laurence Sheriff, a wealthy London merchant. Its present buildings date from the early 19th cent., when Rugby became famous under the headmastership of Thomas ARNOLD His son Matthew Arnold helped immortalize Rugby in his poetry, and another Rugbeian, Thomas Hughes, wrote the great schoolboy classic *Tom Brown's School Days*, which deals with Rugby life Rugby football (from which American football developed) originated here in 1823 Other famous graduates are Arthur Hugh Clough, Rupert Brooke, C L Dodgson (Lewis Carroll), and Walter Savage Landor Among Rugby's fine buildings is the chapel, which commemorates the 682 Old Rugbeians who fell in the First World War

Rugby, city (pop 2,215), co seat of Pierce co, N N Dak, ENE of Minot, in farm and dairy country, platted 1885, inc 1906

rugby, game which originated (1823) on the playing fields of Rugby in England It has many of the characteristics of SOCCER and American FOOTBALL The game is said to have been started quite by accident when in a soccer game a player picked up the ball and ran downfield with it instead of kicking it Games of this sort were soon seen frequently at Rugby, and when other English schools and universities adopted this style of play in the mid 19th cent, the name rugby was given to the game In 1871 the English Rugby Union was formed to standardize the game, and the sport was soon organized in other sections of the British Isles The game was introduced (1875) into the United States, where it made relatively little headway The rugby field is roughly 160 yd long and 75 yd wide, with goal lines 110 yd apart and two in-goals (corresponding to football's end zones) 25 yd deep A halfway line divides the field, which is further subdivided by other lines parallel to the goal line The goal posts have measurements similar to those used in American football, and the ball, although larger and more rounded, is similar to the American football A team consists of 15 players (8 forwards and 7 backs), and no substitution is permitted If a player is seriously injured, the team must play shorthanded The ball may be kicked, carried, or passed (to the sides and to the rear), though tackling is permitted, blocking is forbidden Unlike American football, play is almost continuous in rugby, after penalties and out-of-bounds plays, however, a scrummage (in which the two opposing lines of forwards kick the ball thrown between them) starts play again A try (carrying the ball into the opponents' in-goal) counts 3 points, a conversion (kicking the ball between the goal posts after a try is scored) 2 points, a field goal 4 points, and a penalty kick 3 points A rugby match is divided into two periods of 40 min, and there is no overtime period in case of a tie Professional rugby, organized in England in 1895, is played by 12-man teams See I H B Stuart, *The Theory of Modern Rugby Football* (1930), D R. Gent, *Rugby Football* (1932), H B T Wakelam, *Rugby Football* (1936)

Rügen (rü'gun), island (358 sq mi, pop 89,306), Pomerania, NE Germany, in the Baltic Sea off Stralsund After 1945 it was included in Russian-occupied Mecklenburg It has been connected since 1936 by a dam with the mainland at Stralsund. Agriculture and fishing are the main occupations There are many very popular seaside resorts The chief town is Bergen Saßnitz is the terminus of a tram ferry from Trelleborg, Sweden Rügen was conquered by Denmark in 1168, came to Pomerania in 1325, and shared the history of Swedish Pomerania from 1648 to 1815, when it became Prussian

Ruggles, Samuel Bulkley, 1800–1881, American public figure, b New Milford, Conn, grad Yale, 1814 He was a successful lawyer in New York city, but at 40 gave up his practice to devote himself to public affairs He enthusiastically promoted real-estate development in the city and was mainly responsible for several private neighborhood parks Ruggles promoted the new water system and other improvements and served as a state assemblyman He helped to organize the Erie RR and the Union Pacific RR As a trustee of Columbia College he was to a large extent responsible for the beginning of its development into a great university Interested in international affairs, he was a delegate to the International Monetary Conference in 1867. See D G Brinton Thompson, *Ruggles of New York* (1946)

Ruhamah (rūhā'mu) [Heb, =commiserated], daughter of Hosea. Hosea 2.1.

Ruhmkorff, Heinrich Daniel (hīn'rĭkh dän'yĕl rōōm'kôrf), 1803–77, German physicist He manufactured scientific apparatus and instruments in Paris and invented (1851) the induction coil which bears his name.

Ruhr (rōōr), river, 145 mi. long, rising in the hills of N Hesse, NW Germany. It flows generally W past Essen and Mülheim and joins the Rhine at Duisburg Its lower course is the southern limit of the industrial **Ruhr** district (c 2,000 sq mi.; pop c 4,000,000) of Westphalia and the former Rhine Prov. of Prussia The district extends from the Dutch border in the west to Hamm in the east and is between the Ruhr and Lippe rivers It was included after 1945 in the British-occupied state of North Rhine-Westphalia It is one of the world's densest and most important industrial concentrations The basis of its industries is its huge anthracite basin, which provides coal not only for the heavy industries of the Ruhr itself, but also for those of France and other countries The chief industry of the Ruhr is steel production, which relies heavily on imports of iron ore from the Lorraine basin in France and on Swedish ore Unfinished, semifinished, and finished steel (notably heavy machinery and, until 1945, armaments) are produced. Coke, tar, and chemicals are important by-products From Duisburg to Dortmund the region is one continuous urbanized district, including the adjoining cities of Bochum, Essen, Gelsenkirchen, Oberhausen, and Recklinghausen A web of railroad and trolley lines connects the various localities, the Ruhr river, the Rhine-Herne Canal, and the Dortmund-Ems Canal connect the region with the Dutch port of Rotterdam and with the German port of Bremen The development of the Ruhr district began with the expansion in the 19th cent of the KRUPP and Thyssen concerns In Jan, 1923, the Ruhr was occupied by French and Belgian forces after the REPARATIONS commission had declared Germany in default The German government in turn discontinued all reparations payments and supported the movement of passive resistance to the Allies in the Ruhr The Franco-Belgian commission arrested several industrialists and took severe measures against sabotage, applying martial law After Gustav Stresemann became German chancellor in Aug, 1923, the government ended resistance and inaugurated a policy of treaty fulfillment which resulted in the German acceptance (Aug, 1925) of the Dawes Plan and the Allied evacuation (Nov, 1925) of the Ruhr The occupation of the Ruhr brought no essential advantages to France or Belgium, and it greatly embittered German nationalist feeling Some of the chief Ruhr industrialists were instrumental in helping Hitler to power in 1933 In the Second World War the cities and plants of the Ruhr district were devastated by air raids In March–April, 1945, a large concentration of German forces were sealed off in the "Ruhr pocket" by the Allies and eventually surrendered The disposition of the Ruhr after the war and the status of ownership and operation of its mines and industries were major factors of disagreement among the Allies French proposals to detach the Ruhr from Germany and to place it under international control were opposed by the United States, the USSR, and Great Britain and were abandoned, as were British proposals favoring socialization of the mines and plants In 1949 an international authority for the Ruhr was set up with the participation of France, England, the United States, Belgium, the Netherlands, Luxembourg, and (after Nov, 1949) the West German federal republic, its headquarters was established at Dusseldorf, and it was given full economic control over the Ruhr The USSR refused to recognize the Ruhr authority No final disposition regarding ownership was taken Production was resumed under the direction of German trustees and soon came close to pre-war production level A plan inaugurated in 1950 by the French foreign minister Robert Schuman provided for the pooling of European coal and steel resources and was adopted by the member countries of the Ruhr authority except England, which objected to the fact that the industries would not be publicly owned The Schuman Plan is likely to exert considerable effect on the status and the production of the Ruhr

Ruisdael or **Ruysdael, Jacob van** (both ya'kōp van rois'dal), c 1628–1682, Dutch painter and etcher, most celebrated of the Dutch landscape painters He was the pupil of his uncle, Salomon van Ruisdael (c 1600–1670), well-known Haarlem landscapist Very little is known of Jacob's life He was admitted to the painters' guild of Haarlem in 1648 and later moved to Amsterdam, receiving the freedom of the city in 1659 In 1668 he is recorded there as a witness to Hobbema's marriage His work was little appreciated in his day, and his life was passed in poverty He died in the Haarlem almshouse His characteristic work shows northern nature in a somber mood In his landscapes the skies are usually overcast, and his marines are gray and stormy He excelled in painting woodland scenes with ancient, gnarled oaks. In these pictures the prevailing tone was originally a strong, rich green, but many of them have darkened badly. He also painted various mountain scenes with waterfalls and foaming torrents, possibly inspired by Van Everdingen's Norwegian pictures. In general Ruisdael's landscapes, unlike those of his Dutch

contemporaries, do not depict any given spot but are imaginary Their realism is the product of keen visual memory and vivid imagination. His little figures are said to have been painted by Wouwerman, Berchem, Van Ostade, and Lingelbach. Ruisdael anticipated and inspired many of the great French and English landscapists of the next two centuries His mature work, in its breadth of handling and impressive light effects, shows the influence of Rembrandt His rare etchings are highly prized He is well represented in many important European and American collections Among his many famous paintings are *Blenheim Castle* and *Jewish Cemetery; Mill near Wijk* and *Waterfall* (Rijks Mus), *Forest* (Louvre), and *Landscape with Ruins* (National Gall , London) The Metropolitan Museum, the Art Institute of Chicago, the Museum of Fine Arts, Boston, the Frick Collection, New York, the National Gallery of Art, Washington, D.C , and the Philadelphia Museum of Art have fine examples of his art

Ruiz, Juan (hwin' rōō'ēth'), 1283?–1350?, Spanish poet He was archpriest of Hita, and what is known of his life has been reconstructed mainly from his masterpiece, the *Libro de buen amor* (Eng tr , *The Book of Good Love*, 1933) It is a collection of poems, fables, and adventures told in a picaresque manner, adaptations of medieval, classical, and Oriental stories and apologues, all forming a unified satirical panorama of medieval society

Rule, town (pop 1,195), W central Texas, N of Abilene, in a farm area, inc 1909

Ruleville, town (pop 1,378), NW Miss , near the Sunflower river NW of Greenwood, laid out 1898 It is a trade center for a plantation area Near by is an experimental vocational school for Negroes

rum, spirituous liquor properly distilled from molasses which has been dissolved in dunder (the lees of a previous distillation) and fermented Inferior rum is made from skimmings and other waste of cane sugar in process of manufacture Naturally colorless, rum acquires by the addition of caramel a rich brown color deepened by storage in casks The mellow, well-aged spirit has a high commercial value It is produced chiefly in the West Indies, where it originated, the choicest being made in Jamaica and Barbados In colonial times rum was extensively manufactured and consumed in New England See Charles Taussig, *Rum, Romance & Rebellion* (1928)

Rumah (rōō'mu) [Heb ,=high], unidentified place, home of Pedaiah the grandfather of King Jehoiakim 2 Kings 23 36

Rumania (rōōmā'nēu), **Romania** (rōmā'nēu, Rumanian rômû'nya), or **Roumania** (rōōmā'nēu), republic (c 92,500 sq mi , 1948 pop 15,872,624), SE Europe BUCHAREST is the capital Rumania is bounded by the Black Sea, the Ukraine, and the Moldavian SSR on the east, by the Ukraine on the north, by Hungary and Yugoslavia on the west, and by Bulgaria on the south The Danube, which forms part of the frontier with Yugoslavia and most of the frontier with Bulgaria, traverses Rumania in the east, its tributary, the Pruth, constitutes the major part of the frontier with the USSR The crest of the CARPATHIANS, of which the Transylvanian Alps are part, traverses Rumania in a wide arc from north to southwest and rises to 8,346 ft in the Negoiul Though Rumania is administratively divided into some 50 departments, the country falls into seven historic and geographic regions or provinces To the south and east of the Carpathian crest are WALACHIA, MOLDAVIA, S BUKOVINA, and—E and S of the lower Danube—DOBRUJA The center of Rumania is occupied by mountainous TRANSYLVANIA Further west, and extending into the Hungarian plain, are CRISANA-MARAMURES and the Rumanian part of the BANAT Primarily agricultural, Rumania is a major producer of wheat and corn, but because of the continental climate crop failures and resulting famines are not uncommon Industrial production, which might put Rumanians on a more stable economic basis, is only beginning to approach its potentialities The only large-scale industry that has been extensively developed for some time is the production of petroleum and natural gas, particularly in the PLOESTI area of Walachia Other mineral resources include salt, lignite, and iron, copper, gold, and silver ores Transylvania is rich in timber Wine production, fruitgrowing, and sheep and cattle raising are important occupations, and food processing (which, of course, depends on crop results) is a major industry. GALATI (Moldavia) is the chief Danubian port, and CONSTANTA (Dobruja), the chief Black Sea port Among other important cities are JASSY in Moldavia; Braila in Walachia, CLUJ in Transylvania; TIMISOARA in the Banat, and ORADEA in Crisana-Maramures. The majority of the population speak Rumanian, a Romance language, but there are considerable minorities whose native languages are Hungarian, German, and Yiddish The Rumanian Orthodox Church is the chief religious body; in 1948, when the Communist-led government took over control of religious worship and education, the Orthodox Church also absorbed the Greek Catholics in communion with the papacy (the Uniates), who as of 1930 had formed about 10 percent of the population Other religious groups include Roman Catholics (about 8 percent in 1930), Jews, various small Protestant denominations, and Moslems. There are four universities—at Bucharest, Jassy, Cluj, and Timisoara Rumania occupies, roughly, ancient DACIA, which was a Roman province in the 2d and 3d cent A D Although the present Rumanians are an ethnical mixture resulting from centuries of invasions and foreign occupation, their ancestors clung tenaciously to the most vital element of their Roman heritage—their Latin speech. After the Mongols withdrew in the 13th cent , the history of the Rumanian people became in essence that of the two Rumanian principalities—MOLDAVIA and WALACHIA —and of TRANSYLVANIA, which for most of the time was a Hungarian dependency By the 15th cent , the princes of Moldavia and Walachia were reduced to vassalage to the Ottoman Empire They retained, however, considerable independence Despite their Asiatic despotism and despite their continuous wars against each other and against their Turkish suzerains, their rule was a period of prosperity compared to that which followed To the cultural revival of the time the many old cathedrals of Rumania still testify MICHAEL THE BRAVE of Walachia defied both the sultan and the emperor and at the time of his death (1601) had united Moldavia, Walachia, and Transylvania under his sway, but his empire soon fell apart The ill-fated alliance (1711) of the princes of Moldavia and Walachia with Peter I of Russia led to the end of the rule by native princes From that time until 1821 the sultans appointed governors, called hospodars, usually chosen from among the Greek PHANARIOTS Some hospodars avoided exertion to the point of having themselves carried from the table to their beds They and their subordinates squeezed the country dry Except for the few great landowners, the bovars, the Rumanian people became a nation of starving peasants and nomadic shepherds In Transylvania the Rumanians fared little better under Magyar rule than their brothers across the Carpathians fared under the Phanariots The Treaty of KUCHUK KAINARJI (1774) gave Russia considerable influence over Moldavia and Walachia When, in 1821, Alexander Ypsilanti raised the Greek banner of revolt in Moldavia, the Rumanians (who had more grievances against the Greeks than against the Turks) rose on their part and helped the Turks in expelling the Greeks In 1822, the Turkish government consented to appoint native governors, after the Russo-Turkish War of 1828–29, during which Russian forces occupied the two principalities, the governors were given life tenure Though technically Moldavia and Walachia remained within the Ottoman Empire, they actually became Russian protectorates Under Russian pressure a constitution was devised which gave exclusive rights to the boyars However, a national and cultural revival was under way, and in 1848, following the French lead, the Rumanians rose in rebellion Their uprising, secretly welcomed by the Turks, was suppressed by Russian military intervention The Crimean War, however, brought the evacuation (1854) of the Russian troops, who were replaced by a neutral Austrian occupation force The Congress of Paris (1856) established Moldavia and Walachia as principalities under Turkish suzerainty and under the guarantee of the European Powers, and it awarded S BESSARABIA to Moldavia The election (1859) of Alexander John CUZA as prince of both Walachia and Moldavia prepared the official union (1861) of the two principalities under the name Rumania Cuza freed the peasants of feudal obligations and enabled them to buy land at cheap rates, but his personal corruption obscured his real achievements, and he was deposed by a coup d'état in 1866 CAROL I, a prince of the house of Hohenzollern-Sigmaringen, was chosen his successor A moderately liberal constitution was adopted in 1866, and in 1877 Rumania joined Russia in its war on Turkey At the Congress of Berlin (1878) Rumania gained full independence, but was obliged to restore S Bessarabia to Russia and to accept DOBRUJA instead In 1881 Rumania was proclaimed a kingdom Its history for the following 70 years was one of violence and turmoil, caused largely by the discontent of the peasants over governmental failure to institute adequate land reforms, by the inexhaustible corruption of the government, and by continuous foreign interference No true attempt was made by the government to curb the barbarous anti-Semitic excesses through which the peasants, misled by demagogues, vented their feelings Rumania remained neutral in the first of the BALKAN WARS but entered the second war, against Bulgaria, in 1913 and gained S Dobruja Although Rumania had adhered (1883) to the Triple Alliance, it proclaimed its neutrality when the First World War broke out King FERDINAND, Carol's nephew, acceded in 1914 Rumanian irredentism in Transylvania helped to bring Rumania into the Allied camp, and in 1916 Rumania declared war on the Central Powers Most of the country soon was overrun by Austro-German forces, and in Feb., 1918, by the Treaty of Bucharest, Rumania consented to a harsh peace By Nov , 1918, however, the Allies under Franchet d'Esperey entered Rumania, which reentered the war on the Allied side The general armistice of Nov 11, annulled the Treaty of Bucharest, and shortly afterward Rumania annexed Bessarabia from Russia, Bukovina from Austria, and Transylvania and the Banat from Hungary Rumanian intervention (1919) in Hungary put down the Communist regime of Bela Kun and put Admiral Horthy into power The acquisition of Bukovina, Transylvania, part of the Banat (the rest going to Yugoslavia), and Crisana-Maramures (until then an integral part of Hungary) was confirmed by the treaties of Saint-Germain (1919) and Trianon (1920), but the USSR never recognized the Rumanian seizure of Bessarabia A series of agrarian laws, beginning in 1917, went a long way toward breaking up the large estates in favor of the peasants The large Magyar and other minorities Rumania had acquired were a constant cause of friction, particularly with Hungary and Bulgaria. Rumania entered the LITTLE ENTENTE (1921) and the BALKAN ENTENTE (1934) to protect itself against Hungarian and Bulgarian revisionism Internal politics demonstrated a thorough lack of understanding of democratic (or even merely fair) methods Electoral laws were repeatedly revised by the party in power to keep out its opponents, and murder was not unusual as a political instrument This state of affairs entered an acute stage on the death (1927) of King Ferdinand, when even the royal succession was thrown into confusion Ferdinand's son, Carol, had renounced the succession and MICHAEL became king, but in 1930 Carol returned, set his son aside and was proclaimed king as CAROL II The court party, led by the king and by Mme LUPESCU, was almost universally unpopular, but its opponents were divided. The Liberal party, led by John Bratianu (see BRATIANU, family) and later by Ion Duca, was bitterly opposed by the Peasant party, led by Iuliu MANIU A right wing of the Peasant party joined with other anti-Semitic groups in the National Christian party, which was linked with the terrorist IRON GUARD Cabinets succeeded each other, and the only figure of some permanence was Nicholas TITULESCU, foreign minister from 1927 In 1936 the increasingly powerful fascistic groups forced him to resign In 1938 King Carol II dissolved parliament, assumed dictatorial powers, and promulgated a corporative constitution which was approved by a farcical plebiscite After CODREANU and the other leaders of the Iron Guard were shot "while trying to escape," Carol proclaimed the "Front of National Renascence" as the sole legal party Veering away from its support of the French collective security system, Rumania after 1936 drew closer to the AXIS powers It remained neutral when the Second World War broke out in 1939, but in 1940 it became a neutral partner of the AXIS Rumania was powerless to resist Russian demands for Bessarabia and N Bukovina (ceded in June, 1940) or to oppose Bulgarian and Hungarian demands backed by Germany, on the Dobruja, the Banat, Crisana-Maramures, and part of Transylvania (ceded in Aug , 1940) Although these losses were in part the result of the rise to power of Iron Guardists and other fascists, the Iron Guard rose in rebellion against Carol's "treachery " Carol was deposed and exiled, Michael returned to the throne, Ion ANTONESCU became dictator, and German troops entered Rumania Early in 1941 Antonescu crushed the Iron Guard, which now had become a hindrance to him, and in June he declared a "holy war" on Russia Rumanian troops recovered Bessarabia and Bukovina and helped to take Odessa, but they suffered heavily in the STALINGRAD disaster In Aug , 1944, two Russian army groups entered Rumania King Michael, until then in the background, by a daring coup d'état arrested the entire Antonescu cabinet, surrendered to Russia, and ordered Rumanian troops to fight on the Allied side The peace treaty between Rumania and the Allies, signed at Paris in 1947, confirmed essentially the armistice terms of 1944. Rumania recovered all its territories except Bessarabia, N Bukovina, and S Dobruja Politically and economically, it became increasingly dependent on Russia A Communist-led coalition government, headed by the non-Communist Peter Groza, came into power in 1945, and obtained (1946) an overwhelming electoral victory which the United States and Great Britain denounced as fraudulous Friction between the king and the Russian-supported cabinet led to his eventual abdication in Dec , 1947. Rumania became a people's republic on the soviet model under a constitution promulgated in 1948. Nationalization of industry and national resources was completed by a law of 1948 Control over the major industries, notably petroleum, had been shared with Soviet Russia since 1945, despite the protests of investors in other countries Although little reliable information has come out of Rumania

since 1948, there are indications that industrialization of the country was speeded up by Rumanian-Soviet industrial trusts See Nicolae Iorga, *History of Roumania* (1920, in French, Eng tr , 1926); J S Roucek, *Contemporary Roumania and Her Problems* (1932), R W Seton-Watson, *A History of the Roumanians* (1934)

Rumanian language, Romance language, belonging to the Italic subfamily of Indo-European languages See LANGUAGE (table)

Rumanian literature Until the 16th cent most writing among the Rumanians was in Slavonic An exception was a crude translation of the Acts of the Apostles and the Psalms, made by a Transylvanian cleric under the impulse of Hussite propaganda. In 1541 a catechism in Rumanian was issued at Sibiu and from 1560 liturgical works were published in Rumanian to meet the needs of the local Calvinist Church In c 1600, translations of the legend of Alexander the Great appeared, and in 1673 the Moldavian Bishop Dositheiu published the first volume of poetry in Rumanian, a verse translation of the Psalms Dositheiu also started (1679) a movement for the use of the vernacular in the liturgy Early historical works were the *Moldavian Chronicle* of Miron Costin (1633–91) and the famous *Moldo-Wallachian Chronicle* (1710) of Demetrius Cantemir (1673–1723), who also wrote a philosophical treatise in Rumanian on the old theme of body versus soul Cantemir's *Chronicle* laid the foundation of a movement which, starting in Transylvania under George Lazan (1779–1823), had as its purpose the emphasis of the Latin as opposed to the Slavic element in the Rumanian national composition The mainspring of this movement was Ion Eliade (1802–72, known as Radulescu), and its culminating product was a dictionary of the Rumanian language produced (1871–76) by August Laurianu and others in which all words of non-Latin origin were eliminated In 1860 the Latin replaced the Cyrillic as the official Rumanian alphabet (the Church used the Cyrillic until 1890), and 1860 marks the beginning of modern Rumanian literature As at first the Slavic and later, in the Phanariot period (1711–1821), Greek influence had been strong, in the early 19th cent that of France predominated Against this the native Rumanian spirit had to struggle to make itself articulate The efforts of Vasili Alecsandri (1819–90) in the ballad *Lulle Lamb* (1852) gave Rumanian literature its starting point Drama played a major part in the rise of Rumanian literature, from the time of Ion Eliade and George Asachi (1788–1869), co-founders (1833–36) of the Rumanian national theater Outstanding in the drama are Ion Luca CARAGIALI, a master of the comedy of manners, Ronetti Roman (1853 -1908), author of the tragedy *Manasse* (1900) dealing with the conflict of Jew and Christian in Rumania, Victor Eftimiu (1889–), who experimented with poetic drama, and Lucian Blaga. Poetry received a spur in 1867 when at Jassy in Moldavia Titu Maiorescu (1840–1917) founded the journal *Convorbiri literare* [literary conversations], which soon began to publish the lyrics of Mihail EMINESCU Maiorescu represents the cosmopolitan art for art's sake school in Rumanian letters The opposite school, holding that Rumanian writing to become great must spring from the peasant, had as its spokesman the historian Nicolae Iorga (1871–1940) In poetry the native school produced George Cosbuc (1866–1918) and in prose Ion Slavici (1848–1945), who collected native tales, and Ion Creanga (1837–89) and Mihail Sadoveanu (1880–), pioneers in the field of the novel A fusion of cosmopolitanism with Rumanianism was achieved in 1894 by Alexandru Vlahuta (1858–1919) in the novel *Dan* (1894), a theme found also in *Country Life* (1894) by Duiliu Zamfirescu (1858–1922) The contrast existing between rural and urban life inspired the realistic novels *Dinu Mullian* by Constantin Mille and *Parasites* (1893) by Barbu Delavrancea (1858 1919) From the "back to the soil" movement in Rumanian letters came the novel *Ion* (1920) by Liviu Rebreanu (1885–), known also for his novel of the First World War, *The Forest of the Hanged* (1922) Of poets, Dimitrie Anghel (1872–1914) and Tudor Arghezi (1880–) are to be noted, as well as Octavian Goga (1881–1938), an outspoken and often partisan advocate of Transylvanianism in Rumanian letters Queen Elizabeth wrote both prose and verse under the pseudonym Carmen Sylva See Leon Feraru, *The Development of Rumanian Poetry* (1929).

rumba (rŭm'bu), Cuban dance of African character, introduced into the United States c 1930 It has an eight-measure theme, with complex syncopation and strong rhythm Unlimited in repetition, the rumba emphasizes movements of the body more than movements of the feet.

Rumelia or **Roumelia** (both rōōmē'lēŭ), former administrative area of the Ottoman Empire, comprising, very roughly, Epirus, Macedonia, S Bulgaria, and part of Thrace and named for Rome (i e , the East Roman Empire) It was divided into several pashaliks Sofia was the seat of the governors until 1878, when the Congress of Berlin (see BERLIN, CONGRESS OF) made N Bulgaria an autonomous principality and created the autonomous province of **Eastern Rumelia.** This province, also known as Southern Bulgaria, had Plovdiv as capital and comprised, roughly, the part of present Bulgaria situated S of the Balkan Mts. It was administered by Bulgarian governors and enjoyed considerable autonomous rights under Turkish sovereignty, but the division of Bulgaria was deeply resented in both parts of the country. In 1885, a revolution broke out at Plovdiv, and Prince Alexander of Bulgaria annexed Eastern Rumelia Serbia, which had claims of its own on the area, promptly declared war on Bulgaria but was forced to make peace (1886) on the basis of the status quo, while the sultan consented to appoint Alexander governor of Eastern Rumelia This arrangement amounted to a tacit surrender by Turkey of that province, which henceforth remained united with Bulgaria

Rumford, Benjamin Thompson, Count, 1753–1814, American-British scientist and administrator, b Woburn, Mass In 1776 he went to England Later he entered the service of the elector of Bavaria as an administrator and in 1791 was created count of the Holy Roman Empire He chose his title from the name of the town Rumford (later Concord) N.H , where his wife was born While in Bavaria he reorganized the army, provided peacetime employment for the soldiers, and did much to aid the industrial workers He also introduced sociological reforms in England and Ireland Rumford's scientific contributions included experiments in gunpowder, improvements in methods of heating, lighting, and cooking, and a scientific theory of heat In contrast to the then prevalent belief that heat was a substance, he presented, in a paper (1798) to the Royal Society, the theory that heat was produced by the motion of particles He founded the Royal Institution in England, established the Rumford medal of the Royal Society, and founded the Rumford professorship of chemistry at Harvard Univ See biography by James Alden Thompson (1935)

Rumford 1 Town (pop 10,230), W Maine, at falls of the Androscoggin and NW of Augusta, settled 1774, inc 1800 It has large paper mills A winter sports center in hilly country, the town has an annual winter carnival 2 Village, R I see EAST PROVIDENCE

Rumi, Jalal ed-Din (julāl' udēn' rōō'mē), 1207–73, Persian poet He was a native of Balkh, but lived at Rum (ancient Iconium, modern Konya), whence his name He was a Sufi, and his lyrics express mystic thought in finely wrought symbols He is considered by many as the greatest of the brilliant school of Sufist poets His name occurs in several other forms in English

Ruml, Beardsley (rŭ'mul), 1894–, American economist, b Cedar Rapids, Iowa, grad Dartmouth, 1915, Ph D Univ of Chicago, 1917 He was an executive of philanthropic societies, dean (1931–33) of the social science division of the Univ of Chicago, and after 1934 a department-store administrator He was the author of the withholding tax plan ('pay-as-you-go plan"), which was adopted by the U S Congress in 1943 He wrote *Tomorrow's Business* (1945)

rummy, card game played by two to six players with an ordinary deck The cards usually rank from king down through ace Seven cards are dealt to each player in the three- or four-hand game, one card is turned up on the table, and the remaining cards are left face down in a stock pile Players, in order, each draw one card from stock and then discard one card from their hands into the discard pile, face up They have the option of drawing the top card from the discard pile The object is to meld, within the closed hand, sets—three or four cards of the same rank or sequences of three or more in the same suit A straight is seven cards in sequence in the same suit The first player to meld all his seven cards calls out "rummy," shows his hand, and thus wins One of the favorite variations of the game is knock rummy, in which a player may wait to meld his seven cards for higher stakes, but may also "knock" after he draws from stock and discards By "knocking" he lays down his cards, and if the nonmelded cards have a total less than the nonmelded cards of each of the other players, he wins Aces are counted 1 point, each face card 10, and all others for their pip values In the early 1940s, gin rummy became an immensely popular game in the United States Each player is dealt 10 cards, knocking is permitted with unmatched cards totaling 10 points or less, and "gin" is announced if all the cards are melded Scoring gin rummy is relatively complicated, for it involves box tallies and a system of bonus points Another variation of rummy, canasta (kŭnä'stu) [fr Span , =basket], was brought by travelers from Argentina to the United States, where in 1949 it gained great popularity It is played with two decks of 52 cards each, plus four jokers, which, with the eight deuces, are wild cards. Red threes are counted as bonus cards and black threes may be used as defensive discards It also differs from most other (but by no means all) forms of rummy in that a card is turned up to form the basis of a discard pile and the whole pile may be drawn by a player. Furthermore, sequences have no value and suits no meaning. A player's object is to score the most points by making canastas (seven or more cards of the same rank or four or more cards of one rank plus wild cards to total seven cards constitute a canasta) and melding cards of the same rank. To go out of the game a player must lay at least one canasta on the table with the remaining cards in melded form. At the end of the game the base score (for going out, for bonus cards, and for each canasta) and the point score (for individual cards of the canastas and the melds) are tallied. In the four-hand game 11 cards are dealt each player. Other popular variations of rummy are five-hundred rummy, continental rummy, and contract rummy.

Rump Parliament see PARLIAMENT

Rumsey, James (rŭm'zē), 1743–92, American inventor, b Cecil co , Md He built and demonstrated (1787) on the Potomac river a vessel propelled by streams of water forced through the stern by steam Patents for the development were granted (1791) him in the United States and England His death prevented an exhibition of a second model of the ship on the Thames in London He wrote *A Short Treatise on the Application of Steam* (1788)

Rumson, borough (pop 2,926), E N J , a resort S of Sandy Hook, settled c 1700, inc. 1907

Runciman, Walter Runciman, 1st **Viscount** (rŭn'-simun), 1870–1949, English shipping magnate and public official He inherited his father's large shipping business As a Liberal he served in Parliament, with two interruptions, from 1899 to 1937 and held a number of governmental administrative positions As president of the Board of Trade (1914–16, 1931–37) he concluded trade agreements with 23 countries He was made viscount in 1937 Lord Runciman's mission to Czechoslovakia in 1938 was a prelude to the Munich Pact

Runcorn, urban district (1931 pop 18,127, 1943 estimated pop 23,220), Cheshire, England, on the Mersey between Liverpool and Manchester It is at the terminus of the Manchester Ship Canal and of the Bridgewater Canal, which connects with the Mersey by a series of locks There are bridges to Widnes, on the Lancashire side of the Mersey Runcorn is a tanning and pharmaceutical and chemical manufacturing subport of Manchester, it owed its development chiefly to the construction of the Bridgewater Canal in the 18th cent It was the site of a castle of ÆTHELFLÆD in 916

Rundstedt, Karl Rudolf Gerd von (kurl' rōō'dōlf gĕrt' fŭn rōont'shtĕt), 1875–, German field marshal He proved his exceptional abilities in the First World War In the Second World War he commanded the southern army group in the Polish campaign (1939), the central sector in the French campaign (1940), and the southern army front in Russia (June–Dec , 1941) Named commander of all German forces in the West (May, 1944), he was defeated in the Normandy campaign and replaced (July) by Field Marshal Günther von Kluge. Reinstated in his Western command in October, he launched a deadly counteroffensive on Dec 16, 1944 (see BATTLE OF THE BULGE) In March, 1945, he was once more dismissed and was replaced by Field Marshal Albert Kesselring He was captured by U S troops in May, 1945

Runeberg, Johan Ludvig (yōō'hän lŭd'vig rū'-nubĕryu), 1804-77, Finnish national poet His first long work was the peasant epic *The Elkhunters* (1832) In 1837 he became professor of Latin at Porvoo near Helsinki, and here he wrote all his later works These include his cycle of romances in unrhymed verse based on Scandinavian legend, *King Fjalar* (1844, Eng tr , 1912), and the great poem on the Russo-Swedish War of 1808–9, *The Tales of Ensign Stal* (1848, Eng trs , 1925, 1938), of which the first song has been adopted as the Finnish national anthem Like all Finnish authors of his day, Runeberg wrote in Swedish Others of his poems are available in English, especially *Nadeschda* (1841, Eng. tr , 1879, 1883, 1890)

runes (rōōnz), ancient Germanic alphabet It was probably first used among the East Goths (c 300) and suggested by a Greek cursive script The runes are adapted to carving on wood, consisting of perpendicular and oblique, and a few curved, lines The first six signs were for f, u, th, o (a), r, c (k), hence the name Futhorc for the runic alphabets There were two alphabets, one of 16 signs, the other of 24 (the 16 with eight more) In historical times the runes were used primarily in England and in Scandinavia, where runic manuscripts occur. In Sweden runes were used after the Middle Ages in some outlying districts

Runge (rŭng'ē), town (pop. 1,001), S Texas, SE of San Antonio, in a farm area, settled 1884, inc 1913

Runnemede (rŭ'nimēd), borough (pop 2,835), SW N J , SSE of Camden, settled 1683 by Friends as New Hope, inc. 1926

runner, creeping, slender, tendrillike stolon issuing from a plant stem and rooting at the node to form a new shoot. The runner itself dies at the end of the season, leaving the new shoot independent of the parent plant. Among plants which multiply by means of runners are the strawberry, the black raspberry, white clover, and some grasses.

Runnymede or Runimede (rŭn'ĭmēd), meadow, 20 mi. W of London, England, on the south bank of the Thames river Either on this meadow or on near-by Charter Island, King JOHN accepted the MAGNA CARTA (1215)

Rupert, 1352–1410, emperor (never crowned) and German king (1400–1410), count palatine He was elected after the deposition of Emperor WENCESLAUS. Defeated (1401) in Italy by Gian Galeazzo VISCONTI, he returned to Germany in 1402, after having raised the necessary money by pawning his jewels and silverware Recognized (1403) by Pope Boniface IX, he adhered stubbornly to the Roman popes in the Great SCHISM When he sent envoys to plead for Gregory XII at the Council of Pisa, the council refused to recognize his title. Rupert was unable to exercise any control over the warring cities and nobles He was succeeded by Emperor SIGISMUND

Rupert, Prince, 1619–82, count palatine of the Rhine and duke of Bavaria Born in Prague, he was the son of Frederick the Winter King and Elizabeth, queen of Bohemia, and was thus a grandson of James I of England Rupert was reared in the Netherlands and studied at Leiden Active in the later part of THIRTY YEAR WAR, Rupert was at the siege of Breda (1637), was taken prisoner (1638), and was not released until 1641, when he went to the aid of his uncle, Charles I of England, in the civil wars Despite his youth, Rupert became an outstanding royalist commander His cavalry was generally successful until the battle of Marston Moor (1644), and despite his defeat there he was made a general of the king's army However, the prince's surrender of Bristol (1645) to Sir Thomas Fairfax and his discussion of peace proposals with the parliamentarians alienated the king Rupert went to France, but later commanded an English fleet assisting the king's forces in Ireland He spent the years from 1654 to 1660 in Germany, but returned to England at the Restoration, became a privy councilor to Charles II, and, as an admiral, played an important part in the DUTCH WARS A man of many artistic and scientific interests, Rupert also took part in colonial and commercial schemes, notably in the ventures of the Hudson's Bay Company See biographies by Elliott Warburton (1849), Eva Scott (1899), and Clennell Wilkinson (1934)

Rupert, city (pop 3,167), co seat of Minidoka co, S Idaho, E of Twin Falls in the Snake valley, laid out 1905, inc as a village 1906, as a city 1917 It is a shipping point for farm products of the MINIDOKA PROJECT

Rupert, river of W Quebec, issuing from Lake Mistassini and flowing 380 mi W through Nemiscau Lake to James Bay, just W of Rupert House

Rupert House, village and trading post, W Que, on the Rupert river east of its mouth on James Bay Founded in 1668 as Fort Charles by Groseilliers and later called Fort Rupert, then Rupert's House or Rupert House, it is the oldest fur-trading post of the Hudson's Bay Company In the struggle between English and French in Canada, the post was captured by the French in 1686, and alternately held until the Peace of Utrecht (1713) restored it permanently to the Hudson's Bay Company

Rupert's Land, Canadian territory held (1670–1869) by the Hudson's Bay Company, named for Prince Rupert first governor of the company Under the charter granted (1670) to the company by Charles II, the region comprised the drainage basin of Hudson Bay, an area embracing what is today the provinces of Ontario and Quebec N of the Laurentians and W of Labrador, all of Manitoba and Saskatchewan, the southern half of Alberta, and the southeast corner of the Northwest Territories In 1869 the Hudson's Bay Company transferred Rupert's Land to Canada for £300,000 but retained certain blocks of land for trading posts and other purposes

Rural Electrification Administration (REA), created (1935) by executive order as an independent Federal bureau Authorized by the U S Congress in 1936 and later (1939) reorganized as a division of the U S Dept of Agriculture, the Rural Electrification Administration undertook a program to provide American farms with cheap electric lighting and power and to improve farming equipment To this end the administration made long-term, self-liquidating loans to state and local governments, to farmers' cooperatives and to nonprofit organizations, no loans were extended directly to consumers In 1944 Congress liberalized the terms of the REA loans and removed the time limitation from the lending program, by July, 1946, loans amounting to $825,000,000 were allocated to about 1,000 borrowers in 45 states, Alaska, and the Virgin Islands

Rurik (rōō'rĭk), d 879, reputed founder of Russia He supposedly was the leader of a band of VARANGIANS who in 862 settled in Novgorod in response to an invitation from the Slavs to establish order and unity among them His heirs—the house of Rurik—ruled RUSSIA till 1598. See V L P Thomsen, *The Relations between Ancient Russia and Scandinavia* (1877).

Rusby, Henry Hurd (rŭs'bē), 1855–1940, American botanist and pharmacologist, b Franklin, N J, M D New York Univ, 1884 In 1888 he became professor of botany, physiology, and materia medica in the department of pharmacy of Columbia Univ In 1904, when the College of Pharmacy of the City of New York became affiliated with Columbia, he became dean, serving until 1930 As a result of his expeditions to Brazil, Bolivia and Colombia he introduced new drugs to materia medica He was influential in the establishment of pure food and drug laws and in increasing the educational requirements for pharmacists He assisted in the revision of three editions of the U S Pharmacopoeia, and he helped found the New York Botanical Garden and was curator of its economic collections His many writings include *Fifty Years of Materia Medica* (1907), *The Properties and Uses of Drugs* (1930), and *Jungle Memories* (1933)

Ruschuk, Bulgaria *see* RUSE

Ruse (rōō'sĕ), city (pop 53,420), NE Bulgaria, on the Danube It is a land and water communications center and has machinery, textile, leather, and tobacco manufactures There is a polytechnic school Dating from Roman times, Ruse is noted for its mosques and for the ruins of its medieval fortress It was formerly also known as Ruschuk (rōōs'chōōk).

Rush, Benjamin, 1745?–1813, American physician, signer of the Declaration of Independence, b Byberry (now part of Philadelphia), Pa, grad. College of New Jersey (now Princeton Univ), 1760, M D Univ of Edinburgh, 1768 On his return to America (1769) he became professor of chemistry, the first in the colonies, at the College and Academy of Philadelphia He was a member of the Continental Congress (1776–77) and was for a time surgeon general of the Continental army. In 1786 he established in Philadelphia the first free dispensary in the United States He was a member of the Pennsylvania convention that ratified the Federal Constitution In 1792 he became professor of the institutes of medicine and clinical practice at the Univ of Pennsylvania (which had absorbed the College of Philadelphia), later becoming professor of theory and practice also His reliance upon the bleeding and purging of patients, particularly in the yellow-fever epidemic of 1793 (in which he worked heroically), aroused medical controversy Very popular as a teacher, he made notable contributions to psychiatry, was a founder of the first American antislavery society, and helped in the founding of Dickinson College From 1797 to his death he was treasurer of the U S mint at Philadelphia Rush Medical College, Chicago, was named for him His principal writings were *Medical Inquiries and Observations* (5 vols, 1794–98, 4th ed, 1815), *Essays, Literary, Moral, and Philosophical* (1798, 2d ed, 1806), and *Medical Inquiries and Observations upon the Diseases of the Mind* (1812, 2d ed, 1818) See D O Runes, ed, *The Selected Writings of Benjamin Rush* (1947), G W Corner, ed, *The Autobiography of Benjamin Rush* (1948), biography by N. G. Goodman (1934)

Rush, Richard, 1780–1859, American statesman and diplomat, b Philadelphia, Pa, grad College of New Jersey (now Princeton Univ), 1797, son of Benjamin Rush He studied law and in 1811 became attorney general of Pennsylvania, resigning the same year to become comptroller of the U S Treasury, and from 1814 to 1817 was U S Attorney General While serving temporarily as Secretary of State (1817), he helped negotiate the RUSH-BAGOT CONVENTION and in the same year was made minister to Great Britain During his service there, Rush obtained concessions on the fisheries problem and the joint occupation of Oregon by England and the United States He also played a part in the negotiations preceding the Monroe Doctrine In 1825 he became Secretary of the Treasury and in 1828 was the vice presidential candidate on the unsuccessful John Quincy Adams ticket Rush spent from 1833 to 1838 in England obtaining the Smithson bequest for the establishment of the Smithsonian Institution, of which he became regent He was (1847–49) minister to France See biography by J H Powell (1942)

Rush, William, 1756–1833, American sculptor, one of the earliest in the country, self-taught His wood carvings, clay models, and figureheads were famous in their day Of his other works, carved in wood, the statue of George Washington is in Independence Hall, Philadelphia, and a bronze replica of his graceful *Spirit of the Schuylkill* is in Fairmount Park, Philadelphia Rush was a leader in founding the Pennsylvania Academy of the Fine Arts, which owns a plaster cast of a vigorous self-portrait of his head carved in a pine knot He did portraits of Joseph Wright, Samuel Morris, Washington, Franklin, and others

rush, name for tall, grasslike plants of various families, many of which have hollow stems The true rushes belong to the family Juncaceae, and most of them grow in swamps Among them are the common or bog rush (*Juncus effusus*), widely distributed in swamps and moist places of the Northern Hemisphere, and the slender rush (*J. tenuis*) found in dryer surroundings Rushes are used for basketwork, mats, chair seats, and other articles Wicks for candles known as rushlights are made from the pith of some rushes The wood rush (*Luzula*) grows on dry ground, and some species are relished by livestock. Other plants often called rushes are the BULRUSH, the Dutch or scouring rush, a horsetail (*Equisetum hyemale*), still used in some regions for scouring, and the sweet flag or sweet rush (*Acorus calamus*) of the arum family Rushes were formerly used for strewing the floors of churches, castles, and other buildings

Rush-Bagot Convention (băg'ŭt), 1817, agreement between the United States and Great Britain concerning the Canadian border It consisted of the exchange of notes signed by Richard Rush, Acting Secretary of State of the United States, and Charles Bagot, British minister in Washington The convention provided for practical disarmament on the U S –Canadian frontier It provided that each nation should have no more than four warships, of 100 tons burden each, on the frontier The agreement was the result of negotiations commenced after the Treaty of Ghent was signed It is important because it set a precedent for the pacific settlement of all Anglo-American difficulties and because it inaugurated a policy of strict peace between the United States and Canada Only one move has been made to abrogate it That was in the Civil War when strained relations with Canada caused W H Seward to announce an intention to abrogate (1864), but before the six months of grace he allowed had elapsed he canceled the announcement (1865) The provision in the 1941 agreement about the St Lawrence seaway that warships could be built on the lakes had no bearing on the disarmament of the frontier.

Rush City, village (pop. 1,020), E Minn, N of St Paul near Rush Lake, settled before 1873. It is a resort in a farm area

Rushford, city (pop 1,182), SE Minn, SE of Rochester, settled before 1854 It is a trade and shipping point in the Root river valley

Rush Medical College, in Chicago, chartered 1837, affiliated with the Univ of Chicago 1898–1941 and with the Univ of Illinois after 1941 It is one of the oldest and best-known medical schools

Rushmore, Mount *see* MOUNT RUSHMORE NATIONAL MEMORIAL

Rush Springs, town (pop 1,422), SW central Okla, SW of Oklahoma City It is a marketing center for a farm area producing chiefly watermelons

Rushville, **1** City (pop. 2,480), co seat of Schuyler co, W central Ill, NW of Springfield, in a coal and farm area, founded 1825, inc 1839 Lincoln pleaded cases and made a campaign speech here **2** City (pop 5,960), co seat of Rush co, E Ind, c 40 mi ESE of Indianapolis, settled 1821 It is a trading center for an agricultural area **3** City (pop 1,125), co seat of Sheridan co, NW Nebr, in the high plains region, founded c 1885 Pine Ridge Indian Reservation, S Dak, is not far

Rushworth, John, 1612?–1690, English historian He collected information on state affairs, after taking down verbatim reports in shorthand His interest was recognized when in 1640 he was made a clerk in the House of Commons During the Puritan Revolution he served in a clerical capacity, first under Thomas Fairfax and then under Oliver Cromwell He was elected to Parliament in 1657 He narrowly escaped trial as a regicide, but retained under Charles II his position as agent for the town of Berwick and was later (1677) agent for the colony of Massachusetts His famous *Historical Collections* (8 vols, 1659–1701) are a hodgepodge of biography, transcripts of documents, and his own valuable notes, covering the years 1618–48

Rusk, Jeremiah McLain, 1830–93, American political leader, b Malta, Morgan co, Ohio He became a farmer in Wisconsin, where he entered politics and held many offices After he served in the Civil War, he was a U S Representative (1871–77) and then (1882–89) served as governor of Wisconsin President Benjamin Harrison appointed (1889) Rusk to the newly created cabinet post of Secretary of Agriculture

Rusk, Thomas Jefferson, 1803–57, Texan statesman, U S Senator from Texas (1846–57), b Pendleton District, S C He studied law under John C Calhoun and practiced in Clarksville, Ga, for 10 years before moving to Texas in 1835 Rusk was a member of the convention that declared the independence of Texas (1836) and became secretary of war in the provisional government of the new republic He distinguished himself at the battle of San Jacinto and, when Sam Houston was wounded there, commanded the Texas army for a brief period thereafter A member of the second congress of Texas (1837) and chief justice of the Texas supreme court (1838–42), he was appointed major general in 1843 to lead a counterinvasion of Mexico, which never came off He was president of the convention that confirmed the annexation of Texas (1845) and the next year was elected to the U S. Senate and remained a Senator until his death Despondent over the death of his wife, he committed suicide.

Rusk, town (pop 5,699), co seat of Cherokee co, E Texas, E of Palestine, settled 1846, inc 1858 It is a center for a truck and dairy section of pine woods on red sandy hills. A small iron industry

has flourished intermittently near by. A state mental hospital is in Rusk

Ruskin, John, 1819–1900, English author and critic Educated by his wealthy, evangelical parents, Ruskin was prepared for the ministry, spending his mornings (till 1836) with his domineering mother, reading and memorizing the Bible, a procedure which colored his thought and taste His father, a wine merchant, imbued in him a love of literature and art and showed him the art of the great estates they visited on business tours In 1833 the family went on the first of its many tours of Europe, and the boy ardently studied nature and painting His stay at Oxford (1836–40) resulted in his winning the Newdigate Prize for poetry, in his determining not to enter the ministry, and in a breakdown of health (1840) which forced him to travel He returned in 1842 for the degree In 1843 appeared the first volume of *Modern Painters*, a work which started as a defense of the painter J M W Turner and developed into a treatise elaborating the principle that art is based on national and individual integrity and morality He finished the five volumes in 1860 *The Seven Lamps of Architecture* (1849) applied his theory to architecture He was married (1848) to Euphemia Gray, but the unconsummated union was nullified (1854) From his position of art dictator, Ruskin defended the work of the Pre-Raphaelite group *The Stones of Venice* (1851–53) maintained that the Gothic architecture of Venice reflected national and domestic virtue, while Venetian Renaissance architecture mirrored corruption In 1860 Ruskin broke with organized religion and with his class and turned from art to political economy—a change of interest presaged by *The Political Economy of Art* (1857) He wrote *Unto This Last* (in *Cornhill*, 1860) and *Munera Pulveris* (in *Fraser's*, 1862–63), which attacked the foundations of mercantile England, saying that modern art reflected the ugliness and unsoundness of modern industry when considered as a basis for national life Both series were stopped because of the outcry against them Ruskin's positive program for reconstruction appeared in *Sesame and Lilies* (1865), *The Crown of Wild Olive* (1866), *Time and Tide* (1867), and *Fors Clavigera* (1871–84) and was carried out with varying success in his industrial experiments Many of Ruskin's social theories have now become accepted doctrine He was made the first professor of art in England (Slade professor, Oxford, 1870) and lectured to crowded halls, but his multifarious activities broke down his health and he suffered (1878) his first period of insanity Recurrences of unbalance became more frequent, though some of his greatest prose, the autobiography *Praeterita* (1885–89), was written in the lucid intervals After 1889 his reason was permanently clouded See his works (ed by E T Cook and Alexander Wedderburn, 39 vols, 1903–12), E T Cook, *Studies in Ruskin* (1890), A C Benson, *Ruskin a Study in Personality* (1911), H A Ladd, *Victorian Morality of Art* (1932), R H Wilenski, *John Ruskin* (1933), biographies by W G Collingwood (rev ed, 1902), Frederick Harrison (1902), Amabel Williams-Ellis (1929), and Peter Quennell (1949), Sir William James, ed, *John Ruskin and Effie Gray* (1947)

Russell, name of an English noble family It first appeared prominently in the reign of Henry VIII when **John Russell, 1st earl of Bedford,** 1486?–1555, rose to military and diplomatic importance He was lord high steward and lord keeper of the privy seal under Henry VIII and Edward VI, was created 1st earl of Bedford in 1550, and had a part in arranging the marriage of Mary I (Mary Tudor) to Philip II of Spain He died possessed of great wealth and lands which have remained in the family until the 20th cent His son, **Francis Russell,** 2d **earl of Bedford,** c 1527–1585, was an influential privy councilor under Elizabeth and president of the council of Wales **Francis Russell,** 4th **earl of Bedford,** 1593–1641, was the most important opponent of Charles I in the House of Lords and the brightest hope for reconciliation in the Puritan Revolution when he suddenly died in 1641 He also began the draining of the Fen country **William Russell,** 5th **earl and** 1st **duke of Bedford,** 1613–1700, fought first for Parliament and then for the king in the civil war His son was the unfortunate Lord William Russell (see separate article) In 1694, when the verdict in his son's treason trial was reversed, the 5th earl was made duke of Bedford, a title which had been held in the 15th cent. by JOHN OF LANCASTER **John Russell,** 4th **duke of Bedford,** 1710–71, was one of the statesmen who attacked Robert Walpole and succeeded him in the government He became leader of the "Bloomsbury Gang," served in the cabinets of the duke of Newcastle, Lord Bute, and George Grenville, and was one of the subjects of the bitter letters by JUNIUS. It was **Francis Russell,** 5th **duke of Bedford,** 1765–1802, whose criticism of Edmund Burke's pension elicited Burke's *Letter to a Noble Lord* (1796). Bedford was a notable stockbreeder Probably the greatest member of the family was the 5th duke's brother, John Russell, 1st Earl Russell (see separate article). His grandson Bertrand Russell (see separate article) became 3d Earl Russell The Bedford title went to the 5th duke's descendant **Hastings William Sackville Russell,** 12th **duke of Bedford,** 1888– See various studies of the family to 1771 by Gladys S Thomson, especially *Two Centuries of Family History* (1930)

Russell, Annie, 1864–1936, American actress, b England She was brought to Canada as a child and came to prominence in the title role of *Esmeralda* (1881) by William Gillette She was also successful in London, where she played in Bret Harte's *Sue* (1898) and Shaw's *Major Barbara* (1906) In 1912 she organized the Old English Comedy Company, from which she retired in 1917 She assumed direction in 1932 of a playhouse named for her in Rollins College

Russell, Bertrand Arthur William Russell, 3d **Earl,** 1872–, English philosopher and mathematician. He studied at Trinity College, Cambridge, where later he was lecturer and fellow His activities on behalf of peace in the First World War caused him to lose his fellowship, and later he was briefly imprisoned because of an anti-war publication Afterwards he taught and lectured in England and the United States He succeeded to the earldom in 1931, and in 1938 he came to the United States At first professor of philosophy at the Univ of California, in 1940 he went to teach at the Barnes Foundation in Philadelphia when his appointment to City College, New York, was canceled after a legal battle Much of his writing has centered on mathematics and logic With A N Whitehead he wrote *Principia Mathematica* (3 vols, 1910–13), a major contribution to symbolic logic The perfection of mathematics appealed to him strongly, and he endeavored to answer the problems of philosophy in the same rigid and abstract forms He is a reformer, emphasizing the importance of the creative activity of man as contrasted with the possessive and acquisitive activities The development of the creative instincts, which he calls the principle of growth, is to be achieved through a system of universal education This educational system must have complete freedom of thought and speech and must use the scientific method in its search for truth and knowledge Russell writes with clarity and vivid metaphor, and his lectures and writings have a wide popular appeal throughout the world Some of his important works are *Principles of Social Reconstruction* (1917), *Mysticism and Logic* (1918), *Introduction to Mathematical Philosophy* (1919), *An Outline of Philosophy* (1927), *Marriage and Morals* (1929), *Education and the Social Order* (1932), *History of Western Philosophy* (1945), *Philosophy and Politics* (1947), and *Human Knowledge* (1948) He edited with his wife, Patricia, *The Amberley Papers the Letters and Diaries of Bertrand Russell's Parents* (1937) See *The Bertrand Russell Case* (ed by John Dewey and H M Kallen, 1941), P A Schilpp, *Philosophy of Bertrand Russell* (1944)

Russell, Charles Edward, 1860–1941, American editor and author, b Davenport, Iowa He was a prominent newspaper editor (1894–1902) in New York and Chicago, an early muckraking writer, a well-known socialist, and a biographer His many books include *The Uprising of the Many* (1907), *Why I Am a Socialist* (1910), *These Shifting Scenes* (1914), *Wendell Phillips* (1914), and *The American Orchestra and Theodore Thomas* (1927), a Pulitzer Prize biography See his autobiography, *Bare Hands and Stone Walls* (1933)

Russell, Charles Taze, 1852–1916, founder of the movement whose followers are known as Russellites, as Bible Students, and (since 1931) as JEHOVAH'S WITNESSES, b Pittsburgh, Pa There he organized (1872) the first group of followers to adopt his beliefs concerning the second coming of Christ and the millennium In 1878 he became an independent minister "Pastor Russell" moved (1909) to the Brooklyn Tabernacle, New York city His teachings are contained in his many pamphlets, which have been widely translated and circulated

Russell, Francis, dukes and earls of Bedford see RUSSELL, family

Russell, George William, pseud **A. E.,** 1867–1935, Irish poet and painter, b Lurgan, educated in Dublin He was an active member of the Irish nationalist movement in both its political and cultural aspects, editing the *Irish Homestead* (1904–23) and the *Irish Statesman* (1923–30) Always a mystic, A E was a theosophist until he left the society to work with Sir Hugh Plunkett, founder of the Irish Agricultural Society For several years A E traveled among Irish farmers, campaigning for cooperatives As a painter he had no technical interests and did not try to exhibit or sell his work, but his landscapes of the Donegal country have been greatly admired His poetry is noted for its melodious lyrics A E. was a famous talker and a convincing lecturer He made a lecture tour through the United States in 1930–31 Among his works are *Homeward Songs by the Way* (1894), *The Candle of Vision* (1918), *The Avatars* (1933), and *Selected Poems* (1935) See his prose collection *The Living Torch* (ed. by Monk Gibbons, 1937), *memoir* by John Eglinton (1937)

Russell, Hastings William Sackville, 12th duke of Bedford: see RUSSELL, family.

Russell, Henry Norris, 1877–, American astronomer, b Oyster Bay, N Y., **grad.** Princeton, 1897. In 1902 he went to Cambridge, England, first as research student, then as research assistant for the Carnegie Institution of Washington, D C He returned to Princeton in 1905, was professor of astronomy there (1911–27), research professor (1927–47), and director of the observatory (1912–47) In 1947 he became research associate at the Harvard Observatory His spectroscopic studies resulted in his development of a theory of stellar evolution He wrote *Determinations of Stellar Parallax* (1911), *Astronomy* (1926–27), *Fate and Freedom* (1927), *The Solar System and Its Origin* (1935), and *The Masses of the Stars* (with C E Moore, 1940)

Russell, James Earl, 1864–1945, American educator, b Hamden, N Y, grad Cornell, 1887, Ph D Leipzig, 1894 From 1895 to 1897 he was professor of philosophy and pedagogy at the Univ. of Colorado As professor of education and dean at Teachers College, Columbia Univ, from 1897 he developed it from a small normal school into an influential professional college In 1927 he became dean emeritus but remained professor of education until 1931 His writings include *The Extension of University Teaching in England and America* (1895), *Trend in American Education* (1922), and *Founding Teachers College* (1937) His son, **William Fletcher Russell,** 1890–, b Delhi, N Y, grad Cornell, 1910, Ph D Columbia, 1914, succeeded him as dean of Teachers College in 1927 He had been dean (1917–24) of the College of Education, State Univ of Iowa, and professor of education and associate director of the International Institute of Teachers College from 1923 He wrote *Economy in Secondary Education* (1916), *Education in the United States* (1917), and *The Meaning of Democracy* (with T H Briggs, 1941) and edited *The Rise of a University*, Vol I (1937)

Russell, John, dukes and earls of Bedford. see RUSSELL, family

Russell, John Russell, 1st **Earl,** 1792–1878, English statesman, son of the 6th duke of Bedford As Lord John Russell, he became a Whig member of Parliament in 1813 and in 1820 began his long career as a liberal reformer He worked for repeal of the Test and Corporation Acts, supported CATHOLIC EMANCIPATION and helped prepare and introduce the REFORM BILL OF 1832 He gave the name to the newly formed Liberal party and helped shape its policies He supported the reduction of Irish church revenues, the act to liberalize municipal governments, the repeal of the corn laws, and educational reform He had meanwhile been in several cabinets and had led the opposition during the second ministry (1841–46) of Sir Robert Peel As prime minister (1846–52) Russell used public works, grants, and other relief to help the Irish during the potato famine and forced the resignation (1851) of PALMERSTON, his foreign secretary and the most popular man in the party, for recognizing Louis Napoleon's coup d'état in France without authorization In 1855 Russell represented England at Vienna in an unsuccessful conference to end the Crimean War As foreign secretary (1860–65) under Palmerston, he vigorously advocated English neutrality during the American Civil War and worked brilliantly for the liberation of Italy He had been made an earl in 1861 and became prime minister again on Palmerston's death (1865) Russell had introduced unsuccessful parliamentary reform bills in 1849, 1854, and 1860, and failure of another in 1866, along with several unfortunate incidents in England, Ireland, and the colonies, caused his ministry to fall Among Russell's literary and historical writings are a translation of Schiller's *Don Carlos* and biographies of Lord William Russell (1819) and of Charles James Fox (3 vols, 1853–57) See his *Recollections and Suggestions, 1813–1873* (1875), his early correspondence (ed by Rollo Russell, 1913) and later correspondence (ed by G P Gooch, 1925), biography by Spencer Walpole (1889), O A Kinchen, *Lord Russell's Canadian Policy* (1945)

Russell, John Scott, 1808–82, Scottish naval engineer and architect. From his studies of waves of translation, he developed the wave-line method of ship construction, he built the large vessel, the *Great Eastern*, and the first armored English frigate, the *Warrior*. He wrote several works on naval architecture

Russell, Lillian, 1861–1922, American actress and singer, whose real name was Helen Louise Leonard, b Clinton, Iowa At 18 she made her debut at Tony Pastor's in New York in burlesques of Gilbert and Sullivan and in comic opera, and she later appeared with the McCaull Opera Company and in her own company She was an immense success at Weber and Fields Music Hall in 1899 She was long famous for her beauty as well as for her talent in light opera See Parker Morell, *Lillian Russell* (1940).

Russell, Mary Annette (Beauchamp) Russell, Countess, pseud **Elizabeth,** 1866–1941, British novelist, b Sydney, Australia, cousin of Katherine Mansfield In 1890 she married Count Henning von Arnim and went to live in Germany. There she wrote her first anonymous and immediately successful novel, *Elizabeth and Her German Garden* (1898), and its

successors, including *The Solitary Summer* (1899), *Adventures of Elizabeth in Rügen* (1904), and *The Pastor's Wife* (1914). Her husband died in 1910, and in 1916 she married the 2d Earl Russell, brother of Bertrand Russell Her later works, almost as popular as the early ones, include *The Enchanted April* (1922), which was made into a play and a moving picture, *Love* (1925), and *Jasmine Farm* (1934) Her last novel, *Mr Skeffington* (1940), achieved widespread popular success

Russell, Sol Smith, 1848–1902, American actor, b Brunswick, Mo He played his first part in an Illinois stock company in 1862 He was chiefly known on tour throughout the United States and was extremely popular in the comedy *Edgewood Folks* (his first play as star, 1880) and in *Peaceful Valley* and *A Poor Relation*

Russell, William, 5th **earl and** 1st **duke of Bedford:** see RUSSELL, family

Russell, Lord William, 1639–83, English statesman, son of the 1st duke of Bedford He entered Parliament in 1660 Contempt for the dissolute court and fear of Catholicism and of France made him join the opposition In 1678 he negotiated with his relative, the marquis de Ruvigny, agent of Louis XIV, to secure the dissolution of Parliament and overthrow of DANBY, in order to prevent war with France In the excitement over the Popish Plot (1678) he joined the 1st earl of Shaftesbury in demanding the indictment of the duke of York (later JAMES II) and in pressing the bill to exclude him from the succession With the temporary Whig success he became a privy councilor (1679), but he was arrested (1682), tried, and convicted of treason because of the RYE HOUSE PLOT—upon perjured testimony Executed in 1683, he was vindicated by the reversal of attainder under William III See biography by Lord John Russell (1819)

Russell, William Clark, 1844–1911, English novelist and biographer, b New York city His eight years (1858–66) in the British merchant service provided background for his tales of the sea, among which the best known are *John Holdsworth, Chief Mate* (1875) and *The Wreck of the "Grosvenor"* (1877) His other works include biographies of Dampier (1889), Nelson (1890), and Collingwood (1891) and *The Turnpike Sailor* (1907), sea ballads

Russell, William Fletcher: see RUSSELL, J E

Russell. 1 City (pop 4,819), co seat of Russell co, central Kansas, between the Saline and the Smoky Hill W of Salina, inc 1872 It is in the oil-producing region, near a farming and grazing area **2** Town (pop 1,844), E Ky, on the Ohio just below Ashland It has railroad yards and repair shops A bridge crosses the river to Ironton, Ohio **3** Town (pop 1,242), SW Mass, NW of Springfield, settled 1782, inc 1792 It includes the paper-milling village Woronoco

Russell of Killowen, Charles Russell, 1st **Baron** (kĭlō'ŭn), 1832–1900, English jurist Born in Ireland, he practiced law in Belfast and London before his election to Parliament in 1880 In the Commons he worked for the conciliation of Ireland He served as William Gladstone's attorney general (1886, 1892–94), supporting that statesman's Irish policy As lord chief justice (1894–1900), he was the first Roman Catholic to hold the office since the Reformation Russell served as counsel (1893) in the Bering Sea Fur-Seal Controversy and in 1899 was one of the Venezuela Boundary Arbitration Tribunal His most dramatic trial was his defense of Charles Stewart Parnell on the Parnell Commission (1888–90) See biography by R B. O'Brien (1909)

Russell Sage College, at Troy, N Y, nonsectarian, for women, opened 1916, chartered 1917, with a gift by Margaret O Slocum Sage It has schools of arts and sciences, business, home economics, nursing, and physical education Preparation for group living is stressed The site was earlier occupied by the Emma Willard School

Russellville. 1 City (pop 3,510), co seat of Franklin co, NW Ala, S of Florence, in a cotton, grain, and mineral area, settled c 1815 **2** City (pop 5,927), co seat of Pope co, NW central Ark, near the Arkansas river, in an area yielding coal, natural gas, lumber, and farm products, settled 1835, inc 1870 Lumber and cotton processing are important The Arkansas Polytechnic College and the Ozark National Forest headquarters are here **3** City (pop 3,983), co seat of Logan co, S Ky, SW of Bowling Green and near the Tenn line, founded c 1790 as Big Boiling Spring The area yields coal, asphalt, timber, and tobacco

Russia, Rus *Rossiya* (rŭsē'ŭ), name commonly applied to the whole vast area now forming the Soviet Union In its political meaning, the term Russia applies only to the RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC, chief member of the union, where Russian is the language of the majority The following article deals with the history of the Russian state—i e., Russia in its wider meaning—from its origins until the Russian Revolution of 1917 For geographic, economic, and constitutional data and for Russian history after 1917, see UNION OF SOVIET SOCIALIST REPUBLICS Numerous remains show that there were inhabitants as early as the Old Stone Age. When in the 7th cent B C the northern shore of the Black Sea and the CRIMEA became known to the Greeks—who soon established flourishing colonies there—the region was in the possession of the Scythians (see SCYTHIA), these were displaced (3d cent B C) by the SARMATIANS. Later the open steppes of Russia invited invasion by numerous peoples, notably the Germanic Goths (3d cent A D), the Asiatic HUNS (4th cent), and the Turkic AVARS (6th cent) In the 7th cent the Turkic KHAZARS built up a powerful state in S Russia, and in the 8th cent the Eastern BULGARS established their empire in the Volga region By the 9th cent the Eastern SLAVS (the ancestors of the Russians) had settled in the northern part of the Ukraine (Little Russia), in Belorussia (White Russia), and in the regions of NOVGOROD and SMOLENSK, and had established colonies to the east on the Oka and the upper Volga rivers The chief Slavic tribes in S Russia were dominated by the Khazars Colonization of the regions north, east, and south of this original territory, which were inhabited by Turkic and Ugro-Finnic tribes, was a main feature of early Russian history The origin of the Russian state coincides with the arrival (9th cent) of Scandinavian traders and warriors, the VARANGIANS Tradition has it that one of their leaders, RURIK, in response to the call of the local population, established himself peacefully at Novgorod (862), and founded a dynasty The name Russ or Rhos possibly originally designated the Varangians, or part of them, but it was early extended to the Slavs and Russia became the name of their country in general Another theory concerning the origin of the name Russia, tracing it to much earlier times, has been favored by nationalist historians Rurik's successor, OLEG (reign 879–912), transferred (882) his residence to Kiev, which remained the Russian capital till 1169 He united the Eastern Slavs and freed them from Khazar suzerainty His successors were IGOR (reign 912–45) and his wife St OLGA Under SVIATOSLAV (reign 964–72) the duchy reached the peak of its power Sviatoslav crushed the Khazars, extending his state to the lower Volga and the N Caucasus, and fought the Greeks and Bulgars in the Balkans Christianity, propagated by St Olga, was made the state religion by VLADIMIR I (980–1015), who adopted the Greek Orthodox rite Thus the cultural influence of Byzantium became predominant Yaroslav the Wise (reign 1018–54) was the last to rule Kievan Russia as an undivided state, after his death the country was subdivided among the various branches of the dynasty Kiev's prosperity, however, reached its highest point under VLADIMIR II (1113–25) and under his son Mstislav (1125–32) Though agriculture was, and remained, the basis of Russian economy, large cities grew and throve on trade with Byzantium, the Orient, and Scandinavia Furs, hides, honey, wax, and slaves were the chief export articles, transit trade also assumed great importance From this period dates the oldest document of Russian literature, *The Lay of the Host of Igor* (see IGOR) However, perpetual strife among the princes and the devastating raids of the nomadic CUMANS soon led to the decline of the cities and the depopulation of the countryside The peasants—then still freemen for the most part—migrated to the northeast, into the basin of the Oka and Volga Political supremacy also shifted northeast, passing from Kiev to the duchy of Suzdal-Vladimir (see VLADIMIR) The Suzdal prince, Yury Dolgoruki (d 1158) became, after a long struggle, the grand duke of Kiev, and in 1169 Kiev was stormed by his son, Andrei Bogolubski, who made Vladimir the capital of the grand duchy The final blow came in 1237–40, when the Mongols (commonly called TATARS) under Batu Khan destroyed the chief Russian cities save Novgorod In S and E Russia they established the empire of the GOLDEN HORDE, which lasted till 1480 In W Russia they were gradually replaced by Lithuanian rule, by the 14th cent the grand dukes of LITHUANIA held all of BELORUSSIA, most of the Ukraine, and part of Russia proper In the grand duchy of Vladimir, Moscow under Ivan I (reign 1328–41) took precedence over the other cities Its rulers, still tributary to the Tatars, began to be called grand dukes of Moscow or of Muscovy (see MOSCOW, GRAND DUCHY OF) The victory (1380) of DMITRI DONSKOI over the Tatars at KULIKOVO established the power of Moscow The Muscovite state expanded and under IVAN III (reign 1462–1505) absorbed the other Russian principalities and the republic of Novgorod In 1480 Ivan ceased to pay tribute to the Tatars Having married the niece of the last Byzantine emperor, Ivan considered Moscow the "third Rome" and himself heir to the imperial tradition of Byzantium VASILY III, his successor, rounded out his father's conquests IVAN IV (Ivan the Terrible), who succeeded in 1533, was the first to assume the title tsar He conquered the Tatar khanates of KAZAN and ASTRAKHAN, establishing Russian rule over the huge region of the middle and the lower Volga The Cossack YERMAK conquered (1582) the khanate of SIBIR for Russia. Soon the Cossacks penetrated deep into SIBERIA and early in the 18th cent they reached the Pacific Ocean. The conquered border territories were colonized by Russian settlers and defended against the Crimean Tatars, the Kazakhs, the Kirghiz, and other hostile border nations by the COSSACKS At home, Ivan crushed the opposition of the great feudal nobles—the boyars—and set up an autocratic government After the death (1605) of Boris GODUNOV began the Time of Troubles—a period marked by the appearance of false pretenders (see DMITRI) and of intervention by foreign powers SIGISMUND III of Poland attempted to conquer all Russia and even took Moscow However, in 1612, a people's army led by Prince Pozharski expelled the invaders, and in 1613 a *zemsky sobor* [popular assembly] chose the boyar Michael Romanov as tsar (see MICHAEL) Thus began the ROMANOV dynasty, which ruled Russia until 1917 The reign (1645–76) of Tsar ALEXIS was an important period in the formation and expansion of the modern Russian state His chief acquisition was that of the E UKRAINE from Poland Russia in the 17th cent was still a semi-Oriental state Medieval in culture and outlook, it was not regarded as a member of the European community of nations In its economic development it was centuries behind the European West, distrust of foreign ways and innovations kept it ignorant and isolated The consolidation of the central power, though it followed the general European trend, was effected not with the help of the almost nonexistent middle class, but through the forcible deprivation of the nobility and gentry of their political influence The nobles were compensated with grants of increasing rights over the peasants Thus serfdom (see SERF), uncommon in medieval Russian society, engulfed growing masses of people and approached the form of slavery This process, which reached its climax in the 18th cent, caused violent peasant revolts, notably those under Stenka RAZIN (1670) and Y I PUGACHEV (1773–75) The reign (1689–1725) of PETER I (Peter the Great) revolutionized Russia politically and culturally, but it hastened rather than changed the social trend Peter, who assumed the title emperor, "Westernized" Russia by a series of reforms that were forced on the people by the most stringent methods He created the Russian navy and modernized the army, he abolished the patriarchate of Moscow (see ORTHODOX EASTERN CHURCH) and placed the Russian Church under the authority of the emperor, he recast the administrative and fiscal systems, founded the first modern Russian industries, and introduced Western education The upper classes were forced to adopt European clothes and even to shave their beards Seeking to make Russia a maritime European power, he transferred his capital to St Petersburg (now LENINGRAD), and in the NORTHERN WAR (1700–1721) acquired LIVONIA and INGERMANLAND, on the Baltic coast, from Sweden He began the Russian push to the Black Sea by taking AZOV He even sent out Vitus Bering to ALASKA, which was later a Russian colony The RUSSO-TURKISH WARS of the following two centuries resulted in the expansion of Russia at the expense of the Ottoman Empire and in the growing influence of Russia on Ottoman affairs (see EASTERN QUESTION) Having become a great power, Russia also took an increasing part in European affairs Empress ELIZABETH (reign 1741–62) successfully sided against Prussia in the SEVEN YEARS WAR, but her successor, PETER III, took Russia out of the war On his mysterious death (1763) his wife assumed power as CATHERINE II (Catherine the Great) Under her rule Russia became the chief continental power of Europe The three successive Polish partitions (1772, 1793, 1795, see POLAND, PARTITIONS OF), the annexation (1783) of the Crimea, and the treaties of Kuchuk Kainarji (1774) and Jassy (1792) with Turkey gave Russia vast new territories in the west and south Catherine's administrative reforms further enhanced the central power Under her "enlightened despotism" Russian writers, scientists, and artists began the great creative effort that culminated in the late 19th and early 20th cent The suppression of Pugachev's rebellion strengthened the privileged classes and lessened the chances of a successful social reform Russia became involved in the French Revolutionary Wars under Catherine's successor, the demented PAUL I, who was murdered in 1801 His son, ALEXANDER I, joined the third coalition against NAPOLEON I, but made peace with France at Tilsit (1807) and annexed (1809) FINLAND from Sweden In wars with Turkey and Persia Alexander gained BESSARABIA by the Treaty of Bucharest (1812) and Caucasian territories by the Treaty of GULISTAN (1813) In 1812 Napoleon began his great onslaught on Russia and took Moscow, but his army was repulsed and nearly annihilated in the winter of that year Napoleon's downfall and the peace settlement (see VIENNA, CONGRESS OF) made Russia and Austria the leading powers on the Continent at the head of the HOLY ALLIANCE Liberal ideas gained among the Russian aristocracy and educated bourgeoisie despite Alexander's growing reaction They found an outlet in the unsuccessful DECEMBRIST CONSPIRACY (1825), which sought to prevent the accession of NICHOLAS I Under Nicholas, Russia acted as the "police-

man of Europe," opposing all liberalism and helping Austria in putting down the Hungarian revolution (1848–49) Russian POLAND, nominally a kingdom ruled by the Russian emperor, was deprived of its autonomy after its unsuccessful rising of 1830–31. A clash of interests between Russia and the Western powers in the Ottoman Empire led to the CRIMEAN WAR, which revealed the inner weakness of Russia The liberal-minded ALEXANDER II, who acceded (1855) one year before the war ended, resolved to accomplish a revolution "from above" Among his reforms the liberation (1861) of the serfs (see EMANCIPATION, EDICT OF) was the most revolutionary Alexander was about to issue a limited constitution when he was murdered (1881) by radical revolutionists The second half of the 19th cent was one of territorial and industrial expansion The CAUCASUS was subdued and pacified, Russian Turkistan was annexed from the local khans, the southern section of the FAR EASTERN TERRITORY was acquired from China The TRANS-SIBERIAN RAILROAD, begun in 1892, opened Siberia to colonization and exploitation Much of the material and industrial progress was due to the initiative of Count WITTE ALEXANDER III, who succeeded Alexander II, pursued a thoroughly reactionary domestic policy, with POBYEDONOSTSEV its leading spirit He was succeeded (1894) by NICHOLAS II, the last Russian emperor, who was dominated by his reactionary entourage Russia, having suffered a severe diplomatic setback at the Congress of Berlin (see BERLIN, CONGRESS OF, 1878), eventually abandoned the THREE EMPERORS' LEAGUE with Germany and Austria-Hungary and in 1892 entered into an alliance with republican France This alliance led to the Triple Entente (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) of England, France, and Russia The disastrous and unpopular RUSSO-JAPANESE WAR (1904–5) made possible the success of the 1905 revolution (see RUSSIAN REVOLUTION) The emperor was forced to grant a constitution, a parliament (see DUMA) was set up As soon as feasible, however, the new democratic freedoms were again curtailed and reaction returned to power Revolutionary agitation, terror, and assassination continued The government countered with police terror and sought to channel popular discontent into anti-Semitic outbreaks (see POGROM) At the same time the premier, STOLYPIN, tried to conciliate the peasants by breaking up the land owned by village communities and making the peasants landowners Despite political disturbances, considerable economic progress was made Russia was still a preponderantly agricultural state, but industry, largely financed by foreign capital, developed with great speed, notably at St Petersburg and Moscow and in the Baku oil fields It was particularly among the industrial proletariat, which because of its geographic concentration possessed great political strength, that the Social Democratic party found its adherents The split of the party into BOLSHEVISM AND MENSHEVISM had crucial consequences after the outbreak of the Revolution of 1917 Russia, by its promotion of PAN-SLAVISM in the Balkan Peninsula and in the Austro-Hungarian Monarchy, played a leading role in the events that led to the outbreak (1914) of the First WORLD WAR Ill prepared and cut off from its allies in the West, it suffered serious reverses at the hands of the Germans and Austrians Inflation, food shortages, and poor morale among the troops contributed to the outbreak of the February Revolution of 1917 and the abdication of Nicholas II The provisional government under Prince LVOV, a moderate, tried to continue the war effort but was opposed by the *soviets* [councils] of workers and soldiers KERENSKY who succeeded LVOV as premier in July, 1917, was equally unsuccessful in enforcing the authority of the central government Finally, on Nov 7, 1917 (Oct 25 O S) the Bolsheviks under LENIN rose and seized the government The Treaty of BREST-LITOVSK (Jan , 1918) with the Central Powers not only was profoundly humiliating to Russia, but even failed to bring peace The civil war between Reds and Whites and the intervention of foreign powers ended only in 1920 with the victory of the Soviet regime These events are related in greater detail in the article RUSSIAN REVOLUTION See A N Rambaud, *History of Russia* (new ed , 1929), S F Platonov, *History of Russia* (new ed , 1929), D S Mirsky, *Russia a Social History* (1931), S R Tompkins, *Russia through the Ages* (1940), Paul Miliukov, *Outlines of Russian Culture* (3 vols , 1942), Alexander Kornilov, *Modern Russian History* (1943), George Vernadsky, *Ancient Russia* (1943) and *A History of Russia* (new ed 1944), Joshua Kunitz, *Russia, the Giant That Came Last* (1947), P I Lyaschenko, *History of the National Economy of Russia to the 1917 Revolution* (1949).

Russia Company. see MUSCOVY COMPANY.

Russian art and architecture was from the beginning deeply rooted in Byzantine traditions The introduction of Christianity in the 11th cent. led to wide building of churches The Byzantine models acquired a definite national and local stamp. Kiev was the first important architectural center, but Novgorod and Pskov soon assumed leadership The sloping roof and the cupola appeared, while Byzantine ornamentation was displaced by simpler decorative motifs In the 13th cent Vladimir and Suzdal became prominent architectural centers There Romanesque influence vied with the Byzantine The palace of Prince Andrei Bogolyubsky in Vladimir is an example of the Romanesque-Byzantine school At the same time icon painting dominated the art of Russia. Until the 16th cent it retained all its Byzantine characteristics Artistic centers were in the same cities in which architecture flourished most, the Novgorod school, where icon painting was at its zenith in the 14th and 15th cent , produced the finest examples In the 16th cent Moscow became the artistic center of Russia, in the 14th cent it had assumed political leadership and thereafter attracted the finest Russian architects, and Ivan the Terrible had imported Italian masters to beautify his capital In architecture the Moscow Kremlin is a masterpiece of the Russian-Italian style In icon work the Moscow school proved less inventive than the Novgorod, producing standardized, ornate works, these are, however, more peculiarly national in character Late in the 16th cent icon painting once more reached a high-water mark The 16th- and 17th-century architecture, characterized also by rich ornamentation, showed no important new developments The reforms of Peter I (Peter the Great) put an end for a time to local expression both in architecture and in art, Western influence loomed large in the late 17th cent , and foreign architects and foreign painters were most active in Moscow during that time Many of the important buildings, in a Russian baroque style, were constructed by foreigners whom Peter had expressly imported Most of the architectural activity of the 18th cent centered around the building of St Petersburg (Leningrad) The outstanding Russian architect of that period was Conte Bartolomeo Francesco Rastrelli, who built the Winter Palace The classical style, in both architecture and art, which succeeded the baroque, owed its great success to Catherine the Great St Petersburg, still the center of architectural activity, seethed with foreign as well as Russian masters The whole country followed the example of the capital Nineteenth-century architecture continued along the severe and simple lines of the classical school The so-called Russian Empire style carried austerity to its limits The Aleksandrovsky Theater in Leningrad is an example of this trend The classical school in painting produced pictures of an academic nature The first years of the 19th cent saw the beginnings of the romantic school The realistic school which followed produced finer pictures than any of its predecessors The growth of a liberal sentiment, of social consciousness, and of opposition to bureaucracy formed the basis of the idealistic realism which distinguished the works of Perov, Vereshchagin, and Repin The 1890s tended to stylize decoration with mystic overtones, culminating in the *Mir Isskusstva* (World of Art) school to which belonged Benois, Roerich, Somov, and Bakst The representative sculptor of the movement was Paul Troubetzkov The 20th cent brought schools of cubists and expressionists, Chagall being outstanding among the latter A short-lived futurist movement, known as constructivism, identified itself with the revolution, the later state control of art insisted on the ideal of service to society rather than art for aesthetic purposes The revolution also affected architecture, after a highly productive period in the beginning of the century when Russian genius was at its best Serious effort has been made to express the new social and political ideology in current architecture, as in the city of Stalingrad See R H Newmarch, *The Russian Arts* (1910), Geoffrey Holme, ed , *Art in the U S S R* (1935), David Talbot Rice, ed , *Russian Art* (1935), C G E Bunt, *A History of Russian Art* (1946)

Russian literature. In the late 12th cent Russian literature had its origin in *The Lay of the Host of Igor*, a masterpiece of poetic prose celebrating a raid led by Igor Svyatoslavovich against the Cumans This work, discovered in 1795, is held by some to be a forgery, but whether genuine or not its influence on Russian literature has been great It is in Old Slavonic, which up to the late 18th cent was the literary language. In this language there were annals of the Kievan period, tales of the Tatar rule, and translations of the Church Fathers In the early 15th cent appeared *Beyond the River Don*, a poetical account of the battle of Kulikovo (1380), composed by Sophonia of Ryazan, who made use of *The Lay of the Host of Igor* This early period produced also Athanasy Nikitin's *Journey beyond the Three Seas*, an account of India in 1466–74. The exchange of correspondence between Ivan the Terrible and his former favorite, Prince Andrei Mikhailovich Kurbsky (c 1528–1583), who had deserted to the enemy, shows a mastery of invective as well as of the Russian language on both sides. Kurbsky also wrote a history of Ivan, first published in 1833. The great schism which took place in the Russian Church in the mid-17th cent. produced the autobiography of the archpriest Avvakum (martyred in 1682), the first work in colloquial Russian Peter I (Peter the Great), by his interest in advancement of all kinds (he founded the first Russian newspaper and the Academy of Sciences), prepared the way for a genuine Russian literature Prince Antioch Kantemir (1708–44), a cosmopolitan, sought by example and through translating foreign works to bring Russia into harmony with Western ideas, he wrote *Satires* (1749, in French, 1762, in Russian) With Tredyakovsky and Lomonosov a true Russian literature came into existence, and with Sumarokov the beginnings of a Russian theater Fables were popular and were written by Sumarokov, Khemnitser, and especially Krylov The ode was cultivated by Tredyakovsky and Lomonosov and reached a high point with Derzhavin The drama was encouraged by Catherine II, who wrote plays herself and in whose reign appeared the first comedies of importance—*The Brigadier* (1766) and *The Young Hopeful* (1782, Eng tr , 1933), by Denis Ivanovich Fonvizin (1745–92) Social and political criticism made its appearance in a pamphlet, *On the Decline of Morals* (first published in book form in 1858), by Prince Mikhail Shcherbasov (1733–90), in the satirical journals published in 1769–74 by Novikov; and in Radishchev's *Journey from St Petersburg to Moscow* (1790) Wars dominated the early 19th cent , generating a new spirit, on the one hand of reform, on the other of heightened national self-consciousness The latter is seen in patriotic odes by Zhukovsky and in the dramas of Vladimir Aleksandrovich Ozerov (1770–1816), especially the popular *Dmitri Donskoi* (1807) By now the Russian language had become a worthy literary instrument, thanks to the pioneer work of Lomonosov, the example set by Karamzin, the lyrics of Batyushkov, and the translations of Zhukovsky It was really through Zhukovsky that the romantic spirit entered Russian literature The great poet of Russian romanticism was Pushkin, whose best-known poem is *Eugene Onegin* He wrote short stories and novels as well as drama and as a literary figure dwarfs all other Russian poets except possibly his younger contemporary Lermontov Other poets of individuality and lasting fame were Koltsov and Tyutchev Popular writers of the romantic era were the poets Eugene Abramovich Baratinsky (1800–1844) and Nikolai Mikhailovich Yazikov (1803–46) and the short-story writer Bestuzhev In the 1830s the schism that since Peter the Great had divided Russian thought into two camps, one pro-West, the other pro-native, deepened, and from the latter emerged the Slavophile movement This produced no great literary figure but exerted great influence through the writing of Alexey Stepanovich Khomyakov (1804–60), the brothers Kireyevsky (Ivan, 1806–56, and Peter, 1808–56), Ivan Aksakov, Mikhail N Katkov, and finally Nikolai Yakovlevich Danilevsky (1822–85), whose *Russia and Europe* (1869) is the ultimate expression of the Slavophile position The pro-Western camp had as its great spokesman the critic Belinsky With Gogol, especially his short story "The Overcoat" (1842), Russian literature began to follow the path most natural to the Russian genius, that of realism Social responsibility became the watchword, and the people, at first the peasant later also the middle class, its theme In poetry Nekrasov sounded the new note and in prose Grigorovich, followed by Goncharov, Pisemsky, and Saltykov and finally by the great triumvirate of novelists, Turgenev, Dostoyevsky, and Leo Tolstoy In the short story realism reached its zenith of perfection in Chekhov, the chief realistic dramas of the period were those of Chekhov and of Ostrovsky This was a golden age of Russian literature, and Russian writing was brought into the main stream of world literature In the 1870s a reaction against realism set in This is seen in the rise of symbolism, which reached its height in the '90s in the works of Sologub and Bryusov, Annensky, Bely and Blok, Balmont and Remizov The reaction manifested itself also in the religio-philosophical works of Vladimir Soloviev and the historical novels of Merezhkovsky In 1912 a return to more concrete imagery in poetry seemed desirable, and the Acmeist school was proclaimed by Gumilev and Gorodetsky To this belonged also the poets Mandelstam and Akhmatova In fiction the figures of Garshin and Korolenko stand out in the period following the golden age, after which the scene was dominated by Gorki, who injected a revolutionary note into Russian realism A similar note appears in the stories and dramas of Gorki's principal disciple, Leonid Andreyev, while Ivan Bunin, also a member of the Gorki circle and a Nobel Prize winner, remained faithful to the older, conservative realism. With the Bolshevist Revolution many writers emigrated from Russia and continued active abroad (Bunin, Kuprin, Merezhkovsky, Aldanov, among others), but no new talents were produced among the émigrés. Within Russia literary development since the revolution falls into four periods. In the first period (1918–21), with

war at home and abroad still in progress, poetry flourished, the symbolist Blok, the imaginist Yesenin, and the iconoclastic Mayakovsky being the principal figures. The older novelist Boris Pilnyak chronicled the scene in a novel *The Naked Year*, and Babel was a novelist of promise In the second period (that of the New Economic Policy, 1922–28), there was much debate on the issue of literary dictatorship, with the "On Guard" group arguing for and the Mayakovsky group against. The Serapion Brothers proclaimed their credo of artistic independence, and the formalists appeared, emphasizing the structure of a poem as of greater importance than its meaning or content This period saw the reburth of the novel, in the humorous works of Petrov (pseud of Yevgeny P Katayev) and Ilf and in the psychological or romantic novels of Leonov, Olesha, and Kaverin With Sholokhov, especially his *Silent Don*, the Russian novel was restored to Tolstoyan stature In the third period (1929–32) following the revolution, a general dissolution of the various literary groups took place, and there was a marked trend toward mobilization of the writer This trend continued in the fourth period (1932–41), when the new Soviet realism was proclaimed as the guiding principle in all writing In the field of drama, a form greatly encouraged and widely used as a means of instruction, the outstanding figures since the revolution are Afinogenov, Kirshon, and Valentin P. Katayev In poetry Pasternak and Nikolai Tikhonov (1896–) are leading figures, in the novel, Ostrovsky and Aleksey N Tolstoy. In criticism Shklovsky has had wide influence. The outstanding war reporter was Ilya Ehrenburg See Maurice Baring, *Landmarks in Russian Literature* (1910); Peter Kropotkin, *Ideals and Realities in Russian Literature* (1915); D S Mirsky, *History of Russian Literature to 1881* (rev ed , 1949), E J Simmons, *Outline of Modern Russian Literature* (1943), George Reavey, *Soviet Literature Today* (1947), Marc Slonim, *The Epic of Russian Literature* (1950)

Russian Revolution. The revolution of 1917 against the Romanov autocracy was not the expression of newly conceived philosophies or policies, but the culmination of a long series of efforts to secure rights to the less privileged Russians From the time of PETER I, the breach between government and people widened Members of the governing class became so imbued with Western culture that it was impossible for them to understand the people they absolutely controlled The rising intelligentsia became abstractly humanitarian and democratic, and politically radical The Russian university became a chief seat of revolutionary activity, and NIHILISM, ANARCHISM, and MARXISM were espoused or propagated by students Industrialization caused the concentration of population in urban centers where radical leaders found receptive ears among workingmen The factory became a second breeding place of revolution The emancipation of the serfs (1861, see EMANCIPATION, EDICT OF) was an unsatisfactory solution of the agrarian problem, the peasant's craving for land and his eagerness to despoil the large landowners only increased his desire to overthrow the existing régime A reactionary and often ignorant clergy kept religion as static as the government which from the time of CATHERINE II had almost ceased to progress A wanton disregard of human life and liberty was frequently exhibited by an incompetent officialdom, the corruption of which was pitilessly revealed by the Russo-Japanese War (1904–5) Various subject nationalities within the empire were repressed and subjected to a policy of "Russification" Religious dissenters were persecuted, and pogroms, with official connivance, were instituted against the Jews, from whose ranks came many radical leaders At the outbreak of the Revolution of 1905, Russia was divided into several political groups The autocracy was upheld by the landed nobility and the higher clergy, the capitalists desired a constitutional monarchy, the bourgeoisie made up the bulk of the Constitutional Democratic party; peasants and intelligentsia were incorporated into the Socialist Revolutionary party; and the proletariat, strongly influenced by Marxism, found expression in the Bolshevik and Menshevik wings of the Social Democratic party (see BOLSHEVISM AND MENSHEVISM). The Russian Revolution of 1905 began on Jan. 9 (O S) when troops fired on a defenseless crowd, which, led by a priest, was marching to the winter palace to petition the tsar A series of great strikes broke out in all the chief industrial centers Riots and assassinations were frequent Revolts took place in the fleet and at naval bases This disorder, coupled with the disaster of the Russo-Japanese War, forced the government to grant concessions, and an electoral manifesto was issued in August. Since the ukase did not guarantee freedom of speech, assembly, or press, renewed strikes broke out. When the power of the government appeared paralyzed, another ukase, which guaranteed civil liberties, was issued (Oct. 1905), but as soon as disorder had been quelled, the autocratic regime was restored. A DUMA with curtailed powers functioned, but it was unsatisfactory to all parties. The revolution aroused the masses and greatly strengthened the radical parties, while accentuating the differences between the right wing, which favored the establishment of a bourgeois republic, and the left wing, which desired a fusion government of urban and rural proletariat The agrarian reform (1906–7) of STOLYPIN came too late to create a conservative peasant class, and his ruthless suppression of the revolutionary movement did not prevent its spread. When the First World War broke out in 1914, most elements of Russia, except the extreme left, united in supporting the war effort However, the repeated military reverses, the acute food shortage, and the intense suffering of the civilian population brought on a revolutionary climate by the end of 1916 The sinister influence of RASPUTIN over Emperor NICHOLAS II and Empress ALEXANDRA FEODOROVNA gave rise to rumors accusing the court and the Stürmer cabinet of secret deals with Germany. The emperor lost the support of all but the extreme reactionary elements. Socialist revolutionary propaganda was effective among the war-weary population By the end of Feb , 1917 (N S , March, 1917) most of the workers in Petrograd (Leningrad) and Moscow were on strike for higher food rations and the soldiers were fraternizing with them Nicholas II, instead of following the advice of the Duma and of forming a new cabinet, ineffectually sought to put down the workers by force and dissolved (March 11, N S) the Duma The Duma refused to obey, while the Petrograd workers took over the capital (March 12) Nicholas II was forced to abdicate (March 15) at Pskov after the Duma had appointed a provisional government of moderate complexion, headed by Prince Lvov and including MILYUKOV and KERENSKY The end of the monarchy was welcomed by the overwhelming majority of the Russians This, however, was the only point of general agreement While the provisional government was being formed, a rival power was set up by the Socialists through the organization of workers'[1] peasants', and soldiers' soviets (see SOVIET), which spread from Petrograd and Moscow over all Russia The soviets did not openly seize the power at the time, but they gained control over the masses and, particularly, the armed forces, and were effective in blocking the vacillating provisional government whenever they pleased One of the first acts of the provisional government was to proclaim a general amnesty for political and military prisoners, freedom of speech and press, abolition of all social, religious, and racial discrimination, and the summoning of a constituent assembly Local self-government was restored under a reorganized ZEMSTVO system The burning issue, however, was the question whether or not the war should be continued The moderates favored continuation, the Bolsheviks agitated for immediate peace Milyukov's strong stand in favor of continuing the war led to his enforced resignation in May, 1917, and to the reorganization of the cabinet, with Kerensky as war minister The collapse of the all-out Brusilov offensive in July, 1917, had a double effect, loaded with political consequences The war party, with General KORNILOV as spokesman, demanded the immediate restoration of army discipline, the Bolsheviks, on the other hand, redoubled their agitation for peace V I LENIN, leader of the Bolsheviks, had been permitted by the German government to cross Germany into Russia in order to help take Russia out of the war At the first all-Russian soviet congress, held in June, 1917, his faction was outnumbered by the Socialist Revolutionaries and the Mensheviks, and his attempt at seizing power in July by an armed uprising at Petrograd was put down However, the uprising resulted in the resignation of Prince Lvov and the formation of a predominantly Socialist cabinet, headed by Kerensky The Kerensky government neither outlawed the Bolsheviks nor conciliated them The war was continued despite overwhelming sentiment for peace, and all measures of economic reform, particularly the redistribution of land, were delayed pending the convocation of the constitutional assembly, although the Russian economy was in a state of collapse The government's vacillation on these points led to a spectacular growth of the Bolshevik following Kerensky's position was further weakened when he broke (Sept , 1917) with Kornilov, who sought to restore order by setting up a military dictatorship, and Kerensky ordered Kornilov's arrest after the general had tried to seize Petrograd by force Kerensky was thus forced into a rapprochement with the Petrograd soviet, which had little use for him. The time was ripe for a Bolshevik revolution, the provisional government having lost the support of both the right and the majority of the left After Bolshevik troops had occupied (Nov 7, 1917) the principal government buildings in Petrograd and arrested the cabinet, the second all-Russian soviet congress met and approved the Bolshevik program A cabinet, called the Council of People's Commissars, was formed under Lenin's chairmanship. It included TROTSKY, RYKOV, and STALIN Kerensky had managed to escape from the Bolshevik October Revolution (so called because it took place in October according to the old Russian calendar), but he ceased to play an active role. Moscow, after some fighting, also fell to the Bolsheviks, whose government was quickly accepted in most of Russia Immediately upon its accession the new government adopted a decree calling for a general cessation of hostilities and a decree abolishing private ownership of the land A dictatorship of the proletariat—actually of the Communist party, as the Bolsheviks came to be called—was set up, and a policy of terror, directed by DZERZHINSKY, was inaugurated against the opposition Negotiations with the Central Powers were begun late in 1917 and resulted in the Russian acceptance (March, 1918) of the humiliating Treaty of BREST-LITOVSK The Bolshevik government having proclaimed the right of national self-determination the Russian Empire quickly fell apart Finland, Estonia, Latvia, Lithuania, the Ukraine, Georgia, Armenia, Azerbaijan, and other territories became independent The constituent assembly met at Petrograd in Jan , 1918, but was immediately disbanded by Bolshevik troops, its composition being predominantly non-Bolshevik Many of the Socialist Revolutionaries, who had formed the majority of the assembly, joined with the anti-Bolshevik forces which began to gather strength in various parts of Russia The civil war between the Reds and the Whites tore Russia until 1920 The Whites represented all shades of anti-Communist groups, several of their leaders sought to set up a military dictatorship, but few were outspoken tsarists Armed opposition to the Soviet regime centered at first in the south, where the volunteers under Kornilov (succeeded by DENIKIN) joined forces with the Don Cossacks. The UKRAINE, which had been occupied by German forces, was the scene of fighting after the Germans evacuated it as a result of the general armistice of Nov 11, 1918, it was seized by the Bolsheviks (early 1919), by the forces of Denikin (Aug –Dec , 1919), again by the Bolsheviks (Dec 1919), and finally by the Poles (May, 1920), with whom war had broken out over the Russo-Polish frontier question Denikin in the meantime had turned over his command to General P N WRANGEL, who after the conclusion of the Russo-Polish armistice was driven by the Bolsheviks into the Crimea and who was obliged to evacuate his forces to Constantinople (Nov , 1920) The civil war in the east was equally fatal to Whites A government was organized at Samara (now Kuibyshev) by a group of Socialist Revolutionaries who had been members of the constituent assembly It received the support of the Czech Legion (see CZECHOSLOVAKIA), which controlled the Trans-Siberian RR, but it merged (Sept , 1918) with a more conservative government set up at Omsk, in Siberia, and a few weeks later fell under the dictatorship of Admiral KOLCHAK Though at first successful, Kolchak's forces were eventually driven to the Far East, by January, 1920, all Siberia except VLADIVOSTOK and some Far Eastern territory was in Bolshevik hands The civil war was complicated by Allied intervention In the Far East the Japanese held Vladivostok until 1922 In N Russia, British, French, and American forces occupied (1918) Murmansk and Archangel with the stated purpose of protecting Allied stores against possible seizure by the Germans, they were evacuated only in Nov , 1919 American forces did not participate in the fighting between the Allies and the Bolsheviks The Bolshevik military victory was due partly to the lack of cooperation among the various White commanders, partly to the remarkable reorganization of the Red forces after Trotsky became commissar for war It was won, however, only at the price of immense sacrifice, and Russia by 1920 was ruined and devastated Atrocities were committed throughout the civil war by both sides For the history of Russia after the civil war, see UNION OF SOVIET SOCIALIST REPUBLICS and LENIN, VLADIMIR ILYICH See W H Chamberlin, *The Russian Revolution* (1935), V M Chernov, *The Great Russian Revolution* (1936), A G Gordon, *Russian Civil War* (1937), Sir Bernard Pares, *The Fall of the Russian Monarchy* (1939)

Russian Soviet Federated Socialist Republic (RSFSR), largest and most populous constituent republic (6,533,600 sq mi , 1947 estimated pop 111 000,000) of the USSR Moscow is the capital The RSFSR occupies most of E Europe and N Asia, extending for c 5,000 mi from the Baltic Sea in the west to the Pacific Ocean in the east and for 1,500 to 2,500 mi from the Arctic Ocean in the north to the Black Sea, the Caucasus, the Caspian Sea, the Altai and Sayan mts., and the Amur river in the south The Urals form the conventional geographic border between the European and the Asiatic RSFSR The European RSFSR, including the Ural Area, covers 1,578,700 sq mi and has an estimated population of 91,500,000 (1947), the Asiatic RSFSR, commonly known as Siberia, has an area of 4,922,800 sq mi and an estimated population of 19,500,000 The neighbors of the RSFSR are the Karelo-Finnish SSR and Finland in the northwest, Estonia, Latvia, Lithuania, and Belorussia in the west, the Ukraine in the southwest, and the Georgian SSR, the Azerbaijan SSR, the Kazakh SSR,

China, and Mongolia along the long southern land border The RSFSR occupies about 77 percent of the total area and contains about 58 percent of the total population of the USSR Its dominant relief features are (from west to east) the East European plain, the Urals, the West Siberian plain, and the central Siberian plateau The chief rivers draining the European RSFSR are the Don (into the Black Sea), the Volga (into the Caspian Sea), the Northern Dvina (into the White Sea), and the Pechora (into the Barents Sea) The highest mountains of the European RSFSR are in the Caucasus (For the main physical features of the Asiatic RSFSR, see Siberia) The climate of the RSFSR, generally continental, varies from extreme cold in N Russia and Siberia (where is Verkhoyansk, the coldest place on earth), to subtropical along the Black Sea shore The soil and vegetation zones include the entire tundra and taiga belts of the USSR, nearly the entire wooded steppe and the northern black-earth steppes, and isolated sections of the semi-desert, desert, and subtropical zones The vast majority of the population are Russians (74 percent) and Ukrainians (8 percent) Among the non-Slavic linguistic and ethnic groups that help to make up the rest of the population are the Finno-Ugric Komi, Mari, Mordvinians, Udmurts, Permyaks, Chuvash, Ostyaks, and Voguls, the Turco-Tatar Bashkirs, Tatars, and Khakass, Circassians, Mongols, Tungus, Samoyedes, Yakuts, and various Hyperborean groups The Eastern Orthodox faith, Islam, and Judaism are the chief religions Administratively, each area with a predominant Russian population is constituted as a territory (Rus *Kray*) or oblast, non-Russian nationalities are constituted, in descending order of importance, as autonomous republics, autonomous oblasts, and national okrugs The RSFSR may be conveniently divided into physico-economic regions as follows

Europe The Central Industrial Region has as its chief cities Moscow, Vladimir, Ivanovo, Yaroslavl, Kostroma, Ryazan, and Tula The Central Black Earth Region, in the southwest, is a rich agricultural area, Orel, Kursk, Voronezh, and Tambov are the main centers The European West includes Bryansk, Kaluga, Smolensk, Kalinin, and Velikiye Luki The European Northwest includes Leningrad, Novgorod, and Pskov The European North, occupying the Kola Peninsula and the Arctic coast, includes the Komi ASSR and has Murmansk, Archangel, and Vologda as chief cities The Upper Volga Region, a wooded area, includes the Mari ASSR, its main centers are industrial Gorki and Kirov The Middle Volga Region, a wooded steppe, includes the Chuvash ASSR, the Tatar ASSR, and the Mordvinian ASSR, and the cities of Ulyanovsk, Penza, and Kuibyshev The Lower Volga Region is a fertile steppe country and contains the important cities of Saratov, Stalingrad, and Astrakhan On the Black Sea and in the N Caucasus are the Crimea, the Lower Don Region (with Rostov, Novocherkassk, and Taganrog), Krasnodar Territory, Stavropol Territory, the Kabardian ASSR, the North Ossetian ASSR (see Ossetia), and the Dagestan ASSR The northern part of former East Prussia, including Konigsberg (Rus *Kaliningrad*), was incorporated into the RSFSR in 1945

Ural Area This region, which is of growing economic importance (see Urals), includes the industrial and administrative centers of Molotov, Sverdlovsk, Magnitogorsk, Chelyabinsk, and Chkalov, the Udmurt ASSR, and the Bashkir ASSR

Siberia Western Siberia has as its chief cities Kurgan, Tyumen, Omsk, Novosibirsk, Tomsk, and Kemerovo, it also includes Altai Territory Eastern Siberia comprises Krasnoyarsk Territory, Irkutsk and Chita oblasts, the Buryat-Mongol ASSR, the Yakut ASSR, and the Tuva Autonomous Oblast The Far East includes the Maritime Territory, Khabarovsk Territory, and Sakhalin

The RSFSR is extremely rich in mineral resources There are huge coal reserves in the industrial Kuznetsk Basin, the Moscow Basin, and the Pechora Basin, large oil fields at Grozny and Maikop, iron ore at Kursk, Kerch, Magnitogorsk, and many other places, nickel and apatite near Murmansk, and nonferrous and rare metals in the Urals and in Siberia Other resources include huge timber reserves, salts, chromite, and pyrite The principal industrial products are machinery, chemicals, textiles, leather goods, and lumber products Fishing, fish canning, and caviar processing are also important industries Fur trapping is a major source of livelihood in the north and in Siberia Land transportation is assured by a dense railroad net in the European RSFSR and by the Trans-Siberian Railroad River and canal navigation uses mainly the Volga, Kama, and Oka rivers, the Mariinsk System, the Baltic-White Sea Canal, and the Northern Dvina canal system Besides Leningrad, the chief seaports include Murmansk and Archangel in the north, Sevastopol, Kerch, Rostov, and Novorossisk on the Black Sea, Astrakhan on the Caspian, and Vladivostok on the Pacific The RSFSR dates in its present organization from the Soviet constitution of 1936. For history, see Russia and Union of Soviet Socialist Republics.

Russky, Nikolai Vladimirovich (nyĭkŭlī' vlŭdyē'mĭruvĭch rōō'skē), 1854–1918, Russian general In the First World War he captured Lvov (1914) and later held command of the armies in the northwest and the north Nicholas II abdicated at his headquarters Russky was shot by the Bolsheviks

Russo-Finnish War, 1939–40 see Finnish-Russian War

Russo-Japanese War, 1904–5, imperialistic conflict which grew out of rival designs of Russia and Japan on Manchuria and Korea Russian failure to withdraw from Manchuria and Russian penetration into N Korea were countered by Japanese attempts to negotiate a division of the area into spheres of influence However, the Russian government was inflexible and was willing to risk an armed conflict in the belief that Japan was bound to be defeated and that a Russian victory would head off the growing threat of internal revolution in Russia. Japan broke off negotiations and severed (Feb 6, 1904) diplomatic relations with Russia Two days later, without a declaration of war, Japan attacked Port Arthur and bottled up the Russian fleet A quick series of Japanese victories, which astounded the world, culminated in the fall of Port Arthur (Jan , 1905), the victory of General Oyama at Mukden (Feb –March, 1905), and the destruction of the Russian fleet under Rozhdestvenski at Tsushima by Admiral Togo (May, 1905) Through the mediation of U S President Theodore Roosevelt peace was made in September at Portsmouth, N H (see Portsmouth, Treaty of) The disastrous outcome for Russia of this war was one of the chief immediate causes of the Russian Revolution of 1905 Japan gained the position of a world power and continued on its ultimately ruinous career of imperialistic expansion For the Russo-Japanese War of 1945, see World War, Second

Russo-Turkish Wars. The great eastward expansion of Russia in the 16th and 17th cent still left the shores of the Black Sea in the hands of the Ottoman sultans and their vassals, the khans of Crimea The Russo-Turkish Wars were the result of Russian attempts to find an outlet on the Black Sea and—in their later stages—to conquer the Caucasus and to dominate the Balkan Peninsula Warfare between the Russians and the Crimean Tatars was a chronic condition in the 16th and 17th cent In 1696 Peter I won the first major Russian victory over the Turco-Tatars by capturing the fortress of Azov In the Northern War (1700–1721) Sultan Ahmed III openly joined the conflict against Russia in 1710 and regained Azov by the Treaty of the Pruth (1711) This, however, was the last Turkish success against Russia France, the traditional ally of Turkey, had a large share in instigating this and later Turkish attempts at stemming the Russian advance In 1736 war again broke out between Turkey and Russia, allied with Austria The Russians retook Azov and won a spectacular success in Moldavia, where General Münnich entered Jassy (1739) However, Austria became alarmed by Russian ambitions in the Balkans and concluded the separate Treaty of Belgrade (1739), in which Russia was forced to join The first major Russo-Turkish War, that of 1768–74, was an indirect result of Russian interference in Poland The Polish Confederation of Bar secured the alliance of Sultan Mustafa III against Catherine II of Russia The Russians conquered (1771) the Crimea, where a pro-Russian khan was installed, and overran Moldavia and Walachia The Treaty of Kuchuk Kainarji (1774) declared the Crimean khanate independent of the sultan, gave Russia considerable territorial gains, and conceded to Russia the role of protector of the sultan's Greek Orthodox subjects A general partition of the Ottoman Empire was contemplated in the treaty of alliance (1781) between Catherine II and Emperor Joseph II, the fate of Turkey thus became a major concern of the Western Powers and created the explosive Eastern Question In 1783 Catherine annexed the Crimea outright A new Russo-Turkish War broke out in 1787, and in 1788 Joseph II entered the war as Catherine's ally Although Austria was forced, chiefly by Prussian exertions, to withdraw from the alliance in 1791, Russian successes under Suvarov enabled Catherine to reach a favorable settlement in the Treaty of Jassy (1792) In 1806 the energetic Sultan Selim III deposed the Russophile governors of Moldavia and Walachia, an act which led to the Russo-Turkish War of 1806–12 This was brought to a close by Kutuzov's lightning campaign of 1811–12 and resulted in the gain of Bessarabia by Russia in the Treaty of Bucharest (1812) The Greek War of Independence (see Greece) precipitated the Russo-Turkish War of 1828–29, which ended with the Treaty of Adrianople (see Adrianople, Treaty of) and brought Russian influence in the Near East to its peak. When, in 1853, Russia sought to obtain further concessions from Turkey, the Turks, backed by England and France, declared war, their allies entered the conflict in 1854, and the Crimean War resulted. The peace of 1856 (see Paris, Congress of) brought no territorial changes but marked a severe setback to Russian influence The last Russo-Turkish War came as a result of the anti-Turkish uprising (1875) in Bosnia and Hercegovina Serbia and Montenegro joined, on Russian instigation, the rebels in their war on Turkey, after securing Austrian neutrality, Russia openly entered the war (1877) The Treaty of San Stefano in 1878 so thoroughly revised the map in favor of Russia and of Russian-influenced Bulgaria that the European powers called a conference to revise its terms (see Berlin, Congress of). In 1878 a thorough realignment of alliances took place It, the First World War, Russia and Turkey faced each other once more, Russia aided with the traditional allies of Turkey—England and France—while Turkey fought with the former partners of Russia—Austria and Bulgaria By the separate Russo-Turkish treaty of 1921, the USSR returned the districts of Kars and Ardahan, acquired in 1878, to Ataturk's Turkish government

Rust, John Daniel, 1892–, American inventor, b. Stephens co , Texas He invented in 1927 the basic mechanism of the Rust cotton picker, which was tested in 1935 and is now in widespread use His other inventions include a cotton cleaner (1940). His associate in inventing the cotton picker was his brother **Mack Donald Rust**, 1900–, a designing engineer, b near Breckenridge, Texas, grad Univ. of Texas, 1925

rust, name for various fungi which parasitize plants, forming brown or rusty patches of spores on the host About 1,000 species are known in North America Some grow entirely on one plant, others require two hosts, plants of two species, in order to complete their life cycles Cedar rust, for instance, grows on cedar and apple trees, needing both for development Blister rust of pine grows on pines and either currant or gooseberry bushes The stem rust *Puccinia graminis* is one of the most destructive to wheat, rye, and other grasses In all but warm climates it forms five kinds of spores, two are produced on barberry shrubs Rusts attack all cereal crops and many fruits, vegetables, forage crops, ornamental plants, and forest trees The planting of barberry, currant, and gooseberry is often forbidden or restricted in areas growing cereals Rusts are hard to eradicate, The best preventive is the use of rust-resistant varieties of seed See U S Dept of Agriculture and experiment-station literature

rust, of metals see rusting

rustication (rŭstĭkā'shŭn), method of creating textures upon masonry wall surfaces, chiefly upon those of stone, by projecting the blocks beyond the surface of the mortar joints Each joint thus lies in a channel or in a V-shaped groove, between adjoining stones, and a separating shadow line is produced The degree of projection, whether slight or bold, permits varying effects The Romans occasionally built rusticated walls This device was used by Renaissance architects in the palace façades at Florence, a favorite treatment being that of a ground floor with stones of strong projection and roughly textured surface, surmounted by upper stories in which both forms were more refined Often columns and pilasters also were rusticated The basement story of the Pitti Palace (c 1440) by Brunelleschi exhibits a celebrated example of rustication, some of its enormous and roughly quarried blocks of stone projecting as much as 2 ft 6 in beyond the surface of the joints The garden architecture of the Italian baroque villa shows many grotesquely textured examples Rustications also appeared often in Georgian and American Colonial architecture Here and in modern work often only the corners of a building are rusticated, contrasting with the smooth surface of the remainder

Rustico di Filippo (rōō'stēkō dē fēlēp'pō), 13th cent , Italian poet, perhaps one of the first to write in the Tuscan dialect as distinguished from the Sicilian Little is known of him save that he was a friend of Brunetto Latini Some 60 of his sonnets are extant, most of them in burlesque vein Examples are translated in D G Rossetti, *The Early Italian Poets* (1861), Lorna de'Lucchi, *An Anthology of Italian Poems* (1922)

rusting of metals is essentially oxidation, the substance rust being formed by the chemical combination of the metal with the oxygen of the atmosphere Moisture is necessary, and the presence of carbon dioxide is apparently of importance When iron is exposed to moist air, a reddish-brown substance (probably a mixture of iron oxide, hydroxide, and carbonate) is formed rapidly at the surface This rust flakes off and the process is continued at the new surface exposed The term is often extended to include the corrosion of other metals besides iron Since this metal is so widely used both as simple iron and as steel in building construction and in tools, methods for its protection against rusting are important Paint is commonly used Galvanized iron is iron covered by a protective layer of zinc. Iron is also plated with tin for protection Oil is used to protect steel tools and instruments Nickel and chromium steels do not

rust and are known as stainless (or rustless) steels Recent experiments indicate that ships can be protected against corrosion by hanging small magnesium plates all around the ship below the water line. As a result an electric current is set up between the steel of the ship and the magnesium, with the water as the electrolyte, slight decomposition of the water touching the ship occurs and corrosion is checked

Ruston (rŭ'stŭn), town (pop 7,107), parish seat of Lincoln parish, N La , E of Shreveport, est c 1884 on a railroad It is the trading, industrial, and cultural center of a rich farming and dairying section and is the seat of Louisiana Polytechnic Institute (coeducational, 1894)

rutabaga see TURNIP

Rutebeuf (rūtŭbûf'), fl between 1254 and 1285, French poet, author of an early miracle play, *Le Miracle de Théophile*, and of fabliaux, allegories, saints' lives, and satires His name is spelled also Rustebeuf

Rutgers University (rŭt'gurz), mainly at New Brunswick, N J , undenominational, with land-grant, state, and private support, for men and women, chartered 1766 as Queen's College, opened 1771 Rutgers was the eighth colonial college, receiving a royal charter from George III in response to the petition of leaders in the Dutch Reformed Church In 1825 the name was changed to honor Henry Rutgers (1745–1830), a captain in the Revolution and colonel of the New York militia The New Jersey legislature in 1864 designated the Rutgers Scientific School as the State College for the Benefit of Agriculture and the Mechanic Arts, under the provisions of the Morrill Act, and in 1917 named it the State Univ of New Jersey In 1924 the whole institution was named Rutgers Univ , and in 1945 it was called the State Univ of New Jersey The New Jersey College for Women was established as a branch in 1918 In 1946 the Univ of Newark (chartered 1933, organized by merging five schools) was absorbed, its college of arts and sciences and schools of business administration and law forming with the college of pharmacy (incorporated in the university in 1927) the Newark Colleges of Rutgers Univ The university also includes colleges of agriculture, arts and sciences, and engineering, a school of education, University College, biological, mineral, and economics and business research bureaus, a psychological clinic, a geology museum, a large library, a university press, and an institute of management and labor relations

Ruth, George Herman (Babe Ruth), 1895–1948, American baseball player, the greatest hero of the "national game," b Baltimore When he was seven years old his parents placed him in St Mary's Industrial School (Baltimore), an institution for underprivileged boys His days at St Mary's were spent in learning the tailor's trade and in practicing baseball in his spare time He began to play semiprofessional ball in Pennsylvania and was signed to pitch and play as an outfielder by the Baltimore Orioles (International League) in 1914 That same year he was sold to the Boston Red Sox of the American League The left-hander proved to be (1914 19) a formidable hurler for the Red Sox—winning 87 and losing 44 games and winning three world series games (one in 1916, two in 1918)—but in 1919, because of his hitting prowess, Ruth was shifted to the outfield In 1920 Ruth was sold to the New York Yankees of the American League, and by his batting feats and attractive personality he greatly helped to salvage the popularity of baseball after the Black Sox scandal He hit the most home runs per season for several years (1919 21, 1923–24, 1926–30), tied for the home-run lead in 1918 and 1931, and set the existing record of 60 "circuit blows" for one season in 1927 In all, he hit 714 home runs in major-league play while establishing many other records He led the Yankees to seven pennants (1921–23, 1926–28, 1932), and the Yankee Stadium, built in 1923, came to be known as "the house that Ruth built " With his large frame and spindle-thin legs, Ruth while on the diamond captured the baseball fan's imagination with his efficient and colorful play—e g , in the third game of 1932 world series he indicated a spot in the stands of the Chicago Cubs' ball park where he would hit the ball and promptly blasted it there for a home run Off the playing field "the Bambino," as he was affectionately called, made headlines by his charitable actions—e g , visiting sick children in hospitals He was the highest-paid player of his era, but took several salary cuts before he was traded by the Yankees to the Boston Braves (National League) in 1935. He played with the Braves while serving as assistant manager, but soon (June, 1935) was released He served as coach for the Brooklyn Dodgers (National League) for one season (1938) In the 1940s the Babe, although stricken with several illnesses, appeared at many benefits and charitable exhibitions. A year before he died he established and endowed the Babe Ruth Foundation to aid underprivileged youth He wrote *How to Play Baseball* (1931). See biographies by Tom Meany (1947), D. M. Daniel (1948), and R. B. Considine (1948).

Ruth, book of the Old Testament, eighth in order in AV, a little story laid in the days of the judges It tells of the fidelity of a Moabite widow (Ruth) to her Jewish mother-in-law (Naomi) and how they return to their husbands' home at Bethlehem There Ruth marries her kinsman and legal protector, Boaz Boaz and Ruth were ancestors of David This idyl is one of the most popular of scriptural stories Date and authorship of Ruth are unknown For bibliography, see OLD TESTAMENT

Ruthenia (rōōthē'nēŭ), Latinized form of the word *Russia* The term was used in the Middle Ages when the princes of GALICH briefly assumed the title kings of Ruthenia In modern times the term *Ruthenians* was used in Austria-Hungary to designate the Ukrainian population of the NE Carpathians, divided among Hungary, Austrian Poland (i e , GALICIA), and Bukovina. It thus was used in the same sense that the term *Little Russian* or *Ukrainian* was used in the Russian Empire, and no ethnical or linguistic distinction can be made between Ukrainians and Ruthenians Culturally, however, the Ruthenians were distinct from the Ukrainians, especially after 1596, when the Orthodox Church of the Polish Ukraine entered into union with the Roman Church, and after 1649, when a similar union was effected in Hungary The Ruthenian Uniate Church of the Eastern rite (see ROMAN CATHOLIC CHURCH) thus included the majority of the Ruthenians in the Austro-Hungarian Monarchy, while the Greek Orthodox Church was fully restored (17th cent) in the Russian part of the Ukraine When, as will be seen later in this article, all Ruthenians were united (1945) in the Soviet Ukraine, government pressure resulted in the secession of the Ruthenian Uniate Church from Rome and its reunion with the Russian Orthodox Church After 1918 the term *Ruthenia* was sometimes applied to the easternmost province (4,890 sq mi ; pop c 900,000) of Czechoslovakia It was also known as Carpathian Ukraine, or by its Czech name, *Podkarpatská Rus* [Sub-Carpathian Russia], or as Carpathian Russia UZHGOROD, the capital, and MUKACHEVO are the chief cities A largely mountainous, agricultural, and pastoral region, Carpathian Russia was ruled from the 10th cent until 1918 by Hungary It was here that the feudal rule of the Hungarian absentee landlords, who owned virtually the entire country, left its most evil traces Carpathian Russia in the 20th cent was one of the most backward regions of the world The peasantry was plunged in abysmal poverty, ignorance, and superstition, the Jews, who formed a large element of the urban population, were economically better off, but also lived under quasi-medieval conditions (it was here that the so-called wonder rabbis held their sway) Many Ruthenians emigrated to the United States, where they exerted themselves vigorously for the rehabilitation of their home country When in 1919 Carpathian Russia joined Czechoslovakia, the Czechoslovak government made an energetic and costly, but on the whole futile, effort to modernize the country The peasantry was freed from its nearly servile status, but the agrarian reform failed to break up all the large estates Efforts at public education were more successful, but could not offset a thousand years of ignorance The promise of an autonomous political status was not kept until 1938, when - as the result of the reorganization of Czechoslovakia after the Munich Pact—the province became autonomous In March, 1939, Czechoslovakia was dismembered, and Hungary annexed the region It was reconquered late in 1944 by Russian troops and local guerrillas, but in 1945 Czechoslovakia, by an agreement with the USSR, ceded the strategically important province Carpathian Russia became the Transcarpathian oblast of the Ukrainian SSR The USSR having also acquired Galicia and N Bukovina, the vast majority of the Ruthenians were united with the Ukraine

ruthenium (rōōthē'nēŭm), rare, gray-ish-white metallic element (symbol=Ru, for physical constants, see ELEMENT, table) It is extremely hard and slightly soluble in acids It unites with the oxygen of the air Ruthenium forms compounds with oxygen (a number of oxides), sulphur (a sulphide), chlorine, and other elements The element is included in the platinum group of metals and occurs chiefly in platinum ores It resembles closely osmium, with which it is associated in nature, as in the mineral laurite Discovery of ruthenium is accredited to C E Claus (1844), who first prepared it in a pure form, its existence had been announced previously by G W Osann, who obtained it only in an impure form Ruthenium and its compounds are of no commercial importance

Rutherford, Daniel (rŭ'dhurfûrd), 1749–1819, Scottish physician, botanist, and chemist, uncle of Sir Walter Scott He studied under Joseph Black at the Univ of Edinburgh, where he was professor of botany and keeper of the Royal Botanical Gardens from 1786. In 1772 he discovered nitrogen, which he called mephitic air; he believed it to be air combined with phlogiston

Rutherford, Ernest Rutherford, 1st Baron, 1871–1937, British physicist, b New Zealand. From 1898 to 1907 he was professor of physics at McGill Univ ; he then served as professor of physics and director of the physical laboratory at the Univ of Manchester (1907–19) and as Cavendish professor of experimental physics at Cambridge (from 1919) He is known especially for his research in radioactivity, for which he received the 1908 Nobel Prize in Chemistry His contribution to the knowledge of the structure of the atom is of great importance He postulated the nucleus of the atom as that part in which the mass is concentrated and atoms themselves as being composites of hydrogen and helium atoms He produced hydrogen by bombarding the atoms of various elements, e g , nitrogen, with helium particles He was knighted in 1914 and elevated to the peerage in 1931 His works include *Radioactive Transformations* (1906), *The Electrical Structure of Matter* (1926), *The Artificial Transmutation of the Elements* (1933), and *The Newer Alchemy* (1937) See biographies by A. S Eve (1939) and Norman Feather (1940)

Rutherford, Joseph Franklin, 1869–1942, American sectarian leader, known as "Judge" Rutherford, b Missouri He became legal adviser c 1907 to a group known as Russellites, later as JEHOVAH'S WITNESSES, in 1916, after the death of Charles T Russell, he became their leader His many pamphlets and books have been widely translated

Rutherford, Mark see WHITE, WILLIAM HALE

Rutherford, Samuel, 1600–1661, Scottish clergyman His *Exercitationes apologeticae pro divina gratia* (1636), upholding the doctrine of divine grace against Arminianism, caused his suspension from his living at Anwoth on the charge of nonconformity to the Acts of Episcopacy He was banished to Aberdeen, where he remained until the National Covenant was drawn up in 1638 The next year he was made professor of divinity at St Mary's College, St Andrews, and later (1651) he was appointed rector of the university In 1643 he was one of the commissioners from Scotland to the Westminster Assembly After the Restoration he was removed from his official positions, his *Lex, Rex the Law and the Prince* (1644) was ordered burned, and he was summoned (1661) by Parliament on a charge of treason He died before he could be tried Rutherford's letters, first published as *Joshua Redevivus* (1664), edited by A A Bonar with a life (2 vols , 1863) have passed through a number of editions

Rutherford (rŭ'thurfurd), suburban residential borough (pop 15,466), NE N J , NE of Newark, laid out 1862, inc 1881 It has pre-Revolutionary houses Fairleigh Dickinson College (coeducational, 1942) is here

Rutherfordton, textile-mill town (pop 2,326), co seat of Rutherford co , W N C , SE of Asheville in a grain, cotton, and truck area, founded 1779

Rutherfurd, Lewis Morris (rŭ'dhurfûrd), 1816–92, American physicist, b New York city, grad Williams, 1834 From 1837 to 1849 he practiced law He studied and experimented in celestial photography, especially in spectral analysis, in which he was a pioneer, and he invented several instruments for his work, including a micrometer and a telescope specially fitted for astronomical photography He gave his instruments and collections of photographs to Columbia Univ , of which he was a trustee (1858–84)

Rutherglen (rŭdh'urglĕn), burgh (pop 25,157), Lanarkshire, Scotland, on the Clyde and SE of Glasgow It became a royal burgh in 1126 under David I and was for some time one of the leading Clyde ports Here, in 1679, the Covenanters published the Declaration and Testament which preceded the battles of Drumclog and Bothwell Bridge The ancient castle was taken by Robert the Bruce in 1313 and burned by James Stuart, earl of Murray, in 1568 The burgh's industry includes the making of chemicals There are coal mines in the vicinity

Ruthin (rĭ'thĭn, rōō'dhĭn), municipal borough (1931 pop 2,912, 1943 estimated pop 3,500), Denbighshire, Wales, on the Clwyd There are ruins of a castle built in the late 13th or early 14th cent and dismantled by the parliamentarians in 1646

Ruthven (rĭ'vun, rōō'thvun), name of a noble family in Scotland, believed to trace its ancestry to Thor, a Saxon or Dane, who in the time of King David I settled in Scotland The name is derived from lands in Perthshire, held by the family, several members of which were in the 16th cent earls of Gowrie **Sir William de Ruthven,** d 1528, was the 1st lord of Ruthven, the title being conferred by James III in 1488 His grandson, **Patrick Ruthven,** 3d **lord of Ruthven,** 1520?–1566, was a firm supporter of the Protestant doctrines. He acted on various commissions appointed by the lords of the congregation to deal with the queen regent, Mary of Guise, and with Elizabeth, queen of England, and he served later as privy councilor to Mary Queen of Scots He took a leading part in the murder of RIZZIO and wrote a memoir of the affair which still exists in manuscript in the British Museum He took refuge in England, where he died shortly after His son, **William Ruthven,** 4th

lord of Ruthven, 1541?–1584, was created 1st earl of Gowrie in 1581 Associated with his father in the murder of Rizzio, he also fled to England, where he remained until pardoned (1567) by the queen He took part in the opposition to Bothwell and was active against Mary Queen of Scots. He was the head of the confederated nobles who planned and carried out the "raid of Ruthven" (1582), to get possession of the person of James VI and bring about the dismissal of his favorites, in the name of religion and the liberties of the kingdom After being held for a time in Ruthven Castle and in Edinburgh, the king escaped Although pardoned in 1583, the earl of Gowrie later fell under condemnation, when the conspirators were declared traitors by the convention of the estates. Ordered to France, he delayed sailing and carried on a correspondence plotting another conspiracy Tried for high treason, he was found guilty and beheaded in May, 1584 In 1600, the name and dignity of the family were extinguished and the estate annexed to the crown in consequence of the Gowrie conspiracy, a mysterious incident that resulted in the killing of the two sons of the 1st earl of Gowrie for having made an attempt upon the person of the king They were **John Ruthven,** 3d **earl of Gowrie** and 6th **lord of Ruthven,** 1578?–1600, and his brother, **Alexander Ruthven,** 1580?–1600 Their dead bodies were indicted and pronounced by Parliament guilty of high treason Descended in a collateral line, **Patrick Ruthven,** 1573?–1651, won distinction in the service of Gustavus Adolphus of Sweden Later he supported the cause of Charles I in Scotland and England, eventually serving as general in chief of the royalist forces (1643–44) He was created Lord Ruthven of Ettrick in 1639, earl of Forth in 1642, and earl of Brentford in 1644 He had no sons, and his titles became extinct

Ruthven, Alexander Grant (rōō*th*'vŭn), 1882–, American zoologist, b. Hull, Iowa, grad Morningside College (B S , 1903). He was instructor and professor of zoology (1906–29) and president (from 1929) of the Univ of Michigan. His special studies were on amphibia and reptilia Among his works is *A Naturalist in a University Museum* (1931)

rutile (rōō'tēl, -tĭl), mineral, one of the three forms in which titanium dioxide is found It crystallizes in the tetragonal system, crystals being common, twins are of frequent occurrence, and rosettes (six-lings and eight-lings) are not unusual Iron is generally present, the mineral is typically brownish red, though there are black varieties The most common titanium mineral, rutile is of wide occurrence in igneous rocks, e g., granite, sedimentary rocks, e g , granular limestone or dolomite, and metamorphic rocks, e g , gneiss and mica schist. It is found in Switzerland, Norway, and some other parts of Europe, in various parts of the United States, and in Brazil

Rutland or **Rutlandshire** (rŭt'lŭndshĭr), inland county (151 sq mi , 1931 pop 17,401, 1948 estimated pop 19,260), central England The county town is Oakham Smallest of the English shires (though not of the administrative counties), both in area and in population, it has a rolling terrain and is largely devoted to farming and pasturage It is drained by the Welland river Rutland was organized as a shire by the 12th cent , but its history is largely associated with that of its neighboring counties See *Victoria History of Rutland* (2 vols , 1908–35)

Rutland. **1** Town (pop 2,181), central Mass , NW of Worcester, settled 1716, inc 1722 Private, veterans', and state tuberculosis hospitals are here The site of a camp for Burgoyne's defeated troops after Saratoga is marked **2** City (pop 17,082), co seat of Rutland co , W Vt , at the junction of Otter and East creeks, settled 1770, inc as a village 1847, as a city 1893. Rutland town (pop 1,350, chartered 1761), surrounding the city, formerly also included the present Proctor and West Rutland towns Claimants under New York grants gave the early community some trouble, in the Revolution two forts were built in the town Marble quarrying began c 1845 and flourished particularly after Redfield Proctor organized the industry. Marble is no longer quarried here, but Rutland is a railroad center, with varied industries Among notable buildings in the city are the old Federal Building, now a public library, the new Federal Building (1933), and the Roman Catholic Church of Christ the King (1929) John Deere was born in Rutland A flood occurred in 1947, when a dam on the East Creek broke

Rutlandshire, England see RUTLAND, county.

Rutledge, Ann, 1813?–1835, American heroine of a romantic story concerning Abraham Lincoln Her father kept the inn at New Salem, Ill , where Lincoln lived from 1831 to 1837 Her sudden death from "brain fever" on Aug. 25, 1835, grieved Lincoln deeply, and from this one known fact William H. Herndon Lincoln's old law partner and biographer, wove the famous story of Lincoln's alleged great romantic love for the girl. Herndon sent the story on its way into the Lincoln legend (where it is still firmly embedded) in a lecture at Springfield, Ill., on Nov. 16, 1866, in which he declared that Lincoln had said his heart was buried with Ann Rutledge. Herndon and Lincoln's wife, Mary Todd Lincoln, had always cordially despised each other, and this story about Lincoln and Ann Rutledge was naturally a cruel blow to a woman who had already suffered much. Mary Lincoln insisted that the story was false, and, in truth, Herndon's "evidence," preserved in the Herndon-Weik manuscripts, is shaky and contradictory Actually, Ann was engaged to Lincoln's friend John McNamar, who was away from New Salem at the time of Lincoln's alleged courtship. Partisans of the Herndon story say, again without any reliable evidence, that McNamar had deserted Ann and that she had entered into a conditional understanding with Lincoln In 1890 Ann's remains were removed from the old Concord cemetery near New Salem and reinterred in Oakland cemetery near Petersburg, Ill , where in 1921 was erected a monument, bearing the passage in Edgar Lee Masters's *Spoon River Anthology* referring to her.

Rutledge, Edward, 1749–1800, American Revolutionary patriot, signer of the Declaration of Independence, b Charleston, S C , brother of John Rutledge He studied law at the Middle Temple, London, and was admitted (1772) to the English bar He returned to America and was a member (1774–77) of the Continental Congress He held many official posts in both nation and state Rutledge was captured (1780) by the British at the fall of Charleston He was governor of South Carolina from 1798 to 1800

Rutledge, John, 1739–1800, American jurist and statesman, b Charleston, S C , brother of Edward Rutledge After studying law in London, he began practice in Charleston, S C., in 1761 He rose to prominence when very young, was a member (1762) of the provincial assembly, attorney general of South Carolina (1764–65), and a delegate (1765) to the Stamp Act Congress, where he was chairman of the committee that drafted the petition to the House of Lords He twice (1774–76, 1782–83) was a member of the Continental Congress and meanwhile held strong sway as president (1776–78) of his state and later (1779–82) as governor As delegate (1787) to the Federal Constitutional Convention, Rutledge played an important role in the drafting of the U S Constitution, and then (1788) was a member of the state ratifying convention After he served (1789–91) as Associate Justice of the U S Supreme Court, he was chief justice of South Carolina In 1795 he was nominated Chief Justice of the U S Supreme Court, but the Senate refused to confirm the appointment See biography by Richard Barry (1942)

Rutledge, Wiley Blount, 1894–1949, Associate Justice of the U.S Supreme Court (1943–49), b, Cloverport, Ky , grad Univ of Wisconsin, 1914, LL B Univ of Colorado, 1922 He became (1924) associate professor of law at the Univ of Colorado and later was (1926–35) professor and dean of the law school at Washington Univ He also was (1935–39) professor and dean at the State Univ of Iowa law school He was associate justice of the U S Court of Appeals, District of Columbia, when President F D Roosevelt appointed him to the Supreme Court Rutledge proved to be one of the court's outspoken defenders of civil liberties

Rütli (rut'lē) or **Grütli** (grut'lē), meadow, Uri canton, Switzerland, on the shore of the Lake of Lucerne Here, according to the legend of William TELL, representatives of Uri, Schwyz, and Unterwalden met in 1307 to swear the **Rütli Oath,** on which Swiss freedom was founded The discovery in the 19th cent. of a written alliance of the three cantons, dated Aug 1, 1291, took away from the historic importance of the Rütli meeting

Ruwenzori (rōō"wunzō'rē), mountain range, central Africa, on the Uganda–Belgian Congo border Albert Nyanza is to the north and Edward Nyanza to the south The snow-capped summits of the range include Mt. Margherita (16,798 ft.), named for the queen of Victor Emmanuel III of Italy, and Mt. Alexandra (16,750 ft.), named for the queen of Edward VII of England The range may be the semifabulous "Mountains of the Moon," erroneously supposed by the ancients to be the source of the Nile The duke of the Abruzzi explored (1906) the range See P M Synge, *Mountains of the Moon* (1938)

Ruysbroeck, John, Dutch *Jan van Ruusbroec* (rois'brōōk, yan' vän rois'brōōk), 1293–1381, Brabantine monk, an outstanding Roman Catholic mystic He was an Augustinian canon In middle age he retired to a hermitage at Groenendael (near Brussels), where he was prior of a small community His sanctity and good counsel attracted visitors from afar, and Tauler and Gerard GROOTE were among his friends On Gerard his influence was so great that John is regarded as a forerunner of the Brothers of the Common Life His mystical treatises are classics of Middle Dutch literature and of Christian mysticism There are English translations of *The Book of the Twelve Béguines* (1913); *The Adornment of the Spiritual Marriage* with *The Sparkling Stone* and *The Book of Supreme Truth* (1916), and *The Kingdom of the Lovers of God* (1919) His cult is widespread among Roman Catholics of N Europe. He was beatified in 1908. See Vincent Scully, *A Mediæval Mystic* (1911).

Ruysdael, Jacob van see RUISDAEL, JACOB VAN.

Ruyter, Michiel Adriaanszoon de (mēkhēl' ä'drēänsōn" dŭ roi'tŭr), 1607–76, Dutch admiral. His life was spent in the Dutch mercantile and naval service. He fought under TROMP in the first (1652–54) of the DUTCH WARS and distinguished himself in the Second Dutch War (1664–67) by the capture of English holdings on the Gold and Guinea coasts. He saved the Dutch fleet in a brilliant withdrawal after defeat at North Foreland (Aug 4, 1666) and burned (1667) English ships in the Medway. With Tromp he led the Dutch fleet in the Third Dutch War (1672–78) and saved (1672) Dutch ports from attack by the English and French. Despite his protests over the conditions of the Dutch fleet, he was sent to the Mediterranean (1675), where he was mortally wounded at Messina

Ruzicka, Leopold (lā'ōpôlt rōō'tsĭkä, rōō'shōchkä), 1887–, Swiss chemist, b Yugoslavia. He was professor of chemistry at the school of technology at Zurich (1923–26 and from 1929) and lectured at the Univ. of Utrecht (1926–29). He investigated the chemical structure of sterols, including vitamin D and the sex hormones, and developed the degradation synthesis of hormones from sterols By this process he produced androsterone and testosterone For this work on hormones he shared with Adolf Butenandt the 1939 Nobel Prize in Chemistry.

Ruzicka, Rudolph (rōōzĭ'kù), 1883–, American artist, b Bohemia He was brought to the United States as a child Ruzicka, with study at the Art Institute of Chicago and long experience in the graphic arts, established himself early as a distinguished wood engraver and an etcher He gained general admiration as one of the leading book illustrators and also as a book designer and the designer of a type face, Fairfield He wrote *Thomas Bewick, Engraver* (1943)

Ryan, city (pop 1,115), S Okla., near the Red River, founded 1892

Ryan, Loch (lŏkh rĭ'un), long narrow inlet, Wigtownshire, Scotland, at the southern entrance of the Firth of Clyde It is 9 mi long and c 1½ mi wide and provides a good harbor which is sheltered by hills

Ryazan (ryŭzän'yu), city (pop 95,358), capital of Ryazan oblast, central European RSFSR, on the Oka river and SE of Moscow It is an agricultural processing center, with flour mills, fruit canneries, distilleries, and tanneries, and it manufactures agricultural machinery The city, originally called Pereyeslavl-Ryazanski, became the capital of the Ryazan principality when the Mongols destroyed Old Ryazan (see SPASSK-RYAZANSKI) in 1237 It was annexed by Moscow in 1520 Late in 1941, in the Second World War, Ryazan was the objective of a German column in the double-pronged attack on Moscow, but the German advance was stopped before it reached the city Ryazan retains much medieval architecture and has picturesque churches with many-colored domes and gilded ornaments A kremlin wall, dating from 1208, surrounds two former monasteries built in the 15th and the 17th cent The former archiepiscopal palace is now a museum

Rybinsk, RSFSR see SHCHERBAKOV

Rybinsk Reservoir (rĭ'bĭnsk), artificial lake, area 1,800 sq mi , N central European RSFSR It was formed in 1941 between the upper Volga and its left affluents, the Mologa and Sheksna, with the completion of the dam and hydroelectric station at Shcherbakov The filling of the reservoir flooded the former city of Mologa. The reservoir is part of the MARIINSK SYSTEM of waterways

Rybnik (rĭb'nēk), town (pop. 23,052), Silesia prov , SW Poland, on the Ruda river Originally a fish hatchery (established c 1100) noted for its carp, it is now an industrial center manufacturing metal products and chemicals It passed from Germany to Poland in 1921

Rydberg, Abraham Viktor (ä'brähäm vĭk'tôr rŭd'bĕryu), 1828–95, Swedish philosopher, poet, and novelist He was a member of the Swedish academy His novel *The Last Athenian* (1859, Eng tr., 1869) was a study of Hellenic versus Christian ideals In his biblical criticism he opposed the fundamentalist views of his day His poetry was distinguished for its lyric quality and for its purity of style and language See C W. Stork, *Anthology of Swedish Lyrics* (rev ed , 1930).

Rydberg, Per Axel (rĭd'bûrg), 1860–1931, American botanist, b Sweden, grad. Univ of Nebraska, 1891. He was associated with the New York Botanical Garden from 1899 Rydberg was an authority on plants of the W United States. Besides articles in various botanical journals and monographs on several plant groups (among them the saxifrages, the rose family, and the potentillas), he wrote *Catalogue of the Flora of Montana and the Yellowstone National Park* (1900), *Flora of Colorado* (1906), *Flora of the Rocky Mountains and Adjacent Plains* (1917), *Key to the Rocky Mountain Flora* (1919), and *Flora of the Prairies and Plains of Central North America* (1932).

Ryde (rīd), municipal borough (pop. 10,520), on the Isle of Wight, England, on the Spithead and NE of

Newport. It is one of the leading resorts of the island.

Ryder, Albert Pinkham, 1847–1917, American painter, b New Bedford, Mass. In 1867 the family moved to New York. There he studied with W E Marshall, the engraver, and at the National Academy of Design, but he was largely self-taught. Except for a brief trip abroad in 1893, most of his life was spent in New York, where he lived as a recluse in a room 10 ft by 12, devoting his whole energy to his paintings, on which he worked over and over, often for years Ryder was indifferent to most comforts and all material success Despite his solitary life and extreme preoccupation with his art, he had devoted friends and admirers. He experimented constantly with the oil medium and produced only about 150 canvases These are now considered among the finest American works of art Although small in size, they have grandeur of design and feeling, great luminosity, and subtle color Moonlight and the sea predominate in Ryder's highly imaginative paintings, which are remarkable in their power to evoke a lonely and poetic mood Notable examples are in most of the important American galleries, the Brooklyn and Metropolitan museums and the National and Phillips Memorial galleries, Washington, D C , have the largest collections *Toilers of the Sea* (Metropolitan Mus), *Death on a Pale Horse* (Cleveland Mus), and *The Flying Dutchman* (National Gall , Washington, D C) are much loved and characteristic works See studies by F F Sherman (1920) and F M Price (1932)

Rydz-Smigly or **Smigly-Rydz, Edward,** (rĭts'-shmĭg'-wĭ), Pol *Rydz-Śmigły,* 1886–1943?, Polish statesman He served under PILSUDSKI in the Polish Legion (1914–17), in the war with the USSR (1920), and in the coup d'état of 1926 According to Pilsudski's wish, he succeeded him (1935) as inspector of the army, in 1936 he was named "first citizen after the president" and marshal of Poland As virtual dictator, he fostered the OZON (Camp of National Unity), a government party which dominated the parliament When Germany and the USSR invaded Poland, he fled (Sept , 1939) to Rumania

Rye, municipal borough (1931 pop 3,947, 1943 estimated pop 4,150), Sussex East, England, near the English Channel and NE of Hastings It was, like Winchelsea, one of the "ancient towns" added to the CINQUE PORTS under Richard I It had good trade, but decayed after the recession of the sea early in the 19th cent There are remains of an ancient friary, a large Norman and Early English church, the 12th-century Ypres Tower, and a school (Pocock's, 1636) It is a resort of artists and authors John Fletcher was born here

Rye. 1 Town (pop. 1,246), SE N H , S of Portsmouth, inc 1837. The villages Rye and Rye Beach are included The first settlement was made in 1623 by David Thomson at Odiorne's Point The Atlantic Air Academy for boys (1945) is at Rye Beach **2** City (pop 9,865), SE N Y , in Westchester co , on Long Island Sound between Port Chester and Mamaroneck, settled 1660, inc as a village 1904, as a city 1942 It is a residential suburb of New York Rye Beach includes the amusement park Playland

rye, staple farm grain crop (*Secale cereale*), grown in many parts of the world but especially important in Central and N Europe It seems to have been domesticated later than wheat. Where it grows well, wheat is preferred, but rye will produce a good crop on soil too poor to produce a good crop of wheat Rye bread is the usual bread in some countries, e g , Germany and Sweden A bread of lighter color, also called rye bread, is made of rye flour mixed with wheat flour As a grain for livestock, rye is commonly mixed with other grains, all being ground together and fed as a moistened mash. Rye is much used as a distillers' grain in making whisky and gin The tough straw of rye is valued for many purposes, e g , thatching for roofs and stuffing for horse collars. ERGOT is a fungus disease of rye; the fungus is poisonous and may make the rye unsafe to use Wild rye and lyme grass are names for several grasses belonging to the genus *Elymus,* some of which are occasionally planted as ornamentals or used for binding sand. See H K Wilson, *Grain Crops* (1948)

Ryegate, town (pop 1,105), NE Vt , E of Barre, on the Connecticut, chartered 1763, settled 1773 It includes East Ryegate, a paper-mill village

rye grass, short-lived perennial grass of leafy, tufted habit Two species are grown in the United States —Italian rye grass (*Lolium multiflorum*), the leading hay grass of Europe, and English or perennial rye grass (*L perenne*) Both are sowed, often mixed with other grains, in parts of the United States where winters are mild, for pasturage and,for temporary and winter lawns Perennial rye grass was probably the first of all perennial grasses to be cultivated pure for forage Poison rye grass or darnel (*L temulentum*), which is reputed to be poisonous and grows in grain fields and waste places, is thought to be the tares of the Bible Western rye grass or slender wheat grass (*Agropyron pauciflorum*) provides nutritious forage

Rye House Plot, conspiracy (April, 1683) to assassinate Charles II and his brother James, duke of York (later James II), as they passed by Rumbold's Rye House in Essex on the road from London to Newmarket However, the king did not make the journey, the plot, which was an offshoot of an older insurrection plot hatched by the 1st earl of Shaftesbury, was revealed Lord William RUSSELL and Algernon SIDNEY were executed, although proof of their guilt was not definitely established.

Ryerson, Egerton (Adolphus Egerton Ryerson) (rī'ərsŭn), 1803–82, Canadian clergyman and educator, b Ontario, son of a United Empire Loyalist Entering (1825) the Methodist ministry, he was a founder (1829) and the first editor of the *Christian Guardian,* a Methodist periodical, which under his guidance achieved wide circulation His attack (1826) on the powerful Church of England clergyman, John Strachan, on the questions of the clergy reserves and ecclesiastical control of education, was the beginning of many years of political controversy, in the course of which Ryerson published a number of pamphlets In the field of education, his achievements were notable Ryerson was a founder and first president (1841) of Victoria College, Cobourg (later Victoria Univ) For 32 years (1844–76) he was superintendent of public schools in Upper Canada The school system of Ontario, which was largely of his creating, served as the model for other provincial school systems in Canada He founded and edited (1848–76) the *Journal of Education* and wrote *The Loyalists of America* (1880) and a history of Canadian Methodism (1882) See biographies by Nathanael Burwash (rev ed , 1926) and C B Sissons (Vol I, 1937, Vol. II, 1948), J H Putnam, *Egerton Ryerson and Education in Upper Canada* (1912)

Rykov, Aleksey Ivanovich (ălyĭksyā' ēvä'nuvĭch rē'kôf), 1881–1938, Russian revolutionist One of Lenin's chief lieutenants, he became commissar for the interior after the October Revolution of 1917 On Lenin's death (1924) he supported Stalin against Trotsky and became chairman of the council of commissars (i e , premier of the USSR), a post which he occupied until 1930, when he was accused of "rightist deviation," because of his opposition to Stalin's drastic collectivization program He recanted in 1931 and was given cabinet posts of secondary importance In 1936 he was implicated in testimony, given in the party purge trials, which linked him with the murder of KIROV in 1964 and with a Trotsky-inspired plot to assassinate Stalin He pleaded guilty in the public treason trial of 1938 and was executed.

Ryks Museum: see RIJKS MUSEUM

Rymer, Thomas (rī'mur), 1641–1713, English critic and historiographer, educated at Cambridge He was called to the bar in 1673 but turned his efforts to literature, especially drama He was fanatically hostile in his criticism of contemporary dramatists in his treatise *The Tragedies of the Last Age* (1677), and in *A Short View of Tragedy* (1692) he labeled Shakspere's *Othello* "a bloody farce without salt or savour " Made historiographer royal in 1692, Rymer began (1693) to edit a work bringing together all public documents showing relations between England and other nations from 1101 to 1654 This work, called *Foedera* (1704–35), was modeled after Leibniz's *Codex juris gentium diplomaticus,* the last 5 of the 20 volumes were edited by Robert Sanderson See preface to T. D Hardy's *Syllabus of Rymer's "Foedera"* (1869–85).

Ryswick, Netherlands see RIJSWIJK

Ryswick, Treaty of, 1697, the pact which ended the War of the GRAND ALLIANCE It was a setback for LOUIS XIV, who kept Strasbourg but lost most other conquests made after 1679 Commercial concessions were granted the Dutch, the independence of Savoy was recognized, and William III was acknowledged king of England

Ryukyu Islands (rēōō'kyōō), Jap *Ruykyu-retto* or *Nansei-shoto* [southwest group], archipelago (1,803 sq mi , 1940 pop 759,683), extreme W Pacific, between Formosa and Kyushu island, Japan The chain, 650 mi long, separates the East China Sea on the west from the Philippine Sea on the east and has three principal groups—Amami-gunto in the north and the Okinawa Islands and Sakishima Islands in the south The major islands are mountainous and of volcanic origin, the smaller ones relatively flat and of coral formation. They are frequently visited by typhoons Semitropical products—sugar cane, sweet potatoes, pineapples, and bananas—are grown, and there is some industry on OKINAWA The inhabitants, who speak a language said to be related to Ainu, had an ancient independent kingdom with its capital at Shuri on Okinawa The Chinese invaded it in the 7th cent. and began to exact tribute in the 14th cent. In the 17th cent the Japanese prince of Satsuma invaded the islands, which henceforth paid tribute to both China and Japan until China relinquished (1874) all claims to Japan In 1879 the Ryukyus were incorporated into the Japanese empire Okinawa and the Sakishima Islands were in Okinawa prefecture, Amami-gunto was in Kagoshima prefecture After the Second World War, in which a crucial battle was won by the Americans on Okinawa, the island groups were placed (Aug , 1945) under a U S military governor at NAHA. Other forms of the name are Lu-chu, Loo-choo, Lu-kiu, Lu-ch'iu, and Riukiu

Rzeszow, Pol *Rzeszów* (zhĕ'shōōf), city (pop 29,407), SE Poland It is a commercial center and the seat of a metal industry It passed to Austria in 1772 and reverted to Poland in 1919 Rzeszow prov (c 7,000 sq mi , pop 1,535,400) mostly an arable lowland in the north, rises to the Carpathians in the south Its mineral deposits include oil, iron, manganese, copper, and salt. The main cities besides Rzeszow are Przemysl and Jaroslaw.

Rzhev (urzhĕf'), city (pop 54,081), central RSFSR, WNW of Moscow and on the Volga It is a railroad center and has hemp spinning mills, oil presses, sawmills, and various other industries. Dating from the 11th cent , Rzhev was a medieval trade center on the Novgorod-Kiev route. In the Second World War it was held (1941–43) by the Germans and suffered virtual destruction.

S

S, 19th letter of the ALPHABET, representing the common sibilant, voiceless in *spur,* voiced in *rose.* It answers to the Greek letter called sigma Formerly s, unless it was final, looked like an f which had lost the part of the bar lying right of the stem In chemistry S is the symbol of the element SULPHUR

Sá, Mem de (mān' dŭ sä'), d 1572, Portuguese colonial official, governor general of Brazil (1557–1572) He drove the French away from Guanabara Bay in 1567 and then established the city of Rio de Janeiro at its present site. He cooperated with Father Manuel de Nobrega in continuing the foundation work of Tomé de Souza.

Saadi. see SADI.

Saadia ben Joseph al-Fayumi (sä'dēä, älfīōō'mē), 892?–942, Jewish scholar, b Egypt. He was the head of the great Jewish academy at Sura, Babylonia, which under his leadership became the highest seat of learning among the Jews His *Book of Language* laid the foundation of Hebrew grammar; he also wrote a Hebrew dictionary, called the *Agron,* and made an Arabic translation of the Old Testament which became the standard version for all Arabic-speaking Jews and exerted an important influence upon Mohammedans as well His great philosophical work, *The Book of Beliefs and Opinions,* was translated by Samuel Rosenblatt (1948). See David Druck, *Saadya Gaon* (1942)

Saale (zä'lə), river, c 270 mi long, E central Germany. It rises in the Fichtelgebirge of NE Bavaria and flows generally N through Thuringia and the former Saxony prov of Prussia past Hof, Saalfeld, Rudolstadt, Jena, Naumburg, Merseburg, and Halle to join the Elbe SE of Magdeburg Its course is flanked by numerous medieval castles It is also called Saxonian or Thuringian Saale, to distinguish it from another river, the Franconian Saale, 84 mi. long, which flows generally SW from the Thuringian Forest through N Bavaria, past Bad Kissingen, to join the Main at Gemünden

Saalfeld (zälˈfĕlt), town (pop 26,387), Thuringia, central Germany, on the Thuringian Saale and S of **Weimar.** It has numerous and diverse manufactures, notably of machine tools, electrical appliances, dyes, paper, chocolate, and textiles, and it was a silver-mining center in the 16th cent In 1826 the duke of SAXE-COBURG exchanged Saalfeld for Gotha with the duke of Saxe-Meiningen Saalfeld has a 14th-century church, a 16th-century town hall, a 13th-century Franciscan monastery (now a museum), and a 13th-century castle. Here in 1806 in the Napoleonic Wars the French defeated the Prussians

Saar, Ferdinand von (fĕr'dēnänt fŭn zär'), 1833–1906, Austrian novelist, poet, and dramatist His *Wiener Elegien* [Viennese elegies] (1893) were little read and his plays were unimportant, but his short stories influenced later writers, among them Schnitzler Saar's works include the collection of stories *Novellen aus Österreich* [tales from Austria] (1897). His short story "Die Steinklopfer" was translated into English as *The Stonebreakers* (1907).

Saar, region. see SAAR TERRITORY.

Saar (zär), Fr. *Sarre* (sär), river, c 150 mi long, ing in the Vosges mts in E France. It flows N/

Sarrebourg, Sarre-Union, and Sarreguemines. It then forms part of the border between France and the Saar Territory, continues NW past Saarbrücken and Saarlouis, and after entering Germany flows N to join the Moselle SW of Trier. It is paralleled in France by a canal used for shipping the Saar coal

Saarbrücken (zär"brü'kun), Fr *Sarrebruck* (sărubrük') city (pop 89,700), capital of the Saar Territory, on the Saar. The largest industrial center of the Saar coal basin, it manufactures steel and machinery Saarbrücken was chartered in 1321 and was the capital of the counts of Nassau-Saarbrücken, a dependency of the Walramian counts of Nassau, from 1381 until its occupation (1793) by the French The Congress of Vienna awarded (1815) it to Prussia From 1919 to 1935 and again after 1945 Saarbrücken was included in the Saar Territory The city was heavily damaged in the Second World War, it was captured by American troops in March, 1945

Saare (sä'rĕ), Estonian *Saaremaa* (sä'rĕmä), Ger *Oesel* or *Ösel* (both ö'zul), Swed *Ösel* (ö'sul), island (1,046 sq. mi.), off the mainland of Estonia in the Baltic Sea, across the entrance to the Gulf of Riga It is irregular in shape, has a level terrain, and is used mainly for dairy farming and stock raising Kuressaare (pop 4,478) is the main town and port The island was ruled by the Livonian Knights until 1560, when it passed to Denmark, which in turn ceded it (1645) to Sweden From 1710 until 1917 it was under Russian rule

Saargemünd, France see SARREGUEMINES

Saarinen, Eliel (ä'lēĕl sä'rĭnĕn), 1873–, Finnish city planner and architect, resident in the United States since 1923 In Finland, where he was a member (1896–1907) of the firm of Herman Gesellius & Armas Lindgren and then practiced alone, he designed the National Museum and the railway station in Helsinki In America he has designed many of the performance halls at the Berkshire Music Center, and he took second prize in the Chicago *Tribune* Tower Contest At the Cranbrook Foundation he not only designed several of the buildings, but also heads the Academy of Art He is the author of *The City Its Growth, Its Decay, Its Future* (1943) and *Search for Form* (1948) See study by Albert Christ-Janer (1948)

Saarlautern, Saar Territory see SAARLOUIS

Saarlouis (zär"lōō'ē), Fr *Sarrelouis* (sarlwē'), city (pop 26,088), Saar Territory, on the Saar and near the French border. It has a steel industry and various manufactures Founded (1680) by Louis XIV, for whom it is named, it was fortified by Vauban and became a major French frontier fortress The Congress of Vienna awarded it (1815) to Prussia A part of the Saar Territory from 1919 to 1935, it was renamed Saarlautern (zär"lou'turn) after its reunion in 1935 with Germany, it reverted to its former name in 1945, when the Saar Territory was once more set up Marshal Ney was born here

Saar Territory or **Saar,** Fr *Sarre,* region (988 sq mi., pop 904,040), W Europe, between Germany on the north and east and France on the west and south As of 1950 the Saar was an autonomous territory in customs union with France, its final political status remained undetermined until the conclusion of a final peace treaty between Germany and the Allies of the Second World War SAARBRÜCKEN (the capital), Neunkirchen, and Saarlouis are the chief cities A hilly, partly wooded region, the territory is drained by the Saar river It is important for its vast coal mines, on which its iron and steel industry is based Iron ore is imported from the neighboring Lorraine basin, in France Agriculture does not cover the local food requirements The territory is covered by a dense rail net and is connected by canals with the Rhine and Rhone The population is German-speaking and largely Catholic The Saar Territory possessed little historic unity before the 20th cent Until 1797, when it was ceded to France by the Treaty of Campo Formio, it was divided among France, which held Saarlouis and the adjacent territory, the county of Saarbrücken (a dependency of Nassau), and the palatine duchy of Zweibrücken The Treaty of Paris of 1815 divided the territory between Bavaria (i.e., the Bavarian or Rhenish Palatinate) and Prussia. The Saar Territory as a political unit came into existence when the Treaty of Versailles (1919) made it an autonomous territory, administered by France under League of Nations supervision, pending a plebiscite to be held in 1935 to determine its final status As compensation for the destruction of the French coal mines in the Nord and Pas-de-Calais depts during the First World War, France received the right, for 15 years, to exploit the Saar coal fields However, though Saar coal constituted—and again constitutes—an important element in the French steel industry, it is inferior for coking purposes to the coal of N France and of the Ruhr basin, and it is by no means sufficient in quantity The Saar Territory was the only area where the League of Nations maintained an international police force The plebiscite, though preceded by an intense campaign, was carried out in an exemplary manner, never approached before or since in similar cases. More than 90 percent of the votes cast favored the reunion of the Saar with Germany, a small group voted for the continuation of the status quo under the League of Nations; some 2,000 votes favored union with France. The Saar accordingly was restored to Germany, where it formed the Saarland prov., in 1940 Hitler united it with Lorraine, annexed from France, into the province of Westmark At the close of the Second World War the Saar was the scene of heavy fighting (1944–45), and a large part of its population was evacuated It was placed under French military occupation in 1945 and obtained an autonomous government. In a referendum (1947) the population voted for economic union with France, which gave it considerable economic advantage over the rest of Germany, and on Jan 1, 1948, the customs union went into effect A pact (1950) between France and the Saar gave France a 50-year lease on the Saar coal mines The Saar Territory entered (1950) the Council of Europe as a separate entity See M. T. Florinsky, *The Saar Struggle* (1934)

Saavedra, Ángel de, duque de Rivas: see RIVAS, ÁNGEL DE SAAVEDRA, DUQUE DE

Saavedra, Hernandarias de. see ARIAS DE SAAVEDRA, HERNANDO

Saavedra Lamas, Carlos (kär'lōs sävä'dhra la'mäs), 1880–, Argentine statesman, foreign minister (1932–38) An exponent of Pan-Americanism and the League of Nations (he was president of the Assembly in 1936), he presided over several international conferences He drafted (1932) an anti-war pact, adopted (1933–34) by many American republics, and was active in bringing an end to the war over the CHACO Saavedra Lamas received the 1936 Nobel Peace Prize

Saavedra y Fajardo, Diego de (dēä'gō dā sävä'dhra ē fahär'dhō), 1584–1648, Spanish writer and diplomat in the reign of Philip IV His chief works are *Empresas políticas* [political maxims] (1640), considered one of the outstanding political treatises of the 17th cent., and *República literaria* [the literary republic] (1655), a work of literary and critical importance

Saaz, Czechoslovakia see ZATEC.

Saba see SHEBA

Saba (sä'bu), island (5 sq mi., 1948 pop c.1,100), Dutch West Indies, one of the NW Leeward Islands It belongs to the Dutch Antilles (formerly Curaçao territory) The rugged island is actually a single volcanic cone, rising to 2,851 ft Saba is not easily accessible because of its steep cliffs and lack of sheltered anchorages Bottom is the chief settlement Fishing and boatbuilding are the principal occupations, lacework is exported The Dutch first settled here in the early 17th cent

Sabac or **Shabac,** Serbo-Croatian *Šabac* (sha'bats), city (pop 18,238), Serbia, Yugoslavia, on the Sava and W of Belgrade It is an agricultural center Since its foundation (1470) by Sultan Mohammed II as a frontier fortress it has frequently changed hands

Sabadell (säbädhĕl'), city (pop 45,931), Barcelona prov., NE Spain, in Catalonia It is an industrial center manufacturing cotton and wool textiles and paper

Sabaeans see SHEBA

Sabalan or **Savalan** (sä"vulän'), mountain, c 15,800 ft high, NW Iran, near Ardebil There are warm springs Zoroaster is supposed to have written the *Avesta* here

Sabaoth (să'bāŏth, -ŏth, săbā'uth) [Heb., =armies], Hebrew term used in the New Testament (Romans 9 29, James 5 4) and in Christian hymns (e.g., SANCTUS and *Te Deum*) in the title of God translated in the Old Testament "Lord of Hosts" (Isa 1 9)

Sabatier, Louis Auguste (lwē' ōgüst' sȧbētyā'), 1839–1901, French Protestant theologian He was professor (1867–72) of reformed dogmatics at Strasbourg, and from 1877 until his death he was a member of the Protestant theological faculty of the Sorbonne, Paris Sabatier became noted as a liberal theologian, stressing the subjective, symbolic nature of religious knowledge and the need of continual revision of religious dogmas in the light of personal experience Among English translations of his works are *The Apostle Paul* (1891), *Religion and Modern Culture* (1897), and *Religions of Authority and the Religion of the Spirit* (1904)

Sabatier, Paul (pôl), 1854–1941, French chemist He assisted P E M Berthelot at the Collège de France and from 1882 was professor of chemistry and from 1905 dean of the faculty of science at the Univ of Toulouse Noted for his researches in catalysis, he shared (with Victor Grignard) the 1912 Nobel Prize in Chemistry for his method of hydrogenating organic compounds in the presence of finely divided metals He wrote *Catalysis in Organic Chemistry* (1913, Eng tr., 1922)

Sabatier, Paul, 1858–1928, French Protestant clergyman and historian, brother of Louis Auguste Sabatier Ill-health required his withdrawal from the active ministry, and he went to Assisi, Italy, here he studied the life of St Francis, and his *Life of St Francis of Assisi* (1893) was widely translated and has passed through a number of editions. In 1919 Sabatier became professor of Protestant theology at Strasbourg.

Sabbatai Zevi (säbätī' zä'vē), 1626–76, Jewish mystic, founder of the Sabbatean sect, b. Smyrna In 1648 he proclaimed himself the Messiah, named the year 1666 as the millennium, and gathered a host of followers In 1666 he attempted to land in Constantinople, was captured, and to escape death embraced Islam Nevertheless, the influence of the Sabbatean movement survived for a long time

Sabbatarians, persons, usually Protestants, who insist upon strict observance of Sunday as the SABBATH A Sabbatarian organization is the Lord's Day Alliance of the United States The term is also applied to those who observe the seventh day (Saturday) as the Sabbath, such as certain ADVENTISTS and the SEVENTH-DAY BAPTISTS

Sabbath [Heb., =repose], last day of the week (Saturday), observed as a rest day by the Jews since time immemorial In the biblical account of creation (Gen 1) the seventh day is set as a Sabbath to mark God's rest after his work In the Hebrew Law, starting with the Ten Commandments, the rules for the Sabbath are carefully detailed The early Christians had a weekly celebration of the liturgy on the first day (Sunday) observing the Resurrection Hence, in the Christian tradition, which survives among Roman Catholics and Orthodox, Sunday is a liturgical feast, and most penitential rules are relaxed then Protestants, applying the idea of the Hebrew Sabbath to Sunday, forbade all but pious activity then The term "Lord's Day" was used, especially by Sabbatarians, to promote such observance (see also BLUE LAWS) Some sects (e.g., SEVENTH-DAY BAPTISTS) replaced Sunday with Saturday In Islam, Friday is the weekly day of public prayer

Sabeans see SHEBA

Sabelli (subĕ'lī), people of ancient Italy who spoke Oscan They were a loose group and seemed to have had little or no political unity Oscan-speaking tribes had expanded over central Italy and in the 5th cent B C seem to have taken ancient Campania and Lucania The Samnites were probably Sabelli, and the Sabines may have been So-called Old Sabellic dialects were not Oscan but other non-Etruscan dialects

Sabellius, fl 215, Christian priest and theologian, b probably Libya or Egypt He went to Rome, became the leader of those who accepted the doctrine of modalistic MONARCHIANISM, and was excommunicated by Pope St Calixtus I in 220 Opposing the orthodox teaching of "essential Trinity," Sabellius advanced the doctrine of the "economic Trinity" God, he held, was one indivisible substance, but with three fundamental activities or modes, appearing successively as the Father (the creator and lawgiver), as the Son (the redeemer), and as the Holy Spirit (the maker of life and the divine presence within men) The term **Sabellianism** later was used to include all sorts of speculative ideas which had become attached to the original ideas of Sabellius and his followers In the East, all monarchians came to be labeled Sabellians

Sabetha (subĕ'thu), city (pop 2,241), NE Kansas, near the Nebr line N of Topeka, inc 1874 It is the trading point of a farm area

Sabians see MANDAEANS

Sabin, Florence Rena (sā'bĭn), 1871–, American anatomist, b Central City, Colo, M D Johns Hopkins, 1900 She was assistant and professor at Johns Hopkins (1902–25), was a member of the Rockefeller Institute (1925–38), and was elected (1925) to the National Academy of Sciences Her special studies were on the lymphatic system and the brain and on tuberculosis and blood diseases

Sabin, Joseph (sā'bĭn), 1821–81, American bibliographer, b England He came to the United States in 1848 and established himself as a dealer in rare books in New York and Philadelphia He compiled the *American Bibliophilist* (1869–75), *Bibliography of Bibliography* (1877), and *Bibliotheca Americana,* better known as *A Dictionary of Books Relating to America* (begun in 1868, after his death continued by others to 1892)

Sabina (subĭ'nu), village (pop. 1,525), SW Ohio, NE of Cincinnati It is a farm trade center, and small tools and canned goods are made At the Methodist Protestant State Conference Grounds here annual meetings have been held since 1892

Sabinal (sā'bĭnăl'), town (pop 1,768), SW Texas, near the Sabinal river and W of San Antonio, settled before 1870, inc 1906 The ranches here produce beef, wool, and mohair

Sabine (sā"bēn'), river rising on the prairies NE of Dallas, Texas, and flowing east and southeast across a corner of Texas, then turning south to form the Texas-La line Near its mouth it broadens to make Sabine Lake (c 17 mi long and 7 mi wide), then goes through Sabine Pass to the Gulf of Mexico. Port Arthur, Texas, is on Sabine Lake, and Orange, Texas, is on the river The Sabine-Neches Canal leads to Beaumont, Texas

Sabine Crossroads (sā"bēn'), locality, De Soto parish, NW La., near Mansfield Here in the Civil War, Union forces under N P BANKS, advancing on Shreveport, were defeated and driven back by Gen Richard Taylor, April 8, 1864

Sabines (sā'bĭnz), ancient people of central Italy, centered principally in the Sabine Hills, NE of

Rome. Not much dependable information on them can be gathered from the wealth of contradictory legends among ancient writers. They were probably Oscan-speaking and therefore may be classed among the Sabelli From the earliest days there was a Sabine element in Rome (the story of the rape of the Sabine women to supply wives for the womanless followers of Romulus is a fictional explanation of this fact), Roman religion is said to have had a strong Sabine tinge, and one theory has it that the patricians were descended from Sabines, the plebeians from Latins Rome was involved in numerous wars with the inland Sabines, and Horatius is supposed to have defeated them in 499 B C and M Curius Dentatus is said to have conquered them in 290 B C The Sabines became full Roman citizens a little later The Samnites were possibly a branch of the Sabines

Sabiyah (sä'bēū), city (pop c 10,000), Asir, Saudi Arabia, c 40 mi inland There is extensive agriculture in the vicinity The name also appears as Sabiya and as Sabya

Sablé, Madeleine de Souvré, marquise de (mädulĕn' du sōōvrā', markēz' du säblā'), 1599–1678, French woman of letters, whose salon was in vogue after the decline of the Hôtel de Rambouillet Its circle drew upon the later Rambouillet group and included the duchesse de LONGUEVILLE, Mme de LA FAYETTE, Philippe I, duc d' ORLÉANS, Armand, prince de CONTI, SAINT-ÉVREMOND, and LA ROCHEFOUCAULD Mme de Sablé's maxims have been published

sable (sā'bul), carnivorous mammal (*Martes zibellina*), found in N Europe and parts of N Asia. Its thick soft fur is generally brown or black mixed with gray and brown The dark Siberian sable is the most valuable Unrestricted hunting for several centuries exterminated the sable in some regions and dangerously reduced it in others Protection is now afforded in parts of Russia, and it is raised on farms The American or Hudson Bay sable is the American marten

Sable, Cape, S Fla, southernmost extremity of the U S mainland

Sable Island, low, sandy island, 30 mi long and 2 mi wide, off Nova Scotia, ESE of Halifax Known as the "graveyard of the Atlantic," it is the exposed part of a sand shoal which stretches northeast-southwest for over 100 mi The island was known to mariners in the early 16th cent, and a small French semimilitary colony was here from 1598 to 1603 It has been the scene of many shipwrecks and a major hazard to navigation There are a lighthouse, a lifesaving station, and a radio beacon on the island A second lighthouse was dismantled in 1948 The island is a breeding place for seals, which are protected by the government See G A England, **Isle of Romance** (1929)

Sables-d'Olonne, Les (lā sa"blu-dôlôn'), town (pop 17,013), Vendée dept, on the Atlantic coast An old fishing port, it is also a favorite beach resort and is famous for its sea food

sabotage (să"butazh') [Fr, *sabot*=wooden shoe, hence to work clumsily], form of DIRECT ACTION by workers against employers through obstruction of work and lowering of plant efficiency Methods range from peaceful slowing of production—in Great Britain known as ca'canny (kă''kā'nē, kô'')—to destruction of property Sabotage was adopted in 1897 as general strategy by organized French workers and later by syndicalists (see SYNDICALISM) and the I W W It has been condemned by Communists and Socialists as counterrevolutionary The term has also been used, notably by Thorstein Veblen, to refer to limitation of output by businessmen to enhance profits by maintaining scarcity of goods In wartime it connotes nonmilitary enemy activity, especially the physical damage of vital industry and matériel See Émile Pouget, *Le Sabotage* (1910, Eng tr, 1913), S B Mathewson, *Restriction of Output among Unorganized Workers* (1931)

Sabraton (sā'brutŏn), town (pop 1,810), N W Va, near Morgantown, in a mining area, inc 1922 Sheet steel, tin plate, and glass are produced

Sabrina, see SEVERN, river

Sabta or **Sabtah** (both sä'bu), son of Cush His descendants occupied some region on the coast of Arabia Gen 10 7, 1 Chron 1 9

Sabtecha or **Sabtechah** (both sä'bu'tēku, sä'bu'tē-), son of Cush His descendants apparently occupied regions near the Persian Gulf Gen 10.7, 1 Chron 1 9

Sabutai: see SUBUTAI

Sabzawar, Sabzevar (both sä'bzuvär'), or **Sebzewar** (sĕb-), town (1947 estimated pop 28,151), NE Iran, W of Meshed An ancient town noted for copper mining, it was ruined by the Mongols.

Sacajawea (să"kujuwē'u, sukă"-), **Sacagawea** (-guwē'u), or **Sakakawea** (-kuwē'u), fl 1804–6, Indian woman guide on the LEWIS AND CLARK EXPEDITION She is generally called in English the Bird Woman, though this translation has been challenged, and there has been much dispute about the form of her Indian name She belonged to a Western tribe (probably the Shoshone), had been captured and brought to the Missouri, and finally was traded to Toussaint Charbonneau, whose wife she became. He was interpreter for the expedition. She had a patient and heroic bearing in the hardships of the journey, and she proved invaluable as a guide and interpreter when Lewis and Clark reached the upper Missouri and the mountains from which she had come She and Charbonneau on the return journey left (1806) the expedition at the Mandan villages Concerning her later history there is great conflict She may have died on the upper Missouri in 1812, or she may have died on the Wind River Reservation in Wyoming in 1884 See notes by Stella M Drumm in the edition of John C Luttig, *Journal of a Fur-trading Expedition* (1920), Grace R. Hebard, *Sacajawea* (1933)

Sac and Fox Indians, North American Indian tribes of Algonquian linguistic stock For a long period they dwelt around Saginaw Bay in E Michigan, but in the early 17th cent they were driven from this area by the allied Ottawa and Neutral groups The Sac (also commonly written Sauk) and the Fox fled N across the Strait of Mackinac, then S into present Wisconsin Thus in 1667, when visited by Father Allouez, they were settled around Green Bay in NE Wisconsin They then numbered some 6,500 Warlike and savage, they were involved in many wars against the Sioux, the Illinois, the Ojibwa, and the French The French, harassed by the Fox on the Fox-Wisconsin waterway, waged a war of extermination, by 1730 they had reduced the Fox to a mere handful The remnants of the tribe incorporated with their longstanding allies, the Sac, and from that time the two tribes have been known as the Sac and Fox After the war with the Illinois (c 1765), the Sac and Fox moved into Illinois territory In 1804 a fraudulent treaty was extracted from them, and they were told to move W of the Mississippi Most of the tribe refused to go, but by 1831 they were induced to cross the river into Iowa By 1832, however, they were back on the east side of the river, attacking frontier settlements This started the BLACK HAWK WAR After that war they moved west, eventually settling on reservations in Iowa, Kansas, and Oklahoma Today they number some 1,600 Sac and Fox culture was of the Eastern Woodlands area with some intrusive Plains area traits. They are also called the Sauk and Fox

Sacar (sā'kur) [Heb, =hire] **1** Father of Ahiam. 1 Chron 11 35 Sharar 2 Sam 23 *33*. **2** Son of Obed-edom 1 Chron 26 4

saccharin (să'kurĭn), white, crystalline substance of great sweetness When pure it is held to be some 550 times sweeter than cane sugar, but the commercial product is usually much less (about 300 or more times) Saccharin is a coal-tar product prepared from toluene, it is a compound of carbon, hydrogen, oxygen, sulphur, and nitrogen, is unrelated chemically to sugar, and has no nutritive value Saccharin was discovered by Ira Remsen and C Fahlberg (1879) It is only slightly soluble in water, but in the form of the sodium salt it is quite soluble and is used as sweetening in foods for those suffering from diabetes and certain other conditions

Sacchetti, Franco (frăng'kō săk-kĕt'tē), c 1330–1400, Italian merchant, statesman, and novelist He held a number of public offices in Florence and wrote lyric verse and a collection of tales, simply and tersely told, as well as moral discourses See Lorna de' Lucchi, *An Anthology of Italian Poems* (1922)

Sacchini, Antonio Maria Gasparo (antō'nyō marē'a gäsparō săk-kē'nē), 1734–86, Italian operatic composer of the Neapolitan school He wrote about 50 operas, *Alessandro nell' Indie* (Venice, 1768) and *Œdipe à Colone* (1786) are the most famous He was active in England and Paris as well as Italy and composed chamber music and oratorios

Sacchis, Giovanni Antonio de see PORDENONE

Sac City, city (pop 3,165), co seat of Sac co, W central Iowa, on the Raccoon river and between Sioux City and Fort Dodge, inc 1856 It is a trade and processing center in a farm, livestock, and dairy area Indian mounds are near by

Sacco-Vanzetti Case (săk' kō-vänzĕt' tē) On April 15, 1920, a paymaster for a shoe company in South Braintree, Mass, and his guard were shot and killed by two men who escaped with the money taken from the company (over $15,000) in an automobile containing three other men It was thought from reports of witnesses to the crime that the murderers were Italians Because Nicola Sacco and Bartolomeo Vanzetti had gone with two other Italians to a garage to claim a car which local police had connected with the crime, they were arrested Both men were anarchists and were fearing deportation by the Dept of Justice Both had evaded the army draft On their arrest they made false statements, both carried firearms, neither, however, had a criminal record, nor was there any evidence of their having had any of the money Indicted by the grand jury, they were tried (May–July, 1921) in Dedham, Mass Many then believed that the conviction was unwarranted and had been influenced by the reputation of the accused as radicals when antiradical sentiment was running high Later much of the evidence against them was discredited Demands for a new trial were denied, and there was a great public outcry In 1927 when the Massachusetts supreme court upheld the denial of a new trial, protest meetings were held and appeals were made to Gov Alvan T Fuller He postponed the execution and appointed a committee of three—President A Lawrence Lowell of Harvard, President Samuel W. Stratton of the Massachusetts Institute of Technology, and Judge Robert Grant—to advise him On Aug 3 the governor announced that the judicial procedure in the trial had been correct Sacco and Vanzetti were executed on Aug 22, 1927 They were—and continue to be—widely regarded as martyrs The case was the subject of Maxwell Anderson's play *Gods of the Lightning* and is reflected in his *Winterset* It is also the subject of Upton Sinclair's novel *Boston* and of sonnets by Edna St Vincent Millay See Felix Frankfurter, *The Case of Sacco and Vanzetti* (1927), Eugene Lyons, *The Life and Death of Sacco and Vanzetti* (1927), Michael A Musmanno, *After Twelve Years* (1939), G L Joughin and Edmund M Morgan, *The Legacy of Sacco and Vanzetti* (1948)

Sacheverell, Henry (sushĕ'vurul), 1674?–1724, English clergyman, the center of a religio-political incident in the reign of Queen Anne In two sermons (1709) Dr Sacheverell attacked the existing Whig government, lashing out especially against its toleration of dissenters He was charged with seditious libel, tried, convicted, and sentenced (1710) to a three-year suspension from preaching The trial created a furor, and the light sentence made Sacheverell the victor in the eyes of the public The Whigs, weakened by the unpopularity of the War of the Spanish Succession, were humiliated by the trial See A T Scudi, *The Sacheverell Affair* (1939)

Sachs, Hans (häns' zaks'), 1494–1576, German meistersinger, leading poet of the school at Nuremberg A shoemaker who became master of his guild, he was self-educated and, imitated in the art of the meistersinger by a weaver, wrote by his own account 4,725 master songs for the Nuremberg school, 1,700 fables and tales in verse, and 208 plays His poem *The Nightingale of Wittenberg* was written in honor of Luther Among his best pieces are the *Schwänke* or brief verse anecdotes, his Shrovetide plays are a delightful and informative picture of 16th-century German life Among his works are *Saint Peter mit der Gans* [St Peter with the goat] and *Die ungleichen Kinder Eva* [the dissimilar children of Eve] Sachs is one of the principal characters in Wagner's opera *Die Meistersinger*

Sachs, Julius von (yōōlyōōs fŭn zaks'), 1832–97, German botanist A professor at the Univ of Wurzburg from 1868, he was a founder of experimental plant physiology He demonstrated the importance of transpiration in plants and the role of chlorophyll, his researches on plant metabolism were a conspicuous contribution to botanical knowledge He was the teacher of many eminent European botanists Among his works are the famous *Textbook of Botany* (1868, Eng tr, 1882), which first brought together the results of the work of various branches of modern botany, *Lectures on Physiology* (1882, Eng tr, 1887), and *History of Botany* (1875, Eng tr, 1890)

Sachsen (zak'sun), German form for SAXONY The name appears, in English, also under its French form, Saxe, as in SAXE-ALTENBURG, SAXE-COBURG-GOTHA, SAXE-WEIMAR, and in personal names, as in Maurice, comte de SAXE

Sac Indians see SAC AND FOX INDIANS

Sackets Harbor, village (pop 1,962), N N Y, at the eastern end of Lake Ontario W of Watertown, settled c 1801, inc 1814 An important naval base in the War of 1812, it was successfully defended against British attacks The village was the starting point in 1813 of Gen James Wilkinson's unsuccessful invasion of Canada Zebulon M Pike is buried in the military cemetery here

Sackville, Charles, 6th **earl of Dorset,** 1638–1706, English poet and courtier in favor with Charles II and William of Orange He wrote witty epigrams, short pieces, and songs of which the best known is *To All You Ladies Now at Land* Dryden dedicated to him his *Essay of Dramatick Poesy*

Sackville, George Sackville Germain, 1st **Viscount** see GERMAIN, GEORGE SACKVILLE

Sackville, Lionel Sackville-West, 2d **Baron,** 1827–1908, English diplomat, ambassador to the United States (1881–88) He entered public service (1845) as an assistant to the earl of Aberdeen, who was then foreign minister, and later served in diplomatic posts at Lisbon, Naples, Stuttgart, Berlin, Turin, Madrid, and Buenos Aires. From 1868 to 1872 he was minister plenipotentiary to France As ambassador to Washington he worked to settle the Bering Sea Fur-Seal Controversy and the North Atlantic Fisheries Controversy He was constantly troubled by Irish-American disturbances growing out of Fenian activity In 1888 his unguarded reply to a letter purporting to come from a British subject naturalized in the United States implied that Grover Cleveland's reelection would be to the British interest The letter was publicized to further the Republican campaign for Benjamin Harrison Sackville's recall was asked by President Cleveland.

Sackville, Thomas, 1st **earl of Dorset,** 1536–1608, English statesman and poet A barrister of the Inner Temple, Sackville entered Parliament in 1558, gained favor with Queen Elizabeth, and was created Baron Buckhurst in 1567 He was sent on several diplomatic missions to France and served as a commissioner of state trials In 1586 he conveyed to Mary Queen of Scots her sentence of death Elizabeth was angered at his conduct in a mission (1587) to the Low Countries, but he soon regained her favor and rose rapidly in rank He was made treasurer (1599) and lord high steward (1601) After the accession of James I, he was appointed lord treasurer for life and created earl of Dorset (1604) Sackville is important in English literature as the author, with Thomas Norton, of *Gorboduc* (1562), a drama in blank verse, generally considered the earliest English tragedy His most important poems are the "Induction" and the "Complaint of the Duke of Buckingham," which were included in the second edition (1563) of *The Mirror for Magistrates,* a collection of verse tragedies in the form of dramatic monologues Sackville's contributions give the work most of its literary value His works were edited by Reginald Sackville-West (1859)

Sackville, town (pop 2 489), SE N B , near the head of Chignecto Bay of the Bay of Fundy and SE of Moncton The early French settlers, who came in 1760, diked and reclaimed the near-by Tantramar marshes, creating fertile agricultural land There is a strawberry market here and stoves, paper boxes, and leather goods are manufactured Sackville is the seat of Mt Allison Univ (United Church, coeducational, 1858) The university owns preparatory schools for boys and girls

Sackville-West, Victoria Mary, 1892–, English poet and novelist; wife of Harold Nicolson Her volumes of verse include *The Land* (1926), *Selected Poems* (1941), and *The Garden* (1946), the best known of her novels are *The Edwardians* (1930) and *All Passion Spent* (1931) She has also written short stories, travel books, and biographical studies, including one of her home and family, *Knole and the Sackvilles* (1922), and one of her grandmother and her mother, *Pepita* (1937) She herself was the heroine of Virginia Woolf's *Orlando*

Saco (sō'kō), industrial and residential city (pop 8,631), SW Maine, at falls of the Saco opposite Biddeford, settled 1631, inc 1867 Textiles, textile machinery, and shoes are produced here A legislative and judicial "court," the first in Maine, was held here in 1640 Saco suffered Indian raids in the 17th and 18th cent It is the seat of Thornton Academy, a preparatory school, and of York Institute, which has historical and other collections

Saco, river rising in N central New Hampshire and flowing c 105 mi southeasterly into SW Maine near Fryeburg and on to the Atlantic below Biddeford

sacrament (săk'-) [Latin, =something holy, especially an oath], in Christianity, one of certain ceremonial observances instituted by Christ while he was on earth Generally, Christendom is divided into two on the belief concerning the sacraments The traditional view, held by Roman Catholics and Orthodox, counts seven sacraments—EUCHARIST, BAPTISM, CONFIRMATION, PENANCE, EXTREME UNCTION, matrimony (see MARRIAGE), and order (see ORDERS, HOLY) These are held to convey grace to the recipient by the very performance of the sacrament Most Protestant sects allow only two, the Eucharist and baptism, regarding them as being merely symbols of grace The exact Catholic teaching in the West was first delineated by PETER LOMBARD A conventional division of the seven sacraments sets apart the "sacraments of the dead," viz , baptism and penance, because they are for souls in a state of sin, the rest, "sacraments of the living," are conferred on souls in a state of grace

sacramental, in the Roman Catholic Church, aid to devotion which is not a sacrament According to the teaching, sacramentals are not founded by God but by the Church, and they do not convey grace Examples are HOLY WATER, many blessings, and the ROSARY

Sacramento (săkrŭmĕn'tō), city (pop 105,958), state capital, and co seat of Sacramento co , central Calif , on the Sacramento at its confluence with the American, founded 1848, first chartered 1849, inc as a city 1850 The city lies on a part of a Mexican land grant belonging to John A Sutter, who in 1839 began a settlement called New Helvetia and in 1840 built a fort The discovery of gold in 1848 at near-by Sutter's Mill (see COLOMA) transformed the little colony into a community of 10,000 people Sacramento was made the capital in 1854 It became the terminus (1856) of the first railroad in California and the western terminus (1860) of the PONY EXPRESS It is the shipping and rail center for a rich agricultural region and an industrial city, with large canneries, packing houses, railroad shops, and other plants. Sacramento College (junior, coeducational) is here Points of interest include the capitol building in a beautiful park, Sutter's Fort, and the Crocker Art Gallery.

Sacramento, river, c.320 **mi. long,** rising in N California near Mt Shasta and flowing generally southwest to enter the tidal reaches of Suisun Bay, an arm of San Francisco Bay. It is joined in the early reaches by the Pit (which rises in NE California and has as its tributary the McCloud) and later by the Feather and the American. Just before it enters Suisun Bay, its waters are swelled by the San Joaquin The river is at high water navigable by small steamers c 260 mi to Red Bluff The valley saw the great gold strike of 1848, and many of the cities on or near the river and its tributaries sprang up in the gold rush Sacramento is the largest This northern part of the Central Valley of California has been developed as a fertile agricultural region In recent years the CENTRAL VALLEY PROJECT has been developed to use the waters of the Sacramento with greater efficiency SHASTA DAM in the Sacramento below the mouth of the Pit, Keswick Dam a few miles downstream, and Folsom Dam on the American (begun 1948) are part of the project See Julian Dana, *The Sacramento, River of Gold* (1939)

Sacré-Cœur (săkrā-kûr'), basilica in Paris, dedicated to the Sacred Heart of Jesus It is a famous landmark atop the MONTMARTRE, from which it dominates the city Built (1875–1914) by subscriptions as a votive offering after the Franco-Prussian War, it was consecrated in 1919 after the First World War and has a patriotic as well as religious symbolic significance Designed by the architect Paul Labadie, the basilica is a huge and harmonious edifice in the Byzantine-Romanesque style Behind its tall dome rises a bell tower 276 ft high

sacrifice, element in religion found in many cultures and in diverse forms The motives are the same as those of any human gift, propitiation of wrath is a common one, another is the *ex voto* offering (made because of a promise) Biblical accounts of sacrifices begin with Cain's sacrifice of the fruit of the ground, not acceptable to God, and Abel's rightful sacrifice of the firstlings of his flock (Gen 4 2–5) The release of Abraham from the vow to sacrifice Isaac (Gen 22) is said to mark an end of human sacrifice in Hebrew tradition, but the story of Jephthah's daughter is an example of human sacrifice (Judges 11–12) The chief sacrifices of Old Testament worship were the paschal lamb (Ex 12) and the scapegoat (Lev 16 20–26), in the Temple there was a regular offering of incense also In the New Testament the symbolization of Jesus by the sacrificial lamb is frequent, and his death on the cross became the supreme sacrifice of history (Heb 8–10) In the ancient liturgies the EUCHARIST is regarded as a real continuation of this sacrifice of Calvary; hence Roman Catholics call the Mass "the holy sacrifice" *Ex voto* offerings are common in Christian tradition, e g , offerings of candles or of ships' models hung up in churches in thanksgiving The other ancient cultures of the Middle East and Europe also had religions with sacrificial rituals The Maya and the Aztec developed a peculiarly bloody and elaborate ritual of human sacrifice Human sacrifice in simpler forms (e g , cannibalism, head-hunting, killing of prisoners) is widespread

Sacsahuaman (săksăwā'mān), stronghold of the ancient Inca outside CUZCO, Peru Built in the 15th cent , Sacsahuaman is a masterpiece of stone construction The Cyclopean blocks, one of which is 38 ft long, 18 ft high, and 6 ft thick, were precisely fitted, though not of uniform size, and were brought from some distance away over rugged terrain without wheeled vehicles Fortress, military storehouse, and castle of the Inca, it was captured by the Spanish garrison besieged in CUZCO (1536–37) by MANCO CAPAC. The loss hastened the defeat of the Indians

Sacy, Antoine Isaac, Baron Silvestre de (ôtwăn' sāzăk' bărō' sĕlvĕ'strŭ dŭ săsē'), 1758–1838, French Orientalist His works on Arabic were pioneering, and he was one of the founders of modern Arabic study in France

saddle. The saddles mentioned in the Bible are believed to have been saddlecloths The ancient Greeks sometimes used saddlecloths, but they had no saddles and often rode bareback The Romans did not use a saddle until near the end of the empire That good riding is possible without a saddle is demonstrated in circuses The Indians of the Great Plains were famous horsemen, and often they rode bareback To riders accustomed to the saddle, however, its advantages are decisive Probably it developed either in France during the early Christian era or in the steppe region of Asia In Europe it came into general use in the Middle Ages The exploits of medieval knights would have been impossible without it Modern saddles include the packsaddle, to which the load of a pack animal is secured, the camel saddle, the howdah used by riders of elephants, and the saddle used by riders of horses There are two main types of horse saddles, the Hungarian and the Moorish. The Moorish saddle, represented by the cowboy's saddle, has a horn, the Hungarian saddle, represented by the English saddle, the McClellan saddle, and the racing saddle, has no horn The English saddle is padded, and the stirrup is hung farther forward than on the cowboy's saddle or the McClellan saddle, neither of which is padded. For constant use, the hard saddle is believed in America to be better for both the horse and the rider The padded saddle has advantages in brief and occasional rides The horn of the cowboy's saddle is essential in using the lasso For holding this saddle in place under the strain of the lasso, it has two strong girths, each tightened by a cinch strap See also RIDING and STIRRUP

Sadducees (săd'jŏosēz, săd'dyŏŏ-), sect of Jews of the time of Jesus It was drawn largely from the upper classes, especially of the city The Sadducees accepted only the five books of the Law and rejected all they thought was not taught therein, e.g , immortality and the resurrection They also denied the existence of demons and angels They were a smaller group than their enemies the Pharisees, and they were devoted to the political status quo The Sadducees were rigorous upholders of all the prescriptions of the Law

Sade, Donatien Alphonse François, comte de (dônăsyĕ' älfôs' frănswä' kôt' dŭ säd'), 1740–1814, French soldier, libertine, and author of licentious novels, known as the marquis de Sade He fought in the Seven Years War, but was imprisoned for his scandalous conduct Thereafter, he spent much of his time under arrest in the Bastille, the dungeon at Vincennes, and at Charenton, for the publication of such obscenities as *Justine, ou, Les Malheurs de la vertu* (1791) and its sequel *Histoire de Juliette, ou, Les Prospérités du vice* (6 vols , 1797) His name has been given the form of perversion known as sadism See Otto Flake, *Marquis de Sade* (1931)

Sá de Miranda, Francisco de (frănsĕsh'kō dŭ sä' dŭ mĕrän'da), d 1558, Portuguese writer A noble, he was known at the Portuguese court He lived for a time in Italy, and there he came into contact with the literature of the Italian Renaissance He was imbued with the new classic style and, coming back, introduced it to Portugal His sonnets and other Italian-patterned poems were disillusioned and moralistic He wrote poetical letters, and his two comedies, *Estrangeiros* [strangers] and *Vilhalpandos* were the foundation of the Portuguese classical theater He wrote in Spanish as well as in Portuguese

Sadi or **Saadi** (both sä'dē), 1184 1291, Persian poet, b Shiraz He seems to have studied in Baghdad, made the pilgrimage to Mecca more than once, and traveled widely before returning to Shiraz He was a mystical poet of great power, one of the finest of the Sufi writers His *Bustan* [garden of fruits] (1257) is a long didactic poem, but his *Gulistan* [garden of roses] (1258), generally considered his masterpiece, is a mélange of prose and poetry—stories, anecdotes, aphorisms, lyrics, and other highly symbolic verses The work is suffused with warmth of feeling and high purpose and mingles entertainment with lofty religious thought Lyrics not included in the *Gulistan* also have a shimmering beauty His tomb in Shiraz is highly venerated

sadism (sā'dĭzm, sā'-), psychical abnormality in which pleasure is obtained from inflicting pain on others In psychoanalysis the term refers to a destructive drive which is turned on other people The word *sadism* derives from the comte de Sade

Sadler or **Sadleir, Sir Ralph** (both săd'lûr), 1507–87, English diplomat Through the influence of Thomas Cromwell, Sadler secured the favor of Henry VIII, whom he served in Scotland and in the dissolution of the monasteries In 1542 he was sent to Scotland to prevent the revival of the influence of Cardinal BEATON Sadler distinguished himself at the battle of Pinkie (1547) He retired during the reign of Queen Mary, but after Elizabeth's accession he became an agent of William Cecil (Lord Burghley) and was sent (1559) to form an English alliance with the Protestant party in Scotland In 1568 he was one of the commissioners appointed to treat concerning the problem of Mary Queen of Scots, who had fallen into English hands He was frequently employed to carry messages to the captive queen, and in 1584 he reluctantly undertook the guardianship of Mary, but was relieved of the task the following year

Sado (sä'dō), island (330 sq mi , 1947 pop 124,250), 35 mi long and 12 mi wide, in the Sea of Japan, off N Honshu, Japan It yields gold, silver, and agricultural products In feudal times it was a place of exile to which Emperor Juntoku and other notable persons were banished

Sadoc (sā'dŏk) [Gr , =Heb ZADOK], name appearing in the Gospel genealogy. Mat 1 14

Sadowa (sădŏ'vă), Czech *Sadová* (sä'dōvä), village, E Bohemia, Czechoslovakia, near Hradec Kralove (Ger *Königgrätz*) Here in 1866 the Austrians suffered a decisive defeat in the AUSTRO-PRUSSIAN WAR

Sadtler, Samuel Philip (săt'lur), 1847–1923, American chemist, b. Pine Grove, Pa , grad. Harvard (B S , 1870). He was professor of chemistry at the Univ of Pennsylvania (1874–91) and at the Philadelphia College of Pharmacy (1878–1916). He edited the 15th to 19th editions of the *Dispensatory of the United States,* aided in the revision of the *Pharmacopoeia of the United States,* and wrote

the widely used texts *Handbook of Industrial Organic Chemistry* (1891; 5th ed., 1923) and *A Text-Book of Chemistry for . . Pharmaceutical and Medical Students* (1892), which went through a number of editions.

Sadyk Pasha: see CZAJKOWSKI, MICHAEL.

Sáenz Peña, Roque (rō'kā sā'ānz pā'nyā), 1851–1914, Argentine statesman, president of the republic (1910–14), son of an earlier president (1892–95), Luis Sáenz Peña. He had an active career as soldier, legislator, diplomat, and cabinet official before he was inaugurated president (Oct., 1910) for a six-year term. His administration was significant for electoral reform. Because of these measures a peaceful revolution occurred when, in the presidential election of 1916, the landowning oligarchy was replaced by a new group, the Radicals, headed by Hipólito IRIGOYEN. Sáenz Peña, however, did not live to see the full results of his reform.

Saeterdal, Norway: see SETESDAL.

Safad, Israel: see SAFED.

Safarik, Pavel Josef, Czech *Šafařík* (pä'vĕl yō'zĕf shä'fär-zhĕk), 1795–1861, Slovak antiquarian, scholar, critic, and journalist. His first great work was a *History of the Slavic Language and Literature* (1826) written in German, of which a free translation in English appeared in 1850. His claim to the title of father of modern Slavonic studies rests on the monumental *Slavonic Antiquities* (1837). In 1848 he was for a short time professor of Slavic languages in the Univ. of Prague. As a young man he translated Aristophanes' *Clouds* and Schiller's *Maria Stuart*. His name also appears as Schafarik.

Safed or **Safad** (both sā'fŭd), Heb. *Zefat,* town (pop. c 9,000), NE Israel, c 12 mi. NW of the Sea of Galilee. It is at an elevation of c 2,700 ft. and is a hot-weather resort. There are ruins of fortifications erected in the 12th cent. by the Knights Templars. In the 16th cent. many learned Jews moved here and made the town a center for cabalistic studies. Much of the town was destroyed in fighting between Arabs and Jews in 1929.

Safed Koh (sāfĕd' kō'), mountain range, Afghanistan, SE of Kabul, reaching 15,620 ft. in Mt. Sikaram. It is crossed by Khyber Pass.

Safety Islands: see ÎLES DU SALUT.

safety lamp, oil lamp so constructed as to be safe for use in mines and other places where inflammable gases such as firedamp (see DAMP) may be present. Its invention c 1816 is usually accredited to Sir Humphry Davy, although it is also claimed for George Stephenson. The Davy lamp is based upon the principle that to be ignited a substance must first be heated to its kindling temperature and that if such heating is prevented it will not undergo combustion. The flame is surrounded by a metal-gauze screen that absorbs the heat and thus prevents its escape into the outside atmosphere. Many improvements have been made, such as special locks to prevent the accidental opening of the lamp and devices to permit the lamp to be held upside down without danger. The work of K. G. Bischof is important in this connection. When explosive gas is present in the atmosphere, the flame shows blue or burns higher, the lamp thus serves to indicate the presence of dangerous gas, and as a result it is used for testing mine atmosphere. Its general use has been superseded by that of the electric light in most modern mines, but it is still useful for testing and in certain cases where glass electric bulbs are likely to be broken. The portable electric lamp has come into increasing use.

safety movement. The increasing number of accidents in industry, traffic and transportation, and homes that followed upon the centralization and mechanization of industry and the growth of cities resulted in a widespread effort at prevention. Large manufacturing companies, public utilities, railroads, steamship lines, and insurance companies were particularly concerned with reducing the number of injuries and deaths and thus the cost of WORKMEN'S COMPENSATION and other damage payments and litigation. Humanitarianism and the growth of social consciousness were other factors in the initiation of the safety movement, which took the form of the organization of safety clubs, the display of posters, the publication of magazines, and other means of educating the public to the prevention of accidents. A part of the safety movement has been the passing of such laws as those requiring that buildings be constructed of fireproof materials and be provided with fire escapes, that ships carry radios and enough lifeboats to accommodate all persons on board, that fire drills be held, that automobile brakes be kept in good condition, that halls be well lighted in certain classes of buildings, that theater exits be marked, that machinery, especially gears, belts, and drive shafts be properly guarded, that food conform to specified standards, that poisonous materials be so marked, and that elevators be equipped with safety devices. The National Safety Council (organized 1913) collects and distributes information regarding safety in industry, the home, travel, and schools and publishes five monthly safety magazines and other propaganda. Attempts to diminish traffic accidents have resulted in maximum speed laws in most states. Safety is taught in many schools through classroom lectures, films, school patrol systems, and the teaching of driving. See S. J. Williams, *The Manual of Industrial Safety* (1927); S. J. Williams and W. W. Charters, *Safety* (1941); publications of the National Safety Council and the U.S. Bureau of Standards.

safety valve, contrivance attached to a BOILER or other vessel for automatically relieving the pressure of steam before it becomes great enough to cause bursting. In the lever type the valve is held closed by weights acting on a lever which passes over the valve. These weights can be adjusted so that the valve lifts when the internal pressure reaches a point in excess of the calculated safe load of the boiler. The spring-loaded type of valve is held closed by a spring the strength of which is designed to achieve the same purpose as the lever type. Spring-loaded valves are in general use, and this type is compulsory on all boilers which are not of the stationary type, such as marine or locomotive boilers. Two or more safety valves are installed on most boilers.

Saffi, French Morocco: see SAFI.

safflower. see SAFFRON.

Safford, Truman Henry, 1836–1901, American astronomer, b. Royalton, Vt., grad. Harvard, 1854. He was on the staff of the Harvard Observatory (1854–66) and professor of astronomy at the original Univ. of Chicago and director of Dearborn Observatory until 1871. After five years with the U.S. Coast and Geodetic Survey he was appointed to the chair of astronomy at Williams College. There he established a meridian observatory. From his untiring observations resulted catalogues of the stars and other compilations. He predicted the position where the suspected companion of SIRIUS might be found. Among his published works are *Mathematics Teaching and Its Modern Methods* (1887) and *The Development of Astronomy in the United States* (1888).

Safford, town (pop. 2,266), co. seat of Graham co., SE Ariz., on the Gila river, founded 1872, inc. 1901.

saffron, autumn-flowering white or lilac CROCUS (*Crocus sativus*), widely cultivated in the Old World since ancient times for the stigmas of the flowers, which are also called saffron and are used as a coloring matter, flavoring, perfume, and medicine. The stigmas of about 4,000 flowers, it has been estimated, are required to be picked and dried for one ounce of saffron. The orange-yellow stigmas have an aromatic odor and, powdered, are soluble in water. Perfume thus made was sprayed in the theaters of Greece and Rome, and on Nero's entry into Rome the powder was sprinkled on the streets. Saffron was until recently popular for coloring and flavoring foods and is still so used in some places. It was formerly used medicinally. Saffron is mentioned in the Bible (Cant. 4:14). This species of crocus is sometimes cultivated in America for ornament. The safflower or American saffron, often used as a substitute, and the MEADOW SAFFRON are not related to saffron.

Saffron Walden, municipal borough (pop. 5,930), Essex, England, NNE of London. The museum has a noteworthy collection. There are remains of a castle probably built in the 12th cent. and a 15th-century church. The town is named for the saffron crocus, grown here from the time of Edward III until the 18th cent.

Safi or **Saffi** (both sā'fē), city (pop. 50,845), French Morocco, a port on the Atlantic Ocean. It was a Portuguese base in the early 16th cent., then, until 1660, it was the chief port of the Sadian dynasty, being the nearest to their capital, Marrakesh. Since 1936 Safi has exported phosphates from a near-by deposit.

Safid Rud (sāfēd' rōōd'), river, 450 mi. long, rising in NW Iran, S of Lake Urmia, and flowing to the Caspian Sea E of Resht. There are few bridges. The river is rich in fish.

Saga (sä'gä), city (1947 pop. 64,978), capital of Saga prefecture, W Kyushu, Japan. It is a railroad, manufacturing, and coal-distributing center. The prefecture is known for its fine porcelain ware.

saga (sä'gə), in OLD NORSE LITERATURE, particularly the Icelandic and Norwegian, an epic in prose or verse centering about a legendary or historical figure. These sagas were composed from the beginning of the 11th to the middle of the 13th cent. Toward the end of the 12th cent. they were written down. Among the most noted of the sagas are the *Heimskringla* and the *Starlunga Saga* by SNORRI STURLUSON; the *Laxdœla,* translated in *The Earthly Paradise* by William Morris, who also translated the *Grettla,* the *Njala,* translated by W. E. Dasent, the FRITHJOF saga by Esaias TEGNER, and *Gisli,* translated by R. B. Allen. See J. W. Hartmann, *The Gongu Hrolfssaga* (1912), A. S. Hoffman, *Book of the Sagas* (1913), E. E. Kellett, *The Northern Saga* (1929); Knut Liestol, *Origin of the Icelandic Family Sagas* (1930), Halvadan Koht, *The Old Norse Sagas* (1931).

Sagamore Hills, village (pop. 1,471), NE Ohio, SE of Cleveland, inc. 1931.

Sagan (sä'gän) or **Zagan,** Pol. *Żagań* (zhä'gänyŭ), town (1939 pop. 22,770, 1946 pop. 4,359), Lower Silesia, on the Bober and NW of Breslau. It was transferred to Polish administration at the Potsdam Conference of 1945. There are textile and other industries. Founded in 1140, Sagan was (1274–1472) the seat of a principality, originally a fief held from the dukes of Glogau. The principality passed (1472) to the electorate of Saxony, which lost it (1547) to the house of Austria. It was ceded (1745) to Prussia. Wallenstein was created (1628) duke of Sagan, and in 1785 the title was purchased by Peter von Biron, duke of Courland, through whose daughter it passed to the French house of Talleyrand.

Sagar (sä'gur), island, West Bengal state, India, at the mouth of the Hooghly river. It is sacred to Hindus as the place where the Ganges formerly emptied into the Bay of Bengal.

Sagasta, Práxedes Mateo (präk'sädhäs mätā'ō sagh'stä), 1825–1903, Spanish statesman. A leader of the Progressive party in the Cortes, he was twice exiled for his opposition to the government of Isabella II. In 1868 he led, with Juan PRIM, the revolution which resulted in the queen's deposition. He served as premier (1871–72) under King Amadeus and as cabinet minister under the first Spanish republic, but retired after the accession of Alfonso XII. In 1880 the Liberal party was founded under his leadership, and Sagasta returned to power as premier (1885–90, 1892–95, 1897–99, 1901–2). Sagasta offered Cuba autonomy, but was unable to suppress the Cuban revolution or to prevent American intervention. Sagasta signed the Treaty of Paris of 1898, which ended the Spanish-American War, and he was generally blamed for the Cuban disaster.

Sage, Russell, 1816–1906, American financier, b. Oneida co., N.Y. He was successful in the grocery business in Troy, N.Y. Active in public affairs, he became (1845) alderman of Troy and served (1853–56) as a Whig member of Congress. He continued to amass wealth by banking, and after he moved (1863) to New York city, he engaged in stock speculation. In association with Jay Gould, Sage gained extensive financial control in several Western railroads, in the elevated railway system in New York city, and in the Western Union Telegraph Company. An attempt to assassinate him in 1891 failed. Upon his death, the distribution of his fortune was left in the hands of his widow, **Margaret Olivia Slocum Sage** 1828–1918. She made large gifts to the Emma Willard School and to the Rensselaer Polytechnic Institute in Troy and donated money to other educational organizations and to benevolent societies. Marsh Island in the Gulf of Mexico was bought in 1912 and given to Louisiana as a bird sanctuary. The great single benefaction was the establishment (1907) of the Russell Sage Foundation in New York city. This institution is largely devoted to cooperating with social agencies for the improvement of social and living conditions in the United States. It maintains a library of the social sciences and has participated in several important surveys. By 1947 the foundation had given more than $9,000,000 for special projects in the field of social science.

sage, any species of the large genus *Salvia,* widely distributed herbs or shrubs of the mint family. The common sage of herb gardens is *Salvia officinalis,* a strongly aromatic perennial native to Europe. It has gray-green, hairy, wrinkled leaves and, commonly, blue or white flowers. The leaves are used as seasoning, especially in dressings for meat and poultry, and in sage cheese, sage tea, once popular as a beverage, has also been used as a domestic remedy for colds and other ailments and as a hair rinse; the oil is sometimes used in perfumery. For commercial purposes sage is cut two or three times a season. The dried leaves soon lose their aroma unless they are kept in airtight containers. Prized since ancient times, common sage was thought to prolong life and to increase wisdom by strengthening the memory—whence the name. The ornamental sages (of which there are several blue-flowered species) are often popularly called salvia. Of these the scarlet sage (*Salvia splendens*) is best known. It is cultivated as an annual bedding plant for the neat spikes of red blossoms; there are also varieties in other colors. Clary is a biennial sage the seeds of which were once used to 'clear the eye'; it has bluish or pinkish flowers. Most sages are good honey plants. A LANTANA is sometimes called red or yellow sage.

sagebrush, name for several species of *Artemisia,* deciduous shrubs related to WORMWOOD and particularly abundant in W North America. The common sagebrush (*Artemisia tridentata*), called also big sagebrush, is a silvery gray low shrub with small wedge-shaped leaves, three-toothed at the wide apex, and with a pungent odor of sage. It is one of the most common shrubs of the West, where it is important as a forage plant on many cattle ranges and is often indicative of good soil. This species has been employed as a domestic remedy and tonic, and the seeds were used for food by Indians. The wood ignites easily and burns well so that it has been valuable for starting fire by friction. Sagebrush is the state flower of Nevada, which is sometimes called the Sagebrush State. The pasture or mountain sagebrush (*Artemisia frigida*) has also

been used medicinally The word sagebrush is often shortened to sage

sage grouse, sage hen, sage cock, or **cock of the plains,** large GROUSE native to the sagebrush country of W North America Much hunted for food, young birds are preferred because the adult flesh is often strongly flavored by buds of the sagebrush, which, with insects, form the diet The plumage is mottled brown, black, and gray above, and the belly is black Yellow air sacs on the neck of the male are distended like balloons during the courtship display

Saghalien, see SAKHALIN

Sag Harbor, resort village (pop 2,517), on E Long Island, SE N Y , on Gardiners Bay, settled 1720–30, inc 1846 During the first half of the 19th cent it was an important whaling port, today it is primarily a summer resort, with small manufactures The *Long Island Herald* (1791) was the island's first local paper Among the town's historic buildings are the Whalers' Church and the Whalers' Museum, and the first customhouse in the state, moved a few blocks in 1948 to a new site

Saginaw (să'gĭnô), city (pop 82,794), co seat of Saginaw co , S Mich , on the Saginaw river and S of Bay City, inc 1857 Indian trails crossed here, and Indian villages were in the vicinity Lewis Cass negotiated here a treaty (1819) with the Indians, who ceded much of Michigan to the United States Fur trade was followed by a thriving lumbering industry, which declined after 1890 Situated in an extensive area producing beans and beet sugar, Saginaw is also a port of entry and an industrial center, near large coal beds, oil wells, and salt deposits Its varied manufactures include automobile parts, graphite, measuring instruments, washboards, and boilers The old Schuch Hotel has a collection of antiques and curios

Saginaw, river, c 22 mi long, formed near Saginaw, S Mich , by the Shiawassee and Tittabawassee rivers and their tributaries and flowing NNE to Saginaw Bay near Bay City With its headstreams and tributaries the river drains a large area in lower Michigan

Saginaw Bay, arm of Lake Huron, c 60 mi long and 15 to 25 mi wide indenting N Michigan Bay City is at the head of the bay, near the mouth of the Saginaw river

Sagittarius (săjĭtă'rēŭs) [Latin,=the archer], in astronomy, a zodiacal constellation lying partly in the Milky Way It is pictured as a centaur, usually considered to represent Chiron, drawing his bow to release an arrow The constellation contains many nebulae, star clusters, and variable stars The sun is in Sagittarius at the time of the winter solstice Sagittarius is the ninth sign of the zodiac

sago (să'gō) [Malay], edible starch extracted from the pithlike center of several East Indian palms (chiefly species of *Metroxyla*) or sometimes of palmlike plants (e g , cycads) The starch furnishes an important item of food for East Indians and is exported for use in puddings and in stiffening textiles It is obtained by cutting down the sago palm when it blossoms, which it does at about 15 years of age, and powdering the starchy material that fills the stem and sometimes weighs 700 lb The starch, washed free from the powder, is made into cakes by the natives, but for market is usually sieved and heated to form granules If uncut, the sago palm blossoms once, matures its fruit, and then dies after having produced new shoots at the base, which propagate the plant The sago palm of florists is not the plant commonly used for the production of sago The wild sago or coontie yields Florida ARROWROOT.

Saguache (sŭwŏch'), town (pop 1,219, alt c 7,800 ft), co seat of Saguache co , S central Colo , on Saguache Creek and N of Monte Vista, in a mine and livestock area, founded 1866, inc 1891.

saguaro see CACTUS

Saguaro National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Saguenay (să'gunā, să'gunā'), river of S Quebec, issuing from Lake St John in two channels, the Grande Décharge and the Petite Décharge, separated by the Île d'Alma, and flowing 110 mi generally ESE to the St Lawrence at Tadoussac It passes St Joseph d'Alma, Arvida, and Chicoutimi and is navigable below Chicoutimi, flowing through a picturesque gorge whose banks rise to more than 1,500 ft at Eternity and Trinity capes The Saguenay was first visited (1535) by Cartier, and Champlain explored its lower reaches in 1603 For more than three centuries it was a route traveled by explorers, missionaries, and fur traders, later becoming a major lumber transportation route and the approach to noted hunting and fishing areas In the 20th cent pulp and paper mills and important hydroelectric stations have been built on the banks of the river and some of its tributaries, and at Arvida is one of the world's largest aluminum plants Excursions up the river by steamer from Quebec have long attracted tourists. See Marius Barbeau, *The Kingdom of Saguenay* (1936)

Sagunto (sägōōn'tō), Latin *Saguntum*, city (pop 10,352), Valencia prov, E Spain, in Valencia, on the Palencia river and 4 mi from the Mediterranean Probably of Iberian origin and later settled by Greeks, Saguntum was an ally of Rome when it was besieged and captured (219–218 B C.), after heroic resistance, by the Carthaginians under HANNIBAL Thus led to the Second Punic War. Saguntum was conquered by the Romans (214 B C) and made a *municipium*. On a ridge above the present city are important Roman remains, notably a well-preserved theater The city fell to the Moors and was called Murviedro until the old name was restored in 1877 In 1874 the restoration of the Bourbon dynasty was proclaimed here

Sahagún, Bernardino de (bĕrnärdhē'nō dā säägōōn'), c 1499–1590, Spanish historian and Franciscan missionary in Mexico The most important of his works, *A History of Ancient Mexico* (Eng tr , Vol I, 1932), was the product of a wide and patiently acquired learning in Indian history and ethnology Sahagún was hampered by opposition within the order, and the work was not published until 1829 (ed by Carlos María de Bustamente)

Sahagún (sä-ägōōn'), town (pop 3,606), Leon prov , NW Spain An agricultural center, it has kept the ruins of a Benedictine abbey, the most powerful in Spain until the 15th cent , founded in the 11th cent by Alfonso VI The abbey was abandoned in 1835

Sahand (sähänd'), peak, c 12,000 ft high, Iran, E of Lake Urmia and S of Tabriz It is crowned with snow most of the year and is traditionally connected with Zoroaster

Sahaptin Indians see NEZ PERCÉ INDIANS.

Sahara (sŭhâ'ru) [Arabic,=desert], desert, North Africa, the largest desert on the earth It occupies most of Spanish Sahara, Morocco, Algeria, Tunisia, Libya, and Egypt and also N French West Africa and N Anglo-Egyptian Sudan It is defined by many geographers as extending from the Atlantic Ocean to the Nile and from the Mediterranean to the Sudan, with these boundaries its estimated area is over 3,000,000 sq mi Other authorities consider the desert area E of the Nile in Egypt also to be a part of the Sahara The Sahara may be regarded as belonging to a larger desert area occupying most of the Near East as well On the northwest the Sahara is separated from the sea by a coastal strip backed by the Atlas Mts and by a steppe region that merges into the desert This area gets off whatever moisture is carried by winds blowing inshore from the Mediterranean The desert comprises varied natural formations It has high sand dunes (*erg*) especially in the NE Sahara (known as the Libyan Desert) and in Algeria, plateaus of denuded rock (*hammada*), and beds of gravel (*reg*) or of rounded stones (*serir*) Although for the most part a level plateau, the Sahara is marked by mountainous massifs, including the Tibesti, Air, and Hoggar elevations, and by a series of depressions (50–100 ft below sea level) in the Libyan Desert The prevailing barrenness is broken by fertile date-bearing oases, many of them on the courses of intermittent streams (wadis) Important oases include Siwa in Egypt, Ghat, Ghadames, and the oases of the Fezzan in Libya, Biskra, Tugurt, Wargla, Mzab, and the Hoggar plateau in Algeria, and Tafilelt in Morocco In ancient times the inhabitants of the desert were predominantly Sudanese Negroes After the introduction of the camel, probably in the early Christian era, Berbers and, later, Arabs took up a nomadic existence in the desert, gradually driving back the Negroes or employing them as laborers in the oases Tibesti is one of the few areas still dominated by Negroid tribes The white nomads extended existing oases or tapped underground waters to create new oases, they also introduced date-palm cultivation. Outstanding among the nomad groups are the Berber TUAREG Although northern shores of Africa have long been dominated by foreign powers, some of whom extended their rule to the northern oases and even into the Fezzan, most of the Sahara was not penetrated by Europeans until the 19th cent One of the earliest European explorers to have crossed the desert (c 1828) and to have returned was Rene CAILLIÉ Other explorers who extended knowledge of the Sahara include Heinrich BARTH and Gustav NACHTIGAL The Algerian section of the Sahara was the first to be extensively explored The suppression of the slave trade, especially by the French in Algeria, has curtailed trans-Saharan trade Today the Sahara is linked by telegraph stations, by railroads to several of the northern oases, and by a network of air and automobile routes The construction of a trans-Saharan railroad has been contemplated since the 1850s but there is only a short section completed See E F Gautier, *Sahara* (1933, Eng tr , 1935).

Saharanpur (suhâ'runpōōr"), city (pop 108,263), NW United Provs , India It was a summer resort of the Mogul court The botanical gardens (founded 1817) are noted There is wood carving, furniture manufacturing, and sugar and paper milling

Saigo, Takamori (täkä'mōrē sī'gō), 1822?–1877, Japanese soldier and statesman noted for his obstinate conservatism A SATSUMA samurai and an early opponent of the shogun, he trained a Satsuma force and led it in the fighting against the shogun's troops in 1868 He entered the new government as an imperial adviser, and in 1873 he advocated war with Korea and opposed the Occidentalization of Japan When his advice was rejected, he retired from the government In 1877 he led the Satsuma revolt, but his samurai followers were defeated by imperial troops, drawn from the peasantry and equipped with modern arms Saigo committed suicide

Saigon (sīgŏn', sīgōn', Fr sāgô'), city (pop. 110,577), capital of Cochin China, on the right bank of the Saigon river, a tributary of the Dong Nai Together with the neighboring Chinese city of Cholon, Saigon is the greatest port and industrial city of Indo-China It is linked by canals to the lower Mekong and by rail to Pnom Penh and Hanoi The principal export is rice, the main industrial activities are rice mills and shipyards With its cathedral, museums, gardens, and tree-lined avenues, Saigon is known for its beauty throughout the East Although the site was occupied in turn by Cambodians and Annamese, the modern city is entirely the product of French rule

sail, expanse of canvas, matting, or similar material on which the wind acts to propel a vessel The oldest sails, used by the ancient Egyptians, were of papyrus fibers Later canvas made of flax came into general use Since the middle of the 19th cent cotton has widely supplanted flax, particularly in sails for racing vessels and smaller craft The finest and most expensive sail cotton comes from Egypt The Chinese make sails for their junks and sampans of grass or fiber matting The old seafaring nations of the Mediterranean and the vikings used square or quadrilateral sails The triangular type is the more modern form The sails of a ship may be square-rigged or fore-and-aft rigged, with some vessels carrying both Square sails are carried on yards which are hung to the mast at the middle, while fore-and-aft sails are secured to a boom or gaff which has only one end attached to the mast, the outer (or after) end being free to swing to suit the wind A vessel can carry more canvas if square-rigged, but the sails are heavier and less easy to handle, a fore-and-aft rigged vessel can usually lie nearer the wind in sailing The names of the sails a full-rigged ship may carry, from bottom to top, are course, lower topsail, upper topsail, lower topgallant, upper topgallant, and royal Some ships have an additional skysail, also called a skyscraper Each sail is designated by prefixing the name of the mast to which it is attached, e g , foretopsail Auxiliary sails, called studding sails, are spread out only when the wind is very light Reducing the sail area is known as reefing, while completely rolling up the sails is referred to as furling Sailing ships were in use as far back as 6000 B C in Egypt and Mesopotamia and not much later in China Sailing was the only means of seafaring until the steam engine was adapted to propelling vessels For more than half a century in the mid-19th cent sailing ships competed successfully with steamships The quickest and best sailing ship ever built, the CLIPPER-SHIP, beat them even in speed Finally the machine conquered, and sailing ships were used only where cheap transport was of importance That was the case with the wheat transport from Australia to Great Britain In the 1920s barks still carried wheat from Fremantle to London, making the voyage in about three months See also SCHOONER

sailcloth, canvas, more commonly called duck, from which sails are made It is woven from hemp, ramie, flax, or cotton, in widths from 14 to 120 in and in weights from 18 to 38 oz per yard The best sailcloth is produced from long flax, because this fiber possesses flexibility, lightness, and strength (see SAIL) Sailmaking was an important handicraft from antiquity, but with the transition from sailing vessels to steamships only a small part of the sailcloth produced found use in sailmaking The greater part of the material now goes to make tenting, awnings, fire hose, tarpaulin, and bags It is also used in bookbinding In the making of sails the canvas cloths are laid together with overlapping seams (1 or 1½ in) and sewed with special twin in an overhand stitch on both edges Heavy sails are given an additional running stitch in the middle of the seams, and extra pieces of canvas are set on the edges for strength and for reef and strain bands A rope is sewed all around to finish the sail Modern sailmaking is generally done on special sewing machines

Sailendra (sīlĕn'drä), name given to a dynasty or dynasties of Indonesia and SE Asia, fl 8th–13th cent Appearing probably in Java in the latter part of the 8th cent , the Sailendras extended their power over the Sumatran domains of Sri Vijaya and the Malay Peninsula and exerted influence in Siam and Indo-China After their eclipse in Java (late 9th cent), they retained control of Sri Vijaya, with important centers at Palembang (generally thought to have been their capital) and in Kedah and Patani The Sailendra power was badly shaken by the Chola war of the 11th cent , but endured in some form till the Javanese invasion of Sumatra and the Malay Peninsula in the 13th cent.

sailfish, marine game fish related to the swordfish It has a long body (sometimes reaching 10 ft), a

high saillike, black-spotted, deep blue dorsal fin, and a spearlike upper jaw. The body is usually a metallic blue above and silvery below. It is an excellent food fish. The American sailfish inhabits tropical Atlantic waters and may travel up the coast in summer, another species inhabits the Indian and Pacific oceans

sailing, general term for the navigation of a ship to a destination by any one of several methods. In plane sailing the ocean is assumed to be a flat surface, the curvature of the earth being ignored. The meridians are assumed to be parallel to each other and at right angles to the parallels of latitude, and the length of a degree everywhere equal on both parallels and meridians. The ship's course is plotted and followed accordingly. In Mercator sailing, the ship's course is plotted and followed on the basis of a chart drawn by the MERCATOR projection. Great-circle sailing has certain advantages over the two preceding methods. The shortest distance between any two points on the earth's surface is represented by the length of the arc of the great circle which passes through these points. (A great circle is a circle with its plane passing through the center of the earth, the equator and all meridians are examples of great circles.) The navigator follows the great circle which passes through the port he is leaving and his destination. To assist the navigator in laying out his course, tables, charts, and diagrams have been worked out which obviate much original calculation. Great-circle sailing is extensively employed by steamships, as in the N Atlantic lanes, and by airplanes. The U S Hydrographic Office publishes a series of great-circle sailing charts for all the navigable waters of the earth

Saima (sī'mä), lake system of central Finland. It comprises more than 120 connecting lakes, covering c 1,850 sq mi., the large southern basin of the system constitutes Lake Saima proper. The Saima system drains into Lake Ladoga through the Vuoksi river (460 mi. long). Numerous canals facilitate steamship and lumber-raft traffic to the Gulf of Finland through the **Saima Canal** (c 36 mi. long, completed 1856), which terminates at Vyborg, RSFSR. On the lakes are the towns of KUOPIO and MIKKELI

Saindon (sĕdō') or **Sayabec** (sayäbĕk'), village (pop. 2,115), E Que., on Lake Matapedia and ENE of Rimouski, in a lumbering and dairying region

sainfoin (sān'foin) [Fr.=holy hay], leguminous, perennial herb (*Onobrychis sativa*), indigenous in Europe and in temperate regions of Asia. From a woody rootstock arise stalks bearing pinnate leaves and clusters or spikes of pink or white flowers, flattened pods enclose single, brownish seeds. Sainfoin has for centuries been widely cultivated in Europe as a forage crop. Although it was introduced into the United States about 150 years ago, it has never become agriculturally important here. It thrives on calcareous soils too dry or too barren for clover or alfalfa. The plant is sometimes associated with the Christmas story of the Infant Jesus in the manger. Sainfoin is also called esparcet

saint [O Fr., from Latin *sanctus*=holy], in Christianity, person living in heaven. In the traditional belief, as taught by Roman Catholics and Orthodox, faithful Christians on earth and the saints are all members of the Church, and just as living members seek the prayers of others and share in the merits of others, so the living ask those in heaven for their prayers and share in their merits (see INDULGENCE). This is the essence of the traditional doctrine of the communion of saints, an aspect of the same cooperation of the living and the saints is prayer for the dead (not yet saints, see PURGATORY). The Virgin MARY is the chief saint. Angels are counted as saints. Prayer to the saints ("veneration" or "honor") is distinct in kind from prayer to God ("worship" or "adoration"), who is the source of all their glory, the saint is asked to pray to God for a favor sought, exactly as a living person is. In the liturgy a saint is commemorated and his intercession sought on a special day ("saint's day", see also ALL SAINTS), usually the anniversary of his death. In the ancient churches each member has at least one PATRON saint from baptism, and in the West another is adopted at confirmation, patrons are expected to have a mutual relation of affection with their earthly clients. Saints vary in popularity, thus St. Joseph, very popular today among Catholics and Orthodox, had scarcely any cultus 1,000 years ago, and St. Nicholas, for centuries a favorite in the West, has today few clients among Roman Catholics. Only the Virgin, preeminent and unique, suffers no change in the love of the people. Examples of nonliturgical devotions to saints are pilgrimages (see PILGRIM), many forms of LITANY, images and icons, novenas, and annual celebrations in honor of patron saints. Saints' lives have been a favorite form of reading, and at times the composition of them (hagiography) has become a real art. Apart from those which are simple, contemporary records, they often become miracle-studded tales. Two immortal collections of saints' lives are the GOLDEN LEGEND and the *Little Flowers of St. Francis* (see FRANCIS, SAINT). In the modern Roman Catholic Church the BOLLANDISTS have been charged with separating the true from the false in hagiography. The effort entails revision of official books, e.g., the Roman Martyrology, a compendium of saints' lives. The addition of the name of a person to the official list of saints is called CANONIZATION. Generally in the Roman Catholic Church the title saint is limited to the canonized if they lived after the year 1000, otherwise the title is used according to custom. In East and West criteria for recognition of sainthood are martyrdom, holiness of life, miracles in life and after death (e.g., with RELICS), and a popular cultus. In the New Testament "saints" often refers to living Christians. See Alban Butler, *Lives of the Saints* (rev. ed. by Herbert Thurston, S.J., Donald Attwater, and Nora Leeson, 12 vols., 1926-38), Donald Attwater, *A Dictionary of Saints* (abridged from the Butler work, 1948), F. J. Sheed, ed., *Saints Are Not Sad* (1949).

Saint Agatha (sānt ă'gŭthu, sāntugăt'), town (pop. 1,874), N Maine, near the N.B. line, a fishing resort on Long Lake, set off from Frenchville and inc. 1899

Saint Albans (sunt ôl'bunz), municipal borough (1931 pop. 28,624, 1947 estimated pop. 42,910) and city, Hertfordshire, England, on the slope and summit of a hill above the Ver river NNW of London. It is the site of the Roman Verulamium and of a Benedictine abbey founded in 793 by Offa of Mercia, in honor of St. ALBAN. The abbey was made famous by a succession of notable chroniclers, including Roger of Wendover, Matthew of Paris, William Rishanger, and Thomas Walsingham. The church was largely rebuilt in 1077, by Abbot Paul of Caen, who used broad flat tiles and other Roman materials from Verulamium. It is an excellent example of Norman architecture, second only to Winchester in size. It was extensively restored by Sir George Gilbert Scott and Lord Grimthorpe in 1871-85. St. Albans became a separate diocese in 1877. A grammar school was attached to the abbey from the 10th to the 16th cent., it was refounded by Edward VI. St. Michael's Church dates from the 10th cent. and contains a memorial to Francis Bacon, Viscount St. Albans, who lived near here. The town was in turn a stronghold of the Britons, Romans, and Danes. John Ball was hanged here in 1381. In the Wars of the Roses it was the scene of two battles: in 1455 the Yorkists were victorious and Henry VI was captured, and in 1461 the Lancastrians were victorious and Henry VI was freed. The site of one of the Eleanor Crosses (see ELEANOR OF CASTILE) is marked by a fountain. Much information about the Roman town has been acquired through extensive excavations. See William Page, *Saint Albans* (1920)

Saint Albans (sānt ôl'bunz). **1** City (pop. 8,037), co. seat of Franklin co., NW Vt., N of Burlington, inc. as a village 1859, as a city 1897. It is a port of entry. St. Albans town (pop. 1,733, chartered 1763), on St. Albans Bay, Lake Champlain, surrounds the city. St. Albans was after the embargo of 1807 a base for smugglers. Confederates coming in from Canada in 1864 raided the local banks, escaping with some $200,000. Two years later a large group of Fenians gathered here for a proposed invasion of Canada. The coming of the railroad in 1850 spurred the growth of the town. Mixed feeds and grain are milled here. St. Albans is the seat of Bellows Free Academy (1930). **2** Trade city (pop. 3,558), W W Va., at the junction of the Coal river with the Kanawha, WNW of Charleston, in a rich coal, lumber, and tobacco area, settled c 1790 on the site of Fort Tackett. The battle of Scary Creek (1861) was fought near here

Saint Alexis de la Grande Baie (sētălĕk'sĭs dŭ lä grănd bā'), village (pop. 2,230), S Que., on Ha Ha Bay of the Saguenay river and SE of Chicoutimi, in a dairying and lumbering region

Saint Andrews, town (pop. 1,167), SW N.B., at the mouth of the St. Croix on Passamaquoddy Bay and just E of the Maine border. It is a summer resort, noted for golf and fishing

Saint Andrews, burgh (pop. 8,269), Fifeshire, Scotland, on St. Andrews Bay and SE of Dundee. A summer resort, it is famous for its golf courses, and its Royal and Ancient Golf Club establishes rules for the game. St. Andrews was the seat of an archbishopric by the 10th cent., the cathedral (in ruins) dates from the 12th cent. The Martyrs' Monument commemorates the burning for heresy of the Protestant reformers George Wishart, Patrick Hamilton, and others. The Univ. of St. Andrews, founded in 1411, is the oldest in Scotland. It includes the United College of St. Salvator and St. Leonard, St. Mary's College, and University College (at Dundee). See Andrew Lang, *St. Andrews* (1893).

Saint Anne, principal town on Alderney, Channel Islands.

Saint Anne, village (pop. 1,131), NE Ill., SE of Kankakee, in a farm area, founded 1852 by French settlers, inc. 1872

Saint Anthony, city (pop. 2,719), co. seat of Fremont co., E Idaho, on Henrys Fork in the Snake valley and NE of Idaho Falls, founded 1890, inc. 1905. Potatoes, alfalfa, and seed peas are among the products of irrigated farming. St. Anthony is the headquarters of Targhee National Forest, and tourists go from the city to see the Crystal Falls Cave. A state industrial school is near by. To the south is the site of the fur-trading post founded by Andrew Henry in 1810

Saint Anthony, Falls of see MINNEAPOLIS, Minn.

Saint-Arnaud, Armand Jacques Leroy de (ärmä' zhäk' lurwä' dù sētärnō'), 1801-54, marshal of France. He was one of the generals summoned from Africa by Louis Napoleon (later NAPOLEON III) to support his coup d'état of Dec., 1851. Saint-Arnaud played a major part in the execution of the coup. He commanded the French troops in the Crimean War and won the victory of the Alma shortly before he died of cholera. Canrobert succeeded him in command

Saint Asaph (sunt ă'suf), rural district (pop. 7,752), Flintshire, Wales, SE of Rhyl and on the Elwy and Clwyd rivers. The small cathedral, restored by Sir George Gilbert Scott, has a collection of early Bibles and other religious books. The ancient monastery of Llanelwy in this cathedral city was renamed to honor Asaph, a 6th-century abbot, traditionally he is called a bishop. Morgan, translator of the Bible into Welsh, was bishop here. In 1920 the bishop of St. Asaph became Anglican archbishop for Wales

Saint Augustine (sānt ô'gustēn), city (pop. 12,090), co. seat of St. Johns co., NE Fla., on a narrow peninsula between the Matanzas and San Sebastian rivers and separated from the Atlantic by Anastasia Island. It is a port of entry, a shrimping and shipping center, and a popular winter and summer resort. Oldest city in the United States, it was founded in early Sept., 1565, by Pedro MENÉNDEZ DE AVILÉS, on the site of an ancient Indian village and near the place where Ponce de León landed in 1513. Menéndez named his fort for St. Augustine, on whose day (Aug. 28) he entered the harbor. The town was burned and sacked by the English buccaneers Sir Francis Drake (1586) and Capt. John Davis (1665). It withstood attacks by South Carolinians in 1702-3 and by Oglethorpe in 1740. St. Augustine passed to the English in 1763, in the Revolutionary War, Tories flocked to it from the North, leaving the city when it reverted to Spain in 1783. With cession to the United States in 1821, the city's growth was rapid until checked by the Seminole War. Union troops occupied St. Augustine in March, 1862, and held it throughout the Civil War. Much of the colonial atmosphere is retained. Notable among the old landmarks is the Castillo de San Marcos, the oldest masonry fort in the country (built 1672-1756). It was called Fort St. Mark in the British occupation and became Fort Marion in 1825. Made a national monument in 1924 (18.51 acres), it was renamed Castillo de San Marcos in 1942. Fort Matanzas at the southern entrance to the Matanzas river, c 15 mi. south of the city, is also a national monument (c 228 acres, est. 1924). It was built by the Spanish in 1737, near the site where Menéndez massacred Jean Ribaut and his company of French Huguenots in 1565. The Castillo, Fort Matanzas, and the old city gates (1804), which replaced earlier ones, were all built of native coquina rock. Other places of interest in the city are the old schoolhouse, the so-called "oldest house" in the United States (said to date from the late 16th cent.), the slave market, the cathedral (1793-97, partly restored), and the Flagler Memorial Church

Saint Augustine's College see RALEIGH, N C

Saint Austell (sunt ô'stul), urban district (pop. 8,295), Cornwall, England, near St. Austell Bay. It is a center of kaolin production and shipping and a resort. Cornish china clay was first discovered here c 1755 by William Cookworthy

Saint Barthélemy, island, West Indies see GUADELOUPE

Saint Bartholomew's Day, massacre of, massacre of French Protestant leaders which began in Paris on Aug. 24, 1572. It was preceded, on Aug. 22, by an attempt, suborned by CATHERINE DE' MEDICI, on the life of Admiral COLIGNY. The failure of the attempt led to the formulation of the plan for a general massacre, for which an opportunity was furnished by the presence in Paris of numerous Protestant chieftains, guests at the wedding of Henry of Navarre (later KING HENRY IV). Involved with Catherine in the scheme were the duke of Anjou, later King HENRY III, Henri, 3d duc de GUISE, and the reluctant King CHARLES IX. Coligny was the first victim, his death was followed by the killing of minor chiefs and of all Huguenots within reach of the soldiery and the mob. The massacre spread from Paris into other sections of France. Its result was the resumption of civil war (see RELIGION, WARS OF).

Saint Benoît Joseph Labre (sē bunwä' zhōzĕf' läbrù), village (pop. 1,593), E Que., on the Matapedia river and E of Rimouski, at the base of the Gaspé Peninsula, in a lumbering and dairy-farming area

Saint Bernard (sānt burnärd'), city (pop. 7,387), SW Ohio, a suburb of Cincinnati. Soap and industrial chemicals are made here

Saint Bernard (sānt bûrnärd'), two Alpine passes, both used since antiquity. The **Great Saint Ber-**

nard, between Valais canton, Switzerland, and Val d'Aosta, Italy, was crossed by Charlemagne, Emperor Henry IV, Frederick Barbarossa, and Napoleon I The hospice (alt 8,114 ft), founded (c.982) by St Bernard of Menthon, is in charge of Augustinian friars The St Bernard dogs bred by them were formerly used to search for lost travelers. Here are a hotel, a church, a library, and a scientific institute A ruined temple of Jupiter stands at the summit The Great St Bernard Road was completed in 1905 The **Little Saint Bernard**, with a road from Val d'Aosta, Italy, to Savoy, France, also has a hospice (alt 7,080 ft) founded by St Bernard of Menthon

Saint Bernard dog, largest of domestic dogs It was named after St Bernard de Menthon, founder (c 982) of the famous hospice in the Swiss Alps It is believed that the dogs were used from the 17th cent by the monks for rescuing lost persons in the mountains However, the name for the dogs was not commonly used until after 1880, when it was officially recognized as a breed name The origin of the dog is uncertain, but it is believed that the Molossus hound introduced from Asia is included in its ancestry, it is believed that a cross with the Newfoundland dog, in 1830, contributed the long hair to the breed Powerfully built, intelligent, and possessed of a keen sense of smell, the dogs proved themselves invaluable in Alpine rescue work With the decrease in foot travel through the Alps their work diminished Modern St Bernards are found in two varieties, the smooth-coated (with dense, short hair) and the rough-coated or long-haired variety (having moderately long hair, ranging from flat to slightly wavy) In color the coat may be white with red markings, red with white markings, white with brindle, or brindle with white The muzzle is white, the face is characteristically marked with black, and the forehead is wrinkled The body and head are massive Males should measure a minimum of 27 5 in at the shoulder, some weigh more than 200 lb

Saint Bonaventure College see ALLEGANY, N Y

Saint Boniface (sānt bŏ'nĭfās), city (pop 21,613), SE Man, on the Red River opposite Winnipeg, founded 1818 as a Roman Catholic mission, inc 1880. It is an industrial center, with oil refineries, paper, lumber, and flour mills, grain elevators, breweries, and varied manufactures The population is largely French A Roman Catholic cathedral is here, as is St Boniface College, affiliated with the Univ of Manitoba In 1938 a memorial was erected commemorating the 300th anniversary of the explorations of Vérendrye in the region

Saint-Brieuc (sĕ-brēû'), town (pop 28,596), capital of Côtes-du-Nord dept, NW France, on the English Channel It is named after a Welsh missionary (6th or 7th cent), who founded a monastery here An episcopal see since the 9th cent, Saint-Brieuc played an important part in Breton history There are many old houses and a Gothic cathedral

Saint Casimir (sĕ kă'zĭmēr, kăzēmēr'), village (pop 1,307), S Que, on the Ste Anne river and W of Quebec, in a lumbering and dairy-farming area

Saint Catharines, city (pop 30,275), S Ont, near Lake Ontario, on the Welland Ship Canal and S of Toronto, founded 1792 as an Anglican mission An industrial center in a rich fruitgrowing region, it has canneries and wineries as well as textile and paper mills, hardware, tools, motors, electrical equipment, and clothing are manufactured Its equable climate and mineral springs make it a popular resort Ridley College is here, as is a sanatorium for tubercular cases

Saint Catharine's College. see CAMBRIDGE UNIVERSITY.

Saint Césaire (sĕ sāzĕr'), village (pop 1,209), S Que, on the Yamaska river and E of Montreal

Saint-Chamond (sĕ-shămō'), town (pop 14,546), Loire dept, E central France, in the SAINT-ÉTIENNE industrial district

Saint Charles. **1** City (pop 5,870), NE Ill, W of Chicago and on the Fox river, founded 1834, inc 1839 It is a residential and industrial center in a farm area. Near by is the state school for boys **2** Village (pop 1,300), S Mich, on the Bad River and SW of Saginaw, inc before 1875. There are bituminous coal mines here **3** City (pop. 1,507), SE Minn., E of Rochester, in a farm area, platted 1854, inc 1870 Whitewater State Park is near **4** City (pop 10,803), co seat of St Charles co, E Mo, on the low bluffs along the north bank of the Missouri river and near St Louis It was settled by French traders in 1769 and was incorporated as a village in 1809, as a city in 1849 The earliest permanent white settlement on the Missouri river, St Charles was an important trading post, a starting point on the westward Boone's Lick Trail, and the state capital until 1826 It is the trade and distribution center of a rich farm area, with various manufactures, among which are shoes and metal products Lindenwood College for Women (Presbyterian, 1827) and Sacred Heart Convent (erected 1838) are here

Saint Charles, Cape, eastern point of Labrador, at the north end of the Strait of Belle Isle

Saint Christopher, British West Indies see SAINT KITTS.

St. Clair, Arthur, 1734–1818, American general, b. Thurso, Caithness co., Scotland. He left the Univ. of Edinburgh to become (1757) an ensign in the British army and served in the French and Indian Wars with Lord Jeffery Amherst at Louisburg and with Gen. James Wolfe at Quebec. In 1762 he resigned his commission, settled in Boston, then moved to Pennsylvania, where he purchased property and held a number of civil offices. In the American Revolution he served in the expedition to Canada as colonel of a regiment of militia which he raised (1775) and was made a brigadier general a year later Authorized by George Washington to organize the New Jersey militia, he fought in the battles of Trenton and Princeton As major general he took command (1777) at Fort Ticonderoga, which he evacuated without a fight to superior British forces A court-martial in 1778 cleared him of blame, and he served afterwards in several minor capacities In 1785–87 St Clair was a delegate to the Continental Congress, serving as its president in 1787 He was appointed (1787) the first governor of the Northwest Territory, established its capital at Cincinnati, and became (1791) commander in chief of the forces fighting the Indians, led at the time by the able LITTLE TURTLE In moving his army to attack he was surprised and defeated near the Miami villages and subsequently resigned his commission (1792), although a congressional investigating committee later exonerated him His arbitrary rule as governor secured him many enemies, and in 1802 he was removed by Thomas Jefferson after condemning the act making Ohio a state He published in 1812 a defense of his conduct in the Indian wars and spent his later years in poverty. See W H Smith, ed, *The St Clair Papers* (2 vols, 1882), biography by F E Wilson (1944)

Saint Clair. **1** City (pop 3,471), S Mich, on the St Clair river at the mouth of the Pine, laid out 1818, inc as a village 1850, as a city 1858 It has large saltworks and manufactures automobile parts The Indian lake shore trail crosses the site **2** Farm trading town (pop. 1,410), E Mo, SW of St Louis, settled in the 1840s Coal, lead, zinc, and barite are found in the area **3** Borough (pop 6,809), E Pa, near Pottsville, laid out 1831, inc 1850. It has anthracite mines and textile mills

Saint Clair, Lake, c 27 mi long and 25 mi wide at its greatest breadth, between S Ontario and SE Michigan Its outlet is the Detroit river, which flows S to Lake Erie, and its inlet is the St Clair river, which flows c 41 mi S from Lake Huron

Saint Clair Shores, village (pop 10,405), SE Mich, on Lake St Clair and NE of Detroit, inc 1925

Saint Clairsville, village (pop 2,797), co seat of Belmont co, E Ohio, W of Wheeling, W Va, laid out 1801 It is a trade center Benjamin Lundy founded (1815) here the antislavery Union Humane Society

Saint-Claude (sĕ-klōd'), town (pop 9,865), Jura dept, E France It has manufactures, particularly of brier pipes, and is also a favorite resort in the French Jura mts The town originated with the foundation (5th cent) of a monastery The abbey church is now the cathedral The monks of Saint-Claude, who had held the land under mortmain and had developed the brier industry of the region, were among the few landowners in France who until 1789 kept their peasants in complete servitude Voltaire, in a spirited but unsuccessful polemic, brought the condition to public attention The abbey was suppressed in the French Revolution

Saint-Cloud (sĕ-klōō'), town (pop 17,068), Seine-et-Oise dept, N France, on the Seine, a western suburb of Paris Its name derives from St Clodoald (6th cent), a grandson of Clovis I, who built a monastery here The palace at Saint-Cloud, built in 1572 and destroyed by fire in the siege of Paris (1870), was a residence of several rulers, particularly Napoleon I, who was declared emperor here by the senate in 1804

Saint Cloud (sānt kloud') **1** City (pop 2,042), E central Fla, N of Lake Kissimmee, between Tohopekaliga and East Tohopekaliga lakes, settled in the 1880s **2** City (pop 24,173), co seat of Stearns co, central Minn., on the Mississippi and NW of Minneapolis, in a farm region, settled 1852, platted 1855, inc as a village 1857, as a city 1868 Granite has been quarried here since 1868, granite finishing is a leading industry A state teachers college (1869), a state reformatory (1889), a U S veterans' hospital (1924), and an orphans' home (1924) are here

Saint Croix see VIRGIN ISLANDS OF THE UNITED STATES

Saint Croix (sānt kroi') [Fr. =Holy Cross] **1** River rising in the Chiputneticook Lakes on the Maine–N.B. border and flowing 75 mi. S and E to Passamaquoddy Bay, forming the international boundary. Champlain and the sieur de Monts planted a colony on St Croix, or Dochet, Island (now part of Washington co, Maine, below Calais) near the mouth of the river in 1604 but moved the surviving settlers to Port Royal (now Annapolis Royal) in 1605 See Guy Murchie, *Saint Croix, the Sentinel River* (1947). **2** River rising in N Wisconsin in the lake region and flowing SW, then S, through Lake St Croix to the Mississippi at Prescott, Wis. It forms part of the Wisconsin-Minnesota boundary. Its beautiful Dalles are near St Croix Falls.

Saint Croix Falls, village (pop 1,007), NW Wis, on the St Croix and NE of St Paul, Minn., settled 1837, inc 1888 It was an early lumbering center Interstate Park contains the Old Man of the Dalles and other rock formations.

Saint-Cyr, Laurent Gouvion, marquis de. see GOUVION-SAINT-CYR, LAURENT, MARQUIS DE.

Saint-Cyr-l'École (sĕ-sēr'-lākōl'), town (pop. 4,288), Seine-et-Oise dept, N central France, W of Versailles. Here in 1684 Mme de Maintenon founded a famous school for daughters of impoverished noblemen Racine's *Esther* and *Athalie* were first performed here by the pupils Mme de Maintenon is buried in the chapel The building later housed the famous military academy (the West Point of France) founded by Napoleon in 1808. It was destroyed (1944) in the Second World War, and the school was temporarily transferred to Coëtquidam in Brittany.

Saint-Cyran, Abbé de: see DUVERGIER DE HAURANNE, JEAN

Saint David's, village, Pembrokeshire, Wales, NW of Haverfordwest An ancient close, of whose ruined walls one gate remains, encompassed monastic buildings here The cathedral, the most famous and one of the finest in Wales, is mainly Transitional Norman in style, built of red-violet stone Among its features is the base of the shrine of St David. The cathedral was added to and altered chiefly by Bishops Martyn, Gower, and Vaughan and was restored by Sir George Gilbert Scott Across the Alan or Alun brook, which flows past the cathedral, are the imposing ruins of the palace of Bishop Gower (14th cent) St David's (ancient Menevia) was for centuries one of the most important places of pilgrimage in Great Britain, several old roads focus here **Saint David's Head**, 2½ mi northwest of the village, is the most westerly point of Wales.

St. Denis, Ruth (sānt dĕ'nĭs), 1880–, American dancer, b Newark, N J, whose real name is Ruth Dennis She made her debut (1906) in a recital of highly imaginative and spectacular Oriental dances which she performed in Europe (1906–8) and in the United States (1910) With Ted Shawn, whom she married (1914), St Denis founded the Denishawn School in Los Angeles and in New York (1920). A divergence in their views led her to found, with La Meri, the Authentic School of Oriental Dancing (1940) An outstanding American pioneer of the dance, she has trained such dancers as Martha Graham, Doris Humphrey, and Charles Weidman Her dances include *Radha*, *Incense*, *Cobras*, *Nautch*, and the *Masque of Mary*. See her autobiographical *An Unfinished Life* (1939).

Saint-Denis (sānt-dĕ'nĭs, Fr sĕ-dunĕ'), town (pop 68,595), Seine dept, N France, a northern suburb of Paris Today dominated by machine and chemical industries, it has a long history Saint-Denis grew around a Benedictine abbey founded (626) by Dagobert I at the tomb of St DENIS, patron saint of France The early Gothic basilica (12th–13th cent), restored after its devastation in the French Revolution, profoundly influenced the evolution of Gothic architecture It contains the tombs of the kings of France Particularly remarkable are the tombs of Francis I by Philibert DELORME and of Henry II by Germain PILON Louis XVI and Marie Antoinette are buried in the crypt The basilica was the scene (1593) of Henry IV's abjuration of Protestantism The abbey (rebuilt in the 18th cent and now a school) played a very important role in French medieval history Its banner, the oriflamme, was the royal standard from the reign of Louis VI to that of Charles VI. It was here that Abelard became a monk

Saint Denis (sānt dĕ'nĭs, Fr sĕ dūnĕ'), town (pop 30,762), capital of Réunion It is a port on the Indian Ocean and exports sugar and rum

Saint-Dié (sĕ-dyā'), city (pop 11,423), Vosges dept, E France, in Lorraine, on the Meurthe It grew around a monastery founded in the 7th cent which later was the seat of a chapter of noble canons and a bishopric In 1944 retreating German troops dynamited its Romanesque and Gothic cathedral, set fire to the city, and partially destroyed the ancient cloisters (14th–16th cent), a large part of the population had previously been expelled, deported, or massacred Here in 1507 was printed the *Cosmographiae introductio* of Martin Waldseemüller, a geographic work which for the first time referred to the newly discovered continent as America.

Saint-Dizier (sĕ-dēzyā'), town (pop. 15,936), Haute-Marne dept, NE France, on the Marne It has a metalworking industry and trade in lumber.

Sainte Agathe des Monts (sētăgāt" dā mō'), town (pop 3,308), S Que, on the North River and NW of Montreal It is a health resort and trade center for a summer and winter recreation area

Sainte Anne de Beaupré (sānt ăn' dŭ bōprā', bō'prā, Fr sĕtăn" dŭ bōprā'), village (pop. 1,783), S Que, on the St Lawrence and NE of Quebec. It is the seat of a famous shrine established in 1620 by sailors who had been shipwrecked A chapel was built in 1658 and a large church in 1876. Burned in 1922,

the church was magnificently rebuilt, it houses relics and is one of Canada's foremost pilgrim resorts, many miraculous cures being ascribed to prayers at the shrine Mountains, a river, and falls near the village are also named for the saint

Sainte Anne de Bellevue (sĕtăn" du bĕl'vü'), town (pop 3,006), S Que , on Montreal island, WSW of Montreal In fur-trading days it was the point of departure for canoes going west and is referred to in Thomas Moore's "Canadian Boat Song" The town has lumbering and publishing industries and is the seat of Macdonald College, a branch of McGill Univ

Sainte Anne de Chicoutimi (du shĭkōō'tĭmē", shē-kōōtēmē'), village (pop 1,540), S Que , on the Saguenay opposite Chicoutimi

Sainte Anne de la Pérade, Que see LA PÉRADE

Sainte-Baume (sĕt-bōm'), grotto near the village of Saint-Maximin-la-Sainte-Baume (pop 1,998), Var dept , SE France, in the Alps of lower Provence, N of Toulon Because of the legend (held utterly improbable by the Roman Catholic Church) that St Mary Magdalen lived here in penitence, the grotto became a place of pilgrimage Saint-Maximin has a fine Gothic church (13th-16th cent)

Sainte-Beuve, Charles Augustin (sharl' ōgüstĕ' sĕt-büv'), 1804–69, French literary historian and critic He studied medicine but abandoned it for literature, contributing reviews to the *Globe* as early as 1824 After attempts at writing poetry, *Les Pensées de Joseph Délorme* (1829), and a semi-autobiographical psychological novel, *Volupté* (1834), which was inspired by his love for Mme Victor Hugo, he broke with romanticism and turned to criticism His weekly articles in four reviews, collected as the *Premiers Lundis* (15 vols , 1851–62) and the *Nouveaux Lundis* (13 vols , 1863–70), are referred to as the *Causeries du lundi* (Eng tr , *Monday Chats*, 1877) He considered his great work to be *Port-Royal* (1840–60), taken in part from his lectures in 1837 at Lausanne This work, comprised of six books, is not only a history of Jansenism but of a whole section of 17th-century French society Made a member of the French Academy in 1844, he taught (1848–49) at Liège, where he lectured on Chateaubriand and his followers, and in 1857 he became a professor at the École normale supérieure, Paris He was made senator in 1865 His vast literary output reveals a critic aware of the many-sidedness of things, hesitant to limit himself by the narrowness of conclusion, and seeking always deep and constant human values See study by L F Mott (1925)

Sainte-Chapelle (sĕt-shăpĕl'), former chapel in Paris Forming part of the buildings of the Palais de Justice (once the royal palace) on the Île-de-la-Cité, it was built (1242–48) for Louis IX) (St Louis) to enshrine the Crown of Thorns and other sacred relics brought back from the Crusades It was admirably restored in the 19th cent by J B Lassus and Viollet-le-Duc Now a museum, the Sainte-Chapelle is one of the purest jewels of medieval art It consists of two chapels, one above the other, and a spire From the painted and gilded lower chapel a winding staircase leads to the porch of the upper chapel The elegant proportions and airiness of the upper chapel, its 15 magnificent stained glass windows, separated only by the width of the buttresses and reaching nearly from floor to ceiling, and its vividly painted columns and panels, combine to create the effect of a sheer blaze of color and light The Sainte-Chapelle is a unique work of art, second to no other in Paris, but its effect depends largely on the presence of sunlight

Sainte-Claire Deville, Henri Étienne (ărē' ătyĕn' sĕt-klār' duvēl'), 1818–81, French chemist, b St Thomas, West Indies He reorganized (1844) the department of sciences at the Univ of Besançon and became professor (1845) and dean there, he was professor at the École normale supérieure, Paris, from 1851 He investigated toluene (1841) and is known especially for his important theory of dissociation and for his research on the properties and preparation of various metals, especially aluminum His work on aluminum (1859) was translated in 1933

Saint Edmund Hall see OXFORD UNIVERSITY

Sainte Genevieve (sānt jĕ'nuvēv), city (pop 2,787), co seat of Ste Genevieve co , E Mo , on the Mississippi below St Louis The earliest permanent white settlement in Missouri, it was founded before 1750 by Frenchmen as a trading post The salt springs, rich bottom lands, and near-by lead mines attracted settlers The settlement was an important river port in the steamboat days Today it is the trade center of a farm area and a shipping point for the lime and marble of the region The Ste Genevieve Church (1880) is built on the site of the city's first church (1785)

Saint Elias, Mount (ĭlī'ŭs), 18,008 ft. high, in the St Elias Mts on the international border between Yukon territory and Alaska. One of the highest of North American mountains, this giant landmark was first seen by Vitus Bering on July 16, 1741. It was climbed by the duke of the Abruzzi in 1897

Malaspina Glacier rises here.

Saint Elias, Mount, Greece. see HAGIOS ILIAS.

Saint Elias Mountains, section of the Coast Ranges, SW Yukon and SE Alaska Its highest point is Mt. LOGAN; the second highest is Mt SAINT ELIAS

Saint Elmo, city (pop 2,290), S central Ill , NE of Vandalia, in an oil area; settled 1830, inc 1903 It has oil refineries, railroad shops, and brick plants

Saint Elmo's fire, luminous discharge of electricity extending into the atmosphere from some projecting or elevated object It is usually observed (often during a snowstorm or a dust storm) as brushlike fiery jets extending from the tips of a ship's mast or spar, a wing, propeller, or other part of an aircraft, a steeple, a mountain top, or even from blades of grass or horns of cattle Sometimes it plays about the head of a person, causing a tingling sensation The phenomenon occurs when the atmosphere becomes charged and an electrical potential strong enough to cause a discharge is created between an object and the air around it The amount of electricity involved is not great enough to be dangerous The appearance of St Elmo's fire is regarded as a portent of bad weather The phenomenon, also known as corposant, was long regarded with superstitious awe. See also PETER GONZALEZ, SAINT

Sainte Marie de Beauce (sĕt mărē' dŭ bōs'), village (pop 1,736), S Que., on the Chaudière river and SSE of Lévis It has plants making shoes, furniture, and textiles. The Chapel of St Anne is a pilgrimage center

Saint-Germain, Treaty of (sĕ-zhĕrmĕ'), name of several treaties signed at Saint-Germain-en-Laye, near Paris, France, The Treaty of Saint-Germain of **1570** terminated the first phase of the French religious wars (see RELIGION, WARS OF) The Treaty of Saint-Germain of **1679** made peace between France and the elector of Brandenburg at the end of the Third Dutch War Frederick William the Great Elector had to restore nearly all his conquests in Pomerania to Charles XI of Sweden, who was allied to France The Treaty of Saint-Germain of Sept 10, **1919,** was signed by the victorious Allies of the First World War on the one hand and by the new republic of AUSTRIA on the other Like the Treaty of Versailles with Germany, it contained the Covenant of the League of Nations and as a result was not ratified by the United States The treaty declared the Austro-Hungarian Monarchy dissolved The new republic of Austria, consisting of the German-speaking part of the former Austrian Empire, recognized the independence of Hungary, Czechoslovakia, Poland, and Yugoslavia (then called the kingdom of Serbs, Croats, and Slovenes) Austria was reduced not only by the loss of crownlands incorporated into Czechoslovakia, Poland, and Yugoslavia (the) "successor states") but by cession of S Tyrol, Trieste, Istria, several Dalmatian islands, and Friuli to Italy, and the cession of Bukovina to Rumania BURGENLAND, then a part of Hungary, was awarded to Austria. The Treaty of Trianon (1920) between Hungary and the Allies completed the disposition of the former Dual Monarchy Austria assumed the responsibility of the imperial Austrian government for its share in bringing about the war, but its reparations payments to the Allies actually were never exacted because of the obvious insolvency of the Austrian state An important article of the treaty was the one obliging Austria to refrain from any act which might directly or indirectly compromise its independence, this meant that Austria could not enter into political or economic union (Ger *Anschluss*) with Germany The Austrian army was limited to a force of 30,000 volunteers. There were numerous provisions dealing with Danubian navigation, the transfer of railroads, and other details involved in the breakup of a great empire into several small independent states

Saint-Germain-des-Prés (sĕ-zhĕrmĕ"-dā-prā'), historic abbey and church of Paris, on the left bank of the Seine It was founded (6th cent) by Childebert I, several Merovigian kings were buried here Both church and abbey were several times destroyed, the present church, in Romanesque style, dates from the early 11th cent It has a remarkable façade Of the old abbey, destroyed in the French Revolution, there remain only ruins, but the Renaissance palace of the abbots (16th cent) still stands near by Among the abbots were Hugh Capet and John II of Poland Mabillon and Prévost d'Exiles, among many other illustrious men, were monks at the abbey

Saint-Jean-de-Luz (sĕ-zhäⁿ'-du-lūz'), town (pop 8,848), Basses-Pyrénées dept , SW France A fishing port and fashionable beach resort on the Bay of Biscay, it is an old Basque town, whose sailors early exploited the Newfoundland fisheries

Saint Jérôme (sĕ zhārōm'), town (pop 11,329), S Que , on the North River and NW of Montreal, inc 1881. It is an industrial center, has woolen and paper mills, and manufactures rubber and wood products, shoes, and plastics. An annual Passion play is given here.

Saint Jo, city (pop 1,010), N Texas, ESE of Wichita Falls It was founded on the California Trail, throve as a cow town in the '70s, and now serves cattle ranches as well as farms that produce poultry, truck, and staple crops

St. John, Henry, Viscount Bolingbroke (sĭn'jŭ, bŏ'lĭngbrŏŏk), 1678–1751, English statesman Entering Parliament in 1701, he attached himself to Robert HARLEY and distinguished himself as a Tory advocate As a favorite of the duke of MARLBOROUGH, he became secretary for war (1704), but resigned when Harley was forced out by the Marlborough-Godolphin faction in 1708 When unpopularity of the war (see SPANISH SUCCESSION, WAR OF THE) and the Henry SACHEVERELL incident brought in (1710) a Tory ministry under Harley, St John became a secretary of state, and management of the Commons fell to him in 1711, when Harley was raised to the peerage as earl of Oxford. St John used the London Tory clubs, periodicals such as the *Examiner*, and writers such as Jonathan SWIFT to mould public opinion and carried on, despite protests of England's allies, separate peace negotiations with France The duke of ORMONDE, the British commander, was instructed to avoid military action In 1712 St John was created Viscount Bolingbroke, and by the influence of Lady Masham, Queen Anne's favorite, he became the leading figure in the government The Peace of Utrecht (1713–14) and Bolingbroke's intrigues preceding it were denounced by the Whigs, whose political influence he sought to weaken by the Schism Act and the Occasional Conformity Act, directed against dissenters He now broke with Harley, who was dismissed in 1714 Bolingbroke's true intent is not known, but it is sure that, in anticipation of a Hanoverian and Whig succession, he negotiated with the Old Pretender and began replacing Whig officers, especially in the army, with Tories Whatever plans he had were thwarted by Queen Anne's sudden death He was promptly dismissed by George I He was impeached, along with Oxford (as Harley now was styled) and Ormonde, but fled to France before the trial and was then attainted by Parliament Bolingbroke served the Pretender and helped plan the Jacobite rising of 1715, although he remained in France He soon abjured the Jacobite cause and received a pardon in 1723 and full restitution in 1725, by bribing the duchess of Kendal, one of George I's mistresses Although excluded from the House of Lords, he exerted great political influence and organized a strong opposition to Robert Walpole among the Tories and disgruntled Whigs He supported the periodical *Craftsman*, to which he contributed a famous series of letters, including a "Dissertation upon Parties," under the signature Occasional Writer He retired from politics after Walpole's electoral success in 1735 and spent most of his remaining years on his estates in France He was a friend of Voltaire and of Alexander Pope, whose *Essay on Man* reflects Bolingbroke's philosophical influence His *Idea of a Patriot King* (1749) is supposed to have helped form the political beliefs of George III His numerous writings, in a lucid but rhetorical style, greatly admired in that day, include *Letters on the Study of History* (privately printed 1735–36) and *The True Use of Retirement* (1736) One of England's great orators, Bolingbroke was one of her most undignified politicians, profligate and unstable In a period of low political morals, he fell victim of current practices and became generally distrusted, although he apparently believed sincerely in a sort of "Tory democracy" such as was later advocated by Benjamin Disraeli His works were edited by David Mallet (5 vols., 1754) and several times thereafter See his correspondence (ed by Gilbert Parke, 1798), J M Robertson, *Bolingbroke and Walpole* (1919), biographies by Thomas MacKnight (1863), J C Collins (1886), Arthur Hassall (1889, 1915), and Walter Sichel (1901–2).

St John, John Pierce (sānt jŏn'), 1833–1916, American political reformer, b Brookville, Ind He traveled in the West and in South America, fought in the Union army in the Civil War, and after 1869 practiced law in Kansas As governor of Kansas (1879–83) he successfully supported a prohibition amendment to the state constitution In 1884 he was the Prohibition party candidate for President He joined the free-silver movement and championed woman suffrage.

St John, Oliver (sĭn'jŭ), 1598?–1673, English statesman A proponent of the parliamentary cause before and during the PURITAN REVOLUTION, he did not commit himself to extreme action In 1638 he married a cousin of Oliver Cromwell, and in 1637–38 he was, by his brilliant defense of Viscount SAYE AND SELE and John HAMPDEN, drawn toward John PYM Although he served under appointment of Charles I as solicitor general (1641–43), St John remained a conspicuous opposition leader in the Long Parliament He supported Cromwell against Parliament in 1647 and was made chief justice of the common pleas (1648) He refused to take part in the trial of Charles I In 1651 St John failed to negotiate a treaty with the Dutch but secured one with Scotland Always fearful of Cromwell's power, he took no part in the government of Richard CROMWELL and cooperated with General MONCK in effecting the Restoration. In his *Case of Oliver St John* (1660) he denied complicity in Pride's Purge, the establishment of the Commonwealth, and the execution of the king, he was punished only with incapacitation for holding office He lived abroad after 1662

Saint John, city (pop 51,741), co seat of St John co, S N B, at the mouth of the St John river on the Bay of Fundy It is a major year-round port, with an excellent harbor, large dry docks, and terminal facilities and with extensive shipping connections to Europe, North and South America, and the West Indies The city is the commercial, manufacturing, and transportation center of New Brunswick, with lumber, mining, and agricultural industries, food processing, fish canning, and the making of pulp, wood, and metal products The site was visited (1604) by Champlain, and a fort and trading post was built (1631–35) by Charles de la Tour In the struggle between France and England for possession of Acadia, the fort was captured and recaptured several times, finally becoming British in 1758 when it was taken by Anglo-American forces Growth of the city dates from 1783, when a large party of Loyalists from the United States established themselves here on land grants The settlement was called Parr Town and in 1785 was incorporated with Carleton (across the harbor) and named St John, becoming the first incorporated city in Canada Benedict Arnold lived and from 1786 to 1791 conducted a business here Much of the old city was destroyed by fire in 1877 In 1912 a commission form of government was adopted Among notable features of the city are Market Slip (1783), the old Loyalist Burying Ground (1783), Martello Tower (fortification, built 1812), the old courthouse (1830), the Roman Catholic cathedral and bishop's residence (1853), the Museum of New Brunswick, and the horticultural gardens The law faculty of the Univ of New Brunswick is here

Saint John, city (pop 1,735), co seat of Stafford co, S central Kansas, WNW of Wichita, platted 1879, inc 1885 It is the trade center of a grain area.

Saint John, Virgin Islands see VIRGIN ISLANDS OF THE UNITED STATES

Saint John, river, c 400 mi long, rising in N Maine in forested, sparsely settled country and flowing NE to New Brunswick, then generally SE below Edmundston, past St Leonard, Grand Falls, Woodstock, and Fredericton to the Bay of Fundy at St John For 75 mi it forms the border between Maine and New Brunswick Its chief tributaries are the St Francis, Madawaska, Aroostook, Tobique, Nashwaak, and Oromocto rivers At Grand Falls the river drops 75 ft in a great cataract and shortly drops 50 ft more in rapids through a mile-long gorge, with walls 80 to 100 ft high At its mouth, within the city limits of St John, are the Reversing Falls Rapids, caused by the strong tides of the Bay of Fundy which force the river to reverse its flow at high tide The river was discovered (1604) by Champlain and Monts, on St John the Baptist's Day, and named by them for the saint In the 17th and 18th cent it was an important route for French, Indian, and English traders, and several trading posts were established on its banks It later became a major logging transportation route It is navigable to Fredericton for vessels of 120 tons

Saint John, Lake, area 375 sq mi, S Que, NNW of Quebec city and W of Chicoutimi, in a sparsely settled region popular for hunting and fishing It is fed by the Ashuapmuchuan Mistassini, and Peribonca rivers and drained ESE by the SAGUENAY. Roberval, Chambord, and Metabetchouan are on the south shore of the lake

Saint John of Jerusalem, Knights of see KNIGHTS HOSPITALERS.

Saint John's, town (pop c 10,000), capital of the Leeward Islands colony and of the Antigua presidency, British West Indies, a port on ANTIGUA island Because of a bar across the entrance, the harbor is limited to shallow-draft vessels

Saint John's, city (1945 pop 56,709), provincial capital, SE N F, on the northeast coast of the Avalon Peninsula It is built on hills overlooking a fine harbor and is the commercial and industrial center of the province and the base of its great fishing fleet The city's industries are chiefly related to fishing and include shipbuilding, manufacturing of fishing equipment and marine engines, and plants for storing, preserving, and processing fish There are shipping connections with ports in the United States, Canada, and Great Britain and rail connections with the west coast of the island Mink and fox farms are near by A fishing settlement was established here by Devon fishermen in the early 16th cent, and the harbor was visited (1542) by Jacques Cartier In 1583 Sir Humphrey Gilbert took possession of the region for England Since that time fishing boats from many lands have based here, and the settlement was captured and recaptured by France and England, becoming finally British in 1762 and serving as a naval base in the American Revolution and in the War of 1812 It was at St John's that Marconi heard (1901) the first transatlantic wireless message and from here that the first nonstop transatlantic flight was made in 1919 The city has been partially destroyed by fire several times In the Second World War a U S army and naval base and a Canadian air base were established just north of the city It is the site of provincial government offices, of Roman Catholic and Anglican cathedrals, several denominational schools and institutes, and an athenaeum

Saint Johns or **Saint Jean** (sĕ zhā'), city (pop 13,646), S Que, on the Richelieu and SE of Montreal It is an industrial center, with silk, paper, and hosiery mills, food canning, and varied manufactures A fort built here in the 17th cent and rebuilt in 1749 was captured by an American force under General Montgomery in 1775, but was retaken by the British and served as a supply base for Carleton and Burgoyne The city was the terminal of the first Canadian railroad (1836) from Laprairie Dawson College, a branch of McGill Univ, and the Collège de St Jean sur Richelieu, affiliated with the Univ of Montreal, are here

Saint Johns, city (pop 4,422), co seat of Clinton co, S Mich, N of Lansing, in a farm region, inc as a village 1857, as a city 1904 Peppermint is an important crop Farm implements and iron castings are made Indian mounds are near by

Saint Johns, river rising in the swampy waters of SE Florida, N of Lake Okeechobee and c 15 mi inland from the Atlantic coast at Fort Pierce It flows in a general northerly direction up the Florida peninsula for c 300 mi, passing through eight lakes and receiving many tributaries, the Oklawaha being the most important At Jacksonville it turns abruptly east and enters the Atlantic 28 mi away The river is navigable for c 170 mi, there is a 30-foot channel from Jacksonville to the ocean See Branch Cabell and A J Hanna, *The St Johns a Parade of Diversities* (1943)

St -John's-bread see CAROB

Saint Johnsbury, town (pop 9,095), co seat of Caledonia co, NE Vt, on steep bluffs above the Passumpsic and Moose rivers, NE of Montpelier, settled 1786 Its maple-sugar industry is famous, and it also has granite works, but the town's industrial development came after the invention of the platform scales by Thaddeus Fairbanks, a son of Joseph Fairbanks, who settled in 1815 Joseph Fairbanks's sons established the St Johnsbury Academy (1842) Scales, grain products, and farm implements are made here The town is the seat also of Fairbanks Museum of Natural History and of an athenaeum containing an art gallery Larkin G Mead designed the town's war monument In 1937 a municipal airport was opened

Saint John's College see CAMBRIDGE UNIVERSITY and OXFORD UNIVERSITY

Saint John's College, at Annapolis, Md, nonsectarian, for men, chartered 1784, opened 1789 as successor to King William's School (chartered 1696) In 1937 Stringfellow Barr as president and Scott Buchanan as dean put into effect a new nonelective curriculum based on the "great books" plan advocated by Robert M Hutchins The 100 classics which must be read and discussed include science and mathematics as well as literature and philosophy Seminar and tutorial methods are used

Saint John's University, at Brooklyn, N Y, Catholic (Vincentian), partly coeducational, opened 1870, chartered 1871 It became a university in 1906 but was called a college until 1933 It has a teachers college and a college of pharmacy, two colleges of arts and sciences, and schools of commerce, law, nursing education, and social action There are two sites—in downtown Brooklyn and in the Stuyvesant Heights section The university has many evening classes.

Saint Johnsville, village (pop 2,283), E central N Y, on the Mohawk and the Barge Canal and SE of Utica, settled c 1775, inc 1868 Broom handles, shoes, and knit goods are made here

Saint John's Wood, residential district of NW London, England, just N of Marylebone Lord's Cricket Ground in the district is the headquarters of the Marylebone Cricket Club, which is the authority for rules of the game. Many artists have lived in the district

St -John's-wort, any species of the large genus *Hypericum*, widely distributed herbs or shrubs with usually bright yellow flowers, for which several species are cultivated A St -John's-wort is said to have been associated with the sun-god Baldr, because of its golden flowers, and when Baldr's Day became St John's Day the plant was likewise transferred to St John It was supposed to ward off evil spirits and thunderbolts, for which it was worn or suspended above doors and windows, particularly on St John's Eve It was also considered to have curative properties, and some species are still used in the Old World for healing wounds The common St -John's-wort is *Hypericum perforatum*, naturalized in North America from Europe, it has tiny black dots on the foliage and margins of the petals This species and others are reported to cause a photosensitivity in livestock with white, or unpigmented, areas, such places sometimes developing a severe irritation if the animal is in the light after feeding on the plants Goats are thought to be

the least affected of any livestock. There are several American species of the plant.

Saint John the Divine, Cathedral of, New York city The charter for the building was granted to the Episcopal diocese in 1873, the first stone was laid in 1892, and the crypt was opened for worship in 1899 In 1941 the entire length of the cathedral was for the first time opened Begun in the Romanesque style after designs by G L Heins and C Grant La Farge, the plans were altered (1911) and a Gothic style adopted according to the design of Ralph Adams Cram The grounds also include a complete close, with a bishop's house, deanery, synod house, the Boys' Choir School, and an open-air pulpit The cathedral is on Amsterdam Ave between 110th and 113th St

Saint Joseph (sĕ zhōzĕf') **1** Village (pop 1,892), S Que , on the Chaudière and SSE of Lévis It has marble quarries **2** Village (pop 1,021), S Que , on the Yamaska opposite St Hyacinthe

Saint Joseph (sānt jō'zŭf) **1** Town (pop 1,096), parish seat of Tensas parish, E La , near the Mississippi, in a cotton-growing area A state agricultural experiment station is here, and some fine ante-bellum houses are in the vicinity **2** City (pop 8,963), co seat of Berrien co , SW Mich , on Lake Michigan at the mouth of the St Joseph and opposite BENTON HARBOR, inc as a city 1891 It is a resort with beaches and mineral springs, and it is a port and trade center for a large fruitgrowing region Its varied manufactures include machinery and rubber goods Indian villages, a Jesuit mission, Fort Miami (a French trading fort built by Robert Cavelier, sieur de LA SALLE, in 1679), and a fur-trading post occupied this site before permanent settlement began c 1830 **3** Village (pop 1 055), central Minn , just W of St Cloud The College of St Benedict (for women) is here **4** City (pop 75,711), co seat of Buchanan co , NW Mo , on bluffs above the east bank of the Missouri river and NNW of Kansas City It was laid out c 1843 on the site of a trading post founded (1826) by Joseph Robidoux In 1860 it became the eastern terminus of the pony express The city, a port of entry, is a huge livestock and grain market, with meat-packing and grain-processing plants, railroad shops, and many other industries, including a factory making serum for hog cholera Of interest are the Robidoux houses, Eugene Field's home, the pony-express stables, and the home of Jesse James The city has a coeducational junior college

Saint Joseph, river, c 210 mi long, rising in S Michigan, near Hillsdale, and flowing generally westward in wide curves to Lake Michigan between St Joseph and Benton Harbor, Mich South Bend, Ind , lies on the river, which was an important route for Indians, explorers, fur traders, and pioneers, portages connected it with rivers flowing to the Ohio and to Lake Erie

Saint Joseph d'Alma (sĕ zhōzĕf" dalmä', dăl'mu), town (pop 6,449), S Que , on the Saguenay near Lake St John and WNW of Chicoutimi, inc 1924 Its industries include lumbering, wool carding, and manufacturing of paper products and bricks

Saint Joseph de Grantham (sānt jō'zŭf du grăn'tum), town (pop 5,556), S Que , just SW of Drummondville It is a market center for a dairying and pig-raising region

Saint Joseph de la Rivière Bleue, Que see RIVIÈRE BLEUE

Saint Joseph de Sorel (sĕ zhōzĕf" du sōrĕl'), town (pop 2,207), S Que , on the St Lawrence and at the mouth of the Richelieu just opposite Sorel, in a dairying and fruitgrowing area

Saint Jovite (sĕ zhōvēt'), village (pop 1,059), S Que , NW of Montreal It is a skiing resort in the Laurentians

Saint-Just, Louis de (lwē'dŭ sĕ-zhüst'), 1767–94, French revolutionist A member of the Convention from 1792, he became a favorite of Robespierre and was (1793–94) a member of the "triumvirate" with Robespierre and Couthon in the Committee of Public Safety (see REIGN OF TERROR) As commissioner (1793) with the army of the Rhine, he was credited with the successful operations that drove the allies beyond the French border On his return he was president of the Convention He fully supported Robespierre in the destruction of the Hébertists and Dantonists, and he shared Robespierre's doctrinaire interpretation of J J Rousseau's political teachings He fanatically believed in the possibility of a perfect state, based on Spartan virtue, which would bring happiness on earth At the coup d'état of the 9 THERMIDOR, Saint-Just was supposed to deliver the speech that was to save the day for Robespierre, but he was not permitted to finish it. He was guillotined with Robespierre Saint-Just's youthful beauty and his terrifying virtue made him known as the "archangel of the Revolution" See biographies by Geoffrey Bruun (1932), E N Curtis (1935), and J B Morton (1941)

Saint Just or **Saint Just-in-Penwith** (pĕn'wĭth), urban district (pop 4,359), Cornwall, England, W of Penzance It has a 15th-century church and one of the oldest Christian tombs in England Near the town is the amphitheater called St. Just Round, a scene of early miracle plays.

Saint Kilda or **Hirta,** island, off NW Scotland, in Inverness-shire, westernmost of the Outer Hebrides, W of North Uist It is c 3¼ mi long and 1½ mi wide The shores are precipitous except at the southeast, where there is a landing place, and rise in the northeast to 1,220 ft at Conagher The Macleods owned the isle for centuries In 1930 the 36 inhabitants were removed at their own request and settled in Argyllshire. The island is now a bird sanctuary

Saint Kitts or **Saint Christopher,** island (68 sq mi), British West Indies, in the LEEWARD ISLANDS It is the chief island of the St Kitts–Nevis presidency (pop 46,253) and has BASSETERRE, the capital Nevis (50 sq mi) is included in the presidency, its chief settlement is Charlestown, the birthplace of Alexander Hamilton The two islands are separated only by a narrow strait (2 mi wide) Both islands are mountainous, volcanic in origin, and notable for their scenery Anguilla (34 sq mi) and small Sombrero are dependencies The islands yield sugar, molasses, cotton, salt, and coconuts St Kitts and Nevis were discovered by Columbus in 1493, but were not settled until the British and the French (under ESNAMBUC) arrived on St Kitts in 1625 Nevis was first settled by the British in 1628 The islands changed hands in the great colonial wars but were awarded to Great Britain by the Peace of Utrecht (1713) The French briefly occupied them at the end of the American Revolution

Saint Lambert (sānt lăm'bûrt), city (pop 6,417), S Que., inc 1921 It is a residential suburb across the St Lawrence from Montreal

St. Laurent, Louis Stephen (sĕ lôrä'), 1882–, Canadian lawyer and statesman, b Quebec prov , of French Canadian and Irish Canadian parentage, educated at St Charles College, Sherbrooke, and at Laval Univ Called to the bar in 1905, he early became a well-known lawyer in the city of Quebec He was president (1930–32) of the Canadian Bar Association In 1941 he entered political life as minister of justice and attorney general in the Mackenzie King government, he was later minister of external affairs (1946–48) Selected (Aug , 1948) by a national convention to succeed King as leader of the Liberal party, St Laurent took office (Nov , 1948) as prime minister of the dominion after King's retirement

Saint Laurent (sĕ lôrä'), town (pop 6,242), S Que , on Montreal island, W suburb of Montreal

Saint Lawrence, one of the principal rivers of North America It is the outlet of the Great Lakes, which it links to the Gulf of St Lawrence to form a waterway c 2,350 mi long from the western end of Lake Superior to the Atlantic The St Lawrence proper issues from the northeast end of Lake Ontario and flows 744 mi northeast to its mouth on the Gulf of St Lawrence, N of Cape Gaspé Northeastward from Lake Ontario the river forms c 114 mi of the international boundary between New York and Ontario Here lie the scenic Thousand Islands (between Kingston and Brockville, Ont) and the International Rapids section, c 48 mi long (below Ogdensburg, N Y) Below the rapids the river widens into Lake St Francis, then passes into the province of Quebec Shortly it widens again into Lake St Louis, then descends through the Lachine Rapids to Montreal, head of navigation for ocean-going vessels Between Sorel and Trois Rivières is Lake St Peter, a widened section c 28 mi long Below the city of Quebec the river is tidal It increases gradually in width to c 90 mi at its mouth In its course it cuts through a part of the Laurentian Plateau The river's principal tributaries from the south are the Richelieu (linking the St Lawrence with Lake Champlain and the Hudson) and the St Francis, its main affluents from the north are the Ottawa, the St Maurice, and the Saguenay rivers The St Lawrence is an important source of hydroelectric power, agreements between the United States and Canada govern power distribution and navigation in the international section Canals have been constructed around the rapids, making the entire river navigable by vessels of limited draft The most important cities and ports along the river are Ogdensburg, N Y , Kingston, Brockville, and Cornwall, Ont , and Montreal, Sorel, Trois Rivières, Quebec city, and Lévis, Que The many bridges which cross the St Lawrence include the Thousand Islands International Bridge (1938), the Roosevelt International Bridge (1934) between Cornwall, Ont , and Rooseveltown, N Y , the Victoria Bridge (remodeled 1898) at Montreal, and the Quebec Bridge (1917), near Quebec The St Lawrence was visited in 1534 by Jacques CARTIER, in 1535 he ascended it as far as Montreal Quebec was settled (1608) by Samuel de CHAMPLAIN The river system was long a highway for explorers, fur traders, and missionaries. The valley remained in the possession of the French until Canada was surrendered to the British at the close of the French and Indian Wars in 1763 After the establishment of the independence of the United States the river became an international boundary, but British influence was generally dominant over the whole St. Lawrence and most of its southern tributaries until after the War of 1812 Since then all questions regarding the St. Lawrence system have been settled by arbitration. The GREAT LAKES–SAINT LAWRENCE SEAWAY AND POWER PROJECT for improved navigation and new water-power sites has long been under discussion. See J. C Hopkins, *French Canada and the St Lawrence* (1913), Henry Beston, *The St Lawrence* (1942).

Saint Lawrence, Gulf of, large bay of the Atlantic, SE Canada, extending 250 mi from the mouth of the SAINT LAWRENCE river to Newfoundland on the east At its greatest width (northeast-southwest) it is c 500 mi It is bounded on the south by Nova Scotia, on the west by New Brunswick and the Gaspé Peninsula, and on the north by Quebec, in the Gulf are Prince Edward Island, Anticosti Island, the Magdalen Islands, and numerous small islands near its north shore Chaleur Bay, a west inlet, lies between the Gaspé Peninsula and New Brunswick The Strait of Belle Isle, Cabot Strait, and the Strait of Canso lead to the Atlantic. The Gulf is subject to frequent fog and is closed to navigation by ice from early December to mid-April It was visited by explorers before the 16th cent , and it has important fishing grounds, especially cod Since 1936 the government has protected the cod fisheries by extermination of porpoises

Saint Lawrence Island, 90 mi long and 8 to 22 mi wide, off W Alaska, in the Bering Sea It is a barren, snow-covered island, inhabited by Eskimo engaged in whaling and fox trapping It was discovered by Vitus Bering on St Lawrence's Day, 1728 Since 1881 several archaeological expeditions have visited the island to study remains of primitive Eskimo culture See H B Collins, Jr , *Archeology of St. Lawrence Island, Alaska* (1937).

Saint Lawrence Islands National Park, 189 4 acres, S Ont , in the THOUSAND ISLANDS, est 1914 It contains 13 Canadian islands and some adjacent mainland between Kingston and Brockville The islands are wooded and have public recreational facilities

Saint Lawrence University see CANTON, N Y

St. Leger, Barry, 1737–89, British officer in the American Revolution In the French and Indian War he served at Louisburg (1758) and with Wolfe at Quebec He was given (1777) command of the Mohawk valley wing of the British attack that was ended by the SARATOGA CAMPAIGN St Leger's force, composed mostly of Indians and Tories, was intended to come down the valley, then meet Burgoyne at Albany St Leger laid successful siege to Fort Stanwix and ambushed at Oriskany a relief force led by Nicholas Herkimer, but his strength was depleted He retreated to Canada before Benedict Arnold's advance

Saint Leonard, town (pop 1,095), NW N B , on the St John river and NW of Grand Falls, in a potato-growing region

Saint Leonards, Sussex East, England see HASTINGS

Saint Lin, Que see LAURENTIDES

Saint-Lô (sĕ-lō'), town (1936 pop 10,009, 1946 pop 5,196), capital of Manche dept , NW France, in Normandy An ancient town, it was pillaged by the Norsemen (889), by Geoffrey Plantagenet (1141), by Edward III of England (1346), and by the Huguenots (16th cent), and it was partially destroyed during the NORMANDY CAMPAIGN of 1944

Saint-Louis (sĕ-lwē'), town (pop c 51,000), capital of Senegal, on the Senegal river, founded c 1658 by the French It is a port handling Atlantic shipping and is the terminus of a railroad from Dakar Peanuts, hides, and skins are exported

Saint Louis (sānt lōō'ĭs) **1** City (pop 3,039), S Mich , on the Pine river and W of Saginaw, settled 1849, inc as a city 1891 Oil found in the vicinity is refined here, and beet sugar, flour, and dairy products are made There are mineral springs **2** City (pop 816,048), E Mo , largest city of the state, on the west bank of the Mississippi some miles below the mouth of the Missouri Pierre LACLÈDE in 1763 chose this spot for a fur-trading post and in 1764 14-year-old Auguste CHOUTEAU built it. In honor of King Louis XV of France, it was named for his "name" saint, Louis IX of France It was transferred to the Spanish in 1770 in accord with earlier treaty agreement, retroceded to France in Napoleon's day, and sold with the other lands of the LOUISIANA PURCHASE to the United States, but the population and customs remained predominantly French until well into the 19th cent This gateway city to the Missouri and the West was the market and supply point for fur traders such as Manuel Lisa and the later mountain men and for explorers, notably the Lewis and Clark expedition The town, incorporated in 1808, did not grow rapidly until after the War of 1812, when flatboat immigrants came in numbers to people the West St Louis became a city in 1823 and grew to be one of the greatest of U.S. river ports Even after the railroads came, the river steamers were at the peak of their glory After the Civil War—in which St Louis was Unionist in sympathy—industry, already planted in the city, expanded greatly Already many German immigrants had come and had helped to foster manufacturing, though their traditionally noted contributions were brewing and interest in music.

St. Louis today has a fine symphony orchestra and presents operatic works in the municipal open-air theater Though it has largely turned from the river, the city is one of the great traffic handlers of the nation There are five bridges across the Mississippi; the first, constructed by James B Eads, still stands St. Louis is a market for farm produce and livestock as well as for furs, wool, and lumber. Its many factories make diverse products —stoves, machinery, iron and steel, drugs and chemicals, liquor, and foodstuffs It is also a banking and financial center and a dispenser of learning and the arts Saint Louis University, Washington University, and Concordia Theological Seminary (Lutheran) are here There is a notable art museum, and the St. Louis *Post-Dispatch* is one of the distinguished newspapers of the country Forest Park, the largest of the many city parks, has the Jefferson memorial building, which recalls the Louisiana Purchase Exposition of 1904 (the "St Louis Fair") and now houses the Missouri Historical Society The botanical garden called Shaw's Garden (officially named the Missouri Botanical Garden) is well known The civic center has many imposing public buildings, and the Jefferson National Expansion Memorial along the water front was projected in 1935 to preserve such historical buildings as the old courthouse (1839–62), the old cathedral (1831–34), and the old rock house built in 1818 by the Missouri Fur Company The birthplace of Eugene Field is now a museum Near by is the military establishment of Jefferson Barracks, with an air base and a national cemetery.

Saint Louis Park (sānt lōō'is park'), manufacturing village (pop 7,737), E Minn , southwestern suburb of Minneapolis, settled 1853, inc 1886 It has the Hennepin County Historical Society museum

Saint Louis University, mainly at St Louis, Catholic (Jesuit), for men and women, opened 1818, the oldest college W of the Mississippi, chartered as a university 1832 It includes University College, colleges of arts and sciences (one at Florissant, Mo), schools of commerce and finance, dentistry, divinity (at St Marys, Kansas), law, medicine, nursing, philosophy and science, and social service, Parks College of Aeronautical Technology (at East St Louis, Ill), Institute of Geophysical Technology, and corporate colleges for women—Fontbonne, Maryville, and Notre Dame Junior College (all at St Louis), Webster (at Webster Groves, Mo), and St Mary's (junior, at O'Fallon, Mo). There are a seismograph, an observatory, and a radio station

Saint Lucia (sānt lōō'shu, -shēu), island (233 sq mi ; pop 72,055), British West Indies, coterminous with St Lucia colony, part of the Windward Islands The capital is Castries The mountains rise abruptly from the sea, creating startlingly lovely scenic effects The forests of the mountain slopes yield fine cabinet woods, and the volcanic soil is rich The island exports sugar, copra, and cacao, and lesser amounts of lime juice and lime oil, spices, honey, hides, rum, coconuts, logwood, and bananas Columbus probably discovered it in 1502 The British attempted to colonize it early in the 17th cent , but were beaten back by the fierce Carib Indians The French signed a treaty with the Carib in 1660, and St Lucia was much contested in the imperial warfare until the British gained permanent control in 1803 French culture has left an indelible mark, and the Negroes, who, with an admixture of Carib, make up the bulk of the population, speak a French patois In 1940 the United States obtained a 99-year lease to a naval base on St Lucia

Saint-Malo (sĕ-mälō'), town (pop 10,873), Ille-et-Vilaine dept, NW France, in Brittany, a port on the English Channel It was built (9th cent) on a rocky promontory by refugees fleeing the Norman raids on Saint-Servan, a town opposite Saint-Malo across an inlet of the Rance estuary, they named Saint-Malo after a 6th-century Welsh missionary. Its prosperity as a seaport dates from Jacques Cartier's exploration of E Canada Saint-Malo was the home of Duguay-Trouin, Surcouf, and other naval heroes. The English tried repeatedly (17th and 18th cent) to destroy its fortified port and the fleet stationed here Saint-Malo is famous for its old ramparts and its 17th-century houses, much was destroyed in the Second World War, particularly in the 11-day siege of the citadel constructed by the Germans on an island in the harbor (Aug , 1944) The Gothic and Renaissance cathedral was heavily damaged Saint-Malo was the birthplace of Châteaubriand, his tomb, planned by himself, is on a rock in the harbor.

Saint Marc des Carrières (sĕ märk" dā käryĕr'), village (pop 2,118), S Que , W of Quebec, in a limestone-quarrying, lumbering, and dairying area.

Saint Maries (sānt mâ'rēs), city (pop 2,234), co. seat of Benewah co , N Idaho, SE of Coeur d'Alene Lake at the confluence of the St. Joe and St. Maries rivers, settled 1888, inc. 1902 Father P. J. De Smet founded a mission for the Coeur d'Alene Indians on the site in 1842. This lumbering town is today headquarters of the St Joe National Forest.

Saint Mark's Church, Venice, named after the tutelary saint of Venice. The original Romanesque basilical church, built in the 9th cent as a shrine for the saint's bones, was destroyed by fire in 976 Byzantine architects assisted in its reconstruction, the main fabric being completed c.1071 In the 12th and following centuries through alterations and elaborate adornments it became a splendid Byzantine monument, reflecting Venice's preeminent position in trade with the East In the 15th cent the façade received Gothic additions The present structure is thus a mixture of Byzantine and Gothic and incorporates materials taken from temples and Eastern ruins Its plan is a Greek cross, with a dome over the center and one over each arm of the cross Across the west front extends a vestibule from which five portals open upon the Piazza San Marco The façade is incrusted with marble slabs and glass mosaics In the interior the lower walls are sheathed with veined marbles. The vaults and domes are completely covered with beautifully colored mosaics spread on a golden background These varied materials combine into a unique harmonic architectural polychromy, effectively illuminated by a hazy light admitted through narrow openings in the domes The Four Horses of St Mark's, in gilded bronze, stand upon the gallery over the main entrance The only existing specimen of an ancient quadriga, they are believed to have adorned Nero's triumphal arch in Rome They were later moved to Constantinople and in 1204 were brought to Venice In 1797 Napoleon carried them off to Paris to adorn the Arc de Triomphe du Carrousel, but in 1815 Francis I of Austria returned them to Venice

Saint-Martin, Louis Claude, marquis de (lwē' klōd' märkē' du sĕ-martĕ'), 1743–1803, French mystic He wrote under the name of *le Philosophe inconnu* [the unknown philosopher] Influenced at first by the Spanish mystic Martínez Pasquales, Saint-Martin was later affected by the mysticism of Jakob Boehme, whose work he translated His own writings include *Des erreurs et de la vérité* (1775), *L'Homme de desir* (1790), and *Le Nouvel Homme* (1792) See biography by A E Waite (1901)

Saint Martin (sānt mar'tĭn, Fr sĕ martĕ'), Dutch *Sint Maarten* (sĭnt"mär'tu), island, area 33 sq mi , West Indies, in the Leeward Islands Since its occupation in 1648 by the Dutch and the French, it has been divided, the northern part (20 sq mi , pop 6,786) belonging to French Guadeloupe, the southern part (13 sq mi , pop 1,609) to Dutch Curaçao The island is low and receives little rainfall so that only small quantities of sugar cane, cotton, and fruits are raised

Saint Martin's see Scilly Islands

Saint Martin's-in-the-Fields, church in London, on Trafalgar Square, built 1722–26 by James Gibbs It has a Corinthian portico and elaborate spire The crypt is kept open all night for the use of the homeless, in the Second World War it was an air-raid shelter The church was damaged in an air raid (1940)

Saint Martinville, historic town (pop 3,501), parish seat of St Martin parish, S La , on Bayou Teche The first settlement was made by the French c 1760, later, various and conflicting groups of French royalists, republicans, Acadians, and Spanish came in It was an important resort during the early steamboat era, but declined after 1855 Today a quiet French town, it is interesting chiefly as the alleged site of the Evangeline romance, commemorated by the Longfellow-Evangeline state park

Saint Paris, village (pop 1,308), W Ohio, NW of Springfield, settled 1813 Honey products are made

Saint Pascal (sĕ paskal′), village (pop 1,265), E Que , near the St Lawrence and SSW of Rivière du Loup, inc 1939 It is in a pig-raising, dairying, and lumbering area

Saint Paul (sĕ pôl′) **or Saint Paul des Métis** (dā mātē′), town (pop 1,187), E Alta , NE of Edmonton, founded 1894 as a settlement for half-breeds (métis) It has grain elevators, and fruit is canned

Saint Patrick's Cathedral, New York city, largest Roman Catholic church in America The Gothic building at Fifth Ave between 50th and 51st St replaces an earlier cathedral at Mott St The original plans, by James Renwick, were executed in 1853, the cornerstone was laid in 1858, in 1879 the building was dedicated The Lady Chapel behind the high altar was added later after plans by William R Ware The cathedral is of marble in the traditional cruciform shape and has 12 side chapels, many stained glass windows, and a chime of 19 bells

Saint Patrick's Purgatory, place where St Patrick had a vision of Purgatory, traditionally located on little Station Island in Lough Derg in SE Donegal, Ireland It is a place of pilgrimage and has been since the early Middle Ages, though its connection with St Patrick is not accepted by modern scholars The wild, rough scenery is also alleged to suggest Purgatory

Saint Paul (sānt pôl′) **1** City (pop 287,736), state capital, and co seat of Ramsey co , E Minn , on hills overlooking the Mississippi, contiguous to Minneapolis Permanent white settlement in this area began with the establishment in the early 1800s of the MENDOTA fur-trading post and Fort Snelling, traders, lumbermen, and settlers made their homes here, and in 1841 Father Galtier established St Paul's Church, from which the city took its name Pierre Bottineau was an early resident, Settlers came from the east after treaties with the Indians opened the lands to settlement and to profitable lumber operations, their numbers were augmented by immigrants, among whom were many Irish and German Roman Catholics Bishop IRELAND was long their leader St Paul became territorial capital in 1849, was incorporated as a city in 1854, and became state capital when Minnesota was admitted to the Union in 1858 The situation of St Paul and Minneapolis at the head of navigation of the Mississippi made the Twin Cities the double metropolis of a large, rich area St Paul also became the center of the railroad empire of James J HILL Printing, publishing, meat packing, and diversified manufacturing are important industries, and the Ford Motor Company has a large plant here The city is a port of entry Like many of the upper Mississippi river towns, St Paul's oldest streets are narrow and crooked, conforming to the hills and river frontage, but as the city grew, new residential sections were laid out with wide, tree-shaded streets and many parks and playgrounds The two largest parks, Como and Phalen, have lakes and recreation facilities The capitol (completed 1904) was designed by Cass Gilbert, with a dome modeled after St Peter's in Rome Near the capitol are the state historical society building, containing a museum and library, and the St. Paul Institute, with science collections In the concourse of the city hall and county courthouse (1932) is a peace memorial designed by Carl Milles St Paul is the seat of Hamline Univ (Methodist, coeducational, 1854), Macalester College (coeducational, 1874), the College of St Thomas (Catholic, for men, 1885), the College of St Catherine, and the St Paul School of Art The agricultural campus of the state university and the state fairgrounds are in the Midway district, between St Paul and Minneapolis The *Pioneer Press,* founded in 1849, is one of the oldest papers in the Middle West Holman Airport and a state fish hatchery are near St Paul **2** City (pop 1,571), co seat of Howard co , central Nebr , near the junction of the North Loup with the middle Loup N of Grand Island, founded 1871. It is a farm trade and shipping point

Saint Paul Park, village (pop. 1,096), SE Minn., near St Paul

Saint Pauls, textile-mill town (pop. 1,923), S N.C., S of Fayetteville, in a cotton area.

Saint Paul's Cathedral, London, masterpiece of Sir Christopher Wren and one of the finest church designs of the Renaissance. It stands at the head of Ludgate Hill, where, according to traditions, once stood a Roman temple The first church on the site was destroyed by fire in 1087 and was replaced by a cathedral which was completed by the end of the 13th cent This structure fell into decay, and toward the middle of the 17th cent Inigo Jones was employed in restoring it Plans for further repairs were next prepared by Wren, but the great fire of London (1666) almost destroyed the church, and in 1668 he was granted authority to demolish the badly ruined structure and to build an entirely new one Wren's design, in the shape of a Greek cross, with a dome over the center, was modified to provide the long nave and choir of the traditional medieval plan In 1675 Wren himself laid the first foundation block of the building, and 35 years later he set the final stone in place The interior of the church consists of a three-aisled nave and choir, of equal lengths, extending east and west from a great central space at the crossing Porticoes project north and south at the center of the building The total length of the interior is more than four times its width, including side aisles The mosaic decorations are modern work and accord with Wren's original program for the interior adornment The crossing is covered by a great dome, pierced at the crown to admit a view of the lantern above Over this dome rises a concealed conical dome of brick, which acts as support for the timber framework of the exterior dome, the entire domical feature thus being constructed in three shells The western front of the church has as central motive a double-storied portico of coupled columns, flanked by two finely designed towers The exterior dome, which ranks as one of the great domes of the world, rises above a colonnaded drum and supports a stone lantern terminating with a cross Wren's scheme for an open, colonnaded piazza to furnish a setting for St Paul's failed of execution because of the high value of the requisite space In the Second World War bombs in 1940 destroyed the east end with the altar and the chapel behind it and in 1941 the roof and floor of the north transept In 1949 it was announced that the east end would be rebuilt according to Wren's original plan

Saint Paul's School, London, England, one of the great English public schools It was founded by John Colet, then dean of St Paul's Cathedral, being planned in 1509 and opened in 1512 with William Lily as first headmaster The school is chiefly a day school, though it has a few boarders The first building was in the churchyard of St Paul's, this burned in the great fire of 1666 and was replaced (1674) by one designed by Wren A third building was erected in 1824 and a fourth in 1884, in West Kensington Milton was a pupil at St Paul's, as was Samuel Pepys. See M F J McDonnell, *A History of St Paul's School* (1909), D L Clark, *John Milton at St Paul's School* (1948)

Saint Peter, city (pop 5,870), co seat of Nicollet co , S Minn , on the Minnesota and N of Mankato, settled 1853, inc 1865 It is a farm trade and manufacturing center Traverse des Sioux, near the site of St Peter, was an early fur-trading post and the scene of a treaty with the Sioux in 1851 Gustavus Adolphus College (Lutheran coeducational, 1862) and a state hospital for the insane are at St Peter

Saint Peter Port, town and parish (pop 16,720), capital of Guernsey, Channel Islands, on the eastern coast It has a shallow harbor protected by piers and exports vegetables, fruits, and flowers Hauteville House, the residence of Victor Hugo from 1856 to 1870, contains memorials of the author The Church of St Peter, partly 14th cent , is the finest on the islands Elizabeth College for boys was founded in 1563 Castle Cornet is on an islet near the town

Saint Petersburg, Russia see LENINGRAD

Saint Petersburg, city (pop 60,812), W Fla , on Tampa Bay at the southern end of the Pinellas peninsula A port of entry with a fine harbor, it ships fish, fruit, and vegetables St Petersburg is one of the state's most popular winter resorts, with boating, fishing, and bathing activities For its annual average of 360 sunny days it is called the Sunshine City It was first settled in the mid-19th cent , but the real founder was John C Williams, who came here c 1876 A railroad arrived in the late 1880s, and the city was incorporated in 1903 Places of interest include the yacht basin, the municipal pier, the historical museum, an alligator farm, and large shell mounds on the site of an Indian village The city has a junior college and a U S coast guard base Near by is a U S veterans' hospital St Petersburg is the winter training ground of big-league baseball teams Gandy Bridge crosses the harbor to Tampa

Saint Peter's Church, Rome, principal and largest church of the entire Christian world Its construction occupied 181 years (1445–1626) Here, with great ritualistic splendor, the pope himself officiates on certain occasions Closely adjoining are the Vatican buildings This was originally the site of Nero's circus, scene of numerous Christian martyrdoms under Nero. In the 4th cent rose the first church of St Peter, a wood-roofed basilica with transepts and five aisles, built over the sarcophagus of the apostle. Here Charlemagne and many other emperors and popes were crowned By the 15th cent this basilica had so far disintegrated that Pope Nicholas V undertook to create an entirely new structure after a design by Bernardo Rossellino Actual work was commenced in 1450, but little was done Pope Julius II, after his accession (1503), selected from the plans of several competing architects those of Bramante They provided for a church in the form of a symmetrical Greek cross with a great dome over the center In 1506 the foundation stone of Bramante's design was laid, but the artist died in 1514. Giuliano da Sangallo, Fra Giocondo, and Raphael were put in charge of the work but accomplished little After their deaths, Peruzzi was appointed (1520), and Antonio da Sangallo, the younger, after him (1538) Pope Paul III appointed (1546) Michelangelo architect, disregarding the recommended changes, he returned to Bramante's original plan, designed the great dome, and, before his death (1564), carried its construction to the top of the drum Vigola, in charge from 1564 to 1573, executed the secondary domes Giacomo della Porta and Domenico Fontana completed (1573–90) the great dome according to drawings left by Michelangelo In 1605 the church plan was transformed into a Latin cross with the addition of a long nave by Carlo Maderna, who also added the narthex and the façade The completed church was dedicated (1626) by Urban VIII Between 1629 and 1667 Bernini completed the great composition of St Peter's, creating a forecourt preceded by a majestic elliptical piazza bounded by quadruple colonnades The great obelisk of Heliopolis, brought to Rome by Caligula, adorns the center of the piazza From the narthex of the church five doors lead to the interior, including the celebrated Porta Santa (Holy Door), which is opened only in jubilee years, once in every 25 The huge scale of all the elements of the interior prevents any accurate notion of its magnitude, and its effectiveness is chiefly owing to the dome, 404 ft high from the pavement The interior diameter of the dome, 137 ft , is one of the largest in the world Beneath it is the high altar, covered by Bernini's superb bronze baldachino, 95 ft high At this altar only the pope may read Mass The crypt beneath it contains the tomb of St Peter The interior, with its colored marbles, its numerous sculptures, and its gilt and fresco decorations, achieves great magnificence The foot of the 5th-century seated bronze figure of St Peter receives the kiss of devotees

Saint Pie (sĕ pē′), village (pop 1,009), S Que , S of St Hyacinthe St Pie has dairying, pig raising, and woodworking

Saint-Pierre, Charles Irénée Castel, Abbé de (sh\ur\ ērānā′ kästĕl′ ȧbā′ du sĕ-pyĕr′), 1658–1743, French social philosopher Elected to the French Academy in 1694, he was expelled in 1718 for his criticism of Louis XIV He was a cofounder of the Club de l'Entresol (c 1720–1734), a group of writers and savants interested in social amelioration In his *Discours sur la polysynodie* (1718), Saint-Pierre advanced the idea of constitutional government by elected councils and an academy of experts, he wanted the state to be responsible for the poor and to supply free education, highways, canals, and a central postal service His economic views included the ideas of freedom of enterprise, a graduated income tax, and land and work as the sources of wealth He wrote *Projet de paix perpetuelle* (1713), in which he described the mechanism of an international court of arbitration and a league of states His writings, prolix and confused, touched a great variety of problems and were animated by faith in human nature, progress, and *bienfaisance,* a word he coined

Saint-Pierre, Jacques Henri Bernardin de. see BERNARDIN DE SAINT-PIERRE, JACQUES HENRI

Saint Pierre (sĕ pyĕr′), town (pop 4,061), S Que , on Montreal islands It is a suburb of Montreal

Saint-Pierre (sĕ-pyĕr′), town and commune (pop 6,218), French West Indies, a port on MARTINIQUE Founded by ESNAMBUC in 1635 and once the chief commercial city of the island, it was engulfed by a mass of flame, lava, and ash in the eruption (1902) of PELÉE Of the city's inhabitants (c 28,000), only one person survived and many thousands more were killed in the region

Saint Pierre (sānt pĕär′, Fr sĕ pyĕr′), town (pop 3,396), seat of government of St Pierre and Miquelon Territory (see MIQUELON), on the east coast of St Pierre island It has a fine harbor, which is the base of the island's fishing fleet, the town's chief industry is centered around codfishing The harbor was known to Breton and Basque fishermen by the 16th cent , permanent settlement began c 1763 after the expulsion of the French from Acadia The town was badly damaged by fire in 1939

Saint-Privat (sĕ-prēvȧ′), village (pop 859), Moselle dept , NE France, NW of Metz Here, in the Franco-Prussian War, the Germans defeated (Aug 18, 1870) the French in a bitter engagement, thus offsetting the simultaneous German defeat at near-by Gravelotte

Saint-Quentin (sānt-kwĕn′tĭn, Fr sĕ-kätĕ′), city (pop. 46,876), Aisne dept., N France, on the

Somme It has been a center of linen manufacture since the 16th cent Of Roman origin, it was chartered in 1080 and was the capital of the medieval county of VERMANDOIS Saint-Quentin has a long history of sieges and captures, notably that by the Spanish in 1557 In the First World War it was virtually destroyed by the Germans, from whom it was recovered (1918) by the Allies after heavy fighting It suffered minor damage in the Second World War The Gothic (12th–15th cent) collegiate Church of St Quentin (a martyr bishop beheaded here in 287) is a large and original structure, the town hall, in flamboyant style, was left almost intact The La Tour Museum contains numerous pastels by Maurice Quentin de LA TOUR, who was born here

Saint-Raphaël (sĕ-rafuĕl′), town (pop 6,642), Var dept , SE France, a resort on the French RIVIERA Its small port has replaced that of near-by Fréjus Bonaparte landed here on his return from Egypt in Oct , 1799

Saint Raymond (sānt rā′mund, Fr sĕ rāmō′), village (pop 2,157), S Que , on the Ste Anne river and NW of Quebec It has paper mills

Saint Regis (sānt rē′jĭs), settlement of Catholic Iroquois on the south bank of the St Lawrence river, on both sides of the boundary line between Canada and the United States, partly in Huntingdon co , Que , and partly in Franklin co , N Y The village was named after St John Francis Regis (1597–1640), French nobleman, philanthropist, and priest, canonized in 1737 It was established c 1755 by a party of Catholic Iroquois from Caughnawaga, Que Being chiefly of Mohawk descent (though mingled with the whites) the Indians speak that language They are expert basketmakers They number in all c 2,500, of whom 1,200 are on the American side See IROQUOIS CONFEDERACY

Saint Rémi (sĕ rāmē′), village (pop 1,431), S Que , S of Montreal It is the market center for a dairying and vegetable-growing region

Saint-Saëns, Charles Camille (shärl′ kämēy′ sĕ-sāⁿs′), 1835–1921, French composer He was an infant prodigy, making his debut as a pianist at 10 His compositions are of a polished classical excellence He is best known for his Third Symphony (1886), with organ and piano, the biblical opera, *Samson et Dalila* (1877), the *Introduction and Rondo Capriccioso* (1863), for violin and orchestra, the piano concertos in G minor (1868) and C minor (1875), and symphonic poems, notably *Le Rouet d'Omphale* (1871) and *Danse macabre* (1874) He studied at the Paris Conservatoire and taught piano at the École Niedermeyer, he was organist for 20 years at the Madeleine See his *Musical Memories* (1919), biographies by Arthur Hervey (1921) and Watson Lyle (1923)

Saintsbury, George Edward Bateman (sānts′burĕ), 1845–1933, English critic Educated at Oxford, he became an authority on French literature and was professor of rhetoric and English literature (1895–1915) at Edinburgh He contributed to the *Saturday Review* and other periodicals from 1875 and to a series of volumes, *Periods of English Literature* (1897-1915), which he edited His writings include *A Primer of French Literature* (1880), *A Short History of French Literature* (1882), and *A History of the French Novel* (1917-19), *A Short History of English Literature* (1898) and several special studies of English literature, biographies of Dryden (1881), Scott (1897), Matthew Arnold (1899), Thackeray (1931), and others, several scrapbooks, collections of essays See *A Saintsbury Miscellany* (1947)

Saint-Servan (sĕ-sĕrvā′), town (pop 10,815), Ille-et-Vilaine dept , NW France, in Brittany, a port on the English Channel, just S of SAINT-MALO Its 14th-century tower (Tour Solidor) was damaged, as was a large part of the town, in the American advance across Brittany (1944)

Saint-Simon, Claude Henri de Rouvroy, comte de (klōd′ ārē′ dŭ rōōvrwa′ kōt′ dŭ sĕ-sēmō′), 1760–1825, French social philosopher While still a young man Saint-Simon won distinction with the French army in America Returning to France in 1783, he supported the Revolution and surrendered his title He made a fortune through speculation, but lavished it on a salon for scientists and spent his later years in poverty, sustained by the faith that he had a message for mankind Finding the controlling forces of society in industry and science, he concluded that industrial and scientific leaders should reorganize and direct the state so as to establish a better social order In *Le Nouveau Christianisme* (1825) he proclaimed that the concept of the brotherhood of man must accompany scientific organization His writings contain ideas foreshadowing the positivism of COMTE (for a time his pupil), socialism, federation of the nations of Europe, and many other modern trends Around him gathered a small group of brilliant young men After his death, they modified and elucidated his principles into a system known as **Saint-Simonianism** (sānt sīmō′nēŭnĭzm) Partly because of their eccentricities the Saint-Simonians achieved brief fame Led by ENFANTIN and BAZARD, they published (1829) the *Doctrine de Saint-Simon Exposition, premier année*, calling for abolition of individual inheritance rights, public control of means of production, and gradual emancipation of women The movement developed into a moral-religious cult, and, though split and disintegrated by 1833, it exerted much influence, especially on later socialist thought See *Œuvres de Saint-Simon et d'Enfantin* (47 vols , 1865–78); study by Sébastien Charléty (rev. ed , 1931)

Saint-Simon, Louis de Rouvroy, duc de (lwē′ dŭ rōōvrwa′ dük′), 1675–1755, French writer of memoirs and courtier He resigned from the army (1702) after his arrogance had involved him in a quarrel with Marshal Luxembourg Though disliked by Louis XIV, he fixed himself at the court of Versailles, where he associated with Louis, duke of Burgundy, until the duke's death (1712) Between 1715 and 1723 he served ineffectually as a member of the regency council and as special ambassador to Madrid His fame is due entirely to his memoirs, written in the years 1739-51 They are based on Saint-Simon's own notes, begun in 1691, and on contemporary journals and memoirs Despite their unevenness and their aristocratic disregard for literary technique and even grammar, the memoirs are a monument of French literature Saint-Simon's account of the court of Louis XIV is the intensely personal and emotional apology of a grand seigneur who was prevented, by his proud temperament and his limited intelligence, from accepting the rise of the bourgeoisie Born a century too late, he vented his resentment against Louis XIV, whose victory over the great nobles he refused to recognize Though full of errors, the memoirs are an indispensable historical source and are remarkable for their psychological observation and brilliant sketches First published in 1788, his memoirs subsequently appeared in several enlarged editions, notably that of Arthur de Boislisle (41 vols , 1879–1928), and in an abridged English version (tr by K P Wormeley, 4 vols , 1899)

Saint Simons Island see SEA ISLANDS

Saint Sophia see HAGIA SOPHIA

Saint Stephen, town (pop 3,306), SW N B , on the St Croix river and W of St John Just opposite is Calais, Maine, with which it is connected by an international bridge The two towns form practically a single community, cooperating in fire-fighting services, a hospital, public utilities, employment, and patriotic celebrations St Stephen was founded by Loyalists, after the American Revolution, and incorporated in 1871 Its industries include cotton milling and the manufacture of shoes, soap, and food products

Saint Stephen, lumbering town (pop 1,185), E S C , N of Charleston near the Santee river

Saint Stephens, former town SW Ala , at the head of navigation on the Tombigbee The Spanish fort built here (1789) came into U S possession by the terms of the demarcation line of 1798 George S GAINES was for many years factor of the trading post established here (1803) The first territorial legislature of Alabama met at St Stephens in 1818

Saint Stephen's College see BARD COLLEGE

Saint Thomas, city (pop 17,132), S Ont , near Lake Erie and S of London It is the commercial and distributing center of a farm and orchard district, with railroad workshops, foundries, and food-processing plants Alma College (junior), affiliated with the Univ of Western Ontario, is here

Saint Thomas see SÃO TOMÉ AND PRINCIPE

Saint Tite (sĕ tēt′), town (pop 2,385), S Que , N of Trois Rivières Gloves and shoes are made here, and dairying and lumbering are carried on

Saint-Trond (sĕ-trō′), Flemish *Sint-Truden* (sĭnt-troi′dun), town (pop 18,468), Limburg prov , E Belgium, NW of Liége It grew around an abbey founded in 655 by St Trudo, and it has kept a Beguinage church of the 13th cent and the 15th-century Church of Notre Dame

Saint-Tropez (sĕ-trôpĕā′), town (pop 3,171), Var dept , SE France, a popular resort on the French RIVIERA It was heavily damaged in the Second World War

Saint-Vallier, Jean Baptiste de la Croix (zhäⁿ′ bätēst′ dŭ lä krŏŏ′ sĕ-valyā′), 1653–1727, Catholic bishop of Quebec b Grenoble, France He succeeded F X de LAVAL in 1688 after serving as vicar general. Austere and aggressive, he formulated a strict ecclesiastical discipline and came into conflict with the civil governors, especially Frontenac Quarrels also arose between Saint-Vallier and Laval with regard to diocesan organization, the seminary, and the new bishop's expenditures From 1700 to 1713 Saint-Vallier was in France and, as a prisoner, in England He did much for the people of Quebec, notably in founding the Hôpital Général for the poor

St. Vincent, John Jervis, earl of. see JERVIS, JOHN, EARL OF ST VINCENT

Saint Vincent, island, area 140 sq mi , British West Indies It comprises most of St Vincent's colony (150 sq mi , pop 61,593), which includes also the tiny islands of the northern half of the archipelago known as the Grenadines and which itself is attached to the WINDWARD ISLANDS colony The capital is KINGSTOWN The island is mountainous and generally well forested, with an equable climate and abundant rainfall Arrowroot and exceptionally fine sea-island cotton are the chief products, followed by copra, sugar, rum, cassava starch, and peanuts Presumably discovered by Columbus in 1498, St Vincent remained uncolonized until the first half of the 18th cent The French took it in 1779, but it was restored to England in 1783 Attempts to subdue the warlike Carib Indians failed until most of the natives were deported to Roatán island off Honduras in 1797 Besides the ruling white element and a few Portuguese and East Indians, the population is predominantly Negro with a small admixture of Carib In 1898 a disastrous hurricane swept over the island and in 1902 much of it was destroyed by an eruption of SOUFRIÈRE.

Saint Vincent, Cape, Port *Cabo de São Vicente* (ka′bō dŭ sä′ō vēsän′tŭ), southwestern extremity of Portugal Near it were fought several memorable sea battles, notably that in 1797, when the British under John Jervis defeated a large Spanish fleet and Commodore Horatio Nelson distinguished himself For the Portuguese it is connected with the dreams and plans of Prince Henry the Navigator, who lived near by

Saint Vincent, Gulf, large inlet of the Indian Ocean, 90 mi long and 45 mi wide, South Australia, E of Yorke Peninsula Port Adelaide is on the east shore of the gulf

Saint Vincent College see LATROBE, Pa

Saint-Vith (sĕ′-vēt′), Ger *Sankt Vith* (zangkt″ vēt′), village (pop 1,327), Liége prov , Belgium, in the Malmédy district and near the German border A key road junction, it was captured by the Germans early in the BATTLE OF THE BULGE (Dec , 1944) and was recaptured by American forces on Jan. 23, 1945 It was largely destroyed in the fighting

Saint Vitus's dance see CHOREA

St Vrain, Céran (sārā′ sĕvrē′), 1798–1870, American fur trader, b near St Louis He went to the Gila in 1825 and later with the Bents was an important figure in the development of trade along the Santa Fe Trail and in the Southwest See BENT'S FORT

Saionji, Kimmochi, Prince (kĕmō′chē slōn′jē), 1850–1940, Japanese statesman A member of the old court nobility, he took part in the Meiji restoration, then spent 10 years in France, absorbing many democratic ideas In 1882 he accompanied his friend and patron, Prince ITO, to Europe to study foreign governments He was made minister to Vienna in 1885 and minister to Berlin in 1888, served in several cabinets under Ito, and was president of the privy council (1900–1903) He succeeded Ito as president of the Seiyukai party in 1903 and was prime minister (1906–8, 1911–12) In 1919 he headed the delegation to the Paris Peace Conference He retired from party politics in 1914 but as genro [elder statesman] continued to enjoy tremendous prestige and influence until his death, using his power to block the appointment of prime ministers identified with the military extremists See Bunji Omura, *The Last Genro* (1937)

Saipan (sī′pän″, sīpän′), volcanic island (47 sq mi , pop 4,945), W Pacific, largest and most important of the Marianas Islands It is 150 mi NNE of Guam Saipan is mountainous, the highest peak being Mt Tapotchau (1,554 ft) There are manganese and phosphate deposits, the chief products are sugar, coffee, and copra In the Second World War the island (site of a Japanese air base) was taken in 1944 by U S forces There is a U S naval base at Tannapag Harbor, Isely Field (formerly Ashto Field) is the largest of three airfields

Sais (sā′ĭs), ancient city of Egypt, in the west central region of the Nile delta It was the royal residence of the XXVI dynasty and much visited as a shrine of Neith and Osiris

Saishu, Korea see CHEJU

Saisset, Bernard (bĕrnär′ sĕsā′), d 1314, French churchman In 1295 he became bishop of Pamiers (near Foix, S France), and in 1301 he was sent by BONIFACE VIII as papal legate to PHILIP IV of France to protest against the king's anticlerical measures and to urge his support for Boniface's projected crusade On his return to Pamiers, Saisset—whose hostility to Philip was well known —was arrested on the ground that he had sought to incite rebellion against the king Philip requested of Pope Boniface that Saisset be deposed, and the pope replied by requesting the king to send Saisset to Rome for trial by an ecclesiastic court Philip refused and secured Saisset's indictment by a civil court, a strictly illegal measure This helped to bring the struggle between Church and state to a head Boniface issued the bulls *Salvator mundi* (reinforcing *Clericis laicos*), *Ausculta fili*, and *Unam sanctam*, and Philip in 1303 sent a military expedition which deposed the pope Saisset, the relatively unimportant object of the titanic struggle, was forgotten in the meantime He was allowed to go to Rome and in 1308 was restored to his see

Saitama (sī′tämä), prefecture, central Honshu, Japan see URAWA, the capital

Saito, Makoto, Viscount (mäkō'tō sī'tō), 1858–1936, Japanese statesman An admiral, he was navy minister (1906–14), governor of Korea (1919–27, 1929), a member of the privy council, and a delegate to the Geneva Naval Conference of 1927 A conservative militarist, he succeeded Inukai as prime minister in 1932, serving until 1934 In 1936 he became keeper of the privy seal, a position close to the emperor In the "barrack" uprising on Feb 26, 1936, he was assassinated by young militarists, who failed to kill Premier Okada

Saito, Takao (täkä'ō sī'tō), 1871–, Japanese statesman A member of the Minseito party, he served many years in the diet, but was expelled in 1940 for questioning Japan's policy in China After the war he was active in organizing the Progressive party and served in the cabinets of Yoshida and Katayama

Sajous, Charles Eucharist de' Medici (sūzhōō'), 1852–1929, American endocrinologist, b at sea near France, M D Jefferson Medical College, 1878 He was professor of endocrinology at the Univ of Pennsylvania from 1921 His chief work was *The Internal Secretions and the Principles of Medicine* (1903–7, 10th ed , 1922)

Sakai (säkī'), city (1940 pop 182,147, 1947 pop 194,048), Osaka prefecture, S Honshu, Japan, on Osaka Bay, at the mouth of the Yamato river It was an important port in ancient times, today it is an industrial center, with engineering works, chemical plants, and textile mills

Sakakawea: see SACAJAWEA

sake (sä'kē), chief alcoholic beverage of the Japanese Made principally from rice, it is fermented by a kind of mold cake called *koji* Sake is yellowish and sherrylike in flavor When distilled it forms a variety of ARRACK

Sakhalin (sä'kulēn", säkulēn', Rus sükhulyēn') or **Saghalien** (sä'gulēn', sugul'yun), island (29,700 sq mi , pop c 500,000), RSFSR, lying off the coast of Siberia, between the Sea of Okhotsk and the Sea of Japan Two parallel mountain ranges, separated by a central valley, run the length of this elongated island There is some agriculture (limited by a severe climate), but lumbering, coal mining, and herring fishing are the principal industries Sakhalin was explored by Russians in the 17th cent and colonized by Russia and Japan in the 18th and 19th cent The two countries shared control until, by the Treaty of Portsmouth (1905), Russia obtained the portion north of lat. 50° N and Japan the remainder The Japanese territory was named Karafuto, and this name was sometimes applied to the whole island Both countries colonized extensively and reduced the aboriginal population to a minority After the Second World War the Japanese holdings were transferred to the USSR as provided by an agreement reached at the YALTA CONFERENCE, and nearly all the Japanese population was repatriated

Saki · see MUNRO, HECTOR HUGH

Sakkara (säkä'rä), necropolis of ancient MEMPHIS, Egypt, 3 mi from the Nile and on the border of the Libyan desert There are pyramids of the V and VI dynasties, inferior to the earlier ones The oldest dated papyrus (VI dynasty) was discovered here in 1893

Sakonnet, R I see LITTLE COMPTON

Sakuntala. see KALIDASA

Sakura-jima (säkōō'rä'-jimä), peninsula, Kagoshima prefecture, S Kyushu, Japan, opposite Kagoshima Of its three volcanic cones, the highest is Kitadake (3,686 ft)

Sala (sä'lu), variant of SALAH

salad, herbs, vegetables, fruit, meat, poultry, eggs, or fish usually served cold or uncooked and with a dressing Green salads have been used from ancient times Lettuce, camomile, dandelion, and mint were the bitter herbs of the Hebrew Paschal feast The Greeks often closed a repast with lettuce, and the Romans served lettuce and eggs as an appetizer Today light salads, served as accompaniments to a meat course or as a separate course, usually consist of greens or tart fruits, the heartier salads are served as a main course Green salads especially are important in the diet because of the mineral salts, vitamins, and stimulating acids they contain Frozen and jellied salads are a modern development The important salad dressings are the dressing of oil (preferably olive) and vinegar or lemon, with seasonings, now generally known as French, mayonnaise, and boiled dressing, a modern adaptation of mayonnaise, cheaper and simpler to prepare

Saladin (sä'lüdĭn), 1137?–1193, Moslem warrior and Ayyubite sultan of Egypt, the great opponent of the Crusaders, b Mesopotamia, of Kurdish descent He lived for 10 years in Damascus at the court of NUREDDIN, where he distinguished himself by his interest in Sunnite theology. He went with his uncle, Shirkuh (or Shirkoh), a lieutenant of Nureddin, on campaigns (1164, 1167, 1168) against the Fatimite rulers of Egypt Shirkuh became vizier there and on his death (1169) was succeeded by Saladin Saladin later caused the name of the Shiite Fatimite caliph to be dropped from the Friday prayer, thus deposing him After the death of Nureddin, who was planning to campaign against his too-powerful subordinate, Saladin proclaimed himself sultan of Egypt, thus beginning the Ayyubite dynasty He spread his conquests westward on the northern shores of Africa as far as Gabès and also conquered Yemen He took over Damascus after Nureddin's death and undertook to subdue all Syria and Palestine He had already come into conflict with the Crusaders (see CRUSADES), and he put the rulers of the Latin Kingdom of Jerusalem on the steadily weakening defensive He was unsuccessful in his efforts to conquer the Assassins in their mountain strongholds, but he took Mosul, Alep, and wide areas from rival Moslem rulers and became the principal warrior of Islam Gathering a large force of Moslems of various groups—but all called Saracens by the Christians—he set out to attack the Christians Raymond of Tripoli was at first his ally, but then joined the other Crusaders, and the great battle of Hattin (near Tiberias) in 1187 found Christians matched solely against Moslems Saladin won brilliantly, capturing GUY DE LUSIGNAN and Reginald DE CHÂTILLON Jerusalem fell to him, and the Christians seemed lost The Third Crusade was gathered (1189) and came to the Holy Land to try to recover the Holy City Thus it was that Richard I of England and Saladin met in the conflict that was to be celebrated in later chivalric romance The reputation that Saladin had among the Christians for his generosity and chivalry does not, however, seem to have been a legend, and there seems no doubt that Saladin admired Richard as a worthy opponent The Crusaders, however, failed of their purpose, and succeeded only in capturing Acre. In 1192 Saladin agreed with them upon the Peace of Ramleh, which left the Latin Kingdom only a strip along the coast from Tyre to Jaffa The Christians were never to recover from their defeat Saladin was not only a warrior but a builder He restored the irrigation systems and erected fine mosques He was also a cultured man and a patron of literature and learning as well as an able theological disputant in his own right See biographies by Stanley Lane-Poole (1898) and C J Rosebault (1930)

Salado, Río (rē'ō sälä'dhō), name of several South American rivers, including four in Argentina The most important is the Río Salado del Norte, rising in the Andes near Salta, N Argentina, and flowing SE to the Paraná at Santa Fe

Salah (sā'lu), descendant of Shem Gen 10 24, 11 12,14 Shelah 1 Chron 1 18,24 Sala Luke 3 35

Salair Ridge (sülīĕr'), range, c 200 mi long, RSFSR, in S Siberia, between the Ob and Tom rivers Extending along the northern border of the Altai Territory, it rises to c 2,000 ft It is rich in iron, silver, lead, and zinc

Salamanca (sälumäng'ku, Span sälämäng'ka), city (pop 71,725), capital of Salamanca prov , W Spain, in Leon, on the Tormes river Dating from Carthaginian times, it was conquered from the Moors by the Christians in 1085 and reached world fame after the foundation (c 1230) of its university by Alfonso IX The university soon rivaled Bologna, Paris, and Oxford, and it made Arabic philosophy available to the Western world In the late Middle Ages and throughout the Renaissance, Salamanca was the center of Spanish cultural life and the fountainhead of Spanish theology In the Peninsular War the city was in part demolished (1811) by the French It was (1937–38) the capital of the Insurgents in the Spanish civil war Salamanca is rich in architectural interest The Plaza Mayor is among the finest colonnaded squares in Spain Adjoining the old Gothic cathedral (12th cent) is the imposing new cathedral (1513–1733), in which the Gothic, plateresque, and baroque styles are combined Among the other churches, the Gothic Church of San Estebán is the finest The university building (15th cent) has a richly adorned façade and possesses a library with precious manuscripts There are many splendid palaces, notably the Casa de las Conchas, named for the scallop shells on its façade, and the Casa de la Salina, with a picturesque patio

Salamanca (sälumäng'ku), city (pop 9,011), W N Y , on the Allegheny and S of Buffalo, settled in the 1860s, inc as a city 1913 Salamanca is within the Allegany Indian Reservation and near Allegany State Park It is a farm trade center and also a resort Among its manufactures are furniture, leather, and yarn

salamander (sä'lumän'dur), a tailed amphibian with small, weak limbs, which superficially resembles the unrelated lizard Lost limbs or tail can be regenerated Many salamanders are gregarious at breeding time The eggs, which are surrounded by a gelatinous material, are usually laid in ponds or brooks where the gill-breathing larvae remain until the lungs develop Among the North American salamanders are the tiger salamander, the larva of which is called in Mexico the axolotl, commonly found E of the Pacific coast states except in New England, the red-backed and the shiny salamanders, which breed on land, the young passing the gill-breathing stage in the egg, the dusky salamander, the two-striped salamander; the terrestrial marble salamander, which lays its eggs where the young can crawl to the water, the more aquatic red salamander, the mud puppy or necturus, which retains its gills through life; and the aquatic hellbender, the largest North American form The giant salamander of China and Japan is 3 to 5 ft long. Old legends portrayed the salamander as a creature that could go through flames unharmed See also NEWT

Salamaua (sälämou'ä), town, on E New Guinea, in the Morobe dist., Territory of New Guinea, on Bayern Bay of Huon Gulf It was founded in 1927 to serve air transport lines into the gold fields In the Second World War it was the site of a Japanese air base taken in 1943 by Allied forces

Salambria, river, Greece see PENEUS

Salamis (sä'lumis), ancient city on Cyprus, once the leading city St Paul visited it on his first missionary journey Acts 13 5

Salamis (sä'lumis), island, E Greece, in the Gulf of Aegina, SW of Athens. It early belonged to Aegina, was under control of Megara in the 7th cent B C , and later was taken by Athens Off Salamis in the PERSIAN WARS the allied Greek fleet decisively defeated (480 B C) the Persians Homer represents Salamis as the home of Ajax and Teucer

sal ammoniac (säl umō'nēăk), common name for ammonium chloride, a compound of chlorine with the ammonium radical (NH_4) It is a white, crystalline substance without odor but with a biting taste, prepared by the combination of ammonia and hydrochloric acid and also from the ammonia dissolved in the water used in treating illuminating gas for commercial use It occurs in nature in volcanic regions It is widely and diversely used, e g , in making dry cells, in preparing metals for soldering, in warfare in forming smoke screens, in medicine in the treatment of certain respiratory diseases, and in the preparation of ammonia

Salandra, Antonio (äntō'nyō sälän'drä), 1853–1931 Italian statesman He entered parliament as a moderate conservative (1886), held various cabinet posts from 1891 to 1910, and succeeded Giolitti as premier in 1914 He immediately declared Italian neutrality in the First World War, but undertook active military preparations After the failure of his negotiations with Austria, he signed the Treaty of London (1915) with the Western powers, denounced the Triple Alliance, and finally declared war on Austria He resigned in 1916 after the Italian retreat in the Trentino Salandra was one of the Italian delegates at the Paris Peace Conference (1919) and Italian delegate to the League of Nations He at first supported Fascism, then opposed it and resigned in 1925 In 1928, however, he was made a senator

Salang see PHUKET

Salathiel (sälā'thēĕl), variant of SHEALTIEL

Salaverry, Peru see TRUJILLO

Salazar, Antonio de Oliveira (äntō'nyō dū ōlēvā'rū sulăzar'), 1889–, Portuguese statesman He made a brilliant record at the Univ of Coimbra, and after graduation he became a member of the teaching staff In 1917 he obtained a lectureship in economics, and he rose to distinction as a professor Profoundly religious, Salazar became the leader of a political group committed to putting into action the social principles expressed in the encyclicals of Pope Leo XIII He was elected a deputy in 1921 but withdrew from the chamber immediately, viewing the proceedings there as futile After Gen Antonio de Fragoso CARMONA had been established in power by a coup, Salazar was appointed (1926) minister of finance, but when he was denied full power over finances he resigned In another financial crisis in 1928 he was recalled and given the full financial control he asked He was now in a position to institute reforms, and he put Portuguese finances on a stable footing for the first time in the 20th cent He occupied other ministries as well and after 1932 was prime minister and was recognized as dictator The constitution of 1933, which established the corporative state of the *Novo Estado* [new state], was of his devising Regimentation of the economy produced great effects in improving the Portuguese position, but at the expense of democratic action Though the constitution provides for an opposition, the attempt to create a democratic party in 1945 was ended by intimidation Salazar remained firmly in control

Salcah or **Salchah** (both säl'ku), ancient fortress, SE Syria, E of the Jordan, in the Hauran, 12 mi E of Bosra. There is now a castle, a landmark for miles around The present town is Salkhat Deut 3 10, Joshua 12 5, 13 11, 1 Chron 5 11.

Sale, George (säl), 1697?–1736, English Orientalist His translation of the Koran was long standard but has been outdated The notes showed great prejudice

Sale, Victoria, Australia. see GIPPSLAND

Sale, municipal borough (1931 pop 28,071; 1943 estimated pop 39,635), Cheshire, England, SW of Manchester. It is a residential and market-gardening suburb. Biscuits are manufactured.

Salé (sälā'), city (pop. 57,188), French Morocco, on the north bank of the Bou Regreg estuary, 9 mi from the Atlantic Ocean, opposite Rabat It has flour mills and produces carpets Its harbor was long a haven for pirates, called the Sallee Rovers

sale, in a general sense, a transfer of ownership for a valuable consideration The consideration distinguishes a sale from a gift Typically, the consideration in a sale is money, and in a narrower sense the word *sale* means a transfer of ownership for money, an exchange of goods for goods being barter The distinction between sale and barter is technical merely, laws that govern one govern the other equally Laws governing sales distinguish fundamentally between sales of real PROPERTY and sales of personal property If nothing is said to the contrary, the law of sales is understood to be the law of sales of personal property, sales of real property being governed by real-estate law Delivery of goods sold passes title to the goods, even though full payment has not been made, the seller may sue for the amount due him, but cannot recover the goods A contract may provide, however, that the goods, though delivered, remain the property of the seller until full payment for them has been made By a contract, one may purchase goods not yet in existence, e g , the crop that a farmer will grow in his field

Salegard, RSFSR see SALEKHARD

Salekhard (sälyĭkhärt'), city (1937 estimated pop 8,800), capital of Yamal-Nenets National Okrug, RSFSR, in NW Siberia, on the lower Ob river and on the Arctic Circle There are sawmills, fish canneries, and an agricultural experimental station Founded as Obdorsk in 1595, it was renamed c 1930, the name was Salegard until 1938.

Salem (sā'lŭm) [Heb , =peace], in the Bible **1** Unidentified kingdom of Melchizedek Gen 14 18, Heb 7 1,2 **2** Abbreviation used for Jerusalem Ps 76 2

Salem, city (pop 129,702), SE Madras state, India Near by are iron and manganese mines Cloth and carpets are woven

Salem 1 City (pop 7,319), co seat of Marion co S central Ill , E of St Louis, in a coal, oil, timber, and farm area, inc 1837 It manufactures lumber, shoes, and paint, and has railroad shops William Jennings Bryan was born here **2** City (pop 3,194), co seat of Washington co , SE Ind , NW of Louisville, Ky , settled c 1800, inc 1815 John Hay was born here **3** City (pop 41,213), a co seat of Essex co , NE Mass , NE of Boston, inc 1846 Roger Conant led a group from Cape Ann to this site, called Naumkeag by the Indians, in 1626 Its early history was darkened by the witchcraft trials of 1692, in which Samuel SEWALL was a judge Salem, a port of entry, was once one of the leading colonial ports and was the home of Revolutionary privateersmen and of world-traveled sea captains Its mast-crowded harbor was prosperous until the middle of the 19th cent Today the harbor is silted up, but mansions designed by Samuel McINTIRE recall the days of commercial glory Electrical supplies and textiles are now the chief products Fire in 1914 destroyed part of Salem, but the city is still rich in fine old buildings Nathaniel Hawthorne's birthplace dates from the 17th cent , and the House of the Seven Gables is preserved Hawthorne was surveyor of the port, 1846–49 The Essex Institute has an excellent library and historical collections George Peabody founded the Peabody marine museum A U S coast guard base and airport occupy Winter Island See R D Paine, *Ships and Sailors of Old Salem* (1909), history by J D Phillips (3 vols , 1933, 1937, 1947) **4** City (pop 3,151), co seat of Dent co , S central Mo , SE of Jefferson City, in an iron-mining, timber, and farm area, settled 1853, inc 1860 **5** Town (pop 3,267), SE N H , SE of Manchester, inc 1750 Among its products are shoes and potato chips The Rockingham Fairground near by has become a race track Robert Frost taught at a district school in the town **6** City (pop 8,618), co seat of Salem co , SW N J , on Salem Creek 3 mi from the Delaware It was settled by John Fenwick and other Friends in 1675 (the first permanent English settlement in the Delaware valley) and incorporated in 1858 It grew as a port and farm trade center and became a muskrat-fur market Glass and linoleum are made here The county historical society has collections in the Alexander Grant House (1721), there are many other old places The Friends' meetinghouse dates from 1772 Salem Oak (30 ft. in circumference and 80 ft high) stands in the Friends' burial ground **7** Village (pop. 1,034), E N Y , near the Vt line NE of Saratoga Springs, settled 1764, inc. 1803 Salem has clothing factories and slate quarries **8** City (pop 12,301), NE Ohio, SW of Youngstown, laid out 1806 by Friends Washing machines and metal-working machinery are made here It was an early abolitionist center and was an important station on the Underground Railroad **9** City (pop 30,908), state capital, and co seat of Marion co , NW Oregon, on the Willamette and SSW of Portland, founded 1841 by Jason Lee and his missionaries, inc 1857 The capital of Oregon Territory in 1851, it remained the capital when Oregon became a state in 1859 In a fertile area producing fruits, grain, flax, hops, and livestock, the city has fruit canneries and packing houses and linen, paper, and woolen mills. Salerno (sulĕr'nō, Ital sälĕr'nō), city (pop 41,925), capital of Salerno prov , Campania, S Italy, a port on the beautiful Gulf of Salerno, an inlet of the Tyrrhenian Sea It is an important agricultural and commercial center, machinery, textiles, and macaroni are manufactured A Roman colony, it became (6th cent) a part of the duchy of Benevento and in the 9th cent the seat of an independent principality, which fell to the Normans in 1076 From Sept 9 to Sept 16, 1943, a fierce battle raged between Allied landing forces and German forces on the beaches around Salerno It ended with the Germans retreating toward Naples Salerno has a fine cathedral with 11th-century bronze doors and ancient mosaics The famous medical school of Salerno, where Latin, Greek, Arabic, and Jewish influences were merged, is considered the first of its kind Originating in the 9th cent , it reached its highest splendor in the 12th cent

sales tax, a tax on the sale of goods or services, generally calculated as a percentage of the selling price, sometimes called a purchase tax It is usually collected in the form of an extra charge by the retailer, who remits the tax to the government It may be levied each time a commodity changes hands—as from manufacturer to wholesaler, from wholesaler to retailer—and is then called a turnover or transactions tax Many oppose the tax as being regressive, i e , as placing a disproportionately heavy burden on persons of small means, but it yields a large revenue, and governments find it easy to collect More than half the states in the United States and many foreign countries levy sales taxes

Salford (sôl'furd, sŏl'–), county borough (1931 pop 223,438, 1947 estimated pop 176,600) and city, Lancashire, England, across the Irwell from Manchester A textile center, it shares the manufacturing and commercial activities of Manchester There is an unusual number of parks and recreation grounds

Salgotarjan, Hung *Salgótarján* (shŏl'gōtŏr"yun), city (pop 20,318), N Hungary One of the chief mining and industrial centers of Hungary, it has iron and steel mills and machinery plants There are large coal and lignite deposits near by.

Salian Law. see GERMANIC LAWS

Salians see FRANKS

Salic Law. see GERMANIC LAWS

Salic law (sā'lĭk), rule of succession in certain royal and noble families of Europe, forbidding females and those descended in the female line to succeed to the titles or offices in the family The aim seems to have been to prevent alienation of family lands by marriage of the female members It is called the Salic law on the mistaken supposition that it was part of the Lex Salica (see GERMANIC LAWS), that code as a matter of fact contains no public law at all The rule was most prominently enforced by the house of Valois and the succeeding house of Bourbon in France At the time of PHILIP V it was introduced to Spain, when it was reasserted there in favor of Isabella II, the Carlists rose in revolt on the grounds of the law The rule was also involved in the rivalry of STEPHEN and MATILDA for the throne of England and in the claim of EDWARD III to the French succession (one item in bringing on the HUNDRED YEARS WAR) It obtained, too, among the Guelphs, and the rule of Great Britain and Hanover—united in one king after George I—had to be separated when VICTORIA ascended the British throne

salicylic acid (sălĭsĭl'ĭk), white crystalline organic acid, without odor and having a sweetish taste It is almost insoluble in cold water, but soluble in hot water and very soluble in alcohol It is present, often in the form of its methyl ester, methyl salicylate, in oil of wintergreen (from which it is obtained) and in other parts of many plants It is commonly prepared commercially from phenol The acid and its sodium salt are used as preservatives in foodstuffs, since they inhibit bacterial growth Their use has been prohibited in some countries because of their injurious effects in any but very small quantities Aspirin (the acetate) and some of the acid's other derivatives (salicylates) are used in medicine as antipyretics, as antiseptics, and in the treatment of certain ailments such as rheumatism Methyl salicylate is widely used as a flavoring, and medically as an ingredient in liniments An important use of salicylic acid is in the manufacture of dyestuffs It was first prepared (1838) by R. Piria. Its presence is detected by the addition of ferric chloride, when a brilliant violet appears

Salida (sulī'dŭ), city (pop 4,969, alt c 7,000 ft), co seat of Chaffee co , central Colo , on the Arkansas river and WNW of Pueblo, founded c 1880, inc 1891 It is a resort, trade, and industrial center for a granite, lime-rock, fluor-spar, and farm area The city is a railroad division point and has an airport It is headquarters for the Cochetopa National Forest Hot springs are near by

Salieri, Antonio (äntō'nyō sälyā'rē), 1750–1825, Italian composer and conductor He received his first training in Italy, going afterward (c 1766) to Vienna, where he remained as conductor of the opera and later (1788–1824) as court conductor He was a friend of Haydn, and he taught Beethoven, Schubert, and Liszt The most successful of his 43 operas were *Les Danaïdes* (Paris, 1784) and *Tarare* (Paris, 1787)

Salim (sā'lĭm) [Gr from Heb SALEM], unlocated place, W of the Jordan and near the scene of John's last baptizing John 3 23

Salina (sulī'nu) **1** City (pop 21,073), co , seat of Saline co , central Kansas, near the confluence of the Saline and Smoky Hill rivers, platted 1858, inc 1870 It is the marketing, shipping, and distributing center for a large grain and livestock area and has elevators, flour mills, and farm-implement factories The city is one of the leading centers of the great hard-winter-wheat belt Kansas Wesleyan Univ , Marymount College, and a military school are here **2** Historic town (pop 687), NE Okla , on the Grand River and ENE of Tulsa It was settled on the site of the first Oklahoma trading post, founded in the early 19th cent by Jean Pierre CHOUTEAU **3** City (pop 1,616), central Utah, in the Sevier river valley NE of Richfield First settled in 1864, it was abandoned (1866) in the Indian wars and resettled in 1871 It ships coal, livestock, salt, grain, and sugar beets

Salinas, Pedro (pā'drō sälē'nus), 1892–, Spanish poet and critic, b Madrid He lectured on Spanish literature at the Univ of Seville and at the Sorbonne In 1936 he came to the United States and taught at Johns Hopkins That he is a profound and perceptive critic of Spanish contemporary literature is shown in his critical works, *Reality and the Poet in Spanish Poetry* (published only in English, 1940) and *Literatura española siglo XX* (1941) He ranks among the best Spanish poets of the 20th cent , and his poetry is characterized by subtlety and intellectualism All poetic experience is submitted to ironical analysis His best poetry is included in *Presagios* (1923), *Seguro azar* (1929), *Fábula y signo* (1931), *Amor en vilo* (1933), *La voz a ti debida* (1933), *Razón de amor* (1936) and *El contemplado* He translated (1925) the *Poema de Mío Cid* into modern Spanish and edited the poems of Meléndez Valdés (1925) Some of his poems have been translated into English as *Lost Angel and Other Poems* (1938), and *Truth of Two and Other Poems* (1940)

Salinas, river, c 150 mi long, rising in S California, in the Santa Lucia Mts E of San Luis Obispo, and flowing (partly underground) past King City, Paso Robles, and Salinas, NW to Monterey Bay The valley is highly productive See Anne Fisher, *The Salinas, Upside-down River* (1945)

Saline (sulēn'), city (pop 1,227), SE Mich , S of Ann Arbor, settled 1824, inc as a village 1877, as a city 1931 A Ford plant here uses soybean oil made at a company mill near by The cooperative Saline Valley Farms is near here

Saline, tributary of the Ouachita river, starting in the Ouachita Mts , W Ark , and flowing to S Arkansas, where it joins the Ouachita

Salineville (sulēn'vĭl), village (pop 2,018), NE Ohio, SW of Youngstown, in a coal-mining region.

Salisbury, John of see JOHN OF SALISBURY.

Salisbury, Robert Arthur Talbot Gascoyne-Cecil, 3d **marquess of** (sôlz'bûrē), 1830–1903, British statesman and diplomat He entered Parliament in 1853 as a Conservative and devoted himself for 50 years to a program of cautious imperialism and implacable resistance to parliamentary and franchise reforms He served as secretary for India in Lord Derby's government, but resigned (1867) in protest against the reform bill sponsored and passed by Benjamin DISRAELI. Throughout the various administrations of William Ewart GLADSTONE,

Salisbury (who succeeded to his father's title in 1868) was a consistent opponent of Gladstone's policies, particularly of his determination to grant Home Rule to Ireland Salisbury served Disraeli as Indian secretary (1874–78) and as foreign secretary (1878–80) His "Salisbury Circular" outlined British policy in the Near East and led to the Congress of Berlin (1878), to which gathering he accompanied Disraeli He became Conservative leader in the House of Lords in 1881 In 1885 he entered upon the first of his three ministries His government fell shortly thereafter, and Gladstone was briefly prime minister (1886) until the Liberals split on the first Home Rule bill Salisbury's second government lasted six years (1886–92), his third, seven years (1895 1902) In each of his ministries he acted as his own foreign minister He favored a liberal land policy in Ireland despite his conservative attitude toward Home Rule He maintained peaceful relations with the great powers Zanzibar and Uganda were exchanged for Heligoland with Germany and the cornerstone of an African agreement with France was laid in the Fashoda settlement He conciliated the United States at the time of the Venezuela Boundary Dispute, in the Spanish-American War, and in the Panama negotiations He directed the arrangements for the Anglo-Japanese alliance and attempted with some success to maintain the Open Door in China The South African War darkened the last years of his career He relinquished the foreign office to Lord Lansdowne in 1900 and resigned as prime minister in 1902, designating his nephew, Arthur Balfour, as his successor Despite his conservatism, Salisbury achieved some domestic reforms, such as the County Councils Act, workmen's compensation laws, and housing reform Throughout his life Salisbury contributed a number of topical essays to various periodicals, notably to the *Quarterly Review* See biography by his daughter, Lady Gwendolen Cecil (5 vols , 1921–35)

Salisbury, Robert Cecil, 1st **earl of,** 1563?–1612, English statesman, son of William Cecil, Baron Burghley A sickly, deformed child, he was educated at home and at Cambridge and spent some years abroad, being in 1588 a member of Lord Derby's mission to negotiate a peace with the Spanish Netherlands Cecil entered Parliament and came gradually to rank second only to his father as adviser to Queen Elizabeth About 1589 he began to perform the duties of secretary of state and was officially appointed to that position in 1596 He became chancellor of the duchy of Lancaster in 1597 and in 1598 succeeded his father as chief minister, despite the rivalry of Francis Bacon and the earl of Essex The fall and execution of Essex in 1601 cleared the way for Cecil to prepare, by secret negotiation with James VI of Scotland, the peaceful accession of the latter to the English throne as James I on the death of Elizabeth (1603) After the accession of James, Cecil was created Baron Cecil (1603), Viscount Cranborne (1604), and earl of Salisbury (1605) His influence over James was due to his abilities, not, as in the case of the earl of Somerset and the duke of Buckingham, to a personal ascendancy over the king For the remainder of his life virtually the entire administration of the government was in his care The duties of lord treasurer devolved upon Salisbury in 1608 He exhibited great financial skill, reducing the public debt and attempting to restrain James's extravagance He greatly increased customs duties without the consent of Parliament and began the ruinous Stuart policy of attempting to circumvent Parliament in securing revenue His proposed Great Contract with Parliament, by which James would receive a settled income in return for abandoning his feudal revenues and assumed rights of imposition, failed of acceptance In foreign affairs Salisbury attempted to maintain a balance of power between France and Spain After 1604 he received a pension from Spain, but his hope that England might lead a Protestant alliance led him to support the marriage of James's daughter to the elector palatine (1612) In his latter years Salisbury planned and had built the great Jacobean mansion, Hatfield House, which remained in the possession of the family

Salisbury (sôlz'–) or **New Sarum** (sar'um), municipal borough (1931 pop 26,460, 1947 estimated pop 30,970), county town of Wiltshire, England It originated with the transfer of the bishopric from Old Sarum in 1220 Squares or "checkers" are characteristic of the regular plan of the city The great cathedral, a splendid example of Early English architecture with the highest spire in England (404 ft), was built mainly between 1220 and 1260, some of the materials being brought from the razed cathedral of Old Sarum The 13th-century palace of the bishops, the churches of St Martin, St Edmund (13th cent), and St Thomas (13th cent), the Blackmore Museum, old hospitals and inns, Audley House (15th cent), and the Salisbury and South Wiltshire Museum are of interest The city is the Melchester of Thomas Hardy's Wessex novels

Salisbury (sôlz'–), city (pop 69,049), capital of Southern Rhodesia, founded 1890 It is connected by rail to Lusaka, the capital of Northern Rhodesia, and to Beira on the coast of Mozambique Textiles are manufactured Gold and chrome are mined near by

Salisbury **1** Resort town (pop 3,030), extreme NW Conn., in the Taconics, settled c 1720, inc 1741 Bear Mountain is in the town, which includes the villages Ore Hill, Lime Rock, Lakeville, Salisbury, and Taconic The hills surrounding the village of Salisbury once yielded iron ore On the broad main street of the village are fine old buildings, including the town hall Salisbury School for boys (preparatory, founded 1901) is near by **2** City (pop 13,313), co seat of Wicomico co, Eastern Shore, Md , at the head of Wicomico river, settled 1732 It is an industrial and shipping point, producing garments and processing lumber, vegetables, meats, fruits, dairy goods, and sea foods A state teachers college is here **3** Town (pop 2,376), extreme NE Mass , N of the Merrimack, settled 1638, inc 1640 It includes the resort Salisbury Beach There are several 17th-century buildings in the town **4** City (pop 1,759), N central Mo , W of Moberly, in a coal and farm area, settled 1877, inc 1891 **5** City (pop 19,037), co seat of Rowan co , W central N C , NNE of Charlotte, in the piedmont, settled 1751, inc 1753 It is a textile-mill city with granite quarries near by A national cemetery, Catawba College (coeducational, 1851), and Livingstone College (Negro, Methodist Episcopal Zion, coeducational, 1879) are here

Salisbury Plain, chalk plateau of undulating, mostly barren highland, 300 sq mi , Wiltshire, England, NW of Salisbury It is noted chiefly as the site of ancient monuments, of which Stonehenge is the most famous The area is an important training ground for the British army

Salishan (sā'lĭshun, să'–), linguistic stock of North American Indians of the NW United States and British Columbia It includes such tribes as the Flathead, the Pend d'Oreille, the Okanogan, the Puyallup, the Nisqually, the Spokan, the Colville, the Coeur d'Alene, the Bella Coola, the Clallam and Shuswap See Algonquian and language (table)

Salish Indians see Flathead Indians

saliva (sulī'vu), alkaline digestive fluid secreted by the salivary glands (să'lĭvē"rē) The saliva bathes the mouth, keeping it moist, and softens the food in the oral cavity It is produced chiefly by the three pairs of salivary glands known as the parotid glands (found just below and in front of the ear), the submaxillary (below the jaw), and the sublingual (beneath the tongue) Ducts carry the secretion into the mouth cavity Other small glands in the mouth region also add to the secretion of saliva The digestive ferment (ptyalin) contained in the saliva converts starch to sugar, thus beginning the process of digestion The flow of saliva is increased when stimulated by the presence of food A lack of salivary flow from a gland may be caused by the formation of a calculus which blocks the duct

Salkhat, Syria see Salcah

Sallai (săl'āī [Heb , =exaltation] **1** Man who returned from the Exile Neh 11 8 **2** Same as Sallu 1

Sallee, French Morocco see Salé

Sallisaw (să'lĭsô), city (pop 2,140), co seat of Sequoyah co , E Okla , in a hilly region near Arkansas, founded c 1886 It is the center of a rich farm district

Sallu (săl'ū) [Heb , =exaltation] **1** One who returned with Zerubbabel Neh 12 7 Sallai Neh. 12 20 **2** Benjamite 1 Chron 9 7, Neh 11 7

Sallust (Caius Sallustius Crispus) (să'lust), 86 B C – c 34 B C , Roman historian He was tribune of the people (51 B C) and praetor (46 B C) He was ejected from the senate ostensibly for adultery (50 B C), but more probably because of his partisanship for Caesar He served with Caesar after his praetorship and was his governor in Numidia, he was subsequently accused of enriching himself from the province His principal work is the *Bellum Catilinarium* or *Catilina*, on the conspiracy of Catiline Sallust's account of the Jugurthine war, *Bellum Jugurthinum* or *Jugurtha*, is of little value as history Sallust's history of Rome is extant only in fragments, it probably covered the period 78 B C –66 B C. There are also two letters, in rhetorical style, from Sallust to Caesar As a historian Sallust was inaccurate and strongly biased, but he was important as one of the first to write historical monographs, dealing with sharply limited events and periods His style is consciously archaizing and strained, but is distinguished by its terseness and directness His character sketches are particularly impressive and vivid, and his work has found as many imitators as critics

Salma (săl'mu), variant of Salmon **1**

Salmasius, Claudius (klô'dēus sălmā'shus), 1588–1653, French humanist and philologist He is known in French as Claude de Saumaise Taught Latin and Greek by his father, he later studied law, theology, Hebrew, Arabic, and Persian Commencing a law career at Dijon in 1610, he turned to his studies when his Protestantism, embraced as a student in Paris, impeded advancement In 1631 he was called to the Univ of Leiden to succeed Joseph Scaliger and glorify it with his name and writings Supporting the Stuarts, he wrote *Defensio regia pro Carlo I* (1649), upholding the divine right of monarchy, which brought a dissenting reply from John Milton In 1650–51 Salmasius was patronized in Stockholm by Queen Christina He is remembered for his discovery (1606) of the Greek anthology of Cephalas at Heidelberg, an important commentary on Pliny (1629), and *De lingua hellenistica* (1643) Vain and pompous, he left over 80 books, full of learning but often hastily written and poorly organized

Salmerón y Alonso, Nicolás (nĕkōlās' sălmārōn' ē alōn'sō), 1838–1908, Spanish statesman and philosopher A professor at Oviedo and Madrid universities and a convinced republican, he became, after the expulsion of Isabella II (1868), a member of the revolutionary junta, of the constituent assembly (1869), and of the Cortes (1871) After Amadeus' abdication, he was minister of justice and then president of the republic (1873) He restored some order, but was unable to handle the confused political situation and soon resigned He opposed Pavía's coup d'état and fled to Paris after the restoration of Alfonso XII Returning to Spain in 1881, he regained (1884) his chair of philosophy at Madrid and was reelected (1886) to the Cortes, where he led the federalist republicans

Salminen, Sally (săl'lē săl'mĭnĕn), 1906–, Finnish novelist While working in Massachusetts as a housemaid for a wealthy family she entered her first novel, *Katrina* (1936, Eng tr , 1937), in a Finnish-Swedish literary competition, in which it won first prize This story in Swedish about the author's native Aland Islands became an international best seller Other novels are *Mariana* (1939, Eng tr , 1940) and *New Lands* (1945)

Salmon (săl'mŏn) **1** Father of Boaz Ruth 4 20, Mat 1 5, Luke 3 32 Salma 1 Chron 2 11,51,54 **2** Place, probably the same as Zalmon **2**

Salmon (să'mun), city (pop 2,439), co seat of Lemhi co , E Idaho, at the confluence of the Salmon and Lemhi rivers near the Mont line The site was visited by Lewis and Clark With the discovery of gold in the area (1866), Salmon City was founded (1867) as a supply center Later it was a distributing point for mining, lumbering, and agriculture A Federal fish hatchery and the headquarters for Salmon National Forest are here

Salmon, river, c 425 mi long, rising in many branches in central Idaho, in the Sawtooth and the Salmon River Mts It flows northeast and is joined, at Salmon, by the Lemhi, after which it flows west and is joined by the Middle Fork and the South Fork, then goes north to join the Snake The canyon of the river threads through a wilderness preserve The river itself has a large salmon run, which is unfished In 1935 a party sponsored by the National Geographic Society explored the canyon See R G Bailey, *The River of No Return the Salmon* (1935)

salmon (să'mun), marine fish of the N Atlantic and the N Pacific which breeds in fresh water The Atlantic salmon, genus *Salmo*, provided a plentiful source of food for the Indians and colonists Pollution of waters, erection of dams, and overfishing have nearly exterminated it Some remain in European rivers and in rivers of Maine and E Canada, and larger quantities are caught near Labrador Pacific coast salmon, genus *Oncorhynchus*, are taken from Monterey, Calif , to Nome, Alaska The chief canning areas are near the regions of abundance on the Columbia river and Puget Sound and in Alaska, British Columbia, Siberia, and N Japan Alaska furnishes over half the world's supply of canned salmon There are five common species of Pacific salmon The Chinook (or quinnat or king) salmon, which averages about 20 lb and sometimes reaches 100 lb , is the chief salmon of the Columbia and Sacramento rivers and the most important commercially It is marketed fresh, smoked, and canned The red (or sockeye or blueback) salmon forms the bulk of the canned salmon. Also valuable commercially are the pink or humpbacked salmon and the silver or coho salmon The chum, keta, or dog salmon flesh is better frozen, salted, or smoked than canned When ready to spawn, salmon migrate from the ocean, each species seeking the region where it hatched Those which journey far to headwater streams arrive battered and exhausted, having fought their way against the current over rapids and falls, past a gauntlet of fishermen and hungry animals The Pacific salmon die soon after the eggs are laid and fertilized, but the Atlantic salmon return to the sea In some species the young descend to the sea immediately after hatching, others remain in fresh water from one to three years They feed in salt water for a period of one to nine years before seeking the freshwater breeding grounds Some salmon are landlocked in northern lakes

Salmone (sălmō'nē), cape on the eastern point of Crete It is mentioned in the account of Paul's voyage to Rome Acts 27 7.

Salmoneus (sălmō'nēus, –nūs), in Greek legend, son of Aeolus and brother of Sisyphus He was founder and king of Salmone in Elis Posing as Zeus' equal, he demanded sacrifices and with flaring torches

imitated lightning Zeus destroyed him and his city with a thunderbolt

Salmon Falls River, rising in lakes around the Maine–N H border and flowing south-southeast, forming the border It enters the Atlantic at Portsmouth Harbor Its lower course is known as the Piscataqua

Salmon River Mountains, central Idaho, between the Sawtooth Mts to the south and the Bitterroot Range to the northeast Twin Peaks reach a height of 10,328 ft The Middle Fork and the East Fork of the Salmon river bracket the Salmon River Range of the Salmon River Mts

Salome (sălō′mē) [from Heb ,=peace] **1** Daughter of Herod Philip and Herodias She is generally supposed to be the daughter who danced for the head of John the Baptist Mark 6 16–28 Thus is the subject of a poem *Salomé* by Oscar Wilde, set to music as a one-act opera by Richard Strauss (Dresden, 1905) **2** One of the women who ministered to Jesus, who beheld his crucifixion, and who brought offerings to his tomb Mark 15 40, 16 1

Salome Alexandra see MACCABEES, Jewish family

Salomon, Haym, 1740–85, American Revolutionary patriot and financier, b Leszno, Poland He aided Robert Morris in securing foreign and domestic loans, and his pledging of his own banking fortune, the personal risks he took, and the taxing work he did to promote the patriotic cause demonstrated that a man could be a hero in the countinghouse as well as on the battlefield See biography by C E Russell (1930)

Salona (sulō′nu), Latin *Salonae,* ancient city of Dalmatia A port on the Adriatic, it was used as a base for Roman conquest and was made a Roman colony and capital of Illyricum The busy commercial city gained prestige when Diocletian on retiring built a magnificent palace near by after A D 305 Salona became an episcopal see in the 4th cent , but in the 7th cent the people fled before invaders and transformed Diocletian's palace into the city of Spalato (now Split, Yugoslavia) Salona was destroyed

Salonica, Salonika (both sălun′ku, sulō′nĭku), or **Saloniki** (sălunē′kē), Gr *Thessalonike* or *Thessaloniki* (both thĕs″salōnē′kē), city (pop 226,147), NE Greece, in Macedonia, on the Gulf of Salonica, an inlet of the Aegean Sea, and at the neck of the Chalcidice Peninsula It is the second largest city of Greece, a major port, and the center of an industrial district producing textiles, cigarettes, leather goods, and machine tools The port trades in wheat, cotton, silk cocoons, vegetables, tobacco, and livestock Salonica also is a road and air transportation center, the seat of the governor of Greek Macedonia, and the seat of a university (opened 1926) The city was founded c 315 B C by Cassander, king of Macedon, on or near the site of the older Therma, and was named Thessalonike in honor of his wife, a half sister of Alexander the Great In 146 B C it became the capital of the Roman province of Macedonia It enjoyed great prosperity under the Romans and was second only to Constantinople under the Byzantine Empire The city had, from early times, a large Jewish colony, and it was an early Christian diocese St Paul addressed his two epistles to the THESSALONIANS to his converts here The Jewish population was greatly increased in the late 15th and early 16th cent by the influx of Spanish-Jewish refugees The massacre (A D 390) of the rebellious citizens of Salonica by order of THEODOSIUS I led to the emperor's excommunication and repentance The city was occupied by the Saracens in 904 and by the Normans of Sicily in 1185 When in 1204 the leaders of the Fourth Crusade created a Latin empire (see CONSTANTINOPLE, LATIN EMPIRE OF), the kingdom of Thessalonica, comprising most of N and central Greece, was its largest fief It was given to Boniface, marquis of Montferrat, but it was seized in 1222 by the Greek despot of Epirus, who had himself proclaimed emperor The kingdom fell into anarchy in the struggle between the Greek rulers of Epirus and the Greek emperors of Nicaea In 1246 the city fell to the Nicaeans, who in 1261 were to restore the Byzantine Empire Conquered by Sultan Murad I in 1387, Salonica was restored to the Byzantines in 1405, was bought by Venice in 1423, and was again conquered by the Turks under Murad II in 1430 From then until its reconquest (1912) by the Greeks in the Balkan Wars, Salonica remained under Ottoman rule In the First World War the Allies landed (1915) at Salonica, thus beginning the Salonica campaigns (see separate article), and in 1916 VENIZELOS set up here his pro-Allied provisional government of Greece Salonica suffered considerable damage in the Second World War The city is famous for its many fine churches, notably those of Hagia Sophia, with notable mosaics, of St George, and of St Demetrius Among its ancient ruins is the triumphal arch of Emperor Constantine

Salonica campaigns. After the outbreak of the First World War, Greece remained neutral When the pro-Allied government of VENIZELOS fell in 1915 because of its intention to enter the war on the Allied side, the Allies landed (Dec , 1915) a force under the French general Maurice Sarrail at Salonica and began a "peaceful blockade" of Greece Their object was to relieve Serbia and to maintain a foothold in the Balkans by bringing Greece into the war King CONSTANTINE proved obdurate, and the Allies fostered the establishment (1916) of a rival Greek government, headed by Venizelos, at Salonica The Venizelos government declared war on the Central Powers, and in June, 1917, after the Allies had begun to invade central Greece, Constantine abdicated and Greece formally joined the Allies In the meantime, the Macedonian front had stabilized after several unsuccessful Allied offensives against the Bulgarian, Turkish, and German forces facing them Bitolj was taken (Nov , 1916), but the battle of the Vardar (May, 1917) was inconclusive The Allies were hampered by friction among their commanders, by the insecure status of Greece, and by the malaria which wrought havoc among their forces In 1918, however, huge reinforcements were brought to Salonica Gen Franchet d'Esperey took command, and in September the Allies began their northward advance along the entire front in an uninterrupted offensive Bulgaria capitulated on Sept 30, Serbia was recovered by Nov 1, and on Nov 10 Rumania was in Allied hands The armistice of Nov 11, 1918, ended the campaign

Salonika or **Saloniki,** Greece see SALONICA

Salop, county, England see SHROPSHIRE

salsify see GOATSBEARD

Salsomaggiore (sal″sōmäd-jō′rā), town (pop 7,751), Emilia, N Italy, W of Parma It is a watering place noted for its iodine saline waters, used for rheumatic and respiratory disorders

Salt, Sir Titus, 1803–76, English textile manufacturer and inventor He invented a machine for making worsted from coarse wool and a process for spinning and weaving alpaca In 1851 he started to build, on the Aire river, extensive textile works and a model manufacturing town, called Saltaire, in which he attempted to embody his conceptions of ideal factory conditions for workers

salt **1** A common and widely used substance, chemically a compound of the elements sodium and chlorine called sodium chloride It crystallizes in small transparent cubes, melts at about 803°C , is soluble in both hot and cold water, and in solution conducts a current of electricity by which it is decomposed (see ELECTROLYSIS) Salt is widely and abundantly distributed in nature It constitutes the greater part of the matter dissolved in sea water, in such large inland bodies of water as the Dead Sea and the Great Salt Lake, and in salt wells in various parts of the world It is a constituent of animal fluids, such as urine and perspiration It occurs in large deposits as rock salt, in the United States (notably in New York, Michigan, Ohio, Kansas, Texas, and Louisiana) and also in Great Britain, France, and Germany India and China also produce much salt Salt is mined from these deposits or is obtained by introducing water beneath the surface of the ground, dissolving the salt, and then pumping the solution to the surface, where the solution is evaporated and the salt crystallizes out Salt is obtained also by the evaporation of sea water, which is led into shallow basins for this purpose and allowed to stand The compound is important in many ways It is the chief source of the metal sodium and of its compounds, such as baking soda and caustic soda It is a source also of chlorine and some of its compounds, notably hydrochloric acid It is employed in industry in the manufacture of glass, pottery, dyes for textiles, and soap It is used for preserving fish and other foods, in curing meat, and in making ice cream It aids digestion by increasing the quantity of hydrochloric acid, which is a small but essential part of the animal digestive fluid, and it is an extremely important part of the diet both of men and of animals Trails have been worn by animals seeking accessible salt Men of primitive tribes have traded their wives and children into slavery for salt See G L Eskew, *Salt, the Fifth Element* (1948) **2** In chemistry, a salt is any one of a class of compounds similar to sodium chloride, which contain some other positive ion than the hydrogen ion (e g , that of a metal or metallic radical) and some other negative ion than the hydroxyl (OH) ion (e g , that of a nonmetal or nonmetallic radical) Salts that contain neither the hydrogen ion (all hydrogen ions having been replaced) nor the hydroxyl ion are called normal salts, those containing the hydrogen ion in addition to another positive ion are called acid salts, and those containing the hydroxyl ion (i e., all the hydroxyl ions of the base are not replaced), in addition to some other negative ion, are basic salts Salts are named from the elements of which they are composed and the acid from which they are derived A salt which is composed of only two elements has the ending -ide suffixed to the name of the nonmetallic one of its constituent elements For example, the chemical name for common table salt is sodium chloride Other chlorides, as well as bromides, sulphides, fluorides, and iodides, are common salts Salts made up of more than two elements and derived from acids with names ending in -ic (as sulphuric acid) have the ending -ate, e g , as in carbonate, chlorate, nitrate, phosphate, silicate, and sulphate. Salts derived from -ous acids receive the ending -ite Salts are widely used in industry, medicine, the arts, and agriculture, for various reasons — for some special property of a specific salt, e g , its color, solubility, or insolubility, as a source for some other element, e g , sodium or chlorine, and for the ions which the soluble salts yield in solution

Salta (sal′ta), city (estimated pop 42,931), capital of Salta prov , NW Argentina, founded 1582 It is the commercial center of a region rich in agriculture, minerals (chiefly oil), and forest products Sugar, tobacco, grain, cattle, sheep, and hides are the chief exports Here in 1813 Belgrano defeated Spanish royalists under Tristán

Saltaire, model village, West Riding of Yorkshire, England, just W of Shipley It was founded in 1851 by Sir Titus SALT for the manufacture of alpaca

Saltcoats, burgh (pop 10,173), Ayrshire, Scotland, on the Firth of Clyde and SW of Glasgow It is now a resort, formerly it was noted for its salt production and shipbuilding

Salten, Felix (fā′lĭks z ăl′tun), 1869–1945, Austrian novelist He was first a journalist and dramatic critic He won a wide public in the United States with his delightful animal stories *Bambi* (1923, Eng tr , 1928), later filmed by Walt Disney (1940), and *Fifteen Rabbits* (1929, Eng tr , 1930) He also wrote *The Hound of Florence* (1921, Eng tr , 1930), *The Good Comrades* (1930, Eng tr , 1942), and *Florian, the Emperor's Stallion* (1933, Eng tr , 1934), filmed in 1940 Salten, who fled to Switzerland when the Nazis invaded Austria, died in that country

Salter, Sir James Arthur, 1881–, English economist He has filled many government posts as an authority on transport and shipping problems, has worked for social welfare, and is noted as an internationalist Sir Arthur's activities have included service in the League of Nations and a professorship at Oxford He became a member of Parliament in 1937 His books include *Allied Shipping Control* (1921), *The Framework of an Ordered Society* (1933), and *Personality in Politics* (1947)

salt glaze, in pottery, a finish produced in an open-flame kiln by adding salt to the fire This technique, developed in Germany in the 15th cent , has been used by many English and American potters

Saltillo (sältē′yō), city (pop 49,430), capital of Coahuila, N MEXICO, founded 1575 Saltillo is built in an alluvial valley almost surrounded by mountains The climate is temperate Primarily an agricultural and mining community, it is also an important rail center and has some manufacturing —cotton, woolen, and flour mills, cottonseed-oil plants, and engineering works Woolen serapes have helped to make Saltillo famous in Mexico and among tourists Often a focal point in wars and insurrections, Saltillo was taken by Zachary Taylor's forces in the Mexican War, and a short distance to the south was fought the battle of BUENA VISTA During the French intervention French troops occupied it several times

Salt Lake City, city (pop 149,934), state capital, and co seat of Salt Lake co , N central Utah, on the Jordan river, SE of Great Salt Lake and at the foot of the Wasatch Range Founded in 1847 by Brigham YOUNG as the capital of the MORMONS, it achieved greatness as the hub of the Mormon economy, the prominence of the gigantic Temple (built 1853–93) on Temple Square at the city's heart shows that Salt Lake City is still eminently the City of the Saints The first Mormon irrigation used the water of City Creek, and the city (called Great Salt Lake City until 1868) led in most enterprises in Utah An outfitting point for California overlanders after 1849, it was connected with the first transcontinental railroad by a line that Young had built (1869–70) to Ogden and is today a focal point for automobile and air traffic across the United States Salt Lake City ships the products of a rich irrigated region and of many mines and has varied small industries It is the seat of the Univ of Utah (see UTAH, UNIVERSITY OF), the College of St Mary-of-the-Wasatch (Catholic, for girls), Westminster College (junior, Presbyterian, coeducational), and McCune School of Music and Art Fort Douglas, founded here in 1862 as Camp Douglas, was particularly notable under the command of Gen P E CONNOR A veterans' hospital and the state prison are also in Salt Lake City See C D Harris, *Salt Lake City, a Regional Capital* (1940, Univ of Chicago dissertation), Josef Muench, *Salt Lake City* (1947, photographs)

Salto (sal′tō), city (1941 estimated pop 46,000), capital of Salto dept , NW Uruguay, on the Uruguay river Falls here interrupt river navigation In competition with CONCORDIA, Argentina, across the river, Salto is a thriving rail and shipping center for the agricultural products and livestock of the Uruguayan side There is a small boatbuilding industry In the environs are extensive orange and tangerine orchards as well as vineyards

Salton Sea (sol′tun), body of water, c 30 mi long and 8 to 14 mi wide, SE Calif , in the IMPERIAL VALLEY Until 1905 the area was a salt-covered depression known as Salton Sink (c 280 ft below sea level) At that time, the Colorado river broke

through an irrigation gap in its levee and flowed for two years into the sink before it was checked Water from irrigation systems, flowing into the Salton Sea, helps to counteract evaporation, so that its level is receding with extreme slowness Its surface is c 245 ft below sea level

Salton Sink · see SALTON SEA

Saltonstall, Sir Richard (sôl'tunstôl), 1586–1658, early English colonist in Massachusetts (1630–31) Of a prominent Yorkshire family (he was knighted in 1618), Saltonstall became a member and was appointed an assistant of the Massachusetts Bay Company in 1629 With his five children, he accompanied John WINTHROP (1588–1649) to America in 1630 and was a founder of Watertown, Mass , but returned to England in 1631 There he helped secure the grant at the mouth of the Connecticut which led to the settlement of Saybrook

saltpeter or **niter** (nī'tûr), naturally occurring form of a white crystalline substance, potassium nitrate, a compound of potassium and the nitrate radical (NO_3), melting at 334°C and decomposing at 400°C It occurs widely distributed in parts of Asia, Europe, and the United States (Indiana, Kentucky, Missouri, Tennessee, Virginia) It is prepared commercially by treating sodium nitrate with potassium chloride It is extensively used in the manufacture of explosives (especially gunpowder), fireworks, and matches, as a preservative in foods (especially meats), and in medicine **Chile saltpeter** (natural sodium nitrate, called in its crude, impure state *caliche*) when pure is a colorless, crystalline substance It resembles ordinary saltpeter in appearance, but it is a compound of sodium and the nitrate radical, melting at 307°C, and decomposing at 380°C It is called also soda niter Chile saltpeter occurs in large deposits in South America in Chile, Peru, and Bolivia Owing to the abundance of the natural form, it is not necessary to prepare it artificially to any great extent, it is, however, prepared synthetically (see NITROGEN and NITRIC ACID) The pure sodium nitrate is obtained by separation from the impurities It is much used in making potassium nitrate, fertilizers, and explosives and in the preparation of nitric acid

Salt River Valley, irrigated region about the lower course of the Salt river, which rises in mountain streams near the Mogollon Rim and flows westsouthwest to join the Gila in S central Arizona Its chief tributary is the VERDE Indians used Salt river for irrigation many centuries ago American settlers commenced irrigated farming about 1867, and at Mesa the Mormons used (1878) some of the old Indian canals In 1905 began the Salt river project, the first large undertaking under the Federal reclamation act Roosevelt Dam (c 280 ft high, of masonry) was built (1906–11) in a canyon 80 mi E of Phoenix Other dams were later built to supply water and power—the Horse Mesa (1924–27), the Mormon Flat (1923–25), and the Stewart Mountain (1928–30) in the Salt and the Bartlett (1936–39) in the Verde, besides the Granite Reef Diversion Dam (1906–8) and the Cave Creek Flood Control Dam (1922–23) The region is richly productive of lettuce, melons, and other truck, citrus fruits, dates, alfalfa, and other crops The sun-pervaded climate makes the region a winter resort The metropolis of the Salt river project is Phoenix, and other cities are Mesa, Glendale, Tempe, Tolleson, and Chandler

Saltsburg, residential borough (pop 1,097), SW Pa , ENE of Pittsburgh, laid out 1817, inc 1838

Saltus, Edgar Evertson (sôltus), 1858–1921, American author, b. New York city, studied at Yale and in Paris and Heidelberg, grad Columbia Law School, 1880 After writing a study of Balzac and two books on philosophy he turned to fiction, specializing in violent plots and lavish descriptions His novels include *Mr Incoul's Misadventure* (1887), *The Truth about Trustrem Varick* (1888), and *The Pace That Kills* (1889) *Imperial Purple* (1892), a history of the Roman emperors, best displays his unusual style

Saltville, town (pop 2,650) extreme SW Va., in the Holston river valley SW of Marion, land patented 1753, inc 1894 Saltmaking began in 1788. The saltworks were taken by Federal forces in Dec , 1864, and destroyed but were later reestablished

Saltykov, Mikhail Evgrafovich (mĭkhīŭyĕl' yīvgrä'fuvĭch sŭltĭkôf'), pseud of **Nikolai Evgrafovich Shchedrin** (shchĕdrēn'), 1826–89, Russian novelist and fabulist He wrote in satirical vein, attacking directly or in Aesopic language such figures as government officials, greedy capitalists, and backward landowners His *Fables* (1885) are available in English (1931), as is his masterpiece, *The Golovlyov Family* (1876, Eng tr , 1917), a study of decaying gentry See Nikander Strelsky, *Saltykov and the Russian Squire* (1940).

Salu (sä'lo͞o), father of ZIMRI 2 Num 25 14

Saluafata (sä"lo͞oäfä'to͞o), American naval station, Upolu island, Western Samoa, on Saluafata harbor on the northeast coast

Saluda (sŭlō'du), town (pop 1,516), co seat of Saluda co., W S C , W of Columbia and SE of Greenwood, in a diversified farming area

Saluda, river rising in W South Carolina in the Blue Ridge and flowing southeast across the piedmont to the Broad River (with which it forms the Congaree) near Columbia Above Columbia the river is dammed by the huge earthen Saluda (or Dreher Shoals) Dam (1930) to form Lake Murray Buzzard Roost Dam, forming Lake Greenwood, is also in the Saluda

Salut, Îles du see ÎLES DU SALUT

Saluzzo (sälo͞ot'tso), town (pop 10,443), Piedmont, NW Italy From the 12th to the 16th cent. it was the capital of a marquisate by the same name, which included several other communes After being occupied several times by France, it passed to the house of Savoy in 1601 There are ruins of a castle and the Church of San Giovanni with sculptured tombs of the marquises

Salvador (săl'vudôr, Span sälvidhôr') or **El Salvador,** republic (13,176 sq mi , 1946 estimated pop 2,018,895), Central America The capital is SAN SALVADOR The country is bounded on the southwest by the Pacific, on the west by Guatemala, and on the northeast by Honduras With the exception of Haiti, Salvador is the smallest and most densely populated of the Latin American countries Homogeneity of population (about 80 percent ladino, less than 20 percent Indian) and uniformity of terrain have contributed to agricultural prosperity From west to east, Salvador is broken by two roughly parallel volcanic ranges, which reach altitudes of 7,000 ft The most active of its volcanoes is IZALCO Between these ranges are warm valleys, such as that of the Río LEMPA, where savannas afford excellent cattle grazing The dominant crop is coffee, which, because of the low elevation of the valleys (c 2,000 ft), is planted far up the precipitous sides of the volcanoes, but corn, the staple food, covers more acreage Communications are good The INTER-AMERICAN HIGHWAY extends the length of the country, and other roads lead out from San Salvador to the interior and to the coast at La LIBERTAD The International Railways of Central America connects La UNIÓN with Puerto Barrios, in Guatemala, and the Salvador Railway links the capital and SANTA ANA with ACAJUTLA The Pacific orientation, the sparse native labor supply, and the failure to find gold left the conquering Spanish under Pedro de ALVARADO with little interest in the region The region, however, became a source of indigo Throughout the colonial period Salvador was under the captaincy general of Guatemala The declaration of independence from Spain in 1821 led to a brief period under the empire of ITURBIDE, and after its collapse Salvador joined the CENTRAL AMERICAN FEDERATION Salvador protested against the continued dominance of Guatemala and under Francisco MORAZAN succeeded in having the federal capital transferred (1831) to San Salvador After the dissolution of the federation, the republic continued to foster the idea of a Central American union, but there was frequent interference from dictators of other Central American countries—Rafael CARRERA, Justo Rufino BARRIOS, and José Santos ZELAYA It was not until the development of coffeegrowing in the second half of the 19th cent that Salvador experienced a phenomenal increase in population Intense cultivation led to the predominance of small, landed proprietors Agricultural growth in turn contributed to minor industrial development, especially in the export of henequen bags, Peruvian balsam, and sugar Some domestic self-sufficiency has been attained in tobacco, clothing, and liquor With the collapse of coffee prices in 1931, the incumbent administration was overthrown and Maximiliano HERNANDEZ MARTÍNEZ became president His dictatorship ended in 1944 Gen Salvador Castañeda Castro was elected president in 1945 When he was planning a constitutional change to permit his reelection, he was ousted by an army coup in Dec , 1948 Maj Oscar Osorio, who became head of the governing junta, won the presidential elections of March, 1950 See M W Williams, *People and Politics of Latin America* (1938); P E James, *Latin America* (1942), George Wythe, *Industry in Latin America* (1946), Ralph Hancock, *Rainbow Republics* (1947)

Salvador (sälvädôr'), formerly **Bahia** (bäē'ù) or **São Salvador** (sä'ō), city (pop 290,443), capital of Bahia state, E Brazil, a port on the Atlantic at the entrance to Todos os Santos Bay It is built on a peninsula and has two sections The older, lower part, next to the harbor, is the market district, the more modern, upper part, which is reached by elevators and railways, contains government buildings, attractive parks, and private residences The city is one of the oldest in Brazil, having been founded in 1549 by Tomé de Sousa A bishopric was established in 1551 Until 1763 it was the capital of the Portuguese possessions in America It has a large Negro population Salvador is an important trade center, exporting tobacco, sugar, cacao, textiles, hides, and industrial diamonds. Processing of agricultural goods is the chief industry. There are many churches, including a 16th-century cathedral, a university (with medical, law, and engineering schools), and agricultural institutes. There is a military arsenal here.

salvage (săl'vĭj), in maritime law, the compensation which the owner must pay for having his vessel or cargo saved from peril, such as shipwreck, fire, or capture by an enemy It is awarded only when the party making the rescue was under no legal obligation to do so A claim ordinarily is allowed if the salvor's activities had some effect in averting the threatened peril even if they were not indispensable In the United States, at least, salvage is granted for rescues made on navigable streams and lakes as well as on the open sea Salvage includes a reward designed to encourage rescue operations besides the payment for the value of the services In setting the value, relevant factors for the consideration of the court include the expense and hazard of the rescue and the price of the ship or goods saved Salvage is distributed by the court to the owner, the master, and the crew of the rescuing ship, usually according to fixed ratios

Salvation Army, international organization for religious and philanthropic work, chiefly among those who would not ordinarily come under the influence of Christian churches It was originated by William BOOTH, with the able assistance of his wife, Catherine Booth Booth, a Methodist minister, began independent evangelistic work in Cornwall in 1861 In London he first held out-of-door meetings in 1865, tents, theaters, and other structures were used to accommodate the crowds that gathered The movement was known as the East London Revival Society, but shortly was called the Christian MISSION By 1878, when it was designated the Salvation Army and organized along military lines, evangelists had carried the activities well beyond the original field, and the new agency for social welfare was drawing wide attention It is said that Booth was the author of the statement, "The Christian Mission is a Salvation Army", from this arose the titles and forms of army organization From the beginning, practical physical relief accompanied spiritual ministrations Soup kitchens came first in a long line of widely varied projects to provide help of the kind needed Although opposition had met the workers at nearly every step, the value of Salvation Army services had been plainly demonstrated by 1890, when General Booth set forth his plan of procedure in his book *In Darkest England and the Way Out* The Army took root in North America, Australia, India, on the European continent, and elsewhere Leaders were trained for their labors before being sent out On the death of William Booth, he was succeeded by his son, Bramwell Booth, as general, but in 1929 Bramwell Booth's removal was voted by the high council of the Army, and Edward J Higgins was elected to that post Salvation Army work in the United States dates from 1880, when Commissioner George Railton and seven women workers from England founded a branch in Pennsylvania In 1904 Evangeline Booth, daughter of the founder, was put in command of the work in the United States, in 1934 she became general of the international Salvation Army Every grade of society is represented in the ranks of the great Army attacking the "fortresses of sin" Its ministers are officers and its members are soldiers, women have parity of position and responsibility with men High commands may be attained by promotion from lower offices Each country has its divisions and its local corps, with a commander at the head of all In the United States national headquarters are in New York city, Ernest I Pugmire became national commander in 1944 International headquarters are in London, Gen Albert W T Orsborn was elected general of the whole Army in 1946 Officers are prepared in training colleges for their varied responsibilities Though spiritual regeneration is the supreme object in view, social service is closely allied with the evangelical efforts The Army operates settlements, hotels, hospitals, children's homes, nurseries, and other such projects Support of the vast undertakings in all parts of the world depends upon voluntary contributions and profits on the sale of publications The *War Cry* is the official organ There is no formal creed, acceptance of which is required for membership, but the beliefs are in general in agreement with those of the Evangelical churches The salvation of God and deliverance from sin are emphasized In conducting the meetings officers are allowed great freedom as no form of service is required, bands and singing are important features The Salvation Army enhanced its reputation by its work with the armed services in the First and Second World Wars See also VOLUNTEERS OF AMERICA.

Salvator Rosa. see ROSA, SALVATOR.

Salvemini, Gaetano (gäätä'nō sälvämē'nē), 1873–, Italian historian He taught at the universities of Messina, Pisa, and Florence until he was arrested (1925) as an anti-Fascist Leaving Italy in the same year, he went to London. He became lecturer on history at Harvard Univ. in 1930 and became a U S citizen in 1940 Salvemini wrote chiefly on recent and contemporary history His best-known works are *The Fascist Dictatorship in Italy* (1928, in English) and *Italian Fascism* (1938, in English).

Salve Regina (säl'vā rājē'nū) [Latin,=hail, queen], prayer or hymn to the Virgin, very popular among Roman Catholics It is said, usually in the vernacular, after Low Mass and also, during part of the year, at Vespers (in Latin) as an antiphon. It begins, "Hail, holy queen, mother of mercy."

Salvi, Giovanni Battista · see SASSOFERRATO.

salvia · see SAGE

Salvian (säl'vēun), 5th cent, Christian writer of Gaul His Latin name was Salvianus. He was a monk and priest of Lérins and became a renowned preacher and teacher of rhetoric Of his several works two treatises and nine letters are extant *De gubernatione Dei* [on the government of God] is in eight books, of which the first five are Salvian's Incomplete as it is, it is a moving indictment of contemporary Roman and Gallic society and a call to true Christian living The other work, usually called *Contra avaritiam* [against avarice] is a plea for generosity to the Church See the English translations by E M. Sanford (1930) and J. F. O'Sullivan (1947)

Salviati, Antonio (äntō'nyō salvyä'tē), 1816–1890?, Italian mosaic worker and designer At his school in Murano he revived the ancient art of making Venetian glass His mosaics are in St Mark's, Venice, the Paris Opéra, and Westminster and St. Paul's, London

Salvini, Tommaso (tōm-mä'zō sälvē'nē), 1829–1915, Italian tragedian He gained fame in Italy and France for his portrayals of Alfieri's Saul, Voltaire's Orosmane, and Niccolini's Oedipus Salvini offered a wide Shakesperian repertoire in England and the United States, but his greatest role was always Othello See his autobiography (1893).

Salween (säl"wēn'), Chinese *Lu*, river, c 1,750 mi long, rising in E Tibet It flows through Yünnan prov, China, in deep, narrow gorges parallel to the Mekong, Yangtze, and Irrawaddy Descending through the Shan State and the Karenni State of Burma, it reaches the Gulf of Martaban near Moulmein It is navigable only for c 75 mi of its lower reaches

Salyersville (säl'yurzvĭl), town (pop 1,254), co seat of Magoffin co, E Ky, on the Licking river and SSW of Ashland, in a mountain valley, settled as Adamsville, renamed 1860 It is in an oil and farm area

Salza, Hermann von (fün sôl'tsu, Ger fün zal'tsä), d 1239, grand master of the TEUTONIC KNIGHTS, conqueror of Prussia, friend and adviser of Emperor Frederick II In 1226 Duke Conrad of Masovia issued a call for a crusade against the heathen Prussians, and in the same year Hermann von Salza obtained from Frederick II vast privileges for his order and the rank of a prince of the empire About 1230 Duke Conrad gave the order the territory of Chelmno (Kulm) and promised to grant it all further territory it conquered, but in 1234 Hermann placed his conquests under papal suzerainty Not until 1466 did the kings of Poland succeed in restoring their suzerainty over the order In 1237 Hermann effected a union with the LIVONIAN KNIGHTS Among the towns founded by him are Torun (Thorn), Marienwerder, and Elbing

Salzburg (sôlz'bŭrg, Ger zälts'bŏork), autonomous province or *Bundesland* (2,762 sq mi, pop 331,615), W central Austria A predominantly mountainous region, it is rich in minerals, with large salt deposits and ancient gold and copper mines still worked on a small scale and some deposits of precious stones on the northern slope of the HOHE TAUERN There are numerous Alpine resorts, Zell am See being the most famous Originally inhabited by Celts, it was conquered by the Romans and became part of the province of Noricum After the fall of the Roman Empire, its history followed that of its capital, Salzburg (pop 105,407) A Roman trading center named Juvavum on the site of an ancient Celtic settlement, it was as early as 816 the seat of an archbishop Emperor Rudolf I created (1278) its ecclesiastical rulers princes of the Holy Roman Empire and they wielded their power with extreme intolerance In the late 15th cent the Jews were expelled, and in 1723 some 30,000 Protestants migrated to Prussia after a period of severe persecution Secularized in 1802, Salzburg was transferred from Austria to Bavaria by the Peace of Schönbrunn (1809) The Congress of Vienna awarded it (1815) to Austria Salzburg is a veritable architectural gem Picturesquely situated on both banks of the Salzach river, it is bounded by two steep hills, the Capuzinerberg (left bank) and the Mönchsberg, on the southern tip of which is the 11th-century fortress of Hohensalzburg (right bank). The main buildings are in late Renaissance and German baroque, erected by the splendor-loving archbishops in the 17th and 18th cent —the cathedral, modeled after St Peter's in Rome; the *Residenz*, formerly the archiepiscopal palace, and Mirabell castle, in a beautiful formal garden The Carolino-Augusteum Museum houses a library and collections of antiquities There is a monument to Paracelsus, who died here in 1541 The university (founded 1623) was closed in 1810 except for its theological seminary. Mosart, Salzburg's most distinguished son, who met scant recognition in his city during his stay there, is now honored by an annual music and theatrical festival, which, attended by celebrities and music lovers from all over the world, constitutes an important source of revenue The third floor of the house where he was born was converted into a museum, and there is a commemorative statue on the quaint little Mozart Platz

Salzkammergut (sälts'kä"murgōōt"), Alpine resort area in Upper Austria, Styria, and Salzburg, Austria. Its principal resorts are ISCHL, SANKT WOLFGANG, HALLSTATT, and Gmunden (all in Upper Austria) and Altaussee (Styria) Among its lovely mountain lakes are the Sankt Wolfgangsee or Abersee, the Traunsee or Gmundnersee, the Mondsee, and the Kammersee or Attersee The Dachstein (9,829 ft), covered with glaciers, is the principal peak. The region has been known since antiquity for its salt mines

Samain, Albert (älbĕr' sämĕ'), 1858–1900, French poet He is often classed as a symbolist, though he was influenced by the Parnassians and other schools He was one of the founders (1890) of the literary periodical *Mercure de France* Samain's first published collection was *Au jardin de l'infante* (1893), which was reissued with *L'Urne penchée* in 1897 *Aux flancs du vase* appeared in 1898, and a selection of his best poems, *Le Chariot d'or*, in 1901, after his early death from tuberculosis A poetic drama, *Polyphème*, was presented in 1904 and published in 1906

Samar (sa'mar), island (5,050 sq mi, pop 470,678), one of the Visayan Islands, in the Philippine Islands It is just NE of Leyte Iron is mined, and rice, hemp, and coconuts are grown Samar prov (5,309 sq mi, pop 546,306) comprises Samar and offshore islands, the capital is Catbalogan

Samara, city, RSFSR see KUIBYSHEV

Samara (sŭmä'rŭ), river, 365 mi long, SE European RSFSR It rises in the foothills of the S Urals, flows generally northwest, and joins the Volga at Kuibyshev, at the eastern extremity of the Samara Bend (see VOLGA) Its lower course is navigable

Samaria (sumā'rēu), ancient city, central Palestine, in territory now claimed by Jordan It was on a hill c 6 mi NW of Nablus (Shechem), the site is now occupied by a village, Sebaste Samaria (named for Shemer, who owned the land) was built by King Omri as the capital of Israel in the early 9th cent B C The scene of the wickedness of Omri's son Ahab and Ahab's wife Jezebel, Samaria was considered a place of iniquity by the Hebrew prophets In the expansion of Assyria, Samaria fell in 722 B C to Sargon The native population was deported, others were settled in its place, and the city was made the capital of an Assyrian province 1 Kings 16 23–33, 20 1–21, 2 Kings 6 24–33, 10 17–28, 13 9–13, 17 It was destroyed in 120 B C by John Hyrcanus and was rebuilt by Herod the Great Here PHILIP preached and the incident of Simon Magus occurred Acts 8 5–24 According to tradition St John the Baptist is buried here There are remains of a church of the Crusaders The area of Samaria was excavated in the 20th cent The city has given its name to the **Samaritans,** of whom a small remnant still live at Nablus The sect may have first arisen in the region at the time of Ezra and later been altered by the addition of non-Hebrew peoples In the Bible the Samaritans recognize only the Pentateuch and observe its ordinances with even greater scrupulosity than orthodox Jews They worship on Mt GERIZIM, where anciently they had a temple The continual hatred of Jew and Samaritan apparently governed the choice of characters in the parable of the Good Samaritan Luke 10 30–37 The Samaritan language is a variety of Palestinian Aramaic (a Semitic language see LANGUAGE, table) The Samaritan manuscripts are not believed ancient, but they do supply some useful variants of biblical passages In 1949, at a site 18 mi NW of Jerusalem, the floor of a Samaritan synagogue was unearthed, and allegedly ancient inscriptions were found

samarium (sumā'rēum), metal of the RARE EARTHS It is a lustrous gray metallic element (symbol=Sm, for physical constants, see ELEMENT, table) It forms several compounds with other elements Samarium is present with other metals of the rare-earths group in the minerals monazite and samarskite It was discovered (1879) by Lecoq de Boisbaudran by means of the spectroscope. The element has no commercial importance

Samarkand (sämŭrkänd', Rus. sŭmŭrkänt'), city (pop 134,346), capital of Samarkand oblast, Uzbek SSR, near the Zeravshan river and on the Trans-Caspian RR It is one of the oldest existing cities in the world and the oldest of central Asia Known to the ancient Greeks as Maracanda, it was built on the site of Afrosiab, which dated from the 3d or 4th millennium B C; ruins of the old town remain north of the present city. The chief city of SOGDIANA, on the ancient trade route between the Near East and China, Samarkand was conquered (329 B C.) by Alexander the Great and became a meeting point of Western and Chinese culture It fell to the Moslems early in the 8th cent A.D. and developed as a center of Arabic civilization as part of the Omayyad and Abbasid empires Here in 751 the first paper mill outside China was established The tomb of BUKHARI (d 870), near Samarkand, is a major Moslem shrine Samarkand continued to prosper under the Samanid dynasty of Khurasan (874–999) and under the subsequent rule of the Seljuks and of the shahs of KHOREZM In 1220 JENGHIZ KHAN took and devastated the city. In the 14th cent TAMERLANE made Samarkand the capital of his empire, under his rule the city reached its greatest splendor Under Tamerlane's successors, the Timurids, the empire soon was much reduced, it broke up in the late 15th cent and was ruled by the Uzbeks for the following four centuries Samarkand formed part of the emirate of Bukhara (see BUKHARA, EMIRATE OF) until 1920 It fell to Russian troops in 1868, when the emirate passed under Russian suzerainty In 1925 Samarkand became the capital of the Uzbek SSR, but in 1930 it was replaced by Tashkent The old quarter of Samarkand, occupying the eastern part of the city, centers on the Registan, a great square It contains some of the most remarkable monuments of central Asia, built during the reign of Tamerlane and his successors The most famous of these is Tamerlane's mausoleum, surmounted by a ribbed dome and faced with multicolored tiles, the conqueror's tomb was opened in 1941 Other buildings include the now ruined Bibi Khan Mosque, erected by Tamerlane to the memory of his favorite wife, several other magnificent mosques, the mausoleums of the Timurid cemetery (Shah-i-Zinda), and the ruins of the observatory built by Ulugh-Beg, a grandson of Tamerlane At the time of its greatest splendor medieval Samarkand was a fabulous city of palaces and gardens, with paved and tree-lined streets and a water system that supplied most of the individual houses It had great silk and iron industries and was the meeting point of merchants' caravans from India, Persia, and China Modern Samarkand still is a major cotton and silk center The irrigated surrounding region is filled with orchards and wheat and cotton fields It is the seat of the Uzbek state university and of medical, agricultural, and teachers' institutes

Samaroff, Olga (sumă'rŏf), 1882–1948, American pianist and educator, whose real name was Hickenlooper, b San Antonio, Texas, studied at the Paris Conservatoire Her American debut (1905) was in New York, in 1925 she joined the faculty of the Juilliard School of Music She was music critic (1927–29) for the New York *Evening Post* and in 1933 founded the Layman's Music Course, Inc She was the wife of Leopold Stokowski from 1911 to 1923 Her writings on music include *The Layman's Music Book* (1935) and *A Music Manual* (1936) See her autobiography, *An American Musician's Story* (1939)

Samarra (samă'ra), town (pop c 8,000), Iraq, on the Tigris river and c 60 mi N of Baghdad It was the residence of the Abbasid caliphs from 836 to 876 The 17th-century mosque with its golden dome is sacred to the Shiite sect of Islam There are also remains of the Great Mosque (built 847)

Sambourne, Edward Linley, 1844–1910, English caricaturist and illustrator He was associated with *Punch* from 1867, when he began contributing, until the end of his life and was chief cartoonist after 1900 Among other works he illustrated Charles Kingsley's *Water-Babies* (1885)

Sambre (sä'brŭ), river, 120 mi long, N France and SE Belgium It flows NE to the Meuse at Namur, traversing the important Franco-Belgian coal basin and industrial district It was the scene of heavy fighting in the First World War, here in 1918 the British won one of the final battles of the war

Samgar-nebo (säm'gär-nē'bō), Babylonian prince with Nebuchadnezzar at Jerusalem Jer 39 3

Samlah (säm'lu) [Heb,=garment], king of Edom Gen 36 36,37, 1 Chron 1 47,48

Samnites (säm'nīts), people of ancient Italy Their country was Samnium The Samnites were Oscan-speaking and therefore included among the Sabelli and were perhaps related to the Sabines The loose confederation of agricultural tribes was expanding in the 4th cent B C and came into conflict with the Romans over Campania. There was probably a good deal of warfare before the Samnite Wars (328 or 326 B C -304 B C, 298–290 B C), in which the Romans won control of central and S Italy The Samnites declined rapidly They sided with Marius in the Social War and were crushed by Sulla before the gates of Rome (82 B C), most of them were killed Some survivors were sold into slavery, the rest Romanized

Samnium (säm'nēum), country of the Samnites, central and S Italy, mostly in the S Apennines It was E of Campania and Latium and NE of Apulia It included a stretch of the Adriatic coast and also the region about present Naples The desire of the Samnites to expand Samnium at the expense of Campania led to the Samnite Wars

Samoa (sumō'u), island group, S Pacific, midway between Honolulu and Sydney, comprising in a 350-mile chain 10 principal inhabited islands and several uninhabited islets. The group was formerly

called Navigators' Islands The major islands are volcanic and mountainous, Mauga Silisili (6,094 ft), on Savaii, being the highest peak The temperature ranges from 90°F (Dec -Feb) to 75°F (Aug), the annual rainfall is 190 in, with a rainy season from December to March The group is in the hurricane zone There are flourishing tree ferns and coconut, hardwood, and rubber trees, the fertile soil yields taro, breadfruit, cacao, pineapples, oranges, bananas, and yams The chief export is copra There are few wild animals The islands were discovered in 1722 by the Dutch Savaii, Upolu, Apolima, Manono, and four uninhabited islands are known as the **Territory of Western Samoa** (1,135 sq mi, pop 68,197) Formerly belonging (1899–1914) to Germany, the group has been under New Zealand mandate since 1920 Apia, the capital, and Saluafata are on Upolu The rest of the Samoan group belongs to the United States and is known as **American Samoa** (76 sq mi, pop 12,908), comprising Tutuila, Aunuu, the three islands of the Manua group, Swains Island, and uninhabited Rose Island Pagopago on Tutuila was ceded to the United States in 1872 as a naval station The only port, it is the headquarters of the U S naval command which governs all of American Samoa Nearly all the land is owned by the Polynesian natives, local government is controlled by *matai* [chiefs] Feleti (F D Barstow Memorial) School for the training of the sons of chiefs is an unusual experimental school See F M Keesing, *Modern Samoa* (1934), Margaret Mead, *Coming of Age in Samoa* (1936)

Samos (sā'mŏs), island (193 sq mi, pop 56,273), off W Asia Minor, in the Aegean Sea, one of the Sporades, SW of Chios and near ancient Ephesus and Miletus, belonging to Greece Largely mountainous, it rises to 4,725 ft in Mt Kerki The island has a fine climate and a fertile soil producing wine tobacco, olives, and citrus fruit The chief city is Vathy on the northeast shore Colonized (about the 11th cent B C) by Ionian Greeks, Samos entered the period of its greatest splendor as a commercial and maritime power and as a center of culture under the tyrant Polycrates (6th cent B C) Anacreon and the legendary Aesop lived on Samos, Pythagoras and Conon were born here Subjected to the Persians, Samos regained independence after the battle of Mycale (479 B C) and joined the Athenian Confederation It declined after Macedon gained hegemony in the 4th cent B C In the Middle Ages, Samos became (1204) a part of the Latin Empire of Constantinople and was in the hands of a Genoese trading company from 1304 to 1329 and from 1346 until its fall (1475) to the Turks. It passed to Greece in 1913 after the First Balkan War Samian earth was formerly valued as an astringent Samian ware is ancient Roman pottery of a soft, deep red Samos is mentioned in Acts 20 15

Samosata (sumŏ'sutu), ancient city of N Syria, on the Euphrates It was built in the 2d cent as the capital of the Commagene kingdom It was taken by the Romans in A D 72 and was of some importance in later Roman times The Arabs took it in the 7th cent Lucian was born here

Samothrace (sā'mōthrās"), Gr *Samothrake* (sāmōthra'kē), island (71 sq mi, pop 3,993), in the Aegean Sea, between the mainland of Thrace and the Gallipoli Peninsula and belonging to Greece. Its chief town, Samothrace or Samothrake (pop 2,055), is on the northwest shore Largely mountainous, the island rises above 5,000 ft in the center In ancient times Samothrace was the center of the worship of the Cabiri There are ruins of a temple dating from the 6th cent B C The famous winged *Nike* (or *Victory) of Samothrace*, erected on the island in 306 B C, is now in the Louvre in Paris Samothrace was the first stop in St Paul's Macedonian itinerary (Acts 16 11) The island was ceded (1913) by Turkey to Greece after the First Balkan War

Samoyede dog (sămoi-ĕd'), working dog long bred by the Samoyede people for herding reindeer and pulling sledges Its resemblance to the chow dog suggests a common ancestor A sturdy, muscular dog noted for its loyalty, it has proved its worth on arctic and antarctic expeditions It makes an intelligent, gentle, and affectionate pet Its luxuriant coat is pure white or cream in color, the undercoat is soft and close, and the outer coat is straight and coarse. The skull is broad and flat, the head wedge shaped, and the hair on the face is short Males stand from 20 to 22 in at the shoulder and should weigh from 45 to 55 lb.

Samoyedes or **Samoyeds** (both sămoi-ĕdz') partly nomadic, partly settled agricultural tribes found in N Siberia and the Taimyr Peninsula, especially in the basin of the Ob and Yenisei rivers The Samoyede language is perhaps distantly related to the Finno-Ugric family. The Samoyedes have more recently been known as the Nentsy.

samp: see HOMINY

sampler, sample piece of work, of silk, cotton, or worsted needlework or embroidery, for the preservation of some pattern worthy of keeping and copying or as an example of the ability of a child or a beginner in the handiwork. Several such designs might be worked on one large piece of material. In museums and private collections there are many samplers dating from 1643 and later It was long the custom for each little girl to work her own sampler as soon as her needlework showed a proper degree of skill While there is great variety of arrangement and design, certain features are found in nearly all—the name of the maker, the date, the alphabet, texts from Scripture, proverbs or bits of verse, birds, animals, or houses Framing the whole, as a rule, there is a conventional border

Sampson, William Thomas, 1840–1902, American naval officer, b Palmyra, N Y, grad Annapolis, 1861 He served in the Civil War and was an officer of the *Patapsco* when she was blown up (1865) in Charleston harbor He afterwards saw varied naval service and was (1886–90) superintendent at Annapolis As chief of the Bureau of Ordnance (1893–97) he made important changes in naval gunnery Sampson was president of the board of inquiry on the destruction of the Maine in Havana harbor With the outbreak of the Spanish American War, he was made commander of the N Atlantic squadron He commanded the blockade of Cuba and the attack on San Juan When the Spanish fleet under Admiral Pascual Cervera was defeated at Santiago, Sampson was not present for most of the battle, being in conference with Gen William R Shafter, and there was some controversy later as to whether the credit of the victory should go to Sampson, who had laid down general instructions, or to Winfield Scott Schley, who actually commanded in the engagement Public opinion favored Schley, and Sampson never received due recognition In 1899 he attained the rank of rear admiral and from then until his death commanded the Boston navy yard See R S West, *Admirals of American Empire* (1948)

Sampson, unincorporated village, W central N Y, in the Finger Lakes region, on Seneca Lake near Geneva It was built in 1942 as a U S naval training station and converted in 1946 into one of the state's emergency colleges for veterans

Samson [Heb, =sun], judge of Israel He was marvelously strong and owed his strength to the hair he never cut b The enemies of his people, the Philistines, accomplished his destruction through the woman Delilah By cutting his hair, she destroyed his might Captured and blinded and chained in the temple of the Philistines, he regained his strength as his hair grew long again, and with his bare hands he pulled down the temple, destroying himself along with his enemies Judges 13–16 Milton's *Samson Agonistes* is a celebrated English poem on the blinded Samson

Samson, town (pop 2,182), Geneva co, SE Ala, near the Fla line, settled 1895, inc 1906

Samsonov, Aleksandr Vasilyevich (ŭlyĭksan'dur vŭsē'lyuvĭch sămsô'nuf), 1859–1914, Russian general Early in the First World War his army advanced into East Prussia in order to relieve German pressure on the French, but it was virtually annihilated by Hindenburg in the battle of Tannenberg (Aug, 1914) His defeat may have been partially caused by the failure of General Rennenkampf to support him. Samsonov shot himself on the field of battle

Samsun (samsōōn'), city (pop 38,725), N Turkey, a Black Sea port It is a major tobacco manufacturing center and an agricultural market. The ancient Amisus, it was founded (6th cent B C) by Greek colonists, became an important city of the kingdom of Pontus, and was much favored under the Roman Empire In the Middle Ages it was held by the Byzantines, the Seljuks, the Genoese, and the empire of Trebizond before falling (14th cent) to the Ottoman Turks

Samuel, Herbert Louis Samuel, 1st **Viscount,** 1870–, English statesman He served in Parliament as a Liberal from 1902 to 1918 and from 1929 to 1935 In 1937 he was raised to the peerage, and in 1944 he became Liberal leader in the House of Lords Samuel held numerous governmental positions He was postmaster general (1910–15, 1915–16) and secretary of state for home affairs (1916) He was first British high commissioner in Palestine (1920–25), chairman of the royal coal-inquiry commission (1925), and again home secretary (1931–32) Samuel's writings include *Practical Ethics* (1935) and *Belief and Action an Everyday Philosophy* (1937) See his memoirs (1945)

Samuel (să'mūul), books of the Old Testament, a single work in the Hebrew canon, called in AV 1 and 2 Samuel, in the Greek versions and the Western canon 1 and 2 Kings, they occupy the 9th and the 10th place in AV They are a consecutive historical narrative of events of Hebrew history, covering substantially the careers of Samuel, Saul, and David (roughly the 11th cent B C), as follows: first, Samuel's career and judgeship (1 Sam 1–7), second, the establishment of the Hebrew monarchy (1 Sam 8–31), which begins with the anointing and subsequent success of Saul (1 Sam. 8–15), followed by his replacement as anointed by David, with stormy consequences (1 Sam 16–31); third, the reign of David (2 Samuel), first at Hebron (2 Sam 1–4), then at Jerusalem (2 Sam 5–20), and, fourth, an appendix of various materials out of order (2 Sam 21–24). The prophet Samuel (fl 1050 B C) was the last judge of Israel The wonderful circumstances of his birth, childhood, and vocation are told in 1 Sam 1–3. His judgeship was dominated by war with the Philistines, who captured the Ark of the Covenant (1 Sam 4–7) In his old age he agreed, at the divine behest, to the establishment of a king and anointed Saul (1 Sam, 8–12) He remained chief prophet in Saul's reign (1 Sam 13 11–16, 15, 19 18–24, 25 1) In this role he anointed David and, after dying, appeared to Saul at Endor (1 Sam 28) Samuel, a great leader, became a national hero and eventually a popular figure of Jewish legend Ecclus 46 16–23 For books and views of the critics, see Old Testament

samurai (să'mōōrī'), the knights of feudal Japan, retainers of the daimyo This aristocratic warrior class arose during the wars of the 12th cent between the Taira and Minamoto clans and crystallized in the Tokugawa period Samurai were privileged to wear two swords and at one time had the right to cut down any commoner who offended them They cultivated the martial virtues, indifference to pain or death, and loyalty to their overlords (see Bushido) They were the dominant group in Japan for long periods, and the masterless samurai, the ronin, were a serious social problem Dissatisfied samurai were largely responsible for overthrowing the shogun in 1867 They also took part in the Satsuma revolt under Takamori Saigo in 1877 The class was abolished, but as statesmen, soldiers, and businessmen, former samurai took the lead in building modern Japan

San (sän), river, 247 mi long, rising in the Carpathians in the Ukraine It flows through Poland northwestward past Przemysl to the Vistula near Sandomierz Its lower course is navigable

Sana or **Sanaa** (both sänä'), city (pop c 25,000), capital of Yemen, largest city of S Arabia It lies c 100 mi inland on a plain c 7,750 ft high Sana has been settled from pre-Islamic times and has an ancient wall It was under Ethiopian control in the 6th cent, in the 17th cent and again from 1872 to 1918 it was occupied by Turkey Sana is especially known for its many (nearly 50) mosques and the numerous minarets Many of the houses are seven stories high An interesting feature of the architecture is the use of elaborate designs in white against the brown brick of the walls There is extensive trade in hides and in the famed grapes of the region

San Angelo (săn ăn'julō), city (1940 pop 25,802, 1947 estimated pop 35,000), co seat of Tom Green co, W Texas, where two forks join to make the Concho river, laid out 1869, inc 1889 Founded beside the border military post, Fort Concho, it was a rough frontier town of cattle trails and overland traffic in the 1870s and grew after the railroad came in 1888 Today it is the metropolis, market, and shipping point for a wide area which has sheep, goat, and cattle ranches, irrigated farms, and oil fields San Angelo has a junior college The municipal reservoir, Lake Nasworthy, is near by, and the state tuberculosis hospital is in the county

San Anselmo (săn ănsĕl'mō), residential town (pop 5,790), W Calif, N of San Francisco, inc 1907 San Francisco Theological Seminary is here

San Antonio (săn" ăntō'nyu,-nēō), city (1940 pop 253,854, 1947 estimated pop 350,000), co seat of Bexar co, S central Texas, at the source of the San Antonio river The site had been visited by the Spanish long before an expedition under Martín de Alarcón founded here a mission, San Antonio de Valero, and a presidio, San Antonio de Béjar (or Béxar) in 1718 Other missions were opened in the neighborhood—San José (1720), Concepción (1721), San Francisco de la Espada (1721), and San Juan Capistrano (1731)—and the neighboring town of San Fernando (now the heart of San Antonio) was founded in 1731 San Antonio was the most important Texas settlement in Spanish and Mexican days In the Texas Revolution it was taken by Texans under Ben Milam in Dec, 1835, and witnessed the heroic tragedy of the Alamo in March, 1836 Later a group of Comanche Indians were killed (1840) in the "council house fight," and in 1842 the city was taken and held briefly by Mexican invaders After the Civil War and especially after the coming (1877) of the first railroad, San Antonio prospered as a roaring cow town with a Spanish flavor Today the city, which is a port of entry, still ships steers as well as cotton, truck, fruits, pecans, and oil and gas It has food-processing plants, oil refineries, and garment and metalwork factories as well as other industries In accord with its military past, San Antonio has big army establishments, notably Fort Sam Houston (est. 1865), and in the vicinity are some of the largest U S military airfields, including Brooks Field, Kelly Field, and Randolph Field It is the see of a Roman Catholic archbishop and of a Protestant Episcopal bishop Among the educational institutions are Trinity Univ (Presbyterian, coeducational, 1869), St Mary's Univ of San Antonio (Catholic, partly coeducational), Our Lady of the Lake College (Catholic, for girls), Incarnate Word College (Catholic, for girls), the

Univ of San Antonio, a municipal junior college, and a junior college for Negroes San Antonio keeps a strong color of its past, and the missions, the warm winter sun, the green and flowered streets and parks, and the exotic customs of the huge Mexican quarter give the city individuality as a popular resort See G P Wertenbaker, *San Antonio, City in the Sun* (1946)

San Antonio de los Baños (sän äntō'nyō dā lōs bä'nyōs), city (pop 16,512), W Cuba, c 20 mi SSW of Havana It is a popular health resort, with mineral springs and baths Tobacco of fine quality is grown in the vicinity, and cigars are manufactured

San Augustine (săn ô'gustēn), town (pop 1,516), co seat of San Augustine co, E Texas, on Ayish Bayou and ESE of Nacogdoches In this forested section a Spanish mission, Nuestra Señora de los Dolores de los Ais [Our Lady of Sorrows of the Ais], was established in 1716, abandoned in 1719, and refounded in 1721 A presidio was established at San Augustine in 1756 which, like Nacogdoches, protected the Spanish-French border Both presidio and mission were abandoned before American settlers came from Louisiana in 1818, several years before Stephen F Austin brought settlers to Texas Today the town, a center of pine lumbering, has on its hills old houses that recall pre-Civil War prosperity Much of the population is Negro

Sanballat (-bāl'ăt), one of the Persian officials in Palestine who consistently opposed Nehemiah in his restoration of Jerusalem He is called a Horonite, a designation perhaps from the name Bethhoron Neh 2 10,19, 4, 6, 13 28

San Benito (săn bunĕ'tō), city (1940 pop 9,501, 1947 estimated pop 12,000), extreme S Texas, NW of Brownsville It is a considerable processing center for the citrus fruit and vegetables grown in the irrigated region of the lower Rio Grande valley and attracts tourists Near by is a state fish hatchery.

San Bernardino (săn bûrnurdē'nō), city (pop 43,646), co seat of San Bernardino co, S Calif, E of Los Angeles, laid out 1853 by Mormons, inc 1854 It is a railroad center, with railroad shops, as well as a citrus-fruit packing and shipping center A national orange show is held here annually The city is the seat of a junior college (coeducational) To the east lies San Bernardino Mt

San Bernardino (săn bĕrnurdē'nō), pass, 6,770 ft high, from the Mesocco Valley to the Rheinwald Valley, Grisons canton, Switzerland Used possibly since prehistoric times, it is crossed by a road (built 1818–23), which passes through the resort village of San Bernardino

San Bernardino Mountains, part of the Coast Range, S Calif, extending NW and SE through San Bernardino and Riverside counties for c 80 mi Notable peaks are San Bernardino Mt (10,630 ft) and Mt San Gorgonio (11,485 ft)

San Blas (săn blăs'), town (pop 752), Nayarit, W Mexico, a port on the Pacific It was in colonial times a thriving city and port busy with traffic across the Pacific The harbor has since silted and has lost importance

San Blas, archipelago off the northeast coast of Panama It is also called the Mulatas archipelago and comprises some 332 islands The inhabitants are almost pure-blooded aborigines of Carib origin Protected by a treaty with the government of Panama, the Indians have only recently permitted scientific observation of their culture and visits of curious tourists Coconuts and fish are their principal foods

Sanborn, Franklin Benjamin, 1831–1917, American journalist, author, and philanthropist, b Hampton Falls, N H, grad Harvard, 1855 He was an active abolitionist, friend and agent of John Brown, although he disapproved of the Harper's Ferry raid He was a correspondent of the Springfield *Republican,* editor (1863–67) of the Boston *Commonwealth,* and a founder of the American Social Science Association and editor (1867–97) of its journal He served as secretary of the Massachusetts Board of Charities, which was the first of its kind in America, and helped found the Massachusetts Infant Asylum, the Clarke School for Deaf Mutes, and the National Prison Association Long a resident in Concord, he gathered his famous friends there and wrote valuable biographies of Alcott, Emerson, W E Channing, Hawthorne, and Thoreau ("American Men of Letters" series), as he did of John Brown, Pliny Earle, and S G Howe

Sanborn, town (pop 1,344), NW Iowa, W of Spencer; founded 1878, inc 1880

San Bruno (săn brōō'nō), residential city (1940 pop 6,519, 1943 special census pop 15,178), W Calif., S of San Francisco, in a truck area, inc 1914.

San Buenaventura, Calif see VENTURA

San Carlos (săn kär'lōs), residential city (1940 pop 3,520, 1947 special census pop 9,828), W Calif, S of San Francisco; inc 1925 It is a flower-shipping point

Sánchez-Coello, Alonso: see COELLO, ALONSO SÁNCHEZ

Sancho I (Sancho Ramírez) (sän'chō ramē'răth), 1045?–1094, king of Aragon (1063–94) and, as Sancho V, king of Navarre (1076–94), son and successor of Ramiro I. He continued the war against the Moors and at the death of Sancho IV of Navarre was proclaimed king of Navarre at Pamplona He died in the siege of Huesca Peter I succeeded him

Sancho III or **Sancho the Great,** c 965–1035, king of Navarre (1000–1035) He inherited Navarre and Aragon, conquered (1008) the seigniories of Sobrarbe and Ribagorza from the Moors, and acquired (1028), through his wife's inheritance, Castile, Vizcaya, and Álava His kingdom thus was the largest Christian state in Spain Its unity was broken at his death when he divided his lands among his sons Navarre passed to García, Castile and Aragon, made into kingdoms, went, respectively, to Ferdinand I and to Ramiro I, Sobrarbe and Ribagorza were given to Gonzalo

Sancho I (săn'chō), Port *Sancho o Povoador* (sĕ'shō ō pōōvwădhōr') [Sancho the settler or populator], c 1154–1211, king of Portugal, son and successor of Alfonso I He shared the rule with his father from c 1170 and was sole king after 1185 He undertook to restore and repeople the lands devastated by war and established the kingdom on a firm base Early successes against the Moors in Algarve were canceled by new Moorish attacks He was succeeded by his son Alfonso II

Sancho II (săn'chō), d 1072, Spanish king of Castile (1065–72), son and successor of Ferdinand I He conquered from his brother ALFONSO VI the kingdom of Leon, except for the city of Zamora, while besieging it, Sancho was assassinated The CID first appears as his retainer Sancho was succeeded by his brother Alfonso VI

Sancho IV (Sancho the Brave), 1257?–1295, Spanish king of Castile (1284–95), son and successor of ALFONSO X On the death (1275) of his elder brother, Ferdinand de la Cerda, Sancho rather than any of Ferdinand's children was designated Alfonso's successor Throughout his reign Sancho had to defend his throne against the claims of Ferdinand de la Cerda's heirs, who at times received the support of Aragon He conquered Tarifa from the Moors in 1292 His son, Ferdinand IV, succeeded him under the regency of Sancho's widow, María de Molina.

Sancho Panza see DON QUIXOTE DE LA MANCHA

Sancho the Great see SANCHO III, king of Navarre.

San Cristóbal (săn krēstō'băl), city (pop 31,477), W Venezuela, near the Colombian border in a mountainous region San Cristóbal is a commercial, agricultural, and mining center of some importance Linked by highway to CÚCUTA and PUERTO CABELLO, it exports coffee, cacao, sugar, corn, wheat, gold, silver, copper, and iron

Sancroft, William (săng'krôft), 1617–93, English prelate, archbishop of Canterbury His strong High Church sentiments caused him to remain abroad during the latter part of the Puritan Revolution Returning to England in 1660, he advanced through various ecclesiastical offices to become (1678) archbishop of Canterbury Earlier, as dean of St Paul's, he directed the building of the famous cathedral designed by Sir Christopher Wren He crowned James II at his accession, but refused to serve on the newly reconstituted court of high commission and in 1687, with six of his bishops, signed a petition asking that the Declaration of Indulgence, which suspended the penal laws directed against non-Anglicans, be withdrawn and gave reasons for their refusal to read it in their churches. The imprisonment, trial, and acquittal of the seven bishops greatly heightened religious tension prior to the deposition of James Sancroft, however, refused to take the oath of allegiance to William and Mary He was suspended and, in 1690, deprived of his office

sanction, in law and ethics, any inducement to follow or refrain from following a particular course of conduct In its ethical sense the term designates the factors which contribute to a moral decision In its legal sense it may mean either a promise of reward for the desired conduct (positive sanction) or a threat of injury for following some disapproved course (negative sanction) Thus, the fee paid to a police informer is a positive sanction while the penalty for crime is a negative sanction (more specifically a penal sanction) The word *sanctions* was applied to the coercive measures available to the League of Nations under its Covenant for inducing states to stop acts of aggression Sanctions, then, are contrasted with moral suasion, offers of arbitration, and other noncoercive steps to restore peace The bootless prohibition of economic relations with Italy which was ordered by the League in 1935 after the invasion of Ethiopia was the sole use of the League's sanction power The Covenant also permitted it to order military and economic sanctions The powers of the United Nations to prevent and punish aggression in a legal sense include the infliction of sanctions, although the term is not generally used See Royal Institutute of International Affairs, *International Sanctions* (1938)

Sanctis, Francesco de. see DE SANCTIS, FRANCESCO.

Sancti-Spíritus (sängk'tē-spē'rētōōs), city (pop. 28,262), central Cuba, SE of Santa Clara It trades in sugar, tobacco, and cattle and has light manufactures Founded in 1514, it subsequently experienced several pirate attacks.

Sanctorius (săngktō'rēus), Ital. *Santorio,* 1561–1636, Italian physiologist He was a professor at Padua (1611–24) By his quantitative experiments in temperature, respiration, and weight he measured what he called "insensible perspiration" and laid the foundation for the modern study of metabolism Among the instruments which he invented was a clinical thermometer He wrote *De statica medicina* (1614, Eng tr, 5th ed, 1737)

sanctuary (săngk'chōōĕ'rē), sacred place, especially the most sacred part of a sacred place Sanctuaries served for ASYLUM or a place of refuge for persons fleeing from violence or from the penalties of the law, to injure a person in a sanctuary or to remove him from it forcibly was considered sacrilege In ancient Greece the ways of escape from a sanctuary were sometimes guarded until the fugitive starved In Rome sanctuary was not infrequently sought by fugitive slaves The Old Testament tells of cities of refuge to which the slayer might flee if he had killed his neighbor unawares and had not hated him in times past (Deut 4 41–43, Joshua 20) Christian churches were made places of refuge by Constantine I In England, in early times, a confessed felon in sanctuary was permitted to go to perpetual exile in a foreign Christian country if he took an oath never to return Abuses of the privilege of sanctuary, tending to encourage crime, led to its curtailment and abolition A secular parallel to the benefit of sanctuary is the immunity which may be gained by a fugitive who crosses the bounds of his state if he is not subject to EXTRADITION See also WILDLIFE REFUGE See N M Trenholme, *The Right of Sanctuary in England* (1903)

Sanctus [Latin,=holy], hymn of the Roman Mass beginning, "Holy, holy, holy," from Isa 6 3, Mat. 21 9 It is the solemn choral ending of the preface (see MASS) The second part of the hymn, called *Benedictus,* is sometimes sung after the elevation The *Sanctus* includes also the *Hosanna* The *Sanctus* is sometimes called *Tersanctus*

Sand, George (sănd, Fr zhôrzh' sän'), pseud of **Amandine Aurore Lucie Dupin, baronne Dudevant,** 1804–76, French novelist Other variant forms of her maiden name include Amantine Lucile Aurore Dupin Born of an aristocratic father (whose mother was the natural daughter of Marshal Saxe) and a plebeian mother, she was reared by an austere grandmother on a country estate in Berry After eight years of a marriage of convenience with baron Dudevant, a country squire, she went with her two children to Paris, obtaining a divorce in 1836 She wrote some 80 novels widely popular in their day, supporting herself and her children chiefly by her writing Her earlier novels were romantic, later ones often expressed her serious concern with social reform Her liaisons—with Jules Sandeau, Musset, Chopin, and others—were open and notorious, but were only part of her life She demanded for women the freedom in living which to men of her day was a matter of course Her first two works, *Prima Donna* and *Rose et Blanche* (both 1831), were in collaboration with Jules Sandeau (a shortening of his last name provided her with the pseudonym which she kept all her life), with whom she had previously written articles for the journal *Figaro* Of her own novels, *La Mare au diable* (1846, Eng tr, *The Haunted Pool,* 1890) and *Les Maîtres sonneurs* [the master bell-ringers] (1853) are considered masterpieces; notable also are *Indiana* (1832, Eng tr, 1881), *Mauprat* (1837), *Consuelo* (1842, Eng tr, 1846), *François le champi* (1849, Eng tr, *Francis the Waif,* 1889), *La Petite Fadette* (1848, Eng tr, *Fanchon the Cricket,* 1864), and *Contes de ma grand'mère* (1881, Eng tr, *Tales of a Grandmother,* 1930), a collection of Breton fairy tales All these books are distinguished by a deep, romantic love of nature as well as an extravagant moral idealism. She also wrote a number of plays Much of her work was also autobiographical, notably *Histoire de ma vie* (1854), *Elle et lui* [she and he] (1858), which concerns her life with Musset, and *Un Hiver à Majorque* [a winter in Majorca] (1841), of her life with Chopin See her *Intimate Journal* (Eng tr by Marie Jenney Howe, 1929), biographies by René Doumic (Eng tr, 1910) and Marie J Howe (1927), Felizia Seyd, *Romantic Rebel* (1940); Frances Winwar, *The Life of the Heart* (1945)

sand, rock material occurring in the form of loose, rounded or angular grains, varying in size from $^1/_{16}$ mm to 2 mm in diameter, the particles being smaller than those of GRAVEL and larger than those of SILT or CLAY A secondary rock, sand is formed as a result of the WEATHERING and decomposition of igneous, sedimentary, or metamorphic rocks Its most abundant mineral constituent is silica, usually in the form of QUARTZ, and many deposits are composed almost exclusively of quartz grains Many other minerals, however, are often present in small quantities, e g, the amphiboles, the pyroxenes, olivine, glauconite, clay, the feldspars, the micas, iron compounds, zircon, garnet, tourmaline, titanite, corundum, and topaz Some sands—e g, coral sands, shell sands, and foraminiferal sands—are organic in origin Sand grains may be rounded or more or less angular, and differences in shape and size account chiefly for differences in such important properties as porosity (proportion of interstices

to the total mass), permeability to gases and liquids, and viscosity or resistance to flow Permeability and viscosity are also affected by the proportion of clayey matter present The chief agents in accumulating sands into deposits are winds, running water, and glaciers, and sand deposits are classified according to origin as fluviatile, lacustrine, glacial, marine, and aeolian The most extensive superficial deposits are seen in the DESERT and on beaches The surface of a sand deposit may be level or very gently sloping, or the sand may be gathered by wind action into ridges called dunes SANDSTONE and QUARTZITE are indurated masses of sand, and sand deposits are sometimes formed by the weathering of sandstone and quartzite formations Sand is used extensively in the manufacture of bricks, mortar, cement, concrete, plasters, paving materials, and refractory materials It is also used in the metallurgical industry, in the filtration of water, in pottery making, in glassmaking, in the manufacture of explosives, and as an abrasive Other industrial uses are numerous. Although soils entirely composed of sand are too dry and too lacking in nourishment for the growth of plants, a soil to some extent sandy (a "light" soil) is favorable to certain types of agriculture and horticulture, as it permits the free movement of air in the soil, offers less resistance than a clay soil to growing roots, improves drainage, and increases ease of cultivation. Sand to which nutrient solutions have been added is often used in soilless gardening.

sandal, footwear consisting of a covering for the sole of the foot, held in place by cords, thongs, or straps. Worn since ancient times and still common in the Orient, sandals have been made of leather, wood, cork, plaited straw and papyrus, palm leaves, velvet, linen, and other fabrics Sandals with turned-up toes have been found on Egyptian mummies Asiatic sandals partly covered the foot, Grecian sandals, often covering the toes, commonly had gilded or embroidered straps, Roman sandals followed Etruscan models Roman Catholic high ecclesiastics at one time wore ceremonial sandals of embroidered red leather As a cheap, cool, and colorful footwear, sandals have recently come into vogue.

sandalwood, name for several fragrant tropical woods, especially for *Santalum album*, an evergreen partially parasitic tree either native to India or introduced there centuries ago It is used in Buddhist religious ceremonies and funeral rites and is made into ornamental wares The oil distilled from it is used extensively as a perfume in the East and has a place in medicine About 19 species of *Santalum* are distributed over the Hawaiian and other Pacific islands Red sandalwood obtained from a leguminous tree (*Pterocarpus santalinus*), also native to India, was probably the almug of the Bible. It is used chiefly as the source of a dye.

Sandalwood Island, Fiji see VANUA LEVU.

Sandalwood Island, Indonesia see SUMBA

Sanday, William (săn'dā), 1843–1920, English theologian and biblical scholar. He was professor of exegesis (1883–95) at Oxford, from 1895 to 1919 he was Lady Margaret professor of divinity and canon of Christ Church, Oxford He was joint editor of the Variorum Bible (1880) Besides commentaries, his many writings include *The Authorship and Historical Character of the Fourth Gospel* (1872), *The Gospels in the Second Century* (1876), and *The New Testament Background* (1918)

Sanday (săn'dă), island (area with North Ronaldsay c 21 sq mi , pop, 1,160), off N Scotland, one of the more northerly Orkney Islands Ancient remains include a broch or prehistoric round stone tower Farming and fishing occupy the inhabitants

sandblast, stream of sand or other like material driven by a jet of COMPRESSED AIR or steam against a surface to clean or abrade it. Powdered quartz, emery, chilled iron globules, and other hard granular substances are used as the abrasive material The sandblast is used for cleaning castings in foundries, for preparing metal surfaces for painting, enameling, and galvanizing, and for cleaning the stonework of buildings The pressure used with the sandblast varies from 10 to 60 lb. per square inch according to the surface and kind of work. Frosted designs are worked on glass by placing a stencil or suitable pattern over the surface so that the blast affects only the uncovered parts.

sandbur or bur grass, any species of the genus *Cenchrus*, sandy-soil grasses with burlike seeds At maturity the sharp spines make the plant a troublesome weed The name sandbur is sometimes used for the BUFFALO BUR.

Sandburg, Carl (sănd'bûrg), 1878–, American poet and biographer, b Galesburg, Ill , studied at Lombard College (now Knox College), Galesburg. The son of a Swedish-born blacksmith, he was a day laborer, a soldier in the Spanish-American War, and a private secretary and was a newspaperman when in 1914 his poem "Chicago" won a prize in the magazine *Poetry*. His *Chicago Poems* (1916) shocked some readers because of what seemed brutal frankness and because of the formlessness of the verse Succeeding volumes—*Cornhuskers* (1918), *Smoke and Steel* (1920), *Slabs of the Sunburnt West* (1922), *Good Morning, America* (1928), and *The People, Yes* (1936)—established him as an American artist, sometimes working with vernacular cadences and slang and sometimes, as in "Fog," with subtle impressionism Rebecca West edited his *Selected Poems* (1926), and he collected his poems for children in *Early Moon* (1930). He wrote (1917–33) for the Chicago *Daily News* and later supported himself by lecture recitals of his poetry and by the sale of his books for children, *Rootabaga Stories* (1922) and others, while he wrote his biography of Lincoln, which won the Pulitzer Prize in history in 1940—*Abraham Lincoln. the Prairie Years* (2 vols , 1926) and *Abraham Lincoln the War Years* (4 vols , 1939) His other works include a biography of his brother-in-law, *Steichen the Photographer* (1929), *Mary Lincoln, Wife and Widow* (with Paul Angle, 1932), an anthology, *The American Songbag* (1927 and later editions); *Photographs of Abraham Lincoln* (with Frederick Meserve, 1944), and a long historical novel, *Remembrance Rock* (1948) See biography by Karl Detzer (1941).

Sandby, Paul (sănd'bē), 1725–1809, English watercolorist and draughtsman He began in 1746 as a draughtsman with the Highland's Military Survey and became chief drawing master at the Woolwich Military Academy in 1768 Sandby was successful as an etcher and illustrator, but is best known for his fine topographical water colors. He is represented in the British Museum, the Victoria and Albert Museum, and the Tate Gallery, London.

Sandeau, Jules (Léonard Sylvain Jules Sandeau) (zhül' sădō', lāōnar' sēlvĕ'), 1811–83, French novelist His best-known romances are *Madeleine* (1847; Eng tr., 1850) and *Mademoiselle de la Seiglière* (1847), made into a play in 1851. With George Sand he wrote *Rose et Blanche, ou, La Comédienne et la religieuse* (5 vols , 1831) From Sandeau, Mme Dudevant took her pen name George Sand

Sandefjord (să'nufyōr), town (pop. 6,302), Vestfold co , SE Norway, near the mouth of Oslo Fjord. A base for the whaling fleets operating in arctic waters, it has whale-oil refineries, shipyards, and chemical works.

Sandemanians (săn'dĭmā'nēănz), name given in England and America to the Glassites, a religious sect founded by John GLAS. Robert Sandeman was a co-worker of Glas

Sanders or **Sander, Nicholas,** 1530–81, English Roman Catholic churchman He became prominent at Oxford as an ally of Cardinal Pole and had to flee on Elizabeth's accession He attended the Council of Trent and traveled in Poland and Lithuania By 1570 he was recognized by the English Catholics as their leader From 1573 to 1578 he worked on plans to restore Catholicism by deposing Elizabeth, and in 1579 he sailed with a Spanish troop to join in the struggle of the Desmond Fitzgeralds against the government Disaster overtook them, and in 1581 he died of the hardships he had undergone His *De origine ac progressu schismatis Anglicani* is the prime source for the state of Catholics in England under Elizabeth Bishop Gilbert Burnet attacked the work, but historians have shown that where Sanders and Burnet disagree Sanders is either right or he is quoting a previous unreliable source

Sanders, Otto Liman von: see LIMAN VON SANDERS, OTTO

Sanderson, Nicholas see SAUNDERSON, NICHOLAS.

Sanderson, Robert, 1587–1663, English clergyman He was regius professor of divinity at Oxford (1642–48) and bishop of Lincoln (1660–63) The second preface of the Anglican prayer book and the General Thanksgiving are attributed to him He published many sermons, other writings include *Logicae artis compendium* (1618) and *De obligatione conscientiae praelectiones* (1660). See his works (6 vols , 1854), biographies by Isaak Walton (1678) and George Lewis (1924).

Sanderson, unincorporated town (pop. c.2,000), co. seat of Terrell co., W Texas, N of the Rio Grande and W of the Pecos. On a railroad and the Del Rio–El Paso highway, this old cow town ships wool, mohair, and cattle

Sandersville, city (pop. 3,566), co. seat of Washington co , E central Ga , SW of Augusta, founded 1796, inc. 1812. It is a farm trade and industrial center.

sand fly, minute biting, bloodsucking fly which breeds in mountain streams, in salt marshes, or in water that has collected in depressions in trees. They are sometimes called punkies and nosee-ums

Sandham, Henry, 1842–1910, Canadian painter and illustrator, b. Montreal. After studying in Europe, he settled (1880) in Boston. His illustrations appeared in *Century, Harper's* and *Scribner's* magazines. Among his paintings are *March of Time* (National Gall. of Art, Washington, D.C.) and *The Dawn of Liberty* (town hall, Lexington, Mass.). He lived in London after 1901.

Sandhurst, Victoria, Australia. see BENDIGO.

Sandhurst, village, Berkshire, England, N of Aldershot It is the site of the Royal Military College, which was founded at Great Marlow in 1802.

San Diego (săn dēā'gō) 1 City (1940 pop. 203,341; 1946 special census pop 362,658), co seat of San Diego co , S Calif., on the east side of San Diego Bay. It was the first permanent white settlement in California Juan Rodrigues Cabrillo sailed into the bay in 1542. In 1769 San Diego de Alcalá Mission was established by Junípero Serra After the United States had taken California, the community was incorporated (1850) as a city Today its excellent natural harbor brings extensive commerce and makes San Diego an important port of entry The city, which has a wide variety of industries, is the distributing and processing center for the surrounding fruit and dairy region and has experienced a large increase in population in recent years The U S navy has a number of large installations here An aqueduct brings water to San Diego from the Colorado The city is the seat of San Diego State College (coeducational, 1897) and a junior college Balboa Park (1,400 acres) contains museums, galleries, gardens, and a zoo Some of the buildings of the Panama-California International Exposition (1915–16) and the California Pacific International Exposition (1935–36) remain in the park. Adobes from the city's Spanish and Mexican days are to be found in the Old Town Across the bay is CORONADO. 2 City (pop. 2,674), co. seat of Duval co , S Texas, WSW of Corpus Christi; inc. 1935 The region produces oil, salt, and cattle

Sandino, Augusto César (ougōō'stō sā'sar săndē'nō), 1893–1934, Nicaraguan revolutionary general. A farmer and a mining engineer, he joined the liberal revolution (1926) against the conservative government headed by Adolfo Díaz and Emiliano CHAMORRO He protested against the new U S intervention in Nicaragua in 1926 and rejected the Stimson-Moncada agreement for the elections of 1927 On this score Sandino broke with the liberal leader, José María Moncada, and conducted vigorous guerrilla campaigns (1927–33) against the U.S marines Never captured but finally reconciled after the withdrawal of the marines, he headed a cooperative farming scheme In 1934 he was suddenly seized and executed

Sandomierz (săndô'myĕrzh), Rus *Sandomir* (sŭndumēr'), town (pop 8,357), S Poland, at the confluence of the Vistula and the San, E of Kielce Founded probably before Poland accepted Christianity, Sandomierz became (1139) the capital of a duchy A synod (known as the Consensus Sandomirensis) held here in 1570 united all Polish Protestants The town passed to Austria in 1795 and to the Russian Empire in 1815 It reverted to Poland (1919) and was included in the Central Industrial District.

San Domingo, shortened form of Santo Domingo that once was much employed in English for the country that is now the Dominican Republic It has long fallen into disuse

Sandomir, Poland see SANDOMIERZ

Sandoval, Prudencio de (prōōdhān'thyō dā sandōvāl'), c 1560–1621, Spanish historian, bishop of Túy and of Pamplona His chief work is a history of Emperor Charles V (1625, Eng tr , 1703), considered by many the best work on Charles's reign He also wrote a history of the kings of Castile and Leon

Sandoval (săndō'vul), village (pop 1,796), S central Ill , E of St Louis, in a farm and coal area, inc 1859

Sandow, Eugene (săn'dō), 1867–1925, German "strong man" and advocate of physical culture, b Konigsberg His original name was Frederick Wilhelm Eugene Sander Physically inept in childhood, Sandow at the age of 10 undertook a course of training which made him a powerfully built man He became a model and accompanied circus troupers, in England, where he had become naturalized, Sandow was successful at wrestling He was presented to the American public by Florenz Ziegfeld in 1893 and made several tours of the country. He gained much notice as an exponent of physical culture for the average man In 1911 he was appointed by royal warrant as professor of physical culture to King George V See biography by G. T. Trevor (1946).

Sandown-Shanklin, urban district (1931 pop 11,240, 1943 estimated pop 11,615), on the Isle of Wight, England, S of Ryde It is a coast resort There is a fountain with verses by Henry Wadsworth Longfellow, who visited the town.

sandpaper, ABRASIVE made by coating heavy paper with glue and dusting the still-wet surface with fine, sharp-edged sand The paper is graded according to the size of the sand particles and is used for polishing and for removing old paint or varnish and otherwise preparing wood surfaces for refinishing or other treatment.

sandpiper, small wading bird of Europe and America, related to the snipe and the curlew Its bill and legs are relatively long The plumage is usually streaked brown or gray above and lighter with streaks or spots below. Most sandpipers are found on seacoasts but some frequent inland waters and marshes

Sandpoint, city (pop. 4,356), co seat of Bonner co , N Idaho, on Pend Oreille Lake, laid out 1898, inc 1900 A lumber town, it is also a rail and highway center and a lake resort

Sandracottus or **Sandrocottus** (both: săndrŭkŏ'tŭs), Greek name of **Chandragupta** (chăndrŭgōōp'tŭ),

d. c.298 B.C., founder of the MAURYA empire. He conquered (c.320 B.C.) the Magadha kingdom and expelled the garrisons Alexander the Great had established in NW India. In 303 he repelled an invasion of India by Seleucus I. According to tradition, Sandracottus abdicated his throne and died a suicide.

Sandringham (sănˈdrĭngŭm), village, Norfolk, England, 3 mi from the Wash and NE of King's Lynn. The Church of St. Mary Magdalene contains numerous memorials of royalty. Sandringham House with its 7,000-acre estate was purchased by Edward VII, then prince of Wales, in 1861. Queen Alexandra lived here until her death in 1925, and George V died here (1936).

Sandrocottus. see SANDRACOTTUS.

Sands, Robert Charles, 1799–1832, American editor and author, b. New York city, grad. Columbia, 1815. He founded the *Atlantic Magazine* in 1824, and when it was merged with the *New York Review and Athenaeum*, he became joint editor with William Cullen Bryant. With G. C. Verplanck and Bryant he wrote the *Talisman*, an annual, 1828–30. His life of Cortés, in Spanish, was well received in South America, his best-known work was his *Life and Correspondence of John Paul Jones* (1830). See G. C. Verplanck, ed., *The Writings of Robert C. Sands* (with memoir, 1834).

Sand Springs, city (pop. 6,137), NE Okla., on the Arkansas river, founded 1907 as the site of a widows' and orphans' home. It has since become an industrial suburb of Tulsa. Lorado Taft designed the memorial group here.

Sandstone, village (pop. 1,559), E Minn., SW of Duluth, settled 1885 when near-by sandstone quarries were opened. It is a farm center and resort.

sandstone, secondary rock formed by the cementing together of grains of sand. The usual cementing materials in sandstone are calcium carbonate, iron oxides, and silica, and the hardness of sandstone varies according to the character of the cementing material, quartz sandstones cemented with quartz are the hardest. Sandstones are commonly gray, buff, red, or brown, although green and some other colors are also found. Green sandstones often contain, in addition to sand and quartz, fossil shells and iron oxides, these that break apart easily are known as greensands and are sometimes used to replenish depleted potash in soils. Sandstones are widely used in construction. In the E United States a red-brown sandstone sometimes called brownstone has been much used in city buildings, the Triassic rocks of the Atlantic coastal region are sources of this stone. Other varieties of sandstone are arkose, which contains feldspar and resembles granite, and graywacke, a gray or sometimes greenish or black rock composed of quartz and feldspar with numerous fragments of other rocks, e.g., shale, slate, quartzite, granite, and basalt. Sandstone may be reduced by crushing it to the form of loose sand grains and can then be put to the same industrial uses as sand.

sandstorm, strong dry wind blowing over the desert which raises and carries along clouds of sand or dust, often so dense as to reduce visibility to practically zero and to obscure the sun. Such a wind is usually the result of convection currents created by intense heating of the ground. The wind is strong enough to move dunes and often interferes with travel, sometimes obliterating roads in flat dry regions such as those of the W United States. The simoom (or simoon) is the sandstorm of North Africa and Arabia which contributes largely to the atmospheric dust over Europe.

Sandusky (sundŭsˈkē, sănˈ-) **1** City (pop. 1,512), co. seat of Sanilac co., S Mich., N of Detroit, in a farm and dairy region, inc. as a village 1885, as a city 1905. **2** Industrial and resort city (pop. 24,874), co. seat of Erie co., N Ohio, W of Cleveland, on Sandusky Bay of Lake Erie, laid out 1817 as Portland, named Sandusky City 1818, "City" dropped 1844. With a natural harbor, it is a shipping point for coal, and there are foundries, clay works, packing houses, and paper and crayon plants. It is a port of entry. Near by are Cedar Point, popular summer resort, PORT CLINTON, KELLEYS ISLAND and numerous other small islands, Blue Hole spring, Crystal Rock Caves, and Marblehead peninsula. The state soldiers' and sailors' home is here.

Sandusky, river, c.120 mi long, rising in N Ohio and flowing W through Bucyrus to Upper Sandusky, thence N past Tiffin and Fremont to Sandusky Bay. This landlocked harbor, c.18 mi long, is one of the best on Lake Erie.

Sandviken (sändˈvēkŭn), town (pop. 17,514), Gavleborg co., E Sweden. It is an iron and steel manufacturing center and was founded c.1860.

Sandwich, Edward Montagu, 1st **earl of** (mŏnˈtŭg), 1625–72, English statesman and admiral. He fought for Parliament at Marston Moor (1644) and Naseby (1645) and served (1653–56) on Oliver Cromwell's council of state. After the failure of Richard Cromwell, however, he assisted in the restoration of Charles II. He brought the new queen, Catherine of Braganza, from Portugal (1661) and secured the cession of Tangiers, which had been promised as part of Catherine's dowry. Sandwich, who had Samuel Pepys as his secretary, was high in naval command. He fought in the DUTCH WARS, assisting in a notable victory off Lowestoft (1665). He was defeated and killed in Southwold Bay seven years later.

Sandwich, John Montagu, 4th **earl of,** 1718–92, English politician. In his early career he undertook diplomatic missions. He also served several times as secretary of state and as first lord of the admiralty (1748–51, 1771–82). Unpopular and profligate, he used the navy for political ends, with the result that it decayed incredibly. Ships of the line literally fell to pieces (see ROYAL GEORGE), and naval stores were sold by officials for profit. His mismanagement contributed largely to British failure in the war of the American Revolution. The Sandwich (Hawaiian) Islands were named for him by Captain James Cook. The sandwich (slices of bread with filling) is supposedly named for him, he is said to have been given to eating informally at the gaming table.

Sandwich (sănˈdwĭch, sănˈwĭch), part (since 1935) of Windsor, Ont. Settled by French in the 18th cent., it received many British inhabitants from Detroit, Mich., in 1796. Assumption College, affiliated with the Univ. of Western Ontario, is here.

Sandwich (sănˈwĭch, sănˈdwĭch), municipal borough (pop. 3,287), Kent, England, on the Stour 2 mi from the coast and E of Canterbury. One of the CINQUE PORTS, it was the chief naval and military port in England under Henry VII, later the harbor silted up. The ancient walls remain, with Fisher Gate (1384) and Barbican Gate (1539). St. Bartholomew's Hospital dates from the 12th cent. Flemish exiles introduced cloth weaving into Sandwich (16th cent.). It is now a resort with tanning and a cereal-food industry.

Sandwich (sănˈdwĭch, sănˈwĭch) **1** City (pop. 2,608), N Ill., SW of Aurora, inc. 1859. It manufactures farm implements. **2** Town (pop. 1,360), SE Mass., on W Cape Cod E of Bourne, settled 1637, inc. 1639. Sandwich glass was made here from 1825 to 1888, the historical museum has a good collection. State forest and game preserves and fish hatcheries are here. See H. B. Barbour, *Sandwich* (1948).

sandwich, two or more slices of bread with a filling usually of meat, cheese, or salad. It is supposed to have been named for the 4th earl of Sandwich, who was given to eating informally at the gaming table.

Sandwich Islands see HAWAIIAN ISLANDS.

Sandy, city (pop. 1,487), N central Utah, S of Salt Lake City, settled 1871. It was a busy ore-shipping and smelting center in the late 19th cent., and slag is now processed to make rock wool.

Sandy Hook (sănˈdē hŏŏkˈ), peninsula, NE N.J., projecting 5 mi N toward New York and separating Sandy Hook Bay from the Atlantic. It is a government reservation, at the northern end is Fort Hancock, built to protect New York harbor. The Sandy Hook Lighthouse (85 ft high, built in 1763) is the oldest in service in the United States. Hudson's men explored this region in 1609, and one was killed by Indians. The British held the peninsula in the Revolution.

Sandys, Edwin (sändz), 1516?–1588, English prelate, archbishop of York (1576–88). While a student at Cambridge he turned to Protestantism. On the death of Edward VI, Sandys supported Lady Jane Grey as candidate for the throne. As a result he was imprisoned by Queen Mary, but was released and fled to the Continent. He returned on the accession of Elizabeth and was made bishop of Worcester (1559), bishop of London (1570), and archbishop of York (1576). He translated parts of the Bishops' Bible (1568) and was a member of the commission to revise the liturgy.

Sandys, Sir Edwin (sändz), 1561–1629, English statesman, leading promoter of the colony in Virginia, b. Worcestershire, grad. Oxford (B.A., 1579, M.A., 1583), son of Archbishop Edwin Sandys. He studied law and in 1586 entered Parliament. His *Europae speculum* (1605), published after an extended tour abroad beginning in 1593, revealed a remarkably tolerant attitude toward Roman Catholics for an Englishman of that period. Sandys was knighted (1603) on the accession of James I, reentered Parliament, and became a leading figure in the House of Commons. In 1614 he denied the the doctrine of the divine right of kings by enunciating the principle that there were certain reciprocal conditions of the constitution which neither the king nor the people could violate, the speech led to some difficulty with the royal government. Sandys had been appointed to the council of the Virginia Company in 1607, was chosen to assist Sir Thomas Smythe, the treasurer, in the management of the company in 1617, and replaced Smythe as treasurer in 1619. The leader of the liberal faction within the company (see LONDON COMPANY), he was responsible for many of the progressive features that characterized the last years of the company's control over Virginia. The king prevented his reelection in 1620, but despite opposition from this and other formidable quarters, he continued to wield great influence until the king annulled the company's charter in 1624, when Virginia became a royal colony. See Alexander Brown, *The Genesis of the United States* (1890).

Sandys, Frederick (sändz), 1832–1904, English Pre-Raphaelite painter and illustrator. He is best known for his wood-block illustrations for *Cornhill* and other magazines and for his crayon portraits of prominent writers.

Sandys, George (sändz), 1578–1644, English poet and traveler, b. Yorkshire, son of Archbishop Edwin Sandys. He was educated at Oxford and in 1610 began an extended tour of Europe and the Near East, about which he wrote in *Relation of a Journey* (1615). In 1621 he became a treasurer of the Virginia Company, an office previously held by his brother, Sir Edward Sandys. He accompanied (1621) the new governor, Sir Francis Wyatt, to Virginia, where he remained until 1631, serving three years on the governor's council. While in Virginia he produced his most famous work, a translation of Ovid's *Metamorphoses* (1626), the first translation of a classic ever made on American soil. His other works include paraphrases of the Psalms and other divine songs and a translation of a work of Grotius, under the title *Christ's Passion a Tragedy* (1640).

San Felipe (sănfĕˈlĭpē), town (pop. 305), S Texas, on the Brazos and W of Houston, founded 1823. It was the administrative center of Stephen F. Austin's colony and the scene of several meetings (1832, 1833, 1835) of Texans before and in the Texas Revolution. Burned in the revolution, it was rebuilt but declined in the latter half of the 19th cent. It is also called San Felipe de Austin. There is a state park here.

San Felipe (sănˈ fēlēˈpā), North American Indian pueblo, N central N.Mex. It is on the west bank of the Rio Grande and 33 mi SW of Santa Fe. The 787 inhabitants are Pueblo Indians of the Keresan linguistic stock. They have ceremonial dances in May and December. The pueblo dates from the early 18th cent.

San Fernando (sănfûrnänˈdō), city (pop. 32,300), Cádiz prov., S Spain, in Andalusia, an Atlantic port near Cádiz. Much salt is obtained from near-by marshes by evaporation. There are a naval academy and an observatory.

San Fernando (sănfurnänˈdō), city (pop. 28,842), Trinidad, a port on the Gulf of Paria, opposite Venezuela. The second largest city of TRINIDAD AND TOBAGO, it is the major exporting point for the colony's petroleum.

San Fernando (sănfurnänˈdō), city (pop. 9,094), S Calif., N of Los Angeles. It is in San Fernando Valley, most of which is now in Los Angeles. The valley, first entered by white men in 1769, was used for journeys to N California from early days. Gold was found in 1842 before the big gold strike. Today the region is one of farms and oil wells. The San Fernando Rey Mission (1797) and a U.S. veterans' hospital are near the city. A railroad tunnel was built through mountains to the north in 1876.

Sanford, Edward Field, Jr, 1886–, American sculptor, b. New York city, studied at the Art Students League and the National Academy of Design and in Paris and Munich. He has done much memorial and decorative work, including the Charles Francis Adams Memorial, Lexington, Va., groups for the Core mausoleum, Norfolk, Va., pediments, figures, and panels for the state capitol, Sacramento, Calif., a commemorative tablet, Columbia Univ., a colossal stone statue for the Payne Whitney Memorial, Yale, and several garden figures, including his *Great Dane*. His style shows the influence of archaic Greek art.

Sanford. **1** City (pop. 10,217), co. seat of Seminole co., E central Fla., on Lake Monroe SW of Daytona Beach. It has resort activities and is a market center for the state's celery district. The city was founded in 1871 by Gen. Henry Sanford on the site of Mellonville, a little settlement established in 1837 near a fort. **2** Industrial town (pop. 14,886), SW Maine, on the Mousam river and SW of Portland, inc. 1768. It is the site of textile factories since the mid-18th cent. Nasson College is in the town. **3** Town (pop. 4,960), co. seat of Lee co., central N.C., SW of Raleigh, in a tobacco, cotton, and farm area. Near by is a large pottery.

San Francisco (sănfrunsĭsˈkō), city (pop. 634,536), coextensive with San Francisco co., W Calif., on a hilly peninsula between the Pacific and San Francisco Bay, which are connected by the strait of the Golden Gate. It is a great cosmopolitan port, the focus of many transportation lines, the market place of a large agricultural and mining area, and the center of the web of busy industrial cities around SAN FRANCISCO BAY. It is the seat of a U.S. mint. With its interest in music, art, letters, and the theater, San Francisco is also one of the country's great centers of culture. The city was founded in 1776, when a Spanish presidio and a mission were established at a location chosen by Juan Bautista de ANZA. The little settlement called Yerba Buena, although a much-visited port on the road to the Orient, was still a village when the Mexican War broke out and Commodore John D. Sloat and his naval force took it in the name of the United States in 1846. The name of San Francisco was given to the town. When gold was discovered in California in 1848, San Francisco had a population of c.800, two years later it was incorporated

with a population of c 25,000 The rush of gold seekers, adventurers, and settlers brought a period of lawlessness when the BARBARY COAST flourished and the VIGILANTES were organized The city took on a metropolitan aspect, with newcomers from over the world, among others the Chinese, the first settlers of the Chinatown which is today the largest Chinese settlement outside the Orient The pony express in 1860 and the Union Pacific RR in 1869 linked San Francisco overland with the East The city grew as California grew. After one of the most spectacular disasters in U S history, the earthquake of April 18, 1906, and the sweeping fire that followed, rebuilding was rapid The opening of the Panama Canal, which swelled the trade of the port, was celebrated by the Panama-Pacific Exposition of 1915 By the time of the GOLDEN GATE INTERNATIONAL EXPOSITION (1939–40), the whole San Francisco Bay area was heavily industrialized When the conference that drafted the United Nations Charter met here in 1945, San Francisco only confirmed its world importance The SAN FRANCISCO–OAKLAND BAY BRIDGE was opened in 1936, and the GOLDEN GATE BRIDGE in 1937 The individuality of the city, almost legendary in the United States, is compounded of items such as the San Francisco fogs, the cable cars, busy Market St the water front of the Embarcadero, Telegraph Hill (where in earlier times a signal tower sent word to the city of harbor doings), Nob Hill (where the nabobs lived in grandiose castles), and Russian Hill The visitor today can see relics of the past, notably the presidio (now an army post) and Mission Dolores (1782, at first called San Francisco de Asís), as well as the modern civic center and Golden Gate Park Institutions of higher learning in the city include the Univ of San Francisco (Jesuit, for men, 1855), San Francisco College for Women (Catholic, 1887), the School of Medicine of Stanford Univ, some schools of the Univ of California, a state teachers college, and a junior college See Federal Writers' Project, *San Francisco the Bay and Its Cities* (1941), Gertrude Atherton, *My San Francisco* (1946), William M Camp, *San Francisco, Port of Gold* (1947) Robert O'Brien, *This Is San Francisco* (1948), John Bruce, *Gaudy Century the Story of San Francisco's Hundred Years of Robust Journalism* (1948), and Edmond M Gagey, *The San Francisco Stage* (1950).

San Francisco Bay, 50 mi long and 3 to 13 mi wide, W Calif, entered through the Golden Gate, a strait between two peninsulas On the southern peninsula stands the city of San Francisco, on the northern peninsula are the residential cities of Marin co, while on the eastern shore of the crescent-shaped bay are such industrial cities as Alameda, Oakland, Berkeley, and Richmond Angel Island, Alcatraz, and Yerba Buena Island are in the bay With the subsidiary waters of San Pablo Bay to the north and Suisun Bay to the east of San Pablo Bay, the natural harbor of San Francisco Bay is one of the most notable of the world On these secondary bays and on Carquinez Strait, which connects them, are the cities of Vallejo, Benicia, Martinez, and Pittsburg Recent evidence tends to show that Sir Francis Drake was in 1579 the first white man to enter the bay, but it was not really known until explored by the Spanish in the late 18th cent

San Francisco–Oakland Bay Bridge, W Calif, built 1933–36 A double-decked structure, it has an over-all length of 8¼ mi From San Francisco it goes to Yerba Buena Island, where a tunnel connects with spans that lead to Oakland and Berkeley approaches

San Francisco Peaks, N Ariz, N of Flagstaff, consisting of Humphreys, 12,655 ft (highest in Arizona), Agassiz, 12,340 ft, Fremont, 11,940 ft

San Gabriel (săn gā'brēul), residential city (1940 pop 11,867, 1946 special census pop 16,840), S Calif, E of Los Angeles, inc 1913 The Spanish mission (1771) contains rare paintings and relics

San Gabriel Mountains, S Calif, E and NE of Los Angeles, running c 50 mi westward from Cajon Pass (c 15 mi NNW of San Bernardino) San Antonio Peak (10,080 ft) is the highest of the range

Sangallo (säng-gal'lō), three Italian Renaissance architects, two brothers and their nephew **Giuliano da Sangallo** (jōōlyä'nō), 1445–1516, designed the Church of Santa Maria delle Carceri at Prato and palaces in Florence After Bramante's death he worked on St Peter's at Rome with Raphael and Fra Giocondo His brother, **Antonio da Sangallo** (äntō'nyō), the elder, 1455–1534, built the domed Church of the Madonna di San Biagio at Montepulchiano **Antonio da Sangallo,** the younger, 1485–1546, their nephew, whose real name was Antonio Cordiani, was the most noted of the three He collaborated with Bramante in the latter's final years For Cardinal Alessandro Farnese (later Pope Paul III) he designed the Farnese Palace, the most magnificent type of Roman Renaissance palace. After Peruzzi's death Antonio was appointed (1538) to succeed him in the construction of St Peter's, though his complex plan for its completion was not accepted At the Vatican he designed the Sala Regia and the Pauline Chapel

Sangamon (săng'gumun), river rising in E central Illinois, c 44 mi. NE of Springfield, flowing SW to Decatur, where it is dammed to form Lake Decatur, then W and NW to the Illinois, above Beardstown Its course is c 250 mi Abraham Lincoln spent much of his youth on and near the river See Edgar Lee Masters, *The Sangamon* (1942)

Sanger, George (săng'ur), 1827–1911, English showman. He was the proprietor of a famous traveling circus which he developed with his brother, John Sanger, from a small show started in 1871 See his *Seventy Years a Showman* (1910)

Sanger, Margaret (Higgins), 1883–, American leader in the BIRTH CONTROL movement, b Corning, N Y Personal experience and work as a public health nurse convinced her that family limitation, especially where poverty was a factor, was a necessary step in social progress She studied in London with Havelock Ellis and others and, back in America, began her campaign almost singlehanded Indicted in 1915 for sending information through the mails and arrested the next year for conducting a birth control clinic in Brooklyn, Mrs Sanger gradually won support from the public and the courts She organized the first American (1921) and international (1925) birth control conferences and visited many countries in Europe and Asia, lecturing and helping to establish clinics Her books include *Women and the New Race* (1920), *Happiness in Marriage* (1926), and an autobiography (1938)

Sanger (săng'ur) **1** City (pop 4,017), S central Calif, near Fresno in the San Joaquin Valley, inc 1911 Raisins and fruits are packed here **2** Town (pop 1,000), N Texas, NNE of Fort Worth, in a farming area

San Germán (sän hĕrmän'), town (pop 6,446), SW Puerto Rico It is an agricultural market Settled by early Spanish explorers, it possesses one of the oldest churches (built 1511) in America Close to the town is the Polytechnic Institute of Puerto RICO (1912)

Sangerville (săng'gurvĭl), town (pop 1,194), central Maine, on the Piscataquis and SW of Dover-Foxcroft, settled 1801, inc 1814 Hiram Maxim was born here

Sangi Islands (säng'ē) or **Sangihe Islands** (sänggē'u), volcanic group (314 sq mi, pop 134, 904), Indonesia, NE of Celebes Mountainous and forested, the group produces ebony, rattan, copra, and nutmeg The largest island, also called Sangi (217 sq mi, pop 79,537), has an active volcano, Mt Awu, 6,002 ft high

San Gimignano (sän jēmēnyä'nō), town (pop 3,426), Tuscany, central Italy, NW of Siena No other Italian town has preserved its medieval aspect so fully The city walls, the palaces, and the celebrated 13 towers still stand as they did in the 13th and 14th cent The collegiate church, rich in works of art, was damaged in 1944 by a German bombardment In the Church of St Augustine there are frescoes by Benozzo GOZZOLI

Sangre de Cristo Mountains (säng'grā dē krĭstō) [Span, =blood of Christ], part of the Rocky Mts, extending from S central Colorado into N central New Mexico Noted elevations in Colorado are Blanca Peak (14,363 ft), the highest, lying in the portion of the Sangre de Cristos known as the Sierra Blanca, and Kit Carson Peak (14,100 ft) The Truchas peaks are in New Mexico

Sangster, Charles, 1822–93, Canadian poet, b Kingston, Ont The son of a shipwright, he had only a common school education and spent his later life as a civil service clerk At first a mediocre imitator of Byron, he became with the publication of *Hesperus and Other Poems and Lyrics* (1860) the first notable Canadian poet to make use of native subject matter His descriptions of rural life and natural scenery and his religious LYRICS are best

Sanhedrin (sănˈhĭdrĭn, sănˈhē-), Jewish legal and religious institution in Jerusalem which exercised the functions of a court The accounts in the Mishna do not correspond to those in Josephus or in the New Testament, most scholars, following the theory of Adolf Büchler, maintain that there probably were two Sanhedrins—one political and civil, the other, known as the Great Sanhedrin, purely religious The former, of 23 members, was like a legal court, the latter, of 71 members, was presided over by a *nasi* [prince] Both bodies perished with the destruction of the Temple, later Jewish academies are considered continuations of the Great Sanhedrin In 1807 Napoleon appointed a Sanhedrin of 71 members, both rabbis and laymen, to consider questions of relationship between Jews and Christians

San Ildefonso (sän ēldäfōn'sō), village, Segovia prov, central Spain, in Old Castile Here is the royal summer residence, called La Granja, built by Philip V (1721–23) in imitation of Versailles It consists of the palace, the collegiate church, and the celebrated gardens, laid out by French landscaping architects

San Ildefonso (sănˈ ēlˈdufōn'sō), North American Indian pueblo, N central N Mex It is on the east bank of the Rio Grande and 17 mi NW of Santa Fe The 174 inhabitants speak a language of the Tanoan family These Pueblo Indians raise grain, chilies, and vegetables The pueblo has become increasingly famous for its excellent pottery and paintings, and many of its native artists have won individual fame, notably María Martínez, one of the finest of Indian pottery makers, and Awa Tsireo, one of the leading Indian painters On Jan 23, their day of fiesta, ceremonial dances (e g, the buffalo and the eagle dances), are performed The present village was established early in the 18th cent See Ruth Bunzel, *The Pueblo Potter* (1929), Alice Marriott, *Maria, the Potter of San Ildefonso* (1948)

San Ildefonso, Treaty of, name of several treaties signed at the royal residence of San Ildefonso, Spain The Treaty of San Ildefonso of **1796** was an alliance of France with Spain against England in the French Revolutionary Wars The secret Treaty of San Ildefonso of **1800** was actually a draft confirmed by two later treaties (March, 1801; Oct, 1802) Spain retroceded Louisiana to France and was compensated by the creation of the kingdom of Etruria in Tuscany, which was given to the duke of Parma, son-in-law of Charles IV of Spain Although Napoleon Bonaparte undertook never to alienate Louisiana, he disregarded the treaty and sold Louisiana to the United States in 1803

sanitary science, principles of health preservation, embracing HYGIENE, on an individual level, and PUBLIC HEALTH, on a communal level Those who specialize in sanitary science are sanitary engineers They endeavor to eliminate or reduce health hazards associated with the supply of water and milk, the collection and disposal of sewage and refuse, and the prevalence of rodents and insects Conditions of noise, odors, obnoxious gases, and food handling that threaten the well-being of the public are also their concern See E S Hopkins, ed, *Elements of Sanitation* (1929), S C Prescott and M P Horwood, *Principles of Sanitary Science* (1935), E B Phelps and others, *Public Health Engineering* (rev ed, 1948), A J Martin, *Work of the Sanitary Engineer* (rev ed, 1949)

sanitation see PLUMBING and SANITARY SCIENCE

San Jacinto (săn jŭsĭn'tu), city (pop 1,356), S Calif, ESE of Los Angeles, inc 1888 It is in a fruit-growing region Hot mineral springs are near by

San Jacinto, river rising in E central Texas and flowing south to an arm of Galveston Bay Its chief tributary is Buffalo Bayou, and both the bayou and the lower river are used for the Houston ship channel In 1836 Texans under Sam Houston surprised and defeated a larger force of Mexicans in the final and decisive battle of the Texas Revolution on the San Jacinto near the mouth of Buffalo Bayou The battlefield is a state park with a slim, tall (570 ft) monument, and April 21, San Jacinto Day, is a Texas holiday

San Jacinto Mountains, part of the San Bernardino Mts, S Calif, NW of the Salton Sea The highest peak is San Jacinto Peak or Mt San Jacinto (10,805 ft), near Palm Springs

San Joaquin (săn wäkēn'), river, c 325 mi long, rising in E California in the Sierra Nevada and flowing westward a short distance, then turning N through the Central Valley to join the Sacramento near Suisun Bay, an arm of San Francisco Bay. The Mokelumne, Calaveras, Stanislaus, Tuolumne, Merced, Chowchilla, and Fresno flow into the San Joaquin along its course The wide southern part of the basin between the Sierra Nevada and the Coast Range is usually called the San Joaquin Valley, though it includes independent rivers such as the Kings and the Kern Between Stockton in the north and Bakersfield in the south are many cities, notably Fresno, Modesto, and Merced The CENTRAL VALLEY PROJECT, undertaken largely to make fertile San Joaquin Valley more fertile, has as one of its units FRIANT DAM in the San Joaquin

San José (sän hōsā'), city (1944 estimated pop 77,182), W central Costa Rica, capital and largest city of Costa Rica Unrivaled by provincial capitals, San José is the economic, political, and social center of Costa Rican life, dominating the central plateau and the near-by towns, ALAJUELA and HEREDIA San José was founded (c 1738) at the beginning of westward expansion from CARTAGO, with independence from Spain (1821) it became the center of the country's liberal element and, shortly afterwards, the capital A modern city, with parks and fine public buildings, including the elaborate National Theater, it has a mixture of Spanish and North American architecture, unusual in Latin American cities, with many houses set back to have lawns and gardens fronting the street Often seen in the surrounding towns, on the small coffee farms of the countryside, and in the city itself are tiny brightly painted oxcarts characteristic of the region San José is a station for international air lines, the hub of the highway system, and the center of the Pacific and Caribbean railways It has a university (founded 1844)

San José, town (pop 1,783), W Guatemala, a port on the Pacific coast, S of Guatemala city The harbor is unprotected, and cargoes are handled by lighters, but San José, a rail terminus of the International Railways of Central America, is the principal Pacific port of the country

San Jose (sănuzā', săn hōsā'), city (pop 68,457), co. seat of Santa Clara co, W Calif, SE of San Francisco Bay, founded 1777, inc. 1850 It was the meeting place of the first state legislature (1849)

and was the capital from 1849 to 1851 It is in a rich fruitgrowing area and is the center of a very large canning and dried-fruit-packing industry San Jose State College (coeducational, 1857) and a junior college (coeducational) are here Willow Glen was annexed in 1936. To the north lies Mission San Jose de Guadalupe (1797), with a small portion of the original structures

San José (săn hōsā'), city (1941 estimated pop. 30,000), capital of San José dept, S Uruguay It was founded in 1783, and is now the commercial center for a large grain-growing region There are flour mills

San Jose scale, scale insect introduced into San Jose, Calif, in plants from China Transported by wind, birds, and large insects, it spread over the fruit-growing areas of North America It causes great damage to a variety of trees by draining the sap and attacking the fruit It covers the bark with tiny gray specks, the waxy scales secreted by the insects The females remain under the scales throughout life The male nymphs become, in spring, yellowish two-winged adults which do not feed The females produce living young which soon lose their legs and attach themselves to the bark Some control is possible by spraying with oil emulsions, especially in winter, and with lime sulphur in spring and fall

San Juan (săn hwän'), city (estimated pop 80,000), capital of San Juan prov, W Argentina, on the San Juan river It is the center of an irrigated region, where viticulture is the chief activity, fruits and grains are also grown, and cattle are raised The province is rich in minerals San Juan was founded in 1562

San Juan (săn" wän', Span săn hwän'), city (1940 pop 167,247, 1949 estimated pop 240,000), capital and chief city of Puerto Rico, on the northeast coast It is an important port, on an island at the entrance to San Juan harbor, and is connected with the mainland by bridges The bay was named Puerto Rico [rich port] by the Spanish explorer Juan Ponce de León, in 1508, and in 1521 the city of Puerto Rico, soon after called San Juan Bautista de Puerto Rico, was founded Strongly fortified, it successfully resisted attacks by the English buccaneers Drake and Hawkins in 1595 but for a short time in 1598 it was occupied by George Clifford, earl of Cumberland, the Dutch took and sacked the place in 1625 It grew in importance as a West Indian port during the 18th and 19th cent and in 1885 was the scene of an uprising against Spanish rule San Juan was taken over by U S troops in Oct, 1898, in the Spanish-American War The city retains much of its early colonial character, with its many crowded, narrow streets, with its small shops and houses with overhanging balconies, and especially with its impressive historic buildings, such as El Morro castle (begun 1539), which commands the harbor entrance, San Cristóbal Castle (begun 1631), and La Fortaleza (begun 1529, now the governor's palace) Other points of interest include the Casa Blanca (1523), the Cathedral of San Juan Bautista, with the tomb of Juan Ponce de Leon, and parts of the Univ of Puerto Rico and its School of Tropical Medicine San Juan is the commercial and financial center of the island and has a considerable export trade in sugar, tobacco, coffee, and fruit, mostly sent to the United States Sugar refining, rum distilling, and the manufacturing of needlework, clothing, buttons, cigars and cigarettes are the chief industries In the vicinity of the city are the residential suburb of Santurce and several fine resort beaches (notably the Condado and Isla Verde), which attract many winter tourists from North America There is an international airport (with seaplane landing) and a U S air base

San Juan (săn" wän'), city (pop 2,264), extreme S Texas, WNW of Brownsville, in the irrigated district of the lower Rio Grande valley

San Juan (săn" wän'), North American Indian pueblo, N N Mex It is on the east bank of the Rio Grande and 26 mi NW of Santa Fe The 788 inhabitants are Pueblo Indians who speak a language of the Tanoan family It was the home of Popé, the medicine man who led the Indians in the Pueblo Revolt of 1680 The principal festival is held on June 24 in honor of St John the Baptist. The village was settled prior to 1598

San Juan (săn hwän'), river, 108 mi long, flowing from the southeast corner of Lake Nicaragua E to the Caribbean The lower course is the boundary between Nicaragua and Costa Rica The deep navigable river is of importance because of the port of SAN JUAN DEL NORTE on one of its mouths and because it would be a vital link in the projected NICARAGUA CANAL In 1916 Costa Rica protested that Nicaragua in granting to the United States an option to build the canal had violated Costa Rican rights

San Juan (săn" wän'), river rising in SW Colorado in the San Juan Mts and flowing SW into New Mexico, NW into Utah, then W to the Colorado near Rainbow Bridge National Monument

San Juan Boundary Dispute (săn" wän'), controversy between the United States and Great Britain over the U.S.–British Columbia boundary It is sometimes called the Northwest Boundary Dispute The difficulty arose from the faulty wording of the treaty that settled the Oregon question in 1846 That instrument set the boundary as a line through the middle of the channel between the mainland and Vancouver Island and through the middle of Juan de Fuca Strait The strait, however, breaks into several channels, and between the two main ones—Haro Strait and Rosario Strait—lie the San Juan Islands Ownership of the islands, especially San Juan itself—was disputed The Hudson's Bay Company in 1853 established a sheep farm there The quarrel, unsettled by diplomatic negotiations, was brought to a crisis in 1859, when G E Pickett and U S troops occupied San Juan Island under orders of W S Harney British war vessels promptly appeared No armed conflict resulted, for Gen Winfield Scott, commander in chief of American armies went to the scene and arranged with the British for joint occupation of San Juan Until 1872 there were soldiers of both powers on the island Attempts to appoint a neutral arbitrator were defeated by the U S Senate until the Washington Treaty of 1871 Emperor William I of Germany as arbitrator in 1872 decided upon Haro Strait as the line, thus giving the archipelago to the United States

San Juan Capistrano (săn" wän" kăpĭstra'nō), unincorporated town (pop 724), S Calif, SE of Los Angeles Junípero Serra founded a mission here in 1776, but the church, completed in 1806, was soon ruined by earthquake It is said that swallows yearly come on St Joseph's day, March 19, and yearly depart on the death day (not the feast day) of St John Capistran, Oct 23

San Juan del Norte (săn hwän' dĕl nôr'tā), town (1946 estimated pop 719), E Nicaragua, a Caribbean port on the northern mouth of the San Juan river Also called Greytown, it was occupied (1848) by the British to secure control of the MOSQUITO COAST and to check the U S efforts to build an interoceanic canal The port became the thriving eastern terminus of a transisthmian transport company operated by Cornelius VANDERBILT in the gold rush to California In 1854 it was bombarded by the U S warship Cyane in retaliation for insults to the U S minister and damage to U S property in Nicaragua San Juan was important in the filibustering activities of William Walker Small quantities of bananas, coconuts, rubber, and hardwoods are exported

San Juan del Sur (dĕl sōōr'), town (1946 estimated pop 1,443), SW Nicaragua, a port on the Pacific Used as Pacific terminus of the transit route across the isthmus during the California gold rush, it is today connected by a short railway to RIVAS and handles some export traffic in coffee and sugar

San Juan Hill (săn" wän', Span săn hwän), E Cuba, near the city of Santiago de Cuba It was the scene (July, 1898) of a battle in the Spanish-American War, in which Theodore Roosevelt and the Rough Riders took part

San Juan Islands (săn' wän"), archipelago of 172 islands constituting San Juan co (pop 3,157), NW Wash, E of Vancouver Island, between Haro and Rosario straits, discovered and named c 1790 by the Spanish The islands were the subject of the SAN JUAN BOUNDARY DISPUTE between Great Britain and the United States, their ownership was decided in 1872 San Juan, Orcas and Lopez are the largest of the group An oceanographic laboratory is at the town of Friday Harbor on San Juan Island

San Juan Mountains, part of the Rocky Mts, SW Colo and NW N Mex, lying W of the San Luis Valley and S of the Gunnison river Its peaks include Uncompahgre Peak (14,306 ft), Mt Sneffels (14,143 ft), and others over 14,000 ft high

Sankara, see VEDANTA

Sankey, Ira David (săng'kē), 1840-1908, American evangelistic singer and hymn composer, b Edinburg, Pa Leading the musical part of the meetings, he toured Great Britain and the United States with the revivalist Dwight L Moody from 1871 to 1899 He worked with P P Bliss on *Gospel Hymns* (1875), the first of a series See his autobiography, *My Life and the Story of the Gospel Hymns* (1907), Elias Nason, *The American Evangelists, Dwight L Moody and Ira D Sankey* (1877)

Sankt Moritz, Switzerland see SAINT MORITZ

Sankt Pölten (zăngkt pûl'tun), city (pop 40,711), Lower Austria, 30 mi W of Vienna It is an industrial center with varied manufactures The 11th-century abbey church here was rebuilt in the 18th cent

Sankt Wolfgang (zăngkt vôlf'gung), resort (pop 2,454) in the SALZKAMMERGUT, Upper Austria, on a lake, the Sankt Wolfgangsee Its Gothic church has an altar carved by Michael PACHER The inn Zum Weissen Rossl is world famous

San Leandro (săn lēăn'drō), city (1940 pop 14,601, 1948 special census pop. 26,701), W Calif, adjoining Oakland, inc 1872. There are metal-goods and automotive industries and canneries Fruits, flowers, and vegetables are raised in the area. Lake Chabot is near by

San Lorenzo (săn lōrān'sō), town (pop 2,723), S Honduras, a port on the Gulf of Fonseca It is the mainland transshipping point between AMAPALA and TEGUCIGALPA

Sanlúcar de Barrameda (sanlōō'kar dā bārāmā'dhā), city (pop 28,446), Cádiz prov, SW Spain, in Andalusia, on the estuary where the Guadalquivir reaches the Atlantic It is a popular bathing resort The port of Bonanza, c 3 mi upstream, has active trade, exporting mainly wine and fish Sanlucar flourished after the discovery of America when all ships passed here to reach Seville Columbus sailed from here in 1498, and Magellan in 1519 A medieval castle, the palace of the dukes of Montpensier, and a 14th-century church are of interest

San Luis (săn lwēs'), city (estimated pop 30,021), capital of San Luis prov, W central Argentina An oasis in an arid region, it is the center of an irrigated area where cattle, grain, and wine are the chief products The province is rich in minerals San Luis was founded c 1596

San Luis Obispo (săn lōō'ĭs ōbĭ'spō), city (pop. 8,881), co. seat of San Luis Obispo co, S Calif, near San Luis Obispo Bay and NW of Los Angeles, inc 1856 It lies in a fertile agricultural region, where oil is also found The Franciscan mission, San Luis Obispo de Tolosa (1772), is now a parish church The city is the seat of California State Polytechnic College and a junior college (coeducational)

San Luis Potosí (săn lwēs' pōtōsē'), state (24,417 sq. mi, 1946 estimated pop 807,849), N central Mexico Most of the state lies on the eastern tablelands of the central plateau Except for the humid and unhealthful tropical valley of the PÁNUCO in the extreme eastern portion near the Gulf of Mexico, the climate is mild and dry Generally level, with a mean elevation of c 6,000 ft, the plateau, largely desert in the north, is broken by spurs of the Sierra Madre Oriental Rainfall is light, and there are few rivers, consequently, although the soil is fertile, agriculture has little commercial value beyond the usual subsistence crops Tobacco, sugar cane, coffee, and tropical fruits and vegetables are grown in the lowlands. On the uplands, stock raising is important, hides, tallow, and wool are exported, and some timber is cut in the forested areas San Luis Potosí has found its wealth in rich deposits of silver, gold, copper, zinc, and bismuth and is one of the leading mining states For this reason it was settled by the Spanish soon after the fall of Tenochtitlán **San Luis Potosí,** the capital (pop 77,161, alt 6,100 ft), was founded in 1576 It was of strategic importance in colonial times and in the wars in Mexico during the republican period Briefly imprisoned here in 1910, the patriot, Francisco I MADERO, later named his revolutionary call to arms the Plan of San Luis Potosí The city is on a small plain almost entirely encircled by low mountains Solid colonial architecture and narrow cobbled streets give it a well-built clean, and picturesque atmosphere A mining and agricultural distributing center, the capital has smelters and also factories making matches, candles, textiles, flour, and beer

San Marcos (săn mar'kus), city (pop 6,006), co seat of Hays co, S central Texas, on the San Marcos river and between Austin and San Antonio, settled 1845, inc 1877 The springs in which the river rises near by, the natural parks on its banks, and the steep, wooded slopes hereabout make the city a resort There are varied processing plants and factories, a military air field, and a U S fish hatchery San Marcos is the seat of Southwest Texas State Teachers College

San Marcos, University of see LIMA, Peru

San Marino (săn murē'nō, Ital săn marē'nō), small and ancient independent republic (23 sq mi, pop c 14,000), in the Apennines near the Adriatic coast, SW of Rimini, Italy Agriculture (corn, grapes, and fruit) and stock raising are the main occupations Frequent issues of postage stamps for collectors are one of the main sources of revenue The republic is governed by two *reggenti* and a general council According to tradition, Marino, a Christian stonecutter from Dalmatia, took refuge on Mt Titano in the 4th cent Soon a little community was formed, because of its position and its poverty it succeeded, with few and brief interruptions, in keeping its independence The capital, **San Marino,** is built on Mt Titano, a precipitous rocky height commanding a fine view over hills, plain, and sea Three towers are built on the rocks and part of the pinnacled walls still stand A bust of Abraham Lincoln, who in 1861 accepted the honorary citizenship of San Marino, was unveiled here in 1937.

San Marino (săn murē'nō), residential city (1940 pop 8,175, 1948 special census pop 10,656), S Calif, near Pasadena, inc 1913 It is the seat of the Henry E Huntington Library and Art Gallery (see HUNTINGTON, HENRY EDWARDS)

San Martín, José de (hōsā' dā săn martēn'), 1778–1850, South American revolutionist, b Yapeyú, in the present Argentina After service with the Spanish army in Europe, he returned to join the revolution in his native country (1812) He superseded Manuel BELGRANO in command of the army against Upper Peru and decided, after some experience, that the attack on the royalist stronghold in

Peru could best be made through Chile After training his troops at Mendoza, San Martín accomplished the difficult feat of leading an army across the Andes through Los Patos and Uspallata passes. Ably seconded by Bernardo O'Higgins, he defeated the Spanish at Chacabuco (1817) San Martín was offered the governorship of Chile, which he refused After a setback at Cancha Rayada, the patriots defeated the royalists at Maipú (1818) and completed the liberation of Chile San Martín, with the aid of Thomas Cochrane (earl of Dundonald), prepared to conquer Peru Lima was taken (1821), and San Martín became protector of Peru When Simón Bolívar advanced with the intention of driving out the Spanish, San Martín interviewed him at Guayaquil (July, 1822) and then resigned, leaving the conquest of Peru to the Liberator. San Martín retired from public life and in 1824 went to Europe, where he spent his remaining years in exile and comparative poverty See Anna Schoellkopf, *Don Jose de San Martín* (1924), Bartolomé Mitre, *Historia de San Martín* (Eng tr by William Pilling, *The Emancipation of South America*, 1893), Ricardo Rojas, *San Martín* (1933, Eng tr , 1945)

San Mateo (săn mətā'ō), residential city (1940 pop 19,403, 1947 special census pop 32,580), W Calif , S of San Francisco on San Francisco Bay, laid out 1863, inc 1894 A junior college is here Flowers and vegetables are raised in the region

Sanmicheli, Michele (mēkā'lā sänmēkā'lē), 1484–1559, Italian architect and engineer He is said to have been the first to introduce corner bastions in his restoration of Italian fortifications. He built many notable churches and palaces, among them Madonna di Campagna near Verona, the Petrucci Chapel at San Domenico, Orvieto, the Grimani Palace, Venice, noted for its façade, and the particularly fine Pompei Palace, Verona The city gates of Venice and Verona are also his work He wrote a book on the orders of architecture See biography by E J Langenskiold (1938)

San Miguel (săn mēgĕl'), city (1946 estimated pop 18,733), SE Salvador Founded in 1530 at the foot of San Miguel volcano (6,996 ft), it grew with commerce in indigo Today the city is the center of the republic's henequen-producing area and also ships some cattle and sugar

Sannazaro, Jacopo (yä'kōpō sän-nätsä'rō), 1458–1530, Italian poet and prose writer, a Neapolitan Devoted to Frederick III of Naples, he followed him to France after his defeat, returning after several years of exile Sannazaro is best known for his pastoral romance in prose and verse, the *Arcadia* (1504), which shows the influence of Boccaccio and exerted considerable influence on the development of Italian prose His Italian verse, modeled upon that of Petrarch, consists of sonnets and other lyrics, he wrote much in Latin, including the long poem *De partu Virginis*, and was called the Christian Vergil A lyric from *Arcadia* is translated in Lorna de' Lucchi, *An Anthology of Italian Poems* (1922)

Sannikov Island (sə'nĭkôf), mythical island, N of the New Siberian Islands, RSFSR Reported in 1810 by the Russian explorer Sannikov, its existence was disproved during the expedition (1937–40) of the Russian icebreaker *Sedov*

San Pablo Bay: see San Francisco Bay

San Pedro (săn pĕ'drō), city, S Calif , consolidated 1909 with Los Angeles Laid out in 1882 on San Pedro Bay, it became an important port and today handles much of the maritime commerce of Los Angeles It has shipyards, dry docks, fish canneries, and oil refineries The population was estimated in 1940 at c 40,000 In 1898 began the development of San Pedro Bay into a serviceable harbor The bay was discovered in 1542 by Juan Rodríguez Cabrillo San Pedro Channel separates the city and Long Beach from Santa Catalina Island

San Pedro Sula (săn pā'dhrō sōō'lä), city (pop 22,116), NW Honduras, second largest city of the country San Pedro Sula, with Puerto Cortés, is the chief port of Honduras and center of the northwestern banana and sugar plantations It is connected by railroad with other ports of the north coast region and by road with Tegucigalpa

San Pier d'Arena (săn pyĕr' därä'nä), city (pop 58,216), Liguria, NW Italy In this industrial suburb of Genoa locomotives, railroad equipment, machinery, tools, and chemicals are manufactured.

San Quentin (săn kwĕn'tĭn), point extending into San Francisco Bay, W Calif , N of San Francisco The state prison here was begun in 1852

Sanquhar (săng'kur), burgh (pop, 1,753), Dumfriesshire, Scotland, on the Nith and NW of Dumfries. The ruined castle on a hill above the river was the birthplace of the Admirable Crichton (James Crichton) A monument marks the site of the cross to which the "Sanquhar Declarations" were affixed by the Covenanters in 1680 and 1685.

San Rafael (săn rəfĕl'), residential city (pop, 8,573), co. seat of Marin co , W Calif , N of San Francisco, inc 1874 It is the seat of the restored Mission San Rafael Arcángel (est. 1817), Dominican College, San Rafael Military Academy, and Tamalpais School for boys

San Remo (săn rä'mō), city (pop, 23,963), Liguria, NW Italy. A fashionable resort on the Italian Riviera, it has a medieval and a modern section. The gambling tables in the casino are the most visited in Italy.

San Remo, Conference of. Representatives of Great Britain, France, Italy, Japan, Greece, and Belgium met at San Remo, Italy, in April, 1920, to discuss problems arising from the First World War Members of the supreme council of the Allies (Lloyd George, Millerand, and Nitti) took a leading part in the proceedings Methods of executing the Treaty of Versailles were discussed, the basic features of a peace treaty with Turkey (see Sèvres, Treaty of) were adopted, and Class A mandates were allotted

San Saba (săn sa'bə, sä'bu), town (pop 2,927), co seat of San Saba co , central Texas, on the San Saba river and NW of Austin It ships pecans and melons and other crops as well as products of surrounding ranches—sheep, wool, cattle, mohair, and turkeys

San Salvador (san sälvädhōr'), city (1946 estimated pop 115,598), W central Salvador, capital and largest city of Salvador The city is high enough to escape the excessive heat of the tropics but has a year-round summer climate Built on the volcanic belt which parallels the Pacific coast (near by is San Salvador volcano, 6,398 ft high), the city has suffered from recurrent and severe earthquakes and has been frequently rebuilt The most disastrous quake caused the founding of Santa Tecla To resist shock, public buildings in the capital are constructed of concrete and pressed iron. San Salvador has several fine parks, broad avenues, and modern houses, particularly in outlying sections It is the center of the republic's trade and communications, with international air lines, the International Railways of Central America, and paved roads (notably the Inter-American Highway) The city was founded early in the 16th cent and for a time (1831–38) was the capital of the Central American Federation under Francisco Morazán

San Salvador (săn säl'vudôr, Span san sälvädhōr'), name given by Columbus to one of the Bahama Islands, first land discovered in the New World on Oct 12, 1492 It was called Guanahani by the Indians and was long thought to have been what is now Cat Island, but is identified by most historians with, and is also called, Watling or Watlings Island

Sansannah (sănsă'nu), unidentified town, S Palestine Joshua 15 31

sans-culottes (sä-kulôt') [French,=without knee breeches], term applied to the lowest class in France during the French Revolution The name came from the fact that such people wore long trousers instead of knee breeches (*culottes*) Throughout the early part of the Revolution, the sans-culottes were held in check by the upper bourgeoisie, but after the fall of the Girondists (June, 1793) France was handed over to the Jacobins, who identified themselves with the sans-culottes

sans-culottides (sä-kulôtĕd'), the last five days of the year in the French Revolutionary calendar, thus named in honor of the sans-culottes

San Sebastián (săn sābastyän'), city (pop 89,276), capital of Guipúzcoa prov , N Spain, in the Basque Provs near the French frontier A seaport picturesquely situated at the foot of Mt Urgull on the Concha Bay of the Bay of Biscay, it was a summer residence of the Spanish court and still is one of the most fashionable seaside resorts in Spain Now a fine modern city, it was rebuilt in the 19th cent after its virtual destruction in the Peninsular War, when it was the scene of a bloody battle between Wellington and the French (1813) The San Sebastián pact, or republican manifesto, which precipitated the fall of the Spanish monarchy, was signed here in 1930 It was not damaged in the civil war (1936–39)

Sans-Gêne, Madame: see Lefebvre, Pierre François Joseph

Sanskrit (săn'skrĭt) [Sanskrit,=perfect], classical standard language of India, of the Indic group of the Indo-Iranian subfamily of Indo-European languages (see language, table) Its earliest form, Vedic, is that of the Veda In its usual form, spoken c 400 B C as a standard court language, Sanskrit became the literary vehicle of Hindu culture Sanskrit remains are among the oldest Indo-European documents, and the language was formerly supposed to be a "parent language." The comparison of Sanskrit with the languages of Europe, especially by Sir William Jones, opened the way to the scientific study of language

Sanskrit literature, main body of the classical literature of India The literature is divided into two main periods—the Vedic (c 1500–c 200 B C), when the Vedic form of Sanskrit generally prevailed, and the Sanskrit (c 200 B C –A.D c 1100), when classical Sanskrit (a development of Vedic) was the language in use Sanskrit had, however, become the standard language of the court by 400 B C , and its early literature overlapped the Vedic. The first part of the Vedic period (c.1500–c 800 B.C), that of the Veda, was a poetic and creative age, but afterwards (c 800–c 500 B.C.) the priestly class transferred its energies to sacrificial ceremonial. They produced the *Brahmanas*, these are prose commentaries, in a later form of Vedic, explaining the relations of the Vedas (which had become sacred texts) to the ceremonials of the Vedic religion in all its symbolic meanings In time the *Brahmanas*, like the Vedas, came to be considered sruti [Sanskrit,=hearing, i.e , revealed]. All later works, in contrast, are called smriti [Sanskrit,=memory or tradition] and are considered to be derived from the ancient sages. The later portions of the *Brahmanas* are theosophical treatises, since they were meant to be studied in the solitude of the forest, they are called *Aranyakas* [forest books] The final parts of the *Aranyakas* are the philosophical *Upanishads* [secret doctrine] (see Vedanta). In language structure the *Aranyakas* and the *Upanishads* approach classical Sanskrit The *Sutras* [Sanskrit,=thread or clue] were written in the third and final stage (c 500–c 200 B C) of the Vedic period They are compendious treatises dealing with Vedic ritual and customary law They were written to fulfill the need for a short survey in mnemonic, aphoristic form of the past literature, which by this time had assumed massive proportions There are two forms of *Sutras;* the *Srauta Sutras*, based on sruti, which developed the ritualistic side, and the *Grihya Sutras*, based on smriti Those *Grihya Sutras* dealing with social and legal usage are the *Dharma Sutras*, the oldest source of Indian law (see Manu) The body of works composed in the *Sutra* style was divided into six *Vedangas* [members of the Veda]—*Siksha* [phonetics], *Chhandas* [meter], *Vyakarana* [grammar], *Nirukta* [etymology], *Kalpa* [religious practice], and *Jyotisha* [astronomy] Linguistic standards were stereotyped in the middle of the *Sutra* period by the grammar of Panini (c 350 B C), regarded as being the starting point of the Sanskrit period The literature of the Sanskrit period is essentially profane Nearly all, except grammar and philosophy, is in verse The first period (c 500 B C –c 50 B C) of the Sanskrit age is one of epics They are divided into two main groupings, the natural epics, i e , those derived from old stories, and those which are derived from artificial epics called *Kavya* The oldest and chief representative of the natural school is the Mahabharata, while the oldest and best known of the artificial epics is the Ramayana The *Puranas*, a group of 18 epics, didactic and sectarian in tone, are a direct offshoot of the *Mahabharata* They are also connected with the old law books and the Vedas In the court epics (c 200 B C –A D c 1100), most of which were derived from the *Ramayana*, the matter gradually became subordinated to the form, and elaborate laws were set up to regulate style The lyric poems are artificial in technique and are mainly stanzaic The most common form, the *Sloka*, developed from the Vedic *Anushtubh*, a stanza of four octosyllabic lines Part of the lyric poetry is comprised of gemlike miniatures, portraying emotion and describing nature, most of it is erotic There are, however, many lyrics ethical in tone These reflect the doctrine of the transmigration of souls in a prevailing melancholy tone and stress on the vanity of human life Sanskrit drama (A D. c 400–1100) had its beginnings in those hymns of the *Rig-Veda* which contain dialogues The origin of staged drama is obscure, but probably derives from the dance and religious ceremonial Sanskrit drama is characterized by the complete absence of tragedy, death never occurs on the stage Other typical features are the alternation of lyrical stanzas with prose dialogue and the use of Sanskrit for some characters and Prakrit for others (see Prakrit literature) The stories were borrowed from legend, and love is the usual theme The play almost always opened with a prayer and was followed by a dialogue between the stage manager and one of the actors, referring to the author and the play Like Western drama, it contained acts (ranging from one act to 10) and scenes The unities were not observed, and when Sanskrit drama reached its full development, it was very similar, in its emphasis on character, to Shakespearian drama There were no theaters, so the plays were performed in the concert rooms of palaces The most famous drama was the *Sakuntala* of Kalidasa There is a didactic quality in all of Sanskrit literature, but it is most pronounced in fairy tales and fables (A D c 400–1100). These are usually mixed together in a single story, but characteristically different stories are inserted within the framework of a single narration. The characters of the tale themselves tell stories until there are many levels to the narrative The Panchatantra is the most important work in this style The sententious element reached its height in the *Hitopadesa*, which was derived from the *Panchatantra*. The Sanskrit literature being composed at present consists mainly of academic exercises, while the main body of Indian literature is written in various vernacular languages Translations of many of the important texts of Sanskrit literature are in *The Sacred Books of the East*, the famous collection edited by Max Müller See A. A. Macdonell, *History of Sanskrit Literature* (1900); *Somadeva. the Ocean of Story* (Eng. tr , 10 vols., 1924–28); A. B. Keith, *History of Sanskrit Literature* (1928); H. H. Gowen, *A History of In-*

dian Literature (1931); Moriz Winternitz, *History of Indian Literature* (2 vols., 1927–33), N K Sidhanta, *Heroic Age of India* (1931), R K Yajnik, *The Indian Theatre* (1933)

Sanson (sänsôN'), French family of public executioners who held that office from the 17th to the 19th cent

Charles[Henri Sanson (sharl' ärē'), 1740–93, guillotined Louis XVI His son **Henri Sanson**, 1767–1840, was chief executioner in the Reign of Terror, he guillotined Marie Antoinette

Sansovino, Andrea (ändrā'ä sänsôvē'nô), 1460–1529, Florentine sculptor and architect of the high Renaissance period, b Monte Sansavino His real name was Andrea Contucci His tombs of cardinals in Rome and his statues and reliefs for church decoration were greatly admired

Sansovino, Jacopo (yä'kôpô), 1486–1570, Italian sculptor and architect of the Renaissance His surname was taken in place of his own, Tatti, as homage to the Florentine sculptor, Andrea Sansovino, under whom he was apprenticed After early years devoted to sculpture, he was architect of several buildings in Rome and in 1527 moved to Venice, importing to that city the classic manner of Roman architecture In Venice, besides his masterpiece, the Library of St Mark's (designed 1536) in the Piazza San Marco, he built the Palazzo Corner della Ca' Grande, the mint, the loggia at the base of the great campanile, and some churches The handsomely designed adornments which distinguish his buildings show his talents as sculptor

Sans Souci (säN sôôsē') [Fr ,=without cares, content], palace built (1745–47) at Potsdam, Germany, by Frederick the Great, who lived here for 40 years It is one story high, over 300 ft long, and is believed to have been conceived by Frederick himself and executed by Knobelsdorff Frederick's apartments are shown as they were when he occupied them, there are also rooms which were Voltaire's during his long visit The library and the magnificent park, the audience chamber with its fine paintings, the orangery, the statue of Frederick, and the great fountain are all well known

San Stefano, Treaty of (sän stĕ'fänō), 1878, peace treaty between Russia and the Ottoman Empire (see Russo-Turkish Wars), signed at San Stefano (now Yesilkoy), a village W of Istanbul, Turkey Turkey ceded to Russia parts of Armenia and the Dobruja, agreed to pay a very large indemnity, and, recognizing the independence of Rumania, Serbia and Montenegro, increased their territories Bulgaria was made an autonomous principality and immensely enlarged, and Turkey promised reforms for Bosnia and Hercegovina Because the treaty modified the Treaty of Paris of 1856 (see Paris, Congress of) and greatly increased Russian influence in SE Europe, the other great powers obtained its revision at an international conference (see Berlin, Congress of)

Santa Ana (sän'ta ä'nä), city (1946 estimated pop 49,008), W Salvador Second largest city of the republic, it is the center of a rich coffee, sugar, and cattle region Santa Ana is in a warm valley and has rail and highway connections with San Salvador and with Guatemala Near by rises Santa Ana volcano (7,828 ft)

Santa Ana (sän'tu ä'nu), city (pop 31,921), co seat of Orange co, S Calif, SE of Los Angeles, founded 1869, inc 1886 In the fertile Santa Ana valley, it produces beet sugar, canned fruits and vegetables, and walnuts A junior college (coeducational) is here

Santa Ana (sän'tŭ ä'nu), North American Indian pueblo, central N Mex It is on Jemez Creek and 24 mi N of Albuquerque The 294 inhabitants are Pueblo Indians of the Keresan linguistic stock Their ancient church, Santa Ana de Alamillo, dates from 1692

Santa Anna, Antonio López de (sän'tu ä'nu, Span änto'nyō lō'päs dā san'tä a'na), 1794–1876, Mexican general and politician He fought in the royalist army, but joined Iturbide in the struggle that won independence for Mexico (1821) With the coming of independence he entered upon a long and tortuous political career His actions were governed by opportunism rather than by any fixed principle, and he shifted his allegiance from party to party, his fortunes rising and falling with bewildering rapidity He led the revolution against Iturbide (1823), aided, then revolted against, Vicente Guerrero, and turned against Anastasio Bustamante after helping him to power His victory over the Spanish when Guerrero was in power gained for him a popularity which he turned into political capital, he was ever afterward "the hero of Tampico" Elected president for a term beginning in 1833, he struggled with the vice president for power and established himself as a reactionary dictator in 1834 He went to Texas to crush the revolution there and became a sort of ogre in American eyes because of the slaughter at the Alamo and the brutality of the massacre at Goliad, which was committed under his orders. His defeat and capture by Sam Houston at San Jacinto (1836) put a temporary halt to his political career in Mexico, but his shrewd political sense, aided by the not unhappy accident of losing a leg in an attempt to repulse the French at Veracruz (1838), restored his prestige Driven from power after a wasteful, corrupt presidential administration (1841–44), he returned from exile—with U S aid apparently—and again was president (1846–47) He commanded in the Mexican War, but his defeats at Buena Vista, Cerro Gordo, and Puebla and the loss of Mexico city sent him again into exile He returned and ruled (after Dec , 1853) as "perpetual dictator" until the revolution of Ayutla again drove him into exile (1855) and brought Benito Juárez to the fore After several attempts, he was allowed to return to Mexico (1874) See his memoirs, *Mi historia militar y política* (1905), biographies by F C Hanighen (1934) and W H Callcott (1936)

Santa Anna, town (pop 1,661), W central Texas, at the foot of Santa Anna Mt W of Brownwood A farm market center, it also makes glass of local sand.

Santa Barbara (săn"tŭ bär'brŭ, -bûrŭ), city (pop 34,958), co seat of Santa Barbara co , S Calif , inc 1850 The presidio was founded in 1782 and the mission in 1786 (present building completed in 1820), today the residential and resort city by the sea retains a little of the air of an old Spanish town. The modern buildings harmonize with the old adobe houses Greenery and flowers abound Santa Barbara has a branch of the Univ of California, a junior college, an art museum, and a museum of natural history An annual fiesta commemorates the city's past

Santa Barbara Islands, off S California, separated from the coast by the Santa Barbara Channel They extend c 160 mi One of the most important of the islands is Santa Catalina Santa Barbara Island and Anacapa Island are included in the Channel Islands National Monument (see National Parks and Monuments, table)

Santa Catalina (săn"tu kă"tulē'nu) or **Catalina Island,** 22 mi long, S Calif , one of the Santa Barbara Islands It is off Long Beach Discovered in 1542 by Juan Rodrigues Cabrillo, it was given its present name by Vizcaíno in 1602 In 1919 William Wrigley bought and developed it as a pleasure resort On it is the city Avalon

Santa Catarina (săn'tu kätürē'nu), state (36,435 sq mi , 1940 pop 1,178,340, 1949 estimated pop 1,422,476), SE Brazil The capital is Florianópolis on Santa Catarina island (30 mi long and from 5 to 10 mi wide) just off the coast Mainland Santa Catarina is between the Atlantic on the east and Argentina on the west On a narrow coastal strip, cereals, vegetables, tobacco, fruit, manioc, and wine are produced The state rises westward to a rolling tableland, where cattle and hogs are raised Coal is mined in the southeast and exported, other industries include textile milling and lumbering The area was first colonized by the Portuguese in the 17th cent , and in the 19th cent there was an influx of German settlers, whose culture is still in evidence

Santa Clara (sän'ta klä'ra), city (pop 27,925), central Cuba On the main rail and highway systems, Santa Clara is an important commercial center for sugar and tobacco Its location is particularly attractive because of the surrounding hills of weathered and worn limestone rock

Santa Clara (săn"tu klă'ru), city (1940 pop 6,650, 1948 special census pop 9,839), W Calif , SE of San Francisco Bay and near San Jose, inc 1866 The Santa Clara de Asís Mission was founded in 1777 The city has large fruit-processing plants The Univ of Santa Clara (Catholic, for men, 1851) is here

Santa Clara (san"tu klä'ru), North American Indian pueblo, N N Mex It is on the west bank of the Rio Grande and 21 mi NW of Santa Fe The 579 inhabitants are Pueblo Indians of the Tanoan linguistic stock They make distinctive black pottery which is exceptionally beautiful The feast day of St Clare of Assisi is celebrated on Aug 12, Mass is accompanied by ceremonial dances Near the village are Puyé ruins, remains of a 15th-century pueblo that included cliff dwellings, kivas, and four terraced community houses Pictographs and pottery remains have been found

Santa Claus see Nicholas, Saint

Santa Cruz, Álvaro de Bazán, marqués de (alva'rō dā bäthän' markäs' dā san'ta krōōth'), 1526–88, Spanish admiral He fought in various actions against the Turks and distinguished himself at Lepanto (1571) In the war of Philip II for the crown of Portugal, he decisively defeated (1582), off the Azores, the French under Filippo Strozzi, who were supporting the Portuguese pretender The leading promoter of an invasion of England, he was to have commanded the Invincible Armada, but died before the expedition

Santa Cruz, Andrés (ändrās' sän'ta krōōs'), 1792?–1865, president of Bolivia (1829–39), b La Paz In 1820 he joined the revolutionists against Spain and, as Bolívar's chief of staff, participated in the decisive liberating battles of Junín and Ayacucho To achieve his one great aim of a Peru-Bolivia confederation Santa Cruz, elected president shortly after the resignation of Antonio José de Sucre, energetically set about establishing Bolivia on a sound footing At the same time he carried on intrigues to foster trouble in Peru and Chile so that his confederation might be realized When the opportunity came with internal disorder in Peru in 1835, Santa Cruz invaded and established himself as protector However, at the battle of Yungay (1839) he was defeated by a coalition of his enemies under Manuel Bulnes of Chile and barely escaped to spend the remainder of his life in Europe in exile

Santa Cruz (sän'tu krōōz', Span san'ta krōōs'), city (1948 estimated pop 38,200), capital of Santa Cruz dept , central Bolivia Formerly called Santa Cruz de la Sierra (dā lä syĕ'rä), it was founded in 1557 and was reestablished at its present site in 1595 by settlers from Asunción, Paraguay It is an agricultural mart for sugar, coffee, rice, and cattle and is potentially of strategic and commercial importance because of its central location for local and international trade Roads link Santa Cruz to Sucre in the highlands and to the oil fields to the south, whenever a railroad is completed, the city will have direct access to the Pacific through Peru and to the Atlantic through Brazil

Santa Cruz (sän'tu krōōz'), city (1940 pop 16,896, 1948 special census pop 21,874), co seat of Santa Cruz co , W Calif , on the north shore of Monterey Bay, inc 1866 A mission was established here in 1791 but was in decay before the modern town grew up Santa Cruz lies in an area of fine beaches along the bay, with the Santa Cruz Mts near by, and has a variety of manufactures

Santa Cruz de Tenerife (dā tānārē'fā), city (pop c 92,000), capital of Tenerife prov , Spain, a port on Tenerife island in the Canary Islands It is a fueling station for ships Horatio Nelson tried unsuccessfully to take it in 1797

Santa Cruz Islands (sän'tu krōōz'), small volcanic group (pop c 5,000), S Pacific, in the Solomon Islands It is E of Guadalcanal Ndeni is the largest island of the group In the Second World War the U S victory (1942) at Santa Cruz prevented the Japanese relief of Guadalcanal

Santa Fe (sän'tä fā'), city (1944 estimated pop 153,713), capital of Santa Fe prov , E central Argentina It is a river port near the Paraná, with which it is connected by canal On the eastern margin of the Pampa, it is important as a transshipping point for products (grain, meat, quebracho) from much of NW Argentina Some manufacturing has developed Founded by Juan de Garay (1573), Santa Fe has played a leading role in Argentine history Here was promulgated the constitution of 1853 The city has several notable churches and is the seat of a university

Santa Fe (sän'tu fā", sän'tu fā'), city (pop 20,325, alt c 7,000 ft), state capital and co seat of Santa Fe co , N N Mex , between the Pecos river and the Rio Grande It is a tourist and resort center, with an artists' and writers' colony, and a shipping point for Indian wares, minerals, and farm products Founded c 1609 by the Spanish on the site of an ancient Indian ruin, it was the center of Spanish-Indian trade for over 200 years and has been a seat of government since its founding, it is the oldest capital city in the United States In a Pueblo revolt of 1680, the Spanish colonists were driven out, they returned in 1692 under Diego de Vargas Shortly after Mexican independence from Spain (1821), extensive commerce with the United States developed by way of the Santa Fe Trail In 1846 Gen S W Kearny and his troops entered the city, without resistance, the region became a province of the United States The railroad reached Lamy (the station for Santa Fe, 16 mi distant) in 1879 The see of an archbishopric since 1875, the city is a center of Roman Catholicism in North America Among the churches are San Miguel Mission Church (c 1636) and the Cathedral of St Francis, built (1869) by Archbishop Lamy on the site of a monastery erected in 1622 by Alonzo de Benavides Other places of interest include the Palace of the Governors (over 300 years old and occupied by Spanish, Indian, Mexican, and American governors), which houses the state museum, the historical society, and a school for archaeological research, the state-owned art gallery, and the Laboratory of Anthropology At Santa Fe are the state school for the deaf, two Indian schools, the state penitentiary, and the regional headquarters for the National Park Service Many Indian pueblos are in the region Bandelier National Monument is near by

Santa Fe Railroad. In 1859 the Atchison and Topeka Railroad was chartered in Kansas, and with government subsidy it was built at a feverish pitch It was recharted (1863) as the Atchison, Topeka, and Santa Fe Railroad, which was opened to traffic in 1864 The Santa Fe, largely because of a boom in the cattle business, was able to recover early from the Panic of 1873 It met increasing competition from the Denver and Rio Grande RR, but in 1880 the city of Santa Fe was reached, and one year later it connected with the Southern Pacific RR Acquisition of several small railroads and further construction followed, and by the early 1890s the Santa Fe, with its 9,000 mi of trackage and with connections of Chicago and Los Angeles, became one of the longest railroad systems in the world The depression of 1893, however, threw the railroad company into bankruptcy, and in 1895 it was reorganized as the Atchison, Topeka & Santa

Fe Railway Company In the 20th cent the railway increased its holdings, and today the Santa Fe operates over 13,000 mi of trackage reaching Lake Michigan, the Gulf of Mexico, the Rio Grande, and the Pacific See J L Marshall, *Santa Fe the Railroad That Built an Empire* (1945)

Santa Fe Trail, important caravan route of the W United States, leading from W Missouri to Santa Fe, N Mex Isolated trapping parties had penetrated to Santa Fe while it was still under Spanish rule but they were not welcomed, and trade was forbidden In Nov , 1821, William Becknell returned with the news that Mexico was free and that Santa Fe now welcomed the trade, and soon afterward he left with a small party of traders from the town of Franklin, on the Missouri Franklin flourished for a time as the chief outfitting point for the trail, but as steamboats went farther up the Missouri, Westport (now part of Kansas City) and Independence were settled and became the chief outfitting points By the middle of the century Old Franklin had disappeared Each year from 1822 until the trade was broken up by the Civil War, an increasing amount of merchandise was taken to Santa Fe, its value was estimated at as much as $5,000,000 for 1855 Five years later, 3,033 wagons, 9,084 men, 6,147 mules, and 27,920 oxen were employed In 1850 a monthly stage line was established between Independence and Santa Fe over this route The Atchison, Topeka, and Santa Fe RR reached Santa Fe in 1880 and marked the death of the old trail, which the line in part parallels See also OREGON TRAIL. For the history of the trail, Josiah Gregg's *Commerce of the Prairies* (1844) and Susan S Magoffin's *Down the Santa Fe Trail and into Mexico Diary, 1846–1847* (1926) are source materials See R L Duffus, *The Santa Fe Trail* (1930), editors of *Look* (magazine), *The Santa Fe Trail* (1946)

Santa Isabel (sän'ta ēsabäl'), town (9,280), capital of Fernando Po, a port on the Gulf of Guinea Cacao is the chief export

Santa María, Domingo (dōmēng'gō sän'ta märē'a), 1825–89, president of Chile (1881–86) A liberal statesman, scholar, and author of several historical works, he took part in revolutions against the conservative regime of Manuel Montt and was twice exiled (1852–53, 1859–60) In his administration the separation of Church and state was fostered, the War of the Pacific brought to a triumphant end, and the last serious uprising of Araucanian Indians suppressed

Santa María (sän'tu märē'u), city (pop 39,074), central Rio Grande do Sul state, S Brazil, c 150 mi W of Pôrto Alegre It is an important rail junction, with an active trade in livestock and agricultural produce The former name was Santa Maria da Bocca do Monte

Santa María (sän'tu murē'u), city (pop 8,522), S Calif , on the Santa Maria and near San Luis Obispo Bay, NW of Santa Barbara, inc 1905 It has oil refineries, processes beet sugar, and is the shipping center for an area producing seeds, bulbs, and vegetables A junior college (coeducational) is here

Santa Marta (sän'tä mär'tä), city (pop 25,113), N Colombia, a port on the Caribbean Founded by Rodrigo de BASTIDAS in 1525, on a deep harbor surrounded by hills, it was important in colonial times as a seaport for the Magdalena river valley It was looted (1543, 1555, 1596) by corsairs, the last time by Sir Francis Drake Royalist in the revolution against Spain except when briefly held (1813) by the republic of CARTAGENA, it was finally liberated in 1821 On a near-by estate SIMÓN BOLÍVAR died Today Santa Marta's banana industry, operated by the United Fruit Company, is the most important on the continent Rising behind the city is the Sierra Nevada de Santa Marta, a range having the highest point in Colombia—the Pico de Cristóbal Colon, 18,947 ft high

Santa Maura see LEUCAS

Santa Monica (sän'ta mō'niku), city (pop 53,500), S Calif., W of Los Angeles and on Santa Monica Bay, in sight of the Santa Monica Mts , laid out 1875, inc as a town 1886, as a city 1902 A resort and residential city, it also has a large aircraft industry A junior college (coeducational) is here

Santana, Pedro (pä'dhrō sänt'na), 1801–64, president of the Dominican Republic (1844–48, 1853–56, 1858–61) Joining the revolution that in 1844 freed his nation from Haiti, Santana was chosen its first president. He and his bitter rival, Buenaventura BÁEZ, alternated in power He repulsed later Haitian attacks, but the republic did not fare well under his repressive rule Convinced that security was possible only with foreign protection, Santana in 1861 made his country a Spanish province and became governor. Intense opposition forced him to resign.

Santander, Francisco de Paula (fränsē'skō dā pou'lä säntändēr'), 1792–1840, Colombian revolutionist, b Cúcuta Given command of the guerrillas of the llanos by Simón BOLÍVAR, Santander materially contributed to the victory at BOYACÁ In Oct., 1821, he became vice president of Colombia and ably administered the country during Bolívar's long absences. A believer in constitutional government, Santander led the federalist opposition to Bolívar, who, on Sept. 24, 1828, suspended him from office. That night Bolívar barely escaped assassination. Convicted without proof of complicity in the plot, Santander was sentenced to death, but was instead banished After Bolívar's death and the dissolution of the large republic of Colombia, he returned and served (1832–36) as president of New Granada His administration was competent, but there were plots against his life and he maintained control only by force

Santander (säntändär', säntän'dur, Span santandēr'), city (pop 84,971), capital of Santander prov , N Spain, in Old Castile, on the Bay of Biscay It is a seaport and a popular bathing resort On the near-by peninsula of **Magdaleua** is a former royal summer palace A port since Roman times, Santander became, after the discovery of America, one of the busiest ports of N Spain The exploitation of near-by mines has recently favored the development of industries (ironworks and shipyards) Santander was the last port of the north coast to fall (Aug , 1937) to the Insurgents in the Spanish civil war The 13th-century cathedral and the business district were destroyed by fire in 1941

Santa Paula (sän'tu pô'lu), city (pop 8,986), S Calif , on the Santa Clara and NW of Los Angeles, laid out 1875, inc 1902 It refines oil and processes the fruits and vegetables of the region

Santaquin (säntukēn'), city (pop 1,297), N central Utah, S of Provo, settled 1851 by Mormons, inc 1931 The area has lands watered by the STRAWBERRY VALLEY PROJECT and grazing lands.

Santarém (sänturän'), city (pop 7,527), W Pará state, N Brazil, at the confluence of the Tapajós and Amazon rivers It trades in guarana, rubber, cacao, cotton, and jute It was founded (1661) by Jesuit missionaries

Santarém (sänturän'), city (pop 11,785), capital of Santarém district, W Portugal, in old Estremadura, on the Tagus It has much trade in olive oil, grain, and other agricultural produce It was retaken from the Moors by the first king of Portugal, Alfonso I, in 1147, just before the capture of Lisbon At a strategic point on the Tagus, it has been of importance through the history of Portugal The old royal palace is now in ruins

Santa Rita (sän'tu rē'tù), unincorporated village (pop 2,588, alt 6,311 ft), SW N Mex , near Silver City It is a copper-producing center The Santa Rita mine was discovered in 1800

Santarosa, Santorre Annibale De Rossi di Pomarolo, conte di (säntōr'rā an-nē'balā dā rōs'sē dē pōmarō'lō kōn'tā dē sän"tarō'za), 1783–1825, Italian patriot Believing in the support of CHARLES ALBERT, the heir to the throne of Sardinia, he organized the unsuccessful revolution in Piedmont in 1821 He fled first to France, then to England, and died while fighting for Greek independence

Santa Rosa (sän'tu rō'zu) **1** City (1940 pop 12,605, 1948 special census pop 17,818), co seat of Sonoma co , W Calif , N of San Francisco, inc 1868 A trade and industrial center for the fertile Sonoma Valley, the city produces canned and dried fruits and wines, as well as shoes and other manufactures Luther Burbank had his home and gardens here. Santa Rosa has a junior college A petrified forest is near by, and to the northwest lie Fort Ross State Historic Monument and Armstrong Redwoods State Park **2** Village (pop 2,310), co seat of Guadalupe co , E central N Mex on the Pecos and ESE of Albuquerque, settled c 1865 It is a trade and shipping point for a livestock and farming area

Santa Sophia, see HAGIA SOPHIA

Santa Tecla (san'ta tā'kla), city (1946 estimated pop 24,691), W central Salvador Also called Nueva San Salvador (nwē'va san salvadhōr'), it was founded after the destruction of SAN SALVADOR by earthquake in 1854 The capital was rebuilt, and Santa Tecla has since become a wealthy suburb among some of the finest coffee farms in the country

Santayana, George (säntayä'na), 1863–, American philosopher and poet, b Madrid, Spain He came to the United States in 1872 A graduate (1886) of Harvard, he taught in the department of philosophy from 1889 until 1912, excluding a year of study at Cambridge Univ and a lecture course he gave at the Sorbonne, Paris After resigning from Harvard he returned to Europe, eventually settling in Italy Living in retirement in a convent, Santayana detached himself from the social turmoil of the 20th cent He sees the rise of Fascism and Communism as another small event in the history of mankind, rejects organized religion while retaining a sense of religion, and secludes himself from relationship with either people or events Santayana's first published philosophical work was *The Sense of Beauty* (1896), an important contribution in the field of aesthetics *The Life of Reason* (1905–6), a major work, was comprised of five volumes which investigated the role of reason in the history of human interests and activities Viewing the operation of reason as essential in the understanding of life, Santayana saw it as the union of impulse and ideation. With the publication of *Scepticism and Animal Faith* (1923), he deviated from his previous theories. New theories were developed in *The Realms of Being*, a four-volume work (*The Realm of Essence*, 1927, *The Realm of Matter*, 1930, *The Realm of Truth*, 1937, and *The Realm of Spirit*, 1940, one-volume ed , 1942) Here he stressed the role of faith as dominant in the life of man This was a modification of his previous emphasis on reason, although he retained the method of scientific analysis as the best resource available to man in the study of human affairs Faith in the unknowable is symbolized by the doctrine of essences Santayana calls himself a "decided materialist" and regards everything that exists as matter All events are to be viewed as both material and mechanistic This is difficult to reconcile with his doctrine of essence—essence is capricious, impossible to will or control Thus leaves the relationship between existence and essence undefined, and since this doctrine is fundamental to much of Santayana's thought, it is difficult to accept his own appraisal of himself as a materialist Santayana has also made valuable contributions to poetry, and his sonnets (1923) are widely read His only novel, *The Last Puritan* (1935), had great popular success All of his writings exhibit a rare gift of poetic expression, excellence of style, and emotional depth See his memoirs, *Persons and Places* (Vols I-II, 1944–45), P A Schlipp, *The Philosophy of George Santayana* (1940)

Santee (säntē'), river formed in central South Carolina by the confluence of the Congaree and Wateree rivers SE of Columbia and flowing 143 mi to the Atlantic S of Georgetown The huge Santee-Cooper hydroelectric and navigation project, which was built by the Federal government, began operation in 1942

Santerre, Jean Baptiste (zhä' batēst' sätēr'), 1658–1717, French figure and portrait painter Among his works are *Susanna at the Bath* (Louvre), *Young Girl Asleep* (Nantes), *Adelaide* and *Marie de Savoy* (Versailles)

Santi, Raphael see RAPHAEL SANTI

Santiago (säntēä'gō), city (pop 952,075), central Chile, capital of Chile and of Santiago prov It was founded and named Santiago de Nueva Estremadura on Feb 12, 1541, by Pedro de VALDIVIA Laid out according to Valdivia's plan in a gridiron pattern between the hill of Santa Lucía and the Mapocho, a mountain torrent, Santiago has spread over a broad valley plain and is today one of the largest cities in South America Low foothills encompass the valley and, forming a superb backdrop, the snow-capped Andes rise in the eastern distance For most of the year the capital (alt 1,703 ft) has a nearly perfect climate—warm sun and cool nights While some architectural elements of the colonial era remain, the atmosphere of Santiago is largely modern, with neoclassical governmental edifices, modern office buildings, and sumptuous residences Spacious parks, plazas, gardens, and wide avenues (the Avenida Bernardo O'Higgins extends 2 mi in a straight line through the city) are characteristic features Focal point of the intellectual and cultural development of Chile from colonial times to the present, Santiago has many national establishments the library, the museum, the theater, and (besides other institutions of higher learning) the National Univ , which is the successor to the Univ of San Felipe, founded by a royal decree of 1738 As the political, commercial, and financial heart of the nation, Santiago is linked by rail and highway to cities in the north and south, to its port at Valparaíso, and to Argentina by the famous Transandine RR Much of Chile's industry is divided among other cities, but Santiago manufactures textiles, cordage products, enamelware, paper, cement, and lesser goods and has large iron and steel foundries Within seven months of its founding the city began to experience disasters In Sept , 1541, the Araucanian Indians revolted and nearly wiped out the new settlement, it was completely leveled by earthquake in 1647, and the Mapocho frequently flooded the city (notably in 1748 and 1783) In 1863 the Campania Church, with doors that opened inward, caught fire from a falling lamp, and 2,000 worshipers perished But in spite of these setbacks and damage from recurrent earthquakes, Santiago has flourished

Santiago, river in Mexico see LERMA

Santiago, Cape Verde Islands see SÃO TIAGO

Santiago de Compostela (säntyä'gō dā kōmpōstä'lä), city (pop 30,127), La Coruña prov , NW Spain, in Galicia It owes its importance to its role, for a thousand years, as one of the chief shrines of Christendom Here in the early 9th cent the supposed tomb of the apostle St JAMES (St James the Greater) was miraculously discovered, and Alfonso II of Asturias had a sanctuary built The city grew around the shrine and became, after Jerusalem and Rome, the most famous Christian place of pilgrimage in the Middle Ages Santiago still thrives as a pilgrimage and tourist center. It is an archiepiscopal see and has a university (founded 1501, expanded 1526) Its most remarkable building is the cathedral, which replaced the earlier sanctuary after its destruction (10th cent.) by the Moors. Originally built (11th-

12th cent) in Romanesque style, it was outwardly transformed by baroque and plateresque additions and restorations Other historic buildings include the Hospital Real (1501–11), built for the accommodation of poor pilgrims, and the Colegio Fonseca (16th cent), a part of the university

Santiago de Cuba (dä kōō'bä), city (pop 120,577), SE Cuba, a port on the southern coast It is the second largest city of Cuba Founded in 1514 by Diego de VELÁZQUEZ, it was for some time capital of Cuba It is an important shipping point, exporting minerals (copper, iron, and manganese) and agricultural produce (coffee, sugar, and tobacco) as well as woods In early days Santiago was captured by French and English buccaneers and was a center of smuggling trade with the BRITISH West Indies It was important in the SPANISH-AMERICAN WAR in 1898 U S ships established a blockade, and the Spanish admiral, Pascual Cervera y Topete, bottled up in the harbor, made a desperate attempt to escape His fleet was completely destroyed There was heavy land fighting around Santiago before the city surrendered There are many colonial survivals, notably the cathedral (the largest on the island) and the crumbling forts that stand on high cliffs above the harbor Since the elimination of the old scourge of yellow fever, Santiago has been a fine modern port

Santiago del Estero (dĕl ĕstä'rō), city (estimated pop 58,925), capital of Santiago del Estero prov, N central Argentina Agriculture, timber cutting, charcoal burning, sugar refining, and lime making are the chief industries of the region The city (founded 1553) is the center of an active cattle trade and a popular health resort

Santiago de los Caballeros (dā lōs kä-bäyä'rōs), city (pop 52,943), N central Dominican Republic A rail and highway crossroads in the center of the fertile region known as the Cibao lowland, Santiago is a commercial and agricultural distributing point for the most densely populated part of the republic Subsistence crops, cacao, sugar cane, and tobacco are grown as well as coffee and cotton There is some commercial production of beeswax and honey Most exports pass through PUERTO PLATA

Santillana, Iñigo López de Mendoza, marqués de (ēnyē'gō lō'päth dā mĕndō'thä märkās' dā säntēlyä'nä), 1398–1458, Spanish poet Though much of his literary work was imitative of Dante, Petrarch, and BOCCACCIO, he is important in Spanish literature as the chief figure of his century He was the first to write sonnets in Spanish and was the author of a dialogue, *Comedieta de Ponza* [the little comedy of Ponza], a dramatic poem, *Diálogo de Bias contra Fortuna*, and several charming songs called *serranillas*

Santo, New Hebrides see ESPIRITU SANTO

Santo Domingo (sän'tō dōmĕng'gō), former Spanish colony on the island Hispaniola The name is also popularly given to the Dominican Republic (sometimes also incorrectly called San Domingo) Geographic and economic material and an account of recent history are to be found in the articles HISPANIOLA, DOMINICAN REPUBLIC, and HAITI This article briefly sketches the history of the colony, which began in Dec , 1492, when Columbus discovered the island He established a settlement on the north coast, but when he returned in 1493 the settlers had vanished He administered a new colony until loud complaints against his rule caused him to be replaced (1500) by FRANCISCO DE BOBADILLA In 1509 Diego Columbus became governor Failing to find mineral wealth in quantity, the colonists became farmers, the work was done for them under the ENCOMIENDA system by the Indians, who had already been reduced in number by frequent Carib raids Before the adoption (1512) of the New Laws urged by Bartolomé de las Casas for protection of the Indian, most of the natives had perished and importation of Negro slaves had been sanctioned Santo Domingo was subject to frequent raids by English and French buccaneers Although Spain nominally owned the whole island, colonization had not been undertaken in the west, French buccaneers used the ports there (in present Haiti) as a rendezvous, and later French planters were able to establish settlements In the latter half of the 18th cent sugar cane was introduced and sugar plantations became dominant Unable to enforce its claims to the whole island, Spain by the Treaty of Ryswick (1697) ceded the western part (then called Saint-Domingue) to France and in 1795 by the Treaty of Basel gave up the whole island French administration of the former Spanish colony was hampered by the sharp cultural division between the two, by the sharp changes in France itself in the days of the French Revolution and the rise of Napoleon, and above all by the revolutionary campaigns of the Haitians against French rule. The inhabitants of the eastern Spanish-speaking part of the island resisted not only the French but also the Haitians French control ended definitely when the Spanish uprose and overthrew Ferrand (1808). Out of the chaotic years that followed came the Dominican Republic The seat of colonial administration was the city of **Santo Domingo.** Founded Aug 4, 1496, by Bartholomew Columbus, brother of Christopher Columbus, it is the oldest continuously inhabited settlement in the Western Hemisphere Shortly after its founding it became the base from which Diego de Velázquez went out to conquer Cuba In 1511 it was made the seat of an audiencia, which was not, however, formally constituted until 1526 Sacked by Sir Francis Drake in 1586, the city always played a colorful role in the history of the colony and in the wars and revolutions that marked the emergence of the modern republic Santo Domingo was almost totally destroyed by a hurricane in 1930 but was rebuilt and renamed TRUJILLO (Ciudad Trujillo).

Santo Domingo (sän'tu dumĭng'gō), North American Indian pueblo, central N Mex It is on the east bank of the Rio Grande and 26 mi SW of Santa Fe Its 1,122 inhabitants are Pueblo Indians of the Eastern Keresan linguistic family It was founded c 1700, earlier pueblos having been destroyed by floods Farming and pottery making are the chief activities Its principal ceremony, a magnificent Green Corn dance, is held on the feast of St Dominic, Aug 4

santonin (sän'tunĭn), colorless, odorless crystalline solid with a bitter aftertaste It is soluble in alcohol and slightly soluble in boiling water It is extracted from the flowers of certain wormwoods and other plants and is used in medicine to expel roundworms and pinworms It disturbs color vision and in large doses is a poison (for treatment, see POISONING table)

Santorin see THERA

Santos (sän'tōōsh), city (pop 155,894), São Paulo state, SE Brazil, on a small island in the Atlantic just off the mainland It is 35 mi SE of São Paulo, with which it is linked by rail and highway It is the world's greatest coffee port and the chief shipping point for the rich interior of São Paulo state Besides coffee, it exports sugar, fruit, cotton, and meat Along its spacious harbor there are over 3 mi of wharves, equipped with modern loading machinery, large warehouses, and mechanical conveyers The city, which was founded c 1545, has a hot, humid climate, with heavy rainfall, and was long an unhealthful spot, until at the beginning of the 20th cent conditions improved with the drainage of swamps and the construction of a new sewage system The impressive Coffee Exchange stands in the center of the crowded business district, a symbolic reminder of coffee's dominance over the economic life of the city

Santos-Dumont, Alberto (sän'tōs-dōō'mônt, Port älbĕr'tō sä'tōōzh-dōōmō'), 1873–1932, Brazilian aeronaut From 1891 to 1928 he resided in France A pioneer in the development of aircraft, he was the first to construct and fly (1898) a gasoline-motored airship He built several other lighter-than-air craft, winning in one a prize for a round-trip flight between Saint-Cloud and the Eiffel Tower (1901) At Neuilly, France, he established in 1903 the first airship base In 1905 he turned to the construction of airplanes and in 1909 built a successful small monoplane See his autobiography (1904)

Santo Tomás, University of (sän'tō tōmäs'), at Manila, Philippine Islands, Catholic, coeducational, founded 1611 by Dominican priests It has faculties of canon law, civil engineering, civil law, engineering, medicine and surgery, pharmacy, and theology and colleges of education and liberal arts

San Vicente (sän vĕsän'tā), town (1946 estimated pop 14,093), E central Salvador It is an export center for coffee, sugar, and indigo and also manufactures shawls, straw hats, cigars, shoes, and liquor A visitor on the summit of the near-by active volcano, San Vicente (7,360 ft), may view most of Salvador, part of Honduras part of Nicaragua, and the international Gulf of Fonseca

Sanzio, Raphael see RAPHAEL SANTI

São Francisco (sä'ō frənsĕsh'kō), river, c 1,800 mi long, rising in SW Minas Gerais state, E Brazil It flows NNE to N Bahia, whence it continues NE and SE along the Pernambuco-Bahia and Alagoas-Sergipe borders into the Atlantic NE of Aracaju Although navigable in its middle course for over 800 mi , rapids and the Paulo Afonso Falls prevent traffic lower down A vast irrigation and hydroelectric project in the river basin was begun in 1949

São Luís (sä'ō lōōēsh'), city (pop 58,735), capital of Maranhão state, N Brazil, on São Luís island, at the mouth of the Itapecuru river Founded in 1612 by the French and named in honor of Louis XIII, it was captured in 1615 by the Portuguese The city is a well-known cultural center and has a large 17th-century cathedral, a government palace, schools of law and pharmacy, and a historical and geographical institute It exports cotton, sugar, babassu oil, balsam, and hides There are cotton mills and sugar refineries São Luís is the birthplace of the poet, Antonio Gonçalves Dias

São Miguel (sä'ō mĕgĕl'), island of the eastern group of the AZORES It is the largest island of the archipelago and has on it Ponta Delgada, the largest city of the islands It is included in Ponta Delgada dist , an integral part of Portugal A remarkable natural phenomenon on São Miguel is the volcanic crater with a large lake, the Caldeira das Sete Cidades

Saône (sōn), river, 267 mi long, E France, mostly in Franche-Comté and Burgundy It flows S from the Vosges mts and, after being joined by the Doubs, passes Chalon-sur-Saône and Mâcon to join the Rhone at Lyons There are famous vineyards along its course

Saône, Haute see HAUTE-SAÔNE

Saône-et-Loire (sōn"-ā-lwär'), department (3,331 sq mi , pop 506,749), E central France, in BURGUNDY It is traversed by the Saône and bounded in the east by the Loire Mâcon (departmental capital) and Chalon-sur-Saône are the main cities

São Paulo (sä'ō pou'lō), state (95,453 sq mi , 1940 pop 7,180,316, 1949 estimated pop 8,679,059), SE Brazil The capital is the city of São Paulo The state extends inland from the Atlantic to the Paraná river, between the states of Minas Gerais (north) and Paraná (south) It rises from a narrow coastal strip across the Serra do Mar (the eastern edge of the great interior plateau) and through hill ranges and uplands to the wide Paraná river valley It is drained by several left-bank tributaries of the Paraná, including the Tietê river Along the coast it is hot and humid, with a very heavy rainfall, while inland it is drier and cooler The state is the most populous in Brazil and is its most important agricultural and industrial area Coffee is the dominant crop and is exported in vast quantity from the port of SANTOS Cotton, sugar cane, bananas, oranges, corn, rice and tobacco are also grown Cattle are raised in many sections There is an extensive transportation net of railroads and highways The development of coffee production and progressive agricultural methods has been aided by numerous foreign immigrants (chiefly Italian), who arrived in the 19th and early 20th cent Textile milling and the processing and shipping of agricultural products are the chief industries

São Paulo, city (1940 pop 1,258,482), capital of São Paulo state, SE Brazil, on the Tietê river and c 225 mi WSW of Rio de Janeiro The plateau city, at an elevation of 2,700 ft , is the commercial and industrial center of Brazil It is a transportation and shipping point for the rich agricultural hinterland and in recent years it has become one of the leading cities of South America Its numerous and varied manufactures include machinery, textiles, metal goods, automobiles, footwear, hosiery, household appliances, cement, and chemicals, meat packing food canning, and dairy farming are also important São Paulo is a wealthy city, with fine public buildings, beautiful parks, and some palatial private homes It contains a government palace, the state university (founded 1934), MacKenzie Institute (1871), a police training school, a modern public library, the noted Butantan Institute (where serums against snake bites are prepared), and several technical and professional schools Near the Ypiranga or Ipiranga Museum (ethnography and natural history) is a monument commemorating the proclamation by Dom Pedro I of Brazilian independence from Portugal in 1822 The city was founded in 1554 by Jesuits on the site of an old Indian village, it later became (1681) the administrative capital of the surrounding area With the enormous increase in coffee cultivation throughout the state in the late 19th cent , São Paulo grew rapidly as a processing and trading center Its inhabitants, called *paulistas*, are among the most enterprising in Brazil In 1932 the city joined a state-wide revolt against the federal government, which ended unsuccessfully after less than three months of resistance

São Salvador, Brazil see SALVADOR

São Thiago, Cape Verde Islands see SÃO TIAGO

São Thomé and Principe see SÃO TOMÉ AND PRINCIPE

São Tiago (sä'ō tyä'gō) or **Santiago** (sänt-yä'gō), Portuguese possession (c 600 sq mi , pop c 60,000), largest of the Cape Verde Islands On it is Praia, the capital of the islands São Tiago produces coffee and fruit

São Tomé and Principe (sä'ō tōōmä', prēn'sĕpä), islands in the Gulf of Guinea, off the coast of Africa, comprising a province (372 sq mi , pop 60,490) of Portugal They were discovered by the Portuguese in 1471 An appointed governor rules the islands, which export cacao, coffee, and palm products

São Vicente (sä'ō vĕsĕnt'), city (pop 12,983), SE São Paulo state, SE Brazil near the city of Santos, on an island off the mainland It was the first permanent Portuguese settlement (1532) in Brazil, it later became the capital of the São Vicente captaincy

São Vicente, Cabo de see SAINT VINCENT, CAPE

sap, fluid consisting of water, dissolved plant foods (especially sugars, salts, and organic acids), and pigments which permeates the cells of plants In a mature plant cell the sap is generally contained in a vacuole, or sap cavity, that occupies the center of the cell The sap water enters the plant through root hairs by osmosis and is carried by the vascular tissues (xylem or wood) to the parts containing chlorophyll, usually the leaves, through which excess water leaves the plant by transpiration Sap is known to ascend at a rate of from 1 to 4 ft per

hour and to rise to a height of from 300 to 400 ft. in tall trees The causes for the ascent of sap are not fully explained, but it is believed that the osmotic pull resulting from higher sap concentration in leaves after transpiration creates an upward movement which causes tension in the water column within the xylem ducts and that the cohesive force of water maintains sufficient tension to permit the upward translocation of sap Sap ascent results also, to some extent, from osmotic pressure arising in the roots This root pressure is especially great in the spring when transpiration is absent and accounts for the rise of sap and its flow (bleeding) from cut stems The sap of certain plants (e g , the sugar maple) contains much sugar and is an article of commerce The name sap is sometimes applied to latex and to other specialized plant fluids

Saph (sāf), Philistine giant killed by one of David's men 2 Sam 21 18 Sippai 1 Chron 20 4

Saphir (sā'fûr), unidentified village, SW Palestine, denounced by Micah Micah 1 11.

Sapir, Edward (supēr'), 1884–1939, American linguist and anthropologist, b Lauenburg, Pomerania, Germany, grad Columbia (B A , 1904, M A , 1905, Ph D , 1909) He was brought to America in 1889 After teaching at the Univ of California and the Univ. of Pennsylvania, he served (1910–25) as chief of the division of anthropology of the Canadian National Museum Assistant professor and then professor of anthropology at the Univ of Chicago (1925–31), he was professor of anthropology and linguistics at Yale from 1931 to his death His studies of the ethnology and linguistics of various Indian groups of the United States contributed greatly to the development of descriptive linguistics, in which he was an influential pioneer Among his books are *Wishram Texts* (1909), *Time Perspective in Aboriginal American Culture* (1916), *Language an Introduction to the Study of Speech* (1921), and *Nootka Texts* (1939) A selection of his writings, edited by D G Mandelbaum, appeared in 1949

saponin: see SOAP PLANT

Sapor. see SHAPUR

Sapphira (sŭfī'ru), wife of ANANIAS 1

sapphire (sā'fīur), precious stone A variety of transparent blue corundum, it is classified among the most valuable of gems Sapphires are found chiefly in Siam, India, Ceylon, and Burma and also in Australia and in the United States (in Montana) Those from Kashmir, India, are of a beautiful cornflower blue and are highly valued The Ceylon varieties are paler, those from Montana have a metallic luster, and the Australian sapphires are of a dark blue shade approaching black The terms yellow sapphire, purple sapphire, and green sapphire are used alternatively with Oriental topaz, Oriental amethyst, and Oriental emerald for other varieties of corundum Like rubies of similar structure, some sapphires display a six-pointed star when cut to a round-topped cabochon shape and exposed to direct sunlight Such star sapphires are usually obtained from Ceylon

Sappho (sā'fō), fl early 6th cent B C , greatest of the early Greek lyric poets (Plato calls her "the tenth Muse"), b Mytilene on Lesbos Facts about her life are scant She was an aristocrat like her countryman ALCAEUS, and apparently she was a member of a society of girls (for whom some of her lyrics were written) There is reason to believe she was married and had a son The legend that she fell in love with the youth Phaon and committed suicide by leaping from the Leucadian Rock is almost certainly pure invention Another story has it that she and Alcaeus exchanged responsive lyrics The ancients had seven (or nine) books of her poems Only fragments survive, the longest an invocation to Aphrodite in seven stanzas She wrote in Aeolic dialect in a great many meters, one of which has been called, after her, the Sapphic Her verse, the classic example of the "pure" love lyric, is characterized by a vehement expression of passion, a vivid use of epithet, a splendid choice of words, perfect control of meter, and a direct simplicity, it evinces a great love of nature She influenced many later poets, e.g., Catullus, Ovid, and Swinburne

Sapporo (sŭp-pō'rō), city (1947 pop 259,602), capital of Hokkaido, SW Hokkaido, Japan Largest city of the island and an industrial and cultural center, it was laid out in 1871 and has wide streets and modern buildings Hokkaido Imperial Univ (1918) is here

sapsucker, small North American WOODPECKER The yellow-bellied sapsucker has black, white, and yellow plumage, with a bright red crown and throat and a black crescent on the breast It damages or kills trees of many kinds because it girdles them with small holes, eats some of the inner tissue, and drinks the sap with its brushlike tongue Ants and other insects attracted by the oozing sap and wild fruits form much of its diet A red-breasted sapsucker is native to the W United States, and there are several other species

Sapulpa (sŭpŭl'pu), city (pop. 12,249), co seat of Creek co , NE central Okla., SW of Tulsa It is the trade center of an agricultural and oil region; its industries include cotton, glass, and brick and tile manufacturing. A government school for Indians is here

Sara or **Sarah** (both sā'ru) [Heb ,=princess], wife of Abraham and mother of Isaac Her name was at first Sarai (sa'rī, sā'rā-ī) She was Abraham's lifelong companion, she was childless until, by divine favor, the birth of Isaac in her old age After his birth, jealous of her handmaid Hagar, who was Abraham's concubine, she drove Hagar and her son Ishmael into the desert to die Sarah died in Hebron when 127 years old and was buried in the cave of Machpelah Gen 11 31–23 20, Rom 4 19, 9 9, Heb 11 11, 1 Peter 3 6 The Sarah of Num 26 46 is the same as SERAH

saraband (sā'rŭbănd), dance of Oriental origin which first appeared in Spain in the 16th cent At this time it was characterized by alternate 3-4 and 3-8 meter and was accompanied by castanets and tambourines Cervantes denounced it for its indecent gestures and text, and it was suppressed at the end of the reign of Philip II In the 17th and 18th cent it had a slow triple meter and a more dignified form It then began to appear as a movement in the instrumental suite

Saracens (sā'rusunz), term commonly used in the Middle Ages to designate the Arabs and, by extension, the Moslems in general, whether they were Arabs, Moors, or Seljuk Turks Strictly, the term applied only to the people of NW Arabia In Spain and Portugal, the Moslems were known as Moors, rather than Saracens The Saracens invaded France in the 8th cent , where they were defeated by Charles Martel Their cultural influence in Europe is particularly noticeable in Sicily, which they held from the 9th to the 11th cent , and in S Italy Palermo and Monreale have fine examples of the fused architectural styles of the Saracens, Byzantines, and Normans

Saracoglu, Sukru (shu'krū" sārā'ȯlōō"), 1890?–, Turkish statesman A close collaborator of Kemal Ataturk, he served as minister of justice (1932–38) and of foreign affairs (1938–42) and as premier (1942–46) His skillful diplomacy kept Turkey out of the Second World War until shortly before its termination

Saragossa (sā"rugŏ'sŭ), Span *Zaragoza* (thārägō'tha), city (pop 205,833), capital of Saragossa prov and of Aragon, NE Spain, on the Ebro An important commercial and communications center, it has sugar refineries, flour mills, canneries, and mechanical industries It is an archiepiscopal see and has a university (founded 1474) Of ancient origin, it was called Caesarea Augusta (hence Saragossa) by Emperor Augustus It fell to the Goths (5th cent) and to the Moors (8th cent), under whom it became (1017) the capital of an independent emirate Charlemagne tried to take it, but was defeated by the Moors (778) The CID fought for a time in the service of the Moorish ruler of Saragossa The city was conquered (1118) by Alfonso I of Aragon, who made it the capital of his kingdom The most notable event in the later history of Saragossa was its heroic defense, under the leadership of PALAFOX, against the French in the Peninsular War The city resisted the first siege (1808) but surrendered after some 50,000 defenders had died in the second siege (1808-9) Saragossa is a cultural center and is rich in works of art, many of which show Moorish influence There are two cathedrals—La Seo (12th-16th cent), formerly a mosque, and El Pilar, named for the sacred pillar near which the Virgin is said to have appeared in the vision of St James the Greater El Pilar contains frescoes by Velázquez and Goya Noteworthy also are the Church of San Pablo, the Moorish castle of Aljaferia (residence of the emirs and later of the kings of Aragon), the exchange building, and a 15th-century stone bridge across the Ebro

Sarah or **Sarai** · see SARA

Sarah Lawrence College, at Bronxville, N Y , nonsectarian, for women, chartered 1926, opened 1928, named for the wife of the founder An experimental college, it has a curriculum which is based on individual needs and interests and is without fixed requirements, textbooks, regular lectures, or examinations Individual conferences, discussion groups, and field work are used While each student has a faculty adviser, she is increasingly responsible for self-direction in work and recreation See Constance Warren, *A New Design for Women's Education* (1940)

Sarai (sūrī'), former city in SE European Russia, E of the Volga and near modern Stalingrad It was (13th-15th cent) the capital of the GOLDEN HORDE.

Sarajevo (sā"rāĭ'yĕvō), city (pop 118,158), capital of Bosnia and Hercegovina, central Yugoslavia, in Bosnia. It is a trade and railroad center and produces tobacco, lumber, carpets, leather, beer, and jewelry. Dating from the 14th cent , Sarajevo fell to the Turks in 1429 The city was sacked (1697) by Prince Eugene of Savoy. With the rest of BOSNIA AND HERCEGOVINA, it passed under Austro-Hungarian administration in 1878 and was annexed to Austria-Hungary in 1908. The assassination here of Archduke FRANCIS FERDINAND and his wife on June 28, 1914, was an immediate cause of the First World War The city is the seat of an Orthodox Eastern metropolitan, a Roman Catholic archbishop, and the chief ulema of the Yugoslav Moslems. The population is largely Moslem There are several Moslem seminaries and various institutes of higher education Sarajevo is noted for its Moslem architecture, including its Oriental market place and more than 100 mosques, the most important one dating from 1450 The city was known originally as Vrh-Bosna and under Turkish rule as Bosna-Sarai or Bosna-Serai An alternate spelling is Serajevo

Saranac Lake (sā'rănăk), village (pop 7,138), N N Y , SW of Plattsburg, in the Adirondacks W of Lake Placid, on Flower Lake and near the Saranac Lakes, settled c 1819, inc 1892 It is a health and year-round resort Edward L TRUDEAU established a tuberculosis sanatorium in 1884 and a research laboratory in 1894 Robert Louis Stevenson was a patient here during the winter of 1887–88, his *Master of Ballantrae* describes the region The Will Rogers Memorial Sanatorium (built 1930) is open to variety, radio, and screen actors

Saranac Lakes, three resort lakes, N N Y , in the Adirondacks Upper Saranac Lake (c 8 mi long), Middle Saranac Lake (c 2 mi long), and Lower Saranac Lake (c 5 mi long) are linked by the Saranac river, which flows NE to Lake Champlain at Plattsburg

Saransk (sŭransk'), city (1926 pop 15,431, 1939 pop 41,211), capital of Mordvinian ASSR, E central European RSFSR, N of Penza Founded in 1641 as a Russian stronghold, it is now an agricultural center

Saraph (sā'răf), Judahite 1 Chron 4 22.

Sarapul (sŭrä'pōōl), city (1938 estimated pop 42,000), SE Udmurt ASSR, RSFSR, on the Kama river, on the border of European and Asiatic Russia It is the center of an agricultural region and has food-processing plants, distilleries, and sawmills Sarapul was founded (16th cent) as a Russian fortress on the trade route to Siberia

Sarasate, Pablo de (pä'blō dā sarasa'tā), 1844–1908, Spanish violin virtuoso, whose name stands near that of Paganini He made difficult arrangements which displayed his brilliant technique and wrote violin pieces which effectively popularized what came to be known as the Spanish idiom, as well as his popular *Zigeunerweisen* Lalo, Bruch, and Saint-Saëns wrote concertos for him

Sarasota (sā"rusō'tu), city (pop 11,141), co seat of Sarasota co , SW Fla , on Sarasota Bay S of Tampa, settled c 1884 by Scotch It is a winter resort for tourists, yachtsmen, and fishermen and the packing and shipping center for a productive citrus-fruit and vegetable (particularly celery) area The winter headquarters of the Ringling Brothers–Barnum and Bailey Circus and the John and Mable Ringling Museum of Art (largest art gallery in the state) are here The colorful Sara de Sota pageant held annually in March is based on the legendary love of De Soto's daughter for an Indian chief

Saratoga campaign (sā"rutō'gu), June–Oct , 1777, of the American Revolution Lord George GERMAIN and John BURGOYNE were the chief authors of a triple plan to end the American Revolution by splitting the colonies along the Hudson Burgoyne was to advance S from Canada along Lake Champlain to Albany, where he would join Sir William HOWE, advancing N from New York city up the Hudson, and Barry ST LEGER, coming E along the Mohawk For reasons that are still disputed, neither Howe nor Sir Henry CLINTON reached Albany Burgoyne had little trouble in taking TICONDEROGA (July 6), but his march south proved difficult The column of Hessians he sent to raid Bennington was badly beaten (Aug 14–16) by the GREEN MOUNTAIN BOYS, under John STARK and Seth WARNER Meanwhile, the second column, under St Leger, was halted at Fort Stanwix (Fort Schuyler) An American party under Nicholas HERKIMER coming to the relief of the fort was ambushed (Aug 6, 1777) when crossing Oriskany Creek, Herkimer was mortally wounded, and the force dispersed Yet the victory was questionable The siege did not prosper, and when rumors came that a large patriot force was approaching under Benedict Arnold, the Indians deserted the British service St Leger had to abandon (Aug 22) the siege and begin a retreat to Canada Burgoyne continued southward, crossed the Hudson (Sept 13), and halted near the present Saratoga Springs, where, on Bemis Heights, Thaddeus KOSCIUSKO had prepared American positions With Benjamin LINCOLN threatening his rear and his supplies running low, Burgoyne tried to break through at Freeman's Farm (Sept 19) and at Bemis Heights (Oct 9) Both attempts were stopped by Benedict Arnold, Daniel Morgan, and Horatio GATES, who had replaced Philip J Schuyler as American commander The British commander then tried to retreat, but, finding himself outnumbered and surrounded, he surrendered Oct. 17, 1777. This battle of Saratoga was the first great American victory of the war, and it is considered by many the decisive battle of the Revolution Besides the heartening effect on the patriots, the campaign also immedi-

ately encouraged the French, who had helped the victory by unofficial supplies and funds, to send official aid to the colonies The battlefield is included in Saratoga National Historical Park (2,087.59 acres, est 1948)

Saratoga Springs (sā"rətō'gu), city (pop 13,705), E N Y, near Saratoga Lake N of Albany; inc as a village 1826, as a city 1915 It produces chemicals, wallpaper, and bottled spring water, but it is chiefly known as a health and pleasure resort famous for its springs An elaborate state-owned spa (1935) preserves and utilizes the waters and contains curative baths, there is also a research laboratory, named for Simon BARUCH Horse racing, one of the city's main attractions, was begun after 1850 SKIDMORE COLLEGE and St Faith's School for girls are here, and the state tree nursery is not far The large estate "Yaddo" was made a retreat for artists and authors The last battles of the SARATOGA CAMPAIGN were fought near by See Hugh Bradley, *Such Was Saratoga* (1940)

Saratov (sŭrä'tuf), city (1939 pop 375,860, 1946 estimated pop 450,000), capital of Saratov oblast, SE European RSFSR, on the high right bank of the Volga It is a major industrial center Its important natural-gas wells have been linked (1946) by pipe line with Moscow Saratov manufactures machinery, chemicals, and cotton textiles and has oil refineries, lumber mills, and shipyards Its port is an important transfer point for petroleum and timber A railroad bridge across the Volga connects Saratov with Engels Saratov has a university (founded 1919), several technical institutes, and several museums The city was originally founded (1590) on the left river bank as a Russian fortress, After its capture (1670) by the rebels under Stenka Razin, it was moved (1674) to its present site In the 19th cent Saratov developed as a major shipping center for grain and as a transfer point for oil shipments from Baku In the civil war it was successfully defended (1918–19) by Soviet troops The discovery, during the Second World War, of natural-gas wells in the vicinity resulted in the expansion of the city limits

Sarawak (sŭra'wuk, -wä, -wäk), British crown colony (47,071 sq mi, pop 546,385), NW Borneo The capital is Kuching Sarawak is bounded on the northeast by British North Borneo and on the west and south by the Indonesian autonomous areas There are rich oil fields, and rubber, rice, sago, and pepper are grown In 1841 the area was ceded by the sultan of Brunei to James Brooke, an Englishman, who became raja of the independent state Sarawak became a British protectorate in 1888, but remained under the control of the Brooke family During the Second World War the area was occupied (1941–45) by the Japanese, in July, 1946, Sarawak became a British colony The name is sometimes spelled Serawak

Sarazen, Gene (sa'ruzun), 1901–, American golfer, b Rye, N Y He became a caddie at Rye, N Y, and later taught golf at Fort Wayne, Ind In 1922—at the age of 20—Sarazen won the U S Open championship He repeated this performance in 1932, the year he also won the British Open crown He won the Professional Golfers Association championship three times (1922–23, 1933) and for several years played on the U S Ryder Cup teams. He wrote *Gene Sarazen's Common Sense Golf Tips* (1924)

sarcoma (särkō'mu), malignant tumor composed of connective-type cells Sarcomas grow rapidly, attaining large proportions They grow upon a scaffolding of blood vessels, this abundant blood supply tends to increase the rapidity of the cell growth Edema and hemorrhage within the tumor result in an increase of bulk of the sarcoma, circulation fails, and degeneration of tissue follows, infection, local suppuration, and gangrene or general sepsis may then develop Sarcoma infiltrates surrounding tissue, rarely forming a capsule The more malignant growths spread along blood vessels and nerves and through soft tissues Cellular bone sarcoma destroys bone tissue and penetrates joint cavities The varieties of sarcoma are many and include sarcomas of the blood vessels, lymph nodes, bone, cartilage, and skin Little is known of the specific cause of sarcoma

sarcophagus (särkō'fugus) [Gr, =flesh-eater], name originally given by the Greeks to a special limestone found in Asia Minor and used in caskets. It was described by Pliny as having the property of destroying in 40 days the entire body with the exception of the teeth The term later generally designated any elaborate burial casket not sunk underground. The oldest known examples are from Egypt, they are box shaped with a separate lid on which sometimes are sculptured effigies of the corpses. The sarcophagus of Tut-ankh-amen (14th cent B C), which was recovered in 1922, is of red granite and ornamented with reliefs of spirits with outspread wings. Later Egyptian sarcophagi are sometimes shaped to the mummy they contain. Sarcophagi were not in common use in Greece earlier than the 6th cent B C because of the previous custom of cremation After that time they became numerous Records reveal that the majority of sarcophagi were made of wood, but the only remaining ones are of stone and terra cotta, as is shown in the early 6th-century examples (British Mus) from Clazomenae Many Greek and Etruscan sarcophagi are in the shape of a couch, examples of this form are in the Louvre and the British Museum Others, such as the sarcophagus of Alexander the Great, are carved and painted in imitation of temple architecture The marble sarcophagi from Sidon (excavated 1877, now in Constantinople) are among the finest examples of Greek art In Rome sarcophagi became popular before the Punic Wars The earliest known example is that of the consul Cn Cornelius Scipio of the 3d cent B C, now in the Vatican Under the rule of the emperors Roman sarcophagi became elaborate, with mythological scenes carved on the sides and statues of the deceased on the lid The early Christians also used sarcophagi for their eminent dead The carvings, usually representing Bible stories, are our chief source of early Christian sculpture Examples are preserved in the Lateran Palace at Rome and at Arles, France In the Middle Ages the vogue for this form of burial decreased, and sarcophagi proper were thereafter used only in rare instances for especially elaborate entombments Although memorials in the shape and decoration of sarcophagi were erected in the Renaissance and often appeared in churches, the body itself was usually buried underground

Sarcoxie, city (pop 1,057), SW Mo, E of Joplin; laid out 1834

sard, semiprecious stone, a variety of chalcedony It is very similar to the carnelian but differs somewhat in color Sard appears brownish red by reflected light and deep red by transmitted light, while carnelian is a brighter red The color is believed to be caused by the presence of ferric oxide Like agate, bloodstone, chalcedony, chrysoprase, and jasper it is a cryptocrystalline variety of quartz It has been valued from ancient times

Sardanapalus (särdună'pulus), in the *Persica* of CTESIAS, an Assyrian monarch who lived in great luxury He was besieged in Nineveh by the Medes for two years, at the end of which time he set fire to his palace and burned himself and his court to death Lord Byron wrote a tragedy on the theme The identity of Sardanapalus is a complete mystery, as the facts given certainly do not fit those of the life of ASSUR-BANI-PAL, with whom some have tried to identify him

Sardes, see SARDIS

Sardica see SOFIA, Bulgaria.

sardine (särdēn'), name for various small fish packed with oil or sauce in flat cans The true sardine from France, Spain, and Portugal is usually the young pilchard (*Sardinia pilchardus*) of the Mediterranean and warm Atlantic coastal waters Young sprat and herring packed in Norway are sometimes called sardines Sardine fishing and canning are an important industry in Maine, where small herring are used, and in California, where the sardine is a species closely related to the European pilchard

Sardinia (särdĭ'nēu), Ital *Sardegna* (särdā'nyä), island in the Mediterranean (second only to Sicily in size) and autonomous region (9,302 sq mi, pop 1,014,206) of Italy, W of the Italian peninsula It is separated in the north from Corsica by the Strait of Bonifacio As a region, Sardinia includes several small adjacent islands and is divided into the provinces of Cagliari, Nuoro, and Sassari Cagliari is the capital The island is mountainous Gennargentu (6,016 ft) is the highest peak, the Campidano in the southwest is the largest valley Natural pastures occupy over half the area Horses, sheep, and goats are raised, corn, barley, grapes, olives, and some tobacco are produced Sardinia is rich in minerals (zinc, lead, lignite, copper, iron, and salt) There are tuna and lobster fisheries Industries are few The development of the island was greatly hampered by malaria and by feudal conditions, which prevailed till the 19th cent Hydroelectric power plants, roads, and reclamation works have been recently completed There are many traces of prehistoric inhabitants, and Carthaginians settled here before the Roman conquest (238 B C) After falling to the Vandals (5th cent), Sardinia passed to the Byzantines (6th cent), their negligent rule strengthened the power of the popes, who claimed suzerainty over the island and helped repel Arab attacks (8th–11th cent) Pisa and Genoa fought long wars (11th–14th cent) for supremacy over the island In the 14th cent the pope bestowed Sardinia on the house of ARAGON, from which it passed to Spain In the Peace of Utrecht (1713) Spain ceded it to Austria, but in 1717 Cardinal ALBERONI sent a Spanish force to occupy the island The settlement of 1720 finally awarded Sardinia to VICTOR AMADEUS II of Savoy (who styled himself king of Sardinia) in exchange for Sicily, which was given to the emperor. The kings of Sardinia ordinarily resided in Turin. They tried to establish some order out of chaos with judicial, agrarian, and ecclesiastic reforms Feudal privileges caused much unrest before their abolition in 1835 Administrative autonomy disappeared in 1847, but was reestablished a century later by the republican constitution of Italy.

Sardinia, kingdom of, name given to the possessions of the house of Savoy (see SAVOY, HOUSE OF) in 1720, when the island of Sardinia was awarded to the duke of Savoy to compensate him for the loss of Sicily Besides Sardinia, the kingdom included Savoy, PIEDMONT, and NICE, LIGURIA, including Genoa, was added by the Congress of Vienna in 1815 During the wars of the RISORGIMENTO the kingdom grew to include almost all Italy Lombardy was added in 1859 In 1860 Parma, Modena, Bologna, the Marches, and the Romagna (i e, the Papal States except Rome and Latium) were joined to the kingdom After annexation (1861) of the Two Sicilies, Victor Emmanuel II of Sardinia was proclaimed king of Italy Though the name kingdom of Sardinia was derived from the island, Turin was its capital except from 1798 to 1814, when the mainland territories were annexed by France During that period, Cagliari was the royal residence

Sardis (sär'dĭs) or **Sardes** (-dēz), ancient capital of Lydia, W Asia Minor, at the foot of Mt Tmolus near the River Pactolus An almost impregnable rock citadel guarded the city on the plains, which, of prehistoric foundation, was frequently devastated by earthquakes and restored Captured by the Persians and later by the Romans, it was an early seat of Christianity, one of the SEVEN CHURCHES IN ASIA Rev 3 1 It was destroyed by Tamerlane Excavation of its ruins have disclosed important Hittite inscriptions

Sardis, town (pop 2,022), a co seat of Panola co, NW Miss, S of Memphis, Tenn, near the Tallahatchie, in a dairy and farm area, founded 1856 Near by is the Sardis Dam and Reservoir, a flood-control project for the Tallahatchie valley.

Sardites (sar'dīts), descendants of SERED.

sardonyx (sär'duniks), banded variety of cryptocrystalline quartz It has parallel layers of sard or of carnelian alternating with bands of onyx or of white chalcedony

Sardou, Victorien (vēktôryĕ' särdōō'), 1831–1908, most popular French dramatist of his day Author of some 70 plays and a master of stagecraft, he excelled in light comedy and in pretentious historical pieces His best farce comedy is *Divorçons* (1880, Eng tr, 1881), and among the semihistorical melodramas of his late period the best are *Patrie!* (1869, Eng tr, 1915) and *Fédora* (1882, Eng tr, 1883), in which Sarah Bernhardt made her triumphant return to the Paris stage Others written for her are *Théodora* (1884, Eng. tr, 1885), *La Tosca* (1887, Eng tr, 1925), the source of Puccini's opera, and *Cléopâtra* (1890) Two plays written for Sir Henry Irving, *Robespierre* (1899) and *Dante* (1903), were never given in French Also among Sardou's best plays in lighter vein is *Madame Sans-Gêne* (1893, Eng tr, 1901) He was several times attacked for plagiarism, but defended himself successfully Sardou was elected to the French Academy in 1877

Sarema, Estonia see SAARE

Sarepta (surĕp'tu), variant of ZAREPHATH

Sarett, Lew (särĕt'), 1888–, American poet, b Chicago, grad Beloit College, 1911, LL B Univ of Illinois, 1916 After 1921 he taught at Northwestern Univ school of speech His long association with the Rocky Mts and the Canadian woods as woodsman, guide, and forest ranger is reflected in his poetry Among his books are *Many Many Moons* (1920), *Slow Smoke* (1925), winner of the 1925 prize of the Poetry Society of America, and *Wings against the Moon* (1931) See his *Collected Poems* (1941)

Sarg, Tony (Anthony Frederick Sarg), 1882–1941, American marionette maker and craftsman, b Guatemala He came to the United States in 1915 after a career (1905–14) as an illustrator and puppeteer in England and became a U S citizen in 1921 He was the creator of Tony Sarg's Marionettes and of numerous workshops His books include *Tony Sarg's Book for Children* (1924), *Tony Sarg's Animal Book* (1925), *Tony Sarg's Wonder Zoo* (1927), and *Book of Marionette Plays* (1927)

Sargasso Sea (särgă'sō), part of the N Atlantic Ocean, extending between the West Indies and the Azores and from about lat 20° N to lat 35° N The relatively still sea is the center of a great swirl of ocean currents and is a rich field for the marine biologist It is noted for the abundance of GULFWEED on its surface

Sargent, Charles Sprague (sär'junt), 1841–1927, American dendrologist, b Boston, grad Harvard, 1862 He was professor of horticulture (1872–73) and of arboriculture (1879–1927) at Harvard and director (1873–1927) of the university's Arnold Arboretum He was influential in encouraging the extension of forest preserves and park systems He was the author of a *Manual of the Trees of North America* (1905) and of the first comprehensive work on North American timbers, the *Silva of North America* (14 vols, 1891–1902).

Sargent, Epes (ĕps'), 1812–80, American editor and author, b Gloucester, Mass He was a journalist (1839–47) in New York and editor (1847–53) of the *Boston Transcript* His works typify a surprising number of the literary interests of his day—poetry, his best in *Songs of the Sea* (1847), plays, of which

the most successful was the tragedy *Velasco* (produced 1837), novels, among which *Fleetwood* (1845) was most popular, and a famous and influential series of readers and textbooks

Sargent, Henry, 1770–1845, American genre and portrait painter, b. Gloucester, Mass., studied in London with Benjamin West. His portrait of Peter Faneuil is in Faneuil Hall, Boston, and there are three portraits at the Massachusetts Historical Society. Two conversation pieces, *The Tea Party* and *The Dinner Party*, are often reproduced.

Sargent, John Garibaldi, 1860–1939, American cabinet officer, b. Ludlow, Vt., grad. Tufts College, 1887. Admitted (1890) to the bar, Sargent practiced law in Ludlow and held several state offices between 1898 and 1912. He served (1925–29) as U.S. Attorney General under President Calvin Coolidge.

Sargent, John Singer, 1856–1925, American painter, b. Florence, Italy, of American parents, educated in Italy, France, and Germany. In 1874 he went to Paris, where he studied under Carolus-Duran. There he remained 10 years except for visits to the United States, Spain, and Africa. From his first exhibit in the Salon of 1878 he received early recognition, and in 1884, when he removed to London, he already enjoyed a high reputation as a portrait painter. There he spent most of the remainder of his life, painting the portraits of American and English social celebrities for which he is famous. In 1890 he was commissioned to paint a series of murals, *The History of Religion*, for the Boston Public Library. He completed them in 1916. An indefatigable and prolific painter, Sargent was particularly brilliant in his treatment of textures. Despite the extraordinary virtuosity of his brush work and the summary character of his portraiture, his paintings were the result of careful, thorough preparation. He was as conscientious and sincere as he was fashionable. In his youth, and again after 1910, he deserted portrait painting long enough to produce a large number of brilliant impressionistic landscapes in water color, many of them painted in Venice and in the Tyrol. Of these, fine collections are in the Museum of Fine Arts, Boston, and the Brooklyn Museum. His portraits and figure pieces are to be seen in many private and public collections in England and America. Well-known examples are *Carmencita* (Luxembourg Mus., Paris), the portraits of Mme X, the Wyndham sisters, Henry Marquand, and William Chase (Metropolitan Mus.), *The Fountain* (Art Inst., Chicago), *Children of C. D. Bost* (Mus. of Fine Arts, Boston). See biography by W. H. Downes (1925).

Sargon (sär'gŏn), fl. c. 2800? B.C., king of Akkad in Mesopotamia. He is sometimes called Sargon the Ancient. By conquest he created a great, though loose-knit, empire, which included various peoples. He not only became overlord of the Sumerian cities but also conquered much of Elam and controlled territories W. to the Mediterranean and N. to the Black Sea. The dynasty he founded seems to have lasted two centuries or more and did much to spread Semitic and Sumerian civilization. The name appears also as Sharrukin.

Sargon, d. 705 B.C., king of ASSYRIA (722–705 B.C.), successor to Shalmaneser V. Supposedly he completed Shalmaneser's conquest of Samaria in 722 B.C., and he defeated a coalition of enemies at Raphia in 720. He pushed his conquests wide, taking Carchemish, subduing Babylonia, and pushing eastward to Kurdistan. He founded the last and most powerful Assyrian dynasty. His magnificent palace of Dur Sharrukin (at present Khorsabad) has been much studied. The name appears also as Sharrukin.

Sarid (sā'rĭd) [Heb.,=survivor], landmark, N Palestine. Joshua 19:10,12.

Sark, Fr. *Serq* (sĕrk), island (2 sq. mi., pop. 571), in the English Channel, E of Guernsey, one of the CHANNEL ISLANDS. It is divided into unequal sections (Great Sark and Little Sark) connected by a natural causeway, the Coupée, 300 ft. long and 6 ft. wide, with high precipitous sides. The coast scenery is extremely beautiful. The interior is reached through tunnels from Creux Harbour, the landing place, on the east. The island belongs to Guernsey bailiwick, its local government is a survival of the feudal system.

Sarmatia (särmā'shu), ancient district occupied by the Sarmatians (Latin *Sarmatae*) about the lower Don river from the 3d cent. B.C. through the 2d cent. A.D. The term is vague and is also used for the territory into which the people were later driven by German pressure, along the Danube and across the Carpathians. The **Sarmatians** spoke an Indo-Iranian language and were a nomadic pastoral people related to the Scythians, whom they displaced in the Don region. The main divisions were the Rhoxolani, the Iazyges, and the Alans or Alani. They came into conflict with the Romans and later allied themselves with Rome, acting as buffers against the Germans. They were dispersed by migration pressures by the 3d cent. A.D.

Sarmiento, Domingo Faustino (dōmēng'gō foustē'nō särmyän'tō), 1811–88, Argentine statesman, educator, and author, president of the republic (1868–74). An opponent of Juan Manuel de ROSAS, he spent years of exile in Chile, becoming known as a journalist and an educational reformer. He toured Europe and North America and was impressed by the school system and the political organization of the United States. He helped URQUIZA to overthrow Rosas (1852) and became active in politics. In Oct., 1868, he succeeded Bartolomé MITRE as president. His administration was marked by the conclusion of the War of the Triple Alliance against Paraguay, by material progress, and, especially, by the organization of schools and the reform of educational methods. Sarmiento was succeeded by Nicolás AVELLANEDA. His essays, writings on education and politics, and critical works are distinguished by crisp style. Best known is *Facundo* (which appeared as *Civilizacion i barbarie*, 1845), nominally a biography of Juan Facundo Quiroga but actually a deep-going study of *caudillismo*, personalism in politics.

Sarmiento de Acuña, Diego see GONDOMAR, DIEGO SARMIENTO DE ACUÑA, CONDE DE.

Sarnath (sărnät'), archaeological site, SE United Provs., India, near Benares. The deer park (*mrigadawa*) where, according to tradition, Buddha first preached is located here. Buddhist monuments include an inscribed pillar (3d cent. B.C.) of Emperor Asoka and a stupa (7th cent. A.D.), c. 140 ft. high.

Sarnen (zär'nun), town (pop. 5,591), capital of Obwalden half-canton, Switzerland, at the north end of the Lake of Sarnen. The town hall has documents on the formation of the Swiss Confederation. There is a small wood industry.

Sarnia, city (pop. 18,734), S Ont., on the St. Clair river, at the south end of Lake Huron and opposite Port Huron, Mich. The two cities are connected by a railroad tunnel and ferries and by an international bridge between Port Huron and Point Edward, just N. of Sarnia. The city is a port, with extensive docking facilities, and handles a large volume of freight for transshipment from railroads to lake steamers. There are grain elevators, lumber and woodworking mills, machinery plants, oil refineries, and chemical and synthetic-rubber industries. It was settled in 1833 as The Rapids and named Port Sarnia (1836) by Sir John Colborne, in 1880 the name was changed to Sarnia.

Saron (sā'rŭn), variant of SHARON.

Saronic Gulf (surŏ'nĭk), inlet of the Aegean Sea, W. central Greece, bounded by Attica on the northeast, the Isthmus of Corinth on the north, and the Argolis peninsula on the southwest. It is connected with the Gulf of Corinth by the Isthmian Canal. Athens, Piraeus, Eleusis, Megara, and Epidaurus are on or near the Saronic Gulf, which also contains many islands, notably Aegina and Salamis. It is also known as the Gulf of Aegina.

saros (sā'rŏs), in astronomy, the period, or cycle, in which eclipses of the sun and moon repeat themselves. It is a period of 18 years 11¼ days and is equivalent to 223 lunations. In times of antiquity the cycle was used in the calculations of the Chaldeans to predict eclipses.

Saros, Gulf of (sä'rôs), inlet of the Aegean Sea, between the Gallipoli Peninsula and the mainland of European Turkey.

Saroyan, William (surō'ŭn), 1908–, American short-story writer and dramatist, b. Fresno, Calif. Since publication of his first stories, *The Daring Young Man on the Flying Trapeze* (1934), he has written several hundred others, including the highly successful collection *My Name Is Aram* (1940). His play *The Time of Your Life* (1939) won both the New York Drama Critics' and the Pulitzer prizes. Other plays produced were *My Heart's in the Highlands* (1939) and *Hello Out There* (1942). A novel, *The Human Comedy* (1942), was filmed in 1943. Three plays were published (1940) under the title of the first play, *Don't Go Away Mad!*

Sarpedon (särpē'dun), in Greek legend, son of Zeus and Europa. He fled the wrath of his brother Minos and settled in Lycia. Zeus allowed him to live as king of Lycia for three generations. His grandson **Sarpedon** fought against the Greeks in the TROJAN WAR. In Homer he is killed by Patroclus, but his body is cleansed and anointed by Apollo, Zeus' agent, and carried back to Lycia by Sleep and Death. The two Sarpedons are sometimes considered the same, and the legends are much confused.

Sarpi, Paolo (pä'ōlō sär'pē), 1552–1623, Venetian councilor, theologian, and historian. In 1565 he became a Servite friar and later theologian and adviser to the republic. In the conflict which developed in 1606 between Venice and Pope PAUL V he staunchly defended the right of the state to control ecclesiastic matters. In his writings against the papal interdict he showed great intransigence. In 1607 he was wounded in an attempt, said to be sponsored by the pope, to seize him by force, and this increased his prestige. His most important work is his history of the Council of Trent in which he viewed the council as the triumph of papal absolutism and centralization. The work was published in London in 1619, many editions and translations followed.

Šar-Planina or **Shar-Planina,** Serbo-Croatian *Šar-Planina* (shär'-plĭnē'nä), mountain group, SW Yugoslavia, between the upper Vardar river and the Albanian frontier. Its highest peak, the *Turčin* (tōōr'chēn) (8,863 ft.), rises 8 mi. W of Tetovo.

Sarpsborg (särps'bôr), city (pop. 12,943), Ostfold co., SE Norway, on the GLOMMA and SSE of Oslo. A large hydroelectric plant operates its important chemical works, textile and paper mills, zinc smelters, and other industrial plants. Sarpsborg was rebuilt in 1838 on the ruins of a medieval town destroyed by the Swedes in 1567.

Sarraut, Albert Pierre (ălbĕr' pyĕr' särō'), 1872–, French politician, a Radical Socialist. He was governor general of French Indo-China (1911–14, 1916–19) and was minister for the colonies in several cabinets between 1920 and 1924. After a brief premiership in 1933 he held cabinet posts under Chautemps and Doumergue and again was premier in 1936 until the electoral victory of the Popular Front. After the fall (1937) of Léon Blum's first Popular Front ministry, Sarraut held portfolios in the increasingly conservative cabinets of Chautemps (1937–38), Blum (1938), Daladier (1938–40), and Reynaud (1940). After the fall of France in 1940 he was interned in Germany until liberated in 1945. Sarraut wrote on colonial problems.

Sarrazin or **Sarazin, Jacques** (zhäk' sărăzĕ'), 1588?–1660, French sculptor and painter, a founder (1648) and rector (1654) of the Académie royale de Peinture et de Sculpture. Examples of his work are the caryatids on Lemercier's pavilion at the Louvre, the statuettes of St. Peter and Mary Magdalen (Louvre), and the tomb of Henri II, prince de Condé (Chantilly).

Sarre see SAAR, river, and SAAR TERRITORY.

Sarrebruck, Saar Territory: see SAARBRÜCKEN.

Sarreguemines (särgumēn'), Ger. *Saargemünd* (zärgumunt'), town (pop. 12,876), Moselle dept., NE France, in Lorraine, on the Saar river. It has porcelain and chemical manufactures.

Sarrelouis, Saar Territory: see SAARLOUIS.

sarrusophone (sŭrŭ'sufōn), brass wind musical instrument played with a double reed and therefore considered a member of the oboe family. Invented by a Frenchman named Sarrus in 1865, it is made in several sizes and exists mainly in military bands. The contrabass sarrusophone occasionally replacing the contrabassoon.

Sars, Michael (mōkäl' särs'), 1805–69, Norwegian biologist. He was professor of zoology at Christiania from 1854. A pioneer in marine research, he discovered the metamorphosis of marine mollusks, established the relation of crinoids to similar fossil groups, and helped to clarify the knowledge of alternation of generations.

sarsaparilla (särs"pərĭl'ə), name for various plants and for the extract made from their roots, used in medicine and in beverages. True sarsaparilla is obtained from various tropical species of the genus *Smilax*, particularly *Smilax officinalis*, *medica*, and *papyracea*. These have thick rootstalks and thin roots several feet long. Other plants used as substitutes for sarsaparilla include *Aralia nudicaulis*, or wild sarsaparilla, and the American SPIKENARD, both North American plants.

Sarsechim (särsē'kĭm, sär'sēkĭm), general with Nebuchadnezzar at Jerusalem. Jer. 39:3.

Sarsfield, Patrick, earl of Lucan (särs'fēld, lōō'kun), d. 1693, Irish Jacobite general. During the reign of Charles II he served with the English forces attached to the army of Louis XIV in France. He helped suppress the rebellion of the duke of Monmouth (1685), supported James II in 1688, and went with him into exile. Commanding James's forces in Ireland, he had some successes, but the battle of the Boyne destroyed the venture. He was forced (1691) to arrange the disadvantageous treaty of Limerick, surrendering that city. Allowed to go to France, Sarsfield took thousands of Irish soldiers with him into foreign service in the War of the Grand Alliance. He fought with the French at Steenkerke (1692) and was mortally wounded at Neerwinden. Though he was not a great general, his loyalty to Catholicism and his king won him the respect and affection of his countrymen. See biography by John Todhunter (1895).

Sarsi Indians (sär'sē), small tribe of North American Indians of the Athapascan linguistic stock. From an early time they had been allied with the BLACKFOOT INDIANS. Sarsi culture was probably acquired from the Blackfoot of the N. Plains cultural area. In the early 19th cent. the Sarsi numbered some 400. They are now on a reservation near Calgary, Alta.

Sartain, John (särtān'), 1808–97, American engraver, b. London. He was a pioneer in mezzotint engraving in the United States, to which he came in 1830. After being engraver for several periodicals he founded in 1848 *Sartain's Union Magazine*, which was discontinued in 1852. He engraved many fine plates after the older school of painters—West, Sir Thomas Lawrence, and Thomas Sully. His daughter, **Emily Sartain,** 1841–1927, b. Philadelphia, was an engraver and painter. She studied with her father and in Paris. Her painting *The Reproof* was exhibited at the Centennial Exposition,

Philadelphia, 1876 She executed some mezzotint engravings and in 1886 became principal of the Philadelphia School of Design for Women A son, **Samuel Sartain,** 1830–1906, b Philadelphia, was also an engraver. He studied mezzotint engraving with his father and engraved after paintings by C W Peale, Thomas Sully, and others Another son, **William Sartain,** 1843–1924, b Philadelphia, engraver and painter, studied with his father and in Paris He made some mezzotint portrait plates and painted landscapes and genre pictures Among his paintings are *Street in Dinan, Brittany* (Corcoran Gall), *A Chapter from the Koran* (Metropolitan Mus); and *Algerian Water Carrier* (National Gall of Art, Washington, D C)

Sarthe (sart), department (2,411 sq mi , pop 412,214), NW France, in MAINE It is traversed by the Sarthe river Le Mans is the capital

Sarthe, river, 175 mi long, rising in the hills of Perche, NW France It winds southwestward past Alençon and Le Mans, through MAINE Joined by the Loir, the Sarthe unites, just above Angers, with the Mayenne to form the Maine river, which after a brief course empties into the Loire

Sarto, Andrea del (ändrā'ä dĕl sär'tō), 1486–1531, Florentine painter, equally famous for his frescoes and his oils He painted chiefly religious subjects In 1509 he was commissioned by the Servites to decorate their cloisters of Sant' Annunziata, Florence His five frescoes there, illustrating the life of St Philip, won him the title the faultless painter Also in this court are *Nativity of the Virgin, Procession of the Magi,* and a lunette, *Madonna del Sacco* Notable scenes from the life of St John the Baptist in monotone are in the Cloisters of the Scalzo, Florence, and the *Last Supper* is in the refectory of the Convent of San Salvi His oils include two *Annunciations, Deposition from the Cross,* two *Assumptions, Madonna in Glory* (Pitti Palace, Florence), *Madonna of the Harpies* (Uffizi), *Holy Family* and *Charity* (Louvre), *Holy Family* (Metropolitan Mus), *Madonna and Child with St John* (National Gall of Art, Washington, D C), and others in London and Madrid Del Sarto's work is distinguished for its monumental composition, fine draughtsmanship, and sumptuous color His handsome and capricious wife, Lucrezia, is thought to have posed for many of his Madonnas

Sartre, Jean Paul (zhäⁿ pōl' sär'trŭ), 1905–, French philosopher and writer, noted as the originator of the French existentialist philosophy (see EXISTENTIALISM) After teaching (1929–39) philosophy, he joined the French army, he was imprisoned (1940–41) by the Germans After his release he participated in the resistance movement in Paris In 1945 he founded and edited the periodical the *Temps modernes,* which covers literature and politics from an existentialist viewpoint Among his philosophical works are *L'Être et le néant* (1943) and *L'Existentialisme est un humanisme* (1946, Eng tr , *Existentialism,* 1947) He is the author also of the novels *La Nausée* (1938, Eng tr , *Nausea,* 1949), *L'Âge de raison* (1945, Eng tr , *Age of Reason,* 1947), *Le Sursis* (1945 Eng tr , *The Reprieve,* 1947), and *La Mort dans l'âme* (1949), the latter three form the trilogy *Les Chemins de la liberté* [the roads to freedom] As a dramatist Sartre has written *Les Mouches* (1943, Eng tr , *The Flies,* 1947), *Huis-Clos* (1944, Eng tr , *No Exit,* 1947), *Morts sans sépulture* (1946, Eng tr , *The Victors,* 1948), *La Putain respectueuse* (1946, Eng tr , *The Respectful Prostitute,* 1948), and *Les Mains sales* (1948, Eng tr , *Dirty Hands,* 1949, produced in New York as *The Red Gloves,* 1948)

Saruch (sā'ruk), variant of SERUG

Sarum, Wiltshire, England see OLD SARUM and SALISBURY

Sarus, river see SEYHAN

Sasanidae or **Sasanians** see SASSANIDAE

Sasebo (säsä'bō), city (1940 pop 205,989, 1947 pop 175,233), Nagasaki prefecture, W Kyushu, Japan It is a port and naval base on the East China Sea and was heavily bombed in the Second World War

Saskatchewan (suskă'chuwun, -wän", sä"–) [Indian, =swift current], province (247,975 sq mi , with water surface, 251,700 sq mi , 1941 pop 895,992, 1948 estimated pop 854,000), W Canada Regina, the largest city, is the capital, other important cities are Prince Albert, Saskatoon, and Moose Jaw Saskatchewan is bounded on the north by the Northwest Territories, on the east by Manitoba, on the south by North Dakota and Montana, and on the west by Alberta It is the central one of the Prairie Provs Its desolate northern third is part of the Laurentian Plateau, with large areas of granite rock laid bare by glaciation An intricate system of lakes and rivers drain NW into the Mackenzie river through the enormous Lake Athabaska or E into the Churchill river Inaccessible except by canoe or plane, the region is inhabited by only a few trappers and prospectors Geological surveys indicate abundant mineral resources, and the discovery of pitchblende-yielding ore of high uranium content may encourage development Between the Saskatchewan and Churchill rivers lie park lands containing much merchantable timber, a large area of which is reserved as Prince Albert National Park. Only in S Saskatchewan has there been any substantial settlement or development. In this region the prairie fields of rich alluvial soil, with adequate rainfall during the growing season, have permitted highly productive agriculture Except for a semiarid section in the southwest used for grazing and an area in the east and central portion given over to mixed farming and dairying, the land is devoted to the raising of hard wheat Vast expanses of unbroken country are well suited to large-scale, mechanized farming, and miles of undulating hills glisten sea green in the spring, soon turning gold under the intensive heat of long summer days The cities serve as railroad and distribution points, 7,500 mi of rail lines, including two transcontinental roads, connect the towns with the Great Lakes ports Oil and lignite are produced for fuel, and there has been some development of hydroelectric power The province of Saskatchewan was created in 1905 from portions of the provisional districts of Saskatchewan, Assiniboia, and Athabaska—formerly part of the Northwest Territories After the transfer of territorial rights by the Hudson's Bay Company to the Canadian government, Saskatchewan was the scene of violent revolt by half-breed trappers in the Riel Rebellion of 1884–85 (see RIEL, LOUIS) By this time the Canadian Pacific Railway had reached the province and was bringing immigrants from E Canada, and later from Europe, and opening up trade through the Great Lakes ports Agricultural settlement, stimulated by free land grants, proceeded so rapidly that there was little opportunity to consider the wisest use of the land As a result large areas were plowed that should have been left covered The Dust Bowl development of the '20s and the drought and world depression of the '30s have resulted in large migrations to other areas Soil-conservation measures and greater diversification of crops have improved agricultural production The high food demands of the Second World War and post-war years and the wide development of consumer and producer cooperatives have placed the economy on a firmer footing Politically Saskatchewan is experimenting with a socialist government After rejecting in 1938 the Social Credit Plan as developed by Alberta, the province gave victory in 1944 to the Co-operative Commonwealth Federation under leadership of T C Douglas Its administration has passed legislation favorable to farmers, promoted numerous welfare measures, and established several government-owned and -operated business enterprises See G M Dunlop, *Tales of the North-West Rebellion* (1934), A S Morton, *History of Prairie Settlement* (1938), G E Britnell, *Wheat Economy* (1939), S R Montague, *North to Adventure* (1939), M W Campbell, *The Saskatchewan* (1950), S M Lipset, *Agrarian Socialism* (1950)

Saskatchewan, river formed in central Saskatchewan, just E of Prince Albert, by the confluence of two large branches, the North Saskatchewan and the South Saskatchewan It flows generally east 340 mi , past Nipawin, crossing the Manitoba border, and past The Pas, then through Cedar Lake to Lake Winnipeg The North Saskatchewan rises in the Columbia ice field at the foot of Mt Saskatchewan, SW Alta , and flows generally east 760 mi past Rocky Mountain House and Edmonton, into Saskatchewan, and past North Battleford and Prince Albert Its chief tributaries are the Clearwater, Brazeau, Vermilion, and Battle rivers The South Saskatchewan is formed in S Alberta by the confluence of the Bow and Oldman rivers, it flows 550 mi (with the Bow 865 mi) E past Medicine Hat, then NE into Saskatchewan, where it receives the Red Deer, then E and N past Saskatoon to its junction with the North Saskatchewan The Saskatchewan proper, with its two branches and their tributaries, drains the prairies of central and S Alberta and Saskatchewan It was a chief transportation route of explorers and fur traders in the old Northwest Territories before the arrival of the railroad See M W Campbell, *The Saskatchewan* (1950)

Saskatchewan, University of, at Saskatoon, provincially supported, coeducational, chartered 1907, opened 1909 It has colleges of agriculture, arts and science, commerce, education, engineering, law, music, and pharmacy, schools of household science, medical sciences, nursing, and physical education, and a junior branch, Regina (Sask) College, which includes a music conservatory and a fine arts school

Saskatoon (săskutōn'), city (pop 46,028), S central Sask , on the South Saskatchewan river and NW of Regina Laid out in 1883, it grew rapidly after the arrival (1890) of the railroad, it was incorporated in 1906 It is the chief manufacturing and distributing center for central and N Saskatchewan, with grain elevators, stockyards, meat-packing plants, woodworking and metalworking plants, and manufactures of farm machinery, soap, chemicals, and powdered eggs The Univ of Saskatchewan (see SASKATCHEWAN, UNIVERSITY OF), with its affiliated colleges, is here, as is a dominion forestry station

sassafras (să'sufrăs"), tree or shrub (*Sassafras variifolium*) with entire or two-lobed or three-lobed leaves It is native to E North America and was one of the earliest plants to command the attention of Europeans on this continent and was early exported to the Old World and sold at high prices It was considered a panacea for many ills More recently it has been reduced to minor medicinal importance The pith of sassafras yields a mucilaginous product used in ophthalmia, the reddish bark of the root is brewed for sassafras tea and is included in root beers, the leaves are powdered and used in parts of the S United States in making soups and condiments Oil of sassafras is used commercially to scent soap and other products and to flavor confectionery

Sassafras Mountain, peak, 3,560 ft high, NW S C , in the Blue Ridge near the N C and Ga lines, highest point in South Carolina

Sassanidae (săsă'nĭdē), **Sassanids** (să'sunĭdz), or **Sassanians** (săsā'nĭunz), last dynasty of native rulers to reign in Persia. The period of their dominion extended from A D c 226, when the Parthians were overthrown and the capital, Ctesiphon, taken, until c 640, when the country fell under the power of the Arabs The last of the Sassanian kings died a fugitive in 651, but he had been forced to yield Ctesiphon to the Arabs in 636 Under the Sassanidae the ancient Zoroastrian religion had a season of new life The name of the dynasty was derived from Sassan, an ancestor of the founder of the dynasty, ARDASHIR I, who seems to have established possession of Ctesiphon in 226 and reigned until 241 In his reign and many of those which followed, war with the Romans occupied much attention Sassanian persecution of the Christians led to wars with Byzantium Syria and Armenia suffered particularly from invading armies Ardashir I was succeeded by his son SHAPUR I who was victorious over Roman Emperor Valerian and ruled until 272 The next reign of importance was that of SHAPUR II, from 309 to 379, a period of particular significance and glory Bahram V, ruling 420 to 438, was defeated by the Emperor Theodosius, but was successful against the White Huns The Armenians were overwhelmed by Yazdagard II in 451, and their land was overrun by the Sassanians under KHOSRU I, who reigned from 531 to 579 and who also invaded Syria Both countries were entered again by KHOSRU II, reigning 590 to 628, whose conquest of Egypt was the final victorious achievement of the dynasty The last representative of the family on the throne was Yazdagard III, who began to reign in 632 His struggle against the Arabs ended in entire defeat The name is also spelled Sasanidae or Sasanian See PERSIA

Sassari (sä'särē), city (pop 44,130), on NW Sardinia capital of Sassari prov , Italy It is an agricultural center Cheese and oil are the main products Zinc and lead are mined near by Sassari was an important center in the Middle Ages, later declined, and is now expanding again It has a cathedral, a university (founded 1677), and a museum of antiquities

Sassoferrato (sä"sōfär-ra'tō), 1609–85, Italian painter, pupil of Domenichino His real name was Giovanni Battista Salvi He is best known for his somewhat sentimental Madonnas in the style of Raphael, such as the *Madonna of the Rosary* (Santa Sabina, Rome) and *Madonna* (Metropolitan Mus)

Sassoon, Siegfried (susōōn'), 1886–, English poet and novelist An officer in the First World War, he expressed his conviction of the brutality and futility of war in his powerful, realistic verse, *The Old Huntsman* (1917), *Counter Attack* (1918), and other volumes His autobiographical novels are on the same theme—*Memoirs of a Fox-hunting Man* (1928), *Memoirs of an Infantry Officer* (1930), and *Sherston's Progress* (1936), all collected as *The Memoirs of George Sherston* (1937) His autobiography to 1920 is in *The Old Century* (1949), *The World of Youth* (1942), and *Siegfried's Journey* (1946) He has also written a biography of George Meredith (1948), and his *Collected Poems* were brought out in 1949

Satalia or **Satalieh** see ANTALYA, Turkey

Satan (sā'tŭn) [Heb ,=adversary], in Judaism, Christianity, and Islam, the principle of evil conceived as a person He is also called the devil [from Gr ,= accuser] and is an angel of heaven who fell from heaven to eternal damnation because he raised a rebellion against God, with him minor angels fell, called devils To Satan the three monotheistic religions commonly ascribe the origin of much of the evil of the world, his characteristic activity in the world, about which he is considered to roam, is the destruction of souls, his favorite method of accomplishment being temptation, especially in carnal things The conception most similar to that of Satan is that of the ruler of the kingdom of darkness in ZOROASTRIANISM and MANICHAEISM Popular legend has been very busy with Satan and his angels, and countless stories are told of him The most celebrated of literary uses of such stories is undoubtedly the Mephistopheles of Goethe's *Faust* The Lucifer of Milton's *Paradise Lost* is a very famous literary treatment LUCIFER is a standard proper name for Satan Names and nicknames of Satan are countless, some of these are variously applied to lesser devils or demons. Besides Satan (I

Chron 21.1; Job 1; 2; Zech 3 2; Luke 10.18; Acts 26 18, 2 Cor 2 11; 11 14) and Lucifer (Isa 14 12), such are Abaddon and Apollyon (both Rev 9 11), Asmodeus (see the book of Tobit), Beelzebub or Baal-zebub (Mat 10 25, 12 22–30, Mark 3 22–30, Luke 11.14–26), and Belial ANTICHRIST is not properly a name for Satan English names for Satan are Dragon and Serpent (both Rev 12 9, 20 2), Evil One, God of This World (2 Cor 4 4), Prince of Darkness, Prince of the Devils (Mat 9 34), Prince of the Power of the Air (Eph 2 2), Prince of This World (John 12 31, 14 30, 16 11), Tempter (1 Thess 3 5), and Wicked One (Mat 13 19) There is no extended account of Satan in the Bible, but there are several references to his fall from heaven and to his strife with Michael before the world began or at its end See (besides the references above) Mat 4 1, 13 39, 25 41, Luke 10 18, John 8 44, Jude 6, and the book of Revelation

Satanism (sā'tunĭzm). The cult of Satan, or Satan worship, is in part a survival of the ancient worship of demons and in part a revolt against Christianity or the Church It rose about the 12th cent and reached its culmination in the blasphemous ritual of the Black Mass, a desecration and perversion of the Christian rite The history of Satanism is secret and obscure It was revived in the reign of Louis XIV in France and is said to be still practiced occasionally there as in some large cities elsewhere

satellite (sā'tulīt), in astronomy, a smaller celestial body attendant upon and revolving round a PLANET or a star Satellites shine only by reflected light. The known satellites differ greatly in size relatively to their primary planets Of them all, the earth's only satellite, the MOON, is the largest in comparison with its planet No satellites have been discovered for Mercury, Venus, or Pluto, but MARS, SATURN, JUPITER, URANUS, and NEPTUNE all have their secondary planets, or satellites, and each one except Neptune is accompanied by more than one satellite In the planetary system, satellites revolving comparatively near their respective planets have orbits nearly circular, the planes of which almost coincide with those of the equators of the primaries, but those which, like the moon, are more remote from their primaries, show greater eccentricity and inclination of orbit The usual motion is from west to east, but some, like the satellite of Neptune, the 9th satellite of Saturn, and the 8th, 9th, and 11th of Jupiter, move in the opposite direction, i e , have a retrograde motion In such cases the satellite has a plane of revolution which is almost perpendicular to the ecliptic It is difficult to find a theory of the origin of the planetary system which satisfactorily accounts for the retrograde motion of satellites

Satie, Erik (ārēk' satē'), 1866–1925, French composer, studied at the Paris Conservatoire, pupil of Vincent d'Indy and Albert Roussel at the Schola Cantorum He reacted against the lush and sensuous in music and wrote in a highly simplified style His perverse sense of humor led him to write his scores in red ink and without bar lines and to give them titles such as *Three Pieces in the Shape of a Pear* (1903) He wrote piano pieces, ballet music, and music for moving pictures, his own music is, however, of less importance than his influence on other composers, among them Ravel In 1918 there gathered around him a group of young composers—POULENC, HONEGGER, Georges Auric (1899–), Louis Durey (1888–), and Germaine Tailleferre (1892–)—who were united in the reaction against impressionism They were joined in 1919 by Milhaud and were later referred to as *Les Six* A ballet, *Les Mariés de la tour Eiffel* (1921), which had music by all except Durey, was the only work in which the group collaborated. Jean Cocteau, their literary prophet, wrote the scenario

satin, lustrous silk in which the filling is so arranged as to bind the warp as seldom as possible and so spaced that practically nothing shows but the warp. Satin was first woven by the ancient silk weavers of China, it is mentioned by classic writers as being greatly desired by early Greeks and Romans In the Middle Ages it was rare and costly and was known as *zaloni* (from the name of a Chinese town) and samite It was used for churchly and royal garments, a robe of Charlemagne's being of blue satin embroidered with gold As the secrets of silk making were carried westward, splendid satins were woven in Genoa and Florence, then at Lyons and in England in the 15th cent Modern satins are made in a great variety of fibers, weights, and qualities and under different names

satin spar see CALCITE and GYPSUM

satinwood, hard and durable wood with a satinlike sheen, much used in cabinetmaking, especially in MARQUETRY East Indian or Ceylon satinwood is the yellowish or dark brown heartwood of *Chloroxylon swietenia* The lustrous, fine-grained, usually figured wood is used for furniture, cabinetwork, veneers, and backs of brushes West Indian satinwood, sometimes called yellowwood, is considered superior It is the golden yellow, lustrous, even-grained wood of an evergreen (*Zanthoxylum flavum*), found in the Florida Keys, the Bahamas, Santo Domingo, and Puerto Rico. It has long been valued for furniture It is also used for musical instruments, veneers, and other purposes

satire (sā'tīr), term applied to any literary form, in poetry or prose, which ridicules a situation, an individual, or an idea The purpose of satire is to correct manners and morals, but it does not do this by being didactic Instead it makes use of mockery, broad humor, sophisticated wit, harsh invective, parody, or a gentle irony. It may be humorous or serious, but in general the object of the satire is made to seem ridiculous rather than evil The Greek Archilochus is said to be the founder of satire, and the most famous Greek satires are the comedies of Aristophanes The satiric dialogues of Lucian were an important influence in the development of satire Among the Romans, who originated the word, satire can be traced to the FESCENNINE VERSES of the Etruscans But the founder of Latin satire was Lucilius, and the most famous satires were those of Horace (ironic and somewhat gentle) and of Juvenal (who flayed contemporary vices) Other satirists include Persius, whose satire was harsh, Petronius, and Martial, the epigrammatist The Middle Ages contributed a large body of satire in fables, beast epics (such as Reynard the Fox), fabliaux, and Goliardic verse The great satirists were Jean de Meun, who wrote the second part of *Le Roman de la Rose*, Chaucer, Langland, and, at the beginning of the Renaissance, Rabelais In the 16th cent great satirists could be found throughout Europe—Cervantes, Erasmus, Ulrich von Hutten, Sebastian Brant, the authors of *Till Eulenspiegel*, and, in England, John Skelton and Alexander Barclay Elizabethan satire is found in Thomas Lodge, Thomas Nash, and John Marston and in the comedies of Ben Jonson Later in the 17th cent , satire was very popular in Butler's *Hudibras*, an attack on the Puritans, and in the famous narrative poems of Dryden Satire now began to use ridicule rather than invective Aside from the comedies of Molière, the best-known French satirist of this period was Boileau-Despréaux In the 18th cent , satire dominated English literature and can be found in the brilliant couplets of Pope, in the fiction of Fielding and Smollett, and in the great prose works (*Gulliver's Travels*, *A Tale of a Tub*, and others) of Swift Others included Arbuthnot, Rochester, and, later in the century, Robert Burns The dominant literary figure in France at this time was also a satirist—Voltaire Lessing, Wieland, and (in the 19th cent) Heine were prominent German satirists Fewer individual literary works can be called satires in 19th-century literature Manners and morals were still ridiculed, but it was generally part of a longer work, usually a novel In poetry famous satires were written by Byron, in light verse by William Gilbert, in drama by Wilde and Shaw, and in fiction by Thackeray, Dickens, Samuel Butler, and many others In America the satirists include Washington Irving, James Russell Lowell, Oliver Wendell Holmes, and Mark Twain The development of the columnist in the modern newspaper and magazine produced a new type of satirist Contemporary satirists of note are Sinclair Lewis, James Thurber, Aldous Huxley, Evelyn Waugh, and W H. Auden See David Worcester, *The Art of Satire* (1940), Edgar Johnson, ed , *A Treasury of Satire* (1945)

Satire Ménippée see SATYRE MÉNIPPÉE

Satoraljaujhely, Hung *Sátoraljaujhely* (sha'tôrô-lyô-ō͞ō'lhĕl), city (pop 18,427), NE Hungary, near the Czechoslovakian border It is sometimes called Ujhely It is the center of a winegrowing region

satrap (sā'trăp), governor of a province (satrapy) of the ancient Persian Empire He was nominated by the king and given extensive powers DARIUS I reorganized the privileges and duties of his 31 satraps in the 6th cent B C The satrap commanded the provincial troops, but the fortresses were garrisoned by imperial forces The king regulated the taxes and imposed a fixed sum upon each satrap Alexander the Great revised the system, replacing Persians by Macedonians and reducing their powers The command of the troops was taken from the satraps, who lost the right to engage mercenaries and to issue coinage

Satsuma (sătsō͞o'mä), peninsula, Kagoshima prefecture, SW Kyushu, Japan It gave its name to a famous porcelain, Satsuma ware It was the old province that was in control of the powerful Satsuma clan, prominent for centuries in Japanese history and most notable for the revolution against the imperial government in 1877 led by Takamori Saigo The suppression of this Satsuma revolt was an important step in the Meiji restoration

Satterlee, Henry Yates, 1843–1908, American Episcopal bishop, b. New York city, grad Columbia, 1863, and General Theological Seminary, 1866 In 1896 he was consecrated as the first bishop of the diocese of Washington, D.C The National or Washington Cathedral, the cornerstone of which was laid before his death, has its origin in his plans and work.

Satu-Mare (sä'tō͞o-mä'rĕ), Hung *Szatmárnémeti* (sôt'marnä'mĕtē) or *Szatmár* (sôt'mär), city (pop. 46,519), NW Rumania, in Crisana-Maramures, near the Hungarian border. It is the commercial center of an agricultural region and has manufactures of textiles, machinery, and various other goods Two thirds of the population are Hungarians. Satu-Mare has three cathedrals and an old palace The peace of Szatmar (1711) ended the rebellion of Francis II RAKOCZY.

saturation, in general, the condition existing in a SOLUTION when the solvent has dissolved all that it can of the solute at a given temperature. It is possible, however, by mechanical means, to dissolve a greater quantity of a substance in a solvent than the solvent would normally hold in solution Such a solution is known as a supersaturated solution and is commonly prepared by heating a saturated solution, adding more of the solute, and then cooling carefully When it is in this condition, in some cases the addition of a minute crystal of the solute will bring about almost instantaneous crystallization of much of the solute DEW results from the saturation of the air near the ground with water vapor (in this case the solute) and the subsequent condensation of this water vapor when the temperature of the air is lowered In chemistry, an organic compound such as methane is called a saturated hydrocarbon because in its molecule the full valence of the carbon atom is taken up in holding the hydrogen atoms Certain derivatives can be formed from it by the substitution of other atoms or radicals for the hydrogen atoms (see METHANE SERIES), but not by the addition of other atoms

Saturday see WEEK and SABBATH

Saturn (sā'turn), in Roman religion, god of the harvest, husband of OPS and father of CERES He is identified with CRONUS He ruled the world in the Golden Age of peace and plenty. Of the origins of his cult little is known His festival was the **Saturnalia** (sā"turnā'lēu) On Dec 17, and for several days thereafter, all work was stopped, gifts were exchanged, and slaves did as they pleased

Saturn, in astronomy, the major planet revolving in an orbit next outside that of Jupiter and sixth in order of distance from the sun It is almost twice as far from the sun as Jupiter, its mean distance being 886,120,000 mi., its period of revolution is almost 30 years Its volume is 734 times that of the earth, its mass 94 9 times as great, but its density, which is less than that of any other planet, is about one-eighth that of the earth Its equatorial diameter is c 75,000 mi To the eye unaided by lenses, Saturn is a star shining with a yellowish light, and it appears to be of about first magnitude Seen through the telescope, its form is a markedly oblate disk, brightest at the equator Bands parallel to the equator present markings across the surface somewhat resembling those of Jupiter but less definite Clearly marked spots, or points, that would aid in determining the rotation period are lacking, but various observers have calculated the time, obtaining different results that depend upon the region under observation In general, the rotation period is shorter near the equator than in other latitudes The shortest time arrived at is 10 hr 14 min , the longest, 10 hr 38 min The different periods of rotation for different regions indicate a fluid or vaporous condition, in place of a solid surface Its atmosphere contains ammonia and methane, the methane predominating Saturn is known to have at least nine satellites In the 17th cent Christiaan Huygens discovered one and G D Cassini four, William Herschel added two in 1789, the eighth was detected independently by W C Bond and W Lassell in 1848, and the ninth was found photographically by W H. Pickering and named Phoebe This one revolves in the retrograde direction. Pickering announced the detection of another, Themis, in 1905, but it is still considered problematical The largest of all the satellites, and the first known, is Titan, about the size of Mercury In 1944 it was determined that Titan has an atmosphere But the feature which has no parallel and which makes Saturn the most interesting and beautiful object of study in the planetary company is the system of rings encircling it and lying in the plane of its equator Seen for the first time by Galileo through his telescope, this appeared in the form of winglike extensions on the sides of the planet Huygens, in 1655, explained that the true form of the extension was a great ring, and in 1675 Cassini discovered that a dark rift separated it into two bright rings Hence the gap is called Cassini's division In the space between the inner of these two rings and the planet, and extending to within c 7,000 mi of the equator of Saturn, is what is known as the crape ring, because it is comparatively faint and dusky First noted by J G Galle in 1838, it was not generally recognized until G. P Bond of Harvard and W R Dawes of England discovered it anew and independently The central ring is the brightest and is c 15,000 mi wide The outer ring is somewhat less broad, and Cassini's division between them is c 2,500 mi. across. The extreme diameter of the whole ring system is estimated to be over 172,000 mi , but the thickness is believed to be only from 10 to 50 mi The plane of the system has an inclination of about 27° to the planet's orbit, of about 28° to the ecliptic It crosses the earth's orbit twice in the course of each

revolution of Saturn. The edge of the system is then turned towards the earth and can be perceived only by means of powerful telescopes This occurs at intervals of nearly 15 years In the periods between, the rings unfold by degrees to their widest stage and diminish gradually again Early in the 18th cent Jacques Cassini indicated that the rings may be made up of meteoric bodies It has since been proved that they are composed of swarms of particles moving in their own individual orbits round the planet The particles of the inner edge revolve with greater velocity than those in the outer regions The dimness of the crape ring is probably the result of a less close distribution of the particles The conclusion reached by James Clerk Maxwell in 1857 that the rings are meteoric particles was confirmed by J E Keeler in 1895 in his observations by means of the spectroscope.

Saturnalia. see SATURN, in Roman religion

Saturninus (Lucius Appuleius Saturninus) (săt'ûr-nī'nŭs), d 100 B C , Roman statesman He was quaestor in 104 B C and later tribune of the people He was violently opposed to the senatorial party and allied himself with MARIUS to procure the banishment of METELLUS NUMIDICUS, the passage of a grain law, and the establishment of new colonies in Sicily, Achaia, and Macedonia With the demagogue Glaucia he instigated the murder of C Memmius, Glaucia's rival for the consulship, for this the senate proscribed them He and Glaucia fled from the Forum to the Capitol, where they surrendered to Marius after the water supply had been cut off When they were being held for security, the mob stoned them to death with roofing tiles

satyr (să'tur, săt'ûr), in Greek mythology, one of a tribe of creatures who lived in forests and mountains A satyr, a lesser deity of fertility, was lustful and fond of wine, of revelry, and all kinds of mischief In this aspect he was like Silenus and Comus A satyr, like a faun, was pictured as a hairy little man, with a short tail, and pointed goatlike ears Later, satyrs became followers of DIONYSUS

Satyre Ménippée or **Satire Ménippée** (sătēr' mānēpā') [from *Saturae Menippeae*, lost work of Varro based on satires by the Greek cynic Menippus], anonymous French political lampoon (1st ed , 1594) circulated in Paris in the 1590s, especially at the States-General (1593) A brilliant burlesque of the part of the leaders of the League at the session, it helped sway Parisian opinion to the side of Henry IV A canon, Le Roy, had the principal part in writing it

Sau, river, Yugoslavia see SAVA

sauce, seasoning or flavoring composition, usually in liquid or semiliquid form, used as an appetizing accompaniment for meat, fish, vegetables, and desserts Since ancient Roman times sauces have been considered an important feature of good cookery, many famous cooks and epicures having distinguished certain concoctions by their own names Sauces may be roughly divided into two general classes, hot and cold, and divided again, the hot as white and brown, the cold as the mayonnaise type and the type used for coating cold foods and often containing gelatine Hot sauces, made with a base of flour, fat, and milk or stock, may be varied by seasonings and added ingredients into some hundred different sorts Some of the familiar sauces are soubise or onion sauce, hollandaise, a rich composition of butter and egg, béchamel, a rich white sauce made with white stock, and béarnaise, with vinegar, onions, and egg yolks Stewed fruits, such as apple and cranberry, are sometimes classified as sauces Commercial sauces are finely blended extracts of various fruits and vegetables with vinegar and condiments Worcestershire-style sauce contains vinegar, onions, spices, chilies, soy, and pickled fish, finely blended and strained Leicester sauce is less pungent Chili sauce, most catchup, and creole sauce contain tomatoes Sauces for puddings and desserts include syrup, custard, fruit, and creamed sauces (hard sauce and wine and brandy sauce)

Saud, Ibn see IBN SAUD

Saudi Arabia (sou'dē ŭrā'bēŭ), kingdom (c 900,000 sq mi ? pop c 5,500,000?), Arabia Riad is the capital Saudi Arabia is washed on the west by the Red Sea and on the east by the Persian Gulf Its land boundaries include, on the north, Jordan (frontier partly undefined), Iraq, Kuwait, and two neutral territories and, on the east, Qatar and Trucial Oman The vast desert stretches of the Rub al Khali in the south make the boundaries with Yemen, Aden, and Oman indeterminate The country was in fact, though not in name, founded in 1925, when the ruling monarch, IBN SAUD, then king of the Nejd, formally annexed the Hejaz In 1927 the kingdom of the Nejd and the Hejaz was proclaimed and recognized by Great Britain The name Saudi Arabia was adopted in 1932. The country is a nearly absolute monarchy, ruled by the king and his sons under Moslem law In several respects Saudi Arabia is one of the leading Arab nations of the world. It is of prime religious significance, for within the Hejaz are the holy cities of MECCA and MEDINA, which yearly attract thousands of pilgrims. Its economic importance also is great, with El Hasa (the east coast) having perhaps the largest oil reserves in the world. The oil concession for the entire country was granted in 1933 to a corporation organized in Delaware, the Arabian American Oil Company With the royalty and rental fees the royal government intends to reduce poverty and undertake a large program of public works, including improvements to the deep-water port of Dammam on the Persian Gulf and construction of a railroad from Riad to the coast In the Second World War, Saudi Arabia was until late in the conflict neutral but sympathetic to the British In March, 1945, it declared war on the Axis and became an original member of the United Nations It belongs to the ARAB LEAGUE and in 1948 gave its support (but few troops) to the attack on Israel For additional history and geography see ARABIA, HEJAZ, NEJD See K S Twitchell, *Saudi Arabia* (1947)

Sauer, Christopher see SOWER, CHRISTOPHER

sauerkraut (sou'ûrkrout") [Ger ,=sour cabbage], finely shredded cabbage fermented and preserved in a brine composed of its own juice and salt Its making, formerly a branch of domestic food preservation, is now chiefly a large-scale commercial operation Layers of cabbage and salt are placed under pressure in large wooden vats, inoculated with a lactic acid culture, and kept at a temperature of about 80°F for two months, then sold in bulk or canned The juice, also canned is used as an appetizer, alone or in vegetable cocktails

Saugerties (sô'gurtēz), village (pop 3,916), SE N Y , on the west bank of the Hudson and N of Kingston, at the foot of the Catskills, inc 1831 Esopus Creek empties into the Hudson here There are stone quarries, and paper and other products are made

Saugus (sô'gŭs), town (pop 14,825), NE Mass , N of Boston, settled before 1637, set off from Lynn 1815 The Saugus ironworks (1645) were the first successful enterprise of the kind in the colonies

Sauk Centre (sôk), city (pop 3,016), central Minn , WNW of St Cloud, on the Sauk river, settled 1856, platted 1863, inc as a village 1876, as a city 1889 It is a trade center for a farm and dairy region A state industrial school for girls is here Sinclair Lewis laid the scene of *Main Street* in Sauk Centre, his birthplace

Sauk City, village (pop 1,325), central Wis , adjoining Prairie du Sac on the Wisconsin and NW of Madison, founded 1838, inc 1854 It is a farm trade center Agoston Haraszthy de Moksca settled here (1840), and other European refugees followed See August Derleth, *Village Daybook a Sac Prairie Journal* (1947)

Sauk Indians see SAC AND FOX INDIANS

Sauk Rapids, village (pop 2,981), central Minn , on the Mississippi just N of St Cloud, in a farm area near granite quarries, platted 1851, inc 1881

Saul [Heb ,=asked for], fl 1025 B C , first king of the ancient Hebrews He was a Benjamite Samuel anointed him king Saul's territory was probably limited to the hill country of Judah and the region to the north, and his proximity to the Philistines brought him into constant conflict with them The Bible tells his story dramatically, for it is really the story of David, first the protégé, then the rival, finally the successor, of the king Saul's son JONATHAN was David's dear friend—a fact that adds pathos to the story of Saul's attempts to destroy David David would not harm Saul, who nevertheless met a melancholy end after he went to the witch of Endor and heard his defeat and death prophesied Saul fell in battle with the Philistines on Mt Gilboa 1 Sam 10-31 There is an oratorio by Handel called *Saul* The Saul of Gen 36 37 is elsewhere called SHAUL

Saul of Tarsus see PAUL, SAINT

Sault Sainte Marie (sōō' sānt mûrē'), city (pop 25,794), S Ont , on the north shore of the St Marys river opposite Sault Ste Marie, Mich A railroad bridge and a ferry connect the two cities A Canadian government canal and lock were completed in 1895 The city is an important port, with ore docks, steel, lumber, pulp, and paper mills, foundries, railroad shops, smelting and chemical works, and breweries It is a tourist center and the gateway to hunting and fishing resorts in near-by lake and forest regions

Sault Sainte Marie, city (pop 15,847), co seat of Chippewa co , E Upper Peninsula, N Mich , on the St Marys river opposite Sault Ste Marie, Ont , inc as a village 1879, as a city 1887 The region (known as "the Soo") on the American and Canadian sides of the rapids here was named (1641) by the Jesuits Isaac Jogues and Charles Raymbault, and later Father Marquette's Jesuit mission was here (1668). Early explorers on their way from Montreal to Lake Superior and the Northwest paused in the Indian village at the rapids, where in the 18th and 19th cent a succession of French and British trading posts were constructed. The U S Fort Brady, built after Lewis Cass had negotiated (1820) an Indian treaty here, was used until the Second World War The Sault Ste Marie Canal and lock opened in 1855 links Lakes Superior and Huron on the American side of the rapids. Since the Federal government's building of additional locks (1881-1943), together with Canada's lock, the volume of iron-ore, coal, grain, limestone, and lumber tollfree shipping has increased manyfold Carbide, leather, woolen goods, lumber, and dairy and other products are made here The city is a port of entry The library's museum has letters and papers of the early white settlers The site of Father Marquette's mission, the house of H R SCHOOLCRAFT, the house of the fur trader John Johnston, and other historic sites, as well as the excellent fishing and hunting near by, draw tourists. A U S. coast guard base is here.

Saumaise, Claude de: see SALMASIUS, CLAUDIUS

Saumarez, James Saumarez, baron de (sô'murĕz), 1757-1836, British admiral He entered the navy in 1770, rose from the ranks, and attained command of a vessel in 1781 Saumarez distinguished himself in the wars with the French, though he did not command at any of the great victories He was with Admiral George RODNEY at the defeat of Admiral de Grasse in the West Indies (1782), with Admiral John JERVIS at the victory of Cape St Vincent (1797), and with Horatio NELSON at Aboukir in 1798, taking an important part in each engagement In 1801 he became rear admiral and was created baronet The same year, after an initial repulse, he defeated a French and Spanish fleet off Algeciras in his greatest victory Made vice admiral in 1807, he conducted a five-year patrol of the Baltic (1809-14), which did much to strengthen Russia for the final campaigns against Napoleon. In 1814 Saumarez was made an admiral, and in 1831 he was raised to the peerage

Saumur (sōmur'), town (pop 14,885), Maine-et-Loire dept , W France, on the Loire It is noted for the sparkling wine of the region and for its cavalry school, founded in the 18th cent Dating from Roman times, Saumur was seized (1026) from the count of Blois by Fulk Nerra, count of Anjou, next to Angers, Saumur became the most important town of ANJOU In the 16th and 17th cent it was a great Huguenot center, with a famous academy founded by Philippe de MORNAY Among the notable buildings are the Church of Notre Dame de Nantilly (early 12th cent), the town hall (16th cent), and many Renaissance houses The town suffered damage in the Second World War

Saunders, Sir Charles, 1713?-1775, British admiral He had seen 32 years of service in the British navy when he was selected to command the fleet that in 1759 carried the soldiers of James Wolfe up the St Lawrence to Quebec To this skillful feat of navigation the fall of Quebec may be in part ascribed Saunders was knighted in 1761, he became first lord of the admiralty in 1766 and an admiral in 1770 He is buried in Westminster Abbey. See biography by Edward Salmon (1914)

Saunders, Sir Charles Edward, 1867-1937, Canadian wheat expert, b London, Ont , grad Univ. of Toronto, 1888, and Johns Hopkins (Ph D , 1891) Appointed (1903) dominion cerealist, he originated four hardy, early-ripening varieties of wheat; his Marquis became the dominant type of Canadian wheat For his notable services to agriculture, he was knighted in 1934 In his wheat discoveries, he worked under and continued the experiments begun by his father, **William Saunders**, 1836-1914, who was director (1886-1911) of the experimental-farms branch of the Canadian department of agriculture In many scientific papers he reported his findings on the cross-breeding of cereals and fruits His *Insects Injurious to Plants* (1883) has passed through several editions

Saunderson or Sanderson, Nicholas, 1682-1739, English mathematician He was blind from infancy A lecturer (1707) on Newtonian philosophy, Cambridge Univ , in 1711 he became Lucasian professor of mathematics. To enable himself to accomplish figuring by touch, he invented a calculating machine He was a fellow of the Royal Society. He wrote *Elements of Algebra* (1740)

sausage, food consisting of finely chopped meat mixed with seasonings and, usually, other ingredients Over a hundred different varieties are known, many of them indigenous to particular localities and some of great antiquity Many different ingredients have been used for different varieties One of the earliest was said to be made from shrimps, crabs, oysters, prawns, and lobsters Black pudding, an ancient dish in England and Scotland, was made of oatmeal, suet, and hog's blood, variously seasoned in different localities White pudding was suet with toasted oatmeal A special white pudding is made in France of chicken, yolks of eggs, spices, and bread crumbs The pork sausage commonly known in the United States is composed of pork, potato flour, water, and seasonings Liver puddings contain parboiled liver with other ingredients Sausages are divided into two classes, wet and dry, according to whether they are made with fresh or cooked meat Dry kinds may be pickled, smoked, or boiled Salame, common in Italy and Germany, contains beef, pork, and bacon and is highly seasoned The large Bologna sausage is of veal, pork, and bacon and is smoked Frankfurters and wienerwurst are small, smoked varieties containing lean pork and beef. Sausage is usually packed in casings made of the cleaned and

salted intestines of the slaughtered animals or in cellulose casings

Sausalito (sô'sulē'tō), residential city (pop 3,540), W Calif, N of San Francisco across the Golden Gate, inc 1893 Fort Baker and Fort Barry overlook the harbor

Saussure, Horace Bénédict de (ôras' bānādēkt' dū sōsür'), 1740–99, Swiss physicist and geologist. He was professor at the Univ of Geneva from 1762 to 1786 He is famous for his studies of the geology, meteorology, and botany of the mountainous regions of Europe, particularly the Alps These are described in his great work, *Voyages dans les Alpes* (4 vols, 1779–96) See biography by D. W Freshfield and H F Montagnier (1920)

Saussure, Nicolas Théodore de (nēkôla' tāôdôr' dū sōsür'), 1767–1845, Swiss chemist and plant physiologist, son of H B de Saussure He applied the methods of chemistry to the study of nutrition and respiration in plants and contributed to the knowledge of fermentation, of the conversion of starch into sugar, and of the composition of alcohols

sauterne · see WINE

Sava (sa'vä) or **Save** (säv), Ger *Sau* (zou), Hung *Szava* (sä'vŏ), river, 583 mi long, N Yugoslavia It rises in two headstreams in the Julian Alps and flows SE past Ljubljana, Zagreb, and Sabac to join the Danube at Belgrade It is navigable for two thirds of its course during part of the year The Sava basin is a fertile agricultural region

Savage, Edward, 1761–1817, American portrait painter, engraver, and goldsmith, b Princeton, Mass, self-taught except for a brief period in London, where he probably studied with Benjamin West He painted a portrait of George Washington for Harvard and a group picture of the Washington family His engraved portraits of Thomas Jefferson and Dr Benjamin Rush are highly prized

Savage, Eugene Francis, 1883–, American mural painter, b Covington, Ind Much of his youth was spent in Washington, D C, where he studied at night in the Corcoran School of Art He later attended the Art Institute of Chicago and Chicago Academy of Fine Arts In 1912 he won the American Academy fellowship for Rome After three years abroad he returned to the United States, where he taught at Cooper Union, Carnegie Institute of Technology, and, after 1924, Yale Univ His murals may be seen in the Elks National Memorial, Chicago, the Buffalo Savings Bank, Buffalo, N Y, the Friday Morning Club, Los Angeles, Yale Univ, Columbia Univ, and the City Art Museum, St Louis His work is characterized by its highly decorative use of line and color His themes are often biblical or mythological

Savage, Minot Judson (mī'nut), 1841–1918, American Unitarian clergyman and writer, b Norridgewock, Maine, grad Bangor Theological Seminary, 1864 After serving for nine years in the ministry of the Congregational Church, he became a Unitarian He was pastor of the Third Unitarian Church, Chicago (1873–74), of the Church of the Unity, Boston (1874–96), and of the Church of the Messiah, New York city (1896–1906) In some of his sermons and writings he advocated Protestant acceptance of Darwinism His many books include *Christianity, the Science of Mankind* (1874), *The Religion of Evolution* (1876), *The Morals of Evolution* (1880), *Social Problems* (1886), and *Immortality* (1906)

Savage, Richard, 1697?–1743, English poet The now discredited story of his illegitimate descent from a noble line and of his persecutions, set forth in a biography by Samuel Johnson, won him a reputation which his works—*The Bastard* (1728), *The Wanderer* (1729), poems, *Love in a Veil* (1719), *Sir Thomas Overbury* (1724), plays—did not merit See biography by S V Makower (1909)

Savage's Station see SEVEN DAYS BATTLES

Savaii (savī'ē), formerly **Chatham Island,** volcanic island (703 sq mi, pop 18,654), Western Samoa, under New Zealand mandate, largest and most westerly of the Samoan islands Fertile and mountainous, it contains Mauga Silisili (6,094 ft), the highest peak in Samoa There are many craters with well-forested slopes Tussivi is the headquarters of the resident commissioner

Savalan, mountain, Iran, see SABALAN

Savanna (suvă'nu), city (pop 4,792), NW Ill, on the Mississippi above Clinton, Iowa, in a farm area, settled 1828, inc 1874 An early river port, the city is a trade center and shipping point, with railroad shops Near by is Mississippi Palisades State Park

savanna or **savannah** (both suvă'nu), tropical or subtropical grassland lying on the margin of the trade-wind belts The migration of the belts or equatorial calms brings a rainy season, when savannas are covered with grasses, these wither in the dry season when trade winds prevail Parklike savannas near the equatorial belt, e g, in Nigeria, support clumps of trees The most extensive savannas—all important pasture lands—are in Africa, others include the llanos and the campos of South America

Savannah (suvă'nu) **1** City (pop 95,996), co seat of Chatham co, SE Ga, a port of entry with a good harbor on the Savannah river 16 mi from its mouth, inc 1789 The port is a rail, fishing, and industrial center, exporting rosin, turpentine, cotton, lumber, tobacco, and the products of its many factories. Georgia's oldest and second largest city, it was founded by James OGLETHORPE in 1733 and was the colonial seat of government. In the American Revolution the British took Savannah on Dec 29, 1778, and held it until July, 1782. A navy-army force of French and Americans led by D'Estaing and Benjamin Lincoln tried to retake the city in 1779, first by siege and then by direct assault (on Oct 9), but failed dismally Savannah was state capital, 1782–85 With the growth of trade, especially after the Revolution and the War of 1812, the city came to rival Charleston as a commercial center The first steamship to cross the Atlantic, the *Savannah*, sailed from here to Liverpool in 1819 In the Civil War although Fort Pulaski (see PULASKI, FORT) was captured by Federals in 1862, the city did not fall until Dec 21, 1864, when Sherman entered it on completing his march to the sea Savannah, well planned at its founding, has beautiful, wide, shaded streets, many parks, and numerous fine ante-bellum houses It is a popular winter resort and is the seat of Christ Episcopal Church (1838), housing the colony's first congregation (1733), preached to by John Wesley in 1736, the Roman Catholic co-cathedral of St John the Baptist (1876), the Telfair Academy of Arts and Sciences, with its fine art gallery, Armstrong Junior College (1935), Georgia State College (Negro, 1891), and the Georgia Historical Society About half the city's population is Negro **2** City (pop 2,108), co seat of Andrew co, NW Mo, N of St Joseph, laid out 1842 It ships farm products **3** Town (pop 1,504), co seat of Hardin co, S Tenn, on the east bank of the Tennessee and Sb of Jackson, in a farm area Near by are Shiloh National Military Park (3 729 26 acres, est 1894) and Shiloh National Cemetery at Pittsburg Landing (see SHILOH, BATTLE OF) Pickwick Dam is south

Savannah, river formed when the Tugaloo, flowing along the S C–Ga line, is joined by the Seneca The Savannah, continuing the boundary between South Carolina and Georgia, flows southeast 314 mi to Tybee Sound, an arm of the Atlantic The Clarks Hill Dam, under construction above Augusta, is for flood control and hydroelectric power

Savary, Anne Jean Marie René (ăn' zhă' marē' rună' săvärē'), 1774–1833, French general in the Napoleonic Wars He presided at the trial of the duc d'ENGHIEN (1804), was created duke of Rovigo (1808), and became ambassador to Russia (1807) In 1808 he lured FERDINAND VII of Spain into France, and shortly thereafter he took command in Spain Succeeding FOUCHÉ as minister of police (1810), Savary did not approach his predecessor's skill and efficiency He wished to go with Napoleon to St Helena, but the English sent him to Naples, there the Bourbons condemned him to death, but he escaped and in 1819 was allowed to return to France He commanded an Algerian expedition in 1831 See his letters (4 vols, 1914–24, in French)

Save, river, Yugoslavia see SAVA

Saveh (savă'), town (1947 estimated pop 15,365), N central Iran, SW of Teheran and NW of Kum It is in a fertile district producing cotton and pomegranates Archaeological investigations have been made

Savery, William (să'vurē), 1721–87, American cabinetmaker Little is known of his early life, but he is believed to have resided in Philadelphia from c 1740 He is noted for his artistic and original interpretation of 18th-century English furniture styles and for his fine workmanship Examples of his work are displayed at the Metropolitan Museum

Savigny, Friedrich Karl von (frē'drĭkh kärl' fŭn sa'vĭnyē), 1779–1861, German jurist and legal historian He taught (1810–42) Roman law at the Univ of Berlin, of which he was the first rector In 1814 Savigny wrote *The Vocation of Our Time for Legislation and Jurisprudence* (Eng tr, 1831), which developed the view that the legal institutions of a people are an indigenous expression of the culture and may not be externally imposed He argued that the jurists who formulate law for an advanced culture are representatives of the popular spirit His works on Roman law, models of historical research, are notable for their explication of the social factors The greatest is *Geschichte des römischen Rechts im Mittelalter* [history of the Roman law in the Middle Ages] (2d ed, 7 vols, 1834–51) His books on the modern European system of Roman law include *The Law of Possessions* (Eng tr, 1848) and the uncompleted *System of Modern Roman Law* (partial Eng tr, 1867–94)

Savile, George. see HALIFAX, GEORGE SAVILE, MARQUESS OF

Savile, Sir Henry (să'vĭl), 1549–1622, English classical scholar and mathematician, grad Merton College, Oxford (B A, 1566, M A, 1570). Elected warden of Merton College (1585), he also became provost of Eton, in 1596 He is principally remembered for his translation of four books of Tacitus' history (1591), for his edition of St John Chrysostom (8 vols, 1610–13), and for being one of the translators of the Bible under King James. At Oxford he founded the chairs of geometry and astronomy.

Saville, Marshall Howard (sŭvĭl'), 1867–1935, American archaeologist, b Rockport, Mass, studied (1889–94) anthropology at Harvard Saville was Loubat professor of American archaeology at Columbia Univ from 1903 He studied the remains of the mound builders of S Ohio and made many expeditions to Central and South America, he was an authority on Mayan ruins Much of his work was done under the auspices of the American Museum of Natural History and the Museum of the American Indian, New York city

savings bank, financial institution which receives savings deposits of individuals, often up to a specified amount, places them in sound investments, and provides a modest return in the form of interest to its depositors Mutual savings banks are the only type which accept savings deposits exclusively They are state-chartered institutions, owned by their depositors, and are managed for their mutual benefit by self-perpetuating boards of trustees Other types of savings banks include stock savings banks, national and state commercial banks, and industrial banks However, since all of these banks accept demand and other time deposits, as well as savings deposits, and perform a wide variety of banking services, they are usually classed as commercial banks A great many mutual savings banks as well as commercial banks are insured by, and operate under the regulations of, the Federal Deposit Insurance Corp Savings deposits are also received by the Postal Savings System, which operates within the U S Post Office Dept See F J Sherman, *Modern Story of Mutual Savings Banks* (1934), John Lintner, *Mutual Savings Banks in the Savings and Mortgage Markets* (1948), J I Bogen, *Financial Handbook* (1948)

Savoie (savwä'), department (2,389 sq mi, pop 235,949), E France, in SAVOY, bordering on Italy Chambéry (the capital) and Aix-les-Bains are the chief towns

Savoie, Haute- · see HAUTE-SAVOIE

Savo Island (sa'vō, sä'vō), volcanic island, S Pacific, one of the Solomon Islands It is N of Guadalcanal In the Second World War the naval battle (1942) of Savo Island resulted in a costly defeat for U S forces

Savona (säVō'nä), city (pop 57,354), capital of Savona prov, Liguria, NW Italy, a Mediterranean seaport The seat of a marquisate in the Middle Ages, it was a flourishing commercial center until crushed by Genoa in 1528 It has a fort, a medieval tower, and a cathedral (17th cent) The well-equipped harbor handles large coal imports, there are heavy industries and glass factories

Savonarola, Girolamo (jĕrō'lämō savōnärō'la), 1452–98, Italian religious reformer, b Ferrara He joined the Dominicans (1475) In 1481 he went to San Marco, the Dominican house at Florence, where he soon became a popular preacher, attacking every sort of laxity with burning eloquence He even predicted events, sometimes (as in the date of the death of Innocent VIII) with success. In 1491 he became prior of San Marco, and on the exile of the Medici (1494) he was real spiritual ruler of the city His severity was terrifying, thus he trained his followers to spy out the vices of others In horror at the scandals of the court of Pope Alexander VI, Savonarola felt inspired to put Florence against him politically by joining with Charles VIII of France, now invading Italy Alexander silenced him, then Savonarola resumed preaching, and the pope excommunicated him for disobedience (1497) Savonarola now declared Alexander was no true pope, being elected by simony Florence seethed There was hostility to him in the city, led by local Franciscans, and in March, 1498, the government, threatened by a papal interdict, asked him to stop preaching His run came suddenly when one of his disciples accepted an ordeal by fire to prove Savonarola's holiness Rain prevented the event Nevertheless there were riots, and Savonarola and two disciples were arrested by the city Under torture he confessed to being a false prophet, or so it was announced The three were hanged for schism and heresy, papal commissioners had passed on the sentence, which was certainly assured by Alexander's vindictiveness See Ralph Roeder, *The Man of the Renaissance* (1933)

Savoy (suvoi'), Fr *Savoie* (savwa'), Alpine region, E France, along the Swiss and Italian borders It is bounded by the Alpine crest (east), the Lake of Geneva (north), the Rhone (west), and Dauphiné (south) It is now divided into two departments, Savoie (south) and Haute-Savoie (north) Commanding the passes which connect Italy and France (notably the Little SAINT BERNARD and the Mont CENIS), it also includes the highest Alpine peak, the MONT BLANC Agriculture and dairying have long been the chief resources of the population. Among the numerous mountain resorts and spas Chamonix, Aix-les-Bains, Évian-les-Bains, and Annecy are the best known Chambéry is the historical capital. Occupied by the ALLOBROGES when Julius Caesar conquered the region, Savoy was part

of the successive kingdoms of BURGUNDY and, after 933, that of Arles It was divided into numerous fiefs when the first counts of Savoy appeared in the 11th cent ; from then on its history was closely linked with that of the house of Savoy (see SAVOY, HOUSE OF) Under AMADEUS VIII, Savoy became a duchy; it then extended far into France, Switzerland, and Italy After the losses (to Switzerland) of Lower VALAIS (1475) and GENEVA and VAUD (1536) and (to France) of GEX, BRESSE, and Bugey (1601), the interest of the dukes shifted increasingly to PIEDMONT Turin became the chief ducal residence When VICTOR AMADEUS II became king of Sardinia, Savoy became a part of that new state (see SARDINIA, KINGDOM OF) Annexed by France in 1792, it was returned to Sardinia in 1815 Finally, by the Treaty of Turin (1860), Savoy (which is French-speaking) was ceded to France and was annexed after a plebiscite

Savoy, the, chapel in London, between the Strand and the Thames Its name is derived from the palace of Peter of Savoy, uncle of the queen of Henry III Destroyed (1381) in Wat Tyler's Rebellion, it was rebuilt (1505) as the Hospital of St. John of Jerusalem by Henry VII and finally destroyed when its foundations were removed in 1810 before the Waterloo Bridge was built The chapel, which was connected with the hospital, is always maintained by the queen The **Savoy Conference** of 12 bishops of the Church of England and 12 Puritan divines was convened in 1661 They failed to agree on alterations in the Book of Common Prayer Near the chapel is the **Savoy Theatre,** erected in 1881 by D'Oyly Carte for the production of Gilbert and Sullivan operas

Savoy, house of, ancient dynasty of Western Europe It ruled Savoy and Piedmont from the 11th cent , the kingdom of Sardinia from 1720 to 1861, and the kingdom of Italy from 1861 to 1946 Its first historical member was Count Humbert the Whitehanded, a powerful feudal lord of the kingdom of Arles in the 11th cent He held possessions in SAVOY and acquired, through marriage, several fiefs in PIEDMONT, including TURIN Through marriage, diplomacy, and conquest his successors expanded their holdings in France, Switzerland, and Italy, acquiring BRESSE and BUGEY, Chablais (on the south shore of the Lake of Geneva), VAUD, lower VALAIS, GEX, GENEVA, IVREA, PINEROLO, NICE, and other seigniories and towns CHAMBÉRY, acquired in 1232, became the seat of the counts, whose scattered possessions were gradually consolidated AMADEUS VIII took the ducal title in 1416 His son Louis (d 1465) married Anne de Lusignan, titular heiress to the kingdoms of Jerusalem, Cyprus, and Armenia, these were titles later borne by ruling members of the house The expansion of Switzerland and the ITALIAN WARS resulted in the temporary disintegration of the duchy The Swiss took the lower Valais (1475) and Vaud (1536), Geneva became independent (1533), and the rest of the duchy was occupied (1536) by Francis I of France In 1559, however, Duke EMMANUEL PHILIBERT called Ironhead, obtained the restoration of his duchy—except the larger part of the Swiss conquests—at the Treaty of Cateau-Cambrésis Emmanuel Philibert made Turin his capital, thus shifting the center of his duchy from France to Italy The language and tone of the court, however, remained French until the late 18th cent Emmanuel Philibert's son and successor, CHARLES EMMANUEL I, unsuccessfully sought to reconquer Geneva He ceded (1601) Bresse, Bugey, and Gex to France in exchange for the marquisate of Saluzzo VICTOR AMADEUS II first sided with France in the War of the Spanish Succession, but later passed to the allied side, his cousin was Prince EUGENE OF SAVOY The peace settlement of 1713–14 (see UTRECHT, PEACE OF) made Victor Amadeus king of Sicily and enlarged his Piedmontese territories Spain reconquered Sicily in 1718, but the QUADRUPLE ALLIANCE was formed, and in 1720 Victor Amadeus was given Sardinia in exchange for Sicily The political history of the dynasty became that of the kingdom of Sardinia (see SARDINIA, KINGDOM OF) and of Italy Victor Amadeus II was succeeded by Charles Emmanuel III (reigned 1730–73), Victor Amadeus III (reigned 1773–96), and Charles Emmanuel IV, who lost all but the island of Sardinia to Napoleon I and abdicated (1802) in favor of his brother, VICTOR EMMANUEL I Restored to his possessions in 1814, Victor Emmanuel I abdicated in 1821, after the outbreak of a revolution in Piedmont His brother and successor, Charles Felix, died without issue in 1831, and the cadet line of Savoy-Carignano, descended from a younger son of Charles Emmanuel I, came to the throne in the person of CHARLES ALBERT In his reign the house of Savoy became the center of the RISORGIMENTO, the movement which led to the unification of Italy under his son, VICTOR EMMANUEL II Savoy itself, however, was ceded to France in 1860 HUMBERT I, who succeeded (1878) Victor Emmanuel II as king of Italy, was assassinated in 1900 His son, VICTOR EMMANUEL III, took the title emperor of Ethiopia (1936) and king of Albania (1939), after the Italian armistice (1943) with the Allies in the Second World War he delegated (1944) his powers to his son, who briefly ruled (1946) as HUMBERT II from Victor Emmanuel's abdication until the establishment of the Italian republic Collateral branches of the house of Savoy include that of NEMOURS A younger son of Victor Emmanuel II, AMADEUS, was given the title duke of Aosta, he was king of Spain from 1870 to 1873 His ducal title descended to Emmanuel Philibert, duke of AOSTA

Savoy Conference. see SAVOY, THE.

Savoy Theatre. see SAVOY, THE

saw Saws of stone were used in the NEOLITHIC PERIOD, and that age knew ways of sawing hard stone, probably by using abrasives In Egypt, Greece, and Rome various types of saws were developed Hundreds of other types have been developed since steel came into general use These range from the delicate instruments used by surgeons, dentists, and jewelers to the powerful machines used in sawmills and the steel industry Some saws cut by means of abrasives, but typically the cutting edge of the saw has teeth To make the cut slightly wider than the blade, so that the saw will not bind or be pinched by the material sawed, the teeth are usually set, i e , bent out alternately in opposite directions The circular saw is not known to have been used for sawing wood before the 18th cent , it was used earlier for sawing stone and metals More recent is the band saw, like a belt running over two wheels The gang mill consists of several straight saws side by side, it cuts heavy timber into boards with one pass through the mill Before power sawmills were used, boards were made by laying a log over a saw pit, a two-handled saw was used, one sawyer working in the pit the other working above the log Well-known saws worked by hand include the bucksaw, for sawing firewood, the carpenter's crosscut saw, for sawing across the grain of wood, the carpenter's ripsaw, for sawing with the grain of wood, and the hack saw, for sawing metals The cylinder or drum saw makes a circular cut, it is used in such work as making buttons and the staves of barrels

Sawatch Mountains (sŭwŏch'), high range of the Rocky Mts , W central Colo , extending c 110 mi S from the Eagle river to the vicinity of Saguache The Arkansas river bounds the range on the east, to the west lie the Elk Mts and West Elk Mts The highest summits in the range are Mt Elbert (14,431 ft), Mt Massive (14,418 ft), and Mt Harvard (14,390 ft) Other noted peaks are La Plata (14,342 ft), Holy Cross (13,986 ft), and Ouray (13,955 ft) That part of the Sawatch Mts known as the Collegiate Range includes Mt Harvard, Mt Princeton (14,177 ft), and Mt Yale (14,172 ft)

sawfish, sharklike ray fish found in most warm seas It enters the lower Mississippi and ascends rivers in Africa and India The saw for which the fish is named is a flat extension of the upper jaw, sometimes 6 ft long and 1 ft wide, edged with a row of strong, toothlike structures The true teeth are within the small mouth Although it may sometimes be a weapon of defense, the saw is used chiefly to secure food by searching through the mud or sand for small animals, by slashing at schools of smaller fish, and by cutting pieces from larger fish The belief that it attacks whales is probably unfounded Some species reach a total length of 20 ft

sawfly, insect of the order Hymenoptera which resembles a wasp Its name refers to the female's use of the ovipositor to saw into plant tissues to deposit eggs Some species produce galls The larvae of some are leaf and stem miners, others feed on the surface of the foliage Various species are destructive to larch, spruce, broad-leaved fruit and shade trees, shrubs, and grasses

Sawtooth Mountains, central Idaho Its several towering ranges rise to forbidding peaks, such as Ryan Peak (11,900 ft) and Castle Peak (11,820 ft) Mt HYNDMAN is in the Pioneer Mts , sometimes considered part of the Sawtooth Mts

Sawyer, Charles, 1887–, U S Secretary of Commerce (1948–), b Cincinnati, LL B Univ of Cincinnati, 1911 He was a Cincinnati city councilor (1911–15), lieutenant governor of Ohio (1933–34), and Democratic gubernatorial candidate (1938) before he served (1944–45) as ambassador to Belgium and Luxembourg He succeeded W. Averell Harriman as Secretary of Commerce in May, 1948

Sax, Charles Joseph (sharl' zhôzĕf' saks'), 1791–1865, Belgian maker of musical instruments, who made some improvements in the clarinet His son, **Antoine Joseph Sax** (ătwan'), known as **Adolphe Sax** (adôlf'), 1814–94, was a highly successful instrument maker He designed the saxhorn, the saxophone, and the saxotromba and influenced the instrumentation of French bands of his time

Saxe, John Godfrey (săks), 1816–87, American editor and author of humorous verse, b Highgate, Vt , grad Middlebury College, 1839 He owned and edited (1856–60) the Burlington *Sentinel* and wrote for the Albany *Journal* His verse appeared in such leading periodicals as *Harper's Magazine* and was collected in several volumes, among them *Clever Stories of Many Nations Rendered in Rhyme* (1865) and *Leisure-Day Rhymes* (1875) Perhaps his best-remembered poem is "The Proud Miss McBride "

Saxe, Maurice, comte de (mō-rēs' kŏt' dŭ saks'), 1696–1750, marshal of France, one of the greatest generals of his age He was the natural son of Augustus II of Saxony and Countess Maria Aurora Konigsmark When very young he entered the Saxon army, and in 1720 he went into French service In 1726 he obtained leave to make good his claim to the duchy of Courland, but in 1727 the attempt failed He fought under the duke of Berwick in the War of the Polish Succession In the War of the Austrian Succession, he led the successful attack on Prague (1741) and later, after becoming (1744) marshal, made his reputation by victories at Fontenoy (1745) and Raucoux (1746) and the capture of Maastricht (1748) In recognition of his services Louis XV gave him life tenure of the castle of Chambord and (1747) the title of marshal general His *Mes Rêveries* (1757) is a remarkable work on the art of war Of a handsome physique, Maurice de Saxe was notorious for his amorous exploits and for his tragic liaison with Adrienne LECOUVREUR Among his descendants was George Sand L H Thornton has translated (1944) *Mes Rêveries* See Thornton, *Campaigners Grave and Gay* (1925)

Saxe-Altenburg (săks'-ăl'tunbûrg), Ger *Sachsen-Altenburg* (zak'sun-äl'tunbōōrk), former duchy, Thuringia, central Germany Altenburg was the capital It became a separate duchy early in the 17th cent and was ruled by an Ernestine line of the house of Wettin In 1672 it passed to the dukes of Saxe-Gotha, but from 1826 to 1918 it was again a separate duchy under a collateral line It sided (1866) with Prussia in the Austro-Prussian War In 1920 it was incorporated into Thuringia

Saxe-Coburg (săks'-kōbûrg), Ger *Sachsen-Coburg* (zak'sun-kō'bōōrk), former duchy, central Germany A possession of the Ernestine branch of the house of WETTIN, it was given by Ernest the Pious (d 1679) of SAXE-GOTHA to his son Albert On Albert's death (1699) it passed to his younger brother, John Ernest, duke of Saxe-Saalfeld, whose descendants ruled the duchy of Coburg until 1918 and the duchy of Saalfeld until 1826 The extinction (1825) of the related line of Saxe-Gotha-Altenburg resulted in a general redivision of the Ernestine possessions in 1826 The duchy of Saalfeld passed to the duke of Saxe-Meiningen, while Ernest III of Saxe-Coburg received the duchy of Gotha and assumed the style ERNEST I, duke of **Saxe-Coburg-Gotha** (-gō'thu) Ernest I's brother Leopold became in 1831 Leopold I, king of the Belgians, and his younger son was Prince Albert, consort of Queen Victoria of England Thus the house of Saxe-Coburg-Gotha became the ruling dynasty of Belgium and of England (where the name was changed to Windsor in the First World War) His elder son, Ernest II, sided with Prussia in the Austro-Prussian War of 1866 He was succeeded (1893) by Alfred, duke of Edinburgh, a son of Queen Victoria and the father of Queen Marie of Rumania On Alfred's death (1900) the duchy passed to his nephew, Charles Edward, who abdicated in 1918 In 1920 Saxe-Gotha was incorporated into Thuringia, and Saxe-Coburg into Bavaria

Saxe-Eisenach see SAXE-WEIMAR

Saxe-Gotha (-gō'thu), Ger *Sachsen-Gotha* (zak'sŭn-gō'tä), former duchy, central Germany, since 1920 included in Thuringia A possession of the Ernestine branch of the house of WETTIN, it passed in the 16th cent to the dukes of Saxe-Weimar After the death (1605) of Duke John of Weimar, his territories were divided among his heirs Saxe-Gotha, along with Coburg, Meiningen, Saalfeld, and other territories, went to Ernest the Pious, one of John's younger sons, who also inherited Saxe-Altenburg in 1672 On Ernest's death (1679), the succession was divided among seven sons, the eldest, Frederick I, received Gotha and Saxe-Altenburg which his direct descendants continued to rule until the failure of the male line in 1825 Saxe-Gotha was awarded in 1826 to Ernest III of Saxe-Coburg who became Ernest I of SAXE-COBURG-GOTHA Saxe-Altenburg became a separate duchy under a collateral line

Saxe-Meiningen, Ger *Sachsen-Meiningen* (zak'sunmī'ning-un), former duchy, Thuringia, central Germany The capital was MEININGEN A possession of the Ernestine branch of the house of WETTIN, it became a separate duchy in the 17th cent under one of the sons of Ernest the Pious of SAXE-GOTHA In the dynastic rearrangement which followed the extinction (1825) of the male line of Saxe-Gotha, the duke of Saxe-Meiningen received (1826) Saxe-Saalfeld from the duke of Saxe-Coburg (who obtained Gotha instead) and Saxe-Hildburghausen (whose duke was compensated with Saxe-Altenburg) Saxe-Meiningen sided (1866) with Austria in the Austro-Prussian War The last duke abdicated in 1918, and in 1920 Saxe-Meiningen was incorporated into Thuringia.

Saxe-Saalfeld see SAXE-COBURG.

Saxe-Weimar, Ger *Sachsen-Weimar* (zak'sŭnvī'mar), former duchy, Thuringia, central Germany It remained with the Ernestine branch of the house of WETTIN after the redivision of the Wettin lands in 1547, when Elector JOHN FREDERICK I of Saxony was captured at the battle of Muhlberg. John Frederick's heirs divided the Er-

nestine lands into the duchies of Weimar, Gotha, Coburg, Eisenach, and Altenburg Duke John of Weimar, who died in 1605, left several sons, one of them was the celebrated Protestant general, BERNHARD OF SAXE-WEIMAR, in the Thirty Years War. The cadet lines of Coburg, Gotha, and Eisenach having failed by 1640, their lands passed to the sons of Duke John Ernest the Pious, who had Gotha and Coburg, also inherited Altenburg in 1672, his possessions were again divided among his seven sons (see SAXE-GOTHA, SAXE-COBURG, SAXE-MEININGEN) An elder brother of Ernest the Pious, William, received Weimar and Eisenach, these duchies, however, were again separated under his heirs until the failure of the Eisenach line in 1741, when its territory (including Jena) reverted to Duke Ernest Augustus I of Saxe-Weimar Small as it was, the duchy of **Saxe-Weimar-Eisenach** (-I'zənäkh), which resulted from the reunion in 1741, was the most important of the Thuringian principalities It gained its greatest prosperity and cultural importance under Duke CHARLES AUGUSTUS, the patron and friend of Goethe, who made WEIMAR, the ducal capital, an intellectual center of Europe Charles Augustus sided against Napoleon I in the War of the Third Coalition, but was forced in 1806 to join the Confederation of the Rhine The Congress of Vienna raised him (1815) to the rank of grand duke Grand Duke Charles Alexander sided (1866) with Prussia in the Austro-Prussian War His grandson, William Ernest, abdicated in 1918, and in 1920 Saxe-Weimar-Eisenach was incorporated into Thuringia

saxhorn, type of brass wind musical instrument designed c 1850 by Adolphe Sax There are about seven varieties of saxhorn, the nomenclature of which is inconsistent and confusing All are transposing instruments, commonly used in bands

saxifrage (săk'ləfĭj), or **rockfoil**, any of a large number of plants of the genus *Saxifraga* or of similar and related genera, noted as low, rock-loving or alpine, spring-blooming herbs Commonly the leaves are borne in a tuft or rosette at the base, and the flowers in a cluster on a flower stalk Many species are prized for rock gardens by specialists but are not yet commonly cultivated in America The strawberry geranium (*Saxifraga sarmentosa*), called also mother-of-thousands and beefsteak saxifrage, is a species cultivated as a house plant, which, like the strawberry, propagates itself by runners The early saxifrage (*Saxifraga*, or *Micranthes, virginiensis*) is one of the better-known wild saxifrages of North America A large saxifrage of West Coast stream banks (*Saxifraga peltata* or *Peltiphyllum peltatum*) is called umbrella plant In the old doctrine of signatures, saxifrages, from an apparent ability to split rocks in obtaining a foothold, were prescribed for calculous formations in the body See Walter Irving and R A Malby, *Saxifrages or Rockfoils* (1915)

Saxo Grammaticus (săk'sō grumă'tĭkus), fl 1188–1201, Danish historian in the service of Archbishop ABSALON At Absalon's suggestion he wrote the *Gesta Danorum* (or *Historia Danica*) The first nine books are mostly composed of oral material and legends concerning the early Danes, including the story of Hamlet The remaining seven books, dealing more nearly with contemporary events, are a valuable source for Danish history The cognomen *grammaticus* [learned] was probably bestowed on Saxo after his death An English translation of the first nine books was made by Oliver Elton (1894)

Saxons, Germanic people who are first known to history through Ptolemy's mention of them in the 2d cent as living in the southern part of the Cimbric peninsula, probably that portion now included in Schleswig Holding both shores of the Elbe at its mouth and some of the islands near by, they gradually extended their territory southward to, and then across, the Weser In the 3d and 4th centuries they were active in raiding expeditions along the coasts of the North sea They made incursions into Roman dominions, and came into conflict with the Franks In the 5th cent they had settlements on the north shore of Gaul between the Elbe and the Loire This strip and the southeastern coast of Britain, where their piratical raids were feared and guarded against, were called by the Romans *litora Saxonica* [the Saxon shores] As the Roman occupation of Britain weakened, the Saxon bands not only increased their marauding attacks but began to settle in groups, resisting all attempts to drive them off, until by the end of the 6th century, they and their neighbors the Angles had become firmly established in the island, laying the foundations of the Anglo-Saxon kingdoms, of which Wessex, that of the West Saxons, proved the dominant unit (see ANGLO-SAXONS) After the migration to Britain, the Saxons on the Continent were the "Old Saxons" They occupied all the northwestern part of Germany. Their great struggles with the Franks ended in their being conquered by Charlemagne before the opening of the 9th cent and forming part of his empire By this conquest they were changed from a heathen to a Christian people In the division of the empire by the Treaty of Verdun (843), the lands of the Saxons were included in the section which made the beginning of modern Germany.

Saxony (săk'sŭne), Ger. *Sachsen* (säk'sŭn). The geographic concept of Saxony has undergone great shifts and has acquired many meanings in the past 15 centuries The land of the Saxons (see separate article), Saxony was in Frankish times roughly the area in NW Germany between the Elbe and Ems rivers; it also included part of S Jutland This area corresponds in part to the state of LOWER SAXONY, created after the Second World War After Charlemagne's conquest (8th cent) of the Saxons, their land was incorporated into the Carolingian empire, and late in the 9th cent the first **duchy of Saxony,** one of the German stem duchies, was created Comprising the three main divisions of Westphalia, Angria, and Eastphalia, it occupied nearly all the territory between the Elbe and Saale rivers on the east and the Rhine on the west, it bordered on Franconia and Thuringia in the south, and it included Holstein in the north Duke Henry I (Henry the Fowler) of Saxony was elected German king in 919, and his son, Emperor Otto I, established the Holy Roman Empire, which he and his descendants ruled until the death (1024) of Henry II Shortly before his imperial coronation, Otto I bestowed (960) Saxony on Hermann Billung (d 973), a Saxon nobleman, whose descendants held the duchy until the extinction of the male line in 1106 Lothair of Supplinburg was invested with the vacant duchy and upon becoming emperor as LOTHAIR II bestowed it on his Guelphic son-in-law, HENRY THE PROUD, who was already duke of Bavaria Emperor Conrad III deprived Henry of Saxony, which he gave (1138) to ALBERT THE BEAR of Brandenburg, but in 1142 the duchy was restored to Henry the Proud's son, HENRY THE LION The struggle between Henry the Lion and Emperor Frederick I ended with Henry's loss of all his fiefs in 1180 The stem duchy was broken up into numerous fiefs The Guelphic heirs of Henry the Lion retained only their allodial lands—the duchy of BRUNSWICK, from which emerged the duchies of Brunswick-Wolffenbüttel and of Brunswick-Lüneburg (the later kingdom of Hanover) Vast territories passed under the rule of ecclesiastic princes—notably the archbishops of Bremen, of Magdeburg, and of Cologne (who received the duchy of Westphalia) and the bishops of Münster, of Osnabrück, of Paderborn, of Minden, of Halberstadt, and of Hildesheim The counties of Holstein, Oldenburg, and Lippe also became immediate fiefs of the empire The ducal title of Saxony went to Bernard of Anhalt, a younger son of Albert the Bear of Brandenburg and founder of the Ascanian line of Saxon dukes Besides Anhalt, Bernard received LAUENBURG and the country around WITTENBERG, on the Elbe These widely separate territories continued after 1260 under separate branches of the Ascanians as Saxe-Lauenburg and Saxe-Wittenberg The Golden Bull of 1356 raised the duke of Saxe-Wittenberg to the permanent rank of elector **Electoral Saxony,** as his territory was called, was a relatively small area, and it lay outside the original stem duchy, being a part of the eastern march of Saxony, which was conquered from its Slavic population in the 13th cent To the south of Electoral Saxony extended the margraviate of Meissen, ruled by the increasingly powerful house of WETTIN The margraves of Meissen acquired (13th–14th cent) the larger parts of THURINGIA and of Lower LUSATIA and the intervening territories, and in 1423 Margrave Frederick the Warlike received Electoral Saxony as well and became (1425) Elector FREDERICK I Thus from NW Germany, Saxony had shifted to E central and E Germany In 1485 the Wettin lands were partitioned between two sons of Elector Frederick II Ernest, founder of the Ernestine branch of Wettin, received Electoral Saxony with Wittenberg and most of the Thuringian lands Albert, founder of the Albertine branch, received ducal rank and the Meissen territories, including Dresden and Leipzig Elector Ernest was succeeded by his son, FREDERICK III, who protected Luther and encouraged the Reformation, as did his brother and successor, John (reigned 1525–32), and John's son JOHN FREDERICK I One of the leaders of the SCHMALKALDIC LEAGUE, John Frederick was deprived of the electorate by Emperor Charles V after the battle of Mühlberg (1547) Duke MAURICE of Saxony, a grandson of Albert, received the electoral title, which remained in the Albertine branch until the dissolution (1806) of the Holy Roman Empire. The Ernestine branch retained after 1547 only the Thuringian duchies, which were split among its various lines (see SAXE-ALTENBURG, SAXE-COBURG, SAXE-GOTHA, SAXE-MEININGEN, SAXE-WEIMAR) Although Maurice had helped Charles V in conquering the Schmalkaldic League, he soon turned against the emperor and made Lutheranism the religion in his domains Despite his Protestant sympathies, Elector John George I (reigned 1611–56) sided with the emperor during the first part of the Thirty Years War; in 1631, however, he joined in an alliance with Gustavus II of Sweden; in 1635, at the Peace of Prague, he made peace with the emperor and obtained both Upper and Lower Lusatia. His failure to reach an understanding with Sweden led to the resumption of war in the same year, with the Saxons taking the field against Sweden and on the imperial side. Electoral Saxony was occupied by Swedish troops and thoroughly devastated, until in 1645 John George made a truce with Sweden. At the Peace of Westphalia (1648) he emerged—despite his military reverses and despite, or possibly because of, his frequent shifts of allegiance—as one of the two most powerful Protestant princes of Germany, the other being the elector of Brandenburg The old rivalry between Saxony and Brandenburg (after 1701 the kingdom of Prussia) was a decisive factor in later Saxon history, as was the election (1697) of AUGUSTUS II (who was Frederick Augustus I as elector of Saxony) as king of Poland In the NORTHERN WAR (1700–1721) Augustus lost and regained the Polish throne His son and successor in Saxony and Poland, AUGUSTUS III, retained the Polish crown in the War of the POLISH SUCCESSION (1733–35) In the War of the AUSTRIAN SUCCESSION, Saxony adhered to its by now traditional wavering policy, changing sides in the middle of the conflict It lost no territory at the Treaty of Dresden (1745), but paid a heavy indemnity to Frederick II of Prussia, who in 1756 opened the Seven Years War by invading Saxony once more At the Treaty of Hubertusburg (1763) Saxony was restored to its pre-war boundaries Its prestige was much diminished The death (1763) of Augustus III ended the union with Poland, where Stanislaus II became king Saxon rule in POLAND marked a period of decay During that period the electors had reverted to Roman Catholicism, but Saxony remained staunchly Lutheran Augustus II and Augustus III were lavish patrons of art and learning and greatly beautified their capital, DRESDEN The universities of Wittenberg and Leipzig had long been leading intellectual centers, and 18th-century Leipzig led in the rise of German literature and music, which reached its first peak in J S Bach Thus, from the cultural point of view, Saxony reached its flower in the 18th cent Saxony sided with France in the Napoleonic Wars, and in 1806 its elector was raised to royal rank, becoming King FREDERICK AUGUSTUS I His failure to follow his predecessor's policy and to change sides in time cost him (1815) about half his kingdom at the Congress of Vienna The **kingdom of Saxony** lost Lower Lusatia, part of Upper Lusatia, and all its northern territory including Wittenberg, Torgau, and Merseburg to Prussia Its principal remaining cities were Dresden, Leipzig, Chemnitz, and Plauen Saxony sided (1866) with Austria in the AUSTRO-PRUSSIAN WAR, was defeated, and was forced to join the North German Confederation From 1871 until the abdication (1918) of Frederick Augustus III, it was a member state of the German Empire Meanwhile the larger part of the territories ceded in 1815 were incorporated with several other Prussian districts into the Prussian **province of Saxony** (9,853 sq mi , 1939 pop 3,616,635), with Magdeburg its capital This was united after 1945 with Anhalt to form the Russian-occupied state of Saxony-Anhalt (see separate article) The former kingdom of Saxony formed after the revolution of 1918 the **state of Saxony** (6,561 sq mi , 1946 pop 5,558,566), with Dresden its capital The RIESENGEBIRGE, in the south, forms its border with Czechoslovakia In the 19th and 20th cent Saxony became one of the most industrialized German states, with the textile industry taking the first place CHEMNITZ became its main industrial, and LEIPZIG its main commercial center After the Second World War the state of Saxony was reconstituted under Russian occupation, it lost a small district E of the Lusatian Neisse, which came (1945) under Polish administration, but it gained a part of former Silesia W of the Neisse

Saxony-Anhalt (săk'sŭnē-ăn'hălt), Ger *Sachsen-Anhalt* (säk'sun-ăn'hălt), state (9,525 sq mi , pop 4,160,539), formed in 1946, in the Russian zone of occupation in E Germany Magdeburg is the capital Consisting, roughly, of the former state of ANHALT and of the former Prussian province of Saxony, the state is mountainous and hilly in the south, where it includes the eastern slopes of the HARZ mts. The section N of Magdeburg is part of the North German plain and is largely agricultural, with sugar beets the main crop The country is rich in minerals There are important potash mines at Stassfurt, coal mines at Halle, iron mines in the Harz, and copper mines at Mansfeld and Eisleben The chief industrial products include sugar, metal goods, and chemicals Among the chief cities are Magdeburg, Halle, and Halberstadt, and there are the historic towns of Wittenberg, Merseburg, and Eisleben (all in the former Saxony prov. of Prussia), and Dessau in Anhalt The towns and districts of Erfurt, Langensalza, and Mühlhausen, in the former Saxony prov. of Prussia, were incorporated with Thuringia after 1945. Though it possesses little historic unity, Saxony-Anhalt has considerable economic cohesion

saxophone, hybrid musical instrument invented in 1840 by Adolphe Sax. While a member of the clari-

net family, it has a conical bore like the oboe and is made of metal, resembling the brass instruments By 1846 there was a family of 14 saxophones, those in F and C intended for orchestral use, those in E flat and B flat for military bands The latter are most common today. The saxophone has a powerful tone, suggesting at times the clarinet and occasionally the cello Its serious solo literature is small, but it is often a member of jazz ensembles, particularly in "sweet" orchestras, such as that of Guy Lombardo. All saxophones except those in C are transposing instruments

Saxton, borough (pop 1,152), S Pa , SE of Altoona, inc 1867 Fisher's Summit Memorial commemorates an Indian attack on rangers of Capt William Phillips in 1780

Say, Jean Baptiste (zhäʹ bätēstʹ sāʹ), 1767–1832, French economist. In *A Treatise on Political Economy* (1803, Eng tr from the 4th ed , 1821) he effectively reorganized and popularized the theories of Adam Smith Say also developed a noted theory of markets and the concept of the entrepreneur His works include *Cours complet d'économie politique pratique* (6 vols , 1828–29) See study by Ernest Teilhac (1927, in French) His grandson was **Léon Say** (lāōʹ), 1826–96, statesman and economist. As minister of finance under several governments he accomplished the payment of war debts to Germany ahead of schedule He edited and wrote several works on finance

Say, Thomas (sā), 1787–1834, American naturalist, b Philadelphia He went to Georgia and Florida on a collecting expedition in 1818 and afterwards accompanied as naturalist the expeditions of Stephen H Long to the Rocky Mts and up the Mississippi and Minnesota rivers, gathering specimens of insects and mollusks Among his works are *American Entomology* (1824–28) and *American Conchology* (1830–34) In 1825 he moved to New Harmony, Ind , where he became a member of Robert Owen's colony See biography by H B. Weiss and G M Ziegler (1931)

Sayabec, Que see SAINDON

Sayan Mountains (sīyänʹ), central Asia, chiefly in the RSFSR, in S Siberia The Eastern Sayan Mts , rising to 11,453 ft , extend SE from the Yenesei river and form part of the boundary of the RSFSR and the Mongolian People's Republic The Western Sayan Mts , rising to 9,180 ft , extend NE from the Altai and border Tuva Autonomous Oblast The Sayan Mts yield gold, silver, lead, graphite, coal, and lumber

Saybrook, town (pop 2,332), S Conn , on the Connecticut above Essex, settled 1635 on the site of the present Old Saybrook under a patent issued to Lord Saye and Sele and Lord Brooke (hence the name) Saybrook colony was sold to Connecticut in 1644, the present town was incorporated in 1899 It includes the village Deep River and is often called Deep River, distinguishing it from Old Saybrook town, which lies south Gliders are made

Saybrook Platform see CAMBRIDGE PLATFORM

Sayce, Archibald Henry (sās), 1845–1933, English philologist, grad Queen's College, Oxford, 1869 From 1891 to 1915 he was professor of Assyriology at Oxford Among his many works are *An Assyrian Grammar for Comparative Purposes* (1872), *The Principles of Comparative Philology* (1874, 3d ed , 1885), *Introduction to the Science of Language* (1880, 4th ed , 1900), *The Races of the Old Testament* (1891), and *The Early History of the Hebrews* (1897, 2d ed , 1899) See his reminiscences (1923).

Saye and Sele, William Fiennes, 1st **Viscount** (fīnz, sāʹunsēl), 1582–1662, English statesman and promoter of colonization in America He was a Puritan in religious sympathy and a leader in the House of Lords in every measure against the king, as such he opposed the 1st duke of Buckingham and supported the Petition of Right (1628) From 1630, Viscount Saye, with Baron Brooke (Robert Greville), John Pym, and other Puritan lords and gentlemen entered into several colonization schemes The first of these was in Providence Island (Old Providence Island in the Caribbean off the Central American coast, now belonging to Colombia) The second was at Saybrook (named for the two lords), Conn , settled in 1635 on the strength of a deed obtained from the 2d earl of Warwick John Winthrop the younger was their governor at Saybrook In 1633 they bought a plantation at Cocheco (now Dover, N H) The lords planned to settle in New England, but their plan of establishing an hereditary aristocracy in the colonies met with definite disfavor in New England, and after a few years they lost interest in the settlements. In 1641 they sold the Dover establishment to Massachusetts and three years later they sold Saybrook to Connecticut In 1641 Providence Island was taken by the Spanish In the Puritan Revolution, Viscount Saye continued his alliance with the rebels although he did not desire the abolition of the monarchy. When the division with the Presbyterians arose, he maintained a position as an Independent. "Old Subtlety," as he was called, was a leader in the move for peace resulting in the short-lived Treaty of Newport. He retired after the king's execution.

Sayers, Dorothy Leigh (sārz), 1893–, English writer, grad Somerville College, Oxford, 1915 Her married name is Fleming. Taking first honors in medieval literature, she was one of the first women to receive an Oxford degree For a time she worked as a copy writer in a London advertising agency—the setting for her *Murder Must Advertise* (1933) Her first detective novel was *Whose Body?* (1923), in which appeared her young nobleman-detective, Lord Peter Wimsey, he reappeared in over a dozen novels between 1926 and 1939, including *The Nine Tailors* (1934) and *Gaudy Night* (1935), with a Somerville College setting *Begin Here*, a statement of faith, came out in 1941, *Creed or Chaos?* in 1949 She has made a translation (1949) of the first part of Dante's *Divine Comedy*

Sayre, Francis Bowes (sār), 1885–, American statesman, b South Bethlehem, Pa A graduate of Williams College (1909) and of Harvard Law School (1912), he later taught at both schools He married a daughter of Woodrow Wilson As Assistant Secretary of State (1933–39), he had charge of reciprocal-trade agreements He then served (1939–42) as U S high commissioner to the Philippines In the Second World War he escaped from Corregidor in Feb , 1942, and was appointed (1943) to assist the Secretary of State in foreign relief He headed UNRRA missions after 1945 to many countries throughout the world and was appointed (1947) U S representative on the United Nations Trusteeship Council Sayre wrote several books on law

Sayre, Lewis Albert, 1820–1900, American surgeon, b Bottle Hill (now Madison), N J , M D College of Physicians and Surgeons, 1842 One of the first in his field, a professor of orthopedic surgery (at Bellevue Hospital Medical College, from 1862), he devised valuable new methods in surgery as well as in other branches of medicine His son, **Reginald Hall Sayre,** 1859–1929, M D Bellevue, 1884, taught at Bellevue from 1885

Sayre 1 City (pop 3,037), co seat of Beckham co , W Okla , on the North Fork of the Red River, settled 1901, inc as a town 1903, as a city 1910 There are gas fields, oil refineries, and a carbon-black plant, the city is also a broomcorn market 2 Borough (pop 7,569), NE Pa , NW of Towanda, laid out 1871, inc 1891 It is a railroad center and manufactures railroad equipment

Sayreville, borough (pop 8,186), E N J , on the Raritan between New Brunswick and South Amboy, inc 1919 Brick and chemicals are made here

Sayville, unincorporated village (pop 4,183), on S Long Island, SE N Y , on Great South Bay It is a resort and yachting center and is noted for its blue-point oysters and flowers

Sazonov, Sergei Dmitreyevich (sĭrgāʹ dumēʹtrēuvĭch sŭzōʹnuf), 1861–1927, Russian statesman As minister of foreign affairs (1910–16) he played a leading role in the crisis that led to the First World War It was probably largely because of Sazonov's pressure that Russia mobilized (July 29, 1914) its armed forces, a gesture which hastened the catastrophe In the Russian civil war (1917–20) Sazonov was minister of foreign affairs in the Kolchak government See his memoirs, published in English as *Fateful Years* (1928) See also S B Fay, *The Origins of the World War* (1928)

Sb [Latin *stibium*], chemical symbol of the element ANTIMONY

Sc, chemical symbol of the element SCANDIUM.

scab see MANGE

scabies (skāʹbēēz, skāʹbēz) or **itch,** contagious disease caused by penetration of the skin by a mite (*Sarcoptes scabiei*) It occurs on hands and wrists, in the armpit and groin, and around the anus There are holes where the mites enter and blisters and redness of the skin Scratching because of the intense itching may result in infection with bacteria Scabies is contracted from towels or bed linen or by direct contact with a case To kill the mite it is necessary to scrub with hot water and soap and then rub in a sulphur ointment twice a day for three days, again taking a hot bath Clothing and sheets should be boiled to prevent reinfection A method more recently found effective consists of the application of an emulsion of benzyl benzoate to the body (not to the head) after a hot bath

scabiosa (skābēōʹsŭ) or **scabious** (skāʹbēŭs), any plant of the genus *Scabiosa*, annual or perennial garden flowers native to the Old World Scabiosas have lacy round- or flat-topped heads of small flowers, for which they are often called pincushion flower The plant is sometimes called mourning bride, particularly the purple-flowered sweet scabiosa, this species, the most commonly cultivated, has flowers also of various other colors Scabiosas were once used as a remedy for scabies

Scaevola (Caius Mucius Scaevola) (sēʹvōlu, -vūlu), 6th cent ? B C , quasi-historical Roman hero He tried to murder Lars Porsena, who was besieging the city, and was condemned to be burned at the stake When Scaevola put his right hand into the blaze and held it there, Porsena was so impressed he liberated him Scaevola's warning that many Romans would follow his example persuaded Porsena to raise the siege.

Scaevola (Quintus Mucius Scaevola), d. 82 B C , Roman jurist He was tribune of the people (106 B C) and consul (95 B C) He was consul with L Licinius CRASSUS and collaborated with him in the law ordaining a purge of the rolls of citizenship The wholesale disfranchisement of allies under this law brought on the Social War He was proconsular governor of Asia, where the people esteemed him highly Later he was elected pontifex maximus, but his sacred inviolability did not prevent his murder at the very hearth of Vesta in the proscription of MARIUS He made a systematic compilation of the civil law

Scafell (skōʹfēlʹ) or **Scaw Fell,** mountain group, Cumberland, England, in the Lake District, between Wastwater and the Esk river It includes the peaks Scafell (3,162 ft), Scafell Pike (3,210 ft ; maximum altitude of England), Great End (2,984 ft), and Lingmell (2,649 ft) The region is a tourist resort

Scala, Can Francesco della (känʹ franchäʹskō dĕlʹlä skäʹlä), or **Can Grande della Scala** (kang-granʹdä), 1291–1329, lord of Verona, the greatest member of the Ghibelline family that ruled Verona from 1277 to 1387 Can Grande was made imperial vicar by Emperor Henry VII and participated in all the struggles against the Guelphs, extending his territories to include Vicenza, Padua, Feltre, Belluno, and Treviso His was one of the important states of N Italy A great patron of the arts and letters, he was a protector of Dante, who mentioned him in the *Paradiso* The tombs of the Della Scala (or Scaligeri) family are one of the landmarks of Verona

scalawags (skāʹlŭwăgz), opprobrious epithet used in the South after the Civil War to describe native white Southerners who joined the Republican party and aided in carrying out the congressional RECONSTRUCTION program The scalawags and their Republican allies who came from the North, the CARPETBAGGERS, were notoriously corrupt.

scaldic poetry see OLD NORSE LITERATURE

scalds see BURNS AND SCALDS

scale, in cartography, the ratio between distances on the map and distances on the earth's surface It may be expressed in three ways numerically as a ratio or a fraction, e g , 1 63,360 or $\frac{1}{63,360}$, verbally, e g , "one inch to one mile" (not "one inch equals one mile"), and graphically, by recording mileage on a graduated line This last scale has the advantage of remaining true even if the size of the map has been changed by photographic processes. The more closely the size of features on the map approaches their actual size on the earth's surface, the larger is the scale of the map A large-scale map, therefore, shows more detail than does a small-scale map

scale, in music, any series of tones arranged in rising or falling order of pitches Scales serve to classify and catalogue the tonal material used in composition The chromatic scale, represented by all the notes of the piano keyboard, contains all the tonal material of Western music This scale, by means of EQUAL TEMPERAMENT, comprises 12 equal semitones and is therefore without MODE The diatonic scale, which may be illustrated by means of the white keys of the piano, contains both whole tones and semitones, seven basic modes are possible in this scale Two of these, the major and minor, assumed in the 17th and 18th cent a dominant position in Western music not challenged until the end of the 19th cent Although the diatonic scale is basically heptatonic, music which is in a major or minor TONALITY generally employs the remaining five tones of the chromatic scale as auxiliary or ornamental tones Music which employs them freely is said to be highly chromatic, while music which employs them sparingly is said to be diatonic Each note in the diatonic scale is thought of as derived from the series of harmonics (see HARMONIC), with the keynote as fundamental The closeness of relationship between any tone and the keynote is determined by the closeness of that tone to the fundamental in the harmonic series Thus degrees of organization only came as a result of the development of HARMONY, an element possessed only by Western music, and no purely melodic system has so highly organized a scale The pentatonic scale (the black keys of the piano illustrate one form) has long been thought of as having an Oriental character because of the prevalence of pentatonic scales in Chinese, Japanese, and Javanese music Joseph Yasser presents the theory (in *A Theory of Evolving Tonality*, 1932) that as a musical system becomes more highly developed the intervals of its scale become smaller and the number of tones employed becomes greater Pentatonic systems frequently employ two additional tones as auxiliary tones As the use of these tones increases, they become part of the basic tones of the scale, and a heptatonic system results By the early 20th cent. the use of the five remaining tones had become so extensive that the feeling of tonality within a heptatonic system had begun to break down According to Yasser's theory the 12-tone system of Arnold Schönberg (see ATONALITY) was an attempt at the next logical step in the tonal evolution—the absorption of the five auxiliary tones into the basic

tonal material of the scale The most highly developed scales known belong to ARABIAN MUSIC and HINDU MUSIC The earliest intelligible records of these scales show them already highly developed, so nothing of the evolution of these scales is known, and little of the application The whole-tone scale, which divides the octave into six equal whole tones (C, D, E, F sharp, G sharp, A sharp, on the piano), was employed to a small extent by Rebikov and to a greater extent by Debussy It gives a feeling of vagueness which made it adaptable to impressionism, but its possibilities seem to have been exhausted in Debussy's works See C H H Parry, *The Evolution of the Art of Music* (1930)

scale, in weights and measures see SCALES

scale, in zoology, an outgrowth, either bony or horny, of the skin of an animal The scales characteristic of fish are of the bony type The teeth of vertebrates—from fish to man—are said to have evolved from the placoid scales such as those in the skin of sharks, scales having a dentine base with a pulp cavity Fish scales show great variety in shape and markings and in their arrangement on the body Some fish such as the ganoid fish (e g , gar pike and sturgeon), have an armor of bony plates derived from scales Horny scales are found on most reptiles In some lizards the scales are modified to form tubercles or granules The crocodile has both horny and bony scales Among turtles and their relatives, scales are usually found on the head, neck, limbs, and tail, in most of the group there are horny plates on the body and these are fused with the bony shell Birds have horny scales on the feet and sometimes on the legs Some mammals, e g , the mouse and the rat, have scales on the tail, the pangolin and the armadillo have a body covering of large horny scales

Scale Force, waterfall, c 120 ft high, Cumberland, England, one of the finest of the Lake District

scale insect, member of the family Coccidae, small sap-sucking insects destructive to many fruit and shade trees and greenhouse plants The armored scale insects secrete a protective wax covering, thick and hard on the upper part of the body and thin on the under surface Among the armored scales are the cottony-cushion scale, the oyster-shell scale, the California and Florida red scales, and the purple scale of Florida, the other Gulf states, and California The chief harm is done by the females, which insert their beaks in the bark and drain the sap They do not move about The adult males are winged and very short-lived and do not feed The unarmored scale insects form no separate covering of wax and are protected only by the chitinized body wall Among these are the black, the terrapin, and the soft brown scales They discharge honeydew in which destructive fungus grows The ladybird beetle is an enemy of scale insects Spraying with oil emulsions and with lime sulphur and fumigation with hydrocyanic gas are methods of control See also COCHINEAL, LAC, SAN JOSE SCALE

scales, instruments for determining weight, generally for other than laboratory use For the principles of operation of all weighing devices, see BALANCE Platform scales utilize a succession of multiplying levers which transmit the weight to a beam or other registration device They are used where massive objects or large quantities are to be weighed For example, railway cars and trucks move onto a platform scale before and after unloading or before and after loading, in each case the difference being the weight of their haul As the name implies, counter scales are commercially used in establishments whose weighing needs can be most conveniently met on a counter These are invariably scales of the beam type Cylinder, drum, or barrel scales have their calibrations on a rotatable chart These find wide use because of the ease with which the concomitant cost of a given weight may be read from them through the juxtaposition of fixed and rotating charts The same service is rendered in the fan-type scale where an indicator describes an arc which is marked off from zero to the weight capacity of the scale Both the indicator and the fan expanse are calibrated for automatic computation A great variety of scales are specially constructed for industrial uses in which weighing of a continuous flow of material is involved These are known as continuous weigh feeders, automatic and conveyor type batching scales, and (where weighing is an intermediate operation in a process) automatic packing and filling scales The scale in such cases is part of the machinery that carries the weighed material to a succeeding operation Many scales provide printed records of each reading, and some keep a cumulative registration of a succession of readings See H T Wade, *Scales and Weighing* (1924), D M. Considine, *Industrial Weighing* (1948)

Scaliger, Joseph Justus (skă'lĭjur), 1540–1609, French classical scholar He was the son of Julius Caesar Scaliger, from whom he acquired his early mastery of Latin and his passion for learning He embraced Protestantism in 1562, served as tutor in the family of a Poitevin noble (1563–70), studied under Cujas at Valence (1570–72), and was professor of philosophy at Geneva (1572–74). After 1593 he held a research professorship at Leiden. Known in his own day as "the bottomless pit of erudition," he was learned in mathematics, in philosophy, and in many languages, a promoter of critical, scientific methods for textual criticism and the study of the classics His *De emendatione temporum* [on the correction of chronology] (1583) surveyed all ways then known of measuring time and established knowledge of ancient calendars and dates on a scientific basis He restored the content of the lost original of the second book of Eusebius' chronicle The chronological foundation for the modern study of ancient history was summed up in his *Thesaurus temporum* [repertory of dates] (1606) His *Catalecta* (1573) was a collection of Vergilian and other Latin poems A brief autobiography, extending to 1594, is supplemented by a selection from his letters in G W Robinson, *Autobiography of Joseph Justus Scaliger* (1927)

Scaliger, Julius Caesar (skă'lĭjur), 1484–1558, Italian philologist and physician in France Discontinuing his military career because of ill-health, Scaliger studied medicine and settled (1526) as a physician in Agen, where he was naturalized as a French citizen Deeply learned but contentious and vain, he quarreled violently with Erasmus and Jerome Cardan In his *De causis linguae Latinae* (1540), he analyzed Cicero's style and pointed out over 600 errors of his humanist predecessors He wrote commentaries on the medical and botanical writings of Hippocrates, Theophrastus, and Aristotle and urged an improved classification of plants according to their unique characteristics His famous *Poetices* (1561), in which he extolled Vergil and Seneca, played an important role in the creation of the unities and other neoclassic principles See F M Padelford, *Select Translations from Scaliger's Poetics* (1905)

scallion see LEEK

scallop (skŏ'lup, skă'–), marine bivalve mollusk, the shells of which have radiating ridges and wings at the sides of the hinge It moves through the water by flapping its shells In some species a row of eyes is found along the edge of the mantle The common scallop found on the Atlantic coast from Cape Cod southward is abundant in the shallow waters near Long Island It is widely marketed Only the adductor muscle (the muscle which closes the shell) is used for food The giant scallop lives in deeper waters from New Jersey to Labrador

scalp, covering of the skull, consisting of three layers, the skin, a subcutaneous fatty layer, and the occipitofrontalis muscle (stretching from the eyebrows to the back of the head) The blood supply of the scalp nourishes the hair follicles and glands Wounds of the scalp bleed profusely Infection beneath the deep layer of the scalp, sometimes called the "dangerous area," may spread readily

scalping, taking the scalp of an enemy The custom, comparable to head-hunting, was formerly practiced in Europe, Asia, and Africa, as well as by some of the American Indians, but by no means all of them To these Indians, the scalp was not always merely a trophy, it bestowed the powers of the scalped enemy In scalping, a circular cut was made around the crown of the head and the skin raised at one side, seized with the teeth, and torn off The scalping of a living person was not always fatal In their early wars with the Indians the American colonists retaliated by taking scalps and heads of Indians, bounties were offered for these, while French scalps brought bounties from the British and the French paid for British scalps These practices were, however, viewed with horror by the opposing parties When scalps were paid for with bounties, the temptation was strong for the Indian to kill indiscriminately, since it was difficult to identify the source of the scalp

Scalp Level, borough (pop 1,950), SW Pa , near Johnstown, inc 1898

Scamander (skumăn'dur), ancient name of the Kuçuk Menderes, a small river of NW Turkey, in Asia Minor It flows W and NW from the Ida Mts. through the Troas into the Mediterranean It is frequently mentioned in the *Iliad*

scammony (skă'munē), twining plant (*Convolvulus scammonia*) of the bindweed family, native to Asia Minor It has white flowers, arrow-shaped leaves, and a thick taproot from which is obtained a dried gum resin sometimes used in medicine Formerly the fresh juice from the living root was used

Scamozzi Ionic order (skămôt'tsē), in architecture, a variant of the Ionic order, named after Vincenzo Scamozzi (1552–1616), the Italian Renaissance architect who standardized it Its capital is slightly different from the ordinary Ionic, having all four faces identical, the volutes protrude diagonally at each corner below a concave-sided abacus similar to that of the Corinthian order Moreover, the volutes, instead of being connected horizontally on each face above the echinus, curve downward into the top of the echinus, in the empty space thus left in the center of each face a rosette or other ornament is placed; often the eyes of the volutes are linked by festoons

Scanderbeg or **Skanderbeg** (both· skăn'dŭrbĕg), c 1404–1468, Albanian national hero. His original name was George Castriota, which was corrupted by the Turks into Iskander Bey (Lord Alexander) or Scanderbeg The son of a prince of N Albania, he was educated in the Moslem faith as a hostage at the court of Sultan Murad II. The sultan showered favors on him and gave him command over a troop of horse, with the title bey. In 1443, when the Turks had signalized their project of adding Albania to their empire, Scanderbeg made his way home by a series of ruses, proclaimed himself prince of Albania, and abjured Islam All Albania and Montenegro rallied to his support, Venice courted his aid, and Pope Calixtus III named him (1457) captain general of the anti-Turkish crusade Scanderbeg held out against the attacks of the formidable Mohammed II, who in the meantime had succeeded Murad, and in 1461 the sultan was forced to conclude a 10-year armistice In 1463, however, Scanderbeg broke his pledge and renewed warfare after Pope Pius II had projected a new crusade The death of Pius II caused the abandonment of the crusade, and Scanderbeg found himself facing the sultan without allies He nevertheless held out in his fortress of Kroia After his death, resistance soon collapsed, and Albania fell to Turkey Scanderbeg's life has furnished Albania with a great fund of popular lore

Scandinavia (skăn'dĭnā'vēu), region of N Europe It consists of the kingdoms of SWEDEN, NORWAY, and DENMARK, the Scandinavian nations are usually also understood to include FINLAND and ICELAND Geographically, Denmark (i e , Jutland and the Danish islands) belongs to the North European plain rather than to the geologically distinct Scandinavian peninsula, occupied by Norway in the west and Sweden in the east The peninsula is washed by the Baltic Sea on the east, the Kattegat, the Skagerrak, and the North Sea on the south, the Atlantic Ocean on the west, and the Arctic Ocean on the north It is mountainous in the west, and its western, or Norwegian, coast is deeply indented by fjords It slopes down in the east and south, and its southernmost tip is the most fertile agricultural section of Sweden A large part of the peninsula lies N of the Arctic Circle, reaching its northernmost point in Cape NORDKYN The climate varies from arctic to humid maritime (in SW Norway) and to continental (in Sweden) The peninsula is particularly rich in timber and minerals (notably iron and copper ore), and its coastal waters are important fishing grounds In the east, Scandinavia is continued by the glacial lake plateaus of Finland and Karelia Except for the Lapps and Finns in the north and east, the Scandinavian peoples speak a closely related group of Germanic languages—Norwegian, Danish, Icelandic, Faeroese, and Swedish The oldest Germanic literature (see OLD NORSE LITERATURE) flourished in Scandinavia and Iceland.

Scandinavian art and architecture The Scandinavian countries are rich in artifacts and objects of archaeological interest from the Bronze Age, the Celtic and Germanic Iron Ages, and the viking period These are exhibited in large number at the civic museums of Copenhagen and Stockholm Peculiar to Scandinavia is the STAVKIRKE, examples of this type of pre-Christian building survive in Norway only, where they were most prevalent When Scandinavia became Christianized in the 11th cent , a great activity of church building set in These were chiefly in wood, but some were in stone The cathedral at Lund, Sweden, begun in 1085, shows Lombard influence, Gothic elements predominate in the cathedrals of Linkoping and Skora The Gothic cathedral at Trondheim, begun in 1248, is in the English Gothic style, the Uppsala cathedral was built by French architects This overwhelming influence from other European countries persisted through the Renaissance and baroque periods, the North German school of Lübeck becoming more and more the chief source for Scandinavian styles, the castles, such as Gripsholm, exemplify this borrowing In the 18th and 19th cent native artists began to make international names for themselves, sometimes through study in France or Germany, whose schools they followed In Denmark the sculptor Albert Bertel Thorvaldsen and the painter Nikolaj Abraham Abildgaard may be mentioned In the same country the academy of Copenhagen grew so renowned in the 19th cent that German artists, such as Philip Otto Runge and Caspar David Friedrich, came to study there Norway produced its best-known artists late in the 19th cent —the sculptors Stephan Sinding and Adolf Gustav Viegland and the expressionist painter Edward Munch Among Swedish artists are the classical sculptor Johan Tobias Sergel and, in the late 19th and early 20th cent , the painters Anders Leonhard Zorn and Carl Larsson as well as the modern sculptor Carl Milles See Carl Laurin, *Scandinavian Art* (1922)

scandium (skăn'dēum), metal of the RARE EARTHS It is a chemical element (symbol=Sc; for physical constants, see ELEMENT, table) discovered by means of the spectroscope by L. F Nilson in 1879 and shown (by P. T Cleve) to correspond to the ekaboron predicted by Mendelejeff through his PERIODIC LAW of 1869. It forms an oxide (scandia),

various halides, and a sulphate, its salts are colorless. Scandium does not occur free in nature but in compounds in various rare minerals (e g, gadolinite, monasite, orthite, thortveitite, wukite, and wolframite) associated with other metals of the rare earths It is present in the sun Separation of the element from its compounds and the other metals with which it appears is extremely difficult. The metal is of no commercial importance

Scania, Sweden see SKANE

Scapa Flow (skă'pu), area of water, c 15 mi long and 8 mi wide, in the Orkney Islands, Scotland, bounded by the islands Pomona, Burray, South Ronaldsay, and Hoy In the First World War it was a well-mined British naval base, but nevertheless the *Vanguard* was torpedoed here (July 9, 1917), and early in the Second World War a German submarine passed the defenses and sank another British vessel, the *Royal Oak* (Oct 14, 1939) The chief historic event at Scapa Flow was, however, the scuttling of vessels of the interned German fleet by their crews in 1919

scarab (skă'rub), name for certain members of a large family of beetles (the Scarabaeidae) It refers especially to the dung beetle *Scarabaeus sacer* of Mediterranean regions, the sacred scarab of Egypt It is the name also for representations of the beetle made of stone (both precious and semiprecious), metal, and faience Like the TUMBLEBUG, the scarab makes balls of dung for its food or as a source of food for the larva which hatches from the egg laid in it From early times the beetle has been a source of interest and an object of symbolism The beetles were thought to be all males and as military symbols were worn in the rings of Roman soldiers In ancient Egypt the scarab was associated with worship of the sun god and with resurrection and immortality In the 3d millennium B C finely carved scarabs came into use as seals, and in the XII dynasty (2000–1788 B C) they generally replaced cylinders and other forms for this purpose Scarabs, often inscribed with quotations from the Book of the Dead, were buried with mummies Scarabs also were issued commemorating events such as marriages and lion hunts Usually the scarab was shown with wings folded, but some later examples had the wings spread

Scaramouch (skă'rumouch, -mōōsh), stock character in the Italian *commedia dell' arte* of the 16th and 17th cent The part was made popular by Tiberio Fiorilli (fl 1608–92) and was meant to ridicule the grandiloquent Spanish don Scaramouch was dressed in black and was constantly cudgeled by Harlequin for cowardice and boasting He appears later in French farces and in English pantomime Joseph Grimaldi was famous in the part

Scarba (skär'bŭ), island, off W Scotland, in Argyllshire, one of the Inner Hebrides It is separated from Jura to the south by Corrievrekin strait

Scarboro, town (pop 2,842), SW Maine, between Saco and Portland, inc 1658 It includes, besides Scarboro village, the resorts Scarboro Beach and Prouts Neck Thomas Cammock settled at Prouts Neck in the 1630s, the colony suffered greatly in Indian raids, being practically destroyed in 1675 Rufus King was born in Scarboro

Scarborough, municipal borough (1931 pop 41,788, 1947 estimated pop 43,450), North Riding of Yorkshire, England, NE of York Spreading inland from a peninsula between two bays, the town is a North Sea port and resort, with a spa, a marine drive along the base of the peninsula, and gardens (South Cliff Gardens, Italian Gardens, and Alexandra Park) A music festival and a sports meet (tennis and cricket) are held annually The summit of the peninsula was early recognized as a valuable site there are vestiges of a 4th-century Roman signaling station in the grounds of the castle, which was founded in the 12th cent and converted into a fort by Henry II This castle was besieged by the Scots under Bruce in the 14th cent , again at the time of the Pilgrimage of Grace, and twice in the civil war The town was attacked by Harold Hardrada (Harold III) in 1066 In the First World War it was several times bombarded by the Germans The ancient Church of St Mary is on the site of a Cistercian priory St Martin's has windows by Burne-Jones, D G Rossetti, and William Morris George Fox was imprisoned in Scarborough

scarlatina see SCARLET FEVER

Scarlatti, Alessandro (älĕs-san'drō skärlät'tē), b 1658 or 1659 in Sicily, d 1725, Italian composer, founder of the Neapolitan school He developed the forms of the *aria da capo* and the Italian overture He was master of the chapel to Queen Christina of Sweden, at Santa Maria Maggiore in Rome, and at the Royal Chapel, Naples He composed 115 operas, 200 Masses, and over 700 cantatas and oratorios See biography by E J Dent (1905) His son, **Domenico Scarlatti** (Giuseppe Domenico Scarlatti) (dōmā'nēkō), 1685–1757, was a harpsichord virtuoso and the composer of works representing the rococo in Italy He was for 25 years chamber virtuoso to the prince of the Asturias in Madrid, during which time he composed many of his 545 one-movement sonatas for the harpsichord The style of these sonatas is florid, and they are of polished classical excellence, brilliant but not deeply emotional See Sacheverell Sitwell, *A Background for Domenico Scarlatti* (1935).

scarlet fever or **scarlatina** (skärlutē'nu), acute contagious, infectious disease, believed to be caused by the *Streptococcus hemolyticus* (or *S scarlatinae*) It occurs commonly in children under the age of eight and less frequently at greater ages The incubation period varies from several hours to a week Symptoms at the onset of the condition include vomiting or chills, high fever, rapid pulse, sore throat, and, after the first day or two, a scarlet-red eruption The tongue becomes coated and red at the tip and edges and the papillae are red and swollen (strawberry tongue) The symptoms are intensified during the period of eruption, which gradually disappears after about a week and is followed by a peeling and shedding of the skin Involvement of the kidney, heart, and ears may be complications of the disease One attack usually gives immunity The Dick test is used to determine the immunity of an individual An antitoxic serum is generally used in treatment, and the disease responds to sulfa-drug therapy.

scarlet runner see BEAN.

scarp, see ESCARPMENT

Scarpanto see KARPATHOS

Scarron, Paul (pōl' skarō'), 1610–60, French novelist, author of *Le Romant comique* (1651), a novel in picaresque style about strolling players He also wrote short stories, collected as *Les Nouvelles tragi-comiques* (1655), satires, and burlesque plays. He married (1652) Françoise d'Aubigné, known later as Mme de MAINTENON He was bedfast with paralysis much of his life See *The Comical Romance and Other Tales*, a 17th-century English translation republished (1892) with introduction by Jusserand

Scarsdale, suburban village (pop 12,966), SE N Y , in Westchester co., S of White Plains, settled c 1701, inc 1915

Scaw Fell see SCAFELL.

Sceva (sē'vu), chief priest of Ephesus Acts 19 14

Schacht, Hjalmar Horace Greeley (yäl'mar, shäkht'), 1877–, German financier He held high executive positions in several major German banks before the finance minister, Hans Luther, appointed him (1923) commissioner of currency Inflation had reached its height and the paper mark had become worthless Schacht substituted the Rentenmark, secured by a mortgage on all land and industry By various stringent deflationary measures the Rentenmark was stabilized and the budget balanced In 1924 Germany obtained a foreign loan under the Dawes Plan, and in 1925 the Rentenmark was replaced by the Reichsmark, based on a gold standard Appointed president of the Reichsbank in 1923, Schacht resigned in 1930 because of his opposition to continued German reparations payments A nationalist and a representative of conservative capitalism, Schacht supported the National Socialist party and in 1934 was appointed minister of economy and president of the Reichsbank by Hitler and was given wide powers He initiated a complicated system of currency exchange controls and barter trade with foreign countries, employing highly unconventional methods His program enabled Germany to secure raw materials for its rearmament and extended German economic influence in Central Europe, the Balkans, and South America The appointment (1937) of Hermann Wilhelm GOERING as director of the Four-Year Plan led to Schacht's resignation from the ministry Schacht continued as president of the Reichsbank until 1939 He had always opposed certain National Socialist practices, notably the elimination of the Jews from economic life When a German defeat in the Second World War became inevitable Schacht allegedly took a leading part in the plot (1944) against Hitler's life He was placed in a concentration camp and, after the German collapse, was tried by the Allies for war crimes He was acquitted (1946) by the Allied court at Nuremberg and (1948) by a German "denazification" court

Schadow, Johann Gottfried (yō'hun gôt'frēt shä'dō), 1764–1850, German sculptor of the neoclassic school, studied in Rome In 1788 he returned to Berlin, where he became court sculptor Among his best-known works are the tomb of Graf von der Mark in Berlin, the *Quadriga* and other sculptures on the Brandenburg Gate, Berlin, statues of Dessau and Frederick the Great, and monuments to Blücher at Rostock and to Luther at Wittenberg His son **Rudolph Schadow** (rōō'dōlf), 1786–1822, also a sculptor, was a follower of Canova and Thorvaldsen Another son, **Friedrich Wilhelm von Schadow-Godenhaus** (frē'drĭkh vĭl'hĕlm fŭn shä'dō-gō'dunhous), 1789–1862, noted German religious and historical painter, was one of the NAZARENES in Rome On his return to Berlin in 1819 he was professor at the Berlin Academy and from 1826 to 1859 was director of the Düsseldorf Academy Among his noted works are *The Wise and Foolish Virgins*, *Christ at Emmaus*, and a portrait of Thorvaldsen.

Schaeffer, Asa Arthur (shā'fûr), 1883–, American zoologist, b Kunkletown, Pa , grad Franklin and Marshall College, 1904. He taught at the Univ. of Tennessee (1909-23), at the Univ of Kansas (1924–31), and from 1932 at Temple Univ He made special studies of the protozoa, particularly of amoeboid movement and the classification of amoebas.

Schafarik, Pavel Josef see SAFARIK, PAVEL JOSEF.

Schaff, Philip (shäf), 1819–93, noted biblical scholar and church historian in America, b Switzerland He came to the United States in 1844 to teach in the Theological Seminary of the Reformed Church, Mercersburg, Pa. His importance as an interpreter of German theology and (in his writings) as a conveyor of the religious thought of America to Germany gained wide recognition From 1870 until his death he was professor at Union Theological Seminary, New York, where he was given the chair of sacred literature (1874) and of church history (1887) Schaff was president of the American branch of the English Bible Revision Committee. He edited the first edition (1882–84) of the *Schaff-Herzog Encyclopedia of Religious Knowledge* and wrote *A History of the Christian Church* (7 vols , 1858–90) His literary work embraced the writing or editing of some 80 publications

Schaffhausen (shafhou'zun), canton (115 sq mi ; pop 53,772), Switzerland Entirely on the right (northern) bank of the Rhine, the canton consists of three agricultural and forested areas, unconnected with each other and largely surrounded by German territory The capital, **Schaffhausen** (pop 22,498), on the Rhine, was originally a Benedictine abbey (founded c 1050), of which the 11th-century minster has been preserved It became (c 1208) a free imperial city, ruled first by its abbots, then by the Hapsburgs, and (after c 1415) by its local trade guilds Schaffhausen joined the Swiss Confederation in 1501 and accepted the Reformation shortly afterward The Rhine, which falls c 60 ft southwest of the town, is industrially exploited, and there are important wool, machinery, and metal industries In the Second World War the town suffered damage when American aircraft bombed it by mistake

Schäffle, Albert (al'bĕrt shĕf'lu), 1831–1903, German economist and sociologist He taught economics in the universities of Tubingen and Vienna His views were based partly on the idealism of Hegel and Schelling, partly on Comtian and Darwinian ideas His work was characterized by the use of organic analogies and the concept of value as indicating the elements of intelligence and spirituality Schäffle was interested in socialism, which he believed would evolve out of capitalism He made important contributions to the theory of taxation His most popular book was *Die Quintessenz der Socialismus* (1875, Eng tr , 1901), his most elaborate was *Bau und Leben des sozialen Korpers* [structure and life of the social body] (4 vols , 1875–78, revised 1896)

Scharnhorst, Gerhard Johann David von (gär'hart yō'han da'vĕt fŭn sharn'hôrst), 1755–1813, Prussian general He fought in the disastrous war of 1806–7 against Napoleon I, and he headed the commission for reorganizing the army and controlled the war ministry from 1807 to 1810 Scharnhorst turned the Prussian army from a mercenary into a people's army Every Prussian was considered liable to military service As the introduction of general conscription was impossible under Napoleonic rule, Scharnhorst invented the famous *Krumpersystem* by which citizens were called to service for a short training period to be then replaced by another group Thus a number far exceeding the 42,000 men allowed Prussia could be trained in the use of arms This system was revived in Germany after the Treaty of Versailles of 1919 The abolition of physical punishment and the admission of nonnobles into the officers' corps further helped to popularize the cause of the army So successful was Scharnhorst in this endeavour that thousands of volunteers rushed to the colors when Prussia turned against Napoleon early in 1813 General conscription, however, was introduced formally only in 1814 after Scharnhorst's death His military reforms were aided by GNEISENAU and Karl vom und zum STEIN

Scharwenka, Franz Xaver (frants' ksavâr' shärvĕng'ka), 1850–1924, German pianist and composer In Berlin he founded (1881) his own conservatory, which was later (1893) merged with the Klindworth Conservatory Beginning in 1874, he toured in Europe and the United States His compositions include the opera *Mataswintha* (Berlin, 1894, New York, 1897), piano concertos, chamber music, and technical studies His brother **Ludwig Philipp Scharwenka** (lōōt'vĭkh fē'lĭp), 1847–1917, associated with him in teaching, wrote several orchestral works, chamber music, and choral music.

Schaudinn, Fritz (frĭts' shou'dĭn), 1871–1906, German zoologist He confirmed the work of Sir Ronald Ross and G B Grassi on malaria, investigated amoebic dysentery, and in his research on protozoa discovered (1905) with Erich Hoffmann the *Treponema pallidum* (or *Spirochaeta pallida*) of syphilis.

Schauenburg see SCHAUMBURG-LIPPE, Germany.

Schaulen, Lithuania. see SIAULIAI

Schaumburg-Lippe (shoum'bōōrk-lĭ'pŭ), former state (131 sq. mi.; 1939 pop. 53,195), W Germany,

W of Hanover and E of the Weser river. After 1945 it was incorporated with British-occupied Lower Saxony Bückeburg is the chief city It is a fertile agricultural region. The county of Schauenburg (as Schaumburg was originally called) occupied a considerable part of Westphalia in the 12th cent, and its lord, Count Adolf, was invested with Holstein in 1111 The direct line died out in 1459, and the branch line which succeeded retained only Schaumburg and the seignory of Pinneberg in Holstein When it in turn became extinct (1640), Pinneberg passed to the Danish crown and Schaumburg was divided among Brunswick-Lüneburg (later the electorate of Hanover), Hesse-Kassel, and the county of Lippe The territorial divisions among the various lines of the Lippe family resulted in the creation (1790) of the principality of Schaumburg-Lippe The last prince abdicated in 1918, and Schaumburg-Lippe became a member of the Weimar Republic.

Scheele, Karl Wilhelm (kärl' vĭl'hĕlm shā'lə), 1742–86, Swedish chemist, b Stralsund He is known as the discoverer of many chemical substances He was a pharmacist in Stockholm, in Uppsala (1770–75), and then in Koping (N of Lake Malar). He prepared and studied oxygen c 1773, but his account in *Fire and Air* (1777, Eng tr, 1780) appeared after the publication of Joseph Priestley's studies He discovered nitrogen independently of Daniel Rutherford and showed it to be a constituent of air His treatise on manganese (1774) was influential in leading to the discovery of that element as well as to the discovery of barium and chlorine. He also isolated glycerin and several acids See his *Collected Papers* (Eng tr, 1931)

Scheer, Reinhard (rīn'härt shār'), 1863–1928, German admiral As commander (1916–18) of the German High Seas Fleet in the First World War, he proved himself a brilliant naval tactician in the battle of Jutland (see Jutland, battle of) He headed the admiralty staff in 1918

Scheffel, Joseph Viktor von (yō'zĕf vĭk'tôr fŭn shĕ'fəl), 1826–86, German poet, novelist, and lawyer He went to Italy, where he wrote a hugely successful romantic epic, *The Trumpeter of Säkkingen* (1853, Eng tr, 1877), made into an opera by Victor Nessler Its success was repeated in a different sphere with *Gaudeamus!* (1868, Eng tr, 1872), a collection of student songs which are still popular. His masterpiece is *Ekkehard* (1857, Eng tr, 1867), the story of a 10th-century monk

Scheffer, Ary (ärē' shĕfĕr'), 1795–1858, Dutch painter in France A fellow student of Delacroix and Géricault, he too is classed as a leader of the romantic movement because of his sentiment and choice of subject matter. Technically, however, he was a conventional and eclectic painter In his early works, such as *Death of Gericault* (Louvre), he attempted realism Later he painted scenes from the works of Goethe, Schiller, and Byron, e g, *Marguerite at the Fountain* (Wallace Coll, London) From 1840 he devoted himself chiefly to religious painting and is best known for such works as *Christus Consolator* (Amsterdam), *Temptation of Christ* (Louvre), and *Christ Weeping over Jerusalem* (Marseilles)

Scheffler, Johannes. see Angelus Silesius

Scheherazade see Thousand and One Nights

Scheidemann, Philipp (fē'lĭp shī'dumän), 1865–1939, German politician, a Social Democrat A member of the Reichstag from 1898, he became (1918) secretary of state without portfolio in the cabinet of Maximilian, prince of Baden After William II had fled (Nov, 1918), Scheidemann proclaimed the German republic and served as its first chancellor He resigned (1919) in protest over the Treaty of Versailles He left Germany in 1933. See his *Making of New Germany* (Eng tr, 1929).

Scheiner, Christoph (krīs'tôf shī'nur), 1579?–1650, German astronomer and mathematician, a Jesuit priest. He taught at Ingolstadt, Rome, and other places and became rector of a Jesuit college at Neisse, Germany, in 1622 His observation of sunspots in 1611 was recorded in two works (1612) and resulted in a controversy with Galileo, who claimed that he was the first to discover sunspots Scheiner made over 2,000 observations of the sun and embodied the results of his studies in *Rosa ursina* (1630) His pioneer research on the physiology of vision appeared in his *Oculus* (1619).

Scheldt (skĕlt), Dutch and Flemish *Schelde* (skhĕl'də), Fr *Escaut* (ĕskō'), river, 270 mi long, rising in N France and flowing generally NNE past Valenciennes, into Belgium and past Tournai, Ghent (where it is joined by the Lys), and Antwerp. Through the Scheldt estuary (between Belgium and the Dutch islands of South Beveland and Walcheren) it empties into the North Sea Navigable for most of its course, it is connected with a dense network of canals in N France and Belgium From the Peace of Westphalia (1648) until 1863, the Netherlands possessed (except during the Napoleonic period) the right to close the Scheldt estuary and thus had a stranglehold over the port of Antwerp. Again, in the Second World War, the Allies had to expel (late 1944) the German garrisons on Walcheren and South Beveland before they could make use of Antwerp.

Scheler, Max (mäks' shā'lùr), 1874–1928, German philosopher and sociologist. His work, done largely in the field of values, led him to an interest in the phenomenological school of Franz Brentano and Husserl, of which he became a leader Scheler conceived of each individual as developing a unique personality structure composed of values graded in order of merit as sensual, organic, cultural, and religious. This position led him to a rejection of the democratic and equalitarian concepts of the value of each human being, but in later life he changed his position to some extent, finding a basic human value beyond the individual personality. His works include *Die transzendentale und die psychologische Method* (1900) and *Schriften zur Soziologie und Weltanschauung* (3 vols, 1923–24)

Schelling, Ernest (Ernest Henry Schelling) (shĕ'lĭng), 1876–1939, American pianist, composer, and conductor, b Belvidere, N J ; pupil of Paderewski He first appeared as a pianist in Philadelphia at the age of four In 1903 he began the appearances which earned him recognition as an outstanding pianist of the romantic school. His most important compositions are his *Impressions from an Artist's Life* (1916), variations for piano and orchestra, and his *Victory Ball* (1923), for orchestra, inspired by the poem of Alfred Noyes He conducted the children's concerts of the New York Philharmonic from 1924 until his death and was conductor of the Baltimore Symphony Orchestra from 1936 to 1938

Schelling, Friedrich Wilhelm Joseph von (frē'drĭkh vĭl'hĕlm yō'zĕf fŭn shĕ'lĭng), 1775–1854, German philosopher After theological study at Tübingen and two years of tutoring at Leipzig, he became in 1798 a professor at Jena, where he helped found the romantic movement in philosophy There he was closely associated with the Schlegel brothers and Fichte and maintained friendship with Goethe While at Jena, Schelling was a collaborator of Fichte, but they drew apart when Schelling left Jena for a professorship at Wurzburg in 1803 He lived in Munich (1806–20), holding various state posts, and after academic work at Erlangen (1820–27) returned to Munich Frederick William IV called Schelling to the Univ of Berlin in 1841 to try to counteract the Hegelian influence In this Schelling was unsuccessful Schelling's early essays were a development of the Fichtean science of knowledge, though in *Ideen zu einer Philosophie der Natur* (1797) he had already differed somewhat in holding that nature cannot be subordinated to mental life If there is to be knowledge of nature and understanding of the origin of mind, the principle of mind must be already manifest in nature Then the difference between the forces of nature and mind must be only a matter of degree or level, and the problem of knowledge is absorbed in the ultimate unity of mind and matter in the Absolute In his later period, Schelling attempted to explain the origin of different degrees or levels within the unity The work in which this was advanced (published in 1809) was translated into English by James Gutmann in 1936 as *Schelling, Of Human Freedom* Schelling maintained that history is a series of stages progressing toward harmony from a previous fall, so that the differences are matters of development Schelling argued, in a doctrine not unlike that of Boehme, that God also partakes of this unfolding and development, for the Deity, to have personality, must hold within himself the limiting factors which define personality See Benjamin Rand, *Modern Classical Philosophers* (1908)

Schenck, Robert Cumming (skĕngk), 1809–90, American politician and diplomat, Union general in the Civil War, b Franklin, Ohio, grad. Miami Univ, 1827 He studied law and practiced in Dayton Schenck was a Whig in Congress (1843–51) and minister to Brazil (1851–53) In the Civil War he fought at both battles of Bull Run and in West Virginia He resigned his major generalcy of volunteers in 1863 and reentered Congress, where he was one of the leading radical Republicans (1864–70) While minister to Great Britain (1871–76), Schenck, for a consideration, allowed the Emma Silver Mining Company to use his name in promoting its stock, which soon proved fraudulent A congressional investigation forced his resignation He afterwards practiced law in Washington

Schenectady (skunĕk'tədē), city (pop 87,549), co seat of Schenectady co, E N Y, on the Mohawk and the Barge Canal and NW of Albany, founded 1662 by Arent Van Curler, inc 1798 Its location on transportation routes spurred the city's growth, particularly after the building of railroads in the 1830s. Locomotive works established here in 1848 are still important. Since 1894 it has been the headquarters of the General Electric Company Other products include athletic equipment and sport goods. The state bought (1938) Charles P. Steinmetz's home and laboratory for use as a science museum Union College is here There are several old buildings, among them the pre-Revolutionary St. George's Episcopal Church.

Schérer, Edmond (ĕdmō' shārĕr'), 1815–89, French critic, of Swiss descent He studied for the Protestant ministry, but, unable to accept all the tenets of the church, turned to literary and religious criticism. His influential articles written for the *Temps* have been collected as *Études sur la littérature contemporaine* (10 vols, 1885–95), of which *Essays in English Literature* (1891) appears in translation, *Mélanges de critique religieuse* (1860), and *Mélanges d'histoire religieuse* (1864).

Scherer, Wilhelm (vĭl'hĕlm shā'rur), 1841–86, German philologist, b Austria He held professorships at the universities of Vienna, Strasbourg, and Berlin. His *Geschichte der deutschen Litteratur* (1883, Eng tr, *A History of German Literature*, 1886) and a history of the German language (1868), in which he applied the scientific attitude to linguistics, are his most famous works. Through his writings ran a strong sense of nationalism He was one of the first to maintain a view now generally held—that in scientific linguistics there can be no such thing as an exception.

scherzo (skĕr'tsō) [Ital, =joke], in music, a term used to denote various types of composition but primarily one which is lively and which presents certain surprises in the rhythmic or melodic material In the symphonies of Haydn the scherzo was a further development of the minuet, and in Beethoven's works it largely replaces the minuet as the third movement of a work in sonata form The humor in a Beethoven scherzo is sometimes of a rather grim sort. In Mendelssohn the scherzo assumes an elfin quality, while the four piano scherzos of Chopin are works of great boldness and strength

Scheveningen (skhā'vunĭng"un), resort town, South Holland prov, W Netherlands, on the North Sea and 2 mi NW of The Hague, of which it is a part It is one of the most popular bathing resorts on the North Sea

Schiaparelli, Giovanni Virginio (jōvän'nē vērjē'nyō skyäpärĕl'lē), 1835–1910, Italian astronomer He was director (1862–1900) of the Brera Observatory, Milan He is especially noted for having detected (1877) on the surface of the planet Mars the markings which he called canals He showed that meteor swarms travel through space in cometary orbits and that Mercury and Venus rotate on their axes He discovered the asteroid Hesperia (1861) and several double stars.

Schick, Bela (bā'lō shĭk'), 1877–, American pediatrician, b Hungary, M D Karl Franz Univ, Graz, 1900 After having taught at the Univ of Vienna (1902–23), he came to the United States From 1923 he was a pediatrician at Mt Sinai Hospital, New York In 1929 he became a naturalized American citizen He devised (1913) the Schick test, a skin test to determine susceptibility to diphtheria He also made important studies of allergy and wrote, with others, *Scarlet Fever* (1912) and *Child Care Today* (1933)

Schiedam (skhē"dam'), municipality (pop 69,095), South Holland prov, W Netherlands, on the New Maas and W of Rotterdam It has large distilleries and is famous for its gin, which is exported throughout the world There also are shipyards and factories Chartered in 1273, Schiedam has kept a 15th-century church and a 17th-century city hall

Schiehallion (shĭhăl'yŭn), mountain, 3,547 ft high, Perthshire, Scotland, near Loch Rannoch In 1774 Nevil Maskelyne experimented here to determine the density of the earth

Schiff, Jacob Henry (shĭf), 1847–1920, American banker and philanthropist, b Frankfurt, Germany He emigrated to America in 1865 and became a partner in a brokerage house in New York city At 38 he was head of the banking house of Kuhn, Loeb and Company. Schiff became associated with E H Harriman in notable contests with the house of Morgan for control of Western railroads His numerous philanthropies included the endowment of the Jewish Theological Seminary, the Montefiore Home, both in New York, and a museum at Harvard See biography by Cyrus Adler (1928)

Schildkraut, Rudolph (shĭlt'krout), 1862–1930, German-Jewish actor He won fame at Vienna, Hamburg, and Berlin for his Shakesperian portrayals, especially Lear and Shylock He was a star (1911–22) of the Yiddish Theater in New York His son, **Joseph Schildkraut**, 1896–, acted at Berlin and Hamburg and after 1920 appeared on the New York stage in such successes as Molnar's *Liliom* and Ibsen's *Peer Gynt* After 1927 he acted in moving pictures

Schiller, Ferdinand Canning Scott (shĭl'lur), 1864–1937, British philosopher Schiller studied at Oxford and was professor of philosophy there (1897–1926) and at the Univ. of Southern California (1929–37). His philosophical position is closely related to the pragmatism of William James. Schiller called his system humanism, holding that "man is the measure of all things." Among his works are *Riddles of the Sphinx* (1891), *Humanism* (1912), *Problems of Belief* (1924), and *Logic for Use* (1929), *Our Human Truths* (1939), a collection of his last writings, was published posthumously.

Schiller, Johann Christoph Friedrich von (yō'hän krĭs'tôf frē'drĭkh fŭn shĭ'lur), 1759–1805, German poet, dramatist, historian, and philosopher, b Marbach, Württemberg; son of an army surgeon Schiller was forced to attend the military school of the duke of Württemberg at Ludwigsburg. When the school was moved to Stuttgart, Schiller studied

medicine there and, again at the duke's insistence, became an army doctor. His first play, *Die Räuber*, written while he was studying medicine, was printed anonymously and at the author's expense in 1781 This, one of the great plays of the STURM UND DRANG period, was remarkable for its freedom of form and for its picture of violence and radicalism. After it was successfully performed at Mannheim in 1782, Schiller fled from Stuttgart and the petty tyranny of the duke Living as a fugitive, he completed two other dramas, a historical tragedy, *Die Verschwörung des Fiesko zu Genua* (1783, Eng tr, *Fiesco, or, The Genoese Conspiracy*, 1796), and *Kabale und Liebe* (1784, Eng tr, *Cabal and Love*, 1795) In these early plays he showed himself to be a great tragic dramatist He was appointed (1783) dramatist to the Mannheim theater Soon, however, he was in financial difficulties and went to Leipzig on the invitation of the family of his friend, C G Körner In the same year (1784) he went to Dresden, where he remained until 1787 Here he wrote (1785) the hymn to joy, *An die Freude*, used by Beethoven in the choral finale to his Ninth Symphony, and the drama *Don Carlos* (1787, Eng tr, 1795), in blank verse Schiller lived in Weimar from 1787 to 1789 and wrote a historical work on the revolt of the Netherlands against Spanish rule (pub 1788) He was closely associated with Goethe in one of the most celebrated of all literary friendships Schiller obtained a professorship in history at the Univ of Jena from 1789 to 1793, when illness forced him to give up teaching In this period he had married (1790) Charlotte von Lengefeld In 1793 he completed his second historical work, on the Thirty Years War Schiller was strongly influenced by Kant, an influence which is evident in his critical writing, in several works on aesthetics, and in his philosophical poems His last years were passed at Weimar and in this period were produced his greatest dramas Outstanding is the dramatic trilogy on Wallenstein, *Wallenstein's Lager* (1798), *Die Piccolomini*, and *Wallenstein's Tod* (both 1799), the last two parts appeared in an English translation by S T Coleridge as *Wallenstein* (1800) Others of his major works are *Maria Stuart* (1800, Eng tr, 1800), *Die Jungfrau von Orleans* (1801), on Joan of Arc, *Die Braut von Messina* (1803), and *Wilhelm Tell* (1804, Eng tr, 1825) His many ballads have been popular in Germany, perhaps the favorite is "The Song of the Bell" Schiller was one of the founders of modern German literature, second in his time only to the overpowering Goethe His dramas are infused with idealistic nobility and with hatred of tyranny English translations of his complete works appeared in 1846–49 and 1897–1903 See biographies by Thomas Carlyle (1825) and Calvin Thomas (1902)

Schilling, Johannes (yōhä'nus shĭ'lĭng), 1828–1910, German sculptor He is represented by many monuments in Germany, including the colossal *Germania* (1883), a national monument in the Niederwald, counted his masterpiece

Schimper, Andreas Franz Wilhelm (ändrā'as frănts' vĭl'hĕlm shĭm'pur), 1856–1901, German botanist, one of a famous family of naturalists He wrote on plant ecology, gathering materials for his works in North America, Asia, and the West Indies as well as in Europe Among his works is *Plant-Geography upon a Physiological Basis* (1898, Eng tr, 1903)

Schinkel, Karl Friedrich (kärl' frē'drĭkh shĭng'kul), 1781–1841, German architect and painter He studied in Berlin and spent two years in Italy copying classical works Upon his return he turned to landscape painting, embodying architectural features in his compositions A member of the Berlin Academy, he became a professor in 1820 He also worked in lithography, etching, and illustration, but attained real distinction as an architect of the classical tradition Among the public buildings, castles, and country residences he designed are the Royal Guard House (1816–18), Royal Theater (1819–20), and Old Museum (1825–30) in Berlin and the New Gate, Church of St Nicholas, and Casino in Potsdam

Schipa, Tito (tē'tō skē'pä), 1889–, Italian operatic tenor He made his debut in 1911 in Vercelli After many appearances in Europe, he came to the United States in 1919, joining the Chicago Opera Company He sang with the Metropolitan Opera Company from 1932 to 1935 Possessed of both a beautiful voice and an impeccable artistry, he sang the leading lyric tenor roles in all the principal operas of the French and German repertory and appeared in the principal opera houses of Spain, Italy, and South America Schipa also toured in concert

schipperke (skĭ'pûrkē, -kŭ) [Flemish, =little captain], small dog said to have originated in the Flemish provinces. Its coat is solid black and rather coarse with a dense undercoat, usually it has no tail. The dog weighs up to 18 lb Although it resembles the spits and the Pomeranian, some authorities say that it is not related to these breeds but is a miniature form of a black Belgian sheep dog. An excellent watch dog, it was long used for that purpose on canalboats.

Schism, Great, or Schism of the West (sĭ'zm), division in the Roman Catholic Church from 1378 to 1417. There was no question of faith or practice involved, it was entirely a matter of persons and politics Shortly after GREGORY XI had returned from Avignon and reestablished the PAPACY at Rome, he died (March 27, 1378). The Romans feared that the papal court might be returned to Avignon, and there was rioting, with the mob demanding a Roman, or at least an Italian, pope On April 8 the 16 cardinals present elected URBAN VI The new pope was soon acting very offensively to all in the Church—some historians believe he was insane The cardinals slipped out of Rome and unanimously declared (at Anagni, Aug 2) that Urban's election was null as being done in fear of the mob At Fondi on Sept 20 they elected ROBERT OF GENEVA pope as Clement VII The next year Clement fled Italy for Avignon, where he reigned, surrounded by the former Roman court, he was recognized by France, Aragon, Castile, Naples, Scotland, and part of the empire There were thus two lines of popes The popes at Rome were Urban VI (1378–89), BONIFACE IX (1389–1404), Innocent VII (1404–6), and GREGORY XII (1406–15) Those of the rival line at Avignon were Clement VII (1378–94) and Benedict XIII (1394–1417, see LUNA, PEDRO DE) There was schism within schism, too, for France withdrew from obedience to Benedict XIII and knew no pope (1398–1403, 1408–9) The rivalry was, of course, perpetually irritating to churchmen The element most consistently eager to end the schism was centered around the theologians of the Univ of Paris, led by Pierre d'Ailly and Gerson From them came the proposal to call a council (1380), and there developed (c 1394) the conciliar theory, that the popes are subject to general councils The Council of Pisa (1409, see PISA, COUNCIL OF) was the result This meeting declared Gregory XII of the Roman (or Urbanist) line and Benedict XIII of the Avignon (or Clementine) line no popes and elected another, Alexander V He died soon, but his energetic successor, Baldassarre COSSA (John XXIII, 1410–15), detached most of Europe from his rivals In 1414 John reluctantly convened the Council of Constance (see CONSTANCE, COUNCIL OF) Gregory XII resigned, and John XXIII and Benedict XIII, who refused to resign, were declared deposed by the council MARTIN V was elected, and the schism was at an end The main effects of the schism were to delay the reforms which were the admitted need of the Church and to give rise to the conciliar theory, which was revived at the Council of Basel (see BASEL, COUNCIL OF) It is generally agreed by Roman Catholic scholars that the line of popes from Urban to Gregory was the canonical one See Edmund G Gardner, *St Catherine of Siena* (1907), L Salembier, *The Great Western Schism* (Eng tr, 1907), E F Jacob, *Essays in the Conciliar Epoch* (1943)

Schism of East and West, division between the ORTHODOX EASTERN CHURCH and the ROMAN CATHOLIC CHURCH See CHRISTIANITY, FERRARA-FLORENCE, COUNCIL OF, LYO IX, SAINT, LYONS, SECOND COUNCIL OF, PAPACY, PHOTIUS

Schism of the West see SCHISM, GREAT

schist (shĭst), metamorphic rock having the crystals of its constituent minerals elongated, segregated, and arranged in bands or leaves (folia) which are parallel not only to each other but also to the cleavage planes of the minerals Schists are distinguished from the other foliated rocks, slates and gneisses, by the size of their mineral crystals, these are larger than those of slates, being visible to the naked eye, but smaller than those of gneisses, which are coarsely foliated rocks as opposed to finely foliated or schistose rocks As contrasted with the folia of slates, the folia of schists are rough-surfaced and irregular Schists split readily along their planes of schistosity, like slates along cleavage lines Like other foliated rocks, schists owe their origin to the metamorphism of other, preexisting rocks The commonest of the schists is mica schist, the essential minerals of which are QUARTZ and MICA (biotite or muscovite) Other schists are hornblende schist, talc schist, chlorite schist, and graphite schists Schists are abundant in the Pre-Cambrian (Archeozoic and Proterozoic) rocks

schizophrenia (skĭt"sufrē'nēū, skĭ"zu-) or **dementia praecox** (dĭmĕn'shū prē'kŏks"), functional PSYCHOSIS characterized by unrealistic behavior dominated by private fantasy In 1896 Emil Kraepelin grouped what were previously considered unrelated mental diseases under the heading of dementia praecox, using four subdivisions (simple, hebephrenic, catatonic, and paranoid), which still have wide and official acceptance It was not, however, until 1911 that Eugen Bleuler, preceded by the work of Freud, C G Jung, and others, wrote the highly influential *Dementia Praecox oder die Gruppe der Schizophrenien*, which corrected the Kraepelin theory that the disease is incurable. In it he introduced the term *schizophrenia* to replace dementia praecox, as the former emphasized the dissociative or splitting phenomena in the mind and avoided the implication regarding age of onset and outlook for deterioration. Schizophrenia commonly, though not always, occurs in late adolescence or early adulthood in the withdrawn, seclusive type of person Among its basic symptoms are faulty thought processes, bizarre actions, tendency to live in an inner world, and incapacity to maintain normal interpersonal relationships Among accessory symptoms Bleuler noted are hallucinations, delusions, stupor, negativism, impulsive acts, and incoherence Because of the crippling nature of the psychosis, a high percentage of sufferers must be hospitalized It is roughly estimated that half the psychotics in mental hospitals are schizophrenic As ordinary psychiatric therapy has had very limited success, more radical approaches have been attempted, such as psychosurgery and shock therapy Chemical and organic factors in schizophrenia have been studied with as yet no impressive results See PARANOIA

Schlegel, August Wilhelm von (ou'gōst vĭl'hĕlm fŭn shlā'gul), 1767–1845, German poet and scholar He studied at Gottingen and went to Jena to join the Schillers With his brother, Friedrich von Schlegel, he founded the *Athenaeum* and edited it (1798–1810) He was thereafter secretary to Bernadotte (later Charles XIV of Sweden) and professor (1818–45) of art and literary history at Bonn Schlegel was one of the first critics to realise the importance of social evolution in the history of art, a champion of the *Nibelungenlied*, and author of the translations (1797–1810) of Shakspere later completed by Ludwig Tieck, his daughter Dorothea, and her husband, Graf von Baudissin These translations, in addition to their extraordinary literary qualities, established Shakspere in Germany Schlegel also translated works of Camoens, Calderón, Cervantes, and Dante His original writings have not been much read since his death, among them is *Lectures on Dramatic Art and Literature* (1809, Eng tr, 1815)

Schlegel, Dorothea von (dōrōtā'a), 1763–1839, German author, daughter of Moses Mendelssohn She married Friedrich von SCHLEGEL after her divorce from her first husband, Simon Veit She wrote *Florentin* (1801), an imitation of Goethe's *Wilhelm Meister*, translated Mme de Staël's *Corinne* (1807), and cooperated in the editing of her husband's works Philipp Veit was her son

Schlegel, Friedrich von (frē'drĭkh), 1772–1829, German philosopher, critic, and writer, most prominent of the founders of the romantic school Educated in law at Göttingen and Leipzig, he turned to literature, writing *Die Griechen und Römer* (1797) It was followed by experimental literary works, notably *Lucinde* (1799) and *Alarcos* (1802). With his brother, August Wilhelm von Schlegel, he founded and edited the *Athenaeum*, the organ of the romantic school He lectured at Jena (1800) and in Paris (1802), where he edited the *Europa* In Paris he studied Sanskrit and Indian civilization which later contributed to his outstanding work, *Über die Sprache und Weisheit der Indier* [on the speech and wisdom of India] (1808) From 1808 to 1819 he engaged in political and diplomatic activities and also wrote works in history and literature At Vienna, after 1818, he edited *Concordia*, issued his collected works (1822–25), and lectured on philosophy Schlegel, during his early period, held that comprehension of life depends on the richness and variety of experience He called it "romantic irony" that truth changes from experience to experience and that wisdom depends on the recognition of the fickleness of truth Later, after he and his wife, Dorothea von Schlegel, had joined (1808) the Roman Catholic Church, he became somewhat more conservative Among the translated lectures are *The Philosophy of History* (Eng tr, 1835) and *The Philosophy of Life and the Philosophy of Language* (Eng tr, 1847)

Schleicher, August (ou'gōst shlī'khur), 1821–68, German philologist A professor at the universities of Prague and Jena, he wrote studies of the Lithuanian language (1856–57), the German language (1860), and the language of the Polabian Slavs (1871) His most important work on comparative philology, published in German (1861–62), was translated as *A Compendium of the Comparative Grammar of the Indo-European Sanskrit, Greek, and Latin Languages* (2 vols 1874–77)

Schleicher, Kurt von (kōrt' fŭn shlī'khur), 1882–1934, German general After the First World War he helped to suppress the extremist revolutionaries in Germany and became a leader of the Reichswehr He was war minister in the cabinet of Franz von Papen, whom he succeeded as chancellor of Germany in Dec, 1932 Trying to prevent HITLER from seizing power, Schleicher demanded authority from President HINDENBURG to dissolve the Reichstag and to assume emergency powers Hindenburg refused and, after Schleicher's resignation (Jan 28, 1933), appointed Hitler chancellor Schleicher retired from public life but was shot with his wife by the Nazis in the 1934 "blood purge"

Schleiden, Matthias Jakob (mätē'äs ya'kôp shlī'dun), 1804–81, German botanist He was professor at the universities of Jena (1839–63) and Dorpat (1863–64) A pioneer in the development of the cell theory, he presented proof, in a paper on phytogenesis (1838), that plant tissues were composed of cells, he emphasized the importance of the

nucleus He wrote an influential textbook, *Principles of Scientific Botany* (2 vols , 1842–43, Eng tr , 1849). His work was carried forward by Theodor Schwann

Schleiermacher, Friedrich Daniel Ernst (frē'drĭkh dä'nyĕl ĕrnst' shlī'ûrmäkh"ur), 1768–1834, German philosopher and Protestant theologian His religious background was the Moravian Church. He studied at Halle and was professor of theology there (1804–10) and at the Univ of Berlin (from 1810) His thought was eclectic, he was influenced by Kant, Fichte, and Schelling His major work, *Der Christliche Glaube nach den Grundsätzen der evangelischen Kirche* (1821–22, Eng tr of 2d ed , *The Christian Faith*, ed by H R Mackintosh and J S Stewart, 1928), is one of the most important theological writings of modern times Schleiermacher sought to reconcile the theories of modern society with religious speculation He stressed the virtues of the organized state and was a strong advocate of national independence Important works include *Reden über die Religion* (1799) *Monologen* (1800), *Grundlinien einer Kritik der bisherigen Sittenlehre* (1803), *Weihnachtsfeier* (1806), and *Kurze Darstellung des theologischen Studiums* (1810) See R B Brandt, *Philosophy of Schleiermacher* (1941)

Schlesinger, Arthur Meier (shlā'zĭng-gur), 1888–, American historian, b Xenia, Ohio, grad Ohio State Univ (B A , 1910) and Columbia (M A , 1911, Ph D , 1917) In 1924, after teaching at Ohio State and the State Univ of Iowa he became a professor of history at Harvard and in 1928 became an editor of the *New England Quarterly* His special interest has been the interpretation of social history, as in *The Rise of the City, 1878–1898* (1933) and *Political and Social Growth of the American People, 1865–1940* (1941) His other books include *The Colonial Merchants and the American Revolution* (1917), *New Viewpoints in American History* (1922), and *Paths to the Present* (1949). With Dixon Ryan Fox he edited the "History of American Life" series (12 vols , 1927–44)

Schlesinger, Arthur Meier, Jr., 1917–, American historian and author, b Columbus, Ohio, grad Harvard, 1938, son of Arthur Meier Schlesinger (1888–) After the publishing success of *Orestes A Brownson a Pilgrim's Progress* (1939), his Harvard honors thesis, Schlesinger became a member of the Society of Fellows at Harvard (1939–42) In the Second World War, he served with the Office of War Information (1942–43) and the Office of Strategic Services (1943–45) In 1946 he became an associate professor of history at Harvard His *Age of Jackson* (1945) won the Pulitzer Prize in history for 1946 and was highly praised An active member of several organizations, historical and political (he was a cofounder of Americans for Democratic Action), he contributed articles to magazines and newspapers and also wrote *The Vital Center* (1949), a defense of liberalism

Schlesinger, Frank (slī'sĭnjur), 1871–1943, American astronomer, b New York city, grad College of the City of New York, 1890, Ph D Columbia, 1898 He was in charge of the International Latitude Observatory at Ukiah, Calif (1899–1903), and astronomer at Yerkes Observatory (1903–5) From 1905 to 1920 he was director of the Allegheny Observatory of the Univ of Pittsburgh and from 1920 to 1941 was director of the observatory at Yale His works are principally monographs on the reduction of photographic plates, variations of latitude, and stellar parallaxes

Schleswig (shlēz'wĭg, slĕz-, Ger shlās'vĭkh), Dan *Slesvig* (slās'vĭkh), former duchy, N Germany and S Denmark, occupying the southern part of Jutland The Eider river separates it from Holstein German Schleswig forms part of SCHLESWIG-HOLSTEIN, its chief cities are Flensburg, Schleswig, and Husum Danish Schleswig, known as North Schleswig (Dan *Nordslesvig*) includes the cities of Aabenraa, Hadersley, Sonderborg, and Tondern Unlike HOLSTEIN, which was part of the Holy Roman Empire even after its union with the Danish crown, the duchy of Schleswig, created in 1115, was a fief held directly from the kings of Denmark King Waldemar III, however, was forced (1376) to grant Schleswig a constitution which forbade the union of Schleswig and Denmark under a single overlord. In 1386 the count of Holstein received Schleswig as a hereditary fief His descendant, Christian I of Denmark, inherited (1460) both Schleswig and Holstein, but was obliged to recognize the inseparability of the two territories and to affirm that they were bound to the Danish crown by a personal union only In the 16th cent Schleswig and Holstein (which had also become a duchy) underwent a complex subdivision, although the principle of the inseparability of the two duchies was in theory not violated The three main divisions were a ducal portion, including parts of both duchies, which was conferred on Adolphus, duke of Holstein-Gottorp, younger brother of Christian III of Denmark, and on his descendants, the dukes of Holstein-Gottorp; a royal portion, including parts of both duchies, ruled directly by the Danish kings, and a common portion, ruled jointly by the Danish kings and the dukes of Holstein-Gottorp The arrangement was complicated by a number of factors, among them was the creation, within the royal portion of Schleswig, of the duchy of Sonderburg (see SONDERBORG) in favor of John, youngest brother of Frederick II of Denmark The Sonderburg branch split into the Augustenburg line and the cadet Glücksburg line. By the Treaty of Roskilde (1658) the Danish crown renounced its suzerainty over ducal Schleswig, the resulting quarrels between Denmark and the duke of Holstein-Gottorp were a major factor in the NORTHERN WAR (1700–1721), which ended with the dispossession of Duke Charles Frederick of Holstein-Gottorp and the union of the ducal portion of Schleswig with the Danish crown Charles Frederick's son became (1762) emperor of Russia as Peter III, his heir, Grand Duke Paul (later Emperor Paul I), renounced (1773) the ducal portion of Holstein, yielding it to the Danish crown, in exchange for OLDENBURG Thus all Schleswig and Holstein were once more united under the Danish kings The events related in the article SCHLESWIG-HOLSTEIN led to the annexation (1866) of both duchies by Prussia After the First World War, North Schleswig passed to Denmark after a plebiscite (1920), held in accordance with the Treaty of Versailles

Schleswig, city (pop 36,935), Schleswig-Holstein, N Germany, NW of Kiel It is a minor port on the Schlei, an inlet of the Baltic Sea, and a Lutheran episcopal see The city is chiefly residential First mentioned c 800, it was the residence of early dukes of Schleswig and (1544–1713) of the dukes of Holstein-Gottorp It was the capital of Schleswig-Holstein from 1866 until 1917, when it was superseded by Kiel The Gottorp or Gottorf castle (16th-17th cent) now houses the state archives and a museum The Romanesque-Gothic cathedral contains the tomb of Frederick I of Denmark

Schleswig-Holstein (-hōl'stĭn, Ger. -hôl'shtīn), state (6,045 sq mi , 1939 pop 1,589,284, 1946 pop 2,650,488), N Germany KIEL is the capital and chief port Schleswig-Holstein occupies the southern part and the base of the JUTLAND peninsula and extends from the Elbe, between the North Sea and the Baltic, northward to the Danish border Other important cities are Flensburg, Kiel, Lübeck, and Schleswig Schleswig-Holstein is drained by the Eider, which forms the border between the former duchies of Schleswig (in the north) and Holstein (on the south) The Kiel Canal links the North Sea and the Baltic A low-lying region, Schleswig-Holstein has fertile agricultural land (except in the center, where heaths and moors predominate) and is famous for its cattle The chief industrial products are ships, machinery, and processed foods Kiel has a university Concerning the history of Schleswig-Holstein, Lord Palmerston once stated in Parliament that it was so complicated that only three men had ever understood it fully, one was Prince Albert, who was dead, the second was a professor, who had become insane, the third was Palmerston himself, but he had forgotten it The history of the area up to the close of the 18th cent will be found in the articles HOLSTEIN and SCHLESWIG From 1773 the kings of Denmark held both duchies —Schleswig as full sovereigns, Holstein as princes of the Holy Roman Empire Both duchies were in personal union with, but not part of, Denmark The Congress of Vienna (1814–15) did not change the status of the two duchies, except that the German Confederation had succeeded the Holy Roman Empire in its suzerainty over Holstein A constitution for Holstein was guaranteed by the German Confederation The growing national consciousness of the predominantly German population in the two duchies made any change in their status an explosive issue In 1846 King Christian VIII announced that succession by females was to apply not only to the Danish throne, but to Schleswig as well This announcement met violent opposition among German nationalists, who feared the complete incorporation of Schleswig into Denmark Nevertheless, on the pressure of the Danish nationalists, Frederick VII, who had succeeded Christian, declared the complete union of Schleswig with Denmark in 1848 Revolution broke out in both duchies, a provisional government was formed, and the German Confederation came to the aid of the rebels and occupied the duchies British intervention led to an armistice in the German-Danish fighting, but in 1849 the war was resumed After inconclusive fighting, peace was made in 1850 between Prussia (which had been commissioned by the Confederation to conduct the war) and Denmark, both sides reserved their rights The fact that Frederick VII was childless made the Schleswig-Holstein succession a burning European issue The question was taken up by the powers in a conference at London, and in 1852 Prussia and Austria (but not the German Confederation as a body) adhered to the London Protocol The succession to Denmark and both duchies was settled on the Glücksburg branch of the Danish royal house, which derived its claim through the female line Duke Christian Augustus of Augustenburg, who represented a collateral line, renounced his claim to the duchies and accepted a money indemnity. Denmark in turn guaranteed the inseparability of the duchies and their continued status in personal union with Denmark. However, once more the pressure of the Danish nationalists forced Frederick VII to proclaim (1855) the Danish constitution as valid for both duchies. The protest of the German Confederation led to the withdrawal (1858) of that measure, but in Nov , 1863, just before Frederick's death, a common constitution for Denmark and Schleswig was drawn up. His successor, Christian IX, signed the constitution, which the German diet declared in violation of the protocol. In Jan , 1864, Prussia and Austria declared war on Denmark, which was easily defeated The disposal of the duchies was still at issue Austria favored the claims of the duke of Augustenburg, who denounced the surrender of the Augustenburg claim by his father in 1852, but BISMARCK, who was guiding Prussian policy, had already resolved to annex the duchies and had encouraged the Danish war with that end in view By the Treaty of Gastein (1865) with Austria, Bismarck deliberately imposed a solution which was bound to create friction with Austria Schleswig was placed under Prussian administration and Holstein under Austrian administration, while the duchy of LAUENBURG (also lost by Denmark in 1864) went to Prussia in return for a money payment to Austria The dual administration led, as Bismarck had anticipated, to such tension that Austria could easily be maneuvered into declaring war on Prussia The AUSTRO-PRUSSIAN WAR of 1866 ended with a swift Prussian victory, Schleswig, Holstein, and Lauenburg were annexed to Prussia and became the province of Schleswig-Holstein After the First World War the Danish majority of N Schleswig determined by plebiscite (1920) the return of that part of the province to Denmark The former free city of Lübeck and the Lübeck district of Oldenburg were incorporated with Schleswig-Holstein in 1937 After the Second World War, Schleswig-Holstein was constituted (1946) as a state in the British zone of occupation The influx of displaced persons and of refugees from E Germany increased the population by 60 percent In 1949 Schleswig-Holstein joined the West German republic

Schley, Winfield Scott (slī), 1839–1911, American naval officer, b Frederick co , Md , grad Annapolis, 1860 After serving in the Civil War, he held various naval posts In 1884 he commanded the third, and successful, relief expedition to rescue the arctic explorer Adolphus W GREELY, and from 1885 to 1889 he headed the Bureau of Equipment and Recruiting Schley was promoted to the rank of commodore in 1898 and in the Spanish-American War commanded the "flying squadron," ordered to seek out the Spanish under Admiral Pascual Cervera There was some ill feeling between Schley and William Thomas SAMPSON, who had been advanced to chief command When the battle of Santiago was fought and the Spanish fleet destroyed, Sampson was absent and Schley had command, thus giving rise to a bitter controversy over the credit for the victory Schley was made a rear admiral and resigned from the navy in 1901 A court of inquiry, requested by Schley to investigate charges leveled against him of negligence and misconduct in the battle of Santiago, was generally adverse toward him but recommended that no action be taken He wrote *The Rescue of Greely* (with J R Soley, 1895) and also memoirs, *Forty-five Years under the Flag* (1904) See R S West, *Admirals of American Empire* (1948)

Schlich, Sir William (shlĭk), 1840–1925, British forestry expert Of German birth and training, he became conservator and inspector general of forests in India and later a pioneer in forest work in England, where he organized the first forestry school Among his writings are *A Manual of Forestry* (1889–96) and *Forestry in the United Kingdom* (1904)

Schlieffen, Alfred, Graf von (äl'frät gräf fŭn shlē'fun), 1833–1913, German field marshal and strategist As chief of the general staff (1891–1906) and after his retirement he developed the brilliant and famous **Schlieffen plan**, by which he hoped Germany could defeat France in a lightning campaign The plan was based on the strategy employed by Hannibal at the battle of Cannae, transposed to a larger scale It called for a flanking movement by an overwhelmingly strong right (i e , northern) wing, which was to crash through Belgium and Holland, capture the Channel ports, and bear down on Paris from the west, while a weak left (or southern) wing engaged the attention of the French along the Franco-German border The plan (which disregarded Belgian and Dutch neutrality) demanded boldness for its execution, it was necessary to mass nearly the entire available strength in the north and to take a calculated risk by leaving the south exposed. Although Schlieffen's last words are said to have been "Make the right wing strong," his successor, H J L. von MOLTKE, lacked the courage to take the full risk When the First World War broke out in 1914, the Schlieffen plan was ostensibly carried out, but it was vitiated in its essence by Moltke's reluctance to leave the left wing exposed. The right wing was not strong enough, and the blow was not delivered in its full force. In the

Second World War, in the battles of Flanders and of France (May–June, 1940), the German command followed the Schlieffen plan successfully

Schliemann, Heinrich (hīn'rĭkh shlē'män), 1822–90, German archaeologist. He acquired American citizenship because he was living in California when it became a state (1850). He accumulated a fortune in business, chiefly in Russia A student of Homer from childhood, he retired from business in 1863 to dedicate himself to his dream of finding Troy and other Homeric sites After several years of study and travel, in 1871 he undertook at his own expense excavations at Hissarlik which resulted in his discovery of four superimposed towns (see TROY) He related every object he found to the verses of Homer, which he knew by heart He made other notable excavations at Mycenae (1876–78), Ithaca (1878), Orchomenus, Boeotia (1881–82), and Tiryns (1884–85) and was assisted by Wilhelm Dörpfeld from 1882 Schliemann wrote several books describing his discoveries and left a vast collection of personal papers, records, and an autobiography published in 1892 See biography by Emil Ludwig (1931)

Schlüsselburg (shlü'sĕlbŏrk), fortress, NW European RSFSR, E of Leningrad and on Lake Ladoga, dominating the access of the lake from the Neva river It stands on an island opposite the city of Petrokrepost (pop 6,412), also named Schlüsselburg until 1944 Built in 1323 by the republic of Novgorod and first called Oreshek, the fortress later fell to Sweden and was renamed (1661) Noteborg Peter I recovered it (1702) from the Swedes and named it Schlüsselburg [Ger ,=key fortress] From the 18th cent until 1917 the fortress was used as a prison for high-ranking persons (including several members of the imperial family) and for political prisoners In the Second World War, Schlüsselburg fell (1941) to the Germans Its recapture (1943) by the Russians opened the land route to besieged Leningrad

Schlüter, Andreas (andrā'äs shlü'tür), 1664–1714, German sculptor After studying in France and Italy, he became architect and sculptor to the Hohenzollern at Berlin, where the principal examples of his decorative work were in the royal castle Although he was the most important German exponent of the baroque style, his work shows a tendency toward realism Most noted among his sculptures were the statue of King Frederick I in front of the castle at Königsberg and in Berlin the *Great Elector*, an equestrian group, on the Long Bridge, a pulpit in the Marienkirche, and the tombs of King Frederick I and his consort in the cathedral At the end of his life, having lost the favor of his patron, King Frederick I, Schlüter entered the service of Peter the Great of Russia

Schmalkalden (shmal'kal"dun), town (pop 12,663), Thuringia, central Germany, SW of Erfurt It is a resort with mineral springs and with tuberculosis sanatoriums, and it has several manufactures First mentioned in 874, it passed to Hesse-Kassel in 1583 and with it to Prussia in 1866, it was transferred to Thuringia, in which it formed a Prussian enclave, in 1945 In the town hall (built 1419) the Schmalkaldic League (see separate article) was founded in 1531, the inn where Luther drew up (1537) the Schmalkaldic Articles, outlining the Protestant viewpoint, has been restored Schmalkalden has kept a 15th-century church and parts of its fortifications

Schmalkaldic League (shmalkăl'dĭk), alliance formed in 1531 at Schmalkalden by Protestant princes and delegates of free cities The chief members were PHILIP OF HESSE and JOHN FREDERICK I of Saxony Its purpose was to defend Protestantism and to oppose Emperor CHARLES V, who eventually crushed the League in the so-called Schmalkaldic War, culminating in the battle of Mühlberg (1547)

Schmeling, Max, 1905–, German pugilist At the age of 17 he began boxing in Germany, and in 1924 he turned professional After several successes Schmeling claimed the championship of Germany and in 1928 came to the United States After scoring several upsets, he was awarded (1930) the world heavyweight championship in New York city when a foul was attributed to his opponent, Jack Sharkey Two years later Schmeling lost the heavyweight crown when Sharkey defeated him in a 15-round decision in New York city In 1936 he became the only boxer to defeat Joe Louis in a professional match, knocking him out in the 12th round In 1938 Louis knocked out Schmeling in the first round of their return match Schmeling then returned to Germany and continued boxing until he became a parachute trooper in the Second World War

Schmidt, Kaspar: see STIRNER, MAX.

Schmidt, Wilhelm (vĭl'hĕlm), 1868–, German philologist, a Roman Catholic priest Educated at the universities of Berlin and Vienna, he entered the Society of the Divine Word in 1890 Residing principally in Austria, he taught at the Univ. of Vienna, founded and directed an anthropological institute at Mödling, and, after 1938, was a professor at the Univ. of Freiburg He devoted particular attention to the languages of S Asia, Australia, and Oceania. His books available in English translation are *The Origin and Growth of Religion* (1931), *High Gods in North America* (1933), *The Culture Historical Method of Ethnology* (1939), and *Primitive Revelation* (1939).

Schmitz, Ettore: see SVEVO, ITALO

Schmoller, Gustav (gōōs'tăf shmō'lür), 1838–1917, German economist He was the leader of the younger school of German historical economists, who tried to interrelate economics with the other social sciences Selections from his chief writings have been translated by Walter Abraham and Herbert Weingast as *The Economics of Gustav Schmoller* (1942)

Schnabel, Artur (är'tōōr shnä'bŭl), 1882–, pianist and teacher, b Lipnik, then in Austria He studied (1891–97) with Leschetizky and began his concert tours in Europe in 1896 He made his first tour of the United States in the season 1921–22 and appeared here regularly beginning in 1936 He earlier taught at the State Academy of Music, Berlin Schnabel is best known for his interpretations and editions of Beethoven's piano works and made records of all 32 Beethoven sonatas and many other works Among his own compositions are his First Symphony (Minneapolis, 1946) and his Rhapsody for Orchestra (Cleveland, 1948) He is the author of *Reflections on Music* (Eng tr , 1933) and *Music and the Line of Most Resistance* (1942) He became an American citizen in 1945

Schnabel, Johann Gottfried (yō'hän gôt'frēt shnä'bul), b 1692, d after 1750, German author He fought in the War of the Spanish Succession and was afterward surgeon and editor His most popular work, known by its short title, *Die Insel Felsenburg* [Felsenburg island] (4 vols , 1731–43), was perhaps the best contemporary imitation of *Robinson Crusoe*. Schnabel wrote under the pseudonym Gisander

Schnakenberg, Henry, 1892–, American painter, b Staten Island, N Y Of a well-to-do family, he traveled abroad from childhood At 21 he studied at the Art Students League under Kenneth Hayes Miller and from then on devoted himself to painting save for service (1917-19) with the U S army medical corps His work is naturalistic with an emphasis on both pattern and structure in space His landscapes of New York and Vermont are well known, but he is also successful in intimate portraits and figure compositions

schnauzer see TERRIER

Schneeberg (shnā'bĕrk"), mountain, 6,808 ft high, Lower Austria, W of Neunkirchen Its popular skiing grounds are reached by cogwheel railroad from Puchberg

Schneidemühl (shnī'dumül") or **Pila** (pē'lä), Pol. *Piła* (pē'wä), town (1939 pop 45,791, 1946 pop 10,671), E Pomerania, transferred to Polish administration in 1945 (see POMERANIA) Chiefly a trade and administrative center, it also has several industries, there are lignite deposits in the vicinity

Schneiderman, Rose (shnī'durmun), 1884–, American labor leader, b Poland She came to the United States in 1890 After going to work as a lining stitcher in a cap factory, she was instrumental in getting women admitted to the United Cloth and Cap Makers Union and participated (1905) in a successful strike Probably the best-known American woman trade unionist, she was elected (1907) vice president of the New York branch of the Women's Trade Union League and was one of their organizers (1908–14) and, later, sole organizer (1917–19) in the Eastern states She was subsequently elected president (1918) of the New York branch and became vice president (1919) and president (1928) of the National Women's Trade Union League She served also as secretary (1937–44) of the New York state department of labor

Schnitzler, Arthur (är'tōōr shnĭts'lür), 1862–1931, Austrian dramatist and novelist The son of a well-known Jewish physician in Vienna, he studied medicine, practiced for a short time, and edited a medical journal (1887–94) Always interested in the theater, he left medicine for authorship when he attracted critical attention with *Anatol* (1892, Eng tr , 1911), a series of seven scenes about a philanderer His first full-length play was *Das Märchen* (1894). *Liebelei* (1895, Eng trs , *The Reckoning*, 1907, *Light-o'Love*, 1912) was very successful and has been frequently played With several other Viennese writers he formed (c 1900) a group known as Young Vienna, opposed to the German naturalistic school of drama. His many plays, novelettes, and a few novels are distinguished in the flexibility and brilliancy of their style, acuteness of observation, and a tendency to clinical consideration of the pathological The happiness of the individual is his concern, rather than society as a whole His translated dramas include *Der einsame Weg* (1903, Eng tr , *The Lonely Way*, 1915), *Das weite Land* (1911, Eng tr , *The Vast Domain*, 1923), *Professor Bernhardi* (1912, Eng tr , 1913), the tragedy of a Jewish doctor, and a number of one-act plays, collected in *Stories and Plays* (1934) Of his novels, *Der Weg ins Freie* (1908, Eng tr , *The Road to the Open*, 1923) is autobiographical See biography by Solomon Liptsin (1932)

Schnorr von Carolsfeld, Julius (yōō'lyŏs shnôr' fün kä'rôlsfĕlt), 1794–1872, German religious and historical painter and draughtsman He studied with his father, Veit Hans Schnorr von Carolsfeld (1764–1841), a German painter and engraver, and in Vienna In 1817 he went to Rome and joined the group of the NAZARENES With them he worked on the frescoes of the Villa Massimi, contributing his *Orlando Furioso* In 1827 he was summoned by King Louis I of Bavaria to Munich, where he was professor and later director of the academy and decorated the palace with his *Nibelungen* frescoes Among his well-known paintings are *Flight into Egypt*, *The Marriage in Cana*, *Ruth and Boaz*, and *Luther at the Diet of Worms* Schnorr is best known, however, for his vigorous drawings for the illustrated Bible, *Bibel in Bildern* (1851–60)

Schober, Johann (yō'hän shō'bur), 1874–1932, Austrian statesman, one of the leading political figures in post-war Austria As chief commissioner of police, he maintained order when the empire became a republic in 1918 An opponent of SEIPEL, he was twice chancellor (1921–22, 1929–30) and was also vice chancellor and foreign minister (1930–32) He sought to better relations with Czechoslovakia and Italy and promoted the customs-union pact with Germany, losing power when other nations forced the abandonment of the project

Schoelcher, Victor (vĕktôr' shülshĕr'), 1804–93, French humanitarian and statesman As undersecretary of state for the colonies (1848) he secured the abolition of slavery in French territory His active opposition to Louis Napoleon's coup d'état of Dec , 1851, forced him into exile in England until Napoleon's fall in 1870 Elected to the national assembly, he sat with the extreme left, and in 1871 he tried unsuccessfully to conciliate the Commune of Paris with the provisional government at Versailles He became senator for life in 1875

Schoenbrunn Memorial State Park (shän'brün, -brōōn), E central Ohio, near New Philadelphia It is the site of the first town to be established in Ohio In 1772 David ZEISBERGER, a Moravian missionary, and his Indian converts settled here and named the town, it was abandoned in 1776 and later burned In 1923 the site was located, and since then the Ohio State Archaeological and Historical Society has been rebuilding Schoenbrunn to its original appearance

Schöffer, Peter: see FUST, JOHANN

Schofield, John McAllister (skō'fēld), 1831–1906, Union general in the Civil War, b Gerry, N Y , grad West Point, 1853 He taught at West Point (1855–60) and was on leave teaching at Washington Univ in St Louis when the Civil War broke out Schofield was chief of staff to Nathaniel LYON, brigadier general commanding Missouri troops (Nov , 1861–April, 1863), and commander of the Dept of the Missouri (May, 1863–Jan , 1864) In Feb , 1864, he was made a brigadier general in the regular army, and he led the Army of the Ohio in the ATLANTA CAMPAIGN He opposed J B HOOD in Tennessee (Oct –Dec , 1864), fighting at Franklin and Nashville Schofield was Secretary of War under Andrew Johnson (1868–69) and held various commands until 1888, when he became commander of the U S army He was appointed lieutenant general shortly before he retired in 1895 See his *Forty-six Years in the Army* (1897)

Schofield, Walter Elmer, 1867–1944, American landscape painter, b Philadelphia, studied at the Pennsylvania Academy of the Fine Arts and at Julien's academy, Paris His paintings, which include many snow scenes, are in leading museums in the United States He lived in England for many years Schofield became a member of the National Academy of Design in 1907

Schofield, village (pop 1,536), central Wis , near Wausau and on the Wisconsin, settled 1849, inc. 1904

Schofield Barracks (skō'fēld), large U S army military post, on central Oahu, T H , 19 mi NW of Honolulu, est 1909 It is situated on a plateau, on the southern edge of which is Wheeler Field

Schoharie (skōhā'rē), village (pop 941), co seat of Schoharie co , E N Y , on Schoharie Creek and W of Albany, inc 1867 A stone fort (1772), originally a church, is preserved as a museum. Near-by Schoharie Reservoir, created by Gilboa Dam and forming part of the New York city water system, collects water from Schoharie Creek and delivers it through the Shandaken Tunnel to Esopus Creek (see CATSKILL AQUEDUCT)

scholasticism, (skŏlă'stĭsĭzm, skō-), philosophical thought of medieval Western Europe The term suggests more unity in the thinkers than there was, it is actually analogous to an expression like "Chinese philosophy" The greatest of earlier Christian philosophers had been St Augustine, who saw in Plato (or in Neoplatonism) a system most congenial with Christianity This influence combined with that of the Pseudo-Dionysius (see DIONYSIUS THE AREOPAGITE, SAINT) to color the speculations of Western thinkers with Neoplatonic ideas Besides St. Augustine, Boethius also was much read, and some Latins had read one or two works of Plato and Aristotle The Neoplatonic bent appeared in the first medieval Western speculative philosopher, Erigena (9th cent.). In the

monastery schools of the 11th cent they began to discuss intellectual implications of Christianity, but rather as biblical commentary than as what later generations would call philosophy Of the theologians of the day (including Berengar of Tours, Lanfranc, and St. Peter Damian) the most original was St. Anselm. He took data of revelation and tried to show how they could be explained in the light of reason This problem of faith and reason, a crux of any Christian philosophy, was boldly explored by Abelard A philosophical problem of the period which has gained great notoriety is that of the universal, an approach to epistemology Abelard had a brilliant victory in a dispute over universals with William of Champeaux William's pupil, Hugh of St Victor, was very influential, especially in maintaining that there is a clear field for reason to exploit, apart from religion Abelard had very important pupils in Peter Lombard and the brilliant canonist Bandinelli (Pope Alexander III), still, Abelard did the rational approach a disservice by his recklessness, for by bringing down the denunciation of St Bernard upon him for teaching heresy (e g , in denying original sin), he made all rationalism seem dubious to the devout All through the 12th cent there was much interest in the work of Aristotle, which was becoming generally available in Western Europe, here was an encyclopedia of knowledge and an integrated philosophical system Early in the 13th cent universities (e g , at Paris) began to replace the monastic schools as the chief centers of learning, and their lectureships were soon manned by the Dominicans and Franciscans, the popular new religious orders There were introduced at this time at Paris through books from Moslem Spain the works of Avicenna and Averroës, Arabian commentators of Aristotle, in them the Christian scholars were horrified to read that what is true in the light of faith may be untrue in the light of reason, and vice versa—a theory since called "Averroism"—and that the immortal soul has no individual character and is identical with a "world soul." The Paris authorities accepted the Arabic interpretation as bona fide and banned the study of Aristotle. Aristotle's prestige was restored and the Arabian interpretations were demolished by the generation of the mid-13th cent , notably the Dominicans St Albertus Magnus and St Thomas Aquinas and the Franciscan St Bonaventure St Thomas produced the greatest body of philosophical work of the Middle Ages, wonderfully careful, detailed, and organized One of his important contributions was separation of the field of philosophy, in which everything is known and studied by reason, from that of theology, where certain basic facts are known from revelation There is a nexus between philosophy and theology God can be proved by the light of reason (as the first cause), also reason operates throughout theology except only in the demonstration of data known from revelation The Thomistic position on truth flatly opposes Averroism There can be, he taught, no conflict between something known to be true by faith and something known to be true by reason; a thing that is unreasonable (i e , can be disproved) cannot be true, a thing known by divine revelation and not amenable to rational proof (e g , the nature of the Trinity) cannot be disproved either Finally, St Thomas held that each man is individualized, by his active intelligence (his soul), which is free and unique St. Thomas's theories were not influential in the Middle Ages There was a three-cornered dispute between him, the Averroist Siger de Brabant, and St Bonaventure St Bonaventure's position was in the Augustinian tradition, and he feared the excesses of reason in its contact with faith—so much so that he nearly succeeded in having St Thomas's teachings condemned by the university, St Bonaventure's Franciscan successors passed from mistrusting Thomism to denying its claims on behalf of reason (e g , that something that is contrary to reason cannot be true), chief of these was Duns Scotus of Oxford, who developed a wholly new and different Aristotelian system An example of an important difference between Scotism and Thomism (as the two schools were called) is that Scotus held that what was good was good because God willed it to be good; Thomists saw in this an implicit denial of their concept of natural law. Out of the Scotists came William of Occam, one of the great radical thinkers of the age His most important contention was that there is no rational ground to anything in faith and that a barrier separates philosophy and religion. This attitude (a flat denial of everything Thomistic) gained complete dominance in the schools and formed the minds of most educated men of the 15th cent Since philosophy and theology were now antithetical, the devout mistrusted all speculative thought, an attitude which dominated most Protestant reformers. Meanwhile, under the influence of the classics newly in vogue with the Renaissance, those who became interested in philosophy abandoned all but lip service to the Christian faith. The reputation of medieval philosophy fell very low Some of those who derided it most knew least about it (e.g., Francis Bacon and Erasmus), and it was true until the 20th cent. that even eminent historians could maintain willful ignorance of medieval philosophy while professing to discuss it. The break between medieval philosophy and Renaissance thought affected mainly metaphysics; scholastic tradition and methods were continued in the field of politics and law—in canon law, civil law, and common law and, later, in the development of international law. In the late 15th cent the Dominicans began a Thomistic revival, its brilliant leader was the reformer Cajetan It was probably this influence which prevented the Catholic Reform from becoming a victory for the devout obscurantists who feared learning and philosophy. St. Thomas's ideas were propagated greatly by the Jesuits, for whom St Ignatius had made Thomism the official philosophy. There was also a living Scotist tradition, and each Catholic university had Thomists and Scotists in its theological faculty In the revolutionary period the secularization of the universities suppressed the theological faculties, and the old tradition was broken. The Scotists always suffered from the very bad state of the text of Duns Scotus's works, and in the 20th cent the Franciscan order has undertaken to make a complete and authoritative edition of them In 1879 Leo XIII proclaimed Thomism to be the "official" philosophy of the Church—this is not a question of religious belief The Univ of Louvain became a center of Thomistic studies, Cardinal Mercier was an ornament of this school Another important modern Thomist is Jacques Maritain Medieval philosophy may be said to have flourished between St Anselm and William of Occam Other important names in its development include Roscelin, Adelard of Bath, William of Champeaux, Hugh of St Victor, Abelard, Gilbert de la Porrée, Peter Lombard, Richard of St Victor, John of Salisbury, Alain de Lille, Alexander of Hales, Robert Grosseteste, Adam de Marisco, St. Albertus Magnus, St Thomas Aquinas, St Bonaventure, Siger de Brabant, Roger Bacon, Duns Scotus, and John Bacon or Baconthorpe See METAPHYSICS, PHILOSOPHY, THEOLOGY See Maurice de Wulf, *History of Medieval Philosophy* (3d Eng ed , Vols I and II, 1935–38), Étienne Gilson, *The Spirit of Medieval Philosophy* (Eng tr , 1936), *The Philosophy of St Thomas Aquinas* (Eng tr of 3d ed , 1937), and *The Philosophy of St Bonaventure* (Eng tr , 1938), Jacques Maritain, *Scholasticism and Politics* (Eng tr., 1940)

Scholz, Wilhelm von (vĭl'hĕlm fŭn shôlts'), 1874–, German poet, dramatist, and critic He was dramatic director (1910–23) of the Stuttgart Theater Besides lyric verse, many critical editions of German classics, and theoretical works, he has written plays, including *Der Jude von Konstanz* [the Jew of Constance] (1905) and *Der Wettlauf mit dem Schatten* [the wager with the shadow] (1921), the novel *Perpetua* (1926), and the short-story collections *Erzählungen* (1924) and *Die Gefährten* (1937) His imaginative writings are fantastic and mystical.

Schomberg, Frederick Herman, 1st **duke of** (shŏm'bûrg), Ger *Friedrich Hermann von Schönburg* (frā'drĭkh hĕr'man fŭn shûn'bōrk), 1615–90, German soldier of fortune, baron of Tetford, conde de Mertola, marshal of France. He was born at Heidelberg, the son of Hans Meinhard von Schönburg (1582–1616), ambassador of the elector palatine to England and tutor of Frederick the Winter King, and of Anne Sutton, daughter of Edward Sutton, 9th Baron Dudley After studying at the Protestant Univ of Sedan, at Paris, and at Leiden, he served in the Thirty Years War under Prince Frederick Henry of Orange and under Bernhard of Saxe-Weimar He entered the French service during the Fronde and fought (1658) in the battle of the Dunes. From 1660 to 1668 Schomberg fought against Spain in Portuguese service, defeating John of Austria at Estremoz and receiving the title conde de Mertola. (The barony of Tetford was conferred on him by Charles II in 1660) Returning to French service, Schomberg distinguished himself in the Third Dutch war and was made marshal of France and created duc de Schomberg by Louis XIV After the revocation of the Edict of Nantes (1685), Schomberg, a Protestant, left France and entered the service of the elector of Brandenburg, who made him governor of the duchy of Prussia and commander in chief of the army of Brandenburg in 1687. He accompanied (1688) William III of Orange to England and assisted William in the Glorious Revolution. Created duke in the English peerage (1689), he was given command over the English forces in Ireland. He was killed in action at the battle of the Boyne, where he defeated the forces of James II. His last victory is also his most celebrated.

Schomburg, Arthur Alonzo (shŏm'bûrg), 1874–1938, American collector of Negro literature, art, and historical materials, b San Juan, Puerto Rico. After he went to New York, he painstakingly assembled a collection of manuscripts, books, and prints of West Indian, African, and American Negroes. The collection was purchased (1926) by the Carnegie Foundation and presented to the New York city public library.

Schomburgk, Sir Robert Hermann (shŏm'bûrk), 1804–65, British traveler and explorer, b. Germany. Under the direction of the Royal Geographical Society he went (1835) on a trip of botanical and geographical exploration to British Guiana For the British government he later (1841–43) surveyed that colony, outlining a boundary which played a prominent part in subsequent boundary disputes with Venezuela. Knighted in 1844, Schomburgk was appointed British consul at Santo Domingo (1848) and at Bangkok (1857). He wrote books on British Guiana and Barbados and edited (1848) Sir Walter Raleigh's journal of his second voyage to Guiana.

Schön, Martin: see SCHONGAUER, MARTIN.

Schönbein, Christian Friedrich (krĭs'tyän frĭ'drĭkh shûn'bīn), 1799–1868, German chemist From 1828 he taught at the Univ of Basel (as professor from 1835) He discovered ozone (1840) and, through his work on nitrocellulose, developed guncotton and collodion

Schönberg, Arnold (ar'nôlt shûn'bĕrkh), 1874–, Austrian composer His early works—*Verklärte Nacht* (1899), *Gurre-Lieder* (1900, Vienna, 1913), the symphonic poem, *Pelleas und Melisande* (1902–3), and the *Quartet in D Minor* (1905)—carry on the romantic tradition of Brahms, Wagner, and Richard Strauss In his first *Kammersymphonie* (1906) the use of chords built in fourths foreshadows his later use of atonality, which appears in the finale of the *Second String Quartet* (1907–8) and in two sets of piano pieces (1908, 1911) Reduced instrumentation and increased use of counterpoint and of classical devices of form accompany his development of atonality The *Gurre-Lieder*, the monodrama *Erwartung* (1909), and *Pierrot lunaire* (1912) require a vocal technique which is neither singing nor speaking In 1914, in a fragment of an oratorio, he arrived at the 12-tone technique (see ATONALITY), which he first used explicitly in his *Serenade* (1924) Other important works of Schönberg are the song cycle *Der hängenden Gärten* (1908), to poems of Stefan George, a second *Kammersymphonie* (1906–39), a violin concerto (Philadelphia, 1940), *Ode to Napoleon* (1944), to Byron's poem, for male reciter, piano, and string orchestra, and some songs and piano pieces Performances of Schönberg's works offer great technical difficulties and are often attended by hostile demonstrations. He has written several theoretical treatises and has done some expressionistic paintings In 1933 he came to the United States, where he has taught at the Malkin Conservatory, Boston, and at the Univ of Southern California, Los Angeles See biography by Egon Wellesz (1925), Merle Armitage, ed , *Schoenberg* (1937), Dika Newlin, *Bruckner, Mahler, Schoenberg* (1947)

Schönbrunn (shûnbrōōn'), royal palace in Vienna, built in the reigns of Emperor Charles VI and Maria Theresa Its beautiful park, emulating Versailles, has a large zoological and botanical garden Both palace and park were heavily damaged when the Russians took Vienna in the Second World War By the **Peace of Schönbrunn** (1809), imposed by NAPOLEON I, Austria temporarily lost W Galicia to the grand duchy of Warsaw and Illyria to France

Schongauer, Martin (mar'tĭn shōn'gou-ur), c 1445–1491, German painter and engraver, known also as Martin Schön (shûn'), son of a goldsmith of Colmar, Alsace He painted altarpieces somewhat in the style of Roger van der Weyden Of these the *Madonna of the Rose Arbor* (Church of St Martin, Colmar) is the only authenticated example He is better known for his remarkable engravings of religious subjects These have a considerable breadth of handling together with minute finish unequaled by any of his contemporaries in the field. Outstanding examples are *The Wise and Foolish Virgins, The Passion, Bearing the Cross, Death of the Virgin, Adoration of the Magi, Christ Enthroned,* and *Temptation of St Anthony.* Schongauer was one of the earliest engravers on copper for reproduction and contributed much to the development of the art

Schönherr, Karl (karl' shûn'hĕr"), 18677–1943, Austrian dramatist and physician, winner of the Schiller, Bauerfeld, and Grillparzer prizes in literature His skillfully constructed and forceful plays include the popular *Glaube und Heimat* (1910, Eng tr., *Faith and Home*, 1913–15), the comedy *Erde* [earth] (1907), and *Der Weibsteufel* [the devil's wife] (1915)

Schoodic Lake (skōō'dĭk), central Maine, in a lumbering, hunting, and fishing region

school, term commonly referring to institutions of precollege formal education It also properly includes colleges, universities, and many types of special training establishments (see ADULT EDUCATION, UNIVERSITY, VOCATIONAL EDUCATION). The United States has no national system of public schools, though Federal support is furnished to land-grant colleges and to some types of vocational and agricultural training. Local governmental units, with various degrees of supervision and assistance from the state, operate and support the free public schools. Compulsory attendance at school has been legislated in all states, though

standards of age and length of the school year vary considerably The standard school system in the past 150 years has changed from an uncoordinated conglomeration of dame schools, reading and writing schools, private academies, Latin grammar schools, and colleges into a well-organized system in which a child may progress from KINDERGARTEN to college in a continuous and efficient free public system By 1890 there had evolved the now common 12-grade system whereby the child enters kindergarten at five, goes to grammar or elementary school for grades one through eight, high or secondary school for grades nine through twelve, and then enters college Recently, to meet the psychological and social stresses of early adolescence, the junior high school has been introduced in many systems for the grades seven through nine This organization, sometimes called the 6-3-3 plan, eases the transition period and makes possible the development of special techniques To provide opportunity for advanced training beyond high school without a full college course, the junior college, which generally includes the first two years of college, has been widely instituted Efforts to reorganize the schools include the Gary plan, developed between 1908 and 1915 in Gary, Ind Devised to utilize the school plant more efficiently, to provide opportunity for more practical work, and to coordinate various levels of schooling, the plan divides the school building between classrooms and space for auditorium, playground, shops, and laboratories Two schools run simultaneously in this space so that every facility is in constant use The school day is eight hours long, and schools are open six days a week The Gary plan has been widely adopted in what is commonly known as the platoon system Public school services have been extended, in some communities, into the sponsorship of community centers, adult education, summer schools, and recreation programs Special programs are established for the deaf, the blind, and the mentally and physically handicapped and in a few instances for the mentally superior In large cities special high schools are sometimes set up to serve special student needs, e g , there may be separate schools for artistic, industrial, scientific, and classical subjects The free public school system is paralleled in many areas by a relatively small number of private and parochial schools Preparatory schools are private schools operated primarily to prepare students for college They correspond to English public schools See also EDUCATION, GUIDANCE, PROGRESSIVE EDUCATION See E P Cubberly, *Public Education in the United States* (1919), C H Judd, *Education and Social Progress* (1934), and S H Patterson, E A Choate, and E de S Brunner, *The School in American Society* (1936)

Schoolcraft, Henry Rowe, 1793–1864, American ethnologist, b near Albany, N Y He came of a family of glassmakers, and he was a glassmaker himself after 1810, but the difficulties of the business led him to abandon it and make a journey down the Ohio to Missouri There in 1818–19 he made valuable geographical, geological, and mineralogical surveys His journal and findings were recorded in *A View of the Lead Mines of Missouri*, completed in 1819 As geologist on the expedition of Gen Lewis Cass he made topographical surveys of the country of present N Michigan and about the upper Great Lakes The expedition reached what they supposed incorrectly to be the source of the Mississippi (see ITASCA, LAKE) This voyage was described in *A Narrative Journal of Travels from Detroit through the Great Lakes to the Sources of the Mississippi* (1821) In 1822 he was appointed Indian agent with headquarters at Sault Ste Marie and began his ethnological researches He married the half-Ojibwa daughter of the fur trader John Johnston, and he learned the Ojibwa language and much Ojibwa lore His area of administration as Indian agent was later much increased, and he had his headquarters at Mackinac He made another journey to the Mississippi in 1832 and served in the territorial legislature from 1828 to 1832 When the Whigs came to power in 1841 he lost his Indian agency and removed to the East, where he continued the Indian studies begun with *Algic Researches* (1839) He wrote voluminously on the Indians, the chief result being his *Historical and Statistical Information Respecting the Indian Tribes of the United States* (6 vols , 1851–57) Schoolcraft may be regarded as the chief pioneer in study of the Indians

schooner (skōō'nur), sailing vessel, of American origin, rigged fore-and-aft It has between two and seven masts. It can lie closer to the wind than square-rigged sailing ships and needs a smaller crew for its service The first schooner was designed by Capt Andrew Robinson of Gloucester, Mass , in 1713, and before long schooners became the favorite craft of the Newfoundland fishers. In the Second World War, when shipping space was scarce, the United States Maritime Commission built hundreds of schooners in shipyards of the West Indies and Latin America These schooners, of between 300 and 500 tons displacement, carried coffee and sugar from South and Central America to the United States.

Schopenhauer, Arthur (är'tōōr shō'punhou"ur), 1788–1860, German philosopher. Out of his own temperament and experience grew his celebrated philosophy of pessimism, which he presented with such clarity and skill as to gain himself recognition among the greatest philosophical writers Born in Danzig of a well-to-do family, he studied at Göttingen, Berlin, and Jena His studies were broad, and he traveled throughout Europe In Berlin he attempted without success to establish himself as a lecturer, and after 1831 his life was one of retirement spent chiefly at Frankfurt-am-Main He had no friends, never married, and was estranged from his mother, a woman of considerable ability Schopenhauer's most important work is *Die Welt als Wille und Vorstellung* (1818, Eng tr , *The World as Will and Idea*, 1883) His other works, mainly elaboration and commentary upon his original thesis, include *Ueber den Willen in der Natur* (1836, Eng tr , *Will in Nature*, 1889), *Die beiden Grundprobleme der Ethik* (1841), and *Parerga und Paralipomena* (1851) Working out his philosophy on Kantian idealism, Schopenhauer argued that the true reality, expressing itself through all things, is a blind impelling force which is manifest in individuals as a will to live Although it sometimes works below the level of consciousness, the will, nevertheless, constantly strives to push itself out As action fails to meet the demands of the stimulus, intellect and consciousness appear The constant mutual resistance of various wills causes continual strife as each individual attempts to fulfill the never fully satisfied wants of his restless will The world, therefore, is a world of unsatisfied wants, of pain Pleasure is simply the absence of pain, unable to endure, it brings only ennui The only possible escape is renunciation of desire, a negation of the will reminiscent of Buddhism Temporary escape from the imperious will can be found in science and art The ethical side of Schopenhauer's philosophy is based upon sympathy, where the moral will, feeling another's hurt as its own, makes an effort to relieve the pain His stress on the strength of the impelling will was profoundly influential in both philosophy and psychology Schopenhauer is noted for his misogyny See biography by William Wallace (1902), Michael Kelly, *Kant's Ethics and Schopenhauer's Criticism* (1910), V J McGill, *Schopenhauer, Pessimist and Pagan* (1931), Thomas Mann, *The Living Thoughts of Schopenhauer* (1940)

Schoreel, Jan van see SCOREL, JAN VAN

Schouler, James (skōō'lur), 1839–1920, American historian and lawyer, b West Cambridge (now Arlington), Mass , grad Harvard, 1859 Admitted to the bar in 1862, he served in the Union army and returned to Boston in 1863 to practice law From 1871 to 1873 he published the *United States Jurist* in Washington, D C He lectured on law at Boston Univ (1883–1902) and at the National Univ , Washington, D C (1888–1908) and on American history at Johns Hopkins (1891–1908) His *History of the United States of America under the Constitution* (7 vols , 1880–1913), covering the period 1783–1877, is primarily a political and constitutional interpretation Other works, aside from a number of treatises on legal subjects, include *Thomas Jefferson* (1893), *Alexander Hamilton* (1901), and *Ideals of the Republic* (1908) His *Historical Briefs* (1896) in part concerns his own experience as a historian

Schouten, Willem Cornelis (vil'lum kôrnā'lis skhou'tun), 1567?–1625, Dutch navigator In 1615 he sailed from Texel island, Holland, in command of an expedition whose objective was to evade the trade restrictions of the Dutch East India Company by finding a new route to the Pacific Avoiding the Strait of Magellan, in 1616 he rounded Cape Horn, which he named for his birthplace, Hoorn He followed the north coasts of New Ireland and New Guinea and visited adjacent islands, including the Schouten Islands Although Schouten had opened a new route, the East India Company claimed infringement of its monopoly, arrested Schouten (who was later released) and confiscated his ship in Java

Schrader, Julius (yōō'lyōōs shrä'dur), 1815–1900, German historical painter He was noted for his brilliant use of color In 1848 he became professor at the Berlin Academy Among his paintings are a portrait of Baron Alexander von Humboldt (Metropolitan Mus)

Schreckhörner (shrĕk'hûr"nur), two peaks of the Bernese Alps, Switzerland Gross Schreckhorn (grōs" shrĕk'hôrn") is 13,386 ft high, while Klein Schreckhorn (klīn") reaches only 11,473 ft

Schreiner, Olive (shrī'nûr), pseud **Ralph Iron,** 1855–1920, South African author and feminist, b Wittebergen Reserve, Cape Colony, of German and English parents After several years as a governess, she went to England in 1881, taking with her the manuscript of her novel, *The Story of an African Farm* Its publication (1883) made her famous, and it was translated into many languages Her later works included *Dreams* (1921), a collection of allegories, *Women and Labour* (1911), important in the literature of feminism, and a significant novel, unfinished, *From Man to Man* (1926) Her letters were edited (1924) by her husband, S C Cronwright-Schreiner, who also wrote her biography (1923).

Schreyer, Adolf (ä'dôlf shrī'ur), 1828–99, German painter of Oriental scenes and of battles and horses He gained material for his pictures in the Crimean War and later on a visit to Algeria and Asia Minor in 1861 He became court painter to the grand duke of Mecklenburg He is best known for his brilliantly colored and dramatic pictures of Arab horsemen, such as *Arabs on the March* (Metropolitan Mus)

Schröder, Friedrich Ludwig (frē'drĭkh lōōt'vĭkh shrû'dur), 1744–1816, German actor, manager and dramatist He became one of the most celebrated tragic actors of his day, playing such Shakspearian roles as Lear and Hamlet and translating Shakspere and other English classics into German In 1771 he and his mother assumed the management of the Hamburg Theater, where he produced and acted in Shakspearian plays, as well as the plays of Schiller, Goethe, Lessing, and himself His natural style of acting and excellent productions raised the standards of the German stage, and his translations familiarized his countrymen with the works of Shakspere

Schrödinger, Erwin (ĕr'vĭn shrû'dĭng-ur), 1887–, Austrian theoretical physicist For his work on the quantum theory, especially the mathematical formulation of wave mechanics, he shared with P A M Dirac the 1933 Nobel Prize in Physics He was professor at the Univ of Berlin (1927–33), fellow of Magdalen College, Oxford Univ (1933–36), and professor at the Univ of Graz (1936–38) and at the Dublin Institute for Advanced Studies (from 1940)

Schubert, Franz Peter (frants' pā'tur shōō'bûrt), 1797–1828, Austrian composer, foremost of the romantic movement In Vienna he learned the piano and the violin from his older brothers and studied composition with Salieri, though his formal musical education was scanty The German lied reached its flower in his songs, they number over 600 and illustrate his incomparable melodic genius His two great cycles, *Die schöne Müllerin* (1823) and *Die Winterreise* (1827), were set to poems by Wilhelm Müller, and he also employed texts from Goethe, Schiller, Heine, and others His symphonies in B minor (the Unfinished Symphony, 1822) and C major (1828) rank with the greatest works in that form The Quartet in D Minor (*Death and the Maiden*, 1824) and the Quintet in A (*The Trout*, 1819) are the best known among many mature chamber works Of his dramatic music, only the incidental music for *Rosamunde* (1823) achieved even moderate success He also composed several overtures, choral music, Masses, and much piano music, including 21 sonatas in addition to the more popular shorter works, such as the waltzes, scherzos, impromptus, and the *Moments musicaux* Although he had a small group of followers, headed by Grillparzer, the only music position he ever succeeded in securing was as piano teacher to the children of a Hungarian nobleman He sold his compositions for pitifully small sums and lived in poverty until his death in Vienna See biographies by W N Flower (1928), Karl Kobald (1928), Edmonstoune Duncan (rev ed , 1934), and A J B Hutchings (1945), O E Deutsch, *The Schubert Reader a Life ... in Letters and Documents* (Eng tr , 1947)

Schulenburg, Ehrengard Melusina von der, duchess of Kendal (ā'rungart mālōōzē'na fŭn dĕr shōō'lunbōōrk), 1667–1743, German mistress of GEORGE I of England She exerted great influence over the king, but was unpopular with the English people because of her foreign birth and manners and the wealth she acquired through bribery and corrupt public transactions

Schulenburg (shōō'lunbûrg), town (pop 1,970), S central Texas W of Houston and E of San Antonio, inc 1873 The blackland farms, settled by Germans and Czechs, long were devoted to cotton Dairying is now prominent, and the thriving town has an evaporated-milk plant and various small industries

Schultze, Max Johann Sigismund (mäks' vō'han zĕ'gĭsmōōnd shōōl'tsu), 1825–74 German biologist He was professor at Bonn from 1859 He is known for his work on the cell theory, on protoplasm, on protozoa, and on nerve endings.

Schulze-Delitzsch, Hermann (hĕr'man shōōl'tsuădā'lĭch), 1808–83, German liberal politician and economic reformer Believing in economic self-help by cooperative associations he founded people's banks, mercantile and consumers' cooperatives, and a general association of German cooperatives (1859), which were given legal security by his statute of 1867 He was a member of the Prussian lower house from 1861, of the North German diet from 1867, and of the Reichstag from 1871

Schumacher, Heinrich Christian (hīn'rĭkh krĭs'tyan shōō'mäkhur), 1780–1850, Danish astronomer He is noted for his work in geodesy and in astronomical literature From 1815 he was professor of astronomy and director of the observatory at Copenhagen He directed a triangulation of Holstein and a geodetic survey of Denmark In 1821 he inaugurated the *Astronomische Nachrichten*, destined to hold a foremost position among astronomical periodicals

Schumacher, Peder, Count Griffenfeld · see GRIFFENFELD, PEDER SCHUMACHER, COUNT

Schuman, Robert (rōbĕr' shōōmä'), 1886–, French statesman and lawyer, b grand duchy of Luxembourg. A member of the Catholic Mouvement Républicain Populaire (MRP), he was finance minister in 1946 and again in 1947 and was premier in 1947–48 He continued as foreign minister, and in 1950 he proposed the so-called Schuman Plan, calling for the creation of a West European coal and steel pool Belgium, the Netherlands, Luxembourg, West Germany, and the Saar Territory joined in the plan, but Great Britain remained aloof

Schuman, William (shōō'mun), 1910–, American composer, b New York city, grad Columbia (B A , 1935, M A , 1937) As a youth he organized a jazz band for which he wrote popular music He taught (1935-45) at Sarah Lawrence College, Bronxville, N Y , leaving to become president of the Juilliard School of Music, where he instituted a curriculum designed to make the musician a responsible member of society His outstanding compositions are his Third Symphony and his Fourth Symphony (both 1941), his *American Festival Overture* (1939), *Symphony for Strings* (1943), *Newsreel* (1941), a suite "in five shots", two secular cantatas, *This Is Our Time* (1940) and *A Free Song* (1942), the ballet *Undertow* (1945), and several chamber works His music is highly contrapuntal and often employs rhythms suggestive of jazz

Schumann, Robert Alexander (shōō'män), 1810–56, German romantic composer, b Zwickau He studied theory with Dorn and piano with Friedrich Wieck, whose daughter he married (1840) A career as a concert pianist was prevented by a permanent hand injury, incurred in 1832 in using a device meant to strengthen the fingers rapidly He founded (1834) the *Neue Zeitschrift für Musik* and was its editor and contributor until 1844 Compositions for piano, including *Papillons*, *Die Davidsbundlertänze*, *Carnaval*, *Fantasiestücke*, *Etudes symphoniques*, *Kinderszenen*, and *Kreisleriana*, occupied him until 1840, when he composed nearly 150 songs, to poems of Heine, Goethe, Chamisso, Kerner, Ruckert, Eichendorff, and others His Piano Concerto in A Minor (1841–45), Spring Symphony (1841), Third, or Rhenish, Symphony (1850), Fourth Symphony in D Minor (1841-51), and later songs, piano pieces, and chamber works are well known His one opera, *Genoveva* (1847–48), was unsuccessful Both as composer and as critic, he was leader of the romantic movement, and he championed younger composers, Brahms and Chopin among them His life was clouded by a threat of insanity, and in 1854 he entered a sanitarium, where two years later he died See his *On Music and Musicians* (Eng tr , abridged, 1946), biographies by Frederick Niecks (1925), Victor Basch (Eng tr , 1931), and R H Schauffler (1945) His wife, **Clara Josephine (Wieck) Schumann**, 1819–96, who bore him eight children, was one of the outstanding pianists of her time She taught at the Frankfurt Conservatory, 1878–92 See biographies by Berthold Litzmann (Eng tr , abridged, 1913) and J N Burk (1940)

Schumann-Heink, Ernestine (shōō'mun-hĭngk'), 1861–1936, American contralto, b near Prague Her concert debut was as soloist in Beethoven's Ninth Symphony in 1876, and in 1878 she made her operatic debut in Dresden in *Il Trovatore* She sang (1883–98) at the Staattheater, Hamburg, and in 1892 sang in *Die Walkure* at Covent Garden From 1896 to 1906 (except 1904) she sang at Bayreuth, made her American debut in Chicago in 1898, and sang regularly (1899–1904) with the Metropolitan Opera Company She toured (1904–5) with great success in a comic opera, *Love's Lottery*, written for her. After that, she appeared mainly in concert, giving her farewell concert in 1925 and appearing once more at the Metropolitan in 1932 In 1935 she was in a moving picture, *Here's to Romance* She had a wide range, a repertoire of 150 roles, and was an extraordinary actress, popular even when her voice had deteriorated She became a U S citizen in 1908. See biography by Mary Lawton (1928)

Schumpeter, Joseph Alois (yō'zĕf a'lōĭs shōōm'pā"tur), 1883–1950, Austrian-American economist, LL D, Univ of Vienna, 1906 He began practicing law but turned to teaching two years later. He was professor of economics at the Univ of Graz from 1911 to 1914 and at Bonn from 1925 to 1932, when he came to the United States, thereafter he was professor of economics at Harvard He served in 1919–20 as Austrian minister of finance His contribution to economics was the theory of the entrepreneur as the dynamic factor in disturbing business equilibrium His most important books are *Theory of Economic Development* (1911, in German, Eng. tr , 1934), *Business Cycles* (1939), and *Capitalism, Socialism, and Democracy* (1942, 2d ed , 1947).

Schurman, Jacob Gould (shûr'mŭn), 1854–1942, American educator and diplomat, b Freetown, Prince Edward Island. His education was completed in London, Edinburgh, and, as Hibbert fellow, Heidelberg, Berlin, and Göttingen In 1886 he became head of the philosophy department at Cornell Univ. He won a notable reputation as teacher, speaker, founder and editor of the *Philosophical Review*, and author of *The Ethical Import of Darwinism* (1887) and other philosophical works In 1892 he succeeded Charles K Adams as president of Cornell In that office until 1920, he helped in the expansion of the university. He headed the first U S Philippines Commission (1899), was joint author of its report, and wrote *Philippine Affairs* (1902) Schurman served (1912-13) as minister to Greece, returning to write *The Balkan Wars, 1912–1913* (1914), later he was envoy to China (1921–25) and ambassador to Germany (1925–30)

Schurz, Carl (shōōrts), 1829–1906, American politician, b Germany He studied in the so-called Jesuit gymnasium at Cologne and at the Univ of Bonn and took part in the revolutionary uprisings of 1848–49 Compelled to flee to Zurich after the collapse of the movement, he went to Paris and London and, in 1852, migrated to the United States For a few years he lived in Philadelphia, but in 1856 he settled in Watertown, Wis , and soon associated himself with the newly formed Republican party He campaigned for Abraham Lincoln in the latter's senatorial contest with Stephen A Douglas in 1858 and again in the presidential canvass of 1860 For his services he was appointed (1861) U S minister to Spain Made restive, however, by the prolongation of the Civil War, Schurz resigned his mission, commissioned brigadier general of volunteers in 1862 (promoted major general in 1863), he fought in the battles of Chancellorsville, Gettysburg, and Chattanooga and served with Gen W T Sherman's army in North Carolina in 1865 Between 1865 and 1868 he was Washington correspondent of the New York *Tribune*, editor of the Detroit *Post*, and joint editor and owner of the St Louis *Westliche Post*, a German daily He was U S Senator (1869-75) from his adopted state of Missouri Antagonized by the excesses of the radical Republican Reconstruction program and opposed to the administration of Ulysses S Grant, Schurz aided in forming the LIBERAL REPUBLICAN PARTY, which, though short-lived, had some effect in checking the cause of the radicals in Congress In 1876 Schurz supported Rutherford B Hayes, whose sound-money views he approved, for the presidency and served (1877–81) in Hayes's cabinet as Secretary of the Interior He was an editor (1881–83) of the New York *Evening Post* and wrote editorials (1892–98) for *Harper's Weekly* In 1884, convinced of James G Blaine's unfitness for office, Schurz led the MUGWUMPS in their opposition to his nomination and candidacy He supported the Democrat Grover Cleveland in that year and again in 1888 and 1892 He turned to William McKinley in 1896 because of William Jennings Bryan's currency views, but in 1900 he supported the Commoner because of his anti-imperialist views Because of his honesty and fearlessness, Schurz exercised wide influence through his writings and speeches From 1892 to 1900 he was president of the National Civil Service Reform League He wrote *Life of Henry Clay* (2 vols , 1887), *Abraham Lincoln an Essay* (1891), and his own reminiscences (3 vols , 1907–8) See Frederic Bancroft, ed , *Speeches, Correspondence, and Political Papers of Carl Schurz* (6 vols , 1913), Joseph Schafer, ed , *Intimate Letters of Carl Schurz, 1841–1869* (1928), C V Easum, *The Americanization of Carl Schurz* (1929), biographies by Joseph Schafer (1930) and C M Fuess (1932)

Schuschnigg, Kurt von (kōōrt' fŭn shōōsh'nĭk), 1897–, Austrian statesman A lawyer by training, he became a political disciple of Mgr SEIPEL and served (1932–34) as minister of justice and education under DOLLFUSS He helped Dollfuss in repressing the Social Democrats and in drawing up a corporative constitution, and after Dollfuss's assassination (July, 1934) he succeeded him as chancellor In 1936 Schuschnigg forced the resignation of Ernst Rüdiger von STARHEMBERG as vice chancellor, disbanded Starhemberg's monarchist militia, the *Heimwehr*, and restored military conscription, thus making himself sole head of the semi-fascist state Schuschnigg's chief aim was to strengthen Austria internally against the attempt of Hitler, acting through the National Socialist party, to unite Austria with Germany In this he was successful as long as he enjoyed the support of Italy, but in 1937 Mussolini withdrew his support Growing German pressure led Schuschnigg to visit Hitler at Berchtesgaden (Feb., 1938), Hitler forced him to grant full amnesty to imprisoned Austrian Nazis and to take the Nazi leader Seyss-Inquart into his cabinet as minister of the interior Violent trouble soon broke out, and Schuschnigg proclaimed (March, 1938) that a plebiscite would be held on the question of Austrian independence Two days later German troops entered Austria unopposed, and Schuschnigg resigned (March 11) He was arrested and kept in confinement until his liberation by American troops in May, 1945 In 1947 he settled in the United States He wrote *My Austria* (Eng. tr , 1938) and *Austrian Requiem* (1947). See biography by R K. Sheridon (1942)

Schuster, Sir Arthur (shōō'stur), 1851–1934, English physicist He was professor of physics at the Univ of Manchester (1888–1907) and is known especially for his work in spectroscopy In 1920 he was knighted His works include *Introduction to the Theory of Optics* (1904), *Progress of Physics during 33 years (1875–1908)* (1911), *Britain's Heritage of Science* (with A. E Shipley, 1917), and *Biographical Fragments* (1932).

Schütt, Great (shŭt), Slovak *Veľký Žitný Ostrov* (vĕl'kē zhlt'nē ô'strôf), island, 53 mi long and 9 to 18 mi wide, SW Slovakia, Czechoslovakia, formed by the Danube proper and a northern arm of the Danube It extends from Bratislava to Komarno Its fertile soil produces wheat, corn, sugar beets, fruit, and grapes Opposite the Great Schütt lies the **Little Schütt**, Hung *Szigetköz* (sĭ'gĕtkûz), an island belonging to Hungary and formed by the Danube proper and a southern arm It is c 30 mi long and c 6 mi wide and produces wheat, rye, and dairy products

Schütz, Heinrich (hĭn'rĭkh shuts'), 1585–1672, German composer of choral music, considered the greatest of his period He was a pupil (1609–12) of Giovanni Gabrieli From 1617 until his death he was director of music at the Dresden chapel His first German work was his *Psalmen Davids* (1619), in which he made use of the new monodic or declamatory style In 1627 he set to music a German translation of *Dafne*, set earlier in Italian by Jacopo PERI Schütz's work (no longer extant) has been called the first German opera Church music comprised the rest of his work, his *Symphoniae sacrae*, written in three parts (1629, 1647, 1650), are influenced strongly by Monteverdi, but it was in his *Seven Last Words of Christ on the Cross* (1645) and his settings of the Passion as narrated in each of the four Gospels that he established his choral style, evolved from the old Venetian polyphony and the new dramatic Florentine style Handel was influenced by Schütz in his development of the oratorio, Bach in his settings of the Passion Schutz's complete works were published in 1885–94 See M F Bukofzer, *Music in the Baroque Era* (1947)

Schuyler, Eugene (skī'lur), 1840–90, American diplomat and author, b Ithaca, N Y , grad Yale, 1859, and Columbia Law School, 1863 Linguistic interests led him from law to diplomacy, and in 1867 he was appointed consul at Moscow, serving later as consul at Reval (now Tallinn), and secretary of legation at St Petersburg (now Leningrad) *Turkestan* (2 vols , 1876), criticizing Russian rule in the East, was the result of a journey in 1873 Appointed secretary of legation at Constantinople, he published (1876) a report on Turkish atrocities in Bulgaria which aroused Turkish resentment and eventually resulted in his recall He acted as minister to Greece, Rumania, and Serbia, negotiating several treaties with the Balkan states Shortly after his appointment as consul general at Cairo he died He translated one of Turgenev's novels – *Father and Sons* (1867)—and wrote *Peter the Great* (2 vols , 1884), *American Diplomacy and the Furtherance of Commerce* (1886), and *Italian Influences* (1901) *Selected Essays* (1901) contains a memoir of him by Evelyn Schuyler Schaeffer

Schuyler, Philip John, 1733–1804, American Revolutionary general, b Albany, N Y He was a member of one of the wealthiest colonial New York families After serving in the French and Indian War, he was appointed (1764) a commissioner in the settlement of the boundaries of New York and of New Hampshire and Massachusetts The major question was the bitterly contested one of the New Hampshire Grants (see VERMONT), and Schuyler, accused with some justice of favoring New York, was viewed with hatred by the Green Mountain Boys and with some dislike by most New Englanders A member of the New York assembly (1768–75) and of the First Continental Congress (1775), he was a strong patriot, and in the Revolution he was appointed (1775) a major general and head of the Northern Dept After Ethan ALLEN and the Green Mountain Boys captured Ticonderoga, Schuyler helped to plan the QUEBEC CAMPAIGN, but his illness forced him to give his command to Gen Richard MONTGOMERY In 1776 a command dispute arose between Schuyler and Horatio GATES When Gen Arthur St Clair surrendered Ticonderoga without a shot, Schuyler was accused of negligence and Gates was given the high command in the SARATOGA CAMPAIGN (1777) A court-martial acquitted Schuyler, who nevertheless resigned from the army in 1779 His wealth and position made him a public figure of note He was a member of the Continental Congress (1779–81), favored adoption of the Constitution, and was U S Senator (1789–91, 1797–98) Among his activities were advocating a canal (eventually the Erie Canal) and helping to found Union College His daughter, Elizabeth, married Alexander Hamilton See biography by Bayard Tuckerman (1904)

Schuyler, city (pop 2,808), co seat of Colfax co., E Nebr , on the Platte in a prairie region WNW of Omaha, founded 1869. It is a rail and trade center for a grain and livestock area.

Schuyler, Fort, name given in the American Revolution to the rebuilt Fort STANWIX The fort built on the site of present Utica, N Y , in 1758 was also called Fort Schuyler A third Fort Schuyler was

built as part of the defenses of New York city in the Bronx

Schuylerville, village (pop. 1,447), E N Y , on the west bank of the Hudson and E of Saratoga Springs, settled in the 17th cent as Saratoga, inc 1874 Woodboard and paper are made here It is famous as the scene of Burgoyne's surrender to Gates in the SARATOGA CAMPAIGN

Schuylkill (skōōl'kĭl", skōō'kəl) [Dutch, = hidden creek], river rising in Schuylkill co , Pa , flowing generally southeast 130 mi , and emptying into the Delaware at Philadelphia There are many industrial cities along its banks—Pottsville, Reading, Pottstown, Norristown, and Philadelphia A state dredging project to remove silt and anthracite culm from the river was started in 1948

Schuylkill Haven, industrial borough (pop 6,518), E Pa , on the Schuylkill near Pottsville, laid out 1829, inc 1840 A railroad center in a coal-mining region, it produces shoes and textiles

Schwab, Charles Michael (shwŏb), 1862–1939, American steel magnate, b Williamsburg, Pa He became (1880) a stake driver in the steelworks of Andrew Carnegie and rose to be chief engineer, then continued to go up the ranks until in 1897 he was made president of the Carnegie Steel Company He was (1901–3) the first president of the U S Steel Corp , but he resigned to direct the Bethlehem Steel Company, which became the largest independent producer in the field In the First World War he made Bethlehem Steel the leading manufacturer of war materials for the Allies, and after serving the government in 1918, he returned to his old post

Schwabach (shvä'bäkh), town (pop 17,873), Middle Franconia, W central Bavaria, SSE of Nuremberg It has metalworking and lead-processing industries The late Gothic church has carvings by Veit Stoss and a tabernacle by Adam Krafft The town hall dates from 1509 The **Articles of Schwabach,** drawn up here in 1529, were used in drafting (1530) the Augsburg Confession of the Protestant faith The articles emphasized differences between Luther and Zwingli, and therefore many cities of S Germany refused to take part in the Augsburg discussions

Schwäbisch Gmünd (shvā'bĭsh gumünt') or **Gmünd,** city (pop 30,748), central Württemberg, E of Stuttgart and at the foot of the Swabian Jura After 1945 it was included in the American-occupied state of Württemberg-Baden Long known as a gold- and silver-working center, it now also manufactures machinery It was a free imperial city from 1268 to 1803 and has retained several medieval churches and monasteries and part of its fortifications

Schwäbisch Hall (shvā'bĭsh hal') or **Hall,** town (pop 16,589), N Württemberg, E of Heilbronn It is a rail junction and has an iron and steel construction industry Its saline baths make it a popular resort Chartered in the 12th cent , it was a free imperial city and ruled a considerable territory surrounding it until 1803 Its baroque town hall burned down in 1945

Schwann, Theodor (tā'ōdōr shvän'), 1810–82, German physiologist and histologist He was an assistant of J P Müller and professor at the universities of Louvain (1838–48) and Liége (from 1848) He carried forward and amended the work of Schleiden and demonstrated that the cell is the basis of animal as well as of plant tissue In his early work Schwann described the nerve sheath known by his name, described pepsin in gastric juice, and recognized the living nature of yeast Of great influence was his *Microscopical Researches in the Structure and Growth of Animals and Plants* (1839, Eng. tr , 1847)

Schwanthaler, Ludwig von (lōōt'vĭkh fün shvän'tä-lur), 1802–48, German sculptor Though he was a neoclassicist, his later works were treated more in the romantic manner and devoted to themes that appealed to the growing national sentiment Overwhelmed by commissions for monuments and large decorative sculptures, for the new palace, the Ruhmeshalle, and other buildings erected in Munich by King Louis I of Bavaria, he left the execution to a great extent in the hands of apprentices Notable among his works in Munich were 12 gilded bronze figures of Bavarian princes for the throne room of the Königsbau and the statue of Bavaria in front of the Ruhmeshalle Elsewhere he is represented by portrait statues and monuments, such as the Mozart at Salzburg and the Goethe at Frankfurt-am-Main and pediment groups for the Valhalla near Regensburg In the Metropolitan Museum is his *Dancing Girl* in bronze

Schwartz, Delmore (shwôrts), 1913–, American poet, b Brooklyn, N Y , grad New York Univ , 1935 His volume of poems *In Dreams Begin Responsibilities* appeared in 1938, in 1940 he was awarded a Guggenheim fellowship *Shenandoah* (1941) is a verse play, *Genesis* (1943), a long poem, and *World Is a Wedding* (1948), a collection of short stories He taught English at Harvard after 1940 His poetry is intellectual and sometimes obscure

Schwartz, Maurice (shvärts), 1890–, American actor, producer, and theater manager, b. Russia He came to the United States (1901) and made his debut (1905) in a Yiddish stock company in Baltimore He gained fame when he acted (1912–19) at the Second Avenue Theatre, New York city, and he established himself as the foremost Yiddish actor of the United States at the Yiddish Art Theatre, New York city, which he founded (1919) His successes include *The Dybbuk, The God of Vengeance, The Lower Depths, Yoshe Kalb, The Brothers Ashkenazi, Three Cities, The Family Carnovsky,* and *Dr Herzl*

Schwartze, Teresa (turā'sä svärt'su), 1852–1918, Dutch figure and portrait painter Her fresh color, lively handling, and clever characterization made her a fashionable and successful portraitist in both oil and pastel *Three Inmates of the Orphanage* and the portrait of P J Joubert (both, Rijks Mus) are good examples of her work

Schwarz, Berthold (bĕr'tôlt shvärts'), fl 14th cent , German Franciscan monk and alchemist He was formerly credited, especially in Germany, with the discovery of gunpowder Though nothing definite about Berthold Schwarz's life is known, it is considered possible that he was the first to make bronze cannons, in a foundry he established in Venice

Schwarzburg-Rudolstadt (shvärts'bŏŏrk-rōō'dôlsh-tät") and **Schwarzburg-Sondershausen** (-sŏn'durs-hou"zun), two former principalities, Thuringia, central Germany Occupying a small area in the central Thuringian Forest, they had, respectively, Rudolstadt and Sondershausen as capitals The ruling dynasty was named after the castle of Schwarzburg, on the Schwarza river The line of Schwarzburg-Rudolstadt was raised to princely rank in 1710, that of Sondershausen, in 1697 The Sondershausen line died out in 1909, and its principality was united in personal union with that of Rudolstadt until 1918, when Prince Gunther abdicated In 1920 both districts were incorporated into Thuringia

Schwarzenberg, Felix, Fürst zu (fā'lĭks fürst' tsōō shvär'tsünbĕrk), 1800–1852, Austrian statesman, prime minister (1848–52), nephew of Karl Philipp zu Schwarzenberg He persuaded Emperor Ferdinand I to abdicate (1848) in favor of the young Francis Joseph and suppressed the Revolution of 1848 in AUSTRIA and BOHEMIA with the aid of his brother-in-law, Prince WINDISCHGRÄTZ, and in HUNGARY with the aid of the Russians At the Convention of Olmütz (1850), he humiliated Prussia by restoring leadership of the German Confederation to Austria See Adolph Schwarzenberg, *Prince Felix zu Schwarzenberg* (1946)

Schwarzenberg, Karl Philipp, Fürst zu (karl' fē'lĭp), 1771–1820, Austrian field marshal in the Napoleonic Wars He led the Austrian forces sent to aid Napoleon I in the Russian campaign of 1812 When Austria joined (1813) the allies against Napoleon, Schwarzenberg was the senior general of the victorious coalition He commanded at Leipzig (1813) and entered Paris in 1814

Schwarzwald, Germany see BLACK FOREST

Schwatka, Frederick (shwŏt'ku), 1849–92, American explorer, b Galena, Ill , grad West Point, 1871, and later studied law and medicine With William H Gilder he commanded an arctic expedition (1878–80) to King William Island to search for traces of Sir John Franklin's party The evidence he unearthed largely answered the last questions as to the fate of the Franklin expedition Later (1883–84) he explored the Yukon river in Alaska Resigning from the army in 1885, he commanded (1886) an Alaskan expedition financed by the New York *Times* Schwatka wrote several books on Alaska, *In the Land of Cave and Cliff Dwellers* (1893) described his explorations in the Southwest and Mexico

Schweidnitz (shvīt'nĭts) or **Swidnica,** Pol *Świdnica* (shvēdnē'tsä), city (1939 pop 39,052, 1946 pop 21,448), Lower Silesia, SW of Breslau It was transferred to Polish administration at the Potsdam Conference of 1945 It is a trade center and has manufactures of electrical appliances, textiles, and chemicals An early residence of the Piast dukes of Silesia, Schweidnitz and the surrounding principality came to the Bohemian crown in 1308 and were ceded to Prussia in 1745

Schweinfurt (shvīn'fōōrt), city (1939 pop 49,321, 1946 pop 37,331), Lower Franconia, NW Bavaria, on the Main. It is an industrial center producing machine tools and dyes Paris green is also called Schweinfurt green First mentioned in 791, Schweinfurt was a free imperial city from the 13th cent until 1803 Schweinfurt was, at the time of the Second World War, the chief center of the German ball-bearing industry It was very heavily damaged in a series of air raids in 1943–44 Friedrich Rückert was born here

Schweinfurth, Georg August (gä'ôrk ou'gōōst shvīn'-fōōrt), 1836–1925, German ethnologist and traveler in Africa, b Riga, Latvia Between 1863 and 1888 he explored extensively in eastern and equatorial Africa and in Arabia In 1870 he discovered the Welle river and later definitely established the existence of African Pygmies. Among his books is *The Heart of Africa* (1873)

Schweitzer, Albert (äl'bĕrt shvī'tsur), 1875–, Alsatian philosopher, theologian, physician, and musician Resolved to become a doctor in French Equatorial Africa, Schweitzer at 30 began his medical studies, meanwhile continuing his other activities, and in 1913 he left for Lambaréné, Gabon, French Equatorial Africa Except for frequent trips to the Continent to raise money and a visit to the United States in 1949 to address the Goethe Festival in Colorado, he remained there, establishing extensive medical facilities which have received financial support throughout the world On these trips he was honored in many countries for his work as a scientist and humanitarian, his artistry as an organist, and his contributions as a philosopher His biography of Bach (1905), considered one of the best studies of the master, along with his edition (with C M Widor, 1912–14) of Bach's organ music, has made him the outstanding authority on Bach *On the Edge of the Primeval Forest* (1920, Eng tr , 1922) is an account of his early years at Lambaréné, supplemented later by *More from the Primeval Forest* (1925, Eng tr , 1931) and *From My African Notebook* (1936, Eng tr , 1938) Schweitzer's philosophy is developed in a three-volume series, *Philosophy of Civilization* (*The Decay and the Restoration of Civilization,* 1923, Eng tr , 1923, *Civilization and Ethics,* 1923, Eng tr , 1923, and *Reverence for Life,* as yet unpublished) "Reverence for life" is the term Schweitzer uses for a universal concept of ethics He believes that such an ethics would reconcile the drives of altruism and egoism by requiring a respect for the lives of all other beings and by demanding the highest development of the individual's resources A profound Christian, Schweitzer is unorthodox in that he rejects the historical infallibility of Jesus while following him spiritually His theological works include *The Quest of the Historical Jesus* (1906, Eng tr , 1910) and *The Mysticism of Paul the Apostle* (1930, Eng tr , 1930) See his autobiography, *Out of My Life and Thought* (1932, Eng tr , 1933) and *Albert Schweitzer an Anthology* (ed by C R Joy, 1947) See Oskar Kraus, *Albert Schweitzer His Work and His Philosophy* (Eng tr , 1944), Hermann Hagedorn, *Prophet in the Wilderness* (1947), George Seaver, *Albert Schweitzer the Man and His Mind* (1947), M C Ratter, *Albert Schweitzer Life and Message* (1949), C R Joy and Melvin Arnold, *The Africa of Albert Schweitzer* (1948)

Schwellenbach, Lewis Baxter (shwĕl'lunbuk), 1894–1948, U S Secretary of Labor (1945–48), b Superior, Wis , LL B Univ of Washington, 1917 He served in the First World War, was admitted (1919) to the bar, and became (1924) chairman of the Democratic state convention After serving (1935–40) in the U S Senate, he was made (1940) U S district judge in Washington state As Secretary of Labor, he reorganized the Dept of Labor and opposed congressional legislation curbing labor-union activity He died in office

Schwenkfeld, Kaspar von (kä'spar fün shvĕngk'-fĕlt), 1490–1561, German religious reformer Schwenkfeld was in court service with the duke of Liegnitz from 1510 to c 1522 He visited Wittenberg during Luther's absence at the Wartburg and there met the radical reformers, Munzer and Carlstadt Returning to Liegnitz, he devoted himself to the reform movement in Silesia Luther suspected Schwenkfeld of Anabaptist leanings and was further provoked by Schwenkfeld's belief that the Eucharist was only a spiritual symbol (see LORD'S SUPPER) After Lutheranism became dominant in Silesia, Schwenkfeld was forced to move to Strasbourg and later to Ulm An anathema was proclaimed against him by the Lutherans at Schmalkald, and his books were banned He wrote a full statement of faith and enunciated the differences between Luther and Zwingli An important part of his belief was the distinction between the outward and transitory word of God as given in the Scriptures and an inward spirit, divine and eternal His followers, known as **Schwenkfeldians** or **Schwenkfelders,** were persecuted, and in the 18th cent many of them fled to other parts of Europe and to North America Some Schwenkfelders emigrated to SE Pennsylvania in the 18th cent , and there the sect still exists

Schwerin, Kurt Christoph, Graf von (kōōrt' krĭs'tôf gräf'fün shvärēn'), 1684–1757, Prussian field marshal, b Pomerania He was one of the most brilliant lieutenants of Frederick II in the War of the Austrian Succession and the Seven Years War In Swedish service before entering (1720) the Prussian army, he was one of the handful of officers that remained with CHARLES XII at Bender He was created count after his victory (1740) over the Austrians at Mollwitz, and he was killed in the battle of Prague

Schwerin (shvärēn'), city (pop 88,164), capital of Mecklenburg, NE Germany, on a lake of the same name It is the center of an agricultural and dairying region First mentioned (1018) as a Wendish settlement, it was chartered (1161) by Henry the Lion and became (1167) an episcopal see The Peace of Westphalia (1648) secularized the bishopric and gave its territories to the duke of Mecklenburg-Schwerin (see MECKLENBURG) Schwerin was occupied (1624–31) by the imperial troops

under Wallenstein in the Thirty Years War. It has a Protestant cathedral (14th–15th cent). The former grand ducal palace, on an island in the lake, was built in the 19th cent

Schwind, Moritz von (mō'rĭts fŭn shvĭnt'), 1804–71, Austrian historical painter and illustrator One of the last of the German romanticists, he studied at the Vienna Academy and at Munich In 1847 he became professor at the Munich Academy He decorated various royal residences for Louis I, king of Bavaria, and his frescoes depicting scenes from Mozart's *Zauberflöte* adorn the Vienna Opera Other works are *Beautiful Melusine* (Vienna) and *Singers' Contest at the Wartburg* Schwind illustrated *Robinson Crusoe* and works of Goethe

Schwyz (shvēts), canton (351 sq mi ; pop 66,555), Switzerland one of the FOUR FOREST CANTONS It is mountainous, forested, and pastoral, with meadows in the valleys and large hydroelectric plants in the north The population is German-speaking In the 13th cent the rights to Schwyz passed to the counts of Hapsburg, but in 1240 Emperor Frederick II granted Schwyz a charter making it immediately subject to the empire The charter having been revoked (1274) by Rudolf I of Hapsburg, Schwyz concluded (1291) with URI and UNTERWALDEN the pact which became the basis of Swiss liberty (see SWITZERLAND, which derives its name from Schwyz) The canton rejected the Reformation and in 1845 joined the Catholic SONDERBUND Its capital, **Schwyz** (pop 9,530), has a 16th-century town hall with historic paintings The Swiss federal archives here contain the original pact of 1291 The town has a small diversified industry

sciatica (sīăt'ĭkŭ), condition characterized by pain, often associated with numbness, tingling, and tenderness, along the course of the sciatic nerve of the leg The condition may be caused by trauma (injury) and by pressure (sometimes the result of an internal growth) on the nerve

science [from Latin *scientia*=knowledge], accumulated and systematized learning, in general usage restricted to the knowledge of natural phenomena The progress of science is marked not only by an accumulation of facts but by the emergence of the scientific method and of the scientific attitude. The first step of the scientific method is the gathering of data by the observation of phenomena By inductive reasoning a hypothesis or preliminary generalization is built on the data The validity of deductions that follow logically from a generalization are tested by further observations and experiments A verified generalization is considered a scientific theory or law, if contradictory facts arise, the theory may be modified to include the new facts or it may be replaced by a new concept The scientific method is an expression of the scientific attitude which rests on rational impartiality and on a strict regard for accuracy and controlled experiment The origins of science can be traced to the crude, and often subjective, observations on which early man based empirical rules for the practical utilization of knowledge The Greeks advanced the systematization of knowledge by classification and by deduction from hypotheses, usually closely bound with metaphysical concepts and unverified by experiment Notable among Greek and Hellenistic scientists are Hippocrates, Pythagoras, Aristotle, Euclid, Archimedes, and Ptolemy Although the Romans made little advance in pure science, they made great strides in applied science The Arabs made valuable contributions in mathematics, astronomy, and medicine and preserved many Greek, Roman, and Hellenistic scientific writings The revival of science in Europe during the late medieval period was stimulated by the recovery of ancient works, especially those of Aristotle. However, progress was slow because investigators relied on ancient authorities and on deductions from the Scriptures as interpreted by the Church instead of on independent observations, a notable exception is Roger Bacon Leaders in basing scientific concepts on observed data and on experiment include Copernicus, Kepler, and Galileo The value of inductive reasoning and of experiment in scientific work was formulated in the early 17th cent by Francis Bacon. In the 17th and 18th cent. much scientific progress was made by men unconnected with universities; scientific societies were the chief agencies in furthering and correlating research. Universities began to play a major role in the 19th cent , and the 20th cent. has seen the rise of research institutes and of industrial research laboratories. Natural science is commonly divided into abstract sciences (e g., mathematics, a tool of increasing value in all other branches of science) and concrete sciences, including the physical sciences (e g , astronomy, geology, physics, and chemistry) and the biological sciences. The vast increase of the body of knowledge has resulted in the subdivision of the sciences into specialized branches. The interrelationship of the divisions of science is evidenced by the establishment of branches dealing with overlapping fields, e.g., biochemistry, biophysics, chemical geology, and psychophysics. See also articles on the several sciences and on scientists. See C W. Watkeys, ed , *An Orientation in Science* (1938); J. B Conant, *On Understanding Science* (1947); W C. Dampier, *A History of Science* (4th ed , 1949); F. Sherwood Taylor, *A Short History of Science and Scientific Thought* (1949)

scientific management: see INDUSTRIAL MANAGEMENT.

Scilla: see SCYLLA.

Scilly Islands (sĭl'ē), archipelago of more than 150 isles and rocky islets, off SW England, in Cornwall, WSW of Lands End They have been identified with the Cassiterides [tin islands] of the ancients, although they have produced very little tin On the rocky coasts, now marked by lighthouses and lightships, scores of ships were wrecked, notably Sir Cloudesley Shovel's fleet in 1707 Five isles are inhabited, St Mary's, Tresco, St Martin's, St Agnes, and Bryher On the largest, St Mary's, is the capital, Hugh Town, with the 16th-century Star Castle at which Prince Charles stopped in 1645 on his flight to Jersey and from which there is a view of the other isles On Tresco are Oliver Cromwell's Tower, ruins of a 10th-century abbey, and the residence of the proprietor of the islands Augustus Smith, who ruled the islands from 1834 to 1872 and did much for the people, began the tropical gardens at the residence. Samson has ancient stone monuments and is the scene of *Armorel of Lyonesse* by Walter Besant The climate is mild and equable, the rainfall heavy, subtropical plants flourish The growing of flowers for Bristol and London markets is one of the leading occupations The isles connect with Cornwall by steamer and telegraph

Scio (sī'ō), village (pop 1,181), E Ohio, W of Steubenville

Scioto (sīō'tō), river, c 245 mi long, rising in W Ohio and flowing east, then turning south to pass through Columbus and Chillicothe and enter the Ohio at Portsmouth. It receives numerous tributaries.

Scipio (sĭ'pēō), ancient Roman family of the Cornelian gens They were patricians In their heyday (3d and 2d cent B C) they were distinguished by love of Greek culture and learning, they were rich, amiable, and generous, in all things different from the family of Cato and Elder, who detested them and worked hard to ruin them **Cneius Cornelius Scipio Calvus** (nē'ŭs), d 211 B C , consul in 222 B C , was sent to Spain (218 B C) to wreck the supply lines of HANNIBAL, who was invading Italy He and his brother Publius defeated Hasdrubal (215 B C.) and captured Saguntum (212 B C) They were killed in different engagements **Publius Cornelius Scipio,** d c 211 B C , brother of Calvus, was consul in 218 B C. He tried vainly to intercept Hannibal in Gaul, then rushed back to Italy, where he failed to hold the enemy at the Ticino He gave battle (against his judgment) at Trebia, and Hannibal won (218 B C) The next year he joined Calvus in Spain Publius was the father of the conqueror of Hannibal, Scipio Africanus Major (see separate article) Africanus Major's wife was the sister of Aemilius Paullus, his daughter CORNELIA was the mother of the Gracchi, and his eldest son was the adoptive father of the destroyer of Carthage, Scipio Africanus Minor (see separate article); Africanus Minor was the son of Aemilius Paullus **Publius Cornelius Scipio Nasica Serapio** (nā'zĭkŭ sĭrā'pēō), d c 132 B C , consul in 138 B C , and pontifex maximus, was a great-grandson of Calvus and a son of Africanus Major's daughter, despite the family connections he led the mob of senators that murdered Tiberius Gracchus He left Rome to escape popular hatred A descendant of Nasica Serapio was adopted by Q Caecilius Metellus Pius (see METELLUS) and named **Quintus Caecilius Metellus Pius Scipio** (sēsĭl'ēŭs), d 46 B C He early became a leader of the senatorial conservatives and was allied with POMPEY from 53 B C , when he ran against MILO for the consulship. In 52 B C , Pompey made Scipio his colleague in the consulship, and Scipio threw all his influence against Julius CAESAR He led the senate in trying to humiliate Caesar and backed the measure of 49 B C , designed to wrest the army from him In 49 B C.–48 B C he was governor of Syria, where he displayed a rapacity unusual even in the Roman Empire He commanded the center at Pharsala and fled after the battle to Africa. He fought Caesar and lost at Thapsus and took to the sea to escape He was met by a fleet under one of Caesar's lieutenants, and, foreseeing defeat, he stabbed himself

Scipio Africanus Major (Publius Cornelius Scipio Africanus) (ăfrĭkā'nŭs), 234?–183 B C , Roman general, the conqueror of HANNIBAL in the PUNIC WARS He was the son of Publius Cornelius SCIPIO, and from a very early age he considered himself to have divine inspiration. He was with his father at the Ticino (218 B C), and he survived Cannae (216 B.C.). On his father's death in Spain (c.211 B C), the young Scipio ran for the proconsulship of Spain and was elected. His conduct of the war in Spain showed his military genius. He conquered New Carthage (Cartagena) almost at once (209 B.C), and used this Punic store city as his own base. Within a few years he had conquered Spain from Carthage. In 205 B.C., Scipio, burning with a desire to carry the war into Africa, ran for consul, but his jealous enemies in the senate, not being able to defeat him, granted him permission to go only as far as Sicily and gave him no army Scipio employed his year in Sicily drilling a volunteer army and at the end of his term (204 B C.) received permission to go to Africa. He immediately joined his allies the Numidians, but for more than a year no real engagement took place against the Punic arms. In 202 B C., Hannibal crossed to Africa and tried to make peace, but Scipio's demands were so extreme that war resulted, and Hannibal was defeated at Zama (202 B C), the greatest battle of the Punic Wars Scipio returned home in triumph and retired from public life But his pride aggravated the hatred of his enemies, and his ruin was attempted by accusing him of receiving bribes in the campaign against Antiochus III in which Scipio had accompanied his brother (190 B C.) Scipio was tried (185 B C), and ignored his enemies, led by CATO THE ELDER, it was only through the influence of his son-in-law, T Sempronius Gracchus, that Scipio was saved from ruin He retired into the country and ordered that his body might not be buried in his ungrateful city. The magnanimity of Scipio was the subject of countless stories; it is notable that he, almost singlehanded, attempted to prevent the ruin of the exiled Hannibal by Rome See B. H Liddell Hart, *A Greater than Napoleon Scipio Africanus* (1926)

Scipio Africanus Minor (Publius Cornelius Scipio Aemilianus Africanus Numantinus), c 185–129 B C , Roman general, destroyer of Carthage He was the son of Aemilius Paullus, conqueror of Macedonia, under whom he fought at Pydna He was adopted by the eldest son of Scipio Africanus Major (see SCIPIO, family). He earned a great reputation as a patron of Greek literature and of Roman writers, notably Terence and Laelius, and he was the lifelong friend of Polybius, his protégé His friendship with Laelius has been immortalized by Cicero in *De amicitia* He served in the army in Spain (151 B.C), and he visited Masinissa of Numidia The Third Punic War had dragged on for several years when Scipio received the consulship (147 B C) He went to Africa and terminated the war with the capture and destruction of Carthage (see PUNIC WARS) In 142 B C he was censor He was consul again (134 B C) and went to Spain, where he ended the rebellion with the destruction of Numantia On his return to Rome he openly rejoiced at the murder of his adoptive cousin and own brother-in-law, Tiberius Gracchus (Scipio's wife, Sempronia, was sister of the GRACCHI), and led the conservatives in attempting to wreck the Gracchan reforms This culminated in a measure introduced by Scipio to deprive the Gracchan land commission of its powers and thus vitiate the agrarian law A great public quarrel arose, and Scipio again denounced the memory of Gracchus The next morning he was found dead in his bed No inquiry was made, and it was generally said that he was murdered by his wife, his mother-in-law, or some other of the Gracchan party. Cicero lauds Scipio beyond measure The *Dream of Scipio*, telling of the apparition of the greater Scipio to this Scipio is a splendid passage of Cicero's *De republica*

scissor-tailed flycatcher, bird of the New World flycatcher family Tyrannidae The length of the male is about 14 in including its deeply forked 7 to 10 in tail Its head and body are soft gray, with a bright reddish patch at the base of the wing and shades of pinkish and orange red in the gray The dark tail feathers are marked with white Grasshoppers, weevils, and other insects provide most of its food It is often seen on lookout perches in open country Males indulge in a dancing flight during courtship It breeds chiefly in parts of Texas, Oklahoma, Kansas, and Nebraska and usually winters in Central America It is sometimes called bird of paradise

Scituate (sĭ'chōōwāt, -wĭt) **1** Resort town (pop 4,130), SE Mass., on the coast about midway between Boston and Plymouth, settled c 1630, inc 1636 Irish moss, sand, and gravel are found here **2** Town (pop 2,838), W R I., W of Providence, set off from Providence 1731. Scituate Reservoir was formed by damming the Pawtuxet river. In the Revolution, cannon were cast at ironworks here North Scituate village is administrative center of the town. Stephen and Esek Hopkins spent their early years in Scituate

Scobey, city (pop. 1,311), co. seat of Daniels co., NE Mont., a port of entry on the Poplar river, inc 1919.

Scollard, Clinton (skŏ'lŭrd), 1860–1932, American poet and educator, b. Clinton, N.Y , grad. Hamilton College, 1881. He was professor of English literature at Hamilton College (1888–96, 1911–32). Alone or with collaborators he wrote more than 40 volumes of poetry, and from them his wife, Jessie B RITTENHOUSE, selected the lyrics in *The Singing Heart* (1934).

Scone (skōōn), parish (pop 2,559), Perthshire, Scotland, on the Tay and N of Perth Old Scone, west of the present-day village of New Scone, was the capital of the semilegendary King Kenneth I. The abbey founded here in 1115 by Alexander I for Augustinian canons was destroyed in 1559 by people from Perth. The site is now occupied by Scone

Palace (built 1803–8). Scone was a royal residence of Scottish kings from 1157 until 1488. The Stone of Scone or CORONATION STONE is now in Westminster Abbey The last coronation in Scone was that of Charles II in 1651

'Sconset, Mass. see SIASCONSET.

Scopas (skō'pŭs), Greek sculptor, fl 4th cent. B C, b. Paros Although numbered among the Athenians, he wandered from place to place and did not attach himself to any school He was the first to express violent feeling in marble faces Some mutilated fragments from the temple of Athena Alea, Tegea, of which he is recorded as architect, furnish evidence of his style and method They are in the national museum at Athens Among the works attributed to him by ancient writers are a seated Mars, of which the *Ludovisi Ares* in Rome is probably a reflection; an *Apollo Citharoedus*, known through a copy in the Vatican; and a statue of Meleager, of which there are copies in Rome and in the Fogg Museum of Art, Cambridge, Mass A celebrated group, probably in relief, represented Achilles, accompanied by Nereids, Tritons, and other creatures of the sea

Scopes trial. A statute was passed (1925) in Tennessee which prohibited the teaching in public schools of theories contrary to belief in the divine creation of man as related in the Bible In a test case that attracted wide notice, John T Scopes, a biology teacher, was tried (July, 1925) for teaching the Darwinian theory in a Dayton, Tenn, public school Clarence Darrow and other distinguished attorneys appeared in defense of Scopes, while William Jennings Bryan was the representative of the state In a dramatic trial Scopes was convicted, but he was later released by the state supreme court on a technicality The law, however, remained on the statute books, although the outcry over the case tended to discourage enactment of similar legislation in other states

scopolamine (skŏpŏ'lŭmēn, -mĭn) or **hyoscine** (hī'ŏsēn, -sĭn), drug classified as an alkaloid and obtained from plants of the nightshade family, chiefly from henbane (*Hyoscyamus niger*) Scopolamine acts as a depressant of the central nervous system, causing drowsiness, fatigue, and sleep It is used as a sedative prior to anesthesia and for patients who are restless and agitated, as in delirium tremens, maniacal states, and cardiac and hyperthyroid psychoses It is sometimes used in preventing airsickness When combined with morphine, the effect produced is known as TWILIGHT SLEEP, formerly used in obstetrical anesthesia and now considered much too dangerous More recently scopolamine has been used in conjunction with barbiturates Scopolamine is also employed in the "withdrawal treatment" of narcotic and alcoholic addicts

scorbutus see SCURVY

score, in MUSICAL NOTATION, manuscript or printed music in which the various parts are placed one above the other so that notes which are to be played simultaneously are in vertical alignment Early polyphony was notated in score until about the 12th cent, when choir books, in which the parts were written out separately one after another, came into use Part books, with a separate book for each part, were employed in the 15th and 16th cent With the rise of orchestral music around the beginning of the baroque period, the modern score came into being, with bar lines scored from top to bottom through all the staffs A full score is one such as an orchestral conductor uses, in which each part is on a separate staff, while in a condensed score two or more parts are written on a single staff In a vocal score or piano-vocal score of an opera or a choral work, the vocal parts are written out in full but the accompaniment is reduced to two staffs

Scorel or **Schorel, Jan van** (yän' vän skō'rŭl, skō'rĕl"), 1495–1562, Dutch portrait and religious painter, studied with Mabuse in Utrecht and probably with Dürer in Nuremburg About 1521 he visited Palestine and later Rome, where he acted as overseer of the Vatican gallery On his return to Utrecht he became a priest and later a canon. Few of his religious paintings have survived Well known are his *Virgin and Child* and portraits of pilgrims from the Holy Land, including a self-portrait (town hall, Utrecht), and *Last Judgment* (Rijks Mus) Scorel was the master of Antonio Moro and of Heemskerk

Scoresby, William (skōrz'bē), 1789–1857, English arctic explorer and scientist He made yearly voyages (1803–22) to Greenland, at first on his father's whaler, later as captain on other ships Fitting himself by study between voyages, he mapped, charted, made deep-sea temperature soundings, noted the flora and fauna, and collected other valuable data along the little-known and hitherto unknown coasts of Greenland, giving special attention to terrestrial magnetism His last trip to the arctic regions was made in 1822. In 1825 he entered the Anglican ministry. He maintained his interest in exploration and encouraged the search for the Northwest Passage. The year before his death he made a voyage to Australia to study terrestrial magnetism. Scoresby wrote several books dealing with his arctic experiences.

Scoresby Sound, inlet of E Greenland. It has numerous branches, some of which extend c 150 mi inland, and it contains many islands Near its mouth the small settlement of Scoresbysund was founded in 1924, it is a fishing and hunting base and has a radio station

Scorpio (skôr'pēō) [Latin, =scorpion], in astronomy, a conspicuous constellation, somewhat resembling the shape of a scorpion. It is seen on the ecliptic between Sagittarius and Libra The giant red star ANTARES is situated in Scorpio, it is attended by a green companion star An account by Pliny credits to Hipparchus in 134 B C the observation of a nova known as the star of Hipparchus in the constellation Scorpio Scorpio is also the name of the eighth sign of the ZODIAC, and Scorpio is one of the zodiacal constellations

scorpion (skôr'pŭn), nocturnal arachnid from ½ in to 8 in long, found in warm and tropical regions It attacks insects and spiders with its pincerlike claws It can paralyze its prey by injecting poison from its sharp, curved spine at the end of the last segment of its narrow post-abdomen The sting of some species is fatal to children The young hatch from the mother's body and are carried on her back for about a week afterward Scorpions are cannibalistic They are immune to their own poison

Scot, Michael, c 1175–1232, medieval scholar He studied at the universities of Oxford, Paris, Bologna, Palermo, and Toledo and spent much of his later life at the court of Emperor Frederick II Popes Honorius III and Gregory IX gave Scot clerical posts He supervised the translations of Aristotle and of Arabian writings into Latin In 1230 he visited Oxford and introduced there the study of Aristotle Scot was famous for occult learning and reputed miraculous powers, and he wrote numerous works of occult wisdom There were many legends concerning his death and burial, but he is supposed to be in a grave at Melrose Abbey, in England Michael Scot, as a magician, figures in Dante's *Inferno* and Scott's *Lay of the Last Minstrel* See J Wood Brown, *Life and Legend of Michael Scot* (1897)

Scotch: see SCOTTISH DIALECT and GAELIC

Scotia (skō'shŭ), Latin name for Scotland, used in the Middle Ages and today occasionally used in rhetoric

Scotia (skō'shŭ), village (pop 7,960), E N Y, on the Mohawk opposite Schenectady, settled before 1660, inc 1904

Scotland, northern portion of Great Britain (30,405 sq mi, including its islands and 609 sq mi of inland waters, 1931 pop 4,842,980, 1948 estimated pop, 5,169,217) bounded by the Atlantic Ocean on the north and west, by the North Sea on the east, by England on the south It is separated from England in part by the River Tweed, the Cheviot Hills, the Liddell river, and Solway Firth The greatest length (274 mi) is from Cape Wrath in Sutherland to the Mull of Galloway, and the greatest width (154 mi) is from Applecross in Ross and Cromarty to Buchan Ness in Aberdeenshire In places Scotland is very narrow, it is 26 mi from the head of Loch Broom to Bonar Bridge on Dornoch Firth, and 30 mi from Bowling on the Clyde to Grangemouth on the Forth Because of the irregular outline and the numerous inland arms of the sea (usually called sea lochs when narrow, and firths when broader and more extensive), the coast line is 2,300 mi long There are many islands off the coast which are of no inconsiderable importance to Scotland On the north are two large groups, the Orkneys and the Shetlands, on the east the islands are few and small, on the west are a series of groups, the Inner and Outer Hebrides or Western Isles, stretching from north to south at a short distance from the coast The most important islands on the west are Lewis, Harris, North Uist, South Uist, Barra, Skye, Rum, Eigg, Coll, Tiree, Mull, Iona, Colonsay, Jura, and Islay Off the southwest coast, in the Firth of Clyde, are the islands of Arran and Bute On the east coast are the prominent firths of Moray, Tay, and Forth, and on the west coast are the firths of Solway, Clyde, and Lorne In N Scotland the land is higher in the west, with the result that the rivers generally are short on the west and longer on the east Scotland may be divided into three physical regions The HIGHLANDS occupy more than one half the area of the country and are divided by the depression known as Great Glen or Glen More (or Albin) into the northwestern and the southwestern Highlands Practically all this region is mountainous (The Hebrides are grouped with the Highlands) The ridges, rising to a generally uniform level, trend northeast to southwest, with deep valleys and sea lochs between The highest ground in the northwest section is along the Atlantic coast (2,000 ft to 3,000 ft) The southeastern section is much more varied, containing transverse valleys (northwest to southeast), overgrown with heather and gorse, many lakes and inland arms of the sea, and some of the loftiest peaks of the British Isles The Grampians, on the Lowland border, constitute the chief mountain chain The highest mountain in Great Britain is Ben Nevis (4,406 ft); among the other prominent peaks are Ben Macdhui (4,296 ft), Cairngorm (4,084 ft), Ben Lawers (3,985 ft), Ben More (3,843 ft), Ben-y-Gloe (3,770 ft), Ben Wyvis (3,429 ft), and Ben Lomond (3,192 ft) The principal rivers are the Dee, with the city of Aberdeen at its mouth, the Don just north of the Dee, the Deveron, with Banff at its mouth, the Spey, and the Beauly, emptying into Inverness Firth. The city of Inverness lies at the northern end of the CALEDONIAN CANAL, a series of navigable lochs and canals which form a waterway across Scotland The central Lowlands, lying between a line drawn from Girvan to Dunbar and a line from Dumbarton to Stonehaven, with a northeast to southwest trend, have a general elevation of 500 ft, with valleys dropping to 200 ft, and eminences rising well above the surrounding country The main ridges are the hills of Ochil, Sidlaw, Pentland, Renfrew, Campsie, and Lantry This region contains several of the finest lakes in Scotland Practically two thirds of the population of the country lives in the central Lowlands, which form one tenth of the total area Here, on the west, at the head of the estuary of the Clyde river lies Glasgow, second largest city in Great Britain, a center of shipbuilding and manufacturing, and an important port On the east, on the Forth river and the Firth of Forth are the manufacturing towns of Stirling, Linlithgow, Dunfermline, and Kirkcaldy On the southern shore of the Firth of Forth lies the beautiful capital, Edinburgh, long a publishing and cultural center On the smaller Firth of Tay lie the cities of Perth and Dundee Coal and iron in Lanarkshire, the Lothians, and Fife have made possible the growth of heavy industry throughout this area The southern uplands are a well-defined slightly mountainous region, less elevated than the Highlands, but rising abruptly from the Lowlands They consist chiefly of rolling moorlands, cut by numerous valleys Here the chief rivers, all in the south and the west, are the Nith (on which is Dumfries), the Cree, and the Ayr On the east is the border river, the Tweed Only about one fourth of Scotland is under cultivation, as a great part of the country is too rugged to be fit for agriculture The principal cereals are barley, oats, and wheat Potatoes, turnips, and beans are also extensively cultivated Sheep raising is important especially in the southern uplands and the Highlands Fisheries are a source of considerable income One of the chief manufacturing countries of Europe, Scotland manufactures chiefly woolen cloth worsted, linen, cotton, and silk textiles, whisky, beer, and paper Scotland and England have been united under the name of Great Britain since 1707 The country is represented in the House of Commons and the House of Lords, and the secretary of state for Scotland, a member of the cabinet, presides over the Local Government Board for Scotland (established in 1894) Municipal bodies exist in the towns of Scotland, as in those of England Each burgh has a town council, consisting of provost or lord provost (the head of the Scottish municipality), bailies, and councilors There are three principal kinds of burgh, royal, parliamentary, and police The Local Government Bill of 1929, bringing local government machinery in line with that of England and Wales, made the county councils and burghs of more than 20,000 population the new unit of local government, and abolished parish councils Scottish counties north of the Grampians are SHETLAND, ORKNEY, CAITHNESS, SUTHERLANDSHIRE, ROSS AND CROMARTY, INVERNESS-SHIRE, NAIRNSHIRE, MORAYSHIRE, BANFFSHIRE, and ABERDEENSHIRE South of the Grampians are ARGYLLSHIRE, PERTHSHIRE, ANGUS, BUTESHIRE, and the more populous counties of KINCARDINESHIRE, DUMBARTONSHIRE, STIRLINGSHIRE, CLACKMANNANSHIRE, KINROSS-SHIRE, FIFE, RENFREWSHIRE, AYRSHIRE, LANARKSHIRE, WEST LOTHIAN, MIDLOTHIAN, EAST LOTHIAN, and PEEBLESSHIRE The counties of the southern uplands are WIGTOWNSHIRE, KIRKCUDBRIGHTSHIRE, BERWICK, DUMFRIESSHIRE, SELKIRKSHIRE, and ROXBURGHSHIRE The Church of Scotland, established in 1560 and confirmed in 1688, is Presbyterian In 1929, the Church of Scotland and the United Free Church (see SCOTLAND, FREE CHURCH OF) were united The four universities of Scotland are those of Edinburgh, Glasgow, Aberdeen, and St Andrews. The law of Scotland is based on Roman law, rather than on common law as in England The pre-Roman history of Scotland is included in that of BRITAIN The PICTS, of obscure origin, were living there at the beginning of historic times Gaels or Celts from Ireland formed roving bands of fierce soldiers who, together with the Picts, kept the Romans from penetrating far into Scotland Agricola, who invaded Scotland (A D 80) built a line of temporary forts, won the battle of Mons Graupius against the Caledonians (as the northern Scots were called) under Calgacus, and left, thinking he had subdued the tribes south of the firths of Forth and Clyde The successive walls built by the Romans proved inadequate barriers to contain the northern tribes whenever the Roman garrisons were depleted The Romans had little influence in Scotland, but before they left Britain, in the 5th cent, Christianity had been introduced into Scotland by St NINIAN and his disciples In the century and a half after the

Roman evacuation, four kingdoms came into being in Scotland that of the Picts in the north, that of the Scots who came from Ireland and founded Dalriada north of Strathclyde in what is now Argyllshire and the island of Iona, that of the Britains in Strathclyde, on the west coast between the Mersey and the Clyde, and that of NORTHUMBRIA, founded by the Angles, from the Lees to the Forth, and largely settled by Teutonic immigrants and people from what was later England The mission of St COLUMBA (fl. 563) from his monastery at Iona in Dalriada brought Christianity to the Picts in the form known in Ireland and the tradition was continued by St Mungo and St Cuthbert, the apostle of Lothian, and in Northumbria by St Aidan As the teachings of the Roman Church persisted in the south of Britain, the disagreements which arose between Roman and Irish usage were decided by King Oswy of Northumbria at the Synod of Whitby (see WHITBY, SYNOD OF) in 664 That decision began the reorientation of Scotland toward Europe rather than toward Ireland and Scandinavia This King Oswy was defeated in 683 by the king of the Picts, and Northumbrian power in Scotland declined During the period of Mercian domination in England, there began the raids of the Norsemen, which disturbed Scotland from the 8th to the 12th cent In 794 they attacked the islands off Scotland and soon returned to live in the Hebrides, by 870 they were established in what are now Caithness and Sutherland Meanwhile, about 843 KENNETH I or Kenneth mac Alpin inherited the kingdoms of the Picts and of Dalriada, thus ruling over the land N of the Firth of Forth, which he called Alba His descendant Malcolm II pushed his sovereignty south by defeating an Anglo-Danish army (Canute of Denmark ruled in England) in Northumbria and annexing all of N Northumbria Malcolm's grandson, Duncan, was a real king of Scotland, ruling Dalriada, Pictland, Strathclyde, and Lothian, though the Norsemen held N Pictland and the islands Duncan was murdered by, and succeeded by, Macbeth, who was in turn slain and succeeded by Duncan's son MALCOLM III Malcolm and his wife St Margaret, an English princess, began a process of Anglicizing and modernizing the Lowlands In Malcolm's long reign (11th cent) though he disliked the Norman conquerors of England, he maintained peace and achieved a stable, cultured court and a new devoutness in the Scottish church After the death of William I of England, Malcolm refused to acknowledge William II's claim to sovereignty over Scotland and died invading England After quarrels among the heirs, complicated by the raids of Norwegians in the west, Scotland was ruled by Malcolm's son Edgar The king's sister Maud became the queen of Henry I of England, and peace with England allowed the process of feudalization to continue in Scotland The clan ties were apparently based on blood relationship and personal loyalty to a chieftain, whereas the feudal system in Europe and Norman England also involved the land rights of lord and vassal The clans survived in the Highlands, but the feudal property rules were adopted fairly generally in the Lowlands in the 11th and 12th cent Alexander I succeeded Edgar, his brother, in Alba, N of the Forth, and David I succeeded S of the Forth The kingdoms were reunited by David on Alexander's death in 1122, and in his long reign he kept Scotland united and peaceful despite his having to take part in the unhappy wars in England between Matilda and Stephen I David regulated the new feudalism with his land grants by the crown He also organized his government into responsible departments, encouraged the growth of walled, self-governing burghs, and promoted foreign trade He further reorganized church government in Scotland, backed his bishops in their refusal to recognize the supremacy of the archbishop of York over them, and founded new monasteries Scotland had achieved the stature of a nation by the time of his death (1153). Malcolm IV (Malcolm the Maiden) succeeded him. The next long reign was that of David's grandson WILLIAM THE LION (1165–1214), who in 1174 was captured by Henry II while the Scottish monarch was aiding Henry's son in revolt. By the Treaty of Falaise extorted from William, Scotland became the vassal of England, a coalition ended only in 1189, when Richard I sold the Scots their freedom for funds to go on Crusade, but couched the agreement in ambiguous terms which allowed English kings later to revive the claim. William's successors Alexander II and Alexander III pushed the Norsemen out of Scotland, finally defeating them in 1263 Orkney and Shetland only remained in Norse hands until 1469. On the death (1286) of Alexander III his heiress was the baby MARGARET MAID OF NORWAY She was betrothed to the son of EDWARD I of England, but never married, for she died as a child (1290). In the ensuing struggle among many claimants to the throne, Edward I declared for John de BALIOL, who was crowned, with Edward acknowledged as overlord of Scotland When in 1295 Edward began a war with Philip IV of France and demanded for it Scottish troops, the Scottish lords and burghs allied themselves with Philip, beginning the long relationship with France that distinguishes Scottish history. Edward invaded Scotland, captured King John, and forced submission of the Scots Scotland rose under William WALLACE to fight for Baliol's return, but Wallace was defeated and executed, and Scotland was governed by England The heir to Baliol was killed by Robert Bruce (later ROBERT I), another claimant to the throne, in 1306, and Bruce had himself crowned at Scone A great general, he gathered men and arms and at last captured Edinburgh and defeated Edward II of England at Bannockburn (1314) Robert I and his brother Edward even extended their conquests to Ireland Not until 1328 was a treaty of peace signed The king of England, now Edward III, acknowledged Scotland's free status Scotland was, during the minority (1329–41) of David II, Bruce's son, invaded by a pretender and during David's reign was attacked by Edward III of England In 1349 the Black Death killed nearly a third of the people David's successor was ROBERT II, first king of the house of STUART, who not only had to deal with quarreling nobles, but also with dissension among his heirs English attacks continued intermittently After Robert III was deposed in 1399 the regent was David Stuart, duke of Rothesay, who was followed by Robert Stuart, duke of Albany Henry VI of England captured the young King JAMES I, and kept him in England, where he received the education which was to make him one of Scotland's most learned and accomplished kings and the best of the Scottish Chaucerian poets Under Albany the Scots sent help to France, who was fighting desperately against England, and helped turn the tide for France At last (1424) James I and his bride, Joan Beaufort, returned to Scotland, and James vigorously attempted to revamp the laws, and put down the too-powerful nobles and unite them He improved his relations with Norway and Flanders, and married his daughter to the future Louis XI of France His murder in 1437 threw Scotland into the old pattern of civil conflict during long minorities for the next hundred years (JAMES II, JAMES III, JAMES IV, and JAMES V) In the 15th cent the Orkneys and Shetlands were gained by marriage alliances James IV married a Tudor princess, a marriage which was ultimately to unite the crowns of England and Scotland in the person of James VI of Scotland (James I of England), but peace with England in the time of James IV seemed impossible He reduced the clans to some order, built a small navy, and tried to improve the laws, but this brief age of order ended at Flodden Field (1513) There James and the flower of Scottish nobility were killed fighting the English army of Henry VIII on behalf of France James V continued the French alliance by marrying MARY OF GUISE, and many French came to Scotland The Reformation was brought to Scotland largely through the efforts of John KNOX (see also PRESBYTERIANISM and SCOTLAND, CHURCH OF), and religious issues were mingled with opposition to the foreigners Cardinal BEATON, James V's chancellor, was an able executive, but he was not successful in opposing the Reformation It progressed rapidly during the rule of Mary of Guise as regent for her daughter MARY QUEEN OF SCOTS, who lived in France as dauphiness and then as queen By the time of the arrival of MARY Queen of Scots Catholicism had been nearly driven out of the Lowlands The melancholy career of the young queen is largely a matter of the personalities of the day and of her conflict with the nobility, now divided into pro-French and pro-English factions ELIZABETH of England maintained the English party with money and arms Mary's struggle ended in loss of the throne, imprisonment in England, and execution But on Elizabeth's death, Mary's son, James VI of Scotland, became king of England as JAMES I (1603) as heir through both his mother's and father's lines. Scotland now had comparative peace for a few years, and many of the nobility went to England with the court Presbyterianism and its maintenance became under James the great question in Scotland, and every political move of the Scottish Parliament was governed by its desire to oppose episcopacy, which was favored by the Stuarts The COVENANTERS declared their opposition to the forms imposed by Charles I and stoutly resisted his attempt to bring them to heel in the BISHOPS' WARS (1639–40) The wars brought Charles's downfall, for the financial drain compelled the king to summon the Long Parliament, and the sharp contest between Parliament and king took the PURITAN REVOLUTION into actual civil war Scotland, like England, was somewhat divided, though the great majority opposed the king, and Charles's effort to win the Scots by yielding rights to Presbyterianism in 1641 did not move Archibald CAMPBELL (who was made marquess of Argyll) and his Covenanters. James Graham, earl of MONTROSE, failed in an early attempt to win Scotland for the king, but almost succeeded with the Highlanders behind him in 1644–45. The Covenanters sought to force Presbyterianism upon England, and Parliament was led to proclaim that form of religion in 1643, but the Puritan movement was by no means unified, and the Independents were strong in the army. The army under Oliver Cromwell ultimately prevailed over Parliament, and the Scottish religion gained only toleration, not supremacy, in England Charles I surrendered to the Scottish army and was turned over to Parliament The execution of the king in 1649 caused a revulsion of feeling in Scotland. Charles II was recognized as king in 1651, but Scottish opinion remained divided. The junction with England enforced by Cromwell was not popular, and the Restoration was welcomed in Scotland The restored Stuarts, however, sought to restore episcopacy, and the Covenanters were under Charles II and James II subjected to bitter persecution James II was hated in Scotland even more bitterly than in England, and the accession of William and Mary was the cause for rejoicing The Glorious Revolution made Presbyterianism once more legal. Scotland was, however, troubled in the reign of William III The brutal massacre of a Highland clan at GLENCOE somewhat discredited the government. William's failure to support the DARIEN SCHEME furthered embittered relations, and Scotland felt that the Navigation Acts were discriminatory Constitutional union of England and Scotland, which had been considered ever since the junction of the crowns, was rejected at this time by the English, but its desirability grew more apparent The question of succession to the throne was a burning issue in the reign of Queen Anne, and the proponents of James Francis Edward STUART (the Old Pretender) worked assiduously in Scotland as well as in England Finally, in order to insure the Hanoverian succession after Queen Anne, the union was voted by both Parliaments in 1707 and provided for Scottish representatives in the Parliament of Great Britain Thereafter the history of Scotland was that of GREAT BRITAIN Freedom of trade and toleration of episcopacy, along with recognition of the Presbyterian Established Church of Scotland were provided The important religious history of Scotland after the union is treated under SCOTLAND, CHURCH OF The Scottish JACOBITES especially in the Highlands attempted in 1715 and again in 1745 to destroy the union, but without success The economic results of the union were eventually wholly favorable to Scotland, and, with revived trade and improved agricultural methods, the Scottish people in the 18th cent were able to raise somewhat their standard of living Feudalism gave way but slowly to modern land leases With a market for cattle, Scottish farmers developed new breeds, raised more diversified crops to feed them, and by 1725 had started the earliest of many societies to improve agricultural knowledge The increasing market for meat and wool led unfortunately also to the dispossession of a large part of the population in the Highland grazing lands during the latter 18th cent and early 19th cent inclosures Partly as a result there was such emigration of Highlanders to Canada, the United States, and Australia as nearly to depopulate parts of Scotland Along with the agricultural revolution of the 18th cent came the rise of the textile industry Early in the century linen manufacture and, to a lesser extent, woolcloth manufacture in the Lowland towns, was of major importance, and toward the end of the century cotton spinning and weaving on the new machinery resulting from the Industrial Revolution became by far the leading industries Thriving commerce within the growing British Empire led naturally to expansion of shipping, and Glasgow achieved eminence as a commercial center The cotton textile factories were by the middle of the 19th cent concentrated mostly in Lanarkshire and Renfrewshire, and the linen ones in Dundee By the end of the century metallurgical industry had taken the lead in Scottish economy, and the development of the coal fields resulted in concentration of the iron industry in Ayrshire, Lanarkshire, Fife, Stirling, and West Lothian The new steamships of the later 19th cent were built on the Clydeside Concentration on heavy industry meant that Scotland was an important arsenal in the First World War It also meant that Scotland suffered heavily in the depression which followed the war and more especially when the depression of 1929 ruined the market for ships In the First World War Scotland was scarcely damaged, but great naval battles were fought off the Scottish shores, and the German fleet was sunk in the harbor of Scapa Flow In the Second World War Scotland shared with England the new air fields and encampments of allied soldiers, and heavy industries of coal, steel shipbuilding, and engineering supplied a great deal of British war material. Again Scotland did not suffer extensive bombing. The steady exodus of population from the Highlands, which in the latter half of the 19th cent. was increased by the seclusion of much land for deer parks and hunting, continued even after the Second World War, but an extensive program of reforestation and hydroelectric development, begun in a small way as early as 1922, was accelerated to make the Highlands profitably habitable. Immigration from Ireland partly replaced the laborers who emigrated.

Also, many new, diversified light industries were started to balance the concentration on heavy industry which had made the Scottish economy somewhat unbalanced Efforts to attract and entertain tourists have included building many modern hotels and the development of the Edinburgh festival of the arts Scotland's part in the social experiments of Great Britain has not lessened a persistent nationalist movement which urges greater autonomy for Scotland The oldest detailed history of Scotland is William Robertson, *The History of Scotland during the Reigns of Queen Mary and of King James VI* (2 vols, 1759) Sir Walter Scott, *Tales of a Grandfather* (4 Scottish series, 1828–31) is still a good introduction to Scotland by a sturdy Border conservative Two useful general histories are P Hume Brown, *History of Scotland* (3 vols, 1900–1909) and Andrew Lang, *A History of Scotland* (4 vols, 1900–07) Invaluable also are the series of studies by W L Mathieson *Politics and Religion a Study in Scottish History* (1902), *Scotland and the Union* (1905), *The Awakening of Scotland* (1910), and *Church and Reform in Scotland* (1916) Six self-contained volumes by A M Mackenzie make up a history of Scotland *The Foundations of Scotland to 1286* (1938), *Robert Bruce King of Scots, 1286–1329* (1935), *The Rise of the Stewarts, 1329–1513* (1935), *The Scotland of Queen Mary and the Religious Wars, 1513–1638* (1936), *The Passing of the Stewarts, 1638–1748* (1937), *Scotland in Modern Times, 1720–1939* (1941) There are several good short histories, among them G M Thomson, *A Short History of Scotland* (1930), Sir Robert Rait and G S Pryde, *Scotland* (1934), and A M Mackenzie, *The Kingdom of Scotland* (1940) See also E W Robertson, *Scotland Under her Early Kings* (1862), V Gordon Childe, *Prehistoric Scotland* (1940), Wallace Notestein, *The Scot in History* (1946), D H McNeill, *The Scottish Realm, an Approach to the Political and Constitutional History of Scotland* (1947), H M Chadwick, *Early Scotland* (1949)

Scotland, city (pop 1,204), SE S Dak, NW of Yankton, founded 1879 by Scottish settlers It is a farm trade center

Scotland, Church of, the established church of Scotland, PRESBYTERIANISM in a national form Under the leadership of John KNOX, the Scottish Reformation was deeply impressed with the influence of Calvin Following the signing of the First Covenant in 1557 by great barons and other nobles, Parliament abolished the jurisdiction of the Roman Catholic Church in Scotland in 1560 A new confession of faith was adopted by the Reformed Church and an organization on Presbyterian lines was begun The first General Assembly of the Church met in Edinburgh, and the *First Book of Discipline* was drawn up *The Second Book of Discipline* (1581) was ratified by Parliament in 1592 This definitely settled the Presbyterian form of government and the Calvinistic doctrine as the recognized Protestant establishment in the country But under James VI (from 1603 JAMES I of England) and the other Stuart rulers who followed, periods of restored episcopacy interrupted the progress of the new organization and were accompanied by confusion and protest In 1638 the National Covenant, a solemn promise to defend the Reformed religion, was signed, in 1643 the Solemn League and Covenant was signed in England as well as Scotland In 1647 the Westminster Confession was accepted In 1689, with William and Mary on the throne of England, religious liberty was secured, and the Act of Settlement (1690) made sure the establishment of the Church of Scotland Confirmation of its status was made in 1707, when the kingdoms of Scotland and England came together as one Questions on the connection between Church and state caused division and resulted in secessions from time to time, but in faith there was no diversity The most extensive break occurred in 1843, amounting to a "disruption" The new body formed was the Free Church of Scotland, under the leadership of Thomas CHALMERS In 1929 the United Free Church (except for a few congregations) was reunited with the Church of Scotland In 1944 women were made eligible for the office of eldership

Scotland, Free Church of, in general acceptance, the secession Presbyterian church established as a result of the great disruption of 1843 in the Church of Scotland The cause of the separation lay in trouble over the question of patronage, which by that time had developed into a question of civil jurisdiction in relation to spiritual In 1712 under Queen Anne an act was passed restoring patronage, previously abolished. Protests and remonstrances resulted In cases brought up for decision, civil and ecclesiastical courts did not agree Intrusion of ministers upon unwilling congregations became a serious issue Congregations everywhere were divided In 1843, after 10 years of conflict, in the General Assembly of the Church of Scotland a body of nonintrusionists signed a protest, withdrew, and constituted themselves the first Assembly of the Free Church Thomas CHALMERS was their leader and organizer. Over 400 ministers and professors who formed the center of the movement signed a deed of demission, giving up their claims to any benefits of the Established Church. There was no divergence from the accustomed doctrine, discipline, and worship New College at Edinburgh was established All but a minority of the Free Church in 1900 entered a union with the United Presbyterian Church as the United Free Church of Scotland In 1929 the body rejoined the Church of Scotland, except for a few congregations

Scotland Neck, town (pop 2,559), NE N C, near the Roanoke NE of Rocky Mount, settled 1722 The town has hosiery mills and processes peanuts

Scotland Yard, short street in London, named for a palace which in the 11th and 12 cent was the residence of Scottish kings when they visited England It became the site of the headquarters of the metropolitan police in 1829 New headquarters, known as New Scotland Yard, were established (1890) on the Thames The Criminal Investigation Department (CID), popularly known as "Scotland Yard," is part of it See J F Moylan, *Scotland Yard and the Metropolitan Police* (rev ed, 1934), B H Thomson, *The Story of Scotland Yard* (1935)

Scotstown, town (pop 1,273), SE Que, on the Salmon river and ENE of Sherbrooke It is a market center for a dairy and pig-raising region

Scott, Charles Prestwich, 1846–1932, English editor He headed (1872–1932) the Manchester *Guardian*, which became under his guidance the most distinguished and influential Liberal newspaper, noted for its editorials He was a member of the House of Commons from 1895 to 1905 See biography by J L Hammond (1934)

Scott, Cyril Meir, 1879–, English composer His compositions, influenced strongly by French impressionism, include several symphonies, operas, choral works, chamber music, songs, and piano pieces Greatly interested in mysticism and in science, he is the author of books on these as well as on musical subjects His writings include *Music Its Secret Influence throughout the Ages* (1933), *An Outline of Modern Occultism* (1935), and *Health, Diet, and Commonsense* (1940) See his autobiography, *My Years of Indiscretion* (1924), A Eagle-field Hull, *Cyril Scott, Composer, Poet, and Philosopher* (1918)

Scott, David, 1806–49, Scottish painter and illustrator Among his works are *Ariel and Caliban* and *Vintager* (National Gall, Edinburgh), portraits of Ralph Waldo Emerson (public library, Concord, Mass) and Dr John Brown, and illustrations for Coleridge's *Ancient Mariner* (1837 ed.) and Bunyan's *Pilgrim's Progress* (1857 ed) He wrote *British, French, and German Painting* (1841)

Scott, Duncan Campbell, 1862–1947, Canadian poet and civil servant, b Ottawa After graduation from Stanstead College, in 1879 he entered the Dept of Indian Affairs and eventually became head in 1913 He began publication with *The Magic House and Other Poems* in 1893 His earlier poems are collected in the edition of 1926, the later in *The Green Cloister* (1935) Recognition came slowly, but in 1921 he received the high honor of the Lorne Pierce medal from the Royal Society of Canada The subject matter of his poetry is various, but many of the best narratives, such as "The Forsaken," treat Indian life Also excellent are his nature poems and the elegy "Lines in Memory of Edmund Morris" His style is characterized by technical skill, restraint, and a melodic quality derived from his interest in music He also wrote excellent short stories and shared editorship of "The Makers of Canada," a historical biography series

Scott, Sir George Gilbert, 1811–78, English architect He was prominent in the Gothic revival as the designer of many public structures and director of a vast amount of restoration work upon Gothic edifices His restorations began with renovations of Ely Cathedral in 1847 and included Westminster Abbey (where he worked upon the north front and the chapter house) and many other cathedrals and churches His design for the Church of St Nicholas at Hamburg, Germany, won first place in competition in 1844 Among his other designs were the buildings (1860–70) for the home office and the foreign office, the ALBERT MEMORIAL in Kensington Gardens, and St Pancras Station, London He was president (1873–76) of the Royal Institute of British Architects and served as a professor of architecture and lecturer at the Royal Academy of Arts He was buried in Westminster Abbey His grandson, **Sir Giles Gilbert Scott,** 1880–, English architect, while still a pupil submitted designs in the competition for the proposed Liverpool Cathedral They were accepted (1903), but because of the winner's youth G F Bodley was placed in partnership with him After his associate's death (1907), Scott redesigned the cathedral and created a monumental modern Gothic structure King Edward VII laid the foundation stone in 1904, and it was consecrated in 1924 After its consecration Scott was knighted. His many works, chiefly ecclesiastical, include the War Memorial Chapel, Charterhouse; new buildings for Clare College, Cambridge, and a number of war memorials

Scott, Hugh Lenox, 1853–1934, U.S. army officer, b Danville, Ky, grad West Point, 1876 He was assigned (1876) to military service in the West. In the Sioux territory he learned the sign language and therefore was made a leader of many scouting parties and was called upon to settle misunderstandings between whites and Indians He was (1898–1903) adjutant general of Cuba In 1903 he was sent to the Philippines as commander of the troops and governor of the Sulu Archipelago, he abolished slavery and the slave trade in the archipelago He was (1906–10) superintendent of West Point, and after brief retirement he was (1913–14) head of a Texas border patrol before serving (1914–17) as chief of staff After service on a Russian mission, he saw action in France in the First World War and retired in 1919 Later he was a member of the Board of Indian Commissioners He wrote an autobiography, *Some Memories of a Soldier* (1928), and various monographs on the Plains Indians

Scott, James Brown, 1866–1943, American lawyer and educator, b Ontario He studied international law at Harvard and at Berlin, Heidelberg, and Paris He was dean of the law schools of the Univ of Southern California (1896–99) and the Univ of Illinois (1899–1903) and professor of law at Columbia and George Washington universities and the Univ. of Chicago. He was solicitor of the Dept of State (1906–10), delegate to the Second Hague Peace Conference (1907), and arbitrator in international disputes He was secretary of the Carnegie Endowment for International Peace (1910–40) and president of the American Institute of International Law (1929–40) He edited (1907–24) the *American Journal of International Law* His books include *The Hague Peace Conferences of 1899 and 1907* (2 vols, 1909) and *Law, the State, and the International Community* (2 vols, 1939)

Scott, John see ELDON, JOHN SCOTT, 1ST EARL OF

Scott, Robert, 1811–87, English classical scholar, grad Christ Church College, Oxford, 1833 Ordained in 1835, he was master of Balliol College (1854–70) and dean of Rochester from 1870 to his death He collaborated with Henry George Liddell in compiling the much-used *Greek-English Lexicon* (1843, new ed, 2 vols, 1925–40)

Scott, Robert Falcon, 1868–1912, British naval officer and antarctic explorer He commanded two noted expeditions to ANTARCTICA The first expedition (1901–4) in the *Discovery*, organized jointly by the Royal Geographical Society and the Royal Society and well equipped for scientific research, was concerned with exploration of the region about the Ross Sea Scott's achievements included sounding the sea, discovering King Edward VII Land (now known as Edward VII Peninsula), surveying the coast of Victoria Land, and making a long, important exploring trip on the antarctic continent itself E H SHACKLETON was a member of Scott's expedition from 1901 until he was invalided home in 1903 Upon Scott's return to England he was promoted captain in the navy and wrote an account of his expedition, *The Voyage of the "Discovery"* (1905) In 1910 he again set forth for Antarctica, this time in search of the South Pole His *Terra Nova* reached its base on the Ross Sea in 1911, and in November he started southward on foot toward the pole Scott and his four companions pulled their heavy sledges by hand across the high polar plateau, in sub-zero weather the whole way When they reached the South Pole on Jan 18, 1912, it was to find that Roald AMUNDSEN had preceded them by about one month On their retreat the heroic party was beset by illness, lack of food, frostbite, and blizzards All five members died, the last three overwhelmed by a blizzard when but a few miles from their depot Their bodies were later recovered, together with Scott's diaries, the records, and the valuable scientific collections Scott's journey constitutes one of the epic events of British exploration His diaries and the scientific findings of the expedition are contained in *Scott's Last Expedition* (2 vols, 1913) See biographies by S L Gwynn (1929) and Martin Lindsay (1934)

Scott, Thomas, 1747–1821, English clergyman and Bible commentator Ordained priest in 1773, he served in several curacies In that of Olney he was the successor of John Newton, through whose influence his religious views had been changed from Unitarianism to extreme Calvinism This experience Scott recorded in *The Force of Truth* (1779), which was revised by William Cowper and has passed through a number of editions In 1801 he became vicar of Aston Sandford, Buckinghamshire His most notable work, a commentary on the Bible (4 vols, 1788–92), many times reissued, was considered one of the theological achievements of the period in England His works (10 vols, 1823–25) and his letters and papers (1824) were edited by his son See biography by A C Downer (1909).

Scott, Thomas Alexander, 1823–81, American railroad president, b Fort Loudon, Franklin co, Pa. He entered the employ of the Pennsylvania RR as a station agent in 1850 and rose to become general superintendent (1858) and first vice president (1860) His efficiency in transporting Pennsylvania troops at the beginning of the Civil War won him a

lieutenant colonelcy of volunteers, and from Aug, 1861, to June, 1862, he was Assistant Secretary of War (an office newly created by Congress) in charge of all government railroads and transportation lines At various times later he was called upon to advise the government on the operation of its railroads After the war he was active in promoting the enormous expansion of the Pennsylvania system, of which he was president (1874–80) He was also president of the Union Pacific (1871–72) and of the Texas Pacific (1872–80) See S R Kamm, *The Civil War Career of Thomas A. Scott* (1940)

Scott, Sir Walter, 1771–1832, British novelist and poet, b. Edinburgh He attended (1783–86, 1788–92) the Univ of Edinburgh and after apprenticeship to his father, who was a writer to the signet, was called to the bar in 1792 Infantile paralysis in his second year left him lame, his convalescence began his association with the Border countryside which he continued in his vacations from legal practice He married Charlotte Carpenter in 1797 and in 1799 was made sheriff-deputy of Selkirkshire Scott's first published work was a translation of two ballads from the German of Bürger (1796), followed by a translation of Goethe's *Götz von Berlichingen* (1799) His *Minstrelsy of the Scottish Border* (2 vols, 1802, enl ed, 3 vols, 1803) was his impressive collection of old ballads with introductions and notes, it led naturally to his first major poem, *The Lay of the Last Minstrel* (1805) He was busy with editions of standard works, including one of Dryden (1808), with contributions to the *Edinburgh Review* and the *Quarterly Review* (which he helped to found), and with his own creative work His second poem, *Marmion*, appeared in 1808 In 1809 a quarrel with Constable and Company, the publishers of *Marmion*, led Scott to supply three fourths of the capital in a reorganization of the Ballantyne printing firm in which he had had an interest since 1805 As publishers the firm began well with Scott's poem *The Lady of the Lake* (1810), but other ventures were less fortunate A court clerkship assured Scott, after 1812, of a moderate steadv income, but his later long poems, *The Vision of Don Roderick* (1811), *Rokeby* (1813), and *The Bridal of Triermain* (1813), were coolly received In 1813 a financial crisis caused Scott to dissolve his publishing firm, return to Constable, and assume responsibility for the Ballantyne printing firm His first novel, *Waverley* (1814), was an immediate success, and though he was technically anonymous until 1827, he became the most popular British novelist In contrast, his next poems, *The Lord of the Isles* (1815) and *Harold the Dauntless* (1817), failed, and he wrote no more verse tales There followed romances of Scottish life—*Guy Mannering* (1815), *The Antiquary* (1816), *The Black Dwarf* (1816), *Old Mortality* (1816), *Rob Roy* (1818), *The Heart of Midlothian* (1818), *The Bride of Lammermoor* (1819), and *The Legend of Montrose* (1819) *Ivanhoe* (1820), Scott's first prose reconstruction of a long-past time, was his first venture into English history His public acclaim grew, and in 1820 Scott was gazetted a baronet His financial affairs were in precarious shape, since he was meeting Ballantyne's obligations out of advances from Constable and was expanding his estate of Abbotsford (purchased in 1812) Most of the novels of the succeeding years were of the *Ivanhoe* style of reconstructed history, *The Monastery* (1820), *The Abbott* (1820), *Kenilworth* (1821), *The Pirate* (1822), *The Fortunes of Nigel* (1822), *Peveril of the Peak* (1822), *Quentin Durward* (1823), *The Betrothed* (1825), and *The Talisman* (1825) In *St Ronan's Well* (1824), however, Scott attempted a novel of manners, and in *Redgauntlet* (1824) he reverted to the background and treatment of his early novels In 1825 an English depression brought ruin to Constable, to Ballantyne's, and to Scott Refusing to go through bankruptcy, Scott assigned to a trust his property and income in excess of his official salary and set out to pay his debt and much of Constable's The next few years' work included *Woodstock* (1826), a life of Napoleon (1827), *Chronicles of the Canongate* (1827), *The Fair Maid of Perth* (1828), *Anne of Geierstein* (1829), three series of history for children (*Tales of a Grandfather*, 1828, 1829, 1831), and much hack work Scott's health was failing, however, and after finishing (1831) *Count Robert of Paris* and *Castle Dangerous*, he went abroad to rest, returning only to die The remainder (less than half) of the debt he had assumed was paid from the earnings of his books. Scott with his swinging narrative poems had introduced a form of verse tale which won great popularity, his lyrics and ballads, such as "Lochinvar" and "Proud Maisie," are masterly in feeling and technique In his novels, models for later historical fiction, he excelled in re-creating the spirit (if not the letter) of great events and in painting realistic pictures of Scottish life, although some of his heroes now seem wooden and his plots mechanical. See Scott's journal for 1825–32 (ed. by David Douglas, 2 vols, 1890) and for 1825–26 (ed by J G. Tait, 1939) and his letters (ed. by Sir H. J. C Grierson and others, 12 vols., 1932–37), the classic biography by his son-in-law, J. G. Lockhart (7 vols, 1837), biographies by John Buchan (1932) and Sir H. J C. Grierson (1938)

Scott, Walter, 1867–1938, Canadian journalist and statesman, b London, Ont. From 1892 to 1906 he was engaged in newspaper work, editing and publishing various papers. A member of the House of Commons from Assiniboia West in 1900 and 1904, he was instrumental in securing the creation of the provinces of Saskatchewan and Alberta A noted Liberal, he was premier of Saskatchewan from 1905 until 1916 He was also president of the council and minister of education

Scott, Walter, 1872–, American adventurer, b near Covington, Ky He is called "Death Valley Scotty" A rider in Buffalo Bill's Wild West Show, Scott established himself c 1903 in Death Valley as a prospector He claimed to have discovered a secret gold mine In 1905 he achieved notoriety by chartering a train to run from Los Angeles to Chicago in the unprecedented time of slightly less than 45 hr He built a "castle" in Death Valley, reputedly costing more than $2,000,000, which has become a tourist show place His mysterious source of wealth was finally discovered to be two backers, the chief of whom was A M Johnson, a retired insurance man from Chicago See C. P. Milligan, *Death Valley and Scotty* (1942)

Scott, Walter Dill, 1869–, American psychologist and educator, b Cooksville, Ill, grad Northwestern Univ, 1895, Ph D Leipzig, 1900 He taught psychology at Northwestern Univ from 1901 to 1920 and was president from 1920 to 1939 He specialized in business psychology, particularly personnel management, and wrote many books in his field He devised the personnel system in the U S army in the First World War

Scott, Winfield, 1786–1866, American general, b "Laurel Branch," near Petersburg, Va He attended the College of William and Mary briefly in 1805 before studying law at Petersburg Abandoning the law, he was commissioned a captain of light artillery in 1808 and was made a lieutenant colonel on the outbreak of the War of 1812 Scott was one of the few U S army officers to distinguish himself in that conflict He fought well at Queenston Heights (Oct, 1812) but was captured Exchanged, he was made (March, 1814) a brigadier general and sent again to the Niagara frontier The thorough training he gave his brigade paid off in July as it chased the British at Chippewa and bore the brunt of the fighting at LUNDY's LANE, where Scott was severely wounded Scott became a hero and was brevetted major general In 1815–16 he visited Europe, where he studied French army practices His army career, following his return, was a long and varied one He was to participate in the Black Hawk War (1832), but cholera broke out among his troops Later that year, however, President Andrew Jackson personally dispatched him to Charleston, S C, during the nullification troubles, and Scott ably handled the potentially explosive situation He served in the Seminole and Creek campaigns and in 1838 supervised the removal of the Cherokee to the Southwest His talent for peacemaking was further revealed in 1838, when he was sent to the Canadian border in the CAROLINE AFFAIR, and again in 1839, when he went to Maine during the so-called AROOSTOOK WAR From July, 1841, when he succeeded Gen Alexander MACOMB, to Nov, 1861, when he retired in favor of Gen George B MCCLELLAN (1826–85), Scott was the supreme commander of the U S army In the Mexican War, Scott personally headed the southern expedition, after Gen Zachary Taylor, whom he had endorsed, had already begun his northern campaign With the cooperation of the navy, he took Veracruz early in 1847 and then began the long march inland to Mexico city CERRO GORDO fell (April, 1847), and Scott's army entered Puebla, where it remained inactive for several months In August the Americans recommenced their advance Fighting at CONTRERAS and Churubusco preceded the attack on the outposts of Mexico city. An engagement at Molino del Rey was followed by the storming of CHAPULTEPEC, which fell on Sept 13, 1847, and the way was clear to the capital The campaign was a triumph for Scott's daring strategy and confirmed his reputation as a bold fighter Scott had objected violently to the actions of Nicholas P TRIST in his peace negotiations when the army was at Puebla, and trouble between the two men caused some embarrassment at home, but after the capture of Mexico city, the quarrel between the general and the envoy subsided However, Scott was a Whig, and in Jan., 1848, he was recalled by the Democratic administration of James K. Polk. Although he was severely criticized by his political enemies in the United States, Scott returned from the Mexican War even more of a national hero. The charges leveled at him because of the criticisms of a few officers were withdrawn, and he was brevetted a lieutenant general. In 1852 he was nominated as the Whig candidate for President (chiefly through the agency of Thurlow WEED), but the Whig party was disintegrating, and he made a poor showing against his Democratic opponent, Franklin PIERCE. In 1859 he once more took a hand in a boundary contest, going to Washington Territory in an effort to settle the SAN JUAN BOUNDARY DISPUTE. The outbreak of the Civil War brought onerous burdens to the general, who, though a Southerner by birth, opposed secession and was loyal to the Union. He wished some delay before any military action was taken so that the civilian army could be more adequately trained The disastrous first battle of Bull Run, fought despite his wishes, bore out his views Old and in failing health, Scott was compelled to retire on Nov 1, 1861. President Lincoln and his whole cabinet paid him a formal call in fitting tribute to his long and honorable service to the nation Scott lived to see the Union victorious in the Civil War, in which many of the leading commanders on both sides, notably Robert E Lee and Ulysses S Grant, had received their most valuable training under him in Mexico He is buried at West Point, an institution he did much to foster In 1947 a monument to him was unveiled in Elizabeth, N J, where he lived for some years Although he was vain and pompous ("Old Fuss and Feathers" he was called), Scott was also generous to a fault His fair-mindedness and love of justice mitigated the severity of the stern discipline he was wont to lay down Considerate of his officers and solicitous for the welfare of his men, he always had the unlimited confidence of both groups, for they had firsthand knowledge of his superior military abilities In nonmilitary matters, excluding his diplomatic ventures, his tendency to be quarrelsome and his faculty for "putting his foot in it" made him far less successful However, it is not possible to dispute the statement that he was the greatest American general between Washington and Lee His memoirs (2 vols) appeared in 1864 The definitive biography is by Charles W Elliott (1937) See also biography by Arthur D Howden-Smith (1937)

Scott City, city (pop 1,848), co seat of Scott co, W central Kansas, N of Garden City, in an irrigated region, inc 1887 Dairy products are made here In a state park north of the city are the remains of an Indian pueblo, El Cuartelejo, and also a buffalo preserve In a near-by canyon was fought (1878) the last battle with Indians in Kansas

Scottdale, industrial borough (pop 6,493), SW Pa, near the Youghiogheny river SE of Pittsburgh, laid out 1872, inc 1874 It manufactures coffins, iron allovs, sheet metal, and mining supplies

Scotti, Antonio (skō'tē), 1866–1936, Italian operatic baritone He made his debut in Malta in 1889, his London debut as Don Giovanni at Covent Garden in 1899, and his American debut in Chicago the same year From 1899 to 1933 he was immensely popular at the Metropolitan Opera House, both for his acting and for his vocal artistry Among his outstanding roles were Iago in *Otello*, Scarpia, a role he created, in *La Tosca*, and Hans Sachs in *Die Meistersinger*

Scottish dialect, English dialect of the Lowlands Since the English speech area is continuous, no boundary sets off Scottish, it is a northern modern form of the Old English of Northumbria Scottish has had a distinct existence in literary form since the Middle Ages In the 11th cent it gained as the language of the courts, and Malcolm III, abandoning Scottish Gaelic, made Scottish the official language *The Bruce*, by John Barbour, dating from the 14th cent, is the oldest literary monument in the Scottish dialect Early great Scottish poets were James I, Robert Henryson, William Dunbar, and Gawin Douglas, all Chaucerians The history of Scottish grammar roughly parallels that of standard English (see ENGLISH LANGUAGE), with loss of inflections and consequent modification of syntactical forms In the details of its sound changes, Scottish frequently differs from standard English, for instance, Old English *hām* (hām) has become modern English *home* (hōm), but modern Scottish *hame* (hām) In vocabulary Scottish is more archaic than standard English, retaining in semicultivated speech many words which have been lost in all but the most rustic forms of English After a golden age during the 15th and early 16th cent, Scottish declined as a medium for literary expression, and since the beginning of the 17th cent, English has made continual inroads into the Scottish vernacular For this decline of Scottish two reasons may be assigned, the accession of the house of Stuart to the English throne with the loss of a Scottish national self-consciousness and the use throughout Scotland of the English Bible. A notable literary revival of Scottish took place in the 18th cent, with Allan Ramsay, Robert Fergusson, and Robert Burns as the leading figures

Scottsbluff (skŏts' blŭf'), city (pop. 12,057), W Nebr, on the north bank of the North Platte, in the Great Plains region near the Wyo. line, settled after 1885, laid out 1899, inc. 1900. It grew as the commercial and industrial center of an irrigated farm area. It has beet-sugar factories, creameries, and flour mills. An agricultural experiment station is here. The city is named for a near-by butte, Scotts Bluff (alt. 4,649 ft), landmark to travelers

of the Oregon Trail. Oregon Trail Museum is in Scotts Bluff National Monument (see NATIONAL PARKS AND MONUMENTS, table) across the river.

Scottsboro, city (pop. 2,834), co seat of Jackson co, NE Ala., near the Tennessee river at the edge of the Cumberland Plateau, in a farm area. The city gave its name to the famous Scottsboro Case.

Scottsboro Case. On March 31, 1931, nine Negro boys were indicted at Scottsboro, Ala., on charges of having raped two white girls (Ruby Bates and Victoria Price) in a gondola car of a Southern RR freight train passing through Jackson co., Ala., on its way to Memphis. Eight of them (the ninth was only 13 years old) were tried, convicted, and sentenced to death early in April. In March, 1932, the Alabama supreme court affirmed the conviction of seven, the eighth was also a juvenile. The belief that the case against them was unproved and that the verdict was the result of anti-Negro feeling in Alabama caused Northern liberals and radicals to come to the defense of the boys, and the Scottsboro Case became a *cause célèbre*. The decision was appealed to the U.S. Supreme Court, which declared (Nov., 1932) a mistrial on the grounds that the defendants' right to counsel had been infringed. In March, 1933, a change of venue was granted, and Haywood Patterson, called by the prosecution the ringleader of the defendants, was retried at Decatur, county seat of Morgan co., Ala. Despite Ruby Bates's recantation of her previous testimony, the jury convicted Patterson and imposed the death penalty (April). However, in June, Judge James E. Horton set aside the conviction on the ground that it was against the weight of evidence and granted a new trial (Horton was defeated for reelection the next year). At this third trial Patterson was again convicted (Dec., 1933), as was Clarence Norris shortly afterwards, both were again sentenced to death. Once more the case was appealed, and in April, 1935, the U.S. Supreme Court reversed the convictions on the grounds that Negroes had been excluded from the juries which had indicted and tried the boys. In Nov., 1935, at Scottsboro, a grand jury of 18, which included one Negro, returned new indictments charging rape against all nine of the boys. Patterson, tried again at Decatur, was convicted by an all-white jury (Jan., 1936) and sentenced to 75 years in prison. The trials of the remaining defendants were postponed until July, 1937, when three more were convicted and sentenced—Clarence Norris (execution), Andy Wright (99 years), and Charlie Weems (75 years). The indictments against the remaining five defendants were quashed. Ozzie Powell, who pleaded guilty to attacking with a knife one of the deputy sheriffs who were transferring the prisoners, was sentenced to 20 years for that assault. The remaining four defendants—Olen Montgomery, Willie Roberson, Eugene Williams, and Roy Wright—were freed. Norris's death sentence was later commuted to life imprisonment by Gov. Bibb Graves. The dropping of the indictments was later attributed by the chief defense counsel, Samuel Leibowitz of New York, to a compromise offered by the Alabama authorities by which all the defendants save Powell were to go free in two years. Patterson's petition for a review of his sentence by the U.S. Supreme Court on the ground that a fair trial in the county court had been impossible was denied in Oct., 1937. In Feb., 1940, the Alabama pardon and parole board began to consider the cases of the imprisoned five, and by Sept., 1946, when Clarence Norris was freed on parole, only Haywood Patterson remained in prison. However, Andy Wright was returned (Oct., 1946) to prison for having violated the terms of his parole. Patterson later escaped and early in 1950 remained a fugitive. The fact that Communists used the Scottsboro boys for propaganda purposes further complicated the affair. The ultimate freeing of most of the defendants was, however, the result of unceasing labor by the Scottsboro Defense Committee, headed by the Rev. Allan Knight Chalmers, which, formed in Dec., 1935, for the most part represented liberal, non-Communist organizations. See Scottsboro Defense Committee, *The Scottsboro Case* (1936, a pamphlet), Haywood Patterson and Earl Conrad, *Scottsboro Boy* (1950).

Scottsburg, town (pop. 2,189), co. seat of Scott co., SE Ind., W of Madison.

Scottsville, town (pop. 1,797), co. seat of Allen co., S Ky., SE of Bowling Green and near the Tennessee line, in a farm, timber, and oil area.

Scottville, city (pop. 1,162), N Mich., on the Pere Marquette river and E of Ludington, settled 1876, inc. as a village 1889, as a city 1907. It is a farm trade center with canneries. Indian mounds are in the vicinity.

Scranton, George Whitefield, 1811–61, American manufacturer, b. Madison, Conn. With his brother Selden he bought (1839) the lease and stock of the ironworks of Oxford Furnace (near Washington, N.J.). The next year, with several others, Scranton formed a company to obtain large tracts of coal-bearing lands in the Lackawanna valley, including the site of Scranton, Pa., which he laid out. By 1842 he had developed the use of anthracite for smelting ore. Later he organized and was president of the Northumberland division of the Delaware, Lackawanna & Western RR and was a Republican Congressman from 1859.

Scranton. 1 Town (pop. 1,014), central Iowa, W of Boone, inc. 1880. It is a farm trade center. 2 City (pop. 140,404), co. seat of Lackawanna co., NE Pa., in a mountainous region, on the Lackawanna river and c. 135 mi. NW of New York city, settled late in the 18th cent., laid out 1841, inc. 1866. Named for George W. SCRANTON, it is the commercial and industrial center of the anthracite section of NE Pennsylvania. Its industries include silk, machinery, munitions, and metal products. The Univ. of Scranton (Catholic, for men, 1892), Marywood College, and the International Correspondence Schools are here. The Everhart Museum of Natural History, Science, and Art and the Pennsylvania State Oral School for the Deaf are in Scranton.

screen, in architecture, a partition or enclosure not extending to the ceiling. It is usually a structure of decorative openwork. Although any open colonnade or arcade enclosing a courtyard or the like is called a screen, the most common use of the term is Gothic and ecclesiastical, applied to a dwarf wall or decorated and pierced partition of stone, wood, or metal, frequently serving to mark the boundaries of portions of churches and cathedrals. The choir screen, or chancel screen, the most usual form, separates the choir or chancel from the body of the church, in some cases it is carried around the *chevet* to enclose the choir entirely. In many medieval cathedrals, the choir screen was a richly decorated structure of pierced stonework, often with sculpture. The screens of the cathedrals of Chartres and Albi in France and of York, Lincoln, and Durham in England are especially noteworthy. Many English parish churches contain fine screens of carved and painted wood. In the basilican churches of Italy, such as San Miniato al Monte at Florence, the chancel front was often marked by an elaborate inlaid marble parapet wall. With the coming of the Renaissance, the constructing of chancel screens became rare except in Spain, where *rejas* of ironwork or bronze were extensively employed (see GRILLE). In Greek Christian churches, the choir screen takes the form of a solid partition, the iconostasis, decorated with holy images (whence its name) and usually provided with three doors. It entirely separates the sanctuary from the body of the church and conceals from the congregation the altar and the celebration of Mass. The haikal is a corresponding screen wall in the Coptic churches of Egypt and in other Eastern Christian churches. The rood screen is a more elaborate form of choir screen which bears the ROOD or crucifix and is sometimes surmounted by a gallery or elevated platform called the rood loft, from which the lessons may be read or sermons preached. A jube is a choir screen equipped with balconies for clerical reading or preaching. A REREDOS is a wall or screen behind the high altar. As an article of furniture, the folding sectional screen is of great antiquity, dating in China from the 2d cent. B.C. Widely used to adorn palaces and mansions, the screens of China and Japan were often gorgeous conceptions with carved wood frames, paneled and inlaid with jade or precious metals, or rich textiles, and the art of screen painting reached superb heights. The use of the folding screen, often showing Oriental influences, has continued to the present day, in various textiles, stamped or painted leathers, and other materials. The term *screen* is applied rather indiscriminately to various forms of covered frameworks, often portable, whose purpose is to conceal or shield from injury, e.g., the fire screen or the window screen, the term is also used of diverse kinds of openwork barriers, such as a bank screen, a low partition of glass or metal which in banks separates the public space from the tellers' cages. See Francis Bond, *Screens and Galleries in English Churches* (1908), Aymer Vallance, *English Church Screens* (1936).

screw, simple MACHINE consisting essentially of a cylinder (usually of metal) around which an INCLINED PLANE winds spirally, either clockwise or counterclockwise. The ridge forming the inclined plane is called the thread, the distance from any point on one thread to a corresponding point on the next successive thread is called the pitch. A thread can be placed on the inner surface of a hollow cylinder. Two screws of the same pitch, one on the outer surface of a solid cylinder and the other on the inner surface of a hollow cylinder, can be so arranged as to revolve one within the other, as in the common nut and bolt. The thread on the convex surface of the bolt is called the external or male screw, that on the concave surface of the nut, the internal or female screw. The common jackscrew used to lift automobiles, houses, and other heavy objects is an application of this principle. The internal screw is situated in the base, the external screw on a metal cylinder; at the top of the cylinder a lever or handle is fastened. As the handle is rotated, the external screw moves up the internal screw and the object placed on top of the jack is lifted. The mechanical advantage of the jackscrew, as of any other screw, is theoretically the ratio between the circumference through which the end of the handle moves and the pitch of the screw. Since, however, there is much friction in the operation of a screw, the amount of WORK put into this machine is much greater than the amount done, and the efficiency is small. On the other hand, the small effort necessary to turn the handle, when compared to the enormous load raised, makes such a machine of great value. The screw is often used for making delicate adjustments of tools and machines, e.g., in the micrometer screw and in the carburetor of the gasoline engine (for regulating the flow of gasoline). Wood and metal screws, the carpenter's and machinist's vise, the PROPELLER of a boat or airplane, ARCHIMEDES' SCREW, and many other devices are applications of the screw.

Scriabin, Aleksandr Nikolayevich (ŭlyĭksan'dur nyĭkŭlā'uvĭch skrē-ŭbēn', skrēä'bĭn), 1872–1915, Russian composer and pianist. He studied at the Moscow Conservatory, where he later taught, 1898–1903. In his piano compositions he introduced chords built in fourths instead of the conventional major and minor triads. He aspired toward a fusion of the arts, and his *Divine Poem* (1903), a programmatic orchestral work, attempts to unite music and philosophy. *Prometheus: a Poem of Fire* (1909–10) calls for the play of colored light upon a screen during the performance. A projected composition, *Mystery*, which would employ the media of all the arts, including colors and scents, was never realized. See biographies by A. E. Hull (1918) and A. J. Swan (1923), M. D. Calvocoressi and Gerald Abraham, *Masters of Russian Music* (1936).

Scribe, Augustin Eugène (ôgüstĕ' üzhĕn' skrēb'), 1791–1861, French dramatist and librettist. He began his writing career with vaudeville sketches and was soon to revolutionize 19th-century French opera with an influx of liberal political and religious ideas and a brilliant dramatic technique. One of the first to mirror bourgeois morality and life, Scribe wrote librettos for Boieldieu's *Dame blanche* (1825), Jacques Halévy's *La Juive* (1835) and *Manon Lescaut* (1856), and Verdi's *Vêpres siciliennes* (1855). Scribe also collaborated with the composers AUBER and MEYERBEER.

scribe (skrīb), originally a Jewish scholar who knew the art of writing, later one of the official teachers of Jewish law as based upon the Old Testament and accumulated traditions. The work of the scribes developed into the Oral Law, as distinct from the Written Law of the Torah. The name in its official designation of teacher was first applied to EZRA, c. 444 B.C., and last to Simeon the Just. These scribes lost their religious leadership in the 1st cent. A.D. and were followed by the Tannaim (plural of Tanna), scholars and teachers of the Oral Law who flourished between A.D. 10 and A.D. 220. The Mishna, begun by HILLEL and SHAMMAI and completed by Judah I (the last Tanna), and the Baraithas are the work of this group. Other prominent Tannaim were Gamaliel I, Johanan ben Zaccai, who founded the academy at Jamnia, and Akiba ben Joseph. They were succeeded by the Amoraim, who developed the Gemara of the TALMUD and established the famous academies of Sura and Pumbedita. From c. 200 to 350 they flourished in Palestine, and subsequently in Babylon. Among the most prominent Amoraim were Rab, Abbahu, and Ashi, compiler of the Babylonian Talmud. Their activities ceased by the beginning of the 6th cent., and the labors of the Saboraim began, the latter disappeared before the century was over, having completed the Babylonian Talmud. They were followed by the Geonim, who became the authoritative interpreters of the Old Testament and the Talmud in its relation to the changed social and economic conditions of the Jews. The title Gaon was applied to the heads of the academies of Sura and Pumbedita in Babylon. Saadia was the greatest of the Sura Geonim, Sherira and his son Hai the most important of the Pumbedita Geonim. The period of the Geonim ended with the death of Hai in 1038.

Scriblerus Club, English literary group formed (1713) to satirize "false tastes in learning." ARBUTHNOT, GAY, Thomas PARNELL, POPE, and SWIFT were among its members. Meetings of the club as such apparently did not continue after 1714. The club's major production was "Memoirs of Martinus Scriblerus," published in Pope's prose works (1741), but almost entirely—if not entirely—by Arbuthnot. The influence of the club is seen in Swift's *Gulliver's Travels* (1726) and Pope's *Dunciad* (1728). See R. J. Allen, *The Clubs of Augustan London* (1933), George Sherburn, *The Early Career of Alexander Pope* (1934).

Scribner, Charles, 1821–71, American publisher, b. New York city, grad. College of New Jersey (now Princeton Univ.), 1840. He founded in 1846 the publishing house which in 1878 became Charles Scribner's Sons and began *Scribner's Monthly* in 1870 (in 1881 it became the *Century Magazine*)

His son, **Charles Scribner,** 1854–1930, b New York city, grad Princeton, 1876, became head of the firm in 1879 and founded *Scribner's Magazine* in 1887 He was the donor of the Princeton Univ Press building

scrip, temporary substitute for money, securities, or other valuable claims Business enterprises and municipalities have at times, especially when short of cash, paid employees in scrip, and communities have facilitated trade by using it Various devices have made it acceptable, e g , a store that would receive it in exchange for goods The term *scrip* has also been applied to money of fractional denominations

Scripps, Edward Wyllis, 1854–1926, American newspaper publisher, b Rushville, Ill His brother James Scripps, publisher of two Detroit papers, gave him his start in journalism E W Scripps's first independent venture was starting the Cleveland *Penny Press* (later the *Press*) in 1878 As Scripps founded other papers, he set up, with his manager, Milton A McRae, and his brother George Scripps as partners, the Scripps-McRae League, a powerful chain of newspapers, liberal in politics and crusaders for labor It developed its own news service, and in 1907 Scripps set up the United Press Association, with Roy W Howard as manager from 1908 McRae left the Scripps papers in 1914 Scripps also organized the Newspaper Enterprise Association to furnish his papers with features, cartoons, and illustrations In 1920 he started the Science Service for newspapers, later he endowed a foundation for population research at Miami Univ, Oxford, Ohio, and the Scripps Institution of Oceanography at La Jolla, Calif, connected with the Univ of California Scripps was paralyzed in 1917 and retired in 1922 His son, Robert P Scripps, soon afterward made Roy Howard a partner, and the newspaper chain was known as the Scripps-Howard papers See biographies by Gilson Gardner (*1932*) and N D Cochran (1933)

Scripps College see CLAREMONT COLLEGE

Scripps Institution of Oceanography, at La Jolla, Calif, since 1912 part of the Univ of California.

scrofula. see TUBERCULOSIS.

Scroggs, Sir William, 1623?–1683, English jurist Trained in law at Gray's Inn, he fought for the king in the civil wars, became (1669) a king's sergeant, was made (1676) justice in common pleas through the influence of the earl of Danby, and became (1678) lord chief justice In the early trials for the alleged Popish Plot (see OATES, TITUS) Scroggs discriminated against and abused Catholic defendants notoriously, but in the case of Sir George Wakeman (1679), the queen's physician, who was accused of plotting to poison the king, Scroggs changed his stand, impugned the testimony of Oates and his fellow conspirators, and brought about the acquittal of Wakeman Subsequently, Scroggs was one of the justices who discharged the grand jury which was to consider the impeachment of the duke of York (later James II) as a Catholic recusant Scroggs was attacked by fanatical Protestants as having yielded to court pressure An effort was made (1681) to impeach and try him, but it failed because of the dissolution of Parliament by Charles II Scroggs was supplanted on the bench, however, and retired on a pension from the crown

scroll sawing see FRETWORK

Scrooby, village, Nottinghamshire, England, SE of Doncaster It was the home of William BREWSTER and center of the group later called the Pilgrims

Scrope, Richard Le (lu skrōōp), 1350?–1405, English archbishop He probably studied law at both Oxford and Cambridge and took priest's orders in 1377 He rose steadily in church rank In 1386 he was made bishop of Coventry and Lichfield, and in 1398 at the request of Richard II the pope made Scrope archbishop of York He at first supported Henry IV, but in 1405 he issued an indictment of Henry's government and raised an armed body of supporters By the guile of the leader of the king's forces, the earl of Westmorland, Scrope was arrested and imprisoned He was convicted, and his execution, held at York as an example to the people, tended to elevate him as a martyr

Scrope of Bolton, Richard le Scrope, 1st **Baron,** 1327?–1403, English chancellor He fought at Neville's Cross (1346) and in many French and Scottish campaigns For many years he was in the service of John of Gaunt and fought with him at Nájera (1367). Scrope became treasurer in 1371, warden of the West Marches in 1375, and steward of the royal household in 1377. He twice served as chancellor (1378–80, 1381–82), finally resigning after refusing to apply the seal to the lavish grants of Richard II In 1385 Scrope began his celebrated controversy with Sir Robert Grosvenor over the use of the same heraldic arms which ended, after a five-year trial, in his favor Scrope was named in 1386 to the reform commission but continued to serve Richard after the king regained power and pardoned him in 1397.

Scudder, Henry Martyn, 1822–95, American missionary and clergyman, b. Ceylon, the son of a missionary. He was educated at New York Univ and Union Theological Seminary In 1844 he went to India under the auspices of the American Board He worked for several years in Madras, then founded a mission and dispensary in the Arcot region for the board of the Dutch Reformed Church Returning (1864) to the United States, he filled pastorates in Jersey City, San Francisco, and Brooklyn and at Plymouth Congregational Church, Chicago From 1887 to 1890 he was with his son and daughter in the mission field of Japan He published several works in the Tamil language of India

Scudder, Horace Elisha, 1838–1902, American editor and writer, b Boston, grad Williams, 1858 He was editor (1890–98) of the *Atlantic Monthly,* and for Houghton Mifflin he directed the "American Commonwealth Series" and the Cambridge Edition of the Poets He wrote many juvenile stories—among them the popular Bodley series—and a study, *Childhood in Literature and Art* (1894) His biographies include those of Bayard Taylor (with Marie Hansen Taylor, 1884) and James Russell Lowell (1901)

Scudder, Janet, 1873–1940, American sculptor, b Terre Haute, Ind , studied at the Art Academy of Cincinnati, under Lorado Taft at the Art Institute of Chicago, and in Paris Her fountains and other garden figures, usually joyous, playful children, are widely known Among them are the *Frog Fountain* (Metropolitan Mus), the *Tortoise Fountain* (Peabody Inst , Baltimore), *Fighting Boy Fountain* (Art Inst , Chicago), *Seated Faun* (Brooklyn, N Y , Mus), *Young Diana,* and others She is represented by portrait medallions in the Library of Congress and in the Luxembourg Museum, Paris She lived in France for many years. See her autobiography, *Modeling My Life* (1925)

Scudder, Samuel Hubbard, 1837–1911, American entomologist, b Boston, grad Williams (B A , 1857) and Harvard (B S , 1862), brother of H E Scudder The founder of American insect paleontology and an authority on Orthoptera and Lepidoptera, he was assistant to Louis Agassiz (1862–64), custodian of the Boston Society of Natural History (1864–70), assistant librarian of Harvard (1879–82), and paleontologist of the U S Geological Survey (1886–92) His works include *A Century of Orthoptera* (1879), *Butterflies Their Structure, Changes, and Life-Histories* (1881), and *Fossil Insects of North America* (1890) See A G Mayer, *Biographical Memoir* (1924, in National Academy of Science, *Memoirs,* Vol XVII)

Scudder, Vida Dutton, 1861–, American educator and writer, b India, of missionary parents, educated at Smith and at Oxford She taught at Wellesley from 1887 to 1927 (as professor after 1910) and was active in settlement-house work Besides editing the works of several English authors, she wrote literary studies, e g , *Social Ideals in English Letters* (1898, enl ed , 1923) and *Socialism and Character* (1912), essays, collected in *The Privilege of Age* (1939), and an autobiography, *On Journey* (1937)

Scudéry, Madeleine de (mädůlĕn' du skůdārē'), 1607?–1701, French novelist She was prominent at the Rambouillet salon and later had one of the chief salons of polite Paris Her two principal works, *Artamene, ou, Le Grand Cyrus* (1649–53) and *Clélie* (1654–60), are immensely long pseudo-historical novels, full of fashionable sentimentalism and preciosity They were popular and influential, and each was translated into English within a few years of its publication On the title pages appeared only the name of her brother, **Georges de Scudéry** (zhôrzh'), 1601–68, who was probably only a secondary collaborator Georges was author of many plays and other works

sculpture, art of producing in three dimensions representations of natural forms or objects of the imagination It includes the whole range of three-dimensional representation, from sculpture in the round which can be viewed from any direction to the incised relief in which lines are merely cut in a flat surface It embraces such varied techniques as modeling, carving, casting, and construction These techniques materially condition the character of the work Whereas modeling permits addition as well as subtraction of the material and is highly flexible, carving is strictly limited by the original block from which material must be subtracted For this reason carvers have sometimes had recourse to construction in which separate pieces of the same or different material are mechanically joined together In contemporary sculpture, however, much emphasis is given to construction as an independent technique Casting is, strictly speaking, a reproduction technique which duplicates the form of an original whether modeled, carved, or constructed, but it also makes practical certain effects which are impractical in the other techniques For example, top-heavy works which would require external support in clay or stone can stand alone in hollow, cast metal because of its lightness and the strength of the material, which also makes practical the free use of delicate outstanding parts These traditional techniques of the sculptor have undergone comparatively slight change in outstanding works throughout the ages. Modeling in wax or clay, largely by hand, is unaltered, although the range of possibilities in the firing of the clay from simple terra cotta to elaborately glazed ceramics has varied greatly Carving, which makes use of such varied materials as stone, wood, ivory, bone, and plastics, has for centuries employed a large number of tools, including many types of hammers, chisels, drills, gauges, and saws For carrying out monumental works from small studies various devices have been evolved for mechanically approximating the proportions of the original study Today, by means of the pointing machine, this process of reproducing general dimensions is greatly facilitated. However, it in no way diminishes the importance of the final work, which must be done by the hand of a sensitive artist Casting bronze is also a technique of extreme antiquity The Greeks and Chinese early mastered the cire-perdue (lost-wax) process, which was revived in the Renaissance and practiced until modern times By this method the final layer of the model is executed in wax, and the whole is coated with a heavy outer mold of heat-resistant material which is attached by rods to the core Then the wax is melted away and molten bronze is run in through tubes and replaces it Little Greek sculpture in bronze has survived, apparently because the metal was melted down for other purposes, but the material itself resists exposure better than stone and was preferred by the Greeks for their copious art of public sculpture Today the cire-perdue method has been largely replaced by the French sand method, in which a damp, packed sand is used for the mold and the core is pared away to leave space for the molten metal. This method is adapted to the casting of many types of metals but cannot be said to have produced finer results artistically Metal may also be cast in solid forms, hammered, carved, and incised, but all these techniques are adapted rather to small works than to large Construction has gained a new importance as a sculpture technique with the contemporary interest in abstract art, with the mobile, which might be defined as a construction which moves and is intended to be seen in motion, it utilizes a wide variety of materials and techniques In general, however, it can be said that each of the principal techniques has its characteristic materials Contemporary practice emphasizes the beauty of materials and the frank expression of their nature in the work, an emphasis partly due to the fact that most of our sculpture is unpainted In many of the great periods of the past, however, and notably in ancient Greece and Egypt and medieval Europe, sculpture was commonly painted or gilded The art of sculpture has had a most varied part to play in the culture of different peoples and periods, from the abstract arabesque which decorates Moorish architecture to the independent, freestanding figure beloved by the Greeks Much of our conception of the cultures of Egypt, Assyria, and ancient America is derived from their magnificent sculptural remains In the history of Western culture sculpture was probably never more flourishing than during the late Middle Ages The great architectural sculpture of the Romanesque and Gothic periods forms an integral part of the church and often a single cathedral displays thousands of masterpieces of carving Most of this art is anonymous but as early as the 13th cent the individual sculptor and individual work gained prominence in Italy with Nicola and Giovanni Pisano, who preceded a long line of famous Italian Renaissance sculptors from Della Quercia to Giovanni da Bologna Florence was the center of this flowering of the art and could boast of such masters as Ghiberti, Luca Della Robbia, Donatello, and Michelangelo The northern Renaissance also produced important known masters such as the German Peter Vischer the elder, the Flemish Sluter, and Pilon and Goujon in France, where a courtly and secular art flourished under royal patronage during the 16th and 17th cent The baroque period produced a dramatic art represented in France by Puget, Girardon, and the Coustous, in Spain by Berruguete, and in Italy by Bernini The 18th cent modified this grandiose style to produce the more intimate art of such sculptors as Clodion and Houdon and also saw the birth of neoclassicism with Canova This rather derivative style flourished well into the 19th cent in the work of Thorvaldsen and his followers but the period is better represented by the long line of French realistic sculptors from Rude to Rodin, including among many others Dalou, Falguière, M J A Mercié, and Carpeaux. In the 20th cent, sculpture like painting has tended to free itself from the extreme realism of the preceding period and also from the long domination of the Greek ideal, although in the admirable work of Maillol that ideal still predominates. The influence of other traditions, such as those of African Negro sculpture and Aztec sculpture (in which a more direct expression of materials, textures, and techniques is found), has contributed to this liberation. The English (with Epstein, Eric Rowland Gill, and Henry Moore), the French (with Lipschitz), the Germans (with Barlach, Lehmbruck, and

Kolbe), the Yugoslavs (with Mestrovic), the Rumanians (with Brancusi), and the Americans (with Lachaise, Archipenko, Calder, and Zorach) have contributed to the number of gifted 20th-century sculptors who have explored widely different and highly original applications of the art See Lorado Taft, *The History of American Sculpture* (new rev ed., 1924); Herbert Maryon, *Modern Sculpture Its Ideals and Methods* (1933), Malvina Hoffman, *Sculpture Inside and Out* (1939), Lincoln Rothschild, *Sculpture through the Ages* (1942), A T Gardner, *Yankee Stonecutters the First American School of Sculpture, 1800–1850* (1945); W R. Valentiner, *Origins of Modern Sculpture* (1946)

Scunthorpe and Frodingham (frŏd'ĭngum), urban district (1931 pop 33,761, 1947 estimated pop 51,070), in the Parts of Lindsey, Lincolnshire, England It is a steel-milling center

scup: see PORGY

scurvy or **scorbutus** (skûrbū'tŭs), deficiency disease resulting from a lack of vitamin C (ascorbic acid) in the diet It occurs in individuals who have not had fresh fruits or raw vegetables in their diet for long periods Symptoms of scurvy were treated with decoctions of twigs and with fruits and other fresh materials by various peoples as early as the 16th cent , but not until 1932 were the chemical nature and antiscorbutic properties of the vitamin definitely determined At one time scurvy was common among sailors whose diet was limited and often consisted mainly of salt meats and biscuits In order to prevent scurvy, the British navy after 1795 supplied lime juice for long sea voyages, hence the term *limeys* as applied to British sailors In the United States some of the pioneers used the juice of white spruce to prevent scurvy The disease may occur in bottle-fed babies after six months of age if the diet lacks orange or tomato juice Raw milk contains vitamin C, but the vitamin is largely destroyed by heat in the process of pasteurization Symptoms of scurvy include bleeding of the gums, ulcers of the limbs, anemia, and general debility The disease is preventable and curable by a diet rich in vitamin C or by the addition to the diet of tablets sold under the names of vitamin C, ascorbic acid, or cevitamic acid

scutage (skū'tĭj), feudal impost originating as a fine or cash impost in lieu of actual military service due by a vassal to a suzerain and especially by the vassals of the king The perpetual warfare of the Middle Ages placed a great burden on the king, who had to assemble armies and funds The wars of the English king for his French territories in the 12th, 13th, and 14th cent were a great drain on the English kingdom The king was always demanding money for his transmarine expeditions and his demands took the form of levies on his vassals and their subvassals These levies usually took the forms of specific scutages, collected for stated expeditions There were also other general levies of scutage, and the question of the exact nature, extent, and meaning of the levy still presents numerous thorny questions to the historian The growth of a professional military class (see KNIGHT) is supposed to have had much to do with causing the increase of scutage collections in the later 12th cent , for scutage was a fee intimately connected with the knight-service holding—was, in fact, a commutation of the military service Subinfeudation is also supposed to have so complicated the collection of military service as to have made money payments more feasible At any rate, the always needy king took advantage of the scutage to obtain some money The barons resisted, and one of the major items in their demands against King JOHN concerned scutage In the MAGNA CARTA (1215) John had to pledge himself to collect scutage only with the "common counsel" of his barons Normally in later times the more important vassals collected the scutage from their subvassals, acting as tax farmers after a fashion The growth of taxes after the time of Edward III entirely displaced the feudal impost of scutage

Scutari (skōō'tärē), Albanian *Shkodër* (shkō'dûr) or *Shkodra* (shkō'drä), anc *Scodra*, city (pop 33,852), N Albania, on a plain at the southeastern end of Lake Scutari It has manufactures of textiles, cement, cigarettes, and flour products An ancient Illyrian capital, Scodra became (168 B C) a Roman colony and was conquered by the Serbs from Byzantium in the 7th cent A D Until the fall of Serbia in the late 14th cent , Scutari was the seat of the princes of Zeta (i e , Montenegro), who pledged it to Venice in return for a subsidy in the war against Turkey It was soon an object of contention between Montenegro and Venice and was lost to Sultan Mohammed II in 1479 Scutari, known under Turkish rule as Iskenderiye, was the seat of a pashalik. The pashas, often chosen from among Montenegrin renegades, fought for centuries against their stubborn neighbors Montenegrin troops occupied (1913) Scutari in the Balkan Wars, but the European powers assigned it to newly independent Albania. Early in the First World War the city was again taken by the Montenegrins, from 1916 it was held by the Austrians, and from 1918 to 1920 it was under Allied occupation. Scutari was made a Roman Catholic archdiocese in 1867. The city has a large bazaar and is dominated by a citadel built by the Venetians It has a Catholic cathedral and several mosques

Lake Scutari, area 150 to 200 sq. mi , partly in Albania, partly in Montenegro (Yugoslavia), is the largest lake in the Balkan Peninsula It is c 25 mi long and 4 to 8 mi wide, seasonally it varies in depth and, as a result, in size Once an inlet of the Adriatic, the lake is separated from the sea by an alluvial isthmus It is navigable by small steamers, and it abounds in fish, which are important to the local economy

Scutari (skōō'tŭrē) or **Uskudar** (ŭskü'där), anc. *Chrysopolis*, urban district (pop 60,722) of Istanbul, Turkey, on the Asiatic side of the Bosporus It has various manufactures and is an important market center During the Crimean War, Scutari was the base (1854–56) of the British army and the site of the military hospital made famous by the work of Florence Nightingale There is a noted Moslem cemetery The spelling Skutari also occurs

Scylla (sĭl'lu), in Greek mythology **1** Princess of Megara She betrayed her father, Nisus, to his enemy Minos When Minos scorned her, she drowned herself **2** Sea nymph She was the daughter of Phorcus and Ceto Circe, her rival in love for the sea-god Glaucus, changed Scylla into a monster, who afterwards lived on a rock between Italy and Sicily, on the Italian side of the Strait of Messina Near by, on the Sicilian shore, was the whirlpool of Charybdis (kurĭb'dĭs) Odysseus in his wanderings passed between them, as did the Argonaut heroes Scylla and Charybdis was the most dangerous strait in the vicinity, it is today called Scilla (shē'lä)

Scyllis see DIPOENUS AND SCYLLIS.

Scyros see SKYROS

scythe (sīdh), harvesting implement consisting of a long, curved metal blade attached at right angles to a long handle or snath, straight or curved It is used for cutting hay crops and sometimes also for cutting grains For large harvesting operations it was superseded by the MOWER and the REAPER drawn by either horse or tractor, but even in the most advanced agricultural regions it is still used regularly for small mowings and where large and complicated machines are impractical It was used in Egypt and other countries in antiquity In war, one type of the scythe-bearing chariot had a scythe blade projecting from each end of the axle, another type had blades attached to the felloes of the wheels The graceful and efficient form of the scythe is a result of many centuries of development One of the earliest American inventions was the strengthening ridge along the back of the scythe blade, patented in Massachusetts in 1655 by Joseph Jenks In art, the scythe symbolizes agriculture, Saturn, time, and death, the reaper See also CRADLE SCYTHE

Scythia (sĭ'thēu), ancient region of S Europe inhabited by the Scythians Its extent varied with the power of the Scythians, but the heart of the region was on the north shore of the Black Sea, on the lower courses of the Don and the Dnieper, and in the Crimea The **Scythians** spoke an Indo-Iranian language and were nomadic conquerors and skilled horsemen They seem to have maintained themselves as a ruling class while others (probably earlier inhabitants) worked the rich grainfields This Scythian kingdom was established long before the end of the 9th cent B C , and Scythian power was maintained in obscure warfare with the Cimmerians After the 7th cent the Scythians—the barbarians par excellence to the Greeks—traded grain and their service as mercenaries for Greek wine, Greek ornaments, and other luxury items They successfully invaded the Assyrian Empire and late in the 7th cent held Palestine They also pushed down into the Balkan Peninsula, and a century later the mysterious campaign of Darius I against them (c 512 B C) may have checked their expansion, though it was no conquest Alexander the Great also sent an expedition against them in vain, but in the 3d cent B C the Scythians were replaced by the related Sarmatians, and part of their shadowy empire became SARMATIA See M Rostovtzeff, *Iranians and Greeks in South Russia* (1922), G Barovka, *Scythian Art* (1928)

Scythopolis (sĭthŏ'pulĭs), name given in classical times to the Palestine city called BETH-SHAN in the Bible and BEISAN today It was a principal city of the Decapolis and a major trade center The Greek name probably commemorates the invasion of Palestine by the Scythians in the 7th cent B C The city has been excavated

Se, chemical symbol of the element SELENIUM

sea, term used as synonymous with OCEAN or designating a large LAKE, usually salt (Caspian Sea, Aral Sea), or a subdivision of an ocean (Caribbean Sea, Yellow Sea)

sea, law of the see MARITIME LAW.

sea anemone (ănĕ'mūnē), marine animal related to the jellyfish and coral. Its muscular cylindrical body is attached by a basal disk to a rock, shell, or seaweed in shallow water Hollow tentacles with cells for stinging prey surround the mouth Many forms are brightly colored and resemble flowers

Seabees [from the initials of Construction Battalion], colloquial name for the U S Naval Construction Battalions of the Second World War The first construction regiment was authorized in Dec , 1941, under the command of the navy's civil engineer corps Recruited largely of volunteer construction workers, the Seabees grew to a force of some 250,000 men who built many of the navy's far-flung bases, often under fire and under difficult conditions See W B Huie, *Can Do!* (1944) and *From Omaha to Okinawa* (1945)

Sea Bright (sē' brĭt), borough (pop 779), NE N J , between the Atlantic Ocean and the Shrewsbury river In a region of fine estates and gardens, Sea Bright is a summer resort and the scene of national and international tennis and polo matches

Seabrook, town (pop 1,782), SE N H , settled 1638, set off from Hampton and inc 1768 A Friends' meetinghouse was built here in 1701

Seabury, Samuel, 1729–96, American clergyman, first bishop of the Protestant Episcopal Church, b Connecticut, grad Yale, 1748 He studied medicine at the Univ of Edinburgh, then turned to theology and was ordained (1753) a priest in the Church of England before returning to America as a missionary in New Brunswick, N J He was then rector at Jamaica (Long Island) and in Westchester co , New York, until 1775 He then avowed himself a Loyalist in the American Revolution, and for a time he had to practice medicine in New York city He later became a chaplain to a royal regiment After the war he was chosen bishop of Connecticut in 1783 The English bishops withheld consecration because of a legal difficulty, but in 1784 he was consecrated at Aberdeen by bishops of the Scottish Episcopal Church In 1789 the General Convention in the United States confirmed his position, and he became presiding bishop of the Church in the United States

Seabury, Samuel, 1873–, American jurist, b New York city, grad New York Law School, 1895, great-great-grandson of Samuel Seabury (1729–96) He served on the supreme court (1907–14) and on the court of appeals (1914–16) of New York state He became nationally prominent when he headed (1930–31) investigations of New York city's magistrate courts and of New York city politics As a result of his investigations, Mayor James WALKER resigned in 1932 The Tammany government was defeated in the ensuing elections

Sea Cliff, residential village (pop 4,416), on NW Long Island, SE N Y , near Glen Cove, inc 1883.

Seaford, town (pop 2,804), SW Del , on the Nanticoke river, inc 1865 It grew as an oyster-packing, shipping, and shipbuilding place Now it is a nylon-industry center

Seaforth (sē'fôrth), town (pop 1,668), S Ont , on the Bayfield river and SE of Goderich It has tanneries and various manufactures

Seagraves (sē'grāvz), city (pop 3,325), NW Texas, SW of Lubbock on the southern part of the Llano Estacado, inc 1928 The region produces oil as well as cattle, and Seagraves has a carbon-black plant

sea horse, small fish of warm waters Its appearance suggests that of a horse—it has an elongated head and snout supported by a portion of the abdomen modified to resemble a neck It swims weakly in an upright position by moving the dorsal fin and rests in the same position by curling its tail around some seaweed It ranges from 2 in to 1 ft in length and is covered with rectangular bony plates bearing spines at their junctures The male has an abdominal pouch in which the eggs are carried and from which the young hatch

Sea Islands, chain of low islands (some are sandy, others marshy and fertile), off the Atlantic coast of South Carolina, Georgia, and N Florida, extending from the mouth of the Santee river to the mouth of the St Johns They were known to the Spanish before 1562, when Huguenots, led by Jean Ribaut, made an unsuccessful settlement called Charlesfort on Parris Island, S C The Spanish missions and garrisons which later dotted the islands were abandoned as the English made steady advances in the area In the early 19th cent SAINT HELENA ISLAND and Port Royal Island (most important of the South Carolina group) became the seats of great plantations devoted to the raising of the fine long-fibered sea-island cotton The wealthy planters were ruined in the Union invasion at the beginning of the Civil War, and the Federal government parceled out the land to the newly freed slaves The Carolina islands are still largely inhabited by Negroes Of almost pure African descent and virtually isolated until the 1920s, they developed a distinct set of customs and dialects (Gullah is the best known), which are pictured in the works of Julia Peterkin and DuBose Heyward With the coming of the boll weevil c 1920, cotton culture gave way to diversified farming (corn, potatoes, peanuts, poultry), oystering and shrimping are also important BEAUFORT, on Port Royal Island, is the principal city Parris Island is the chief basic-training center on the Atlantic coast for the U S Marine Corps St Simons Island, Sea Island, and Jekyll Island (also called the Golden Isles), near Brunswick, Ga , are popular resorts On St Simons Island are the ruins of Fort Frederica (now in a

national monument, 74.53 acres, est 1945), built by James Oglethorpe in 1736–54 during the English-Spanish struggle for the present SE United States, near by, Oglethorpe defeated the Spanish in the battle of Bloody Marsh (July 7, 1742) Jekyll Island, once the private preserve of Northern millionaires, was made a state park in 1948 Cumberland Island, Ga., largest of all the Sea Islands (c 22 mi long and from 1 to 5 mi wide), is almost completely privately owned For bibliography, see SAINT HELENA ISLAND

seal, carnivorous aquatic mammal with front and hind limbs modified as flippers The suborder Pinnipedia consists of three families, the true, earless, or hair seals (Phocidae), the eared fur seals and sea lions (Otariidae), and the walruses (Odobenidae) Among the true seals are the harbor, ribbon, ringed, bearded, Greenland, gray, hooded or bladdernose, elephant, and Lake Baikal seals, they have no external ears, the hair is coarse and short Their progress on land is slow and awkward since the hind limbs are directed backwards Eskimo depend on the seal for food and oil and use the hides for boats and other necessities The eared seals have small external ears, and the hind flippers can be bent forward to facilitate progress on land The Alaskan fur seals, also called sea bears, winter from the Alaska Peninsula to the northern coast of California and in spring migrate northward to breeding grounds on the Pribilof Islands The mature males (six years or older) establish themselves on the beaches in April or May, and each gathers a harem from the females which arrive a month or more later The single pups, the result of the previous year's mating, are born a few days after the females arrive Mating again occurs The bulls fast for more than a month while guarding their harems The females swim out to the feeding grounds regularly and return to suckle the young Immature males herd together apart from the others From this group, usually the three-year olds, the annual kill for fur pelts (often in excess of 50,000) is made under government supervision In preparing the sealskin of commerce the long hairs are removed and the soft brownish underfur is dyed The fur of species found farther south is less valuable The trained "seal" of the circus is the California sea lion (*Zalophus*), the northern or Steller's sea lion (*Eumetopias*) inhabits the N Pacific, and the southern sea lion (*Otaria*) is found in the waters near S South America See also BERING SEA FUR-SEAL CONTROVERSY

seal, stamp, made from a die or matrix of metal, a gem, or other hard substance, which yields an impression on wax or other soft substance The use of seals is very ancient, examples of great antiquity occurring in China, Egypt, Greece, Rome, and other places The commonest form was the seal ring, of which the GEM formed the seal Ecclesiastical seals, used in the 9th cent., reached their greatest perfection in the 13th and 14th cent The use of seals with emblematic designs antedates the development of the ESCUTCHEON and is therefore important in the history of HERALDRY Edward the Confessor was the first English king to adopt a Great Seal for the kingdom. Heraldic or emblematic seals are in wide use by national, state, and local authorities, by institutions of all kinds, and in the certification of legal documents A committee was appointed by the Continental Congress on July 4, 1776, to prepare a device for the Great Seal of the United States. It was not, however, until 1782 that a design, made by Will Barton, was accepted It shows the escutcheon borne on the breast of an eagle, and on the reverse an unfinished pyramid with an eye (the eye of Providence) above it The eagle has arrows in one talon and an olive branch in the other In his beak is a scroll inscribed E Pluribus Unum

Seal Beach, resort city (1940 pop 1,553, 1948 special census pop 3,549), S Calif., SE of Long Beach, inc 1915.

Sealy, unincorporated town (pop c 1,800), S Texas, W of Houston. It is a market center for a farm area and has a mattress factory and other small industries

Sealyham terrier: see TERRIER.

sea otter. see OTTER.

sea pink or **thrift,** names for perennial garden plants of the genus *Statice* (formerly *Armeria*) They have papery globe-shaped clusters of flowers of various colors borne on stiff stems arising from a clump of grasslike, evergreen leaves. The different species are useful as border, rock-garden, EVERLASTING, and pot plants. The sea lavenders (*Limonium*) are often called sea pinks or *Statice*, from which they may be differentiated by the flowers, which are not in rounded heads. Wild flowers of the genus *Sabbatia* are sometimes called sea pinks

seaplane, any airplane designed to take off from and alight on water The two most common types are the floatplane, in which the body of the plane is supported by struts attached to two or more pontoon floats, and the flying boat, in which the fuselage has a boat-hull form so constructed as to impart the buoyancy and strength necessary for landing on and floating in the water. Amphibians may be of either of these types with the addition of landing gear, enabling them to take off from and alight on both land and water Because the floating structures offer greater resistance to the air than wheel landing gear, seaplanes are less efficient in speed for the horsepower developed than are land craft

sea power, naval strength which enables a state to control part of the sea and deny its use to enemy nations or to uphold its maritime rights in time of peace or war. The development of sea power dates from earliest history, when tribes constructed primitive navies to ward off attacks or, conversely, to raid their enemies' coast settlements Later, with the increase of sea-borne commerce, naval forces were necessary to protect overseas trade from acts of PIRACY Possession of sea power enabled states poorly endowed with natural resources to become powerful, and nations already strong to extend their dominions and increase their wealth The Phoenicians, because they developed their sea power, controlled Mediterranean commerce and traded with Atlantic and Baltic ports. Athens flourished because of the Athenian commerce and navy, and the great Athenian leader Themistocles by stressing the importance of sea power enabled the Greeks, with their fleet of triremes, to defeat the Persians at Salamis The long struggle between Rome and Carthage was essentially a contest for the control of the W Mediterranean Roman victory was largely the result of superior sea power To the extension of the empire the Roman navy contributed greatly, and by patrolling sea lanes it enabled the capital to draw vital supplies from the lands of the E Mediterranean and the northern shores of Africa The Italian city states derived their wealth from maritime trade, and their sea power was indicated by the great fleets which operated from Venice, Genoa, and Pisa. In the north the HANSEATIC LEAGUE exercised similar control of the seas Turkish naval power, which had developed in the early 16th cent., was brought to an end by the great battle of LEPANTO (1571) Sea power had already grown far more important after Portuguese navigators had found the way around Africa to the Indies and Christopher Columbus had reached the New World It was upon the sea that small Portugal built its enormous empire Spain's period of greatness also depended strictly on control of the waters and disappeared after that control was challenged by English sea dogs and was shattered by the defeat of the Armada The Dutch also lifted their small land to great power by exploits on the sea, and the era of modern IMPERIALISM brought the modern navy The contest between Great Britain and France in the 18th and early 19th cent was spread across the world and depended upon the sea lanes It is not without good reason that the British revere Horatio Nelson as one of the greatest of their heroes British control of the sea was a strong factor in the American Revolution, and the partly successful challenge to that power was a major factor in the War of 1812 The United States developed its navy along with its commerce, and the Civil War illustrated how sea power could be dominant even in closed land warfare The blockade established along the coast of the South showed the force of sea power exerted to keep necessary goods from reaching an enemy—a demonstration repeated in the blockade of Germany in the First World War A T MAHAN contributed greatly to the study of the significance of sea power late in the 19th cent His emphasis on the matter was glaringly high-lighted by the course of the Spanish-American War The recognition that the British Empire depended on naval might even more than had the Roman Empire made other expanding powers undertake to develop navies, notably Germany and Japan The bottling-up of the German navy in the First World War proved the value of the big navies and led to a naval armaments race in the period after the First World War (see NAVAL CONFERENCES) After the outbreak of the Second World War and the demonstration of the tremendous striking power of aircraft, there were many who saw supremacy in the air as having made sea power obsolete The fall of Crete was the example cited. But Great Britain did not fall despite air attack. The combination of air and sea power in aircraft carriers and the development of amphibious warfare proved that sea power might have changed slightly in character but had lost none of its significance The essential requirement of sea power in the Pacific (where the battle of the Coral Sea showed a new type of sea warfare but no change in principle) and its tremendous force in the invasion of the Continent dried the tears of those who had mourned the passing of sea power The effect of atomic energy in warfare has yet to be assayed, but it is perhaps significant that the U.S. navy has been of the greatest importance in post-war experiments with the atomic bomb. See A. T. Mahan, *The Importance of Sea Power upon History, 1660–1783* (1890), *The Interest of America in Sea Power* (1897), and *Sea Power in Its Relations to the War of 1812* (1905); Archibald Hurd and Henry Castle, *German Sea-Power* (1914), W. O. Stevens and Allan Westcott, *A History of Sea Power* (1920, rev ed., 1942), Bernard Brodie, *Sea Power in the Machine Age* (1941); H. H. Sprout and Margaret Sprout, *Toward a New Order of Sea Power: American Naval Policy and the World Scene, 1918–1922* (1943), J. H. Thiel, *Studies on the History of Roman Sea-Power in Republican Times* (1946); W. D Puleston, *The Influence of Sea Power in World War II* (1947); A. F. Westcott, ed., *American Sea Power since 1775* (1947); William M. Janus, *The Influence of Sea Power on the History of the British People* (1948)

search, right of, in international law, right of a warship or military airplane to detain and search a private vessel belonging to a foreign national In peacetime, this right is ordinarily exercised only within the territorial waters and merely as an incident of the power to police such waters A search on the high seas is not justified in peacetime except where piracy or violation of fishing regulations is suspected or where a vessel which has fled the territorial waters is being freshly pursued. In wartime, a belligerent may search neutral vessels on the high seas in order to capture the property of enemy nationals or to remove contraband of war bound for enemy ports Forcible resistance to search allows the warship to attack or destroy the vessel or its cargo or to take them as a PRIZE The right of search in wartime occasioned bitter controversy between Great Britain and the United States just before the War of 1812 The United States objected to the practice of the British navy in stopping American merchant ships at sea to impress into naval service sailors who were believed to be British subjects IMPRESSMENT virtually ended after the War of 1812 The right of search is sometimes also called the right of visit and search

searchlight, device using a lens and a reflecting surface to direct a beam of light In 1892 such apparatus was used along the English Channel as a coastal defense measure, and later in the Boer War as an aid to infantry movement It was used to illuminate vessels for identification and possible bombardment, for dazzling the enemy, for illuminating the ground in an attack, and to locate targets for the guns After 1900 acetylene came into use as an illuminant, and in 1916 Edison invented a portable apparatus fed from storage batteries During the First World War powerful searchlights mounted on trucks and railroad cars came into use The electric arc was the type mostly employed, especially after 1915 when E. A. Sperry, the American inventor, introduced his high intensity arc lamp, embodying principles of operation that predominate in modern searchlight equipment Lights of 1,500,000,000 candle power capable of reaching 150 mi are common at present Revolving searchlights as beacons spaced along air routes have yielded to radio beacons, but the use of powerful lights coordinated with anti-aircraft guns developed considerably during the Second World War

search warrant, in law, written order by an official of a court directing an officer to search in a specified place for specified objects and to seize them if found The objects sought may be stolen goods or physical evidences of the commission of crime (e.g., during the period of prohibition, alcoholic beverages) The Fourth Amendment of the U S Constitution provides, in effect, that a search warrant may be issued only on oath or affirmation that a crime was probably committed, and the Federal courts have uniformly excluded from evidence in a trial information or objects which were obtained by an illegal search State constitutions and statutes have similar provisions, but in most states evidence obtained through an unlawful search is admissible against the accused, whose sole remedy is to sue the officer for damages

Searcy (sûr'sē), city (pop 3,670), co. seat of White co., N central Ark., near the Little Red River NE of Little Rock, in a strawberry-growing area Harding College is here

Seares, Frederick Hanley (sērz), 1873–, American astronomer, b Cassopolis, Mich., grad Univ of California, 1895 He taught at the Univ of California before studying in Berlin and Paris Upon his return to the United States in 1901, he became professor of astronomy at the Univ of Missouri From 1909 to 1946 he was connected with Mt Wilson Observatory of the Carnegie Institution of Washington, D C His many papers contributed to astronomical periodicals give the results of his researches in stellar photometry, the orbits of comets, the general magnetic field of the sun, and the distribution of stars He is the author of *Practical Astronomy for Engineers* (1909). He edited publications of Mt Wilson Observatory and was editor (1927–45) of the *Astrophysical Journal*

Sears, Paul Bigelow, 1891–, American botanist and author, b. Bucyrus, Ohio, grad. Ohio Wesleyan Univ. (B S., 1913), Ph.D Univ. of Chicago, 1922 He was professor of botany at the Univ. of Oklahoma (1927–38) and in 1938 became professor at Oberlin College. Known for his studies of soil erosion and of climatic history by pollen analysis, he has presented his findings and theories to the layman in *Deserts on the March* (1935; rev. ed.,

1947), *This Is Our World* (1937), *Who Are These Americans?* (1939), *Life and Environment* (1939), and *This Useful World* (1941). He is also the author of *Charles Darwin, the Naturalist as a Cultural Force* (1950).

Searsport (sērz'pôrt), town (pop 1,319), inc 1845, in Maine, on the west shore of Penobscot Bay, inc 1845. It includes the resort village of Searsport, which flourished in the sailing-ship days. Its Penobscot Marine Museum was incorporated in 1936.

seas, freedom of the, in international law, the principle that outside its territorial waters a state may not claim sovereignty over the high seas except with respect to its own vessels. This principle, first established by the Romans, gives to all nations in time of peace unrestricted use of the seas for navigation (both naval and commercial), for fishing, and for the laying of submarine cables. During long periods, leading naval powers have repudiated the principle. From the late 15th cent to the early 19th cent., Spain, Portugal, and Great Britain assumed to exclude commercial rivals from parts of the open sea. The opposition of other nations revived the traditional freedom of the seas. One of its strongest advocates was the United States, especially in its dispute with Great Britain preceding the War of 1812. In time of peace freedom of the seas cannot be restricted lawfully except by international agreements, such as those which regulate fisheries or the right of visit and search. During war, however, belligerents often assert limitations of the principle which will permit more effective conduct of hostilities, and it is then that the sharpest disagreements arise, e.g., the case of the *Lusitania* in the First World War. Subjects of contention between neutrals and belligerents include the right to seize neutral property and persons aboard an enemy ship, the mining of sea lanes, and the exclusion of neutral vessels from enemy ports by blockade. See J. B. Potter, *The Freedom of the Seas in History, Law, and Politics* (1924).

seasickness, condition caused in some individuals by the pitching and rolling of a ship at sea. A similar state is sometimes induced by traveling in cars, elevators, or airplanes (see AIR SICKNESS). Symptoms include vertigo, nausea, vomiting, and prostration. There is no certain preventive measure or cure. Relief may be obtained by the use of sedatives and certain other drugs (e.g., Dramamine).

Seaside, resort city (pop. 2,902), extreme NW Oregon, on the Pacific and S of Astoria, inc 1899. A monument marks the point sometimes considered the end of the Oregon Trail.

seasons, divisions of the year characterized by variations in the amount of heat received from the sun. These variations depend on the inclination of the equator in the plane of the ECLIPTIC and on the revolution of the earth around the sun. The amount of heat received at a given point on the earth's surface depends chiefly on the angle at which the sun's rays strike the earth at that point and on the daily duration there of exposure to the sun's rays, the more vertical the rays and the longer the exposure, the more heat will be received. Seasonal change varies greatly with latitude. Near the equator there is little change, in high latitudes spring and autumn are very short. In the temperate zones there are four well-defined seasons, e.g., in the North Temperate Zone spring begins theoretically on March 21, the vernal equinox, summer, on June 22, the summer solstice, autumn, on Sept. 23, the fall equinox, and winter, on Dec. 22, the winter solstice. Actually the seasons lag somewhat, e.g., at the time of maximum insolation (June 22) in the Northern Hemisphere, the ground is too cold to radiate as much heat as is received, and average temperatures usually rise for several weeks until a balance is reached between reception and radiation of heat. In low latitudes and in certain other areas (e.g., India) where oceans and winds are the chief factors governing seasonal changes, the terms "wet season" and "dry season" are used. The seasons play an important part in mythology and folklore, many holidays are connected with the changes of season.

Seaton, John Colborne, Baron, 1778–1863, British soldier and colonial administrator. Active service in Egypt (1801) and Sicily (1806) was followed by participation in the Peninsular War (1808–14) and the Waterloo campaign, where the regiment he commanded was instrumental in securing the defeat of Napoleon's "Old Guard." He was appointed lieutenant governor of Guernsey (1825) and lieutenant governor of Upper Canada (1829). As commander in chief of Canadian forces he suppressed the rebellions of 1837 and 1838 and in 1839 was appointed governor general of Canada. At the end of 1839 he returned to England and was raised to the peerage.

Seat Pleasant, town (pop. 1,553), W central Md., a suburb of Washington, D.C.

Seattle (sēă'tūl), city (1940 pop. 368,302; 1947 estimated pop. 600,000), co. seat of King co., W Wash., built on hills between Elliott Bay of Puget Sound and Lake Washington and between the Olympic and Cascade mountain ranges. Mt. Rainier is southeast and Mt. Baker is northeast. Seattle was settled in 1852 but remained a small lumber town until the coming of railroads after 1884. Subsequent growth was rapid, despite strikes, anti-Chinese riots, and the great fire of 1889. In 1897 the Alaska gold rush made Seattle a boom town, and the opening of new waterways, especially the Panama Canal, began an era of major expansion. The Alaska-Yukon-Pacific Exposition was held at Seattle in 1909. Important chiefly as a port and commercial center, with Alaskan and Far Eastern trade, it has also manufactures of lumber and food products and iron and steel and is a headquarters for fishing and pleasure boats. As a fur market, it is second to New York. Shipbuilding and aircraft industries brought a tremendous influx of workers during the Second World War and began a new period of industrial growth which was aided by the development of hydroelectric power projects in the region. The Univ. of Washington (see WASHINGTON, UNIVERSITY OF) is here, as are Seattle Univ. (Jesuit, coeducational, 1898), Seattle Pacific College (Free Methodist, coeducational, 1891), the state museum, an art museum, a Roman Catholic cathedral (1907), an Episcopal cathedral (1931), and historical landmarks. It is the seat of Sand Point Naval Air Station and Fort Lawton. See Archie Binns, *Northwest Gateway* (1941).

sea urchin, marine animal which, like the starfish, is an echinoderm. The body is protected by a calcareous, somewhat flattened globular exoskeleton. Irregular spines, which show variation among the approximately 500 species, are attached by means of movable joints to the tubercles on the shell, and these aid the tube feet in locomotion. Most sea urchins have a complex structure called Aristotle's lantern which contains five sharp teeth and is found in the mouth region on the underneath surface of the animal. Sea urchins are scavengers, most forms eat chiefly algae and other plants, others eat animals. Especially in S Europe the eggs and some internal portions of the sea urchin are used as food.

seaweed, name commonly used for the marine ALGAE. The simplest forms consist of a single cell, or of rows of cells, but the more highly developed seaweeds have a base or disk, called a holdfast, and a frond. Varying greatly in size, the frond may be leaflike, ribbonlike, or branched. Few seaweeds appear below a depth of 150 ft. The green forms grow nearest the shore, the brown seaweeds (the commonest marine forms) from the low-tide mark to a depth of 50 or 60 ft, the red seaweeds are found at the greatest depths. Seaweeds reproduce by forming spores or by the union of eggs and sperms. The green alga *Ulva*, or sea lettuce, provides food for many sea creatures, and its thin, broad surface releases a large amount of oxygen. *Fucus* or rockweed, a tough, leathery brown alga (though it often looks olive green), clings to rocks with its suckerlike disks. Its flattened fronds, branched in one plane, are lifted by air bladders at the tips. Seaweeds, especially species of the red algae *Porphyra* and *Chondrus*, form an important part of the diet in China and Japan. Other species are eaten in the British Isles and Iceland. Commercial AGAR or vegetable gelatin is obtained from a red alga. The red algae are all anchored forms and are rarely seen except when torn from their holdfasts. Ranging in coloring from pale pink through red and dark purple, their fronds ribbonlike or branched and fernlike, they have a delicate beauty. See also GULFWEED, IRISH MOSS, KELP.

Seba (sē'bu), grandson of Ham. Gen. 10:7, 1 Chron. 1:9, Ps. 72:10.

Sebago Lake (sĭbā'gō), 12 mi. long and from 1 to 8 mi. wide, SW Maine, NW of Portland, in a resort area. It is the source of Portland's water supply.

Sebaste or **Sebastia**: see SIVAS, Turkey.

Sebastian, Saint, 3d cent.?, Roman martyr. Tradition made him a beautiful youth beloved by Diocletian, who turned against him for embracing Christianity and had him killed with arrows. He is invoked against the plague. Feast (with St. Fabian) Jan. 20.

Sebastian, Port. *Sebastião*, 1554–78, king of Portugal (1557–78). He was the grandson and successor of John III. His grandmother acted as regent until 1562, then his uncle Henry (a cardinal and later king) was regent until Sebastian was declared of age in 1568. Weak and sickly, he was imbued by his Jesuit training with fanatic religious fervor, and his admiration for the military was tremendous. He viewed himself as a Christian knight and was determined to try to win glory by fighting the Moslem infidels in Africa. He asked the aid of Philip II of Spain (his uncle) for an expedition against Morocco and spent vast sums of money in preparation. He gathered an immense force, with many foreign mercenaries (but no Spaniards). In 1578 Sebastian set out to take Larache and landed in Morocco. His headstrong desire to command and lack of experience led the force to defeat in the battle of the three kings at ALCAZARQUIVIR. His army was wiped out and he was himself killed. It was not at the time known, however, that he was dead, and rumor had it that he was captured. There grew up a legend that he would return, and Sebastianism (a messianic religious belief) persisted until well into the 19th cent. His uncle, the cardinal, succeeded him and was the last of the Avis kings. The crown then went to Philip II, and Spanish control of Portugal began. Sebastian's expedition is generally considered the worst disaster that ever befell Portugal.

Sebastiano del Piombo (sābāstyä'nō dĕl pyōm'bō), c.1485–1547, Italian painter of the Venetian school, whose real name was Sebastiano Luciani. His first important work is the frescoed altarpiece representing St. Chrysostom in the Church of San Giovanni Grisostomo, Venice. Called (c.1510) to Rome, he painted a series of lunettes in the Farnesina. Under Michelangelo's influence he painted the *Raising of Lazarus* (National Gall., London), *Pietà* (Church of San Francesco, Viterbo), *Martyrdom of St. Agatha* (Pitti Palace, Florence), *Flagellation* and *Transfiguration*, the latter a fresco (Church of San Pietro in Montorio, Rome). In 1531 he was appointed to the lucrative office of the *piombo* (keeper of the papal seals) and thereafter painted but little. Piombo also painted occasionally on stone, e.g., the *Ecce Homo* (Madrid), and on slate, e.g., *Holy Family* (Naples). Piombo's portraits are justly famous for their characterization and coloring. Noted examples are the likenesses of Doge Andrea Doria (Doria Palace, Rome), Cardinal Pole (Hermitage, Lenmgrad), Christopher Columbus (Metropolitan Mus.), and Cardinal Pucci (Vienna).

Sebastopol, RSFSR: see SEVASTOPOL.

Sebastopol (sĭbă'stupul, -pōl), city (pop. 1,856), W Calif., near Santa Rosa, in an orchard and vineyard region, inc. 1902.

Sebat or **Shebat** (subät', shŭbät'), the 11th month of the Jewish CALENDAR, the fifth from New Year's. Zech. 1:7.

Sebec Lake (sē'bĭk), 11 mi. long and from ¼ to 3 mi. wide, central Maine, SE of Moosehead Lake. It is noted for its salmon and bass fishing.

Sebenico, Yugoslavia: see SIBENIK.

Sebewaing (sē'buwĭng), village (pop. 1,598), N Mich., on Saginaw Bay NE of Bay City and at the mouth of Sebewaing Creek, in a farm area, settled 1835, inc. 1879. Beet-sugar refining and commercial fishing are its chief industries.

Sebree (sē'brē), town (pop. 1,109), W Ky., S of Henderson near the Green River, in a timber and gas area, settled c.1850, inc. 1872.

Sebring (sē'brĭng), **1** City (pop. 3,155), co. seat of Highlands co., S central Fla., on Lake Jackson, in a citrus-fruit area. It was founded in 1912 by George Sebring, a manufacturer of Sebring, Ohio. Near by are a botanical garden and Highlands Hammock State Park. **2** Village (pop. 3,902), NE Ohio, near Alliance. Pottery and chinaware are made here.

Sebzewar, Iran: see SABZAWAR.

Secacah (sē'kuku, sēkā'ku), unidentified place in the wilderness. Joshua 15:61.

Secaucus (sēkō'kŭs), town (pop. 9,754), NE N.J., N of Jersey City, inc. 1917.

Secchi, Pietro Angelo (pyā'trō an'jälō sĕk'kē), 1818–78, Italian astronomer, a Jesuit priest. He was director of the observatory of the Gregorian Univ., Rome, from 1849. He is known especially for his work in spectroscopy and was a pioneer in classifying stars by their spectra. In 1860 he made some notable solar-eclipse photographs. His works include a star catalogue (1867) and *Le stelle* (1878).

secession, formal withdrawal from an association by a group discontented with the decisions or actions of a majority. The best-known example of secession was the withdrawal (1860–61) of the 11 Southern states from the United States. They formed the CONFEDERACY and fought the CIVIL WAR with the Northern states. Their defeat settled a constitutional question that had been an issue in the United States from the formation of the Union. It was the most important point in the controversy over STATES' RIGHTS. The Union created by the Constitution, according to the theory behind secession, was only a compact of sovereign states, and the power given the Federal government was only a partial and strictly limited power, not paramount over the states and effective only in the limited field assigned to it. It followed then, said secessionists, that the states, being sovereign, had the legal right to withdraw from the voluntary union. The opponents of secession argued that the Constitution created a sovereign and inviolable union and that withdrawal from the union was impossible. The sections which supported one or the other of these arguments changed with political and economic conditions, the party out of power which felt that its interests were threatened or impaired naturally thought of leaving the Union. The most notable example of secessionist sentiment in the North was the HARTFORD CONVENTION. The theory was, however, more traditional in the South from the days of the KENTUCKY AND VIRGINIA RESOLUTIONS. The NULLIFICATION movement in South Carolina indicated how one Southern state felt threatened by the predominance of the Northern industrial, nonslaveholding economy in the government. The compromises as to the question of the extension of slavery in the territories did not settle any question permanently (see MISSOURI COMPROMISE and COMPROMISE OF 1850). Oppo-

nents of the extension of slavery grew in power in the North, and there are those who claim that the agitation of the ABOLITIONISTS was one of the prime reasons for secession. However, the South had equally belligerent agitators in the "fire-eaters," men such as Edmund RUFFIN, R B RHETT, and W L. YANCEY They failed to achieve secession in 1850, but eventually succeeded in winning over the majority. The reasons for secession were quite complex Some hold that fundamentally the South became convinced, falsely, it would appear, that the powerful North would, sooner or later, destroy its social and economic system More recent views emphasize the psychological and racial factors — Southerners were determined to retain "white supremacy " At any rate, in the election of the Republican, Abraham Lincoln, most of the Southern states chose to see a direct threat to their very existence With justificatory speeches, the delegates of South Carolina took the momentous step and seceded on Dec 20, 1860 Six other Southern states soon followed suit, and Lincoln's call for troops after the firing on Fort Sumter brought four more into the secessionist fold For secession in the various states, see the articles on those states See also D W Howe, *Political History of Secession, to the Beginning of the American Civil War* (1914), R G Russel, *Economic Aspects of Southern Sectionalism, 1840–1861* (1924), J. T Carpenter, *The South as a Conscious Minority, 1789 1861* (1930), D L Dumond, *The Secession Movement, 1860-1861* (1931) and (ed), *Southern Editorials on Secession* (1931), G W Johnson, *The Secession of the Southern States* (1933), U B Phillips, *The Course of the South to Secession* (1939), H C Perkins, ed , *Northern Editorials on Secession* (1942)

second sight, faculty of seeing as a vision events which are occurring at a distance or which will occur in the future Although this type of CLAIRVOYANCE is common among Celtic peoples, particularly in the Scottish Highlands, it is not peculiar to one people or one time Allusions to second sight are made in classic and Icelandic literature, and it has been found among the Lapps, the Zulu, and the American Indians Among the Scottish seers the gift, or the particular vision, is said to be transmitted by contact, others believe the faculty to be inherited The "sight" is sometimes, though rarely, accompanied by epileptic symptoms, often by a sense of oppression or uneasiness Warnings of death are given by the appearance of shrouds, corpses, and candle lights Unexpected arrivals are also often foreseen The most curious phase of second sight is the belief that it is experienced by domestic animals, notably dogs and horses They manifest their uncanny knowledge by signs of fear and distress, when nothing startling is visible or audible to human beings

Secord, Laura (Ingersoll) (sē'kôrd), 1775–1868, Canadian heroine of the War of 1812 Born in Massachusetts, she was taken by her parents to Canada after the American Revolution In 1813 she learned from American troops billeted in her house at Queenston of a planned surprise attack on the British at Beaver Dams on the Niagara frontier She made her way through the American lines and gave warning to James FITZGIBBON at Beaver Dams See biography by W S Wallace (1932)

secretary bird, African bird of prey with long legs, a hooked beak, and a crest of black feathers which suggest quill pens stuck behind the ear of a secretary It is about 4 ft high and is grayish blue with the upper part of the legs feathered in black and with black on the wings and tail It attacks even poisonous snakes with its powerful feet Because it destroys reptiles and other harmful animals it is sometimes domesticated on African farms

secretion, in biology, a substance formed by the living material of an animal or a plant In some cases a single cell produces the secretion and in others the substance is produced by a group of cells commonly called a gland Secretions are well exemplified by those produced in the human and in some other higher animals Some of these perform special functions within the body and others are eliminated as excretions Digestive secretions include saliva, gastric juice, intestinal juice and pancreatic juice, and bile Certain secretions serve as lubricants, e.g , the synovial fluid in joints and secretions from mucous membranes and from the lachrymal gland. In the external auditory gland is secreted cerumen, a waxy substance The mammary gland secretes milk The endocrine (ductless) glands secrete hormones which are poured directly into the blood stream (see GLAND). Among those excreted are urine from the kidneys, sweat from the sebaceous glands, and bile pigments from the gall bladder. Plant secretions include nectar and the various enzymes concerned with the digestion of nutrients within the plant cells.

secret police. The enforcement of the law has required, in nearly all organized societies, a certain amount of secrecy, particularly in that phase of law enforcement which is connected with the investigation of crime rather than with the apprehension and conviction of the criminal It is probable that the emergence of a uniformed, clearly recognizable police force is of much more recent origin than secret bodies formed by societies for their protection from internal and external attack. In its wider meaning, the term "secret police" embraces all those members of any police force that operate, usually in ordinary civilian clothes, without giving warning to the suspected criminal that he is being investigated However, in democratic nations, the role of the secret police ordinarily ends once the investigation is closed, either no sufficient ground for supposing guilt has been found, or the criminal is indicted and confronted with the full evidence against him The limitation of the role of the secret police to investigation only and the right of the indicted offender to an open trial and to complete access to the evidence against him—these two conditions are basic guarantees of individual freedom in the societies that have adopted the English and American concepts of democracy Wherever these interrelated conditions are not fulfilled, a secret police in the narrower sense of the term either exists or is in progress of developing This is a body officially or in fact endowed with authority superior to other law-enforcing agencies It investigates, apprehends, and sometimes even judges the suspect in secrecy, and it is accountable only to the executive branch of the government In extreme cases such a secret police force may even have its own courts and prisons, and its activities are kept secret not only from the mass of the population, but also from the administrative, judiciary, and executive authorities of the state except at the topmost level Like any ordinary police force, a secret police force may operate either in a recognizable uniform or in "plain clothes", the distinction does not lie there It is popularly assumed that secret police forces (in the usual narrower sense) have always been primarily concerned with the security of the state and that they are invariably created by governmental action, but this is not the case Thus the formidable VEHME of medieval Germany was a spontaneous creation of a segment of the people to protect its interests, it may be argued that the Vehme and similar institutions were secret societies rather than bodies of secret police, but the distinction is not always easy to make It is certain that the institution of a secret police has reached its most menacing aspect in the modern totalitarian state—largely because of the improved technical means at its disposal Yet the institution is in no way exclusively limited to totalitarianism It has existed in most societies where a minority has exercised an uneasy rule over a majority Thus, in ancient Sparta, a well-organized secret police controlled the helots and ruthlessly suppressed any sign of rebellion or dangerous talent among them In Rome, particularly under the Julian emperors, a professional class of informers, who received a share of their victims' confiscated fortunes, was employed by the state, for obvious reasons, their activities were confined to the wealthy classes Among the earliest secret police forces organized along modern lines were the Venetian Inquisition (see TEN, COUNCIL OF) and the Oprichnina of Tsar IVAN IV of Russia After the abortive Decembrist coup d'état of 1825, a powerful secret police was again organized in Russia As in all "police states," the secret police worked hand in hand with the censorship and sought to suppress not only subversive activity, but even subversive thought (The culmination of this trend was symbolized by the name of the Japanese secret police before 1945—Thought Police) The use of *agents provocateurs* in late 19th-century and early 20th-century Russia by the tsarist police led to such extremes that in investigating revolutionary movements members of the secret police actually spread revolutionary propaganda and helped to assassinate government officials, while posing as revolutionists After the Russian Revolution of 1917 the Soviet regime instituted its own secret police, the Cheka (in full, its Russian name meant "extraordinary commission for the suppression of counterrevolution"), under DZERZHINSKY This was renamed (1922) OGPU or GPU (in full, "united department of political police") and was abolished in 1934. The functions of the OGPU were transferred to the people's commissariat (later ministry) of internal affairs (NKVD, later MVD) Its head, G. G. Yagoda, was removed in 1936 and was convicted, in the 1938 Moscow treason trials, of having been a leader in a conspiracy against Stalin, true or false, the charge is characteristic of the inherent danger of a strong secret police, namely, the danger of its becoming a state within the state, so that it ultimately may easily overthrow the very state it is supposed to protect The Communist party purges of the 1930s appear to have averted that danger in the USSR at least temporarily. Under the ministry of internal affairs, the Russian secret police continued to exist despite its changed name; its responsibilities include the detection of subversive elements as well as the supervision of prison and labor camps and the "reeducation" of political offenders. A similar secret political police helped to consolidate Mussolini's power in Italy and to put down anti-Fascist activities Germany under Adolf Hitler came closest to an absolute police state, i e , a state where the police runs the government rather than the government the police. The German Gestapo (secret state police) was founded in 1933 after the advent of National Socialism. Its first head was Hermann Goering. In 1936 the Gestapo was combined with the SS (see NATIONAL SOCIALISM) under Heinrich Himmler, who subordinated it to the over-all *Sicherheitsdienst* or SD [security service] Just as the Gestapo had its secret ramifications among the mass of the population, the SD had agents, known only to the chief SD officers, in every department of the German government, in the armed forces, in the Nazi party, among the chief industrial executives, and among the Gestapo itself While the existence of the Gestapo was a matter of common knowledge, the existence of the SD was generally little known By the end of the Second World War, Himmler was the real master of Germany, and even the Nazi party, which supposedly controlled the state, was to some extent at the mercy of the SD The SS, which by then formed a separate army, was responsible to Himmler only, thus, probably for the first time in history, a secret police wielded virtually absolute power, demonstrated by its victory over the army plot on the life of Hitler (July, 1945) The crimes and atrocities of the Nazi authorities throughout German-occupied Europe during the Second World War were largely carried out by the SS and Gestapo, who controlled the extermination and concentration camps and who set up their subsidiary agencies in every conquered country

secret society. Human groups from the most primitive to the most civilized on all the continents maintain secret societies The ceremonies of initiation into such a society typically begin with an oath pledging secrecy as to all proceedings of the society, assuming special obligations to its members, and assenting to penalties for violation of the oath This is followed by tests of the candidate's worthiness In primitive groups physical courage is stressed especially, and the tests often include painful mutilations After the candidate has passed the prescribed tests, the knowledge understood to be a possession of the society exclusively is transmitted to him This knowledge includes the explanation of the secret and overt signs and symbols of the society Among remote peoples such societies function as schools in which the elders instruct the young men in the tribal code Women have comparable secret societies Societies that admit both men and women are unusual The mysteries or secret rites and doctrines of the Egyptians, the Persians, the Greeks, the Romans, and other ancient peoples were transmitted solely through secret societies The Greek mysteries included the Orphic, the Eleusinian, and the Samothracian The Romans adopted mysteries from various sources, e g , the mysteries of Isis (from Egypt), Adonis (of Semitic origin), the Great Mother (from Asia Minor), and Mithras (from Persia) In modern civilizations secret societies are numerous In various ways, they usually function in mutual aid, there are, for example, special obligations to members who are ill and to the families of deceased members Some churches oppose secret societies, as do some governments, who suspect them of being centers of disloyalty and subversion Some secret societies, e g , the BLACK HAND and the MAFIA, under the guise of fraternal forms have defended the interests of their members by violence, at a later stage supplementing this function with criminal activities such as blackmail, extortion, and murder. See also FRATERNITY and FREEMASONRY See Hutton Webster, *Primitive Secret Societies* (1908)

Secundus (sēkŭn'dus) [Latin, =second] companion of Paul on his third journey Acts 20 4

securities, in finance, instruments giving to their legal holders rights to money or other property Securities include stocks, bonds, notes, mortgages, bills of lading, and bills of exchange See BUCKET SHOP, BULLS AND BEARS; SPECULATION, STOCK EXCHANGE

Securities and Exchange Commission (SEC), agency of the U S government created by the Securities Exchange Act of 1934 and charged with certain duties in connection with the public issuance and sale of corporate securities The SEC administers a number of the most important "reform" measures of the New Deal, namely, the Securities Act of 1933, the Securities Exchange Act of 1934, the Public Utility Holding Company Act of 1935, the Trust Indenture Act of 1939, the Investment Company Act of 1940, and the Investment Advisers Act of 1940 In addition it may act as a participant in corporate reorganizations in the Federal courts under the National Bankruptcy Act. The first three of these statutes were passed in response to pressure for greater protection of investors, consequent upon the drastic decline in values of securities after Oct. 1929, the revelation of fraudulent and unfair practices in the sale of stocks and bonds, and wide-

spread belief that such practices had contributed to the severity of the depression of 1930–33. The SEC is composed of five commissioners, appointed by the President for terms of five years One of the commissioners is annually elected chairman Its staff is organized into various divisions, each of which is headed by a director who is responsible to the commissioners. Regional offices are maintained in 10 administrative zones in the United States The Securities Act of 1933 is intended to compel full disclosure to investors of material facts about securities offered and sold in interstate commerce or through the mails It requires that, before an issue of securities may be offered for public sale, the issuer must file with the SEC a registration statement giving complete information on such securities and on the issuing company Dealers in securities must provide their customers with a condensation of the data in the statement The SEC examines the statement and may refuse registration if it appears to be misleading, inaccurate, or incomplete If registration is denied, the securities may not be offered for sale However, an approval of the statement is not a finding by the SEC that the securities have investment value The Securities Exchange Act of 1934 is designed to increase the information available to investors and to prevent unfair practices in the securities markets It requires that certain current information be made public on the financial and managerial condition of corporations whose securities are traded in the exchanges A registration statement containing such data for each listed security must be submitted to the SEC The act also places the stock exchanges and over-the-counter markets under the SEC's supervision Stock exchanges, brokers, and dealers must file information about themselves with the commission Manipulative practices and false and misleading statements are prohibited Other practices, such as short sales and market pegging, are regulated Officers, directors, and principal stockholders of corporations whose securities are registered must report all their transactions in equity securities of their companies The Board of Governors of the Federal Reserve System is responsible for regulating by means of margin requirements the use of bank credit to finance trading in securities The Public Utility Holding Company Act regulates the financial practices of holding-company systems controlling electric and gas utilities It provides for registration of holding companies, elimination of uneconomic holding-company structures, and supervision of their transactions in securities and of certain of their financial practices The SEC must pass upon all plans for reorganization of such companies or their subsidiaries and must require the corporate simplification and geographic integration of holding-company systems However, it does not regulate public-utility rates This act was upheld by the Supreme Court in 1946 The Trust Indenture Act requires that securities of trustees meet satisfactory standards, and it also sets up qualifications for trustees The Investment Company and Investment Advisers Acts provide for registration and regulation of investment trusts, investment companies, and investment advisers The various laws administered by the SEC are intended to give investors a greater degree of safety in entrusting their money to enterprises than was previously afforded them The emphasis has shifted from *caveat emptor* to *caveat vendor* However, the statutes do not guarantee investors against loss It is perhaps no more difficult for them to lose their money than before The regulatory measures were at first bitterly opposed by the financial community, on the ground that they imposed such severe limitations and liabilities on security issuers and dealers as to impede the financing of industry Persons aggrieved by the decisions of the SEC have a right of review by a U S circuit court of appeals The original penalties of the Securities Act of 1933 were softened in 1934 As time passed, governmental supervision tended to win considerable acceptance by the interests concerned See annual reports of the SEC

security, in international relations, state of safety from aggression Typical expressions of the search for security may include building up armaments and making military and naval pacts and defensive alliances Measures of this sort often have the consequence of alarming other states and inducing them to take similar steps The final effect may be to bring two groups of antagonistic powers to readiness for war or even to war itself To avoid this eventuality, a foreign policy looking to security may stress disarmament, nonaggression pacts, neutrality, and even appeasement of aggressors. Here there is danger that aggression will be invited by weakness. Since the end of the First World War the attempt has been made to attain security through international organizations which are intended to have behind them the moral and physical strength of most of the powerful nations The LEAGUE OF NATIONS, the first of such bodies, failed in its main goal, and it was hoped that its successor, the UNITED NATIONS, would prove successful In the case of both organizations internal disagreements led to the creation of complementary security alliances between some of the members Thus in the '20s France made alliances with other continental countries, and after serious rifts developed in the United Nations the NORTH ATLANTIC TREATY was concluded at the instance of the United States

Security Council: see UNITED NATIONS

Sedalia (sĭdā'lyə), city (pop 20,428), co seat of Pettis co, W central Mo, ESE of Kansas City, in an area of farms and limestone quarries, laid out 1859 It has railroad shops and manufactures disinfectants and food products The state fairgrounds are here

Sedan (sĭdăn', Fr sudã'), town (pop 12,987), Ardennes dept, NE France, on the Meuse near the Belgian border It is primarily a garrison town but also has a textile industry A part of the duchy of BOUILLON, it passed to France in 1642 It was a Protestant stronghold in the 16th and 17th cent, with a famous Calvinist academy where Pierre Bayle and Pierre Jurieu taught Sedan was the scene (1870) of the decisive French defeat in the FRANCO-PRUSSIAN WAR and of the capture of Napoleon III Occupied by the German army in the First World War, it was recaptured by American troops in Nov, 1918 In the Second World War the Germans broke through here (May, 1940) and thus opened the fateful "battle of France", the town was heavily damaged

Sedan (sĕdăn'), city (pop 1,948), co seat of Chautauqua co, SE Kansas, WNW of Coffeyville, in a farm and oil area, founded 1875, inc 1876

sedative (sĕ'dətĭv), in medicine, a drug employed to lessen general nervous excitement or to reduce the activity or irritability of a specific organ The term is sometimes applied also to drugs administered to alleviate pain, although drugs that are given primarily for this purpose are usually called anodynes or analgesics Most sedatives, especially the bromides, act as mild depressants of the central nervous system, by relieving nervous tension they sometimes assist also in inducing sleep Certain sedatives taken in sufficient quantity have a direct soporific effect and, in large doses, produce anesthesia Sedatives are useful in relieving convulsions, coughing, and nausea, in lessening anxiety, and in quieting patients with cardiac disorders They should be taken only under the direction of a physician, since they frequently produce harmful effects

Sedding, John Dando, 1838–91, English architect A leading figure in the Gothic revival, he was an enthusiast for medieval forms and methods and especially interested in a rebirth of Gothic craftsmanship, which he emphasized in his many churches, notably Holy Trinity in Sloane Square, London

Seddon, James Alexander, 1815–80, secretary of war in the Confederacy, b Fredericksburg, Va, grad Univ of Virginia law school, 1835 He served in the U S House of Representatives (1845–47, 1849–51) Jefferson Davis brought him into the cabinet in Nov, 1862, and Seddon faithfully discharged the president's orders until he resigned in Jan, 1865 See B J Hendrick, *Statesmen of the Lost Cause* (1939)

sedge (sĕj), name for grasslike and rushlike marsh plants of the family Cyperaceae, widely distributed in temperate and tropical regions and found in some species in the arctic Sedges differ from the related grass family chiefly in having solid, angular (usually triangular) stems Many are perennial, reproducing by rhizomes *Carex*, with over 1,000 species, and *Cyperus*, with about 600 species, are the largest genera Pith from the stems of *Cyperus papyrus* was made into papyrus in early Egypt and in other Mediterranean countries Species of *Scirpus*, especially *Scirpus lacustris*, are known as bulrushes Some sedges are woven into mats and chair seats, and a few yield a coarse hay

Sedgemoor, tract of moorland, Somerset, England, SE of Bridgwater The duke of Monmouth was disastrously defeated here in 1685 by James II

Sedgwick, Adam (sĕj'wĭk), 1785–1873, English geologist He was a professor at Cambridge from 1818 His most important work was a study, made with R I Murchison, of the rock formation of Devonshire, which they named the Devonian system See biography by J W Clark and T McK Hughes (1890)

Sedgwick, Anne Douglas (sĕj'wĭk), 1873–1935, American author, b Englewood, N J After the age of nine, she lived in England and later studied painting in France In 1908 she married Basil de Selincourt Her most successful novels were *Tante* (1911), *The Little French Girl* (1924), and *Philippa* (1930). See *Anne Douglas Sedgwick a Portrait in Letters* (ed by Basil de Selincourt, 1936)

Sedgwick, Catharine Maria, 1789–1867, American author, b Stockbridge, Mass, of a wealthy and influential family She spent most of her life in the Berkshires, the scene of many of her novels Her novels were frankly didactic and dealt with domestic life The first, *A New-England Tale*, was written in 1822, the most famous, *The Linwoods*, in 1835, and her last, *Married or Single* (a justification of her single life), in 1857 See biographies by M E Dewey (1871) and Sister Mary Michael Welsh (1937)

Sedgwick, Ellery, 1872–, American editor, b New York city, grad Harvard, 1894, brother of Henry Dwight Sedgwick As editor (1908–38) of the *Atlantic Monthly* he continued the literary traditions of the magazine and broadened its popularity See his reminiscences, *The Happy Profession* (1946).

Sedgwick, Henry Dwight, 1861–, American biographer and historian, b Stockbridge, Mass, studied at Harvard, brother of Ellery Sedgwick His works include biographies of Francis Parkman (1904), Alfred de Musset (1931), and Horace (1947) and several short histories of European nations See his autobiography, *Memoirs of an Epicurean* (1942)

Sedgwick, John, 1813–64, Union general in the Civil War, b Cornwall Hollow, Conn, grad West Point, 1837 He fought against the Seminole and won two brevets under Scott in the Mexican War Sedgwick's Civil War service was with the Army of the Potomac In the PENINSULAR CAMPAIGN he was prominent at Fair Oaks and was wounded at Frayser's Farm in the Seven Days battles (1862) Wounded again in the Antietam campaign, Sedgwick was afterwards promoted major general of volunteers and given command of the 6th Corps In Joseph Hooker's move on Lee (see CHANCELLORSVILLE, BATTLE OF), he drove Jubal Early from Marye's Heights at Fredericksburg but was defeated at Salem Church His corps was in reserve at Gettysburg Sedgwick was killed at Spotsylvania Courthouse in the WILDERNESS CAMPAIGN, May, 1864 See his correspondence (1902–3)

Sedgwick, Theodore, 1746–1813, American lawyer and statesman, b West Hartford, Conn, grad Yale, 1772 (as of 1765) He practiced law in Massachusetts after being admitted (1766) to the bar In the American Revolution he acted (1776) as military secretary to Gen John Thomas on the Canadian expedition After serving in the state legislature for several years, he became a member of the Continental Congress (1785–88), was concerned with the suppression of Shays's Rebellion, and was a delegate to the Massachusetts convention that ratified the Constitution (1788) From 1789 to 1801 he served either in the U S House of Representatives, where he was speaker (1799–1801), or in the Senate He was afterwards judge of the Massachusetts supreme court until his death His most famous legal case concerned the freeing of an escaped Negro slave, Elizabeth Freeman, under the Massachusetts Bill of Rights (1783)

sedimentary rock see ROCK

sedition (sĭdĭ'shən) in law, acts or words which may tend to upset the authority of a government The scope of the offense was very wide in early common law, which even permitted prosecution for a remark insulting the king In the United States there was long doubt that the protection accorded free speech by the First Amendment of the U S Constitution would permit language to be deemed seditious In 1940, however, Federal legislation was adopted which made utterances deliberately designed to overthrow the government of the United States or to cause disaffection in the armed forces criminal, and there were several prosecutions

Sedley, Sir Charles, 1639?–1701, English wit and profligate, father of the countess of Dorchester, who became the mistress of James II The comedy *Bellamira* (1687) was the best of his several plays, and "Phyllis Is My Only Joy," the best known of his songs See biography (1927) and edition of his works (1928) by V de S Pinto

Sedro-Woolley (sē'drō-wōō'lĭ), farm trading city (pop 2,954), NW Wash, on the Skagit river and SE of Bellingham Sedro and Woolley, founded separately, were consolidated in 1898 A state mental hospital is near by

sedum (sē'dŭm) or **stonecrop,** any species of the large genus *Sedum*, fleshy or succulent, usually low herbs of wide distribution Most species are hardy (some evergreen) and perennial, a number of them are popular for rockeries, bedding plants, and window boxes One of the most common species, naturalized from the Old World, is *Sedum acre*, which is called also wall pepper and gold moss It is a low creeping plant with bright yellow flowers and is common in cemeteries and rock gardens The orpine or live-forever is a garden sedum sometimes found wild in North America, it has flat-topped clusters of flowers commonly rosy purple, stems that root easily, and leaves that children delight to blow up into "frogs"—whence it is called also frog plant The showy sedum (*Sedum spectabile*), with pink, crimson, or white flowers, is another species popular for gardens

See, Thomas Jefferson Jackson, 1866–, American astronomer, b near Montgomery City, Mo, grad Univ of Missouri, 1889 Between 1893 and 1896 he organized the department of astronomy in the Univ of Chicago and, as its head, had a part in establishing Yerkes Observatory at Williams Bay, Wis From 1896 to 1898 he was astronomer at the Lowell Observatory, Flagstaff, Ariz He made a survey of the southern skies, examining about 200,000 fixed stars, among them about 600 new double stars were discovered and measured, and about 1,400 other double stars remeasured In 1899 he was appointed professor of mathematics in

the U S navy and from 1903 was at the naval observatory, Mare Island, Calif He is particularly known for his elaboration of the laws of the capture theory of the formation of the solar system, which substitutes for Laplace's process of throwing off a process of building up the larger bodies by the attraction and capture of the smaller, this theory is described in the second volume of his *Researches on the Evolution of the Stellar Systems* (1896–1910) Among his numerous other publications are double-star catalogues and contributions to scientific journals

Seebohm, Frederic (sē'bōm), 1833–1912, English historian. He was a Quaker in religion, a barrister, and a partner in the bank of Sharples & Company His earliest historical studies were on aspects and results of the Reformation, *The Oxford Reformers* (1867) and *The Era of the Protestant Reformation* (1874) Economic history claimed his attention, and in the discussion among historians of the village or MARK, Seebohm's *The English Village Community* (1883) upheld the theory that the feudal village had its origin in a semipastoral system probably influenced strongly by the Roman villa *The Tribal System in Wales* (1895) and *Tribal Custom in Anglo-Saxon Law* (1902) were close studies of original, pre-Roman customs His last work, *Customary Acres* (1914), was posthumously published

Seeckt, Hans von (hans' fŭn säkt'), 1866–1936, German general He fought in Poland, Serbia, Rumania, and Turkey during the First World War After the Treaty of Versailles he created (1920) the Reichswehr—the army of 100,000 men which Germany was allowed to keep under the peace terms He commanded the Reichswehr until his retirement in 1926 and made it an efficient nucleus capable of serving as cadre for a much larger army Seeckt was (1930–32) a member of the Reichstag, representing the conservative People's party In 1934–35 he was a military adviser to Chiang Kai-shek in China Among his writings are *Die Zukunft des Reiches* (1929, Eng tr , *The Future of the German Empire*, 1930) and *Gedanken eines Soldaten* (1929, Eng tr , *Thoughts of a Soldier*, 1930)

seed, product of the fertilization of the ovum of a FLOWER following POLLINATION A seed is a complex structure of many cells borne within a FRUIT and containing the embryo or young plant and stored food It is produced by the highest group of plants in the evolutionary scale The plants of lower orders (e g , mosses and ferns) bear spores, which are unicellular and contain no embryo Agents which aid in the dispersal of seeds include wind, water, birds, quadrupeds, and man (particularly with improved methods of transportation) There is usually a close correlation between a fruit and its distributing agent wind-borne fruits typically have wings (e g , the maple) or tufts of down (e g , the dandelion), bird-borne fruits usually have an edible pulp with a hard indigestible seed, and animal-borne fruits usually have burs or prickles that tangle in the fur Seeds vary in size from the dusthke seed of some orchids to the very large seeds of a PALM (*Lodoicea maldivica*) which have been called sea coconuts and double coconuts Seeds by providing a resting stage in the life cycle of a plant often enable it to endure adverse conditions An ANNUAL is particularly dependent upon its seeds for renewed existence Many seeds require a resting or dormant period before they will germinate, some are capable of prolonged resting periods (a lotus seed was viable after over 200 years), while others will not germinate after more than one season One factor aiding a long dormancy period for some seeds is an exceptionally hard seed coat. This is overcome in horticultural practice by filing, soaking, or other methods Under suitable conditions of temperature, moisture, and oxygen, the dormant period of a seed is brought to an end and vital activity is begun, which results in the growth of the embryo into the young seedling A plant grown from seed may differ from its parent plant (as a result of cross-pollination or other causes); this is particularly true of horticultural varieties. Under controlled conditions seed are produced which will assure the desired type of plant Some few plants that multiply by vegetative means, e g , by shoots, produce aborted seeds that are useless, such a plant is the banana—cultivated and propagated vegetatively for centuries Because of the large quantities of stored food contained within seeds they are an important source of food for man (see GRAIN)

Seeger, Alan (sē'gur), 1888–1916, American poet, b New York city, grad Harvard, 1910 He enlisted in the French Foreign Legion in 1914 and was killed in battle in 1916 He is famous for his war poem, "I Have a Rendezvous with Death." See his *Collected Poems* (1916)

seeing-eye dog, trained to guide a blind person Among the dogs used for this purpose are the German shepherd dog, the Doberman pinscher, and some bulldogs Dorothy Harrison Eustis was the founder (1929) of the Seeing Eye, Inc , which established itself near Morristown, N J., in Dec , 1932 At the school in Morristown each dog is first trained alone, and then dog and master undergo training together. Scores of blind persons have completed the course and with the aid of a seeing-eye dog have achieved new independence. See Dickson Hartwell, *Dogs against Darkness* (1942).

Seekonk (sē'kŏngk), town (pop. 4,912), SE Mass , at the R I line NW of Fall River; settled 1636, set off from Rehoboth 1812

Seeland, Denmark: see ZEALAND.

Seeley, Sir John Robert, 1834–95, English historian. He was, from 1869 until his death, professor of modern history at Cambridge His first work was the anonymously published study of the life of Christ, *Ecce Homo* (1865), which created wide discussion His historical works include the *Life and Times of Stein* (1879), *The Expansion of England* (1883), and the posthumous *Growth of British Policy* (1895) He was a proponent of the British imperialist ideal

Seely, John Edward Bernard, 1st baron of Mottistone, 1868–1947, British statesman and general He served with distinction in the South African War and in the First World War, rising to the rank of major general (1918). In 1900 he was elected to Parliament, where he served until 1924 In 1912 he was appointed secretary of war, but was forced to resign in 1914 for exceeding his authority in assenting to demands of officers opposed to serving against Ulster in the Home Rule crisis He was undersecretary in the ministry of munitions (1918) and then undersecretary for air (1919), resigning as a protest against the failure to establish a separate air ministry In *Adventure* (1930) and *Fear and Be Slain* (1931) he tells the story of his life

Seelye, Julius Hawley (sē'lē), 1824–95, American clergyman and educator, b Bethel, Conn , grad Amherst, 1849, and Auburn Theological Seminary, 1852, and studied in Germany, brother of L C Seelye After serving as pastor of the First Reformed Church, Schenectady, N Y., he became professor of mental and moral philosophy at Amherst in 1858, he was president of the college from 1876 to 1890 He inaugurated at Amherst what is said to be the first case of student self-government on record in any American college Seelye also served (1874–77) in Congress, to which he was elected in a nonpartisan movement His writings include *The Way, the Truth, and the Life* (1873), *Duty* (1891), and *Citizenship* (1894)

Seelye, Laurenus Clark, 1837–1924, American educator and Congregational clergyman, b Bethel, Conn , grad Union College, 1857, and studied at Andover Theological Seminary and in Germany From 1865 to 1873 he was professor of rhetoric, oratory, and English literature at Amherst In 1873 he became first president of Smith College, retiring in 1910 See his *Early History of Smith College* (1923), biography by H C S Rhees (1929)

Segantini, Giovanni (jōvän'nē sägäntē'nē), 1858–99, Italian painter, b in the Tyrol A herdsman in his youth, he is known for his portrayal of peasant scenes in the Alpine regions Among his works are *The Angel of Life* (Budapest), *The Punishment of Luxury* (Liverpool), and *At the Watering Place* (Basel) At St Moritz there is a Segantini Museum

Segesta (sĭjĕ'stŭ), ancient city of Sicily Tradition called it a Trojan colony It was the long-standing and bitter rival of Selinus Athens undertook the disastrous expedition against Syracuse (415–413 B C) as an ally of Segesta in trouble growing out of a quarrel with Selinus After this failure, Segesta got the help of Carthage, and Selinus was sacked Thereafter Segesta was a Carthaginian dependency with some interruptions until the First Punic War, when it surrendered to the Romans It declined in the 1st cent B C The ruins, with a fine temple to Ceres, are near modern Alcamo

sego lily (sē'gō), ornamental plant (*Calochortus nuttallii*), belonging to the same genus as the Mariposa lily It is native to the region E of the Rocky Mts , especially Utah, of which it is the state emblem It has narrow leaves, beautiful tulip-like white flowers marked with purple, lilac, or yellow, and bulbous roots which were used by the early settlers for food It is used in Mormon church symbolism

Segonzac, André Dunoyer de (ädrā' dünwäā' du sugōzäk'), 1884–, French painter, studied at the École des Beaux-Arts and Julien's academy, Paris He served (1915–18) as an officer in the French army. He is best known for his fine landscapes, nudes, and still lifes in oil and water color, painted in a direct and highly simplified manner, approaching abstraction in form but not in spirit. His drawings, prints, and illustrations are equally successful

Segou, French West Africa: see SEGU

Segovia, Andrés (ändrās' sägō'vyä), 1894–, Spanish guitarist, studied at the Granada Musical Institute. He is famous for his transcriptions of early contrapuntal music, which have shown the possibilities of the guitar as a concert instrument Composers who have written works for him include Ottorino Respighi and Paul Hindemith

Segovia (sĕgō'vēu, Span sägō'vyä), city (pop 24,258), capital of Segovia prov., central Spain, in Old Castile. It stands on a rocky ledge crowned by the cathedral and the alcasar Of ancient origin, Segovia was favored by the Romans, who built the aqueduct (about 900 yards long) that still brings water to the town, built of uncemented limestone blocks, it is one of the greatest Roman monuments in Spain. Segovia was repeatedly taken and lost by the Moors from 714 until Alfonso VI conquered it in 1083. It was a favorite residence of the kings of Castile. Isabella I was proclaimed queen in the alcasar (14th cent ; mostly rebuilt in the 19th). Segovia, long famous for its wool industry, declined in the 18th cent. The late Gothic cathedral (1525–1616) has fine cloisters Of the many medieval churches and palaces, the Romanesque churches of San Estebán and San Millán are the most notable

Segovia (sägō'vyä), river rising in NW Nicaragua and flowing NE to the Caribbean. Also called the Coco, Cape, and Wanks, it is one of the longest Central American rivers Honduras claims the Segovia as the southeastern boundary with Nicaragua, but Nicaragua claims the whole territory

Segu or Segou (both sägō'), town, S central French Sudan, French West Africa, on the upper Niger There is trade in cotton and peanuts It was the capital of the state of the Bambara Mandingoes, powerful in the 17th and 18th cent Hajj Omar captured it in 1861 It passed to the French in 1890

Segub (sē'gŭb) [Heb ,=elevated]. 1 Son of Hiel the restorer of Jericho 1 Kings 16 34 2 Son of Hezron 1 Chron 2 21,22.

Séguier, Pierre (pyĕr' sāgyā'), 1504–80, French jurist A president in the Parlement of Paris, he secured the withdrawal of the edict introducing the Inquisition into France and was also notable for his moderate tone in dealing with the Protestants

Séguier, Pierre, duc de Villemor (dük' du vēlmôr'), 1588–1672, chancellor of France, grandson of Pierre Séguier. A councilor to the Parlement of Paris, he rose to power after crushing a revolt in Normandy (1639) A friend of Mazarin, he was instrumental in having the parlement accept Anne of Austria as regent He helped to found the French Academy

Seguin, Édouard (sā'gwĭn, Fr ādwär' sügĕ'), 1812–80, French psychiatrist, instrumental in introducing a scientific method of treatment of the insane He opened a school for the feeble-minded in 1839 and after the Revolution of 1848 came to the United States to continue his pioneer work He received a medical degree in 1861 from the Univ of the City of New York (later New York Univ) His son, **Edward Constant Seguin** (kŏnstă'), 1843–98, b Paris, M D Columbia, 1864, was a leading neurologist

Seguin (sügēn'), city (1940 pop 7,006, 1947 estimated pop 9,200), co seat of Guadalupe co , S central Texas, on the Guadalupe and ENE of San Antonio, settled 1832, laid out 1838, inc 1853. It was named after Col Juan Seguin, a hero of the Texas Revolution, was once a plantation center, and still keeps a tidy German look given it by German settlers, thus, the city epitomizes much of Texas history The region produces oil, cattle, diversified farm produce, and pecans, and the city has processing plants and small factories The Guadalupe river and near-by Lake McQueeney attract vacationers Seguin is the seat of Texas Lutheran College

Ségur, Louis Philippe, comte de (lwē' fēlēp' kōt' du sägür'), 1753–1830, French general and diplomat, son of Philippe Henri, marquis de Ségur (1724–1801), marshal of France and war minister under Louis XVI The younger Ségur served in the American Revolution under Rochambeau, was ambassador (1783) to Catherine II of Russia, served on Napoleon's council of state, and became a member of the chamber of peers in the Restoration

Ségur, Philippe Paul, comte de (fēlēp' pōl'), 1780–1873, French general and historian, son of Louis Philippe de Ségur He fought in the Napoleonic campaigns and wrote (1824) an excellent account of the Russian campaign of 1812 He was made a peer by Louis Philippe (1831)

Segura (sägōō'rä), river, c 200 mi long, SE Spain It rises on the northeastern slopes of the Sierra de Segura (a mountain range rising to 7,812 ft) and flows generally E into the Mediterranean 20 mi SSW of Alicante It is used for irrigation

Seidl, Anton (än'tŏn zī'dul), 1850–98, Hungarian conductor, famous as a conductor of Wagnerian opera. He conducted the first Bayreuth Festival (1876) and was conductor at the Leipzig Opera House (1879–82), the Metropolitan Opera House (1885–91), and of the New York Philharmonic Society (1891–98). His extensive library of scores and personal papers was given to Columbia Univ

Seidlitz powders (sĕd'lĭts), mild, saline cathartic consisting of two powders One powder, contained in a blue paper, is a mixture of Rochelle salt (sodium potassium tartrate) and bicarbonate of soda, the other, contained in a white paper, is tartaric acid Each powder is separately dissolved in about one third of a glass of water; the solutions are then combined and should be taken before effervescence (arising from the generation of carbon dioxide) has subsided The medicine is named for its resemblance to the natural waters of Seidlitz (now Sedlcany), near Prague, Czechoslovakia, and is also known as "compound effervescent powders "

Seignelay, Jean Baptiste Colbert, marquis de: see COLBERT, JEAN BAPTISTE, MARQUIS DE SEIGNELAY.

Seignobos, Charles (shärl' sānyōbō'), 1854–1942, French historian. He taught at the Univ. of Paris and wrote many works on French and European

history and civilization, partly as contributions to the cooperative series edited by Ernest LAVISSE and Alfred Rambaud. Some of these are widely used as textbooks in France and, in translation, in English-speaking countries. With C. V. Langlois he wrote an *Introduction to the Study of History* (1897; Eng. tr., 1898), analyzing the methods of objective and scientific history writing. His *La Méthode historique appliquée aux sciences sociales* (1901) extended his method into the fields of social and economic history. Among the most useful works of Seignobos is *The Feudal Régime* (Eng. tr., 1902, new ed., 1926).

seignorial system: see MANORIAL SYSTEM and FEUDALISM

Seillière, Ernest, Baron (ĕrnĕst' bärō' sāyĕr'), 1866–, French critic, studied at the École polytechnique, Paris, and the Univ. of Heidelberg. On socialism in Germany he wrote a study of Ferdinand Lassalle (1897) and a collection of essays (1898), but he is especially known for his studies on romanticism, to which he is antagonistic. A collection of his essays was translated as *Romanticism* (1929), with a bibliography of his works.

Seine (sān, Fr. sĕn), department (185 sq. mi., pop. 4,775,711), N France, coextensive with Paris and its suburbs (Greater Paris). Unlike the other departments of France, each of which is administered by one prefect, Seine dept. has two prefects, the prefect of Seine and the prefect of the police. In the outskirts (*banlieue*) of Paris there are numerous large industrial and residential suburbs, most populous are Asnières, Aubervilliers, Boulogne-Billancourt, Clichy, Courbevoie, Levallois-Perret, Neuilly-sur-Seine, Saint-Denis, Montreuil, Saint-Maur-des-Fossés, and Vincennes. Much of the industry and all of the agriculture of the region depend on the needs of the capital, but there also are machine, automobile, airplane, textile, chemical, and other plants and numerous luxury industries, particularly in Paris itself. The area is the largest industrial concentration of population in France although it has almost no raw materials. See PARIS.

Seine, Latin *Sequana*, river, 482 mi. long, N France. With its tributaries (Aube, Yonne, Marne, Oise, Eure, and others) it drains the entire Paris basin. Rising in the Langres Plateau, it winds NW through CHAMPAGNE and ILE-DE-FRANCE, passing Troyes and Paris, whence it meanders in large loops through the VEXIN and Normandy, past Les Andelys and Rouen, to the English Channel. Its estuary is very wide, measuring 6 mi. from Le Havre to Honfleur. Its waters have a regular flow and are easily controlled despite the fact that for two thirds of its course it traverses a plain less than 300 ft. above sea level. The ports of PARIS, ROUEN, and Le HAVRE handle the major part of French river and ocean trade, since time immemorial the Seine has been the chief commercial artery of France, and therefore the cities on its banks have prospered.

Seine-et-Marne (sĕn"-ā-märn'), department (2,290 sq. mi., pop. 407,137), N France, in ILE-DE-FRANCE, E of Paris. Melun is the capital.

Seine-et-Oise (sĕn"-ā-wāz'), department (2,185 sq. mi., pop. 1,414,910), N France, in ILE-DE-FRANCE. It surrounds but does not include Paris. The southern section is a part of BEAUCE. Versailles is the departmental capital.

Seine-Inférieure (sĕn"-ănfārēûr'), department (2,448 sq. mi., pop. 846,131), N France, in Normandy. It is traversed by the lower Seine, at the mouth of which on the English Channel lies Le HAVRE. Other coastal towns are Dieppe and Fécamp. ROUEN is the departmental capital.

Seipel, Ignaz (Ig'näts zī'pul), 1876–1932, Austrian statesman, a Roman Catholic prelate and leader of the Christian Socialist party. After the collapse of the monarchy, Monsignor Seipel held the divergent elements of his party together, and, as chancellor (1922–24, 1926–29), he introduced stringent economies, stabilized the currency, and secured Austrian acceptance of the Geneva Protocol. He was hated by many because of his clericalist and sternly anti-Socialist policies, and an attempt was made on his life in 1924.

Seir (sē'ĭr), mountainous region, S Palestine, S of the Dead Sea. Mt. Hor is the highest point. It is identical with EDOM. It is mentioned frequently in the Bible as Mt. Seir. The eponym appears at Gen. 36:20, 1 Chron. 1:38. The Seir of Joshua 15:10, a border point of Judah, seems to be different.

Seirath (sē'ĭrăth, sēĭr'-), mountainous region, E central Palestine. Judges 3:26.

Seishiu, Korea: see CHONGJIN.

seismology (sīsmŏ'lŭjē, sīs-), scientific study of earthquakes or movements of the earth's crust. Instruments used to indicate and record earthquakes are known as seismographs or seismometers. Simple devices were employed even in ancient times. Among those who laid the foundations of the science were John Winthrop in the United States and Sir James Ewing and John Milne in Great Britain. Among the seismographs used now are those known as the Milne-Shaw, the Galitsin (Galitsin), the McComb-Romberg, the Wood-Anderson, and the Benioff. Seismographs vary somewhat in design but generally a heavy mass, either a pendulum or a large permanent magnet, is an essential part of the structure. A recording device consisting of either a mechanical system or an optical system is connected with the pendulum or the magnet. A mechanical one has a pen which marks on a smoke-covered surface on a rotating drum or has a pen or pencil which draws on a roll of paper fastened to the rotating drum. In an optical system a beam of light is reflected by a mirror on a photographic paper or film. When tremors of the earth occur, the pendulum or the magnet because of inertia actually remain still as the earth beneath moves. The relative motion between the earth and the instrument is magnified either by a system of levers connected with the pendulum or by electrical apparatus. For scientific studies the time intervals must be accurately marked on the drum. From the graphic record, called the seismogram, the severity and other information about an earthquake can be learned. By using three instruments, each set to respond to motions from a different direction (north-south horizontal, east-west horizontal, and vertical), both the distance and the direction of the earth movement can be found. A more recently developed instrument installed in the observatory at Harvard can make, with this single instrument, a triple record of movement in all three directions. An important commercial application of seismology is its use in the petroleum industry for the detection of oil deposits. In 1924 the first deposit was discovered by this method in Texas. A portable seismograph is set up in the area to be investigated, and dynamite or another high explosive is detonated in a hole drilled near by. From an interpretation of the waves created by the explosion and recorded on the seismograph the detection of a geologic formation called a salt dome is possible, such a dome is characteristically covered with a cap of rock with which oil is associated. See John Milne, *Earthquakes and Other Earth Movements* (1886, 7th ed., rewritten by A. W. Lee, 1939), Charles Davison, *Manual of Seismology* (1921) and *Founders of Seismology* (1927), J. J. Lynch, *Our Trembling Earth* (1940), Perry Byerly, *Seismology* (1942), K. E. Bullen, *Introduction to the Theory of Seismology* (1947).

Seistan (sēstän'), lowland region of W Afghanistan (c. 4,000 sq. mi.) and E Iran (c. 2,000 sq. mi.). The Helmand river ends here. The region has the large swamps Hamun-i-Helmand and Gaud-i-Zireh. It corresponds roughly to the ancient Drangiana.

Seitz, Karl (karl' zīts'), 1869–1950, Austrian politician. After the electoral victory of the Social Democrats in 1907, he became, with Viktor Adler, a Socialist parliamentary leader. He was acting president of Austria (1919–20) and later mayor of VIENNA from 1923 until the Socialist revolt of 1934. Arrested, he was soon released on parole. He was incarcerated by the Nazis in 1944. When Austria was restored after the Second World War, Seitz was elected to parliament (1945).

Seiyukai (sā'yōōkī"), Japanese political party founded in 1900. It was derived, via the Kensei-to, from the Jiyuto, organized by Itagaki in 1881. Ito was its first president, and Saionji its second, but these great statesmen were more powerful in their own right than as party leaders. The first real party cabinet, marking the decline of the old clan oligarchy, was that of Hara, Seiyukai leader, in 1918. Party governments prevailed from 1924 to 1932 the Seiyukai cabinets of Tanaka (1927–29) and Inukai (1931–32) alternating with Minseito governments. After this the influence of political parties steadily declined as that of the militarists increased, and in 1940 all political parties voluntarily disbanded to make way for a government-sponsored totalitarian party. Japanese parties have been based more on factionalism and personal loyalty than on divisions of principle, and there was little difference between the program of the Seiyukai and that of Minseito. The Seiyukai was slightly more conservative and more amenable to army demands, it was identified with the Mitsui interests.

Sejanus (Lucius Aelius Sejanus) (slĭā'nus), d. A.D. 31, Roman statesman; son of L. Sejus Strabo, Praetorian prefect. When his father went to Egypt as governor, he succeeded to the command of the Praetorian guards and obtained great ascendancy over Emperor TIBERIUS. He was suspected of conspiring with Livia in a successful plot to poison her husband, the emperor's son, Drusus, and obtained the arrest of AGRIPPINA I. Tiberius feared a plot on the part of Sejanus and had him put to death.

Sek Harbour, New Guinea: see ALEXISHAFEN.

Sekia-el-Hamra: see SPANISH SAHARA.

Sekondi-Takoradi (sĕ'kŭndē-tăkōrä'dē), municipality (pop. 44,130), SW Gold Coast colony, a port on the Gulf of Guinea. Sekondi, settled in the 16th cent. by the Dutch, went to Great Britain in 1872. It flourished after the construction (1903) of a railroad to the mining and hardwood-lumbering region of the interior. The old port was replaced (1928) by the deep-water harbor of the near-by town of Takoradi. The two towns were amalgamated in 1946. Sekondi formerly appeared as Seccondee.

Sela or **Selah** (sē'lä) [Heb., =rock], unidentified town, S of the Dead Sea. It was captured by Amasiah and renamed by him Joktheel. Some identify Sela with PETRA. 2 Kings 14:7, Isa. 16:1.

Selah (sē'lä), obscure Hebrew word occurring many times in Psalms and three times in Hab. 3. Its derivation is unknown. It may be a musical notation signifying a pause or the end of a phrase.

Selah (sē'lä), town (pop. 1,130), S central Wash., on the Yakima river just N of Yakima, in a fruit-growing section.

Sela-hammahlekoth (sē'lä-hăm"ulē'kŏth) [Heb., = cliff of escape], unlocated place, S Palestine, associated with Saul's pursuit of David. 1 Sam. 23:28.

Selangor (sulăng'ur), state (3,160 sq. mi., pop. 708,091), central Malaya, on the Strait of Malacca. It is bordered on the north by Perak, on the east by Pahang, and on the south by Negri Sembilan. It contains coal deposits that are mined commercially, as well as tin mines, rubber, pineapples, and rice are grown. These are considerable fisheries. Both the Chinese and the Indian groups in the population exceed the Malay group, together the Chinese and Indians constitute two thirds of the inhabitants. Before the 16th cent. the territory of Selangor was subject to the powers that in turn dominated the Malay Peninsula. After the fall of Malacca (1511), it was nominally ruled by the kings of Riouw and Johore, but in the late 17th cent. it was conquered by Bugis tribesmen from Celebes, who for a time threatened to dominate Malaya from Selangor. Selangor accepted British protection in 1874, and in 1895 it became one of the Federated Malay States. The capital, Kuala Lumpur, is the capital of the federation of Malaya.

Selborne, Roundell Palmer, 1st earl of (sĕl'bôrn), 1812–95, English jurist and statesman. A brilliant academic and legal career preceded his entry into Parliament as a nominal Conservative in 1847. He served Lord Palmerston as solicitor general (1861–63) and Lord John Russell as attorney general (1863–66). He was raised to the peerage in 1872 and during the ministries of William Ewart Gladstone served as lord chancellor (1872–74, 1880–85). Selborne had an important influence on law reform through his work on the Judicature Act of 1873. In 1885 he broke with Gladstone on the question of Irish Home Rule and joined the Liberal Unionists. Selborne was a conservative writer on problems of church history and doctrine. See his *Memorials* (ed. by Lady Sophia Palmer, 4 vols., 1896–98).

Selborne (sĕl'bôrn), village, Hampshire, England, SSW of Aldershot. *The Natural History and Antiquities of Selborne* was written by the vicar Gilbert WHITE, who was born here. He lived in "The Wakes" (still standing) and is buried in the old parish church.

Selby, William, 1738–98, English organist and composer, who resided in Boston, Mass., from c. 1771. He was organist at King's Chapel, Boston, before the Revolution and from 1782 until his death, and he gave concerts of an ambitious sort, which were very important in the musical development of Boston. His own compositions, which included church music, a harpsichord concerto, and an organ concerto, were esteemed during his lifetime but have long been forgotten. See O. G. Sonneck, *Early Concert Life in America* (1907).

Selby, urban district (pop. 10,064), West Riding of Yorkshire, England, on the Ouse and 8 of York. The fine cruciform Church of St. Mary and St. German was part of a Benedictine abbey founded in 1069 by William the Conqueror. It was partly burned in 1906, but was rebuilt. The town is the traditional birthplace of Henry I.

Selden, John, 1584–1654, English jurist and scholar. He studied at Oxford, was called to the bar in 1612, and practiced as a consultant and conveyancer. He was elected to Parliament in 1623, but had already been politically active. He had assisted in preparing the protestation of Commons in 1621 and had briefly been held in custody as a result. He continued to support the rights of Parliament in its struggle with the crown, was prominent in the trial of George Villiers, duke of Buckingham, and helped to draw up the Petition of Right in 1628. For his activity in the recalcitrant Parliament of 1629 he was imprisoned and not released until 1631. He represented Oxford Univ. in the Long Parliament, which convened in 1640, and he retired from public life in 1649. Selden was considered one of the most erudite men of his time. His *England's Epinomis* and *Jani Anglorum* (1610) established him as the father of legal antiquarianism. Thus field of work was further explored in his *Analecton Anglo-Britannicon* (1615). The preface to his edition of the Fleta (1647) summarizes his lifelong study of the origins of British law. Selden's reputation as an Orientalist was begun with his *De Diis Syris* (1617), and he prepared a number of studies of rabbinical law. His *History of Tithes* (1618) involved him in a conflict with the clergy, and the work was suppressed. Others of his works are *Titles of Honour* (1614), *Privileges of Baronage* (1642), and *Mare Clausum* (1635), a defense of England's right to sovereignty over the seas between that country and the Continent. He is popularly best remembered for the record of his conversations kept by his secretary, Richard Milward, and published as *Table Talk* (1689, ed. by Frederick Pollock, 1927). See G. W. Johnson, *Memoirs of John Selden* (10 vols., 1883–84).

selection. In DARWINISM, the mechanism of natural selection is considered of major importance in the process of EVOLUTION As a result of various factors in the environment (e g , the quantity of food and water available and the conditions of temperature and pressure) and the overproduction in animals and plants, a struggle for existence arises In this struggle, according to Darwin, those organisms better adapted to the environment survive (survival of the fittest) and reproduce, while those least fitted do not The "selection" is therefore based upon adaptation A special form of natural selection, sexual selection, is also stressed in Darwinism It attempted to account for secondary sex characters which were not necessarily of value in the struggle for existence It assumed that the female animal selects as a mate one having the most highly developed of such characters, e g , the most beautiful plumage or a superior song, therefore through reproduction those characters are perpetuated Artificial selection, the selection by man of individuals best suited for his purpose, is common in plant and animal breeding

selective service, in U S history Although national military CONSCRIPTION was begun (1863) in the Civil War to replenish the number of men in the Union army, Congress authorized release from service to anyone who furnished a satisfactory substitute and, at first, those who paid $300 General conscription was undertaken in the First World War The Selective Service Act of 1917 required all men between 21 and 30 years of age, inclusive, to register The age limits were extended to 18 and 45 in 1918 The men actually drafted for military service were chosen from the list of registrants by lottery Exemptions from service were granted to men who had families dependent on them, who were physically unfit, who were indispensable for duties at home, or who belonged to religious organizations with pacifistic principles Well over 2,500,000 men were drafted into the U S army in the First World War The United States adopted peacetime conscription for the first time in its history by the Selective Training and Service Act of Sept , 1940, when the Allies reached one of their blackest moments in the Second World War The act provided for an army limited to 900,000 men, men between 21 and 35 years of age registered and one year was made the length of service—later (Aug , 1941) extended to 18 months After the United States was plunged into the Second World War by the attack on Pearl Harbor, a new selective service act was passed (Dec , 1941), this made men between 18 and 45 liable for military service, while all men between 18 and 65 were required to register The terminal point of service was extended to SIX months after the war, and after enlistments were halted in the navy, marine corps, and coast guard, all the major branches of service were augmented from the pool of conscripted men As the need for men in the armed services increased, deferments for essential employment and for family dependents were steadily cut From 1940 until 1947—when the wartime selective service act expired after extensions by Congress—a total of over 10,000,000 were inducted into the armed services A new selective service act was passed in 1948 which required all men from 18 through 25 years of age to register and which made men from 19 to 25 liable for induction for 21-month service

Seled (sē'lĕd) [Heb ,=exultation], descendant of Jerahmeel 1 Chron 2 30

Selene (sŭlē'nē) [Gr ,=moon], in Greek religion, moon-goddess, daughter of the Titans HYPERION and THEIA She was identified with ARTEMIS and HECATE

Selenga (sĕlĕng-gä') river, c 750 mi long, rising in the Khangai mts , NW Mongolian People's Republic It flows east through the republic and then north along a generally navigable course through the Buryat Mongol ASSR to Lake Baikal The Orkhon is the principal tributary.

selenite (sĕ'lĭnīt, sŭlē'nīt) [Gr ,=of the moon], transparent variety of gypsum When pure, it is clear and colorless It occurs commonly in nature, in the United States (New York, Utah, and Ohio), in Canada, and in Europe (France, Italy, and Switzerland) Crystals of great beauty have been discovered in Sicilian sulphur mines Selenite crystallizes in the monoclinic system Chemically it is anhydrous calcium sulphate It is valued for its optical properties

selenium (sŭlē'nēum), rare, nonmetallic element (symbol=Se, for physical constants, see ELEMENT, table) Selenium exhibits allotropy, appearing in a number of different forms, including a red, amorphous powder, a red crystalline material, and a gray, metallike form which is called, from its appearance, "metallic" selenium A remarkable property (discovered by Willoughby Smith in 1873) of the crystalline "metallic" form is the difference shown in its ability to conduct electricity in darkness and in light When illumination is increased, its conductivity is increased As a result, the element has been used in a variety of devices in so-called selenium cells, which are highly sensitive to light The element is also extensively used in the preparation of rubber and in the manufacture of red glass and of some enamels In the colloidal condition it is used as a germicide and insecticide Selenium is grouped with sulphur and tellurium in the periodic system, resembling these elements in chemical activity, it forms, with oxygen, an oxide, with hydrogen and oxygen, selenious and selenic acids, of which the salts are, respectively, selenites and selenates, with hydrogen and several metals, e g , iron and silver, selenides, with chlorine, a chloride, and with chlorine and oxygen, an oxychloride It is rarely found uncombined in nature, but often occurs in the form of selenide in sulfide ores, especially those of copper, lead, silver, and iron Commercially it is obtained chiefly as a by-product in the refining of copper and in the preparation of sulphuric acid In some parts of the United States, chiefly in the Great Plains region, selenium is absorbed from the soil by vegetation in quantities sufficient to cause poisoning of livestock, thus making the land useless for grazing The element was discovered by Berzelius in 1817

Seleucia (sulū'shu), ancient city of Mesopotamia, on the Tigris below Baghdad It was founded by Seleucus I (c 312 B C) and soon replaced Babylon as the main center for east-west commerce through the valley As long as the Seleucids held the area Seleucia was their eastern capital When the Parthians conquered, they placed their capital at Ctesiphon, across the river from Seleucia Seleucia was thus superseded In a Parthian campaign Trajan burned the city, and it was destroyed by Romans in 164 The Arabs applied the name El Maidan to Seleucia-Ctesiphon Another Seleucia was founded by Seleucus as the seaport for Antioch. St Paul sailed from there Acts 13 4

Seleucus I (Seleucus Nicator) (sulū'kus), d 280 B C , king of ancient Syria An able general of Alexander the Great, he played a leading part in the wars of the Diadochi In the new partition of the empire in 312 B C he received Babylonia Conquest of Susiana and Media enlarged his holdings, and he managed to extend his power to the Oxus and the Indus He joined the league against ANTIGONUS I, and when Antigonus was defeated at Ipsus in 301 B C , Seleucus gained a large part of Asia Minor and all of Syria Of the Macedonian generals he was the one who tried hardest to set up a kingdom following Alexander's ideas He founded Greek colonies everywhere and tried to govern the subject peoples according to the methods of the Persian Empire He was succeeded by ANTIOCHUS I

Seleucus II (Seleucus Callinicus), d 226 B C , king of ancient Syria, son of Antiochus II On his father's death there was a struggle for the throne between Seleucus and his stepmother, Berenice (on behalf of her infant son) Before Berenice's brother, PTOLEMY III of Egypt, could arrive, Seleucus seems to have had Berenice and his half brother murdered A long war with Ptolemy ensued Seleucus also had to wage long war against his own brother, Antiochus Hierax, for Asia Minor Bactria and Parthia revolted and threw off Seleucid control, and Seleucus failed in attempts to reduce them ANTIOCHUS III was his son

Seligman, Edwin Robert Anderson (sĕ'lĭgmun), 1861–1939, American economist, b New York city, Ph D Columbia, 1885 As professor (1885–1931) at Columbia, he edited the "Columbia University Studies in History, Economics, and Public Law" and the *Political Science Quarterly* He was editor in chief of the *Encyclopaedia of the Social Sciences* An expert on public finance, he acted on many tax commissions and in 1931 was financial adviser to the Cuban government His works include *The Shifting and Incidence of Taxation* (1892, 5th ed , 1925), *Essays in Taxation* (1895, 10th ed , 1925), *The Economic Interpretation of History* (1902, 2d ed , 1924), *Principles of Economics* (1905, 12th ed , 1929), and *The Economics of Farm Relief* (1929)

Selim I (Selim the Grim) (sĕ'lĭm, sulēm'), 1467–1520, Ottoman sultan (1512–20) He ascended the throne by deposing his father, BAJAZET II, and by killing his brothers Selim ordered the massacre of some 40,000 Shiites—perhaps for political rather than religious reasons—and in 1514 he attacked and defeated the Shiite conqueror of Persia, Shah Ismail, annexing Diyarbekir and Kurdistan Aided by his superior artillery, he defeated (1516–17) the Mamelukes in Syria and Egypt, which he added to the Ottoman Empire By assuming the CALIPHATE, Selim made himself and his successors spiritual as well as temporal heads of the empire and gained control over the holy cities, Mecca and Medina. Selim died while preparing the conquest of Rhodes A bloodthirsty and inflexible despot, Selim was also an able organizer and reformer Under him the Ottoman Empire entered the period of its greatest power He wrote poetry in Persian and protected literature His son, Suleiman I, succeeded him

Selim II (Selim the Drunkard), c 1524–1574, Ottoman sultan (1566–74), son and successor of Suleiman I His reign was dominated by his grand vizier, Sokolli. Although the Turks conquered Cyprus from Venice and recovered Tunis from Spain, the Ottoman Empire received its first severe setback during Selim's reign in the naval defeat at LEPANTO (1571). He was succeeded by his son Murad III.

Selim III, 1761–1808, Ottoman sultan (1789–1807), nephew and successor of Abdu-l-Hamid I He suffered severe defeats in the second of the RUSSO-TURKISH WARS with Catherine II, but suffered no territorial losses when peace was made at Jassy in 1792 An ardent reformer, Selim set out to rebuild the Turkish navy on European lines, to reform the army, and to curb the JANIZARIES In 1798 Selim joined the second coalition against France in the French Revolutionary Wars Turkish forces lost Jaffa to Napoleon Bonaparte, who had invaded (1799) Syria after taking Egypt, but they held out at Acre and forced Napoleon to retreat In 1801 the French left Egypt, which was restored to the sultan In 1806 war with Russia broke out again (see RUSSO-TURKISH WARS). A revolt of the Janizaries led to Selim's deposition and imprisonment in 1807 MUSTAFA IV was placed on the throne A loyal army marched on Constantinople to restore Selim It entered the city in 1808, just after Selim's enemies had strangled him Mustafa was deposed and another of Selim's cousins, Mahmud II, ascended the throne During Selim's reign Egypt became virtually independent under MOHAMMED ALI, as did Albania under ALI PASHA Selim's well-intentioned and efficient reforms came too late to arrest the decay of Turkey

Selinsgrove (sĕ'lĭnzgrōv), borough (pop 2,877), E Pa , on the Susquehanna and c 35 mi N of Harrisburg, settled 1755, laid out 1790, inc 1827 A trading center for farmers, it produces textiles Susquehanna Univ (Lutheran, coeducational, 1858) and a state colony for epileptics are here

Selinus (sĭlī'nus), ancient city of Sicily It was founded (628? B C) by Dorian Greeks and was the constant rival of neighboring Segesta Selinus got Syracuse to interfere in a quarrel, which led to the unsuccessful Athenian expedition in Sicily (415 413 B C) Segesta invoked the aid of the Carthaginians, who sacked Selinus in 409 B C The city was rebuilt, but did not prosper and was finally destroyed by Carthage in 250 B C Ruins of the five Doric temples on the Acropolis of Selinus recall the brilliance of the city when it was at its height

Seljuks see TURKS

Selkirk, Alexander (sĕl'kûrk), 1676–1721, Scottish sailor, whose adventures suggested to Daniel Defoe the story of *Robinson Crusoe* (1719) In 1704, when a sailing master, he quarreled with the captain of his ship in the Juan Fernández islands and asked to be put ashore He remained on Más Afuera Island for four years and four months before he was rescued (Feb 9, 1709) by an English privateer His equipment on the island included a gun and ammunition Later he became a lieutenant in the British navy See John Howell, *The Life and Adventures of Alexander Selkirk* (1829)

Selkirk, Thomas Douglas, 5th **earl of,** 1771–1820, Scottish philanthropist, founder of the RED RIVER SETTLEMENT Emigration to America seemed to him the best solution for the poverty of his countrymen, especially those Highlanders who had been evicted from their small holdings He obtained land on Prince Edward Island and supervised (1803) the founding of a successful settlement His experiences in planting a colony in Rupert's Land were far less happy To get the necessary land there, he acquired a controlling financial interest in the Hudson's Bay Company In 1812 the first party of colonists settled at the forks of the Red and Assiniboine rivers, a site important to the powerful North West Company as a food-supply region and focal point in their east-west fur trade Selkirk later dispatched other parties to join the first Trouble soon broke out, in 1815 the North West Company broke up the colony, which was, however, refounded that year Selkirk decided to visit his project He went from Scotland to Montreal, and from there with a company of colonists and an armed guard he set forth via the Great Lakes En route he learned of the attack (the massacre of Seven Oaks, 1816) on his colony He seized Fort William, a headquarters post of the North West Company, and in his capacity as justice of the peace of Upper Canada, he arrested some of the ringleaders, whom he sent east for trial After refounding (1817) his colony for the third time, he returned to Canada Lawsuits were brought against him by the North West Company, and he was forced to pay damages Having sacrificed his health and most of his fortune in his philanthropic enterprises, he returned home in 1818 and died in France two years later He wrote *Observations on the Present State of the Highlands of Scotland* (1805) and *A Sketch of the British Fur Trade in North America* (1816). See Chester Martin, *Lord Selkirk's Work in Canada* (1916), George Bryce, *Mackenzie, Selkirk, Simpson* (rev. ed , 1926)

Selkirk, county, Scotland see SELKIRKSHIRE

Selkirk (sĕl'kûrk), town (pop 5,408), SE Man , on the Red River, NE of Winnipeg and S of Lake Winnipeg It is a transshipping center for Lake Winnipeg fish and has lumber and steel mills, dairies, and truck gardens. The town is named for the 5th earl of Selkirk, who established (1812) the RED RIVER SETTLEMENT in the region.

Selkirk, burgh (pop 5,667), county town of Selkirkshire, Scotland, on Ettrick Water and S of Gala-

shiels. Here, in 1113, the future David I founded an abbey which was later moved to Kelso. There are statues commemorating Sir Walter Scott (sheriff of Selkirkshire for many years) and Mungo Park. There is also a memorial of the battle of Flodden. The term "souters of Selkirk" originated from the former occupation of the town, shoemaking. Since the 19th cent tweed has been the principal manufacture.

Selkirk Mountains, range of the Rocky Mts, SE British Columbia, near the Alta. border and extending northwest 200 mi. from the Idaho and Mont. borders. It is almost encircled by the Columbia river, which loops around the north end of the range.

Selkirkshire (sĕl'kûrkshĭr) or **Selkirk,** inland county (267 sq. mi., 1931 pop. 22,608, 1948 estimated pop. 22,296), S Scotland. The county town is Selkirk. It is a region of rolling hills, watered by the Ettrick river. Sheep raising is the chief occupation. The county has literary associations with Sir Walter Scott, who lived here for some years, and with James Hogg, the "Ettrick Shepherd." Selkirkshire was once part of the Saxon kingdom of Northumbria and was not annexed to Scotland until 1020. It was the scene of much strife during the border warfare between England and Scotland.

Sellersburg, residential town (pop. 1,121), Clark co., SE Ind., SE of Salem.

Sellersville, borough (pop. 2,115), SE Pa., c 30 mi. NNW of Philadelphia, inc. 1874. Quarrying is done near here.

Selma **1** City (pop. 19,834), co. seat of Dallas co., SW central Ala., W of Montgomery and on the Alabama river, in a diversified farm area, settled 1816, inc. 1820. It processes cotton, cottonseed oil, iron, lumber, and dairy goods and is a rail center. A Confederate arsenal and supply point, it was ravaged in 1865. There are a number of fine ante-bellum houses. Selma Univ. (Negro) is here. The U.S. military aviation school here was opened in 1941. **2** City (1940 pop. 3,667, 1946 special census pop. 5,894), S central Calif., SE of Fresno in the San Joaquin Valley, inc. 1893. The surrounding area produces fruit, truck, dairy products, and cotton. **3** Textile-mill town (pop. 2,007), E central N.C., SE of Raleigh.

Selous, Frederick Courtenay (sulōō', -lōōs, kôrt'nē), 1851–1917, English author, hunter of big game in Africa. His explorations and collections of museum specimens were a valuable contribution to geography and natural history. He guided the pioneering expedition of the British South Africa Company to Mashonaland (1890). He was killed in action in German East Africa. His books include *Travel and Adventure in South-East Africa* (1893), *Sunshine and Storm in Rhodesia* (1896), and *African Nature Notes and Reminiscences* (1908). See biography by J. G. Millais (1918).

seltzer water, alkaline water, rich in salts, especially sodium carbonate. It is also known as selters water, deriving its name from the Neider-Selters spring water in Prussia. It was very popular during the 19th cent. as a beverage and as medicine. First produced artificially in the 19th cent., it is now manufactured in commercial quantities in Europe and America. It is reputedly beneficial in certain diseases of the digestive, respiratory, and urinary systems.

selvas (sĕl'vəz) [Span., =woods], tropical forested plains, more particularly the selvas of the Amazon basin. They are remarkable for lush, variegated plant growth and numerous species of animal life. Their many rubber-yielding trees were formerly of great commercial value.

Selwyn, George Augustus (sĕl'wĭn), 1809–78, English prelate, first Anglican bishop of New Zealand and bishop of Lichfield. In 1841 he was appointed to the new colonial diocese of New Zealand. Having prepared himself on the voyage by studying navigation and the language of the Maoris, he extended his area among the South Sea Islands, sailing his own vessel. In 1868 Bishop Selwyn was made bishop of Lichfield. In 1882 Selwyn College, Cambridge, a tribute to his memory raised through popular subscription, was incorporated. See Louise Creighton, *G. A. Selwyn, Bishop of New Zealand and Lichfield* (1923).

Selwyn College · see CAMBRIDGE UNIVERSITY.

Sem, variant of SHEM.

Semachiah (sĕm'əkī'ə), temple doorkeeper 1 Chron. 26:7.

semaphore (sĕ'məfôr'), device for the visible transmission of messages. The marine semaphore, used by day between ships or between a ship and the shore, consists essentially of a post at the top of which are two pivoted arms. The arms are connected by light gearing to two operating levers. Each letter of the alphabet and each numeral is indicated by a different placing of the arms. The system can also be used by the signalman through motions of his own arms, with or without small flags as indicators. The semaphore used in traffic regulation consists of an upright post on a stand, having at the top right-angle arms bearing stop and go signals. For night use there are red and green lights on the arms. In the railroad semaphore a single projecting arm pivoted at one end and attached to a vertical post is devised to take three positions. Horizontal indicates stop, and vertical, all clear, the inclined position indicates that the locomotive may go ahead under control expecting to be stopped.

Semarang (sōmä'räng), city (pop. 217,796), on N Java, Indonesia, on the Java Sea and at the mouth of the Semarang. An important port, it is one of the major commercial centers of Java. It exports tobacco, sugar, copra, rubber, kapok, and coffee. There are textile mills and shipyards.

Sembrich, Marcella (sĕm'brĭk), 1858–1935, stage name of Praxedo Marcelline Kochanska, Polish coloratura soprano, studied piano and violin at the Lemberg Conservatory. Urged by Liszt to train her voice, she studied in Vienna and Italy and made her operatic debut in Athens in 1877. She sang from 1878 to 1880 in Dresden and then for five seasons in London. In 1883 she made her debut at the Metropolitan Opera House, where she sang regularly from 1898 to 1909. She continued concert appearances until 1917, afterward teaching at the Curtis Institute, Philadelphia, and the Juilliard School of Music. Considered the greatest coloratura of her day, she was outstanding as Violetta in *La Traviata*.

Semei (sĕ'mēī), ancestor of Joseph in the Gospel genealogy. Luke 3:26.

Semele (sĕ'məlē), in Greek religion, daughter of Cadmus and Harmonia. ZEUS, who loved her, appeared to her as a man. She asked him to come in all his divine majesty, but when he did so she died of terror and was consumed by lightning. Zeus rescued her child, DIONYSUS, who later found his mother in Hades and took her to Olympus.

Semendria, Yugoslavia · see SMEDEREVO.

semicolon · see PUNCTUATION.

Seminole (sĕ'mĭnōl) **1** City (pop. 11,547), central Okla., SE of Oklahoma City, settled 1890, inc. as a town 1908, as a city 1926. It is the trade center for a farm and oil region. **2** Town (pop. 1,761), co. seat of Gaines co., NW Texas, SW of Lubbock, in a ranching area on the Llano Estacado, founded 1908, inc. 1936.

Seminole Indians, North American Indian tribe of Natchez-Muskogean linguistic stock. They separated (their name means "separate") from the Creek Indians in the early 18th cent. and settled in the former territory of the Apalachee Indians in Florida. They gradually grew in strength, absorbing many runaway Negro slaves and the remnants of the Apalachee. While still under Spanish rule the Seminole became involved in trouble with the United States, particularly in the War of 1812 and again in 1817–18. In the war of 1817–18 Gen. Andrew Jackson with over 3,000 men invaded Florida to punish the hostile Seminole. By the treaty of Paynes Landing in 1832 the Seminole were bound to move W of the Mississippi within three years. A large portion of the tribe, led by Osceola, refused to go and prepared for resistance. In 1835 began the Seminole War which proved to be the most costly Indian war in which the United States engaged. The war lasted for nearly eight years, and 1,500 American soldiers were killed and $20,000,000 spent. The American troops were led, for a time, by Richard Keith Call. The Seminole, finally subdued (Aug., 1842), consented to move to the West. Some remained isolated in the Everglades, and there is now a reservation for them. In Oklahoma the Seminole are one of the Five Civilized Tribes. There are 650 Seminole in Florida and 2,000 in Oklahoma. The Seminole, like their parent tribe the Creek Indians, were of the Southeast culture area. See Alexander Spoehr, *Florida Seminole Camp* (1944).

Semipalatinsk (syĭmē"pŭlä'tyĭnsk), city (pop. 109,779), capital of Semipalatinsk oblast, E Kazakh SSR, on the Irtysh river and the Turksib RR. Founded in 1718 as a Russian frontier post, it grew into an important trade, transportation, and administration center. The population consists of Russians, Kazakhs, and Tatars.

Semi-Pelagianism see PELAGIANISM.

semiprecious stone · see GEM.

Semiramis (sĕmĭr'əmĭs, sĭ-), in Assyrian mythology, the daughter of the Syrian fish-goddess Derceto. She was brought up by the royal shepherd Simmas. Afterwards Onnes, an Assyrian general, married her. Her skill in conducting the capture of Bactria brought her the love of Ninus, the king of Assyria, who married her after Onnes had killed himself. She reigned for 42 years after the death of Ninus, and according to legend she conquered Persia, Libya, and Ethiopia, founded Babylon and Nineveh, and built many monuments. She left the kingdom to her son Ninyas. After her death she became a dove and was worshiped as such. The historical figure behind this legend is probably Sammuramat, who was regent of Assyria from 810 to 805 B.C. Later, she acquired many of the characteristics of Ishtar.

Semite (sē'mīt, sĕ'–), originally one of a people believed to be descended from Shem, son of Noah. Today the term is used to include the following peoples: Arabs, the Akkadians of ancient Babylonia; the Assyrians, the Canaanites (including Amorites, Moabites, Edomites, Ammonites and Phoenicians), the various Aramaean tribes (including Hebrews); and a considerable portion of the population of Ethiopia. These peoples are grouped under the term *Semite*, chiefly because their languages were found to be related, deriving presumably from a common tongue, Semitic (see LANGUAGE, table). Other kinds of evidence, such as similarities in physical characteristics and in aspects of culture other than language, also indicate relationships between peoples but are less easily demonstrable and are subject to more varied interpretation. In fact, no such evidence as physical or linguistic similarities between two groups is conclusive in asserting kinship and must be used with care. Though the matter is not beyond controversy, the weight of opinion holds that the original home of the Semites was Arabia, from which they spread in successive migrations to Mesopotamia, the eastern Mediterranean littoral, and the delta of the Nile. Such movement over a considerable period of time resulted in mixing of various tribes, who as they entered an area came into contact with Semitic predecessors or with non-Semitic peoples. In Mesopotamia, Semitic people from the earliest date were in contact with Sumerian civilization and with the rise of Sargon of Agade and Hammurabi of Babylon were able to dominate it completely (see SUMER). In Phoenicia, the Semitic population developed a widespread maritime trade and became the first great seafaring people (see PHOENICIAN CIVILIZATION). That group of Hebrews which had been diverted through Sinai into the Nile delta settled at last with other Semitic inhabitants in Palestine. These southern or Judean Hebrews became the leaders of a new nation and religion (see JEWS and JUDAISM). See W. H. Worrell, *A Study of Races in the Ancient Near East* (1927), G. A. Barton, *Semitic and Hamitic Origins* (1934).

Semitic languages (sĭmĭt'ĭk), great linguistic family. See LANGUAGE (table).

Semliki (sĕmlē'kē), river, c 150 mi. long, rising in the western foothills of the Ruwenzori mts. It flows from Edward Nyanza N to Albert Nyanza and forms for c 50 mi. the boundary of Belgian Congo and Uganda. The explorer Henry M. Stanley reached the Semliki in 1888.

Semmelweis, Ignaz Philipp (ĭg'nätsfĭ'lĭp zĕ'mulvĭs), 1818–65, Hungarian physician. He was a pioneer in employing antiseptic methods in obstetrics. While on the staff of the general hospital in Vienna, he recognized PUERPERAL FEVER to be an infectious disease, and by insisting on the antiseptic cleansing of the hands of attendants in obstetrics cases, he notably reduced the death rate from infection in childbirth. Opposition to his campaign caused him to leave Vienna (1854) for Pest, Hungary, and ultimately affected his mind. Although he recorded his results in *The Cause, Concept, and Prophylaxis of Childbed Fever* (1861, Eng. tr., 1941), the value of his work was not fully recognized until c 1890. See biography by L. F. Destouches (1937).

Semmering (zĕ'mərĭng), scenic resort region of the Eastern Alps on the border of Styria and Lower Austria, SW of Wiener Neustadt. The Alps here are crossed by the **Semmering Pass,** 3,215 ft. high, 275 ft. beneath it runs the first mountain railroad in the world (built 1848–54). It penetrates 15 tunnels and is carried over 16 viaducts.

Semmes, Raphael (sĕmz), 1809–77, American naval officer, b. Charles co., Md. He was appointed midshipman in the U.S. navy (1826), and although he studied law and was admitted to the bar (1834), he continued in the service. He took part in the Mexican War, practiced law at Mobile, Ala., and was in the Lighthouse Service from 1856 to Feb., 1861, when he resigned his commission as commander. He soon took the same rank in the Confederate navy. His first ship, the *Sumter*, eluded the Union blockade at the mouth of the Mississippi (June, 1861) and did considerable damage to Northern commerce before she was bottled up at Gibraltar in Jan., 1862. In Aug., 1862, Semmes now a captain, took command of the *Alabama* (see CONFEDERATE CRUISERS), and a two-year cruise made him the naval hero of the Confederacy. After the *Alabama* was sunk by the *Kearsarge*, Semmes returned to the South. He was promoted rear admiral in Feb., 1865, and charged with the naval defense of Richmond. He also became a brigadier general. After the war Semmes taught, edited a newspaper, lectured, and again practiced law in Mobile. He wrote several books concerning his naval exploits. See biographies by Colver Meriwether (1913) and W. Adolphe Roberts (1938), H. A. Gosnell, *Rebel Raider* (1948).

Semnae, see ERINYES.

Semnan (sĕmnän'), city (pop. 23,078), capital of the Second Prov., N Iran, E of Teheran. It has cotton manufactures and handles pistachio nuts. It is a road junction.

Semonides of Amorgos (sĭmŏ'nĭdēz, umôr'gŏs), fl. c 650 B.C., Greek iambic poet. His satires were more general than personal, in one of the few extant fragments he satirizes women, whose peculiar characteristics he describes by comparison with animals. His name also appears as Simonides.

Sempach (zĕm'pakh), town (pop. 1,229), Lucerne canton, Switzerland, near Sempach Lake. Here, in

1386, the Swiss decisively defeated the Austrians. According to a legend, victory was secured by the self-sacrifice of Arnold von WINKELRIED

Semper, Gottfried (gôt'frēt zĕm'pur), 1803–79, German architect, skillful in adapting the Italian Renaissance style to German environment. He taught (1834–49) architecture at the Dresden Academy and became (1855) director of the architectural section of the Polytechnische Schule, Zurich. Because of his part in the Revolution of 1848, he was forced to leave Germany and was for a time in London. Among the buildings he designed are the New Synagogue and Hoftheater, Dresden, Polytechnicum, Zurich, and two museums and the imperial palace, Vienna. His chief written work was on style in the technical arts (1878)

Sempill, Robert, 1530?–1595, Scottish ballad writer and satirist. He spent a number of his early years abroad and probably was a soldier of the army, for he was present at the siege of Leith (1559–60). In his ballads and crude, coarse but vigorous satires, Sempill supported the earl of Moray and the Reformation party. The manuscript of his poems, written in black letter, is still extant; they were published in *The Sempill Ballates* (1872), edited by T. G. Stevenson

Semple, Ellen Churchill, 1863–1932, American geographer, b. Louisville, Ky., grad. Vassar, 1882, and studied at the Univ. of Leipzig. She helped develop the study of anthropogeography (science of geographical distribution of mankind), lecturing (1906–23) on the subject at the Univ. of Chicago. From 1921 to 1932 she was professor of anthropogeography at Clark Univ. She was a frequent contributor to geographical journals; her writings include *American History and Its Geographic Conditions* (1903, revised 1933), *Influences of Geographic Environment* (1911), and *The Geography of the Mediterranean Region* (1931)

Senaah (sĕnā'u), same as HASSENAAH

Senancour, Étienne Pivert de (ātyĕn' pēvĕr' du sŭnăkōor'), 1770–1846, French writer. He is known principally for his autobiographical epistolary novel *Obermann* (1804, 2d ed., 1833, 3d ed., 1840, Eng. tr., 1903). The sentimental attitude toward nature and the morbid melancholy of his novel without a plot suggest Rousseau, but a pervasive preoccupation with intellectual problems sets it apart from other works of the same genre and period

Senate, United States see CONGRESS OF THE UNITED STATES

senate, Roman, governing council of the Roman republic. It was the outgrowth of a royal privy council. By the 3d cent. B.C. the senate was a group of 300 men with legislative and administrative control of Rome. There were serious checks on its power, especially in the hands of the tribunes. The members were chosen by the censors, and included theoretically the "best" citizens, but as it worked out, the senate consisted of ex-magistrates, almost entirely members of a small number of old families. In the expansion of Rome in the 3d and 2d cent. B.C. the senate sent out the armies, made the treaties, organized the new domain, and controlled finance. The senatorial conduct of Roman affairs was fairly successful until c. 130 B.C. After that provincial administration of the huge empire was increasingly inefficient and graft-ridden. In spite of the narrowness of the membership, the authority of the senate was not called in question until the growth of party-class division that developed with the agitation of the GRACCHI. The leaders of the senate became also the leaders of the most reactionary group and would yield on no point, economic or political. The fatal development in the republic of two parties, optimates (the senatorial conservatives) and populares, grew out of this resistance to change. The optimates tried to foster the idea that they represented constitutionalism versus subversion, but after SULLA, who combined the bloodiest illegality with strictest defense of the senate (which he raised to 600 members), such a claim by optimates was cynical. Julius CAESAR, a popularis, did not make his famous (illegal) move across the Rubicon until the senate had defied him with a clearly unconstitutional decree. Caesar enlarged the number (to 900) to broaden it. The ruin of the optimates and the senate was accomplished in the proscription of 43 B.C. after Caesar's assassination (the work of optimates who had sided with Pompey and who had been reconciled with Caesar). After the proscription what was left of the senate was docile and ineffectual. AUGUSTUS included the senate in his plans and, reversing Caesar's program of enlarging Roman citizenship and responsibility, lowered the number to 600. As an administrator he found he had to reduce senatorial control in the provinces, and an attempt he made to turn the city government to the senate was a failure. He made much of senatorial prestige, and for generations the emperor's chief title was *princeps senatus* [leader of the senate]. There was an important revival of the senate late in the 1st cent. A.D. often attributed to the influx of non-Roman Italians. Nerva and his successors emphasized the role of the senate, but even this shadow of former authority was obviously only possible if the monarch willed it. The ancient senate is not heard of after the 6th cent.

Senath (sē'năth), cotton city (pop. 1,261), extreme SE Mo., near the St. Francis river, founded 1882.

Senatobia (sĕnătō'bēu), town (pop. 1,757), co. seat of Tate co., NW Miss., S of Memphis, Tenn., in a farm area, founded 1856. A district junior college is here.

Sendai (sändī'), city (1947 pop. 293,816), capital of Miyagi prefecture, N Honshu, Japan, on Ishinomaki Bay. It is a manufacturing and educational center, seat of Tohoku Imperial Univ. and the Industrial Art Research Institute. In the 17th cent. it was the stronghold of the powerful feudal lord, Date. Masamune Miyagi prefecture yields farm products, lumber, raw silk, and minerals.

Sender, Ramón José, (rämōn' hōsā' sändĕr'), 1902–, Spanish novelist. Educated at religious colleges, he also studied law. His success has been greater in foreign countries than in his own, and most of his books have been translated. He was active in the Spanish revolutionary movement and was exiled for republican ideas. He is considered the original of the character "Manuel" in André Malraux's novel *Man's Hope*. Some of his best-known novels, all of which are concerned with social problems, are *Imán* (1930, Eng. tr., *Earmarked for Hell*, 1934, American title *Pro Patria*, 1935), *Siete domingos rojos* (1932, Eng. tr., *Seven Red Sundays*, 1936), *El lugar del hombre* (1939, Eng. tr., *A Man's Place*, 1940), and *Epitalamio del prieto Trinidad* (1942, Eng. tr., *Dark Wedding*, 1943). See his autobiographical *Crónica del alba* (1942, Eng. tr., *Chronicle of Dawn*, 1944)

Senebier, Jean (zhä' sunubyā'), 1742–1809, Swiss natural philosopher. After leaving the ministry he became a librarian at Geneva. He is known for his discovery and demonstration of the dependence of plant nutrition on sunlight.

Seneca (Lucius Annaeus Seneca) (sĕ'nuku), c.3 B.C.–A.D. 65, Roman philosopher, dramatist, and statesman, b. Corduba (Córdoba), Spain. He was the son of Lucius (or possibly Marcus) Annaeus Seneca, who wrote on rhetoric. The younger Seneca went to Rome in his childhood, studied rhetoric and philosophy, and earned renown as an orator when still a youth. He was exiled by Claudius (A.D. 41) ostensibly because of his intimacy with Julia, Germanicus' daughter. In 49 he was recalled at the urgings of AGRIPPINA to become tutor of the young NERO. In the first years of Nero's reign Seneca was virtual ruler with Afranius Burrus, and their influence on the emperor was probably for the best. But the ascendancy of Poppaea brought about first the death of Agrippina (A.D. 59), then that of Burrus (A.D. 62). Seneca asked to retire. He had amassed a huge fortune and wanted no more of court life. Accusations of conspiracy were finally leveled at Seneca, who, bidden to commit suicide, opened his veins. His death scene was considered remarkably noble by the Romans. Seneca was a Stoic, and his writings show a high, unselfish nobility considerably at variance with the greed, timeserving, and even actual connivance at murder in his own life. His *Epistolae morales ad Lucilium* are essays on ethics written for his friend Lucilius Junior, to whom he also addressed *Quaestiones naturales*, philosophical, rather than scientific, remarks about natural phenomena. The so-called *Dialogi* of Seneca include essays on anger, on divine providence, on Stoic impassivity, and on peace of soul. Other moral essays have also survived, notably *De clementia*, on the duty of a ruler to be merciful, and *De beneficiis*, on the award and reception of favors. The *Apocolocyntosis* is a satire on the apotheosis of Claudius. Perhaps the most influential of his works as far as European literature is concerned were his tragedies. Nine of these are now accepted as his—*Hercules Furens*, *Medea*, *Troades*, *Phaedra*, *Agamemnon*, *Oedipus*, *Hercules Oetaeus*, *Phoenissae*, and *Thyestes*. All of them are based on Greek originals, and all have lofty moralizing declamations that slow the action. They seem to have been written for recitation rather than for acting. The poetry is highly finished and to the modern reader seems contrived and monotonous. Indeed the plays are ill thought of today, but they—and a 10th, *Octavia*, now no longer ascribed to Seneca but to a later imitator—had a tremendous influence on the Renaissance. In Italy, France, and England their high tone, magnificent rhetoric, and formal elegance appealed very greatly, and the Senecan drama was long popular. Some of the plays written in imitation of them (e.g., Racine's *Phèdre*) are generally considered much finer than the originals. Among the English dramas modeled on his were the first of the regular English tragedies, *Gorboduc* (largely by Thomas Sackville, earl of Dorset), and the tragedies of Ben Jonson. He was also admired in the neoclassic period and imitated by such men as Addison and James Thomson. See F. L. Lucas, *Seneca and Elizabethan Tragedy* (1922).

Seneca (sĕ'nŭkŭ). **1** Unincorporated community, N Ill., on the Illinois river and E of La Salle. It experienced a temporary expansion during the Second World War with the installation of a large U.S. navy shipyard where landing craft were constructed. **2** City (pop. 2,015), co. seat of Nemaha co., NE Kansas, near the Nebr. line, NNW of Topeka; laid out 1857, inc. 1870. It is the trade center of an agricultural area. **3** City (pop. 1,091), SW Mo., at the Okla. line, SW of Joplin, platted c.1869. Tripoli is mined and processed here. **4** Textile town (pop. 2,155), NW S.C., between the Tugaloo and Seneca rivers, NW of Anderson, in a cotton area, founded 1874.

Seneca, river flowing ENE from Seneca Lake, W central N.Y., to Cayuga Lake and thence northeasterly to join the Oneida and form the Oswego. Part of the river is utilized by the Barge Canal.

Seneca Falls, village (pop. 6,452), W central N.Y., in the Finger Lakes region, on the Seneca river and E of Geneva, settled 1787, inc. 1831. Its products include power pumps and machinery. Elizabeth Cady Stanton lived here and was one of the organizers of the first woman's rights convention in the United States, held in the village in 1848.

Seneca Indians: see IROQUOIS CONFEDERACY.

Seneca Lake, 35 mi. long, W central N.Y., one of the FINGER LAKES. It lies between Keuka and Cayuga lakes, with Watkins Glen at its head and Geneva at its foot, and drains ENE through the Seneca river. A naval training base was set up at SAMPSON here in 1942.

Senefelder, Aloys (zā'nufĕl"dur), 1771–1834, b. Prague. He invented lithography in Munich c. 1796. In 1818 he published a full account of the nature and the history of his invention. The English translation, *A Complete Course of Lithography*, appeared in 1819.

Seneff or **Seneffe** (both sunĕf'), town (pop. 3,052), Hainaut, Belgium, NW of Charleroi. Here in 1674 the French under Louis II de Condé defeated the Dutch.

Senegal (sĕnĭgôl', sĕ'nĭgôl), overseas territory (731,000 sq. mi.; pop. c. 1,895,000), French West Africa, on the Atlantic. The capital is Saint-Louis. It is bordered on the north by the Senegal river, which separates it from Mauritania, on the east by French Sudan, on the southeast by French Guinea, and on the southwest by Portuguese Guinea. Gambia forms an enclave. The coast (c.250 mi. long) is low lying, and the interior is a well-forested plain. Railroads connect Dakar, the capital of French West Africa, with Saint-Louis, and during the rainy season the Senegal river is a trade artery. Peanuts, the chief crop and export, are shipped principally from Kaolack on the Saloum river. Cotton and gum arabic are also exported, and fisheries are increasing in importance. Senegal was first explored by the Portuguese in the 15th cent. Other European nations followed, including the French, who in 1659 established a trading post in Saint-Louis. French possession was internationally recognized in 1814, and the conquests of General Faidherbe established the colony on a firm basis, but the country was not completely pacified until 1900. The Senegalese have contributed many soldiers to the French forces.

Senegal, river, c.900 mi. long, rising in SW French Sudan. It flows NW through Senegal to empty into the Atlantic Ocean below Saint-Louis. During the rainy season it is navigable to the Senegal border.

senega snakeroot (sĕn'ĭgu), perennial plant (*Polygala senega*) which bears small white flowers and grows wild in the United States. The rootstock, once used by Indians for treating snake bite, is the source of the drug senega, an expectorant and a diuretic for some ailments. The senega snakeroot is a SOAP PLANT.

Seneh (sē'nĕ), in the Bible: see BOZEZ.

Senigallia (sänēgäl'lyä), town (pop. 11,394), the Marches, central Italy, on the Adriatic. A Roman town, it was (6th cent.) one of the five cities of the PENTAPOLIS. Although included in the territories donated by Pepin the Short to the popes, it was a free commune (12th cent.) and later a papal fief under various lords. Cesare Borgia had several rebellious lords slain here (1502). The city has walls and a castle dating from the 15th cent. and two Renaissance churches. It is today a bathing resort.

senility (sunĭ'lutē), state of body and mind that tends to develop in old age. The span of life varies, and evidences of old age vary in the time of their appearance. Brittleness of bones, loss of pigment in the hair, and loss of elasticity of the lens of the eye are evidences of senility. The degenerative diseases are characteristic of old age, e.g., arthritis and arteriosclerosis. The advance of old age is thought to be hastened by an improper balance of endocrine gland secretions.

Senior, Nassau, 1790–1864, English economist. A graduate of Oxford, he was called there in 1825 to fill the first chair of political economy in England. In *An Outline of the Science of Political Economy* (1836) he sought to carry classical economic principles closer to scientific formulation. He also promulgated a famous theory which stated that capital was a productive factor and that interest and profit accrued to the capitalist as a result of his "abstinence" (i.e., saving). Senior served on several commissions to investigate social problems and helped produce the report that was the basis for the

poor law of 1834. See studies by Marian Bowley (1937) and S. L Levy (1944).

Senir (sē'nûr) or **Shenir** (shē'nûr), Amorite name for Mt. HERMON and its neighborhood. Deut 3 9; 1 Chron 5 23, Cant 4.8; Ezek. 27.5.

Senlac: see HASTINGS, Sussex East, England.

Senlis (sälēs'), city (pop. 6,049), Oise dept., N France, NE of Paris. A royal residence from the time of Clovis, it has preserved an inner city wall, which dates from Gallo-Roman times and is largely embedded in the present houses, and vestiges of a medieval wall. The Church of Notre Dame (a cathedral until the French Revolution) is one of the earliest of all large Gothic structures (12th cent.), other historical buildings include the town hall (15th cent.) and numerous old private houses. Here in 1493 Charles VIII signed a treaty yielding Franche-Comté, Artois, and Charolais to Emperor Maximilian I.

Senn, Nicholas, 1844–1908, American surgeon, b. Switzerland, M. D. Chicago Medical College, 1868. He came to the United States in 1853. He practiced in Milwaukee and from 1887 taught at Rush Medical College. In 1898 he served as surgeon in the Spanish-American War. A noted surgeon, he introduced methods of repair of the intestines and, by inflation with hydrogen, a method of detecting perforation. He also made a study of tumors and wrote numerous works on surgery.

senna, any plant of the genus *Cassia*, leguminous herbs, shrubs, or trees most common in warm regions. Some species are cultivated for ornament, but sennas are best known as medicinal plants. The dried leaves are used as a purgative and are chiefly obtained from *Cassia acutifolia* (Alexandria senna) and *Cassia angustifolia* (Indian senna), both cultivated in Old World tropics. The wild senna (*Cassia marylandica*) of the E United States is a tall yellow-flowered plant that has been sometimes similarly used. The seeds of one senna have served as a coffee substitute. Cassia or cassia bark is a species of CINNAMON.

Sennacherib (sĕnă'kurĭb), d. 681 B.C., king of Assyria (705–681 B.C.). Son of Sargon, Sennacherib spent most of his reign fighting to maintain the empire established by his father. His first campaign was waged against Babylonia. In 701 B.C. he marched against an uprising of the western nations, Phoenicia, Palestine, and Philistia, who were supported by Egypt. He defeated the Egyptians at Eltekeh (701) and prepared to take Jerusalem. ISAIAH encouraged HEZEKIAH of Judah to resist Sennacherib and the Assyrian came to terms, but exacted a heavy tribute. It is uncertain whether the biblical account of the plague which ravaged Sennacherib's army occurred at this time or at a later date. Byron's poem, "The Destruction of Sennacherib," relies on the account in 2 Chron. 32. Disturbances in Babylonia called the king to that area, and he waged a naval campaign against the Chaldaeans. He laid Elam waste and finally fought both the Chaldaeans and the Elamites at the battle of Halulina (Khaluli) (c. 691 B.C.). The exact outcome of this battle is uncertain. Two years later Sennacherib captured and destroyed Babylon. Sennacherib constructed canals and aqueducts and built a magnificent palace at Nineveh. He was murdered, perhaps by his two sons, and was succeeded by his son, ESAR-HADDON. Isaiah 36, 37, 2 Kings 18,19. See A. T. Olmstead, *History of Assyria* (1923).

Sennar (sĕnär'), town (pop. c. 8,000), E central Anglo-Egyptian Sudan, on the Blue Nile. It was the capital of the Moslem kingdom of Sennar, founded by Amara Dunkas (reigned c. 1484–c. 1526), who overthrew the Christian kingdom of Aloa. Under its strongest rulers Sennar extended from the Atbara river to the White Nile. The kingdom declined in the 18th cent., and Egypt easily annexed its territory in 1821. Sennar town is connected by rail with Khartoum and with El Obeid. Near it is the Sennar Dam (completed 1925), which impounds water used to irrigate over 10,000 sq. mi., planted mainly in cotton and millet.

Sennett, Mack (sĕ'nĭt), 1884–, American moving-picture director and producer, whose real name was Michael Sinnott, b. Danville, Que. He acted for David Wark Griffith at the Biograph Company in 1909 and was in charge of production for the Keystone Company in 1912. Sennett's films, rarely more than one or two reels long, were slapstick comedies with fantastic chases, custard pie warfare, Keystone cops, and bathing beauties. They include *Bright Lights, Fatty and Mabel Adrift, The Surf Girl, Tillie's Punctured Romance*, and *Mickey*. Mabel Normand, Ford Sterling, Ben Turpin, Roscoe ("Fatty") Arbuckle, Marie Dressler, and Charles Chaplin all acted for Keystone. See Gene Fowler, *Father Goose* (1934).

Senones (sĕnō'nēz, sē'nōnēz), ancient people of GAUL. There were two groups, one of which settled in NE Italy S of the Po in the 4th cent. B.C. The others, known to Caesar, lived in the valley of the Seine.

Sens (säs), city (pop. 15,936), Yonne dept., France, in Champagne. It is an old ecclesiastic city and an archiepiscopal see. An important center of the Roman province of Lugdunensis, Sens later became a county which in 1055 was annexed to the French crown. Several ecclesiastic councils took place here. The massacre (1562) of the Huguenots of Sens rekindled the Wars of Religion, during which Sens was a stronghold of the League. The great power of the archbishops of Sens declined when Paris, until then under their ecclesiastic jurisdiction, was made (1622) an archdiocese. The Cathedral of St. Étienne (mostly 12th cent.) is one of the oldest Gothic monuments in France. Its windows probably were painted by Jean COUSIN. Its chief architect, William of Sens, also worked on Canterbury cathedral, which resembles it in part. Town and cathedral were slightly damaged in 1940 in the Second World War.

sensationalism, in philosophy, the theory that there are no innate ideas and that knowledge is derived solely from the sense data of experience. This was the position of Hobbes, Locke, Berkeley, Hume, La Mettrie, Holbach, Helvétius, and others. Compare EMPIRICISM.

sense, faculty by which external or internal stimuli are conveyed to brain centers where they are registered as sensations. The five senses, sight, hearing, touch, smell, and taste, are special faculties concerned with the receiving and conducting of external stimuli through the eye, ear, skin, olfactory organ, and the taste buds of the oral cavity. Visceral senses, e.g., the hunger sense, thirst sense, and other internal sensations, are conducted to the brain from internal organs.

sensitive plant: see MIMOSA.

Senta (sĕn'tä), Hung. *Zenta* (zĕn'tô), city (pop. 24,916), N Serbia, Yugoslavia, on the Theiss and NNW of Belgrade. It is an agricultural center of the fertile Vojvodina. Here in 1697 Prince Eugene of Savoy won a decisive victory over the Turks, who accepted (1699) the Treaty of Passarowitz.

sentence, in law, punishment which a court orders inflicted on a person convicted of crime. Sentences may consist of a fine, imprisonment for life or a shorter period, or execution. In the United States exile and forfeiture of property by heirs are not used as punishment. A fine and imprisonment may both be imposed, or (especially in misdemeanors) payment of a fine may be the alternative to a prison sentence. The sentence to be imposed is generally fixed by statute. In some cases the duration is exactly prescribed and in others the judge has a limited discretion. If a person is convicted of more than one crime at his trial, his sentences may run concurrently (i.e., all begin at the same date) or consecutively. Sentences may be determinate (a fixed duration) or indeterminate. In the latter a minimum and a maximum term is set, and if the convict's behavior is good he may be released on PAROLE any time after the expiration of the minimum term. In many states successive convictions of felony bring longer sentences. New York state provides that imprisonment for life shall be mandatory after the fourth conviction of felony.

Sentinel, city (pop. 1,088), SW Okla., settled 1901, inc. 1906.

Sentinel Ridge, SW Wis., near Prairie du Chien. It is in Wyalusing State Park and is the site of interesting Indian mounds.

Sentinum (sĕntī'num), ancient town of Umbria, E central Italy, near the modern Sassoferrato. In 295 B.C. the Romans (led by P. Decius Mus) here defeated the Gauls and the Samnites.

Senuah (sĕnū'u) [Heb., =hated woman], Benjamite. Neh. 11 9.

Seorim (sēō'rĭm) [Heb., =barley], chief priest of David's time. 1 Chron. 24 8.

Seoul (sā'ōōl', sā'ōōl, sōl) or **Kyongsong** (kyŭng'sŭng'), Jap. *Keijo*, city (1949 pop. 1,446,019), capital of the South Korean Republic. It is scenically situated at the base of high hills. Three gates are all that remain of the wall which once surrounded Seoul. There are three imperial palaces, and in the center of the city is a huge bronze bell, which was cast in 1468. Seoul was the capital of Korea from 1393 until the partition of the country after the Second World War, when it became the headquarters of the U.S. forces occupying S Korea. Today it is a thoroughly modernized city with an international airport. Manufactures include flour and textiles. Here are the Univ. of Seoul and several colleges.

sepal: see CALYX.

separation, in law, either the voluntary agreement of husband and wife to live apart or a partial dissolution of the marriage relation by court order. The marriage bond subsists, and remarriage of either party is criminal. The separated parties will ordinarily be bound by the provisions of an agreement respecting the amount to be paid for separate maintenance and the adjustment of their property rights. Separation by court decree is a divorce *a mensa et thora* [from bed and board], the parties are forbidden to live together, and the wife has a right to ALIMONY. The laws of the states of the United States vary greatly as to separation, generally jurisdictions where DIVORCE is difficult to obtain have a more lenient policy toward legal separation than do jurisdictions with easier divorce laws. The main grounds for legal separation are adultery, cruelty, and desertion.

separatists, in religion, a term used to describe those bodies of Christians who withdrew from the Established Church in Great Britain. They desired freedom from church and civil authority, control of each congregation by its membership, and changes in ritual. In the 16th cent. a group of early separatists were known as Brownists after their leader, Robert BROWNE. The name Independents came into use in the 17th cent. Among other separatist groups were the Pilgrims, the Quakers, and the Baptists. See CONGREGATIONALISM.

separator, cream, dairy machine used to separate fresh milk into cream and skim milk. Formerly the separation was made by allowing the cream to rise to the top of a pan and skimming it off. C. G. de Laval of Sweden devised the first mechanical cream separator c. 1880. The design of the machine varies but the principle is that of the centrifuge. Whole milk is conducted into a bowl, commonly through a central tubular shaft. A spindle rotates the bowl very rapidly, and a series of identical conical disks separate the milk into layers. The skim milk flies to the outer circumference of the rapidly whirling bowl, and the lighter cream tends to move towards the center. The pressure of the whole milk supply above the bowl forces the cream and skim milk out of the machine into separate collecting vessels. The cream separator makes it possible to control the amount of fat remaining in the milk. With the cream separator nearly all of the fat can be removed, and because the process is much faster than the settling method, there is less chance for bacterial action to injure the products.

Sephar (sē'fur), unlocated hill in the Sinai peninsula. Gen. 10 30.

Separad (sĕ'furăd), unlocated place peopled with Jews in captivity. Obad. 20.

Sephardim (sĕfär'dĭm): see ASHKENAZ.

Sepharvaim (sĕ"farvā'ĭm). **1** City of Babylonia, probably SIPPAR, whence colonists for Samaria were brought. 2 Kings 17 24, 31. **2** Unknown city conquered by the Assyrians, probably in Syria. 2 Kings 18 34, 19 13, Isa. 37 13.

Sepik (sā'pēk), river of NE New Guinea, rising near the Netherlands New Guinea boundary and flowing 700 mi. eastward across the Territory of New Guinea to the Bismarck Sea. It is navigable for 180 mi. It was formerly the Kaiserin-Augusta river.

Sepoy Rebellion (sē'poi), 1857–58, rebellion of the native soldiers (sepoys) in the Bengal army of the East India Company. Many factors combined to precipitate the revolt. A belief commonly held by Indians at the time was that the centennial anniversary of the battle of Plassey (1757) would witness the end of British rule in India. Many Indian princes, fearing the confiscations of land by Governor General Dalhousie and his successor Lord Canning, were ready for an armed struggle, and they may have encouraged rebelliousness. The Bengalese soldiers (all Brahmins) had been repeatedly affronted. They resented the annexation, in 1856, of the kingdom of Oudh, from which most of them came. They interpreted a regulation of 1856 which subjected them to service overseas (despite the loss of CASTE entailed in crossing the open sea) as part of a plot to force them to adopt Christianity. This belief was strengthened when they were furnished cartridges coated with what they believed to be beef grease. Handling beef grease was a violation of Hindu law, and the initial concerted act of disobedience occurred at Berhampore in Feb., 1857. It was at Meerut that an attempt (which proved unsuccessful) was first made to seize a large city. After May rebellious forces swarmed over N central India, gaining much support. They besieged Lucknow and captured Cawnpore and Delhi. At Delhi, BAHADUR SHAH, the last Mogul emperor, was proclaimed sovereign of all India, and he appears to have received the adherence of the principal leaders, including NANA SAHIB, who was responsible for the massacre at Cawnpore. In repressing the rebellion the British were aided by the loyalty of the soldiers from Madras, Bombay, and the Punjab and by the large princely states, including Hyderabad, Mysore, and Kashmir. Troops (largely British) under Sir John Lawrence (see LAWRENCE, JOHN LAIRD MAIR LAWRENCE, 1ST BARON) and Generals Colin Campbell and Henry Havelock accomplished the reconquest. Delhi and Cawnpore were invested in Sept., 1857, and the long siege of Lucknow was relieved in March, 1858. The punishment inflicted on the rebels may even have exceeded in atrocity what they themselves had wrought. The rebellion demonstrated the urgency of reform, and in 1858 the East India Company was abolished and rule directly assumed by the crown. Expropriation of land was discontinued, religious toleration was decreed, and Indians were admitted to subordinate positions in civil service. Military precautions against further uprisings included increasing the proportion of British to native troops and restricting artillery service to Britons. See Sir John Kaye and George Malleson, *History of the Indian Mutiny* (6 vols., 1896), Thomas P. Holmes, *History of the Indian Mutiny* (3 vols., 1904–12).

Seppänen, Unto Kalervo (ōōn'tô kä'lĕrvô sĕp'pänĕn), 1904–, Finnish writer. A native of Helsinki, he

attended school in Karelia, and this province on the Russian border became his spiritual home, as well as the scene of his stories He has written plays, short stories, and several novels, of which *Sun and Storm* (1931–34, Eng tr , 1939), based on the Finnish-Russian duel for Karelia, was awarded a prize

septaria: see CONCRETION.

September: see MONTH

September massacres (1792): see FRENCH REVOLUTION

septicemia (sĕptĭsē'mēù), condition in which the blood stream is infected by bacteria which multiply in the blood It is most commonly caused by the streptococci and staphylococci It is a form of blood poisoning, it differs from toxemia, also a type of blood poisoning, in that in septicemia the blood stream is infected by both the bacteria and their toxic products, while in toxemia only the bacterial toxins are present in the blood In many infectious diseases bacteria enter the blood stream and are carried to tissues in other portions of the body where they thrive Bacteria passing through the blood stream also sometimes lodge in tissues and cause abscesses, this condition is known as pyemia Bacteria may enter the blood through small cuts, larger wounds, and blisters or as a result of careless treatment of pimples on the face Septicemia is always a serious condition and may be fatal The early care of cuts and other injuries is the best preventive measure

septic tank, sedimentation tank into which sewage is discharged and in which it remains for periods ranging from 8 to 24 hr The organic matter in the sewage is attacked first by aerobic bacteria while there is oxygen present in the tank, when no oxygen remains anaerobic bacteria attack it, causing it to disintegrate, liquefy, and give off gases The Imhoff septic tank is an improvement over the ordinary septic tank and is still used in the United States, it is a two-story structure with the upper compartment used for settling the sewage and the lower one for the anaerobic disintegration of sludge A sloping floor enables solid material to slide to the lower compartment, and with the sludge separated from the material in the sedimentation compartment, the action is more rapid Some cities have more modern sewage-treatment plants in which the processes of sedimentation and sludge digestion are more completely separated

Septimania (sĕptĭmā'nēù), region of S France In Roman times it was the narrow strip along the Mediterranean coast about Narbonne and was named for the Seventh Legion In Frankish days the name was extended to include the whole area from the upper Garonne to the Rhone and from the Pyrenees to the Cevennes The Visigoths held it, and it was taken from them by the Franks and lost again. The Moors held it briefly Later it was attached to Aquitania for a time. Finally it passed to the counts of Toulouse

Septimius Severus. see SEVERUS

Septuagint (sĕp'tūùĭnt) [Latin, =70], translation of the Old Testament into Alexandrian Greek by Hellenistic Jews, between 250 B C and c 100 B C. The story that it was done in 72 days by 72 translators for Ptolemy Philadelphus accounts for the name. The Septuagint is of importance to critics because it is translated from texts now lost It was the version of Hellenistic Jews and the Greek-speaking Christians, including St Paul, it is still used in the Greek Church It includes the books of the APOCRYPHA and some PSEUDEPIGRAPHA, therefore the whole of the Western canon (see OLD TESTAMENT) The symbol for the Septuagint is LXX No copy of the original form of the translation exists, textual difficulties abound

Sepulcher, Holy: see HOLY SEPULCHER

Séquard, Charles Édouard Brown-. see BROWN-SÉQUARD, Charles Édouard

sequoia (sĭkwoi'ù), name for either of two huge, coniferous, evergreen trees of the genus *Sequoia*. The genus probably originated over 100,000,000 years ago. Once widespread in temperate regions of the Northern Hemisphere, the trees were almost exterminated by the ice sheets of the glacial ages Several species are known only by fossil remains, some have been found in the Petrified Forest in Arizona Only two species are extant, and these survive only in a narrow strip near the Pacific coast of the United States The redwood (*Sequoia sempervirens*) occurs along the coast of California and S Oregon Growing 100 to 340 ft high, it is probably the tallest tree in the world Its trunk is 20 to 25 ft in diameter. It usually has bluish-green, needlelike leaves. Some redwoods are believed to be over 2,000 years old. The big tree (*S gigantea*), 150 to 325 ft tall and with a trunk 10 to 30 ft in diameter, grows on the western slopes of the Sierra Nevada in California It reaches an even greater age than the redwood; some big trees are believed to be 3,000 to 4,000 years old The leaves are small, overlapping scales. Recently it has been proposed to separate the two species into different genera, *Sequoia* and *Sequoiadendron*. Both trees have deeply grooved, reddish bark and soft, straight-grained, reddish heartwood whose resistance to decay makes it especially valuable for outdoor building purposes, e g., for shingles, siding, and flumes. Although the sequoias are protected in parks, e g , in Sequoia National Park of California, their extermination elsewhere is threatened by exploitation China's "dawn redwood" tree (*Metasequoia*) is believed to be a related species and is perhaps an ancestor of the California redwood. See Walter Fry and J R White, *Big Trees* (1930).

Sequoia National Park, 385,100 13 acres, E Calif , ESE of Fresno, est 1890 Large groves of sequoias give the park its name The General Sherman Tree, said to be the largest living thing, is 272 4 ft high and 36 5 ft in diameter at its widest point and is estimated to be more than 3,000 years old Within the park are Mt WHITNEY, Kern River Canyon, and the Great Western Divide (which separates westward-flowing from eastward-flowing streams) Kings Canyon National Park adjoins Sequoia See John R White and Samuel J Pusateri, *Sequoia and Kings Canyon National Parks* (1949)

Sequoyah (sĭkwoi'ù), c 1770–1843, North American Indian leader, creator of the Cherokee syllabary, b Loudon co., Tenn He was the son of a Cherokee girl and a white trader It is said that his father was Nicholas Gist, at any rate his "white" name was George Guess He was a silversmith and a trader in the Cherokee country in Georgia He set out to create a system for reducing the Cherokee language to writing, and c 1821 he compiled a table of 85 characters, he took some letters from an English spelling book and by inversion, modification, and invention adopted the symbols to Cherokee sounds In 1822 he visited the Cherokee in Arkansas, and soon he taught thousands of the Indians to read and write He moved with them to what is now Oklahoma Parts of the Bible were soon printed in Cherokee, and in 1828 a weekly newspaper was begun His remarkable achievement helped to unite the Cherokee and make them leaders among the Indians The giant tree, sequoia, is named for him See biographies by G E Foster (1885), Grant Foreman (1938), and C. C Coblentz (1946)

Serawak, Borneo: see SARAWAK

Serbia (sûr'bēù), Serbo-Croatian *Srbija* (sŭr'bēä), autonomous republic (34,194 sq mi.; pop 6,523,224), E Yugoslavia Its capital, BELGRADE, is also the capital of Yugoslavia Serbia borders in the west on the Yugoslav republics of Croatia, Bosnia and Hercegovina, and Montenegro; in the southwest, on Albania, in the south, on Yugoslav Macedonia; in the east, on Bulgaria and Rumania; and in the north, on Hungary. It is the largest and most important of the Yugoslav republics Serbia is largely mountainous in the west and the south, but its northeastern section is part of the fertile great Danubian plain, drained by the Danube, the Sava, the Theiss, and the Morava The northeastern section has been Serbian only since 1920, when it was ceded by Hungary in the Treaty of Trianon, and it includes the autonomous VOJVODINA prov , with SUBOTICA and NOVI SAD and the western section of the former BANAT OF TEMESVAR. Next to Belgrade, the principal city of Serbia proper is NIS About 80 percent of the Serbian population is agricultural, but efforts are being made to increase the industrial and mineral output of the country, which has great potentialities Serbia contains some Slovenian, Croatian, Magyar, and Albanian minorities, but the majority of the population are Serbs Culturally, the Serbs distinguish themselves from the closely related Croats and Slovenes in that they have for centuries belonged to the Orthodox Eastern Church and use the Cyrillic rather than the Roman alphabet Linguistically, Serbian, Croatian, and Slovene are very similar members of the South Slavic language group Coming from present Galicia, the Serbs settled in the Balkan Peninsula in the 6th and 7th cent and accepted Christianity in the 9th cent Their petty principalities were theoretically under an overlord, called the grand *zhupan*, who for the most time recognized the suzerainty of the Byzantine emperor at Constantinople Civil strife and constant warfare with their Bulgarian, Greek, and Magyar neighbors characterized the early history of the Serbs Stephen Nemanja, who became (1159) grand *zhupan*, founded a dynasty which ruled Serbia for two centuries His successor assumed the title king of all Serbia in 1217 The Serbian kingdom was at first overshadowed by the meteoric rise of the Bulgarian empire under IVAN II (Ivan Asen), but under STEPHEN DUSHAN, who became king in 1331 and had himself crowned tsar in 1346, Serbia became the most powerful empire in the Balkan Peninsula, the larger part of which it absorbed However, soon after Stephen's death, the empire decayed and fell victim to the onslaught of the Ottoman Turks The Serbs were defeated (1371) at the Maritsa, in the same year the last tsar, Stephen Urosh V, died and left no male issue His successor and relative, Lazar, contented himself with the title prince of Serbia Lazar was slain (1389) in the battle of Kossovo, which sealed the fate of Serbia Lazar's son Stephen was allowed to rule over a diminished and divided Serbia by Sultan Bajazet I, to whom he paid tribute He and his successor George Brankovic (1427–56) received the title despots from the Byzantine emperors, but they witnessed the gradual absorption of their land by the Turks and did not take part in the Christian crusade that ended in disaster at Varna (1444) The quarrel for the succession to George Brankovic facilitated the complete annexation of Serbia by Sultan Mohammed II in 1459. Belgrade, then held by Hungary, fell to the Turks only in 1521 Serbia became a Turkish province, its pashas residing at Belgrade, but MONTENEGRO continued for 500 years to fight for its independence Turkish rule in Serbia was more oppressive than in most Turkish provinces The Serbian nobility was annihilated and the lands of the nobles were distributed to the Turkish military aristocracy, while the Christian peasants—the *rayas*—were treated little better than slaves Although the Serbs were forbidden to possess weapons, insurrections were frequent No attempt was made to curb Christianity, but the Serbian Church was placed in the hands of the Greek PHANARIOTS, who were no less unpopular than the Turks Many Serbs fled to Hungary and Austria in order to help those countries fight the sultans The Turkish reverses in the wars of the 17th and 18th cent against Austria and Russia revived Serbian hopes for independence, and in 1804 KARAGEORGE led a successful insurrection, but by 1813 the Turks were once more in control In 1817 Milosh Obrenovich (see MILOSH) procured the assassination of his rival Karageorge and was named prince of Serbia by the chief Serbian leaders Turkey was in no position to challenge his power, and in 1828 Russia forced the sultan, in the Treaty of Adrianople, to recognize Milosh as a vassal prince Except for Turkish garrisons in Belgrade and other fortresses, Serbia was evacuated by the Turks. Much of the ensuing internal politics of Serbia was the direct result of the bloody feud between the KARAGEORGEVICH and OBRENOVICH families Serbia remained neutral in the Crimean War, but the Congress of Paris (1856), while recognizing the suzerainty of the sultan over Serbia, placed the principality under the collective guarantee of the European powers. In 1867 Serbia obtained the peaceful evacuation of the last Turkish troops. King MILAN liberalized the constitution in 1869, giving increased powers to the Skupchtina (lower house of parliament). He supported the rebellion of BOSNIA AND HERCEGOVINA against Turkish rule and in 1876 declared war on Turkey. The rout of the Serbs in 1876 led to the entry of Russia into the war in 1877 (see RUSSO-TURKISH

WARS) on the Serbian side. The Congress of Berlin (1878) declared Serbia fully independent but disappointed Serbian hopes of aggrandizement by placing Bosnia and Hercegovina under Austro-Hungarian administration, in 1882 Milan proclaimed himself king The assumption by Serbia of the role of champion of PAN-SLAVISM in the Balkans led to bitter rivalry with Bulgaria and the Austro-Hungarian Monarchy The Serbian defeat (1885) by the Bulgarians over the question of Eastern RUMELIA and the inglorious reign (1889–1903) of King ALEXANDER greatly harmed Serbian prestige With PETER I, who acceded in 1903, the Karageorgevich dynasty became firmly entrenched He restored the liberal constitution of 1889 and in 1904 appointed as premier Nikola PASHITCH, leader of the strongly nationalist and pro-Russian Radical party Pashitch's policy dominated the following 20 years Dissatisfied with its failure to secure a major part of MACEDONIA in the first (1912–13) of the BALKAN WARS, Serbia in 1913 turned against, and defeated, its former ally Bulgaria in the Second Balkan War It thus became the foremost Slavic power in the Balkans The Austrian annexation (1908) of Bosnia and Hercegovina had led to increased Austro-Serbian tension, which was to explode in the FIRST WORLD WAR after the assassination (June 28, 1914) of Archduke FRANCIS FERDINAND at Sarajevo by a Serbian nationalist The Serbian army at first held the Austro-Hungarian army in check, but in 1915, when Bulgaria joined the Central Powers and when the Austrians were reinforced by the Germans, Serbia was quickly overrun The Serbian troops and government were evacuated to Corfu, where in 1917 Serbian, Croatian, Slovenian, and Montenegrin representatives declared the union of the southern Slavs In 1918 the kingdom of the Serbs, Croats, and Slovenes, headed by Peter I of Serbia, was formally proclaimed The later history of Serbia is essentially that of YUGOSLAVIA The predominant position of Serbia in the new kingdom was a major cause for unrest in Croatia and Macedonia in the years between the First World War and the Second World War After the conquest (1941) of Yugoslavia by the Axis powers in the Second World War, a Serbian puppet government was set up by the victors over a much-diminished Serbia It never received the support of the Serbian people, who continued to wage guerrilla warfare under the leadership of Draja MIKHAILOVICH Later in the war Marshal TITO won the support of the majority of resistance fighters in Yugoslavia, while Mikhailovich's following became largely restricted to the Serbian nationalists The federal constitution of Yugoslavia, adopted in 1945, stripped Serbia of Macedonia, Bosnia and Hercegovina, and Montenegro, which became autonomous republics Servia is an alternate name for Serbia, but is now in general disuse See H W V Temperly, *History of Serbia* (1917), Ferdinand Schevill, *History of the Balkan Peninsula* (1922)

Sered (sē'rĕd) [Heb ,=fear], Zebulunite, the ancestor of the Sardites Gen 46 14, Num 26 26.

Serena, La (la sārā'nä), city (pop 21,742), N central Chile Its port is Coquimbo Founded in 1544, La Serena was destroyed in 1549 by an Indian revolt and sacked in 1680 by English filibusters It is a city of old-world charm, noted for its cathedral, fine buildings, and gardens The climate is uniform, and the surrounding region is covered with orchards and vineyards

serenade (sĕrunād') [Ital *sera*=evening], term used to designate several types of musical composition Opera and the song literature yield numerous examples of the serenade sung or played by a lover at night beneath his beloved's window, outstanding being *Deh vieni alla finestra* from Mozart's *Don Giovanni* In the late 18th cent the serenade became a light instrumental suite, the movements of which were numerous and short and usually included a march and a minuet The lover's song is known in German as *Ständchen*, while the suite is usually designated *Nachtmusik*, an example being Mozart's *Eine kleine Nachtmusik* The Italian *serenata*, while the equivalent of the term *serenade*, had an additional usage in the late 18th cent in designating a short opera or dramatic cantata written to celebrate a special event in the household of the composer's patron

Seres (sē'rēz), Roman name for China It is possibly derived from the Latin *sericum* [silken cloth].

Seres, Greece· see SERRAI.

Sereth (sĭrĕt', să'rĕt), Rumanian *Siret* (sĭrĕt') or *Siretul* (sĭrĕ'tōōl), Rus *Seret* (sĭryĕt'), river, 280 mi. long, rising in the W Ukraine, in the Carpathians SW of Chernovtsy. It flows SSE through Moldavia, E Rumania, to join the Danube 3 mi. above Galati Its chief tributaries are the Bistrita and the Moldava

serf. Serfdom may be said to be the state of half freedom characteristic of the bulk of peasant labor in a typical agricultural society under FEUDALISM (see also MANORIAL SYSTEM). It is usually distinguished from slavery by saying that the serf is bound to the land, but this distinction is false A serf was not necessarily bound to the soil, there are many exceptions to be found in the medieval economy of Western Europe, in which serfdom is best known Serfdom is distinguished from slavery chiefly by the body of rights the serfs hold by a custom generally recognized as inviolable and by the strict group arrangement that makes the peasants servile in a group rather than severally Serfdom has arisen only under a local, agricultural economy, connected with a political system based on personal contract—some form of feudalism It sometimes arose from conquest of a people by victors who, because of weakness or for some other reason, did not reduce the natives to slavery but only depressed them into tributaries, holding their lands as of old, but paying dues (especially labor dues) to the conquerors Thus serfdom was established in some Aegean regions by Greek conquests Serfdom was also known in the Hellenistic civilization, and in the Roman Empire economic maladjustment led to appearance of the servile class, the *coloni*. In the Middle Ages, serfdom developed in France, Italy, and Spain, later spread to Germany, and in the 15th cent was carried to Slavic lands It developed separately in England, but underwent a great change with the Norman Conquest, when most of the free villeins (see VILLEIN) were depressed to serfdom Since the status of the manorial peasants was regulated by local custom, there was a wide and confusing diversity in the names applied to the various types of tenants, which ran from the complete servile tenant to the freeholder who paid simply a form of rent The tendency in the Middle Ages was for all the tenants to approximate the same social status The free villeins tended to become the equal of the serfs, and all tended to have their landholding become tenure by labor service (a mark of servile tenure) as well as fixed payments The true serf was theoretically subject to labor service at the will of his lord, but all such matters came to be governed by customs and worked in a set pattern One distinguishing mark of servile tenure was the lord's control of the marriage of his serf's children In legal theory the holding was granted at the will of the lord, but actually the right to hold came to be hereditary In Western Europe the growth of towns and of commerce and the transfer to a money economy broke down the manorial systems and made serfdom anachronistic Even at the height of the manorial system many serfs were manumitted by their lords, and one of the principal questions of modern European reform was the emancipation of serfs Serfdom disappeared in England before the end of Middle Ages In the Hapsburg monarchy, it was ended (1781) by Emperor JOSEPH II, but feudal labor service (*robot*) continued in some provinces until 1848 In France, where it survived only in outlying provinces, serfdom was swept away by the French Revolution The repercussions of the Napoleonic Wars helped to destroy it elsewhere, the most notable examples being the reforms of Karl vom und zum STEIN in Prussia In Russia and the other Slavic lands it was late in coming, took strange forms, and persisted late Serfdom in Russia originated in the 16th cent when Ivan IV created a new landholding aristocracy, the *pomestchiks*, whose tenure was based on service to the tsar Beginning in 1581, laws were passed inhibiting the free movement of the peasant tenants of the *pomestchiks*, however, the peasants were as yet not the property of the landholders, and they kept their civil rights In the reign of Peter I the peasants, whose rights had been gradually diminished by various encroachments, were definitely bound to the landowner rather than to the land, and their condition became virtual slavery There had been real slaves already in the Muscovite state, and in the 18th cent the distinction between slaves and serfs was abolished In the mid-18th cent, masters were given the right to punish their serfs, to exile them to Siberia, and to sell them There were two categories of serfs—the "house serfs," who held domestic positions, and the peasants The peasants enjoyed a larger measure of freedom and often formed self-administered village communities, headed by an elder, the *starets* As can be seen, the institution bore more resemblance to slavery in the S United States than to serfdom under feudalism It reached its peak in the late 18th cent under Catherine II, but was somewhat limited by reforms under Alexander I and Nicholas I Thus, in 1833, the breaking up of servile families by sale was forbidden Serfdom was regarded by the majority of Russians as the major defect in the structure of the Russian state It was contrary to the interests of the rising industrial class, and even a large number of the great landowners recognized that the abolition of serfdom was to their own best interest It was the class of small landowners who risked losing everything if serfdom were abolished, and it was that class which most stubbornly resisted reform The serfs were freed only in 1861 by Alexander II (see EMANCIPATION, EDICT OF) Serfdom also appeared with feudalism in China, Japan, India, pre-Columbian Mexico, and elsewhere. See also SLAVERY and PEONAGE For bibliography, see MANORIAL SYSTEM and FEUDALISM.

series, in mathematics, a sum of several terms. An infinite series is a sum of infinitely many terms, e g , the infinite series $1/2+1/4+1/8+1/16+$ The dots mean that the remaining terms are formed according to the rule made evident by the first few terms, in this case doubling the denominator of the preceding term to form that of the next term Some infinite series converge to a certain value called its limit, i e , as one adds together progressively more terms, these sums (called the partial sums of the series) form a sequence of values which get closer and closer and in fact arbitrarily close to this value called the limit For example, the series given above converges to the value 1 because the partial sums form the sequence $1/2, 3/4, 7/8, 15/16$, Many series, however, do not converge, i e , have no value which their partial sums approach Such a series is $1/2+1/3+1/4+$ for even though the terms get very small, enough of them added together will give a value greater than any number named

Srinagar, Kashmir see SRINAGAR

Seringapatam (surĭng"guputam', -tăm'), town (pop c 6,000), S Mysore state India, on an island in the Cauvery river There are Hindu monuments some built in the 13th cent Most of the large buildings were erected in the 17th and 18th cent when this was the capital of Mysore The greatest builder was Tippoo Sahib, who left a large mosque, a summer palace, and a mausoleum, in which he and his father Hyder Ali rest Seringapatam declined after its capture (1799) by the British in a battle in which Tippoo was killed

serjeanty or sergeanty (both sär'jĕntē), that type of TENURE in British FEUDALISM in which the tenant held his lands from the king or overlord in return for the performance of some personal, often menial, service Such duties varied from that of king's constable or chamberlain to that of supplying arrows for an overlord when he went hunting This method of landholding was less widespread than other forms of tenure, such as knight service and socage, by which it was largely superseded Such tenures were inalienable and indivisible A remnant of the custom survives in certain ceremonial offices at royal coronations

Serna, José de la (hōsă' dā la sĕr'na), 1770–1832, Spanish general, viceroy of Peru (1821–24) In 1821 the military leaders, dissatisfied with Viceroy PEZUELA and his conduct of the war against José de SAN MARTÍN, deposed Pezuela and named José de la Serna in his place, he was confirmed in the office by Spain Forced to evacuate Lima, he made Cuzco his capital and preserved some show of royal government until the defeat at AYACUCHO, where he was captured

Serov (syĕ'rŭf), city (pop 64,719), RSFSR, in the eastern foothills of the central Urals It is a leading metallurgical center, producing quality steels and pig iron Its development began in the late 19th cent and was greatly speeded in recent years In 1939 its name was changed from Nadezhinsk to Serov

Serowe (sĭrō'ē), town (pop c 30,000), Bechuanaland protectorate, South Africa It is the capital of the Bamangwato tribe Most of the inhabitants are farmers

serpent, name which is often applied to any crawling creature, chiefly to a snake No real sea serpents have been discovered to substantiate the legends about them Large squids or octopuses, whales, dolphins, seals, and other sea animals are sometimes mistaken for sea serpents In religion and art, the serpent symbolizes Satan (Rev. 20 2). See also DRAGON

serpentine (sûr'puntēn, -tĭn), hydrous silicate of magnesium It occurs in crystalline form only as a pseudomorph having the form of some other mineral and is generally found in masses which may be granular, fibrous, or foliated It is commonly some shade of green, but may also be reddish, yellowish, black, or nearly white It has a greasy or silky luster and is often translucent, even in large masses Serpentine is a secondary mineral, usually resulting from the alteration of minerals or rocks containing magnesium, and it occurs very widely in Europe and the United States Serpentine rocks are classified as common serpentine and precious serpentine,

the common serpentine being darker, less translucent, and sometimes impure When serpentine is mixed with calcite, dolomite, or magnesite, a mottled or veined rock called verd antique is produced A fibrous variety of serpentine is chrysotile or commercial ASBESTOS. Serpentine is sometimes used as a gem, and the massive varieties are quarried and used like marble for decorative purposes, although the masses are frequently jointed and only small slabs can be secured Serpentine takes a beautiful high polish, but it is easily cracked and discolored by exposure to the weather and is consequently of little value for exterior use

Serpent Mound State Park, S Ohio, N of Peebles. Of the several prehistoric mounds, the largest, Serpent Mound, a 1,330 ft long, represents a serpent swallowing an egg Harvard Univ held the land from 1887 to 1900, when the Ohio State Archaeological and Historical Society assumed care of it

Serpukhov (syĕr'pōōkhŏf), city (pop 90,766), central European RSFSR, on the Oka and S of Moscow. It is a textile center, processing cotton, wool, and flax Dating from the 14th cent, it has a well-preserved kremlin (16th cent) In the Second World War, Serpukhov resisted (1941) the Germans in their drive on Moscow

Serra, Junípero (hōōnĕ'pārō sĕ'rä), 1713–84, Spanish Franciscan missionary in North America, b Majorca His name originally was Miguel José Serra, and Junípero was his name in religion. For 15 years he taught philosophy in the college at Palma In 1749 he was sent to America with Francisco Palou, his lifelong friend and biographer, and proceeded to Mexico city, where he taught briefly at the College of San Fernando For three years he worked successfully among the Indians of the Sierra Gorda, then returned to Mexico city for seven more years, working half of each year in the surrounding villages His passionate preaching and stern asceticism won him a large and respectful following It was at this time that his self-mortification began and that legends began to grow up about him. In 1769 Serra went with the second expedition sent by José de Gálvez to California and commanded by Gaspar de Portolá When the party reached San Diego, Serra remained to found the mission there, while most of the rest of the party went on in search of the harbor of Monterey When they returned unsuccessful, Serra was one of those responsible for the sending of a second expedition, which he accompanied When Monterey was reached and the mission San Carlos Borromeo founded, Serra remained there as president of Alta California missions, moved the mission to Carmel-by-the-Sea, and made it his headquarters for the rest of his days Under his presidency were founded the missions San Antonio de Padua (1771), San Gabriel Arcángel (1771), San Luis Obispo (1772), San Juan Capistrano (1776), San Francisco de Asís (1776), Santa Clara de Asís (1777), and San Buenaventura (1782) The source material on Father Serra is chiefly in Francisco Palou, *Life and Apostolic Labors of the Venerable Father Junípero Serra* (Eng tr., 1913) and *The Founding of the First California Missions under the Spiritual Guidance of the Venerable Padre Fray Junípero Serra* (Eng. tr 1934). See J J Walsh, *These Splendid Priests* (1926), biographies by A H Fitch (1914) and Agnes Repplier (1933)

Serrai (sĕ'rē), city (pop 34,766), central Macedonia, NE Greece It is a trading center for tobacco, cotton, grain, and livestock and manufactures textiles and cigarettes In the 14th cent it was a capital of Tsar Stephen Dushan of Serbia. In 1913 the city passed to Greece as a result of the Balkan Wars, but it was occupied and damaged by Bulgarian troops both in the First World War and the Second World War. It is also known as Seres or Serres

Serrano Suñer, Ramón (rämōn' sĕrra'nō sōōnyĕr'), 1901–, Spanish politician A conservative member of the Cortes (1933–36) and one of the founders of the fascist FALANGE, he joined his brother-in-law, Francisco Franco, early in the Spanish civil war of 1936–39 and became minister of the interior (1937–40), of the press and propaganda (1939–40), and of foreign affairs (1940–42) A leading advocate of Spanish collaboration with the Axis during the Second World War, he had to resign as foreign minister and as president of the political council of the Falange when Franco adopted a less warmly favorable attitude toward Germany and Italy With Serrano's fall the Falange lost much of its power

Serrano y Domínguez, Francisco (franthē'skō sĕrä'nō ē dōmēng'gäth), 1810–85, Spanish general and statesman In 1834–39 he distinguished himself in the war against the Carlists. He at first supported ESPARTERO but later worked for his overthrow. He was appointed captain general of Granada (1848), then of Cuba (1859) On his return he was created duque de la Torre and a grandee of Spain After the death of his friend O'Donnell he led the Liberal Union party He participated with Juan Prim in the revolution of 1868 and was named regent by the constituent assembly. Serrano was premier under King Amadeus, after whose abdication (1873) he opposed the newly established republic In 1874 a military coup d'état placed him at the head of the provisional government. Serrano fled to France when Alfonso XII was restored (1875) to the Spanish throne, but he returned in 1881.

Serres, Greece see SERRAI.

Sert, José María (hōsä' märē'ä sĕrt'), 1876–1945, Spanish painter, b Barcelona. He settled in Paris in 1900. Maintaining close contact with Spain, he later became a Franco sympathizer His mural paintings, internationally known, include the decorations of the council chamber of the League of Nations, Geneva, of the ballroom and the music room at the Kent House, London, six panels illustrating scenes of American progress in the RCA Building at Rockefeller Center, New York, and the *Marriage of Don Quixote,* a mural in brown and silver tones in the Sert Room at the Waldorf Astoria Hotel, New York.

Sertorius, Quintus (surtô'rēŭs), d 72 B C, Roman general He was a general under Marius but did not take part in Marius' proscriptions. He was appointed governor of Farther Spain in 83 B C, but fled to Africa to escape Sulla's reprisals He later was summoned to Spain by the Lusitanians, who were in rebellion, in 80 B C He was successful even after Metellus Pius and Pompey were sent out with new armies The tide was turning against Sertorius when he was assassinated by Perperna, a disaffected officer Sertorius attempted to build on a sort of national feeling among the local leaders, by founding a senate and a school for their sons. He thus expanded the work of Viriatus. The identification of Sertorius with local interests led, long after, to a mistaken glorification of him as a Portuguese patriot

Serug (sĕ'rug) [Heb, =sprout], ancestor of Abraham Gen 11 20–27 Saruch Luke 3 35

serum (sēr'um), straw-colored liquid component of blood which separates from the corpuscles when clotting occurs Serum is therefore the liquid part of the blood after coagulation has occurred, while plasma is the liquid part of the blood before clotting has taken place The composition of serum is complex and includes water, albumin, globulins, hormones, salts, and enzymes It is removed from whole blood by centrifuging Serums from immunized animals (animals which have been inoculated with bacteria or toxins) or from persons convalescent from infectious diseases contain antibodies When the serum is introduced into another individual, it may have a prophylactic effect by establishing an immunity for varying lengths of time In addition to this prophylactic use of serum, there are other uses to which it is put in diagnosis and therapy Normal human serum is sometimes introduced into a patient to counteract surgical or traumatic shock or losses of the fluid resulting from burns Antitoxic serums are used against toxin-producing bacteria in cases of tetanus, botulism, and scarlet fever, and antibacterial serums are used against pneumococcic pneumonias, anthrax, and dysentery Some persons are serum sensitive and react badly when serum is administered to them Only rarely is the reaction fatal Untoward effects can be avoided by determining such sensitivity beforehand through making skin tests

Servandoni, Jean Nicolas (zhä' nēkôlä' sĕrvädônē'), 1695–1766, French architect, b Italy Winning a competition for the building of a façade for the Church of St Sulpice, Paris, which had been originally constructed by Le Vau, he produced (1733–45) an imposing colonnaded design which is his most famous work In this church the organ loft and the Chapel of the Virgin also are by him He built the high altars of several churches, including the cathedral of Sens Throughout Europe he attained fame as a decorator

Servetus, Michael (survē'tŭs), 1511–53, Spanish physician and theologian. His name in Spanish was Miguel Serveto In his early years he came into touch with some of the leading reformers in Germany and Switzerland—Oecolampadius, Martin Bucer, Capito, and probably Luther But he held views, concerning the Trinity in particular, which brought condemnation from the theologians of the Reformation as well as from those of the Catholic Church When he published *De trinitatis erroribus* (1531) and *De trinitate* (1532), the feeling of opposition was so strong that he assumed the name of Michel de Villeneuve, from the family home, Villanueva, and spent some time in Lyons, working on an edition of Ptolemy's geography and other scientific works, then in Paris studying medicine There he is said to have seen Calvin He became well known for his ability in dissection and had unusual success as a physician, he discovered that some of the blood circulates through the lungs. From 1541 to 1553 he lived in the palace of the archbishop of Vienne as his confidential physician. When (1553) he had a work setting forth his ideas of Christianity secretly printed, investigation was begun by the Inquisition Servetus, arrested, tried, and condemned, escaped from prison Several months later, while making his way to Italy, he was seized in Geneva by Calvin's order. There, after a long trial, in which Calvin's condemnation was a stern factor, he was burned on Oct 27, 1553. See William Osler, *Michael Servetus* (1909), Alexander Gordon, *The Personality of M. Servetus* (1910) and *Servetus and the Spanish Inquisition* (1925).

Servia: see SERBIA.

Service, Robert William, 1876–, Canadian poet and novelist, b England, educated at the Univ of Glasgow. He went to Canada in 1897 and spent some time in British Columbia and at White Horse in the Yukon. He celebrated the Yukon in *Songs of a Sourdough* (1907; reprinted 1915 as *The Spell of the Yukon*) and *Ballads of a Cheechako* (1909) and in the novel, *The Trail of '98* (1910) He became a foreign correspondent in *1912* and drove an ambulance during the First World War, an experience which gave him material for *Rhymes of a Red Cross Man* (1916) He remained in France until 1940, when he took refuge from the Second World War in Canada and later in the United States. Soon after the war he moved back to Monte Carlo His later works did not have the tremendous popularity of his earlier ones *The Rough Neck* (1924), a novel, was followed by *Master of the Microbe* (1926) and *The House of Fear* (1927) His *Complete Poems* appeared in 1944 His autobiography was issued in two books, *Ploughman of the Moon* (1945) and *Harper of Heaven* (1948) His *Songs of a Sun-Lover* (1949) shows the same rough prosody which marked his earliest poetry.

serviceberry: see SHADBUSH

Servile Wars, name given in Roman history to three slave uprisings The agricultural slaves were exploited by their owners, who had extreme powers and were never averse to using them The first of the Servile Wars was fought in Sicily from 134 to 132 B C (or from 135 to 133 B C), the second, more serious, also occurred in Sicily from 104 to 101 B C (or from 105 to 102 B C) The third took place in Campania and was led by the gladiator SPARTACUS He and his men gained control over most of S Italy in 73 B C and were finally put down cruelly by Crassus and Pompey in 71 B C

sesame (sĕs'umē), herb (*Sesamum indicum* or *orientale*) cultivated for its seeds since ancient times and growing in the tropics, chiefly of Africa and Asia, called also benne Sesame seed, or gingili, are black or white and yield an oil which keeps well without turning rancid The oil, particularly important in India, is used for cooking, soap manufacture, food, and medicine and as an adulterant of olive oil The seeds are also added to cookies and made into candy Sesame was introduced by Negroes into the Far South of the United States, where it sometimes escapes cultivation The sesame was formerly credited with mystic powers, and the phrase "open sesame!" from the Arabian Nights' tale of the Forty Thieves has come to mean a magical password

Sesostris I (sĭsō'strĭs), d 1935 B C, 2d king of the XII dynasty of ancient EGYPT, son and successor of AMENEMHET I He had been coregent with his father from 1980 B C, he was sole ruler from 1970 to 1938 B C His reign was notable for successful campaigns in the present Sudan His son and successor, AMENEMHET II, was his coregent in the last three years of his reign **Sesostris II,** d 1887 B C, was the son of Amenemhet II, his coregent (1906 B C), then his successor (1903–1887 B C) **Sesostris III,** d 1849 B C, succeeded his father Sesostris II (1887 B C) He fixed the southern boundary of Egypt above the second cataract of the Nile, not far from Wadi Halfa It was under Sesostris III that Egypt made the first recorded Egyptian expedition to Syria He also curbed the power of the Egyptian nobles

Sesser, city (pop 2,117), S Ill, SW of Mt Vernon, in a farm area, inc 1906

Sesshu (sĕs'shōō'), 1420–1506, Japanese painter and Buddhist priest Having won distinction for the boldness and individuality of his work, he was commissioned to decorate a Chinese palace Upon returning to Japan in 1469, he declined court favors and withdrew to his rural temple to resume duties as a Zen priest, though he continued to paint and to teach, becoming one of Japan's most famous artists He executed wall paintings in various monasteries, decorated many sixfold screens, and painted *kakemonos* that are masterpieces

Sessions, Roger, 1896–, American composer, b Brooklyn, N Y, grad Harvard, 1915, pupil of Horatio Parker at Yale and of Ernest Bloch He taught (1917–21) at Smith College, leaving to teach at the Cleveland Institute of Music as Bloch's assistant From 1925 to 1933 he lived in Europe, after his return he taught in New York and Boston and in 1935 joined the faculty of Princeton Univ, becoming associate professor in 1940 He became professor of music at the Univ of California c 1945 With Aaron Copland he organized in 1928 the Copland-Sessions Concerts for contemporary music His first major work was his incidental music (1923) for Leonid Andreyev's *Black Maskers* Among the works which followed are choral preludes for organ; two symphonies (1927, 1946), a violin concerto (1931–35, première, 1940), a choral work, *Turn O Libertad* (1944), which takes its text from Walt Whitman, piano pieces, and a string quartet (1936). In 1935 he began composing a gigantic opera, *Montezuma,* to a libretto by G. A. Borgese.

Sestos (sĕs'tŏs), ancient town on the Thracian shore of the Hellespont, opposite Abydos. It was the scene of the story of HERO and Leander. It was here that Xerxes entered Thrace on his invasion of Greece, crossing the Hellespont on a bridge of boats. The city was later controlled by Athens and continued important in Roman times, but declined after the founding of Byzantium.

Sesto San Giovanni (sĕs'tō sän jōvän'nē), city (pop 31,394), Lombardy, N Italy, just NE of Milan. There are important iron, machinery, chemical, and textile plants.

Sestriere (sĕstrēā'rā), Fr *Sestrières*, village, Piedmont, NW Italy. A fashionable skiing resort, it lies 6,600 ft. high in the Alps near the French border.

Sestri Ponente (sĕs'strē pōnĕn'tā), city (pop 26,374), N Italy, a western suburb of Genoa. The noted Ansaldo shipyards are located here with many other industries (steelworks and ironworks, machinery and tool factories, and tanneries).

Set· see EGYPTIAN RELIGION

Sète, formerly **Cette** (both sĕt), town (pop 29,914), Hérault dept, S France, a Mediterranean seaport. Founded (17th cent.) by Colbert to serve as outlet for the Canal du Midi, it now is an important export center for wine. It suffered heavy damage in the Second World War.

Setesdal or **Saetersdal** (both· sä'tusdäl), narrow valley, S Norway, in Aust-Agder co. It is drained by the Otra river and contains several lakes. Communication with the rest of the country has, until recently, been difficult, as a result the Setesdalers have retained their ancient dress, speech, customs, and handicrafts (notably wood carving, weaving, and goldworking). Agriculture, stock raising, and fishing are the chief means of livelihood.

Seth, Egyptian god: see EGYPTIAN RELIGION

Seth, son of Adam and Eve, father of Enos. Gen 4 25,26, 5 3. Sheth 1 Chron 1 1.

Seth, Andrew (Andrew Seth Pringle-Pattison), 1856–1931, Scottish philosopher. He was professor of logic and philosophy at University College, Cardiff (1883–87), and at St. Andrews (1887–91) and was professor of logic and metaphysics at Edinburgh (1891–1919). With R. B. Haldane he edited *Essays in Philosophical Criticism* (1883). He wrote *Man's Place in the Cosmos* (1897), *The Philosophical Radicals* (1907), and *The Balfour Lectures on Realism* (ed. with a memoir by G. F. Barbour, 1933).

Sethur (sē'thur) [Heb.,=hidden], one of the spies sent by Moses into Canaan. Num 13 13.

Seti I (sē'tĭ, sā'tē), d. 1292 B.C., king of the XIX dynasty of ancient Egypt, succeeded his father, RAMSES I, c 1313 B.C. He invaded Palestine and Syria to reduce them again to the tributary state and defeated the Libyans. He built temples at Thebes and Abydos and a magnificent tomb in the Valley of the Kings at Thebes. His successor was RAMSES II. **Seti II,** d. 1205 B.C., one of the ephemeral kings following MERNEPTAH, seems to have ruled for about four years with indifferent success, after him anarchy set in for a few years until the accession of RAMSES III.

Sétif (sātēf'), city (pop. 39,883), NE Algeria. It was built by the French on the ruins of a Roman city founded in the 1st cent. A.D. In a cereal-growing region on the edge of the steppe, it has become a trade center linking the Tell region and the interior.

Seto (sā'tō), city (1947 pop 42,788), Aichi prefecture, central Honshu, Japan. An important porcelain center since the 13th cent., it is the site of a national ceramic experiment station.

Seton, Elizabeth Ann (Bayley) (sē'tun), 1774–1821, American Roman Catholic leader, usually called Mother Seton. She was a New Yorker, the daughter of the anatomist Richard Bayley, professor in Columbia College. She married William Seton, a substantial merchant. He died in Italy (1803), leaving her with five young children. Soon afterwards she became a Roman Catholic (1805). This conversion severed her from her relatives, and she started a school in New York to support her family. In 1808, invited by Bishop Carroll, she opened a school in Baltimore, then (1809) moved to Emmitsburg, Md., already the seat of a Catholic school for boys, Mt. St. Mary's. She stayed at Emmitsburg, and there she opened the first Catholic free school, the beginning of American parochial education. She also founded St. Joseph's College (for women). About her she formed a community of women, which soon adopted the rule of the Daughters of Charity of St. Vincent de Paul, the great sisterhood centered in Paris. This was the first American congregation of Daughters of Charity (or Sisters of Charity). Mother Seton was superior of her community, this had grown into 20 communities before her death. Her journals, letters, and memoirs have been published, her life has been much studied as part of the work for her beatification, and her cause has been introduced at Rome. See Katherine Burton, *His Dear Persuasion* (1940); E. F. X. McSweeney and M. M. Meline, *The Story of the Mountain* (1911).

Seton, Ernest Thompson, 1860–1946, American writer and artist, b. England. His name was originally Ernest Seton Thompson. He grew up in W. Canada and studied art in London. His stories and paintings of wildlife, especially *Wild Animals I Have Known* (1898, new ed., 1942) and *The Biography of a Grizzly Bear* (1900), were standard works on nature study and wood lore for boys and girls in the first quarter of the century. In 1902 he organized the Woodcraft Indians (later the Woodcraft League), much in the spirit of the later Boy Scout movement. See his autobiography, *The Trail of an Artist-Naturalist* (1940).

Seton Hall College: see SOUTH ORANGE, N.J.

Seton Hill College: see GREENSBURG, Pa.

Settembrini, Luigi (lwē'jē sĕt-tĕmbrē'nē), 1813–77, Italian patriot and author. An ardent liberal, he conspired against the Neapolitan Bourbons and spent many years in prison (1839–41, 1851–59), most of his second term was spent in the island penitentiary of Santo Stefano off the Gulf of Gaeta. While being deported to America he and his companions forced the captain to land them in Ireland. Settembrini returned to Naples after the fall of the Bourbons and was appointed (1862) professor of Italian literature at the university. Of his writings, the best known are his memoirs covering his life from 1850 to 1859.

setter, large hunting dog, probably derived from the spaniel. It has been known in England since the 16th cent. There are three well-known varieties of setter. The English setter has a silky coat with "feathered" legs and tail, in color usually tan and white, black and white, lemon and white, or liver and white. The Gordon setter has a very glossy coat of coal black and tan. The Irish setter is a golden chestnut or mahogany red, sometimes with a little white on chest, throat, and toes. Setters require considerable exercise. They are known for their beauty, intelligence, and good dispositions.

Settignano, Desiderio da see DESIDERIO DA SETTIGNANO

Settle, Elkanah, 1648–1724, English dramatist and poet, considered in his day a rival of Dryden. The production in 1671 of his heroic play, *The Empress of Morocco*, stirred up a quarrel with Dryden, who satirized Settle as Doeg in *Absalom and Achitophel*. Although he was made city poet in 1691, he later died penniless in the Charterhouse. See biography by F. C. Brown (1910).

Settlement, Act of, 1701, passed by the English Parliament, to provide that if William III and Princess Anne (later Queen Anne) should die without heirs, the succession to the throne should pass to Sophia, electress of Hanover, granddaughter of James I, and to her heirs, if they were Protestants. The house of HANOVER, ruling from 1714 (George I), owes its claim to this act. Among additional provisions, similar to those in the Bill of Rights, were requirements that the king must join in communion with the Church of England, that he may not leave England without parliamentary consent, that foreign-born kings may not use English armies in defense of foreign territory without parliamentary consent, and that no appointee or pensioner of the king shall sit in the House of Commons. The unpopularity of William's pro-Dutch policy, the lack of an heir to William or Anne, and fear of the JACOBITES prompted the act.

settlement house: see SOCIAL SETTLEMENT.

Setúbal (sətōō'bal), city (pop. 37,071), capital of Setúbal prov., W Portugal, in old Estremadura, an Atlantic port on the Bay of Setúbal. One of the more important ports of Portugal, it handles wine, fruit, cork. It has a fishing fleet and shipyards and processing plants. King John II resided here.

Seurat, Georges (shôrzä' sürä'), 1859–91, French postimpressionist painter. He early elaborated a technique of painting in tiny dots of pure color, called pointillism, a refinement on the broken color of the impressionists. His major achievements are his *Baignade* (Tate Gall., London), shown in the Salon des Indépendants in 1884, and his masterpiece, *Un Dimanche à la Grande Jatte* (Art Inst., Chicago), painted two years later. He died of pneumonia at 31. Seurat is recognized as one of the most intellectual artists of his time and was a great influence in restoring harmonious and deliberate design to painting at a time when sketching from nature had become the mode. Other examples of Seurat's work are in the Barnes Foundation, Philadelphia, and in the Louvre. See study by Walter Pach (1923).

Sevan (svĭvän'), mountain lake, area 546 sq. mi., central Armenian SSR, at an altitude of 6,285 ft. It is fed by some 30 streams, but the Zanga, a tributary of the Aras, is its only outlet. The Sevan-Zanga hydroelectric project, begun in 1930, has drained part of the lake. Lake Sevan remains free of ice in winter and abounds in trout. On Sevan Island, in the northwest, stands an ancient Armenian monastery, now a rest home. The town of Sevan (pop. 2,700) is at the Zanga outlet. The lake was formerly known under its Turkish name, Gokcha.

Sevastopol (sĭvä'stŭpōl", Rus. syĭ"vustô'pŭl), city (1939 pop. 111,946), RSFSR, in the S Crimea, on the Bay of Sevastopol, an inlet of the Black Sea. It is also spelled Sebastopol. A major naval base and a strategic strong point, it also has various industries, notably shipbuilding, fish processing, and flour milling. There are an institute of physiotherapy and a biological marine research station. Sevastopol stands near the site of the ancient Greek colony of Chersonesus, founded in the 5th cent. B.C. by Heraclea Pontica. Chersonesus or Cherson later became a Roman protectorate and was a flourishing Byzantine trade center until the 13th cent. Here Vladimir I of Kiev accepted Christianity. The city was abandoned after the Tatar conquest. Sevastopol was founded by Catherine II on the site of the Tatar village of Akhtiar after the Russian annexation (1783) of the Crimea. It was strongly fortified and became the chief base of the Russian Black Sea fleet. In the CRIMEAN WAR, Sevastopol resisted the besieging British, French, and Turks for 11 months (1854–55). The hero of the defense was Gen. E. I. TOTLEBEN. The Russian fleet was sunk to block the entrance into the harbor. In Sept., 1855, the French stormed the fortress of Malakhov, on the south shore of the Bay of Sevastopol, and three days later the Russians were forced to abandon Sevastopol. The fortifications were razed, but were rebuilt after 1870. In the First World War, Sevastopol was shelled by the Germans, and in the Russian civil war it was the headquarters of Gen. P. N. Wrangel during the last stand of the "Whites" (1920). The heroic resistance of Sevastopol in 1854–55 was, if possible, eclipsed by the stand the city made against the Germans in the Second World War. In the course of a siege lasting more than eight months, the city was virtually destroyed. For three weeks the defenders fought on in the rubble, against all hope, until July 3, 1942, when German and Rumanian troops at last entered the city. After its recapture (May, 1944) by the Russians reconstruction began.

Sevcik, Ottokar Josef, Czech *Ševčík* (ōt'ōkăr jō'sĕf shĕv'chĕk), 1852–1935, Czech violinist. He taught in Kiev (1875–92), at the Prague Conservatory (1892–1906), in Vienna (1909–21), and in the United States (1922–31) and had many distinguished pupils. He produced valuable technical studies for the violin.

Seven against Thebes, in Greek legend, seven heroes —POLYNICES, ADRASTUS, AMPHIARAÜS, Hippomedon, CAPANEUS, TYDEUS, and PARTHENOPAEUS— who made war on ETEOCLES, king of Thebes. After the death of OEDIPUS, father of Eteocles and Polynices, Eteocles excluded his brother from a share in the kingdom. Polynices led the Seven against him. The brothers killed each other in single combat. Of the seven, only Adrastus survived. Ten years later he led against Thebes the sons of the leaders, the EPIGONI, who avenged their fathers. Tragedies by AESCHYLUS and EURIPIDES and the *Thebaid* of STATIUS are based on the story.

Seven Churches in Asia, addressed in the preface of the REVELATION (1–3). They are the churches of Ephesus, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia (Lydia), and Laodicea (Phrygia). They are in W Asia Minor.

Seven Days battles, in the Civil War, name given to the week of heavy fighting near Richmond, Va. (June 26–July 2, 1862). After the battle of Fair Oaks (see PENINSULAR CAMPAIGN) the Union general G. B. MCCLELLAN moved his army so that only the 5th Corps under Fitz-John Porter remained N of the Chickahominy river. Thereupon Gen. R. E. LEE, commanding the Confederate Army of Northern Virginia, planned to attack Porter and cut McClellan off from his base at White House Landing on the Pamunkey river. T. J. (Stonewall) JACKSON, who was on his way from the Shenandoah Valley to join Lee, was to advance from the north and turn Porter's strong position behind Beaver Dam Creek before A. P. Hill fell upon the Union advance lines at Mechanicsville, a village c 5 mi. NE of Richmond. Jackson failed to arrive. Nevertheless Hill attacked and was severely repulsed in the battle of Mechanicsville (or Beaver Dam Creek) on June 26. Porter fell back to another strong position at Gaines's Mill, a locality near Old Cold Harbor, c 10 mi. NE of Richmond. Here on June 27, Longstreet, Jackson, A. P. Hill, and D. H. Hill led the Confederates against Porter's greatly inferior forces in the battle of Gaines's Mill and at nightfall finally broke the heroic Union resistance. With a good part of his corps, Porter crossed the river and joined the bulk of McClellan's army, which had remained inactive. The Union general now began to change his base to the James river. Lee crossed the Chickahominy and followed him, but in the battles of Savage's Station (a railroad station c 8 mi. E of Richmond) on June 29, and Frayser's Farm or Glendale (c 12 mi. SE of Richmond) on June 30, he failed to cut off McClellan's movement. McClellan posted his army on Malvern Hill (an elevation on the north bank of the James c 18 mi. SE of Richmond), and in the battle of Malvern Hill on July 1, the Union troops repeatedly repulsed the spirited Confederate attacks in some of the hardest fighting of the war. On the next day, however, McClellan withdrew to Harrison's Landing on the James, and the Peninsular campaign was over. Although his losses were heavier, Lee had saved Richmond. Not until 1864 did Union forces again come so near to the Confederate capital. See K. P. Williams, *Lincoln Finds a General* (1949).

Seveneh: biblical name see ASWAN.
Seven Hunters, Hebrides see FLANNAN ISLANDS.
Sevenoaks, urban district (1931 pop 10,484, 1943 estimated pop 12,780), Kent, England, on a hill, SE of London It has a 15th-century parish church and a grammar school founded in 1432 "Knole," the seat of Lord Sackville, built largely by Archbishop Bourchier in the 15th cent, has a park of over 900 acres. See V M Sackville-West, *Knole and the Sackvilles* (new ed , 1947)
Seven Pines see PENINSULAR CAMPAIGN
Seven Sleepers of Ephesus (ĕf'ĭsŭs), in a Christian version of a widespread story, martyrs immured in a cave near Ephesus in the persecution of Decius (c 250). Long afterward they awoke, as from sleep, and were taken before the emperor, Theodosius II (d 450) Their story convinced the emperor, who had been wavering in his faith The youths returned to their cave, to sleep again until Judgment Gregory of Tours told the story.
seventeen-year locust. see CICADA
Seventh-Day Adventists see ADVENTISTS
Seventh-Day Baptists, Protestant sect holding the same doctrines as other Calvinistic Baptists but observing the seventh day of the week as the Sabbath In the Reformation in England the observance was adopted by many, and in the 17th cent there were Seventh-Day Baptists among the followers of Oliver Cromwell In America the first Seventh-Day Baptist church in the country was organized (1671) in Rhode Island German Seventh-Day Baptists, under the leadership of Johann Conrad Beissel, established (c 1728–1733) at Ephrata, Pa , a semimonastic religious society, famous in colonial times Among the industries was a noted print shop
Seven Weeks War see AUSTRO-PRUSSIAN WAR
Seven Wise Men of Greece. Lists of men drawn from among the outstanding politicians and political philosophers of ancient Greece differed widely One usual listing is BIAS, CHILON, CLEOBULUS, PERIANDER, PITTACUS, SOLON, and THALES
Seven Wonders of the World, in ancient classifications were the Great Pyramid of Khufu (see PYRAMID) or all the pyramids with or without the SPHINX, the Hanging Gardens of Babylon, with or without the walls, the MAUSOLEUM at Halicarnassus, the Artemision at EPHESUS, the COLOSSUS OF RHODES, the Olympian *Zeus,* statue by PHIDIAS, and the PHAROS at Alexandria, or, instead, the walls of Babylon
Seven Years War, 1756–63, world-wide war fought in Europe, North America, and India between France, Austria, Russia, Saxony, Sweden, and (after 1762) Spain on the one side and Prussia, Great Britain, and Hanover on the other The struggle was complex in its origin and involved two main distinct conflicts the colonial rivalry between France and England and the struggle for supremacy in Germany between the house of Austria and the rising kingdom of Prussia It was preluded in America by the outbreak of the last of the FRENCH AND INDIAN WARS and in India by fighting among native factions and the struggle between DUPLEIX and CLIVE The War of the AUSTRIAN SUCCESSION (1740–48) had left Austria humiliated Seeking to recover Silesia from Prussia, Empress MARIA THERESA even before the conclusion of that war had secured the alliance of ELIZABETH of Russia In the years following the Treaty of Aix-la-Chapelle (1748) Maria Theresa's chancellor KAUNITZ worked for a rapprochement with France In 1755, when hostilities broke out in North America, George II of England and Hanover negotiated an alliance with FREDERICK II of Prussia, the Treaty of Westminster This event hastened the alliance (1756) of France and Austria, sometimes called the "diplomatic revolution" Shortly afterward Frederick II opened hostilities by invading Saxony In Jan , 1757, war was declared on the aggressor in the name of the Holy Roman Empire Austria concluded offensive alliances with France and Russia and was joined by Sweden The main European phase of the war began with the Prussian invasion of Bohemia early in 1757 Victorious at first, Frederick was severely defeated by the Austrians under Daun at Kolin (June, 1757) and had to evacuate Bohemia The fighting was carried into Saxony and Silesia, where Frederick gained the great victories of Rossbach (Nov , 1757) and Leuthen (Dec , 1757) over the French and Austrians The Russians, who had invaded Prussia, were defeated by Frederick at Zorndorf (Aug , 1758) The English and Hanoverians, at first unsuccessful against the French in NW Germany, began a vigorous effort when the younger Pitt (later earl of CHATHAM) came into power, the troops then won the victories of Krefeld (June, 1758) and Minden (Aug , 1759) However, Frederick soon found himself in an almost desperate situation He was badly beaten by Daun at Kunersdorf (Aug , 1759) and in Nov , 1759, Daun captured a Prussian army of 13,000 at Maxen. In Oct , 1760, the Russians entered Berlin Frederick succeeded in expelling them a few days later and in November won a victory over Daun at Torgau, but his situation remained critical, especially after the fall of Pitt (1761) deprived him of British subsidies Only the death (Jan , 1762) of Elizabeth of Russia and the accession of PETER III, Frederick's ardent admirer, saved him from certain defeat By the Treaty of St Petersburg (1762) Russia concluded peace and restored all conquests, Sweden made peace in the same year Now fighting alone in the east, the Austrians were soundly defeated at Burkersdorf (July, 1762). The French, too, had suffered severe reverses In America, they had lost Louisburg (1758), Quebec (1759), and some possessions in the West Indies, in India, the British victories at Plassey (1757) and Pondichéry (1761) had destroyed French power, on the sea, the French took Port Mahón from the British (1757) but were defeated by Hawke in Quiberon Bay (1759). The entry of Spain into the war under the terms of the Family Compact of 1761 was of little help to France, where the war had never been popular in the first place After protracted negotiations between the war-weary powers peace was made (Feb , 1763) among Prussia, Austria, and Saxony at HUBERTUSBURG, and among England, France, and Spain at Paris (see PARIS, TREATY OF, 1763) The Treaty of Hubertusburg, though it restored the pre-war status quo, marked the ascendancy of Prussia as a leading European power Through the Treaty of Paris, Great Britain emerged as the world's chief colonial empire at the expense of France For Russia, the Seven Years War was the first great venture into purely European affairs See Richard Waddington, *La Guerre de sept ans* (5 vols , 1899–1914)
Severing, Wilhelm Karl (vĭl'hĕlm kärl' zā'vurĭng), 1875–, German statesman A Social Democrat, he served, between 1907 and 1933, several times in the Reichstag and was long (1920–32) Prussian minister of the interior
Severn, Joseph (sĕ'vurn), 1793–1879, English portrait and landscape painter He was consul at Rome from 1861 to 1872 He is best known for his devotion to Keats in his last days He became a popular portraitist, especially among the friends and associates of Keats See biography by William Sharp (1892), Sheila Smith, countess of Birkenhead, *Against Oblivion* (1944)
Severn (sĕ'vurn) **1** River rising in W Ontario in lake country and flowing 420 mi NE through Severn Lake to Hudson Bay Fort Severn, a Hudson's Bay Company trading post established (1689) at the mouth of the river, was captured (1690) by Pierre le Moyne, sieur d'Iberville The post was rebuilt in 1759 and has been in continuous operation since **2** River of S Ontario, issuing from the north end of Lake Couchiching and flowing 20 mi WNW to Georgian Bay of Lake Huron, NW of Orillia It drains Lake Couchiching and Lake Simcoe and forms part of the inland waterway system linking Georgian Bay with Lake Ontario via the Trent Canal
Severn, ane *Sabrina,* one of the principal rivers of England It rises on Plinlimmon, in Wales, and flows c 200 mi (of the rivers in Great Britain second to the Thames in length) NE and E to Shrewsbury and thence SE, S, and SW—through a great estuary—to the Bristol Channel It borders or passes through the counties of Montgomery, Shropshire, Worcester, and Gloucester, and Worcester, Gloucester, and numerous smaller towns are on its banks The tributaries include the Teme, Wye, Usk, Upper Avon, and Lower Avon It is connected by canal with the Thames, Mersey, Trent, and other streams A railroad tunnel more than 4 mi long passes under the estuary between Portskewett and New Passage The river is still important as a transportation route Because of the conformation of the estuary, a great tidal rise, or bore, occurs up to Gloucester
Severnaya Zemlya (svĕ'vĭrnŭ zĭmlya') [Rus ,= northern land], archipelago, area 14,300 sq mi , in the Arctic Ocean, N of Siberia, in Krasnoyarsk Territory, RSFSR, extending from lat 77° 50' N to lat 81° 15' N It separates the Kara Sea from the Laptev Sea Discovered in 1913, it was at first named Nicholas II Land
Severovostochny, Cape, RSFSR see CHELYUSKIN, CAPE
Severus or **Septimius Severus** (Lucius Septimius Severus) (sĕptĭ'mēus sēvē'rus), 146–211, Roman emperor (193–211), b Africa He was the only African who became emperor He was campaigning in Pannonia and Illyria when PERTINAX was murdered He moved on Rome vowing to avenge Pertinax and accomplished the death of the usurper, Didius Julianus He was proclaimed emperor and went to the East against Pescennius Niger, who had been proclaimed by his legions Severus defeated the pretender (194) and put him to death He took Byzantium (196) and subdued the rebellious Arabs of Mesopotamia He then came to the West and reduced Clodius Albinus, another pretender, in Gaul (197) and, returning eastward, attacked and expelled the Parthians from Mesopotamia (198) In 208 he went to Britain, thence he invaded Scotland He also repaired HADRIAN'S WALL He died at York Severus ruled with vigor, always favoring the army In beautifying Rome he built the Arch of Septimius Severus in the Old Forum To pay his way he debased the coinage. He was the patron of Papinian. **Caracalla** succeeded him See M Platnauer, *The Life and Reign of the Emperor L Septimius Severus* (1918).
Severus (Flavius Valerius Severus) (sēvē'rŭs), d. 307, Roman emperor (306–7). He was proclaimed Caesar by Galerius, with whom he participated in an unsuccessful attempt to overthrow Maxentius He was captured at Ravenna by Maximian (father of Maxentius) and was taken to Rome. He was treacherously killed
Severus, Alexander see ALEXANDER SEVERUS
Sevier, John (suvēr'), 1745–1815, American frontiersman and statesman. He was born near the site of New Market, Va , the town he founded in young manhood In 1773 he moved with his family to W North Carolina, where he became a leader of the WATAUGA ASSOCIATION In the American Revolution, Sevier, an ardent patriot and veteran of many Indian campaigns, was prominent as one of the frontier leaders in the American victory at Kings Mountain (1780) in the CAROLINA CAMPAIGN After the war, when North Carolina ceded (1784) its Western lands to the United States, the settlers organized a separate, short-lived government headed by Sevier (see FRANKLIN, STATE OF) Following its demise, he was elected (1788) to the North Carolina senate, voted for the U S Constitution in the state ratifying convention of 1789, and was elected (1789) to represent the western districts in Congress In 1791 he was made a brigadier general in the "Territory South of the River Ohio" and in 1794 was appointed to its 10-man legislative council The new state of Tennessee was organized (1796) out of this territory, and Sevier, elected the first governor, served from 1796 to 1801 and again from 1803 to 1809 The rising young Andrew Jackson unsuccessfully tried to curb Sevier's political power, and the two men became bitter personal enemies Sevier ended his distinguished career by returning to Congress (1811–15), where he was one of the "war hawks," who favored hostilities with Britain See J R Gilmore, *The Rear-Guard of the Revolution* (1886) and *John Sevier as a Commonwealth Builder* (1887), C S Driver, *John Sevier, Pioneer of the Old Southwest* (1932)
Sevier (sēvēr'), river formed in SW Utah by the junction of Panguitch Creek and Assay Creek It flows northward through canyons, then rounds out of the mountains and flows SW through the Sevier Desert to the salt Sevier Lake The river is much used for irrigation and is impounded, particularly in the Sevier Bridge Reservoir and the Sevier River Reservoir
Sevierville (suvēr'vĭl), town (pop 1,161), co seat of Sevier co , E Tenn , ESE of Knoxville, in a timber and farm area, laid out 1795 Great Smoky Mountains National Park and Douglas Dam in the French Broad are near by
Sévigné, Marie de Rabutin-Chantal, marquise de (marē' du rabütē'-shätal' markēz' du sāvēnyā), 1626–96, French woman of letters Her correspondence (1st partial ed , 1725, definitive ed , 1862–68, 2 vols of newly found letters, 1876) of more than 1,500 letters is a monument of French literature After her husband's death (1651) she devoted herself to her two children To her daughter, the comtesse de Grignan, who lived in Provence, the marquise wrote long letters of personal, literary, and social news, full of witty comment These letters are the chief element of the Sévigné correspondence The conscious art of Mme de Sévigné is best seen in the unaffected elegance of her style and in the acuteness of her observation But the letters interest most for the revelation of their author, a high-principled, delightful, and intelligent woman Her most intimate friend was Mme de la Fayette The letters of Mme de Sévigné have been frequently issued in English translation A recent partial edition is that by Richard Aldington (1937). Edward FitzGerald, the poet, left a useful *Dictionary of Madame de Sévigné* (1914) See J Aldis, *The Queen of Letter Writers* (1907), Arthur Tilley, *Madame de Sévigné* (1937)
Seville (suvĭl', sĕ'vĭl), Span *Sevilla* (sāvē'lyä), city (pop. 312,123), capital of Seville prov and of Andalusia, SW Spain, on the Guadalquivir Connected with the Atlantic by the river and by a canal accessible to ocean-going vessels, Seville is a major port as well as an important industrial and cultural center. Its industries include manufactures of tobacco, armaments, explosives, perfume, porcelain, pharmaceuticals, chemicals, textiles, and machinery It is an archiepiscopal see and has a university (founded 1502) The ancient Hispalis, Seville was an important place in Phoenician times It was favored by the Romans, who made it the capital of Baetica prov and who built the near-by city of Italica, of which some ruins remain Seville continued as the chief city of S Spain under the Vandals and the Visigoths Falling to the Moors in 712, it was (c.1023–1091) the seat of an independent emirate under the ABBADIDES and was a flourishing commercial and cultural center under the Almoravides and the Almohades. In 1248 Ferdinand III of Castile conquered it after a long siege and made it his residence. It is said that 300,000 Moors left the city at that time With the discovery of the New World, Seville entered its

greatest period of prosperity, holding the monopoly of trade with the new colonies until 1718, when it was superseded by Cádiz Its economic recovery from the subsequent decline is only recent Seville was the seat of a flourishing school of painting to which Velázquez, Murillo (both born here), and Pacheco belonged The colorful life of the city was the subject of many of the best-known paintings of MURILLO, who is generously represented in the art gallery and in the cathedral Seville has to a large degree retained its Moorish aspect The Gothic cathedral (1401-1519), one of the world's largest, occupies the site of a former mosque, of which two parts remain—the Court of Oranges and the beautiful GIRALDA tower The interior of the cathedral is extraordinarily rich and contains invaluable works of art Here also is the tomb of Christopher Columbus During Holy Week the cathedral is the scene of unique and colorful pageantry Adjoining the cathedral is the alcazar, built (14th cent) in Moorish style by Moorish artisans on the order of Peter I (Peter the Cruel) Among the many other notable buildings of Seville are the city hall (16th cent), the Casa de los Pilatos, a palace in Mudéjar style, the Torre del Oro, a 13th-century tower, the university building, the Colombina library, containing manuscripts by Columbus and many volumes, the large tobacco factory (scene of part of the action of Mérimée's and Bizet's *Carmen*), and numerous churches and private palaces One of the world's most beautiful cities, it derives its charm not only from its palatial buildings and churches, but mainly from its general color and architecture, which summarize all that has made S Spain a land of romance It is, moreover, the capital of bullfighting in Spain and a center of the Andalusian gypsies, famed for their songs and dances

Sèvres (sĕv'ru), town (pop 15,112), Seine-et-Oise dept, N France, a southwestern suburb of Paris Its name is famous for SÈVRES WARE There is a ceramics museum established by Alexandre BRONGNIART Sèvres is the headquarters of the International Bureau of Weights and Measures

Sèvres, Treaty of, 1920, peace treaty concluded after the First World War at Sèvres, France, between Turkey on the one hand and the Allies (excluding Russia and the United States) on the other The treaty, which liquidated the Ottoman Empire and virtually abolished Turkish sovereignty, followed in the main the decisions reached at San Remo (see SAN REMO, CONFERENCE OF) In Asia, Turkey renounced sovereignty over Mesopotamia (Iraq) and Palestine (including Trans-Jordan), which became British mandates, Syria (including Lebanon), which became a French mandate, and the kingdom of HEJAZ Turkey retained Anatolia, but was to grant autonomy to Kurdistan ARMENIA became a separate republic under international guarantees, and SMYRNA with its environs was placed under Greek administration pending a plebiscite to determine its permanent status In Europe, Turkey ceded parts of E Thrace and certain Aegean islands to Greece and the Dodecanese to Italy, retaining only Constantinople and its environs, including the Straits zone (see DARDANELLES), which was neutralized and internationalized The Allies further obtained virtual control over Turkish economy The treaty was accepted by the government of Sultan Mohammed VI at Constantinople, but was rejected by the rival nationalist government of Kemal ATATURK at Ankara Ataturk's separate treaty with the USSR and his subsequent victorious campaign against the Greeks forced the Allies to negotiate a new treaty in 1923 (see LAUSANNE, CONFERENCE OF)

Sèvres ware, porcelain made in France by the royal (now national) potteries established (c 1740) by Louis XV at Vincennes, moved (1756) to Sevres, and still in operation Before 1770 it was a soft-paste porcelain (*pâte tendre*), of underglaze decoration and alkaline glaze, subsequently it was made of kaolin, with a feldspar glaze and an overglaze decoration, a hard infusible porcelain Delicacy and perfection of technique are dominant characteristics Tableware shows flower and figure subjects on a white ground, clocks, vases, and plaques display panels or medallions on white with figures enclosed by ornate gold frames, the main ground being a brilliant color Sometimes a diaper design in gold enriches the background Jeweled SÈVRES exhibits a rich decoration of enamels, simulating precious stones encrusted gem-fashion in gold relief ornament The early *pâte tendre* Sevres is eagerly sought by collectors

sewage. Modern cities now have water-carriage sewerage systems, which are conduits of iron, concrete, brick, stone, or vitreous earthenware Those of London and Hamburg date back to the early 19th cent In the United States the development of efficient sewerage systems was begun c 1850. In the water-carriage system the sewage from the various plumbing fixtures is discharged into the house sewer and thence into the street sewer system Before leaving the plumbing fixtures, the solids are enormously diluted with water which rushes the solid matter along to the ultimate disposal point at the end of the sewers Sewage disposal must be such that all germs and other matter are destroyed or rendered harmless Methods of treating sewage include dilution, screening, tank treatment by sedimentation or precipitation, septic-tank treatment, broad irrigation, filtration, disinfection, and combinations of these methods All rely on the oxidation of the organic matter suspended or dissolved in the sewage and the destruction of bacteria by chemicals or by burning Dilution is accomplished by discharging the raw or partially treated sewage into the sea or a river Unless the deposit is made sufficiently far out, bathing places, shell fisheries, and other water facilities may become polluted Screening is used to remove the suspended matter before disposing of the liquid and dissolved sewage by filtration or disinfection Sedimentation tank treatment consists of sending a sewage flow slowly through sizable tanks so that suspended matter will sink to the bottom If chemicals are added to the process, it is called precipitation Mechanical devices are frequently employed to remove the sludge from the tanks The SEPTIC TANK is used widely Filtration employs beds of crushed coke or fine coal which catch the solid particles as the liquid runs through, the filter-bed materials are removed and burned after becoming clogged with sludge Disinfection is most often accomplished by adding chlorine in various forms to the sewage and allowing it to stand in tanks for stipulated periods of time Sludge from the tanks is dried out as much as possible and then used as fertilizer or ground fill, or it is dumped many miles out at sea Sewers vary in size from 6 in in diameter to 16 by 12 ft, and more, in cross section The sewer of egg-shaped cross section, with the small radius at the bottom, keeps the stream of sewage relatively deep even when a small quantity is passing through and thus keeps the solid matter moving To prevent stoppage, the sewer must be flushed out, either by using a hose through a manhole or automatically by building flushing tanks at the ends of the sewer At intervals of about 300 ft along the main sewers are placed manhole covers with perforated cover plates to permit ventilation Rain water is drained off by a combined sewer system, or it may be taken care of by itself in a storm sewer See A P Folwell, *Sewerage* (1898, 11th ed, 1936), H F Babbitt, *Sewerage and Sewage Treatment* (1922, 6th ed 1947), C E Keefer, *Sewage-Treatment Works* (1940)

Sewall, Samuel (sū'ul), 1652-1730, American jurist, b England He was brought as a child to Newbury, Mass, and was graduated from Harvard in 1671 He became a minister but gave up the cloth in 1677 to assume management of a printing press in Boston and entered upon a public career He was elected (1684) to the General Court and was (1692-1725) a member of the council As one of the judges who tried the Salem witchcraft cases in 1692, he shared responsibility for the condemnation of 19 persons Convinced of the error of these convictions, in 1697 in Old South Church, Boston, he publicly accepted the "blame and shame" for them and thereafter annually spent a day of repentance in fasting and prayer Sewall served (1692-1728) as judge of the superior court of the colony, being chief justice during the 10 last years His diary (3 vols, 1878-82) reveals an attractive and very humane man of Puritan days See N H Chamberlain, *Samuel Sewall and the World He Lived In* (1897)

Sewanee see SOUTH, UNIVERSITY OF THE

Seward, Anna (sē'wurd), 1742-1809, English poet, called the Swan of Lichfield A member of the Lichfield literary group which included Thomas DAY and Erasmus DARWIN, she was acquainted also with Dr Johnson and Boswell She bequeathed her literary remains to Sir Walter Scott, who edited them in 1810 Her letters appeared in 1811 (6 vols), selections are in *The Swan of Lichfield* (ed by Hesketh Pearson, 1936) See M E Ashmun, *The Singing Swan* (1931)

Seward, William Henry, 1801-72, American statesman, b Florida, Orange co, N Y, grad Union College, 1820 Admitted to the bar in 1822, he established himself as a lawyer in Auburn, N Y, which he made his lifelong home He was active in the Anti-Masonic party and later joined the Whig party Seward and his close personal and political friend, Thurlow WEED, became the two most influential Whigs in New York state A state senator from 1830 to 1834, he ran unsuccessfully for the governorship in 1834, but won in 1838 and 1840 Educational reforms and internal improvements were vigorously pressed in his administrations At the close of his second term he returned to his law practice until 1848, when he was elected to the U S Senate and, reelected in 1854, was one of its most prominent members in the troubled years preceding the Civil War A genial, gregarious man with intellectual interests, he was generally well-liked, even by his political opponents Seward was an uncompromising foe of slavery and, though he apparently tempered his public expressions so as not to alienate votes, he nevertheless made two remarks which became catch phrases of the antislavery forces In the Senate on March 11, 1850, he said that there was a "higher law" than the Constitution, and in a speech at Rochester on Oct 25, 1858, he declared that there would exist "an irrepressible conflict" until the United States became either all slave or all free With the disintegration of the Whig party, Seward and Weed joined (1855) the new Republican party Prominent as he was Seward, despite (probably, indeed, because of) the efforts of Weed's machine, was never able to secure the Republican presidential nomination He was passed over for John C Frémont in 1856 and for Abraham Lincoln in 1860 He was also a sincere friend of the immigrants, especially the Irish, and naturally received their political support and the opposition of former members of the Know-Nothing group within the Republican party As Lincoln's Secretary of State he was hardly impressive at first In a peculiar memorandum (April 1, 1861) to the President he proposed waging war against most of Europe so as to unite the nation and also revealed a desire to dominate presidential policy Lincoln's masterly rebuke did not offend him however, and the President wisely retained his services Seward also did some unwarranted meddling during the Fort Sumter crisis, but after war broke out he showed himself an able statesman though it took all of Lincoln's ingenuity to keep both Seward and his rival, Salmon P CHASE, eternally ambitious for the presidency, in the same cabinet Seward's handling of delicate matters of diplomacy with Great Britain, particularly in the TRENT AFFAIR was notably adept He also protested French intervention in Mexico and after the Civil War helped bring an end to it The plot of John Wilkes BOOTH to assassinate Lincoln also marked Seward for death, but he recovered from the attack and retained his cabinet position under the new President, Andrew JOHNSON He supported Johnson's Reconstruction policy and, like the President, was roundly denounced by the radical Republicans Seward's most important act in this administration was the purchase of ALASKA from Russia in 1867 His foresight was not generally acknowledged, however, and Alaska was long popularly called "Seward's folly" He also tried to purchase the two most important islands in the Danish West Indies (the Virgin Islands), but the Senate refused to approve his action See G E Baker, ed, *The Works of William H Seward* (5 vols, 1853-84), F W Seward, ed, *Autobiography of William H Seward to 1834 and Selections from His Letters* (3 vols, 1891), biographies by T K Lothrop (1896), Frederic Bancroft (1900), and E E Hale, Jr (1910), Gideon Welles, *Lincoln and Seward* (1874), Gamaliel Bradford, *Union Portraits* (1916), B J Hendrick, *Lincoln's War Cabinet* (1946)

Seward, town (pop 949), S Alaska, on the east side of Kenai Peninsula, at the head of Resurrection Bay It was founded in 1902 by surveyors for the Alaska RR (built 1915-23) as the ocean terminus of the railroad With an airfield and an ice-free harbor, it is an important supply center for the Alaska interior Fishing and lumbering are also carried on During the Second World War, Seward was a major port of entry for U S troops and matériel

Seward, city (pop 2,826), co seat of Seward co, SE Nebr, WNW of Lincoln, founded 1868, inc 1874 It is a farm trade and rail center in a prairie region A Lutheran teachers college is here

Seward Peninsula, W Alaska, projecting c 200 mi into Bering Sea, between Norton Sound and Kotzebue Sound, just below the Arctic Circle The region is mostly bleak tundra, with very long and cold winters Placer gold mining and trapping are the chief occupations of its sparse population Nome is on the south coast

Sewell, Anna (sū'ul), 1820-78, English author Her one work, *Black Beauty* (1877), the story of a horse became a children's classic and has gone into countless reprints Her mother, **Mary Wright Sewell,** 1797-1884, was also a popular writer for children

Sewell, Jonathan, 1766-1839, Canadian jurist, b Cambridge, Mass He went to New Brunswick in 1785 and was called in 1789 to the bar in Quebec While chief justice (1808-38) of Lower Canada, he made a decision (1818) which was the basis for drawing the boundary between Upper and Lower Canada He was president (1808-29) of the executive council and speaker (1809-39) of the legislative council. He was one of the earliest advocates of confederation

Sewickley (sū'ĭklē), residential borough (pop 5,614), SW Pa, on the Ohio and NW of Pittsburgh, inc 1853

sewing see EMBROIDERY and NEEDLEWORK

sewing machine An attempt at mechanical sewing was made in England (1790) by Thomas Saint, with a machine having a forked, automatic needle which made a single thread chain B Thimonnier, a French tailor, patented in 1830 a wooden device with a hooked needle In 1841 he used 80 of these machines to make uniforms for the French army His factory was wrecked by a mob, but in 1848 he placed another machine on the market An eye-pointed needle making a chain stitch was tried about the same time for glovemaking Walter

Hunt of New York city is said to have devised in 1832 a machine using an eye-pointed needle but failed to patent it Elias Howe made the first successful machine (1846) using an eye-pointed needle and an intermittent feed After perfecting various features and defending his patents, he made a fortune from his machine A B Wilson invented in 1850 an automatic feed and later perfected the four-motion feed, an essential feature of later machines Before 1850 all machines were operated by hand and the cloth was fed by various clumsy devices, such as a separately moved belt with projecting steel spikes He also invented the rotary bobbin and hook Isaac M Singer, who is credited with the invention of the foot treadle and the yielding presser foot, finally coordinated previous attempts into the modern machine, gave it a commercial status, and began large-scale manufacturing Two types of machine, the chain and the lock stitch, operate on the same principle, an eye-pointed needle, raised and lowered at great speed, pierces the material lying on a steel plate, casting a loop of thread on the under side of the seam In the lock-stitch machine a second thread, fed from a shuttle under the plate, passes through the loop and is interlocked with the upper thread as it is drawn tightly up by the rising needle In the chain-stitch or single-thread machine the loop is held under the seam while the needle rises, the cloth is fed forward, and the needle descends again engaging the loop and drawing it flat under the cloth Both lock and chain machines are made in two classes, domestic and industrial Of the domestic machines 90 per cent are the lock-stitch type Electrification and an ever-increasing number of attachments for hemming, gathering, tucking, quilting, and other operations are improving the efficiency of the household machine Power-driven, highly specialized machines for industrial use include many used in clothing manufacture such as those for buttonholing and button sewing, seam finishing, and embroidery Shoes, gloves, hats, books, upholstery, hosiery, corsets, tents, awnings, flags, and sails are sewn on specially devised machines The thin plates of the all-metal dirigible are sewn so that the gas will not escape The United States leads in the manufacture of sewing machines and exports them to all parts of the world See Julia Silverman, *Power Machine Sewing* (1942)

sex, term used to refer both to the two groups distinguished as males and females and to the anatomical and physiological characteristics associated with maleness and femaleness Sex is associated with the ability to produce special reproductive cells known as gametes, the type produced by a female organ is an ovum or egg cell and that produced by a male organ is a sperm Differentiation into the two sexes is observable in some members of all divisions of both plant and animal kingdoms Among the higher animals, i e , the vertebrate animals, the sexes are usually quite readily distinguished by certain anatomical differences (e g , in the structure of the reproductive organs and in size of the animal) and by the possession of secondary sexual characters Among these characters are the brighter coloring that usually distinguishes males from females in birds, fish, and certain other animals, the presence in male deer of antlers, and the growth of the beard and the deepening of the voice in the human male In the highest group of plants, the seed-producing plants, or spermatophytes, the female organ is the pistil or egg-producing organ and the male organs are the stamens or pollen-producing structures Most seed plants have both stamens and pistil in the same flower, and many have separate staminate and pistillate flowers on the same plant In a few (e g , species of holly and willow) staminate and pistillate flowers are borne on separate plants Studies of sex in plants are complicated by the fact that an alternation of generations is characteristic of some members of the lower plant groups as well as of the seed plants This alternation involves the production of eggs and sperm by a gametophyte generation, fusion of an egg and sperm results in the development of a spore-bearing plant capable of producing spores which give rise to a gametophytic generation In certain animals, e g , the earthworm, eggs and sperm are produced by the same individual, such an animal is said to be hermaphrodite In certain lower plants and animals, especially the microscopic forms, there is often little or no apparent differentiation into sexes Many of the lower multicellular forms are capable of producing within the one individual two different kinds of cells capable of uniting and developing into a new individual, this is true of some jellyfish However, in some members of the group, e g , the sea anemone, male and female cells are produced by different individuals In some mold plants, e g , in bread mold, there is a foreshadowing of differences in sex in that certain plants known as plus strains produce a kind of gamete which unites with a gamete produced by a minus strain to form a zygospore capable of developing into a new plant The gametes in this case are apparently identical anatomically but they differ physiologically In both plants and animals that form egg and sperm cells the union of an egg and sperm is called fertilization and the resulting cell is known as a fertilized egg or a zygote The factors that determine sex have long been a subject of interest Early ideas centered around superstitious beliefs. With the development of the concepts of Mendelism and the later studies of chromosomes and genes came a better understanding of the problem Although much remains to be learned, the method of inheritance of sex has, in some cases, been determined In human beings each body cell contains 48 chromosomes and each sex cell before the occurrence of meiosis, or reduction division, contains also 48 chromosomes or 24 pairs of chromosomes In the female there are 23 pairs consisting of apparently similar (homologous) members and another pair known as X chromosomes (the pair is indicated by XX) In the male 23 pairs appear to be homologous and the 24th pair consists of one X chromosome and a smaller chromosome known as a Y chromosome When meiosis occurs, one member of each pair of chromosomes enters each mature sex cell Therefore, all of the mature egg cells will contain 24 chromosomes and each will have one of the X chromosomes However, in the male, the segregation of members of each pair of chromosomes will result in the production of two kinds of mature sperm cells—half with 23+X and half with 23+Y The presence of a Y chromosome as a member of a pair is believed to determine the sex of the individual as male When fertilization occurs, according to Mendelian ratios, in one half of the fertilized eggs the chromosomes will consist of 46+2X (resulting in a female) and the other half will have 46+X+Y (resulting in a male) Theoretically the number of male and female births would then be in a one-to-one ratio, actually there is a slight deviation This mechanism of inheritance of sex accounts for the mode of inheritance of sex-linked characters Genes located in the X chromosome are said to be sex-linked, i e , they are inherited through the X chromosome Such characters are not necessarily limited to a particular sex For example, red-green color blindness in humans is attributed to a recessive gene in the X chromosome, a female carrying this trait can transmit it to her male offspring, although she herself may not suffer from it

sexpartite vault (sĕks'pär'tīt) It developed in medieval masonry construction from the difficulty of vaulting an oblong space with ribs of exclusively semicircular form, since the diagonal ribs being longer, would unavoidably rise to a higher crown than the transverse ones The adoption of pointed arches was eventually to solve this problem by permitting arches of varying spans to be brought to the same crown Before this, however, the Romanesque builders of the early 12th cent , in an attempt to secure square compartments not only for the wide nave, but also for the narrow side aisles, adopted the expedient of including two aisle bays in the width of each nave bay The intermediate nave pier which resulted from this was then, in some cases, carried up to the vault height, and from it an intermediate vault rib was sprung This extra member strengthened the diagonal ribs, aided in supporting the vault masonry, and transformed the quadripartite or four-part vault into one of six sections The sexpartite vault thus created is seen in its tentative stage at the Abbaye-aux-Dames, Caen (1083) It was employed frequently in France in the 12th cent , and in a few cases in England, e g , the choir of the Canterbury cathedral However, its form was productive of unsatisfactory warped surfaces, and it fell from use in the early 13th cent when the complete adoption of pointed arches had fully solved the original vaulting difficulties

sextant, instrument for finding geographical position by measuring the altitude of the sun or the stars The sextant was invented independently by the American Thomas Godfrey and the Englishman John Hadley in 1731 Its construction is based on the principle that a reflected ray of light leaves a plane surface at the same angle that the direct ray strikes the surface The sextant consists of a triangular frame, the bottom of which is a graduated arc forming a sixth part of a circle A horizontal mirror lies in the same vertical plane, while a small telescope is mounted on an adjustable ring with an index arm and a vernier The position is mostly taken at noon The user looks through the telescope straight at the sea horizon, but he sees also the image of the sun, dimmed by an interposed dark glass, through the mirror He moves the mirror slowly until the solar image appears just to touch the horizon Then the sun's altitude is read, and by reference to the tables of altitude in different latitudes in the nautical almanac and by a simple calculation, the altitude is obtained A sextant may be used on land with an "artificial horizon" This consists of a small shallow receptacle with mercury, which gives a truly horizontal surface In air navigation a bubble octant—sometimes called a bubble sextant—is used, in which a spirit level is reflected into the field of view in such a way that the center of the bubble indicates the true horizon

Sextus Empiricus (sĕk'stus ĕmpĭ'rĭkŭs), 3d cent , skeptic philosopher and physician, probably a Greek. Two of his works are extant, one an exposition of skepticism as he held it, the other an attack on mathematicians from a skeptical point of view He is the best source for ancient skepticism. A translation of his works appeared in 1933–36.

sexual selection: see SELECTION

Seychelles (sāshĕl'), British crown colony (156 sq mi ; pop 30,940), comprising 92 volcanic islands in the Indian Ocean, c 800 mi. E of Zanzibar They were settled by the French in the 18th cent , taken by the British in 1794, and later ceded to Great Britain Copra, cinnamon, vanilla, and guano are exported Mahé (pop. 26,327) is the largest island Others are Praslin and Silhouette The Seychelles are ruled by an appointed governor with the aid of an executive and a legislative council. The inhabitants, of mixed African and European descent, mostly speak a French patois

Seydisfjord, Icelandic *Seyðisfjörður* (sā'dhĭsfyûr'-dhûr), town (pop 778), E Iceland It is a trade center

Seydlitz, Friedrich Wilhelm, Freiherr von (frē'drĭkh vĭl'hĕlm frī'hĕr fŭn zīd'lĭts), 1721–73, Prussian general under Frederick II A cavalry commander, he made the cavalry a decisive offensive weapon by using it for fierce galloping attacks He took a major part in the most important battles of the War of the Austrian Succession and the Seven Years War, notably at Hohenfriedberg (1745), Kolin (1757), Rossbach (1757), Zorndorf (1758), and Freiberg (1762) His family produced distinguished officers until present times

Seyffert, Leopold (sī'fŭrt), 1887–, American painter, b California, Mo He studied art in Pittsburgh and under William M Chase at the Pennsylvania Academy of the Fine Arts Traveling scholarships enabled him to spend some time in France and in Spain, where he worked under Zuloaga On his return to the United States he rapidly acquired a reputation as a portrait painter, particularly of men Seyffert taught at the Art Institute of Chicago and the National Academy of Design, New York In addition to his portraits his work includes numerous figure compositions and decorations He is represented in the museums of Chicago, Detroit, and Rochester and in the Pennsylvania Academy

Seyhan (sāhän'), ane *Sarus,* river, 320 mi long, rising in the Anti-Taurus mts It flows SSW past Adana into the E Mediterranean It is also known as Sihun

Seymour, Charles see SOMERSET, CHARLES SEYMOUR, 6TH DUKE OF

Seymour, Horatio (sē'môr, sē'mur), 1810–86, American statesman, b Pompey Hill, Onondaga co , N Y Educated at the military academy at Middletown, Conn , which later became Norwich Univ (Northfield, Vt), he studied law at Utica, N Y and was admitted to the bar in 1832 Seymour, a Democrat, was military secretary to Gov William L Marcy (1833–39), was thrice elected to the New York assembly (1841, 1844, 1845), and was chosen mayor of Utica in 1842 Elected governor in 1852, he was criticized for vetoing a prohibition bill and was defeated for reelection In the Civil War, Seymour was again elected (1862) governor He declared the Emancipation Proclamation unconstitutional, opposed Federal conscription as an unwarranted invasion of states' rights (but vigorously promoted voluntary enlistments), and denounced the military arrest of Clement L VALLANDIGHAM His conciliatory speech in New York city on the occasion of the DRAFT RIOTS (July, 1863) played into Republican hands and was a factor in his defeat (1864) by Reuben E Fenton He was the Democratic presidential candidate in 1868, and after his defeat by Gen U S Grant assumed the role of elder statesman in his party See biography by Stewart Mitchell (1938), C H Coleman, *The Election of 1868* (1933), W B Hesseltine, *Lincoln and the War Governors* (1948)

Seymour, Jane, 1509?–1537, third queen of Henry VIII of England She served as a lady in waiting to both of Henry's first two queens, Katharine of Aragon and Anne Boleyn Henry became interested in her c 1535, but Jane, by the advice of Sir Nicholas Carew and others, refused to accept any proposal other than marriage Thus was a strong factor in the institution of trial proceedings against Anne Boleyn. She and Henry were married (1536) 10 days after Anne's execution Jane was a partisan of Katharine of Aragon, strove to reunite the king with Princess Mary, and during the Pilgrimage of Grace implored Henry to restore the monasteries She was, however, personally too timid and weak to be effectual Parliament vested succession to the throne in Jane's issue, and in 1537 she gave birth to a son, later Edward VI She died 12 days later

Seymour 1 Town (pop 6,754), SW Conn , on the Naugatuck and NW of New Haven, settled c 1680, inc 1850 The industrial village of Seymour, on the river, produces wire and other metal products 2 City (pop 8,620), SE Ind , S of Columbus, settled c 1850 Its products include automobile parts and household appliances The city has an aviation school Jackson County State Forest is near by

3 Town (pop. 1,539), S Iowa, near the Mo line SW of Centerville; inc 1874 **4** City (pop 3,328), co seat of Baylor co, N Texas, on the Brazos and SW of Wichita Falls, inc 1906 The city, settled in 1878 as a farming community in ranch country at the crossing of the old Dodge City and California trails, handles cotton, grains, and cattle **5** City (pop. 1,365), E Wis, W of Green Bay, settled 1871, inc 1879

Seymour of Sudeley, Thomas Seymour, Baron (sē'mŏr, sŭd'lē), 1508?–1549, English lord high admiral After the marriage of his sister Jane to Henry VIII (1536) he received a number of preferments He served on various diplomatic missions, was in command of the English army in the Netherlands in 1543, and was admiral of the fleet in 1544 At the death of Henry VIII in 1547, Seymour became lord high admiral and Baron Seymour of Sudeley His brother Edward Seymour, duke of Somerset, became the protector to King Edward VI, thereafter Thomas Seymour tried to supplant his brother as the guardian of the young king Refused the hand of Princess Elizabeth, he secretly married the dowager queen, Catherine Parr (1547) In the same year he was influential in securing an act of Parliament which made the duration of the protectorate depend on the king's pleasure instead of being fixed until the king should reach the age of 18 Seymour used his position as admiral to come to an understanding with pirates, in the hope of securing their support After his wife's death (1548) he sued once again for the hand of Elizabeth His activities provoked questioning by the council, and he was convicted of high treason and executed in 1549

Seyne-sur-Mer, La (lä sĕn"-sür-mĕr'), town (pop 18,490), Var dept, SE France, near Toulon A Mediterranean port, it has shipyards

Seyss-Inquart, Arthur (är'tōōr zīs'ĭng'-kvärt), 1892–1946, Austrian National Socialist leader In Feb, 1938, Chancellor Schuschnigg of Austria was forced by German pressure to appoint Seyss-Inquart to the ministry of the interior and of security, a step which considerably facilitated the *Anschluss* [union] of Austria and Germany shortly afterward Seyss-Inquart became governor of the Ostmark, as Austria was called under the Nazi regime In 1940 he was appointed German high commissioner in the occupied Netherlands He ruthlessly exterminated the Dutch Jews and countered Dutch patriotic opposition by executing hostages and by deporting many thousands to slave-labor camps in Germany and German-occupied Europe Captured in 1945, he was tried at Nuremberg as a war criminal He was convicted and hanged

Sfax (sfäks), city (pop 54,637), SE Tunisia, a port on the Mediterranean Sea The site of Phoenician and Roman colonies, it early enjoyed a prosperous trade It was taken (c 1147) by Roger II of Sicily and in the 16th cent by the Spanish Later it became a stronghold of Barbary pirates Today it exports phosphates, olive oil, cereals, and sponges

Sforza (sfôr'tsä), Italian family which ruled the duchy of MILAN from 1450 to 1535 The first prominent member was **Muzio Attendolo Sforza** (mōō'tsēō ät-tĕn'dōlō), 1369–1424, a farmer from the Romagna who became a noted condottiere and took the surname Sforza [the forcer] He fought in the service of several Italian states, then became involved in the struggles for the succession to the kingdom of Naples and died while serving Queen Joanna II His natural son, Francesco I Sforza (see separate article), became duke of Milan in 1450 through his marriage to Bianca Maria VISCONTI He was succeeded by his eldest son, **Galeazzo Maria Sforza** (gälä'ät'tsō märē'ä), 1444–76, a highly educated but dissolute and cruel man, he was a patron of the arts and had Bramante work for him He was assassinated in the Church of San Stefano at Milan by republican conspirators The popular uprising anticipated by the assassins did not materialize Galeazzo's daughter Bianca Maria married Emperor Maximilian, and his natural daughter **Caterina Sforza** (kätärē'nä), 1463?–1509, became the wife of Gerolamo Riario, lord of Imola and Forlì, a nephew of Pope Sixtus IV After Gerolamo's murder (1488) Caterina ruled both cities until she lost them to Cesare Borgia in 1499 Her second husband, Giovanni de' Medici, a grandnephew of Cosimo de' Medici, died in 1498, to him she bore a son who became the famous condottiere Giovanni delle Bande Nere (see MEDICI, GIOVANNI DE') **Galeazzo's** wife, Bona of Savoy, acted as regent for their minor son, **Gian Galeazzo Sforza** (jän'), 1468–94, who succeeded to the duchy on his father's assassination However, in 1480, Galeazzo's brother Ludovico Sforza (see separate article) deprived his nephew of the duchy and assumed its control Gian Galeazzo died a virtual prisoner. His daughter, Bona Sforza, married SIGISMUND I of Poland In the ITALIAN WARS Milan was claimed by Louis XII of France, great-grandson of Gian Galeazzo VISCONTI Ludovico lost Milan to Louis in 1499, but in 1512 the Swiss, as members of the Holy League, stormed Milan and installed Ludovico's son, **Massimiliano Sforza** (mäs"sēmēlyä'nō), 1491–1530, as its duke The Swiss actually controlled Milan until their defeat at Marignano (1515), which obliged Massimiliano to surrender Milan to Francis I of France Massimiliano retired to France, and Emperor Maximilian conferred the title of duke of Milan on Massimiliano's brother, **Francesco II Sforza**, 1495–1535 Francesco took possession of his duchy after the French defeat (1522) by the army of Emperor Charles V at Bicocca Accused by PESCARA of plotting against Charles, Francesco was deprived (1525) of most of his duchy. He joined (1526) the League of Cognac, headed by Francis I, against the emperor, but was obliged to surrender to the imperial troops who besieged him in the citadel of Milan After the Treaty of Cambrai (1529) Francesco was restored as duke and ruled till his death He had no issue, and the succession to Milan once more was contested by France and Spain, with Spain emerging victorious in the Treaty of Cateau-Cambrésis (1559) The Sforza family had several other branches, some of which are still in existence See C M Ady, *History of Milan under the Sforza* (1907), Lacy Collison-Morley, *The Story of the Sforzas* (1933)

Sforza, Carlo, Conte (kär'lō kōn'tā), 1872–, Italian statesman He held high ministerial and diplomatic posts and became a senator in 1919 As foreign minister (1920–21) he negotiated the Treaty of Rapallo with Yugoslavia He was ambassador in Paris, and when Mussolini came to power (1922) he resigned After leading the opposition in the senate for a few years, he went (1927) into voluntary exile to Belgium and France and, after 1940, to the United States, where he became the most prominent Italian anti-Fascist and anti-monarchist leader In 1943 Count Sforza returned to Italy, where he played a major role in politics He became foreign minister in 1947 Among his numerous writings are *Europe and Europeans* (1936), *Fifty Years of War and Diplomacy in the Balkans* (1940), and *The Real Italians* (1942)

Sforza, Francesco I (franchä'skō), 1401–66, duke of Milan (1450–66), natural son of Muzio Attendolo Sforza He succeeded his father to the command of the mercenaries and by his valor and sagacity became one of the most powerful condottieri of his time In 1441 he married Bianca Maria, natural daughter of Filippo Maria VISCONTI, duke of Milan On Filippo's death (1447) the so-called Ambrosian republic was set up in Milan Francesco, who commanded the Milanese troops, made himself master of the republic and was proclaimed duke in 1450 with the support of the Medici of Florence He consolidated the power of Milan and in 1464 seized Genoa An able prince, he patronized arts and letters and beautified Milan His son, Galeazzo Maria Sforza, succeeded him as duke

Sforza, Ludovico or **Lodovico** (lōdōvē'kō sfôr'tsä, lōdōvē'kō), 1451–1508, duke of Milan (1494–99), younger son of Francesco I Sforza He was called Ludovico il Moro (the Moor) because of his swarthy complexion In 1480 he deprived his sister-in-law, Bona of Savoy, of the regency for her infant son, Gian Galeazzo Sforza (see SFORZA, family), and from that date his actual rule may be reckoned In 1494 Gian Galeazzo died, a virtual prisoner, and Ludovico was formally invested with Milan by Emperor MAXIMILIAN I Partly in order to divert French ambitions from Milan, partly in order to protect himself from the hostility of the king of Naples, Ludovico concluded an offensive alliance with CHARLES VIII of France, whose invasion (1494) of Italy was the beginning of the ITALIAN WARS In 1495, however, he reached an understanding with Charles's enemies and turned against the French, who were expelled from Italy In 1499 Louis XII of France, who had a hereditary claim to the duchy of Milan (he was a great-grandson of Gian Galeazzo Visconti), invaded Italy and expelled Ludovico from his duchy Ludovico's attempt, with the aid of Swiss mercenaries, to recover his lands was defeated at Novara (1500), he was captured and died a prisoner in France Before his fall, Ludovico Sforza was one of the wealthiest and most powerful princes of Renaissance Italy He was a subtle diplomat and an unscrupulous intriguer, these qualities undoubtedly helped him to power and most probably contributed to his ruin With his wife, Beatrice d'ESTE, he held a brilliant court and spent immense sums to further the arts and sciences His chief fame in the eyes of posterity is his patronage of LEONARDO DA VINCI and of Bramante

Shackleton, Sir Ernest Henry, 1874–1922, British antarctic explorer, b Ireland The first of his four voyages to Antarctica was made as a member of the expedition (1901–4) of Robert F. SCOTT Although Shackleton was invalided home in 1903, he had gained valuable experience in antarctic exploration which stood him in good stead as commander of a south polar expedition (1907–9) In the course of this expedition, of which Sir Douglas Mawson was a member, Mt Erebus was ascended, the south magnetic pole located, and the polar plateau crossed to a point less than 100 mi from the South Pole The scientific results of the expedition were of vast importance Knighted in 1909, Scott published that year an account of his expedition, *The Heart of the Antarctic* As commander of a transantarctic expedition, he set out in the *Endurance* in 1914, planning to enter the Weddell Sea and cross over the south polar region to the Ross Sea When his ship was crushed in the ice in 1915, he led (1916) his party to safety at Elephant Island, some 180 mi distant, from that small island in the Scotia Sea, Shackleton and several companions made a voyage of 800 mi through wild seas and across the unknown, rugged interior of South Georgia Island to a whaling station on its north coast, where he received aid He managed to rescue his Elephant Island party and later returned to the Weddell Sea to pick up a sledging party which he had left there earlier in the expedition His *South* (1919) is an account of the whole expedition In 1921 he sailed on the *Quest* to study Enderby Land but died and was buried on South Georgia Island See biography by H R Mill (1923), F A Worsley, *The Endurance* (1931), Frank Hurley, *Shackleton's Argonauts* (1948)

shad, fish of the herring family native to the N Atlantic The American shad, blue green above, silvery white on the sides, weighs from 2½ to 14 lb Its flesh and roe are valued as food Large catches are made in vertical nets in the spring when the fish ascend the larger rivers to spawn It is also of commercial importance on the Pacific coast, where it was introduced The European species are less palatable

shadbush, Juneberry, or **serviceberry,** any species of *Amelanchier*, chiefly North American shrubs or trees, conspicuous in the early spring for their white blossoms The bush is more often called shadbush on the East Coast (it is said to bloom when the shad are running), serviceberry is in general a Western name The berrylike fruits of native species—ripening in the early summer to a dark purple and resembling in taste the huckleberry—have been an important food for Indians Some kinds of shadbush are cultivated for ornament. The wood is very hard

shaddock see GRAPEFRUIT

shadow, relative darkness over some area caused by the interception of light waves by an opaque mass. The factors involved in the casting of shadow are the size and intensity of the light source, its proximity to the opaque body, the bulk of the body, and the angle and distance of the surface upon which the shadow appears Where light is wholly interfered with, there is complete shadow, or umbra An illustration is the darkness during a total eclipse of the sun by the moon A small portion of the earth is in complete shadow, and a partial shadow, or penumbra, is produced over a larger area where a part of the sun's disk appears from behind the moon Several sources of light and several opaque objects will produce, when superimposed, a range of effects from maximum illumination to umbra Objects that intercept sound or radio waves are said also to cast shadows, which affect reception The phenomena of shadow figures largely in superstitions

Shadrach (shā'drăk), one of the THREE HOLY CHILDREN

Shadwell, Thomas, 1642?–1692, English poet and playwright His Jonsonian comedies of type characters are distinguished chiefly for realistic London scenes and coarse but witty dialogue They include *The Sullen Lovers* (1668), *Epsom Wells* (1673), and *The Squire of Alsatia* (1688) In his notorious feud with Dryden, whom he succeeded as poet laureate, Shadwell attacked him in *The Medal of John Bayes* (1682) and was himself lampooned as Og in Dryden's *Absalom and Achitophel* and under his own name in *MacFlecknoe* See biography by A S Borgman (1928)

Shafter, William Rufus (shăf'tur), 1835–1906, American general, b Galesburg, Mich Joining the army in the Civil War, he was mustered out in 1865 reentered in 1867, and rose to the rank of brigadier general In the Spanish-American War he was placed in command of the army invading Cuba, which in June, 1898, went from Tampa to Cuba The battles of Siboney, El Caney, and San Juan and the capture of Santiago after the destruc-

tion of the Spanish fleet insured the success of the campaign, despite deficiencies in equipment and some mismanagement Shafter received little credit for his victories He was a major general when retired in 1901 In 1919 a bust of Shafter was dedicated at Galesburg, Mich See J O Miley, *In Cuba with Shafter* (1899)

Shafter, city (pop 1,258), S central Calif., NW of Bakersfield, inc 1938

Shafter, Fort, military headquarters of the Hawaiian Dept, on Oahu, T H , 3 mi NW of Honolulu It was the first military post to be occupied (1907) after Hawaii was annexed by the United States

Shaftesbury, Anthony Ashley Cooper, 1st **earl of,** 1621–83, English statesman In the civil war of the Puritan Revolution he supported the crown until 1644, but then turned to Parliament He was an able general, was made a member of the council of state, and supported Oliver Cromwell until 1654 Thereafter, he opposed the Protectorate because of his distrust of autocratic rule He opposed Richard Cromwell, supported the Rump Parliament against John Lambert, then swung to General Monck and assisted in restoring Charles II Made a privy councilor and Baron Ashley (1661), he assisted in the trial of the regicides, but worked for a lenient settlement The same year he became chancellor of the exchequer and gained royal favor by his support of toleration Named one of the proprietors of Carolina in 1663, he took much interest in plans for the colony He joined the opposition to the 1st earl of Clarendon and was a member of the Cabal Created earl of Shaftesbury, he was made lord chancellor in 1672, but became strongly anti-Catholic, supported the Test Act (1672), and was dismissed in 1673 Out of favor at court and embittered by his imprisonment in 1677 for opposing the prorogation of Parliament, he made use of the Popish Plot (see Oates, Titus) to promote opposition to Danby and anti-Catholic feeling On Danby's fall he became president of the council, pressed for the bill to keep James, duke of York, from the throne, and supported the claims of the duke of Monmouth, illegitimate son of Charles II For this he was arrested (1681), and his position became precarious since his Whig party was now discredited and the king in complete control of government He was bitterly satirized in Dryden's *Absalom and Ichitophel* The indictment for treason failed, and he fled to Holland (1682), and soon died Shaftesbury has been called the most skillful politician of his day Rich and intellectual, he was a close friend of John Locke, and probably a deist See biographies by W D Christie (1871), H D Traill (1886) and L F Brown (1933)

Shaftesbury, Anthony Ashley Cooper, 3d **earl of,** 1671–1713, English philosopher, son of the 2d earl and grandson of the 1st earl The philosopher Locke was in charge of his education, which was largely classical Shaftesbury's ill-health restricted his political life, although he served (1695–98) in Parliament and supported the Whig party later Shaftesbury's contributions are in the field of moral philosophy. He reacted against individualism as an ethical basis and found true morality in a balance between egoism and altruism This balance is possible because there is a harmony between society and the individual which makes the general welfare identical with individual happiness Man is innately equipped with spontaneous instincts or affections to promote this harmony In the ethical field he called this the moral sense, the first use of this term His influence was considerable, and his ideas were immediately further developed by Francis Hutcheson Most of the important essays of Shaftesbury he collected himself as *Characteristics of Men, Manners, Opinions, Times* (1711) See F M G E Higham, *Lord Shaftesbury* (1945)

Shaftesbury, Anthony Ashley Cooper, 7th **earl of,** 1801–85, English social reformer He was known as Lord Ashley until 1851, when he succeeded his father as earl Entering Parliament in 1826, he worked steadily for reforms in many fields Notable legislation introduced by him included acts prohibiting employment of women and children in coal mines (1842) providing for care of the insane (1845), and establishing a 10-hour day for factory workers (1847) He promoted the building of model tenements and the "ragged schools" for waifs. See biographies by J L Hammond and Barbara Hammond (4th ed., 1936) and J W Bready (1926)

Shaftesbury, municipal borough (1931 pop 2,367, 1943 estimated pop 3,093), Dorsetshire, England, on a hill WSW of Salisbury It is in a farming region and is known locally as Shaston There are vestiges of British, Roman, and Saxon occupation, Alfred founded a convent here in 880.

Shaftsbury, town (pop 1,577), SW Vt , N of Bennington at the N Y line, chartered 1761, settled 1763 Steel squares are made in South Shaftsbury village

shaft sinking. Little difficulty is experienced in shaft sinking through solid rock which contains little water When loose, water-bearing strata have to be contended with, careful shoring and sealing of the shaft lining becomes necessary, and pumping facilities are needed Vertical shafts are usually circular or rectangular and are generally lined with wood, masonry, concrete, steel, or cast iron Shafts sunk in loose water-bearing soils, where there is great external pressure on the shaft sides, are nearly always circular, rectangular shafts with wood lining are largely used in mining work, as the shafts are frequently of a temporary nature. Shaft sinking through rock is generally accomplished by blasting When the loose surface material has been removed, holes are drilled, and the charges are placed and are fired by electricity The broken rock is removed, and the process is repeated In an ordinary rectangular shaft the lining consists of timbers 8 or 12 in square placed horizontally around the shaft Shafts of a more permanent nature are generally circular in form and lined with cast iron or with concrete masonry 1 to 2 ft thick, built in sections as the work advances When excessive quantities of water are met with, cast-iron tubbing is sometimes used This consists of heavy cast-iron rings made in segments, with flanges for connecting, and bolted together in place Cement grout is forced into the space between the outside of the tubbing and the surrounding earth to form a seal Shaft sinking by the freezing process in very watery soil is accomplished by sinking pipes in the area to be excavated and circulating brine at low temperature in them until the earth is frozen and hard so that it can be excavated in the same manner as rock In the grouting method, liquid cement is forced into the water-bearing earth under very high pressure On mixing with the water, the cement solidifies the adjacent area, and it is removed by drilling and blasting as with rock

Shaharaim (shā"hurā'im) [Heb ,=two dawns], descendant of Benjamin 1 Chron 8 8

Shaharaimah (shāhăz'imu, shā"huzi'mu) unidentified town, NW Palestine Joshua 19 22

Shahi (shahē') town (1947 estimated pop 7,407), N Iran, at the Caspian end of the Trans-Iranian RR near Gorgan

Shahjahanpur (shajuhan'pōōr), city (pop 110,163), central United Provs , India Founded (1647) by Shah Jehan (or Shah Jahan), it was named in his honor The city is a railroad junction Sugar is the chief article of trade and manufacture

Shah Jehan or **Shah Jahan** (both shä juhan'), d 1666, Mogul emperor (1628–58) He won his way to the throne by defeating his brothers in battle In his long reign he conquered much of S India and made it possible for his son Aurangzeb to bring the Mogul empire to its greatest extent Shah Jehan's reign is considered the golden period of Moslem architecture in India He built extensively in Delhi and in Agra (with the unsurpassed Taj Mahal) and encouraged literature and the arts His sons revolted against him in the last years of his reign, and in 1658 he was deposed by Aurangzeb and imprisoned for the rest of his life

Shahrud (sharōōd'), town (pop 23,123), N Iran, on the railroad between Teheran and Meshed The region produces cotton and fruit

Shaker Heights, residential village (pop 23,393), NE Ohio, near Cleveland, founded 1905 as a suburban development by the Van Sweringens East View village was annexed in 1920

Shakers, members of a religious society, styled by themselves "The United Society of Believers in Christ's Second Appearing" and sometimes called "The Millennial Church " The movement originated about the middle of the 18th cent in England in the Society of Friends The group known as "Shaking Quakers" because of their physical manifestations of spiritual power during public worship, was led by Jane and James Wardley They were succeeded by Ann Lee, a convert Imprisoned for her zeal, she received through a vision the announcement that the mother element of Christ's spirit was manifested in her Following a vision's instruction, she and eight followers emigrated (1774) to New York Near Albany, at what is now Watervliet, they settled in 1776 "Mother Ann" gained a number of converts who, after her death (1784) began the formation of Shaker communal societies, the first at Mt Lebanon, N Y in 1787. By 1794 there were (in addition to the original settlement at Watervliet) 11 communities in New England and New York, 7 more had been founded by 1826 in Kentucky, Ohio, and Indiana The total membership was c 6,000 After 1860 Shakerism began to decline, in 1948 fewer than 50 elderly members remained in the three societies still extant One of the fundamental doctrines of the society was belief in the dual nature of the Deity The male principle of Christ came to earth in Jesus, the female principle, in "Mother Ann " Other tenets were celibacy, open confession of sins, community of possessions, separation from the world, pacifism, equality of the sexes, and consecrated work Singing, dancing, and marching characterized phases of Shaker worship Ministers, elders, deacons, and trustees, both male and female, managed Shaker affairs The communal life was in "families" of from 30 to 90 individuals Although upon entering a family, a Believer donated his services and possessions to its use, he was free to withdraw and to take back his possessions at any time There was equality of labor and of responsibility, but men and women worked at separate occupations and lodged and ate separately The Shakers were noted agriculturalists and craftsmen, their farm products, their herbs and seeds, their excellent furniture and textiles enjoyed a wide sale The members wore a prescribed garb, somewhat like that of the Quakers *The Testimony of Christ's Second Appearing,* prepared by some of the Shaker leaders and often called the Shaker Bible, appeared in 1808 See C A Nordhoff, *Communistic Societies of the United States* (1875), E D Andrews and Faith Andrews, *Shaker Furniture the Craftsmanship of an American Communal Sect* (1937), E D Andrews, *The Gift to Be Simple Songs, Dances and Rituals of the American Shakers* (1940), and M F Melcher, *The Shaker Adventure* (1941)

Shakespeare, William. see Shakspeare, William

Shakhty (shakh'tē), city (1926 pop 41,043, 1939 pop 155,081), S European RSFSR, NE of Rostov It is a major anthracite-mining center of the Donets Basin The city, now enlarged by the incorporation of adjacent towns, was known as Aleksandrovsk-Grushevski before the Russian Revolution

Shakopee (shăkŭpē'), city (pop 2,418), co seat of Scott co, E Minn , on the Minnesota and SW of Minneapolis, settled 1851 as a trading post, inc 1870 It is a commercial and industrial center in a farm area A state reformatory for women is here

Shakspere, Shakespeare, or **Shakspeare, William,** 1564–1616, English poet and dramatist, b Stratford-on-Avon, Warwickshire His father, John Shakspere, was a well-to-do glover in Stratford and was prominent in municipal affairs, his mother, Mary, came from a prosperous landed family Comparatively little of William Shakspere's life is known, and what is known is based on official records, contemporary allusions, and various traditions He was fairly well educated, probably at the Stratford grammar school, and as a young man may have taught as a schoolmaster In 1582 he married Anne Hathaway, and despite popular tradition to the contrary there is no real evidence that the marriage was not a happy one, and it is thought that the couple had three children Moving to London as early as 1588, he probably joined the stage as an apprentice who performed minor roles and jobs By 1592 he had become a recognized playwright His first production, probably *The Comedy of Errors* or Part I of *Henry VI,* appeared c 1589, and from that time until he stopped writing c 1613, he steadily composed plays, usually at the rate of two a year By 1593 he secured the patronage of Henry Wriothesley, the wealthy and brilliant young earl of Southampton, to whom he dedicated *Venus and Adonis* In 1594-95 he appeared as a member of the Lord Chamberlain's Men, the dramatic company which later became the King's Men of James I Until the end of his London career, he remained with this company as playwright and frequently as an actor It may be assumed that he played supporting roles such as that of the Ghost in *Hamlet* In 1599 he became a partner in the new Globe Theatre and in 1609 of the Blackfriars Theatre, which his company took over that building He gradually extended his financial interests in the London stage, and by the time of his retirement to Stratford c 1610 he seems to have possessed a moderate fortune His will containing three of the six accepted Shakspere signatures, is dated March 25, 1616 he died on April 23 of the same year The majority of scholars accept 38 plays as the work of Shakespere The chronology of the plays can be determined only approximately, on the basis of the dates of publication, some references by contemporary writers, allusions in the plays themselves, and, within limits, on the evidence of style and versification Shakspere's dramatic and poetic genius developed and deepened consistently, but his responses to changing popular tastes and to the demands of his company would make rather arbitrary an arrangement of his plays into characteristic "periods " For convenience, however, they may be divided into four groups—the first (from c 1589 through 1594) *The Comedy of Errors,* the three parts of *Henry VI, Titus Andronicus, The Two Gentlemen of Verona, Richard III, Love's Labour's Lost, The Taming of the Shrew,* and *King John,* the second period (from 1595 through 1600), which is sometimes called his lyrical period and which includes most of his best comedies and chronicle plays and most of his poems and sonnets *Richard II, A Midsummer*

Night's Dream, *The Merchant of Venice*, *Romeo and Juliet*, the two parts of *Henry IV*, *The Merry Wives of Windsor*, *Much Ado about Nothing*, *Henry V*, *Julius Caesar*, *As You Like It*, and *Twelfth Night*, the third period (1601 through 1609), in which his greatest tragedies appeared *Hamlet*, *Troilus and Cressida*, *All's Well That Ends Well*, *Measure for Measure*, *Othello*, *King Lear*, *Macbeth*, *Antony and Cleopatra*, *Timon of Athens*, *Coriolanus*, and *Pericles*, *Prince of Tyre*, and the fourth period (from 1609 through 1613) *Cymbeline*, *The Winter's Tale*, *The Tempest*, *Henry VIII*, and *The Two Noble Kinsmen* Of the 38 plays which comprise the Shakspere canon, 36 were printed in the First Folio (1623), the first collected edition of his dramatic works Of these 36, 18 had been published during his lifetime in the so-called Quartos *Pericles*, first printed as a quarto, was not added to the collected works until 1664, in the second issue of the Third Folio *The Two Noble Kinsmen* was first published in 1634 It is generally agreed that some of the plays are not entirely Shakspere's own and are either the products of collaboration or the incomplete adaptation by Shakspere of old plays He does not seem to be the sole author of Part I of *Henry VI*, of *Timon of Athens*, or of *Pericles* It is fairly well established that he collaborated with John Fletcher on *Henry VIII* and *The Two Noble Kinsmen* Shakspere's principal poems are *Venus and Adonis* (1593), *The Rape of Lucrece* (1594), and the sonnets, most of which were probably composed between 1593 and 1596 and which were published in 1609 The former two works were dedicated to the earl of Southampton, and it is likely that so were the sonnets, although other contemporaries have been suggested At any rate, the majority of them are addressed with affection to a noble young man Some of the others speak of the poet's passion for a "dark lady" who apparently scorns his attentions for those of his friend The story, however, is not very clear, the lady cannot be identified, and the evidence is not adequate to assume that such a situation actually occurred in Shakspere's life The sonnets are in the form now known as the Shakesperian sonnet, an Elizabethan variation of the Italian three quatrains with alternate rhymes and a concluding couplet (*abab cdcd efef gg*) Other poems by Shakspere include *The Phoenix and the Turtle* (1601), an allegory *The Passionate Pilgrim* (1599), a collection of lyrics was published under Shakspere's name but contains little assignable to the poet which cannot be found elsewhere His authorship of *A Lover's Complaint* (1609) is doubtful Shakspere read extensively in the more important French, Italian, and classical authors as well as in the literature of England Two of his important sources were Holinshed's *Chronicles of England, Scotland, and Ireland*, on which were based *Macbeth* and most of the plays of English history, and North's translation of Plutarch's *Lives*, on which the Roman plays were chiefly based Of all his plays, *Love's Labour's Lost* is the only one for which no direct literary source is known In the history of English literature Shakspere's influence has been greater than that of any other author During the Restoration period, when dramatic fashions had changed a decline in Shakspere's prestige was threatened Nahum Tate and Colley Cibber wrote adaptations of some of the plays, and Dryden wrote *All for Love* as an "improvement" on *Antony and Cleopatra* But Dryden himself readily recognized Shakspere's genius, by the beginning of the 18th cent serious study of Shakspere had begun, and his position as the greatest English poet was recognized In 1709 Nicholas Rowe produced the first "edited" edition of Shakspere, in which the plays were divided into acts and scenes and the actor's entrances and exits were noted Among the numerous editions which followed was that of Samuel Johnson (1765), important in Shakspere criticism for its preface The Shakspere cult was introduced into Germany by Lessing and Herder and was carried on by Goethe and the romantic school The German version of Shakspere, begun by A W von Schlegel in 1797 and completed by Ludwig Tieck and others in 1853, is one of the world's great translations On the contemporary stage and in contemporary reading and criticism, Shakspere has continued to hold his place as the greatest poet and dramatist in perhaps all literature His genius can still not be explained alone in terms of his specific accomplishments, e g , his perfection of the blank-verse line which he received from Marlowe or his development of the form of tragedy In the words of his friend and critic, Ben Jonson, he is "for all time" Good one-volume editions of Shakspere are by W A Neilson (1906, rev ed , 1942) and G L Kittredge (1936) Of the larger editions the most important are H H Furness and H H Furness, Jr , *The New Variorum* (1871–), which is the fullest of all editions, and W J Craig and R H Case, *The Arden Shakespeare* (1899–1924), the best annotated edition of the separate plays O J. Campbell, *The Living Shakespeare* (1949), an excellent edition of the more important plays, contains a well-balanced and readable introduction to Shakspere's life and works For Shakspere's biography, see J Q Adams, *A Life of William Shakespeare* (1923), E K Chambers, *William Shakespeare* (1930), Hazelton Spencer, *The Art and Life of William Shakespeare* (1940), M G Chute, *Shakespeare of London* (1949) Good works of general criticism are Harley Granville-Barker, *Prefaces to Shakespeare* (3 series, 1927–36), *A Companion to Shakespeare Studies* (ed by Harley Granville-Barker and others, 1934), Mark Van Doren, *Shakespeare* (1939); J D Wilson, *The Essential Shakespeare* (1948) More specialized critical works are C F E Spurgeon, *Shakespeare's Imagery* (1935), H B Charlton, *Shakespearian Comedy* (1938), O J Campbell, *Shakespeare's Satire* (1943), E M W Tillyard, *Shakespeare's History Plays* (1944), A C Bradley, *Shakespearian Tragedy* (1949) For Shakspere's theater, see E K Chambers, *The Elizabethan Stage* (1923), for the life of his day, *Shakespeare's England* (1916) The standard Shakspere bibliography is Walther Ebisch and L L Schucking, *A Shakespeare Bibliography* (1931, supplement, 1937) An annual listing is to be found in Allardyce Nicoll, *Shakespeare Survey* (1948–)

Shakuntala · see KALIDASA

shale (shāl), sedimentary rock formed by the consolidation of mud or clay, having the property of splitting into thin layers parallel to the bedding planes upon which the rock was deposited Shales containing abundant carbonaceous matter grade into bituminous coal, and some of these carbonaceous shales are a possible source of petroleum (oil shales)

Shalem (shā'lĕm) [Heb ,=peace], unidentified town, near Shechem Gen 33 18

Shaler, Nathaniel Southgate (shā'lur), 1841–1906, American geologist, b Newport, Ky , grad Harvard, 1862 He was at Harvard from 1864, as professor of paleontology (1869–88) and of geology (1888–1906) and as dean of the scientific school (from 1891) Shaler served (1873–80) as head of the geological survey of Kentucky and as director (1884–1900) of the Atlantic division of the U S Geological Survey His works include *The United States of America* (1894), *The Individual* (1900), and *Man and the Earth* (1905) See his autobiography (1909)

Shalim (shā'lĭm) [Heb ,=land of foxes], unidentified region, perhaps N of Jerusalem 1 Sam 9 4

Shalisha (shā'lĭshā), region of Palestine, probably W of Shiloh 1 Sam 9 4 BAAL-SHALISHA may have been in it

Shallecheth (shăl'ĕkĕth, shăl'ăkĕth) [Heb ,=falling down], gate of the Temple 1 Chron 26 16

shallot (shulŏt') [O Fr], perennial plant (*Allium ascalonicum*) of the lily family, closely related to the onion, leek, and garlic, a native of Asia and supposedly introduced into Europe from Ascalon by Crusaders It is cultivated for both its leaves and its bulbs The plant is easily propagated from the cloves or bulblets The flavor is similar to garlic, but milder It is less known in the United States than in Europe Scallion is a name sometimes used for shallots, leeks, and onions

Shallum (shă'lum) [Heb ,=retribution] **1** Died c 749 B C , king of Israel for a month He killed King Zachariah for the throne and was himself killed by Menahem. 2 Kings 15 13–15 **2** King of Judah see JEHOAHAZ **3** Husband of Huldah 2 Kings 22 14 **4** Chief of a family of porters 1 Chron 9 17 Meshullam Neh 12 25 **5** See MEHHELEMIAH **6** Ruler over part of Jerusalem Neh 3 12 **7** Priest 1 Chron 6 12,13, Ezra 7 2 Meshullam 1 Chron 9 11, Neh 11 11 **8** See SHILLEM **9** Simeonite 1 Chron 4 25 **10** Ephraimite 2 Chron 28 12 **11, 12** Men who had foreign wives Ezra 10 24,42 **13** Descendant of Jerahmeel 1 Chron 2 40

Shallun (shă'lun), one who rebuilt the walls of Jerusalem Neh 3 15

Shalmai (shăl'māī, shăl'mī), family returned from exile Ezra 2 46, Neh 7 48

Shalman, name occurring in a prophecy, perhaps for SHALMANESER Hosea 10 14

Shalmaneser I (shălmănē'zŭr), d 1290 B C , king of Syria He restored the great temple at Assur, established a royal residence at Nineveh, and removed the capital from Assur to Calah, c 18 mi S of Nineveh **Shalmaneser III,** d 825 B C , claimed to have defeated (c 854 B C) Benhadad and AHAB, king of Israel, at Karkar (Kirharaseth) on the Orontes His victory was probably indecisive since he failed to reach Damascus or fight his other enemies He received presents from Jehu of Judah and subdued some Median tribes, but was defeated by the Chaldaeans in Armenia In Calah he built an enormous tower, or ziggurat, 167 ft long He recorded his conquests in Syria and Palestine on a great black obelisk which is now in the British Museum **Shalmaneser V,** d 722 B C , succeeded Tiglath-pileser IV (728 B C) He attacked Hosea, king of Israel, and captured Samaria (2 Kings 17 3-6) The claim of Sargon to its capture has not been substantiated

Shama (shā'mu) [Heb ,=obedient], one of David's mighty men 1 Chron 11 44

shaman (shā'mun, shă'mŭn, shă'mun), among primitive peoples, a healer, priest, or magician. The name is applied especially to one who uses mediumistic methods, as among the Siberian tribes, where the name originated The shaman is sometimes distinguished from the Indian medicine man, who resorted to dreams and visions for help and guidance, but there is no difference in the functions performed Either name may be used to designate the individual, found in all primitive groups, who was the earliest to practice the medical, magical, and religious arts Both make use of spells or incantations as well as of material remedies, where such are known (e g , quinine was used by the Brazilian Indians) Both are specialists in the use of supernatural agencies, whether these are conceived as personal spirits or as impersonal mysterious power like mana or manito In working a cure the shaman goes into a trance or ecstasy, characterized by hallucinations and sometimes convulsions, in which his familiar in the spirit world – which may be an animal or the soul of an ancestor or a dead shaman—takes possession of him Treatment of the patient includes suggestion and incantations, bloodletting, blowing and suction, and pounding, kneading, and massage designed to remove from the body the cause of the disease, which may be a material object (e g , a piece of bone or quartz), a disease demon, or a spell cast upon him by a sorcerer The shaman knows how to induce in himself the trancelike state—by fasting, autosuggestion, drugs or intoxicants, exhausting dances or gyrations, and self-torture He enhances his authority and the awe and fear with which he is regarded by wearing special garments and by the use of hypnotism, ventriloquism, and sleight of hand. His spells or oracles consist of a combination of gibberish and archaic words and phrases The oracles at Delphi were uttered by a medium and had to be interpreted by a priest The shaman is thought to be able to change his form, talk with spirits, and travel to the other world He can make rain, foretell the future, and detect thieves and murderers which makes him greatly feared If he can cure disease and bring benefits to his clients, he can also cause disease, death, and ill luck If too many of his patients die or he is suspected of sorcery, he may be put to death In some groups he gains his office by inheritance, but any individual possessing the peculiar aptitudes required may gain recognition as a shaman Women shamans are common among some peoples Among the Plains Indians all young people were encouraged to seek supernatural guidance from dreams and visions. The mediumistic shaman is often a nervously unstable person, sometimes an epileptic The American medicine man was usually a person of superior intellect and ability whose advice was sought by chiefs and elders See J L Maddox, *The Medicine Man a Sociological Study of the Character and Evolution of Shamanism* (1923), W T Corlett, *The Medicine-Man of the American Indian* (1935); W Z Park, *Shamanism in Western North America* (1938)

Shamariah (shă'murī'u) [Heb ,=whom God keeps], son of Rehoboam 2 Chron 11 19

Shamed (shā'mĭd), son of Elpaal 1 Chron 8 12.

Shamer (shā'mur) **1** Temple singer 1 Chron 6 46 **2** Grandson of Heber 1 Chron 7 34. Shomer 1 Chron 7 32

Shamgar (shăm'gar), deliverer and apparently a judge of Israel He slew 600 Philistines with an ox goad Judges 3 31, 5 6

Shamhuth (shăm'hŭth) see SHAMMAH

Shamir (shā'mĭr) [Heb ,=thorn] **1** Levite serving in the Temple 1 Chron 24 24 **2** Unidentified town, S Palestine Joshua 15 48 **3** Unidentified place, E Palestine, home of the judge Tola Judges 10 1,2

Shamma [Heb ,=loss], Asherite 1 Chron 7 37

Shammah (shă'mu) [Heb ,=desolation] **1** Jesse's third son 1 Sam 16 9, 17 3 Shimea 1 Chron. 20 7 Shimeah 2 Sam 13 3,32 Shimma 1 Chron. 2 13 Shimeah 2 Sam 21 21 **2** Duke of Edom, grandson of Esau Gen 36 13,17, 1 Chron 1 37. In the confusing list of David's mighty men the name Shammah occurs several times, and the references may be to the same man 2 Sam 23 11, 25,33 The correspondences with the parallel list in 1 Chron 11 are also obscure, but Shammoth of 1 Chron 11 27 seems to be the same as Shammah of 2 Sam 23 25—as well as the captain Shamhuth of 1 Chron 27 8 – and the Shage of 1 Chron 11 34 seems the same as Shammah of 2 Sam 23 33

Shammai (shă'mī) [Heb ,=desolated] **1** Jerahmeelite 1 Chron 2 28 **2, 3** Descendants of Caleb. 1 Chron 2 44, 4 17

Shammai, 1st cent A D , Jewish scribe, vice president of the Sanhedrin His fame rests upon his opposition to the liberal teachings of HILLEL. Shammai's interpretation of the laws was extremely rigorous The conflict between the schools of Shammai and Hillel continued to rage long after the death of the leaders, the school of Hillel finally winning

Shammoth: see SHAMMAH

Shammua or Shammuah (both shă'mūū) **1** Son of David and Bathsheba 1 Chron 14 4, 2 Sam 5.14. Shimea 1 Chron. 3.5 **2** Reubenite spy. Num.

13 4 **3** Father of ABDA **2.** Neh 11 17 Shemaiah 1 Chron 9 16 **4** Priest. Neh 12 18

Shamo see GOBI

Shamokin (shŭmō'kĭn), borough (pop 18,810), E Pa., ESE of Sunbury and on Shamokin Creek, settled c 1836 The borough is a mining and industrial center in an anthracite region Textiles and machinery are produced here

Shamrock, city (pop 3,123), extreme N Texas, E of Amarillo in the Panhandle, settled 1900, inc 1911 In what was once ranching country a large natural-gas field was discovered and Shamrock now has a gas refinery and other plants

shamrock, a plant with leaves composed of three leaflets which, according to legend, was used by St Patrick in explaining the doctrine of the Trinity and which is now used as the emblem of Ireland An artificial or real shamrock leaf is customarily worn on St Patrick's Day The actual species of the true shamrock has long been debated, but the plants most often favored and used as an emblem are the white clover (*Trifolium repens*), the black medic (*Medicago lupulina*), the wood sorrel (*Oxalis acetoselia*), a hop clover (*Trifolium dubium* or *minus*), and, formerly, the water cress (*Rorippa nasturtium aquaticum*)

Shamsherai (shăm'shērā'ī, shăm'shērī), descendant of Benjamin 1 Chron 8 26

Shamyl (shä'mĭl), c 1798–1871, leader of the Moslem rebellion against Russian domination in E Caucasia As imam (religious and political leader) of the rebellious mountaineers from 1834 to 1859, he conducted a Holy War by effective guerrilla methods and stirred his adherents to religious and nationalist fanaticism The conclusion (1856) of the Crimean War enabled the Russians to send more forces to the Caucasus Shamyl was captured in 1859, and the rebels were gradually pacified Taken first to St Petersburg and then to Kaluga, Shamyl was allowed in 1870 to go to Mecca, where he died

Shang (shang) or **Yin,** dynasty of China, which ruled, according to traditional dates, from c 1766 to c 1122 B C or, according to some modern scholars, from c 1523 to c 1027 B C The legendary founder, T'ang, is said to have defeated the last Hsia ruler, Chieh His successors consolidated an empire comprising modern Szechwan, Honan and Hopeh to the eastern shore, and part of Korea They warred against the Huns and against the Chou, who finally defeated the last Shang emperor, Shou Archaeological remains at one of the capitals, near modern Anyang, suggest (along with later records) that the Shang had a complex agricultural civilization of peasants and city-dwelling craftsmen with a priestly class, nobles, and a king The Chinese family system seems to have been already developed

Shanghai or **Shang-hai** (both shăng'hī'), city (pop 4,300,630), m, but independent of, Kiangsu prov, China It is the largest city of China and one of the world's greatest seaports It is on the Whangpoo river, a narrow tributary of the Yangtze The name dates from A D 1280, but the old walled city was unimportant until it was opened to foreign trade by the Treaty of Nanking in 1842, certain sections were ceded to foreign powers In 1863 the United States and Great Britain consolidated into the International Settlement the areas which had been conceded to them The French concession, however, always remained separate in government These areas formerly under foreign control constitute the modern section of the city Here are broad streets and handsome boulevards lined with imposing buildings, including banks, commercial houses, consulates, hotels, and department stores, many of skyscraper height The Bund (which runs along the waterfront), Nanking Road, and Bubbling Well Road are the most noted thoroughfares Nothing in the architecture of this section suggests that Shanghai is not a Western city It is only in the original native town, no longer walled, that typical Chinese buildings are found Shanghai, the only large port of central China which is not cut off from the interior by mountains, is the commercial center and outlet for the productive Yangtze basin, and it regularly handles about half of China's foreign shipping Great sums are expended to keep open its rather poor harbor Shanghai is the terminus of railroads to most parts of China, and it maintains regular air service to Peiping, Nanking, Hankow, and abroad There are many colleges supported by foreign missions and by the government, and the city is second only to Peiping in the extent of its educational activities Leading institutions include the National Chiao-Tung Univ, the National Medical College, Saint John's Univ, (Episcopal), the Univ of Shanghai (Baptist), and the Université l'Aurore (Jesuit) Shanghai is one of the leading manufacturing cities in China The chief industry is cotton spinning and weaving, of great importance are silk weaving, ironworking, shipbuilding, tobacco processing, and paper, flour, and oil milling. In recent years Shanghai has undergone repeated attacks Japan invaded and bombed the native city in 1932 to force the Chinese government to break an unofficial boycott of Japanese goods There was great havoc, especially in the Chapei quarter, and China capitulated in May. Further trouble with the Japanese occurred in 1935. In Aug, 1937, as part of the general Japanese hostilities against China of the Second Chino-Japanese War, a campaign was launched to capture the native city, and stubborn resistance was overcome in November. A puppet municipal regime was later set up The Japanese, who had earlier occupied the French concession, seized the undefended International Settlement on Dec 8, 1941 The city was restored to China at the end of the Second World War With the abolition of all foreign holdings in 1946 the Chinese central government for the first time gained control of the entire city Shanghai fell to the Communists in 1949 in their sweep through central and S China See W C Johnstone, *The Shanghai Problem* (1937), G E Miller, *Shanghai, the Paradise of Adventurers* (1937), E O Hauser, *Shanghai, City for Sale* (1940)

Shanhaikwan, China see LINYÜ

Shankin, England see SANDOWN-SHANKLIN

Shannon, Charles Hazelwood, 1865–1937, English portrait and figure painter, etcher, and lithographer. Among his paintings are *Bunch of Grapes* and *Lady with the Green Fan* (Municipal Art Gall, Dublin) Many others are in private collections The British Museum print room has sets of his lithographs and etchings

Shannon, Sir James Jebusa, 1862–1923, English portrait and figure painter, b Auburn, N Y. He was long a popular London portraitist Among his paintings are *Girl in Brown* (Corcoran Gall), *Miss Kitty* (Carnegie Inst, Pittsburgh), *Fairy Tales* and *Magnolia* (Metropolitan Mus), and *Flower Girl* (Tate Gall, London)

Shannon, Wilson, 1802–77, American political leader, b Mt Olivet, Belmont co, Ohio, educated at Ohio Univ and Transylvania Univ A lawyer, he entered politics and was governor of Ohio (1838–40, 1842–44), minister to Mexico (1844–45), and a U S Representative (1853–55) In Aug, 1855, he succeeded Andrew H Reeder as territorial governor of KANSAS and was barely able to avert warfare between the proslavery and Free State forces His resignation one year later was quickly accepted, and Shannon ultimately settled in Lawrence to practice law

Shannon, principal river of Ireland It rises in the mountains of Co Cavan and flows generally south c 220 mi through Loughs Allen, Boderg, Forbes, Ree, and Derg to Limerick, where it turns west in a broad estuary (c 70 mi long) to the Atlantic The entrance is marked by Loop Head and Kerry Head Towns along the Shannon include Carrick, Athlone, Portumna, Killaloe, and Limerick The main tributaries are the Boyle, Inny, Suck, Brosna, and Fergus The river, connected with E Ireland by the Royal Canal and the Grand Canal, formed an important commercial waterway Large vessels, however, cannot ascend above Foynes, and Limerick is the head of estuary navigation There is an important hydroelectric plant between Lough Derg and Limerick The fisheries of the river are valuable

Shansi (shăn'sē'), Mandarin *Shan-hsi,* province (60,393 sq mi, pop 11,631,026), E China The capital is Taiyüan It is bounded on the west and the south by the Yellow River Much of Shansi is mountainous Its soil is fertile loess, but scant rainfall and widespread erosion (following destruction of the forest cover) prevent the raising of sufficient food for the population's needs Crops include millet, wheat, barley, kaoliang, and cotton Livestock is raised in the northern grazing areas, and there is an exportable surplus of wool and hides Coal, the most abundant mineral, is sometimes found with iron The best communication system of the province is its rail net with connections to central and N China There are few good roads, and none of the internal rivers, of which the Fen is the longest, are navigable

Shan State (shan'), division (c 56,000 sq mi, pop. 1,699,585) of E Burma The capital is Lashio Essentially the Shan State is a hilly plateau, continuous with the plateaus of Yunnan prov, China, to the northeast and of Thailand to the southeast The gorge of the Salween river cuts across it The valleys and tableland are inhabited by the Shans, who in language and customs resemble the Siamese and the Laos They are Buddhists and are mostly engaged in agriculture Among them live Burmese, Chinese, and Karens The hills are held by primitive tribes, notably the head-hunting Was, who form a numerous group in the N Shan State and along the Chinese border The Shans dominated most of Burma from the 13th to the 16th cent In the 19th cent they were distributed among more than 30 petty states, most of them paid tribute to the Burmese king Under British rule in Burma, the Shan states were ruled by their hereditary chiefs as feudatories of the British crown In 1922 most of them were joined in the Federated Shan States, under a commissioner who also administered the Wa states This arrangement survived the constitutional changes of 1923 and 1937 in Burma proper A single Shan state within the union of Burma, including the former Wa states, was formed in 1948. Represented in the union government by members of parliament and a cabinet minister, it retains a large degree of self-rule The Bawdwin mine is an important producer of lead, silver, copper, and other metals, and there are smelters at Namtu.

Shantar Islands (shăntär'), archipelago, area 965 sq mi, Khabarovsk Territory, RSFSR, in the Sea of Okhotsk Discovered in 1645, they are used mainly for fishing and hunting

Shantung or **Shan-tung** (both shän'tŭng'), province (56,655 sq mi, pop 38,539,930), N China, on the Pohai and the Yellow Sea Tsinan is the capital Shantung is venerated by Chinese as the birthplace of the ancient philosophers Confucius and Mencius and as the site of Tai, a sacred peak Off the coast (c 380 mi long) there is extensive fishing Tsingtao and Yentai are the chief ports Central and E Shantung are mountainous and have abundant coal and iron and some lead, copper, and mica The level area of the west is part of the delta of the Yellow River, which crosses Shantung to empty into the Pohai Although the soil is very fertile, famine occasionally results from inadequate rainfall Wheat, kaoliang, millet, corn, beans, peanuts, and cotton are the main crops Mulberry trees are raised for silk culture The leading industries are cotton and silk spinning and flour milling Several rail lines running to Tientsin, a section of the Grand Canal, and many paved roads provide good communications Strategically located near Manchuria, Shantung has often attracted foreign interference, and for a time (1898–1930) Great Britain leased the territory of WEIHAIWEI Germany leased KIAOCHOW, which was taken by the Japanese in the First World War In recent years many Chinese have migrated from Shantung to Manchuria to escape extreme overcrowding

Shantung see SILK

shanty, in music see CHANTEY

Shaoking (shou'jĭng', -shĭng'), Mandarin *Shao-hsing,* city (pop 92,573), N Chekiang prov, China It is an important commercial center Its manufactures include silks and satin and brass and pewter implements

Shapham (shā'făm) (Heb =sheep) **1** Chief Gadite 1 Chron 5 12

Shaphan (shā'făn) (Heb =coney) **1** Trusted secretary of King Josiah He was the father of friends of Jeremiah and grandfather of Gedaliah 2 Kings 22 3–14, 2 Chron 34 8,15–22, Jer 26 24, 29 3, 36 10–12, 39 14, 40 5 **2** Father of the idolatrous Jaazaniah Ezek 8 11

Shaphat (shā'făt) (Heb =judge) **1** Prince of the blood in Judah 1 Chron 3 22 **2** Father of Elisha 1 Kings 19 16,19 2 Kings 3 11, 6 31 **3** One of the spies Num 13 5 **4** Officer under David 1 Chron 27 29 **5** Gadite 1 Chron 5 12

Shapher (shā'fur), unlocated desert resting place of the Jews Num 33 23,24

Shapinsay (shă'pĭnsā), island (6,761 acres, pop 584), off N Scotland, one of the Orkney Islands It is E of Pomona Balfour Castle is on Shapinsay

Shapiro, Karl (shupēr'ō), 1913–, American poet, b Baltimore, studied at the Univ of Virginia and Johns Hopkins His *V-Letter* (1944), written on active duty in the Pacific, won the Pulitzer Prize for poetry in 1944 *Essay on Rime* (1945), a verse essay of criticism composed, without a library, as a sergeant in the medical corps, drew wide attention His earlier volumes, *Person, Place, and Thing* (1942) and *Place of Love* (1943), both appeared while he was in the army *Trial of a Poet* (1947) confirmed his standing as a poet of intellect and originality

Shapley, Harlow (shăp'lē), 1885–, American astronomer, b Nashville, Mo, grad Univ of Missouri (B A, 1910), Ph D Princeton, 1913 He was astronomer at Mt Wilson Observatory, from 1914 to 1921, before he became director of Harvard Observatory He has won distinction as a lecturer in foreign universities and in America and has done notable research work in photometry and spectroscopy, devoting particular study to the structure of the universe His investigations in the fields of Cepheid variables and globular clusters are especially important His works include *Galaxies* (1943)

Shapur I (shăpōōr') or **Sapor I** (să'pôr), d 272, king of Persia (241–72), son and successor of Ardashir I, of the Sassanid or Sassanian dynasty He was an able warrior king Although he was defeated by the Roman emperor, Gordian III, in 242, Gordian's successor, PHILIP (Philip the Arabian), concluded a peace with him guaranteeing Shapur's power in Armenia and Mesopotamia Shapur put down a revolt of the Armenians in 244 In 260 he achieved his greatest triumph by defeating Emperor VALERIAN thoroughly at Edessa—a landmark in the decline of Rome The rise of ODENATHUS of Palmyra cut into Shapur's territories and even threatened Ctesiphon. Yet, Shapur not only maintained Persian power in the west but also rebuilt Persian economy

Shapur II or **Sapor II,** 309–79, king of Persia (309–79), of the Sassanid or Sassanian dynasty, called Shapur the Great He was the posthumous son of Hormuz II and therefore was born king His wisdom and competence as a ruler were thoroughly admirable. The Arabs of the Persian Gulf area had

taken advantage of his minority to overrun parts of Persia and even threaten Ctesiphon When he was grown, Shapur swept upon them and had his revenge Warfare with the Romans went on over the control of Armenia Shapur's army defeated Constantius II, and Julian was killed (363) when retreating from an attack on Ctesiphon His realm thus assured, Shapur devoted all of his last years to successful efforts to build up Persian prosperity

Shapur III or Sapor III, d 388, king of Persia (383–88), of the Sassanid or Sassanian dynasty, son of Shapur II, successor of his uncle, Ardashir II He warred with the Arabs and took up the long-lasting struggle with Rome over Armenia He lost part of that territory The circumstances of his death are unknown, he may have died in a sandstorm, or he may have been killed by rebellious subjects. He had a large rock sculpture made near Kermanshah, representing his father and himself

Sharai (shā'rāī, shārā'ī), one who had a foreign wife Ezra 10 40

Sharaim (shārā'īm) [Heb ,=two gates], unidentified town, SW Palestine Joshua 15 36

Sharaku (shā'rākōō, sha'rak), fl 1794, Japanese color-print artist, whose real name was Toshusai Saito A professional performer of *no* drama and attached to a noble family, he produced in 1794 many full-length portraits of actors of the *kabuki*, or popular, stage The drawing is vigorous and the coloring beautiful Of these prints, 136 have survived Nothing is known of Sharaku after 1794. See H G Henderson and L V Ledoux, *The Surviving Works of Sharaku* (1939)

Sharar (shā'rār), same as SACAR 1.

share, in finance see STOCK

share cropping, system of farm tenancy common in the United States Similar arrangements exist in S Europe and in Asiatic countries In the United States the institution arose at the end of the Civil War out of the plantation system Many planters had ample land but little money for wages At the same time most of the former slaves were unaccustomed to wage labor, uneducated, and impoverished The solution was the share-cropping system, which continued the workers in the routine of cotton cultivation under rigid supervision Economic features of the system were gradually extended to poor white farmers The cropper brings to the farm only his own and his family's labor Most other requirements—land, animals, equipment, and seed—are provided by the landlord Generally he also advances credit to meet the living expenses of the cropper family Most croppers work under the close direction of the landlord, who markets the crop and keeps accounts Normally in return for their work they get a share (usually half) of the money realized From this share is deducted the debt to the landlord High interest charges, emphasis on production of a single cash crop, slipshod accounting, and chronic cropper irresponsibility are among the abuses of the system However, it is argued that the arrangement enables landlords to obtain a reliable labor force for the crop season and that it provides croppers with greater security than they would have as wageworkers Economically the croppers are merely hired hands who are paid, not a stipulated amount of money, but in terms of a share in the crop In recent years farm mechanization and a marked reduction in cotton acreage have tended to reduce the number of share croppers See T J Woofter, *Landlord and Tenant on the Cotton Plantation* (1936)

Sharezer (rē'-), brother of ADRAMMELECH 2.

Shari (shā'rē), river, c 1,400 mi long, rising in central French Equatorial Africa It flows NW to Lake Chad and is partly navigable

shark, member of a group of fish more primitive than the bony fish The skeleton is cartilaginous, and the fish lack scales and an air bladder Dermal denticles, which consist of a bony base embedded in the skin and a projecting enamel-covered spine, roughen the surface of the body of most forms Sharks inhabit nearly all seas but are most abundant in warm waters The one fresh-water species lives in Lake Nicaragua Almost any kind of animal food, including carrion and refuse, is eaten by sharks The toothed mouth is on the ventral surface, but it is not necessary for the shark to swim upside down to secure its prey Sharks range in length from 2 to 50 ft The larger species are usually viviparous Many of the smaller forms lay eggs heavy with yolk and protected by horny coverings The great white shark or man-eater roves all warm seas and occasionally temperate ones Other sharks are the whale shark (the largest species) and the Greenland, basking, nurse, blue, sand, and hammerhead sharks The flesh of sharks is sometimes eaten, but it is generally coarse and unpalatable The liver oil of some is valuable as a source of vitamins and as a lubricant Shagreen and a durable tanned leather can be made from the skins In the Orient a gelatinous soup is made from shark fins See also DOGFISH

Shark Bay, inlet of the Indian Ocean, 150 mi long and 60 mi wide, W Western Australia. It has pearl-fishing grounds.

Shark Island: see FORT JEFFERSON NATIONAL MONUMENT.

Sharon (shā'rŭn, shă'rŭn) [Heb ,=plain], fertile plain between the mountains of central Palestine and the sea 1 Chron 5 16, Isa 33 9, 35 2, 65 10 Saron Acts 9 35 See ROSE OF SHARON

Sharon (shă'run, shă'-) **1** Resort town (pop 1,611), NW Conn , in the Taconics, inc 1739, shortly after settlement Fine old homes edge a broad main street Noah Webster wrote his *Spelling Book* when he taught school here **2** Town (pop 3,737), E Mass , SW of Boston, settled c 1650, inc 1775 **3** City (pop 25,622), NW Pa , on the Shenango river near the Ohio line, settled c 1800, laid out 1815, inc as a borough 1841, as a city 1918 Its manufactures include metal and electrical products Bituminous coal is mined here Sharon grew with the advent of the Pennsylvania Canal and the railroad **4** Town (pop 530), E Vt , NE of Rutland It is the birthplace of Joseph Smith, founder of Mormonism, who is commemorated by a Barre granite monolith

Sharon Hill, residential borough (pop 4,467), SE Pa , near Philadelphia, inc 1890 The Convent of the Holy Child Jesus now occupies buildings erected for John Jackson's Quaker School, famous in the mid-19th cent There are brickyards here

Sharon Springs, resort village (pop 433), E central N Y , NW of Albany, inc 1871 Its sulphur springs are used for hydrotherapeutic treatments

Sharonville, village (pop 1,157), SW Ohio, NE of Cincinnati, surveyed 1796 It is a transportation center, with railroad shops and yards

Sharp, Cecil James, 1859–1924, English musician, best known for his researches in English folk music. He was principal (1896–1905) of the Hampstead Conservatory of music and in 1911 founded the English Folk Dance Society In the United States (1914 18) he collected folk songs in the Appalachian Mts , where he found many songs of English origin In addition to his many anthologies of folk song, he wrote *English Folk-Song Some Conclusions* (1907) and, with A P Oppe, *The Dance an Historical Survey of Dancing in Europe* (1924) See biography by A H Fox Strangways and Maud Karpeles (1933)

Sharp, Dallas Lore, 1870–1929, American educator and author, b Haleyville, N J , grad Brown, 1895 He was ordained a Methodist pastor in 1895 and was professor of English at Boston Univ from 1902 to 1929 His many books of nature essays include *Wild Life near Home* (1901), *Watcher in the Woods* (1903), *The Spirit of the Hive* (1925), and *The Seer of Stabindes* (1921), a boy's life of John Burroughs

Sharp, Granville, 1735–1813, English reformer, scholar, and abolitionist In 1772 he won a case which established the principle that any slave should become free upon reaching British land Sharp continued his abolitionist activities notably the promotion of a Negro colony in Sierra Leone which was unsuccessful He was also interested in many other reforms In 1776 he began agitation against the impressment of seamen Later he founded a Bible society Self-taught in Greek and Hebrew, he was noted for his studies in biblical texts, especially his *Remarks on the Uses of the Definitive Article in the Greek Text of the New Testament* (1798) He wrote many pamphlets on political questions See Prince Hoare, *Memoirs of Granville Sharp* (1820, 2d ed , 1828)

Sharp, James, 1618?–1679, Scottish divine He became prominent as a Presbyterian minister and a supporter of the resolutions of 1650, which paved the way to conciliation with the royalists by holding that persons not avowed enemies of the Covenant might join the army On behalf of the resolutioners (the more moderate church party which supported the resolutions) he went in 1657 to London to counteract the influence of the protestors (opponents of the resolutions) with Cromwell. In 1660 Monck sent him to see Charles II at Breda While apparently supporting the Presbyterian cause, Sharp seems to have been secretly advocating the restoration of episcopacy in Scotland After the Restoration he was appointed (1661) archbishop of St. Andrews, admittedly as a reward for his change of views, and thereupon embarked on a policy of severe repression of the principles of the Covenanters, a band of whom murdered him on Magus Moor In Scottish history Sharp is usually pictured as a hated figure

Sharp, William, pseud **Fiona Macleod** (fō'nŭ mŭkloud', fō'nu), 1855–1905, Scottish poet and man of letters Under his own name he wrote literary biographies, poems, *Earth's Voices* (1884) and others, and novels, notably *Silence Farm* (1899) With his wife he made the anthology *Lyra Celtica* (1896) Under the name Fiona Macleod, supposedly a talented Celtic lady, he wrote his best work, *Pharais* (1894), *The Mountain Lovers* (1895), and *The Washer of the Ford* (1896), as well as two plays, *The House of Usna* (1903) and *The Immortal Hour* (1908) The identity of "Fiona Macleod" was revealed only after Sharp's death See memoir by his wife, E H Sharp (1910)

Shar-Planina, Yugoslavia see ŠAR-PLANINA.

Sharpsburg. 1 Town (pop 834), NW Md see ANTIETAM CAMPAIGN. **2** Borough (pop 8,202), SW Pa., on the Allegheny river and near Pittsburgh, inc. 1842.

Sharpsville, borough (pop 5,129), NW Pa , near Sharon, inc 1874 Buhl Park, here, is a large recreation and sports center

Sharuhen (shārōō'hĕn), variant of SHAARAIM

Shashai (shā'shāī, shă'shī), one who had a foreign wife Ezra 10 40

Shashak (shā'shăk), descendant of Benjamin 1 Chron 8 14,25

Shasta, Mount (shă'stu), volcanic peak, 14,162 ft, high, N Calif , in the Cascade Range It was discovered c 1827 by Peter Skene Ogden The town of Mt Shasta is at the southwest foot of the peak

Shasta Dam, N Calif , in the Sacramento river and near Redding, built 1938–45 The huge dam, 602 ft, high and 3,500 ft long, is, with small Keswick Dam downstream, a unit in the CENTRAL VALLEY PROJECT Its power plant develops much energy, and the dam is also intended for flood control and improvement of navigation

Shatt el Arab (shăt'ĕl ă'rŭb), river, c 120 mi long, formed by the confluence of the Tigris and Euphrates rivers It flows through SE Iraq, then forms part of the Iraq-Iran border, and empties into the Persian Gulf It is navigable to Basra, the chief port of Iraq The broad, swampy delta is a rich agricultural area The name also appears as Shatt-el-Arab and Shatt-al-Arab

Shattuck (shă'tuk) farm town (pop 1,275), NW Okla , near the Texas line, settled 1904, inc 1906

Shaughnessy, Thomas George Shaughnessy, 1st **Baron** (shô'nusē), 1853–1923, Canadian railroad official, b Milwaukee, Wis He worked (1869–82) for the Chicago, Milwaukee and St Paul, and in 1882 he became purchasing agent of the Canadian Pacific Railway, of which later (1898–1918) he was president He was knighted in 1901 and raised to the peerage in 1916

Shaul (shôl) [Heb ,=SAUL] **1** Son of Simeon, eponym of the Shaulites Gen 46 10, Ex 6 15, Num 26 13, 1 Chron 4 24 **2** King of Edom 1 Chron 1 48 Saul Gen 36 37 **3** Same as JOEL 13

Shaulyai or **Shaulyay,** Lithuania see ŠIAULIAI

Shaunavon (shô'nuvun, shô-), town (pop 1,643), SW Sask , in the Cypress Hills SW of Swift Current It has grain elevators, flour mills, and cold-storage plants Coal is mined near by

Shaveh (shā'vĕ), unidentified valley near Salem Gen 14 17 This is possibly the same as the king's dale where Absalom placed his commemorative pillar 2 Sam 18 18

Shaveh Kiriathaim (kĭ'rēuthā'ĭm) [Heb ,=plain of KIRIATHAIM], unidentified place Gen 14 5

Shavli, Lithuania see ŠIAULIAI

Shavsha (shāv'shu) [Heb ,=warrior of God], David's scribe 1 Chron 18 16 Seraiah 2 Sam 8 17 Sheva 2 Sam 20 25 Shisha 1 Kings 4 3

Shaw, Albert, 1857–1947 American editor, b Shandon, Ohio, grad Grinnell College, 1879, Ph D Johns Hopkins, 1884 In 1891 he established, with others, the *Review of Reviews*, which he edited until 1937, the year of its merger with the *Literary Digest* His extensive writings on municipal government and public relations include *Political Problems of American Development* (1907), and he wrote as well a biography of Lincoln (2 vols , 1929).

Shaw, Anna Howard, 1847–1919, American woman-suffrage leader, b England She came to the United States in early childhood and grew up on a farm in Michigan She received a degree in theology (1878) and one in medicine (1885) from Boston Univ , and, although the Methodist Episcopal Church refused to allow her to preach, she was ordained by the Methodist Protestant denomination She had filled several pastorates in Massachusetts when, in 1888, she met Susan B Anthony and thereafter devoted her life to working for woman suffrage She was vice president at large (1892–1904) and president (1904–15) of the National American Woman Suffrage Association In Miss Anthony's last years, she was her constant associate Dr Shaw campaigned in every state where a suffrage measure was under consideration she was one of the most effective speakers of the suffrage movement See her autobiography, *The Story of a Pioneer* (1915)

Shaw, George Bernard, 1856–, British dramatist, b Dublin He left school at 14 to work in an estate agent's office In 1876 he went to London, whither his mother and his sister had preceded him For his first nine years there he made only a few pounds, being supported by his mother's music teaching and a small allowance from his father Yet in the years 1879–83 he wrote his five novels, *Immaturity*, *The Irrational Knot*, *Love among the Artists*, *Cashel Byron's Profession*, and *An Unsocial Socialist* Several of these appeared serially in small socialist papers After some journalistic hack work, Shaw became (1888) music critic for the *Star* For four years from 1890 he was music critic for the *World* His unacademic, lively, and individual music reviews were read with interest and infected others with his own enthusiasm for Wagner In 1895 he became dramatic critic for the *Saturday Review*, a position he continued to hold until his own plays brought him fame and a living His interest in economics had been stimulated as early as 1882 by hearing Henry George speak. The reading of Marx's *Das Kapital*

turned his allegiance to socialism, and he was one of the founders of the famous FABIAN SOCIETY It was through Shaw that Sidney Webb joined it Through his friends Sidney and Beatrice Webb he met Charlotte Payne-Townshend, whom he married in 1898 Shaw's early plays were produced only at small theaters *Widowers' Houses*, with a plot based on the slum landlordism familiar to him from his rent collecting in Dublin, was the first to be produced (1892), in an independent theater *The Philanderer* (written 1893) was not presented until much later, it is one of the least successful of his plays *Mrs Warren's Profession* (written 1893), in which the leading character is a procuress, was banned in England until 1924, but was produced privately in 1902 by the Stage Society, it was produced (1905) by Arnold Daly in New York These three plays were published (1898) as the "unpleasant" plays in the volumes *Plays Pleasant and Unpleasant* The "pleasant" plays were *Arms and the Man* (written and presented 1894), *Candida* (written 1894, played by Janet Achurch, 1897, produced with great success by Arnold Daly in New York in 1904), the first of the characteristically Shavian plays with dialogue that sparkles with paradoxes, and *You Never Can Tell* (written 1895, produced for a short run in 1900) The plot of *The Devil's Disciple* (written 1896, presented 1899) concerns the American Revolution, as produced (1897) by Richard Mansfield in New York, it brought Shaw financial returns which enabled him to give up his reviewing *Caesar and Cleopatra* (1899) was a historical extravaganza, a genre which has since been popular *Captain Brassbound's Conversion* was written in 1899 for Ellen Terry, but was not played by her until 1906 These three plays were published in 1900 as *Three Plays for Puritans* Shaw had corresponded with Ellen Terry for some years before he finally met her in 1900, a selection of their letters was published in 1931 *Man and Superman*, considered very startling in its frank discussion of the relations between men and women, was published in 1903 but was not produced till 1905 It has been several times revived *John Bull's Other Island* (1904), about Ireland, was written at the request of W B Yeats for the Irish Literary Theatre *Major Barbara* (produced 1905) deals sympathetically with the Salvation Army *The Doctor's Dilemma* was produced in 1906 *Getting Married* (produced 1908), though one of his lesser plays, was a modest success *The Shewing-up of Blanco Posnet*, censored in England, was produced (1909) at the Abbey Theatre In the farcical *Fanny's First Play* (1911) Shaw ridiculed dramatic critics *Androcles and the Lion* (1911), the gentlest of Shaw's plays, has genuine religious emotion *Pygmalion*, written for Mrs Patrick Campbell, was produced in 1912 *Heartbreak House* was begun in 1913 but not produced until after the First World War, during which Shaw's outspoken pacifism made him unpopular, it was presented in New York in 1920, in London in 1921 *Back to Methuselah* was produced first in New York by the Theatre Guild, and in England in 1924. *Saint Joan* (produced 1924), a full, rich tragedy of Joan of Arc, is usually considered Shaw's masterpiece He was awarded the 1925 Nobel Prize in Literature, but refused to accept the money Two later plays, *The Apple Cart* (pub 1929) and *Too True to Be Good* (1932), were produced but had Shaw's fault of wordiness with less than his usual wit Shaw's period of activity in the theater and in literature extended for almost 60 years In the course of these years he expressed himself on all subjects with great frankness, sometimes with wisdom, but always with wit, the prefaces to his published plays are perhaps the best expressions of his philosophy His books on widely varying subjects include *The Quintessence of Ibsenism* (1891), *The Perfect Wagnerite* (1898), *The Intelligent Woman's Guide to Socialism and Capitalism* (1928), and *Music in London, 1890–94* (3 vols, 1931). Shaw has been most of his life an ardent vegetarian and a teetotaler His complete works were published in 30 volumes in 1930–32 A large body of literature about Shaw has appeared, including biographies by G K Chesterton (1909), Archibald Henderson (1911), Frank Harris (1931, called an unauthorized biography), and Hesketh Pearson (1942) and a study by E. C. Wagenknecht (1929)

Shaw, Henry Wheeler: see BILLINGS, JOSH

Shaw, Leslie Mortier, 1848–1932, American Secretary of the Treasury, b. Morristown, Vt, grad State Univ. of Iowa law school, 1876 He practiced law in Denison, Iowa, became a strong advocate of the gold standard, and was (1898–1902) governor of Iowa He served (1902–7) as Theodore Roosevelt's Secretary of the Treasury and then took up banking in New York

Shaw, Richard Norman, 1831–1912, British architect Breaking away from the current Victorian house designs and returning to the Queen Anne and Georgian styles and to traditional English craftsmanship and use of materials, he became the leader of a revolution in domestic architecture Shaw designed numerous London and country houses The economical small houses which he designed in the late 1870s for the Bedford Park housing development had beneficial influence throughout England Shaw's most important work was the New Scotland Yard (1891) He became a member (1877) of the Royal Academy of Arts, retiring in 1901. He wrote *Architectural Sketches from the Continent* (1858). See study by Sir R T Blomfield (1940)

Shaw, Robert Gould, 1837–63, Union hero in the Civil War, b Boston, educated at Harvard Colonel of the 54th Massachusetts Regiment, the first body of Negro troops from a free state, he was killed leading it in the attack on Fort Wagner, Charleston, S C A sculptured figure of him by Saint-Gaudens is on Boston Common

Shaw, town (pop 1,669), NW Miss , NE of Greenville, in a rich cotton area

Shawangunk Mountain (shŏng'gŭm, -gŭngk), ridge of the Appalachian system, SE N Y , extending northeast from its junction with Kittatinny Mt near the N J border Sam's Point (2,255 ft high), near Ellenville, is one of the best-known elevations in the ridge, which has a maximum altitude of 2,289 ft

Shawano (shô'nō, shô'wunō), city (pop 5,565), co seat of Shawano co , NE Wis , on the Wolf and NW of Green Bay, settled c 1840, inc 1874 It grew with lumbering and is a farm trade center with manufactures of paper and wood products The Menominee Indian Reservation is north, and Shawano Lake is east

Shawano Indians · see SHAWNEE INDIANS

Shawinigan Falls (shuwī'nĭgun), city (pop 20,325), S Que , on the St Maurice and NW of Trois Rivières, founded 1899, inc 1909 Just north are the falls of the St Maurice, 150 ft high, with a hydroelectric station supplying power for the city's pulp and paper mills and plants whose products include aluminum, abrasives, electrodes, chemicals, cellophane, and shoes

shawl, a wrap, usually a square or oblong cloth worn loosely over the shoulders, used in most parts of the world at different periods and known by different names The term is of Persian origin, and the shawl was made in Persia, India, and central Asia The cashmere shawl is famous for its beauty and workmanship Made in the Vale of Kashmir, from the fine under wool of the Tibetan or Kashmir goat, it was of the finest texture Its characteristic by an intricate pattern of large and small floral motifs The borders are of varying widths with designs of small floral motifs The shawl may be woven in one piece, but it is often woven in sections and sewn together with invisible stitches Another type of cashmere shawl was woven with a fine twilled ground embroidered all over in small patterns Indian shawls were imported into Europe late in the 18th cent At Paisley, Scotland (c 1820), hand looms turned out beautiful shawls patterned after Indian models Broché shawls having tapestry-like patterns were made about the same time Norwich, England, produced fine goods for a short time Shawls were fashionable in France early in the 19th cent and in America a little later, they were made in many styles of crepe, embroidered and fringed, and of *barège* printed in cashmere patterns The beaver shawl was a heavy single one for common use Shetland shawls, made from the native wool of the islands, spun and knitted or crocheted by hand, are marvelously light and warm The Spanish shawl of silk with long knotted fringe and gay silk embroidery was sometimes made in China for Spanish trade Lace shawls were fashionable in the 19th cent and Chantilly lace was much used The mantilla, a triangular shawl of a type of lace known as blonde, is worn on the head and falls over the shoulders Formerly universal in Spain and Spanish America, it is still much worn in those lands.

Shawnee (shô"nē') **1** Village (pop 1,475), S central Ohio, SW of Zanesville **2** City (pop 22,053), co seat of Pottawatomie co , central Okla , on the North Canadian river and SE of Oklahoma City, inc 1894 Formerly an oil boom town, it is more important now as the trade and rail center for a rich agricultural area A U S Indian tuberculosis sanatorium is here Shawnee is the seat of Oklahoma Baptist Univ (coeducational) and a Benedictine junior college

Shawnee Indians or **Shawano Indians** (shô'wunō), North American Indian tribe of Algonquian linguistic stock In the mid-17th cent part of the tribe was settled in W South Carolina and part in N Tennessee These two bodies, divided by the Cherokee, migrated constantly, from South Carolina to S New York, thence to W Pennsylvania and into Ohio, where they finally united in the mid-18th cent They then numbered some 1,500 The warlike Shawnee after their reunion in Ohio participated in almost every war of the Old Northwest By the Treaty of Greenville (1795) they were obliged to give up their lands in Ohio and move to Indiana. The Shawnee Prophet arose (c 1800) He and his followers, cooperating with TECUMSEH, established themselves on a village at the mouth of the Tippecanoe river in Indiana It was this village that William Henry Harrison destroyed in the battle of Tippecanoe. The Shawnee were thereafter moved to Missouri, to Kansas, and finally to Oklahoma Today living on reservations in Oklahoma, they number some 1,000 See T W Alford, *Civilization* (1936)

Shawnee Prophet, 1768–1837, North American Indian of the Shawnee tribe, twin brother of TECUMSEH His Indian name was Tenskwatawa He is said, on not very good authority, to have been backward and dissolute before he received his message from the spirit world and announced himself as a prophet bearing a revelation from the Indian master of life The message urged the renunciation of the acquired ways of the white man and the return to Indian modes and customs in all matters His doctrines were spread over a wide area of scattered tribes, and his prestige was enhanced by his foretelling a solar eclipse in 1806 His influence gave rise to the plan to confederate all the Indian tribes in opposition to the whites—a plan which inspired the Creek War of 1813 The movement provided many recruits for the British in the War of 1812, after which Tenskwatawa returned to Canada with a British pension He returned to Ohio in 1826 and accompanied his tribe to Missouri and farther west into Kansas, where he died, already forgotten

Shawneetown (shô'nētoun), city (pop 1,963), co seat of Gallatin co , SE Ill , on the Ohio, in a farm and coal region It is one of the state's oldest towns, settled after 1800, laid out in 1808, and incorporated in 1814 It was an important river port and commercial center in the early part of the 19th cent , and the first bank chartered in the state still stands here Lafayette was entertained in Shawneetown on his American visit After the severe flood of 1937, the decision was made to move the city a few miles west to higher ground In 1940 the state purchased part of the old Shawneetown area Cave-in-Rock State Park lies to the south

Shaw University see RALEIGH, N C

Shays, Daniel (shāz), c 1747–1825, American soldier, b probably in Hopkinton, Mass A farmer of W Massachusetts, he answered the patriot call from Lexington which began the American Revolution and later fought at Bunker Hill, Ticonderoga, Saratoga, and Stony Point, being made a captain of the 5th Massachusetts Regiment in 1777 After the war he settled at Pelham, Mass , and became a leader in the revolt of the small farmer known as Shays's Rebellion Pardoned after the uprising was quelled, he later moved to New York state

Shays's Rebellion, 1786–87 In the period of financial depression after the American Revolution there was general discontent among the farmers, which in W Massachusetts reached the point of armed insurrection The high land tax pressed more heavily upon farmers than upon other classes, legal costs were exorbitant, and salaries of public officials were felt to be too high The general unrest centered chiefly among those of the debtor class, who wanted extreme remedies to prevent the foreclosure of mortgages on their property and their own imprisonment for debt Sentiment of the oppressed farmers and laborers against the merchants and lawyers of Boston and other seaboard towns was especially strong in the Connecticut valley and Berkshire Hills Resolutions were passed against the state senate and the court of common pleas In 1786 armed insurrectionists under Daniel Shays prevented the sitting of the courts Later in the same year the state supreme court at Springfield was forced to adjourn Early in 1787 Gov James Bowdoin appointed Gen Benjamin Lincoln to command 4,400 men against the rebels Before these troops arrived at Springfield, Gen William Shepard's soldiers there had repelled an attack on the Federal arsenal The rebels, losing several men, had dispersed, and Lincoln's troops pursued them to Petersham, where they were finally routed Shays himself escaped to Vermont Later, with other leaders of the rebellion, he was pardoned by Gov John Hancock The rebellion influenced Massachusetts's ratification of the Federal Constitution.

Shchedrin, Nikolai Evgrafovich see SALTYKOV, MIKHAIL EVGRAFOVICH

Shcherbakov (shchĕrbŭkôf'), city (1926 pop 55,494; 1939 pop. 139,011), central European RSFSR, on the upper Volga and the RYBINSK RESERVOIR It was named Rybinsk until 1946 Shcherbakov is a major inland port and a lumber center and is the site of the Rybinsk Reservoir dam and hydroelectric station, completed in 1941 Dating from the 16th cent , it developed as a trading and transshipment center after the founding (1703) of St Petersburg and the construction of the Volga-Neva canal systems.

Sheaffe, Sir Roger Hale (shēf), 1763–1851, soldier in the British army and administrator in Canada, b Boston, Mass He entered the British army in 1778 and twice (1787–97, 1802–11) was stationed in Canada before serving there in the War of 1812 On the death of Sir Isaac Brock at the battle of Queenston Heights (1812), Sheaffe succeeded to the command of the British forces He was also president and administrator of Upper Canada until recalled to England in 1813 He was made a baronet that year and later a general.

Sheal (shē'ul), one with a foreign wife. Ezra 10.29.

Shealtiel (shĕăl'tē-ĕl) [Heb ,=whom I asked of God], father of Zerubbabel Ezra 3 2,8, 5 2, Neh 12 1, Hag 1, 2 Salathiel 1 Chron 3 17, Mat 1 12, Luke 3 27

Shearer, Thomas, fl late 18th cent , English cabinet-maker and furniture designer His work shows the Adam influence and he, in turn, influenced Hepplewhite His furniture was original in design and simple in style His sideboards are especially notable Many of his patterns were published in *Designs for Household Furniture*

Sheariah (shē"ăr-ī'ă) [Heb ,=God esteems], one of the descendants of Saul 1 Chron 8 38, 9 44

Shear-jashub (shē'ăr-jā'shŭb) [Heb ,=a remnant shall return], son of Isaiah Isa 7 3

Sheba (shē'bŭ) **1** Descendant of Shem, Eber's grandson Gen 10 28, 1 Chron 1 22 **2** Descendant of Shem, Abraham's grandson Gen 25 3 Either may be the eponymous ancestor of the Sabaeans, and textual confusion may explain the difference of ancestry of **1** and **2** **3** Rebel against David 2 Sam 20 1–22 **4** Place Joshua 19 2

Sheba (shē'bŭ), biblical name of a region of S Arabia This region, also called Saba (sā'bŭ), included Yemen and the Hadramaut, and its inhabitants were called Sabaeans or Sabeans It is believed that the Sabaeans migrated south at an early date from N Arabia The Semitic colonization of Ethiopia was made from Sheba An ancient culture in Sheba is evidenced by the many inscriptions found there, the oldest dating from about the 8th cent B C , and the remains of engineering works, such as the dam near Marib The inscriptions are written in a Semitic language (Himyaritic) akin to Ethiopic and Akkadian, in characters derived from Phoenician script Sheba, situated along the trade route from India to Africa, was known as a country of great wealth, a fact commemorated in the biblical story of the visit of the queen of Sheba (called in Moslem tradition Balkis) to Solomon (1 Kings 10) Ethiopia after a short occupation in the 4th cent A D , conquered Sheba c 525 A D , but this rule was ended after about 50 years when Sheba became a Persian province With the rise of Mohammed, Sheba came under Islamic control and lost its separate identity See De Lacy O Leary, *Arabia before Muhammad* (1927), H St J B Philby, *The Background of Islam* (1947)

Shebam (shē'băm), town in the pasture land E of the Jordan Num 32 3 Shibmah Num 32 38 Sibmah Joshua 13 19, Isa 16 8 9, Jer 48 32

Shebarim (shē'bŭrĭm, shĕbā'rĭm) [Heb ,=breaches], place, central Palestine Joshua 7 5

Shebat. see SEBAT

Sheber (shē'bur) [Heb ,=rum], son of Caleb 1 Chron 2 48

Shebna (shĕb'nu), official of Hezekiah's court who was denounced by Isaiah 2 Kings 18, 19, Isa 22 15, 36, 37

Sheboygan (shĭboi'gun), city (pop 40,638), co seat of Sheboygan co , E Wis , a port of entry on Lake Michigan at the mouth of the Sheboygan and N of Milwaukee, inc as a village 1846, as a city 1853 The North West Company established a fur-trading post here in 1795 Permanent settlement began c 1835, and Sheboygan grew as a shipping, industrial, and dairying center Much cheese is shipped from here German refugees in the 1840s and 1850s gave the city its liberal character

Sheboygan Falls, city (pop 3,395), E Wis , W of Sheboygan and at falls of the Sheboygan river, inc as a village 1854, as a city 1913 It has varied manufactures

Shebuel (shē'bū-ĕl, shĕbū'ul) [Heb ,=captive of God] or **Shubael** (shōō'bā-ĕl, shoōbā'ul) **1** Descendant of Moses 1 Chron 23 16, 24 20, 26 24 **2** Leader of temple singers 1 Chron 25 4, 20

Shecaniah or **Shechaniah** (both shĕ"kunī'ă) [Heb , =familiar with God] **1, 2** Two chief priests 1 Chron 24 11, 2 Chron 31 15 **3** Father-in-law of Tobiah Neh 6 18 **4** See SHEBANIAH **5** Additional mention of this name is in 1 Chron 3 21, 22, Ezra 8 3,5, 10 2, Neh 12 3

Shechem (shē'kŭm, shĕ'-) **1** Hivite prince Gen 34 Sychem Acts 7 16 **2** Manassite chief Num 26 31, Joshua 17 2, 1 Chron 7 19

Shechem (shē'kum), town, central Palestine, N of Jerusalem, called NABLUS in modern Arabic Shechem lies between Mts Gerizim and Ebal It is an ancient holy city Here Jacob lived, his well, famous throughout antiquity, is still pointed out Joseph was buried here It was the first northern capital, before Samaria Schem and Sychem are variants of the name Gen 12 6, 33 18, 34, Joshua 21 20,21, 24 32, Judges 9 6, 1 Kings 12.

Shedeur (shē'dē'ur), father of ELIZUR

Shediac (shē'dē-ăk), town (pop 2,147), SE N B , on Northumberland Strait and NE of Moncton It is a resort and has a seaplane base and lobster, oyster, and smelt fisheries

Shee, Sir Martin Archer, 1769–1850, British portrait painter and writer, b. Dublin, pupil of Sir Joshua Reynolds He attained popularity in court and theatrical circles and executed many royal commissions Among his portraits are those of Daniel O'Connell and William Archer Shee (Metropolitan Mus) and Lord Chief Justice Denman and William Popham (National Portrait Gall , London) He wrote *Rhymes on Art* (1805), a tragedy, *Alasco* (1824), and *Old Court* (1829) and was president of the Royal Academy from 1830

Sheeler, Charles, 1883–, American painter and photographer, b Philadelphia, studied at the School of Industrial Art there and later at the Pennsylvania Academy of the Fine Arts under William M Chase With Chase he made two visits to Europe to study the galleries After exhibiting at the famous Armory Show in New York in 1913 he became widely known both as a painter and a photographer His characteristic works are meticulously painted, with great emphasis on flat pattern in which straight lines often predominate Through his choice of subject and viewpoint Sheeler achieves effects at once realistic and abstract He is represented in numerous prominent galleries His *Upper Deck* (Fogg Mus of Art, Cambridge) is a characteristic work

Sheen, Fulton John, 1895–, American Roman Catholic clergyman, b El Paso, Ill , grad St Viator College, Bourbonnais, Ill (B A , 1917, M A , 1919) After receiving (1920) his baccalaureates in sacred theology and canon law at the Catholic Univ of America, he studied at the Univ of Louvain (Ph D , 1923) in Belgium and at the Univ of Rome (D D , 1924) Ordained a priest in 1919, he joined the faculty of Catholic Univ in 1926 He was appointed a papal chamberlain in 1934 and a domestic prelate in 1935 An outstanding orator, he won an increasingly large radio audience after he began broadcasting in 1930 Known for his attacks on Communism and Freudianism as well as for his many conversions, Monsignor Sheen is the author of numerous books, including *God and Intelligence in Modern Philosophy* (1925), *The Cross and the Crisis* (1938), *Preface to Religion* (1946), *Communism and the Conscience of the West* (1948), *Philosophy of Religion* (1948), and *Peace of Soul* (1949)

sheep, common name for many species of wild and domesticated ruminants of the genus *Ovis*, of the cattle family (Bovidae) The male is called ram (if castrated it is a wether), the female is called ewe, and their offspring lamb All but the wild species, whose outer coat is usually of coarse hair, are covered with a fleece of wool of varying length, fineness, and curliness Sheep are bred for cropping of this wool, for their meat (mutton), and for their skins They were one of the first animals to be domesticated by man their care and pasturing leading primitive peoples to adopt a pastoral existence The domesticated breeds are thought to be derived chiefly from the wild mouflon of the Greek peninsula and islands and from the urial of Asia The Romans bred sheep for their fine wool as early as 200 B C , and descendants of their flocks have helped to evolve the forerunners of the Merino type in Spain In mountainous parts of India sheep are used as beasts of burden Elsewhere they are kept for their milk, with which cheese is made No domesticated sheep were found in North America by the early explorers, nor has the wild bighorn or Rocky Mountain sheep been domesticated or crossed with the sheep bred from those brought over from the Old World In the United States important sheep-raising areas are in Colorado and Nebraska Most sheep mate in the fall, and the lambs, born five months later, are known as spring lambs Sometimes lambs are produced in the fall by the few breeds that mate at other seasons Among the important breeds of sheep are the COTSWOLD SHEEP, HAMPSHIRE SHEEP, KARAKUL SHEEP, LEICESTER SHEEP, MERINO SHEEP, SHROPSHIRE SHEEP, and SOUTHDOWN SHEEP The herding of sheep is one of the first occupations mentioned in the Bible Sheep figure largely in the symbolism of both Old and New Testaments, representing innocence and purity and those under God's care and protection in this connotation used in the best known of the Psalms and so extended to the congregation of a church and its minister The sheep also was the literal and symbolic SACRIFICE in Judaism, hence in Christianity Jesus is called the Lamb of God The secular poetry of England, one of the chief sheep-raising countries, is rich in references to sheep See *Breeds of Sheep for Farm* (U S Dept of Agriculture, Farmers' Bul 576), *Farm Sheep Raising for Beginners* (U S Dept of Agriculture, Farmers' Bul 840), *Equipment for Farm Sheep Raising* (U S Dept of Agriculture, Farmers' Bul 810)

sheep dog, name applied commonly to many dogs bred originally for guarding sheep but forming part of the breed name of only certain dogs These include the Belgian sheep dog, the old English sheep dog, and the SHETLAND SHEEP DOG The Briard is a French sheep dog There are about six varieties of the Belgian sheep dog Of these two are recognized in the United States, the Groenendael, a long-coated black variety developed in Groenendael (near Brussels), Belgium, and the Malinois, having a short coat and appearance similar to the German shepherd dog and originating in Malines, Belgium The old English sheep dog was developed in England, probably in the 18th cent , for driving sheep and cattle to market It has a long, shaggy coat covering the face as well as the body In color it is some shade of gray often marked with white or white marked with gray Males stand about 22 in at the shoulder The tails are cut off when the puppies are very young The dogs are amiable and intelligent The Briard is descended from a type known in France in the 12th cent Although developed for herding and guarding sheep and cattle, the dog has proved its worth as a police dog and as a war dog It makes an excellent companion and pet dog It is a muscular, well-proportioned, active breed, the males stand from 23 to 27 in at the shoulder The coat is usually black black with some white hairs, or a mixture of dark and light gray, the hair is long, rather stiff, and slightly wavy The tail should be well feathered and carried low

sheep laurel see MOUNTAIN LAUREL.

Sheepshead Bay, community in S Brooklyn borough of New York city, SE N Y , on Sheepshead Bay, indenting SW Long Island W of Jamaica Bay It is a center for commercial and pleasure fishing craft and has a number of restaurants which serve sea food In past years it was noted for its horse and automobile races

sheep sorrel see DOCK

Sheerness, urban district (pop 16,738), on the Isle of Sheppey, Kent, England, at the confluence of the Medway with the Thames It is a seaport and has government dockyards, begun and fortified by Charles II Much of the industry of the town depends upon the garrison There are officers' residences, barracks and storehouses, constituting a part of Sheerness known as Blue Town Another section is a resort, with a good beach The town was taken by the Dutch in 1667

Sheffield, county borough (1931 pop 511,757, 1947 estimated pop 514,290) and city, West Riding of Yorkshire, England, on the Don and E of Manchester It is one of the leading industrial centers of England, having been the chief seat of cutlery manufacture since the 14th cent The Cutlers' Company, the governing body of cutlery manufacturers, was founded here in 1624 Silver and electroplate goods, tools and heavy steel goods, including plates for battleships, artillery, and rails, are also made The first Bessemer steelworks were built here in 1858 The Univ of Sheffield (1905) has a medical school and a technical college The city's parks include Meersbrook (the site of the Ruskin Museum), High Hazels (with botanic gardens and a museum) Weston (with an observatory and a museum), Norfolk, and Firth The Mappin Art Galleries are famous Among noteworthy buildings are Cutlers' Hall, the Renaissance town hall, libraries, the Church of St Peter, and the market hall Mary Queen of Scots was held captive for years in the old Norman castle, which was taken by parliamentarians in 1644 and later dismantled The city and surrounding manufacturing districts were heavily bombed in air raids in Dec , 1940, resulting in many casualties and wide damage See J S Fletcher, *Sheffield* (1919)

Sheffield **1** Railroad and industrial city (pop 7,933), NW Ala , on Pickwick Lake of the Tennessee river near Muscle Shoals and S of Florence, in an iron and coal area, founded 1883, inc 1885. Its industries produce ferrosilicon, aluminum sheets and bars, nitrates, stoves, and other iron and steel products **2** Town (pop 1 060), N central Iowa, S of Mason City, inc 1876 **3** Resort town (pop. 1,709), SW Mass , in the Berkshires, on the Housatonic and S of Great Barrington, settled 1726, inc 1733

Sheffield Lake, village (pop 1,099), NE Ohio, near Lake Erie and E of Lorain, inc 1920

Sheffield plate, metalware of copper, silver-plated by fusion, originated at Sheffield, England This process of plating was discovered c 1742 by a Sheffield cutler, Thomas Boulsover, who found while doing repair work on silver and copper that they fused at high temperature and could be hammered and shaped as one metal He used his discovery to make buttons and buckles, but an apprentice, Joseph Hancock, grasped the broader application and began the production of tableware and other domestic articles which won wide popularity as substitutes for the more expensive solid silver The manufacture spread not only in England, where Birmingham became an active center of production, but to the Netherlands, Russia, and Poland, where English methods and patterns were adopted. Similar ware was produced in France by a different process Sheffield plate followed in general the contemporary styles in silver, but used some original designs and in the 19th cent developed characteristic flat-chased pieces Early ware was plated on one side only, but c 1765 a method for plating both sides was introduced Edges were at first soldered, then concealed with plated wire and finally with applied silver edges Additional silver was embedded in areas to be engraved German silver, an alloy of nickel, zinc, and copper, came into common use c 1835 and was preferred to copper as a base,

since it showed less where the plating wore off Special hallmarks were used after 1784 Sheffield plate was superseded c 1840 by the cheaper electroplating method

Sheharlah (shĕ″hurl′u) [Heb =God seeks], descendant of Benjamin 1 Chron 8 26

Sheherazade. see THOUSAND AND ONE NIGHTS

Shekinah (shĕkī′nŭ) [Heb, =dwelling], term used in the Targum and elsewhere to indicate the manifestation of the presence of God among men Wherever the Hebrew text speaks of the presence of God in a way which implies certain human limitations, the Targum paraphrases by substituting the word *Shekinah* for the word *God* or *Jehovah* ("And I will cause my Shekinah to dwell," in the Targum Onkelos) Although the Shekinah is never intended as an intermediary between God and man, the word is sometimes used in such a manner that it cannot be identical with God, i e, "God allows his Shekinah to rest"

Sheksna (shĭksnä′), river, c 100 mi long, central European RSFSR Flowing into the Rybinsk Reservoir, it forms part of the MARINSK SYSTEM of inland waterways and is also connected by canal with the Northern Dvina Before the filling of the Rybinsk Reservoir in 1941 the Sheksna emptied into the Volga

Shelah (shē′lŭ) **1** Son of Judah and ancestor of the Shelanites Gen 38 5, 46 12, 1 Chron 2 3, 4 21; Num 26 20 This tribe is the same as the Shilonites of 1 Chron 9 5 and as the Shiloni of Neh 11 5 **2** Same as SALAH

Shelbina (shĕlbī′nu), city (pop 2,107), NE Mo, W of Hannibal, in a stock, grain, and poultry area, founded 1857

Shelburn (shĕl′burn), town (pop 1,606), SW Ind, c 20 mi S of Terre Haute, inc 1872 Coal mining is done here

Shelburne, William Petty Fitzmaurice, 2d **earl of** (shĕl′burn), 1737–1805, British statesman President of the Board of Trade (1763) in Grenville's cabinet, he then became a supporter of William Pitt (see CHATHAM, WILLIAM PITT, 1ST EARL OF), spoke in favor of John WILKES, and was made (1766) secretary of state in Pitt's cabinet When Shelburne's policy of conciliating the American colonies was not supported by the king and Parliament, he resigned (1768) He had been in the cabinet again before in 1782 he was made head of the ministry of the king's friends, including William Pitt the younger Shelburne concluded the Treaty of Paris in 1783, granting independence to the new United States, but he was driven from office (1783) by a coalition of Tories under Lord North and Whigs under Charles James Fox One of the most consistently liberal of the English statesmen of his day, he was also one of the most consistently unpopular He was created marquess of Lansdowne in 1784

Shelburne (shĕl′burn) **1** Town (pop 1,605), SW N S, on Shelburne Harbour and E of Yarmouth, settled 1783 by United Empire Loyalists It has fish curing and packing, lumbering, shipbuilding, and manufacturing of boxes and barrels Granite is quarried near by **2** Village (pop 1,005), S Ont, SE of Owen Sound.

Shelburne. **1** Town (pop 1,636), NW Mass, on the Deerfield river and W of Greenfield, settled c 1756, set off from Deerfield 1768 Shelburne Falls village is near the crest of the Mohawk Trail **2** Town (pop 1,010), NW Vt, on Lake Champlain S of Burlington, granted 1763, first settled 1768 but abandoned in the Revolution, organized 1787 Macdonough's fleet wintered in Shelburne Harbor, 1812–13

Shelby, Isaac, 1750–1826, American frontiersman, b Washington co (then part of Frederick co), Md Around 1773 he settled in the Holston river country in what is now E Tennessee In the American Revolution he was one of the frontier leaders who defeated the British at Kings Mt (1780) in the CAROLINA CAMPAIGN Shelby moved to Kentucky in 1783, helped secure its separation from Virginia, and was the first governor (1792–96) of the new state During his second term (1812–16) he organized and commanded a body of volunteers under Gen W H Harrison at the battle of the Thames (Oct, 1813), one of the few American land victories in the War of 1812 In 1818, with Andrew Jackson, he was a member of the special commission which purchased the remaining lands of the Chickasaw in Kentucky and Tennessee See Archibald Henderson, *The Star of Empire* (1919)

Shelby. **1** Village (pop 1,367), S Mich, N of Muskegon, in a fruit and dairy area, inc 1885 **2** Town (pop 1,956), NW Miss, near the Mississippi NNE of Greenville, in a cotton area **3** City (pop 2,538), co seat of Toole co, N Mont, NNW of Great Falls Once a cowboys' town, then a center of dryland farming, it later benefited from discovery (1921) of oil near by **4** City (pop 14,037), co seat of Cleveland co, W N C, W of Charlotte, in a rich piedmont farming area, inc as a city 1929. It has important textile and woodworking plants **5** City (pop 6,643), N central Ohio, NW of Mansfield Steel tubing is made here

Shelbyville **1** City (pop 4,092), co seat of Shelby co., S central Ill, on the Kaskaskia river and SE of Springfield, in a farm and coal area, inc 1839 Farm equipment is made here Lincoln argued law cases in the courthouse **2** City (pop 10,791), co seat of Shelby co, SE Ind, c 25 mi SE of Indianapolis, platted 1822 It is a farm trading center in the Corn Belt and has furniture factories **3** City (pop 4,392), co seat of Shelby co, N Ky, between Louisville and Frankfort, founded 1792 It is in a bluegrass region yielding tobacco, livestock, grain, and dairy products. The city refines oil and is also a large tobacco market Science Hill, a girls' school (1825), is here Near by is the Old Stone Inn (1794) **4** Town (pop 6,537), co seat of Bedford co, central Tenn, on the Duck river and SSE of Nashville, laid out 1810, inc 1819 Tire cord and pencils are among its manufactures The region, which yields dairy and other farm products and timber, is noted for the breeding of the Tennessee "walking horse"

Sheldon, Charles Monroe, 1857–1946, American Congregational clergyman and author, b. Wellsville, N Y, grad Brown, 1883, and Andover Theological Seminary, 1886 He filled a long pastorate (1889–1919) at Topeka, Kansas, and edited the *Christian Herald* from 1920 to 1925 His religious novels grew out of his Sunday evening services. Of them, *In His Steps* (1896) was world famous He was a well-known lecturer and a militant pacifist

Sheldon, Edward Brewster, 1886–1946, American dramatist, b. Chicago, grad Harvard, 1908 His first play, *Salvation Nell* (1908) starring Mrs Fiske, was followed by *The Nigger* (1909), *The Boss* (1911), and *The High Road* (1912) *Romance* (1913), his most popular play, was successful in London as well as in the United States As a light opera, with music by Sigmund Romberg, it had a short run in 1948 With Charles MacArthur he wrote *Lulu Belle* (1926), and with Margaret Ayer Barnes, *Dishonored Lady* (1930)

Sheldon, Gilbert, 1598–1677, English divine, archbishop of Canterbury He attended Charles I at Oxford and Newmarket and in the Isle of Wight, remaining thereafter in retirement until the Restoration, when he became (1660) bishop of London and later (1663) archbishop of Canterbury Sheldon was an influential adviser to Charles II While chancellor of Oxford Univ he built (1669) the Sheldonian Theatre at his own expense

Sheldon **1** Village (pop 1,046), E Ill, near the Ind line, founded 1860, inc 1901 It is a shipping center in a grain and stock area **2** City (pop 3,768), NW Iowa, on the Floyd river and NNE of Sioux City, in a farm area, inc 1876 It has varied manufactures **3** Town (pop 1,471), NW Vt, NE of St Albans, granted 1763, settled 1789–90, organized 1791

Shelekhov, Grigori Ivanovich (grēgô′rē ēvä′nuvĭch shĕl′ĭkhuf), 1747–95, Russian fur merchant In Siberia he built up a large fur business Profitable trading ventures in the Aleutian Islands led to his resolve to open a new fur-trading area In 1784 he led a company to Kodiak Island and at Three Saints Bay founded the first permanent settlement in Alaska From there the mainland was explored, and other fur-trade centers were established In 1786 Shelekhov set out for Russia, seeking a grant to his company of the monopoly of the fur trade To manage his interests in Alaska he dispatched (1791) Aleksandr Baranov, the man who was to dominate affairs during the Russian occupation of Alaska Shelekhov's company, of which Ivan L Golikov was a partner, was the nucleus for the noted Russian American Company, which was formed several years after Shelekhov's death His *Journal of the Voyages . to the Coast of America in 1783–87* was published in London in 1795 Shelikof Strait is named for him

Shelemiah (shĕ″lĭmī′u) [Heb, =God repays] **1** Father of Hananiah Neh 3 30 **2** Treasurer Neh 13 13 **3** Father of Irijah Jer 37 13 **4** See MESHELEMIAH These identifications are not all certain, other appearances of the name may refer to some of the same persons Ezra 10 39,41, Jer 36 14,26, 37 3

Sheleph (shē′lĭf) [Heb, =drawing out], ancestor of a tribe of S Arabia Gen 10 26, 1 Chron 1 20

Shelesh (shē′-), Asher's descendant 1 Chron 7 35

Shelford, Victor Ernest, 1877–, American zoologist, b Chemung, N Y, grad Univ of Chicago (B S, 1903, Ph D, 1907) He taught at the Univ of Illinois from 1914 to 1946 (professor from 1927) and is known for his research in animal ecology His many contributions include *Animal Communities in Temperate America* (1913), *Laboratory and Field Ecology* (1929), and *Bio-Ecology* (with F E Clements, 1939). He compiled the *Naturalist's Guide to the Americas* (1925).

shell, in zoology, a hard outer covering secreted by some part of an animal Usually it refers to the calcareous shells of the many species of MOLLUSK It is also applied to the exoskeleton of the crab and other crustacean animals and to the bony covering of the turtle Man has made use of mollusk shells since early times as receptacles for food and water, as money, and for ornamentation The scientific study of shells is conchology See A. H Verrill, *Strange Sea Shells and Their Stories* (1936), P. A Morris, *What Shell Is That?* (1939) and *A Field Guide to the Shells of Our Atlantic Coast* (1947); C N Vilas and N R. Vilas, *Florida Marine Shells* (1945).

shellac (shŭlăk′), name commonly used for a solution of LAC in alcohol. In commerce the name is applied to the resinous substance itself rather than to the solution. It ranges in color from orange to light yellow depending upon the extent to which it has been purified, the darker shellacs being the less pure When bleached it is known as white shellac The alcoholic solution is applied to surfaces such as wood and plaster, and it forms upon evaporation of the alcohol a hard coating It is widely used as a paint varnish, as a protective covering for drawings and plaster casts, for stiffening in the manufacture of felt hats, in making sealing wax, and in electrical insulation.

shellbark hickory see HICKORY

Shelley, Harry Rowe, 1858–1947, American organist and composer, b New Haven, Conn, studied at Yale and with Dvorak and Dudley Buck in New York He was organist of various churches in New Haven, Brooklyn, N Y, and New York city, including Plymouth Church, Brooklyn, of which Henry Ward Beecher was pastor His anthems follow the tradition of the Victorian composers He also wrote cantatas, organ music, and orchestral music and compiled anthologies of organ music

Shelley, Mary Wollstonecraft, 1797–1851, English author, daughter of William Godwin and Mary Wollstonecraft Although she was a talented child, she received no formal education In 1814 she fell in love with the poet Shelley, accompanied him abroad as his wife, and after the death of his first wife in 1816 was married to him As the result of a story competition with Shelley and Byron, she wrote the best of the novels of terror, FRANKENSTEIN (1818) The historical novel *Valperga*, written at this time, was published in 1823 At first overwhelmed by the death of her husband in 1822, Mrs Shelley later edited Shelley's writings (1824–40) and wrote biographies, articles, and fiction to educate her surviving son Percy, until 1840, when he received an allowance from his grandfather Her best works of this period are *The Last Man* (1826), an imaginative work on the destruction of the human race, and the partly autobiographical novel *Lodore* (1835) See her letters (1944) and journal (1947), both ed by F L Jones, biography by R G Gryll (1938) See also bibliography under Percy Bysshe Shelley

Shelley, Percy Bysshe, 1792–1822, English poet, b Horsham, Sussex, son of Timothy Shelley (later Sir Timothy) He attended Syon House Academy (1802–4) Eton (1804–10), and Oxford (1810–11), but his real education came from reading and from the exercise of his imagination In Feb, 1811, he had published a pamphlet, *The Necessity of Atheism*, his authorship being discovered, he and his friend Thomas Jefferson Hogg were expelled from the university (March, 1811) His father, already alienated by Shelley's advanced views, broke with him, but grudgingly continued his allowance In Aug, 1811, Shelley eloped to Scotland with his sister's schoolmate Harriet Westbrook For three years, the couple moved frequently, driven by financial embarrassments and Shelley's enthusiasm for new causes In *Queen Mab* (1813), he set forth more completely and violently than before or later his belief in man's degradation by priestcraft, monarchy, and commerce and in his final redemption Doubting the validity of his marriage, Shelley remarried Harriet in March, 1814, but soon became infatuated with Mary Wollstonecraft Godwin, with whom he eloped (July) Financial straits, estrangement from the Godwins, the problem of a settlement with Harriet—all made the couple's life a troubled one *Alastor* (1816) met with little favor A stay in Switzerland (summer, 1816) brought association with BYRON The suicide of Harriet late in 1816 and the chancellor's refusal to give Shelley custody of her children (March, 1817) increased Shelley's and Mary's misery, somewhat relieved by a new association with Leigh Hunt and his circle Soon after Harriet's suicide, Mary and Shelley were married *Laon and Cythna*, a history of an ideal revolution in which the mistakes of the French Revolution were avoided, was printed in Dec, 1817, then withdrawn and reissued as *The Revolt of Islam* In March, 1818, the Shelleys left England for the last time, to settle in Italy Domestic troubles continued, but there Shelley composed the great body of his poetry The closet dramas *Prometheus Unbound* and *The Cenci* and the "Ode to the West Wind" were composed in 1820 A girl known at Pisa, Emilia Viviani, helped to inspire *Epipsychidion* (1821)—part spiritual autobiography, part praise of ideal love The death of Keats (Feb, 1821) led to *Adonais* (1821), in which Shelley reasserted the eternity of beauty; the Greek struggle for independence prompted *Hellas* (1822) On July 8, 1822, Shelley was drowned while sailing in the Bay of Lerici Shelley's political philosophy long inspired radical thinkers, though his aversion from Christianity and his zeal for violent change were modified before he died The overweighted Spenserian stanzas of *The Revolt of Islam* never attained popularity, but the restrained and somber

blank verse of *The Cenci*, the rich variety of *Prometheus Unbound*, and the polished completeness of *Adonais* made them endure Shelley's reputation is based most firmly, however, on the fresh imagery and subtle melody of his many shorter pieces, e g , his "Ode to the West Wind," "To a Skylark," "The Indian Serenade," and "When the Lamp Is Shattered " The complete works were edited by Roger Ingpen and W E Peck (1927) See *New Shelley Letters* (ed by W S Scott, 1949), Mary Shelley's letters (1944) and journal (1947), both ed by F L Jones, biographies by Edward Dowden (1886), W E Peck (1927), N I White (1940), and Edmund Blunden (1946), studies by Carl Grabo (1930), R M Smith (1945), and Carlos Baker (1948)

Shelley, city (pop 1,751), SE Idaho, on the Snake and S of Idaho Falls, settled 1884, inc 1904 It is the center of a potato-growing region

shellfish, popular name used for certain edible aquatic animals such as the oyster, clam, scallop, and other mollusks and for crustacean animals such as the crab, lobster, and shrimp To avoid the danger of spoilage, shellfish must be cooked, canned, or served very soon after being caught

Shellman, city (pop 1,063), SW Ga , NW of Albany, in a farm area, settled 1837

shell money, in its many forms, is the most widely distributed type of primitive money It is particularly useful for this purpose because it may be strung in long strips of proportionate value or it may be used to provide a single, small unit value in exchange Relative scarcity of the type of shell used or the way the shell is fashioned often determines its value COWRIE shells have been the most common shell media and are probably the oldest in usage as money WAMPUM was usually fashioned from thick-shelled clams, dentalia ("tooth shells") were popular with the Indians of the west coast of North America Mother-of-pearl and tortoise shell are said to have been used as money in ancient China Oceanic peoples, in particular, use a variety of shells in trade It is often difficult to distinguish monetary from ritual function in barter exchange Thus, the ostrich-eggshell disks of SW Africa and the shell arm bands in Melanesia are not usually considered as money though they are actually exchanged

shell mound, in archaeology, a mound consisting largely of the shells of edible mollusks It is a kind of KITCHEN MIDDEN found in both the Old World and the New

Shelomi (shĕ'lōmī, shĕlō'mī) [Heb ,=*peaceful*] father of Ahihud, a prince of Asher Num 34 27

Shemya (shĕm'ya), island, 4 mi long , off W Alaska, one of the ALEUTIAN ISLANDS In the Second World War a U S air base was established here

Shen [Heb ,=*tooth*], place, perhaps close to Bethel, near which Samuel set up Ebenezer 1 Sam 7 12

Shenandoah (shĕnŭndō'ŭ) **1** City (pop 6,846), SW Iowa, SE of Council Bluffs and on the East Nishnabotna river, inc 1871 The city is a trade and shipping center for a farm and livestock area, it has varied manufactures **2** Industrial borough (pop 19,790), E Pa , in the Schuylkill anthracite region near Pottsville, settled 1835, laid out 1862, inc 1866 Coal mining is the principal activity There are also textile mills and meat-packing plants Many languages are spoken here **3** Railroad town (pop 1,829), N Va , on the South Fork of the Shenandoah river, NE of Harrisonburg between the Blue Ridge and Massanutten Mt , inc 1884

Shenandoah, river, c 170 mi long, rising in two main forks in western Virginia which flow northeastward, unite near Front Royal, and continue to the Potomac at Harpers Ferry, W Va The two forks, separated by Massanutten Mt for some 40 mi , lie in the two distinct parts of the beautiful Shenandoah Valley (c 150 mi long and 10–20 mi wide), which has rich farm lands, orchards, and pastures Between the Blue Ridge on the east and the Alleghenies on the west, it is a region of varied scenery and natural wonders In the Civil War the valley was the ideal avenue of approach for a Southern invasion of the North and figured as such in the brilliant campaign of T J (Stonewall) JACKSON in 1862 (which, however, was only a diversion), in the GETTYSBURG CAMPAIGN (1863), and in the raid of J A EARLY in 1864 Lee retreated through the valley after being checked in the ANTIETAM CAMPAIGN (1862) and in the Gettysburg campaign It was one of the principal storehouses for Lee's army The first conspicuous Union success in the Shenandoah Valley was achieved by DAVID HUNTER in 1864, but he was defeated by Early Early was in turn driven out by P H SHERIDAN, who then laid waste the fertile countryside By early 1865 the valley was completely lost to the South The principal cities and towns are Winchester, Front Royal, Luray, Staunton, Waynesboro, and Lexington See S C Kellogg, *The Shenandoah Valley and Virginia, 1861 to 1865* (1903), W O Stevens, *The Shenandoah and Its Byways* (1941), Julia Davis, *The Shenandoah* (1945)

Shenandoah see CONFEDERATE CRUISERS

Shenandoah National Park, 193,472 98 acres, N Va , extending c 75 mi along the crest of the Blue Ridge from Front Royal to Jarman Gap, near Waynesboro, est 1935 In 1936 the state of Virginia transferred title of the area to the United States Skyline Drive, 107-mile highway, begins at Front Royal and extends through the park From its parking overlooks may be viewed the Blue Ridge, Shenandoah Valley, Massanutten Mt , and the Allegheny Mts Elevations in the park run from 600 ft at the northern entrance to 4,049 ft at the summit of Hawk's Bill Another peak, Stony Man, is 4 010 ft

Shenandoah Valley see SHENANDOAH, river

Shenazar (shĕnā'zur), descendant of Josiah 1 Chron 3 18 See SHESHBAZZAR

sheng, Chinese musical instrument consisting of a gourd into which is fastened a set of graduated tubes with free reeds These are set in motion by the player's breath, blown through a mouthpiece Each tube has a hole which must be stopped in order to sound The sheng was introduced into Europe in the 18th cent and possibly furnished the idea for other free-reed instruments, such as the reed organ, accordion, and concertina The spelling cheng is sometimes used for the sheng

Shenir (shē'nur), variant of SENIR

Shensi (shĕn'sē'), Mandarin *Shan-hsi*, province (72,407 sq mi , pop 9,140,180), N central China, Sian is the capital Shensi is bordered on the east by the Yellow River, which forms the boundary with Shansi The Tsingling in the south is the greatest range of this predominantly hilly and mountainous province. The Wei, a tributary of the Yellow River, crosses Shensi from west to east and divides it into two approximately equal areas The soil in the north is fertile loess, but insufficient rainfall makes agriculture uncertain The south, with poorer soil but adequate rainfall, is the main farming region Wheat, fruit, tobacco, and cotton are important crops There is much coal in Shensi, but it is almost untouched because there is little transportation from the main deposits Parts of the province, however, are served by the Lung-Hai RR, the principal east-west line of China, and by several short branch lines

Shenstone, William, 1714–63, English poet and landscape gardener *The Schoolmistress* (1742) and *The Pastoral Ballad* (1755) are his best-remembered poems His home, "Leasowes," in Shropshire, became a famous example of 18th-century gardening. See studies by E M Purkis (1931), Marjorie Williams (1945), and A R Humphreys (1937).

Shemyang, China see MUKDEN

Shepham (shē'făm), unidentified boundary town, NE Palestine Num 34 10,11 See SHIPHMITE

Shephatiah (shĕfutī'u) [Heb ,=*God is judge*] **1** One of David's mighty men 1 Chron 12 5 **2** Chief Simeonite under David 1 Chron 27 16. **3** Son of David 2 Sam 3 4 **4** Son of Jehoshaphat 2 Chron. 21 2 **5** Prince in Jeremiah's time Jer 38 1, **6** Benjamite 1 Chron 9 8 **7** Judahite Neh 11 4. **8, 9** Families of returning exiles Ezra 2.4,57, 8 8.

shepherd dog, working dog long bred in Germany for guarding sheep It is correctly known as the German shepherd dog, although because it has been, in more recent times, much used in police work it came to be called the German police dog Because of its intelligence, stamina, loyalty and teachability it has proved valuable as a war dog and as a seeing-eye dog for the blind Males stand from 22 to 26 in at the shoulder and weigh from 75 to 85 lb They require considerable exercise. The woolly undercoat is overlaid with a coarse outer coat, which may be solid black, solid white, or, more commonly, a mixture of browns grays, and brindle The body is firm and muscular, the back straight, and the tail long and plumed. When the dog is at attention the ears are erect.

Shepherdstown, town (pop 945), W Va , in the agricultural Eastern Panhandle, on the Potomac and SE of Martinsburg, settled 1762 It is one of the oldest towns in the state The *Potowmac Guardian* (started here in 1790) was the first newspaper in what is now West Virginia Rumsey State Park and Shepherd State College are here

Shephi (shē'fī) or **Shepho** (fō) [Heb ,=*smoothness*], Seir's descendant 1 Chron 1 40, Gen 36 23.

Shephuphan (shĕfū'făn), variant of SHUPHAM.

Sheppard, John (Jack Sheppard), 1702–24, English criminal Brought up in the Bishopgate workhouse and apprenticed to a carpenter, he ran away with Bess Lyon, known as Edgeworth Bess, who, with another girl known as Poll Maggott, incited him to a short but spectacular career as a thief and robber. He achieved his greatest fame for his numerous and astonishing escapes from custody, climaxed by an amazing escape (1724) from Newgate, when he overcame manacles, chains, bars and heavily bolted doors and made his way out through a chimney. He was soon apprehended, however, and hanged at Tyburn His exploits became the subject of numerous narratives and plays, one or two attributed to Daniel Defoe The most famous fictionized version was written by W H Ainsworth (1839). See Horace Bleackley, *Jack Sheppard* (ed , with additional materials, by S M Ellis, 1933).

Sheppard, Morris, 1875–1941, American legislator, b Morris co , Texas, grad Univ of Texas (B A., 1895, LL B , 1897) He practiced law in Texas and was elected (1902) to Congress to succeed his father, John L Sheppard He was in the House until his election (1913) to the Senate, where he served until his death His name is connected with the Sheppard-Towner Act which provided for Federal and state cooperation toward maternity and infant welfare He helped draw up the Webb-Kenyon Act (1913) to control interstate shipment of liquor and also wrote the Sheppard Bill (1916) to make the District of Columbia dry He fathered the Senate resolution which was destined to become the Eighteenth Amendment, and he helped frame the Volstead Act

Sheppey, Isle of [isle of sheep], Kent, England, in the Thames estuary, separated from the mainland by the narrow Swale It is largely flat, with low cliffs in the north, where the sea is encroaching and undercutting The soil is fertile and vegetables, grain, and sheep are raised The chief towns are Sheerness, Queenborough, and Minster, where there is a church, founded in 673 containing the tomb of Sir Robert Shurland, protagonist of a story in R H Barham's *Ingoldsby Legends*

Sherah (shē'ru) [Heb ,=*kinswoman*], daughter of Ephraim, eponym of the unidentified Uzzensherah 1 Chron 7 24

Sher Ali see SHERE ALI

Sheraton, Thomas (shĕ'rutun), 1751–1806, English designer of furniture and author Little is known of his early years, but he is believed to have been apprenticed to a cabinetmaker An earnest Baptist, he wrote religious books and preached Records show that he was in London from c 1790 and eked out the meager earnings from his books by giving drawing lessons Although he may have supervised the making of some furniture, his style

became influential through his manuals of design, especially the *Cabinet-Maker and Upholsterer's Drawing-Book* (1791) Sheraton's style is marked by a graceful delicacy and simplicity, emphasis on straight, vertical lines, and a preference for inlay decoration, reeded legs, and classical motifs.

Sherborn, town (pop 1,022), E Mass, SE of Framingham, settled 1652, inc 1674

Sherborne (shur'bŭrn), urban district (1931 pop, 6,542, 1943 estimated pop 7,094), Dorsetshire, England, on an elevated site in the Vale of Blackmore It became the seat of a bishopric under St. Aldhelm in 705, but the see was transferred to Old Sarum in 1075 The abbey church was part of a Benedictine abbey founded in 998 Sherborne School, founded by Edward VI in 1550, is a well-known English public school It occupies some of the old abbey buildings, and the library is rich in musical scores. The town's products are silk and cheese

Sherbrooke, Robert Lowe, Viscount (shŭr'brŏŏk), 1811–92, English statesman He emigrated to Australia (1842) and achieved notice as a reform politician Returning to England (1850), he entered the House of Commons (1852), distinguished himself as a speaker, and held subordinate offices in the ministries of Lord Aberdeen and Lord Palmerston In 1866, with Edward Horsman, he led the "cave of Adullam," the insurgent Liberals who attacked and defeated their government's reform bill Despite this action, he served William E Gladstone as chancellor of the exchequer (1868–73) and home secretary (1873–74), effecting some tax reduction, but pursuing no very marked policies. See biography by A P Martin (1893)

Sherbrooke (shŭr'brŏŏk), city (pop 35,965), co seat of Sherbrooke co, SE Que, on the St Francis at the mouth of the Magog and E of Montreal It is the commercial and market center for a surrounding farm region and is an industrial city, with hosiery, rayon, and knitting mills, steel foundries, railroad workshops, milk canning, and plants producing mining machinery, rubber products, clothing, gloves, and furniture There are asbestos mines near by Sherbrooke is a Roman Catholic episcopal see, and the Séminaire St Charles Borromée, affiliated with the Univ of Montreal, is here

Sherburn, village (pop 1,030), S Minn, W of Fairmont near the Iowa line It is a resort in a lake and farm region

Sherburne, village (pop 1,192), S central N Y, SW of Utica, settled 1793, inc 1830 Knitted goods and dog foods are made A state game farm is near here

Shere Ali (shēr'ä'lē, shâr') or **Sher Ali** (shâr'), 1825–79, emir of Afghanistan (1863–79), son of Dost Mohammed His succession was opposed by other members of his family, notably his brothers Shere Ali turned from his friendship with the British toward friendly relations with Russia Trouble resulted and finally brought on the second of the Afghan Wars Shere Ali's forces were defeated by the British, and he had to flee the country He died in exile, and his entire party was ousted from Afghanistan in 1880 His nephew Abdu-r-Rahman Khan became emir

Sherebiah (shĕ"rĕbī'ŭ), companion of Ezra and signer of the covenant Ezra 8 18,24; Neh. 8.7, 9.4,5, 10 12, 12 8,24

Sheresh (shē'rĕsh), Manassite 1 Chron 7.16

Sherezer (shĕ-rē'-), one of a group sent to ask the priests about fasting Zech 7 2

Sheridan, Philip Henry (shĕ'rĭdun), 1831–88, Union general in the Civil War, b Albany, N Y He spent his early life in Somerset, Ohio After graduation from West Point (1853), he saw varied service on the frontier In the Civil War, Sheridan, made colonel of the 2d Michigan Cavalry (May, 1862), took part in the Union advance on Corinth, Miss., under H. W Halleck For his victory over Confederate cavalry at Booneville, Miss., on July 1, 1862, he was made a brigadier general of volunteers and was given command of a division of the Army of the Ohio Sheridan distinguished himself under D. C Buell at Perryville (Oct, 1862) and was promoted major general of volunteers (Dec, 1862) for his able conduct under W S Rosecrans at Murfreesboro In the Chattanooga campaign (1863) he aided G H Thomas in holding off the Confederates at Chickamauga and had a prominent part in the Union victory at Missionary Ridge Grant recognized his ability and, shortly after he was made commander in chief, appointed Sheridan commander of the cavalry corps of the Army of the Potomac (April, 1864) In a notable raid (May 9–24, 1864) beyond Lee's army in the Wilderness campaign, he destroyed communications and supplies and defeated J E. B Stuart at Yellow Tavern The success of the Confederate general J. A Early in the Shenandoah Valley prompted Grant to give Sheridan command of the Union forces there in Aug, 1864 At Winchester (Sept. 19) and Fishers Hill (Sept 22) Sheridan roundly defeated Early and drove him up the valley Sheridan then slowly withdrew, systematically laying waste to the Shenandoah so that, as he reported, even a crow flying over the place would have to take his rations with him But Early advanced again, and on the morning of Oct 19, while Sheridan was at Winchester, 15 mi away, he surprised the Federals at Cedar Creek and drove them back Upon hearing of the defeat Sheridan hurried to the field, rallied his men, and, counterattacking, won a decisive victory (This success was highly dramatized by Thomas Buchanan Read in his poem, "Sheridan's Ride") In March, 1865, Gen George Custer of Sheridan's army defeated the remains of Early's command at Waynesboro Sheridan then moved eastward, destroying Confederate communications as he went, and joined Grant near Petersburg After his victory at Five Forks (April 1, 1865), he pursued Lee vigorously and cut off the Confederate retreat at Appomattox Courthouse, forcing Lee's surrender. From May, 1865, to March, 1867, Sheridan commanded the Military Division of the Gulf His force on the Mexican border was instrumental in causing the fall of Maximilian in 1867 In Reconstruction days he commanded the 5th Military Dist (Texas and Louisiana) from March until Sept, 1867, when President Johnson transferred him to the command of the Dept of the Missouri because of the excessive rigor of Sheridan's administration In the Franco-Prussian War he was a military observer with the Prussian army Sheridan was again sent to Louisiana in 1875, when the revolt against Republican rule created great public disturbance His military rule was even more severe than before, and his name is anathema in Louisiana even today On W T Sherman's retirement in 1883, Sheridan was made commanding general of the U S army He was promoted general shortly before his death Sheridan was not a brilliant general, but his flair for leadership and ready fighting ability made him the outstanding Union cavalry commander See his *Personal Memoirs* (1888), biographies by P C Headley (1889) and H C Davies (1895), Joseph Hergesheimer, *Sheridan a Military Narrative* (1931), A H Burne, *Lee, Grant, and Sherman* (1939), C C. Rister, *Border Command General Phil Sheridan in the West* (1944).

Sheridan, Richard Brinsley, 1751–1816, British dramatist and politician, b Dublin After his elopement in 1773 with Elizabeth, daughter of the composer Thomas Linley, Sheridan began writing for the theater and in 1776 became part owner and director of the Drury Lane Theatre Sheridan's masterpieces are *The Rivals* (1775) and *The School for Scandal* (performed 1777), comedies of manners intended to instruct as well as to entertain *The Critic* (performed 1779) is a dramatic caricature modeled on *The Rehearsal* (1671) of the 2d duke of Buckingham Other noteworthy dramatic works are the comic opera *The Duenna* (performed 1775) and *A Trip to Scarborough* (performed 1777), an adaptation of *The Relapse* (1696) by Vanbrugh Several of Sheridan's characters, particularly Mrs Malaprop, Lydia Languish, Bob Acres, and Lady Teazle, are comic classics Entering Parliament in 1780, Sheridan became one of the most brilliant orators of his time He played a prominent part in the impeachment of Warren Hastings and with Charles James Fox defended the French Revolution The burning in 1809 of the new Drury Lane Theatre virtually ruined Sheridan financially See his plays and poems (ed by R C Rhodes, 5 vols, 1928), biographies by R C Rhodes (1933), Alice Glasgow (1940), Kenelm Foss (1940), and Lewis Gibbs (1948) Sheridan's mother, **Frances Sheridan,** 1724–66, wrote a popular novel, *Memoirs of Miss Sidney Bidulph* (3 vols, 1761, enl ed, 1767), *The History of Nourjahad* (1767), an Oriental tale, and *The Discovery*, a comedy staged in 1763

Sheridan. 1 Lumber town (pop 1,338), co seat of Grant co, S central Ark, NW of Pine Bluff, in a farm region **2** Town (pop 1,720), central Ind, NNW of Indianapolis **3** City (pop 1,294), NW Oregon, NW of Salem, in a lumber and fruitgrowing area, settled 1847, inc 1880 It was named for Gen Philip Sheridan **4** City (pop 10,529), co seat of Sheridan co, N Wyo, on Goose Creek 20 mi E of the Bighorn Mts, in a coal-mining, cattle-raising, farming, and dude-ranch area, settled 1878, laid out 1882, inc 1884 A railroad division point and the largest city in N Wyoming, it refines sugar and has farm-product processing plants A rodeo and a flower show are annual events Near by are a U S veterans' hospital (on the site of Fort MacKenzie) and the state industrial school for girls. To the south are a number of historic places, including a reproduction of Fort Phil Kearny (a post in the 1860s) and the site of the Fetterman massacre, where Indians wiped out a force of soldiers

Sheriffmuir (shĕ'rĭfmvōōr"), battlefield in Perthshire, Scotland, near Dunblane It was the scene, Nov 13, 1715, of an indecisive battle between the Jacobites under John Erskine, earl of Mar, and George I's forces under John Campbell, 2d duke of Argyll.

Sherley, Sir Anthony see Shirley, Sir Anthony.

Sherman, Francis, 1871–1926, Canadian poet, b. Fredericton, N B A successful banker, he published during his lifetime only the small volume *Matins* (1896) Other poems, which had been printed only in private editions, were collected for his *Complete Poems* (1945), which established his reputation His work is reminiscent of the Pre-Raphaelites in style and sensitivity

Sherman, Henry Clapp, 1875–, American chemist, b Ash Grove, Va, near Washington, D C, grad Maryland Agricultural College (B S, 1893), Ph D Columbia, 1897 From 1895 he was associated with Columbia Univ, as Mitchill professor of chemistry (from 1924 to 1946) and as executive officer of the chemistry department (1919–39) An authority on nutrition, he served on the National Research Council and the Public Health Association and as research associate of the Carnegie Institution (1912–29, 1933–) His research has added especially to knowledge of the contributions of vitamins and minerals in the diet to the maintenance of optimum health His many works include *Chemistry of Food and Nutrition* (1911, rev ed, 1946), *Food Products* (1914, rev ed, 1948), *The Vitamins* (with S L Smith, 1922, rev ed, 1931), *Food and Health* (1934, rev ed, 1947), *Essentials of Nutrition* (with C S. Lanford, 1940, rev ed, 1943), *Foods Their Values and Management* (1946), *Calcium and Phosphorus* (1947), and *The Nutritional Improvement of Life* (1950)

Sherman, James Schoolcraft, 1855–1912, Vice President of the United States (1909–12), b near Utica, N Y, grad Hamilton College, 1878 He was admitted (1880) to the bar and was (1884–85) mayor of Utica Sherman served (1887–91, 1893–1909) as a Republican in Congress and headed the House Committee on Indian Affairs for 14 years In 1908 he was elected Vice President on the Republican ticket along with William H Taft Sherman was renominated in 1912 but died shortly thereafter, and Nicholas M Butler ran in his place.

Sherman, John, 1823–1900, American statesman, b Lancaster, Ohio, brother of William Tecumseh Sherman He studied law, was admitted (1844) to the bar, and practiced law several years in Mansfield, Ohio, before he moved (1853) to Cleveland He had been a delegate to the Whig conventions of 1848 and 1852, and after the passage of the Kansas-Nebraska Bill he intensified his political activities He helped organize the Republican party in Ohio and presided over the first Republican state convention in 1855 Sherman, a moderate opponent of slavery expansion, served (1855–61) in the House of Representatives and quickly rose to prominence As chairman (1859–61) of the Committee on Ways and Means, he was influential in the passage of the Morrill Tariff Act of 1860 Sent (1861) to the Senate to fill the vacancy caused by the resignation of Salmon P Chase, he served there until 1877 He became (1867) chairman of the Senate finance committee and played a leading role in government finance in the Reconstruction period He had supported the Legal Tender Act of 1862 and the National Banking Act of 1863, but, opposed to Secretary of the Treasury Hugh McCulloch's plan to retire the greenbacks in circulation (see Greenback), Sherman vigorously pushed a compromise plan for resuming specie payment He forced the Resumption Act of 1875 through the Senate, and as Secretary of the Treasury (1877–81) under President Rutherford B Hayes, Sherman directed the working out of the act in resumption of specie payment In 1880, 1884, and 1888 he was a candidate for the Republican nomination for President Again (1881–97) in the Senate, he was associated in 1890 with the passage of the Sherman Anti-Trust Act and the Sherman Silver Purchase Act He resigned from the Senate to provide a seat for Marcus A Hanna in 1897 The same year he was appointed Secretary of State by President William McKinley Because of age and failing memory, he retired to private life in 1898 He wrote *Recollections of Forty Years in the House, Senate, and Cabinet* (1895) See *The Sherman Letters* (ed by R S Thorndike, 1894), biographies by T. E. Burton (1906) and W S Keir (1908).

Sherman, Roger, 1721–93, American statesman, b Newton, Mass Sherman helped to draft and signed the Declaration of Independence He was long a member (1774–81, 1783–84) of the Continental Congress, helped to draw up the Articles of Confederation, and after serving as a member of the Federal Constitutional Convention was one of the strongest proponents of the new Constitution He was prominent in Connecticut colonial and state politics and was mayor of New Haven, treasurer of Yale College, a member of the House of Representatives (1789–91) and U S Senator (1791–93) See biographies by L H Boutell (1896) and R S Boardman (1938)

Sherman, Stuart Pratt, 1881–1926, American critic and educator, b Anita, Iowa, grad Williams, 1900, Ph D Harvard, 1906 Professor of English at the Univ of Illinois from 1907 to 1924, he resigned to edit the literary section of the New York *Herald Tribune* With others he edited *The Cambridge History of American Literature*. He stood midway between the conservatives and the radicals in his biography of Matthew Arnold (1917) and in his critical works, among them *Americans* (1922), *The Main Stream* (1927), and *The Emotional Discovery of America and Other Essays* (1932) See his *Life and Letters* (ed by Jacob Zeitlin and H. E. Woodbridge, 1929)

Sherman, William Tecumseh, 1820–91, Union general in the Civil War, b Lancaster, Ohio After the death of his father (1829) he lived in the family of Thomas EWING, whose daughter, Eleanor Boyle EWING, he married in 1850 He was graduated from West Point (1840), spent several years at various Southern garrisons, served in California in the Mexican War, and was later stationed at St. Louis and at New Orleans Sherman, resigning from the army in 1853, was a banker in San Francisco and New York (1853–57) and a lawyer in Leavenworth, Kansas (1858–59) In 1859 he was made superintendent of the State Seminary of Learning and Military Academy opened in Jan , 1860, near Alexandria, La (now Louisiana State Univ at Baton Rouge), but resigned in Jan , 1861, when Louisiana seceded In May he rejoined the U S army as a colonel Sherman commanded a brigade at Bull Run (July) and in August was made a brigadier general of volunteers and sent to Kentucky There he succeeded Robert Anderson in command of the Dept of the Cumberland (Oct), but in November he was replaced by Buell and transferred to the Dept of the Missouri Sherman distinguished himself as a division commander at Shiloh (April, 1862) and was promoted major general in May He took part in operations about Corinth, occupied Memphis (July), and commanded the Dist of Memphis (Oct –Dec , 1862) After his defeat at Chickasaw Bluffs in the first advance of the VICKSBURG CAMPAIGN, he served under J A MCCLERNAND in the capture of Arkansas Post (Jan , 1863) In the successful move on Vicksburg, Sherman ably led the 15th Corps In July he was made a brigadier general in the regular army When U S Grant assumed supreme command in the West, Sherman became commander of the Army of the Tennessee (Oct , 1863) He commanded the Union left at Missionary Ridge in the CHATTANOOGA CAMPAIGN (Nov), went to the relief of A E BURNSIDE at Knoxville (Dec), and destroyed Confederate communications and supplies at Meridian, Miss , in Feb , 1864 On Grant's becoming commander in chief Sherman succeeded him as supreme commander in the West (March). His ATLANTA CAMPAIGN (May–Sept , 1864) resulted in the fall of that city on Sept 2, and on Sept 9 he ordered its evacuation The Confederate attempt to draw him back failed (see HOOD, JOHN BELL), and Sherman burned (Nov 15) most of Atlanta and the next day, with 60,000 men, began his famous march to the sea With virtually no enemy to bar his way, he was before Savannah in 24 days, leaving behind him a ruined and devastated land Savannah fell on Dec 21, and in Feb , 1865, Sherman started northward to close in on Lee from the rear Every step now reduced the area upon which the Confederates in Virginia could depend for aid His advance through South Carolina (the state which in the eyes of Sherman's men had provoked the war) was slower but even more destructive than the march through Georgia In North Carolina, J F JOHNSTON opposed Sherman in engagements at Averasboro and Bentonville, but after hearing of Lee's surrender, he asked for terms Sherman, understanding the South and the ruin wrought there better than any other Union general, offered him generous terms that practically amounted to a plan of Reconstruction, but Secretary of War Stanton repudiated them Johnston then surrendered the last major Confederate army on the same terms as Lee (April 26, 1865) Sherman was promoted lieutenant general in 1866 and general in 1869, when he succeeded Grant as commander of the U S army He saw more clearly than any other Civil War general that modern warfare was completely unlike its 18th-century counterpart Since the Civil War was a war between free peoples, Sherman maintained that only by breaking the war spirit of the enemy, noncombatant as well as combatant, could victory be won—hence the march through Georgia and South Carolina His answer to the mayor of Atlanta, who had protested the evacuation, epitomizes his sentiments "War is cruelty, and you cannot refine it " Sherman is said by many to be the greatest of Civil War generals How effective his actions were is proved by the fact that his name is still cordially detested in the South See his memoirs (1875), *The Sherman Letters* (correspondence with his brother John SHERMAN, ed by R S Thorndike, 1894), and *Home Letters of General Sherman* (ed by M A DeWolfe Howe, 1909), biographies by Edward Robins (1905), Lloyd Lewis (1932), and B H Liddell Hart (1929), Anna McAllister, *Ellen Ewing, Wife of General Sherman* (1936), A H Burne, *Lee, Grant, and Sherman* (1939)

Sherman. 1 Town (pop 1,058), E Maine, E of Mt Katahdin, in the Aroostook farming region, inc. 1862 **2** City (pop 17,156), co seat of Grayson co , N Texas, near the Red River NNE of Dallas, settled 1849, inc 1854 Stagecoaches once passed through Sherman, which is now a highway and railroad junction It processes farm produce flour mills, cereal plants, and feed mills use grain, cotton gins, cottonseed-oil mills, a textile mill, and a garment factory use cotton Despite these and other industries Sherman has somewhat the air of a wealthy farm market Austin College (Presbyterian, coeducational) was founded in 1849 in Huntsville and later moved to Sherman

Sherman Anti-Trust Act, 1890, passed by the U S. Congress It took its name from Sen John Sherman Increasing public opposition to large corporations and to combinations of large business caused much political turmoil The demand for restrictive legislation grew to great power in the 1880s and finally brought about the Sherman Anti-Trust Act Based on the constitutional power of Congress to regulate interstate commerce, the act declared illegal every contract, combination (in the form of trust or otherwise), or conspiracy in restraint of interstate and foreign trade A fine of $5,000 and imprisonment for one year were set as the maximum penalties for violating the act The Supreme Court by its decisions, as in the E C Knight Company Case of 1895, reduced the force of the act greatly in the first decade of its operation As a result of President Theodore Roosevelt's "trust-busting" campaigns, however, the Sherman Anti-Trust Act was later invoked with some success, and under the terms of the act the Northern Securities Company was ordered to dissolve in 1904 The act was further employed by President W H Taft in 1911 to dissolve the Standard Oil trust and the American Tobacco Company In the Wilson administration, the CLAYTON ANTI-TRUST ACT (1914) was enacted in supplement to the Sherman Anti-Trust Act, and the FEDERAL TRADE COMMISSION was set up (1914) In the 1920s anti-trust action sharply declined, but under President F D Roosevelt, new acts supplementary to the Sherman Anti-Trust Act were passed (e g , the ROBINSON-PATMAN ACT), and anti-trust action was vigorously resumed In recent years the new decisions of the Supreme Court have eased many of the old difficulties of government prosecution of trusts See Thurman Arnold, *The Sherman Antitrust Act and Its Enforcement* (1940)

Sherman Silver Purchase Act, 1890, passed by the U S Congress to supplant the BLAND-ALLISON ACT of 1878 It not only required the U S government to purchase nearly twice as much silver as before, but also added substantially to the amount of money already in circulation The Sherman Silver Purchase Act (supported by John Sherman only as a compromise with the advocates of FREE SILVER), when put into operation, threatened to undermine the U S Treasury's gold reserves After the Panic of 1893 broke, President Grover CLEVELAND called a special session of Congress and secured (1893) the repeal of the Sherman Silver Purchase Act

Sherridon (shĕ'rĭdun), town (estimated pop 1,500), W Man , on Kississing Lake and N of The Pas It is a center of copper and gold mining and the north terminus of the Manitoba Northern Railway

Sherriff, Robert Cedric, 1896–, English dramatist His experience in the First World War gave him material for his impressive play *Journey's End* Produced in 1929, it met with huge success in England and the United States *St Helena,* written with Jeanne de Casalis, was produced in 1936 Sherriff has also written many moving-picture scenarios, including *Goodbye Mr Chips* (1936) and *Odd Man Out* (1945)

Sherrill, Clarence Osborne, 1876–, American army officer and city manager of Cincinnati (1926–30, 1937–44), b Newton, N C , grad West Point, 1901 As an engineer, Sherrill advanced through the army grades to become colonel in 1917 After service in France in the First World War he was director of public buildings and parks in Washington, D C In 1926 he resigned from the army to become city manager of Cincinnati after that city had shaken itself loose from party-ridden politics Four years later he was succeeded by C A DYKSTRA When Dykstra resigned (1937) to become a university president, Colonel Sherrill was immediately recalled as city manager

Sherrill, city (pop 2,184), central N Y , W of Utica, inc 1916 Silverware is made here

Sherrington, Sir Charles Scott, 1861–, English physiologist, educated at Cambridge He was professor of physiology at the universities of Liverpool, London, and Oxford He was knighted in 1922 Noted for his research on the nervous system, he shared with E D Adrian the 1932 Nobel Prize in Physiology and Medicine for their discoveries regarding the function of the neuron Among his works are *The Integrative Action of the Nervous System* (1906), *Mammalian Physiology* (1919, rev ed 1929), *The Brain and Its Mechanism* (1933), and *Man on His Nature* (1940)

sherry [from Jerez], naturally dry, fortified wine, pale amber to brown in tint It is made from grapes grown in the region of Jerez de la Frontera, Andalusia, Spain After fermentation the wine is fortified with brandy Matured in cask for several years, the wine when mature is classed as *palma,* very dry, *raya,* full and rich, or *palo cortado,* an intermediate variation. The big sherry houses blend the wines with reserves from the Soleras, collections of flavoring wines from very fine vintages, kept in dated casks and maintained for long periods by exact replenishment of the blending wine withdrawn from the oldest cask with wine from the next oldest The varieties of sherry include AMONTILLADO and manzanilla, dry *aperitif* wines of the *palma* type, the fairly sweet, fruity oloroso and amoroso, blended from *palo cortado,* and the very sweet golden or brown sherries, *raya* blends The dessert sherries are usually colored and sweetened by the addition of dark, syrupy wines Sherry contains from 15 to 23 percent of alcohol, the more highly fortified wines being for export Wines of the sherry type are produced in the United States and Latin America Sherry must be long matured in wood and bottle to acquire the mellowness demanded of blended wines It is widely used as a flavoring in fine cookery. See H Warner Allen, *Sherry* (1933)

's Hertogenbosch (sĕr'tōkhŭnbŏs'), Fr *Bois-le-Duc* (bwa"-lu-dük'), municipality (pop 53,432), capital of North Brabant prov , S central Netherlands It is a manufacturing center for electric-light bulbs, bicycles, food products, and cigars Chartered in 1184, it was a fortress city until 1876 It suffered heavy damage in the Second World War

Sherwood, Mary Martha (Butt), 1755–1851, English writer of moral and religious stories for young readers She is best known for *Little Henry and His Bearer* (1815), a story of India, and the popular *History of the Fairchild Family* (1818–47) See biography by F J H Darton (1910)

Sherwood, Robert Emmet, 1896–, American playwright, b New Rochelle, N Y , grad Harvard, 1918, son of Rosina Emmet Sherwood, painter and illustrator After service in the First World War, Sherwood wrote for *Vanity Fair* and *Life;* he served as editor of *Life* from 1924 until 1928. His first successful play, *The Road to Rome* (1927), was equaled in popularity by his *Reunion in Vienna* (1931) and *The Petrified Forest* (1935) He won the Pulitzer Prize in drama three times, in 1936 for *Idiot's Delight* (1936), in 1939 for *Abe Lincoln in Illinois* (1938), and in 1941 for *There Shall Be No Night* (1940) All of these plays have been published. Politically active, Sherwood was director of overseas operations in the Office of War Information, and a speech writer for President Franklin D. Roosevelt On the basis of the papers of Harry Hopkins he wrote a memoir, *Roosevelt and Hopkins* (1948), one of the most important and comprehensive histories of the Second World War, it won the 1949 Pulitzer Prize in biography Sherwood collaborated with Irving Berlin and Moss Hart in the musical comedy *Miss Liberty* (1949)

Sherwood Forest, formerly a large royal forest, Nottinghamshire, England, including the district of the DUKERIES Today remnants of the forest exist near Mansfield and Hucknall The forest is most celebrated as the haunt of Robin Hood and his famous band Alfred Noyes has written two poems on Sherwood Forest

Sheshach (shē'shăk), mysterious name apparently meaning Babylon Jer 25 26, 51 41

Sheshai (shē'shī), son of ANAK

Seshan (shē'shăn), descendant of Judah 1 Chron. 2 31,34,35

Sheshauen or **Sheshawen,** Morocco see XAUEN

Sheshbazzar (shĕsh'shbă'zar), probable predecessor of Zerubbabel as governor of Jerusalem, commissioned by Cyrus to carry back the sacred vessels. Ezra 1 8,11, 5 14,16 Some think him identical with ZERUBBABEL and SHENAZAR

Sheshonk I (shē'shŏngk), d c 924 B C , king of ancient Egypt (c 945–c 924 B C), founder of the Libyan dynasty Originally a commander of mercenaries at Heracleopolis—an office hereditary in the family—he assumed royal authority when the weak dynasty at Tanis died out He captured Gaza and presented it to Solomon Later he overran (c 926 B C) all Palestine He enlarged the Karnak temple and on its walls recorded the tribute paid him in Palestine and Nubia His temple court (314 ft wide and 269 ft deep) is the largest ever built, and it was fronted by a huge pylon Sheshonk is the Shishak (shī'shăk) of the Bible 1 Kings 9 16, 11 40, 14 25, 26 The name occurs in English also as Shoshenk

Sheth 1 See SETH **2** Otherwise unknown person mentioned in an obscure passage Num 24 17

Shethar (shē'thur), prince and counselor of King Ahasuerus Esther 1 14

Shethar-Boznai (-bōz'nāī), Persian who tried to obstruct the building of the second Temple Ezra 5 3,6, 6 6,13

Shetland (shĕt'lund) or **Zetland** (zĕt'lund), county (550 sq mi , 1931 pop 21 421, 1948 estimated pop 20,263), consisting of the **Shetland Islands** or **Shetlands,** an archipelago (70 mi long, NE of the Orkneys, Scotland The group consists of some 100 islands About a fourth of them are inhabited Mainland, Yell, Unst, Fetlar, Whalsey, and Bressay are the largest islands Lerwick, on Mainland, is the county seat, the only large town, and the chief port of the islands The surface of the islands is generally low and rocky, with few trees and little good farm land, in places cliffs rise to 1,000 ft The climate is humid and, despite the northern latitude, rather mild Oats and barley are the chief crops, but fishing (herring) and cattle and sheep raising are more important than farming The region is famous for its knitted woolen

goods The small, sturdy Shetland pony is bred here The islands were early occupied by the Norsemen, and traces of their speech and customs survive Shetland was not annexed to Scotland until 1472, when the islands were taken over as an unredeemed pledge of King Christian I of Norway and Denmark for the dowry of his daughter Margaret, who married James III of Scotland, See William Moffatt, *Shetland* (1934)

Shetland sheep dog, miniature working dog, very closely resembling the larger collie in appearance The "Sheltie," as the dog is often called, was developed in the Shetland Islands, near Scotland Although its exact ancestry is not known, it undoubtedly includes the working collies taken to the islands from Scotland The standards require that the shoulder height be between 12 and 15 in The heavy double coat is usually sable, black, or blue marked with various proportions of white and tan The hair of the mane and frill should be abundant, and the legs well feathered Although dainty in appearance the dog is sturdy and makes an intelligent easily trained pet and watchdog

Sheva (shē'vŭ). 1 Son of Caleb 1 Chron 2 49 **2** David's scribe see SHAVSHA

Shevchenko, Taras (tä'rus shĭvchĕn'kō), 1814–61, Ukrainian poet and nationalist Son of a bondman, he was apprenticed to a painter in St Petersburg, there the poet Zhukovsky met him and bought him free Becoming politically suspect because of the nationalist themes in his poetry, Shevchenko was exiled (1848–58) to Siberia, by the time he was pardoned, his health was broken His verses, written in simple folk language, were very popular in his country *Selected Poems* were rendered into English in 1945 He was the author also of the short-story collection *Music* (1882) and the autobiographical novel *The Artist* (1887)

Shiahs see SHIITES

Shibboleth (shĭ'bŏlĕth) [Heb ,=ear of corn or stream], test word which the Gileadites made the Ephraimites pronounce As Ephraimites could not say *sh* but only *s* as in "Sibboleth," this was regarded as a test of an Ephraimite, 42,000 Ephraimites were thus detected Judges 12

Shibmah (shĭb'mŭ), variant of SHEBAM

Shickshinny (shĭk'shĭ'nē), industrial borough (pop 2,354), NE Pa , on the Susquehanna and SW of Wilkes-Barre, inc 1861 It has a silk mill and anthracite collieries

Shickshock Mountains, range forming part of the Appalachian system, E Que , a continuation of the Notre Dame Mts extending c 100 mi east-west near the north coast of the Gaspé Peninsula Table-top Mt or Mt Jacques Cartier (4,160 ft) is the highest point in SE Canada

Shicron (shī'krŏn) [Heb ,=drunkenness], unlocated landmark, SW Palestine Joshua 15 11

Shidehara, Kijuro, Baron (kē"jōōrō', shēdā'hărä), 1872–, Japanese statesman A career diplomat, he was ambassador to the Netherlands (1914–15), vice foreign minister (1915), ambassador to the United States (1919 22), and foreign minister (1924–27, 1929–31) As foreign minister he pursued a conciliatory policy toward China, contrary to the desires of the army After the war he became head of the Progressive party and was prime minister from Oct , 1945, to May, 1946 Known as a liberal before the war, in post-war Japan he was regarded as a conservative He is connected by marriage with the Mitsubishi interests When in 1947 he opposed nationalization of the coal industry, he was ousted from the party

Shiel, Loch (lŏkh shēl'), lake, c 17 mi long and 1 mi. wide, Inverness-shire, Scotland It is drained by the Shiel river to Loch Moidart Prince Charles Edward raised his standard (1745) at Glenfinnan, at the head of Loch Shiel

shield, piece of defensive ARMOR, borne upon the left arm to ward off weapons in war prior to the introduction of gunpowder The ancient Greeks and early Romans carried circular shields, a later type being square and curved to the body The Normans of Sicily are said to have introduced, in the 11th cent., a shield comparable in shape to a boy's kite, and it was on shields of this shape that armorial designs were first represented With the disuse of shields in war, on the introduction of firearms, the form of shields carrying armorial bearings became varied For the shield in heraldry, see ESCUTCHEON

Shields, James, 1806–79, American soldier and statesman, b Altmore, Co. Tyrone, Ireland Coming to the United States in 1826, Shields settled in Kaskaskia, Ill , where he became a lawyer and entered politics A Democrat, he was a state representative (1836), state auditor (1839), and a justice of the state supreme court (1843–45) President Polk appointed him commissioner of the General Land Office in Washington in 1845, but Shields resigned the next year to become a brigadier general of volunteers in the Mexican War He was brevetted major general of volunteers for gallantry at Cerro Gordo, where he was wounded He also distinguished himself at Churubusco After the war he was governor of Oregon Territory, U S Senator from Illinois (1849–55), and U S Senator from Minnesota (1858–59). When the Civil War broke out he was engaged in mining in Mexico He offered his services to the Union and was made a brigadier general of volunteers. His division defeated T J (Stonewall) JACKSON at Kernstown in the Shenandoah Valley in March, 1862 After Stonewall had routed Banks, Shields and Frémont attempted to cut off his withdrawal but were defeated at Cross Keys and PORT REPUBLIC Shields resigned his commission in 1863 and ultimately settled in Carrollton, Mo He served in the legislature in 1874 and 1879 and was again in the U S Senate (Jan – March, 1879), filling a vacancy from Missouri

Shields, England see TYNEMOUTH (for North Shields) and SOUTH SHIELDS

Shiga (shē'gä), prefecture, S Honshu, Japan see OTSU, its capital

Shigatse (shēgät'sē), town (pop c 14,000) S central Tibet, on the Tsangpo (Brahmaputra) river After Lhasa, it is the most important trade center in Tibet Half a mile outside the town is the monastery of Tashilunpo (founded 1446), within its walls are c 5,000 monks headed by the Panchen Lama (see LAMAISM)

Shigaion (shĭgā'yun), plural **Shigionoth** (shĭgī'ō-nŏth), in Ps 7 1 and Hab 3 1, terms perhaps describing the character of the psalm

Shihon (shī'hŏn), town, N Palestine, probably near Nazareth Joshua 19 19

Shihor (shī'hôr), variant of SIHOR

Shihor-libnath (-lĭb'năth), unidentified boundary mark of Asher Joshua 19 26

Shiites (shē'īts) [Arabic,=sectarians], members of one of the great divisions of ISLAM, the other much more numerous group being the SUNNITES The Shiites (also called Shiahs) may be said to represent a Persian variation of the religion of Mohammed, and the Sunnites certainly are the norm of Moslems The essential belief of the Shiites is that Ali and his successors were divinely ordained caliphs and that any variation from this order is intolerable They regard Ali as almost half divine and consider HUSEIN a sacred martyr The nationalism of Persia under the early CALIPHATE and the detestation by the Persians of what they considered the usurpation of the divine position gave Shiism its peculiar attitude of looking for an IMAM or MAHDI, who was always in existence, but in hiding from the usurpers Hence arose the fanatical behavior which has characterized some of the Shiites, as evinced in the Ismaelites, the FATIMITE sect and the ASSASSIN fanatics The Shiites have many more festivals than the Sunnites and a much greater cult of saints They have also produced many more dervishes than other Moslems, and SUFISM arose among them Shiism is the religion of Persia, of Oman, and of Afghanistan The movements of BABISM and BAHAISM have Shiite bases

Shikoku (shĭkō'kōō), island (c 6,800 sq mi , 1940 pop 3,337,102, 1947 pop 4,074,708), Japan, S of Honshu and E of Kyushu, between the Inland Sea and the Philippine Sea It is the smallest (140 mi long and from 30 to 95 mi wide) of the four major islands Its mountainous, forested interior is sparsely settled Of the coastal cities, the largest are Matsuyama, Kochi, and Tokushima The chief exports of Shikoku are salt, copper, tobacco, lumber, and fruit

Shilhi (shĭl'hī), grandfather of King Jehoshaphat 1 Kings 22 42

Shilhim (shĭl'hĭm), variant of SHAARAIM

Shilka (shĕl'kŭ), river, 345 mi long, formed by the union of two rivers rising in Mongolia It flows ENE in Far Eastern Siberia, RSFSR, past the town of Shilka (1939 pop over 10,000) and joins the Argun river to form the Amur on the border between Russia and Manchuria It is navigable in its entire length

Shillaber, Benjamin Penhallow (shĭ'lubur), 1814–90, American humorist, b Portsmouth, N H As editor of a humorous weekly, the *Carpet-Bag* (1851–54), and creator of "Mrs Partington," the amiable and loquacious small-town gossip, he influenced Mark Twain and other writers His works include *Rhymes with Reason and without* (1853) and *Life and Sayings of Mrs Partington* (1854)

Shillelagh (shĭlā'lu), town, Co Wicklow, Ireland, SW of Aughrim The ancient Forest of Shillelagh gave its name to the Irishman's oak or blackthorn cudgel, the shillelagh or shillalah

Shillem (shĭl'ĕm), son of Naphtali Gen 46 24, Num. 26 49 Shallum 1 Chron 7 13.

Shillington, industrial borough (pop 4,932), SE Pa , near Reading, settled 1860 It produces building blocks, textiles, lumber, and limestone

Shillong (shĭlŏng'), town (pop 38,192), capital of Assam state, India At an altitude of 5,000 ft., it is a summer resort There are two colleges

Shiloah (shĭlō'u), variant of SILOAM.

Shiloh (shī'lō), in the Bible **1** Name appearing in a passage where the text is obscure Gen 49 10 **2** Place where the ark rested after the conquest of Judah and the home of the prophets Eli and Ahijah Here Samuel spent his boyhood. It was the sanctuary and general meeting place of the Levites until the Philistines captured the Ark of the Covenant Joshua 18 1, Judges 18 31, 21 19, 1 Sam 3, 4, 1 Kings 11 29, 12.15; 14 2, Jer 7 12 Shiloh has been identified as a ruin NNE of Jerusalem.

Shiloh, battle of, April 6–7, 1862, also called the battle of Pittsburg Landing, one of the great battles of the Civil War The battle took its name from Shiloh Church, a meetinghouse c 3 mi SSW of Pittsburg Landing, which was a community in Hardin co , Tenn , 9 mi S of Savannah on the west bank of the Tennessee river After the fall of Fort DONELSON, Gen U S Grant advanced up the Tennessee river and, on March 17, 1862, established headquarters for his Army of the Tennessee (45,000 men) at Savannah Five divisions were placed in the vicinity of Pittsburg Landing and one at Crump's Landing, 5 mi north Meanwhile, Gen D C Buell, commanding the Army of the Ohio (35,000 men), was marching W from Nashville to join Grant and crush the Confederate army at Corinth, Miss , strategic point on the Memphis-Charleston RR Gen A S Johnston, about to make a stand after leading the retreat from original Confederate positions in the West, commanded the army at Corinth (40,000 men), with Gen P G T Beauregard second in command Johnston's plan was to defeat Grant before Buell could arrive. He moved to attack on April 3, but because of delay in the 20-mile advance to the Union front, it was not until early on April 6 that his troops fell upon the enemy near Shiloh Church Grant's position was unfortified, in spite of orders to the contrary from Gen H W Halleck, Union commander in the West Having offensive plans of his own, Grant expected no attack, and consequently his irregularly placed divisions were thrown back in confusion at the Confederate assault In the day's fighting the Confederates swept the field, but Johnston was killed When Beauregard, who assumed command, ceased battle at nightfall, the Union forces had been pushed back over a mile from their first positions but on the hard-pressed left still held Pittsburg Landing, which the Confederates wanted to secure in order to cut off retreat With 20,000 reinforcements from the division at Crump's Landing and the advance divisions of Buell's army, the Federals took the offensive on April 7 Beauregard, outnumbered and without fresh troops, resisted for about eight hours and then proceeded to withdraw on Corinth, the Union command not making any effective pursuit Corinth was abandoned to the Union forces one month later Ultimately, Shiloh may be considered a Union victory because it led to later successful campaigns in the West It was one of the bloodiest contests of the war, losses on each side reaching over 10,000, and, except possibly Gettysburg it has been the subject of more controversy than any other Civil War battle See J C Ropes, *The Story of the Civil War* (1895–1913), J F Rhodes, *History of the Civil War* (1917).

Shiloh National Military Park see SAVANNAH, Tenn

Shiloni (shĭlō'nī) or **Shilonites** (shĭlō'nīts, shī'lō-nīts) see SHELAH **1** The term also refers to Shiloh, the place

Shilshah (shĭl'shu), son of Zophah 1 Chron 7 37

Shimane (shĭm'nä), prefecture, SW Honshu, Japan see MATSUE, the capital

Shimea (shĭ'mēu) [Heb ,=renown] **1, 2** Levites 1 Chron 6 30, 39 **3** See SHAMMUA **1 4** See SHAMMAH 1

Shimeah (shĭ'mēu) [Heb ,=renown] **1** See SHAMMAH **1 2** See SHIMEAM

Shimeam (shĭ'mĕum) [Heb ,=renown], Gibeonite 1 Chron 9 38 Shimeah 1 Chron 8 32

Shimeath (shĭ'mēăth) [Heb ,=known], mother of Jozachar the murderer 2 Kings 12 21

Shimei (shĭ'mēī) [Heb ,=famous] **1** Benjamite who cursed David 2 Sam 16 5–14, 1 Kings 2 36–46 **2** Royal official 1 Kings 1 8, 4 18 **3** Ancestor of Mordecai Esther 2 5 **4** Gershonite family 1 Chron 2 4 9,10 Shimi Ex 6 17 **5** Brother of Zerubbabel 1 Chron 3 19 **6** Simeonite 1 Chron 4 26,27 **7** Reubenite 1 Chron 5 4 **8, 9** Levites 1 Chron 6 29,42 **10** Course of priests 1 Chron 25 17 **11** Keeper of vineyards 1 Chron 27 27 **12, 13** Levites contemporary with Hezekiah 2 Chron 29 14, 31 12 **14, 15, 16** Husbands of foreign wives EZRA 10 23,33,38

Shimeon (shĭ'mēŏn) [Heb ,=famous], Israelite who had a foreign wife Ezra 10 31

Shimhi (shĭm'hī) [Heb ,=famous], Benjamite. 1 Chron 8 21

Shimi (shĭ'mī), variant of SHIMEI **4**

Shimizu (shĭmē'zōō), city (1947 pop 80,515), Shizuoka prefecture, central Honshu, Japan, a port on Suruga Bay It exports tea and oranges.

Shimma see SHAMMAH 1

Shimoda (shĭmō'dä), town, Shizuoka prefecture, central Honshu, Japan, at the south extremity of Izu peninsula, on the Sagami Sea Under the U S - Japanese treaty of 1854, its port was to be opened to American trade, but its poor harbor rendered this impracticable The first U S. consulate, under Townsend Harris, was opened at Shimoda in 1856

Shimon (shĭ'mŏn), name in a genealogy of Judah 1 Chron. 4.20

Shimonoseki (shē'mōnōsākē), city (1940 pop 190,022, 1947 pop 176,666), Yamaguchi prefecture, extreme SW Honshu, Japan An important port on Shimonoseki Strait, it is opposite Moji, Kyushu, with which it is connected by a tunnel.

Shimonoseki is a railroad and industrial center, with engineering works, shipyards, and metal and chemical plants It is also an important fishing port. There are well-known shrines In 1864 a fleet of U.S., British, French, and Dutch ships, in retaliation for hostile acts of the Chosu clan, bombarded the port The Treaty of Shimonoseki was signed here (1895) The city was bombed (1945) in the Second World War

Shimonoseki, Treaty of, 1895, ending the First CHINO-JAPANESE WAR. The negotiators and signers were Yuko Ito for Japan and Li Hung-chang for China Harsh terms, including a large indemnity, were imposed upon a badly defeated China The treaty provided for ending Chinese suzerainty over Korea, giving Korea at least nominal independence, and for the cession to Japan of Formosa, the Pescadores islands, and the Liaotung peninsula Later in 1895 Japan gave up Liaotung in exchange for an increase in China's indemnity payment

Shimrath (shĭm'răth) [Heb ,=watch], descendant of Benjamin 1 Chron 8 21

Shimri (shĭm'rī) [Heb ,=vigilant] **1** Descendant of Simeon 1 Chron 4 37 **2** Father of one of David's guard 1 Chron 11 45 **3** One who helped clean the Temple in Hezekiah's reign. 2 Chron 29 13

Shimrith (shĭm'rĭth), same as SHOMER **2.**

Shimrom (shĭm'rŏm) or **Shimron** (-rŏn) [Heb ,=watching place] **1** Son of Issachar Gen 46 13, Num 26 24, 1 Chron 7 1 **2** Unlocated town of Zebulun Joshua 11 1, 19 15 This may be the same as **Shimron-meron** (-mē'rŏn), a place whose king Joshua defeated Joshua 12 20

Shimshai (shĭm'shī, shĭm'shāī) [Heb ,=like the sun], author of a letter to Artaxerxes which stopped the work on the Temple Ezra 4 8,9,17,23

Shinab (shī'năb), king of Admah Gen 14 2

Shinano (shĭnä'nō), river, 229 mi long, flowing generally NNE through central and N Honshu, Japan, to the Sea of Japan at Niigata It is the longest river of the country

Shinar (shī'nur), in the Bible, the whole or a part of Babylonia Gen 10 10, 11 2, 14 1, Isa 11 11, Dan 1 2, Zech 5 11

Shiner, town (pop 1,520), S Texas, E of San Antonio, settled 1887 principally by Czechs, inc 1890 It processes farm products and has a brewery

Shingishu, Korea see SINUIJU

Shingle House, borough (pop 1,106), N Pa , near the N Y boundary NE of Smethport, settled 1808, inc 1902

shingles, virus infection of a nerve which usually affects one side of the body The condition, also known as *herpes zoster*, begins with pain similar to that of neuralgia, followed by reddening of the skin and the appearance of vesicles or blisters Scabs and sometimes scars form The lower thorax and the upper abdomen are the most common sites Vitamin B has been used in treatment In severe cases X-ray therapy has been found to be of benefit

Shinn, Everett, 1876 , American muralist and magazine illustrator, b Woodstown, N J , studied at the Pennsylvania Academy of the Fine Arts He painted murals for the Trenton city hall and for the Stuyvesant and Belasco theaters, New York At the Metropolitan Museum of Art is his *London Music Hall*

Shinnston, trade city (pop 2,817), N W Va , on the West Fork of the Monongahela and NNE of Clarksburg, in a mining region, settled 1818

Shinto (shĭn'tō), ancient native religion of Japan, still practiced in a form modified by the influence of Buddhism and Confucianism In its present form it is not so much a religion as a set of traditional rituals and customs involving pilgrimages to famous shrines and celebrating popular festivals The term *Shinto* is the equivalent in Chinese for the Japanese *Kami-no-michi*, "the way of the gods" or "the way of those above " The word *kami*, meaning "above" or "superior," is the name used to designate a great host of supernatural beings or deities In general the Kami are beneficent, many of them are felt to be responsible for the fertility of the crops It is significant that phallic worship was prevalent in ancient times Like other primitive religions, Shinto cannot be traced to its beginnings, because until the 5th cent the myths and rituals were transmitted orally for lack of a written medium There are, however, three compilations in which is gathered together much of the ancient belief and custom The mythical matter is contained chiefly in the *Kojiki* [records of ancient matters], prepared under imperial order and completed in A D 712, and the *Nihongi* [chronicles of Japan], completed in A D 720 Both were written in Chinese script The *Engishiki*, compiled in the 10th cent , is the first written record of ritual and prayers, the texts of prayers of earlier times are included From these first Japanese accounts of the religion of days then already far past it can be seen that a worship of the forces and forms of nature had grown into a certain stage of polytheism in which spiritual conceptions had but the slightest place Nor was there any clear realization of a personal character in the beings held to be divine. This was one reason why there were practically no idols. There was no one deity supreme over all, but some gods were raised to higher ranks, and the one who held the most exalted position was the sun-goddess, known as the Ruler of Heaven According to the mythology, Kami first had their being on the Heavenly Plain, after heaven and earth had taken form out of original chaos There were three Kami at first Others came after them At length two, Izanagi and Izanami, a pair of creators, standing on the rainbow, "the bridge of heaven," and piercing with a jewel spear the surface of the mass of matter beneath, made an island to which they descended They then produced the other islands of Japan and brought forth many gods and goddesses, among them Amaterasu-o-mi-kami, the sun-goddess, and her brother, Susa-no-wo, the storm-god, who in some ways seems to represent the principle of evil His rough behavior made Amaterasu retire into a heavenly cave, withdrawing her radiance from the earth Finally, enticed by the Kami with music, dancing, offerings, and proffer of a mirror, she emerged and restored light to the world From her the emperors of Japan are said to be descended in unbroken line from the first Jimmu Tenno, who ascended his throne in 660 B C The mirror bestowed upon him by his divine ancestress, it is claimed, is in her shrine (one of the great shrines of Ise at Uji-Yamada), where many pilgrims go to worship Thus the emperor was looked upon as divine, even while living, by divine right he was the chief priest, and as such he presided over ceremonies of foremost importance Aside from this, his religious responsibilities were delegated to others A Shinto shrine, unaffected by other religious influences, is a simple unpainted wooden building, having some object within it which is believed to be the dwelling place of the Kami Before the shrine stands the detached portal called the torii In many shrines Buddhistic influences are seen and Buddhist priests serve The worship under their direction is more elaborate than that of pure Shinto, which consists almost entirely in reciting prayers, dances by the priests and the offering of food Since Buddhism entered Japan in the 6th cent A D , the two religions have been mingled until the separate elements can hardly be dissociated, although a vigorous effort was made, beginning in the 17th cent , to revive the old ways and ideas, and after the restoration of imperial power in 1868, the ancient department of Shinto rites was reestablished Reverence of ancestors and worship of the spirits of dead heroes as Kami, originally introduced from China with Buddhism, is still an essential part of Shinto In present-day Shinto there is no dogmatic system Ceremonial purity is strongly insisted upon, and bodily cleanliness is an absolute necessity In ancient times wounds, sickness, and even death were considered states of pollution There is no formulated code of morals, only the socially immoral require to have ethics prescribed In 1882 all Shinto organizations were divided into two groups, state shrines (supervised and partially supported by the government) and sectarian churches The official cult became a powerful instrument in the hands of the militarists, who used it to glorify their policy of aggression Shinto flourished even abroad wherever large Japanese communities existed, as in the United States and South America The defeat of Japan in the Second World War brought about a collapse of state Shinto In 1946 in a New Year's rescript, Hirohito destroyed its chief foundation by disavowing his divinity, in the same year Gen Douglas MacArthur forbade the use of public funds to support Shinto At the present time sectarian Shinto thrives in much the same form as before, although some of the newer sects promote such strange innovations as faith healing See W G Aston, *Shinto* (1905), D C Holtom, *Modern Japan and Shinto Nationalism* (1943), R O Ballou, *Shinto: the Unconquered Enemy* (1945)

ship, large craft in which persons and goods may be conveyed on water The term BOAT is sometimes employed when ship is meant, and there are some vessels which may be called by either name Seagoing vessels large enough to be called ships were used in ancient times, as by the Phoenicians, Cretans, Egyptians, Greeks, Romans, and Chinese The voyages made by these ancient ships were sometimes years in duration Homer's *Odyssey* is an account of such a voyage The legendary voyage of Jason and his companions in the ship *Argo* is further evidence that seaworthy ships were known at the dawn of history Ancient ships were propelled by oars or by sails or by both They were of different types, for different functions Heavy and slow ships transported grain The trireme used by the Greeks and the Romans was the most famous warship of ancient times Its swiftness was given by oars In the beginnings of their history, the Scandinavians were seafaring men Their notably seaworthy viking ships, propelled both by oars and by sails, enabled them to make surprise attacks on settlements, as in Normandy and England Even Alfred the Great could not defend England from the vikings until he restored to Englishmen their forgotten skills in building and handling ships He is rightly considered the founder of the English navy. Such a ship as the vikings used carried Leif Ericsson to America. The structure of viking ships is well known from such evidences as the Gokstad ship, unearthed in 1880, it is 80 ft long, 16 ft 6 in wide, and 6 ft 10 in deep There was one 40-foot mast, and on each side of the ship 16 oars projected through holes in the bulwarks The introduction of the mariner's compass and the transoceanic voyages of the Portuguese who rounded Africa and of Columbus and other explorers of the New World gave new impetus to the building and navigation of ships Many sturdy and refined types of wooden sailing vessels were developed Men-of-war included ships of the line, corresponding to the modern battleships, frigates, corresponding to the modern cruisers, and the smaller ships known as corvettes By types of design, differing especially in such details as number and position of masts, with sails either square-rigged or fore-and-aft ships were differentiated into such types as the bark, the barkentine, the brig, the brigantine, the clipper, and the schooner Building wooden ships became an important industry, especially in England, Scotland, and America The success of Fulton's *Clermont* on the Hudson river (1807) prepared the way for superseding sailing ships by steamships, and later in the 19th cent. steel began to supersede wood as material for shipbuilding Steel ships are often much larger than wooden ships ever were, and steamships attain much greater speed than sailing vessels Steam engines were followed by steam turbines (see TURBINE), which actuated the propeller directly or through gear mechanisms Both methods of power production underwent many improvements across the years before the DIESEL ENGINE came into maritime use The first marine Diesel engine was of 20 horsepower and was used in 1902–3 on a French canal boat Four decades later a 12,000 horsepower oil engine was installed as the power plant of a vessel Freight ships are equipped with powerful machines for handling cargo Passenger ships are provided with the luxuries of the finest hotels Warships have guns of great power and long range and are protected by armor plate See E Kehl Chatterton, *Sailing Ships and Their Story* (1923) and *Ships and Ways* (1924), Hawthorne Daniel, *Ships of the Sailing Seas* (1925), S R H. Rogers, *Book of the Sailing Ship* (1931), H I Chapelle *American Sailing Craft* (1936), W H Clark, *Ships and Sailors* (1938), C E Gibson, *The Story of Ships* (1949)

Shiphi (shĭf'fī) [Heb ,=abundant], father of a Simeonite prince 1 Chron 4 37

Shiphmite (shĭf'mīt), geographical epithet of David's officer, Zabdi 1 Chron 27 27 Some connect it with the town of SHEPHAM

Shiphrah (shĭf'rŭ), midwife ordered to kill Jewish boys Ex 1 15

Shiphtan (shĭf'tăn) [Heb ,=judicious], Ephraimite Num 34 24

Shipka (shĭp'kä), pass through the Balkans, central Bulgaria It is 4,166 ft high At Gabrovo, north of the pass, the Russians defeated the Turks in 1878

Shipley, urban district (1931 pop 30,242, 1947 estimated pop 32,220), West Riding of Yorkshire, England, on the Aire and near Bradford Its industries include woolen milling, leather tanning and the manufacture of machine tools, metal products, paint, and pharmaceuticals

Shippen, Margaret, 1760–1801, wife of Benedict ARNOLD, b Philadelphia The daughter of Edward Shippen, a prominent Tory, Peggy Shippen became Arnold's second wife in 1779 Just how much influence she had on him is hotly debated After his treason at West Point, she joined him in New York and later went to England

Shippen, William, Jr., 1736–1808, American surgeon, b Philadelphia, M D Edinburgh, 1761 A pioneer lecturer on anatomy and midwifery, he was influential in stimulating the organization (1765) at the College of Philadelphia (later the Univ of Pennsylvania) of the first medical school in the country, where he served as professor of anatomy and surgery The actual plans for the medical school were drawn up by John Morgan Shippen claimed that the establishment of the school had been his idea and that Morgan had taken it over The controversy resulted in a bitter rivalry between the two men Shippen succeeded Morgan as head of the army medical service, both men were court-martialed—on charges arising in part from their personal feud—and acquitted Shippen afterward resumed his teaching at the medical school

Shippensburg, borough (pop 5,244), Cumberland and Franklin counties, S Pa , SW of Carlisle, settled 1738, inc 1819 It has a state teachers college

shipping, transportation of passengers and goods, particularly on waterways From prehistoric times shipping has been a major influence on the fortunes of the human race Water routes, unlike roads, did not need making Their difficulties and dangers were less than those offered by mountains, marshes, and enemy tribes Therefore the first civilizations developed on navigable rivers or on the coasts of warm seas Ancient peoples famous for their shipping enterprises include the Phoenicians, the Cretans (particularly in the Minoan period), the Egyptians, the Greeks, and the Romans.

The shipping of these highly civilized peoples was chiefly about the Mediterranean, but their voyages extended to India, along the coasts of Africa, and to Britain, where tin was secured The goods shipped consisted largely of luxuries, as spices, perfumes, and such fine pottery as the famous Athenian ware, but shipments of grain became important as cities grew in size Shipping never ceased to be of importance, but the great modern merchant marine (a country's commercial ships) appeared in the commercial revolution Leaders in shipping included the Spanish, the Portuguese, and the Venetians The activities of mariners of SW Europe included discovery and conquest in the New World In the 13th and 14th cent the HANSEATIC LEAGUE built up a great trading and fishing fleet, while the Italian city-republics developed marine insurance on modern lines England's shipping industry was associated with colonization, with the development of manufacturing, and especially with leadership in the Industrial Revolution The greatest competitors of the British were the French and the Dutch Both were vanquished in war and strangled in peace through the British NAVIGATION ACTS The introduction of slave labor into the American colonies made the slave trade a most profitable branch of shipping for two centuries America's vast resources in timber gave advantages in building wooden ships, and such swift sailing vessels of American design as the schooners and the clippers for a time were dominant in shipping Steamships of steel returned to England the chief place in shipbuilding and shipping From c 1900 until the First World War, Germany held second place in the world in both navy and merchant marine, and her competition with Great Britain's domination of the sea was an important cause of the war In the period between the First and Second World Wars the principal maritime nations were Great Britain and its dominions, the United States, Japan, Norway, Germany, Italy, the Netherlands, and France, but the United States merchant marine steadily declined In order to stimulate shipbuilding the Merchant Marine Act of 1936 created the U S MARITIME COMMISSION At the beginning of the Second World War U S trade was handicapped by the NEUTRALITY ACT American vessels were diverted to trade outside the war zones and many were transferred to other flags, mainly the Panamanian After the entry of the United States into the war (Dec , 1941), a huge shipbuilding program rapidly got under way, and standardized vessels were turned out by assembly-line methods In spite of losses in the war, at its end U S shipping had risen to first rank in the world Other countries ranked in the following order Great Britain, Norway, the Netherlands, France, and Panama See SHIP and SEA, LAW OF THE See M D Stevers and Jonas Pendlebury, *Sea Lanes the Story of Man's Conquest of the Oceans* (1935)

Shiprock, unincorporated village (pop c 2,100), extreme NW N Mex , in the Navajo Indian Reservation, for which it is a trade center It is named for a rock formation towering 1,400 ft above the surrounding desert

Shipstead, Henrik (shĭp'stĕd), 1881–, U S Senator (1923–46), b Kandyohi co , Minn , grad Northwestern Univ dental school, 1903 He practiced dentistry in Minnesota before he entered politics He was elected to the U S Senate on the Farmer-Labor party ticket in 1922 and was three times reelected He opposed the policies of the Coolidge and Hoover administrations, but in 1940 joined the Republican party See biography by Martin Ross and K F Chalkley (1940)

Shipton, Mother, traditional English prophetess Her supposed prophecies concerning the reign of King Henry VIII and later events were first published in 1641, and she rapidly entered the folklore of English literature Her fame was increased by the great fire of London (1666), which she was considered to have predicted A life by Richard Head, first published in 1667, more than a hundred years after her death, purported to identify her as Ursula Shipton (1488–1561) of Knaresborough, Yorkshire A new version of her life in 1862, with additional prophecies, was discovered to be a forgery

shipworm, wormlike marine bivalve mollusk of the genus *Teredo* It has very long siphons and small shells bearing spines with which it makes cavities in wood, causing great damage when it attacks ships or piers It lines the holes with a shell-like secretion

shipwreck, complete or partial destruction of a vessel as a result of collision, fire, grounding storm, explosion, or other mishap In recent times the number of ships wrecked at sea has steadily declined, except for ship destruction arising from war Factors contributing to the decrease are the improvements in ship construction, modern methods of navigation, efficient ship-to-ship and ship-to-shore radio communication, meteorological reports and storm warnings, and radar equipment The greater size and larger accommodations of present-day vessels, however, involve greater potential loss of life and cargo in each ship disaster In the following table are some of the major shipwrecks since 1850 (naval losses as a result of hostilities not included)

Year	Name	Type of Ship	Cause of Disaster	Lives Lost
1850	*Griffith*	steamship	fire	300
1852	*Atlantic*	steamship	collision	350
1854	*City of Glasgow*	steamship	never heard from	450
1854	*Prince*	steamship	sank in storm	500

Shiras, George (shī'rŭs), 1832–1924, Associate Justice of the U S Supreme Court (1892–1903), b Pittsburgh, grad Yale, 1853 Admitted (1855) to the bar, he practiced in Iowa and Pennsylvania and attained eminence as lawyer His appointment as Associate Justice of the Supreme Court by President Benjamin Harrison was confirmed (1892) by the U S Senate after objections had been raised by Senators on the grounds that Shiras lacked judicial experience

Shiraz (shĕ-răz'), city (pop 129,023), SW Iran On a fertile highland plain, Shiraz is the metropolis of the Fars region (Seventh Prov) The city is noted for its wines its juicy lemons, and its big gardens The people have a reputation for gaiety Textiles, rugs, brocades, and metalwork are produced Shiraz became an important city in the 7th cent and was often the capital of the country, notably under Karim Khan in the 18th cent Karim Khan's vengeful successor, Aga Mohammed Khan razed part of it The city has also suffered much from earthquakes, but has been rebuilt Shiraz has the garden-enclosed tombs of Hafiz and Sadi The founder of Babism was a native of Shiraz

Shiré (shēr'ā), river, c 370 mi long, flowing out of Lake Nyasa in Nyasaland It flows S through Nyasaland and Mozambique to the Zambesi river

Shirlaw, Walter (shûr'lô), 1838–1909, American painter, b Scotland His parents settled in Chicago when he was a child At first a banknote engraver, he studied (1870–77) art in Munich and became widely known in the United States as illustrator, painter, muralist, and designer for stained glass He took an active part in the founding of the Art Institute of Chicago and the Society of American Artists (1878), of which he was first president He became a member of the National Academy of Design in 1888 Among his paintings are *Toning the Bell, Sheep Shearing in the Bavarian Mountains, Susanna and the Elders,* and *Street Scene in Brittany*

Shirley or **Sherley, Sir Anthony,** 1565-1635?, English adventurer He graduated from Oxford in 1581 and served in the army under the earl of Leicester and later under the earl of Essex, who became his patron He was knighted by Henry IV of France (1593) without the permission of Queen Elizabeth, who had him imprisoned Released after relinquishing the honor, he was still generally known as Sir Anthony Shirley organized a buccaneering expedition in 1595, and his travels to Jamaica and North America were related (1598) in Richard Hakluyt's collection of narratives of voyages In 1598 he left for Italy to aid in the capture of Ferrara but, on the instructions of Essex, he soon set out (1599) for Persia Falsely representing himself as an English envoy, Shirley gained some trade concessions and returned to Europe as the shah's envoy (1600) Barred from England, even after the accession of James I, he visited various European courts attempting to arrange alliances with Persia against the Turks Although unsuccessful in this, Shirley was favorably received at many courts Emperor Rudolf II sent him (1605) on a mission to Morocco and made him a count of the Holy Roman Empire He was made an admiral of the Spanish navy After the failure of an expedition against the Turks in the Mediterranean (1609), Shirley lost favor although Spain gave him a pension After 1611 he lived in Madrid in abject poverty His account of his Persian travels was published in London in 1613 See *The Three Brothers* (1825), a record of his travels and of those of his brothers Thomas and Robert, Samuel Chew, *The Crescent and the Rose* (1937), Boies Penrose, *The Shirleian Odyssey* (1938)

Shirley, James, 1596–1666, English dramatist He was ordained in the Church of England, but was converted to Catholicism and became a schoolmaster He wrote about 40 plays, both comedies and tragedies Among his comedies are *Hyde Park* (1632), *The Young Admiral* (1633), and *The Lady of Pleasure* (1635), his tragedies include *The Traitor* (1631), *The Cardinal* (1641), and *The Contention of Ajax and Ulysses* (1659), containing the famous dirge beginning, "The glories of our blood and state" See biography by A H Nason (1915)

Shirley, William, 1694–1771, colonial governor in British North America, b England After graduation from Cambridge Univ , he became a lawyer and in 1731 emigrated to Massachusetts In 1741 he became governor of Massachusetts He opposed the issuance of more paper money, and in the war with France he promoted the successful expedition (1745) against Louisburg British specie payments for the expenses of that expedition helped redeem the paper money and stabilize the colony's currency Shirley led (1755) an unsuccessful expedition against Canada in the French and Indian War and was briefly commander of British forces in America after the death of Gen Edward Braddock He was cleared of charges concerning the Canadian expedition and served as governor of the Bahamas until he retired (1770) to Roxbury, Mass. His correspondence was edited by D H Lincoln (1912). See biography by G A Wood (1920)

Shirley, town (pop 2,608), N Mass , E of Fitchburg, settled c 1720, set off from Groton 1753 Twine is produced A Shaker community was established here in 1793

Shirpurla see LAGASH

Shisha (shī'shu), David's scribe see SHAVSHA.

Shishak see SHESHONK I

Shitrai (shĭt'rāĭ, shĭtrā'ī), chief herdsman of David 1 Chron 27 29

Shittim [Heb , =acacias], last place in which the Israelites encamped before reaching the Holy Land It was E of Jericho Num 25, Joshua 2, 3 Abel-shittim Num 33 49 The valley of Shittim of Joel 3 18 is not the same place, and the Shittim of Micah 6 5 is not clear

shittim wood, wood of the shittah tree (Isa 41 19), probably an ACACIA, from which the Ark of the Covenant and furniture of the Tabernacle were made (Ex 25 10) The Revised Version of the Bible calls it acacia wood The various species with which it is usually identified have hard durable wood, light in color at first but becoming nearly as dark as ebony It seems to have been held in high esteem (Ex 25 5) The name shittim wood is sometimes given two plants not acacias, the BUCKTHORN and the false buckthorn

Shiva see HINDUISM

Shively (shĭv'lĭ) town (pop 1,273), N Ky , near Louisville, settled c 1885, inc 1938 Whisky is distilled here

Shiza (shī'zŭ), father of one of David's valiant men 1 Chron 11 42

Shizuoka (shĭzōō'ōka), city (1940 pop 212,198, 1947 pop 205,737), capital of Shizuoka prefecture, central Honshu, Japan, a port on Suruga Bay A tea and orange center, it is also known for its lacquer ware It is the site of the castle of the last of the Tokugawa shoguns A statue of Ieyasu, founder of that shogunate, is in Hodai-in, a Buddhist temple in the city Shizuoka prefecture is the chief tea-producing area of Japan The prefecture contains celebrated Fuji-yama, the cities of Hamamatsu and Shimizu, and the town of Shimoda, seat of the first U S consulate in Japan

Shkhara (shukhûr'ŭ), peak, 17,037 ft high, in the Greater Caucasus, SW of Nalchik

Shklovski, Victor Borisovich (vēk'tur bŭrē'suvĭch shklôf'skē), 1893–, Russian critic and novelist He was an exponent of the formalist school, which held that in literature only the form and structure of a work are important, not its content or the social conditions that produced it At the outbreak of the 1917 revolution, Shklovski served the provisional government at the front as a commissar After a period of opposition to the Bolshevist government he spent two years abroad, chiefly in Berlin, where he wrote *A Sentimental Journey* (1923) He returned to Petrograd and supported the Bolshevist government Among his critical works are *The Technique of the Writer's Craft* (1928) and *Material and Style in Leo Tolstoy's Novel "War and Peace"* (1928) A historical novel, *Minin and Pozharski,* appeared in 1940

Shkodër or **Shkodra,** Albania see SCUTARI

Shoa (shō'ŭ), people mentioned in Ezek 23 23 in connection with Mesopotamian nations

Shoa see ETHIOPIA

Shoals, town (pop 1,031), co seat of Martin co , SW Ind , on the East Fork of the White River and E of Washington, settled 1818, inc c 1845 In a farming area, its products include lumber and buttons Martin County State Forest is near by

Shobab (shō'băb) [Heb , =rebellious] **1** Son of David and Bathsheba 2 Sam 5 14 **2** Descendant of Caleb. 1 Chron 2 18

Shobach (shō′băk), Syrian general defeated by David 2 Sam 10 16,18 Shophach 1 Chron 19 16,18

Shobai (shō′bāī, shōbā′ī), family of temple doorkeepers Ezra 2 42, Neh 7 45

Shobal (shō′băl) [Heb ,=flowing], three descendants of Judah Gen 36 20,23,29, 1 Chron 1 38,40, 2 50, 4 1,2 These may be one person

Shobek (shō′bĕk), signer of the covenant Neh 10 24

Shobi (shō′bī) [Heb ,=captivating], Ammonite who was kind to David 2 Sam 17 27 See HANUN 1

Shocho or **Shochoh** (both shō′kō) see SOCOH

shock, sudden depression of the vital centers of the nervous system The condition may be caused by injury or emotional stress following an accident, by hemorrhage, by surgery, or by the use of certain drugs Symptoms include a grayish pallor of the skin, sweating, rapid thready pulse, rapid and shallow breathing, subnormal temperature, and low blood pressure Loss of consciousness and prostration may occur Necessary treatment should be given to the injury, and the individual should be wrapped in warm blankets and maintained in a supine or horizontal position, usually with the head lower than the legs Stimulants, e g , hot coffee or spirits of ammonia, can be given but this should be done only if the patient is conscious See also SHELL SHOCK

shock absorber, device on automobiles, airplanes, and machinery, used to supplement the action of the springs and to reduce the effects of sudden movements In the friction-type absorber the rebound of the springs is counteracted to a degree by the rubbing together of friction plates The pneumatic shock absorber is a two-sectioned air chamber, one telescoping into the other upon impact Differing only to the extent that oil is the agent upon which compression acts, the hydraulic shock absorber also has an air valve to enable air to be sent in when the oil pressure in the chamber falls The spring type of shock absorber is used in industrial power-cham drives so that starting impulses are taken up by the springs to avoid stress on the cham

shock therapy, in psychiatry, treatment employing chemical agents or electricity to effect improvement or cure in certain mental diseases The therapeutic possibilities of these treatments were discovered in the 1930s by Manfred Sakel (insulin), Medunas (metrazol), and Cerletti and Bini (electric) Injection of insulin causes coma while metrazol and electric shock result in convulsions similar to those of epileptics There is no general agreement as to the over-all value of shock therapy although electric shock has had unquestionable success with involutional melancholia and other depressive disorders Metrazol and insulin have accounted for a very limited number of remissions in cases of schizophrenia Shock therapy is often used to make the psychotic patient rational enough for psychotherapy

Shoco (shō′kō), variant of SOCOH

shoddy see WOOL

shoe, foot covering, usually of leather, consisting of a sole and an upper The SANDAL, probably the earliest form of shoe, was worn in Egypt, Greece, and Rome, the boot was used for hunting, for traveling, and, especially in Rome, for outdoor wear The thick-soled cothurnus was first worn on the Greek stage to give added height to actors representing gods and heroes Wooden clogs and shoes were known from ancient times and became the standard footgear of peasants about the 11th cent , especially in N Europe From the 15th cent either the flat clog or the patten raised on blocks was commonly fastened under the shoe to protect it from mud or water The patten was later attached to the upper and was probably the forerunner of the heeled shoe Europe went to picturesque extremes in footwear In fashion at different periods were shoes with points so long they required support by chains fastened at the knee, shoes with toes of exaggerated breadth, chopines with soles a foot high, "French" heels 3 in high, boots faced with fur or velvet, cavalier boots with wide, floppy tops In the 16th and 17th cent elaborate ornaments—rosettes, buckles, lace, and jewels—were worn by both sexes In colonial America the Indian moccasin, similar to the one-piece shoe worn by early tribes in N Europe, sometimes served as shoes, since real shoes were scarce The earliest known shoemaker in the colonies was Thomas Beard, who arrived in Salem, Mass , in 1629 Early shoemakers worked at home, in small shops, or as itinerant workers who went to homes to make up the annual supply Hand processes were used until the middle of the 19th cent Although some shoe machinery had appeared by 1845, the industry was revolutionized by a machine to stitch together soles and uppers, invented c 1858 by a shoemaker, Lyman Blake, and bought and developed by Gordon McKay Shoemaking has developed into a highly organized industry using over 180 different kinds of machines Most of the essential machines are manufactured in the United States by a consolidated concern and are leased on a royalty basis Modern footwear is made in a wide range of sizes, materials include fabrics, plastics, and rubber, as well as a variety of leathers Special models are built for sports, for different occupations, and for orthopedic purposes See R Turner Wilcox, *The Mode in Footwear* (1948)

Shoemakersville, borough (pop 1,081), SE Pa , N of Reading It has an onyx cave and natural onyx bridge Brick is made here.

shogun (shō′gōōn), title of the military dictators who from the 12th cent to the 19th cent were the actual rulers of Japan The title itself, *Sei-i-tai Shogun* [barbarian-subduing generalissimo], dates back to 794 and originally meant commander of the imperial armies The shogunate as a system of military government was established by YORITOMO after 1185 and was known as the *Bakufu* [literally, army headquarters] The imperial court at Kyoto continued to exist, but effective power and actual administration were in the hands of the hereditary shoguns The shogunate was held in turn by the Minamoto family and their successors, with their capital at Kamakura (1192–1333), the Ashikaga with their capital at Kyoto (1338–1597), and the TOKUGAWA, with their capital at Yedo (Tokyo) after 1603 The overthrow of the shogun in 1867 brought the MEIJI restoration and the beginning of modern Japan

Shoham (shō′hăm) [Heb ,=onyx], descendant of Merari 1 Chron 24 27

Sholapur (shō′lupōōr, shōlupōōr′), city (pop 212,620), W central Bombay state, India A fort of Mohammedan construction, perhaps dating from the 14th cent , is the most interesting monument The city was occupied by the Moguls (1668), by Hyderabad (1723), by the Mahrattas (1795), and by the British (1818) Today Sholapur is a major trading center

Sholes, Christopher Latham (shōlz), 1819–90, American journalist and inventor, b Mooresburg, Montour co , Pa He moved to Wisconsin, where he edited the Southport *Telegraph* and the Milwaukee *News* and *Sentinel* and also served as state senator and as collector of the port of Milwaukee In 1868, with Carlos Ghidden and S W Soulé, he received a patent for a typewriter See histories of the typewriter by C L Weller (1918) and H W Roby (1925)

Sholokhov, Mikhail Aleksandrovich (mēkhīl′ ălyĭksăn′drŭvĭch shō′lŭkhŏf), 1905–, Russian novelist His epic novel of the Don Cossacks, *The Silent Don* (4 vols 1928–40, Eng tr in 2 vols, *And Quiet Flows the Don*, 1934, and *The Don Flows Home to the Sea*, 1940, one-volume ed , 1942), is a work in the great tradition of the Russian novel It has been vastly popular at home and widely translated, winning for its author top ranking among Soviet writers Sholokhov wrote another novel of the Cossacks *Seeds of Tomorrow* (1932–33, Eng tr , 1935, title in England, *Virgin Soil Upturned*), dealing with collective farming Both novels have been used by Ivan Dzerzhinsky as the basis for operas, and *The Silent Don* has been filmed

Sholom Aleichem see ALEICHEM, SHOLOM

Shomer (shō′mĕr) [Heb ,=keeper] **1** See SHAMER **2** Mother of one of the murderers of King Joash 2 Kings 12 21 Shimrith 2 Chron 24 26

Shonnard, Eugénie Frederica (shō′nurd), 1886 American sculptor, b Yonkers, N Y studied under Rodin and Boudelle Her greatest success has been with animal subjects in a formalized manner, but she has also succeeded in portrait sculpture and in her granite and wood carving of the Pueblo Indians Examples of her work are *Rabbit* (Luxembourg Mus , Paris), *Brittany Peasant* and *His Majesty the Heron* (Metropolitan Mus), and *Two Geese* (Cleveland Mus)

shooting, the firing with RIFLE, SHOTGUN, PISTOL, or REVOLVER at stationary or moving targets The term *shooting* is also used in England to mean HUNTING In the 19th cent the sport of rifle shooting became increasingly popular in England and in America, where the National Rifle Association was formed in 1871 to standardize the rules for rifle marksmanship Matches were arranged and trophies offered Pistol and revolver events soon were included In 1906 shooting matches with a variety of firearms were included in the Olympic games In small-bore rifle shooting the targets range in distance from 50 ft to 200 yd , while in pistol and revolver shooting they range from 25 ft to 50 yd For long-range rifle marksmanship, targets from 200 to 1,000 yd are used A shooting target is made of black-on-white cardboard and is composed of a bullseye (black) and several concentric circles Often adjacent circles to the bullseye are blackened In small-bore rifle and pistol shooting a bullseye counts 10 points, and in long-range rifle marksmanship it counts 5 Trapshooting was begun in England in the 19th cent Moving targets—usually "pigeons," made of silt and pitch in the shape of saucers, which are hurled out of a mechanical contrivance—to simulate the flight of game birds are used in place of stationary targets The range is from 16 to 25 yd , a 12-gauge gun is preferred Trapshooting was adopted in the United States in the late 19th cent , and in 1900 the American Trapshooting Association was organized Annual championship matches are held at Vandalia, Ohio Skeet, in its early years called "round the clock" shooting, was developed in the United States after 1910 The trapshooting hurling contrivance is used, but the "pigeons" are hurled in a fixed circular path 40 yd in diameter The marksman shoots at the moving target from different positions corresponding to the perimeter and to the units of the circle, 12-, 16-, 20-, and 28-gauge guns are used In skeet matches 25 "pigeons" are thrown, of which 8 are hurled in pairs See also SPORTING GUN See H B C Pollard, *Gun Room Guide* (1930), Robert Churchill, *How to Shoot* (7th ed , 1938), W F Roper, *Pistol and Revolver Shooting* (1945), C E Chapel, *Rifle, Skeet, and Trap Shooting* (1949), Jack O'Connor, *Rifle Book* (1949)

shooting star or **American cowslip,** North American perennial wild flower (*Dodecatheon meadia*) of the primrose family The leafless flower stem is topped with a cluster of nodding flowers, in which the stamens project in a narrow cone and the petals, white to rose or lilac, flare backward like those of the related cyclamen The plant is cultivated in rock and wild gardens Both names also apply to other species of the genus

shooting star see METEOR

Shophach (shō′făk), variant of SHOBACH

Shophan (shō′făn), town, E of the Jordan, unless it be taken with ATROTH Num 32 35

Shore, Jane, d 1527?, mistress of Edward IV of England The wife of William Shore, a goldsmith, she became mistress to Edward IV c 1470 and exerted a great influence over the king After Edward's death she became the mistress of Thomas Grey, marquess of Dorset Probably only out of political motives, she was accused (1483) by Richard III of sorcery, placed in the Tower, and later forced to do public penance as a harlot Her great beauty attracted the king's solicitor, Thomas Lynon, but their proposed marriage failed to come about, and Jane died in poverty Her life was the subject of Nicholas Rowe's *Tragedy of Jane Shore* (1714) See C J S Thompson, *The Witchery of Jane Shore* (1933)

shore see COAST

Shoreditch, metropolitan borough (1931 pop 97,042, 1948 estimated pop 44,960) of E London, England It is a center of the furniture-making industry and suffered much air-raid damage in 1940–41 London's first theater was built in Shoreditch c 1576 by James Burbage

Shorewood, residential suburban village (pop 15,184), SE Wis , on Lake Michigan and the Milwaukee river adjoining N Milwaukee, settled c 1834 inc 1900 as East Milwaukee, renamed 1917 It has numerous recreational facilities

Shorewood Hills, village (pop 1,064), S Wis , near Madison, inc 1927

shoring (shō′rĭng), the placing of inclined braces against the sides of a building to prop it up for repairs or structural changes Generally 12″ x 12″ timbers called shores are used The upper end, which is sometimes capped with steel, fits into a niche cut in the brickwork, and the lower end rests on a base or platform, frequently of steel plate The application of wedges or steel jacks between the lower end of the shores and the platform permits the weight of a building to be shifted from underpinning to shoring Shores are frequently used as supplemental support for buildings damaged by fire or by underpinning failure When employed horizontally, e g , when a building is removed from between two others, the shores consist of wooden struts suitably braced and exerting pressure on wall plates in order to distribute the thrust over a wide area See Lazarus White and E A Prentis, *Underpinning Its Practice and Applications* (rev ed , 1950)

Short, Sir Francis Job (Sir Frank Short), 1857–1945 English engraver and water-colorist, at first an engineer He was knighted in 1911 He is best known for his mezzotints, which are sometimes combined with etching Among them are *Putney Bridge Wary Moon, Nathdale,* and *Ebb Tide* He also reproduced paintings of Turner and Watts He was professor of engraving at the Royal College of Art

short circuit The current in an electric circuit is deflected if it is given a path of less resistance, it is then said to be short-circuited In common usage the term is often used to indicate a broken ELECTRIC CIRCUIT, such as occurs when an electric FUSE "blows out" or when a wire of connection in the circuit is broken and current no longer flows through it

Shorter, Clement King, 1857–1926, English journalist and critic He founded the *Sketch* (1893) and the *Sphere* (1900) and was an authoritative biographer of George Borrow, the Brontës, and Dr Johnson See his unfinished autobiography (ed by J M Bulloch, 1926) His first wife, **Dora Sigerson Shorter,** 1866–1918, was an Irish poet, closely allied to Ireland's cause Among her works are *Ballads and Poems* (1898) and *Sixteen Dead Men and Other Poems of Easter Week* (1919)

Shorter College see ROME, GA

shorthand, any brief, rapid system of writing that may be used in transcribing or in recording the spoken word Such systems, their characters based on the letters of the alphabet, were used in ancient times, the shorthand of Tiro, Cicero's amanuensis was used for centuries. Modern systems date from

1588, when Timothy Bright published his 500-odd symbols for words, a French system was developed by Jacques Cossard in 1651, a German one in 1679 In 1602 Rev John Willis published the *Arte of Stenographie*; there followed dozens of systems before 1837, when the shorthand of Isaac PITMAN appeared This, with improvements, is in wide use in English-speaking countries today; it is perhaps the most rapid shorthand system and is favored by many court and convention reporters The Pitman system makes use of shading (a line heavily drawn has a meaning different from that of the same line lightly drawn) and of difference in slope and position on a given line, it is geometric in outline and is difficult to master, but makes possible very great speed John Robert Gregg (b. Ireland, 1867) in 1888 published a popular system of business shorthand in use today Its outlines are curved and natural, resembling those of ordinary script, need for lifting the pen was eliminated as much as possible, so that a cursive motion is used, there is no shading, but variation in length of line indicates variation in translation The outlines were scientifically worked out for simplicity, naturalness, and other qualities that make for speed The National Shorthand Reporters Association was organized in 1899 On the Continent, F X Gabelsberger (Germany) and Émile Duployé (France) originated systems widely used, the Sloan-Duployan shorthand has found favor also in South America and Canada

Short Hills, N J see MILLBURN

shorthorn cattle or **Durham cattle** (dŭ'rum), breed of cattle originated in NE England as a result of the mixture of breeds brought in by various invaders Development of the shorthorns as a distinct breed took place chiefly in the Tees valley, in the counties of Durham and York The first systematic breeding of shorthorns was undertaken (c 1784) by Robert and Charles Colling after they had observed the methods of Robert Bakewell in the inbreeding of livestock It is believed that shorthorns were first shipped to America in 1783 They are dual-purpose cattle, their milk production is good, and they yield a high percentage of superior beef Their strength and mild disposition have led to their occasional use as draft animals In color shorthorns are red, red and white, or white and roan, the body is large and deep, and the back broad A hornless variety known as the polled shorthorn cattle originated in the United States At first they were called polled Durhams, but the name was officially changed (1919) to polled shorthorns They are found over most of the United States

Shorthouse, Joseph Henry, 1834–1903, English novelist, b Birmingham He was the author of *John Inglesant* (1880), his only well-known book See his *Life and Letters* (ed by his wife, Sarah Shorthouse, 2 vols, 1905)

Short Parliament see PARLIAMENT

short story, form of fiction, generally under 10,000 words in length Short stories can be found in the Bible, in the *Gesta Romanorum* in the Middle Ages, in Boccaccio's *Decameron*, and in Chaucer's *Canterbury Tales* But the modern short story, with its great compactness and its tendency towards a pointed ending, begins with Edgar Allan Poe and Guy de Maupassant in the 19th cent This form has proved immensely popular, especially in magazines and newspapers Among the most famous writers of short stories are Rudyard Kipling, Bret Harte, Anton Chekhov, O Henry, Katherine Mansfield, and Ring Lardner The form has also been popular with such famous novelists as Balzac, Leo Tolstoy, Henry James, and, in more recent years, Ernest Hemingway and William Faulkner The very short story of less than 2,000 words has become increasingly popular

Shortsville, village (pop 1,316), W central N Y, in the Finger Lakes region, SE of Rochester, inc 1889 Paper and threshing machines are made here

Shortt, Adam, 1859–1931, Canadian economist and historian, b near London, Ont, grad Queen's Univ, Kingston (B A, 1883, M A, 1884, LL D, 1911) He studied at Glasgow and at Edinburgh universities and taught (1885–1908) first philosophy, then political science at Queen's Univ Shortt was civil service commissioner (1908–18) in Ottawa. In 1918 he was appointed chairman of the board of historical publications of the Public Archives of Canada A recognized authority on Canadian economic and banking history, he wrote *Imperial Preferential Trade from a Canadian Point of View* (1904) and edited *Documents Relating to Canadian Currency, Exchange, and Finance during the French Period* (1926). He also wrote *Lord Sydenham* (1908, new ed, 1926) and, with A G Doughty, edited *Documents Relating to the Constitutional History of Canada, 1759–1791* (1907, rev. ed, 1918) and *Canada and Its Provinces* (23 vols, 1913–17).

Shoshannim and **Shoshannim-Eduth.** see AIJELETH SHAHAR.

Shoshenk I: see SHESHONK I

Shoshone (shōshō'nē), village (pop 1,366), co seat of Lincoln co, S Idaho, on the Little Wood river and N of Twin Falls In a region well known in the 1880 mining rush, Shoshone was founded in 1882 with the coming of the railroad, was a cattle town, then became an irrigated farming center after 1905 and particularly after Magic Dam was built in the Big Wood river in 1907 It is in the MINIDOKA PROJECT, ships wool, and is the gateway to Sun Valley and the Sawtooth Mts

Shoshone Cavern National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Shoshone Falls, S Idaho, in the Snake river, near Twin Falls Once a spectacle of some grandeur, with a gush of water leaping more than 200 ft, they have now been much reduced by irrigation projects upstream

Shoshone Indians, tribe of North American Indians of the Uto-Aztecan linguistic stock In the early 19th cent, according to Lewis and Clark, the Shoshone occupied SW Montana, W Wyoming, S Idaho, and NE Nevada The eastern Shoshone had horses and ranged into the N Great Plains in search of buffalo, but the western and horseless Shoshone subsisted largely on nuts and wild vegetables The Shoshone, the Bannock, and the northern Paiute, all dwelling in essentially the same area, were called the Snake Indians Today the Shoshone live on reservations in California, Idaho, Nevada, Utah, and Wyoming, they number some 4,500 See R H Lowie, *Notes on Shoshonean Ethnography* (1924)

Shoshone project, NW Wyo., near the Mont line and near the Shoshone river in the Bighorn river basin Developed by the Bureau of Reclamation, it includes 161,654 acres and has five divisions The project is supplied by a system of small diversion dams, canals, and laterals and by Buffalo Bill Dam (formerly Shoshone Dam, est 1910), in the Shoshone river A powerhouse (est 1922) at Buffalo Bill Dam and the Heart Mt power plant (est 1948), 2 mi below it, supply power for the project Powell is on the project, Cody is c 10 mi southwest

Shostakovich, Dmitri (dyĭmē'trē shŏstŏkô'vĭch), 1906–, Russian composer, studied at the Leningrad Conservatory, 1919–25 His First Symphony (1925) has had frequent performances, and an opera, *The Nose*, and a ballet, *The Golden Age* (both 1930), satirical works, firmly established his reputation His opera *Lady Macbeth of the District of Mzensk* (Leningrad, 1934) and his ballet *The Limpid Stream* (1934) were attacked vigorously by Soviet critics in 1936, after they had become quite popular A storm of controversy followed, and Shostakovich withdrew the Fourth Symphony (1935–36) from rehearsal It has never been performed His Fifth Symphony (1937), performed during the 20th anniversary festival of the November Revolution, restored his works to favor His Piano Quintet (1940) won the Stalin Prize The Sixth (1939), the Seventh (Kuibyshev, 1942), composed during the siege of Leningrad, the Eighth (1943), and the Ninth (1945) symphonies have all been received enthusiastically Among his other works are his satirical, grotesque Twenty-four Preludes (1933) for piano, a piano concerto (1933), a cello sonata (1934), and a string quartet (1938) He has composed incidental music (unpublished) for many films and stage plays See biography by Victor Seroff (1943)

shotgun, smooth-bore firearm, designed for firing a number of small shot at short range Shotguns are usually double-barreled Repeating shotguns with a single barrel and with a magazine holding a number of cartridges are made, the objection to them is that they give game too little chance to escape In some states the use of the repeating shotgun is prohibited by law The shot from a shotgun spreads in a widening circle The larger the game that is hunted, the larger the shot used See P A Curtis, *Guns and Gunning* (1934), Sir Gerald Burrard, *The Modern Shotgun* (1945)

Shottery, village, Warwickshire, England, a mile W of Stratford-on-Avon The cottage in which Shakspere's wife, Anne Hathaway, lived and its surrounding grounds are national property, preserved much as they were in Shakspere's time

Shotwell, James Thomson, 1874–, American historian, b Strathroy, Ont, grad Toronto Univ, 1898, Ph D Columbia Univ, 1904 A teacher of history at Columbia from 1900 and professor from 1908 to 1942, Shotwell was an active member of several national and international labor, peace, and historical conferences He was director of the division of economics and history (1942–49) and president (1949–50) of the Carnegie Endowment for International Peace and served as chairman (1932–43) of the American committee on International Intellectual Cooperation of the League of Nations In 1939 he organized the Commission to Study the Organization of Peace. Among his many books are *The Religious Revolution of Today* (1913), *An Introduction to the History of History* (1922, rev. ed, *The History of History*, Vol. I, 1939), *Plans and Protocols to End War* (1925), *War as an Instrument of National Policy* (1929), *On the Rim of the Abyss* (1936), and *The Great Decision* (1944) He was also assistant general editor (1904–5) of *The Encyclopaedia Britannica*, co-author of several books on international relations, first editor of the "Records of Civilization" series, and editor of *Economic and Social History of the World War* (150 vols, 1919–29) and of other series

shovel. The shovel, used for handling loose materials such as sand and gravel, is a tool of prehistoric origin, related to the SPADE, from which it differs especially in having its edges turned up to hold the material For handling such materials in large quantities, steam shovels are used. In the revolving type of shovel, the whole unit, including the shovel and the operating mechanism, revolves in a complete circle on a turntable mounted on a traveling base Shovels were formerly operated by steam, but Diesel units or electric power units are more commonly used to operate modern shovels

Shovell, Sir Clowdisley, or **Sir Cloudesley Shovel** (klou'dĭs'lē shŭ'vul), 1650–1707, English admiral He served James I faithfully, just as faithfully he convoyed William III to Ireland in 1690 He burned enemy ships at the battle of La Hogue in 1691 and was joint commander (1693) with Admiral Killigrew and Ralph Deleval In the War of the Spanish Succession he brought home the silver captured by Sir George Rooke at Vigo (1702), helped him capture Gibraltar (1704), and assisted at the capture of Barcelona (1705) On Sir Clowdisley's return from an abortive attack on Toulon he was lost with 800 or 900 men when his ship was wrecked off the Scilly Islands

Shrady, Henry Merwin (shrā'dē), 1871–1922, American sculptor, b New York city A businessman and amateur in art, he stepped into the ranks of professional sculptors and won immediate recognition In 1901 his Washington, an equestrian statue for Brooklyn, N Y, took first prize in competition In 1902 he was given the commission, also competitive, for the U S Grant Memorial, Washington, D C Other works are equestrian statues of General Williams (Detroit, Mich) and General Lee (Charlottesville, Va) and a seated bronze of Jay Cooke (Duluth, Minn)

Shrapnel, Henry (shrăp'nul), 1761–1842, British General, inventor of the shrapnel shell The shell, consisting of a steel case filled with bullets and an explosive charge, is fired in midair by a time fuse and scatters shot and shell fragments with great force over a wide area Adopted by the British army in 1803, it was used at Surinam in 1804 and in the Peninsular War It has been important in modern warfare Henry Shrapnel also improved construction of howitzers and mortars

Shreve, Henry Miller (shrēv), 1785–1851, American inventor, b Burlington co, N J The *Washington*, a double-decked, shallow-hulled steamboat with its high-pressure engine on the main deck was built under his direction and made several successful trips (1816–17) on the Mississippi and Ohio rivers He established the practicability of steam navigation on the Western rivers and broke the monopoly held by Robert Fulton and R R Livingston Shreve invented a heavy-timbered, twin-hulled snag boat with which he cleared (1830) 1,200 mi of the Mississippi of tree trunks and other impediments along the waterway Shreveport, La, is named for him See F L Dorsey, *Master of the Mississippi* (1941)

Shreve (shrēv), village (pop 1,113), NE central Ohio, S of Wooster, in a gas and oil region

Shreveport (shrēv'pôrt), city (pop 98,167), parish seat of Caddo parish, NW La, on the Red River near the Texas and Ark borders, founded c 1834, inc 1839 Important during the steamboat era and the antebellum cotton boom, it became the Confederate capital of Louisiana in 1863, the discovery of oil in 1906 provided the greatest impetus for its growth Now the second largest city in the state, it is primarily an oil center, with important cotton, cottonseed-oil, glass, and lumber manufactures A typical modern industrial city, it has some fine buildings, notably the Shreveport incinerator (1935), built in modern functional style The state fairgrounds and Centenary College of Louisiana (Methodist, coeducational, 1825) are here Cross Lake, with recreational facilities, and a U S pecan experiment station are near by

shrew (shrōō), insectivorous mammal (family Soricidae) of North America, extreme N South America, Europe, and Asia It is related to the mole and has a musky odor A nervous, active animal, it is a prodigious eater and vicious fighter The common species of shrews of both hemispheres are of the genus *Sorex* Shrews are among the smallest of mammals, some species are barely 2½ in from the head to the tip of the tail The largest are about 6¼ in in total length Early beliefs that the shrew was poisonous were recently substantiated by the discovery that the saliva of the American short-tailed shrew (*Blarina*) is lethal when injected into mice, and the bite of the animal causes discomfort to humans African elephant shrews and Oriental tree shrews belong to other families

Shrewsbury, Charles Talbot, duke of (shrōōz'burē, shrōz'–), 1660–1718, English statesman Brought up a Catholic, he embraced Protestantism in 1679 Talbot was one of seven who signed the invitation for William of Orange (later WILLIAM III) to take the throne in 1688 He was made secretary of state and privy councilor in 1689 and resigned in 1690. William III reappointed the powerful Whig in 1694, made him marquess of Alton and duke of Shrewsbury in the same year, and so trusted him that in spite of his known correspondence with Jacobites the king regarded him as chief minister

until his resignation in 1699. Shrewsbury went abroad to improve his precarious health Returning in 1706, he was won over by Robert HARLEY to the Tory cause, became lord chamberlain (1710), lord lieutenant of Ireland (1713), and lord treasurer (1714). He supported the Hanoverian succession and was briefly (1714–15) lord chamberlain under George I See biography by T. C. Nicholson and A S Turberville (1930)

Shrewsbury, Elizabeth Talbot, countess of, 1518–1608, English peeress, known as Bess of Hardwick At the age of 14 she married Robert Barlow, who died shortly after She married and was widowed twice more, inheriting large estates, and in 1568 was married to George Talbot, 6th earl of Shrewsbury The marriage of her daughter Elizabeth to Charles Stuart, brother of Lord Darnley, angered Queen Elizabeth because Stuart had a claim upon the throne, and the countess was sent to the Tower for three months The countess quarreled with her husband and accused him of a love affair with Mary Queen of Scots, whose custodian he was, but the couple was reconciled before his death (1590) She built a number of great mansions, including Hardwick Hall See Maud Stepney Rawson, *Bess of Hardwick and Her Circle* (1910)

Shrewsbury, John Talbot, 1st **earl of,** 1388?-1453, English soldier As lieutenant of Ireland (1414–19, 1445–47) he quelled native unrest in that country, but he achieved his greatest fame for his military daring in France during the latter years of the HUNDRED YEARS WAR He was present at the siege of Orléans and was taken prisoner (1429) at Patay and held for four years He was finally slain at Castillon

Shrewsbury (shrōz'burĕ, -bŏŏz'-), municipal borough (1931 pop 32,372, 1947 estimated pop 44,550), co seat of Shropshire, England, on the Severn and WNW of Birmingham It is an ancient Saxon and Norman stronghold, retaining much of its former medieval atmosphere There are ruins of an 11th-century castle and abbey, several English and Welsh bridges built in the early Middle Ages, and a few old churches The narrow streets are lined by many oak-timbered, black-and-white houses of the 15th, 16th, and 17th cent , and there is a fine public garden and park which adds to the city's beauty In 1403 Henry IV defeated Henry Percy (Hotspur) on a plain near Shrewsbury and had the body of the rebel displayed to the townspeople as proof Shrewsbury School, a public school founded in 1551 by King Edward VI, overlooks the Severn Sir Philip Sidney, Fulke Greville, and Charles Darwin studied here Shrewsbury has tanneries and manufactures electrical equipment and pharmaceuticals

Shrewsbury (shrōōz'burĕ, -bĕr'rē) **1** Town (pop 7,586), central Mass , NE of Worcester, settled 1722, inc 1727 Gen Artemas Ward was born here **2** City (pop 2,182), E Mo , near St Louis **3** Borough (pop 1,058), E N J , S of and near, Red Bank, settled 1665, inc 1926 It has an 18th-century church

shrike (shrīk) or **butcher bird,** bird of prey, chiefly of the Old World but with two New World species The plumage is mostly gray, black, and white, the tail is long and rounded, and the wings are rather short The name butcher bird is applied to certain shrikes of both hemispheres because of their habit of impaling their prey—small birds and mammals and large insects—on a thorn or sharp twig while tearing it apart with their strong, terminally hooked beaks One explanation for the habit of either impaling the prey or pushing it into a crevice is that the shrike's claws are too weak to hold it firmly The northern and the loggerhead shrikes are the North American species

shrimp, small marine crustacean, usually about 1½ to 3 in long, found on most coasts Like the related prawn, lobster, and crayfish, it has 10 jointed legs, and there are swimmerets on the abdominal segments The exoskeleton is flexible, not calcified, usually grayish, and translucent or transparent When cooked the palatable flesh is pink and white In the United States the chief centers of the shrimp industry are in Louisiana, Texas, Mississippi, Alabama, Florida, and Georgia Shrimps are canned in large quantities, but many are packed in ice and shipped raw They are used in salads and in many hot dishes Dried shrimps are exported to the Orient Shrimp fishing in Japan is carried on chiefly near the southern islands.

shrine see PILGRIM

Shropshire (shrŏp'shĭr, -shər), border county (1,346 sq mi ; 1931 pop 244,156, 1948 estimated pop 272,350), W England It is also sometimes called Salop (săl'ŭp) The county town is Shrewsbury The terrain to the north and east of the Severn, Shropshire's principal river, is level, toward the Welsh border the land is hilly The Wrekin, an extinct volcano, rises to 1,335 ft The county is chiefly pastoral (Shropshire sheep) and agricultural, but some coal is mined The ancient Watling Street and Offa's Dyke cross the county In Anglo-Saxon times it was a part of the kingdom of Mercia, and it was organized as a county in the 10th cent. After the Norman Conquest it became an important part of the Welsh Marches and was the scene of much border conflict recalled by the ruins of many medieval castles (among others, Ludlow and Stokesay) The quiet beauty of the countryside is suggested in A E Housman's poems *A Shropshire Lad* (though Housman was not actually a Shropshire man) See Arthur Mee, *Shropshire* (1939)

Shropshire sheep, mutton breed of sheep developed from the native sheep of Shropshire and Staffordshire, England As early as 1340 a grade of wool was known as Shropshire, but the breed was not officially recognized until about the middle of the 19th cent The Shropshire is of medium size, with dark face and legs, is prolific and fast growing, and produces a good grade of mutton and wool Because of its adaptability, it has spread widely over the world. It is the most popular breed of English origin in America. Its importation to America began c 1855

Shrove Tuesday [English *shrove*=confession], day before ASH WEDNESDAY (the beginning of LENT) In the Latin countries it is the hilarious last day of the carnival, called by the French MARDI GRAS

shrub, common name for any woody, perennial plant which usually branches at the base and is smaller than a TREE Shrubs are an important feature of permanent landscape planting, being used for formal decorative groups, hedges, screens, and background plantings, to which they contribute pattern, color, fragrance, or utility In the natural style of landscape gardening they are often allowed to grow according to inclination, but in many gardens they are pruned in the spring or fall for greater shapeliness and to induce more compact growth Many shrubs are beautiful even in winter, furnishing green foliage (as in the evergreen arborvitae and rhododendron) and often decorative stem and branch forms and bright-colored fruits The introduction of the use of native shrubs in masses marked a great change in American landscape architecture Among the most frequently used shrubs are the lilac, mock orange, viburnum, forsythia, azalea, flowering shadbush, cotoneaster, and barberry See W R Van Dersal, *Ornamental American Shrubs* (1942), M D Lamson, *Gardening with Shrubs and Small Flowering Trees* (1946)

Shua (shō'ŭ), Asherite woman 1 Chron 7 32 Shua is also a variant of SHUAH

Shuah (shō'ŭ) **1** Father of one of Judah's wives Shua 1 Chron 2 3 **2** Son of Abraham Gen 25 2, 1 Chron 1 32 **3** Brother of Chelub 1 Chron 4 11 The patronymic of BILDAD the Shuhite may refer to any Shuah

Shual (shō'ŭl) [Heb ,=jackal], descendant of Asher 1 Chron 7 36

Shubael (shōō'bā-ĭl, shōōb'ā'ŭl), variant of SHEBUEL

Shubun (shōō'bōōn'), fl 1st half of 15th cent , Chinese painter of the Ming period He was naturalized c 1420 in Japan, where he founded the high-ranking Soga (his Japanese name) school of Ashikaga, which linked Chinese and Japanese art in the time of Yoshimitsu Notable among Shubun's works are the monochrome landscaped *fusuma* [sliding doors] in the collection of Count Inouye Those formed three sides of the artist's living rooms in his residence at Daitokuji (Buddhist temple), where he lived, though not a priest

Shufeldt, Robert Wilson (shōō'fĕlt), 1850–1934, American scientist and author, b New York city, M D Columbian Univ (now George Washington Univ), 1876 He was army surgeon (1876–81) in the Indian wars His scientific writings, chiefly on the osteology of birds, include *Contributions to the Anatomy of Birds* (1882) and *Osteology of Birds* (1909)

Shuham (shōō'hăm), son of Dan Num 26 42 Hushim Gen 46 23

Shuhite (shōō'hīt), a patronymic see SHUAH

Shuksan, Mount (shōōk'sun), peak, 9,038 ft high, N Wash , in the Cascade Range

Shulamite (shōō'lumit), female character of the Song of Solomon Cant 6 13 See SHUNEM

Shullsburg, city (pop 1,197), SW Wis , SW of Madison, inc 1889 There are zinc mines here

Shumathites (shōō'muthīts), family of Kirjath-jearim 1 Chron 2 53

Shumen (shōō'mĕn), city (pop 31,169), NE Bulgaria, W of Varna It is a trade and railroad center Founded in 927, it was of strategic importance during the Turkish rule (15th-19th cent) and was frequently besieged by the Russians Shumen is noted for its Moslem architecture and has the largest mosque in Bulgaria (built 1649) It was formerly also known as Shumla

Shunem (shōō'num), town of Issachar, probably on the north side of the vale of Jezreel not far from Endor The adjective SHULAMITE probably refers to it Joshua 19 18, 1 Sam 28 4

Shuni (shōō'nī) [Heb ,=quiet], founder of a family of Gadites Gen 46 16, Num 26 15

Shupham (shōō'făm) or **Shuppim** (shŭ'pĭm) [Heb , =serpent], family of Benjamin Num 26 39, 1 Chron 7 12,15, 26 16 Muppim Gen 46 21 Shephuphan 1 Chron 8 5

Shur (shûr) [Heb ,=wall], unidentified landmark of the Egyptian border N of the Red Sea It is associated with the wandering of Hagar and with the Exodus Gen 16 7, 20 1, 25 18, Ex 15 22, 1 Sam. 15 7, 27 8.

Shuri, city, Okinawa see RYUKYU ISLANDS

Shurtleff, Roswell Morse, 1838–1915, American landscape painter, b Rindge, N H , grad Dartmouth, 1857 At first an architect and lithographer, he turned to illustration and oils after his service as an officer in the Civil War Forest scenes were his specialty Two of his paintings are *Mountain Stream* (Metropolitan Mus) and *First Snow* (Corcoran Gall) He became a member of the National Academy of Design in 1890

Shurtleff College see ALTON, Ill

Shusha (shōōsha'), city (pop 5,104), Mountain-Karabakh Autonomous Oblast, Azerbaijan SSR, on the eastern slope of the Lesser Caucasus, near Stepanakert Silk spinning and rugmaking are the chief industries Shusha flourished as the fortress capital of the Karabakh khanate, conquered by Russia in 1805, it had more than 40,000 inhabitants, mainly Armenians, until 1920, when the Armenians were massacred by the Moslem mountaineers and most of the city was destroyed

Shushan see SUSA

Shushan-eduth see AIJELETH SHAHAR.

Shushtar (shōōshtär'), town (1947 estimated pop 23,654), W Iran, on the Karun river It is the head of river navigation and handles much shipping It was long known for its textiles The population—Kurds, Arabs, and Lurs—take refuge from the summer heat in deep cellars The name also appears as Shuster

Shuster, George Nauman, 1894–, American educator and author, b Lancaster, Wis , grad Notre Dame (B A , 1915, M A , 1920), Ph D Columbia, 1940 Head of the department of English at Notre Dame (1920–24), he later was professor of English at St Joseph's College for Women, Brooklyn, N Y. (1924–35), and dean and acting president of Hunter College (1939–40) In 1940 he became president of Hunter From 1925 to 1937 he was on the editorial board of the *Commonweal*, being managing editor (1929–37) Chairman of the Historical Commission to Germany for the War Dept (1945), he was appointed state commissioner for Bavaria in 1950 Among his writings are *The Catholic Spirit in Modern English Literature* (1922), *The Germans* (1932), *Like a Mighty Army* (1935), *The English Ode from Milton to Keats* (1940), and *Germany, a Short History*, (with Arnold Bergstraesser, 1944)

Shuswap Indians (shōō'swŏp), tribe of North American Indians of the Salishan linguistic stock In the mid-19th cent they lived in S British Columbia on the Fraser river They then numbered some 4,000 The Shuswap are on reservations in British Columbia See J A Teit, *Shuswap* (1909)

Shuthelah (shōō'thĕlu), head of an Ephraimite family Num 26 35, 1 Chron 7 20

shuttle see LOOM

Shuvalov, Piotr Andreyevich, Count (pyô'tur ŭndrā'yĭvĭch shôôvä'luf), 1827–89, Russian diplomat He was special envoy (1873), then ambassador (1874–79) to England He sought to smooth over difficulties caused by Anglo-Russian rivalry in Asia, arranged for the marriage of Grand Duchess Marie to the duke of Edinburgh, and negotiated to secure a treaty at the end of the Russo-Turkish War (1878) that would please England better than the Treaty of San Stefano The upshot was the calling of the Congress of Berlin, to which Shuvalov was plenipotentiary The new territorial arrangements were unpopular, and Shuvalov was recalled

Si (sē), Mandarin *Hsi*, river of SE China, c 600 mi long, rising in E Yunnan prov and flowing E through Kwangsi and Kwangtung provs to the S China Sea near Canton The Si is navigable to large steamers most of its length The river is called in Chinese Si-kiang (sē'-kyäng') [west river]

Si, chemical symbol of the element SILICON

Sia (sē'ŭ) or **Siaha** (sē'ŭhu), family returned from exile Ezra 2 44, Neh 7 47

Sialkot (sēäl'kōt") city (pop 138,708), West Punjab prov , Pakistan There is a fortress built in 1181 This city is known for its manufacture of surgical instruments and sporting goods

Siam see THAILAND

Siam, Gulf of, arm of the South China Sea, separating the Malay Peninsula on the west from Indo-China on the east The coasts of the Malay Peninsula and at the head of the gulf form part of Thailand, the Indo-Chinese coast is divided between Cambodia and Cochin China

Siamese language, the standard accepted speech of Thailand The name is sometimes used to include all of the Tai group of Indo-Chinese languages, and the standard speech is also called Tai or Thai See LANGUAGE (table)

Siamese twins, conjoined twins consisting of two nearly complete individuals united side by side or back to back by musculofibrous tissue The generic term is derived from a set of TWINS Chang and Eng, born in Siam in 1811, of Chinese parents Following years of exhibiting themselves in P T Barnum's circus they settled on a farm in North Carolina They married English sisters and fathered a total of 22 children Chang and Eng died within two hours of each other in 1874 Siamese twins make common use of one or more parts of their joined bodies Their other organs are asym-

metrical (in mirror-image relationship), with the heart of one twin normally placed and that of the other in inverse position One is likely to be right-handed, the other left-handed Only rarely do conjoined twins survive birth or childhood Fatal illness in one dooms the other unless separation of the two by surgery is accomplished successfully

Sian (sē'ān', shē'ān'), Mandarin *Hsi-an*, city and county (pop 499,376), central Shensi prov , China The city is the capital of the province Hsienyang, one of several cities which previously occupied this site, was (255–206 B C) the capital of the Ch'in dynasty The present city, then called Changan, was the western capital of the T'ang dynasty (618–906), and it was then a center of Buddhist, Moslem, and Nestorian Christian missionary activity A Nestorian stone tablet (781) commemorating the establishment of a church is preserved The city, on the Lung-Hai RR, the principal east-west line of China, is important as a commercial center In Sian in 1936 Chang Hsueh-liang kidnaped Chiang Kai-shek

Siang (sēäng', shēäng'), Mandarin *Hsiang*, river, c 400 mi long, rising in N Kwangsi prov , S China, and flowing N through Hunan prov to Tungting lake The river is navigable to large steamers for most of its course

Siangtan (sēäng'tan', shē–), Mandarin *Hsiang-t'an*, city and county (pop 917,500), E central Hunan prov , China The city is on the Siang river and is a commercial and marketing center

Siasconset (skŏn'sĭt, sĭuskŏn'sĭt) or **'Sconset**, resort village, on E Nantucket, SE Mass

Siauliai (shăou'lyĭ), Ger *Schaulen* (shou'lŭn), Rus *Shavli* (shăv'lyĕ), city (pop 31,641), N Lithuania Here the Lithuanians defeated the LIVONIAN KNIGHTS in 1236 and a German free corps in 1919 The city itself dates from the 15th cent It is a rail center and a manufacturing town, producing mainly shoes and other leather goods and linen and wool textiles The name also appears as Shaulyai or Shaulyay

Sibbecai or **Sibbechai** (both sĭ'bŭkī, -kā"ī), one of David's guard, noted for his fight with the Philistine giant 2 Sam 21 18, 1 Chron 11 29, 20 4, 27 11 Mebunnai 2 Sam 23 27

Sibboleth see SHIBBOLETH

Sibelius, Jean Julius Christian (shan' yōō'lyŭs krĭs'tyan sĭbā'lyŭs) 1865–, Finnish nationalist composer He studied in Berlin (1889) and with Karl Goldmark in Vienna (1890) Although he wrote a great deal of chamber music, piano music, and violin music, he is best known for his orchestral works, many of which have become part of the standard orchestral repertoire These include tone poems on national subjects, such as *En Saga* (1892) and *Finlandia* (1900), *Valse triste*, *The Swan of Tuonela* (1893, from the suite *Lemminkäinen*), a violin concerto (1903), and seven symphonies (1899, 1901, 1907, 1911, 1915 1923, 1924) He is a romantic composer, sometimes criticized as a reactionary, but exalted by many of his admirers as the greatest of contemporary composers See biography by Karl Ekman (Eng ti , in Finland, 1935, American ed , 1938), studies by Bengt de Torne (1937) and Rosa Newmarch (1939), *The Music of Sibelius* (ed by Gerald Abraham, 1947)

Sibenik, Serbo-Croatian *Šibenik* (shēbĕ'nĭk), Ital *Sebenico* (sābā'nēkō), town (pop 16, 015), Croatia, Yugoslavia, an Adriatic seaport on the coast of Dalmatia It has a chemical industry First mentioned in the 10th cent , it was an early residence of the kings of Croatia From 1212 to 1497 it was a Venetian possession Its finest buildings date from that period, notably the cathedral (begun in the 15th cent), which is considered the most beautiful in Dalmatia

Siberia (sībēr'ēu), Rus *Sibir* (sĭbĕr'), vast area of the Asiatic USSR Although it has no official standing as a territorial division, it is generally understood to comprise the Asiatic part (4,922,800 sq mi , estimated pop 19,500,000) of the RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC Occupying the northern third of Asia, Siberia extends from the Ural mts to the Pacific Ocean (specifically, the Bering Sea, the Sea of Okhotsk, and the Sea of Japan) and from the Arctic Ocean (specifically, the Laptev Sea, the Kara Sea, and the E Siberian Sea) to the Kazakh Hills, the ALTAI and SAYAN mountain systems, and the AMUR and the USSURI rivers Its southern land border separates it from the Kazakh SSR, China, and Mongolia, in the extreme northeast, the narrow Bering Strait separates it from Alaska Among the islands off Siberia in the Arctic Ocean are the NEW SIBERIAN ISLANDS, the SEVERNAYA ZEMLYA archipelago, and WRANGEL ISLAND Siberia may be divided, from north to south, into the zones of vegetation that run across the entire Russian land mass—the TUNDRAS, the TAIGA, the mixed forest belt, and the steppe belt It is drained, from south to north, by the mighty OB, YENISEI, and LENA rivers and by their tributaries These rivers are the only means of longitudinal transportation East-west transportation depends largely on the TRANS-SIBERIAN RAILROAD (which follows the steppe belt) and to some extent on the Arctic sea route, which has been increasingly used in recent years There are many polar and arctic stations on the north shore and on the northern islands The conventional geographic subdivisions of Siberia are W Siberia, E Siberia, and the Far East W Siberia, between the Urals and the Yenisei, is a low-lying, partly marshy plain, drained by the Ob and the IRTYSH Agriculture and dairying (particularly in the Baraba Steppe) are important in its southern steppe belt In the southeast of W Siberia, at the foot of the Altai, is the KUZNETSK BASIN, one of the world's richest coal regions, it also has large iron deposits E Siberia, which is drained by the Lena, extends from the Yenisei to a huge mountain chain, an offshoot of the mountains of central Asia, comprising (from southwest to northeast) the YABLONOVY, STANOVOI, VERKHOYANSK, KOLYMA, and ANADYR ranges and the plateaus along the VITIM and ALDAN rivers In the center of E Siberia rise the central Siberian uplands, farther south, and surrounded by mountains, is Lake BAIKAL The Far East comprises the CHUKCHI PENINSULA, terminating in EAST CAPE, and KAMCHATKA in the extreme northeast, these are administratively included in the vast KHABAROVSK TERRITORY, which extends southward, along the Sea of Okhotsk, to the Amur and to the Manchurian border Farther south, along the Sea of Japan, stretches the MARITIME TERRITORY The island of SAKHALIN and the KURILE ISLANDS are administratively included in Siberia Except for the southern steppe belt and for a few cities along the rivers, Siberia is virtually unpopulated, chiefly because of the extreme rigors of its continental climate and the difficulties of communication Thus Verkhoyansk, where the lowest temperatures on earth have been recorded, has summer heats rising above 90°F However, the opening up of Siberia for colonization in the late 19th cent and the intensive colonization and exploitation of its vast resources under the Soviet regime have resulted in the growth of numerous cities Not counting the cities in the URALS (sometimes considered part of Siberia), the chief Siberian cities include NOVOSIBIRSK, OMSK, TOMSK, TOBOLSK, BARNAUL, and STALINSK in W Siberia and in the Kuznetsk Basin, KRASNOYARSK, IRKUTSK, ULAN-UDE, and CHITA in the southern part of E Siberia, and VLADIVOSTOK, KHABAROVSK, and KOMSOMOLSK in the Far East YAKUTSK, on the Lena, is the largest and oldest center of the interior Igarka, on the Yenisei, is the largest Siberian city N of the Arctic Circle and is the principal lumber center More than 90 percent of the Siberian population is Russian Non-Russian groups include Turkic-speaking nationalities in the KHAKASS AUTONOMOUS OBLAST, the TUVA AUTONOMOUS OBLAST, and the YAKUT ASSR, Mongols in the BURYAT-MONGOL ASSR and in the MOUNTAIN-ALTAI AUTONOMOUS Oblast, Finno-Ugric Ostyaks and Voguls in the KHANTY-MANSI NATIONAL OKRUG, Samoyedes (now called Nentsy) in the TAIMYR PENINSULA, Tungus in the EVENKI NATIONAL OKRUG, and various Hyperborean groups, such as the Chukchi, the Kamchatkans, and the Koryaks in the extreme northeast A Jewish Autonomous Oblast was founded by the Soviet regime in BIROBIDZHAN, in the Far East The Mongol and Turkic groups of S Siberia were, until recently, largely nomadic herdsmen, but under the Soviet regime the majority settled down to agriculture The indigenous peoples of central and N Siberia remain, for the most part, hunters and fishermen, reindeer play an important part in the economy of the northernmost belt The chief non-Christian religions are Islam and Lamaism in the south, primitive shamanism is still widespread in the rest of Siberia The growing colonization and exploitation of Siberia in the past 50 years is a historical event of world-wide importance and may, in the long run, prove of equal consequence to that of the Russian Revolution of 1917 Numerous remains show that Siberia has been inhabited from prehistoric times In the historical period S Siberia frequently was—for reasons still obscure—the point of departure for several nomadic hordes, such as the HUNS, the MONGOLS, and the Manchus (see MANCHU), who within relatively short spans of time conquered immense empires, lost them, and reverted to their original obscurity Russian traders from Novgorod crossed the Urals as early as the 13th cent and established colonies in NW Siberia, chiefly for the fur trade The actual Russian conquest of Siberia, however, began only in 1581, when the Tatar khanate of SIBIR (see also TATARS) was conquered by the Cossack YERMAK In 1582 TSAR IVAN IV annexed Siberia to the Russian state The Cossacks to whom the conquest of the immense country was exclusively due, rapidly penetrated eastward by land and on their river boats, building a string of small fortresses and levying tribute from the sparse population in the form of precious furs By 1640—within less than 60 years—they had reached the Pacific and soon afterward they collided with Chinese troops By the Treaty of Nerchinsk (1689) Russia abandoned to China the region later known as the FAR EASTERN TERRITORY, which was ceded to Russia only in 1858 and 1860. S Sakhalin and the Kuriles were annexed after the surrender (1945) of Japan in the Second World War. From the early 17th cent. Siberia was used as a penal colony and as a place of exile for criminal and political offenders However, there was no organized attempt to colonize the country, and large sections remained unexplored. When the Russian serfs were freed by the Edict of Emancipation of 1861 they were allowed to take free possession of Siberian land, but they received little practical aid from the government and suffered intolerable hardship Settlement on a large scale began only with the construction (1892–1905) of the Trans-Siberian RR, after which the eastward migratory movement reached gigantic proportions, comparable to the westward migration of the American pioneers in the 19th cent Between 1914 and 1946 the population of Siberia was doubled Siberia played a major role in the Russian civil war of 1918–20 (see RUSSIAN REVOLUTION) The counterrevolutionary government of Admiral KOLCHAK collapsed in 1920, but Vladivostok and part of the Far Eastern Territory remained in the hands of the Japanese interventionist army until 1922 Under the Five-Year Plans, the Soviet government stepped up not only the agricultural colonization of Siberia, but also its industrial growth The decentralization of Russian economy was vastly stimulated in the Second World War, when entire industries were transferred E of the Urals Thus a city such as Novosibirsk grew from 120,128 inhabitants in 1926 to c 750,000 in 1946 Siberian grain was an essential factor enabling Russia to resist the German onslaught in the Second World War despite the loss of some of its most valuable agricultural areas in the west The iron and steel industry of the Kuznetsk Basin makes Siberia (if combined with the Urals) virtually self-sufficient The effect of the economic transformation of Siberia and the Ural region was to shift the vital center of the USSR from central and S European Russia to the area between the Volga and the Yenisei Part of the agricultural colonization of Siberia was carried out, after 1929, by the forced resettlement of large segments of the Russian rural population, notably the expropriated kulaks Forced labor is used extensively in the exploitation of the rich gold mines (particularly in the Aldan and Kolyma ranges) of E and NE Siberia and for clearing and road and railroad construction projects in the least hospitable sections of the country In the northern areas of Siberia fur hunting remains one of the principal pursuits of the Russians as well as of the indigenous population Fishing, crabbing, sealing, and whaling are conducted on a large scale in the northern and eastern coastal waters, particularly off Kamchatka See R A Davies and A J Steiger, *Soviet Asia* (1942), Emil Lengyel, *Siberia* (1943), William Mandel, *The Soviet Far East* (1944), Daniel Henderson, *From the Volga to the Yukon* (1944)

Sibert, William Luther (sĭ'bŭrt), 1860–1935, American army engineer, b Gadsden, Ala , grad West Point, 1884 A member of the Isthmian Canal Commission (1907–14), he built the Gatun locks and dam, for which he was made brigadier general in 1915 He was promoted major general (1917), served in the First World War, and organized and directed (1918–20) the Chemical Warfare Service He wrote *Construction of the Panama Canal* (with J F Stevens, 1915) See biography by E B Clark (1930)

Sibilla Aleramo see ALERAMO, SIBILLA

Sibir (sĭbĕr'), former city, SE of the present TOBOLSK, RSFSR It was the capital of the Tatar khanate of Sibir or Siberia, which rose after the disintegration of the empire of the GOLDEN HORDE and which extended along the Irtysh, Tobol, and Ishim rivers The Cossack Yermak conquered Sibir in 1582, and the khanate was annexed by Ivan IV of Russia The city was abandoned after the founding of Tobolsk Its name was subsequently extended to all of present Siberia Sibir was also known as Isker and Kashlyk

Sibiu (sēbyōō'), Ger *Hermannstadt* (hĕr'mănshtät"), Hung *Nagyszeben* (nŏch'sĕ'bĕn), city (pop 60, 602), central Rumania, in S Transylvania, at the foot of the Transylvanian Alps It manufactures machinery and other metal products, textiles, and food products, and it is an Orthodox metropolitan see Founded in the 12th cent by German colonists, it still preserves much of its German medieval character and has a considerable German minority It has long been a cultural center of Transylvania

Sibley, Henry Hastings, 1811–91, first governor of Minnesota, b Detroit After two years of law study, he was (1829–34) a clerk for the American Fur Company He later became (1834) a partner and engaged in trading in the Wisconsin and Dakota territories He was (1848) delegate to Washington from Wisconsin Territory and promoted (1849) the organization of Minnesota Territory He was then delegate to Washington from Minnesota Territory, and when it became (1858) a state, he was (1858–60) its first governor In the later troubles with the Sioux in and after the Civil War, Sibley commanded expeditions against the Indians See biographies by Nathaniel West (1889) and W. P. Shortridge (1922).

Sibley, town (pop 2,356), co seat of Osceola co, NW Iowa, near the Minn line W of Spirit Lake, named 1872, inc 1875 It is in a livestock, farm, and dairy area and is a center of Iowa cooperatives.

Sibmah (sĭb'mŭ), same as SHEBAM

Sibraim (sĭ'brāĭm, sĭbrā'ĭm), unlocated landmark, extreme N Palestine Ezek 47 16 This is possibly the same as ZIPHRON

sibyl (sĭ'bĭl), in Greek mythology, one of a group of prophetic old women The most famous was the Cumaean Sibyl (kūmē'um) Aeneas consulted her, and she led him down to the underworld She sold Tarquin the prophetic writings about Rome's destiny, the Sibylline Books (sĭ'bĭlĭn) She offered him nine books at a high price He refused to buy She kept burning the books until finally he bought the remaining three at the original price Whatever the origin of these books, they were kept at Rome in the Capitol and were consulted by the state in times of emergency The books were destroyed in 83 B C when the Capitol was burned There are some fragments which are supposed to be parts of the Sibylline Books, but most of them are forgeries

Sibylline Oracles see PSEUDEPIGRAPHA

Siccuth (sĭ'kŭth), in Amos 5 26 RV, a heathen god Many texts regard this as a common noun, thus, AV translates "tabernacle"

Sichem (sĭ'kŭm), variant of SHECHEM

Sicilian Vespers. On Easter Monday, 1282, a rebellion broke out at Palermo against the French domination of Sicily The revolt quickly spread to the whole island, nearly all the French in Sicily were massacred The insurrection was largely a spontaneous outburst against King CHARLES I, who had transferred his capital from Palermo to Naples, leaving Sicily to be governed by arrogant French officials However, its success also was partially due to the intrigues of Emperor MICHAEL VIII, of JOHN OF PROCIDA, and of King PETER III of Aragon Peter was elected king by a federal assembly, and a long war followed for the possession of SICILY between the Angevin kings of Naples and the Aragonese kings of Sicily

Sicily (sĭ'sĭlĭ), Ital *Sicilia* (sēchē'lyä), island and autonomous region (9,928 sq mi, pop 4,000,078, including several adjacent islets), a part of Italy, separated from the mainland by the Strait of Messina The triangular island (sometimes called Trinacria by the ancients) is the largest and most populous in the Mediterranean, it lies between the Ionian and Tyrrhenian seas, c 100 mi N of Africa Capes Lilibeo (or Boeo), Passero, and Peloro (or Punta del Faro) are the vertices of the triangle Sicily is an autonomous region under the Italian constitution of 1947, with Palermo as the capital The region is divided into the provinces of Palermo, Agrigento, Caltanissetta, Catania, Enna, Messina, Ragusa, Syracuse, and Trapani—all named after their chief cities Sicily is almost entirely covered by mountains, a continuation of the Apennines, the active volcano, Mt ETNA, is the highest The only wide valley is the fertile plain of Catania Some malarial areas have been reclaimed Sicily has long been noted for its fertility, pleasant climate, and natural beauties, but agriculture, its main resource, is hampered by absentee ownership, primitive methods of cultivation, and lack of irrigation Land reforms are under way Corn, barley, grapes, olives, citrus fruit, almonds, and some cotton are produced, mules, donkeys, and sheep are raised Tuna and sardine fishing are important industries Sicily has rich sulphur mines and exports sulphur, pumice, salt, wine, citrus fruit and their derivatives, fertilizers, and canned sardines The island has a long and colorful history The oldest known inhabitants were the Elymi, Sicani, and Siculi Phoenicians settled at Panormus (now PALERMO) and other places, the Carthaginians founded LILYBAEUM and Drepanum (now TRAPANI), while on the east and southeast coasts the Greeks founded (8th–6th cent B C) such cities as SYRACUSE, CATANIA, Zancle (now MESSINA), GELA, and SELINUS and settled in older towns such as SEGESTA The Greek cities flourished and in turn founded such cities as Acragas (now AGRIGENTO) and HIMERA Their original democratic governments were gradually usurped by tyrants, those of Syracuse taking the leadership Greek civilization was temporarily saved from Carthaginian expansion by the victory of Himera (480 B C), but later Roman and Carthaginian rivalry in Sicily led to the first of the PUNIC WARS and resulted (241) in Sicily's becoming a Roman colony The resources of the island were squeezed dry by the Romans, who also founded the large landed estates that have been the major economic evil of Sicily ever since Slave revolts were cruelly suppressed (late 3d cent B C) From the Greek and Roman periods there remains a great wealth of monuments, excavations yield ever more objects After the barbarian invasion, Sicily passed to the Byzantines (A D 535) and to the Arabs (9th cent) The Arabs promoted agriculture, commerce, and the arts and sciences They were displaced by the Norman conquest (1060–91), led by ROGER I. ROGER II became (1130) the first king of Sicily, he forced (1139) Pope Innocent II, who claimed suzerainty over Sicily, to invest him with the kingdom, which included the Norman possessions in S Italy His brilliant court did much to introduce Arabic learning to Western Europe His last direct descendant, CONSTANCE, married Emperor Henry VI, their son and heir, Emperor FREDERICK II (1197–1250), was more interested in Sicily, where he resided in splendor, than in the Holy Roman Empire After his death and the failures of the last Hohenstaufen claimants (CONRAD IV, MANFRED, and CONRADIN) Pope Clement IV crowned CHARLES I (Charles of Anjou, a brother of LOUIS IX of France) king of Sicily as his vassal (1266) The unpopular government of the French caused an uprising (see SICILIAN VESPERS), and the Sicilians chose PETER III of Aragon as their king The resulting war between the ANGEVIN line and the Aragonese ended temporarily in 1302 with FREDERICK II (see ARAGON, HOUSE OF) becoming king of Sicily and Charles II of Anjou keeping S Italy (see NAPLES, KINGDOM OF) In 1372 Joanna I of Naples formally renounced Sicily The Sicilian branch of Aragon becoming extinct, Sicily reverted to the main branch in 1409 Ruled by Spanish governors, the island deteriorated and passed into the hands of a few powerful nobles and ecclesiastics In 1713 the Peace of Utrecht gave Sicily to Savoy, which in 1720 exchanged it with the emperor for Sardinia However, as a result of the War of the POLISH SUCCESSION both Sicily and Naples came (1735) under the rule of Don Carlos of Bourbon (later CHARLES III of Spain) The BOURBON kings resided at Naples, except in 1799 and from 1806 to 1815, when Naples was under French domination The two kingdoms were merged, despite Sicilian protests in 1816, when FERDINAND I styled himself officially king of the TWO SICILIES The Sicilian spirit of independence (still manifested in the MAFIA) gave rise in 1820 and in 1848–49 to revolutions, which were mercilessly repressed, the bombardments of Messina (1848) and of Palermo (1849) earned FERDINAND II the name King Bomba GARIBALDI, in 1860, conquered the island, which voted its incorporation into the kingdom of Sardinia In the Second World War an Allied landing was effected from North African bases on July 9–10, 1943 After heavy fighting, the Allied conquest of the island was completed by the fall of Messina on Aug 8, 1943 See A H Allcroft, *A History of Sicily* (1890), E A Freeman, *History of Sicily* (4 vols 1891–94), Ashley Brown, *Sicily, Present and Past* (1928)

Sickingen, Franz von (frants' fŏn zĭ'kĭng-un), 1481–1523, German knight, protector of religious reformers Though he inherited large estates, he served as soldier of fortune under Francis I of France and later Emperor Charles V He came under the influence of Ulrich von HUTTEN, took the side of Reuchlin and Luther, and gave refuge to persecuted reformers at Ebernburg and his other castles Fired by personal ambition, he then set out with a private army to make war against the ecclesiastical princes, aiming at the secularization of their lands He declared war on the archbishop of Trier and in 1522 laid siege to the city, which, however, resisted successfully Sickingen was placed under the ban of the empire Besieged in his castle of Landstuhl by the princes of Trier, Hesse, and the Palatinate, he was forced to capitulate and died of his wounds His defeat symbolized the end of the power of German knighthood Sickingen appears, much romanticized, in Goethe's *Götz von Berlichingen* and Wilhelm Hauff's *Lichtenstein*

sickle, agricultural implement for cutting hay crops or ripe grain It consists of a curved blade with a short handle The cutting edge of the grass sickle is smooth, but the sickle for cutting ripe grain has fine teeth The sickle was one of the earliest agricultural implements, in the early instruments the blade was of wood and the teeth were flint In the Bronze Age, bronze sickles were much like modern sickles in form In the earliest Bible times, the sickle was in general use (Deut 16 9) The sickle and the SCYTHE were the reaping and mowing implements of colonial America, and they are still much used for harvesting As the standard implement for reaping, the sickle was displaced by the CRADLE SCYTHE, or cradle

Sickles, Daniel Edgar, 1819–1914, American politician, Union general in the Civil War, b New York city, educated at the Univ of the City of New York (now New York Univ) Sickles became a lawyer and a Democratic politician A member of Congress (1857–61), he was acquitted in 1859 of the murder of Philip Barton Key, whom he shot and killed in Washington because of attentions to Sickles's wife In the Civil War, Sickles was a brigadier general commanding New York volunteers in the Peninsular campaign (1862) He led a division at Antietam and Fredericksburg (1862) and the 3d Corps at Chancellorsville and in the GETTYSBURG CAMPAIGN At Gettysburg he lost a leg in the fighting at the Peach Orchard General Meade alleged that Sickles disobeyed orders in placing his corps there, a move which nearly caused the loss of the Round Tops He saw no active service for the rest of the war but remained in the army till 1869, when he was retired as a major general His severity as Reconstruction commander in the Carolinas (1865–67) led President Johnson to transfer him to another command. As minister to Spain (1869–73), Sickles sought to precipitate hostilities with that country over the VIRGINIUS affair, but Hamilton Fish intervened and brought about an amicable settlement He later held various political offices in New York and served again (1893–95) in Congress See biography by Edgcumb Pinchon (1945)

Sicyon (sĭ'shēŏn, sĭ'sēŏn), ancient city, Greece, in the Peloponnesus, W of the Asopus river 2 mi S of the Gulf of Corinth, and NW of Corinth It was famous both for its art and for its political history The bronze work of Sicyon was mentioned by Strabo, Pamphilus and Apelles were among the famous artists who studied at the Sicyonian school of painting founded by Eupompus, Canachus and Lysippus were native sculptors CLEISTHENES was a powerful Sicyonian despot of the 6th cent B C After a period of rule by tyrants, ARATUS reintroduced democracy (3d cent B C), and Sicyon joined the Achaean League With the destruction of Corinth by the Romans (146 B C) Sicyon briefly regained power, but subsequently declined.

Siddhartha see BUDDHA

Siddim, locale of the battle of the kings, said to mean the valley of the Dead Sea Gen 14

Siddons, Sarah Kemble, 1755–1831, English actress The most distinguished of the famous KEMBLE family, she had early theatrical experience in her father's traveling company and at 18 married William Siddons an actor In 1774 her portrayal of Belvidera in Otway's *Venice Preserved* attracted the attention of Garrick, who engaged her for Drury Lane in 1775–76, but she failed In 1782 after appearances in the provinces had greatly increased her powers, she played Isabella in Southerne's *Fatal Marriage* at Drury Lane Her success was instant and indisputable, and her fame grew in such roles as Queen Katharine, Desdemona, and Ophelia and as Volumnia to the Coriolanus of John Philip Kemble As Lady Macbeth she was unequaled Her warm, rich voice and majestic presence held audiences in awe, and she won the praise of Hazlitt Leigh Hunt, and Byron Her portrait, *The Tragic Muse*, was painted by Reynolds, and her statue, by Chantrey, is in Westminster Abbey See her *Reminiscences, 1773–1785* (ed by William Van Lennep 1942), James Boaden, *Memoirs of Mrs Siddons* (1827), André Maurois, *Portrait d'une actrice* (1928), Yvonne ffrench, *Mrs Siddons Tragic Actress* (1936)

siderite (sĭ'durĭt) or **chalybite** (kă'lĭbĭt), a mineral, varying in color from brown, green, gray, and black to white and occurring in nature in massive and crystalline form A carbonate of iron, it serves as an ore of the metal especially in the British Isles It is widely distributed, being found also in the United States, Europe, South America, and Australia

Sidgwick, Henry (sĭj'wĭk), 1838–1900, English philosopher He studied at Trinity College, Cambridge Univ, and taught moral philosophy there from 1883 until 1900 The basis of his thought was English utilitarianism Analyzing the intuitionist and utilitarian arguments, he indicated their interrelationship by showing how the doctrine of common sense rests on the principles of utilitarianism In *The Methods of Ethics* (1874) he differentiated between two ethical ideas of utilitarianism one based on self-interest and the other on altruism Sidgwick was active in the administrative affairs of the university, and he was interested in the advancement of woman's rights, aiding in the planning and founding of Newnham College for women He was also a founder of the Society of Psychical Research Other major published works are *Principles of Political Economy* (1883), *Philosophy Its Scope and Relations* (1902), and *The Development of European Polity* (1903)

Sidi-bel-Abbès (sē'dē-bĕl-ăbĕs'), city (pop. 52,881) NW Algeria, in the Tell region It grew up around an old walled town and about a French redoubt built in 1843 It became the headquarters of the Foreign Legion The city is an agricultural market

Sidlaw Hills (sĭd'lô), range, E Scotland, extending NE from near Perth into Angus co The highest hills, including Dunsinane, are over 1,000 ft

Sidmouth, Henry Addington, Viscount, 1757–1844, English statesman. He entered Parliament in 1783 and in 1789 became speaker of the House of Commons Sidmouth subscribed to William Pitt's policies in the French wars, and when Pitt was forced to resign because of his disagreement with George III on the Catholic question, Sidmouth served as prime minister (1801–4) The chief event of his administration was the Treaty of Amiens (1802) with Napoleon On the renewal of war, his incompetence forced him to give way to Pitt He was president of the council under Pitt (1805), Charles James Fox and Lord Grenville (1806–7), and Spencer Perceval (1812) As home secretary (1812–21) under Lord Liverpool he incurred great odium for his reactionary policy of repression in the face of widespread hunger and discontent

Sidney or **Sydney, Algernon,** 1622–83, English republican, son of Robert Sidney, 2d earl of Leicester His early activities included service in the parliamentary forces and in the council of state (1652–53, 1659), but he opposed Oliver Cromwell's dictatorial

rule At the Restoration he went into exile in 1660, returning by permission in 1677 to attend to private affairs Stirred by the threat to constitutional government in the reaction following the Popish plot, he joined Lord William Russell and others in vague plots for an insurrection, perhaps to make James Scott, duke of Monmouth, a constitutional monarch This conspiracy was discovered by the exposure of another one, the Rye House Plot After an unfair trial under Jeffreys of Wem, Sidney was sentenced to death for treason and executed His name was cleared in 1689 His chief work was *Discourses concerning Government* (1698) See biography by A C Ewald (1873)

Sidney or **Sydney, Sir Philip**, 1554–86, English soldier, statesman, and author Educated at Oxford and sent abroad by his father and his uncle the earl of Leicester, he was one of the chief ornaments of Queen Elizabeth's court and a model of his age's ideal of knighthood His literary works were circulated only in manuscript during his lifetime His unfinished *Arcadia* (1590) was a prose romance written for his sister Mary, countess of Pembroke, the original version, simpler and complete, was first printed by Albert Feuillerat in 1926 Sidney's excellent critical work appeared in two slightly different versions, *The Defense of Poesie* and *An Apology for Poetry* (both 1595) *Astrophel and Stella* (1591) is one of the greatest sonnet sequences in English and was inspired by his love for Penelope Devereux, later Lady Rich Sidney himself married Frances Walsingham in 1583 He served in several diplomatic missions on the Continent and in 1585 was made governor of Flushing while England was active against Spain in the Netherlands At the battle of Zutphen (1586) he was fatally wounded See his works (ed by Albert Feuillerat, 4 vols, 1912–26), biographies by M W Wallace (1915) and Mona Wilson (1931), bibliography by S A Tannenbaum (1941)

Sidney, Robert see Leicester, Robert Sidney, earl of

Sidney. **1** Town (pop 1,290), co seat (since 1851) of Fremont co, SW Iowa, near the Missouri S of Council Bluffs, inc 1870 An annual championship rodeo is held in August **2** City (pop 2,978), co seat of Richland co, E Mont, in the Yellowstone valley near the N Dak line, inc 1911 The principal city of the Lower Yellowstone project (est 1906 by the Bureau of Reclamation) it has a sugar refinery for sugar beets grown in the area **3** City (pop 3,388), co seat of Cheyenne co, W Nebr, in the Great Plains region, on Lodgepole Creek between the North Platte and South Platte rivers, founded 1867 by the Union Pacific RR It grew up around Fort Sidney (1867–94) and was an early supply point during the Black Hills gold rush (1876–77) The city is a grain-shipping and farm-trade center **4** Village (pop 3 012), S N Y, NE of Binghamton, inc 1888 There is a large magneto plant, and bluestone is quarried **5** City (pop 9,790), co seat of Shelby co, W Ohio, on the Great Miami and N of Dayton, settled 1820 Its manufactures include machine tools, refrigeration units, washing machines, and steel scrapers

Sidney Sussex College see Cambridge University

Sidon (sī'dun), ancient city, one of the great seaports of the Phoenicians, in the present Lebanon It had extensive trade and also in a later period was known for its purple dyes and for glassware (glass blowing is said to have begun at Sidon) Though eclipsed by its own colony, Tyre, Sidon continued to be a port of prominence under the Persians, in the Hellenistic world, and in the later Roman Empire Saida now occupies the site It is often mentioned in the Bible Gen 10 5,15, 1 Kings 16 31, Mat 15 21, Acts 27 3

Sidonius, Apollinaris. see Apollinaris Sidonius

Sidra, Gulf of (sē'drŭ), arm of the Mediterranean Sea, lying between Misurata and Bengasi, Libya

Siebenbürgen, Rumania see Transylvania

Siebengebirge (zē'bungubĭr"gu) (Ger =seven mountains), small range of the Rhenish Slate Mts, W Germany Of volcanic origin, it extends for c 10 mi S of Bonn along the right bank of the Rhine and rises to 1,509 ft in the Grosser Ölberg One of the most scenic spots of the Rhineland, it is particularly famous for the Drachenfels

Siebold (zē'bôlt), family of German scientists It includes **Karl Kaspar von Siebold** (karl' kas'par fŭn), 1736–1807, anatomist and surgeon, who was professor at the Univ of Würzburg from 1769 He was ennobled in 1801 A son, **Adam Elias von Siebold** (ä'dăm ālē'as), 1775–1828, was noted as an obstetrician He taught at the universities of Würzburg (1799–1816) and Berlin (from 1816), where he founded a noted obstetrical clinic **Eduard Kaspar von Siebold** (ā'dōōart), 1801–61, a son of A E von Siebold, was also a noted obstetrician He was professor at the universities of Marburg (1829–33) and Gottingen (from 1833). Another son, **Karl Theodor Ernst von Siebold** (tā'ōdōr ĕrnst'), 1804–85, also a physician, was noted as one of the foremost biologists of his time He specialized in the comparative anatomy of invertebrates and wrote the first volume (1846) of *Lehrbuch der vergleichenden Anatomie*, this volume appeared in English under the title *Anatomy of the Invertebrata* (1854). Especially noteworthy is his research on intestinal parasites and his work on the classification of invertebrates He taught from 1853 at the Univ of Munich

Siebold, Philipp Franz van (fē'lĭp frants' vän), 1796–1866, German naturalist and physician, noted for his studies of the natural history and ethnography of Japan Sent (1823) by the Dutch East India Company on a scientific mission to Japan, he was expelled (1830) for obtaining maps not issued to foreigners. On a second visit (1859–62) to Japan he served as mediator between Japan and the European powers He was ennobled by Holland in 1845 Chief of his authoritative works is *Nippon Archiv zur Beschreibung von Japan* (20 parts, 1832–51)

Siegbahn, Karl Manne Georg (kärl' mä'nu vä'ôryu sēg'bän), 1886–, Swedish physicist (He was professor at the universities of Lund (1920–23)) and Uppsala (1923–36) and in 1937 became director of the Research Institute for Physics of the Academy of Sciences, Stockholm He worked in electricity and magnetism, then specialized in X-ray spectroscopy, evolving a method for the precise measurement of X-ray wave lengths For this work he received the 1924 Nobel Prize in Physics Some of his later research deals with "ultra-soft" X rays Siegbahn wrote *The Spectroscopy of X-Rays* (Eng. tr, 1924)

siege (sēj), belea guerment of a city or fortress Before the use of gunpowder battering rams were employed to reduce the walls or gates of a fortified place In besieging Carthage the Romans used as many as 6,000 men merely to build a "penthouse" or shelter to protect the wielders of the rams from arrows, stones, and hot oil Huge shields of wicker covered with wood or hide (mantelets) served to protect the artificers Mounds were built by both besieger and besieged in a race to attain heights from which the adversary could be assailed Engines of war were brought into play by both sides to hurl stones, spears, pots of fire, and arrows It was the practice among the ancients for besiegers to build a wall (circumvallation) around their objective and a second wall (contravallation) around their own army as security against relieving forces In the Middle Ages a long pivoted pole weighted with stones (the trébuchet) was used to hurl projectiles into the enemy stronghold Mining was resorted to by the assailants from earliest time, and the besieged dug countermines in defense This tactic greatly increased in effectiveness with the introduction of explosives The history of siegecraft parallels the development of fortification Castles were fortresses as well as dwellings In many of the cities of the Old World there are still vestiges of the walls and gates which once enclosed them Notable sieges of history include those of Syracuse (415–413 B C), Constantinople (1453), Londonderry (1689), Quebec (1759–60), the Alamo in Texas (1836), Richmond (1864–65), Port Arthur (1904), and the Alcazar in Toledo (1936) During the First World War powerful artillery, moved about by tractor and rail and out of range of the defenders sent shells into the cities and strongholds In the Russo-Finnish War and the Second World War cities behind the Mannerheim, Maginot, and Siegfried lines yielded when the enemy breached or flanked the fortifications The failure of the Nazi forces to oust the defenders of besieged Stalingrad in 1942–43 ultimately cost them 22 divisions See Sir Charles W C Oman, *History of the Art of War in the Middle Ages* (1926), J R Newman, *The Tools of War* (1942)

Siegen, Ludwig von (lōōt'vĭkh fŭn zē'gun), c 1609–1680, German engraver, b Holland, educated in Germany He invented (c 1640) the mezzotint process of engraving Among his seven known plates are portraits of Amalia Elisabeth of Hesse and of William II, prince of Orange, and his wife, Mary His new method of engraving, long a secret, was revealed to Prince Rupert of the Palatinate in 1654 Through him it was communicated to the English engravers A collection of Siegen's work is in the British Museum.

Siegen (zē'gun), city (1939 pop 40,269, 1946 pop 29,922), in the former Rhine Prov of Prussia, W Germany, on the Sieg, a tributary of the Rhine, and W of Bonn It lies in an iron-mining region and has iron foundries More than half the city was destroyed in the Second World War Rubens was born here

Siegfried (sēg'frēd, Ger. zēk'frēt) or **Sigurd** (sĭ'gurd), great hero of Germanic mythology Seigfried is the ideal hero, brave and true In the Nibelungenlied, he is the conqueror of Brunhild and the husband of Kriemhild He is murdered by Hagen, a Germanic knight, who was instigated by Brunhild In the Volsungasaga, as Sigurd (the Icelandic form of the name) he plays a role similar to that in the *Nibelungenlied*, he marries Gudrun (Kriemhild) In the opera *Siegfried* by Richard Wagner (the third opera of the Ring cycle, see Nibelungen), Siegfried is son of Sieglinde and Siegmund. He kills the dragon Fafnir, understands the language of the birds, gains the ring, and wins Brünnehilde

Siegfried, André (ädrā' sēgfrēd'), 1875–, French economist and historian. He became professor at the École des Sciences politiques in 1911 and at the Collège de France in 1933 He is the author of many books on economics and political science His translated works include *Post-War Britain* (1925), *America Comes of Age* (1927), *France* (1930), *Impressions of South America* (1933), *England's Crisis* (1935), *Canada* (1937), and *Suez and Panama* (1940)

Siemens, Ernst Werner von (sē'mŭns, Ger ĕrnst' vĕr'nur fŭn zē'muns), 1816–92, German electrical engineer and inventor He was a founder (1847) and director of Siemens and Halske, a firm which made electrical apparatus He invented an electroplating process (1841) and an electric dynamo, laid the first telegraph line and built the first electric railway in Germany, and, with his brother Sir William Siemens, developed (1866) a widely used process of steelmaking The Siemens unit of electrical resistance was proposed by him In 1884 he founded a research laboratory at Charlottenburg See his *Personal Recollections* (1892, Eng tr., 1893) and his *Scientific and Technical Papers* (Eng tr, 1892–95)

Siemens, Sir William (sē'mŭnz), 1823–83, British electrical engineer, b Germany, brother of Ernst Werner von Siemens Originally his name was Carl Wilhelm von Siemens After visiting England to introduce some of his own and his brother Ernst Werner's inventions, he remained there and became a naturalized British subject He was head of the English branch of the Siemens firm, which was founded in Germany by Ernst Werner and J G Halske and made telegraphic and other electrical apparatus and handled electrical engineering projects With his brother Frederick he developed an improved regenerative furnace later of great importance to a number of industries The furnace was used especially by the Siemens brothers in improving the steel made by their process of manufacture, the process and a variation of it introduced by Pierre Martin came to be known as the open-hearth process

Siemering, Rudolf (rōō'dôlf zē'murĭng), 1835–1905, German sculptor His monuments include memorials to Frederick the Great (Marienburg), Luther (Eisleben) and Frederick William I Haydn, Mozart, and Beethoven (all Berlin), *Victory of 1870* (Leipzig), an equestrian statue of Kaiser Wilhelm I (Magdeburg), and the elaborate Washington Memorial, unveiled in 1897 in Fairmount Park, Philadelphia

Siemianowice Slaskie, Pol *Siemianowice Śląskie* (shĕm'yanôvē'tsĕ shlôn'skyĕ), industrial town (pop 32,708), Silesia prov, SW Poland, just N of Katowice

Siena (sē'ĕ'nu, Ital syā'na), city (pop 36,064), capital of Siena prov, Tuscany, central Italy It is one of the richest art cities in Italy Probably of Roman origin, it became a free commune (12th cent) and, gradually extending its territory, developed into a wealthy republic In spite of continuous internal strife between popular and aristocratic factions and frequent wars (particularly with Florence), Siena kept its independence Sienese art reached its zenith in the 13th to 15th cent The local interpretation of the Gothic style produced fine works of architecture and sculpture, but the fame of Siena is due mainly to its school of painting (13th–14th cent), of which Duccio di Buoninsegna, Simone Martini, and the two Lorenzetti were the greatest representatives The university was founded in the 13th cent and still has several faculties The Petrucci family ruled Siena (1487–1523), then the Spanish and the French struggled for the city, which finally fell, after a long siege (1554–55), to the army of Emperor Charles V and passed to Cosimo de' Medici, duke of Tuscany The conch-shaped main square, called the Piazza del Campo, is surrounded by notable buildings—the imposing Gothic Palazzo Pubblico, with frescoes by Ambrogio Lorenzetti and Martini and with the Fonte Gaia (a fine sculptured fountain by Jacopo della Quercia), the slender Mangia Tower, and medieval palaces Here the Palio festival, a horse race of medieval origin, is still held twice a year The cathedral, one of the finest examples of Italian Gothic, has an elaborate façade of polychrome marbles The adjoining Piccolomini Library is adorned with Pinturicchio's famous frescoes. There are also many fine Gothic and Renaissance palaces St Catherine of Siena was born here, her home, a much-visited shrine, has frescoed chapels Siena has fine cultural traditions and has several learned societies, libraries, and archives It is also noted for the wine produced in the surrounding hills and for the Siena marble, a rich orange with purple and black veinings

Sienkiewicz, Henryk (hĕn'rĭk shĕnkyĕ'vĕch), 1846–1916, Polish novelist and short-story writer, educated in Warsaw. He won the 1905 Nobel Prize in Literature Sienkiewicz is probably best known to English readers through his *Quo Vadis?* (1895, Eng tr., 1896), a novel of the time of Nero His trilogy *With Fire and Sword* (1883, Eng. tr., 1890), *The Deluge* (1886, Eng tr, 1891), and *Pan Michael* (1888, Eng tr., 1893) glorified the struggle for Polish national existence in the 17th cent. He

traveled in the United States in 1876, and some of his short stories collected in *Yanko the Musician and Other Stories* (1879, Eng tr, 1893) mirror his impressions Also translated were his historical novel *The Knights of the Cross* (1900, Eng tr, 3 vols, 1897–1900) and the psychological novel *Without Dogma* (1891, Eng tr, 1893) Sienkiewicz died in Switzerland, where he was active in the International Red Cross in the First World War See biography by M M Gardner (1927).

Sierra, Justo (hōō'stō syĕ'rä), 1848–1912, Mexican educator and historian He entered the literary life as a romantic poet but later, fired with zeal to bring light to his nation, he devoted himself to founding schools, lecturing, and seeking in every way to quicken new intellectual life in Mexico He was to a large extent responsible for the intellectual renaissance in Mexico early in the 20th cent He was minister of education under Porfirio Díaz and refounded the National Univ of Mexico His best-known work is a history of Mexico showing the growth of national feeling and culture, *La evolución política del pueblo mexicano* (1900–1902)

Sierra Blanca (sĕĕ'rə blăng'kə, sēr'ə), unincorporated town (pop c 800), co seat of Hudspeth co., extreme W Texas It is a railroad junction in a ranching country

Sierra Blanca (sĕĕ'rə blăng'kə), part of the Sangre de Cristo mts, S Colo The highest summit is Blanca Peak (14,363 ft)

Sierra Leone (sĕĕ'rə lēō'nē, lēōn', sēr'ə lēōn'), British colony and protectorate (27,925 sq mi, pop c 2,087,000), W Africa, on the Atlantic Ocean Freetown is the capital It is bordered on the northwest, north, and northeast by French Guinea and on the southeast by Liberia The colony, a relatively small peninsula, is covered with ranges of hills which rise to c 3,000 ft The protectorate comprises swamps and mangroves in the south, high savannas in the central zone, and in the north an arid plateau rising to c 6,000 ft The chief crops and exports of Sierra Leone are palm oil, cacao, coffee, and ginger The staple food is rice Diamonds, gold, chrome, and iron are mined Sierra Leone was visited (c 1462) by the Portuguese They were followed a century later by English slave traders During the 17th and 18th cent, Sierra Leone became the haunt of pirates In the late 18th cent, through the efforts of the British abolitionists, it was settled by liberated slaves In 1808 the British government took over the administration of the colony, and in 1896 the protectorate was proclaimed Sierra Leone is ruled by an appointed governor with the aid of a nominated executive council and a partly elective legislative council

Sierra Madre (sĕĕ'rə mä'drā), city (1940 pop 4,581, 1947 special census pop 6,669), S Calif, at the foot of Mt Wilson near Pasadena, in an orange-growing region, inc 1907

Sierra Madre (syĕ'rä mä'dhrā), chief mountain system of Mexico, including the Sierra Madre Oriental, the Sierra Madre Occidental, and the Sierra Madre del Sur Lifting their peaks into the cold, high air above deep, hot valleys, blocking passage to man with rough ridges and almost impassable canyons (*barrancas*), and holding an unbelievable store of minerals, these ranges determine climate, crops, roads, and wealth They have been the greatest single geographic force in the lives of the people of Mexico The **Sierra Madre Oriental** (ōryĕntäl'), beginning in barren hills S of the Rio Grande, runs for 1,000 mi roughly parallel to the coast of the Gulf of Mexico, ranging from 10 to 200 mi inland It reaches an elevation of 18,700 ft in Orizaba peak, which belongs also to the volcanic belt, the Cordillera de Anáhuac This belt, which divides Mexico in half at about lat 19° N and includes the peaks Popocatepetl and Ixtaccihuatl, on the other end joins the **Sierra Madre Occidental** (ōk'sēdĕntäl') This range, paralleling the Pacific coast, extends SE from Arizona Its main escarpment is more abrupt than that of the eastern cordillera and averages 7,000 ft in height From c 5,000 ft in the north, elevations reach over 10,000 ft in the south The two ranges and the volcanic belt enclose the vast central region of Mexico, including the plateau of Anáhuac The **Sierra Madre del Sur** (dĕl sōōr') is a tumbled, broken mass of uplifted mountains, which touch the Pacific coast but form into no clearly defined range It spreads over S Mexico between the volcanic belt and the Isthmus of Tehuantepec

Sierra Madre, Rocky Mts see Park Range

Sierra Maestra (syĕ'rä mäĕ'strä), rugged mountain range, SE Cuba, rising abruptly from the coast. Although it consists of connecting ranges with local names, the Sierra Maestra is the dominant system of Cuba, rich in minerals, especially copper, manganese, chromium, and iron. Pico Turquino is the highest point

Sierra Morena (syĕ'rə mōrā'nə), mountain range, SW Spain, extending between the Guadiana and Guadalquivir rivers from the Sierra de Aracena near the Portuguese border eastward to the Sierra de Alcaraz in Murcia. The highest peak is c.4,500 ft. high. The mountains are rich in minerals

Sierra Nevada (syĕ'rä nävä'dhä), chief mountain range of S Spain, in Granada It is c 60 mi long The highest peak of the range and of Spain is Mulhacén (11,411 ft)

Sierra Nevada (sĕĕ'rə nəvă'də), mountain range, E Calif, beginning at Tehachapi Pass, SE of Bakersfield, and running c 430 mi northwest to the gap S of Lassen Peak The eastern front has steep walls and rugged summits, the western face slopes gradually into the Sacramento and San Joaquin valleys Mt Whitney is the highest peak in the range Truckee Pass, just N of Lake Tahoe, is the best known of the few passes through the Sierra Nevada The snow-covered peaks feed the many streams on the western slope used for water power and irrigation in California A small portion of the range is in Nevada The range contains three national parks, Yosemite, Sequoia, and Kings Canyon See Roderick Peattie, ed, *The Sierra Nevada* (1947), George Hinkle and Bliss Hinkle, *Sierra-Nevada Lakes* (1949)

Sierra Nevada de Mérida (syĕ'rä nävä'dhä dā mä'rēdhä), mountain range, NW Venezuela, a spur of the Andes, beginning at the Colombian border and extending 200 mi NE to the Caribbean coastal range From 30 to 50 mi wide, it rises between the Orinoco llanos and Maracaibo lowlands to perpetually snow-capped peaks which are over 15,000 ft high

Sierre (syĕr), Ger *Siders* (zē'dərs), town (pop 6,306), Valais canton, Switzerland There are hydroelectric stations and aluminum works in the area

Sieyès, Emmanuel Joseph (ämanüĕl' zhôzĕf' syāĕs'), 1748–1836, French revolutionary pamphleteer and statesman He was a clergyman before the Revolution and was known as Abbé Sieyès His pamphlet, *Qu'est-ce que le tiers état?* [What is the third estate? (1789), was immensely popular throughout France, and he was elected deputy to the States-General of 1789, in which he played a leading part He edited the tennis court oath, the Declaration of the Rights of Man, and the constitution of 1791 (see French Revolution) As a member of the Convention he voted for the execution of Louis XVI His prudent silence enabled him to live through the Reign of Terror, and after the overthrow of Robespierre on 9 Thermidor (1794) Sieyès was one of the leaders in the Thermidorian reaction In 1795 he took part in the peace negotiations with the Batavian Republic, and in 1799 he entered the Directory He conspired (1799) with Bonaparte in the overthrow of the Directory by the coup d'état of 18 Brumaire Sieyès became, with Bonaparte and Roger Ducos, one of the three provisional consuls, his sketch for the Constitution of the Year VIII was changed in decisive points by Bonaparte, and Sieyès and Ducos were replaced (Dec, 1799) as consuls by Cambacérès and C F Lebrun He later became senator and count of the empire and after the Bourbon restoration lived in exile (1815–30) at Brussels Sieyès prided himself on his logical and systematic constitutional drafts His chief contribution to political thought was his defense of government by representatives unbound by electoral mandate See studies by J H Clapham (1912) and G G Van Deusen (1932)

Sifton, Sir Clifford, 1861–1929, Canadian statesman, b Ontario Removing to Manitoba, he served (1888–96) as a Liberal in the legislative assembly there In 1896 he entered the Canadian House of Commons As minister of the interior (1896–1905) in Laurier's cabinet he pursued a vigorous immigration policy, his aggressive promotion brought hordes of people from the United States and Europe to settle in W Canada In 1905 he resigned his ministry in disagreement with Laurier over the school question in Alberta and Saskatchewan, and in 1911 he withdrew from Parliament and from the Liberal party in opposition to Laurier's reciprocal trade policy Sifton was knighted in 1915 See J W Dafoe, *Clifford Sifton in Relation to His Times* (1931)

Sigbert I (sĭ'gbûrt), d 575, Frankish king of Austrasia (561–75), son of Clotaire I He married Brunhilda, and his brother, Chilperic I of Neustria, married and later murdered her sister Galswintha When Chilperic attacked Austrasia in 573, a desire for vengeance made Sigebert vindictive in the fighting by which he overran Neustria About to be proclaimed king of Neustria, he was assassinated by order of Fredegunde, Chilperic's second wife.

Sigel, Franz (fränts' sē'gul), 1824–1902, Union general in the Civil War, b Sinsheim, Baden, Germany A graduate of the military academy at Karlsruhe (1843), Sigel became an officer in the army of Baden In 1848 and in 1849 he was a leader of revolutionary forces, and after the Baden insurrection of 1849 failed, he fled to Switzerland Sigel came to the United States in 1852, living first in New York city and then in St. Louis There at the beginning of the Civil War he organized the 3d Missouri Volunteers His command was routed at Wilson Creek, but Sigel later distinguished himself in the campaign that rid Missouri of Confederate forces, particularly at the battle of Pea Ridge Promoted major general of volunteers (March, 1862), he led a corps of Pope's Army of Virginia at the second battle of Bull Run (Aug, 1862) In 1864 he was given command of the Dept of West Virginia, but after Breckinridge defeated him at New Market (May), he was replaced by David Hunter In 1867 Sigel removed to New York city, where he held several political offices and was an editor of German periodicals

Siger de Brabant (sēzhĕr' du brəbä'), 13th cent, French philosopher He was at the Univ of Paris in the 1260s and 1270s and was included in the condemnation of Aristotelian teaching in 1270 He was forbidden to teach seven years later Siger's works reveal the Averroism for which he was condemned, it was Siger, indeed, who chiefly supported the Aristotle of Averroës against the triumphant Aristotle of St Thomas Aquinas Siger's philosophy followed Averroës closely He held that all men have one intellectual spirit, that each man is mortal, but mankind is immortal, and that all is determined

Sigerson, Dora see Shorter, Clement King

sight, see vision.

Sigillaria (sĭjĭlā'rēə), genus of club moss allied to Lepidodendron, abundant in the Carboniferous period of geologic time The trunk was thick and rarely branched, and the erect leaves were larger than those of lepidodendron, the leaf scars were in vertical rows The root stocks of Sigillaria, as of Lepidodendron, are known as stigmaria

Sigismund (sĭ'jĭsmund, sĭ'gĭs-), 1368–1437, emperor (crowned 1433) and German king (1410–37), king of Hungary (1387–1437) and of Bohemia (1420–37), elector of Brandenburg (1378–1415), son of Emperor Charles IV Though betrothed to Mary, daughter of Louis I of Hungary, he was excluded from power till 1387, when he was called to Hungary to rescue Mary from prison and to restore order After the Turkish victory of Kossovo (1389) Sigismund issued a call for a crusade, his army, gathered from all parts of Europe, was crushingly defeated by Bajazet I at Nikopol (1396) The same year he forced his brother, Emperor Wenceslaus, to name him vicar of the empire He put down a revolt (1403) in Hungary, where Lancelot of Naples briefly claimed the kingship In the disputed imperial election of 1410 both Sigismund and his cousin Jobst of Moravia claimed success, since Wenceslaus, though deposed in 1400, had never waived his title, there were, for a time, three emperors As a result of the Great Schism, there also were three popes The death of Jobst and the withdrawal of Wenceslaus made possible the unanimous reelection of Sigismund (1411) To heal the schism, Sigismund joined with Antipope John XXIII (see Cossa, Baldassarre) in summoning a council at Constance (see Constance, Council of) He further urged the attendance at the council of John Huss, who arrived with the emperor's guarantee of safe-conduct Huss antagonized Sigismund, who presided over the council, and Sigismund revoked the safe-conduct and approved his death sentence The schism was ended, but the burning of Huss hastened the Reformation in Bohemia and earned Sigismund the lasting hatred of the Czechs At the death (1419) of Wenceslaus, Sigismund's succession to Bohemia was bitterly opposed To secure an army, he persuaded Pope Martin V to proclaim (April, 1420) a crusade against the Hussites, he had himself crowned at Prague, but was defeated by the Hussites under John Zizka and withdrew In 1421 a Czech assembly declared him deposed, the throne being offered to a Polish prince, and in 1423 the Hussites began their incursions into Germany (see Hussite Wars) Disgust with the affairs of Germany and campaigns against the Turks kept Sigismund in Hungary most of this time A new crusade against the Hussites, who were led by Procopius the Great, ended in disaster Negotiations to heal the breach in the Church were resumed at the Council of Basel (see Basel, Council of) and resulted in compromise with the drafting (1433) of the Compactata The moderate wing of the Hussites (see Utraquists) having defeated the radicals at Lipany (1434) and the Compactata having been ratified at Jihlava (1436), the Bohemians accepted Sigismund's return to Prague (1436) Sigismund failed to keep his promises to the Czechs, and disorders broke out again before his death The last emperor of the Luxemburg dynasty, Sigismund arranged for the succession to his titles, including Bohemia and Hungary, of his son-in-law, Albert of Austria (later King Albert II) Brandenburg he had transferred in 1415, in payment of a debt, to Frederick of Hohenzollern (Frederick I, margrave of Brandenburg) See Archibald Main, *The Emperor Sigismund* (1903)

Sigismund I, 1467–1548, king of Poland (1506–48), son of Casimir IV He was elected to succeed his brother, Alexander I The enactment (1505) of the law *Nihil Novi*, which forbade the kings to enact laws without the consent of the diet, seriously handicapped Sigismund in his struggle with the nobility and the gentry Nevertheless, Sigismund established (1527) a regular army and a fiscal system to finance its maintenance He tried to check the progress of the Reformation but took no drastic action. In 1515 Sigismund entered into an alliance

with Emperor Maximilian I and consented to the marriage of the children of his brother, ULADISLAUS II of Bohemia and Hungary, with the grandchildren of Maximilian Through this double marriage contract Bohemia and Hungary passed to the house of Hapsburg on the death (1526) of Sigismund's nephew, Louis II Sigismund warred against Vasily III of Moscow, to whom he lost Smolensk He fought without result against the Teutonic Knights, however, when their grand master, Albert of Brandenburg, secularized the order he did homage (1525) to Sigismund, who invested him with the domains of the order as the first duke of Prussia Sigismund sought peaceful relations with the khans of Crimea, but was nonetheless involved in border warfare with the Crimean Tatars Sigismund and his second wife, Bona Sforza, daughter of Gian Galeazzo Sforza of Milan, were patrons of Renaissance culture, which began to flower in Poland during their reign He was succeeded by his son, Sigismund II

Sigismund II or **Sigismund Augustus,** 1520–72, king of Poland (1548 72), son and successor of Sigismund I His main political accomplishment was the Union of Lublin (1569), by which he transferred his hereditary grand duchy of LITHUANIA to the Polish crown, thus creating the unified Polish-Lithuanian state His great diplomatic skill enabled him to conciliate the extreme nationalist elements both among the Poles and the Lithuanians who opposed the fusion The dissolution (1561) of the Livonian Knights enabled him to acquire Courland, Latgale, and other parts of LIVONIA, but he was drawn into conflict with Ivan IV of Russia, to whom he lost Polotsk (1563) The Reformation reached its height in Poland during Sigismund's reign, and in 1570 nearly all the Protestant sects entered into a union to strengthen their cause An open-minded and tolerant monarch, Sigismund nevertheless was a loyal Catholic and sought to counteract the Reformation by peaceful means He abolished (1562) ecclesiastic courts but introduced (1565) the Society of Jesus, which successfully preached the Catholic Reform The Renaissance flowered at this time (see also POLISH LITERATURE), and Sigismund himself was an accomplished humanist and theologian The last of the JAGIELLO dynasty to rule Poland, Sigismund died childless After an interregnum and the brief rule of Henry of Valois (later Henry III of France), Stephen Bathory was elected king (1575)

Sigismund III, 1566–1632, king of Poland (1587–1632) and king of Sweden (1592 99) He was the son of John III of Sweden and of Catherine, sister of Sigismund II of Poland, and thus united the VASA and JAGIELLO dynasties He was a Catholic, his marriage with Anne of Hapsburg linked him with the Catholic monarchs of Europe After the death (1586) of Stephen Bathory, Sigismund was elected to succeed him as king of Poland, largely through the aid of Jan ZAMOJSKI, who feared the candidacy of Maximilian of Austria Moreover, Sigismund vaguely promised to give Swedish Livonia to Poland In 1592 he succeeded his father on the Swedish throne, but his reluctance to accept Protestantism as the state religion in Sweden involved him in conflict with the Swedes and with his uncle, the regent (see CHARLES IX) Sigismund was defeated (1598) at Stangebro and was formally deposed by the Swedish diet in 1599 He did not renounce his claims to Sweden, and in 1621 war flared up with his nephew, GUSTAVUS II, to whom he lost most of Livonia when peace was made in 1629 Sigismund intervened in Russia in the TIME OF TROUBLES that followed the death of BORIS GODUNOV He supported the pretender DMITRI and hoped to conquer all Russia In 1610 the Russians elected Sigismund's son Ladislaus tsar, but Sigismund continued his military conquest and took MOSCOW In 1612, however, an improvised Russian army under Prince Pozharski expelled the Poles, and Michael Romanov was elected tsar of Russia Peace with Russia was made only under Sigismund's successor, his son Ladislaus IV, in 1634 Poland retained Smolensk and other border towns Sigismund's pro-Catholic policy helped to bring about the union (1596) of the Ruthenian Church in Poland-Lithuania with the Church of Rome His efforts to use Austrian aid in limiting the powers of the diet and the dissatisfaction of the Protestants led to the rebellion (1606-7) led by Nicholas Zebrzydowski, the palatine of Cracow Though the rebels were defeated, they won their cause, for no more attempts were made to change the constitution

Sigismund Augustus see SIGISMUND II

Siglufjord (sĭ'glōsfyôrd'), Icelandic *Siglufjörður* (sĭk'lufyûr''dhûr), town (pop 2,972), NE Iceland It is a port and exports herring

Sigmaringen (zē̆k'mărĭng''un), town (pop 6,158), capital of former Hohenzollern, after 1945 in Württemberg-Hohenzollern, S Germany It lies on the Danube and at the foot of the Swabian Jura First mentioned in 1077, the town was the residence of the HOHENZOLLERN-SIGMARINGEN family Kings Carol I and Ferdinand I of Rumania were born here The town is dominated by the large 16th-century castle, rebuilt after a fire in 1893 The Vichy government of France took refuge here in 1944–45

Signac, Paul (pôl' sēnyak'), 1863–1935, French postimpressionist painter Together with Seurat, he originated pointillism and painted in tiny dots of pure color He is best known for his Parisian street scenes

Signal Hill, city (pop 3,184), S Calif , inc 1924. Although an independent municipality, it is surrounded by the city of Long Beach Oil was discovered here in 1921.

signaling, communication of information by visible or audible means The fall of Troy was signaled to Greece by means of fires lighted on mountain tops Primitive peoples in Africa and elsewhere transmitted messages by drums, with the tone determining the meaning The American Indians employed smoke signals, and in the American Revolution the colonists used combinations of three articles—a barrel, a basket, and a flag placed in different positions atop a post In the early days of railroading, men were posted at places where accidents might occur, e g , at stations and tunnels, and they signaled to the engineer by flag or lamp Modern railroad signaling depends upon electrically operated indicators which constitute a SEMAPHORE system The position of a movable arm swinging from a pivot indicates whether the train can go forward or must wait and whether it should go rapidly or slowly In the interlocking and signaling system used at terminals, freight yards, sidings, and crossovers, coordination of movements of trains is achieved, when one unit is given clearance, all others that may possibly foul the section are signaled not to encroach or are barred from doing so by switching devices In automatic block signaling the line is divided into blocks, and each block is connected with its neighbors by electric circuits which pass either through wires alongside the line or through the rails Thus a signal, generally colored lights, indicates to the engineer whether or not the next block is clear This block-signal system is responsible for the infrequency of rear-end collisions on railroads Most electric trains, including subways, are equipped with automatic devices which turn the power off and the brakes on if the engineer ignores a stop signal Railroads also use light signals to duplicate the positions of a semaphore arm Brightly painted disks on swinging arms are sometimes used to convey information to approaching trains The electricity or compressed air used for actuating a signal system automatically may be further controlled by a signalman in a tower or other control center of a railroad In marine signaling, flags have been used for hundreds of years The International Code of Signals was compiled by the British government in 1857 and, by international agreement, was amended to the present system in 1901 It utilizes a number of flags of various colors and forms, each flag represents a certain letter or number, and the flags are hoisted to convey a message to another vessel or to the shore Blinker lights are much used by naval units At night flash lamps using Morse or another code may be used for signaling Fog signals are commonly used by vessels and lighthouses when visibility conditions make visual warnings ineffective They include bells, gongs, horns, compressed-air or steam whistles and sirens International law requires seagoing vessels to possess and use, in prescribed fashion, fog signals In modern times aerial and marine craft are commonly given directional data through RADIO BEACON signals Radio and telephone appliances have largely superseded other means of communication in military use

Signal Mountain, town (pop 1,308), E Tenn , near Chattanooga, settled 1911, inc 1919 It is on Signal Mt , which figured in the Chattanooga campaign during the Civil War

signature, in music see MUSICAL NOTATION

sign language, substitute for normal language, not including letter for letter signaling Celebrated sign languages have been developed by deaf-mutes, who usually use letter and word substitutes, by Trappist monks, who have a rule of silence, and by Plains Indians, where speakers of mutually unintelligible languages communicate freely Examples from the Plains Indian sign language are for a lie, first two fingers of the right hand spread apart and extended from the lips (i e , two tongues), a dog, same two fingers drawn across the breast (i e , track of a travois), a horse, same two fingers astride the extended fingers of the left hand (i e , something ridden) Many languages have conventionalized body gestures, such as nodding, some of these are highly elaborated to accompany or supplement speech (e g , the Neapolitan gesture language)

Signorelli, Luca (lōō'kä sēnyôrĕl'lē), 1441?-1523, Italian painter of the Umbrian school He had as master Piero della Francesca. Together they worked on the frescoes in San Francesco, Arezzo, forming a group of importance in the period that ushered in the genius of Michelangelo Signorelli's manner is marked by austerity, sadness, and vigorous realism He went to live in Cortona, where some of his paintings are to be seen He painted in the cathedral of Perugia, in Volterra, and at Monte Oliveto before undertaking (1499) the decoration of the Cappella Nuova in the Orvieto cathedral His *End of the World* there anticipates in some ways Michelangelo's *Last Judgment* His paintings in the Vatican, where he went in 1508, were later sacrificed to make way for some of Raphael's work In the Uffizi is a *Madonna and Child* in which Signorelli introduced a powerful treatment of anatomy, a new element in religious pictures Michelangelo admired this and was influenced by it The National Gallery of Art, Washington, D C , has two paintings

Sigourney, Lydia (Huntley) (sĭ'gûrnē), 1791–1865, American poet and author of numerous edifying books for the young, b Norwich, Conn From 1811 until her marriage to Charles Sigourney in 1819 she conducted girls' schools in Norwich and Hartford Conn Her sentimental verses soon won enormous popularity, and the editors of popular magazines competed for her prose and poetry Much of her writing shows a preoccupation with death, in the fashion of the period See her autobiographical *Letters of Life* (1866), G S Haight, *Mrs Sigourney, the Sweet Singer of Hartford* (1930)

Sigourney (sĭ'gurnē), city (pop 2,355), co seat of Keokuk co , SE Iowa, E of Oskaloosa inc 1858

Sigsbee, Charles Dwight, 1845–1923, American naval officer, b Albany, N Y , grad Annapolis, 1863 He saw service in the Gulf of Mexico in the Civil War, was subsequently stationed with the Asiatic squadron, taught at Annapolis, and served in the Hydrographic Office and the Coast Survey In 1897 he achieved the rank of captain and commanded the MAINE until it was destroyed in Havana harbor He was commended for his judicious action in averting trouble pending investigation of the incident While in command of the *St Paul* in the Spanish-American War, he defeated the destroyer *Terror* and the cruiser *Isabella II* Commissioned rear admiral (1903), he commanded the Caribbean squadron and then a squadron of the Atlantic Fleet He invented several marine instruments useful in deep-sea exploration He wrote *Deep-Sea Sounding and Dredging* (1880) and *The "Maine" an Account of Her Destruction in Havana Harbor* (1899)

Sigurd see SIEGFRIED

Sigurdsson, Jon, Icelandic *Jón Sigurðsson* (yōn' sĭ'khurdhsōn), 1811–79, Icelandic statesman and historian He went to Copenhagen in 1833 to study classical languages but soon developed the interest which resulted in his becoming the outstanding authority on Icelandic literature and history He was active in many learned societies, which published his editions of the sagas and other literary works He became secretary (1840), later president (1851) of the Icelandic Literary Society, which under his direction published monumental studies in Icelandic history and literature, he began the series *Diplomatarium Islandicum* in 1857 In 1841 he founded the periodical *Ný félagsrit*, which lasted until 1873, the most influential Icelandic political journal The constitution granted to Iceland in 1874 was largely the result of Sigurdsson's efforts, as were the grant of free trade (1854) and the establishment of a pastoral seminary (1847) and a medical school (1876) During all these years he lived in Copenhagen the leader of the group of Icelandic writers, scholars, and diplomats there

Sihon (sī'hun), king of the Amorites, who attacked Israel He became a figure for the mighty fallen Num 21 22–30, Ps 135 10,11

Sihor (sī'hôr) or **Shihor** (shī'hôr), name for the river Nile 1 Chron 13 5, Isa 23 3, Jer 2 18 In Joshua 13 3 a boundary of Canaan seems indicated

Sihun, river, Turkey see SEYHAN

Sihun, river, USSR see SYR DARYA

Sikang (sē̆'käng', shē̆'käng'), Mandarin *Hsi-kang* province (174,332 sq mi , pop 1,748,458), SW China The capital is Kangting Sikang is bordered by Burma and India on the south and by Tibet on the west The largely mountainous surface is cut by the gorges of several rivers (here unnavigable), including the Yangtze, locally known as the Kinsha [Chinese, =golden sands], the Mekong, the Salween, and the Yalung With no railroads and few highways, communications are very poor and human carriers are generally used to transport goods The main settlements, including Kangting, are on the trade route to Tibet During the warm, rainy summer agriculture is possible in the river valleys, and grains and fruits are grown Livestock raising, hunting, and lumbering support much of the diverse population, which consists of Chinese, Tibetans, and aborigenes

Sikeston (sĭk'stun), city (pop 7,944), SE Mo , in the Mississippi plain WSW of Cairo, Ill , laid out 1860, inc 1874. It is the shipping and processing center of a cotton and grain area Shoes are manufactured here

Sikhote-Alin (sē̆khŭtĕ''ŭlyēn'yu), mountain range, RSFSR, in Far Eastern Siberia, extending in parallel ridges along the Sea of Japan from Vladivostok to the lower Amur river It rises to c 5,200 ft Its dense forests abound in valuable woods There are deposits of gold, silver, coal, iron, and rare metals The range has several game preserves

Sikhs (sēks), religious community of India and Pakistan, numbering some 5,500,000 persons They

are concentrated in the Punjab The religion was founded by Nanak (b 1469), the first guru [Hindustani, =teacher] He taught a monotheistic creed and the fundamental identity of all religions Nanak opposed the maintenance of a priesthood and the CASTE system. Angad, the third guru, separated the ascetics (udasis) from the laity and eliminated most features of Hinduism Under the fourth guru, Ram Das, AMRITSAR was founded as a sacred city By the mid-17th cent the position of guru became hereditary, and the Sikhs split into several divisions (sometimes antagonistic) Govind Singh (b 1666) was installed in 1675 as the 10th and last guru His policy was to raise all Sikhs to the warrior caste This was accomplished by a military ceremony, after which the initiate took the name Singh [lion] He introduced the Sikh practices of wearing a turban, carrying a dagger, and never cutting the hair or beard Under his authority there was made the final recension of the Sikh scriptures, the *Granth* [Sanskrit, =treatise], which contains hymns, hortatory tales, and ritual injunctions, all in verse He welded the Sikhs into a military community which adopted the caste practices and the polytheistic beliefs typical of Hinduism The Sikhs conquered most of the Punjab by the late 18th cent and established a number of feudal states Their greatest leader in the early 19th cent was RANJIT SINGH, who conquered much territory After his death, conflict with the British caused the SIKH WARS and the subjugation of the Punjab Sikh soldiers were a large element of the British armies in India A number of Sikhs immigrated to Canada In 1947 in the partition of India, the Sikhs' territory there was divided despite their protest See J C Archer, *The Sikhs* (1946)

Sikh Wars. With the annexation of Sind in 1843, the only territory in India not under British control was that ruled by the Sikhs By a treaty with the British in 1809, RANJIT SINGH had accepted the Sutlej river as the southern boundary of his domain A successor, the regent Jhindan suspecting that the British might be plotting conquest on Dec 11, 1845, sent troops across the river The British, under Sir Hugh (later Viscount) Gough, Sir Harry Smith, and others, won several preliminary victories and then decisively defeated (Feb 10, 1846) the Sikhs at Sobraon on the Sutlej Dissensions of the Sikh leaders helped the British who occupied Lahore on Feb 20 The Sikhs were forced to cede Kashmir and to pay an indemnity of 55,000,000 rupees The British established a protectorate, which was resented In April, 1848, a riot occurred, two British officers were killed A general uprising followed The British forces won (Jan 13, 1849) a costly battle at Chilianwalla, but at Gujrat, near the Chenab river, they completely routed the Sikhs, who surrendered on March 12 Lord Dalhousie, the governor general annexed all the Sikh territory on March 30

Si-kiang see Si, river

Sikkim (sĭ'kĭm), state (2,818 sq mi , pop 121,520), dependency of India The capital is Gangtok Sikkim is bordered on the south by India on the west by Nepal, on the north and east by Tibet, and on the east by Bhutan Most of Sikkim is in the Himalayas, and on the boundary with Nepal lies KANCHENJUNGA Rivers, including the Tista, flow through deep valleys and intersect the country, making travel difficult The inhabitants are pastoral nomads who speak Tibeto-Burman languages Hinduism is the largest religion, but Buddhism is professed by the ruling maharaja and the official class, and Sikkim is noted for its Buddhist monasteries After the 17th cent Sikkim was ruled by rajas of Tibetan descent There were cessions (1835, 1849) of territories to the British, who assumed a protectorate which China, nominal suzerain of the area, recognized in 1890 In 1947 Sikkim became completely independent, but in 1949 the territory was occupied by India

Sikorski, Wladyslaw. Pol *Władysław Sikorski* (vwädĭ'swaf sēkôr'skē), 1881–1943, Polish general and statesman He fought under Pilsudski in the First World War and later held (1922–25) various cabinet posts Pilsudski dismissed him from the service in 1928, but after the fall of Poland, Sikorski became (1939) premier of the Polish government in exile He also was commander in chief of the Polish forces that continued to fight alongside the Allies throughout the Second World War Sikorski restored (1941) diplomatic relations with the USSR, but after the KATYN incident relations were again broken off (1943) Sikorski was seeking to heal the breach when he was killed in an airplane crash near Gibraltar

Sikorsky, Igor Ivanovich (sĭkôr'skē), 1889–, Russian-American aeronautical engineer, grad Naval Academy, St Petersburg, Russia, 1906 He entered the United States in 1919 and was naturalized in 1928 Sikorsky built and flew the first multimotored plane (1913) and established the world's endurance record for sustained flight in a helicopter of his own design (1941) He organized corporations to manufacture airplanes (in 1923, 1925, and 1928) and became engineering manager of the Vought-Sikorsky Aircraft Division of the United Aircraft Manufacturing Corp He was the author of *The Story of the Winged-S* (1938; rev ed , 1948), an autobiography, and *Invisible encounter* (1947). See biography by R M Bartlett (1947)

silage see ENSILAGE

Silas (sī'lus), early Christian leader and companion of Paul on two missionary journeys Acts 15 22–18 5 Probably he is the Silvanus of 2 Cor 1 19, 1 Thess 1 1, 2 Thess 1 1, 1 Peter 5 12

Silchester (sĭl'chĭstur), village, Hampshire, England, S of Reading It is noted for the ruins of the Romano-British town Calleva Atrebatum The outside walls (2,760 yd in circumference), forum, amphitheater, and entire plan of the city, including baths and villas, were revealed through excavation The smaller articles were removed to Reading Museum, and the structures were re-covered, with the exception of the ruins of the town hall

silencer, device used to muffle noise The muffler of an automobile is a familiar type When the exhaust valve of an internal-combustion engine opens directly into the atmosphere, at the end of every exhaust stroke there is a report like the firing of a pistol, caused by the passage of the exhaust gases from the high pressure of the cylinder to the normal pressure of the atmosphere To eliminate or tone down the noise, the gases are led through a pipe to a muffler, which consists of an arrangement of pipes through which the gases pass, with gradual reduction in pressure, before they reach the atmosphere The Maxim silencer, which was invented by Hiram Percy Maxim, is a device that renders the explosions of firearms practically noiseless It became popular almost immediately and at one time was adopted by the U S army With the development of the Diesel engine, Maxim silencers were produced and used to eliminate the noise caused by Diesel exhaust Maxim silencers of other forms are widely used in eliminating noises from gasoline engines, compressors, blowers, vacuum pumps, and in high-velocity steam and air discharge As the use of silencers expanded, so did the dimensions of the device There is a 30-inch-pipe-size silencer and spark catcher in use for the exhaust of 3,800 horsepower marine Diesel engines

Silenus (sīlē'nus), in Greek mythology, god of wine and fertility He was the son of Hermes (or Pan) and the teacher and companion of Dionysus, who loved Silenus very much When Midas befriended Silenus, Dionysus gave the king the power to turn everything he touched into gold Silenus was a jolly old man, usually drunk but gifted with powers of song and prophecy He was one of the tribe of sileni and looked like an elderly SATYR or FAUN

Siler City (sī'lur), town (pop 2,197), central N C , SE of Greensboro in a farm area, settled 1855, inc 1885 It has textile mills and woodworking plants

Silesia (sĭlē'zhu, shu, sī-), Czech *Slezsko* (slĕz'kô), Ger *Schlesien* (shlā'zyun), Pol *Śląsk* (shlōsk), region of E central Europe, extending along both banks of the Oder river and bounded in the south by the mountain ranges of the Sudetes—particularly the RIESENGEBIRGE—and the W Carpathians Politically, Silesia fell, as of 1950, into two main divisions The first comprised most of the former Prussian provinces of Upper Silesia (Ger *Oberschlesien*, 3,750 sq mi , 1933 pop 1,482,765) and Lower Silesia (Ger *Niederschlesien*, 10,270 sq mi , 1933 pop 3,204,004), both of which were transferred to Polish administration at the POTSDAM CONFERENCE of 1945, it furthermore included those parts of Upper Silesia that were ceded by Germany to Poland after the First World War and part of the former Austrian principality of TESCHEN Together, Polish Silesia and Polish-administered Silesia form the Polish province of Silesia (c 5,900 sq mi , pop 2,823,351), with Katowice as capital, and the Polish province of BRESLAU The second, and much smaller, division of Silesia has formed a part of Czechoslovakia since 1918, with Troppau as its chief city, it was until 1949 part of the province of MORAVIA and Silesia and after 1949 part of the Czech Lands, one of the two constituent states of Czechoslovakia Except in the south, Silesia is largely an agricultural and forested lowland, drained by the Oder and its tributaries, among them the Lusatian Neisse, the Glatzer Neisse, and the Bober BRESLAU (a major commercial and industrial center), Liegnitz, and Glogau are among the chief cities Along the slopes of the Sudetes there are numerous small industrial centers with traditional textile and glass industries Czech Silesia comprises the rich KARVINNA coal basin The most important part of Silesia is, however, its southern tip, comprising both Upper Silesia and Polish Silesia One of the largest industrial concentrations of Europe, it has extensive coal and lignite deposits and zinc, lead, iron, and other ores The industrial area around KATOWICE comprises such important centers as Beuthen, Gleiwitz, and Hindenburg and has iron and steel mills, coke ovens, and chemical plants OPPELN, the former capital of Upper Silesia, is an important trade center Silesia was settled by Slavic tribes A D c 500 and was an integral part of Poland by the 11th cent King Boleslaus III (reigned 1102–38), of the PIAST dynasty, divided the kingdom into four hereditary duchies (of which Silesia was one) for the benefit of his sons After 1200 the duchy of Silesia fell apart into numerous minor principalities The Silesian Piasts encouraged German colonization of their lands, the larger part of which became thoroughly Germanized, and in the early 14th cent the Silesian princes accepted the king of Bohemia as their suzerain and thus became mediate princes of the Holy Roman Empire During the Hussite Wars of the 15th cent Silesia, with Moravia, was temporarily detached from the Bohemian crown and was ruled by Hungary In 1490, however, both Silesia and Moravia reverted to Bohemia, with which they passed to the house of Hapsburg in 1526 The principality of Sagan, Saxon from 1472, went to Bohemia in 1547 Though administratively Silesia tended to become an Austrian province, the dual title, along with the principalities of Brieg and Liegnitz and other fiefs, remained with the Silesian branch of the Piast dynasty until its extinction in 1675 The margraviate of Jägerndorf was purchased in 1523 by a cadet branch of the Hohenzollern dynasty of Brandenburg, which later also claimed inheritance to other Silesian fiefs Elector Joachim II of Brandenburg moreover concluded (1537) an alliance with the Piast duke, by which Brandenburg would inherit the Piast principalities if the Piast dynasty became extinct This treaty was declared invalid by King Ferdinand I of Bohemia (later Emperor Ferdinand I) In 1621 John George of Jägerndorf, brother of the elector of Brandenburg, lost his fief for having supported Frederick the Winter King The Thirty Years War (1618–48) brought untold misery to Silesia under Saxon, imperial, and Swedish occupation It reverted to Austrian control at the Peace of Westphalia In 1675, on the death of the last Piast, Austria incorporated the Piast territories into the Bohemian crown domain The Catholic Reform had by then made great progress in Silesia, although Lutheranism was tolerated in Breslau and certain other districts It was on the very shaky dynastic grounds indicated above that Frederick II of Prussia, as heir of the house of Brandenburg, claimed a portion of Silesia in 1740 from Maria Theresa, who had just assumed the succession to Austria, Bohemia, and Hungary His claim and his offer to assist Maria Theresa in the impending War of the Austrian Succession were rejected by the queen, while Prussian troops were already invading Silesia The Silesian Wars of 1740–42 and 1744–45 were part of the general War of the AUSTRIAN SUCCESSION By the Treaty of Berlin (1742) Maria Theresa ceded all of Silesia except Teschen and present Czech Silesia to Prussia, this cession was ratified by the Treaty of Dresden (1745) The Industrial Revolution of the late 18th and 19th cent affected Silesia disastrously at first The Silesian weavers became dependent on entrepreneurs who farmed out work, working conditions and unemployment became intolerable, and outbreaks were frequent Landholding conditions also were iniquitous, most of the land being held by owners of large estates, and the expansion of the heavy industries in Upper Silesia brought social problems as well as economic benefits Though these conditions were gradually improved, Silesia even in the 20th cent remained, despite all its productivity, a relatively backward area After the First World War, the Treaty of Versailles (1919) provided for a plebiscite to determine if Upper Silesia was to remain German or to pass to Poland The results of the plebiscite (1921) were favorable to Germany except in the easternmost part of Upper Silesia, where the Polish population predominated After an armed rising of the Poles (1922) the League of Nations accepted a partition of the territory, the larger part of the industrial district, including Katowice, passed to Poland The contested city and district of Teschen were partitioned in 1920 between Poland and Czechoslovakia (to the satisfaction of neither) by the conference of ambassadors The political division of the Silesian industrial district was carried out so arbitrarily that the boundaries often cut through mines, some workers slept in one country and worked in another As a result of the MUNICH PACT of 1938 Czech Silesia was partitioned between Germany and Poland, and after the German conquest of Poland in 1939 all Polish Silesia was annexed to Germany After the Second World War the status quo as of 1922–38 was restored, but—as stated at the beginning of the article—all formerly Prussian Silesia E of the Lusatian Neisse was placed under Polish administration by the Great Powers, who also allowed the expulsion (in an "orderly and humane" manner) of the German population from Czech Silesia, Polish Silesia, and Polish-administered Silesia The mass expulsions were, perforce, neither orderly nor humane, moreover, although the transfer of territories to Polish administration was made subject to revision in a final peace treaty with Germany, the Polish government treated all Silesia as integral Polish territory A small section of Lower Silesia W of the Neisse was separated from the rest and was incorporated with Saxony See W J Rose, *The Drama of Upper Silesia* (1935)

Silesian Wars see AUSTRIAN SUCCESSION, WAR OF THE, and SEVEN YEARS WAR

Silesius, Angelus, see ANGELUS SILESIUS

silhouette (sĭl'ōōĕt'), outline image, especially a profile drawing solidly filled in or a cutout pasted against a lighter background It was named for Étienne de Silhouette (1709–67), who was the French controller general in 1759, it is commonly supposed that his promotion of stringent economies caused his name to be associated with these shadow miniatures Silhouettes probably were originally inspired by the common Asiatic shadow play They became very popular in Europe in the last three decades of the 18th cent and replaced miniature paintings at French and German courts, their popularity was fostered by the interest in Lavater's science of physiognomy In the 19th cent, the popularity of silhouettes decreased until the invention of the daguerreotype pushed them completely out of fashion See E N Jackson, *History of the Silhouette* (1911), Curtiss Sprague, *How to Draw Silhouettes* (1929), and R L Mégroz, *Profile Art through the Ages* (1948)

silica (sĭl'ĭkŭ), common name for silicon dioxide, a compound of silicon and oxygen, widely and abundantly distributed throughout the world It occurs in many forms, e g , in quarts (agate, amethyst, chalcedony, flint, jasper, onyx, and rock crystal), opal, sand, sandstone, clay, granite, and many other rocks, in the skeletal parts of various animals and plants, such as certain Infusoria and diatoms, in infusorial earth (diatomaceous earth or kieselguhr), and in higher plants in the stem and other tissue Silica has many important uses, in making ordinary GLASS and in a special material called fused quartz employed for chemical vessels and for various optical instruments, including lenses and other objects required to transmit ultraviolet light, in ceramics, in abrasives (e g , sandpaper), as a filler in paints, for building, and in the preparation of carborundum (SILICON CARBIDE) Chemically, silica is the anhydride of silicic acid, the salts of which are the silicates It is insoluble in water and ordinary dilute acids with the exception of hydrofluoric acid When pure it is white to colorless **Silica gel** is a colloidal form of silica produced when silicic acid is partially dehydrated Because of its great adsorptive powers it is used to remove impurities from air and various other substances.

silicate (sĭl'ĭkāt, -kĭt), compound containing silicon and oxygen in combination with such metals (either separately or in complex unions of two or three) as aluminum, barium, beryllium, calcium, iron, magnesium, manganese, potassium, sodium, or zirconium These compounds are considered chemically as the salts of various silicic acids, being classified as ortho-, meta-, di-, and trisilicates according to the acid from which (theoretically, since with one exception the silicic acids have not been obtained pure) they have been derived The silicates are widely distributed in nature and include many common substances, e g , ASBESTOS, BERYL, AQUAMARINE, EMERALD, FELDSPAR, GARNET, GRANITE, LAVA, MICA, SERPENTINE, TALC, and WOLLASTONITE Clay consists essentially of a silicate of aluminum (called KAOLIN) with which other substances are mixed From it are made various kinds of bricks and tiles, cement, pottery, and chinaware, enamelware, and porcelainware GLASS is a mixture of silicates WATER GLASS is chiefly a solution of potassium and sodium silicates in water The silicates are formed in nature by the action, going on in the earth's crust (of which they constitute the greater part), between silica and various metallic oxides and carbonates

silicon (sĭl'ĭkŭn), nonmetallic element (symbol=Si, for physical constants, see ELEMENT, table) In the laboratory it is obtained in two allotropic forms—in the amorphous form as a brown powder and in the crystalline form as dark needlelike crystals Chemically, silicon resembles carbon, with which it is grouped in the periodic table With oxygen it forms a dioxide, SILICA, with oxygen and various metals, SILICATE compounds, with carbon, SILICON CARBIDE, for which Carborundum is a common trade name, with chlorine, a chloride used in forming smoke screens in warfare, and with various metals, silicides Silicon is very abundant (second only to carbon), making up a large part of the earth's crust, occurring in silica and the silicates, but never uncombined It is obtained commercially by heating sand and carbon (in the form of coke) in the electric furnace Aside from the wide industrial importance of its compounds, silicon is used in the preparation of low-carbon steel and also to form various alloys (e g , with aluminum, copper, iron, and manganese), since it increases hardness and resistance to corrosion. An alloy of silicon with manganese is employed as a deoxidizing agent in the manufacture of steel, an alloy with iron is used in making acid-resisting fixtures and plumbing The silicones, compounds in which the molecules consist of chains of atoms of silicon and oxygen alternately, were developed during the Second World War These compounds are used in making such products as silicone rubber (resistant to heat and moisture), silicone liquids (useful in hydraulic systems of airplanes at temperatures at which other such fluids are useless), and silicone varnishes having superior insulating value Discovery of the element (1823) is credited to Berzelius.

silicon carbide, extremely hard, dark green to blue-black crystalline substance, a compound of silicon and carbon It was discovered in 1891 by Edward Goodrich Acheson and is used as an artificial ABRASIVE It is an end product in the fusion at high temperatures in the electric furnace of sand and coke, the sand supplying the silicon and the coke the carbon Sawdust is added to make the materials porous, and salt is used as a flux to eliminate the impurities Among the trade names for silicon carbide are Carborundum and Crystolon

silicosis (sĭlĭkō'sĭs), occupational disease caused by excessive inhalation of rock dust (e g , from quartz and granite) or sand particles which contain a high percentage of silica The disease occurs most commonly among miners, sand blasters, and tunnel and quarry workers Silicosis was first given national publicity when a number of the workers engaged in constructing a tunnel (begun 1929) at Gauley Bridge, W Va , contracted the disease and died Efforts have been made to secure protective legislation for workers and to institute preventive and remedial measures The dust settles in the lungs, and the silica causes inflammation and the growth of fibrous tissue, the victims are susceptible to tuberculosis

Silistra (sĭlĭ'strä), town (pop 16,180), NE Bulgaria, in the S Dobruja It is a port on the southern bank of the Danube, opposite the Rumanian town of Calarasi The Roman Durostorum, it was founded in 29 B C and became an important town of Moesia After the Turkish conquest (15th cent), it was strongly fortified It was captured (1877) by the Russians in the Russo-Turkish War of 1877–78 and was Rumanian (1913–40) from the Second Balkan War until the Second World War It is sometimes spelled Silistria

silk, fine, horny, translucent, yellowish fiber produced by the silkworm in making its cocoon and covered with ceresin, a natural gum Many varieties of silk-spinning worms and insects are known, but the silkworm of commerce is the larva of the *Bombyx mori* or mulberry silkworm and other closely related moths Sericulture (the culture of the silkworm) and the weaving of silk have been practiced in China from a remote period Legend dates this back to 2640 B C , to Empress Si Lingchi, who not only encouraged the culture of the silkworm but also developed the process of reeling from the cocoon This was a closely guarded secret for some 3,000 years Silk seems to have been woven very early in the Island of Cos In the 1st and 2d cent A D silk fabrics imported to Greece and Rome were sold for fabulous prices Up to the 6th cent raw silk was brought from China, and death was the penalty for exporting silkworm eggs About A D 550 two former missionaries to China, incited by Emperor Justinian, succeeded (says Procopius) in smuggling to Constantinople, in a hollow staff, both the eggs of the silkworm and the seeds of the mulberry tree Byzantium became famous for splendid silken textiles and embroideries, used throughout medieval Europe for royal and ecclesiastical costume and furnishings In the 8th cent the Moors began to carry the arts of silk culture and weaving across the northern coasts of Africa and to Spain and Sicily, and in the 12th cent Spain and Sicily were weaving silks of exquisite texture and design Italy developed great weaving centers Lucca, in N Italy, had established looms by the 13th cent , and in the 14th cent the city became famous for its materials and designs Florence and Venice followed and wove sumptuous fabrics and velvets enriched with gold thread Genoa's velvets became well known France established looms, and under Louis XIV's minister Colbert it set the fashion with its beautiful silks Lyons in S France became an important weaving center Early attempts were made in England under Henry VI to establish the silk industry, but it was not until the revocation of the Edict of Nantes, when many French refugee weavers fled to England, that the industry received a real impetus The French settled in Canterbury, Norwich, and other places, but it was in Spitalfields, London, that the industry became important Many attempts were made to establish sericulture in the American colonies, inducements such as land grants and bounties being offered, and many mulberry trees were planted In 1759 Georgia sold more than 10,000 lb of cocoons in London Pennsylvania had a silk industry, fostered by Benjamin Franklin, up to the Revolution. The high cost of labor seems to have been the main deterrent to its success in America. Wild silk is the product of the tussah worm of India and China, which feeds on oaks It is now semicultivated, as groves of dwarf trees are provided for its feeding It spins a coarser, flatter, yellower filament than the *Bombyx mori*, and the color does not boil out with the gum. Tussah silk is a rough, durable, washable fabric known as Shantung or pongee In silk manufacture, the first operation is reeling The cocoons, having been sorted for color and texture, are steamed or placed in warm water to soften the natural gum They are then unwound, each cocoon may give from 2,000 to 3,000 ft of filament, from 4 to 18 strands of which are reeled or twisted together to make an even thread strong enough to handle This is called raw silk Formerly a hand process, this work is done now in Europe and some parts of the Orient in factories on simple machines called filatures The next step, called throwing, is preparing the raw silk for the loom by twisting and doubling it to the required strength and thickness This process also is now mostly done in large mills with specialized machinery Silk after throwing has three forms—singles, which are untwisted, used for the warp of very delicate fabrics, tram, two or more singles twisted and doubled, used for the weft of various fabrics, and organzine, made of singles twisted one way, then doubled and twisted in the opposite direction, used for the warp of heavy fabrics For sewing and embroidery thread, more doubles and smoother twists are made In modern factories spinning frames complete the preparation for the loom The silk is boiled off in soapsuds to remove gum and prepare it for dyeing For white and pale tints it must be bleached Scouring or boiling causes loss of weight, sometimes made up by loading with metallic salts, as tin, which has an affinity for silk and can be absorbed to excess, so causing weakening of the fiber Dyeing may be done in the yarn or the piece Finishing processes are varying and important, as in making moires WEAVING is done as with other textiles, but on more delicate and specialized looms Fabrics made are plain weaves (taffeta, pongee), cords (faille, poplin), gauzes (net mallnes), pile fabrics (plush, velvet), crepes, satins, damask, ribbons, and brocade Some of these weaves are ancient, developed on the shuttle looms of China and the hand looms of India, Greece, and Europe In Europe and the Orient the hand loom is still used for the finest fabrics Japan and China lead in the production of raw silk, with India, Italy, and France following America is the largest importer and manufacturer, with the possible exception (as to manufacture) of China, for which no statistics are available For artificial silk, see RAYON See J M Mathews, *The Textile Fibers* (5th ed , 1947), Richard Glazier, *Historic Textile Fabrics* (1923), Shuhro Matsui, *History of the Silk Industry in the United States* (1930)

Silkeborg (sĭl'kubôr"), city (pop 20,955), E central Jutland, Denmark, on the Guden river and W of Aarhus It is a health resort surrounded by beautiful woods and lakes

silkweed see MILKWEED

silkworm, the larva of various species of moths indigenous to Asia and Africa, but now domesticated and raised for silk production throughout most of the Temperate Zone The culture of silkworms is known as sericulture The most widely raised type and the producer of the finest silk is the larva of the species *Bombyx mori* Hatched from an egg so small that about 45,000 weigh only an ounce, this silkworm is immediately quite active and feeds voraciously on the leaves of the mulberry tree At maturation (32 to 38 days after hatching) the larva is about 3 in long Its body is made up of 12 concentric rings of cartilage connected by soft elastic skin Its head is supplied with two very powerful mandibles Three pairs of hooklike feet near the head and five pairs of pads support its weight and supply grasping power and traction to aid its humping locomotion The mature larva attaches itself to a twig and, with a peculiar waving head motion and a slow circular motion of its body, begins to spin its cocoon A moist substance, fibroin, manufactured within the larva's body and mixed with a small amount of wax, is emitted from an orifice in its lip The fibroin dries quickly in the air, hardening into one long thread of silk which makes up the cocoon The various species of silkworms raised today are distinguished by the quality of the silk produced, the type of leaves on which they feed and the number of breedings per year See also SILK

Sill, Edward Rowland, 1841–87, American poet and educator, b Windsor, Conn , grad Yale, 1861 He was professor of English at the Univ of California from 1874 to 1882 Of his slender output, only *The Hermitage and Other Poems* (1868) was published in his lifetime, after his death appeared his collected prose (1900) and collected poems (1902) Best known of his lyrics are "The Fool's Prayer" and "Opportunity" See biography by W B Parker (1915)

Sill, Fort, U S military reservation established in 1869 near Lawton, Okla , under the name of Camp Wichita It was made a permanent garrison and renamed Fort Sill in memory of Gen Joshua W Sill later the same year. Indian tribes were taken in to live on the reservation, and the fort, which underwent extensive construction in the early 1870s, became the base of operations for quelling Indian uprisings and maintaining law and order in SW Oklahoma The Wichita, the Kiowa, the Comanche, and other groups of Indians were trained in agriculture on the reservation; bellicose Indians, e g , Geronimo and Satanta, were imprisoned at the fort from time to time By 1904 the reservation was almost abandoned, but a field artillery school was established there in 1911, and the two world

wars tremendously increased the importance of Fort Sill See W S Nye, *Carbine and Lance* (1937)

Silla (sĭl'lä), locale at Jerusalem, possibly near Mt Zion 2 Kings 12 20

Sillanpää, Frans Eemil (frăns' ā'mĭl sĭl'lampĕ"), 1888–, Finnish novelist As a young man he studied medicine During his student days in Helsinki he came under the influence of the highly cultured Järnefelt family and through them was exposed to the best in European literature and other forms of art He was powerfully influenced by Hamsun, Maeterlinck, and Strindberg His novels are masterpieces of lyrical impressionism, *Fallen Asleep while Young* (1931, Eng tr, 1933, American title, *The Maid Silja*, 1933) and *Meek Heritage* (1919, Eng tr, 1938), both of which are epics of resignation, their scenes laid in the Finnish countryside, are representative of Sillanpää's best work He was awarded the 1939 Nobel Prize in Literature

Silliman, Benjamin, 1779–1864, American chemist, geologist, and physicist, b Trumbull, Conn, grad Yale, 1796 In 1802 he was appointed first professor of chemistry and natural history at Yale, he traveled abroad and then returned to teach at Yale until 1853 He was noted as a teacher, as a popular lecturer on scientific subjects, and as a founder and editor (1818–46) of the *American Journal of Science and Arts* He wrote *Journal of Travels in England, Holland, and Scotland* (1810) and *Elements of Chemistry* (1830) His son, **Benjamin Silliman,** 1816–85, American chemist, b New Haven, Conn, grad Yale, 1837, was professor at Yale (1846–49) and then at the Univ of Louisville (1849–54) In 1854 he returned to Yale, succeeding his father The school of chemistry which he had established there (1847) later developed into the Sheffield Scientific School

silo (sī'lō), watertight and airtight storage tank for ENSILAGE, often cylindrical in shape It may be of wood, brick, concrete, or other materials, or it may be a lined pit in the ground or on a hillside

Siloah (sĭlō'ä), variant of SILOAM

Siloam (sĭlō'um), pool, SE of Jerusalem, Palestine, in the Kidron valley, mentioned in the Old and New Testaments It is connected with the Virgin's Pool by a winding rocky conduit 1,700 ft long, in the mouth of which was discovered in 1880 an undated inscription describing the cutting of the tunnel Shiloah Isa 8 6 Siloah Neh 3 15 See Luke 13 4, John 9 7

Siloam Springs (sī'lŭm) city (pop 2,764), NW Ark, in the Ozarks near the Okla line, laid out and inc 1880 A resort city, with mineral springs, it is also a center for shipping poultry and apples John Brown Univ and Baptist campgrounds are here

Silone, Ignazio (ēnyä'tsyō sēlō'nā), 1900–, Italian novelist and journalist, whose real name is Secondo Tranquilla A Socialist and for a time a Communist, he has devoted his writings to attacking Fascism and promoting Socialism, but he has not sacrificed human and literary values in favor of a thesis He fled Italy in 1931 and, after living in Switzerland, returned to his native country in 1944 as editor of the newspaper *Avanti* His novel *Fontamara* (1933, Eng tr, 1934), a little masterpiece of anti-Fascist satire, was translated into 17 languages Other works are *Pane e vino* (1937, Eng tr, *Bread and Wine*, 1936), which he dramatized as *Egli si nascose* (1945, Eng tr, *And He Hid Himself*, 1946), *The School for Dictators* (1938, in Eng tr only); *The Living Thoughts of Mazzini* (1939, in Eng tr only), and *Il seme sotto la neve* (1940, Eng tr, *The Seed beneath the Snow*, 1942) Silone also contributed critical and political articles to various periodicals

Silsbee (sĭls'bē), city (pop 2,525), E Texas, near the Neches NNW of Beaumont, in a truck and lumber area, founded c 1892, inc as a town 1906, as a city 1938

silt, earth of which the particles are finer than grains of sand but larger than particles of clay Unlike sand, the particles cohere when wet A sedimentary rock, silt is, like clay and sand, a product of the weathering and decomposition of preexisting rock Indurated silt is a SHALE

Silurian period (sĭlōō'rēum, sī-) [from the Silures, ancient tribe of S Wales, a type section, named by R I MURCHISON], third period of the PALEOZOIC ERA of geologic time The continents in the Silurian period were about the same as in the ORDOVICIAN PERIOD, with approximately the same areas subject to flooding by shallow seas The transition between the Ordovician and Silurian rocks is not clearly marked in the United States The Medina sandstone stretching from New York to Alabama has been assigned to both periods, but is generally regarded as Silurian Three main series, based on type sections in New York state, are usually distinguished—the lower Silurian (Medinan or Alexandrian series), the middle Silurian (Niagaran series), and the upper Silurian (Cayugan series) The early Silurian deposits in the East are often sandstone, shale, and conglomerate, derived from EROSION of high-standing mountains, in the West marine limestone predominates The great event of the Silurian period in North America was the flooding of the interior basin by warm waters from the arctic and the deposition of the Niagaran limestone, which can best be seen at Niagara Falls The withdrawal of the Niagaran flood was apparently followed by desert conditions, under which the Salinan "red beds" of the Appalachian area and the salt deposits of New York, Michigan, Ontario, and Ohio were laid down Certain areas were later reflooded, the Cobleskill and Rondout limestone of New York being deposited The Silurian of the Far West is little known In North America, the Silurian ended quietly, however, in the British Isles, Scandinavia, and France, as a result of the Caledonian disturbance, great mountains were thrust up Economic resources of the Silurian strata, besides salt, are iron ore, worked near Birmingham, Ala, and quartz sandstones, used in glass manufacture Plentiful in the life of the Silurian were cruinoids and cystoids, mollusks, some of them the fiercest inhabitants of the sea, and eurypterids, invertebrates related to crabs and insects The Niagaran limestone contains extensive coral reefs Members of the trilobite family were still numerous, primitive fishes increased in number Most notable in the Silurian fauna were scorpions, possibly the first animals to live on land and take their oxygen from the air

Silva, Antonio José da (antō'nyō zhōōzā' dä sĕl'vu), 1705–39, Portuguese playwright, b Rio de Janeiro, Brazil He belonged to a family of "New Christians" (Jews converted by force), suspected of remaining secretly loyal to Judaism The family had to return to Portugal, and he was like his mother, accused, but was released Practicing as a lawyer, he still had time in the years from 1733 to 1737 to write a number of plays Vigorous, satiric, with some elements of the *commedia dell' arte*, these have more vitality than polish Among them were *A vida do grande Dom Quixote* [the life of Don Quixote], *Amphitrião* [Amphitryon], *As variedades de Proteo* [the shapes of Proteus], and *Guerras do alecrim e da mangerona* [wars between the rosemary and the marjoram] In 1737 he was haled before the Inquisition Convicted of practicing Jewish rites, he was in 1739 burned at the stake He is commonly called simply *o Judeu* [the Jew]

Silva, José Asunción (hōsā' äsōōnsyōn' sĭl'vu) 1865–96, Colombian poet, one of the creators of MODERNISMO Wealthy, aristocratic and handsome, he was morbidly sensitive and pessimistic, and he was borne down by misfortune—disappearance of the family wealth, loss of a manuscript by shipwreck, the early death of a beloved sister At 31 he committed suicide, leaving behind him poems marked by technical innovations, haunting musical tones, and a brooding spirit of pessimism, now melancholy now savage They had great influence on Rubén DARIO and other *modernistas* Perhaps the most famous of his poems is the incomparable "Nocturno III," an elegy for his sister, revolutionary in form and evocative in feeling

Silvanus (sĭlvā'nus), in Roman religion, ancient pastoral god of fertility He was protector of field boundaries, flocks, and herds He was conceived of as being an old man, similar in appearance to the Greek Pan

Silvanus (sĭlvā'nus), in the Bible, probably the same as SILAS

silver, important metallic element (symbol=Ag [Latin *argentum*], for physical constants, see ELEMENT, table) It is nearly white when pure, lustrous, soft, very ductile, malleable, and an excellent conductor of heat and electricity Chemically, it is not an active metal, being considerably below hydrogen in the electromotive series (see METAL) It is, however, acted upon by nitric acid (forming the nitrate) and by hot concentrated sulphuric acid At ordinary temperatures it unites with sulphur (tarnishes) to form the sulphide Although it is not affected by the oxygen of the air, it reacts with ozone Two oxides are known The compounds with bromine, chlorine, and iodine (silver bromide, chloride, and iodide respectively) are used in photography because of their sensitivity to light Silver nitrate, a compound of silver, nitrogen, and oxygen, is used in medicine, in fused stick-like form (lunar caustic) or in solution as a caustic to destroy tissue and to treat infections (e g, of the throat and bladder) and burns. Silver set free from some of its salts in solution kills bacteria and is used for this purpose in medicine and in the purification of water Silver nitrate is used also in indelible inks, in silvering mirrors, and as a reagent in chemical analysis Silver occurs uncombined in nature The greater part used today is obtained from its ores Among these most important are argentite or silver glance (silver and sulphur), which is found associated with sulphides of other metals, as in galena, horn silver or cerargyrite (silver and chlorine), two ores both composed of silver, antimony, and sulphur (but in different proportions), called pyrargyrite (or ruby silver ore) and stephanite, and another ore composed of silver, arsenic, and sulphur, called proustite Mexico, the United States (Idaho, Montana, Arizona, Colorado, Utah, Nevada, California, New Mexico, and Texas), and Canada are leading producers, others are Peru, Japan, Germany, Burma, and Bolivia. The metal is prepared in various ways depending upon the nature of its occurrence, the greatest quantity is obtained in connection with the refining of lead and copper It is separated from lead metal by the Parkes process, which is based upon the fact that silver is soluble in molten zinc, whereas lead is not The CYANIDE PROCESS has largely replaced an amalgamation (see AMALGAM) process in which silver, like gold, is dissolved in mercury Alloys of silver with copper, in which the copper adds hardness, are important Silver coins are commonly made only of an alloy consisting of 90 percent silver and 10 percent copper Sterling silver contains 92 5 percent silver with the balance copper Like copper and gold, silver was one of the first metals used by man (see SILVERWORK) Much of the silver produced today is used, as it has been in the past, in making coins (see COIN, MONEY, BIMETALLISM) The greater part of the rest is used in silver plate (see PLATING), silver utensils, and jewelry

Silver Age, see AGE

Silver City, town (pop 5,044), co seat of Grant co, SW N Mex, near the Ariz line and in the foothills of the Pinos Altos Range, founded 1870, inc 1878 It is a trade and shipping point for the near-by mines (mainly copper), stock ranches, and irrigated farms It is also a health resort The town flourished as a silver- and gold-mining camp in the late 19th cent New Mexico State Teachers College is here Near by are Gila Cliff Dwellings National Monument and Fort Bayard U S veterans' hospital

Silver Creek, village (pop 3,067), W N Y, on Lake Erie NE of Dunkirk, in a grape region, inc 1848 Dining cars and milling machinery are made here

Silverius, Saint (sĭlvēr'ēus), d 537, pope (536–37), an Italian, successor of St AGAPETUS I and predecessor of VIGILIUS The son of Pope Hormisdas, who had been married before taking orders, St Silverius was elected pope at the instance of the Gothic king, Theodatus, although Vigilius as Agapetus' deacon, was the logical candidate Failing to gain Silverius over to MONOPHYSITISM, Empress THEODORA intrigued to make Vigilius pope On a trumped-up charge of treason the pope was carried into exile Vigilius was declared pope, and Silverius died shortly afterwards Both Emperor Justinian and the people seemed to believe in the pope's innocence Feast (as a martyr) June 20

Silverman, Joseph, 1860-1930, American rabbi, b Cincinnati, grad Univ of Cincinnati (B A, 1883), D D Hebrew Union College, 1887 He was rabbi at Dallas, Texas (1884–85), at Galveston (1885–88), and at the Temple Emanu-El, New York (1888–1922) He was president (1900–1903) of the Central Conference of American Rabbis and was founder and president of the Emanu-El Brotherhood He wrote *A Catechism on Judaism* (1886) and numerous contributions to periodicals and was active in Zionist work

silver nitrate, see SILVER

Silver Purchase Act see SHERMAN SILVER PURCHASE ACT

Silver Springs, famous spring, N central Fla, 6 mi E of Ocala, forming the Silver River, tributary of the Oklawaha The spring is an ancient one, with a large basin 80 ft deep, the rate of flow, which varies, is about 25,000,000 gal per hour. The aquatic life in the clear waters may be seen through glass-bottomed boats

Silverton. 1 Town (pop 1,127, alt c 9,300 ft), co seat of San Juan co, SW Colo, in the San Juan Mts founded 1874, inc 1885 It is a trade and resort center in a mining area **2** Village (pop 2,907), SW Ohio, residential suburb of Cincinnati **3** City (pop 2,925), NW Oregon just NE of Salem founded c 1853, inc 1891 It has lumber and flour mills

Silvertown, city (pop 3,930), W central Ga, near the Flint river W of Macon, inc 1929 It was founded in 1926 around the tire-cord plant which governs the economic life of the city

silverwork includes ecclesiastical and domestic plate, flatware, jewelry, buttons, buckles, boxes, toilet articles, weapons, furniture, and horse trappings It involves a variety of embellishments such as chasing, *repoussé*, filigree, and inlaying which have engaged the talents of skilled artisans since prehistoric times That it was highly developed among the ancients is evidenced by treasures and funeral objects from Egyptian tombs, Minoan silver cups, seals, and ornaments of c 2000 B C and silver vases and the inlays on bronze blades of Mycenae Work evidently by Phoenicians has been found in Greece, where early native examples are few A Greek bowl (c 400 B C) and Etruscan silverwork of the same period are in the Metropolitan Museum Roman silverwork displays rich, often high, reliefs. It is well represented in the Bosco reale Collection (Louvre) and in pieces preserved in the British Museum Byzantine silverwork and goldwork enrich churches and monasteries Italian silverwork found its way to the melting pot, this was also the case in France during the Revolution, though notable pieces are in the Louvre and collections of the 18th-century French silver are in Lisbon and Leningrad. Early German

Renaissance silverwork is less abundant than that of the 16th cent from the two most prolific centers, Augsburg and Nuremberg, with their numerous Italian artisans German characteristics prevail in Swiss silverwork, and the influence extended to Spain but was overbalanced by the presence of many Italian craftsmen there in the 15th cent Spanish silver of the 16th cent carries elaborate designs, and in the 17th cent silversmiths added filigree and enamel to the decoration and the baroque style found high favor Preserved in the Hyde Museum is much fine 17th and 18th-century Dutch silver, the designs showing French feeling, Poland and Russia produced ecclesiastical plate, domestic ware, and horse trappings Silversmiths of Oriental countries have been expert from early times The British Museum and the Victoria and Albert Museum contain representative pieces of superior workmanship, some from Persia, India, Tibet, and China The Reformation brought destruction to ecclesiastical art expressions of N Europe, and much plate was melted down in England during the Wars of the Roses so that little early English silver is extant The HALLMARK came into use c 1300 Elizabethan pieces display German influence, and work of the period of Charles II is loaded with ornament Cromwellian influence is reflected in English silverwork of extreme simplicity, French tendencies of the Louis XIV regime contributed great enrichment and were followed by the later rococo style, under Adam influence there was a classic reaction SHEFFIELD PLATE was an innovation of the 18th cent , since then plated ware has become the product of important industries in England and America Silverwork is a native craft in MEXICO, among Indian tribes in the W United States, and in Peru, where the abundant metal is used unalloyed In the American colonies silversmithing proved so profitable that it attracted several hundred silverworkers It was highly developed in New England, by such leaders as John Hull, Jeremiah Dummer, John Coney, and Paul Revere in Boston and Samuel Vernon in Newport, R I , and in other American cities including Philadelphia and New York, where the Boelen family and Jacobus van der Spiegel were especially noted Colonial silver, simple and chaste in design, is much sought by collectors Representative pieces are in the Metropolitan Museum The modern revival of hand-wrought silver is exemplified by Danish work See Seymour B Wyler, *The Book of Old Silver* (1937)

Silvester see SYLVESTER

Silvestre de Sacy: see SACY, ANTOINE ISAAC, BARON SILVESTRE DE

Silvis, residential city (pop 2,990), NW Ill , near Moline, inc 1920

Silvretta (silvrĕ'tä), Ger zĭlvrĕ'tä), Alpine group at the border of Tyrol and Vorarlberg (Austria) and the Grisons (Switzerland) Piz Linard (11,200 ft) is in Switzerland, the Fluchthorn (11,165 ft), Piz Buin (10,880 ft), the Silvrettahorn (10,656 ft), and the Dreitanderspitze (c 10,500 ft) straddle the Austro-Swiss frontier

Simancas (sēmang'kas), village, Valladolid prov , NW Spain, in Leon The castle, an old fort rebuilt in the 15th cent , is the seat of the Spanish national archives Begun by Ferdinand V in Valladolid, the collection was transferred here by Emperor Charles V and was greatly enriched by Philip II

Simbirsk, RSFSR see ULYANOVSK

Simcoe, John Graves (sĭm'kō), 1752–1806, British army officer, first governor of Upper Canada He was educated at Oxford, entered the army in 1770, went to New England with British troops at the beginning of the American Revolution, and served throughout the war surrendering with Cornwallis The exploits of the Queen's Rangers, a partisan corps (originally founded by Robert Rogers) of which Simcoe was given command in 1777, he recorded in his *Journal of the Operations of the Queen's Rangers* (1787) Upon the division of the province of Quebec into the two Canadas, he was appointed (1791) lieutenant governor of Upper Canada In 1792 he arrived at Niagara (which he called Newark), his temporary capital, and summoned the first legislative assembly that year, he moved to York (now TORONTO) in 1793 He selected the site for LONDON on the Thames river, which he named Filled with zeal to make the province a strong colony of the British Empire, he encouraged immigration (particularly of the Loyalists), fostered agricultural development, and urged the imperial government to lay plans for a provincial college In 1796 he left for England on a leave of absence, he was sent that year to take part in the ineffective campaign in Haiti He returned (1797) to England and shortly resigned his governorship of Upper Canada In 1806 he accepted appointment as commander in chief in India but died before he could reach his post His correspondence was edited by E A Cruikshank (5 vols , 1923–31), and Mrs Simcoe's diary was edited by J R Robertson (rev ed , 1934) See biographies by W R Riddell (1926) and D C Scott (rev ed , 1926)

Simcoe (sĭm'kō), town (pop 6,037), S Ont , on the Lynn river and SW of Hamilton It is a market center for a region producing meat, dairy products, fruit, and vegetables Simcoe has canneries and woolen and lumber mills

Simcoe, Lake, 28 mi long and 26 mi wide, S Ont , N of Toronto Cook Bay and Kempenfelt Bay are the south and west arms It is connected with Lake Couchiching just north by a channel, the Narrows Orillia and Barrie and several small resorts are popular for boating and fishing The lake drains N through Lake Couchiching and the Severn river to Georgian Bay of Lake Huron and forms part of the TRENT CANAL system

Simeon I, d 927, first tsar of Bulgaria (893–927), son and successor of BORIS I Ambitious to conquer a vast empire, he made the duties levied by the Greeks on Bulgarian trade a pretext for attacking the Byzantine emperor, Leo VI He defeated the Byzantines but was defeated in turn by Leo's allies, the MAGYARS under Arpad However, after securing the help of the Petchenegs, he drove the Magyars into their present abode in Hungary, ravaged the Byzantine Empire, twice threatened Constantinople (913, 924), and temporarily held Adrianople (914) He conquered most of Serbia and took, with papal consent, the title tsar of the Bulgars and autocrat of the Greeks He installed a patriarch at his capital Preslav, where he held a splendid court Under his rule the first Bulgarian empire attained its greatest power and Old Slavonic literature reached its golden age An able Greek scholar himself, Simeon fostered the translation of Greek authors into Old Slavonic

Simeon II, 1937–, tsar of Bulgaria (1943–46) He succeeded his father, Boris III, under a regency After the occupation (1944) of Bulgaria by Russian forces he remained nominal king under a new council of regents until 1946, when a plebiscite abolished the monarchy He went into exile.

Simeon or **Symeon** (both sĭ'mēən). **1** Second son of Jacob and Leah and ancestor of the southernmost tribe of Israel He and his tribe are seldom mentioned individually Gen 29 33, 34, 49 5–7, Joshua 19 **2** Name in the Gospel genealogy Luke 3 30 **3** Devout man who blessed Jesus when He was presented in the Temple He uttered NUNC DIMITTIS Luke 2 21–34 **4** or **Simeon Niger** (nī'jur), early Christian, prominent in Antioch Acts 13 1 In Acts 15 14 Simeon appears for the usual Simon, referring to St Peter

Simeon of Durham (dŭ'rum) or **Symeon of Durham,** d after 1129, English chronicler A monk of Durham, he wrote between 1104 and 1108, the *Historia ecclesiae Dunelmensis*, a history of the church at Durham In 1129 he started a valuable chronicle, *Historia regum Anglorum et Dacorum*, which was to continue that of the Venerable Bede See translation by the Rev Joseph Stevenson (1855)

Simeon Stylites, Saint (stīlī'tēz) [Gr , =of a pillar], d 459?, Syrian hermit He lived more than 35 years on a small platform on top of a high pillar He had many imitators (called stylites) and gained the reverence of the whole Christian world Feast Jan 5

Simferopol (sēmfyĭrō'pul), city (pop 142,678), capital of Crimea, RSFSR, on the Salgir river The region abounds in orchards, vineyards, and tobacco fields, and the city has flour mills, fruit and vegetable canneries, and various manufactures Simferopol occupies the site of an ancient Scythian capital and of the Greek colony Neapolis Named Ak-Mechet under Tatar rule, it was renamed after its annexation (1783) to Russia The old part of the city has retained its Oriental appearance

simile see METAPHOR

Simkhovitch, Mary Kingsbury (sĭmkō'vĭch), 1867–, American social worker, b Chestnut Hill, Mass , grad Boston Univ , 1890 After several years of further study at Radcliffe, Columbia, and the Univ of Berlin, she became active in settlement work and the study of social economy She married Vladimir G Simkhovitch in 1899 In 1902 she and several others founded Greenwich House, in the Greenwich Village district of New York city, which became famous for its activities in social service, music, and handicrafts She was its director from 1902 until 1946, when she retired to become director emeritus Her writings include *Neighborhood* (1938), *Group Life* (1940), *Quicksand* (with Elizabeth Ogg, 1942), and her autobiography, *Here Is God's Plenty* (1949)

Simla (sĭm'lu), town (pop 18,348), capital of Himachal Pradesh, India It is situated on a forested ridge (c 7,100 ft high) in the lower Himalayas Simla is a resort town, and until 1947 it was the summer capital of India

Simmel, Georg (gā'ôrk zĭ'mul), 1858–1918, German philosopher and sociologist At the universities of Berlin and Strasbourg he was an influential lecturer Concerned with problems of human interaction and basing his social philosophy on a broad historical foundation, he did much to establish German sociology as an independent discipline *Soziologie* (1908) is his chief work in sociology, *Lebensanschauung* [philosophy of life] (1918), in philosophy See N J Spykman, *The Social Theory of Georg Simmel* (1925)

Simmesport (sĭmz'pôrt), fishing village (pop 1,215), central La , on the Atchafalaya river near its beginning

Simmons, Edward Emerson, 1852–1931, American mural painter, b Concord, Mass , studied with Boulanger and Lefebvre in Paris His early work in the Criminal Courts Building, New York, won the prize of the Municipal Art Society Subsequent works are in Massachusetts, Minnesota, and South Dakota state capitols, the Library of Congress, and the Vanderbilt and Rockefeller country homes. Most of his decorations for the old Waldorf-Astoria Hotel, New York, have been removed to the new hotel See his autobiography, *From Seven to Seventy* (1922)

Simmons, Franklin, 1839–1913, American sculptor, b Androscoggin Co , Maine, studied in Boston with J A Jackson He opened a studio in Lewiston, Maine, and then became an itinerant artist, executing portraits in oil and in clay In 1866 he went to Washington, where he made portrait busts of Grant, Sherman, Sheridan, Farragut, and other Civil War leaders At Portland, Maine, are a soldiers' monument and a Longfellow monument He went to Rome in 1867 and lived there the rest of his life

Simmons College, at Boston, Mass , nonsectarian, for women, chartered 1899, opened 1902, called Simmons Female College until 1915 It was the first to combine liberal and professional instruction for women It has schools of business and secretarial studies, English, home economics, library science, nursing, preprofessional studies, retailing (Prince), science, and social work (open to Tufts College students) The buildings are on the Fenway and on Beacon Hill

Simms, William Gilmore, 1806–70, American novelist, b Charleston, S C He wrote prolifically, both prose and poetry, but it is as a historical romancer of his own state that he is remembered and often compared with James Fenimore Cooper His tales of the border in the South include *Guy Rivers* (1834) and *Beauchampe* (1842, one part rewritten as *Charlemont*, 1856), those of colonial times are *The Yemassee* (1845) and *The Cassique of Kiawah* (1859), romances of Revolutionary times include a series - *The Partisan* (1845), *Vellchampe* (1836), and *Katharine Walton* (1851)—and *The Foragers* (1855) and its sequel, *Eutaw* (1856) He also wrote less successful novels of Spanish history In 1836 he married the heiress of a South Carolina plantation, "Woodlands." Besides continually writing fiction, he edited (1849–56) the *Southern Quarterly Review* and wrote local history and biographies of Francis Marion (1844), Nathanael Greene (1849) and others His short stories are in *Carl Werner* (1838) and *The Wigwam and the Cabin* (two series, both 1845) His home and fortune were destroyed in the Civil War See biography by W P Trent (1892), bibliography by Oscar Wegelin (3d ed revised, 1941)

Simnel, Lambert (sĭm'nul), fl 1486–1525 English impostor Little is known of his early life, but before 1486 he was taken to Oxford by Robert Simon, a priest, to gain the necessary education so that he might impersonate Edward, earl of Warwick, who was then confined in the Tower and was later (1499) murdered by order of Henry VII Simon took Simnel to Ireland in 1486, claiming that he was the earl of Warwick and that he had escaped from the Tower A number of Yorkist adherents rallied to his cause, and in 1487 at Dublin, Simnel was crowned as Edward VI Simon, Simnel, and their supporters crossed to England and were defeated in battle by the royal forces Simnel was taken prisoner but pardoned and possibly was employed thereafter as a scullion in the royal kitchen

Simois (sĭ'mōĭs), small river, NW Turkey, a tributary of the SCAMANDER It was the scene of many legendary events of Asia Minor, particularly in the siege of TROY

Simon, Saint (sī'mun) [Gr , from SIMEON], one of the Twelve Disciples In the Gospels he is called the Canaanite or Cananaean or Zelotes, synonymous terms referring probably to association with the fanatical sect of ZEALOTS Mat 10 4, Mark 3 18, Luke 6 15, Acts 1 13 Feast (with St JUDE) Oct 28

Simon, in the Bible **1** One of the MACCABEES **2** or **Simon Peter** see PETER, SAINT **3** See SIMON, SAINT **4** Kinsman of Jesus Mat 13 55, Mark 6 3 **5** Leper of Bethany in whose house a woman anointed Jesus' feet He may have been the father of Lazarus Mat 26 6, Mark 14 3 **6** Pharisee in whose house Jesus was entertained Luke 7 36–50 **7** Father of Judas Iscariot John 6 71, 13 2,26 **8** See SIMON OF CYRENE. **9** Tanner of Joppa with whom Peter stayed Acts 9 43 **10** See SIMON MAGUS

Simon, Antoine (ätwän' sēmō'), 1736–94, French revolutionist, often called "the shoemaker," a member of the Commune of Paris He and his wife guarded the dauphin, LOUIS XVII, in the Temple, and the brutality and coarseness they displayed were notorious A friend of Robespierre and Marat, Simon was executed after 9 Thermidor.

Simon, Sir John (sī'mun), 1816–1904, English surgeon and sanitarian Long associated with St Thomas's, London, he agitated successfully for the introduction of public health measures and

served as London's first officer of health He wrote *English Sanitary Institutions* (1890). See his *Personal Recollections* (1898)

Simon, John Allsebrook Simon, 1st Viscount, 1873–, British statesman and jurist Simon was called to the bar in 1899 and entered the House of Commons as a Liberal in 1906 He became Herbert Asquith's solicitor general (1910) and attorney general (1913) He refused the lord chancellorship in the coalition government of 1915 because he preferred a political career in the House of Commons He was home secretary (1915–16), but resigned because of his opposition to the government conscription bill and went to France with a staff appointment in the air force Defeated in the election of 1918, he was returned to Parliament in 1922 In 1926 he was leading counsel for Newfoundland in the Labrador boundary settlement, and he served as chairman (1927–30) of the commission to study the operation of the Montagu-Chelmsford reforms of 1919 in India In the National government he was foreign secretary (1931–35), home secretary (1935–37), and chancellor of the exchequer (1937–40) He gained a reputation as one of the most outspoken advocates of the "appeasement" policy toward Germany From 1940 to 1945 he was lord chancellor

Simon, Jules (Jules François Simon Suisse) (zhül' sōmō', frāswa', süēs'), 1814–96, French statesman and philosopher He taught philosophy at the Sorbonne from 1839 to 1852, during which time he edited the works of other philosophers and wrote his *Histoire de l'école d'Alexandrie* (1844–45) He served (1848) in the national assembly and then entered the council of state His republican opinions led to his retirement, and his subsequent refusal to swear allegiance to Louis Napoleon lost him his professorship (1852) Between that time and 1863 he devoted himself to writing From 1863 to 1875 he served as deputy and then was made senator for life As minister of education (1870–73) he proposed many educational reforms and was successful in liberalizing the secondary school system In his writings and in public service he was devoted to the cause of republicanism and opposed to the monarchy Among his works are *La Liberté civile* (1859) and *L'Ouvrière* (1861)

Simon, Théodore see BINET, ALFRED

Simone Martini see MARTINI, SIMONE

Simonides of Amorgos see SEMONIDES OF AMORGOS

Simonides of Ceos (sīmŏ'nĭdēz, sĭ'ŏs), c 556–468? B C, Greek lyric poet, b Ceos At Athens for a time under the patronage of Hipparchus, he seems then to have gone to Thessaly, returning to Athens at the time of the Persian Wars, he was a friend of most prominent Athenians After the wars he went (with his nephew Bacchylides) to the court of Hieto of Syracuse, where he was a rival of Pindar Simonides was highly honored in both Greece and Sicily There are only fragments left of his work, but some of the finest Greek poetry is in them He wrote, in an epigrammatic manner, verses of many kinds, some of these—encomia, epinicia, and threnes—he brought to a new perfection Two of his finest epitaphs (with the first of which he defeated Aeschylus) are on the fallen at Marathon and at Thermopylae A man of great intellect, Simonides was among the ancients a classic example of moderation in all things; hence his pathos without sentimentality, his dignity without pomposity, his elegance without preciosity

Simon Magus (mā'gŭs), Samaritan sorcerer who attempted to buy spiritual power from the apostles From this comes the term SIMONY Acts 8 9–24 He was said anciently to have founded a Gnostic sect

Simon of Cyrene (sī'rēnē), bystander made to carry Jesus' cross He was probably an African Jew, and since he is identified by his sons' names, they were probably Christians later Mat 27 32, Mark 15 21, Luke 23 26

Simonov, Konstantin (kŭnstuntyēn' sē'munuf), 1915–, Russian dramatist, novelist, and war correspondent He sprang into prominence in the Second World War with his reports from the front, published in book form as *On the Pitsamo Road* (1942), *Stalingrad Fights On* (1942), and *No Quarter* (1943, Eng tr, 1943) His fine novel of the defense of Stalingrad, *Days and Nights* (1945, Eng tr, 1945), gave him international fame Of his plays, *The Russian People* was presented in the United States in 1942 and the comedy *The Whole World Over* in 1947 After a trip to the United States in 1946, he wrote a play of which an American newspaper publisher was the villain, the play, *The Russian Question*, presented in 1947 and filmed in 1948, won the Stalin Prize

Simon Peter: see PETER, SAINT

Simons, Menno. see MENNO SIMONS

Simons, Walter (vä'tur zē'mônz), 1861–1937, German jurist and statesman He served (1919) as commissioner general to the German delegation at Versailles Opposing the terms of the peace treaty, he resigned one week before the signing As foreign minister (1920–21) he attended the reparations conference at London In 1922 he became president of the German supreme court After the death of President Ebert, Simons was acting president of the republic (March–May, 1925) An outstanding authority on international law, Simons wrote several works

Simonson, Lee, 1888–, American scenic artist, b New York city, grad Harvard, 1908 He was associated as designer with the Washington Square Players, 1915–17, and with the Theatre Guild as director, 1919–40 He designed the settings for *The Goat Song*, *The Road to Rome*, *Marco Millions*, *Elizabeth the Queen*, and other plays He wrote *Minor Prophecies* (1927), *The Stage Is Set* (1932), *Theatre Art* (1934), and *Part of a Lifetime* (1943)

Simonstown (sī'munztoun), town (pop 7,307), W Cape Prov, Union of South Africa, founded 1741 It has a good harbor S of Capetown and is headquarters of the British navy in Africa

simony (sī'munē) [from SIMON MAGUS], in CANON LAW, the procuring or disposing of a spiritual thing or something appertaining thereto for a temporal consideration It is a very grave sin, and simoniacal ecclesiastics may be excommunicated The temporal price may be one of many kinds, e g, money or high office The spiritual thing may be the performance of a sacrament or any other spiritual service, it is also simony to sell a benefice or endowment or other temporality to which anything spiritual is attached The desire, intention, or promise to make a simoniacal sale is simony itself Because of the frequency of simony at times in the history of the Roman Catholic Church, the legislation of the Church is very strict, e g, simony in the election of a pope invalidates the election (law of Julius II, 1503), no priest may ask for a baptismal fee in any way, and Mass stipends are fixed by the bishop and are governed by the expense of the Mass and the necessities of the priest The sale of indulgences is prohibited in any form, and no blessed article may be sold as blessed, for blessings are conferred not on things but persons The prevalence of simony was most important in bringing on the reform of Hildebrand (Gregory VII) and the Catholic Reform The sale of indulgences was one of the great abuses cited by Luther

simoom or **simoon** see SANDSTORM

Simplon (sĭm'plŏn), pass, 6,589 ft high, over the Pennine Alps It is crossed by the **Simplon Road** built (1800–1806) by Napoleon Simplon village is on the road The Simplon RR passes through

Simplon Tunnel, the longest (12¼ mi) in the world Opened in 1906, the tunnel crosses the Swiss-Italian border from Brig to Iselle It has a maximum elevation of 2,313 ft, the mountain rises 7,000 ft above it

Simpson, Sir George, 1792–1860, governor of the Hudson's Bay Company in Canada and traveler, b Scotland In 1820 he was sent by the company to Canada, where he took charge of the important Athabaska fur district In 1821 he was appointed governor of the northern department of the Hudson's Bay Company (with which the North West Company was merged that year) and later was made governor of Rupert's Land and of all the interests of the company in N North America Simpson encouraged exploration of his vast realm (Thomas Simpson, explorer of the arctic coast, was his cousin) and himself journeyed constantly (twice crossing the continent) from one wilderness trading post to another Over the territory he held firm control, managing the company's affairs with great astuteness His famous "overland" trip (1841–42) around the world, during which he crossed Siberia to St Petersburg, is described in his *Narrative of an Overland Journey round the World* (1847) Simpson's journal (1824–25), edited by Frederick Merk, was published as *Fur Trade and Empire* (1931) E E Rich edited his *Journal of Occurrences in the Athabasca Department* (1938) and *Part of a Dispatch to the Hudson's Bay Company 1829* (1947) See George Bryce, *Mackenzie, Selkirk, Simpson* (new ed, 1926), biography by A S Morton (1944)

Simpson, Sir James Young, 1811–70, Scottish physician, M D Univ of Edinburgh, 1832 He was made (1839) professor of medicine and midwifery at Edinburgh Although he introduced the use of ether to produce general anesthesia in childbirth, he almost immediately abandoned its use in favor of chloroform, the value of which he reported in 1847 For many years thereafter chloroform was widely used Although known chiefly as an eminent obstetrician, he was also an archaeologist See study by H L Gordon (1897)

Simpson, Sir John William, 1858–1933, English architect, a leading exponent of the classic style in England Specializing in public buildings, he designed hospitals and school buildings and the Corporation Art Galleries at Glasgow He was responsible for the design of the British Empire Exhibition at Wembley Simpson was a fellow of the Royal Institute of British Architects, served (1919–21) as its president, and was associated with other learned societies He was knighted in 1924 He wrote *Essays and Memorials* (1923) and *Some Account of the Old Hall of Lincoln's Inn* (1928)

Simpson, Matthew, 1811–84, American Methodist bishop, b Cadiz, Ohio In 1839 he became the first president of Indiana Asbury Univ (now DePauw Univ) He edited (1848–52) the *Western Christian Advocate* and was consecrated bishop in 1852 His noted oratory was used in behalf of the Union in the Civil War and in eulogizing his personal friend, Abraham Lincoln, at Lincoln's burial services in Springfield, Ill See E M Wood, *The Peerless Orator* (1909), C T Wilson, *Matthew Simpson* (1929)

Simpson, Thomas, 1808–40, British arctic explorer, b Scotland cousin of Sir George Simpson In 1829 he entered the service of the Hudson's Bay Company, by whom he was sent to Canada In journeys (1836–39) with Peter W Dease he traced the coast of the Arctic Ocean from the mouth of the Mackenzie river to Point Barrow and from the mouth of the Coppermine to the Gulf of Boothia In the course of his explorations he discovered Victoria Island On the return from his final trip he was killed, perhaps by members of his own party, or else he committed suicide His *Narrative of the Discoveries on the North Coast of America* appeared in 1843

Simpson, Wallis Warfield see WARFIELD, WALLIS

Simpson College see INDIANOLA, Iowa

Simpson Desert, 13,500 sq mi, SE Northern Territory, Australia Sand dunes and generally dry salt lakes characterize the area It is also called the Arunta Desert With the use of camels, it was crossed by Dr Cecil Madigan in 1939

Simpsonville, town (pop 1,298), NW S C, SE of, and near, Greenville

Simri (sĭm'rī) [Heb, =SHIMRI], head of a Merarite family 1 Chron 26 10

Sims, James Marion, 1813–83, American surgeon, b Lancaster Co, S C, M D Jefferson Medical College, Philadelphia, 1835 He practiced in Mt Meigs, Ala A gynecologist of international reputation he introduced new operations (including one for vesico-vaginal fistula) and new instruments and wrote the important *Clinical Notes on Uterine Surgery* (1866) In 1855 he founded the Woman's Hospital in New York city See his autobiography (1884), Seale Harris, *Woman's Surgeon* (1950)

Sims, William Sowden, 1858–1936, American naval officer, b Port Hope, Upper Canada (now Ontario), of American parents, grad Annapolis, 1880 He served (1882–86) in the Atlantic and Pacific fleets and later he was (1897–1900) naval attaché in Paris and St Petersburg He served (1902–9) with the Bureau of Navigation while performing (1907–09) the duties of naval aide to the President Sims was (1909–11) commanding officer of several U S battleships, and after leading (1913–15) the Atlantic torpedo flotilla he was appointed (1917) rear admiral and president of the Naval War College In the First World War he was in command (1917–18) of American operations in European waters He again became president of the Naval War College in 1919 and served there until 1922, when he retired with the rank of rear admiral He was made a full admiral by act of Congress in 1930 He wrote, with Burton J Hendrick, *The Victory at Sea* (1920) See biography by E E Morison (1942)

Simsbury, town (pop 3,941), N Conn, NW of Hartford, settled 1660, inc 1670 Safety fuses are made in the town Two preparatory schools, Westminster (for boys) and Ethel Walker (for girls), are here Gifford Pinchot was born in Simsbury See J E Ellsworth, *Simsbury* (1935)

Sin 1 Wilderness through which the Israelites wandered when they came up out of Egypt It is probably not the same as Zin Ex 16 1 **2** Same as PELUSIUM Ezek 30 15,16

sin, in religion, unethical act The term implies disobedience to a personal God, as in Judaism, Christianity, and Islam, and is not used so often in systems where there is no personal divinity, as Buddhism In ancient Israel besides personal sin there was national sin, usually idolatry, to regain God's favor the whole people had to be purified Ex 32 34 Crimes of a few might also be visited on all, but punishment of the criminals could avert this Joshua 7 Apart from ORIGINAL SIN Christianity and Islam have no developed idea of collective sin As to what constitutes sin, Christian ideas differ Some Christians divide human acts into good, indifferent, and bad, others regard all acts not positively good as necessarily sinful Thus, some may think card playing is indifferent so long as no obligation is infringed, while others consider card playing wrong as such The traditional view, presupposed by Christian asceticism, is that a major way to perfection lies in performing or in refraining from indifferent acts solely to please God, this is held, for example, by Roman Catholics, The theory that no act is really indifferent is common among conservative "evangelical" Protestants For Christians the effect of sin may be twofold, since a sin is at once a rebellion against the omnipotent Creator, risking punishment (even HELL), and a cruel offense against a Father and friend, The idea that sin is a grief to the loving Friend, shutting him out of one's life, was popularized in the Middle Ages, notably by the Cistercians in the 12th cent and the Franciscans in the 13th It is explicit in Western MYSTICISM and in modern Roman Catholic teaching Among Protestants it was typical of Luther and John Wesley. In Western theology (particularly Roman Catholi-

cism) sins are mortal if committed with knowing and deliberate intent in a serious matter, other sins are venial Roman Catholics are required to confess individually all mortal sins (see PENANCE) The seven deadly, or capital, sins are pride, covetousness, lust, anger, gluttony, envy, and sloth The sins which cry out to heaven for vengeance are willful murder, the sin of Sodom, oppression of the poor, and defrauding the laborer of his wages The sin of the angels (*specifically of* SATAN) is pride New ideas about God introduced with MODERNISM among Protestants and in Judaism entailed changed views of sin, the usual tendency of modernists has been to set up a purely humanitarian ethics without supernatural sanctions See ATONEMENT, BAPTISM, ETHICS, PURGATORY

Sinai (sī'nī, sī'nē), triangular peninsula, extending north into a wide isthmus which fronts on the Mediterranean Sea Sinai extends c 230 mi from north to south and is c 150 mi wide The easternmost part of Egypt, it is usually regarded as belonging to Asia rather than to Africa The peninsula is bounded by the two arms of the Red Sea, i e , on the west by the Gulf of Suez (which is extended north by the Suez Canal) and on the east by the Gulf of Aqaba Level and sandy in the north, in the south Sinai rises in granitic ridges, which attain a height of over 8,500 ft at Jebel Katrun In the south is also Jebel Musa [Arabic,= mount of Moses] or Mt Sinai, some authorities deny that this is the mountain on which Moses received the Ten Commandments and suggest instead the near-by Jebel Serbal At the foot of Jebel Serbal is the famed Greek Orthodox monastery of St Catherine, founded c 250 Here in the 19th cent was found the Codex Sinaiticus, one of the oldest manuscripts of the New Testament This was purchased from the USSR by the British Museum in 1933 In 1950 the task of microfilming the 3,000 volumes of manuscripts in the monastery library was completed In ancient times Sinai was ruled by the Arabs of Petra (Ex 3 1, 19), usually, however, it was under the Egyptian kings, who worked its copper mines Today there are quarrying and oil drilling See Lina Eckenstein, *A History of Sinai* (1921)

Sinaia (sēnī'ä), town (pop 6,531) S central Rumania, in Walachia, NW of Ploesti It is a health and winter sports resort in the Transylvanian Alps, and it was the summer residence of the kings of Rumania until the abdication (1947) of King Michael There are two former royal palaces (built 19th cent) and the former royal hunting lodge The older of the palaces, built in Renaissance style, contains an internationally famous art collection There also is a 17th-century monastery

Sinaloa (sēnälō'ä), *state (22,582 sq mi , 1946 estimated pop 582,761)*, NW Mexico, on the Gulf of California and the Pacific Culiacán is the capital Long and narrow, lying between the ocean and mountain spurs of the Sierra Madre Occidental, Sinaloa has low, hot, humid plains and, especially in the south, numerous marshes Many rivers, fertile valleys, and varying elevation produce a variety of crops—sugar cane, coffee, tobacco, tropical fruits, rice, henequen, and grains of the Temperate Zone More important is the mining of gold, silver, and copper Forest products—fine woods and rubber—are generally unexploited Although the coast has many sheltered harbors, only one port, MAZATLAN, is of major importance During early Spanish exploration, CULIACÁN was the starting point for the northwest and was the northern city of NUEVA GALICIA Later Sinaloa was joined with SONORA and did not become a separate state until 1830

Sinan (sīnän'), Moslem architect, 1489?-1578? He is regarded as the greatest of Islamic builders, his achievement lying in his solutions of spatial problems in the cupola-topped structures He was active in the reigns of Selim I, Suleiman I, and Selim II and was named (1539) court architect His masterpieces are the mosques of Sha Zade and Selim I at Constantinople and the mosque of Suleiman I at Adrianople His autobiography lists over 300 buildings of his design

Sinclair, Sir John, 1754–1835, Scottish agricultural economist and statistician He compiled *A Statistical Account of Scotland* (21 vols , 1791–99), giving information on farming and other industries, with notes on natural history as well as statistics of population He was active in politics and in agricultural organizations, and he corresponded with George Washington A memoir by his son John Sinclair was published in 1837

Sinclair, May, 1865?–1946, English novelist, b Rock Ferry, Cheshire, educated at Ladies' College, Cheltenham Her first and greatest success was *The Divine Fire* (1904) Other novels of distinction are *The Combined Maze* (1913), *The Tree of Heaven* (1917), and *The Allinghams* (1927) In *Mary Olivier* (1919) she was one of the first to employ the stream-of-consciousness technique Other works are *The Three Brontës* (1912) and her *Journal of Impressions in Belgium* (1915) Ill-health prevented her from writing in late life

Sinclair, Upton, 1878–, American novelist and socialist, b. Baltimore, grad. College of the City of New York, 1897 His desire for social and industrial reform underlies most of his writing *The Jungle* (1906), a novel of the Chicago stockyards, aroused great public indignation and led to investigations and improvements With the money from that novel, Sinclair established in 1906 his short-lived socialist community, Helicon Home Colony, at Englewood, N J Further novels exposing social evils were *King Coal* (1917), *Oil* (1927), *Boston* (on the Sacco-Vanzetti Case, 1928), and *Little Steel* (1938) Similar in tone are his social studies, among them *The Brass Check* (1919), on American journalism, and *Mammonart* (1925) Never a true Marxian, Sinclair has been an ardent socialist, in and out of the American Socialist party In 1934 he was defeated as the Democratic candidate for governor of California *World's End* (1940) began a long cycle of books about the fictional and ubiquitous Lanny Budd, which is a history since 1914 in novel form, the third, *Dragon's Teeth* (1942) won a 1943 Pulitzer Prize Sinclair's more than 70 titles have been widely translated, and he is one of the best-known American authors in Europe See his reminiscences, *American Outpost* (1932)

Sind (sĭnd), province (48,136 sq mi , pop 4,535,008) West Pakistan, on the Arabian Sea Karachi is the capital Sind is bordered by India on the east and south It comprises some hilly country and parts of the alluvial plain and delta of the Indus river, which empties through the province The heat is intense in the summer and the rainfall is very scanty, but extensive irrigation permits the raising of crops, including grains, fruit, oilseeds, and cotton Salt is processed and livestock is raised where agriculture is not feasible Sind, which includes the archaeological site of MOHENJO-DARO, may have had the oldest settled civilization in the Indian subcontinent The region was occupied by Alexander the Great and was part of the Mauiya empire Sind was converted to Islam after its conquest by Arabs in the 8th cent The local rulers resisted the early efforts of the British to control the region, but in 1843 Sir Charles Napier conquered it in a short campaign Until 1937 it was administered as part of Bombay

Sindhi (sĭn'dē), *modern language of the Indic group* of the Indo-Iranian subfamily of Indo-European languages See LANGUAGE (table)

Sinding, Christian (krĭs'tyän sĭn'dĭng), 1856–1941, Norwegian nationalist composer, studied at the Leipzig Conservatory, brother of Stephan Sinding and Otto Sinding His government granted him a yearly stipend from 1890 until his death In 1921–22 he taught at the Eastman School of Music in Rochester N Y He wrote the opera *Der heilige Berg* [the holy mountain] (Dessau, 1914), orchestral music, chamber music, many songs, and piano pieces, of which his *Rustle of Spring* is the most popular

Sinding, Stephan (stā'fan), 1846–1922, Norwegian sculptor, naturalized in Denmark French influence shows strongly in his art, although he turned to Norse mythology and Norse life for many of his themes, such as *The Valkyrie*, the *Valhalla* frieze, and *The Eldest of Her Kin* Other works are the *Barbarian Mother*, *May*, and monuments to Ibsen, Bjornson, and Ole Bull Sinding used wood, as well as bronze, for a medium He was a brother of Christian Sinding, composer, and of **Otto Sinding,** 1842 1909, Norwegian landscape and genre painter

Singapore (sĭng'gupôr, sĭng'u-, sĭng'gupôr'), city (pop 729 296), on Singapore island (217 sq mi , pop 948,303) at the southern tip of the Malay Peninsula Singapore is one of the great commercial centers of the world and the major British naval base in the Far East The city and port lie on the south side of the island, the naval base fronts the Johore Straits to the north The coast is broken by many inlets, and there are extensive mangrove swamps A causeway links the island to the state of JOHORE, of which Singapore formed a part before it was granted (1819) to the British East India Company through T Stamford RAFFLES It was finally ceded to Great Britain in 1824 There was only a small fishing and trading village on the island when it passed under British control, but Chinese and Malay merchants quickly moved in The port grew rapidly, soon overshadowing PENANG and MALACCA in importance The development of Malaya under British rule in the late 19th and early 20th cent made Singapore one of the leading ports of the world for the export of tin and rubber The construction of a railroad through the peninsula to Bangkok in Siam swelled Singapore's trade, and the building of airports made it more than ever a communication center. The naval base, begun in 1924, was completed in 1938, the island, reinforced in the early days of the Second World War, was counted as the key point in the defense of SE Asia and Indonesia against the Japanese After the swift Japanese campaign in Malaya, however, Singapore was successfully attacked across the Johore Straits. Cut off from their water supply, outnumbered, and blockaded, the garrison surrendered to the Japanese on Feb 15, 1942 Singapore was reoccupied by the British Sept. 5, 1945. The city has a cosmopolitan aspect. There are many European-style buildings, including the public offices, the cathedral, Raffles College, and the King Edward VII College of Medicine Most of the people (c 600,000) are Chinese Singapore formed a part of the STRAITS SETTLEMENTS until 1946, when it was erected into Singapore crown colony, including Singapore, Christmas Island, and the Cocos-Keeling Islands.

Singer, Isaac Merritt, 1811–75, American inventor, b Rensselaer co , N Y As a child he lived in Oswego, N Y He patented in 1851 a practical sewing machine which could do continuous stitching Although he lost a suit for infringement brought by Elias Howe, his company was already so well established that it took the lead in a subsequent combination of manufacturers and pooling of patents Between 1851 and 1865 Singer patented 20 improvements, including the yielding presser foot and a continuous wheel feed In 1863 he retired to live abroad

Singhalese (sĭng'gulēz), language of Ceylon It belongs to the Indic group of the Indo-Iranian subfamily of Indo-European languages The name is also spelled Sinhalese See LANGUAGE (table)

single tax, tax derived from economic RENT It is based on the doctrine that land and the natural resources are the source of all wealth, and it corresponds substantially to the *impôt unique* of the 18th-century PHYSIOCRATS Basic to the theory is the belief that the land and its wealth belong to all The most effective advocate of the single tax was Henry George, who held that economic rent tends to enrich the owner at the expense of the community and is thus the cause of poverty, he believed that by appropriating all (or nearly all) economic rent governments could wipe out social distress and even acquire a surplus without recourse to any other taxes George's theories have had some influence on land taxation in Britain, several of the dominions, the W United States, and several continental nations See Henry George, *Progress and Poverty* (1879), J F Muirhead, *Land and Unemployment* (1935)

Singleton, Esther, 1865–1930, American author, b Baltimore She was editor (1923 30) of the *Antiquarian* and wrote articles and books on a large number of topics, e g , antique furniture, the history of New York, opera, musical instruments, famous cities, buildings, and pictures, and great events Her works include *The Furniture of Our Forefathers* (2 vols , 1900), *The Shakespeare Garden* (1922), and *The Collecting of Antiques* (1926)

Singleton, municipality (pop 3,940), New South Wales, Australia on the Hunter river and NW of Newcastle It is in a fruitgrowing and coal-mining area

Sing Sing see OSSINING, N Y.

Singspiel see OPERA

Sinhalese (sĭn'hulēz), language of Ceylon It belongs to the Indic group of the Indo-Iranian subfamily of Indo-European languages The name is also spelled Singhalese See LANGUAGE (table)

Sinim (sī'nĭm), a remote people Isa 49 12 Some identify them with the Chinese

Sining (shē'nĭng'), Mandarin *Hsi-ning*, city (pop 55,564), capital of Tsinghai prov , W China It is in the northeast section of the province, c 50 mi E of Ching lake

Sinites (sī'nīts), unidentified people of ancient Syria Gen 10 17, 1 Chron 1 15

Sinkiang (sĭn'kyäng', shĭn'jyäng'), Mandarin *Hsin-chiang*, province (660,976 sq mi , pop 3,730,051), W China It is also called Chinese Turkistan or Eastern Turkistan The capital is Urumchi Sinkiang is bordered by the Mongolian People's Republic on the east, by the USSR on the north and west, and by India and Tibet on the south Almost half the province is covered by three mountain ranges which extend east and west, from north to south, they are the Tarbagatai, the Tien Shan, and the Altyn Tagh The rivers of Sinkiang, including the Ili, the Kashgar, and the Tarim, rise in the mountains Gold and jade are mined, but large deposits of iron and coal are untouched The level land mainly comprises Dsungaria, a grazing region of the north, and the Taklamakan, a desert in central Sinkiang The province has a continental climate with great extremes of winter and summer temperature Rainfall is scant, averaging less than 15 in annually The bulk of the population lives along the borders of the Taklamakan in oases where barley, maize, melons, and cotton (locally spun and woven) are grown Nomadic sheepherding supplies much of the subsistence requirements Transportation is mainly along two roads which skirt the Taklamakan and connect the cities, of which Kashgar, Khotan, Kuldja, Turfan, and Urumchi are the largest Except for a few trucks, the Bactrian camel is the chief means of transport Most of the trade (chiefly luxury goods) is with the USSR, and India and China are of secondary importance Turkis, who are Moslems, constitute the bulk of the population, indigenous Chinese and nomads, largely Kirghiz and Kazakhs, are the other large elements A great increase in aridity in the 16th cent caused the disappearance of the kingdoms which had earlier flourished in Sinkiang, especially in the TURFAN

region. An anarchic period followed until the mid-19th cent, when Chinese control became effective. The province (ruled virtually as a colony) by its position in the far west was spared most of the civil strife which raged in China after the establishment (1912) of the republic. Early in 1950 Sinkiang capitulated to the Chinese Communists without a struggle See Owen Lattimore, *High Tartary* (1930) and *Pivot of Asia* (1950).

sinking fund, sum set apart periodically from the income of a government or a business and allowed to accumulate in order to pay its debts as they fall due. A preferred investment for a sinking fund is the purchase of the government's or firm's bonds that are to be paid off Usually the fund is administered by a trustee

Sinking Spring, industrial borough (pop 1,861), SE Pa, W of Reading settled 1793, inc. 1913 It has textile mills and a foundry

Sinn Fein (shĭn' fān') [Irish,=we, ourselves], Irish nationalistic movement which triumphed in the establishment of the Irish Free State (see IRELAND) Irish attempts to obtain Home Rule through the British Parliament were severely checked in 1890 by the disgrace of Charles Stewart Parnell and the subsequent break in the ranks of the Irish party Meantime nationalistic spirit in Ireland was growing In 1893 the Gaelic League was founded to advocate the reassertion of a distinctively Irish culture In 1899 Arthur GRIFFITH, the father of the Sinn Fein movement, established the first of his long series of patriotic journals, the *United Irishman*, advocating an "Irish Ireland" [the symbolic meaning of *Sinn Fein*] This ideal called for an economically and politically self-sufficient Ireland The program was not, at first, an overtly political one, nor did it advocate violence Its method was, rather, one of passive resistance to all things British, and included an attempted revival of Irish Gaelic In 1905 Sinn Fein was organized politically, but until the outbreak of the First World War it gained little strength It had no part in the labor movement led by James CONNOLLY and James LARKIN The Home Rule Bill of 1912 and the growing tension between Ulster and Southern Ireland resulted in the establishment of volunteer military organizations in the two sections of the country and the beginning of a period of unrest and violence in which Sinn Fein was eventually to triumph The organization assisted Patrick PEARSE in the unsuccessful Easter Rebellion of 1916 The suppression of that revolt, the execution of its leaders, and the military occupation of Ireland resulted in a great stimulation of the growth of Sinn Fein In 1917 many of its leaders were released from internment in Wales and met to reorganize under the leadership of Eamon DE VALERA Early in 1918 the British Parliament passed a conscription act for Ireland, which was never enforced but, nevertheless, solidified Irish resistance In the "khaki" election of 1918 after the armistice, Sinn Fein put up a candidate for every Irish seat in the British Parliament and elected 73 members These declined to go to Westminster, and set up an Irish assembly, called the DÁIL EIREANN The Dáil declared Ireland independent and undertook to organize the new state Within a few months disorder was rife in Ireland Led by Michael COLLINS, the Irish extremists set about to destroy English rule A small corps of gunmen, by assassination and terrorism, attempted to disorganize British police control For some time the people stood quietly by, the Catholic bishops denounced the guerrilla warfare, and many ardent patriots deplored it The British government undertook, however, to suppress the revolt by sheer violence and sent (1920) a body of military irregulars, popularly known as Black and Tans, to reestablish order by a counterterror It then became increasingly clear that the people were responding by rallying to the support of Sinn Fein Eventually, in 1921, the British government, under David Lloyd George, yielded to British opinion and continued Irish resistance, and negotiations began for establishing the Irish Free State The treaty agreed upon in 1922, however, did not satisfy a minority of Sinn Fein represented by De Valera, and a period of civil war ensued Eventually the great mass of the people were reconciled to the new government. In 1927 De Valera reentered the Dáil, and in 1932 became president of the Irish Free State The Irish Republican Army, an intransigent remnant of Sinn Fein, was outlawed The establishment of the Free State brought the Sinn Fein movement to a virtual end The heirs of the movement, however, continued as the Irish Republican Army to agitate against the partition of Ireland into the republic and Northern Ireland

Sinnott, Edmund Ware (sĭ'nŭt), 1888–, American botanist, b Cambridge, Mass, grad Harvard (B A, 1908, Ph D, 1913) After doing botanical research in Australasia, he served as professor of botany and genetics at Connecticut Agricultural College (1915–28) and as professor of botany at Barnard College (1928–39) and at Columbia (1939–40) In 1940 he became professor of botany at Yale and in 1945 director of the Sheffield Scientific School there He was editor in chief (1926–32) of the *American Journal of Botany* and in 1948 was elected president of the American Association for the Advancement of Science His research has been concerned especially with plant morphology, morphogenesis, and genetics He is the author of *Botany Principles and Problems* (1923, rev ed, 1940) and *Principles of Genetics* (with L C Dunn, 1925, rev ed, 1950)

Sino-Japanese War see CHINO-JAPANESE WAR

Sinope (sĭnō'pē), ancient city and seaport, on the northern coast of Asia Minor and on the Sinope Peninsula, projecting into the Black Sea It is the modern Turkish town of Sinop (pop 4,995), with an excellent harbor, but lacking adequate land communications Ancient Sinope was founded by Milesian colonists in the 8th cent B C, was rebuilt after its destruction (7th cent B C) by the Cimmerians, rose to great commercial and political importance, and established numerous colonies on the Euxine shores One of its chief exports was cinnabar, which derives its name from Sinope The city fell (early 2d cent B C) to the kings of Pontus, whose capital it became The Romans under Lucullus captured it from Mithridates VI in the Third Mithridatic War (74–63 B C) and made it a free city Sinope was occupied and devastated by Pharnaces II but was restored by Julius Caesar Under the Roman Empire the city again reached great prosperity, which continued under the Byzantine Empire When the Byzantine Empire broke up in 1204, Sinope joined the Greek empire of Trebizond, but within a few years it was conquered by the Seljuk Turks, and its decline began Sinope was the birthplace of Diogenes

Sinsinawa (sĭn'sĭnuwu), unincorporated village, SW Wis, across the Mississippi from Dubuque, Iowa Samuel MAZZUCHELLI founded St Clara Academy for girls here c 1848

Sinton (sĭn'tun), town (1940 pop 3,770, 1947 estimated pop 4,700), co seat of San Patricio co, S Texas, N of Corpus Christi, settled c 1892, inc 1916 Long known as a shipping point for cotton and cattle, it has gained from handling oil and from general growth in the Corpus Christi region

Sintra, Portugal see CINTRA

Sinuiju (sēn'wē'jōō), Jap *Shingishu* (shēn-gĭ'shōō), city (1944 pop 118,414), N Korea, on the Yalu river, opposite Antung, China The city's rise dates from the opening in 1910 of a bridge across the Yalu Industries include paper milling and processing of soybeans Sinuiju was formerly called Wiju

Sinus Arabicus see RED SEA

sinus infection (sī'nŭs) Sinuses are spaces within bones of the body The paranasal or accessory sinuses of the nose are known as the ethmoidal, frontal, maxillary, and sphenoidal sinuses Infection in these paranasal sinuses may be caused by trauma (injury), allergy, or dietary deficiencies, the most common cause of infection in the sinuses of the head however, is acute rhinitis (inflammation or infection of the mucous membranes) Infection from teeth in the upper jaw sometimes spreads to the maxillary sinuses and thus to the nose Symptoms of sinus infection include a discharge of thick mucus from the nose and severe headache In addition to general nutritive and tonic measures, local applications of heat and astringents, irrigation, and sometimes surgery to produce drainage are employed in therapy

Sion (sĭ'ŭn), in the Bible **1** Same as Mt HERMON Deut 4 48 **2** Variant of ZION

Sion (syō), Ger *Sitten* (zĭ'tun), town (pop 9,363), capital of VALAIS canton, Switzerland, on the Rhone river It has a large hydroelectric station and many historic remains Sion has been an episcopal see since the 6th cent

Siouan (sōō'un), linguistic family of North America It is one of the most widely distributed of American Indian stocks, in historical times Siouan languages were spoken from the Gulf of Mexico to Saskatchewan, mainly on the Great Plains and the western prairies A relationship has been suggested between Siouan and Natchez-Muskogean and a further relation of both with Iroquoian and Caddoan (see also HOKAN) For members of the Siouan family, see LANGUAGE (table)

Sioux Center (sōō), town (pop 1,680), NW Iowa, between the Floyd and Rock rivers N of Sioux City, inc 1891 It is a farm trade center with several cooperatives There are many people of Dutch descent in the area

Sioux City, city (pop 82,364), co seat of Woodbury co, NW Iowa, at the junction of the Big Sioux and the Floyd with the Missouri, settled 1848, inc 1857 Second largest city in the state, it is a shipping, trade, and industrial center for an extensive agricultural and livestock area (including near-by states) and has railroad shops, foundries, brickworks and tileworks, stockyards, meat-packing plants, and flour mills Morningside College (Methodist, coeducational, 1894) and Briar Cliff College (Catholic, for women) are here A stock show is held annually in March Near by is a monument commemorating the death and burial in 1804 of Sgt Charles Floyd of the Lewis and Clark expedition The U S army maintained an air base here for training bomber pilots and crews during the Second World War

Sioux Falls, city (pop 40,832), co seat of Minnehaha co, SE S Dak, on the Big Sioux river and N of Sioux City, Iowa, founded 1857 Indians forced its abandonment in 1862, but with the establishment here of Fort Dakota in 1865, the city was resettled, it was incorporated as a village in 1877 and chartered as a city in 1883 It was named for the river falls, which furnish power Largest city in the state it is the commercial, industrial, and shipping center for an extensive agricultural area, with factories, warehouses, and meat-packing plants Sandstone ("Sioux Falls granite") is quarried near by Sioux Falls College (Baptist, coeducational, 1883), AUGUSTANA COLLEGE, the state school for the deaf, and the state penitentiary are here

Sioux Indians or **Dakota Indians,** related group of North American Indian tribes of the Siouan linguistic stock The Sioux or Dakota were divided into seven tribes—"the seven council fires" Wahpekute, Mdewakanton (who together with the Wahpekute formed the Santee), Sisseton, Wahpeton, Yankton, Yanktonnai, and Teton The Sioux were first noted historically in the *Jesuit Relation* of 1640 when they were in the general vicinity of Sault Ste Marie Their traditions indicate that they had moved there some time before from the northeast They were noted in 1678 by Duluth and in 1680 by Father Louis Hennepin in the Mille Lacs region in Minnesota Their migration had been in a southwesterly direction in the face of the hostile Ojibwa, who had been equipped with guns by the French In the mid-18th cent, having driven the Cheyenne and the Kiowa out of the Black Hills, the Sioux inhabited the N Great Plains and the western prairies—mainly in Wisconsin, Iowa, Minnesota, North and South Dakota, and up into the bordering provinces of Canada They then numbered at least 30,000 The Teton Dakota numbering some 15 000 were the most populous of the seven tribes, and the Oglala Sioux, the most numerous band of the Teton, numbered some 3,000 In relations with the white man all the divisions of the Sioux have essentially the same history The Sioux became friendly with the British after the fall of the French power and supported the British against the United States in the American Revolution and (with the exception of one chief, Tohamo or Rising Moose) in the War of 1812 The United States concluded peace treaties with the Sioux in 1815, 1825, and 1851 A portion of the Sioux under Little Crow rose in 1862 and horribly massacred more than 800 white settlers and soldiers in Minnesota, this revolt was suppressed but unrest continued In 1867 a treaty was concluded by which the Sioux gave up a large section of territory and agreed to retire to a reservation in SW Dakota before 1876 The discovery of gold in the Black Hills and the subsequent rush of prospectors brought on another outbreak led by such famous chiefs as Sitting Bull, Red Cloud, Rain-in-the-Face, Crazy Horse, American Horse, and Gall In this revolt occurred the famous last stand by Gen George A CUSTER, the Sioux were finally quelled by Gen Nelson A MILES after another outbreak caused by treaty grievances and the excitement incident to the appearance of a reputed Indian messiah (see GHOST DANCE) The Sioux are generally considered to represent one of the highest types of North American Indian, both physically and mentally They had a typical Plains area culture Today living on reservations in Minnesota, Nebraska, North Dakota, South Dakota, and Montana, they number some 46,000 See R H Lowie, *Dance Associations of the Eastern Dakota* (1913), G E Hyde, *Red Cloud's Folk* (1938), B O Nelson, *Land of the Dacotahs* (1946)

Sioux Lookout, town (pop 1,756), W Ont, on Pelican Lake and NW of Fort William It is a gold-mining and lumber center and distributing point for the surrounding area There are creosote works

Sioux Rapids, town (pop 1,056), NW Iowa, on the Little Sioux river and NW of Fort Dodge, platted 1858, replatted 1869

Siphmoth (sĭf'mŏth), unidentified place, S Palestine, associated with David 1 Sam 30 28

Siphnos (sĭf'nus), island (32 sq mi, pop 3,325), off S Greece, in the Aegean Sea W of Paros, one of the Cyclades In ancient times it was famous for its gold, silver, and iron mines

siphon (sī'fun, sī'fŏn), tube through which a liquid is lifted over an elevation by the pressure of the atmosphere and is then emptied at a lower level To start the siphon, air must be removed from it, as may be done by filling it with the liquid The elevation over which a siphon will lift a liquid is limited by the atmospheric pressure At sea level, water may be lifted about 34 ft The siphon must discharge at a lower level than the level of the liquid at the intake

Sippai (sĭ'pāī), variant of SAPH

Sippar (sĭpar'), ancient city of N Babylonia, on the Euphrates in present Iraq It was one of the capitals of Sargon and had a great temple to the sun-god Shamash Excavations begun in 1882 have yielded thousands of inscribed clay tablets It is probably the biblical SEPHARVAIM.

Siqueiros, David Alfaro (dävēdh' alfä'rō sēkä'rōs), 1898–, Mexican painter, b Chihuahua His career as a painter has always been associated with vigorous political and revolutionary activities He enlisted in the Batallón Mamá ("Baby's Brigade") in the Carranza army and at 17 was a staff officer As military attaché (1919–21) at the Mexican legation in Paris, he came into contact with stimulating contemporary artistic movements Upon his return to Mexico in 1922, he became a leader of the Syndicate of Technical Workers, Artists, and Sculptors and a founder of the magazine *Machete*, which expounded the principles of a new national "people's art" After 1924 he visited Moscow, Los Angeles, New York (where he established for a time the Siqueiros Experimental Workshop), Havana, and several South American cities In 1936 he served as an officer in the Spanish republican army Characteristic of the style of Siqueiros is a dynamic swirling brushwork and dramatic contrasts of light and dark His art is one of violent social protest He is famous as a technical innovator Much of his work is executed with pyroxylin paints on masonite Among his best-known works are frescoes in the National Preparatory School, Mexico city (1922–24), murals at the Choumard Art Institute and Plaza Art Center, Los Angeles (1932), murals at the Mexican school, Chillán, Chile (1942), and murals at the National Institute of Fine Arts, Mexico city (1945)

Siquijor (sēkēhôr'), island (130 sq mi , pop 59,507), one of the Visayan Islands, in the Philippine Islands. It is SE of Negros Its products are manganese, tobacco, hemp, and corn

Sirach (sī'rak), father of the author of Ecclesiasticus, which is sometimes called Sirach See the prologue of the book

Sirah (sī'ra) [Heb ,=departure], well, between Hebron and Jerusalem, where Abner was intercepted by Joab's emissaries 2 Sam 3 26

Siren (sī'ran), in Greek mythology, one of three sea nymphs They were the daughters of Phorcus or of Achelous They lived on a pleasant island and sang so sweetly that all who heard would draw near and be shipwrecked on the rocks The Argonaut heroes were saved from them by the music of Orpheus, and Odysseus escaped by tying himself securely to a mast and stopping the ears of his men It is said that the Sirens committed suicide when Odysseus escaped them Sirens are sometimes pictured as birds with the heads of women They resemble the German Lorelei

Siret or Siretul, river see SERETH

Sirion (sī'rēon), Sidonian name of Mt. HERMON Deut 3 9, Ps 29 6

Sirius (sī'rēus) or **Dog Star,** brightest star in the heavens It is a white star in the constellation Canis Major (the Great Dog) To the ancient Egyptians its rising was a sign of the beginning of the Nile flood To the Greeks and Romans it was a token of summer heat In 1844 BESSEL announced his belief that the irregularities in the proper motion of Sirius indicated the existence of an obscure companion star Later, T H SAFFORD designated the position where the companion might be found, and in 1862 Alvan G CLARK detected it in the position predicted It is a star of the 10th magnitude and is classed as a white dwarf star, of which one cubic inch is calculated to weigh about a ton The parallax of Sirius has been measured with considerable precision From this, the Dog Star is estimated to be about 8½ light years distant from the earth

Sirmium (sûr'mēum), ancient city of Pannonia The site is near Mitrovica, Yugoslavia It was unimportant until occupied by the Romans in the conquest of Pannonia, but later as the chief city of Lower Pannonia, a trade center, and a residence of high Roman officials, it was prominent, especially in the 3d and 4th cent A D

sirocco (sirō'kō) [Ital , from Arabic ,=eastern], name applied to an oppressive warm or hot southerly wind in Mediterranean lands, especially Italy The sirocco rises in the Sahara in North Africa, frequently bears with it much dust, causing haze, and gathers moisture as it crosses the ocean

Sir Roger de Coverley see ROGER DE COVERLEY

sisal hemp (sī'sl, sīs'l sēsäl') [from Sisal, former chief port of Yucatán], important cordage fiber obtained from the leaves of the sisal hemp plant, an extensively cultivated tropical AGAVE It is considered next to Manila hemp in strength and value and is used in making lariats The name sisal hemp is frequently given to fibers of various agaves, particularly henequen and the false sisal *Henequen* (hĕn'ukĭn) [from the Mexican name] has come to mean the species *Agave fourcroydes* as distinct from the true sisal, *Agave sisalina* Henequen is grown chiefly in Yucatán, where the production of the fiber, principal source of binder twine, is a major industry Ropes made of henequen were used by pre-Columbian Americans Henequen and sisal plants are typical agaves The false sisal of Florida, *Agave decipiens*, produces an inferior fiber and is distinguished by spiny edges on the leaves

Sisamai (sīsä'māī, sī'sùmā'ī), descendant of Judah. 1 Chron 2 40

Sisera (sī'sùrù). **1** Canaanite captain, defeated by Deborah and Barak and murdered by Jael Judges 4,5 **2** Family in the return to Palestine Ezra 2 53, Neh 7 55

Sisley, Alfred (alfrĕd' sēslā'), 1839–99, French landscape painter, b Paris, of English parents He studied under Corot, Gleyre, and Courbet One of the impressionist group, he knew Renoir, Manet, Degas, Monet, and Pissarro After his father's failure in business in 1870, Sisley lived modestly at Moret-sur-Loing and painted charming landscapes, which were only fully appreciated after his death Less daring than the works of Monet, Sisley's gentle, sunny paintings are often much happier He is well represented in many modern galleries *A River Bank* (Luxembourg Mus , Paris), *First Snow at Louveciennes*, and *The Banks of the Loing* are characteristic

Sismondi, Jean Charles Léonard Simonde de (zhäⁿ' sharl' lāônär' sēmôd' du sēsmôdē'), 1773–1842, Swiss historian, b. Geneva A member of the circle of Mme de Staël, he was a moderate liberal, and his political views colored his writings His most celebrated work is the *History of the Italian Republics in the Middle Ages* (16 vols , 1809–18, Eng tr , abridged and revised, 1906) Although this work is in many ways outdated and although it is marred by Sismondi's Calvinist bias against the Catholic Church, which he considered as chiefly responsible for the loss of liberty in the Italian states, the *History of the Italian Republics* is unique in its scope and has not been fully superseded by any other work Among Sismondi's other writings is a history of France Sismondi was among the first historians to appreciate the influence of economic factors on political and cultural developments

Sisseton (sī'sutun), city (pop 2,513), co seat of Roberts co , NE S Dak , W of Lake Traverse near the N Dak line, in a region of farms and lakes, inc 1892 It is the seat of the Sisseton Indian Reservation, opened to white settlement in 1892 Fort Sisseton to the west, established in 1864 for protection against Indians, was abandoned in 1888

sisterhood see MONASTICISM

Sisters of Charity, in the Roman Catholic Church, many independent communities of women Most of them owe their origin to the institute of St VINCENT DE PAUL, founded (1633) for works of mercy The foundation of Mother SETON in America was affiliated to this The Sisters of Charity are very active in parochial schools, hospitals, orphanages, and colleges They are often called Gray Sisters, where their habit (as in France) is of that color

Sistersville, city (pop 2,702), NW W Va , on the Ohio and NE of Parkersburg, settled 1802 Once a boom oil city, it still has several gasoline refineries

Sistine Chapel (sī'stēn) [for SIXTUS IV], celebrated private chapel of the popes in ROME, one of the principal glories of the Vatican It was built (1473) under Pope Sixtus IV Not especially remarkable for size or architecture, it is world famous for its decorations There are fine marble work and beautiful floor mosaics, but the paintings on walls and ceiling make its renown unique Frescoes by Perugino, Pinturicchio, Botticelli, Ghirlandaio, and other 15th-century painters decorate the side walls On altar wall and ceiling are the almost superhuman achievements of Michelangelo—the *Last Judgment* filling the end wall space and the series of Old Testament scenes, with statuesque figures of prophets and sibyls, spread across the vaulted ceiling They depict the stages of creation, man's temptation and fall, Noah and the Deluge, young David's victory, and other biblical events Another treasure of the chapel is its collection of illuminated music manuscripts in the archives of the choir

Sistova (sī'stuvu), Bulgarian *Svishtov* (svĭsh'tŏf), town (pop 12,949), N Bulgaria, on the Danube Here in 1791 the Austrians, allied with Catherine II of Russia in the second of her RUSSO-TURKISH WARS, made a separate peace with the Ottoman Empire Belgrade was restored to the Turks

Sisyphus (sī'sĭfus), in Greek mythology, king of Corinth He was the son of Aeolus, the husband of Merope, the father of Glaucus, and in some accounts the father of Odysseus Because of his disrespect for Zeus, he was condemned to eternal punishment in Tartarus, where he was required to push a heavy rock up a steep hill The rock, just as it reached the top, would slip from his fingers and fall back again

Sitka (sĭt'ku), town (pop 1,987), SE Alaska, on the west side of Baranof Island, in the Alexander Archipelago It was founded in 1799 as New Archangel by Aleksandr BARANOV and was destroyed by the Indians in 1802 After it was rebuilt, Baranov established his headquarters here, and changed the name to Sitka Here, in 1867, the United States officially took possession of Alaska from Russia, and Sitka remained the capital of Alaska until 1900. It has a fine harbor, which is dominated by Mt Edgecumbe on a near-by island to the west Some trade is carried on, while fishing, canning, and lumbering are the chief industries Here are the Sitka National Monument, the Sheldon Jackson School, the Russian Orthodox Cathedral of St. Michael (built 1844), and the Pioneers' Home for elderly Alaskans Since 1940 it has become a naval station. See C. L. Andrews, *Sitka* (3d ed , 1945)

Sitka National Monument, 57 acres, SE Alaska, est 1910 It preserves an old Indian stockade, where, in 1804, the Indians were decisively defeated by the Russians

Sitnah (sĭt'nù) [Heb ,=strife], one of Isaac's wells. Gen. 26 21

Sitten, Switzerland see SION

Sitter, Willem de (vĭ'lum dù sĭ'tûr), 1872–1934, Dutch astronomer and mathematician From a study of Einstein's general theory of relativity, he deduced (1917) the theory that celestial objects are receding or drawing closer together Further study led him to conclude that the universe is expanding. Although many scientists have accepted the theory of the expanding universe, most of them agree that the De Sitter model of the universe does not represent the present stage of expansion, but may predict a final stage His calculations of the rate of expansion are generally considered not to be in close agreement with experimental results De Sitter is known also for his photometric studies of the distribution of stars and for his research on the satellites of Jupiter He was professor from 1908 at the Univ of Leiden and in 1919 became director of its observatory His works in English include *Kosmos* (1932) and *The Astronomical Aspect of the Theory of Relativity* (1933)

Sittingbourne and Milton (sĭt'ĭngbôrn), urban district (pop 20,177), Kent, England, on the ancient Watling Street and on the old route of pilgrimage to Canterbury It is an agricultural market with paper, paint, and cement works

Sitting Bull, d 1890, Indian chief, Sioux leader in the battle of the Little Bighorn He rose to prominence in the Sioux warfare against the white men, and the resistance of the Indians under his command to being forced to settle on a reservation led to a punitive expedition In the course of this occurred the Indian victory on the Little Bighorn, where George A CUSTER and his men were defeated and killed Sitting Bull and some of his followers escaped to Canada, but returned (1881) on a promise of a pardon and were settled on a reservation In 1885 he appeared in Buffalo Bill's Wild West Show, but his championship of the Indian cause was not at an end He encouraged the Sioux to refuse to sell their lands, and he fostered the religion of the ghost dance He was shot by Indian police on a charge of resisting arrest See biographies by Stanley Vestal (1933) and U L Burdick (1941)

Sitwell, Edith (sĭt'wul), 1887–, English poet and critic Her poetry, strongly influenced by the French symbolists, includes *The Mother and Other Poems* (1915), *Gold Coast Customs* (1929), *Green Song* (1944), and *The Song of the Cold* (1948) *The Canticle of the Rose, 1917–1949* (1949) is a collected edition of her poetry *Façade*, a notable group of her poems set to music by William Walton, was first read by her in London in 1922 Important among her critical works are *Poetry and Criticism* (1925), *Aspects of Modern Poetry* (1934), *A Poet's Notebook* (1943), and a biography of Alexander Pope (1930) Other prose works include *Bath* (1932), *English Eccentrics* (1933), and *I Live under a Black Sun* (1937), a novel about Jonathan Swift See *A Celebration for Edith Sitwell* (ed by J G Villa, 1948) She collaborated on *Twentieth Century Harlequinade* (1916) with her brother Sir **Osbert Sitwell,** 1892–, poet and novelist His best poetry is in *Selected Poems* (1943) Among his other works are short stories in *Triple Fugue* (1924) and *Open the Door!* (1941), novels, including *Before the Bombardment* (1926), and, with Edith and Sacheverell Sitwell, *Trio* (1938) Upon his father's death in 1943, he became 5th baronet, he has written a remarkable family history in autobiographical form—*Left Hand, Right Hand!* (1945) *The Scarlet Tree* (1946), *Great Morning* (1947), and *Laughter in the Next Room* (1948) **Sacheverell Sitwell** (sashē'vurul, 1900–, poet and art critic, is the youngest of the family With Osbert he wrote *All at Sea* (1928) His work on the history of art includes *Southern Baroque Art* (1924), *The Gothick North* (1929), and *British Architects and Craftsmen* (1945) He also wrote biographies of Liszt and Mozart, a study, *Conversation Pieces* (1936), and *The Hunters and the Hunted* (1948) The unfinished *Dr Donne and Gargantua* (1930) is one of his several books of poetry See his *All Summer in a Day an Autobiographical Fantasia* (1926), R L Mégroz, *The Three Sitwells* (1927).

Siva see HINDUISM

Sivaji (sĭva'jē), 1627–80, leader of the MAHRATTAS The son of a Mahratta chieftain, from early childhood he was imbued with hatred of the Mogul empire, which controlled most of India From his capital at Poona and in the field he victoriously carved out a domain in central India In 1674 he was crowned the first Mahratta emperor.

Sivan (sēvän'), in the Jewish CALENDAR, the third (or ninth, depending upon the system of reckoning) month Esther 8 9, Baruch 1 8.

Sivas (sĭväs'), city (pop 44,856), central Turkey, on the Kizil Irmak. It is a trade center and has cement

and rug manufactures. There are copper mines near by Known as Sebaste, Sebastia, or Cabira in ancient times, it was an important city of Asia Minor under the Romans, the Byzantines, and the Seljuks Here in 1919 Kemal ATATURK began the nationalist revolution in Turkey Sivas has preserved many fine relics of medieval Moslem art

Sivash Sea (sēvĭsh') or **Putrid Sea,** Rus *Gniloye More* (gnyē'lŭyu mŏr'yu), salt lagoon, area c.1,000 sq mi, RSFSR, extending along the northeastern coast of the Crimea It is separated—except at the Genichesk Strait—from the Sea of Azov by the narrow land tongue of Arabat The Perekop Isthmus separates it from the Black Sea in the north The water has a salt content of up to 20 percent

Siwa (sē'wə), oasis, area c 35 sq mi, NW Egypt, in the Libyan Desert It was the seat of the temple and oracle of Zeus Amon [Zeus represented with the horns of Amon] Alexander the Great visited (and perhaps consulted) the oracle

Siwalik Hills (sĭwə'lĭk), N India and S Nepal, extending c 900 mi parallel to the S Himalaya range, of which they are foothills The Siwaliks contain vast fossil beds which are chiefly noted for mammalian remains

Siward (sū'ŭrd), d 1055, earl of Northumberland in England A Danish warrior, he probably came to England with King Canute At the behest of King Harthacanute in 1041 he ravaged Worcestershire and perhaps murdered Eadwulf of Northumberland, thereafter he was himself earl of Northumberland He supported Edward the Confessor against Earl Godwin in 1051 and in 1054 defeated Macbeth, king of Scotland, on behalf of Siward's nephew, later Malcolm III

Six Nations see IROQUOIS CONFEDERACY

Sixtus IV (sĭk'stŭs), 1414–84, pope (1471–84), an Italian (b near Savona) named Francesco della Rovere, successor of Paul II and predecessor of Innocent VIII He was made general of his order, the Franciscans (1464), and became (1467) a cardinal Sixtus was expected to be a reformer, but he was too much embroiled in political difficulties The struggle with the French monarchy over the control of the Church in France was complicated by Louis XI's efforts to replace Ferdinand I of Naples with a Frenchman A quarrel with Lorenzo de' MEDICI became critical after the PAZZI CONSPIRACY (1478), since an important instigator was Girolamo Riario, nephew of Sixtus, and the pope seems to have had prior knowledge of the plot (though probably he did not know that it involved an attempt at murder) He waged war on Florence afterward Though a reconciliation was patched up in 1479, Lorenzo joined Louis XI in threatening schism Relations with Italian states other than Florence were also unhappy Sixtus consented (1478) to the establishment of the Spanish Inquisition (see INQUISITION **2**), and then found his rebukes for illegal procedure and jurisdiction and his demands for moderation ignored He welcomed into the Papal States the Jews expelled from Spain The behavior of his favored nephews was disgraceful, a happy exception was Giuliano della Rovere (later Julius II) Sixtus IV's creations of cardinals also had a disastrous effect, as the old reformers died, they were mostly replaced with men named on political grounds, hence the reforming party in the Curia did not again make its influence felt until the election of Adrian VI Sixtus was an excellent administrator of the city and did much to improve and beautify Rome He was an important benefactor of the Vatican Library, and he founded the Sistine Chapel

Sixtus V, 1521–90, pope (1585–90), an Italian (b near Montalto) named Felice Peretti, successor of GREGORY XIII and predecessor of Urban VII He entered the Franciscans in early youth After ordination (1547) he became a famous preacher, and he was patronized by zealous leaders of the Catholic Reform, notably Cardinals Carafa (later Paul IV) and Ghisleri (later St Pius V) and St Philip Neri and St Ignatius of Loyola From 1556 to 1560 he was counselor to the Inquisition in Venice, but his ardor caused trouble and he was recalled In 1565 he went to Spain to look into the alleged heresy of the archbishop of Toledo and so seriously fell out with his companion, Cardinal Buoncompagni (later Gregory XIII), that they were enemies for life He was created cardinal (1570) by St Pius In the pontificate of Gregory, Cardinal Peretti lived in retirement, spending much time on an edition of St Ambrose As pope, he set about to bring order to the Papal States, which were at the mercy of brigands, and his methods, if violent, were successful He spent a vast amount of money on the city, rebuilding countless churches, beautifying streets, and erecting new buildings and monuments Sixtus left a tremendous surplus in the treasury, to do this he nearly ruined commerce in the Papal States. He reorganized the pontifical administration and the sacred college, which he set at the number of 70 Sixtus V is one of the greatest figures of the Catholic Reform

Sixtus of Bourbon-Parma, Prince, 1886–1934, son of Robert, last duke of Parma, and thus brother of ex-Empress Zita of Austria-Hungary. He studied at the Univ. of Paris and then made geographical and archaeological surveys in Africa and Asia On the outbreak of the First World War he enlisted in the Belgian army, after being rejected by France because of his Bourbon ancestry He was the intermediary of his brother-in-law, Emperor CHARLES I of Austria-Hungary, in the latter's effort to effect a separate peace with the Allies in 1917 After negotiations had broken down, the French government, in an effort to produce a rift between Austria and Germany, published a letter written by Charles to Sixtus

Sjaelland, Denmark see ZEALAND

Skagen (skä'gŭn), town (pop 6,446), N Jutland, Denmark, on the northern tip of the Jutland peninsula, between the Kattegat and the Skagerrak It is a port on the Kattegat and a rail terminus, and it has shipyards and fisheries Skagen dates from the 14th cent It is also known in English as the Skaw

Skagerrak (skä'gŭrăk), strait between Norway and Denmark, stretching NE from the North Sea and continued to the southeast by the KATTEGAT toward the Baltic Sea It is shallow on the Danish shore and deepens toward the Norwegian coast, its width is from 80 to 90 mi For the battle of the Skagerrak, see JUTLAND, BATTLE OF

Skagit (skă'jĭt), river rising in the Cascade Range, British Columbia, and flowing c 150 mi SW through Washington into Puget Sound Near the source three large power dams are planned by the city of Seattle, of these, DIABLO DAM is completed

Skagway (skăg'wā"), city (pop 634), SE Alaska, at the head of Lynn Canal and 75 mi NNW of Juneau, founded 1897 Lying in a mountain valley at the foot of White Pass, it was a jumping-off point to the Klondike during the gold rush of 1897–98 It is a port of entry, a trade and tourist center, and the coastal terminus of the White Pass and Yukon Railway

Skanderbeg see SCANDERBEG

Skane, Swed *Skåne* (skō'nu), historic province of extreme S Sweden, now administratively divided between MALMOHUS co and KRISTIANSTAD co Skane, the scene of many battles, was held by Denmark till 1658, when it was conquered by Charles X of Sweden There are prehistoric dolmens and tumuli and many medieval castles and manors

Skaneateles (skĭnēăt'lus, skă–), residential village (pop 1,949), central N Y, in the Finger Lakes region, at the north end of Skaneateles Lake and SW of Syracuse, settled before 1800, inc 1833 The town has a famous restaurant and manufactures containers

Skaneateles Lake, 15 mi long, W central N Y, one of the FINGER LAKES It is a source of water supply for Syracuse

Skaraborg, Swed *Skaraborgs län* (skä'rbôr"vus lĕn"), county (3,269 sq mi, pop 244,737), S central Sweden, between Vanern and Vattern lakes It is formed by the northeastern part of the historic province of Vastergotland Mainly agricultural, it also produces cement lumber, and textiles Chief towns are Mariestad (the county seat), Lidkoping, and **Skara** (pop 7,889), an ancient commercial center Skara is a Lutheran episcopal see, with an 11th-century cathedral

Skara Brae (skä'ru brā), Stone Age village, on the west coast of Pomona, Orkney Islands Scotland

skating, gliding along an ice surface on skates The earliest skates were made of bone, which gave way to wood, probably in the 14th cent These materials frequently proved fragile under strain, and wooden skates shod with iron came into use Skates made entirely of iron were introduced in the 17th cent Steel skates, with straps and clamps to fasten them to the shoes, were first made in the 1850s, and later came the skate permanently attached to the shoe Skating has long been a means of travel in countries with long, cold winters such as Norway, Sweden, Finland and Russia and especially in Holland, with its cold winters and canals There are references to skating in English books as early as the 12th cent By the 17th cent skating was not only a means of travel, but was also well established as a sport It was early introduced into America by European colonists and became a popular sport in the N United States and Canada Skating, besides being the essential skill in the game of ice HOCKEY, developed along two lines as a sport for exhibition—speed skating and figure skating In Europe many skating contests are held at Swiss resorts such as St Moritz, while in North America, Montreal, Lake Placid, and Sun Valley are well known as centers for skating events There are also many indoor skating rinks where ice is artificially frozen Since 1924 figure-skating contests for women and men as well as 500-, 1,500-, 5,000-, and 10,000-meter speed-skating events have become an important part of the Olympic winter sports Sonja HENIE did much to bring skating to wide public notice, and after she turned (1936) professional, the ice carnival became a favorite amusement in the United States See T D Richardson, *The Complete Figure Skater* (1948) and *Ice-Rink Skating* (1949) **Roller skating,** gliding on a hard, smooth, durable surface on skates with rollers or wheels, in recent years has become a popular adult sport Skates mounted on wooden rollers date from the 1860s, and soon wooden wheels replaced the rollers The ball-bearing skate wheel was invented in the 1880s The origin of roller skates is obscure (perhaps they were first used in Holland), but the sport became popular among children throughout the world When figure skating and dance movements were adopted from ice skating, roller skating gained a large adult following Numerous roller-skating rinks were built in the United States in the 20th cent, and today several roller-skating tournaments are held annually See R D Martin, *Roller Skating* (1944)

Skaw, the, Denmark see SKAGEN

Skeat, Walter William, 1835 1912, English scholar and philologist, grad Christ's College, Cambridge (B A, 1858, M A, 1861) He took holy orders in 1860, but illness cut short his church career Returning to Cambridge, he served as a lecturer in mathematics (1864–71), began the study of Old English, and was professor of Anglo-Saxon (1878–1912) In 1873 he founded the English Dialect Society, which brought about the *English Dialect Dictionary,* edited by Joseph Wright (1896–1905) Skeat was the author of a number of textbooks, contributed freely to learned journals, and led the way in the study of English place names Among the many works he edited are *Lancelot of the Lark* (1865), *Piers Plowman* (in several parts, preliminary, 1866, 4 parts, 1867–85), John Barbour's *The Bruce* (4 parts, 1870–89), Ælfric's *Lives of Saints* (2 parts, 1881 1900), and a seven-volume edition of Chaucer (1894–97) His important work, *An Etymological Dictionary of the English Language* (1882), was enlarged and revised in 1910

Skeena (skē'nu), river of W British Columbia, rising in the Stikine Mts and flowing 360 mi S and SW to Hecate Strait of the Pacific, just SE of Prince Rupert It is navigable for c 100 mi The Bulkley river is its chief tributary

skeet see SHOOTING

skeleton, name applied to the bony and cartilaginous supporting framework of humans and other vertebrates and also to certain supporting and protective structures of invertebrate animals In vertebrates it is chiefly an endoskeleton (inner skeleton), while among the invertebrates the skeleton is commonly an exoskeleton (an outer skeleton) In the mollusks it usually takes the form of a calcareous shell of either one valve (e g, in the conch, snail, and whelk) or two valves (e g, in the clam, mollusk, and oyster) Crabs and other crustaceans have an outer skeleton containing chitin Some microscopic forms of life, e g, the DIATOM and certain protozoa, have a skeleton The skeletal material of the coral polyp constitutes the coral used for jewelry and other purposes and contributes to the formation of coral reefs In the human being the skeleton is usually said to consist of about 200 bones (in addition to six small bones within the ears) Some of the bones that are separate in a child become fused in the adult skeleton The human skeleton (composed chiefly of BONE and CARTILAGE) is usually divided into axial and appendicular portions The axial skeleton consists of the bones of the head or SKULL and those of the trunk The bones of the trunk make up the SPINAL COLUMN, the sternum (or breast bone), and the ribs There are 12 pairs of ribs in both sexes, the first 7 pairs are joined at their anterior extremities to the sternum by cartilaginous tissue, the 8th, 9th, and 10th pairs are attached to the cartilage of the rib next above, and the two lowest pairs (sometimes called floating ribs) are unattached in front The appendicular skeleton is made up of the bones of the arms and legs

Skellefte, Swed *Skellefte älv* (shĕlĕf'tu ĕlv'), river of N Sweden, rising in the mountains on the Norwegian border and flowing 255 mi through Norrbotten and Vasterbotten to the Gulf of Bothnia

Skelleftea, Swed *Skellefteå* (shĕlĕf'tuō"), town (pop 12,782), Vasterbotten co, NE Sweden, on the Gulf of Bothnia and at the mouth of the Skellefte river The city owes its growth to the rich deposits of sulphides, pyrites, and copper ore in the vicinity which also contain quantities of arsenic, gold, zinc, silver, antimony, and lead Timber, tar, ores, and Lapp wares are exported, and there are smelting plants Although founded as recently as 1845, Skelleftea has significance as an old cultural center, and many archaeological finds have been made

Skelligs, rocky islands, off SW Ireland, in Co Kerry, comprising Lemon Rock, Little Skellig, and Great Skellig Climbing the rocks to the peaks of Great Skellig was part of an ancient means of penance, the island has ruins of a monastery and a lighthouse visible for 18 mi There is evidence that the Danes visited the isles in the 9th cent

Skelton, John, 1460?–1529, English poet and clergyman Tutor of the princes under Henry VII, he later became rector of Diss, Norfolk He wrote a long allegorical poem, *The Garland of Laurel* (1523), but is remembered for his satires directed largely against the clergy, such as *Bowge of Court* (1499), *Colyn Clout* (1522), *Why Come Ye Not to Court?* (c 1522), and a parody, "Philip Sparrow." He fre-

quently used a form of verse with short lines and insistent rhymes, sometimes repeated through several sets of couplets, these Skeltonics also employ alliteration Skeltonic verse has influenced several modern poets See studies by William Nelson (1939) and Ian Gordon (1943)

skepticism (skĕp'tĭsĭzm) [from Gr ,=to reflect, consider], philosophic position which denies the ability of man to know all and the ability of his reason to penetrate everything It is loosely defined as any questioning attitude Challenging the supremacy of reason, **skepticism** in an extreme form is logically untenable, because in denying the possibility of any truth, the skeptic denies the truth of his statement Manifesting itself early in the history of Western thought, the first important skeptical view was held by DEMOCRITUS, who saw sense perception as no certain guide to objective reality The Sophists (see SOPHIST) were the earliest group of skeptics, some, e g , PROTAGORAS, teaching the relativity of knowledge and others attempting to be absolute skeptics GORGIAS, for instance, held that nothing could be known, or if anything were known, it could not be communicated PYRRHO later held a similarly extreme position, seeing reality as inaccessible ARCESILAUS of the Middle Academy taught that certitude is impossible and only probable knowledge is attainable In the Renaissance skepticism is seen in the writings of Montaigne, CHARRON, and Pascal For Descartes skepticism was a device which allowed him to arrive at certain incontrovertible truths This approach is methodological skepticism and in itself is a refutation of complete skepticism In the 18th cent the philosophers of Enlightenment (Bayle, Voltaire) were not skeptics because they assumed the rule of reason or rationalism, of which skepticism is the especial enemy. HUME is one of the most famous of modern skeptics, though skepticism is not characteristic of his thought In his criticism of basic concepts he sharply limited man's supposed knowledge of substance, causality, and the self The greatest of modern skeptics is Kant, whose antinomies are an actual demonstration of skepticism because they show certain problems to be insoluble by reason As a result, pure modern Kantian AGNOSTICISM is closely linked in basis with skepticism The scientific method demands that all things assumed as facts be questioned and is, therefore, skeptical to a degree, but the positivism of many scientists, whether latent or open, is incompatible with skepticism, for it accepts without question the assumption that material effect is impossible without material cause SEXTUS EMPIRICUS wrote on ancient skepticism See J B Bury, *A History of Freedom of Thought* (1913), George Santayana, *Scepticism and Animal Faith* (1923), Bertrand Russell, *Sceptical Essays* (1928), M M Patrick, *The Greek Sceptics* (1929)

Skerries (skĕ'rēz), town (pop 2,306), Co Dublin, Ireland, on the Irish Sea and NE of Dublin It is a fishing village and a seaside resort

ski see SKIING

Skiatook (skĭtōōk', -tōōk'), town (pop. 1,496), NE Okla , N of Tulsa, settled 1886, inc 1907

Skibbereen (skĭ'burēn, -rēn'), urban district (pop 2,361), Co Cork, Ireland, SW of Cork and on the Ilen near its mouth It is an agricultural market, with farm-implement works, slate quarries are near by Victims of the famine of 1847 are buried near a ruined Cistercian abbey west of the town, which has the cathedral and the bishop's palace of the Roman Catholic diocese of Ross

Skiddaw (skĭd'ô), mountain, 3,054 ft high, Cumberland, England, in the Lake District near Keswick

Skidmore College, at Saratoga Springs, N Y , nonsectarian, chiefly for women, chartered and opened 1911 as Skidmore School of Arts with a gift from Lucy Skidmore Scribner, chartered as a college 1922. It offers liberal arts courses and training in fine and applied art, business and commercial science, home economics, music, nursing, and physical education. Men were admitted in 1946

Skien (shĕ'ĭn, shā'ŭn), city (pop 15,206), co seat of Telemark co , S Norway, SW of Oslo, in an iron- and copper-mining district It exports ores, lumber, and paper The city was incorporated in 1346 It was largely rebuilt after a fire in 1886 Ibsen was born here

Skierniewice (skyĕrnyĕvē'tsĕ), town (pop 17,666), Poland, between Warsaw and Lodz Chiefly a trade center, it has woodworking and electrical industries, glass and ceramics are produced in the vicinity

skiing (skē'ĭng) Skis—long, narrow, flexible runners with the curved front ends turned up and pointed—are used for propulsion (usually downhill) over tightly packed snow surfaces They are usually made of highly polished hickory, ash, or pine wood and the binding, which attaches the boot to the ski, is made of metal or leather To aid him in accelerating and in balancing, the skier uses a pair of poles which have leather strips on the top, sharp metal tips at the bottom, and circular rings about 4 in from the tips to prevent the pole from sinking into the snow Although the origin of skiing is obscure, it is known that skiing was a vital means of transportation in Scandinavia for many centuries Skis are thought to have been originally made from the smoothed-down bones of large animals. In the Middle Ages skiing was used by the Swedes in warfare, and after the 17th cent it was introduced to the countries of Central Europe which had abundant snowfall and slopes Skiing as an organized sport began in Norway in 1877 and was soon adopted by many countries The U S National Ski Association was founded in 1904 The same year Norwegians also helped organize a military school for skiing at Briançon for the French army Skiing as a military technique spread to other countries, and ski troops were widely used by the Finns in the Russo-Finnish War (1939–40) Skiing has been a major event in the winter Olympic sports since 1924 A skiing meet usually includes four types of events· the ski jump (each contestant is given two jumps), in which distance and form are the deciding factors, the flying kilometer, a straight downhill race, the *slalom*, contested on a sharply twisting course marked off by flags on a graded slope, in which the skier who completes the course in the least time wins, and the cross-country run, over a long course (ranging from 18 to 50 kilometers in Olympic games) in which the natural terrain and obstacles test the skier's durability and maneuverability Lake Placid, N Y , and Sun Valley, Idaho, are notable among the many American skiing centers, while in Europe Chamonix (France), Garmisch-Partenkirchen (Germany), St Moritz (Switzerland), and Oslo (Norway) are well known Famous skiers include Alf Engen, Lars Haugen and Anders Haugen, Hannes Schneider, and Torger Tokle See A H M Lunn, *A History of Skiing* (1927) and *Mountains of Youth* (2d ed , 1949), E H Jessup, *Skis and Skiing* (1929), Eddie Huber and Norman Rogers, *Complete Ski Manual* (1940), Frank Harper, *Skiing for the Millions* (1945) and *Night Climb* (1946), E F Little and J A Clark, *Fundamentals of Skiing* (1948)

skin, integument or covering of the body of humans and some other animals It is composed of two distinct layers The outer layer or epidermis consists of a number of layers of similar cells from which dried cells are continually shed Pigment in the epidermis and blood in the capillaries of the dermis give the skin its color The true skin, the dermis, lies beneath the epidermis, and it contains nerve endings, capillaries, sweat glands, hair follicles, and sebaceous glands The general functions of the skin are protection, heat regulation, secretion, excretion, and sensation. Disorders of the skin include birthmarks, e g , moles and small blood tumors (hemangiomas), warts, blackheads, and rashes caused by allergy or infectious disease, other skin conditions include hives, eczema, acne, boils, and ringworm

Skinner, Otis, 1858–1942, American actor, b Cambridge, Mass After his New York debut in 1879, he rose to popularity with Augustin Daly, Lawrence Barrett, and Mme Modjeska He won lasting fame in *Kismet* (1911) and was popular in such plays as *Blood and Sand* (1921) and *Sancho Panza* (1923) as well as in Shakespearian productions *The Last Tragedian*, his selections from Booth's correspondence, was published in 1939 See his *Footlights and Spotlights* (1924) and *Mad Folk of the Theatre* (1928) His daughter, **Cornelia Otis Skinner**, 1901–, American monologist and author, b Chicago, was educated at Bryn Mawr and the Sorbonne Her presentation (1937) of the novel *Edna His Wife* as a monologue displayed great versatility, and in 1946 she achieved success in the title role of *Lady Windermere's Fan* See her *Our Hearts Were Young and Gay* (with Emily Kimbrough, 1942) and *Family Circle* (1948), reminiscences of her early years.

Skobelev, Mikhail Dmitreyevich (mēkhŭvĕl' dumē'trēu vĭch skô'bĭlyĭf), 1843–82, Russian general He took part in the Russian expedition (1873) to Khiva and led the expedition to Kokand in 1875–76 The khanate of Kokand became the Russian province of Fergana, of which Skobelev was the first governor He distinguished himself (1877–78) in the Russo-Turkish War, and in 1881 he led the spectacular march to GEOK-TEPE, which resulted in the conquest of Russian Turkestan

Skobelev, Uzbek SSR see FERGANA

Skokie (skō'kē), residential village (pop 7,172), NE Ill , near Chicago, inc 1888, called Niles Center till 1940 Pharmaceutical supplies are made

Skokloster (skōōklō'stŭr), castle on Malaren lake, E Sweden It was built (1650) by Field Marshal Karl Gustav Wrangel on the site of a suppressed monastery, and it contains a fine collection of furniture, portraits, and tapestries and of arms of the Thirty Years War

Skoplje (skôp'ulyŭ), Macedonian *Skopje* (skôp'yu), city (pop 91,557), capital of Yugoslav Macedonia, S Yugoslavia, on the Vardar It is a manufacturing and trade center, the see of an Orthodox Eastern metropolitan, and the seat of a Macedonian university Dating from Roman times, Skoplje was the scene (1346) of Stephen Dushan's coronation as tsar of Serbia. Among the many ancient landmarks of the city are the Stephen Dushan bridge (said to date from the 15th cent) across the Vardar, the cathedral, the Turkish citadel, the fine mosques of Mustafa Pasha and of Sultan Murad (both 15th cent.), and the Oriental bazaar Under Turkish rule Skoplje was known as Üsküb.

Skovde, Swed. *Skövde* (shûv'dŭ), city (pop 16,237), **Skaraborg** co , S central Sweden, between Vattern and Vanern lakes It has a large military post. Known since pagan times, it was a medieval shrine of St Elin (Helen) of Skovde and received town privileges in 1526

Skowhegan (skouhē'gun), town (pop 7,159), co seat of Somerset co , central Maine, on the Kennebec above Waterville, settled 1771, set off from Canaan as Milburn 1823, renamed 1836 It has varied manufactures and is a supply point for vacationists Five miles north of the village is the resort Lakewood, site since 1901 of a well-known summer theater A boulder commemorates Arnold's passage through Skowhegan in 1775

Skriabin, Aleksandr Nikolayevich, see SCRIABIN.

skull, bony framework of the head, consisting of the cranial bones and the facial bones The bones forming the cranium are the occipital, parietal, temporal, frontal, ethmoid, and sphenoid The bones of the face are the lachrymal, nasal, palatine, inferior turbinates, maxillary (upper jaw), malar (zygoma or cheek bones), vomer, and mandible (lower jaw) The brain is encased in the bones of the cranium and communicates with the spinal cord through an opening, the foramen magnum, at the base of the skull At birth certain areas of the cranial bones are not completely ossified, these soft portions are known as fontanels There are six such areas which close at different ages, but all are normally completely ossified by the second year

skunk, carnivorous, nocturnal mammal of the weasel family The common or striped skunk of the United States, N Mexico, and Canada has thick black fur with two white stripes on the back It is usually a little over 2 ft long including the long, bushy tail Because it destroys many insect pests it is protected in many states Its ability to spray from the vents under the tail an oily liquid with an offensive, persistent odor protects it against most enemies In the North the animals sleep through the winter The small, slender spotted skunk (*Spilogale*) has several white stripes or lines of spots It inhabits parts of the SE and central United States, Mexico, and Central America In the fur trade it is of less value than the striped skunk The hog-nosed skunk (*Conepatus*) ranges from the SW United States through most of South America

skunk cabbage, early-spring-blooming, rank-odored perennial (*Symplocarpus foetidus* or *Spathyema foetida*) of wet places of E North America and Asia A low, cowl-shaped spathe, usually reddish mottled, envelops the dense head of florets A cluster of large leaves appears later The plant is said to contain a poison destroyed in cooking, medicinal use has been made of the root In the West a related plant (*Lysichiton camtschatcense*) is called yellow skunk cabbage

Skutari, Turkey see SCUTARI

sky, apparent dome over the earth, background of the clouds, sun, moon, and stars The blue color of the clear daytime sky is the result of the selective scattering of light waves by the minute particles of dust and vapor in the earth's ATMOSPHERE The longer rays (the reds and yellows) pass through most readily, while the shorter rays (the blues) are scattered The smaller the dust particles, the fewer will be the rays scattered, and therefore the purer will be the blue An excess of dust and especially of large dust particles causes scattering of many rays besides the blue, and the sky "fades" and becomes whitish or hazy The sky is clearest when and where there are the fewest and smallest dust particles—in the morning, in the winter, after a rain, from a mountain, or over the ocean Leonardo da Vinci experimented with light and attempted an explanation of the sky's blue color The work of Sir Isaac Newton, Lord Rayleigh, and other physicists on light and its behavior made it possible to understand rainbows, sky color, mirages, and other atmospheric phenomena.

Skye (skī), island (with surrounding islets 428,998 acres, pop 10,407), off NW Scotland, in Inverness-shire, one of the Inner Hebrides Separated from the mainland by the Sound of Sleat, the Inner Sound, and Loch Alsh, it has an irregular coast line Many of its lochs are overlooked by lofty, sheer precipices Inland the Cuillin Hills rise to 3,309 ft. Only a small part of the island is cultivable Sheep and cattle raising and fishing are the chief industries The climate is mild, and the island is a resort in spite of its heavy rainfall Portree, the capital, on the east coast, is the leading town. At Dunvegan, on the west coast, is the castle of the Macleod clan, close by at Boreraig the MacCrimmons, pipers to the Macleods, once had a bagpiping school At the north end of the island are the ruins of Duntulm Castle, belonging to the rival clan, the Macdonalds. Near here is the grave of Flora Macdonald. The cave which sheltered Prince Charles Edward is near Portree.

Skye terrier: see TERRIER.

skylark, Old World bird famous for its spirited, melodious song delivered as it soars into the air. Its

plumage is protectively colored—the upper parts brown streaked with black and the under parts light with black streaks on the breast In Europe the bird is used for food Several unsuccessful attempts have been made to establish it as a permanent resident in America Often celebrated in English literature, it is the subject of Shelley's "To a Skylark"

Skyros (skĕ'rŏs, skī'rus) or **Scyros** (sī'rus, skĕ'rŏs), island (81 sq mi , pop 3,395), off central Greece, in the Aegean Sea, E of Euboea It is the largest of the Northern Sporades Wheat, figs, and olives are grown here. There are marble, chromite, and iron deposits. Fishing and sponge diving are important sources of livelihood In ancient legend Thetis here concealed her son Achilles (in woman's attire) among the daughters of Lycomedes; here Neoptolemus, son of Achilles by Deidamia, was reared, and here Theseus was killed by Lycomedes Skyros was conquered in 469 B C by the Athenians under Cimon, who discovered what were said to be Theseus' bones and conveyed them to the Theseum in Athens Rupert Brooke, who died in the Gallipoli campaign of 1915, was buried on Skyros

skyscraper, building of great height, constructed on a steel skeleton, a purely modern and almost exclusively American type of structure The many mechanical developments of the last quarter of the 19th cent contributed to its evolution The development of the hydraulic passenger elevator, of which the first installation took place in New York city in 1857, made possible a maximum height of 18 to 20 stories In 1887 the first electric elevator was installed, and with the eventual perfecting of high-speed electric elevators skyscrapers were free to attain any desired height The earliest tall buildings were of solid masonry construction, with the thick walls of the lower stories usurping a disproportionate amount of floor space The elevator, by making greater heights possible, thus revealed the need for a form of construction which would permit thinner walls through the entire height of the building Architects began to use cast iron in conjunction with masonry, and this was followed by cage construction, in which the iron frame supported the floors and the masonry walls bore their own weight The next step was the invention of a system in which the metal framework would support not only the floors but also the walls This appeared in the Home Insurance Building in Chicago, designed (1883) by William Le Baron Jenney, the first building in the world which employed steel skeleton construction and which embodied the general characteristics of a modern skyscraper A number of similar buildings then followed in Chicago, which was thus the birthplace of the early skyscrapers In the 1890s the steel frame was developed into its final form, that of a completely riveted skeleton bearing all the structural loads, with the exterior or thin curtain walls serving merely as an enclosing screen In 1892 the New York Building Law made its first provisions for skeleton constructions There followed a period of numerous experiments in devising efficient floor plans and in seeking a satisfying architectural form The Flatiron Building was constructed in 1902, the Metropolitan Life Insurance Tower in 1909, and the Woolworth Building, 60 stories high, by Cass Gilbert, in 1913 The last, based upon Gothic design, was the first instance of a unified and aesthetically satisfying solution and marks the end of the embryonic period of skyscraper design In 1926 the New York Telephone Company Building, by McKenzie, Voorhees, and Gmelin, achieved a definitive form for a modern tall building freed from all historical motives of design Its emphasis upon simple, expressive mass set a practice followed by practically all subsequent skyscrapers In 1916 New York city adopted the Building Zone Resolution, establishing legal control over the heights and arrangements of buildings and over the elements relating to health, fire hazard, and the assurance of adequate light and air to buildings and streets Height regulations and the progressive setting back of the exterior walls above a determined height gave rise to the setback buildings, whose stepped profiles characterize the contemporary American skyscraper With the complex structural and planning problems solved, there remains the need for satisfactorily integrating skyscrapers with the best interests of the community, including hygiene, transit, and economy The proper placing and regulating of lofty structures has become of prime importance in modern planning of cities Among the highest New York skyscrapers are the Empire State (102 stories, 1,250 ft high), Chrysler (77 stories, 1,046 ft high); Rockefeller Center (70 stories, 850 ft high), 60 Wall Tower at 70 Pine St (67 stories, 950 ft high). See W. A. Starrett, *Skyscrapers and the Men Who Build Them* (1928), A. P. Morgan, *Story of Skyscrapers* (1934).

skywriting, advertising modium in which aircraft, through the controlled emission of thick smoke, spell out trade names and sales slogans in the sky The technique was first developed in 1922 when J. C. Savage, a pioneer English airman, wrote the name of a British newspaper in the sky over Epsom Downs. Patents were secured and skywriting enterprises started in England, France, the United States, and elsewhere Letters a mile high and a mile wide can be formed by the movements of specially built planes equipped with the smoke-emitting apparatus Engine heat is used to turn light paraffin oil into white smoke, which is exhausted under pressure The introduction of other chemicals (the formula of the oil compound is patented) enable the smoke particles to adhere together until the message as a whole can be read by persons looking up from the ground The "writing" is done at heights of from 10,000 to 17,000 ft and is only feasible in cloudless skies in which there is no more than a moderate wind Contracts are frequently written for skywriting over a designated place, e g , a race track, fair, bathing beach, or carnival, and for a specified day and time Should the elements not favor the arrangements, the agreement expires Skytyping, the name given to a more modern form of skywriting, involves the use of from five to seven planes They fly rigidly parallel and equidistant courses as nearly in perfect unison as possible The message to be written in the sky is arranged on a master control panel, and as the planes fly abreast electronic signals cause the smoke-emission control in each plane to release puffs of smoke accordingly Other advertising devices associated with skywriting are the flashing of messages or designs in lights on plane wings and on the sides of lighter-than-air airships during darkness and the towing of signs during daylight

Slade, Felix, 1790–1868, English art collector and philanthropist He endowed the Slade professorships of fine arts at Oxford and Cambridge universities and at University College, London, which also received six scholarships in art His fine collections of glass, books, and engravings were given to the British Museum

Sladek, Joseph Vaclav, Czech *Joseph Václav Sládek* (yō'zĕf vätz'läf slä'dĕk), 1845-1912, Czech poet and translator, studied science at the Univ of Prague He came to the United States in 1868 and lived here for two years Later he taught English in Prague He translated much English and American poetry into Czech, and his translation of Shakspere is still standard Sladek's own lyrics are simple, in the style of folk poetry, and express his personal emotions

slag see BASIC SLAG and METALLURGY.

slaked lime see LIME

slander see LIBEL AND SLANDER

slang, novel, ostensibly careless, more or less humorous language In colloquial standard English, slang has been a constant feature for more than a century, mainly consisting of faddish tricks of vocabulary Some of the expressions pass into the ordinary vocabulary, as "O K" Slang is related to preciosity, which is overelegant where slang is violent, like preciosity it has had literary use, as in the Anglo-American sports pages Contrary to a widespread belief, slang shares the taboos and euphemisms of ordinary speech, thus American slang always provides words for death See studies of H L MENCKEN, especially in his *American Language*

Slankamen (slăng-kä'mĕn), village, Serbia, Yugoslavia, at the confluence of the Danube and the Theiss, c 25 mi NW of Belgrade Here in 1691 the imperial army under Louis of Baden inflicted a decisive defeat on the Turks The Turkish grand vizier, Mustafa Kuprili, was slain in the battle The village was also known as Salem Kemen and Szalankemen

slate, fine-grained rock formed by the metamorphism under pressure of clayey and silty sediments and characterized by the property of splitting into extremely thin layers The direction of this slaty cleavage, which is presumably at right angles to the source of the pressure, is parallel to the longer axis of the mineral particles which have been rearranged under the pressure, and the cleavage planes often cut across the bedding planes Slate is intermediate in hardness between clay rocks (e g , shale) and mica schists Its characteristic color is a gray blue. The better grades are used for roofing

Slater, Samuel (slā'tŭr), 1768–1835, American pioneer in the cotton textile industry, b Derbyshire, England As an apprentice and later a supervisor in the mill of Jedediah Strutt, a partner of Richard ARKWRIGHT, he gained a thorough knowledge of all the cotton-manufacturing machinery then in use Drawn by the bounties offered for the encouragement of the textile industries in America, he left England in disguise, since the emigration of textile workers was forbidden, and reached New York in 1789 In 1790 he went to Providence, R I , where he met Moses Brown and contracted to reproduce Arkwright's complicated machinery for the firm of Almy and Brown, to which his name was soon added This he accomplished by a remarkable feat of memory, because all attempts to obtain English models, by purchase or smuggling, had been in vain The first mill was replaced by another in 1793 which still stands, at near-by Pawtucket In 1798 he formed an additional partnership with his relatives by marriage, called Samuel Slater and Company, and built another mill near Pawtucket. He later established mills at Slatersville (now in the town of North Smithfield), R I , and elsewhere in New England, becoming very prosperous He exercised a strict but paternal supervision over his employees and was a leader in the Sunday-school movement See W R Bagnall, *Samuel Slater and the Early Development of Cotton Manufacture in the United States* (1890), Perry Walton, *The Story of Textiles* (1912, new ed , 1936).

Slater, city (pop 3,070), N central Mo , near the Missouri river E of Kansas City, in a livestock and grain area

Slatersville, R I see NORTH SMITHFIELD

Slatin, Rudolf Carl (rōō'dōlf kärl' slä'tĭn), known as **Slatin Pasha** (pä'shä), 1857–1932, Austrian adventurer in British and Egyptian service Recommended to C G Gordon by Emin Pasha, Slatin became governor of Dara (1879) and governor general of Darfur (1881) He failed to receive adequate support against the rebellious Arabs in S Darfur in the Mahdist War and in 1883 was compelled to surrender to the Arab leader, the Mahdi Mohammed Ahmed He remained a prisoner under degrading conditions until 1895, when he managed to escape to Cairo Slatin then served as inspector general of the Sudan (1900–1914) During the First World War he superintended the prisoners-of-war section of the Austrian Red Cross He wrote *Fire and Sword in the Sudan* (Eng tr , 1897) and was ennobled by the Austrian emperor in 1906

Slatington, industrial borough (pop 4,062), E Pa , on the Lehigh river between Mauch Chunk and Allentown, settled 1737, inc 1864 Slate quarrying on a large scale is done here Potatoes are produced as a staple crop

Slaton (slā'tun), city (pop. 3,587), NW Texas, SE of, and near, Lubbock on the Llano Estacado It is a railroad division point and a processing center in a farm area

slaughterhouse see ABATTOIR and MEAT PACKING

Slaughterhouse Cases. In 1869, the Louisiana legislature, chiefly in order to protect the health of the people of New Orleans, granted a 25-year monopoly to a slaughterhouse concern in that city. Other slaughterhouse operators thus restrained from prosecuting their trade brought suit, principally on the ground that they had been deprived of their property without due process of law in violation of the FOURTEENTH AMENDMENT The U S Supreme Court, with Justice Samuel F Miller rendering the majority decision, decided against the slaughterhouse operators in 1873 It was held that the Fourteenth Amendment must be considered in connection with the original purpose of its framers, i e., to guarantee the freedom of former Negro slaves Though the amendment could not be construed to refer only to Negro slavery, yet its scope as originally planned did not include rights such as those in question A distinction was drawn between citizenship of the United States and citizenship of a state, and it was held that the amendment did not intend to deprive the state of its legal jurisdiction over the civil rights of its citizens The restraint placed by the Louisiana legislators on the slaughterhouse operators was declared not to be depriving them of their property without due process of law The decision was a conservative one, in that it declared the old police power of states intact and did not seize the opportunity to extend Federal power See Conyers Read, ed , *The Constitution Reconsidered* (1938)

Slav. see SLAVS

Slave, river see GREAT SLAVE LAKE.

Slave Coast, coast bordering the Bight of Benin of the Gulf of Guinea, W Africa It was the principal source of slaves from W Africa from the 16th to the 18th cent

Slave dynasty see DELHI SULTANATE

slavery. The vast extent in geography and in time of the human institution of slavery makes general remarks about it dangerous and to a greater or less extent untrue, and the intrusion of the moral element into the social and economic situation makes the problem even more difficult to discuss The institution is known among many groups of low material culture as in the Malay Peninsula and among many of the North American Indian tribes Commonly it is said that primitive pastoral tribes had and have little slavery, which appeared in full form only with the development of agricultural economy, there are numerous exceptions to this theory, and it would seem that domestic slavery and sometimes concubine slavery appeared among the nomadic Arabs, among Indian tribes primarily devoted to hunting, and among the seafaring vikings It is generally agreed that usually the origin of slavery was connected with warlike operations by a tribe and with the subjection of a conquered tribe Slavery as a result of debt is, however, seen in very early times, and African tribes have the custom of putting up wives and children as hostages for an obligation, if the obligation is unfulfilled, the hostages become permanent slaves The institution is of incalculable antiquity, and appears in the laws of Hammurabi Its form and nature varied greatly in ancient society It seems to have been common in the Tigris-Euphrates civilizations and in ancient Persia, but was not so vital a part of early Egyptian

economy The institution was familiar to the ancient Hebrews, as is testified by passages in the Bible Slavery was an established institution in the Greece of Homer's time and a large portion of the population of the Greek city-states in later days were of the servile class There were domestic slaves, agricultural slaves, and artisans and workmen In Greece, though not quite so commonly as in Asia Minor, there were also public slaves, such as those belonging to the temples In general it is thought that slaves in the unified life of the city-state were well treated, though the system was subject to abuses as it has been every where, the economic picture Hesiod paints is not a pleasing one, and the life of the Spartan helots was one of sheer oppression The slaves were in law regarded as property Manumission was common, and the problem of the freedman appeared, his social status and the process of becoming a free man were beset with difficulties Slavery in the early times of Roman history seems to have been of the same type as in Greece, but with the expansion of the Roman state and the victorious wars of Rome a more or less new form of slavery was introduced, the type that may be called "estate" or, anachronistically, "plantation" type, where agriculture was pursued by large numbers of slaves in a sort of impersonal relationship to the landowner, who had practically absolute power over them The growing wealth of Rome led to an increase in domestic slaves and the servile class grew to great numbers They were employed in the theater, in gladiatorial combats, and, to some extent, in prostitution Most of the slaves were foreign and some were highly educated and were employed as instructors Having a large retinue of slaves became one of the prime marks of luxury, and exotic, especially Asiatic, slaves were in great demand The conditions of agricultural and, frequently, of all sorts of slavery were brutal The exploitation of conquered provinces spread and increased the evils of slavery With a continual new supply of slaves, manumission was common and freedmen became a significant factor in the Roman social scheme The slave, of course, had almost no legal status, though custom did restrain the owners somewhat, the slave could testify against his master only in a very limited number of serious crimes (adultery, incest, and later lese majesty) As the Roman expansion approached saturation point, conditions of slavery improved somewhat The introduction of Christianity is generally thought to have had little effect, though it did mitigate conditions by inculcating principles of humanity and it did give hope and courage to the long-oppressed classes A gradual change in economic life set in and resulted in the practical disappearance of the agricultural slaves, who became, to all practical purposes, one with the *colons* Thus process helped prepare the way for the manorial economy in which the agricultural slave became the SERF (see also VILLEIN) The semifreedom of serfdom was the dominant theme in the Middle Ages, though domestic slavery (and, to some extent, other forms) did not disappear The Church in general encouraged manumission, but there were many slaves attached to churchmen and church property Sale into slavery was an extreme punishment for serious crimes Slavery continued to be prevalent in the Byzantine Empire and the pirates of the Mediterranean continued their timeworn if not time-honored custom of enslaving the victims of their raids Somewhat less important was the enslavement resulting from the expeditions of the Norse sea raiders and of the pirates who sporadically appeared about all the coasts of Europe Islam, like Christianity, accepted slavery and it became a standard institution in Moslem lands One of its most bizarre aspects there was in the eunuch guardians of the harems, eunuchs had been widely known in Grecian, Roman, and especially Byzantine times, but it was among the Moslems and in the Orient that they were to survive longest In the Orient, slavery was rooted in the first historical developments, was commonly accepted as fixed until the contemporary era, and is still so, to some extent In Western Europe, outright slavery had largely disappeared by the later Middle Ages though it still remained in such manifestations as the use of slaves on galleys —a custom to be perpetuated in penal servitude until the 20th cent In Russia slavery persisted somewhat more than in the more westerly countries, and indeed the serfs were pushed into the classification of slavery by Peter the Great The Moorish conquests and later the Turkish conquests in Europe tended to swell the number of slaves greatly, and this process was complemented by Christian reconquest of some of the lands A revolution came in the 15th and 16th cent in the institution of slavery The explorations of Portuguese navigators on the African coast resulted in the exploitation of the African Negro as a slave, and for nearly five centuries the visits of slave raiders to the African coasts were to be a lucrative and important business, not the less notable because of its appalling brutality Although shortly after 1440 Negroes were brought back to Portugal and subsequent importations were large enough to change distinctly the ethnography of that country, it was not in Europe that Negro slavery was to be profitable and widespread, but in the New World, where European exploitation began at the end of the 15th cent At first the slaves of the Spanish and the Portuguese in the West Indies and Central and South America were the native Indians, but the aborigines of the West Indian islands were unable to endure the rigors of the system of slavery or of the forced labor in the *repartimiento* and the ENCOMIENDA, which persisted in spite of valiant efforts of religious reformers (notably Bartolomé de Las Casas) The Indians were exterminated, and Negroes were imported to replace them They proved to be profitable laborers in the hot Carribean islands and the lowlands of the South American mainland In the colder highlands Indian slavery or quasi-slavery continued, and long after the first introductions of Negroes the *paulistas* in Brazil continued their slave raids against the Indians of the Brazilian hinterlands, but Negro slavery gradually became dominant In the British settlements on the Atlantic coast Negroes were first introduced in 1619, when the first shipload arrived in Virginia The raising of staple crops—coffee, tobacco, sugar, rice, and much later cotton (in the South of the United States)—and plantation economy made Negro slavery particularly valuable in the Southern colonies of America, in the West Indies, and in Brazil The British, the Dutch, the French, the Spanish, and the Portuguese all engaged in the slave traffic The British traders were the most active and by the *asiento* they gained the right to import slaves into the Spanish colonies The number of Negroes in the colonies increased until in some (notably French Saint-Domingue, the modern Haiti) they constituted a great majority of the population The growth of humanitarian feeling in the "age of enlightenment" in the 18th cent, the spread of the doctrines of Rousseau and others, the increase of democratic sentiment—all led to a growing attack on the slave trade The French Revolution had a great effect not only in the spread of agitation for the "rights of man" but more directly in the risings of Negroes and mulattoes against white dominance in Saint-Domingue and the establishment of Haitian independence There was much humanitarian sentiment for liberation of the slaves in America, and when the Constitution of the United States was drawn up the status of the slave and the prohibition of the slave trade were discussed, stipulations concerning slavery directly were consciously omitted, and Congress was prohibited from abolishing the slave trade for 20 years In the next decade, British humanitarians who had incorporated the abolition of slavery into their conception of Christianity labored successfully to outlaw (1807) the British slave trade These same men, especially William WILBERFORCE, Thomas CLARKSON, Zachary Macaulay, and Baron Brougham (Henry Peter BROUGHAM), continued to work for the abolition of British slavery, which was finally effected in the West Indies in 1833 However, according to a recent study (see Eric Williams, *Capitalism & Slavery*, 1944) the British, in abolishing slavery, were primarily motivated by economic, not humanitarian, interests While the institution produced great wealth under the mercantilist system, it became unprofitable with the rise of industrial capitalism, which displaced mercantilism early in the 19th cent At any rate, the abolition legislation of 1833 was followed by the gradual extermination of slavery in all lands under British control, principally by the device of invalidating the legality of slavery and removing its legal safeguards, sometimes also by recompensing the owners Already several of the South American nations in gaining independence from Spain had broadened their democratic principles to include absolute prohibition of slavery In the United States, slavery had proved unprofitable in the Northern states and early in the 19th cent had disappeared in them Its abolition had been hastened by the work of the Quakers, who, as in England, were in general staunchly opposed to slavery In the South, however, slavery came to be an integral part of the plantation system (especially after the introduction of the cotton gin in 1793), which was dominant in the economic and social fabric It is true that the whole system grew somewhat obsolescent in the less fertile eastern lands, with the exhaustion of the staple crops of tobacco and rice (to a much less extent), and that in the lower South the development of sugar and cotton gave some signs of not being really permanent Some schools also hold that on the whole the slaves were humanely treated and that their position was in many ways much better than that of the Mexican peons (see PEONAGE) and their own condition immediately after emancipation There was, however, another important factor, which existed only to a much less degree in Latin-American countries the feeling of race solidarity on the part of the whites that led to a contempt for the Negro and the classification of all who had any drop of Negro blood with those who were entirely black. In the North humanitarian and social principles led to the appearance of the ABOLITIONISTS They knew little of the actual conditions in the South, but it must be remembered that they were fighting not for economic reform but for a quasi-religious ideal and for democracy The Northern man of culture in general tended to regard slavery as an unmitigated evil The small Northern farmer also feared slavery with an unreasoning fear The South, anxious to conserve its system, drifted into a bellicose defense, which was hardened by such things as the Southampton insurrection of 1831 (see TURNER, NAT), the troubles over fugitive slaves, and the very active propaganda against the South The question, involving the very existence of the Southern society as then organized, was the dominant one in U S. history from 1830 to 1860 The political expression of the struggle was largely an attempt on the part of the South to maintain legislative guarantees of the system against its enemies in the North —not only the abolitionists but the less passionate antislavery forces, men who merely wished to prevent any threat of proslavery dominance and wished to guarantee freedom as far as was feasible The chief question was a theoretical one, the right of extension of slavery in the Western territories This first became important in 1820 and it continued so All the statesmen of the day sought an answer Henry CLAY, the great compromiser, Daniel WEBSTER, John C CALHOUN, Stephen A DOUGLAS, who proposed SQUATTER SOVEREIGNTY to decide the free or slave status of territories, and the uncompromising antislavery men such as Charles SUMNER and William H SEWARD. The great compromises—the MISSOURI COMPROMISE, the COMPROMISE OF 1850, and the KANSAS-NEBRASKA BILL—were ultimately ineffective Sectional opposition, which involved much broader questions than slavery, including the constitutional issue of STATES' RIGHTS, grew more passionate and the two sections became more and more hostile The OSTEND MANIFESTO and the proposed annexation of Cuba, the FUGITIVE SLAVE LAWS, the operations of the UNDERGROUND RAILROAD, the furor caused by the DRED SCOTT CASE, the WILMOT PROVISO—all showed the temper of the time Sporadic armed conflict in "bleeding" Kansas and in the Harpers Ferry raid of John BROWN boded ill The struggle became clear-cut as the REPUBLICAN PARTY was formed with a definite antislavery platform In the victory of the Republican presidential candidate, Abraham LINCOLN (1860), the South saw a threat to Southern institutions, and the Southern states in an effort to secure independence turned to SECESSION and formed the CONFEDERACY The CIVIL WAR followed, and the victory of the North meant the end of slavery in the United States Lincoln's EMANCIPATION PROCLAMATION was followed by much effective legislation, especially the Thirteenth Amendment to the Constitution In other countries also emancipation of slaves was a serious problem, but never to such an extent as in the United States, chiefly because the question of race and "white supremacy" was nowhere else so important In Brazil the opposition of the planters was strong and it was only after a long series of rather ineffective measures that the slaves were emancipated in 1888 Revulsion to that action helped to bring on the revolution of 1889 The slave trade on the African coasts was a serious problem in the 19th cent, though the prohibition of the foreign slave trade of the British possessions, of the United States (1808), and elsewhere helped to do away with the horrors of the "middle passage" (the Africa to America leg of the old "triangular" trade route) In later years the trade, now mostly surreptitious, was prosecuted on the east coast of Africa, the market being in Moslem lands The Berlin Conference in 1885 produced the Berlin Act which bound the more important Moslem potentates to act against the slave traffic This was supplemented by the Brussels Act of 1890, to which 18 states were signatory The emperor of Abyssinia (Ethiopia) was unable to prevent traffic from that land to Arabia and a rather brisk trade went on over the Red Sea International scandals occurred from time to time with regard to forced labor; two notable ones concerned the Belgian Congo and the Putumayo region of Peru (Indian servitude) The League of Nations undertook a world-wide study of slavery with a view to its abolition and accomplished much good, especially by the convention of 1926 Slavery continued to exist in Central Asia and, apparently, though usually in disguised forms, in parts of China It remained also in Arabia and, despite increasingly successful efforts to abolish it, in various parts of Africa, especially Liberia and Ethiopia, where its existence provided grist for Mussolini's propaganda mill when he invaded that country in 1935 In recent years, the USSR has been denounced by the Western powers for its forced labor camps (also used by the Nazi Germans) in which unknown numbers of workers are held in virtual slavery See also NEGRO and the bibliography to that article See W. E B Du Bois, *The Suppression of the African Slave-Trade to the United States of America, 1638–1870* (1896), H J Nieboer, *Slavery as an Industrial System* (2d ed , 1910); A H. Slavic (slä'vïk, sla'), subfamily of Indo-European languages See LANGUAGE (table)

Slavkov u Brna, Czechoslovakia see AUSTERLITZ

Slavonia (sluvō'nēu), Serbo-Croatian *Slavonija* (sluvō'nēa), region, E Croatia, N Yugoslavia It is a fertile agricultural and forested lowland bounded, in part, by the Drava river in the north and the Sava in the south OSIJEK is the chief city The history of Slavonia is closely linked with that of CROATIA With Croatia, Slavonia was recovered by Hungary from the Turks through the Treaty of Karlowitz (1699) As a result of the Revolution of 1848 Hungary lost Slavonia, which was made an Austrian crownland, but in 1868 Slavonia was restored to the Hungarian crown and it was united with Croatia It has been part of Yugoslavia since 1918

Slavonic (sluvō'nïk), subfamily of Indo-European languages See LANGUAGE (table)

Slavs (slävz, slavz), large ethnic and linguistic group of peoples belonging to the Indo-European linguistic family (see LANGUAGE, table) They are usually classified in three main divisions The West Slavs include the Poles, the Czechs, the Slovaks, and the WENDS and other small groups in E Germany The South Slavs include the Serbs, the Croats, the Slovenes, the Macedonians, and the Bulgarians The East Slavs, which are by far the largest group, include the Great Russians, Ukrainians (or Little Russians), and White Russians (or Belorussians) Culturally, the Slavs fall into two major groups—those who have been traditionally associated with the Orthodox Eastern Church (the Great Russians, most of the Ukrainians, the Bulgarians, the Serbs, and the Macedonians), and those who have been historically affiliated with the Roman Catholic Church (the West Slavs, most of the White Russians, part of the Ukrainians, and the Croats and Slovenes) By the mid-20th cent , however, the White Russians and Ukrainians had been largely, but not completely, absorbed into the Great Russian cultural pattern The cleavage into Eastern Church and Western Church is symbolized by the use of the Roman alphabet by the one group and of the Cyrillic alphabet by the other Ethnically, the Slavs possess little unity, for they have mixed for centuries with other peoples, including Turko-Tatars, Finnic peoples, Mongols, Germans, Greeks and various Illyrian tribes The Bulgarians are not of Slavic descent (see BULGARS, EASTERN) The origin of the Slavs is obscure and has given rise to several theories Slavs were presumably settled in S central Russia and in E Poland at the opening of the Christian era They probably were tributary, in succession, to the Sarmatians, to the Goths, to the Huns, and to the Avars, in whose westward expansion they shared At any rate, by the 6th cent A D the Slavs had settled in Germany E of the Elbe (where they were called Wends, a name probably derived from that of the Celtic Veneti, with whom the Slavs had mixed and who also gave their name to Venice), they were pressing hard in the Balkan Peninsula on the Byzantine Empire, and they formed principalities in Poland, Bohemia, Moravia, and Slovakia They were a sedentary, agricultural people and possessed no political unity Charlemagne in the 8th cent temporarily subdued the Slavs E of the Elbe, but the German eastward expansion, which permanently pushed the Slavs beyond the Oder, came only in the 12th cent with Henry the Lion of Saxony, the Wendish Crusade, Albert the Bear of Brandenburg, and the Teutonic Knights It was here that the Slavs resisted Christianization longest. The Bohemian, Moravian, and Slovak tribes were converted in the 9th cent by SS CYRIL AND METHODIUS A large Slavic empire emerged at that time under the leadership of MORAVIA, but it soon fell apart under the pressure of the Magyars The duchies (later kingdoms) of POLAND and BOHEMIA, most powerful among the West Slavic medieval states, became unified in the 10th cent In the south the kingdoms of BULGARIA, SERBIA, CROATIA, and Bosnia each had its time of glory before the Ottoman Empire absorbed them all (14th-15th cent) Most important of all was the Russian state, which grew up around KIEV in the 10th cent Kievan RUSSIA was destroyed (13th cent) by the Mongol invasion, but it was succeeded by the grand duchy of Moscow, which freed itself from the Tatar yoke in the 15th cent and expanded until it reached almost the extent of the present USSR In the 19th and 20th cent PAN-SLAVISM was a powerful instrument of Russian expansion Much of the history of the West Slavs and the South Slavs in the past three centuries was taken up with their struggle for liberation from Turkish, German, and Magyar domination

Slavyansk (slïvyansk'), city (1926 pop 28,771, 1939 pop 75,542), SE Ukraine, in the Donets Basin An industrial center, it has soda, salt, porcelain, and limestone works There is a health resort with mud baths near by

Slayton, village (pop 1,587), co seat of Murray co , SW Minn , E of Pipestone, in a grain and stock-raising area, settled 1881

sledge Evidence indicates that the sledge was used in the Neolithic period, before man knew any use of the wheel or had any draft animal but the dog Probably it was first drawn by man The Eskimo used dog sledges in pre-Columbian America Whether the sledge originated in the Old World or the New or independently in each is not known In ancient Egypt blocks of stone were hauled on sledges The simplest form of the sledge is a board turned up in front, as in the toboggan Developments include the addition of runners, the coupling of two sledges tandem (the bobsled), and the light and graceful horse-drawn passenger sledge (called sleigh in America) The sledge is still commonly used in northern regions

sleep, periodically recurring state in which conscious life is minimal, muscles are relaxed, and the nervous system is depressed It is essential for the continued functioning of body and mind in higher animals The duration and periodicity of sleep varies, with some older persons apparently needing as few as 5 hr out of each 24 of the daily span and children requiring as many as 12 or 13 hr Most adults sleep from 6 to 8 hr daily Complex physiological and chemical changes ensue in the human body when sleep occurs, but their integration is not yet well understood During the state of slumber the breathing is slow and deep, the blood pressure is low, and the pulse slow Anxiety, discomfort, noise, and unfamiliar surroundings may inhibit sleep or may affect unfavorably its quality Sleep may be induced by drugs (soporifics), but the benefits of natural sleep are only meagerly realized when it is brought about by these means Dreaming is habitual with some persons and is a sign of disturbed sleep in others See also INSOMNIA See D A Laird and C G Miller, *Sleep* (1930), Nathaniel Kleitman, *Sleep and Wakefulness* (1939), J F. Bender, *How to Sleep* (1949)

sleeping sickness Two diseases are popularly known by this name One, known also as *encephalitis lethargica* (ënsĕf"ulī'tïs lĕthär'jïku) and epidemic encephalitis, is an infectious disease, believed to be caused by a virus Symptoms include apathy, drowsiness, and lethargy A progressive muscular weakness occurs, and usually there is damage to the brain and other nerve tissue The other condition referred to as sleeping sickness is trypanosomiasis (trĭ"pănō-sōmī'usïs, trī"–), a disease of tropical Africa, caused by a protozoan transmitted by the tsetse fly Diagnosis is made by microscopic examination of the blood in order to identify the parasite Compounds of arsenic and of antimony are used in treatment

sleeplessness see INSOMNIA

sleepwalking or **somnambulism** (sŏmnăm'byulïzm), state between waking and sleeping, usually regarded as a hysterical symptom, in which complex movements may be executed with ease Psychiatrists believe somnambulistic episodes are symbolic representations of unconscious wishes that cannot be fully inhibited Occurrence is most common in childhood and puberty and is considered a symptom of a personality disturbance

Sleepy Eye, city (pop 2,923), S Minn , W of New Ulm, platted 1872 In a farm area, it has food-processing plants

Sleepy Hollow, locality at North Tarrytown, SE N Y Washington Irving's "Legend of Sleepy Hollow" is laid here Irving is buried in the graveyard of the Dutch Reformed Church (c 1697) here

sleet, name applied to several forms of wintertime precipitation It is used to refer to small, hard, globular grains of ice produced by the freezing of raindrops They are distinguished from hail in their method of formation and in their season of occurrence Sleet is also used synonymously with glaze —an icy coating formed by the freezing of rain on tree branches, sidewalks, and all exposed surfaces Sometimes a mixture of rain and snow falling together is termed sleet

sleigh see SLEDGE

Slesvig see SCHLESWIG

Slezak, Leo (slā'zak), 1875?–1946, Czech tenor. He made his debut as Lohengrin in 1895 at Brunn, after which he sang opera in Berlin and Vienna In 1908 he was a pupil of Jean de Reszke He sang (1909–12) with the Metropolitan Opera Company, afterward returning to Europe His son, **Walter Slezak,** 1902–, is a distinguished actor of the stage and moving pictures

Slick, Sam see HALIBURTON, THOMAS CHANDLER

Slidell, John (slïdl', slī'dul), 1793–1871, American politician and diplomat, b New York city, grad Columbia, 1810 In 1819 he moved to New Orleans, where he became a prominent lawyer and politician He was a Democrat in Congress (1843–45) Slidell was appointed minister to Mexico in 1845, but that country, which had broken off diplomatic relations after the U S Congress had provided for the annexation of Texas, declined to receive him (see MEXICAN WAR) Senator from Louisiana (1853–61), he was influential in securing the nomination and election of James Buchanan to the presidency (1856) and was a power in the administration till he went with the Confederacy early in 1861 Jefferson Davis appointed him commissioner to France the same year With James M MASON, Slidell figured in the TRENT AFFAIR Though cordially received in Paris, Slidell was unable to get official recognition or any material aid for the Confederacy, since Napoleon III refused to act without England's support See L M SEARS, *John Slidell* (1925) Beckles Willson, *John Slidell and the Confederates in Paris* (1931), B J Hendrick, *Statesmen of the Lost Cause* (1939)

Slidell (slïdl'), town (pop 2,864), SE La , near Lake Pontchartrain, here crossed by a bridge to New Orleans, settled after the Civil War, inc 1888 It has sawmills, shipyards, and brick, tile, and creosote plants

Slide Mountain, peak, 4,204 ft high, SE N Y , highest of the Catskills

slide rule, instrument for making numerical computations and readings, the results of which may be read easily and quickly after performing simple mechanical manipulations Based on John Napier's principle of the logarithm, it came into use after Edmund Gunter created a logarithmic scale in 1620 Gunter's rule consisted of a straight line on which numbers were spaced at intervals proportional to their common logarithms Though not a slide rule as it is known today (there were no sliding parts), Gunter's invention was the forerunner of the modern slide rule of Amédée Mannheim, a French army officer, in 1850 This modern, 10-inch type of slide rule has three parts, the stock, the slide, and the cursor (indicator) The stock consists of two fixed parallel rules, each with a scale on its inner edge The slide is a single rule, moving between them It has two scales on its outer edge, each scale corresponding to the fixed scale to which it is adjacent The cursor is a square of glass, with a hair line, which may be moved the length of the rule to aid in reading it On the reverse side of the slide rule are tables which, when used in conjunction with the scales, determine sines, tangents, and logarithms Special slide rules are made with scales for special calculations Other instruments, based on the same principle, by which more complicated calculations may be made, are the calculating circle and the calculating cylinder Most manufacturers of slide rules publish manuals of instructions

Slieve Bloom (slēv), mountain range, 15 mi long, central Ireland, on the border of Counties Laoighis and Offaly It rises to 1,733 ft, at Arderin

Slieve Donard (dŏ'nurd), peak, 2,796 ft high, Co Down, Northern Ireland, in the Mourne Mts

Sligo (slï'gō), maritime county (694 sq mi , pop 62,375), NW Ireland, in Connaught The county town is Sligo, a trading center and port of some consequence The irregular coastline is deeply indented by Killala and Sligo bays The interior is mountainous, with the Slieve Gamph range in the south and the Benbulben range rising to 2,000 ft , in the northeast Cattle-raising and farming are the chief occupations A round tower at Drumcliffe is part of a monastery founded by St Columba in 575 Sligo was organized as a shire in 1579

Sligo, urban district (pop 12,906), county town of Co Sligo, Ireland, at the head of Sligo Bay It is a seaport and fishing center, with a woolen trade and other industries The town is well situated, has a long quayage, and carries on an extensive trade with Glasgow and Liverpool There are remains of a Dominican monastery and a castle, built in the 13th cent by Maurice Fitzgerald, earl of Kildare The abbey was burned in 1414, rebuilt, and again burned in 1641 by the parliamentarians Other interesting features are the Church of St John and the Roman Catholic cathedral, college, and bishop's palace

slime mold or **slime fungus,** primitive form of life usually considered a fungus of the class Myxomycetes, although there is disagreement about its

classification Some scientists consider it an animal form Most slime molds are saprophytic on decaying vegetation—fallen trees, stumps, and leaves There are two phases in their life history In the vegetative phase naked amoebalike cells exist either independently or fused in a mass called a plasmodium The fungus creeps about in damp, dark places in an amoeboid fashion In the reproductive stage it inhabits a drier place, assumes a shape characteristic of the species, and forms a sporangium from which the spores are discharged after a winter (sometimes longer) of dormancy Slime molds are of practically no economic importance

slip, propagation by see CUTTING

Slipher, Vesto Melvin (slī'fur), 1875–, American astronomer, b Mulberry, Ind, grad Indiana Univ, 1901 From 1901 he was at the Lowell Observatory, Flagstaff, Ariz, where he served as director from 1917 He was at the head of the Lowell solar eclipse expeditions of 1918 and 1923 In 1919 he was awarded the Lalande Prize and the gold medal of the Paris Academy of Sciences Much of his attention has been devoted to the investigation of astronomical spectroscopy, and particular study given to the rotations and atmospheres of planets, nebulae, etc He has made discoveries regarding the rapid rotation of nebulae and the high velocities of star clusters

slipperwort see CALCEOLARIA.

Slippery Rock, borough (pop 1,269), W Pa, N of Pittsburgh, inc 1851 It is a farming center. A state teachers college is here

slip ware, pottery decorated with various colors of slip, a thin mixture of clay and water. Slip may form a design on a contrasting background, or lines may be scratched through a coating of slip to show the color beneath, in the style called graffito The decorated plates of the Pennsylvania Germans are good examples of slip ware

Sliven (slē'vĕn), city (pop 35,553), E Bulgaria It produces woolen goods, carpets, embroideries, and wine and has several Turkish mosques and ruins of a medieval fortress It is also known as Slivno

Slivnitsa (slĭv'nētsə), village, Bulgaria, NW of Sofia. Here in 1885 the Bulgarians defeated the Serbs, who had invaded Bulgaria as a result of the Bulgarian annexation of Eastern Rumelia

Sloan, John, 1871–, American painter and etcher, b Lock Haven, Pa He studied at the Pennsylvania Academy of the Fine Arts and worked for 12 years as an illustrator on the Philadelphia *Inquirer* and Philadelphia *Press* In 1905 he went to New York, where he worked as an illustrator A member of THE EIGHT, he was active in organizing the Society of Independent Artists and was its president from 1918 Long a popular teacher at the Art Students League of New York, he was elected president in 1930. His paintings of intimate scenes of city life are in leading museums throughout the United States. Characteristic are *Hotel Lafayette* and *Dust Storm, Fifth Avenue* (Metropolitan Mus), *McSorley's Bar* (Detroit Inst of Arts), *Renaneschi's, Saturday Night* (Art Inst, Chicago), and *Wake of the Ferry* (Phillips Memorial Gall, Washington, D C) Sloan's painting owes its distinction to a natural love of plain people, whose life he portrays simply and succinctly with poetic realism As an etcher he is equally gifted See his *Gist of Art* (1939), studies by A E Gallatin (1925) and Guy Pène du Bois (1931)

Sloan, village (pop 3,836), W N.Y, near Buffalo, inc 1896

Sloane, Sir Hans (slōn), 1660–1753, British physician and naturalist He was president of the Royal College of Physicians (1719–35) and of the Royal Society (1727–40) His collection of botanical specimens (some of which he gathered in the West Indies), as well as collections of books and manuscripts, formed a beginning of the British Museum He wrote, in Latin, a catalogue of the plants of Jamaica and published an account of his stay there.

Sloat, John Drake, 1781–1867, American naval officer, b near Goshen, N Y He entered the navy as a midshipman in 1800 and resigned after a year's service, but reentered the navy for service in the War of 1812 He was aboard the *United States* when she captured the *Macedonian* After the war he served against the pirates in the West Indies, notably taking part in the capture (1823) of the pirate brig *Palmyra* and in the destruction of the pirate nest at Fajardo on Puerto Rico He was commander of the Pacific squadron from 1844 to 1846, and in 1846, when war with Mexico was threatening, he occupied Monterey, Calif, on the grounds that the British were about to do so In the war he took San Francisco and held it until relieved by Robert F Stockton He retired in 1861, but was promoted commodore (1862) and rear admiral (1866) on the retired list. See biography by C E Slocum (1913)

Sloatsburg, village (pop 1,771), SE N Y, in the Ramapos near the N J line, settled before 1775, inc 1929.

Slocomb, town (pop 1,041), SE Ala, SW of Dothan near the Fla. line, in a farm area, settled 1884, inc. 1900

Slocum, Henry Warner (slō'kŭm), b 1826 or 1827, d 1894, Union general in the Civil War, b. Delphi, Onondaga co, N Y, grad West Point, 1852 He resigned from the army in 1856 and practiced law in Syracuse, N Y, until war broke out Slocum, rising to a major generalcy of volunteers (1862), fought in all the Eastern campaigns through Gettysburg (1863), where he commanded the right wing In 1864 he led the 20th Corps at the end of Sherman's Atlanta campaign His troops constituted Sherman's left wing in the march through Georgia and the Carolinas (1864–65) After the war, Slocum settled in Brooklyn, where he practiced law He was a Democratic Representative in Congress (1869–73, 1883–85)

sloe, name applied to the BLACKTHORN and also to various American wild plums

sloop (slōōp), fore-and-aft-rigged sailing vessel differing from a CUTTER in that it has a jibstay—a support leading from the end of the bowsprit to the mast on which the jibsail is set A sloop also has greater beam in proportion to keel depth than a cutter and carries a center board and a fixed bowsprit A sloop-of-war was a fast sailing vessel used in the British navy about the middle of the 19th cent and carrying 12 to 18 guns, not unlike the later SCHOONER

Slosson, Edwin Emery, 1865–1929, American scientist, b Albany (now Sabetha), Kansas He was professor of chemistry at the Univ. of Wyoming (1891–1903), later literary editor of the *Independent* (1903–20), and from 1921 director of Science Service, Washington, D C His many works on scientific subjects include *Creative Chemistry* (1919) and *A Number of Things* (1930), which contains a biographical memoir by his son

sloth (slōth, slŏth), arboreal mammal of tropical America Sloths sleep, eat, and travel through the forest suspended upside down and clinging to the branches with the curved claws of their fore and hind limbs. Algae which grow on the long hair make the animal blend with the foliage The three-toed sloth or ai (*Bradypus*) feeds almost exclusively on leaves, buds, and stems of a species of cecropia The two-toed sloth or unau (*Choloepus*) has a less restricted vegetarian diet Huge ground sloths are extinct forms

slot machine, see VENDING MACHINE

Slough (slou), municipal borough (1931 pop 33,530, 1947 estimated pop 64,690), Buckinghamshire England, W of London It is the site of the British Orphan Asylum Slough was the home of the Herschels, Sir William, Caroline Lucretia, and Sir John Slough is now an industrial city Stoke Poges and Burnham Beeches, associated with the poet Gray, are near

Slovakia (slōvä'kēə, slōvä'kēu), Slovak *Slovensko* (slō'vĕnskô), province (18,902 sq mi, pop 3,434,369), E Czechoslovakia. BRATISLAVA is the capital Slovakia is bordered by Moravia and Silesia in the west, by Austria in the southwest, by Hungary in the south, by Ruthenia (part of the Ukraine) in the east, and by Poland in the north Slovakia, by the Czechoslovak constitution of 1948, is one of the two constituent states of Czechoslovakia, the other being composed of Bohemia, Moravia, and Silesia It has its own legislature and its own government (which, however, is appointed by the central government at Prague) Most of Slovakia is mountainous, being traversed by the CARPATHIANS, including the TATRA and the BESKIDS S Slovakia, however, is a part of the great Hungarian plain Its fertile soil is drained by the Danube and its tributaries, notably the Vah The mountainous part of Slovakia has vast forests and pastures, used for intensive sheep grazing, and is rich in mineral resources, including high-grade iron ore, copper, mercury, gold, silver, lead, and lignite There also are numerous mineral springs, notably at Piestany, and many popular resorts Farms, vineyards, orchards, and pastures for stock are the main sources of wealth in S Slovakia Aside from mining, agricultural processing is the chief industry The most important cities are Bratislava, KOMARNO, KOSICE, TRNAVA, and NITRA Although the Slovaks and the Czechs are ethnically and linguistically closely related, they have been politically and culturally separate for 1,000 years, a fact which had grave consequences for the stability of the Czechoslovak state after its creation in 1918 The region was settled (5th–6th cent) by Slavic tribes It was conquered (9th cent) by the empire of MORAVIA, and under its Moravian rulers Christianity was introduced by SS Cyril and Methodius. The Magyars conquered Slovakia early in the 10th cent, and from that time until 1918 Slovakia was an integral part of Hungary It escaped Turkish occupation and as a result became a stronghold of the great Hungarian nobles, who owned most of the land German and Jewish settlements in the cities date from the Middle Ages In the 18th cent Maria Theresa and Joseph II intensified the Germanization of Slovakia, but at the same time began the Slovak national revival, which grew steadily in the 19th cent. Large-scale immigration (1900–1910) of the landless Slovak peasants to America gave the movement for Slovak independence considerable backing in the United States during the First World War. Agreement was reached between the Czech and the Slovak leaders, and in 1918 the union of the Czech and Slovak lands as CZECHOSLOVAKIA was proclaimed The Treaty of Trianon (1920) established the present boundaries, by which a minority of more than 1,000,000 Hungarians was included in Slovakia Hungary never ceased to claim the return of at least part of Slovakia, while a large Slovak nationalist party, led by a priest, Mgr Andreas Hlinka, agitated against the Czechoslovak government, which it accused of having denied Slovakia the autonomous rights promised. Indeed, from 1918 until 1938, Slovakia held the status of a simple province, although the Slovak language was official within its boundaries The minority problem was complicated by a religious problem, the majority of Slovaks being intensely Catholic, while the Prague government was distinctly anticlerical The archbishop of Esztergom, who as primate of Hungary had had spiritual authority over Slovakia, continued to claim jurisdiction over the Slovak dioceses until 1937, and as a result only one of the five Catholic bishops of Slovakia was acknowledged in full exercise of his authority Monsignor Hlinka and his successor as leader of the nationalist party, Father Joseph Tiso, exploited both nationalist and religious feeling and inclined to a pro-fascist and strongly anti-Semitic policy As a result of the MUNICH PACT of 1938, Slovakia became an autonomous state within reorganized Czecho-Slovakia, with Father Tiso as Slovak premier At the same time a large part of S Slovakia was ceded to Hungary, and some districts in the north to Poland When the Prague government dismissed (March, 1939) Tiso as premier, Tiso appealed to Chancellor Hitler of Germany, who used this appeal as a pretext for seizing Bohemia, Moravia, and Silesia as a German protectorate Slovakia became a nominally independent state, actually a German puppet, under Tiso's totalitarian rule Tiso allowed German troops to occupy Slovakia in Aug., 1939, and entered the Second World War as an ally of Germany His regime was particularly cruel to the large Jewish minority A pro-Allied underground movement gained strength, however, and powerfully aided the Russian troops who drove the Germans out of Slovakia late in 1944 The Allied victory in 1945 restored Slovakia to its territorial status before the Munich Pact, and the new constitution of 1948 increased its autonomous rights Provision was made at the Potsdam Conference of 1945 for the exchange of Magyar and Slovak minorities in Slovakia and Hungary respectively The accession in 1948 of a Communist government in Czechoslovakia again brought the old antagonism between Czechs and Slovaks into focus The Catholic clergy in Slovakia, militantly opposed to Communism, was persecuted, and the autonomous Slovak government was entirely controlled by the Communist party and thus in effect lost its autonomy

Slovenia (slōvē'nēə), Slovene *Slovenija* (slōvĕ'nēə), autonomous republic (7,796 sq mi, pop 1,389,084), NW Yugoslavia, bordering on Austria in the north and on Italy in the west LJUBLJANA, the capital, and MARIBOR are the chief cities Most of Slovenia is situated in the Julian Alps, which here reach their highest point in the TRIGLAV and in the KARST It is drained by the Drava and Sava rivers The majority of the population are Slovenes Until 1918 the region was largely comprised in the Austrian crownlands CARNIOLA, STYRIA, and CARINTHIA The kingdom of the Serbs, Croats, and Slovenes (later called Yugoslavia) was proclaimed in 1918, and in 1919 Austria formally ceded the region by the Treaty of Saint-Germain Of the elements composing the Yugoslav nation, the traditionally Roman Catholic Slovenes are most distinctly oriented toward Western culture, but unlike the Croats they did not agitate for an autonomous status between the two world wars In the Second World War, Slovenia was divided (1941) among Germany, Italy, and Hungary The Slovenes were very active in the underground warfare led by Marshal Tito After the war, Slovenia received (1945) autonomous status and received part of formerly Italian VENEZIA GIULIA.

Slowacki, Julius, Pol *Juliusz Slowacki* (yōō'lyōōsh swôväts'kē), 1809–49, Polish poet, educated in Vilna He traveled in Europe and the Middle East and died in Paris One of the chief Polish romantic poets, he was a revolutionist, and his works were burned in Poland His tragedies, largely based on Polish history and in part influenced by Shakspere, include *Kordjan* (1833), *Balladina* (1834), and *Lilla Veneda* (1839) Among translated works are the prose epic *Anhelli* (1838, Eng tr, 1930), the tragedy *Mazeppa* (1834; Eng tr, 1929), and the romantic drama *Mary Stuart* (1830, Eng. tr, 1937) His *King Spirit* is a philosophical essay.

slug, name used for a terrestrial mollusk similar to the land snail and for the marine sea slug of another order of molluscs The terrestrial slug is a garden pest The shell is lacking or represented only by a small plate. A slimy path is laid down by the animal. Adult sea slugs lack the shell entirely. See *Land Slugs and Snails and Their Control* (U S. Dept. of Agriculture, Farmers' Bul. 1895).

Sluis (slois), municipality (pop. 2,183), Zeeland prov., SW Netherlands, on the Scheldt estuary and on the Belgian border. It is also known under the former spelling, Sluys, and under its French name, L'Ecluse. Sluis was founded in the 13th cent. as an additional port of Bruges, and it accorded trading privileges to the Hanseatic League. In 1340 Edward III of England defeated, off Sluis, the fleet of Philip VI of France, which had tried to prevent an English landing. The naval battle of Sluis was the first important engagement in the Hundred Years War. During the Dutch struggle for independence, Sluis fell to the Spanish in 1587 and was recovered by the Dutch in 1604. It subsequently lost its importance as a port.

slum, term applied to substandard HOUSING, especially in cities.

Slupsk, Pomerania: see STOLP.

Sluter, Claus (klous' slü'tur), d. c.1406, Flemish sculptor, probably of Dutch extraction, chief master of the Early Burgundian school. Under Philip the Bold of Burgundy, he had charge of the sculptural works for the porch of the Chartreuse of Champmol, near Dijon, there is his pedestal of a Calvary—the *Well of Moses*—with its strongly individualized figures of Moses and the Prophets, a masterpiece of admirable realism, dignity, and power. Another magnificent work at Dijon is the tomb of Philip the Bold, with a recumbent effigy upon the sarcophagus and 40 small alabaster figures of mourners set in niches in its sides. The tomb was finished by Claus de Werve, nephew and pupil of Sluter and also his assistant on the *Well of Moses*.

Sluys, Netherlands: see SLUIS.

Slye, Maud (slī), 1879–, American pathologist, b. Minneapolis, grad. Brown, 1899. A member of the staff of the Sprague Memorial Institute, Univ. of Chicago, from 1911 to 1943, she also taught pathology at the Univ. of Chicago, becoming professor emeritus in 1945. She is known for her work on cancer, which includes studies of the relationship of heredity to the disease.

Sm, chemical symbol of the element SAMARIUM.

Smackover (smăk'kōvur), oil city (pop. 2,235), S. Ark., N. of El Dorado, inc. 1922. A Negro vocational school is near by.

Smaland, Swed. *Småland* (smō'land), historic province of S. central Sweden, now administratively divided among KRONOBERG, JONKOPING, and KALMAR counties. Although fertile along the coast, most of the soil is poor. Large numbers of Swedish immigrants to America came from this region.

Small, Albion Woodbury, 1854–1926, American sociologist, b. Buckfield, Maine, grad. Colby, 1876, and studied in Germany. He was made president of Colby in 1889, but left Colby in 1892 to found at the Univ. of Chicago the first department of sociology in any university. This he made a leading center of sociological study and research. He also established (1895) and edited the *American Journal of Sociology*, the first sociological journal in America. He did much to establish sociology as a valid field for academic study, and he occupied a leading place as a historian of sociological thought. *General Sociology* (1905) is the chief of his several works. His "Fifty Years of Sociology in the United States" appeared in the *American Journal of Sociology* in 1915–16.

small holding, term used in England for a tract of agricultural land larger than a cottage garden (three acres or less), but not too large to be cultivated by the owner or tenant and his family with only occasional hired labor. The maximum size was fixed by law at 50 acres. The farming of the small holding is meant to be a business capable of supporting the family engaged in it. In general, attempts of the government in behalf of small holdings have had disappointing results. Cottage holdings differ fundamentally from small holdings in providing food for a family which secures its money income from some source other than the marketing of farm produce. In America, the term "one-family farm" is sometimes used of farms often more than 50 acres in size but otherwise cultivated under conditions similar to those of the English small holdings.

smallpox, infectious, contagious disease caused by a virus. About 8 to 12 days after contact with a case there is fever, aching, and prostration for about three days. Then a skin eruption starts on the face and wrists and spreads. At first there are red spots which become raised, later these form blisters which soon contain pus. There may be a rise in temperature and enlargement of glands of the lymphatic system at this time. After about 12 days a crust forms and later falls off, sometimes leaving a deep scar, the pock. Scarring often follows scratching of the sores. Pneumonia and infection of the eye are serious complications. Immunity usually follows one attack of the disease. This disease, formerly a scourge and still a lurking menace, can be wiped out by universal VACCINATION. Edward JENNER introduced the method of vaccination with cowpox virus.

Smaltite (smôl'tīt), opaque tin-white to steel-gray mineral of the pyrite group, a compound of cobalt and arsenic. It occurs in massive form, occasionally in crystals (cubes) of the isometric system. It is an important ore of cobalt and is found in Saxony, Cornwall, Sweden, and Ontario.

Smart, Christopher, 1722–71, English poet. His best poem, the fine *Song to David* (1763), follows biblical language closely, it was written while he was confined as mad in an asylum. See Laurence Binyon, *The Case of Christopher Smart* (1934).

smartweed, name for species of *Persicaria* (or *Polygonum*) having an acrid juice which causes smarting. The common smartweed (*Persicaria hydropiper*), called also water pepper, is an annual with drooping catkinlike clusters of small pinkish flowers. It is widely distributed in moist places. A related cultivated species is the prince's-feather.

Smeaton, John (smē'tn), 1724–92, English civil engineer. He became an instrument maker, improved navigation instruments, and carried out many experiments on mechanical apparatus. He rebuilt (1756–59) the Eddystone lighthouse and worked on the Forth and Clyde Canal, Ramsgate Harbour, and many important bridges.

Smederevo (smĕ'dĕrĕvô), town (pop. 15,455), Serbia, Yugoslavia, on the Danube and SE of Belgrade, in a wine-producing region. Dating from Roman times, it was in the 15th cent. the capital of Serbia. There remains a fortress, built in 1429 and surrendered to the Turks in 1456. It was formerly known as Semendria.

Smedley, William Thomas, 1858–1920, American painter and illustrator, b. Chester co., Pa., studied at the Pennsylvania Academy of the Fine Arts and in Paris. His illustrations, appearing in the best magazines of the country, made his name familiar. In 1882 he accompanied the marquess of Lorne on a tour through Canada, contributing many sketches toward the illustration of Lorne's *Picturesque Canada*. Smedley traveled around the world in 1890. In 1905 he became a member of the National Academy of Design. Besides landscapes he painted portraits and figure compositions. His work is represented in the Metropolitan Museum, the National Gallery of Art, Washington, D.C., and elsewhere.

smell, that one of the five senses by means of which the odors of substances are perceived. In man the organs of smell, called the olfactory cells, are situated in the upper portion of the nasal cavity and are partly embedded in the epithelial tissue. The free end of the cells, however, projects outward from the epithelial tissue in the form of hairlike processes that are stimulated by odors and scents entering the nasal cavity. The other end of the cell is extended inward in the form of nerve fibers which serve to connect the cell with the higher centers of the brain. Smell has long been considered a chemical sense in that it is concerned with the reception of stimuli which are chemical in nature. The difference in structure of the molecules of different odoriferous substances constitutes a difference in stimulus and consequently the distinction of a different odor by the individual. Some evidence indicates, however, that smell may not be chemical in nature but that it involves the emission of infrared radiation by an olfactory organ and the absorption and emission of different wave lengths of infrared radiation by different odoriferous substances. Taste and smell are often confused, and in many cases substances supposedly tasted are actually smelled and are without taste. The sense of smell is apparently not as well developed in man as in a number of other vertebrates, e.g., the dog. In many vertebrates and invertebrates (especially the insects), smell is important in food getting and also in reproduction. In the moths, for example, the male is attracted to the female through the agency of smell. In insects the antennae are apparently the organs of smell. Many of the lower vertebrates show strikingly their dependence upon smell in obtaining food. This same connection is seen in man, in the increase in the flow of saliva and of other digestive fluids, upon perception of the odor of food. The use of perfumes indicates in some degree the part which smell plays in social intercourse. See R. D. Bienfang, *The Subtle Sense* (1946); C. P. McCord and W. N. Witheridge, *Odors* (1949).

smelt, small slender fish of north temperate waters of both hemispheres, related to the salmon. Smelts are chiefly marine, but many enter fresh waters to spawn and some are landlocked in lakes. Adults average about 8 in. in length, sometimes reaching 14 in. The flesh is rich and delicate and often fragrant. The common American smelt (*Osmerus mordax*) of the Atlantic coast and inland lakes is greenish along the back and silver on the sides and has a large mouth with strong teeth. On the Pacific coast at spawning time some species approach the shore in thousands and are carried up the beaches in the surf of high tide. The adhesive eggs cling to the gravel and withstand the pounding waters during their development. The pond smelt inhabits Japan, Kamchatka, and Alaska.

smelting, in METALLURGY, any heat process for the preparation of a metal from its ores. The processes vary in details according to the metal involved, but are typified in the use of the BLAST FURNACE and the REVERBERATORY FURNACE.

Smerdis (smûr'dĭs), d. c.528 B.C., second son of CYRUS THE GREAT, king of Persia. He was strangled by his brother Cambyses II, who kept the murder a secret. Patizithes, the Magian custodian of Cambyses' palace, deposed Cambyses (who was campaigning in Egypt), put forward his own brother Gaumata to impersonate Smerdis, and proclaimed him king. After a reign of seven months the false Smerdis was overthrown (521 B.C.) and slain, together with his brother. DARIUS I ascended the throne.

Smet, Pierre Jean de : see DE SMET, PIERRE JEAN.

Smetana, Friedrich, Czech *Bedřich Smetana* (smĕt'ănə), 1824–84, Czech composer, creator of a national style in Czech music. His materials are often drawn from the rich source of Czech folk music. Smetana was a friend of Liszt and Schumann. Of his eight operas, only *The Bartered Bride* (1863–66) has been successful outside his native land, although several others—*Dalibor* (1867), based on legend, *Libuse* (1871–72), and *The Kiss* (1876)—have been much performed in Czechoslovakia. He was conductor of the National Theater in Prague from 1866 until 1874, when total deafness compelled him to resign. Some of his finest works were composed after this time, including the symphonic cycle *My Fatherland* (1876–79), which contains the popular *Vltava* (*The Moldau*). Almost all his works are program music, even two string quartets, *From My Life* (1876, 1882), the earlier of which is considered one of his finest works. He suffered a mental breakdown in 1882 and died in an asylum. See Rosa Newmarch, *The Music of Czechoslovakia* (1942).

Smethport, borough (pop. 1,840), co. seat of McKean co., NW Pa., SE of Bradford near the N.Y. boundary, laid out 1807, inc. 1853. It produces oil and gas.

Smethwick (smĕdh'ĭk), county borough (1931 pop. 84,406, 1947 estimated pop. 76,700), Staffordshire, England, just W of Birmingham. Its manufactures include railroad equipment, glass, electric generators, paint, soap, and metal products.

Smetona, Antanas (antə'nəs smĕ'tônä), 1874–1944, Lithuanian dictator. A lawyer, he became a leader of the Lithuanian autonomists under the tsarist regime. He was (1919–20) provisional president of Lithuania when it gained independence. In 1926 he led a coup d'état against the Socialist government and became president, with Augustin Voldemaras as premier. Parliamentary government was suspended, and in 1929 Smetona forced the resignation of Voldemaras, assuming full dictatorial powers. A new parliament, constituted along fascist lines, was elected in 1936 on a single-party basis. One-party government was slightly relaxed early in 1939. After Lithuania was joined (1940) to the USSR, Smetona fled to Germany, then (1941) to the United States, where he died.

Smibert or Smybert, John (both smĭ'bûrt), 1688–1751, American portrait painter, b. Scotland, the first skillful painter in New England. Apprenticed to an Edinburgh house painter, he went to London when his apprenticeship was over, managed to study art, made a trip to Italy, then returned to London, where he had a small success. He came (1729) to America with Dean (later Bishop) Berkeley, who had persuaded him to teach art at his college in Bermuda, though this did not materialize. After a sojourn in Newport, R.I., Smibert went to Boston. There he married an heiress, became a successful portrait painter, and won social standing. Among his works are portraits of Jonathan Edwards and Judge Edmund Quincy (Mus. of Fine Arts, Boston) and Governor Endicott and Peter Faneuil (Mass. Historical Society, Boston). Harvard, Bowdoin, and other institutions possess examples of his faithful formal portraiture. To Yale belongs the first important portrait group painted in America, Smibert's *Bishop Berkeley and His Entourage* (1731), including a self-portrait. The artist's influence was a factor in the painting of such early Americans as Copley, Washington Allston, and John Trumbull.

Smigly-Rydz, Edward : see RYDZ-SMIGLY, EDWARD.

smilax (smī'lăks), South African twining vine (*Asparagus asparagoides*), commonly grown by florists for greenery. The true leaves are reduced to small scales, while flattened branches (cladophylls) simulate and function like leaves in shape resembling those of the common greenbrier but smaller. Greenbriers, prickly vines often weedy in North America, belong to the genus *Smilax*, distinct from the florists' smilax. Other species of the genus *Smilax* yield SARSAPARILLA.

Smiles, Samuel, 1812–1904, Scottish author, a physician. His very popular books, devoted to moral education and illustrated with biographical material, include *Self-Help* (1859), *Character* (1871), *Thrift* (1875), and *Duty* (1880). He also wrote a biography of George Stephenson (1857) and *Lives of the Engineers* (3 vols., 1861–62). See his autobiography (1905).

Smillie, James David (smĭl'ē), 1833–1909, American landscape painter, etcher, and engraver, b. New York city. His early work was chiefly in association with his father, James Smillie (1807–85), a well-known engraver, born in Scotland, who came

to the United States c 1829 James David engraved a series of illustrations for Cooper's novels and was an engraver of landscapes before he began to paint them, working ably in both water color and oil In the various methods of etching he displayed unusual skill He was active in founding the American Water Color Society and the New York Etching Club, and he was made a member of the National Academy in 1876 His brother **George Henry Smillie,** 1840–1921, American landscape painter, was born in New York city He became a member of the National Academy in 1882 His lively landscapes, modern in manner, are represented in the Metropolitan Museum, the Corcoran Gallery, and various other collections

Smillie, Robert (smil'ĭe), 1857–1940, British labor official, b Belfast, Ireland, of Scottish parents He left school at an early age to work as an apprentice in a shipyard, later becoming a coal miner and trade-union worker He was president of the Scottish Miners' Federation from 1894 to 1918 and from 1921 until his death, and as president (1912–21) of the Miners' Federation of Great Britain he led the coal miners' strike of 1912 For many years he advocated the nationalization of mines He served as a Labour member of Parliament from 1923 to 1929 See his autobiography, *My Life for Labour* (1924)

Smirke, Sir Robert, 1781–1867, English architect, one of the most noted exponents of the classic revival His best-known design is the main façade of the British Museum (1823–47) Other buildings in London are the General Post Office and the Royal College of Physicians Smirke's influence resulted in a more accurate interpretation of Greek forms in the English work of the time Upon his retirement (1847), his brother, **Sydney Smirke,** 1798–1877, took up the work at the British Museum, where he erected the western side of the quadrangle and the new reading room (1854–57) In 1857 he rebuilt the Carlton Club, London, on a design adopted from the Library of St Mark's at Venice, he also built the exhibition galleries for the Royal Academy at Burlington House (1866) He became a member (1859) and was professor of architecture (1861–65) of the Royal Academy of Arts

Smith, Adam, 1723–90, Scottish economist, educated at Glasgow and Oxford He became professor of moral philosophy at the Univ of Glasgow in 1752 His *Theory of Moral Sentiments* (1759) gave him the beginnings of an international reputation He traveled on the Continent from 1764 to 1766 as tutor to the duke of Buccleuch and while in France met some of the PHYSIOCRATS and began to write *An Inquiry into the Nature and Causes of the Wealth of Nations,* finally published in 1776 Smith postulated the theory of the division of labor and emphasized that value arises from the labor expended in the process of production He was led by the rationalist current of the century, as well as by the more direct influence of Hume and others, to believe that in a laissez-faire economy the impulse of self-interest would bring about the public welfare, but he was capable of appreciating that private groups such as manufacturers might at times oppose the public interest Smith was opposed to monopolies and the concepts of mercantilism in general but admitted restrictions to free trade, such as the NAVIGATION ACTS, as sometimes necessary national economic weapons in the existing state of the world Smith wrote before the Industrial Revolution was well launched, and some of his theories were voided by its development, but as an analyst of institutions and an influence on later economists he has never been surpassed His pragmatism, as well as the leaven of ethical content and social insight in his thought, differentiates him from the rigidity of Ricardo and the school of early 19th-century utilitarianism In 1778 Smith was appointed commissioner of customs for Scotland His *Essays on Philosophical Subjects* (1795) appeared posthumously See biography by John Rae (1895), Eli Ginzberg, *The House of Adam Smith* (1934)

Smith, Alexander, 1865–1922, Scottish-American chemist, b Edinburgh, grad Univ of Edinburgh (B A , 1888), Ph D Univ of Munich, 1889 He came to the United States in 1890 and was professor at the Univ of Chicago (1904–11) and at Columbia (1911–19) Besides conducting important research on the different forms of sulphur and on vapor-pressure measurements, he wrote a number of texts, including the widely used works *The Teaching of Chemistry and Physics* (with E H Hall, 1902), *Introduction to General Inorganic Chemistry* (1906, rev ed *Introduction to Inorganic Chemistry,* 1917), and *General Chemistry for Colleges* (1908, 6th ed , *Smith's College Chemistry,* 1946).

Smith, Alfred Emanuel, 1873–1944, American political leader, b New York city Reared in poor surroundings, he took various jobs—truckman's helper, fish peddler, shipping clerk—to help support his family He joined Tammany Hall and was appointed (1895) a clerk in the office of the commissioner of jurors in New York city As a member (1903–15) of the New York state assembly, he took a prominent role in state Democratic politics, became (1913) speaker of the assembly, and gained a reputation for his progressive policies He was (1915–17) sheriff of New York co and then was elected (1917) president of the New York city board of aldermen Despite bitter opposition from the Republican party and from William Randolph Hearst, Smith was elected governor of New York state four times (1918, 1922, 1924, 1926) He proved to be a forceful and well-liked governor and led in the enactment of much reform legislation In 1928 Smith, helped by Franklin D Roosevelt, won the Democratic nomination for President His opposition to prohibition, his affiliation with Tammany Hall, and the fact that he was a Roman Catholic all contributed to his defeat by Herbert Hoover in the 1928 election After he was badly defeated for the Democratic presidential nomination by Roosevelt in 1932, he retired from politics He then served (1932–34) as editor of the magazine *New Outlook* and devoted himself to various business enterprises He was president of the firm that owned and operated the Empire State Building in New York Smith bitterly opposed President Roosevelt's policies until the U S entry into the Second World War He wrote *Up to Now* (1929) See F D Roosevelt, *The Happy Warrior* (1928), biographies by Henry F Pringle (1928) and Frank Graham (1945)

Smith, Andrew Jackson, 1815–97, Union general in the Civil War, b Bucksco , Pa , grad West Point, 1838 His service before the Civil War was mostly in the West As chief of cavalry under H W Halleck (Feb -July, 1862), he took part in the move on Corinth Smith, made a brigadier general of volunteers (March, 1862), fought in the Vicksburg and Red River campaigns (1863 and 1864) and opposed N B FORREST at Tupelo, Miss (July, 1864) For his service at the battle of Nashville (Dec , 1864) he was brevetted major general in the regular army He resigned in 1869, when he became postmaster of St Louis

Smith, David Eugene, 1860–1944, American mathematician, b Cortland N Y , grad Syracuse Univ (Ph B , 1881) He was professor at Teachers College, Columbia (1901–26, professor emeritus from 1926) In 1935 he gave the university his valuable collection of mathematics books and early calculating instruments He was mathematics editor of the 14th edition of *The Encyclopaedia Britannica* and wrote numerous books, including *The Teaching of Arithmetic* (1909, rev ed , 1913), *Number Stories of Long Ago* (1919), *History of Mathematics* (1924–25), and *The Wonderful Wonders of One-Two-Three* (1937)

Smith, David Stanley, 1877–1949, American composer, b Toledo, Ohio, grad Yale (B A , 1900, B Mus , 1903, M A , 1916) He joined the faculty of Yale in 1903 and in 1916 became professor of music In 1920 he succeeded his teacher, Horatio Parker, as dean of the school of music and conductor of the New Haven Symphony Orchestra In 1940 he resigned as dean, he became professor emeritus in 1946 His works, showing a polished technique and a fine intellectual background, include his Fourth Symphony (1937, Boston, 1939), *1929—a Satire* (1933), an orchestral work, *Epic Poem* (1926, Boston, 1935), chamber music, and choral works, including *Daybreak* (1945)

Smith, Donald Alexander see STRATHCONA AND MOUNT ROYAL, DONALD ALEXANDER SMITH, 1ST BARON

Smith, Edgar Fahs, 1854–1928, American chemist, b York, Pa , grad Pennsylvania College, Gettysburg (B S , 1874) After serving as assistant in chemistry at the Univ of Pennsylvania (1876–81), he taught abroad and then returned to the Univ of Pennsylvania—as professor of chemistry (1888–1920), as vice provost (1898–1911), and as provost (1911–20) He did important work on electrochemical analysis and wrote numerous texts in chemistry, several volumes on the history of chemistry, and biographies of Robert Hare and Joseph Priestley

Smith, Edmund Kirby, or **Edmund Kirby-Smith,** 1824–93, Confederate general, b St Augustine, Fla , grad West Point, 1845 He was cited for gallantry at Cerro Gordo and Contreras in the Mexican War Smith was a major when he resigned from the U S army (March, 1861) to fight for the Confederacy He served first in the Shenandoah under J E Johnston, was made a brigadier general (June), and fought at BULL RUN (July) In the invasion of Kentucky under Braxton BRAGG, Smith led the advance and defeated a Union force at Richmond, Ky (Aug , 1862) He ably commanded the isolated Trans-Mississippi Dept (1863–65) and was promoted general in Feb , 1864 The unsuccessful Red River campaign of N P BANKS was directed against his forces Smith was the last Confederate general to surrender (May 26, 1865) After the war he was chancellor of the Univ of Nashville (now George Peabody College for Teachers) from 1870 to 1875 and professor at the Univ of the South, Sewanee, Tenn , from 1875 to 1893 See biography by A H Noll (1907).

Smith, Elizabeth Oakes (Prince), 1806–93, American author, b North Yarmouth, Maine The wife of Seba Smith, she lived after 1840 in New York, where she wrote for magazines Some of her novels, popular in her day, were about the American Indian, such as *The Western Captive* (1842) and *Bald Eagle* (1867, one of Beadle's dime novels) *The Newsboy* (1854), a sentimental novel, aroused concern over New York child labor Her active interest in woman suffrage is reflected in her lectures, *Woman and Her Needs* (1851) See selections from her autobiography (ed by M A Wyman, 1924), M A. Wyman, *Two American Pioneers* (1927)

Smith, Elmer Boyd, 1860–, American author and artist, b Canada He wrote and illustrated *My Village* (1896), *The Story of Pocahontas and Captain John Smith* (1906), *The Farm Book* (1910), *In the Land of Make Believe* (1915), *The Story of Our Country* (1920), and *The Country Book* (1924).

Smith, Ermunnie Adelle (Platt), 1836–86, American ethnologist, b Marcellus, N Y , grad Troy Female Seminary (now Emma Willard School), Troy, N Y , 1853 In 1855 she married Simeon H Smith of Jersey City After studying in Germany, she returned to the United States, where she became (1880) a scientific explorer for the Smithsonian Institution to study Iroquois life and habits She perfected her knowledge of Indian languages and compiled valuable dictionaries of these languages She was the first woman fellow of the New York Academy of Sciences and was an officer of the American Association for the Advancement of Science

Smith, Francis Hopkinson, 1838–1915, American author, artist, and engineer, b Baltimore Though known chiefly as an author of Southern novels, notably *Colonel Carter of Cartersville* (1891), he also wrote short stories, travel sketches, and essays on art, very popular in their time Some of his books are *A White Umbrella in Mexico* (1892) and *Gondola Days* (1897), travel sketches, *A Day at Laguerre's* (1892) and *The Wood Fire in No 3* (1905), volumes of short stories, and *The Fortunes of Oliver Horn* (1902) and *The Tides of Barnegat* (1906), novels

Smith, Frederick Edwin see BIRKENHEAD, FREDERICK EDWIN SMITH, 1ST EARL OF

Smith, George, 1840–76, English Orientalist His paper on the Chaldean account of the Deluge brought him wide fame and resulted in an excavation trip to Nineveh (1873), sponsored by the *Daily Telegraph,* to locate missing fragments While on another undertaking of excavation he died at Aleppo His works include *Ancient History from the Monuments Assyria* (1875) and *Ancient History from the Monuments, the History of Babylonia* (1877), *Assyrian Discoveries* (1875), and *The Chaldean Account of Genesis* (1876, new ed , 1880)

Smith, Sir George Adam, 1856–1942, eminent Scottish biblical scholar and Hebraist He was professor of Old Testament language, literature, and theology in the United Free Church College of Glasgow from 1892 to 1909 and thereafter, until 1935, principal and vice chancellor of the Univ of Aberdeen He frequently traveled and lectured in the United States, where some of his many books were well known to churchmen and college students, especially his *Historical Geography of the Holy Land,* which in 1932 went into its 25th edition See biographies by Stanley A Cook (1943) and Lilian B A. Smith (1943)

Smith, Gerrit, 1797–1874, American philanthropist and reformer, b Utica, N Y , grad Hamilton College, 1818 He spent a good part of the large fortune he inherited from his wealthy, landholding father in promoting various reforms, especially temperance and the abolition of slavery Unlike his friend William Lloyd Garrison he favored political action in the abolitionist cause and was an organizer of the Liberty party, which nominated him for governor of New York in 1840 He served in Congress as an independent from March, 1853, to Aug , 1854, when he resigned, and again sought the governorship on a third-party ticket in 1858 A devoted friend of John BROWN, whose Harpers Ferry plans were discussed at Smith's home in Peterboro, N Y , he denied having backed the raid, but there is strong evidence that he was an accessory before the fact In the Civil War he spoke and wrote widely for the Union cause, but at its close urged moderation towards the South and in 1867 was one of the signers of the bail bond for Jefferson Davis *Speeches of Gerrit Smith in Congress* (1854), *Sermons and Speeches* (1861), *Religion of Reason* (1864), and *Speeches on the Rebellion* (2 vols , 1864–65) are his most important published works See biography by R V Harlow (1939)

Smith, Gipsy Rodney, 1860–1947, British evangelist The son of a gypsy, he started his work as a member of General Booth's Christian Mission of London, which became the Salvation Army This connection was later severed From 1883 Smith's evangelistic labors gradually extended throughout England, to Scotland, the United States, and Australia, until he was known in all parts of the world He was a special missioner (1897–1912) of the National Free Church Council His published works include *Gipsy Smith. His Life and Work* (rev ed , 1925)

Smith, Goldwin, 1823–1910, British educator, historian, and journalist He was educated at Oxford and was associated with that university until 1866, taking a prominent part in the passage (1854) and execution of the reform act, which liberalized en-

trance qualifications In 1858 he was made professor of modern history He was ardently democratic, anti-imperialist, and antimilitaristic, and expounded his convictions in speeches, pamphlets, newspapers, and journals throughout his life Having supported the Union cause in the American Civil War, he visited the United States in 1864, and in 1868 he returned to the United States as professor of English literature and constitutional history at the newly founded Cornell Univ He moved to Toronto in 1871, but continued to interest himself in Cornell and left the bulk of his considerable estate to it at his death He started a number of short-lived journals, including the *Nation*, the *Bystander*, the *Leader*, and the *Week*, and earned a position of great respect in the United States, Canada, and Great Britain for his educational and social work Some of his writings were collected as *Lectures and Essays* (1881) and *Essays on Questions of the Day* (1893) He also wrote many works on history, literature, biography, current politics, religion, and social problems See his reminiscences (1910) and correspondence (1913), both ed by Arnold Haultain, biography by Haultain (1913)
